THE PORT AUTHORITY OF NEW YORK AND NEW JERSEY
PUBLIC RECORD ACCESS FORM

PRA 15686

Action by (print / type name):

William Shalewitz , Freedom of Information Administrator

Signature: Date:

06/29/2016

On behalf of the Secretary of the Port Authority, as Records Access Officer and Custodian of Government Records of the Port Authority.

☐ The requested records are being made available.

☐ Any responsive records that may exist are currently in storage or archived, and a diligent search is being conducted. The Port Authority will respond by:

☐ A diligent search has been conducted, and no records responsive to your request have been located.

☐ The requested records that have been located are not being made available, as they are exempt from disclosure for the following specific reasons:

☑ Some requested records that have been located are being made available. The remainder are exempt from disclosure for the following specific reasons:

Privacy, security and proprietary information.

☐ The request does not reasonably describe or identify specific records; therefore, the Port Authority is unable to search for and locate responsive records. Please consider submitting a new request that describes or identifies the specific records requested with particularity and detail.

☑ Other:

Material responsive to your request can be found on the Port Authority's website at http://corpinfo.panynj.gov/documents/15686-C, http://corpinfo.panynj.gov/documents/15686-C-1 and http://corpinfo.panynj.gov/documents/15686-C-2

This form is promulgated by the Port Authority pursuant to the Port Authority Public Records Access Policy and is intended to be construed consistent with the New York Freedom of Information Law and the New Jersey Open Public Records Act. It is intended to facilitate requests for Port Authority public records and does not constitute legal advice.

The Mills Corp., Meadowlands Mills, Carlstadt, New Jersey. Project manager for all civil/site infrastructure, utility, and foundation design services for a 592-acre commercial retail development site within the environmentally sensitive Hackensack Meadowlands district. Site engineering included the design of over two million cubic yards of fill, erosion and sediment control, hydraulics and flood control, grading and drainage, utilities, internal roadways, and foundations for a 2.4-million-square foot mall.

New York City School Construction Authority, PS/IS 366K, Brooklyn, New York. Project manager for the design and design services during construction of civil/site, utilizes foundation and below-ground structure elements of an elementary/middle school.

New Jersey School Construction Corporation, PS 3/MS 4 Staff Parking Feasibility Study, Jersey City, New Jersey. Project manager for a feasibility study and design of a parking facility for approximately, 100 faculty on a site totaling 20,000 square feet. Managing hazardous soils, environmental and land use issues, design of site/civil, geotechnical, utilities, and traffic improvements.

Harlem River Yard Ventures, Inc., Harlem River Yard Intermodal Transportation Center, Bronx, New York. Project manager for the development of a 96-acre former rail yard into a modern intermodal terminal and industrial park. Managed site planning, hazardous waste site assessments, environmental impact studies to supplement previous studies by the New York State Department of Transportation. , Design and construction management of infrastructure including civil/site, rail, utilities and waterfront.

New York City Department of Design and Construction, College Point Sports Park-Phase I, Queens, New York. Principal-in-charge of the development of a public recreational facility on 22 acres of reclaimed marshland. Phase I (five acres), includes site/civil, engineering, geotechnical, utilities, and the design of a field house.

Westchester County DPW – New Rochelle WWTP Composite Performance Implementation and Plant Expansion – New Rochelle, NY. Project Manager for design and construction management of the expansion and system upgrades to the New Rochelle Wastewater Treatment Plant. The NRWWTP is being expanded from a 13.9 mgd average daily flow and all plant systems are being upgraded and processes added to handle the new flow and to meet new permit discharge limits.

Plant upgrades and expansion include: influent screening, main influent pumps, aerated grit separation facilities, primary tank mechanisms and covers, pure oxygen secondary treatment, liquid oxygen supply, final clarifiers, sludge pumping New Sludge Processing Building which includes sludge thickening with gravity belts, sludge drying with belt filter presses, additional dry sludge storage and loadout capacity, plant wide electrical system upgrade, new odor control systems, new ID card SCADA systems and upgrades to support systems and utilities.

David G. Fredericks, PE, LEED AP

Senior Electrical Engineer

EDUCATION

B.S. – Marine Engineering, United States Merchant Marine Academy, Kings Point, NY, 6/1998

CERTIFICATIONS

Registered Professional Engineer: Pennsylvania, New Jersey, New York
USGBC LEED® Accredited Professional

SKILLS

SKM Power Tools, Latest Version (Power System Study Software), Lighting Simulation and Calculation Software (Lumen Micro, Lumen Designer)

EXPERIENCE

Mr. Fredericks is the Lead Electrical Engineer and is responsible for the quality control and or design of all Electrical Design projects produced by Savin. Mr. Fredericks has extensive experience in completing Electrical Design and Construction projects from start to finish, including the production of drawings, specifications and providing design services during construction (RFIs, Shop Drawings, etc.). Mr. Fredericks also specializes in performing complex electrical systems analysis (Short Circuit, Relay Coordination, Arc Flash, Voltage Drop and Load Flow) using SKM powertools software.

Binghamton-Johnson City Joint Sewage Treatment Plant, Vestal, NY – Plant Restoration and Rehabilitation – BAF Facility (2013)
Served as Electrical Engineer/Electrical Project manager for the complete electrical renovation of the BAF facility due to severe storm damage. Responsible for the production of Contract Drawings and Specification, this included a complete condition survey of the incoming 4.8kV underground service run. The design documents covered the upgrade of the main facility 4.8kV service switchgear equipment including the interconnection design of two - 2 MW Diesel Generators to supply power to the entire treatment facility during a utility power failure event. The design included new work to facilitate the upgrade of the BAF facility, which included all required transformers, relocated utility metering, 4.8kV distribution power, 480 volt distribution power, new switchgear equipment, paralleling switchgear, generator automatic transfer switchgear, new lighting, controls and electrical back-up support for the new instrumentation and HVAC designs. Performed all power calculations and complete interface and coordination with the Power Utility (NYSEG).

Binghamton-Johnson City Joint Sewage Treatment Plant, Vestal, NY – Plant Restoration and Rehabilitation –New DAF Facility (2014)
Served as Electrical Engineer/Electrical Project manager for the electrical design of the new DAF facilities. Responsible for the design of the new 4.8kV underground power run, new distribution transformers (1500 kVA each) and building distribution switchgear (480 volts). Responsible for the production of Contract Drawings and Project Specifications. Electrical Design Drawings covered 480 volt-three phase power distribution power, new motor control centers, control, lighting, grounding and power interface with process instrumentation and HVAC Systems. The design included the modifications to the Blower House service switchgear equipment for the required 4.8kV double-ended power required for the DAF facility.

NYCDEP Newtown Creek WWTP Contract NC30E – Electrical Facilities Upgrade
Performed several types of power system analyses including short circuit studies, load flow calculations, voltage drop calculations and protective device coordination. Large motor starting studies were performed on new 3000 HP process air blowers to investigate the effect of large motor starts on the plant distribution system.

NYCDEP Risk and Prioritization Study
Provided conditions assessment services for 12 NYCDEP owned and operated facilities. This included wastewater treatment plants from 100,000 gpd to 310 MGD. Responsible for inspecting and evaluating all electrical systems including but not limited to distribution transformers, standby generator, switchgears, moto control centers and control panels. Each element was inspected, evaluated and scored on a rating system from 1 to 5. Further analysis incorporated a risk-based approach to prioritizing repairs.

NYCDEP AWTPA-02, Bronx, NY – Carbon Addition Facilities (2012-Present)
Lead Electrical Engineer responsible for design of 5 Carbon Feed facilities located at Jamaica, 26th Ward, Bowery Bay, Hunts Point, Tallman Island and Wards Island WWTPs.

NYCDEP Hunts Point WWTP, Bronx, NY – Stabilization Project (2008-Present)
Served as Electrical Engineer/Electrical Project Manager for an extensive $80M electrical system upgrade design of the Hunts Point Wastewater Treatment Plant (WWTP) in the Bronx, NY, including new 15kV electrical service entrance equipment, 5kV distribution equipment, interior and exterior lighting and lightning protection systems. Provided technical reports and detailed calculations for several types of Power System Analyses including Short Circuit Studies, Load Flow Calculations, Large Motor Starting Studies and Protective Device Coordination. Also provided Design Services During Construction (DSDC) including coordination with the Utility, RFI responses, shop drawing review, change order preparation, construction phasing and coordination between trades.

Westchester County – New Rochelle WWTP BNR Facilities – Contract 09-514
Served as Lead Electrical Engineer for Savin Engineers. Produce all of the Electrical Design Drawings covering 480V power distribution and lighting for the BNR Building, Process Control Building and Sodium Hydroxide Building including all motor controls, motor control centers, grounding and power interface with process mechanical, instrumentation and HVAC systems. Design also included extension of the fire alarm system and page/party system to these areas.

MTA – East Side Access Queens Bored Tunnel Project
Served as Electrical Project Engineer providing design and construction services for the installation of a new interim electrical substation for boring two new tunnels under the Sunnyside Train Yard in Queens, NY. Design included four (4) new 26.4kV service switchgear (34kV rated), four (4) new 6MVA liquid filled transformers, and four (4) new 13.2kV switchgear. Engineering services also included performance of a site-wide short circuit and device protection study including equipment evaluation and recommended protective device setting development.

Port Authority NY/NJ – World Trade Center complex Power System Study
Provided engineering services related to the development of a short circuit and device coordination study for the World Trade Center Tower One. Scope of study included Con Edison service down to 208V panelboards throughout Tower One and included service equipment at the Memorial site, Transportation Hub and Central Chiller Plant. Scope of equipment included eight (8) medium voltage (13.8kV) service entrance rated switchgear lineups, fifteen (15), four (4) feeder 13.8kV-480V spot networks, 480V fused distribution switchboards, four (4) 2500kVA 480V generators and associated distribution switchgear, and 480V and low voltage panelboards. Engineering services also included protective device coordination study including equipment evaluation and recommended protective device setting development.

Adam Clayton Powell State Office Building Boiler Upgrade, New York Power Authority Electrical Engineer
Performed site survey of existing emergency power distribution system and provided feasibility study determining spare system capacity and upgradeability. Performed electrical design work supporting new high efficient boiler system upgrade. Also provided shop drawing review and services during construction.

Edward Patrick Conn, P.E.

Senior Mechanical Engineer

EDUCATION

B.S. – Mechanical Engineering, Rutgers University – College of Engineering, Piscataway, NJ, May 1997

CERTIFICATIONS

Registered Professional Engineer: New Jersey, New York

PROFESSIONAL AFFILIATIONS

Member of the American Society of Heating, Refrigerating, Air-Conditioning Engineers
Member of New Jersey Chapter of the US Green Building Council
Advisory Group Member for the production of Rutgers University's "NJ Green Remodeling Guidelines".
Successful completion of The Dale Carnegie Course ®, Presented with the "Highest Award of Achievement" as voted by classmates, February 2006

EXPERIENCE

Mr. Conn is the Lead Mechanical Engineer and is responsible for the quality control and or design of all Mechanical Design projects produced by Savin. Mr. Conn has extensive experience in completing Mechanical Design and Construction projects from start to finish, including the production of drawings, specifications and providing design services during construction (RFIs, Shop Drawings, etc.). Mr. Conn specializes in large industrial HVAC system design.

Philadelphia Water Department (PWD) - Baxter WTP – Ammonia System Improvements
Served as Lead Mechanical Engineer responsible for the HVAC and plumbing designs associated with the modifications to the existing aqua ammonia (ammonia) feed system and the construction of new underground, chemical storage/pumping vault. Design included heating and ventilation for the pump room, ventilation for the chemical storage room, domestic hot water for two (2) combination eyewash/showers, PVC water piping and heat tracing. Responsibilities involved heating, ventilation and domestic hot water calculations, equipment selections, duct and piping layouts, cost estimation, bid document production including drawings and specifications, and inter-discipline coordination.

Westchester County – New Rochelle WWTP BNR Facilities – Contract 09-514 (2010)
Served as Lead Mechanical Engineer for Savin Engineers. Produce all of the Mechanical Design Drawings covering Heating, Ventilation and Cooling design for the BNR Building, Process Control Building and Sodium Hydroxide Building.

New York Power Authority – Bronx Community College, Bronx, NY
Served as Project Manager/Mechanical Engineer. Performed site survey of existing central hot water boiler plant and its distribution system and provided existing energy usage calculations. Developed feasibility report regarding possible upgrade of the central boiler plant and the creation of a new campus central chiller plant. The options of high pressure steam versus medium temperature hot water heating systems were investigated and compared for advantages/disadvantages and construction costs. Performed Life Cycle Cost Analysis for recommended building upgrades including central heating and cooling systems, in which the

estimated annual electricity and gas usage were calculated to determine the payback period from the proposed construction cost estimates.

NYCDEP Hunts Point WPCP, Bronx, NY – Stabilization Project (2008)
Lead HVAC Engineer responsible for construction support services of both Phase I and II portions of the design, whose HVAC construction contracts total $27 million. Responsibilities included shop drawing review, requests for information, contractor-engineer coordination, on-site inspections, and change order preparation, which involved the design of an additional $1 million due to scope changes and field conditions. Design of Phase III is ongoing, including design of new, upgraded heating and ventilation to new egg-shaped digester facility and existing thickener area. Both areas will be provided with a heat recovery system totaling 114,000 cfm and 160,000 cfm respectively. Hot water will be provided from the 5-750HP dual fuel boilers designed and installed in a previous phase.

NYC DEP - Catskill & Delaware Water Treatment Ultra Violet Disinfection Facility, Contract CAT-210
Served as Project Manager and HVAC Designer for large Ultra Violet (UV) Disinfection Facility. The facility, rated for 2,020MGD, provides New York City with up to 90% of the nearly two billion gallons of water consumed daily. Project responsibilities include value engineering participation, inter-discipline coordination, cost estimating, applications for permits, assistance in bidding, and direct supervision of three (3) HVAC designers. Highlights of the design include the following:

- Design of a hot water boiler plant with (3) 300 HP boilers divided into three primary zones.
- Desiccant dehumidification (humidity control) systems serving the main pipe galleries totaling 124,000 CFM with a spare unit and complex interconnecting ductwork for redundancy.
- Utilizing plant raw water to provide approximately 500 tons of "free cooling" to numerous air conditioning units through a three loop, stainless steel heat exchanger system. Entire system equipped with redundant pumps, heat exchangers and piping to prevent system failure.
- A dedicated smoke removal system sized to serve approximately 1.6M CF of space in the main UV piping gallery.

City if Greenwich, CT - Grass Island WWTP - Dewatering Building Upgrade
Served as Lead HVAC Engineer responsible for designing a complex control strategy to interlock the new Heating & Ventilating (HV) Units with a new variable frequency drive (VFD) odor control exhaust system as part of an initiative to install a new gravity belt thickener system within the existing dewatering building. Designed the system so that room pressure sensors controlled VFDs on the HV units via PLC logic so as to maintain constant negative pressure in the room regardless of the operating schedule of the odor control exhaust system.

Cedar Creek WPCP Sludge Dewatering Facility Improvements – Hempstead, NY
HVAC Construction Costs: $2 million (approx.)

Served as Lead HVAC Engineer responsible for the HVAC design to support the creation of the new process facility where sludge dewatering tanks were to be demolished and replaced with a new gravity belt thickener facility within the existing dewatering building. Design included HVAC calculations, equipment selection, duct and piping layouts, and interconnecting controls systems for four (4) new heating and ventilating units, associated exhaust fans, and one (1) control room air conditioner. Responsibilities involved cost estimation and bid document production, including drawings and specifications.

Timothy Cheatham, P.E.

Registered Professional Engineer, New Jersey/2011/[redacted]

PROFESSIONAL AFFILIATIONS

American Society of Civil Engineers

RELEVANT EXPERIENCE

Mr. Cheatham has over 13 years of professional experience in the areas of Environmental, Structural, and Civil Engineering. Mr. Cheatham has designed numerous water and wastewater facilities. These have ranged from 25 gpm facilities to 2 bgd facilities. All designs comply with local building codes and the GLUMRB "Ten States" standards for water and wastewater facilities. He has also performed numerous inspections of existing facilities for structural and mechanical deficiencies.

Current Assignment: Dissolved Air Floatation Thickener. Westchester County DPW. Contact Leah Radko, PE, (914) 995-2471. Estimated completion date, Summer 2015. 60% of time.

Repair Construction and Rehabilitation of the Little Dam Lake Dam, New York. Project Engineer – all permitting for this project including the preparation of a NYSDEC/ACOE joint application. As part of this application a mitigation plan for the Northern Cricket Frog (a NYSDEC endangered species) was prepared.

Design Engineer for Route 9G Connection for Dutchess County Water and Wastewater Authority. Project involved the construction of approximately 7,500 linear feet of new water distribution mains within an existing system to connect existing piping terminations and improve system redundancy and pressure distribution. Piping was ductile iron and varied in size from 6" to 16" diameter. Specific elements designed included upgrade and calibration of the existing water distribution system hydraulic model, use of the model to evaluate several alternative piping configurations and sizing alternatives, preparation of the Storm Water Pollution Prevention Plan, and preparation and coordination of permitting documents for regulatory agency review.

Design Engineer for Replace Water Tank and Replace Water Main at the Otisville Correctional Facility for NYS Office of General Services, Department of Correctional Services. Project involved the construction of a new water storage tank, the construction of new supply force mains and distribution water mains to connect to the existing distribution network, the installation of several pressure reducing valves throughout the existing network, the demolition of the existing water storage tank, and the remediation of lead and asbestos contaminated soils. Specific elements designed include the new storage tank and appurtenances, storage tank foundation, temporary site access road, soil erosion and sediment control measures, and the preparation of a detailed Storm Water Pollution Prevention Plan (SWPPP) in accordance with NYSDEC GP-02-01. The construction details and requirements were coordinated with DOCS security requirements.

Hydraulic Model for the Staatsburgh Water System, New York.
Project Engineer for the development of a hydraulic model for the Staatsburgh water distribution system, including pumps, storage tanks, piping and pressure reducing valves. Project included analyses of different flow conditions as well as field testing to calibrate model.

Design Engineer for Westlake Trunk Sewer Rehabilitation for Westchester County Department of Public Works. Project involved the rehabilitation of approximately 2,400 linear feet of 12-inch diameter ACP and RCP gravity sewer pipe and approximately a dozen manholes to reduce infiltration and inflow into the sanitary sewer system. Rehabilitation included cured-in-place-pipelining, grout injection and manhole frame and cover replacement. Specific elements designed include the CIPP lining system, sealing of manhole risers by grout injection, installation of manhole frames and covers, and maintenance and protection of traffic measures. The project site was located within the New York City public water supply watershed and additional environmental controls were required due to the sensitive location.

Design Engineer for Catskill / Delaware Water Treatment Ultraviolet Light Disinfection Facility for New York City Department of Environmental Protection. Project involved the construction of the world's largest ultraviolet (UV) light drinking water disinfection facility with an ultimate capacity greater than 2 billion gallons of treated water per day. Design included an approximate 2-acre footprint disinfection building with 56 UV disinfection units, connections to the existing aqueducts, energy dissipating chambers, valve chambers and flow meter chambers. Specific elements designed included all structural work for a below-grade, 65-feet by 40-feet flow meter chamber and a below-grade, 120-feet by 25-feet valve chamber. Additional elements designed included structural steel framing including columns, beams, and bracing members, to support aluminum access grating for a number of structures at the site, including access to all 56 UV disinfection units. All design was completed in accordance with current ACI and AISC codes.

Design Engineer for Central Dutchess Water Transmission Line for the Dutchess County Water & Wastewater Authority. Project involved the design of approximately 70,000 linear feet of ductile iron water transmission line, including seven bored and jacked NYSDOT Highway, MTA railroad and stream crossings, and a 5,000 square foot pumping station. Specific elements designed include pipeline alignment, valves, hydrants, water meters and backflow prevention, road and minor stream crossings, thrust restraint, corrosion protection and all structural work associated with valve and water meter vaults, including foundations, walls and roof beams and slabs. Coordinated design of pumping station with pipeline. Also designed all erosion and sediment controls and prepared the Storm Water Pollution Prevention Plan (SWPPP). All design was performed in accordance with current AWWA, Ten States and ACI standards and codes.

Design Engineer for Readiness Center Addition for the DMNA Headquarters at the Latham Armory for NYS Office of General Services, Division of Military and Naval Affairs. Project involved the construction of approximately 13,000 square feet of classrooms, administrative offices, locker rooms and storage areas adjacent to the existing Armory building. Specific elements designed include all civil and site work including utility and pavement relocation and replacement, additional parking for both privately operated vehicles and military operated vehicles, the design of new and upgrades to existing stormwater conveyance and detention facilities, and the preparation of a detailed Storm Water Pollution Prevention Plan (SWPPP) in accordance with NYSDEC GP-02-01. The construction details and requirements were coordinated with OGS and Army National Guard requirements.

Design Engineer for Primary System Rehabilitation for the Yonkers Joint Wastewater Treatment Plant for Westchester County Department of Public Works. Project involved the rehabilitation of several systems and facilities servicing the primary treatment system at the plant. Specific elements designed include the replacement of sludge storage tank mixing pumps; installation of mixing nozzles and piping in the sludge storage tanks; replacement of an air compressor for instrument air; design of an extherm for the destruction of waste sludge digester gas; replacement of the roof membrane and insulation on one of the sludge digesters; and building drainage improvements. Replacement equipment was designed such that operation of the existing system could be maintained during construction.

David Han, P.E.

Structural Engineer

EDUCATION

Bachelor of Engineering in Civil Engineering - Stevens Institute of Technology, Hoboken, NJ, 2008

CERTIFICATIONS

Registered Professional Engineer: New York

ACTIVITIES

American Society of Civil Engineers
American Institute of Steel Construction

RELEVANT EXPERIENCE

2007-Present
Structural Engineer - Responsibilities include work on numerous water, wastewater and building projects. All design work was in accordance with the New York State Building Code, New York City Building Code, including the appropriate seismic provisions, AISC Manual, and ACI Codes.

North River Water Pollution Control Plant – Cogeneration Design
Performed structural analysis of an existing steel framed, reinforced concrete structure to determine the maximum allowable loading in order to support new equipment associated with new pumps, motors and engines. Completed preliminary structural design of additional steel framing to an existing floor to support new motors.

New Rochelle Wastewater Treatment Plant – Upgrade and Expansion
Detailed structural design of all reinforced concrete and precast concrete components associated with the new BAF facility. This included N-Unit structures, DN-Unit structure, intermediate pumping state structure, UV Facility structure and NaOH structure. All structures were designed in accordance with ACI-350 - 2006.

Green Haven Correctional Facility, Wastewater Treatment and Water System Improvements, NYSOGS. Design services for improvements to the existing wastewater treatment plant and the water distribution system at the Green Haven Correctional Facility. The approximate 300,000 gallon per day wastewater facility includes preliminary screening, followed by extended detention in an aerated lagoon and ultraviolet light disinfection. The water system includes several pumped wells, a softening plant, storage tanks and a booster pumping station.

Westchester County Asset Management Program
Performed inspection of 19 pumping stations and five wastewater treatment plants to identify structural deficiencies in the steel and concrete facilities. The inspections included visual observation and sounding of concrete elements. All inspections were conducted in accordance with ACI inspection standards. The facilities inspected included:

- Below-grade tanks – grit removal, primary and secondary sedimentation, aeration, and disinfection.
- Above-grade tanks – sludge thickeners, primary and secondary digesters.
- Superstructures – process buildings, administration buildings, pump stations.

Inspections included identifying corrosion, cracks, section loss, misalignment, and other elements in need of repair. The repair of the deficient elements was prioritized based on risk of failure.

Canastota CSO Facilities, Canastota, New York
Detailed structural design of a timber pile supported, reinforced concrete Headworks Building and a steel H-pile supported reinforced concrete foundation for a glass lined CSO storage tank with an approximate capacity of 750,000 gallons.

Pleasantville Alum Plant – Caustic Soda Storage and Feed System
Structural design of reinforced concrete foundation associated with a new caustic soda containment building for the New York City Department of Environmental Protection.

Wards Island Water Pollution Control Plant – Concrete Evaluation
Performed concrete evaluations of multiple aeration tanks and grit chambers at Wards Island.

- Visual inspection and documentation of structural deficiencies.
- Utilized the Windsor Pin System to test for compressive strength of concrete.

New Rochelle Wastewater Treatment Plant – Upgrade and Expansion
Structural design of concrete and steel elements.

- Design of a multi-story steel framed building.
- Design of multiple new concrete structures (tanks, retaining walls, foundations) as well as rehabilitation and retrofitting of existing concrete structures.

Structural Engineer, Replace Water Tank and Replace Water Main at the Otisville Correctional Facility for NYS Office of General Services, Department of Correctional Services. Project involved the construction of a new water storage tank, the construction of new supply force mains and distribution water mains to connect to the existing distribution network, the installation of several pressure reducing valves throughout the existing network, the demolition of the existing water storage tank and the remediation of lead and asbestos contaminated soils.

Siphon Chamber Walkway Restoration
Performed field inspections and condition assessments for multiple siphon chambers.

- Inspections consisted of sounding of concrete elements, visual documentation of cracks, exposed reinforcing steel and areas of structural deficiency.

Catskill / Delaware Water Treatment Ultraviolet Light Disinfection Facility
Structural design of concrete elements (columns, beams, roof beams, structural slabs) for the flow meter chamber and valve chamber. This $1.2 billion project is the largest of its kind in the world.

New Baltimore UV Building
Structural design of a reinforced concrete foundation associated with a new UV disinfection facility at the New Baltimore rest area for the New York State Thruway Authority.

Delsa Fermin

Construction Inspector

EDUCATION

Masters of Science in Construction Management, Polytech University, 2010
Civil Engineering, Pontificie Universidad Catolica Madre y Maestra (PUCMM) Santiago, Dominican Republic, 2001

CERTIFICATION

ACI Special Inspector
Scaffold UserTraining, OSHA 10 hr, OSHA 30 hr, Confined Space awareness

COMPUTER SKILLS

Microsoft Excel, Microsoft Word, Microsoft Power Point, AutoCad, Primavera – P6

RELEVANT EXPERIENCE

2008-Present
Paerdegat Basin CSO
Civil Engineer/Inspector
Assist with construction management for DEP (Department of Environmental Protection) on Paerdegat CSO Project - Project included the construction of a waste water channel. Ms. Fermin's daily responsibilities in the field included the inspection of: Excavation, forms works, concrete placement, installation of reinforcement, backfilling for road construction, construction of road ways including sub-grade to asphalt finish and landscaping. Her responsibilities in the office were to inspect and coordinate with DEP throughout the project, from the onset of design, through the construction and finish work to maintain quality standards while maintaining a mandated schedule deadlines review. In addition, she was responsible for negotiation and coordination of any RFI / COR submissions from the General Contractor. Throughout the day additional responsibilities included monitoring of daily work activities throughout the project to maintain safety standards as outlined by the DEP, DOB and OSHA 1910 / 1926 regulation standards.

2006-2008
Professional Contractors, Inc.
Project Management
Assist with construction management responsibilities for retail store and office suite remodel projects. Duties included reviewing of blue prints for overlay conflicts between disciplines, site visits for quality control and problem solving, project turn over and generating of punch list for clients.

2002-2004
BP& Associates Santiago, Dominican Republic
Supervising Engineer

- Project management and supervision of residential and commercial projects. New construction for private residence and apartment complexes (general construction).
- Design solid waste removal system for land development projects.
- Project management for the installation of solid waste removal plumbing. Trouble shoot as required per field conditions to complete project at hand.

2001-2002
Marte Castillo Construction Co., Santiago, Dominican Republic
Supervising Engineer

- Project management and supervision of streets, curbs, gutters and sidewalks.

- Project management and supervision of waste and supply water systems to ready location for the general construction of residential dwellings.
- Project management and supervision of residential and commercial projects. New construction for private residence and apartment complexes (general construction).
- Completion of company payroll process for the projects directly supervised by writer.

2000-2001
Caraasan, Santiago, Dominican Republic
Project Manager/Superintendent

- Design solid waste removal system for land development projects.
- Project management for the installation of solid waste removal plumbing. Trouble shoot as required per field conditions to complete project at hand.

Ken C. Odum

RELEVANT EXPERIENCE

2000-Present
Construction Inspector – Port Authority of New York and New Jersey – Inspected and desk audited various port projects including:

Port Street and Brewster Road Connector.
New Jersey Marine Terminal Marine Rehabilitation.
New Jersey Marine Terminal Immediate repairs via Work Order.
New Jersey Marine Terminal Paving and Utility Via Work Order.
New Jersey Marine Terminal Multi – Facility Fender System Rehabilitation Via Work Order.
PN - 654.089 Maintenance dredging (Port Newark, Berths 18, 20 & 22)
MFP - 654.058A Maintenance dreging Port Newark and Elizabeth
MFP - 654 .126 NJMT Pavement and utility via work order
MFP - 954.701 NJMT Concrete roadway rehabilitation
MF - 100.538 NJMT Phase 111 CCTV camera system
MFP - 654.073 NJMT Priority marine rehabilitation via work order
MFP - 654.125 NJMT Asbestos and Lead abatement via work order

Mr. Odums responsibilities include:

- Multi-Facility maintenance dredging and berth deepening
- Port Newark container terminal berth deepening
- Paving and utilities at 1300& 2200 series
- Water main replacement at Maracaibo and Calcutta Streets
- Installation of marine terminal emergency warning system
- WTC emergency clean-up, steel removal operations and by weeks marine

- Tyler Street railroad track upgrade.
- Berths 2 through 36 wharf repairs (PN354.034)
  - Replace timber line and interior pile
  - Replace timber pile with post and concrete extension from pile cap to mud line
  - Clean and wrap timber piles
  - Clean and patch spalled concrete pile caps, deck soffit etc.
  - Install concrete jackets, replace broken or missing bollards, utility box covers and cleats
- Asbestos and lead abatement via work order (MFP 234.034)
- Replacement of water meters (MFP 954.566)
- Demolition of buildings 102, 110, 190, & 321 (PN 924.565)
- Building demolitions and construction of expressrail tracks 9 & 10
- Expressrail Elizabeth administration building (EP 384.060)
- Multi-facility fender system repairs via work order (MFP 954.911)
- Multi-facility wharf rehabilitation/reconstruction via work order (MFP 994.580)
- Immediate repairs (MFP 100.533)

1997- 2000
Inspector
- Construction management, for asbestos remediation, Queens midtown tunnel including, soil and water sampling and indoor air quality survey

1990-1992
Field Geologist
- Gravel and bedrock deposit field studies, including diamond drilling for road usage.
- Soil – Moisture content studies using Troxler

1986-1990
Field Geologist
- Mining Supervisor, involved in studying soil and rock characteristics and advised on best mining methods

1986-1995
Exploration Geologist
- Worked with team of geologist exploring and drilling for gold

RELEVANT EXPERIENCE

March '12-Present
Civil Inspector – DDC Rehabilitation Project, Brooklyn, NY. $20 Million Rehabilitation Project of sidewalks which covers all of the five boroughs - The project involves the rehabilitation of sidewalk, driveways, milling and paving in order to match the existing grade with the catch basins of catch basins. Responsible for the construction inspection for conformance with the plans and specifications, and reports any deviations to the Resident Engineer. Prepare and maintain daily construction inspection reports, progress of the work, crew size and composition, weather, equipment utilization, and all other information relative to the execution of the work. Maintain payment records, including the verification of the Contractor's time and material sheets, and assist in the review of the Contractor's partial payment requests. Maintain as-built drawings of the work, including any deviations from the contract drawings or approved shop drawings. Coordinate with the contractor towards the preparation of the CPM schedule. Monitor contractor's work progress based upon his approved construction schedule and report any deviation. Perform all other inspection and field duties as required by the Resident Engineer.

Oct. '09-Jan. '12
Civil Inspector – Techno Consult, Inc., Princeton NJ - $1.5 billion Newtown Creek Wastewater Treatment Plant, NY – The project involves the completion of significant upgrades to the structures and systems that treat wastewater from a combined sewage treatment system. Some of the project elements include improvements to the plant bar screens, electrical, plumbing, HVAC, and controls and instrumentation upgrades, new screening and control buildings, new barge facilities and site work. The plant was undergoing a major capital improvement and upgrade program to expand its intended capacity from 1.2 to 1.8 cubic meters per day – a 50% increase. Process improvements will result in dramatic reductions of biochemical oxygen demand (BOD), and will help bring NYC into compliance with the secondary treatment standards required under the Clean Water Act. Responsible for the construction inspection for conformance with the plans and specifications; prepare and maintain daily construction inspection reports; maintain payment records, including the verification of the contractor's time and material sheets, and assist in the review of the contractor's partial payment requests. Maintain as-built drawings of the work, including any deviations from the contract drawings or approved shop drawings and monitor contractor's work progress based upon his approved construction schedule and report any deviation.

Jul. '04-Sept. '09
Civil Inspector/Cost Engineer - $155 million Delaware Aqueduct Rehabilitation of Shafts 9, 10 & 18 for NYCDEP, Carmel/Kent, New York – The project consists of replacing all existing sluice gates and operators; Remediate hazardous materials including lead paint, asbestos, mercury, and PCBs; Replace existing incremental valves and piping; Replace existing manually cleaned screens with mechanically cleaned screens; Install a new chlorination feed system in a building addition; Install a chlorine gas scrubber; Replace all un-watering and sump pumps; Replace house water system, including a new separate potable water system; Construct a new water quality station; Provide improved entrance and parking area; Install a new emergency power generator in a dedicated structure; Dredge influent channel of sediment; Upgrade electrical and HVAC systems; Replace chemical feed and storage facilities, including chemical unloading stations; Replace all un-watering and sewage pumps; Install a new water quality station; Install a separate potable water system; Replace the flat roof over the Operator Building; Install an emergency power generator in a dedicated structure; Provide improved entrance and parking area; Upgrade electrical and HVAC systems; Stabilize eroded embankment.

As a Cost Engineer, Mr. Warsi was responsible for checking and reviewing certified payroll, prevailing wages and daily report with the Inspector's Reports; Checking quantities and the percentage of work done during the month at different sites to make sure that they are correctly presented in the requisition; verify pencil copy of the invoices with the Site Representative and notify the contractor of any deviation to be incorporated in the final copy of the Invoice; Send out request for Insurance verification for the contractor and their sub-contractors to NYCDEP; Review final copy from the pencil copy and start processing payment and update payment log in the system and make power presentation for NYCDEP Auditors.

As a Civil Inspector, he was also responsible for supervision and inspection of structural steel, placing and splicing of rebar, quality and quantities of reinforced concrete in compliance of project specification. Supervision of storm water and sewer water pipes (gravity & force main) inverts and elevations of distribution network containing of pump stations man holes and cleanouts. Supervision in storm water prevention protection plan, supervision of site safety and assure local and state regulation, assisting Deputy Resident Engineer, interfacing both, site main office and field office. Also responsible for keeping track of scope of work, machinery, man power and T&M items, supervision of demolition work and disposal of debris according to city and state regulation.

Mar. '03-June '04
Civil Inspector - $25 million Kensico Flow Improvement and Contr. Project, Upstate New York - The project is divided into three phases: Phase I– Construction of a Dividing Wall Buttress at Hillview Reservoir Phase II– Kensico Flow Control Modifications, construction of the Flow Control Structure. Phase III– Construction of the Hill view Cover. Flow Control Modifications - Shaft 18 & 19. The new structure includes access man-ways for inspection of the structure and accompanying supply conduits as well as stop plank grooves with removable concrete planks at the ground elevation for isolation of the supply conduit sluice gates. The structure will also include a connection with piping and a blind flange for a future drinking water connection for the Town of Mount Pleasant and a similar connection for a water supply to a future water fountain in the existing Aerator. Proposed modifications to Shaft 19 of the Delaware Aqueduct consist in removal of the existing concrete weirs and provision of a new vent structure at the shaft if necessary. These modifications will reduce head losses through the structure, and increase the flow discharge capacity of the aqueduct. Responsible for the construction inspection for conformance with the plans and specifications, and reports any deviations to the Resident Engineer. Prepare and maintain daily construction inspection reports, progress of the work, crew size and composition, weather, equipment utilization, and all other information relative to the execution of the work. Maintain payment records, including the verification of the Contractor's time and material sheets, and assist in the review of the Contractor's partial payment requests. Maintain as-built drawings of the work, including any deviations from the contract drawings or approved shop drawings. Coordinate with the contractor towards the preparation of the CPM schedule. Monitor contractor's work progress based upon his approved construction schedule

and report any deviation. Perform all other inspection and field duties as required by the Resident Engineer.

July '01-Mar. '03
Civil Engineer/Inspector - $25 million CSO Abatement Project for the City of Newark, New Jersey. The project was spread out in phases. Phase: I consist of sewer separation projects in the Third Avenue, Orange Street and Bridge Street drainage areas. Specifically, this phase involves the installation of sanitary and storm sewers, cleaning of storm sewers and modifications to existing regulators. Phase II will include the removal of illegal connections from storm sewers in the Meadowbrook, Oriental, Brown, Lockwood, Blanchard, and Haynes Avenue drainage areas, and Phase III includes the construction of ten (10) screening facilities covering 14 outfalls, one each in the Verona, Delevan, Herbert, Fourth, Clay, Rector/Saybrook, City Dock, Jackson/Polk, Freeman and Roanoke drainage areas and four (4) in-ground netting facilities covering 6 outfalls, one each in the Adams, Wheeler, Queen and Waverly drainage areas. Responsible for performing construction inspection for conformance with the plans and specifications, and reports any deviations to the Resident Engineer. Prepare and maintain daily construction inspection reports, which shall indicate the Contractor's work activities, progress of the work, crew size and composition, weather, equipment utilization, and all other information relative to the execution of the work. Maintain and update shop-drawing log; coordinate with the field and the design team to resolve conflicts in the drawings; review contractor's Monthly Requisition to conform the percentage completion of pay items. Coordinate with contractor and the Maintain as-built drawings of the work, including any deviations from the contract drawings or approved shop drawings. Perform all other inspection and field duties as required by the Resident Engineer.

Feb. '01-July '01
Construction Inspector – Rehabilitation of Betsy Ross and Commodore Barry Bridges – Delaware River Port Authority, Maple Shade, New Jersey. Responsibilities included performing construction inspection for conformance with the plans and specifications, comprises removal of defective bearing stiffener/plates made of soft metals for main columns, purlins, under deck repair work using special type of the boom lift, truss railing repair work, studs replacement, jacking bridge to desired height in order to replace the main bearing plates, localize paint removal, excavation, embankment, erosion control, landscaping, seeding & sod, planting, hot mix asphalt pavement, traffic control on Authority Roadway, disposal of hazards material as per city & state regulations and report any deviations to the Resident Engineer. Prepare and maintain daily construction inspection reports, which shall indicate the Contractor's work activities, progress of the work, crew size and composition, weather, equipment utilization, and all other information related to the execution of the work. Maintain and update shop-drawing log; coordinate with the field and the design team to resolve conflicts in the drawings; review contractor's Monthly Requisition to conform the percentage completion of pay items. Coordinate with contractor and the Maintain as-built drawings of the work, including any deviations from the contract drawings or approved shop drawings. Perform all other inspections and field duties as required by the Resident Engineer.

Feb. '00-Feb. '01
Construction/Materials Inspector – Projects: Philadelphia International Airport, PA Pharmaceutical Laboratory – Building #123 & 127 for Hoffman LaRouch – Nutley, NJ and Ryders Crossing Shopping Mall – East Brunswick, NJ – Involved in materials testing and inspection of concrete and steel rebar, asphalt, soil, concrete, for taxiway at Philadelphia Airport, Responsible for quality assurance on highway and bridge rehabilitation projects including inspection and testing material (Asphalt and concrete field and lab), CBR test, soil classification, footing bottom, rebar, fireproofing, pulltest piles, soundness of fine and coarse aggregates, abrasion resistance of stones. Mr. Warsi was responsible for performing construction inspection for conformance with the plans and specifications, and reports any deviations to the Resident Engineer. Prepared and maintained daily construction inspection reports, which indicated the Contractor's work activities, progress of the work, crew size and composition, weather, equipment utilization, and all other information pertaining to the execution of the work. Maintained and updated shop-drawing log, review contractor's Monthly Requisition to conform the percentage

completion of pay items. Coordinated with contractor and Maintained as-built drawings of the work, including any deviations from the contract drawings or approved shop drawings. Performed all other inspections and field duties as required by the Resident Engineer.

1988-1997
Project Engineer – Projects: Police Officers' Housing Complex, Karachi, Pakistan, Pipri Thermal Power Station - Responsible for overall project management and close coordination with various Petty Contractors for the projects services and material quality, execution of entire projects of the civil work as well as mechanical and electrical sides of project, making, estimation and costing of the project management, checking of main reinforcement of the building prior to concreting, designing of concrete as requires by the drawing and specification, checking all dimensions of the formwork and structural member and positioning of reinforcement bars, preparation of concerned specimen for compression test and performance of the concrete, carrying out inspection of batching, mixing, placing and curing of concrete as per drawing & specification, making and checking of Bill of quantities, and facilitated the site activities in a professional way.

1986-1988
Civil Engineer – Construction of Qassim Cement Factory – Responsible for carrying out refractory work, routine maintenance of civil work in the different zones of Kiln, cement and cooling. Was also involved in the maintenance and renovation work carried out for the staff quarters and offices located in the colony and plant area.

1984-1986
Quality Controls Engineer – Project: Sudair Water Supply Project, Sudair, Saudi Arabia – Responsible for carrying out all types of test for civil work, laying out main water transmission lines of ductile iron pipes, distribution network of PVC pipes and fire hydrants, carrying out compaction tests, compression tests, and pressure tests for the pipes, checking of levels, and surveying of the project; carrying out daily report of civil work, scheduling different works in connection with masonry, plastering, tile work, checking of placement of reinforcing steel prior to pouring of the concrete, and performed checking of elevations and coordinating with the electrical and mechanical trades. Maintained as built drawings at the end of the project.

David Post

Civil/Structural Construction Inspector

EDUCATION

Associate Degree in Civil Engineering Technology – I.C.S. Center for Degree Studies, Scranton, PA
Butler High School, Butler NJ

SKILLS & AFFILIATIONS

Auto Cad R14 (Sussex Vo-tech Certified Auto Cad course (1994)
OSHA, BOCA and MESHA Codes
The Construction supervisor Building Contractors Assoc, NY
ACI Certified Special Inspector

RELEVANT EXPERIENCE

David Post of Savin Engineers was recently promoted to a supervisory role for all night operations on various construction contracts at the Port Authority's PATH facilities. Mr. Post has over 24 years of experience in construction management and inspection and has been working on PANYNJ projects for over 5 years. His experience includes train station construction work as well as a variety of buildings types. He is an ACI Certified Special Inspector.

2008-Present
Construction Management Term Agreement, PANYNJ – Responsibilities included:

- Supervise, direct and provide technical support for Electrical Contractors on Homeland Security construction projects located throughout the entire PATH train station and tunnel system.
- Provide coordination between related PATH construction projects.
- Supervise work train movements and placement by coordinating with the contractor and providing direction to the assigned train crew.
- Coordinate tunnel and train station construction work with various PATH personnel (Train Masters, Power Rail Men, Communications Department, Signal Department, Yard Masters, Dispatchers, Surveyors, other EIC's)
- Provide Assistant Resident Engineer with written reports (Spreadsheet format) and mark-up pictorial reports of project progress and deficiencies.
- Evaluate and mark-up monthly Payment Requisitions.
- Evaluate submittal logs.
- Provide electrical inspection of contract work performed.

2004-2008
Project Manager – Chrisdon Homes, Inc. – Chrisdon Homes is a general contracting company specializing in construction of pre-fab homes in the $200K to $800K price range. As Project Manager, his responsibilities include:

- Site preparation and foundation design
- Subcontractor negotiations
- Building construction operations
- Material procurement and scheduling
- Specification and Contract Compliance
- Final Inspections

2003-2004
Project Manager – RSA Enterprises, Inc. – RSA is a construction management company specializing in commercial and residential projects in the 1 to 20 mil. dollar range. Project manager for a $2.5 million project at a prestigious New Jersey Golf and Country Club and a $2.1 million jewelry center. Responsibilities included:

- Budget estimated
- Project scheduling
- Site preparation
- Customer relations
- Building construction operations
- Subcontractor negotiations
- Material procurement and scheduling
- ADA compliance
- Change orders-formulation and negotiation
- Specification and contract compliance
- Final inspections

1987-2000
Construction Engineer & Lead Designer – Worked as group lead designer and construction engineer for projects in the 1 to 60 million dollar range, for power plants, mining and quarry operations. Designed bulk material, handling conveyors, steel and concrete structures and g.a.'s with design teams of 5 to 25 employees.

RELEVANT EXPERIENCE

Senior Structural Inspector on structural, civil and mechanical work with over 13 years experience. Perform detailed inspection of construction work, including rebar installation and concrete pours, to ensure compliance with contract documents, resolve field issues and record quantities and activities.

2011-Present
New Rochelle Wastewater Treatment Plant, New Rochelle, NY
Senior Structural Inspector for Composite Performance Implementation and Plant Expansion and Biological Nutrient Removal Contracts at the 20 MGD, New Rochelle Wastewater Treatment Plant. Total Construction value of the 2 construction projects is $235 million. Project work includes replacement and upgrade of all existing plant process equipment including; headworks, primary clarifiers, pure or secondary treatment and final clarifiers, new electrical service, odor control and solids handling. Biological Nutrient removal project includes new construction of a BAF and UV process trains.

2010-2011
New York City Health and Hospitals Corporation, Queens Hospital
Structural inspector for this $5 million upgrade for a new wing to the Queens Hospital Center. The work included structural excavation and backfilling, temporary sheeting and bracing, 2 new reinforced concrete 27 kV duct banks, a new reinforced concrete retaining wall, storm and sanitary sewer work, and miscellaneous concrete repair work. All concrete work was checked for conformances with ACI 318 and NYC Building Code.

July-December 2009
NYCDEP, Wards Island
Concrete Aeration Tanks Upgrade, modifications, improvements and repairs. Mr. John's work included repairing damaged reinforced concrete y-walls, tank floors, installed new expansion joints, baffle walls, as well as new concrete handrails, and structural support towers for process air piping and headers. New Electrical Substations – Installed piles, foundations, grade beams, steel structural-framing, curtain & masonry walls, roofing, equipment, switchgears and transformers.

Jan-June 2009
New Rochelle WWTP - Senior Structural Inspector for the demolition of obsolete structures and equipment. Work included the removal of outdated equipment and piping, including two former sludge incinerators and their associated pollution control equipment. Coordination of contractor's activities with ongoing plant operations including shutdowns and treatment systems isolation to facilitate demolition activities. Senior Structural Inspector for structural evaluation and repair design for existing steel framing for sludge processing building. Included field inspection and measurements analysis of capacity of deteriorating steel members.

2008 (Vacation Coverage)
Yonkers Joint Treatment Plant, Primary Digester Roof Replacement
Senior Structural Inspector for the Yonkers Joint Treatment Plant, Primary Digester Roof Replacement project. The project consisted of the removal and replacement of the aging steel dome roofs on three anaerobic sludge digesters. Work involved close coordination with plant personnel and the removal contractor as well as the installation of shoring towers and support trusses to secure the roof during removal and the placement of a 330-ton crane for removal of the entire dome assembly as one unit.

2007–2008
Henry Hudson Bridge, TBTA, New York
Senior Structural Inspector for deck replacement of the Henry Hudson Bridge. Supervised inspection of coating application for the protection of structural steel and concrete. Specific elements included inspection of:

- Deck reinforcing and concrete placement and expansion joint installation
- Concrete repairs to existing north abutment wing walls
- Sandblasting and surface prep of existing structural steel
- Metal pan deck installation
- Replacement of navigation lights for bridge.
- Installation of temporary gantry crane hoist on Bridge
- Placement of new lighting control system for bridge.
- Miscellaneous steel repairs

2005-2006
Brooklyn Battery Tunnel Roadway Rehabilitation, TBTA New York
Structural Inspector – **Brooklyn Battery Tunnel.** Mr. John performed inspection on the Brooklyn Battery Tunnel Roadway Rehabilitation Project. Most of this work was performed at night. He performed inspection to ensure compliance with Contract Documents, resolve field issues and record quantities and activities. Inspection included: significant under deck concrete repairs including cathodic protection, placement of 6" ductile iron dry stand pipe embedded in a 24" x24" horizontal trench located on the west wall of the tunnel.

2001–2005
Civil/Structural Construction Inspector – NYSDOT Project - Reconstruction of the Cross Island Parkway and Long Island Expressway Interchange. Inspected pours of 50 year Concrete pavement ramps and on grade work at Interchange, Conducted concrete testing on site (i.e. slump, air, temp., and cylinders). Inspection of pile driving operation for Abutments. Oversaw Pile Driving Operation for S-6 State II (silent pile driving), Drainage, placement, and compaction of subbase. Inspection of asphalt, nighttime MPT inspector. Supervise Jr. Inspectors on various field inspection operations. Inspection of North Abutment Footing. Preparation of take-offs for various items for "order on contracts" and review information with contractor. Participate in field and office meetings with contractor and office personnel. Prepare schedule for daily operations for inspectors.

2001
Sewer Line and Water Main Installation Inspection – Project: HWKP 131 74th Street Brooklyn, NY- Duties included:

- Inspection of installation of sewer line and water main for residential area.

2000-2001
Bridge Construction Inspection – Project: HBK 1051/1052 Third Avenue & Ridge Boulevard Bridges Brooklyn, NY – Duties included:

- Inspection of full demolition of two mason and stone bridges and replacement with precast concrete arch bridges.

1998-1998
Bridge Construction Inspection – Project TANY 97-65B Tappan Zee Bridge Tarrytown, NY – Duties included:

- Inspecting of underwater concrete cutting and core drilling
- Inspection of the driving of 48" pipe piles
- Inspection of underwater concrete placement
- Inspection of bridge painting, including blasting
- Inspection of placement of scaffolding and lead containment for lead paint removal

1999-1999
Bridge Construction Inspection – Project TANY 97-46BP Tappan Zee Bridge, NY – Duties included:

- **Inspection of the marine placement of structural steel members**
- **Inspection of bolted and welded connections**
- **Inspection of the driving of H-piles**

1997-1998
Structural Construction Inspection – Project TANE95-30 I-95 Larchmont, NY – Duties included:

- **Inspection of concrete, asphalt, and subbase placing and testing**
- **Inspection of grading of surface, painting of structural concrete with protective coating**
- **Inspection of placement of under drain systems, and reinforcement bars for concrete placement**
- **Inspection of demolition of concrete decks**

RELEVANT EXPERIENCE

2011-Present
Structural Inspector - New Rochelle WWTP - Composite Performance Implementation and Plant Expansion
Structural Inspector for the $235 million plant upgrade and BNR upgrade at the New Rochelle Wastewater Treatment Plant. Performed inspection of erection of a multi-story structural steel framed building. Ensured steel sections were erected in accordance with the plans and specifications. Witnessed torque-testing of bolted connections and radiographic testing of field welds. Assisted in preparing change orders for modified steel connection details as a result of field conditions.

2006 - 2011
Field Inspector (Civil & Mechanical) – NYCDEP Paerdegat Basin CSO-4B Facility Project - Responsibilities include: Daily inspection of quality assurance and quality control of small and mass concrete placement during cold and hot weather conditions to within ACI, SOP, shop drawing and job specifications for a 20 million gallon CSO storage tank slabs, walls, pipe cradle and road base. Daily inspections include:

- Reinforcing steel
- Concrete formwork
- RCP piping installation
- Water proofing
- Concrete finishing
- Removal of mass earth material off site
- Dredging of canal

CSO-5G – Responsibility included daily inspection for quality assurance and quality control of small and mass concrete placement in cold and hot weather conditions to within ACI, SOP, shop drawing and job specifications for connection into existing as well as new CSO system and new plant facilities and garage facility department for DEP. Daily responsibility inspections were as follows:

- Reinforcing steel
- Concrete formwork
- RCP piping installation
- Demolition of existing building and tide gates
- Installation of site security and ornamental fencing
- Day and night roadwork
- Building equipment pads

- Road base
- Asphalt placement (site and road)
- Concrete encasements of building columns
- Site planting of trees and flower vegetation
- Sidewalks and curbs for facility and city roadways

CSO-5H – Responsibility included inspection to within SOP, shop drawings, contract drawings, and job specifications on installation for boil heat piping system and HVAC units with ductwork installation within the office, garage and processing plant for DEP CSO facility.

CSO-6 – Responsibility included daily inspections to within SOP, shop drawings, contract drawings, and job specifications of a nature preserve and ecology center within the borough of Brooklyn. Daily inspections included the following:

- Excavation and removal of mass earth material off site to contract grade drawings
- Excavation and removal of contaminate material
- Removal of tree and invasive vegetation
- Rough grading to contract drawings
- Installation of reinforced silt fencing and debris exclusion fencing along shoreline.

2002 - 2006
Concrete Placement Inspector – NYC DEP QAS Concrete Placement Inspector (Batch Plant and Field) – Responsibilities include:

- Overseeing field-testing and placement on various NYC DEP concrete job sites.

2001 - 2002
Lab Technician Assistant – Responsibilities include:

- Removal of molds from concrete, capping of concrete, and strength testing of PSI in concrete.

1998-2001
Sales Representative – Long Island Paneling – Responsibilities include:

- Supervising customer relations, sales, coordination of building materials to be delivered to construction sites, and reviewing of blueprints and specifications.

1996-1998
Construction Worker – Rooney Brothers Corporation – Responsibilities include:

- Construction of private homes and businesses, including framing and extensions, review of blueprints and specifications, as well as building concrete patios and steps.

Hany Costandy

Construction Inspector

EDUCATION

Bachelor in Mechanical Engineering – Alexandria University, 1994

SKILLS/LICENSES

Computer skills
ISO 9000
ACI Certified Inspector
NJ DCA Special Inspector License
NJ Licensed Inspector for Concrete Placement
NJ State Licensed Inspector for Reinforced Concrete Inspection

RELEVANT EXPERIENCE

February 2014-Present
Project Manager – SCA, DASNY, NYCH projects.

June 2010-Present
Project Manager – Cameron Group, Bayonne, NJ – Responsible for monitoring and coordinating between the different trades and contractor on the job site.

- Generate and approve all change orders
- Observing the quality of work done on the job and trying to keep the time schedule.
- Writing daily reports.
- Schedule the project in logical steps and budget time to meet deadlines
- Inspect and review projects to monitor comp0liance with building and safety codes and other regulations
- Interpret and explain plans and contract terms to administrative staff and clients
- Prepare contracts and negotiate revisions, changes and additions to contractual agreements with architects, consultants and clients.
- Negotiate Sub-contractors agreements
- Supervise Subcontractors and coordinate their material deliveries
- Supervise Superintendent and staff on the project
- Coordinate with Owner and Owner's Representative requested revisions or errors on drawings and documents.
- Participate in inspections and preparation of punch lists.

2012-2014
Senior Project Manager/Head of Inspectors – Craig Testing Labs, Mays Landing, NJ – Performed site inspections such as concrete sampling, slump, temperature, unit weight, air content (volumetric and pressure methods), rebar inspection (geotechnical probe test), soil compaction tests (nuclear gauge test), soil bearing capacity (dynamic core penetration test). Masonry inspection (Mortar, rebar, grout-durra wall), pile driving inspection, asphalt testing, writing daily reports and organizing work between contractors on site. Report all discrepancies to the contractor, construction manager and structural engineer. Training new inspector to be qualified to work on site and to be qualified for ACI test. Also observing the contractors work and make sure they follow the job specs and requirements.

2004-2012
Head Quality Control Construction Inspector – Atlantic Engineering Labs, Rahway, NJ – Performed site inspections such as concrete sampling, slump, temperature, unit weight, air content (volumetric and pressure methods), rebar inspection (geotechnical probe test), soil compaction tests (nuclear gauge test), soil bearing capacity (dynamic core penetration test). Masonry inspection (Mortar, rebar, grout-durra wall), pile driving inspection, asphalt testing,

writing daily reports and organizing work between contractors on site. Report all discrepancies to the contractor, construction manager and structural engineer. Training new inspector to be qualified to work on site and to be qualified for ACI test. Also observing the contractors work and make sure they follow the job specs and requirements.

1994-2004

Assistant to Purchasing & Technical Manager – Globe Automotive Import – Middletown, NY – Worked with the Purchasing Manager in issuing all the purchase orders and placed them with domestic and foreign suppliers (European, South America and Asian suppliers), negotiate prices with suppliers while maintaining quality; categorize new parts on the online catalog, add the applications for each part; research Mercedes Benz, BMW, Audi and VW on line catalogue to find new items and add to the inventory. Solved all technical problems with customers and sales team.

Alex Serebrennik

Sales Construction Inspector

CERTIFICATIONS

Boating Safety 2011, OSHA 10 Hours 2011, NJSA 2011, Certified Concrete Filed Testing Technician 2010, Concrete Construction Special Inspector 2011

RELEVANT EXPERIENCE

Highly motivated valuable team-player, fast learning inspection professional with many years of hands-on experience in roads construction industry, very creative, versatile problem solver, aggressive and able to lead seeking a construction inspector position where a valuable construction can be made.

Senior Construction Inspector
NJDOT – Route 35, Restoration (Sandy Restoration) (MP 9.0-12.0) Borough of Mantoloking & Bay Head)
(Sub-contract to Ammann Whitney, Senior Construction Inspector – on a 39 Mil Restoration Project, Inspect General Contractors work involving drainage work (New Drainage Inlets) 4 Pump Stations, upgrading of existing water and sewer mains (Laterals), removal of Existing concrete pavement, new curb/sidewalk, new asphalt pavement, landscaping and TC. Provided video inspection of sewers and hydrostatic pressure tests of the water main. Existing High water table warranted dewatering activities throughout utility excavations. Perform force account monitoring, provided Inspection to 4 Pump Stations.

NJDOT – Weldon Road – Espanong Road Over Route 15 Jefferson Township Contract #MOE113210 Bridge Deck Replacement.
(Sub-Contract to Dewberry) Senior Construction Inspector responsible for Bridge Deck Replacement along with most able Stages on Espanong Road – Weldon Road. Major and complex Removal Deck Replacement, new armor joints, reinforcement steel installation, partial wing wall replacement, parapet, bridge sidewalk, concrete median Center, fence, vertical spall and pier cracks repair and waterproofing, drainage, roadway milling, pavement restoration, surveying structural grades and road alignment. Maintained the purity of the road under the bridge, preventing it from contamination from leaking flows of slurry from the bridge. Involved in MPT Construction Signs installation MPT detours / lane shifts. Assisted the review of shop drawings written procedures and miscellaneous assignments. Successfully cooperate with safety inspector form the NJDOT, fixing all deficiencies and responding to their comment.

Construction Inspector
NJTA, Roadway Improvements at Garden State Parkway and Interchanges 157 and 161. Grading, Paving, and lightning.
Construction Inspector for Contract P300.213 the Authority widening project, electrical and drainage improvements. This project was performed along one of the busiest sections of the GSP and has to goal to reduce a traffic bottleneck at Exit 157 of GSP S.B. and upgrade the lighting systems over Exit 161 of GSP S.B. and N.B.
Responsibilities included supervision/ inspection of construction and quality control activities for earthwork, embankment improvement, sidewalks, driveways, and curbs, new drainage network construction, new electric installation, roadway lighting systems, replacement of existing utility pole mounted lighting with NJTA standard lighting facilities. ITS and facilities, roadway reconstruction, asphalt milling and paving, baseline control, staged construction including extensive maintenance and protection of traffic, signing and striping, utility lines installation under the bridges. Responsibilities also included submittals, daily reports and shop drawings review, filed testing of construction materials.

Senior Construction Inspection
Montville, NJ
Hudson County NJ Rehabilitation of 3 Span Arch Bridge over West Hudson Park Lake. This 6 month widening construction project is being performed in West Hudson Park in Kearny, NJ over the Park's Lake. Responsibilities included supervision / supervision inspection of construction and quality control activities involved the reconstruction and widening of the3 span arch bridge, demolition of old bridge structures and clearing from trees and vegetation. Also included construction of a temporary bridge structure which included modifying the approach to the bridge and adding steps to the stair, installation of girders and other structural streel constructions, pile driving, construction of retaining walls, substructures, and bridge piers.

Structural steel and pre-cast concrete plants inspector
July 2010 to June 2011
NJTA Interchange 6-9 Widening Program and GSP Mullica River Bridge
For clients such as AECOM, PB, IEW, HARMS, RENCOR and other, conducted inspection of precast plants manufacturing for different related projects. Inspected a lot of pre-cast plants in NJ, Maryland and Pennsylvania such as: M & M Precast, Inc., North East, MD; Old Castle Telford, PA; Faddis Concrete Products, PA; NorthEast Precast, Millville, NJ; Concrete Safety Systems, LLC, Bethel, PA etc. Controlled the manufacturing of noise reduction barriers panels and posts, traffic control barriers and different MSE wall panels for different projects (101, 102, 103, 201, 203, 501, 502, 801, 802 etc.), inspected production of culvert boxes for Turnpike. Verified the panel's dimensions with shop drawings and verified their position on Wall elevation's drawings.

Controlled fabrication, welding, cleaning and blasting, galvanized and paint coatings of different steel units such as bridge girders and their parts, piles. Also inspected sign supports used on NJ Turnpike and Garden State Parkway such as butterflies, cantilevers and overheads within a whole process of their manufacturing from the beginning until the shipping. Also inspected quality of manufacturing pre-cast concrete units such as different slabs, sewage units, drainage structures, checked spacing and placement of rebar configuration and their set into forms pursuant to plans; reviewed QC's monthly records for moistures for sand and aggregate and audited the gradation certifications for the concrete aggregate products, cement and reinforcement steel. Controlled consistency of suppliers. Prepared and submitted daily inspector reports to clients providing them with stage of readiness and quality of their products, etc.

Mark Zaki

Construction Inspector

CERTIFICATIONS

ACI Concrete Construction
ICC Structural Masonry

SKILLS

AutoCAD (Structural Drafting), SAB2000 (structural analysis), ICDL (Windows, Word, PowerPoint, Excel, Access, Outlook and IT), Surveying Equipment (Totalstation, GPS, Theodolite, Level, Planemeter and Steroscope)

RELEVANT EXPERIENCE

2012-Present
Special Inspector – Queens, NY – Responsibilities include:

- Soil compaction and asphalt inspection and testing using Troxlar
- Concrete and rebar inspection
- Structural Masonry

Douglas Barillas

Construction Inspector

EDUCATION

High School
Instituto Tecnico Vocacional – Guatemala, 1993

SKILLS/CERTIFICATIONS

Welding – SMAW, GMAW, GTAW, FCAW, SAW
CWI (Certified Welding Inspector), ICC Bolting Inspector

RELEVANT EXPERIENCE

Mr. Barillas has over twenty four years of experience in the inspection of structural steel and other steel and metal fabrication. He is a certified welding inspector and is familiar with a variety of welding methods and procedures. He has excellent communication skills and proficient at preparing proper field reports and documentation.

June 2013-Present
Field Inspector – Duties include but not limited to visual inspection of structural steel, field welding and shop welding and high strength bolting inspection. Performed inspection of structural steel installation, welding, bolting and repairs. Inspected columns, beams, girders, splices, connections and field modifications.

April 2005-June 2013
Leadman/Inspector – Leadman/Field Inspector on numerous steel construction projects throughout the New York Metro Area. Projects included: The New York Times Building, Goldman Sachs Building, World Trade Center Tower 1 and Tower 4 and the PATH Transportation Hub.

November 2001-April 2005
Welder Fabricator and Steel Erector – Custom Steel, Kearny, NJ – Worked as a welder and was promoted to layout/fitter. Responsible for fabrication of steel stairs, hand railings, beams and columns. Also worked on the fabrication of aluminum and stainless steel hand railings. Extensive experience in reading and interpreting detailed installation drawings.

May 1997-November 2001
Leadman/Customer Service – Cargo Logistics, Carteret, NJ – Started working on picking and packing. In one year he was promoted to Leadman overseeing 7 people. Also worked in the office as customer service rep.

June 1996-April 1997
Welder/Fitter – Pam International, Garfield, NJ – Worked as a welder/fitter in a production shop using GMAW and GTAW.

Albert Wong

Construction Inspector

EDUCATION

Bachelor's Degree in Aircraft Engineering, The Chelsea College of Aeronautical & Automobile Engineering, UK
Diploma – Major Aero-engines, Instruments, Sheet Metal Work, Electrical & Hydraulic Equipment, Far East Flying & Technical School, Hong Kong, China

QUALIFICATIONS/CERTIFICATIONS

Certified American Welding Society Welding Inspector (CWI)
International Code Council (ICC) Registered Special Inspector for Structural Steel & Bolting
Non-Destructive Testing: SNT-TC-1A (U.T., M.T., P.T. Level II, E.T., R.T. Level I)
Welder's Qualification Test (Q2) in according with ABS procedures

MEMBER

The American Society for Non-Destructive Testing
The American Welding Society
The American Society of Metal
The Hong Kong Institute of Engineers
The British Institute of Non-Destructive Testing (Licensed member)

RELEVANT EXPERIENCE

2010-Present
Construction Management, Engineer, Architecture, Land-surveying, & Material Testing – NY EPA, City Tunnel #3, Stage 2 – Special Inspector for welding, structural steel and bolting – New York, NY – Responsible for witnessing testing and inspection of:

- Welding Certification Test
- Welding Procedure Test
- Welding of stainless steel pipe, carbon steel, pipe, galvanized steel pipe
- Hydrostatic test of pipe systems on pipe size from 1" to 48" in diameter
- Cathodic Protection Test (Corrosion Protection Test of carbon Steel)
- NDT, RT, PT, UT, and RT Film Interpretation
- Structural steel erection and welding
- High strength bolts installation of skid more test
- Aluminum grating and support installation and welding
- Heating and ventilation pipe and support installation and welding
- Load test of telescoping monorail, jib crane, personnel transport elevator
- Installation of chemical grouting, expansion anchor bolt
- Verification of calibration certificates of testing instruments

2006-2010
Quality Control Engineer (Structural Steel) - Fluor EPCM Services – Phoenix Constructors – **World Trade Center Transportation Hub** – New York, NY – Responsible for the management of a comprehensive quality control program for the $4 billion project.

- Led the processing audit on contractors and the documentation and issuance of the non-conformance reports
- Accountable for the review and implementation of the contractor's submittals, quality control program, welding procedure, welder certification record, structural steel erection procedures and punch list record.
- Led the coordination and client interaction for special control inspection and testing, AS destructive testing, non-destructive testing, high strength bolt pretension testing, fabrication ship inspection, and the corrosion protection testing of structural steel and piping.
- Managed surveillance of daily site activities for welding, bolting, and erection of structural steel.

- Managed the relationship with key client management (project manager level) and kept them adequately informed with the timelines and status of required corrective activities.
- Ensured that the contractor's quality personnel are in compliance with the current quality control program
- Permits and certifications obtained in relation to this project:
    - World Trade Center Transportation Hub Security Clearance
    - MTA NYCT track safety training
    - The PATH/The Port Authority of NY/NJ Roadway Worker Protection Training
    - OSHA 10 hour & 30 hour Safety Training

1998-2006
Senior QA/QC Inspector (Structural Steel) – U.S. Engineering Laboratories, Inc. - In charge of the inspection and surveillance of construction work to ensure compliance with contract stipulations.

- Responsible for witnessing various tests and surveillance of operations for fabrication and erection of structural steel work.
- Led the tracking and review of all contractor testing reports and material testing to ensure conformance with specifications.
- Managed project progress and documented problem areas in preparation for the submission of progress and inspection reports.
- Projects for which the above was performed include:
    - Conoco Phillips Bayway Refinery – Linden, NJ
    - Hudson Bergen Light Rail Transit System – Various locations, NJ
    - Merck & Co. – Research Building 820 – Rahway, NJ
    - Battery Tunnel and Mid-town Tunnel Exhaust System – New York, NY
    - Tri-Borough Bridge – New York, NY
    - George Washington Bridge – New York, NY
    - Newark Liberty Int'l Airport, North Cargo Building – Newark, NJ

1995-1998
Defense Contractor/Inspector – Led the quality control group in mechanical measurements, daily in-process inspections, equipment set-up and calibration, and results documentation.

- Responsible for salt spray testing, powder coating, in-coming inspections, final inspections, corrosion protection, and NDT inspections including U.T., M.T., P.T., and E.T.

1992-1995
Supervisor – Non-Destructive Testing Corporation – Responsible for quality control and carrying out all NDT inspections Led R.T., P.T., U.T., M.T., destructive testing, bend testing, hardness testing, and tensile testing.

- Monitored welding procedures and welder qualification tests
- Managed client relationship and acted as liaison between the testing group and the clients.

1987-1992
Contract Manager – Harley System Ltd. Space Frames – Managed engineers' work plan with regards to preliminary scheme design, costing, and erection procedures.

- Monitored factory production, site welding, and daily site activities to ensure compliance with contract terms
- Primary liaison between the architect and engineering team to deliver successful and timely project completion.

1982-1987
Structural Welding Surveyor – John LOK/Wimpey Joint Venture. IQRC Hong Kong Bank New Headquarters – Hong Kong, China – Led the surveillance of the subcontractor's inspection of welding and testing in structural steel work. Supervised non-destructive testing work.

Michael Fradua

Structural Engineer

EDUCATION

B.S. in Civil Engineering – Manhattan College, Riverdale, NY

CERTIFICATIONS

Certified International Code Council (ICC) Special inspector

CORE CAPABILITIES

Design & Inspection Management Administration
Commercial & Industrial Buildings; Project Management; Contract Management; Special Inspection & Reports; Team Leadership; Scope & Budget Development; Emergency Response; Union Workforce Management; Scheduling; Seismic retrofit upgrade; Client & architect relations; Production Drawings; Structural damage assessment; Contractor oversight; Budget monitoring

RELEVANT EXPERIENCE

Mr. Fradua is a structural engineer with over 28 years of experience. He is a Certified International Code Council (ICC) Special inspector. Excellent communicator and team leader who quickly establishes rapport and credibility with diverse stakeholders, including architects, developers, contractors, and local and state agencies. Experience in private and public sectors in US and globally.

January 2011-Present
Director of Special Inspections – Structural – Skyline Engineering, New York, NY – Conduct special inspections of NYC heavy construction projects; both new construction and renovations. Inspections include bolting, welding, masonry, concrete, steel structures, soils, and fire stopping. PE approved to sign and seal structural Technical Reports (TR) for NYC Department of Buildings.

- Ensured safety and structural integrity of rooftop framing and supports HVAC equipment for 60 story building on Wall Street.
- Responsible professional in charge of structural inspection for a high-rise reinforced concrete building.

2008-2010
Structural Engineer - Galli Engineering, Melville, NY – Design and inspect commercial, industrial, residential and environmental building projects, including generating preliminary designs and calculations, preparing drawings, inspecting ongoing construction jobs, and producing reports. Projects include:

- Produced forensic report on commercial building damaged by adjacent Long Island Rail Road construction project.
- Delivered structural design for multi-building/multi-use apartment complex.

2008-2010
Project Engineer – Galli Engineering, Westbury, NY – Inspect and design commercial buildings, including historic renovations, foundations and underpinnings. Monitored demolition, assess load-bearing capacity of foundations and structures.

- Successfully engineered underpinning of historic landmark building in Brooklyn, NY.
- Designed foundations and steel framing for new commercial building; oversaw demolition of existing building.

2005-2008
Assistant Chief Operating Officer, Contract Inspection – NYC Transit – Oversaw outside contractors on NYC Transit operation and capital construction projects. Managed inspection of external construction projects to ensure safety and integrity of NYC Transit routes and facilities.

Supervised 3 directors and managers, and crew of 80 union engineering and field personnel. Represented Transit Authority in emergency response and supervised TA field forces during disasters.

- Oversaw inspection of World Trade Center 7 reconstruction
- Contributed to FEMA regional planning for disaster response in NYC, including terrorist attack & hurricanes.
- Delivered yard paving and facility roofing projects system wide, within budget and on deadline.

1999-2005
Director, Contract Inspection – NYC Transit – Spearheaded project scoping, design, budgeting and inspection of NYC Transit multi-million dollar capital and operation projects, including repair, upgrading and maintenance of system-wide elevated and tunnel structures. Supervised managers and 50 engineering & field staff. Liaison to City, State and Federal agencies.

- Coordinated all NYC Transit operations at OEM Command Center after 9/11 World Trade Center collapse.
- Reopened closed subway lines 2 month ahead of schedule after 9/11.
- Monitored all aspects of Columbus Circle development, including interconnection with subway system.'
- Led NYC Transit engineering team inspecting old Yankee Stadium, coordinating fabrication of emergency support stanchions.

1986-1999
Manager, Contract Inspection – NYC Transit – Led team of 30 engineers and field inspectors to inspect development projects that affected TA facilities in all 5 boroughs. Developed design solutions to underpinning and foundation problem.

Project Manager – Basil Engineering, Consulting Engineers, Italy & Saudi Arabia

Job Captain – Weiskoph & Pickworth, Consulting Engineers, Texas

Feld, Kaminetzky & Cohen, Consulting Engineers, New York City

Eric Davis

Construction Inspector

EDUCATION

KrautKramer Branson School of Nondestructive Testing, Charlotte, NC, 1997
Washington County Technical School, Johnson City, TN, 6/94-4/94

CERTIFICATIONS

ICC Structural Steel & Bolting Special Inspector, Dec. 2013-Dec. 2016
ICC Welding Special Inspector, Jan. 2014-Jan. 2017
Certified Welding Inspector, October 2016
OSHA – 30 Hour, Oct. 2013-Present
30 Hour Occupational Safety and Health Training Course in Construction Safety & Health

RELEVANT EXPERIENCE

June 2012-Present
Superintendent – WTC Oculus, Skanska Koch Inc., New York, NY- Directed all inspections on steel member for fit-up, welding and non-destructive testing (NDT)

- Reviewed and endorsed all daily special inspection and NDT reports
- Closed punch list items related to welding non-conformances
- Tracked progress of all welding and bolting activities
- Quantified and managed development of all NDT procedures, including non-conventional methods and base metals.
- Attended all punch list meetings with client and engineering department
- Witnessed qualification tests for stainless and D1.5 welders
- Tested orbital welding machine for welding procedure of round pipes on site.

January 2011-June 2012
Site Quality Manager/Lead Bridge Inspector – WTC Transportation Hub, DCM Erectors, Inc. New York, NY – Directed all inspections on fracture critical member for fit-up, welding and NDT.

- Reviewed and endorsed all daily special inspection and NDT reports
- Developed critical repair procedures for unacceptable welds and/or poorly fabricated joints
- Performed NDT inspections and in-process welding activities when needed
- Continuous internal auditing of all site CWIs and NDE technicians
- Managed all interaction between contractor's QC and client's QA (Port Authority)
- Attended all punch list meetings with client and engineering department
- Monitored field progress and compliance to required schedule milestones.

June 2010-January 2011
Welding Inspector – URSSA Fabrication Plant – DCM Erectors, Inc. – Performed fit-up verification of joints and in-process welding inspections of assemblies for the WTC Transportation HUB

- Supervised NDT inspection of welds, performing additional inspection as required
- Performed final visual inspection and documentation review for completed assemblies prior to turning over to client's QA.(Port Authority).

September 2006-April 2010
Quality Control Engineer - Archer Western Contractor – RDU International Airport Terminal, Morrisville, NC

- Performed inspection and testing on project's components – RDU International Airport Terminal 2 Renovation/Expansion Project.
- VT, NDT or welded connections
- Verification of bolted connections

- Moisture verification
- Paint thickness verification
- Assistant concrete testing technician
- Mechanical inspections of plumbing, duct, pipe and fire suppression systems
- Ongoing inspections including those requiring owner's representative and/or county inspector's verification
- Coordination of daily activities and testing

June 2002-September 2006
Senior Metals Technician – MACTEC Engineering, Raleigh, NC – Performed NDT and weld inspection at various project sites.

- Structural steel fabrication plants
- Bridge manufacturing plants
- Major pharmaceutical plants (Coordinate inspections/testing during shut down projects as well as performing ongoing inspections of plant pressure vessels.

January 2002-June 2002
Quality Control/Quality Assurance Manager – Southern Monopole & Utilities Co – Steel, AL – Implemented the Quality Control Program during startup of company.

- Qualified welding procedures and welders
- Trained welding inspectors and NDT personnel
- Maintained daily inspection records and performed NDT – Visual, Ultrasonic and Magnetic Particle
- Procured testing agencies for destructive testing of qualification plates.

May 1995-April 1999
Fitter's Helper – Carolina Steel Corporation – Abingdon, VA

- Performed dimensional verification inspections
- Qualified welders – Shielded Metal Arc, Submerged Arc, Arc and Flux Cored Arc Welding Processes
- Performed NDT of welded joints
- Performed coating inspections
- Assisted with fit-up of bridge girders in fabrication plant.

Anna Hrisomallis

Senior Construction Inspector

REGISTRATIONS/PROFESSIONAL AFFILIATIONS

NACE CIP Level I Coatings Inspector
SSPC C3 Supervisor/Competent Person Training
OSHA 10 Hour Construction Safety
Confined Space Safety Certification
Visible Emissions Evaluation

EXPERIENCE

2013-Present
JFK International Airport, Port Authority of New York and New Jersey
Construction inspector for inspection of terminals and roadway modifications.

2011-2012
New York State Thruway Authority
Bridge Painting and Steel Repairs to the New England Viaduct in Westchester County/Rehabilitation of eight New England Thruway Bridges in Bronx and Westchester.
Chief Inspector for all Class A and B Containment Systems, SP-12 Power Jetting, SP-10 Abrasive Blast, SP-3 and SP-11 Power Tool Cleaning and all coating Systems Documentation to the NYSTA as well as Payment Requisitions. Also responsible for MPT along the mainline on I-95, and in the inspection of under deck bridge lighting, which consisted of installing 1" steel conduit with a three phase wiring system. During the winter shutdown period assisted the office engineer with correspondence, created spreadsheets with excel to finalize quantities, and helped with the preparation of Order on Contracts.

On the New England viaduct, Ms. Hrisomallis oversaw all steel repairs including stringer web and stiffener repairs rivet replacement, cap beam stiffener repairs and column brace repairs. All work was completed as per approved shop drawings and New York State Steel Manual. The project was completed with a three coat Carboline coating system.

2011
New York City Department of Transportation, Belt Shore Parkway
A senior construction inspector for the Protective Coating of six BSHP Bridges. Work involved Using Class "1A" Containment System, Performing SP-12 Surface Preparation and Cleaning of the steel by high pressure water jetting,SP-10 Near White Metal Blast Cleaning , SP-7 Brush Off Blast Cleaning and SP-15 Commercial Grade Power Tool Cleaning, followed by Paint System B' - Total Coating Replacement/ Epoxy Zinc-Rich Primer / Epoxy Penetrating Sealer / Epoxy Intermediate / Urethane Finish using Carboline product.

2010 – 2011
QC/HS officer for LIRR for the Atlantic Ave. Viaduct Rehabilitation Phase II. Performed QC painting inspections and worker lead exposure and handling of all documentations for SSPC/QP-1.
Water Tank in New Rochelle. Work included SP-6 Commercial Blast Cleaning and SP-10 Near White Metal Blast Cleaning with the application of four coats of paint including the sealer.

2009-2010
QC/HS Officer for New York State DOT-NYS Thruway – Performing quality control and QC/HC on various bridges for NYSDOT. Responsible for inspections and documentation related to the contractor's OSHA, DEC and EPA compliance matters. Perform QC painting inspections and worker lead exposure monitoring and handling of the documentation for SSPC QP-IIAP-2.

2005-2009
Senior Construction Inspector for New York City Department of Transportation. Performing quality assurance painting inspections on multiple NYCDOT painting projects: Williamsburg Bridge, Manhattan Bridge, Queensboro Bridge, Martha Washington Bridge & East 241st Bridge.

2000-2005
Quality Control Officer and Competent Person – Responsible for inspections and documentation related to the contractor's OSHA, DEC and EPA compliance matters. Performed QC painting inspections and worker lead exposure monitoring and handled the documentation for SSPC QP-IIQP-2 quality control designations for the contractor. Some of the projects worked on include the following:

- Staten Island Expressway – Rehabilitation of 12 Bridges (NYS)
- Kolb Pedestrian Bridge at Riverside Drive – Blasting and Repainting (NYC)
- Queensboro Bridge – Blasting and Repainting (NYC)
- Tappan Zee Bridge – Blasting and Repainting (NYS)
- Fresh Kills Overpass Bridge on West Shore Expressway – Blasting and Repainting (NYS)
- Korean War Veterans Memorial Parkway and West Shore Expressway – Painting of 39 Bridges (NYS)
- Spring Creek Water Treatment Plant in Brooklyn – Maintenance Painting (NYC) Broadway
- Bridge – Bridge – Blasting and Repainting (NYC)
- Sunrise Highway – Maintenance Painting of 11 Bridges (NYS)
- Williamsburg Bridge – Blasting and Repainting (partial) and Maintenance Painting (partial) (NYC)
- Manhattan Bridge – Blasting and Repainting (partial) and Maintenance Painting (partial) (NYC)
- Marine Parkway Bridge – Blasting and Repainting (TBTA)

Edward Obara

Senior Coating Inspector

EDUCATION

PROFESSIONAL REGISTRATIONS

NACE 2
KTA-Tator Coatings Failure
Analysis-Level I, 1996
KTA-Kator Coatings Training, 1999
SSPC-3 Supervisor/Competent Person Training, 1999

PROFESSIONAL MEMBERSHIPS

The Society for Protective Coatings (SSPC)
National Association of Corrosion Engineers (NACE)

RELEVANT EXPERIENCE

Mr. Obara has over 30 years in the coatings industry including 15 years of experience as a coatings inspector. He spent a portion of his career with the New York City Department of Transportation where he served as District Supervisor of Bridge Painting Section. In that position, he managed activities of supervisory and union bridge painters, and he as responsible for major East River bridges and overpasses through the five boroughs. Mr. Obara received excellent work performance reviews by Director of Bridge Painting. He is extremely knowledgeable and experienced with inspection of bridges and other complex steel structures. He has a comprehensive knowledge of OSHA and EPA regulation, as well as climbing and rigging procedure and SSPC Standards. Mr. Obara has performed on-going emergency repairs on various bridges and overpasses. He is experienced with graffiti removal and assigned to the Mayor's Anti-Graffiti Task Force. He is experienced in sand blasting, power tool cleaning, airless spray painting, and testing of new paint systems. In addition, he assisted in designing and erecting containment systems used for lead abatement, maintained equipment and material budget, and coordinated scheduling and personnel overtime.

2011-2014
Verrazano Narrows Bridge, TBTA, NY – Inspector for the abrasive blasting and coating of the lower tower legs, lower tower leg cells and the lower tower strut cells. Also provided inspection for the seismic retro fit of bearings at various locations, oiling of the main cable strands in the anchorages, guard rail installation on the VNB approach from the Belt Parkway, conduit rack repair, both direction entire lower level, installation of 14 stainless steel doors at the toll plaza tunnel. Also the maintenance contract, inspecting scupper and drain cleaning upper level and maintenance painting on the lower level.

2009-2011
Brooklyn Queens Express Bridges, NYCDOT, NY – Chief Coating Inspector for the abrasive blasting and coating of eleven overpass bridges along Brooklyn-Queens Expressway. Various containment enclosure such as rapid deployment containers, platform based and drop down containments are being utilized on this project to accommodate access restriction, community issues, noise control and lane closure restrictions.

2006-2009
Protective Coating of the Queensboro Bridge, NYCDOT, NY – Coating Inspector for this $170 million bridge protective coating project. Responsibilities included existing coating removal and new coating installation.

12/2003-2005
Protective Coating of the Washington Bridge, NYCDOT, NYC, NY – Chief Inspector of the construction inspection services for the repainting of the Washington Bridge. The coating work included abrasive blasting and recoating of the entire structure.

4/2000-12/2003
Broadway Bridge, NYCDOT, Manhattan, NY – Chief Inspector for this project that involved construction inspection services for the repainting of the Broadway Bridge. This project required close coordination with the NYCT, MNR, Coat Guard, and NYCDOT. As a moveable bridge, the scheduling of activities adjacent to trains and traffic is critical to the success of the project. Responsibilities included overseeing all field work and assuring protection of traffic, trains, and pedestrians. The coating work included abrasive blasting and recoating of the entire structure.

1999-3/2000
Goethals Bridge Repainting, Staten Island, NY and Linden, PANYNJ, NJ – Chief Inspector for this project that involved construction inspection services for the repainting of the Goethals Bridge. The work involved deleading the structure by abrasive blasting and application of a new coating system. In addition to coating inspections, oversaw electrical conduit removal and replacement, structural steel repairs, shotcreting and fiber optic cable splicing.

Michael Betanzos

NICET IV (Equivalent)

RELEVANT EXPERIENCE

Mr. Betanzos has over 35 years of experience on major construction projects. In his capacity as assistant NYSDOT materials engineer, he established, implemented and oversaw QA/QC programs related to asphalt and concrete plant production and advised personnel as to equipment and procedures necessary to achieve density required by NYS Asphalt Concrete Density Specs. He is familiar with all aspects of roadway, bridge and utility construction, repair, reconstruction, inspection, and testing. He has been the resident engineer on numerous Thruway, New York Division, projects including TANY 01-5 Rock Remediation; TANY 03-6; TANY 01-60 Noise Barriers and TANY 01-4 Mill/Fill Thruway Mainline. In addition to his technical duties Mr. Betanzos is adept at community relations as it pertains to the construction activities on his projects. He regularly meets with local homeowners, merchants and officials to respond to concerns and keeps the owners staff informed at all times. He recently worked on I84/87 Interchange Phase III Project and recently finished working on a safety upgrades project for the New York State Thruway Authority.

2010- 2013
D213941 - Chief Inspector, TANY 10-18, Safety Upgrades at Mile Post 46.0 thru Mile Post 60.5, New York Division, Orange County
Project consisted of upgrades to the guide rails throughout the project. Drainage upgrade including culvert extensions / replacement, headwall removal and replace A.O.B.E. drainage. Structure alterations at various locations. Flattening of slopes, shoulder backup throughout project. Provided tree trimming and clearing as needed throughout project. Project includes various visual inspections and as needed safety upgrades.
Reference: Darrin Scalzo, (845) 918-2500

2007-2010
D213520 - Senior Construction Inspector, 1-87/I-84 Interchange, Contract 3, NYS Thruway Authority
Senior Construction Inspector for construction inspection services for the I-84/Rt. 300 intersection and highway and bridge work. Project consisted of 7 bridges.
Reference: Darrin Scalzo, (845) 918-2500

2007
D213522 - Assistant to the Project Engineer for the New York State Thruway New High Speed E-Z Pass in Spring Valley. Work included 4 VMS boards and 2 cameras along the New York State Thruway, installation of space frame structure, instrumentation, conduit and related work. Mr. Betanzos was in charge of all field operations and reviewed all contracts. He coordinated MPT with all Thruway units and the Toll Plaza Manager.
Reference: Tom McGuinness, (845) 918-2500

2004
D213289 - Resident Engineer – New York State Thruway Authority - Responsibility includes – the construction of noise wall barrier for the New York State Thruway in West Nyack, NY, Rockland County. Work included construction of new noise barrier, utilities relocation, pile driving, rock blasting and maintenance and protection of traffic.
Reference: Jack Holman, (845) 918-2500

2002-2003
D213005 - Resident Engineer – New York State Thruway Authority on the Rock Remediation and Noise Barrier Construction New York State Thruway, South Nyack, NY. Responsibilities include complete construction management of 1.2 miles of precast concrete noise barrier along thruway. Work included drain cleaning, clearing and grubbing, reinforced concrete footings, precast posts and wall segments as well as miscellaneous shoulder repair.
Reference: Stephen Grabowski, (845) 918-2500

2001-2002
D212995 - Resident Engineer – New York State Thruway Authority – Noise Barrier Installation in Rockland County - Performing office engineer duties including: processing estimates, reviewing daily IR's, produce meeting minutes, track contractors progress with EEO requirements and payroll, provide correspondence for Thruway Authority and Contractor.
Reference: Stephen Grabowski, (845) 918-2500

2000
D212995 - Resident Engineer – Mill & Fill – Provided inspection for milling, repaving and line stripping of nearly 10 miles of I-87. Installation of rumble strip and saw cutting joints. Also inspected daily lane closure patterns.
Reference: Stephen Grabowski, (845) 918-2500

2000-2001
D212799 - Resident Engineer - Noise Barrier Installation – Construction inspection of noise barrier along north bound I-87. Work included drilling footings, placement of reinforcement steel and concrete, erection of prefab. Posts and panels, joint caulking, installation of R.O.W. fence and paintings.
Reference: Stephen Grabowski, (845) 918-2500

1998 - 2000
Resident Engineer on the construction of noise wall barrier for the New York State Thruway in West Nyack, NY. Work included construction of new noise barrier, utilities relocation, pile driving, rock blasting and maintenance and protection of traffic.
Reference: Stephen Grabowski, (845) 918-2500

1990 - 1998
Civil Engineer I/Assistant Materials Engineer – Assisted Department in establishing procedures and specifications for the Quality Control Quality Assurance program being implemented in New York State. Reviewed and made recommendations on Quality Control Plans submitted for annual asphalt plant approvals. Advise project personnel as to the equipment and procedures necessary to achieve density as required by New York State Asphalt Concrete density monitoring specifications. Instruct field inspectors on field-testing of Portland Concrete, in accordance with the American Concrete Institute. Provided assistance to construction personnel on interpretation of specifications and standards. Assisted in administering and supervising a consultant testing contract, employing up to twenty (20) contract engineers, performing Quality Control and Quality Assurance of Asphalt and Concrete plant production. Supervise Regional Materials Group in the absence of Regional Materials Engineer.

Frank Montefusco

Senior Construction Manager

EDUCATION

BA Architecture – New York Institute of Technology

CERTIFICATIONS/TRAINING

OSHA 10 hour Construction Safety- 2008
Historical Preservation Local Level -2000
Clean design Pharma 1999
Historical Preservation National level 1999

RELEVANT EXPERIENCE

Mr. Montefusco has over thirty years of experience encompassing Architectural design, construction and program management, estimating, and scheduling of new and retrofit work. Experienced Project Managing in all aspects of site and facility design, from programming through construction of manufacturing, research, and administration buildings for the pharmaceutical, biotechnology industry and Commercial and Residential design. His areas of expertise include building code compliance, coordination of design disciplines, construction scheduling, field supervision, project close out, developing and upgrading project plans, including schedules and budgets; monitoring and reporting project progress; implementing appropriate recovery actions when project deviates and construction management.

2008 - Present
PATH – Journal Square, Port Authority of New York and New Jersey – Responsibilities include:

- Supervise, direct and provide technical support for Contractors on Homeland Security construction projects located throughout the entire PATH train station and tunnel system.
- Provided coordination between related PATH construction projects.
- Supervise work train movements and placement by coordinating with the contractor and providing direction to the assigned train crew.
- Coordinate tunnel and train station construction work with various PATH personnel (Train Masters, Power Rail Men, Communications Department, Signal Department, Yard Masters, Dispatchers, Surveyors, other EIC's etc.)
- Provide Assistant Resident Engineer with written reports (Spreadsheet format) and mark-up pictorial reports of project progress and deficiencies.
- Evaluate and mark-up monthly Payment Requisitions.
- Evaluate submittal logs.
- Post Sandy Emergency Construction; 14 hour shifts, 7 days a week

2007-2008
Senior Construction Manager - for the PANYNJ New York Airports he manages project teams of professional staff composed of Port Authority engineers, architects, project control engineers and outside consultants. Major areas of responsibility include; managing all engineering efforts from conceptual design through construction completion; developing and upgrading project plans, including schedules and budgets; monitoring and reporting project progress; implementing appropriate recovery actions when project deviates; serve as the Engineering Department representative with the Line Department of JFK Airport.

2006-2007
Project Manager – New York City School Construction (SCA)

Representative Projects
Restructuring Bronx HS (12)
Reso A Cafeteria's (6) and Auditoriums (4)
Bathroom renovations ADA
HVAC upgrades

2006-2006
Project Manager (University of Medicine & Dentistry of NJ) - Responsible for managing project at UMDNJ from inception through construction completion. Responsibility for RFP, Architect coordination, contract drawings, developing schedules and budgets.

Representative Projects
U Hospital Lobby (5 mil)
Pediatric Private Practice @DOC. (2.5 mil)
Ambulatory Care Center (200mil)
MCC @ SSB (1.5 mil)

2001-2005
Project Manager (Port Authority of NY & NJ) - Responsible for managing project at JFK Airport from project inception through construction completion. Responsibility for contract drawings, developing and project plans, including; schedules and budgets as well as serving as the Engineering Departments the Line Department owners representative.

Representative projects
JFK Roadway Recirculation Refinement Outbound ($9mil)
Demolition cost Estimates for Buildings and Hangers ($25mil)
Rental Car Site & Road Modification with New Air Train Station ($30mil)
Rehabilitation of Cargo Service Road to Federal Circle ($5.5mil)
Additional projects from $250k to $5mil

1996-2001
Principal Project Architect, Project Manager - (Foster Wheeler USA Corporation) - Owner's representative for programming, design development, through design process for duration of project and construction management support. Managed design team and construction personal. ISO 9001 compliance.

1994-1996
Construction Manager and Project Architect (PANYNJ) - Management of Capitol Improvement Projects and tenant fit-up owner requirements. Established long range forecast for owner and tenant occupied space.

Joe Tola

Associate/Construction Manager

EDUCATION

NY Institute of Technology Old Westbury, New York- Bachelor of Science, May 1996

CERTIFICATION

Code Enforcement Official, New York State
OSHA Outreach 10 Hour

COMPUTER LITERACY

Proficient in Windows, Microsoft Project, Primavera Expedition, and Facility Planning tools

RELEVANT EXPERIENCE

Mr. Tola is an Associate at Savin, and has over 19 years experience in the construction industry of which 13 years experience are at Savin, which includes the following projects:

- World Trade Center – Performing commissioning services related to the following building systems listed below: This includes development of Pre-functional checklists (PFCs) and Functional Performance Test (FPT) scripts and participation in the review of field installation and in the field system and integrated system testing. Sewer ejectors, duplex sump pumps, elevator sump pumps, fire suppression- including sprinklers and water mist system, storm water system – including gray water treatment plant, tunnel exhaust system, and emergency generators and paralleling switchgear
- Westchester Medical Center – Evaluating site assets, existing construction, interior and exterior components and building systems based on overall integrity, probable useful life, and the need for replacement; and provided an analysis of potential problems that may require short or long-term attention, detailed information was provided for the maintenance of the HVAC equipment including CAD drawings of the mechanical rooms.
- Sound Shore & Mt Vernon Hospital – A $47 million facility planning and evaluation of site assets, existing construction, interior and exterior components and building systems based on overall integrity, probable useful life, and the need for replacement.
- Eldred Central School District -$17 Million additions and renovations.
- Port Jervis City School District - $25 million district wide renovations.
- Syracuse City School District – Provided Facility Planning for Five Year Plan and Capital Projects Plan
- Pocantico Hills C.S.D. - $18 million capital project.
- Greenburgh 7 UFSD– Infrastructure projects through multiple years including roofing and mechanical work
- Westchester County Department of Public Works - Set up Facility Center, created a five year plan, and building condition survey of all County owned property. Used basic AutoCAD functions to polyline areas and add asset blocks and AutoCAD with links to Facility Center.
- Westchester County Penitentiary - $60 million project which included demolition of existing jail and the construction of a general population mid-rise housing 264 inmates in single cell and dormitory pods, and a separate single-story special housing unit for 16 inmates in single cells.

Nick Furtado

Construction Manager

CERTIFICATIONS

ACI (American Concrete Institute) Certification
OSHA Outreach – 10 Hours

LICENSES

Nuclear Moisture Density Gauge

COMPUTER LITERACY

Microsoft Word, Microsoft Excel, Primavera Expedition

RELEVANT EXPERIENCE

Mr. Furtado has 30 years of experience in the construction industry. He has been an employee of Savin Engineers for the last 11 years. He has acted as the Resident Project Representative on numerous multi-million dollar building projects. In his capacity as the Owner's representative, Mr. Furtado has coordinated construction issues between the Owner, the Architect, the Contractor and the home office; has managed the construction related correspondence RFIs, shop drawings, change orders, etc; chaired progress and negotiation meetings; and overseen the work and reporting of construction inspectors and administration personnel assigned to his projects. Mr. Furtado is an expert in the utilization of Primavera Expedition.

Mr. Furtado's relevant experience is as on office engineer on the $120M New Rochelle WWTP Upgrade project. Specific responsibilities included the following:

- Attends Owner's meetings.
- Supervises CM staff
- Sets-up initial Expedition reports
- Performs specification review
- Prepares Executive Summary Reports
- Reviews/approves monthly payment requisitions
- Secures closeout documents and submittals
- Reviews inspection and testing reports
- Monitors project schedules
- Analyzes bids and qualifies low bidders
- Prepares milestone schedule per Owner's needs
- Assists with the development of construction schedule and establish a project coordination plan
- Identify long lead material/equipment procurement needs
- Conducts pre-bid walk-through/tours of facilities for prospective bidders
- Assists in analyzing bid results and evaluating Contractor qualifications and in recommending bid awards
- Advises the Owner on the acceptability of Subcontractors and material suppliers proposed by Contractors.
- Advises Owner of conditions which may cause delay of completion
- Assists the Owner in selecting and retaining the professional services of surveyors, special consultants and testing laboratories and coordinates such services

- Reviews requests for changes and recommends necessary or desirable changes to the Owner
- Assists in negotiating Contractors change order proposals and submits recommendations to the Architect and Owner
- Conducts Construction Meetings
- Coordinates all project information with Owner
- Assists with final inspection of work and establishes punch list for substantial completion and recommendation for final completion
- Expedites project closeout
- Performs day to day detailed monitoring of construction
- Monitors Contractors hired to perform work to determine:
    - Adequacy of work force and equipment
    - Conditions, which may cause delay in the completion of the work
    - Availability of necessary materials and supplies
- Maintains a full set of drawings, specifications, submittals, shop drawings and correspondence at the site.
- Reviews Contractors applications for payments on a monthly basis.
    - Recommends approval or rejection of payment
    - Verifies that required back up is included. Back up includes certified payroll, updated schedule, waiver of liens, updated as-builts and other documents as required in Contract Documents.
- Secures and transmits to the Owner all closeout documents. Tracks progress of document submission.
- Tracks all issues by having the potential of becoming a Change Order and any other issues required by Resident Engineer.
- Processes Requisitions for Payment and forwards to Owner for approval.
- Generates Expedition Reports.
- Ensures that all general requirement items are submitted prior to project startup.

Ossining Public Library - $15.8 million new library
Coordinated, scheduled, monitored, and inspected the remedial work for the fuel oil tank and underground gas tanks at the Ossining Public Library Project, which included thorough preconstruction inspection of the site and review of documents related to the site. Coordinated, scheduled and inspected gravity sanitary sewer. This project also included the removal of contaminated soil.

Tarrytown Public Schools - $72 million additions and renovations
Coordinated, scheduled, monitored, and inspected the remedial work for the fuel oil tank removal at Sleepy Hollow HS/MS project. Coordinated, scheduled and inspected 1200lf of gravity sewer lines and a new pump station at the Sleepy Hollow HS/MS

Reconstruction of Water Street in Bridgeport, CT included installation of a new 60" water outfall into the sound. During excavation noted discoloration of the existing soil, odors and differences in soil properties. Brought this to the attention of the DOT resident engineer on site. The soil was determined to be contaminated with hydrocarbons coming from an adjacent public works garage. Received contract to excavate and stock pile material onsite until a determination could be made on the proper disposal, work include. Soil was tested to confirm contamination, covered material and created a berm around the stock pile away from the waterway and drainage structures.

Nancy Barbera

Project Executive

EDUCATION

Vermont Technical College – Associates Degree in Applied Science: Architectural and Building Engineering Technology

CERTIFICATION

OSHA Outreach 10 Hour

COMPUTER LITERACY

Microsoft Word and Excel, Word Perfect, Expedition, Timberline Estimating

RELEVANT EXPERIENCE

Ms. Barbera is a Senior Project Executive at Savin and has over 18 years of experience in construction management with a focus on active sites. An employee of Savin for 15 years, Ms. Barbera has been responsible for the on site, field supervision of both renovation and new construction projects where she was responsible for coordinating and overseeing the project specific work and the work to be accomplished by the contractors. Specific responsibilities include managing and monitoring the work progress, making sure materials and equipment are delivered to the site on time and that the work progresses on schedule, tracking and communicating progress to the Owner; identifying potential problems or delays, communicating design questions to appropriate personnel, working to minimize disruptions in the building during the construction, maintaining all documentation associated with the project; and supervising the closeout process regarding the archival of documents and transfer of project information to the client. Ms. Barbera's recent experience includes:

- Long Beach Public Schools - $98 million district wide renovations and additions, including two new artificial turf fields, track, lighting, bleachers, and boards
- Village of Tarrytown – Riverwalk Park
- Village of Tarrytown – New $8.5 million 22,000 s.f. village hall.
- Pelham UFSD - $27.6 million addition and renovations to middle school, renovations to High School, exterior restoration at elementary schools and high school.
- Tarrytown UFSD – District-wide roof replacements, window replacements and fire alarm upgrades.
- Scarsdale UFSD – $19 million district- wide renovations and additions.
- Mt. Pleasant Central School District – $ 25.4 million district expansion and renovations.
- Stamford City Public Schools – Hart School, $9 million renovation and expansion to existing elementary school.
- Stamford City Public Schools – Westover School, $17 million construction at new elementary school.

Prior to joining Savin, Ms. Barbera's experience included administrative and technical support at the New Westover Elementary School Project and the engineering bureau, Stamford Government Center. As an Administrative Coordinator, Ms. Barbera's duties consisted of scheduling of various phases of each project, processing of field reports, requisitions, meeting minutes and shop drawings. She coordinated field quality control, monitored steel reinforcement and placement of concrete in accordance with daily log of field operations and manpower.

Michael Melocoton

Project Executive

EDUCATION

New York Institute of Technology – Electrical Engineering

COMPUTER LITERACY

Primavera Expedition, Microsoft Word, PowerPoint, Excel, Outlook, Word Perfect, Lotus 1,2,3, LAN & Network Environments

CERTIFICATION

OSHA Outreach 10 Hour

RELEVANT EXPERIENCE

Mr. Melocoton has extensive experience in Construction Management and project management. In his experience as a construction manager, he was responsible for maintaining a full set of drawings, specs & submittals on site, maintaining a list of required permits, inspections, surveys and utility notifications, interfacing with campus administration, etc. to apprise them of work that may impact their operation, and photographing work in place as a record for the Owner.

Mr. Melocoton's responsibilities include management and coordination of the various trades, insuring that all work is performed as specified by the Architect/Engineer/Owner. He attends all project meetings, conducts daily site inspections, prepares detailed field reports and monitors the progress of work in the field, including monthly payment requests, change in work directives, quality control and compliance with the construction schedule and site safety issues.

His experience as a construction manager also involved budget performance and scheduling criteria. As such, Mr. Melocoton became proficient in the use of Primavera scheduling software, Excel spreadsheets and database software.

His experience at Savin includes Construction Management in the following districts:

- Nassau Community College - $6 million parking lot reconstruction
- Hempstead UFSD - $33 million District-Wide Renovations including pedestrian access, lot repair and athletic fields.
- Comsewogue UFSD - $14 million District-Wide Renovations including athletic fields, new parking lots, roads, and security.
- Rocky Point UFSD – $28.5 million District-Wide Additions and Renovations including parking lot rehabilitation.

Tony Darien

Civil/Structural Construction Inspector

EDUCATION

High School G.E.D.
Tech Drafting Course – Lehigh Technical Institute
MPT Training/New York State Thruway Authority

CERTIFICATION

NICET Level III

RELEVANT EXPERIENCE

2008-Present
Inspector - Tappan Zee Bridge Redecking, Phase II, NYS Thruway Authority project. Work includes removal of the existing bridge deck from the right and center lanes northbound and southbound from the eastern point of the superstructure to the Nyack shoreline.

Along with oversight of the necessary demolition (saw-cut & removal of existing road deck) and the joint work between the new deck panels (grout & sealant applications); Mr. Darien also performed structural oversight of the installation of the panels. This included: monitoring the installation of new diaphragms, plates / brackets and bearing stools at floor beams; Inspection and monitoring of '2-cell, 4-cell, and 5-cell modular joints' between bridge spans; monitored re-bar and concrete placements at headers between bridge spans; and monitored daily maintenance of the ramped steel road-plate system (for MPT) during the process of new joint installations.

2004-2008
Sr. Construction Inspector – Bowery Bay Water Pollution Control Plant upgrade project. Responsible for the inspection of the Primary and Final Tanks, including demolition and reconstruction. Inspected rebar installation, formwork and concrete pours.

Responsible for the oversight of the Froth Control Building including foundations (grade beams and pile caps), masonry walls and Architectural finishes. Site work oversight included roadway grading and paving, curbs and concrete sidewalks.

2002-2003
Sr. Construction Inspector – Paerdegat Basin – Construction of an in-ground CSO retention facility for NYCDEP. Monitored installation of slurry wall shoring, including calculation and recording of quantity installed. Calculation and recording of quantities of various soil types excavated, stockpiled and removed from site. Checking re-bar installation and concrete pours for structure walls and floors.

2001-2002
Construction Inspector – World Trade Center Emergency for the Port Authority of New York and New Jersey - Computations of steel and debris tonnages (removed from Ground Zero and trucked over to the Pier-6 location), were documented as per shift. Responsibilities included reporting the final quantities to my supervisor; which were determined by the water-displacement levels of the barges, as they arrived empty and shipped out fully loaded. Worked around the clock on numerous day and evening shifts.

2000-2001
Construction Inspector – World Trade Center for the Port Authority of New York and New Jersey - Demolition and removal of existing 6" conc. Floor-slab at the B-1 level, truck-dock area of the north tower. Steel corrugated decking and new 6" depth, reinforced conc. was than re-installed in manageable sections to accommodate truck traffic.

Removal of and upgrading of the existing H-Vac system in the north and south projection rooms of World Trade Center towers 1 and 2. The existing ventilating fans were directly above the path trains of tunnels E and F, which required supervising work along the tracks at off-peak hours. Obtained the necessary certification for this supervision (EIC/Employee in charge), on Sept. 6, 2001. Work had just begun.

1999-2000
Senior Inspector – Jamaica Avenue Reconstruction (127th Street to Sutphin Boulevard - This was a high profile project in an area that is both commercial and residential. Major utility facilities were relocated to accommodate water mains, sewers, and drainage. Close coordination with two community boards (Q-9 and Q-13), merchants, and property owners was necessary to minimize disruption due to construction and interruption of water service. Jamaica Hospital was constructing a new parking garage adjacent to this project and special coordination was required there as well.

Project specifics included:

- 10,000 l.f. of distribution water mains
- 1,500 l.f. of sanitary sewers
- 1,100 l.f. of storm sewers up to 24" diameter
- 1,400 l.f. of storm sewers 30" - 36" diameter
- 10,000 l.f. of curbing
- 130,000 s.f. of sidewalk
- 15 reinforced concrete bus pads
- 3" asphalt on 9" concrete base
- urban park area
- drainage and ancillary structures
- extensive MPT including detours and the employment of traffic enforcement agents

1998-1999
Senior Inspector – Long Island Expressway (I-495) Reconstruction – Suffolk County, NY - This project included the construction of new High Occupancy Vehicle (HOV) lanes on the Long Island Expressway and the reconstruction of the LIE mainline pavement from Exits 57-61. A total of eight bridges were reconstructed and/or replaced. Construction encompassed three phases to allow for an unimpeded traffic flow.

Project specifics included:

- Drainage: Over 28,000 lf of RCP and PE pipe in sizes ranging from 15 in. to 42 in. diameter.
- Asphalt: Over 240,000 tons. All asphalt is placed in accordance with Superpave specifications.
- Sound Barrier: Precast concrete panels and posts are mounted on cast-in-place piers. 640,000 sf total
- Concrete Curb: 12,000 lf.
- Concrete Median Barrier: 30,000 lf, all precast.

Magdi F. Iskander

Construction Inspector

EDUCATION

Bachelor of Science in Mechanical Engineering

CERTIFICATIONS/TRAINING,

Asphalt Institute - Hot Mix Asphalt Training - 2009
Structural Steel and Bolting Inspection - 2009
Masonry Society - Special Inspection of Structural Masonry - 2009
ACI 1 - Concrete Field Testing
OSHA 10 hour Construction Safety- 2008
Environmenal Issues Associated with Construction projects – 2008

RELEVANT EXPERIENCE

As a Senior Construction Inspector, Mr. Iskander's responsibilities include management and coordination of the building trades, ensuring that all work is performed as specified by the Owner. He attends all project meetings, conducts daily site inspections, prepares detailed field reports and monitors the progress of field work, including monthly payment applications, change in work directives, quality control and compliance with the construction schedules & site safety issues.

2004-Present
Construction Inspector at Teterboro Airport for the Port Authority of New York & New Jersey.
Work includes: taxiway renovations, drainage systems, drainage pipes, new hangar, terminal building, sound proofing, mechanical, sprinkler systems, fire alarms, emergency light and generators. Mr. Iskander's responsibilities include:

- Construction of new passenger terminal buildings, new taxiways and runways
- Entire Airport drainage system to be connected wit the main station (78"pipes, manholes, runway, taxiway side drainage perforated pipes and complete box culvert.)
- Construction of new underground fire hydrant system including 2500 feet DIP 8" steel pipe and six hydrants
- Manage New Hangar (4,250 SF).
- Provided sound proofing to local schools

2003-2004
New Rochelle City Schools, New Rochelle, N.Y.
$38.6 million for additions and renovations to several elementary schools. Completed new addition and renovation work on: Trinity Elementary School, (three story building; 64,000 square feet), three sports fields and replacement of New Rochelle fire alarm system to control underground water.

2000-2003
Scarsdale Union Free School District, Scarsdale, NY
$15 million addition to the Middle School. Completed new addition and renovation work on Scarsdale Middle School, 75,000 square feet, including large detention facilities and drainage systems to control all the underground water.

He utilized his industrial, mechanical engineering and electromechanical engineering experience here. His accomplishments are as follows:

- Developed new methods of production to improve cost efficiency and product quality.
- Designed the layouts for equipment for efficient and production in factories.
- Founded Al Doofa Establishment, an Engineering and Manufacturing Contracting firm.
- Organized deliveries of material to ensure timely completion of projects
- Planned the design and production of special tools as per specification.
- Evaluated contract costs for specific projects, including warranties.
- Handled all relations and contracts with manufacturing companies.
- Prepared tender bidding strategies and pricing policies.
- Prepared both shop drawings and as-built drawings.

Roshan Sidhar

Senior Construction Inspector

EDUCATION

B.C.E., Civil Engineering, Bhopal University, India, 1972

CERTIFICATIONS & TRAINING

NICET - IV
American Concrete Institute (ACI)
Hot Work Permits
Hazardous Communications
Lead & PCBs Hazards & Safety
Confined Space
Scaffolding – User Safety – NYC Dept. of Buildings
Welding (AWS)
OSHA Construction Safety & Health

RELEVANT EXPERIENCE

Mr. Sidhar has over 35 years experience as an inspector on large wastewater plant improvement projects, buildings and transportation (roads and bridges) projects in Westchester, New York City and Connecticut. Degreed engineer with specific expertise in mechanical, structural and civil disciplines.

2012-Present
Senior Process Mechanical Inspector, New Rochelle Wastewater Treatment Plant. The project is a $235 million plant upgrade and BNR upgrade at the New Rochelle Wastewater Treatment Plant.

2006 – 2012
NYCDEP – Wards Island Water Pollution Control Plant. Plant stabilization upgrade and improvements of structures and equipment. Mr. Sidhar provided mechanical, structural and civil inspection. The following were some of his areas of responsibility.

- **Aeration Tanks Upgrade, Modifications, Improvements and Repairs.** Mr. Sidhar's work included repairing damaged y-walls, tank floors, installed new expansion joints, baffle walls, ceramic & EPDM diffusers, process air piping system, froth hoods, surface wasting lines, purge system, sluice gates, mixers, sensors, concreting, handrails, and structural support towers for process air piping and headers.

- **Final Settling Tanks** – Responsible for the installation of new bearings at flights, new electric motors and control system, cross collector drives, maintenance of collector shafts, & cleaning & dewatering.

- **Pump and Blower Building** – Work included demolition of existing process air blowers, motors, oil lines, blow off lines, and installation of new blowers, motors, silencers, heat exchangers, valves, oil pumps & cooling lines.

- **Return Sludge Pump Stations** – Demolition of old system structures and equipments, and replacement with new return activated sludge pumps & sensors, waste activated sludge pumps and sensors, equalizing lines, valves, gauges, and new seal water system.

- **Sludge Storage Tanks** – Work included demolition of existing centrifugal pumps and installation of new centrifugal pumps to transfer sludge to the dewatering building. Installed new sensors, switches, pads, and seal water system and controls.

- **Hypochlorination Facility** – Installed new 6000 gals storage tanks for sodium hypochlorite pumps, fill ports, piping, valves, gauges, and control system. Also installed hypochlorite piping system, instrumentation, and truck unloading containment areas/pads.

- **New Electrical Substations** – Installed piles, foundations, grade beams, steel structural-framing, curtain & masonry walls, roofing, equipment, switchgears and transformers.

- **Yard Piping and Utilities** – Installed air headers with fixed and sliding supports and new city water and fire lines and hydrants.

- **Pipe Galleries** - Installed new centrate lines, surface wasting lines, process air piping system, sodium hypochlorite lines, supports and hanger system, concrete pads for panels and equipments, controls for heat tracing system, process air lines in the effluent and influent channels.

- **Instrumentations/Control and Mounting** - Installation of level sensors, venturis, suspended solids/ph sensors, transducers, fill tank control panels, grounding, overflow relay, flow meters, magmeters.

Chief Inspector for the New York City DEP, Bowery Bay Water Treatment Plant Upgrade. Construction work included all civil and structural work including masonry, steel and installation of roofing as well as excavation for electrical work. Responsible for change orders and estimates.

Senior Inspector for the New York State Hudson Valley Transportation Management Center. Mr. Sidhar's work included inspections of site work, upgrade of drainage system, installations of underground utilities, grading, retaining wall, curbs, paving, concrete, steel reinforcement, metal fabrications, steel structure, masonry, roofing, all steel, architectural and civil construction activities, review of shop drawings and of all reports. Construction inspection services for this important facility included: excavation, utility relocation, concrete foundation, steel superstructure, architectural finishes and landscaping.

Senior inspector for construction of Lincoln Hospital, Bronx and Harlem Hospital, Manhattan. Responsibilities included overseeing all renovation and new construction work at emergency ward, pediatric ward and the pre-natal ward. Duties also included supervision of all construction activities, like flooring, walls, roofing, HVAC, elevators, medical gases, fire stopping and protection, hatchways, steel beams (structural steel work), masonry, metal and wood work and other related site work.

Administrative duties on these projects included evaluation of bids, selection of subcontractors, submittal of work material to architect and the hospital corporation for approval, updating drawings, estimating, preparing work schedules, progress meetings and overseeing QA program.

Senior Inspector – Yonkers Joint Wastewater Treatment Plant – Inspected the series of work activities for engine modifications, blower reconditioning and other related improvement work. Work included ongoing work for proper materials, methods and workmanship, protection of utilities and structures, reviewed plans, specs and shopdrawings to check contractor's work. Also inspected architectural work, concrete work, earthwork, non-shrink grouts, painting, repairs, tests, restoration work, maintained all document work, reports, and project-progress photos.

Construction Inspector on the construction of the Bronx-Whitestone Bridge Service Building. Responsibilities included on-site inspection for nearly all project phases including structural steel erection, steel deck, masonry work, electrical, architectural and landscaping work.

Senior Inspector for Taconic State Parkway and Bridge projects, NYSDOT including Bryant Pond Road Bridge over Taconic. Responsible for inspection of all field construction activities for conformance to NYSDOT specifications. Estimate quantities, field testings, environmental and wetland protection, drainage, inspection reports, maintenance and protection of traffic. The Bryant Pond Road bridge project included installation of significant earthwork, rock backfilling and compaction associated with bridge approaches.

Construction Inspector for the Triborough Bridge and Tunnel Authority on the construction of an Automotive Shop Building and a garage on Randall's Island. The automotive shop and north hub garage were constructed for the purpose of fleet maintenance for many of the TBTA's vehicles. Work on this 45,000 square foot facility included demolition, excavation, structural steel, concrete, masonry, drywall, acoustical ceilings, roofing sheet metal, exterior wall panels, plumbing, electrical, HVAC, public address, fire alarm and security systems. Mr. Sidhar was responsible for inspection of various aspects of the construction as well as the inspection of electrical and HVAC improvements to the Robert Moses Building; and on electrical and lighting improvements to the Triborough Bridge.

Field Inspections of contractors' work on Derby Bridge at Route 8 over Route 34. CT DOT to check conformance to CT DOT specifications. Quantities, reports, tests, and related engineering work for highway and bridge repairs.

Resident Engineer for CT DOT. General inspection of federally funded State DOT and City/Municipal projects. Fully responsible for management of the Construction Contract. Monitoring of all facets of construction activities involving civil, structural, mechanical, electrical architectural work, for overall, compliance to proper specifications and requirements, contract schedule, cost, safety program, quality assurance/quality control, MBE/WBE compliance, workforce, labor-wage checks, submittal requirements and insurance coverage.

Senior Inspector for Connecticut State Highway #8, resurfacing and safety improvements. Duties included inspections of construction operation of bridge demolition, concreting of bridge abatements, wing walls and decks. Partial and full depth patches, structural steel erection, remove and reconnect diaphragms, asphaltic plug expansion joints, pressure relief joints, approach slabs, bridge rail system, retrofit steel girders, and welding.

Thomas M. Tanner

Construction Manager

RELEVANT EXPERIENCE

Mr. Tanner has over 18 years of diverse construction inspection experience ensuring compliance with plans and specifications of projects involving civil, structural, mechanical, architectural, and environmental engineering. Experience includes:

- Field assessment of concrete and structural steel
- High rise building construction: foundation, superstructure, electrical, plumbing, mechanical & office fit-out
- Sewer and water line installation/rehabilitation
- Assistance in project start-up and all phases of project construction. Also responsible for quality control, daily reporting, and quantity measurements.

2013-Present
Port Jersey, Port Authority of New York and New Jersey
Construction Inspector for Building 108 roof rehabilitation at Port Jersey. Priority protective measures for flood protection. TAA-PJ-002, RCCL Berth N-1, cut off wall repair.

2011-2013
Harrison Station Intermodal Improvements, Port Authority of New York and New Jersey
Construction Inspector for improvements and enhancements to the Harrison Station. Project included demolition to existing staircase and rebuilding new staircase and platform, including handrails and lighting.

2011-2013
PATH – Journal Square, Port Authority of New York and New Jersey
Construction Inspector for security work at the PATH station. Night work included mitigation, flood gates and electrical improvements.

2009-2011
Port Newark Capital Projects, Port Authority of New York and New Jersey
Construction Inspector, Port Newark Wharf Reconstruction of Berth 8 & 10

- Pile Driving – Total of 430 18" steel pipe piles filled with reinforced concrete – 207 Closed end plumb pipe piles with rock crusher tip, 98 Closed end battered pipe piles with rock crusher tip, 99 Open end pipe piles with 20' deep rock socket
- Rotex Pile Driving – 26 18" open end pipe piles with 10' deep rock socket filled with reinforced concrete

- Cast-In-Place reinforced concrete pile caps, cross beams, steel sheet piling cap, face of wharf sea wall & 80' x 652' reinforced concrete deck
- Setting 35 ton reinforced precast concrete pile caps & 8" thick precast panels on top of the precast pile caps for a 70' X 652' 8" Thick Cast-In-Place reinforced concrete deck with a 10" x 652" 8" thick C.I.P reinforced concrete approach slab - Overall total rehabilitation limits of construction 120' X 752" with the upland infrastructure & tying into the east & west existing berths
- State of art Fender System, Ballard's, Timber Curb System
- Outfall System
- Upland Infrastructure
- Paving

Senior Construction Inspector – Demo of Building 291 and Upgrades to Railroad Crossings throughout Port Newark

2002-2009 PA Facilities Port Newark Tenant Alteration Applications (TAA'S) Hoboken, Legal Center, Jersey City/Bayonne Auto Marine Terminals, Elizabeth Industrial Park, Bathgate Industrial Park.
Also immediate repairs and work orders in all the above locations

Construction Inspector for a 140,000 sq. ft. two-story steel framed educational campus building in the Bronx, New York. The building consists of three distinct high schools of 500 students each. Mr. Tanner on behalf of the Port Authority of NY & NJ performed the following:

- Above Ceiling and Elevator Inspections
- Sprinkler System testing on all tamper and flow switches are performed to ensure their proper function during an emergency
- Emergency Generator load tests were conducted to ensure its proper functioning in the case of an emergency
- Emergency lighting testing, powered by the emergency generator, conducted throughout the building; illumination levels range from 1 to 5 foot candles
- Fire Alarm System Testing: included over 200 devices such as manual pull stations, area smoke detectors, heat detectors, duct detectors, Kitchen Ansul Systems, roof hatches, etc.; the Building's Central Command Station on the ground floor receives all the signals and relays them to their remote fire alarm Central Monitoring Station.
- Fire Damper Testing: 206 dampers were physically testicluding smoke purge dampers, fire smoke dampers, transfer dampers, and exhaust fan dampers.
- All strobes and audible alarm devices were tested to ensure proper operation during an emergency.
- Facility Occupational Health Inspections for Kitchen/Dining Areas
- Other life safety equipment was inspected and approved

Construction Inspector – Waterfront Corporate Center, Hoboken, N.J. Port Authority of New York and New Jersey, Construction Inspector on all phases of construction including:

- Electrical Inspection for construction use and permanent power
- Ceiling Inspection, spray on fireproofing, sprinkler piping hangers including seismic bracing, ceiling grid, hangers for ceiling grid, including seismic bracing for ceiling grid and electrical inspections.
- Sprinkler system installation and testing, Spray on fireproofing inspection for columns and beams
- Fire Pump Testing
- Fire Alarm System Testing
- Smoke Exhaust System Testing
- Stair pressurization inspection
- Emergency lighting testing
- Emergency generator testing

- Occupational health dinning facility inspection including kitchen exhaust and ansul system.

Construction Inspector – Port Authority of New York & New Jersey/Port Redevelopment at Maersk and Hoboken Ferry Terminal.

Construction Inspector involved in all phases of construction on various Tenant Alteration Application (TAA's) as follows:

- Wharf Improvements – Phase 2 APM Terminals/Maesk Marine Terminal
- APM Terminals – Phase 2 Yard Improvements
- APM Terminals UST Removal/AST Replacement
- Toyota Logistic – Expansion of warehouse and construction of a new car wash.
- FAPS, Inc. (car & truck handlers). Demolition of buildings and site improvements including construction of a new car wash.

1999 – 2002 Port Authority Staten Island Bridges
Construction Inspector
Construction Inspector on the **Port Authority of New York & New Jersey/Outerbridge Crossing** – Construction Inspector of all phases of construction including concrete deck rehab, all structural steel work and new sidewalks on truss span.

1999-2000
Chief Construction Inspector
Chief Construction Inspector for the New Emergency Disinfection System, for Yonkers Wastewater Treatment Plant. Responsible for coordinating all construction activities with plant personnel, also for quality control on all phases of construction including training and start up.

Equipment Installed:
- Metering pumps
- PVC Hanger System
- Valves
- Electrical
- Sump Pump
- Double Wall PVC Pipe
- Heavy Duty Concrete Containment Pit, for Chlorine Fill Station.

Construction Inspector for rehabilitation work for the Queens Mid Town Tunnel. Responsible for all concrete repair work, also assisted in inspection of all other ongoing rehabilitation including, tile, ceiling panels, railings, elevation and appurtenances.

George G. Van Sant
Senior Construction Inspector

RELEVANT EXPERIENCE

Mr. Van Sant has over 35 years of construction experience.

2009-2010
Resident Engineer, New Rochelle WWTP - Resident Engineer for the demolition of obsolete equipment project at the New Rochelle WWTP. Mr. Van Sant provided inspection and construction administration services for project which involved the removal of outdated equipment and piping, including two former sludge incinerators and their associated pollution control equipment. Project also involved the relocation of a natural gas pipeline and replacement of the existing meter and regulator assemblies. Project also included the cleanout, dewatering and disposal of residuals from two enclosed pure-oxygen aeration tanks. Access to these tanks was provided by temporarily removing the existing surface mixers. Mr. Van Sant coordinated contractor's activities with ongoing plant operations including shutdowns and treatment systems isolation to facilitate demolition activities.

2006-2009
Senior Construction Inspector (Night shift) – World Trade Center PATH Transportation HUB, New York – Responsibilities included – opening and closing of general orders in coordination with MTA Transit on the #1 line and the R&W lines. This was track work which entailed complete power outages on either of those subway lines in order to complete the contract work or emergency track/tunnel sub-contractor monitoring work to detect any movement/settlement in subway station or in tunnels caused by nearby demolition at the WTC contract work. Work duration was usually between 11 pm and 7 am. Power had to be restored by 5 am in preparation for morning rush hours. During this time, Mr. Van Sant would be in continuous contact with an MTA Track Engineer, Track Supervisor for that sector and MTA Flag Persons, who would monitor and protect the outage areas for the safety of all personnel involved. Responsibilities include:

- Oversee any work connected with underpinning of the 1-Line contract, including minipile driving, track removal and replacement; preparation for temporary structural steel placement; constructing and monitoring protective barriers and any other track related underpinning work.
- Oversee and record any and all work activity related to site demolition, including safety, in coordination with contractor supervisor, work location(s), work crew manpower, machines, equipment and materials used.
- Oversee any nearby related street/roadway activities.
- Responsible for safety of PATH customers passing beneath, through or near contract work areas, usually involving water penetration and cleanliness of temporary PATH underpass stairways, escalators and walkways.
- Oversee and record all General Conditions work, paid on a T&M basis. This work involved all East Sector site maintenance, safety, clean up, delivery and removal of machines and equipment from site and other on-going shift personnel and activities (i.e. lighting, repair and maintenance equipment, machines and personnel).

1999-2006
Mortgage Plus Financial Group, Newark, NJ - Duties include:

- Provided inspection reports on various properties
- Supervised construction – reconstruction – repairs for clients
- Received and reviewed architectural prints, constructions permits, etc.

1994-1999
Port Authority of NY&NJ, New York, NY - Duties include:

- Reconstruction of various sections of the Vista Hotel post '93 bombing including:
  - Installation of new commercial kitchen, dining hall and related facilities.
  - Inspection of utility testing including pipe pressure and leakage testing & disinfection
  - Inspection of plumbing, HVAC, steam lines as well as waste facilities, grit trap, automatic fire suppression systems
  - Manage field changes and change orders
  - Commissioned all equipment including startup testing & training
  - Coordinate with PA Code Compliance Division.

Morgan H. Scott

Senior Construction Inspector

EDUCATION

SUNY College at Brockport

CERTIFICATIONS/TRAINING

NICET Level III
ACI 1 - Concrete Field Testing
Structural Steel and Bolting Inspection - 2009
OSHA 10 hour Construction Safety- 2008

RELEVANT EXPERIENCE

As a Senior Construction Inspector Mr. Scott's responsibilities include insuring that all work is performed as specified by the Owner. He attends all project meetings, conducts daily site inspections, prepares detailed field reports and monitors the progress of work in the field, including monthly payment requests, change in work directives, quality control and compliance with the construction schedule & site safety issues.

2008-Present

Lead /Senior Civil Inspector at Stewart International Airport for the Port Authority of New York and New Jersey. Mr. Scott is performing construction inspection services on several projects at the airport including:

- Long Term Parking Lot Expansion - Project includes cut/ fill, placement of subgrade material choker stone, #2 stone and then pave. Contractor will realign toll booths and supply power to the new parking lot lighting system and communications to the new toll booths. Contractor also installed steel faced curbing, ductbanks, drainage structures, manhole structures, new light poles, overhead signs and a traffic signal.

- Rehabilitation of the Weather Instrument Power Circuit
  Installed the Infrastructure for the New WIP Circuit. (Included installation of Manholes/Handholes Electrical and Communication Ductbank) Excavation / Rough Grading /High Early Concrete.

2006- 2008

Project Superintendent – Rockland Children's Psychiatric Center. Performed on site construction management for this important DASNY project. This new 56-bed facility included site preparation, excavation, utilities, reinforced concrete foundation, steel superstructure and building enclosure. It will provide an environment that supports a multi-faceted effort to improve clinical research and training in the field of children's mental health.

2002-2006

Senior Inspector – Teterboro Airport reconstruction for the Port Authority of NY&NJ. Duties include on site inspection of security fencing upgrades, soil erosion and sedimentation protection measures, taxiway extensions and coordination with airport operations.

2002-2004
Senior Civil Inspector – Teterboro Airport – New Taxiways and Taxiway Improvements/Tenant Hangar & Administration Buildings – Responsibilities include:

- Civil Inspector for the new hangar and administration building erection. Involving structural steel erection, reinforced concrete floor slab installation & steel corrugated roof installation.
- Inspection of all utilities associated with these hangars and buildings, water main and sewer tie-ins.
- Inspection of installation and construction of several new high-speed taxiways, involving the excavating of unsuitable material, undercutting, backfilling and asphalt paving.
- Participation in the preparation of cost estimates
- Preparation of all required job related paperwork such as Daily Narratives, T&M records, etc.
- Reviewing of Plans & Specifications for completeness, accuracy and constructability.

2001 – 2002
Senior Inspector –TANY 00-47 Reconstruction of I-87/287 Interchange or Interchange 8.

- Involved in the inspection of the reconfiguration of Interchange 8.
- Involved in the Construction of Pre-cast Concrete Piers, Inverset Panels.
- Involved in the Realignment of ramps on the westbound side of I-287.
- Involved in the Construction of a New Bridge connecting the Saw Mill River parkway with I-287 west and Route 119.
- Installed steel bearing piles, and pre-cast concrete slabs at the Tappan Zee toll plaza.

2000-2001
Senior Inspector – Worked on multiple projects, including TANY 99-13B & 12B. Rehabilitation of Three Bridges Over I-87 & Rehabilitation of I-87 Over Sawmill River Parkway and Northbound Ramp.

- Involved in inspection of elastometric bearing installation, both fixed and expansion.
- Pedestal reconstruction, concrete deck repairs both partial and full depth.
- Responsible for installation of guide rail and protective fencing, structural lifting operations, concrete testing, in classified excavation (stone fill, trench excavation) and MP&T compliance.
- Handled steel spicing, joint removal and replacement, as well as bridge painting.

1997-2000
Senior Inspector – Construction Engineer - Worked on 5 projects: TANY 00-3A, 99-70 & 99-74, Construction of Maintenance and Garages.

- Erected 2 maintenance garages, on each at East Fishkill and Middletown section Maintenance areas, on I-84.
- Poured concrete footings, foundations and floors.
- Erected wood frame buildings using a truss system roof.
- Handled excavation and trenching for new water and sewer connections to existing utilities.
- Responsible for installation of electrical service panels, disconnects, interiors, exteriors wiring, and lights. Also responsible for installation of truck lifts, unit heaters, compressed air systems and exhaust fan systems.

Venard Johnson, Jr.

Senior Construction Inspector

EDUCATION

B.A. Oswego – State University of NY, 1998

7hr. Site Safety Manager Certification
NYCDOB Registered Licensed Construction Superintendent
ACI - Pending

RELEVANT EXPERIENCE

Mr. Johnson is a NYCDOB Registered Licensed Construction Superintendent with over 10 years of industry experience. He has proven track record of success in achieving budget and quality goals on Multimillion-Dollar projects. He excels in Planning, Phasing, Coordinating, Blue Print reading, Contract Administration, Schedule Management and Cost Control. Dedicated to completing projects on time while following all OSHA, Facilities, and Company Safety Guidelines.

December 2007 - Present
Project Superintendent – Currently serving for Confidential and Secure Security Projects at JFK Airport. Managing and coordinating all multiple trade construction activities for various projects. Performing construction installations, phasing, scheduling, and quality assurance management.

Jan 2013 – Present
Checkpoint Digital CCTV Installation Project for Multiple Terminals JFK Airport - $16M Project. Manage electrical contractor conduit and camera installations. Supervise and plan installations for various Airline Terminal Checkpoint Areas. Coordinate with TSA and Facility Management. Supervise restoration of penetrations to structures containing asbestos. Managed manpower, material, equipment and access for secured area installations.

March 2012 – Dec 2012
Delta Barrier and Gate Arm Installation Project for Multiple Guard Post JFK Airport - $13M Project. Construction Manager for Electrical Contractor Gate Arm and Delta Barrier Installations of various JFK Guard Post. Supervised and Planned Installations for Electrical Wiring and Controls. Supervised restoration of Roadway and Curbs on Air Side and Land Side after underground conduit installation. Managed Manpower and Access for Secured Air Side Installations. Performed Construction Phase and Coordinated Scheduling Management.

Sept 2011 – March 2012
Police Radio Communication Expansion Project for Terminal 5 JFK Airport - $3M Project. Managed electrical contractor Fiber Optic cable and Antenna installations. Supervised and planned installations for Departure, Arrival, Public, and Secured Areas. Supervised restoration of penetrations to structures containing asbestos. Managed manpower, material, equipment and access for secured air side installations.

Nov 2010 – Sept 2011
NYU Langone Clinical Research Facility Renovation Fit-Out Project - $30M Project. Planned and supervised installation layouts for electrical, mechanical, carpentry, structural, and masonry contractors. Handled strategic demolition management for occupied building. Supervised multiple story facility build out.

June 2008 – Nov 2010
Two Way Radio Communication Expansion Project for Port Authority Tunnels - $17M Project. Managed and coordinated all electrical contractor construction activities including manpower, materials, and equipment. Monitored layout installation plans for fiber optic and radiating cable which included monitoring cable testing and inspection for installation specification. Implemented and enforced all Port Authority established construction policies and safety procedures.

Dec 2007 – June 2008
Perimeter Strengthening Project for Port Authority LaGuardia Airport - $9M Project. Installed reinforced concrete barriers and security fencing installation. Inspected concrete for all perimeter barriers, ballards and fencing to ensure they were completed and built as per contract drawings and specifications. Phased and scheduled all contactor airport installation.

Jan 2005 – Sept 2007
Construction Inspector - Manhattan Bridge Rehabilitation - In partnership with the New York City Department of Transportation (NYCDOT) - $160M project which included rehabilitation to the Lower Roadway, Brooklyn Plaza, Sands Street realignment, and Street lighting. Inspected welding and alignment of new grid deck, stringers, and floor beams of new steel installation. Inspected and coordinated excavation and compaction for concrete and asphalt. Inspected installation of piping for roadway drainage system. Safety inspector for burning operations for removal of old steel beams, stringers and grid deck. Electrical inspector for removal/installation of conduit and cable for lighting and traffic signals.

March 2004 – Dec 2007
Con Edison Construction Inspection Services Westchester County, New York - Coordinated and monitor MPT for various Con Edison operations in accordance with NYSDOT approved MPT plans. Performed construction inspection services on Con Edison contracts for gas main, conduit, and over head high voltage cable installations. Performed and monitored asphalt standardized tests for quality and strength. Documented field measurements and sketched work for report. Maintained all records in accordance with NYS Manual of Uniform Record Keeping (MURK)

Jan 2002 – Dec 2004
Sidewalk, Pedestrian Ramp, and Curb Restoration Project in Borough of Queens - In partnership with the New York City Department of Design & Construction (NYCDDC) - $80M Project. Coordinated, setup and monitored MPT for sidewalk and pedestrian ramp construction in various locations in Queens. Analyzed and marked out violated sidewalk based on Preliminary Inspection Report (PIR). Performed concrete inspection for all sidewalks, curbs and pedestrian ramp installations. Prepared concrete cylinders for Lab Testing (7 day, 14 Day, 28 Day Breaks).

Oscar Hinkle has over 12 years of experience in construction and facilities management with a focus on building facilities and a strong emphasis on all aspects of project documentation including the submittal and review process, RFI's, and executive summaries. With Savin for over 10 years, Mr. Hinkle's knowledge to detail and exceptional written and verbal communication skills have made sure our clients receive the quality they expect. Mr. Hinkle has been responsible for the on-site, field supervision and project administration for the following Savin projects:

2010-Present

Port Jervis City School District – Project administration for $14 million Excel project and additional $3.8 million in Capital projects including boiler replacements, unit ventilator replacements, conversion to DDC controls, installation of District-wide VoIP telephone system, window replacements, office renovations, toilet room renovations, installation of emergency generator systems and installation of new domestic well and storage tank. Some of his responsibilities included but not limited to:

- Logged all incoming correspondence on Contract Manager 13.1
- Distributed the contractor's shop drawing for review by various disciplines
- Coordinate Submittal, RFI's, PCO's, CO's
- Attend weekly Progress Meeting.
- Contract Manager Routine Maintenance – Meeting Minutes and Payment Requisitions
- Scanned documents into Contract Manager using Image Tool v5.0 Document Management

2009-2010

Pocantico Hills Central School – Project administration for $18 million infrastructure renovation project including boiler and unit ventilator replacement and new DDC controls along with roof replacement. Some of his responsibilities included but not limited to:

- Logged all incoming correspondence on Contract Manager 13.1
- Distributed the contractor's shop drawing for review by various disciplines
- Coordinate Submittal, RFI's, PCO's, CO's
- Attend weekly Progress Meeting.
- Contract Manager Routine Maintenance – Meeting Minutes and Payment Requisitions
- Scanned documents into Contract Manager using Image Tool v5.0 Document Management

2009

Monticello Central School District - Project administration for $7 million Excel project, included boiler replacements, upgrade of all IDC's and construction of a new Network Operations Center. Also included a 50 camera network based security system. This was followed by a $4 million Energy Performance Contract that included additional boiler replacements and converting the entire HVAC systems of seven buildings to DDC controls. Some of his responsibilities included but not limited to:

- Logged all incoming correspondence on Contract Manager 13.1
- Distributed the contractor's shop drawing for review by various disciplines
- Coordinate Submittal, RFI's, PCO's, CO's
- Contract Manager Routine Maintenance – Meeting Minutes and Payment Requisitions
- Scanned documents into Contract Manager using Image Tool v5.0 Document Management

2007-2008

Tuckahoe Union Free School District - Project administration for $14 million additions and renovation project including new fully-equipped science and computer labs. Project included a new artificial turf football field and a new underground fuel storage tank. Some of his responsibilities included but not limited to:

- Logged all incoming correspondence on Contract Manager 13.1
- Distributed the contractor's shop drawing for review by various disciplines
- Coordinate Submittal, RFI's, PCO's, CO's
- Contract Manager Routine Maintenance – Meeting Minutes and Payment Requisitions
- Scanned documents into Contract Manager using Image Tool v5.0 Document Management

2002-2007

Enlarged City School District of Middletown, Hyde Park Central School District, Union Free School District of the Tarrytowns, Irvington Union Free School District, Ellenville Central School District, Stamford Public Schools, Rye City School District – Project administration for multiple capital renovation & addition projects. Some of his responsibilities included but not limited to:

- Logged all incoming correspondence on Contract Manager 13.1
- Distributed the contractor's shop drawing for review by various disciplines
- Coordinate Submittal, RFI's, PCO's, CO's
- Contract Manager Routine Maintenance – Meeting Minutes and Payment Requisitions
- Scanned documents into Contract Manager using Image Tool v5.0 Document Management

2012-2013
Binghamton Johnson City Joint Sewage Treatment Plant - Backwash Equalization Tank Stabilization Project.
Chief Inspector/Project Engineer – Contract included installation of geofoam and placement of controlled low-strength material adjacent to existing tank walls to reduce lateral loading. Mr. D'Addio's responsibilities include:

- Coordinate with contractors
- Inspection of excavation and stabilization of tank walls
- Coordinate change orders
- Prepare meeting minutes and lead progress meetings
- Photo documentation of project progress
- Process payment
- Prepare close out reports

2012
Binghamton Johnson City Joint Sewage Treatment Plant - Interim Demolition
Chief Inspector/Project Engineer – This project included installation of steel bracing, demolition of existing reinforced concrete walls and media removal. Mr. D'Addio's responsibilities included:

- Coordinated with contractors
- Inspection of demolition and installation of steel bracing
- Coordinated change orders
- Prepared meeting minutes and lead progress meetings
- Photo documentation of project progress
- Process payment
- Utilize Primavera Contract Management
- Prepared close out reports

2011-2012
Throgs Neck Bridge Repairs
Construction Inspector/ Engineer – Worked as an onsite construction inspector and office engineer assisting in construction management for the MTA (Metropolitan Transportation Authority) on the 15 Million Dollar Anchorage and Tower Protection Project and the 47 million dollar Interim Repairs of Orthotropic Deck Structure Project at the Throgs Neck Bridge.

Thomas D'Addio
Construction Engineer

Daily responsibilities for field work included inspection and preparing reports for: installation of FRP piles and steel fenders, construction of new steel walkways, inspection of existing structural elements, installation of new navigation and decorative lighting systems, and repairs of deteriorated steel members. Additional responsibilities included daily coordination with the MTA throughout the project, from the onset of design, through construction and finished work to uphold quality standards while maintaining a mandated schedule of deadlines. Office tasks and responsibilities included additional coordination with the MTA, preparing estimates for change orders, verifying shop drawings and work records, and compiling quantities of work completed for payment.

2011
Paerdegat Basin CSO
Construction Inspector – Worked as an onsite construction inspector assisting in construction management for the DEP (Department of Environmental Protection) on the Paerdegat Basin CSO Improvement Project. Scope of work for the project included inspecting and preparing reports for: excavation, removal, and shoring of existing roadway and sewer pipe, construction of concrete pipe, manholes, and supporting reinforced concrete pads, and the installation of supporting timber piles for sewer pipe cradle. Additional responsibilities included coordination with the DEP and monitoring all daily work activities to maintain proper safety standards.

2010
Structural Engineer– Responsible for project coordination tasks and deliverables including:

- Designing structural steel members
- Generating computer models for analysis
- Providing structural calculations for steel framing and concrete reinforcing.
- Reviewing shop drawings and specifications
- Creating drawings and sketches
- Performing structural inspections of repairs
- Preparing written technical reports
- Coordinating with contractors and responding to RFI's.

2008-2009
Field Assistant – Field Services
- Worked with sewer smoke testing teams
- Assisted field engineers on sewer CCTV inspections
- Performed manhole inspections

John V. Codella

Civil/Structural Construction Inspector

EDUCATION

Nassau County BOCES – Architectural Drafting
Nassau Community College – Elementary Surveying I
Various computer and drafting course

CERTIFICATION

Level III Inspector, Heavy Highway Construction
N.I.C.E.T. Certification #[redacted]
OSHA Course completed 2012

RELEVANT EXPERIENCE

Mr. Codella's 28 years of experience on major highway and bridge construction inspection projects with the NYS Department of Transportation includes a strong background working in topography, surveying and drafting. Project responsibilities include concrete testing, soil sampling and testing, asphalt paving, erosion control and Maintenance and Protection of Traffic. Duties include supervision and control of contractor's construction activities, enforcement of safety standards, accurate payment and reporting of contract items and quality assurance of material specifications. Major items of work involve concrete and rebar installation for bridge substructures, concrete and asphalt paving, drainage installation and stone bridge construction.

2012-Present
Senior Inspector: Bronx River Parkway Bridges at Crane Road, Westchester County
Mr. Codella is providing construction inspection services for the replacement of the Bronx River Parkway Bridges, at Crane Road over the Bronx River and Metro-North Railroad in the towns of Scarsdale and Greenburgh.

2007-2012
Senior Inspector: NYSDOT - Reconstruction of Cross Westchester Expressway I287 Stage III, Harrison, N.Y. $141M
Senior inspector in charge of subbase placement and asphalt paving operations; excavation and embankment operations; precast culvert and guide rail installation. Supervised rebar installation and concrete placement for bridge footings, abutments, wingwalls and pedestals.

2004-2007
Senior Inspector: NYSDOT - Reconstruction of Taconic State Parkway, Yorktown, N.Y. $68M
Inspector in charge of asphalt paving operations, subbase placement, drainage and precast culvert installation, guide rail installation, wetlands mitigation and soil erosion control and final computations.

2002-2004
Senior Inspector: NYSDOT - Reconstruction of Route 6 and Construction of Bike Trail, Town of Carmel/Mahopac, N.Y. $6M - Duties on this project included installation of GRES Wall, precast box culvert installation, rehabilitation of existing drainage system,

paving operations, wetland creation, fence and guide rail installation and supervision of inspectors and final computations.

1999-2001
Senior Inspector: NYSDOT - Reconstruction of the Hutchinson River Parkway, Rye Brook, N.Y. $30M - Inspector in charge of Daily Maintenance and Protection of Traffic, paving operations, stone bridge rehabilitation, guide rail installation and final drainage computations.

1998-1999
Senior Inspector: NYSDOT - Reconstruction of Route 9, Town and City of Poughkeepsie, N.Y. $10M - Inspector in charge of Daily Maintenance and Protection of Traffic, slipform concrete median barrier installation and paving operations.

1996-1998
Senior Inspector: NYSDOT - Reconstruction of the Saw Mill River Parkway, Towns of New Castle and Mount Pleasant, N.Y. $9M - Duties on this project included the creation of an 8' shoulder, installation of new storm sewer systems, traffic signal rehabilitation, granite curb and concrete sidewalk installation, topsoil placement and establishing turf. Final computations for drainage quantities.

1994-1995
Senior Inspector: NYSDOT - Reconstruction of the Saw Mill River Parkway, Towns of Pleasantville and Mount Pleasant, N.Y. $7M - Duties on this project included creation of an 8' shoulder, installation of new storm sewer system, plantings and extensive stone bridge rehabilitation. Emphasis placed on Maintenance and Protection of Traffic and final computations for quantities.

1974-1994
Various Civil Engineering firms working as a topographic, survey and engineering draftsman.

RELEVANT EXPERIENCE

WORK EXPERIENCE HIGHLIGHTS

- NYSBA-Newburgh-Beacon Bridge Expansion joint replacement
- NYSTA – I-87 I-84 Interchange Phase II at Newburgh, NY
- DCW&WA – Water main installation – Rail trail & Hyde Park
- NYSTA – Noise walls & rock outcrop remediation
- NYSDEP – Restoration of West Branch Dam
- Landfill Closures

2011 - 2013
Inspector, TANY 10-18 D213941, Safety Upgrades at Mile Post 46.0 thru Mile Post 60.5, New York Division, Orange County
Project consisted of upgrades to the guide rails throughout the project. Drainage upgrade including culvert extensions / replacement, headwall removal and replace A.O.B.E. drainage. Structure alterations at various locations. Flattening of slopes, shoulder backup throughout project. Project includes various visual inspections and as needed safety upgrades.

2009
Geologist/Inspector – NYSBA-Newburgh - Beacon Bridge – North Span – Responsible for the field inspection for the NYSBA North Span expansion joint replacement. The scope of the project was the removal of fifteen modular joints and replacing them with steel finger expansion joints. The project included saw cutting the bridge deck, disassembling the existing joints, and then removing the sections with a crane. Then the new joint was assembled and installed. The diaphragm, angle clips and scuppers were bolted to the existing steel structure. The new finger joints were lower into place with a crane. Once in place the finger joint was then bolted and welded to the steel structure of the bridge. Inspected the installation of the joints and the torque testing of the bolts. Inspected the painting of the newly installed structure and the clean-up which included the removal of debris and scaffolding. The project spans over two railroad tracks and the main channel of the Hudson River. Coordinated with Metro-North, CSX and tug boats to stop work when they were approaching to pass under the work zone.

2006-2008
Environmental/Construction Inspector – NYSTA-I-87 & I-84 Interchange Phase II - Responsible for field inspection for NYSTA Interchange Phase II. This phase constructed six new buildings including maintenance buildings, two salt sheds, two-toll plazas, a toll plaza building and NYS trooper barracks. The project included demolition of all existing buildings on site and relocating all utilities. Responsible for the inspection of all underground utilities – sewer, water, storm drains, telephone and electric lines. Inspected the installation of pipe, valves, hydrants, pre-cast vaults and manholes. Observed subcontractor set up equipment to tunnel under I-84 and Route 300. Once all the utilities were in place, witnessed the disinfection and hydrostatic testing of the water lines and the pressure testing of the sewer lines. Assisted with environmental issues such as collecting soil samples to be tested for contamination before the slab foundation is poured. Observed subcontractors remove asbestos from several buildings slated for demolition.

Witnessed the demolition of old buildings. Inspected the excavation for building footings and retention ponds and calculated soil volumes. Helped with the inspection of the new buildings which included the re-bar and form work for footings, grade beams, and the installation of roof trusses. Assisted with the concrete pours by coordinating with the concrete testing lab's inspector, checking truck tickets and observed the placement of the concrete.

2005-2006
Inspector – Dutchess County – Central Dutchess Water Transmission Line – Responsible for field inspection for the Dutchess County Water and Wastewater Authority water transmission line. This twenty-four inch water line was designed to bring water from Poughkeepsie to IBM's East Fishkill manufacturing plant. This is the same thirteen-mile waterline project for which she supervised the soil borings while working for Savin Engineers, P.C. Worked with clearing and grubbing crews to insure that they stayed inside project boundaries. Inspected the installation of silt fence and haybales along the railroad corridor and the roadways. Prior to the installation of the pipe, worked with blasters. There were several miles of rock, which had to be blasted before the pipe could be installed in the ground. Responsible for the preparation of blasting reports with detailed drawings of the blast layout. Inspected the installation of ductile-iron pipe, valves, hydrants, thrust blocks and the installation of pre-cast vaults. Observed the contractor set up equipment and tunnel under streams, state and county roads. Observed the installation of forty-eight inch concrete pipe, which would house the twenty-four inch ductile-iron pipe. Witnessed the disinfection of the waterline and observed the contractor perform hydrostatic testing of the pipeline. Conducted weekly environmental survey and implemented the Storm Water Pollution Prevention Plan (SWPPP) prepared under the requirements of New York State Department of Environmental Conservation SPEDES Permit No GP-02-01. This task included record keeping and weekly inspection of the site for environmental problems. Issued a weekly report to the contractor dealing with deficiencies and required actions to comply with the SWPPP.

1999-2005
Inspector – NYSTA – Noise Barrier Wall – Responsible for conducting field inspections at a NYSTA noise wall projects at Spring Valley and Hillburn. Prior to installing access roads, observed and recorded quantities as the contractor removed guiderail, installed temporary concrete barrier and silt fence with haybales. Inspected the installation and maintenance of a temporary access roadway for construction activity. Responsible for checking the depths of drilled footings and the fabrication of re-bar cages. Coordinated with concrete testing lab for the inspection of the concrete for the footings. Inspected posts and panels when delivered to site for defects. Once posts and panels were erected, checked to see that each post and panel was properly installed and caulked. Inspected weekly temporary erosion and sediment control measures including haybales, silt fence, and jute mesh covered slopes. Coordinated with NYSTA traffic control for lane closures for the installation of temporary concrete barrier and the installation of noise wall posts and panels.

Field Inspector – Dutchess County – Central Dutchess Water Line – Responsible for overseeing the drilling operation for the Dutchess County Water and Wastewater Authority. Coordinated and supervised two drilling crews to perform soil borings for the proposed thirteen-mile waterline. Collected data from the twelve hundred soil borings to get a stratigraphy overview of local geology. Data was acquired through the use of hollow stem auger drilling. Soil samples were taken with split spoon sampling and when rock was encountered it was cored with a diamond bit core barrel.

Inspector – NYSTA – Rock Outcrop Remediation – Responsible for conducting field inspections at a NYSTA rock remediation project mile marker 37. Observed and recorded quantities as the contractor removed guiderail, installed temporary concrete barrier and silt fence with haybales. Inspected the installation and maintenance of a temporary rock catchment barrier fence. This fence was installed to catch rock during the blasting and the reshaping of the rock outcrop to a 1:1 slope. Responsible for preparing blasting reports which showed detailed drawings of hole layout, distance apart, number and size of dynamite sticks in each hole, along with the timing delays for each hole. Coordinated with NYSTA traffic control for stopping traffic during blasting. Inspected the construction of a ditch at the toe of the rock slope. Observed and recorded quantities of topsoil and seed used to establish turf. Also responsible for inspecting the milling and repaving of damaged roadway and inspected the installation of guide rail and chain link ROW fence.

Inspector – NYSDEP – Construction/Restoration at West Branch Dam – Work included restoration of various dams in the NYSDEP watershed area. This included the exterior cleaning and repointing of a one hundred year old dam and gatehouse. Inspected and calculated quantities of rip rap stones placed along the shoreline of the reservoir. Inspected the erection of a concrete building, which would house equipment to monitor and control the flow of water into a stream. Inspected the rehabilitation of the gatehouse interior. This entailed removing old wooden sluice gates and guide rails, repointing and replacing damaged brick and installing new guide rail and new metal sluice gates. Landscaping improvements included planting a three-acre meadow of Native American plants and the installation of security fencing.

Inspector – Dutchess County – Ductile-Iron Water Main – Responsible for field inspection for the Dutchess County Water and Wastewater Authority water main line to connect Hyde Park to Staatsburg. Worked with clearing and grubbing crews to insure we stayed inside of our project boundaries. Inspected the installation of silt fence and haybales along county and private property. Inspected the installation of the ductile-iron pipe, valves, hydrants, thrust blocks and the installation of three pre-cast concrete vaults. Recorded daily quantities of rock removed to install pipe and fittings. Observed the set up of equipment for tunneling under roads for two-inch service line. Measured and checked to see that the service lines had four feet of ground cover for frost protection. Observed the installation of two-inch taps for homeowner's connections. Witnessed the disinfection of the waterline and observed the contractor perform hydrostatic testing of the pipeline.

Field Inspector – NYSDEP – Proposed Water Treatment Plant – Responsible for overseeing the drilling operation for the New York State Department of Environmental Protection Agency. Coordinated and supervised drilling crews to perform soil borings for the proposed Westchester Water Treatment Plant located on Route 100c. Worked on the phase 1 drilling project, collected data from the fifty soil borings and the 10 monitoring wells to get a stratigraphy overview of local geology for building foundations. Data was acquired through the use of hollow stem auger drilling. Soil samples were taken with split spoon samplers and when rock was encountered it was cored with a diamond bit core barrel. Also monitored the water level in the 10 monitoring wells for one year. This data was used to determine direction of groundwater flow and seasonal groundwater table fluctuations.

John J. Franco

Structural Inspector

EDUCATION

B.S. – Civil/Environmental Engineering, Manhattan College, NY, 2012
Liberal Arts & Social Sciences, Westchester Community College

AFFILIATIONS

Member of ASCE Student Chapter at Manhattan College.
Member of The New York Water Environmental Association.

SKILLS

Microsoft Office, familiar w/ AutoCAD, HECRAS, EPANET, SWMM, Primavera Contract Manager, Fluent in Spanish

RELEVANT EXPERIENCE

Mr. Franco's experience includes working as a Construction Manager where he used Primavera Contract Manager to produce daily reports, file submittals and RFI's; prepared meeting minutes for all construction team personnel; prepared schedules for contractors concerning construction activities in accordance with due dates and reviewed payment applications for processing. He recently performed construction inspection at the New Rochelle Wastewater Treatment Plant for the BNR and non-BNR contracts. Specific Project Experience includes:

Structural Construction Inspector - New Rochelle Wastewater Treatment Plant, New Rochelle, NY

- Inspected installation of reinforcing steel in accordance with the contract documents and approved shop drawings for the walls and foundation slabs associated with the UV Building, Process Control Building and BNR Building.
- Inspected the fabrication and installation of concrete formwork for walls, foundation slabs, suspended slabs, and beams associated with the UV Building and BNR stair tower, equipment galleries and backwash tanks. Checked for wall and slab thickness, beam dimensions, waterstop locations and installation, and keyways.
- Inspected installation of structural steel framing and metal deck associated with the Process Control Building garage.
- Inspected placement of 5,000 PSI concrete for the filter cell walls for the BNR Building and junction chambers walls for the UV Building. Concrete placement was in accordance with the contract specifications in regards to mixing requirements, time restrictions, and curing requirements.
- Witnessed and recorded concrete testing including slump test, air test and temperature test.
- Inspected installation of upper and lower grid piping and grid air brackets in the N and DN filter cell walls for proper spacing and elevation.
- Inspected assembly of 30-inch diameter static mixer and spool for N and DN filter cells, mechanical joints, 30-inch butterfly valves, and 42-inch diameter stainless steel backwash piping.

Construction Manager - Hawthorne PEARLS Elementary School, Yonkers, NY

- Full Interior Restoration (Classrooms, Hallways, Restrooms) and Abatement

- New windows and new roof
- Daily Reports, took pictures every day to show progress of job, reviewed submittals and made sure material used was correct, helped answer RFI's, Meeting minutes, reviewed Payment requisitions, scheduling. Constant interaction with every contractor, client and own supervisor to let them know everything that's happening on the job. Made sure all aspects of the job followed the Specifications.

Construction Manager- P.S 10, Yonkers, NY

- Masonry repairs, new roof and Abatement work
- Daily Reports, took pictures every day to show progress of job, reviewed submittals and made sure material used was correct, helped answer RFI's, Meeting minutes, reviewed Payment requisitions, scheduling. Constant interaction with every contractor, client and own supervisor

Construction Manager - Saunders H.S, Yonkers, NY (Kitchen Renovation)

- New kitchen plumbing and electrical. New floor, ceiling, paint. Abatement
- Daily Reports, took pictures every day to show progress of job, reviewed submittals and made sure material used was correct, helped answer RFI's, Meeting minutes, reviewed Payment requisitions, scheduling. Constant interaction with every contractor, client and own supervisor to let them know everything that's happening on the job. Made sure all aspects of the job followed the Specifications.

Construction Manager - Saunders H.S, Yonkers, NY (Athletic Field Restoration)

- Excavation, grading, storm drain installation and synthetic field installation.
- Daily Reports, took pictures every day to show progress of job, reviewed submittals and made sure material used was correct, helped answer RFI's, Meeting minutes, reviewed Payment requisitions, scheduling. Constant interaction with every contractor, client and own supervisor to let them know everything that's happening on the job. Made sure all aspects of the job followed the Specifications.
- Assisted in testing concrete for the drains.

Construction Manager - Lincoln H.S, Yonkers, NY

- New Handicap ramp, new bathrooms to accommodate the handicapped, installed new handicap lift in auditorium, installed new eye/face wash stations.
- Assisted in testing concrete for new handicap ramp that was built. Checked to make sure the re-bars were the correct size. Assisted in making sure all components of the job was consistent with ADA regulations.
- Daily Reports, took pictures every day to show progress of job, reviewed submittals and made sure material used was correct, helped answer RFI's, Meeting minutes, reviewed Payment requisitions, scheduling. Constant interaction with every contractor, client and own supervisor to let them know everything that's happening on the job. Made sure all aspects of the job followed the Specifications.

Design Engineer - North River Wastewater Treatment Plant, New York, NY

- Assembled various reports regarding investment grade feasibility study for cogenerations, basis of design report and technical memorandums.

Michael Balagula, P.E.

Instrumentation & Controls, Electrical

EDUCATION

MSEE/1971/Automation of Electrical Machines for Petroleum Industries/Petroleum College, Odessa Former USSR

Graduate Study: Computer Science II - 1982/24 Credits Toward Masters Degree in Computer Science/Cleveland State University/Cleveland, Ohio

CERTIFICATION

Professional Engineer/WA

PROFESSIONAL SOCIETIES/AFFILIATIONS

ISA - Instrument Society of America
IEEE - Institute of Electrical and Electronic Engineers
NFPA - National Fire Protection Association

TRAINING

Configuration and Programming of PLC systems Allen-Bradley training course 1995
Engineering Configuration of Ovation DCS systems by Emerson 2002

RELEVANT EXPERIENCE

Mr. Balagula has more than 35 years of project experience in large-scale municipal projects involving preparation of plans and specifications, construction management and resident engineering. Responsible for design of electrical and control systems, pump stations, electrical and process equipment selection for wastewater, water, chemical, petroleum, fossil and waste-to-energy plants; paper mills and hazardous waste processing. Supervise the electrical and control system engineering staff with overall responsibility for the conceptualization, design of electrical and instrumentation systems for industrial, waste water, hazardous waste, and solid waste projects. Outline scope of work and define system architecture based on the process requirements. Responsible for preparation of detailed specifications, electrical One Lines, Electrical Load plans, schematics and P&IDs as a complete bid package.

NYCDEP, Hunts Point WPCP Stabilization Design, Bronx, NY:
Electrical and Control Systems Design Engineer, Design of instrumentation and control for the upgrade of this 200-mgd WPCP including upgrade of the main 400-mgd sewage pump lift station. The project includes a plant wide digital distributed control system (DCS). Data will be transmitted from distributed control units located throughout the plant via a fiber-optic data highway to the central plant control room. The DCS will provide centralized supervisory control, monitoring, recording, reporting, and trending capabilities.

Nassau County, Cedar Creek Wastewater Treatment Plant, Cedar Creek, NY: Electrical and Control Systems Design Engineer, responsible for construction administration of electrical and instrumentation systems for this wastewater treatment plant upgrade project. The plant, with a capacity of 120 mgd, underwent major expansion including a large-scale upgrade to the digester facility. Designed 120-mgd main sewage pump lift station. Significant involvement with the computer system that controls and monitors a diesel generation facility, including electrical power distribution system; implementation of Distributed Control System (CDS) manufactured by Fisher and Porter that controls second stage aeration. Assisted in the development of plant Designed flow distribution algorithm to optimize BOD treatment. Designed distributed SCADA system for four 3,000 kW diesel generators. Developed detailed P&ID and interconnecting wiring diagrams based on the manufacturer shop drawings

NYCDEP, Flushing Bay 28.5 mgd CSO Storage Facility, Queens, NY: Control Systems Design Engineer, Design of instrumentation and control system and 28 mgd pump station for this $200 million facility. Included is a SCADA system tying control of the facility to the Tallman Island WPCP.

NYCDEP, Hunts Point WPCP Stabilization Design, Bronx, NY: Electrical and Control Systems Design Engineer, Design of instrumentation and control for the upgrade of this 200-mgd WPCP including upgrade of the main 400-mgd sewage pump lift station. The project includes a plant wide digital distributed control system (DCS). Data will be transmitted from distributed control units located throughout the plant via a fiber-optic data highway to the central plant control room. The DCS will provide centralized supervisory control, monitoring, recording, reporting, and trending capabilities.

Elf Autochem Plant Upgrade, Buffalo, NY: Project Manager for Electrical and Instrumentation design of chemical plant upgrade. Project involved upgrade of two 3,000 KVA electrical substations and evaluation of all existing electrical systems. Design plant-wide personal computer-based Supervisory Control and Data Acquisition (SCADA) system to monitor Power Distribution and other plant processes. Responsible for preparation electrical and instrument contract bid documents.

NYCDEP, 108th Street Pump Station, Brooklyn, NY: Electrical Design Engineer, Electrical and Instrumentation design of a 40 mgd lift station. Responsibilities include preparing cost estimates, creating and reviewing electrical Contract Drawings, electrical Specifications and providing coordination efforts for the project.

NYCDEP, Corona Avenue 400 mgd CSO Vortex Facility, Queens, NY: Electrical and Control Systems Design Engineer, Design of instrumentation and control system for this $35 million facility. Instrumentation and control includes design of testing facilities for a two-year evaluation of this prototype CSO treatment facility.

NYCDEP, Designed Electrical and Control Systems, Boiler Plant Upgrade, New York: Designed electrical and control systems, coordinated mechanical civil and electrical design coordination efforts, assisted in the selection of mechanical and electrical equipment, assured design compliance with applicable safety codes.

NYCDEP, English Kills Aeration Demonstration Project, Brooklyn, NY: Electrical and Control Systems Design Engineer, Electrical and Instrumentation design of an aeration facility. Responsibilities include preparing cost estimates, creating and reviewing electrical Contract Drawings, electrical specifications and providing coordination efforts for the project.

NYCDEP, Owls Head Hypochlorite System Upgrade, Brooklyn, NY: Electrical and Control Systems Design Engineer, responsible for design of upgrade to the hypochlorite system for NYCDEPs Owls Head WPCP.

NYCDEP, Port Richmond Boiler Upgrade, Staten Island, NY: Electrical and Control Systems Design Engineer for Instrumentation and Controls for this Boiler Upgrade project for the NYCDEP.

Keith Craven
Sr. Electrical Engineer

PROFESSIONAL ORGANIZATIONS
Member of the Illumination Engineering Society of North America (IESNA)
Member of the Society of American Military Engineers (SAME)
Citation from Commanding Officer R.M. Honey, Captain, US Navy, "For Professional Achievement in the Superior Performance of Your Duties During the Power Outage at Naval Weapons Station Earle Pier Complex from 16 to 24 March 2000"

EXPERIENCE

Mr. Craven has over 36 years of experience in senior management, project management and design engineering, including power distribution, lighting, controls, power generation, lightning protection systems, primary and secondary grounding systems, fire alarm systems, fiber optic systems, communications, demolition and cost estimating. Over 23 years of experience with projects for the Department of Defense, Veterans Administration and Army Corps of Engineers. Responsible for multiple design engineering projects, including administration, design analysis/narrative, engineering, specifications, and cost estimation. Responsible for scheduling of project work.

Explosive Truck Holding Yards # 1 & 2 – Security Improvements
Naval Weapons Station Earle (NWSE), Colts Neck, NJ
Electrical design engineer for the electrical and security up-grades to two explosive truck holding yards. The design called for the installation of an emergency back-up generator system as well as a complete CCTV security system. Responsibilities included the interconnection of all required equipment and run of fiber optic cables from the Truck Holding Yards to the station security offices. Included with this was the placement and mounting of all CCTV cameras. Head-End equipment and CCTV camera units were used on the project. The fiber optic run included transmitters, receivers, patch panels and associated data surge suppression devices. New power was designed for the CCTV cabinets and the internal equipment, including power surge protection. Combination of both single-mode and multi-mode fiber optic cables were used. Fusion splicing was specified for all required connections as necessary.

Security Up-Grades to Ordnance Storage Magazines
Naval Weapons Station Earle (NWSE), Colts Neck, NJ
Electrical design engineer for electrical and security upgrades to multiple ordnance storage magazines located in a secure area of NWSE. Design included new power for equipment, lighting, and security systems for intrusion detection and CCTV observation and recording. Responsibilities included the interconnection of all required equipment and run of Fiber Optic cables from the magazines to the station security offices. Included with this was the placement and mounting of all CCTV cameras. Head-End equipment and CCTV camera units were used on the project. The fiber optic run included transmitters, receivers, patch panels and associated data surge suppression devices. New power was designed for the CCTV cabinets and the internal equipment, including power surge protection. Combination of both single-mode and multi-mode fiber optic cables were used. Fusion splicing was specified for all required connections as necessary.

Great Neck Schools – Emergency Generators
Great Neck School District - Great Neck, New York
Design Engineer for the design of three natural gas fired emergency generators to provide back-up power to the High School, Middle School and Commons Building. Three generators were designed: two 250kW units and one 350kW unit.

The design included the removal of the existing antiquated generators and a new up-rated electrical distribution system necessary to interconnect the generators to the associated building's distribution system. The new system was also configured to connect into very specific loads within the buildings via two emergency panel boards, one for critical emergency loads and the second for non-emergency but essential building supporting loads. An upgraded natural gas train was designed for each new unit. All three generators were provided with Level 2 sound attenuation enclosures. Distribution system voltage was rated at 208Y/120 volts, three-phase, four-wire. Responsibilities included contract drawings and project specifications.

Rehabilitation of the High Bridge over the Harlem River
New York City Department of Design and Construction (NYC-DDC) and,
City of New York Parks and Recreation (NYC-DPR)
Electrical Engineer responsible for the design of control and power distribution for the new lighting proposed to be installed on the historic bridge structure. Power was derived from a new Con-Edison service and distributed throughout the bridge to both the decorative and pedestrian lighting systems. Lighting was provided for accent, pedestrian safety, and "attic" space lighting required for maintenance purposes. Lighting fixture types included LED, Induction and Compact Fluorescent. Responsibilities included the coordination of all aspects of the power distribution with Con-Edison, NYC-DDC, NYC-DPR, and New York City Department of Transportation (NYC-DOT). Incoming service, delivered by Con-Edison, was a 208Y/120 volt, three-phase, four-wire system. The electrical design was developed to meet the criteria of the NYC-DOT and the Historic Preservation Authority having jurisdiction. During design, the placement of conduit, wire, junction boxes, etc. to minimize impact on the historic structure was paramount.

Sr. Project Engineer for multiple engineering projects at Naval Weapons Station Earle and Stewart Air Force Base. Sample projects included:

- Photo Voltaic System (energy upgrades) for Buildings C-60 and C-62. PV system included the coordination with PV manufacturer/vendor for the design of complete PV system. This included the interface with the AC system using with 3-Phase Grid-Tie inverter, electrical distribution, and reverse flow revenue metering.
- Electrical design for installing complete C-17 Aircraft flight simulator system at Stewart Air Force Base. This included all required electrical distribution, communications, and fiber optics for full operation of the simulator. Responsible for coordination with the associated Boeing engineering staff and developing systems for secure operational capabilities.
- Project electrical engineer for the design of a high voltage overhead distribution utility run (pole line construction) including 15kV G.O.A.B. switching, 9kV lighting arrestors, ACSR cabling and associated guy wire requirements. Primary voltage: 8.32kV.
- Electrical design for various renovation projects including incoming power upgrades, energy efficient lighting, distribution, emergency generators, fire alarm systems, and testing.

1977 to 2011
Senior Associate/Department Head - Electrical
Responsible for management of 14 electrical engineers and 1 architect, including workload scheduling, administration, inter-department coordination, training, and final QAQC

1995 to 2009: Base Electrical Engineer at Naval Weapons Station Earle

- Responsible for overseeing and troubleshooting major electrical problems/issues including ship-to-shore power systems, electrical testing, electrical evaluation and electrical failure investigations

1990 to 2011: Project Management

- Responsible for multiple engineering design projects for military installations, pier facilities, wastewater/water treatment facilities, commercial and industrial facilities, transit facilities, educational institutions, and prison installations.
- Responsibilities have included contract administration and negotiations, sub-consultant administration and coordination, client relations, engineering fee structures, and preparing Requests for Proposal.
- Military-specific project management provided for the integration of electrical, mechanical, structural, plumbing, and design engineering services to Naval Weapons Station Earle beginning in 1990. Work/task orders were spread over six consecutive NAVFAC IDQ contracts. They included technically diverse and complex challenges involving management of subcontractors as well as integration of the designs into an existing and continuously operating facility

Electrical Design Engineer for diverse projects associated with the US Navy, Veterans Administration, Army Corp of Engineers, Department of Environmental Protection, Long Island Railroad, MTA, Port Authority of New York and New Jersey, NYC Department of Transportation, NYC Department of Parks and Recreation, and New York City Correctional Facilities

- Responsibilities included electrical engineering design, writing of existing facilities studies, feasibility studies, electrical distribution system maintenance and repair contracts, operation and maintenance manuals, and electrical testing protocols including safety/administration duties
- Experience with design engineering projects covering voltages ranging from 34.5kV voltage systems to secondary distributions system of 208Y/120 volts, three phase

Mohamad A. Oghli

Senior Mechanical Inspector

EDUCATION

B.S - Mechanical Engineering - SUNY@ Stony Brook, 1984

CERTIFICATIONS & TRAINING

American Concrete Institute (ACI)
Hot Work Permits
Confined Space
Scaffolding – User Safety
OSHA Construction Safety & Health
FIT Test Certified
Familiar with new DEP Standard Operating Procedure and applied the SOPs into Mechanical and some civil work.

RELEVANT EXPERIENCE

Mr. Oghli has over 25 years of construction and commissioning experience. He has performed commissioning of mechanical, HVAC, electrical and related work. He has overseen commissioning and inspection staff and reported directly to the owners representative.

2005 – 2013
Sr. Construction Inspector
NYCDEP – Paerdegat Basin CSO Facility Contracts: 4B, 5G, 5H, 5P and CSO-6.

- Oversaw the commissioning, testing, document conformance and installation of HVAC systems to include:
  - Unit Heaters (Electrical & gas fired)
  - Air Handling Units
  - Air conditioning and condensing units
  - Computer Room Air Conditioning Units (CRAC Unit)
  - Motorized Smoke fire and gravity dampers
  - Automatic temperature controls systems, including life safety interlocks and shut downs.
- Inspected and documented conformance with contract documents for all testing, adjustment, and balancing of HVAC ductwork systems.
- Field testing of equipment and ATC control systems.
- Inspected and documented equipment startup and commissioning, including manufacturers certifications for warrantee and guarantees.
- Compiled equipment and HVAC system deficiencies and punch lists and implemented corrections for acceptance.
- Reviewed, attended and audited all HVAC equipment and system operation and training to ensure appropriateness of scope of work.
- Oversaw installation and commissioning of Instrument Control system with assistant of I & C Engineer
- Inspected installation and testing of piping for water, drain, gas, SS air, and sprinkler piping system including the insulation for required piping.
- Inspected installation, testing and commissioning of sluice, slide and tide gates, service water skids, boilers and related breeching system, hot water heaters, fuel oil filtration and pumping skids, circulating water pumps, sump pumps, grit pumps and related valves.
- Oversaw installation, testing and commissioning of Carbon Vessel for Odor Control System.
- Oversaw the installation, testing and commissioning of screening and conveyor systems.

- Involvement with shop drawings and drawings review.
- Inspected the installation and testing of a 2000 gallon underground storage fuel tank for boilers and connecting piping.
- Also inspected underground gasoline, diesel tanks, pump dispersion, control devices and fire protection systems of vehicle fueling station.
- Inspected the installation of piping for storage tank for backup generator.

2003-2005
Remex Construction Corp., Astoria, NY – Responsible for different phases of mechanical/structural rehabilitation of commercial buildings in New York related to pumps/motors and pipe supports.

2002-2003
Kent Construction Co., Inc., Woodside, NY – Responsible for overseeing demolition of balconies in a 36-story building, restoration of boiler rooms, placement of concrete and arrangement of pipe support systems. Obtaining permit from NYCDOB "CD5" for submittal related to stage scaffolding using outrigger beams and/or hooks.

1985-2002
Worked as an independent contractor; managing all different phases of new construction, restoration/rehabilitation of commercial/residential buildings.

Andrew Denniser

Construction Inspector

EDUCATION

Queensborough Community College, Queens, NY, 2002
APEX Technical School, New York, NY, 2003

TECHNICAL SKILLS

Electrical/I&C: Low voltage control wiring, control instruments and gauges, RGS conduit, mega-ohm testing, continuity testing, wiring diagrams and wiring schematics

Mechanical: Boilers (Hydronic, steam, electric, direct vent), HVAC units (split system, package unit, chilled water system, heat pump), piping, refrigeration lines, industrial and commercial pumps

RELEVANT EXPERIENCE

Construction Inspector, Yonkers WWTP
2012-Present

As a Construction Administrator/Inspector acted as liaison between the contractor, designer and the client. Coordinated all construction activities with working plant operations. Prepared documentation for and participated in Pre-Construction, Monthly Progress, and Issues and Tasks Meetings. Maintain and prepare logs and documentation for Federal and State funding appropriation audits. Reviewed, negotiated and authorized all payments.

Provided Electrical/I&C Inspection which included:

- installation of conduits, fixtures, disconnect switches, wires and cables
- testing of wires and cables (mega-ohm, continuity, millivolt, milliamp testing)
- installation and testing of instruments and controls
- installation of electrical meters, circuit breakers and panels

Provided Mechanical Inspection which included:

- installation and testing of boilers and other HVAC equipment
- insulation of piping, ductwork, and ventilation equipment
- exhaust and odor control systems
- Installation of windows & doors
- metal fabrication and welding
- roof systems

Provided Plumbing inspection which included:

- metal piping, fiberglass, drainage and storm piping
- hanger and support systems
- seismic anchoring systems
- hydrostatic testing
- installation of various types of valves (electrical and manual)

Provided civil inspection which included:

- Installation of rebar, form work, steel I-beams and channels
- Placement of concrete pads/piers and asphalt roadways
- Construction of masonry walls

2011-2012 Construction Inspector, Port Richmond WWTP, NYCDEP

Performed Construction Inspector duties as well as maintained quantities log book, reviewed new shop drawings, monitored adherence to DEP specifications and Standard Operating Procedures (SOPS) to ensure no conflicts, maintained ARRA logs and prepared for ARRA audits, HAZMAT logs and results, assisted in change orders (drafted, estimating, and negotiations) and payments.

Provided Electrical/I&C Inspection which included:

- installation of conduits, fixtures, disconnect switches, wires and cables
- testing of wires and cables (mega-ohm, continuity, millivolt, milliamp testing)
- installation and testing of instruments and controls
- security monitoring and communication systems
- street lighting
- installation of electrical meters, circuit breakers and panels

Provided Mechanical Inspection which included:

- installation and testing of boilers and other HVAC equipment
- natural gas piping and fuel oil piping
- insulation of piping, ductwork, and ventilation equipment
- exhaust and odor control systems
- metal fabrication and welding
- roof systems
- finished carpentry

Provided Plumbing inspection which included:

- water mains and waste water treatment systems
- fire systems (dry, wet, deluge, stand pipe)
- various metal piping, fiberglass, drainage and storm piping
- hanger and support systems
- seismic anchoring systems
- various types if hydrostatic testing
- installation of various types of valves (electrical and manual)

Provided civil inspection which included:

- Installation of rebar, form work, steel I-beams and channels
- Placement of concrete pads/piers and asphalt roadways
- Construction of masonry walls

2008-2011
Construction Inspector, Paerdegat Basin CSO
Provided construction inspection services on the Paerdegat CSO Project for the New York City Department of Environmental Protection.

Provided Electrical/I&C Inspection which included:

- installation of conduits, fixtures, disconnect switches, wires and cables
- testing of wires and cables (meggar, continuity, millivolt, milliamp testing)
- installation and testing of instruments and controls
- security monitoring and communication systems
- street lighting
- installation of electrical meters, circuit breakers and panels

Provided Mechanical Inspection which included:

- installation and testing of boilers and other HVAC equipment
- natural gas piping and fuel oil piping
- insulation of piping, ductwork, and equipment
- installation and operation of flushing, sluice, and slide gates
- exhaust and odor control systems
- vehicle fueling stations
- installation and operations of bar screens and all pumping systems (dewatering, and submersible pumps)
- installation of conveyors and monorail and bridge crane systems
- Installation of windows, doors and wooden tides gates
- metal fabrication and welding
- roof systems
- finished carpentry

Provided Plumbing inspection which included:

- water mains and waste water treatment systems
- fire systems (dry, wet, deluge, stand pipe)
- various metal piping, fiberglass, drainage and storm piping
- hanger and support systems
- seismic anchoring systems
- various types if hydrostatic testing
- installation of various types of valves (electrical and manual)
- soil testing
- water closets and bathroom fixtures
- domestic water, sanitary waste and venting system

2007-2008
Certified Installer and Senior Service Technician
Magdad, Inc.

- Installed and serviced HVAC units of various types and configurations
- Installed and serviced walk in refrigerators and freezers
- Installed and serviced exhaust fans of various types and sizes
- Serviced Air Conditioners for the Staten Island Ferry
- Installed and serviced warming trays for the Federal Penitentiary
- Reviewed equipment specs and schematics to troubleshoot problems for field personnel
- Inspected the installation of HVAC Units for the School Construction Authority as a Certified Technician

2003-2007
Certified Installer and Senior Service Technician
Cooper Wilkins, Inc.

- Installed and serviced commercial and residential boilers of various types and configurations
- Installed and serviced HVAC units of various types and configurations
- Specialized in the installation of Low Voltage Control Wire for HVAC equipment and boilers
- Installed serviced and replaced control instruments
- Installed and serviced indirect and direct hot water unit heaters
- Reviewed equipment schematics prior to installation and/or servicing of equipment

RELEVANT EXPERIENCE

Mr. Krom has a broad background in construction management and inspection with over 30 years of experience. His experience includes all aspects of Resident Engineering inspection and the duties of an owner's representative. His responsibilities includes overseeing inspection and office engineering staff, chairing progress meetings, conducting special utility meetings, payment processing, submittal review, resolving field issues, coordinating controlled inspections, commissioning and preparing monthly progress reports

2012-2013
Yonkers School District, Saunders Trades and Technical High School. As construction inspector he was responsible for construction inspection of a new kitchen for the school. Mr. Krom also inspected the installation of gas lines, electrical, plumbing and kitchen equipment.

Melville School District. Mr. Krom was construction inspector responsible for the inspection of the addition of 8 new classrooms, elevator and kitchen. He inspected all mechanical, electrical, HVAC and structural work.

Yonkers School District, School 21. This project consisted of a new auditorium. Mr. Krom inspected the electrical, plumbing and general construction work.

2011-2012, Construction Inspector at the Woodbourne Correctional Facility, Woodbourne, NY, Sullivan County.- NYSOGS Project included rehabilitation of over 12,000 sq. ft. flat membrane (EPDM) **roof** for the main kitchen building. Provided electrical inspection of new Transfer Station building, removal and wiring. Inspection of horizontal boring of storm water piping as well as manhole replacement and electrical duct banks..

August 2010 – 2011, Senior Construction Inspector at the Tappan Zee Bridge Redecking, New York State Thruway Authority This contract includes the removal of the existing bridge deck from the right and center lanes northbound and southbound from the eastern point of the superstructure to the Nyack shoreline.

May - July 2010
New York State Thruway Authority - Inspector for the pavement striping of various roads including I-84, I-287, I-87 and I-95. Responsibilities also included as builts and pay requests.

2009-2010
Inspector for the 4.6 million upgrade of the Hill Sparrow WWTP 35,000 gal per/day. Work included the demolition of a sand filter building and sand filters also part of the mud well building. Demo also included several waste water distribution lines and air lines. The upgrade consisted of a new building approximately 43' x 43' x 12' which now houses a EQ tank, three new UV units, a holding tank and three seimens micro filter units, also an electrical room and a new lab room. The upgrade also included one additional sand filter, new mixers for the secondary chaifer and a new chemical food system. The Hill Sparrow WWTP now has all new control panels (PLC's) and is entirely run by a new SCADA master control panel. Mr. Krom also inspected the George Fischer WWTP 4,000 gal per/day facility. This 4.3 million upgrade consisted of a new building, EQ tank, 3 UV units, 2 micro filter units, 2 sand filters and all the control panels and SCADA system. Both jobs were NYCDEP projects. Responsibilities included overseeing inspection and office engineering staff, chairing progress meetings, payment processing, resolving field issues, review submittal, and being the eyes and ears for the design engineer.

Mr. Krom worked on the Hyde Park Superpulsator Project which involved the repair of existing concrete. Work included sand blasting of the concrete tank walls and floor. After cleaning tank he inspected for cracks and spalling. The smaller cracks were repaired by epoxy crack injection method and the larger cracks were v-notched and a structural non-shrink grout was applied. Areas where the rebar were exposed - the area around the rebar was routed at least ¾ inch all the way around and then filled with a structural crack material. Some areas were so bad that they had to saw cut the area remove the existing concrete. They drilled holes and doweled the concrete. Forms were constructed around area and a rebar mat was installed and tied to the dowels then poured with concrete.

Mr. Krom also worked on several smaller bridge jobs where parts of the concrete decking were removed and replaced on wing walls that were in need of repair (Route 52 East Ellenville, Route 32 South New Paltz and Route 52 West Greenfield Park).

2008-2009
Inspector For the $4 Million upgrade of the Blackberry and Hills Barrow WWTP. Work included new advanced sand filter units, equalization tanks and significant sitework. Performed Storm Water Pollution Prevention (SWPP) Inspections, including erosion control inspections to insure compliance with approved SWPP plan; preparation of weekly reports communicating deficiencies and suggested remedies for various storm water related issues; direct communication with operator's representative on weekly basis; documentation of site progress and certification as it relates to storm water pollution and erosion control. A 1600 sq. ft. new shingled roof was installed at the Blackberry WWTP for the process support building structure.

2007-2008
Inspector for a lime stabilization system for the City of Lancaster, PA WWTP. The system included the placement of a lime silo on the roof of the plant and a lime mixing system with screw conveyors and odor control system. Also several PLC's and controls to the MCC and SCADA system. Projected included replacement of a new 60,000 sq. ft. membrane (EPDM) roof for the process support building.

2006-2007
Inspector for a new sludge loading system and odor control system for the City of Lancaster PA WWTP. The project consisted of two new sludge bins and several conveyors to a new screw conveyor loading system. All was done inside of an existing building. Large odor control duct work was installed with two large blowers that fed a new BioFilter Building and a larger scrubber system.

2005-2006
Inspector for a large demo project at the City of Lancaster PA WWTP which demolished an old sludge loading system and large composting silo and equipment. The project included the installation of two new belt dewatering presses and a new electrical service to the old building. The electrical consist of new service from the transformer to a new switching system and several larger MCC and PLCs. The project also included the installation of a fire alarm system, eye washes, and new computer with an updated SCADA system.

2003-2004
Inspector for an RBC rehabilitation project for Kiryas Joel WWTP. The project consisted of the rehabilitation of eight (8) RBCs , the installation of four (4) new RBCs, and the piping for the new RBC, along with the replacement all of the existing piping for the old RBC. The project also included the construction of a new WWTP building at Four Bay Garage.

2002-2003
Inspector for the County of Renssalaer WWTP. The project was the rehabilitation of four (4) old clarifiers and the construction of a new 60 foot diameter clarifier along with all of the piping related to the clarifiers.

2001-2003
Inspector – Napanoch Water District – Oversaw construction of 6 miles of new water lines and hydrant installation, and 500,000 gallon water tank site and development of 5 wells.

2000-2001
Inspector – Project included the installation of 1000 feet of new sanitary sewer lines and five new HDPE lined sanitary manholes. Plans included slip lining of storm sewer lines, using 32 inch HDPE, 14 inch HDPE and 10 inch HDPE pipe for the rehabilitation of nine storm sewer manholes, and abandoning two outfalls along the Mohawk River and Utica Harbor. A major part of the project was the de-watering of the construction site, as the site had a lot of LNAPL and DNAPL, which required processing through a small water treatment plant before it would meet DEC discharge requirements. Mr. Krom managed the water treatment plant and also made several improvements to the system.

1999-2000
Resident Engineer – Responsible for monitoring well development for nine wells. Method used was surging and pumping. Activities included measurement of water levels, evaluation of the presence or absence of LNAPL and DNAPL, calculation of well volumes and organic vapor levels, emptying well discharge into drums, and documenting all liquids and waste.

1998-1999
Resident Engineer – City of Newark, NJ – City of Waterbury, CT – Cured-in-Place Sewer Lines - Projects consisted of cured-in-place lining of sewer lines ranging in size from 15 to 109 inches in diameter. Waterbury project also included the realignment of water mains, gas mains and storm water lines.

1994-1998
Mr. Krom owned a surveying business in which he did many mortgages surveys, large parcel surveys and topographical surveys. He also did a lot of construction surveying and worked with GPS and Arial Control Mapping.

1993-1994
Licensed Surveyor - He was responsible for the surveying department both field and office work.

1985-1993
Senior Party Chief - He was responsible for all field work and several field crews.

- Process and Maintain all SAR Documents per Contract
- Process and Maintain all TAA Correspondence and Reports

2003-2008
Assistant Office Engineer for the Port Authority of New York and New Jersey - Responsibilities included:

- Administer and coordinate all daily functions including:
- Maintain and process all Personnel records for on site employees.
- Track and record all employees vacation and sick time
- Maintain and compute all daily written correspondence
- Interact and provide assistance to Subcontractors and PA Personnel
- Maintain and process all expense reports for on site employees
- Interact and provide assistance on a daily basis with the Office Engineer
- Maintain and process Net Cost Audit Letters and summary reports for Subcontractors
- Maintain and process all Subcontractors Approval requests for signatures
- Maintain and Input all Post Award Contract Changes (PACC) for approval
- Maintain and Input all Change Order forms for approval
- Maintain and Download all site photos to various contracts for access availability
- Maintain all contract filing for available access
- Maintain and process all Contractor Performance Evaluations for closeouts
- Maintain and process all Net Cost Items to Wintrak per contract
- Prepare Weekly Construction Newsletter/ Progress Reports
- Prepare and process Blue Folders for signature
- Assist in all Contractors Payments
- Assist in Contracts Monthly Report

1999-2002
Assistant to Facility Manager - Responsibilities included:

- Administer and coordinate all daily functions including:
- Maintain and process all Personal records for all on site employees.
- Track and record all employees' vacation and sick time.
- Dispatch employees to address maintenance issues within the facility.
- Interact and provide assistance to all Clients, Vendors and Subcontractors.
- Maintain and process all accounts payable on a daily basis.
- Coordinate Facility Managers daily functions.
- Investigate and follow-up on all client complaints.
- Administer and coordinate all monthly billings and reports for clients.

1997-1999
Divisional Administrator – Responsibilities included:

- Administer and coordinate all divisional functions including:
- Maintain and process all expense reports and travel arrangement for Divisional Vice President.
- Maintain and process monthly invoicing for various sites.
- Maintain and update all Workers Compensation and General Liability claims Division wide.
- Interact and provide assistance on a daily basis with site Facility Managers.
- Maintain and process all accounts payable for Divisional Office.
- Assist Facility Managers, Corporate Office and Division with start-up of new sites.
- Investigate and follow-up on a monthly basis all delinquent payments Division wide.
- Interact with Corporate Office staff on a daily basis to facilitate operating procedures.

RELEVANT EXPERIENCE

2009-2013
Senior Inspector - Tappan Zee Bridge Redecking, Phase II, NYS Thruway Authority. This contract includes the removal of the existing bridge deck from the three middle lanes of the main span to the Nyack shoreline. Duties include inspection of precast roadway sections, structural steel installation and blot up, bearing replacement, pedestal reconstruction and steel repairs. Review force account submissions and submit daily IDR.

2006-2009
Senior Inspector - Tappan Zee Bridge Redecking, Phase I, NYS Thruway Authority. This contract included the removal of the existing bridge deck from the two outer lanes northbound and southbound from the main span to the Nyack shoreline. Project also included replacement of bridge rail and expansion joints. Duties included inspection of installed precast roadway sections, structural steel installation and bolt up, bearing replacement, reviewed submitted force account info and submitted daily IDR.

2005-2006
Construction Engineer - NYCDEP- Jamaica Water Pollution Control Plant – Performed construction inspection of plant upgrades including sheeted excavations, pipe installation, caisson installation and building construction.

2004-2005
Construction Inspector - Paerdegat Basin CSO, NYCDEP – Provided inspection of storage tank construction including reinforced steel and concrete placement.

2003-2004
Office Engineer - Noise Barrier Installation – Performed office engineer duties which included: processed estimates, reviewed daily IR's, produced meeting minutes, tracked contractors progress with EEO requirements and payroll, provided correspondence for Thruway Authority and Contractor. Duties include review of daily work reports for accuracy and conformance with NYSDOT Specifications and Manual of Uniform Record Keeping (MURK). Review and enter quantities, material certifications and partial payment of stored materials for processing contractor payments in the CEES program. Review and process Orders-On-Contract for new contract work and overruns items; Field Change Orders for force account (T&M) work and performed cost analysis for negotiated agreed to prices for new items.

2001-2003
Construction inspector - Noise Barrier Installation – Construction inspection of noise barrier along north bound I-87. Work included drilling footings, placement of reinforcement steel and concrete, erection of prefab. Posts and panels, joint caulking, installation of R.O.W. fence and paintings.

2000-2001
Construction inspector - Noise Barrier Installation – Construction inspection of noise barrier along north bound I-87. Work included drilling footings, placement of reinforcement steel and concrete, erection of prefab. Posts and panels, joint caulking, installation of R.O.W. fence and paintings.

1999
Construction Inspector on the I-287 Cross Westchester Expressway. Work included reconstruction of 3-mile stretch of I-287 including reconstruction of two ramps and replacement of three bridges. Work included asphalt overlay, cracking and seating of underlying concrete pavement, super pave hot mix asphalt overlay, concrete median barrier, steel bearing piles, drainage, guide rail, extensive rock blasting, noise walls, utility relocations and installation of variable message signs.

1998-1999
Construction Inspector Woodland Viaduct Bridge, Westchester County, NY. Work included complete deck replacement of concrete arch bridge over active Metro-North Railroad tracks, new approaches, retaining walls, erosion and sediment control, & maintenance and protection of traffic.

Senior inspector for the $15 million project that involved the installation of an asphalt overlay on the main runway of the Westchester County Airport. In addition other work elements included drainage improvements, lighting repair, sediment and erosion control and maintenance and protection of airport traffic. To accommodate air traffic volume, most of the project work was completed at night as well as using 24-hour shifts on selected weekends.

1996-1998
Construction Inspector on the New England Thruway. Responsibilities include preparation of daily reports, computation of quantities for unit price items, on-site material testing such as concrete slump and air entrainment tests and documentation of work progress with diagrams.

Construction Inspector Chatsworth Ave. Bridge, Weaver St. Bridge and Larchmont Parking Deck. Work included removal of existing paint by sandblasting and application of paint from prime coat to finished coat. All work was done in accordance with NYSTA specifications including containment and removal of waste. Responsibilities included inspection of paint removal and application and testing for proper film thickness.

1995
Construction inspector on the construction of high-level platforms and parking lot improvements on four new railroad stations in Patterson, Pawling, Harlem Valley/Wingdale, and Dover Plains for Metro-North commuter railroad. Responsibilities include overseeing excavation work for footings and drainage pipes, grading for parking lots and the construction of railroad station platforms with reinforced concrete. Completed railroad flagging/safety course.

1992-1994
Construction inspector on the combined sewer overflow facilities at Yonkers, NY, a $10 million project involving general, electrical, HVAC and plumbing contracts. He is responsible for inspection of erection, bracing and removal of concrete formwork. He is also responsible for QA/QC of concrete including time limits for mixing and placing of concrete as well as performing slump tests, air entrainment tests and temperature readings. Inspection of finished concrete surfaces including but not limited to fins, burrs, projections, honeycombs and rubbing of concrete surfaces.

Mr. Porco also has experience with inspection of reinforcing steel including proper methods for cutting and bending of steel, splicing and spacing, proper bar cover and steel coatings. Inspection of reinforcing ranging from welded wire fabric to #18 bars.

Coordinate and review contractor's submission of shop drawings and catalog cuts, maintain correspondence logs using

Expedition program, complete final estimate and project closeout documents, and prepare As-Built records. Maintain and track FHWA and Railroad Force Account records and forms.

2001-2006
Office Engineer - Interchange 8 (TANY 00-47) - Reconstruction of I-87/I-287 from Tappan Zee Bridge Toll Plaza to the Saw Mill River Parkway for NYSTA ($173M). Project involves construction of 4 new bridges, reconstruction of 5 existing bridges and rehabilitation of 2 existing bridges; installation of precast pavement panels at toll plaza; construction of modular retaining walls, concrete post and panel noise barrier walls and extensive pile driving, rock sockets and rock blasting. Duties include review of daily work reports for accuracy and conformance with NYSDOT Specifications and Manual of Uniform Record Keeping (MURK). Review and enter quantities, material certifications and partial payment of stored materials for processing contractor payments in the CEES program. Review and process Orders-On-Contract for new contract work and overruns items; Field Change Orders for force account (T&M) work and performed cost analysis for negotiated agreed to prices for new items. Review of certified payrolls and monthly utilization reports for compliance with D/M/WBE & EEO requirements. Coordinate and review contractor's submission of shop drawings and catalog cuts, maintain correspondence logs using Expedition program, complete final estimate and project closeout documents, and prepare As-Built records. Maintain and track FHWA and Railroad Force Account records and forms.

1998-2001
Office Engineer - Tappan Zee Bridge Rehabilitation (TANY 97-32B) - Deck Replacement and Rehabilitation, Joint Replacement and Rail Upgrade ($36M). Project consists of removal of existing deck slabs for installation of new Exodermic deck panels with Polycarb overlay, repair of the joint system and upgrade of the existing bridge rail along the East Deck Truss spans of the TZ Bridge. Duties include review of daily work reports for accuracy and conformance with NYSDOT Specifications and Manual of Uniform Record Keeping (MURK). Review and enter quantities, material certifications and partial payment of stored materials for processing contractor payments in the CEES program. Review and process Orders-On-Contract for new contract work and overruns items; Field Change Orders for force account (T&M) work and performed cost analysis for negotiated agreed to prices for new items. Review of certified payrolls and monthly utilization reports for compliance with D/M/WBE & EEO requirements. Coordinate and review contractor's submission of shop drawings and catalog cuts, maintain correspondence logs using Expedition program, complete final estimate and project closeout documents, and prepare As-Built records. Maintain and track FHWA and Railroad Force Account records and forms.

1996-1998
Assistant Office Engineer - Tappan Zee Bridge Rehabilitation (TANY 96-1B) - Center Lane Deck Replacement ($26M). Project includes replacement of center lane deck panels and stringers from the Nyack Abutment to Bent 81 of the TZ Bridge. Performed deck rehabilitation for the remaining lanes by strip, repair, seal, and overlay (SRSO). Duties include review of daily work reports for accuracy and conformance with NYSDOT Specifications and Manual of Uniform Record Keeping (MURK). Review and enter quantities, material certifications and partial payment of stored materials for processing contractor payments in the CEES program. Review and process Orders-On-Contract for new contract work and overruns items; Field Change Orders for force account (T&M) work and performed cost analysis for negotiated agreed to prices for new items.

EXPERIENCE

Ms. Coitino is a skilled and dedicated Project Engineer who provides project support to Project Executives, Project Managers and Junior Staff members. She assists with meeting minutes and all correspondence such as letters and transmittals. Ms. Coitino monitors project finances for up to date reporting. This includes tracking RFI's, submittals, financial/change orders. Additionally, she monitors all insurance, general requirements, and closeout documents.

Savin Engineers, P.C., Pleasantville, NY **2001 - Present**
Sr. Project Administrator/Office/Project Engineer

New York State Office of General Services
Troop F Headquarters Addition & Renovations and Field Investigation Unit Bldg. (FIU)
Project/Office Engineer for review of submittals, RFI's, track and maintain logs, update team members, send notifications to all parties involved. Some responsibilities include:

- Document control coordination
- Project schedule maintenance
- On-site LEED coordinator
- Job Meeting coordinator
- Review and process contractor's requisition for payment
- Track and maintain project field and change orders
- Monitor all insurance, general requirements, and close-out documents
- Implemented monthly newsletters, which provides the client with update project progress
- Generate cost worksheets utilizing the "Cost Works" program

Port Authority of NY & NJ (PANYNJ) - Contract Manager Specialist (Expedition)
TB&T Various Projects

- Review & knowledge of Project Specifications related to submittals for each project.
- Attend Pre-construction meetings to advise the Contractor of PANYNJ's proper submittal process and numbering system.
- Track, log and maintain project submittals in Contract Manager.
- Generation of Contract Manager reports (submittal log) related to submittals.
- Handling of electronic submittals utilizing "**Livelink**".
- Track project substantial completion to expedite project archiving related to files as well as in Contract Manager.
- Organize and maintain an efficient submittal filing system.
- Utilizing WinTrak to vie project updates as it pertains to schedule, budget etc.

Office Engineer
Provided a wide variety of project administrative support to clients as well as the firms Project Associate. Worked on multiple projects simultaneously from project start-up until project completion.

Relevant Projects:
Norwood Jackson Facility, Valhalla - $50 million dollar project
Richard J. Daronco Courthouse, White Plains, NY - $120 million dollar project
Hyde Park Central School District, Hyde Park, NY - $15 million dollar project
Yonkers Central School District, Yonkers, NY - $7 million dollar project

- Generation of Contract Manager Reports. (Issues, Cost Worksheets).
- Logged, tracked and maintained **shop drawings**, certificate of insurance, daily reports and **"Request for Information"** (RFI)'s utilizing "Expedition".
- Review and process all applications for payment and **change orders**.
- Meticulous review of the financial reporting to insure the utmost accuracy of the projects' accounts.
- Set up new projects with cost codes in "Expedition".
- With the use of Primavera Contract Manager tracking software, **monitor project finances** for up to date reporting. This includes tracking issues, submittals, financials, change orders, and potential change orders. Additionally, she monitors all insurance, general requirements, and closeout documents via internet.
- Word Processing: generated letters, memos, faxes, agendas, and various excel spreadsheet. Weekly meeting minutes, project budget, change orders and Contractors requisition for payment where created, tracked and maintained utilizing "Expedition".
- Editing: proof read, formatted, edited correspondence generated by all personnel to company standards.
- Project Schedules - Utilized (Primavera) to create and maintain on a bi-weekly basis or as required by the Project Manager and Owner/Client the projects schedule. This helped in tracking the projects milestones and project completion.
- Implemented the creation of monthly Project Executive Reports.
- Generated "ManPower" reports to provide the Owner with the amount of Contractor personnel working each day. The information was useful in tracking the individuals' working day to day, and maintain the project milestones tracked in the schedule.
- Prepares preliminary and final SED forms.
- Implementing procedures for document control and **maintaining all project documents** from the start of construction through closeout of the final construction contracts.
- Review of contractor requirements including bonds and insurance through project close-out requirements such as releases of liens, **As-Builts** and certificate of substantial completion.
- Accounting: **tracked project budget**, maintained excel spreadsheets in order to track contractor's change orders against their original contract budget, and entered the pertinent information in "Expedition". This tracking process provided the Project Manager and Owner the financial status of the project on a bi-weekly basis to avoid going over budget on the project.

Ms. Coitino also provided administrative services for the Westchester County CAFM (Computer Aided Facility Management) project. The custom-designed CAFM system provided a comprehensive database for easy maintenance and update of valuable building data for the County of Westchester.

Ms. Coitino assisted in the production of Building Condition Surveys for various school districts including:

- Syracuse City School District
- Mineola Union Free School District
- Greenburgh Graham Union Free School District
- Pocantico Hills Central School District
- Hyde Park Central School District

Lourdes James

Contract Administrator

Plaza Business Institute

COMPUTER SKILLS

Port Authority SAP system, Microsoft Word, Excel, PowerPoint

RELEVANT EXPERIENCE

2007-Present

Administrative Assistant – Stewart International Airport for the Port Authority of New York and New Jersey – Assisted the Terminal/Landside Operations General Manager. Used good organization, typing, data entry skills on a daily basis, as well as other office clerical duties and administrative procedures. Responsible for providing airline data to the rest of company, by collecting all the data and formulating accurate timely monthly reports. Assist client needs regarding statistical data collection at all times.

Ensured airport standards for quality and customer service as it relates to the terminal services and upheld documents on daily housekeeping reports and subsequent follow up inspections. Maintained records of problems reported by customers and tenants, and reports that information to the appropriate areas for correction. Assisted in the coordination of events and promotions at the airport such as fund raising, VIP ceremonies, conferences, commercials and any other function where terminal space is required. Ensured all needs and security requirements. Responding to feedback on web site/pages, and worked with clients to make appropriate changes also updating public information programs to address passenger's needs. Performing related duties including tracking MWDBE utilization.

Responsible for recording, producing and distributing daily, weekly, monthly and yearly airport traffic statistics. Assist the General Manager of the Department with basic administrative duties including filing, travel arrangements, maintaining expense reports and daily schedules.

2006-2007

Marketing Assistant – Assisted the General Manager of Marketing – Responsible for supporting management in conceptualizing a strategic marketing program which includes air service development, public relations, community awareness programs, website development/maintenance, media placement and management.

Prepare and coordinate distribution of news clips on a daily basis. Assist in initiating various morale building steps within the company – monthly newsletters, monthly "all hands" meetings, picnics, awards and distinctions program, employee birthdays, company holiday parties, employee farewells, etc. Responsible for recording, producing and distributing daily, weekly, monthly and yearly airport traffic statistics. Assist the General Manager of the Department with basic administrative duties including filing,

travel arrangements, maintaining expense reports and daily schedules. Produce and maintain accurate accounts payable documents for payment on a daily basis. Communicate effectively with company management and co-workers, airline management at transportation services, state police and TSA. Check and respond to daily emails.

Key liaison in developing, producing and maintaining accurate information on the airport's printed material covering cargo, air service schedules and diversionary operations. Create, organize and maintain selective databases for accurate distribution of marketing materials aimed specifically at travel agents, media, cargo companies, tenants, community leaders and regional business. Maintain an inventory control program aimed at effectively distributing and managing printed material. Supervise all interns and volunteers in the Marketing Department. Oversee the decorating of the main terminal at Christmas.

Assist management in creating and launching campaigns in the Hudson Valley Region for the new airline entrants from an advertising, public relations and customer service perspective. Support management in organizing and placing of all national and local trade advertising. Assist in launching community outreach programs positioning the airport as the "friendly alternative" to the major New York metropolitan airports. Support the key airport spokesperson on all issues related to airport emergencies and information distribution to the media. Prepared and participate in an Airport Emergency/Crisis situation. Facilitated management in researching and collecting information for writing and broadcasting press releases through all mediums. Key representative to several business related trade shows, exhibitions, business functions, press conferences, community and company social events (Orange County Chamber yearly Expo), travel shows, as well as other Travel & Business Expo throughout Hudson Valley. Attend strategic group meeting within the local business community in the absence of the General Manager.

Coordinate and maintain contracts for airport terminal art displays and photo shoots for commercials and television shows. Collect, maintain and produce graphs and statistical reports on regional demographics for air service and cargo development efforts. Create and maintain a filing system for photos and negatives that could be accessed easily for all future ad campaigns. Assist in the coordination of special activities at the Airport such as the Y3 Kids Program. Create, produce and maintain an airport informational guide book for employee's assistance. Shop for Airport supplies such as for the kitchen, employee birthday certificates, cards, supplies for trade shows. Maintain the Airport's trade shows equipment: booth and supplies. Organize and prepare for press conferences. Take photos for the airport when called upon.

Deidre Dennis

Senior Contract Administrator/Contract Manager

EDUCATION

Associates Degree, Fashion Buying and Merchandising, Fashion Institute of Technology, 1985
Liberal Arts Major, Morgan State University, 1977-1979
Certificate in Construction Project Management, Pace University, 2009 (continuous)

COMPUTER SKILLS

Proficient in Microsoft Word, Excel, Access, PowerPoint, Outlook, Expedition, Livelink , Wintrak,and Prolog

RELEVANT EXPERIENCE

2008-Present
Contract Administrator – PATH, Journal Square Transportation Management Center for the Port Authority of New York and New Jersey. Responsible for facilitating the Contract close-out process for all PATH/TAA projects. Prepare and request all Certificates of Occupancy. Maintain weekly materials installation and project delay logs. Validate Subcontractor Approval Requests. Perform desk audits for net cost work. Process and track RFI's, and submittals for Security projects. Distribute weekly schedules and approved submittals to the Engineering Staff. Provide administrative support to the Resident Engineer and Assistant Resident Engineers as needed.

2006-2007
Project Administrator – Toll Brothers, Long Island City, NY - 48th Avenue/Queens West Project $40M Project. Primary responsibilities included the set-up and management of the home office. Developed and maintained procedural and administrative protocols. Processed and tracked RFI's and submittals. Assembled, and distributed bid packages. Prepared shop drawings and specifications listings. Created and maintained RFI, submittal, permit and contract status logs. Provided administrative support to the President as needed.

2005-2006
Project Planner for NYC Transit Authority – Responsible for the development and distribution of weekly contractor activity schedules. Prepared and issued monthly flagging utilization reports. Coordinated tier services for daily work crews. Formulated actual TA labor charge reports.

1990-2003
Project Administrator – Bronx Criminal Courthouse Project, Bronx, NY – $ 580M Project – Established and managed field office. Purchased equipment, furniture, fixtures and supplies through competitive bidding. Developed and maintained office procedures and filing systems. Designed and maintained security database. Coordinated staff meeting schedules and planned conferences. Prepared and distributed job meeting minutes. Supervised administrative staff.

Assistant Project Manager – Battery Park City Authority- PS 89, NYC/ Smithsonian Cooper Hewitt Museum – Procured $ 3M worth of furniture, fixtures, equipment and supplies. Created and maintained all project related databases. Processed scope changes, change orders, and RFI's. Prepared Owner's meeting minutes and monthly reports.

Deidre Dennis

Office Manager/ Project Secretary – HPD Bronx, Early Childhood Centers 1, 2, & 3 - Executed monthly requisitions for 35 contractors. Administered the Equal Employment Opportunity program. Prepared monthly report for the Client. Designed and maintained RFI's, change order, and shop drawing databases. Supervised administrative staff. Provided administrative support to the Project Executive and Team as required.

Stuart F. Schiller, CSI, CDT

Sr. Scheduler

EDUCATION

S.U.N.Y. College of Environmental Science in association with Syracuse University
B.S., Construction Engineering

PROFESSIONAL AFFILIATIONS

Construction Document Technologist, Construction Specifications Institute

RELEVANT EXPERIENCE

Mr. Schiller is responsible to the Owner for providing project scheduling, phasing plans and construction claims analysis.

Project scheduling services includes creating master project schedules, critical-path-method (CPM) construction schedules and progress updates for comparison to the baseline. Narrative reports accompany the schedules to better communicate the information provided by the scheduling software, Primavera P6. The reports generally provide the status of project milestones, issues encountered that will affect the schedule, changes made to logic, added/deleted activities, lookaheads and other data requested by the Owner. When required, recovery schedules are created to reduce or eliminate delays.

Scheduling services are also provided to review and prepare analysis of construction schedules submitted by others. Mr. Schiller will import the Primavera P6 files to provide a report of the schedule completeness, activity logic, critical path and conformance to contract requirements. The progress schedule updates are also analyzed to determine if the forecast milestone dates are reasonable and the progress of work is substantiated.

Phasing plans are provided to graphically depict the sequence of work areas or scope, either for public presentation, as part of bid package or during construction.

Construction claims analysis typically involves a project delay and the associated cost of delay, submitted by contractor(s), consultant(s) or the Owner. Using schedule files submitted during the course of the work, daily field reports, change order documentation and other project reports, the project history is reconstructed tracing the source of the delays and the legitimacy of the claim. The cost of such delay, if any, is calculated based on one or more methods, depending on the nature of the claim.

Mr. Schiller has over 24 years of experience providing construction cost estimating, scheduling, project management and claims analysis for multi-phase, multi-site and multi-contractor projects up to $282 million. He is proficient in Microsoft Project, Primavera Contract Manager, Building Information Modeling (BIM) and many cost estimating and graphics software. Some relevant project experience includes:

State University of New York at Binghamton, Rehabilitate Domestic Water Distribution System, Binghamton, NY. Prepared CPM construction schedule, progress updates and recovery schedule including narrative reports using Primavera P6 for campus-wide water system upgrade including water main, pump stations, water tanks and related construction.

Wake Tech Community College Health Sciences Building, Charlotte, NC. Performed analysis of contractor delay claim involving multiple delays and concurrent delays based on the default of a subcontractor.

Levine Cancer Institute, Charlotte, NC. Performed analysis of contractor delay claim involving multiple delays and concurrent delays based on the default of a subcontractor.

Port Authority of New York and New Jersey – Construction Claim Analysis for Newark International Airport Terminal B Modernization Electrical Upgrades, Lobby B-1 and Vertical Circulation Project, Newark, NJ. Under term contract agreement, performed analysis of $6 million contractor delay claim involving multiple delays, concurrent delays and change order analysis for the $53 million rehabilitation and renovation.

Port Authority of New York and New Jersey – Schedule Analysis of Howland Hook Marine Terminal Open Area Paving and Utilities Project, Staten Island, NY. Analysis of baseline schedule submitted by Contractor to determine if proper activities were included and completion dates achievable. Analysis of 'as-built' schedule for delays and inefficiencies.

New York State Office of General Services. Performed scheduling services for construction management term agreement. Projects include new Firing Range at Fishkill Correctional Facility in Fishkill, NY and New York State Police Troop "F" Headquarters Addition, Renovation and new FIU Building in Middletown, NY.

Queens Midtown Tunnel Rehabilitation, New York, NY. Performed concurrent delay analysis of a claim submitted by the contractor. Using Primavera Project Planner and on-site submittal logs forecasted different scenarios and determined the validity of delays. Responsibilities also included report preparation outlining the scenarios and making recommendations on resolving claims.

Roosevelt UFSD - $170 million District Wide Replacements and Improvements.
North Shore UFSD - $30 million district-wide renovations and additions
Miller Place UFSD - $10.8 million district-wide infrastructure improvements
Rocky Point PS - $28.5 million annual capital project plans

10-Hour OSHA Outreach Seminar

RELEVANT EXPERIENCE

Mr. Accilien is a Construction Manager for Savin. He has over ten years of construction experience. Mr. Accilien's experience at Savin includes:

- Roosevelt UFSD – Document control and logistics plans for district wide replacements and improvements. Construction manager and assistance to Project Executive.
- North Shore CSD, Sea Cliff, NY – Roof replacement at North Shore High School.
- Freeport UFSD - District wide additions and renovations.

Prior to joining Savin, Mr. Accilien's experience includes:

Savin Engineers, P.C., Pleasantville, New York – On-call, Seasonal Field Technician.

Lund Fire Products, Inc., Bayside, New York 2002 – 2003 On-call/Part-time Draftsman Drafter assisted in the design of fire suppression systems for commercial and residential kitchen.

Barrett, Bonacci & Van Weele, P.C., Hauppauge, New York 2001 – 2002 Surveyor Technician / Draftsman Drafter creating tile, topographic, preliminary, title, boundary surveys and Instrument Operator.

F.E. Warren Air Force Base, Cheyenne, Wyoming 1998 – 2001 Civil Engineer Assistant Civil Engineer Assistant, plan and execute general land surveys, creating drawing for various projects, reviewing submittals, construction inspections and assisting squadron engineers.

Robert Dean Sproch

Scheduler

EDUCATION

College of DuPage, Glen Ellyn, Illinois

COMPUTER SKILLS

SAP, Word, Excel, Access, Power Point, Expedition, Microsoft Project, P6, FoxPro and Lotus Notes

RELEVANT EXPERIENCE

Mr. Sproch is a disciplined self-starter who works well in a structured environment. He has practical experience in a variety of construction disciplines and enjoys working in the field of construction from the conceptual stage in creating a schedule through the construction phase in comparing the actual construction to the approved schedule.

His experience in understanding the critical path of construction systems does well in transferring the information to the software of choice by the Owner. The Microsoft Project software is often accepted as a project schedule which includes the tasks of the Owner, architect, construction manager and consultants for the pre-construction phase and construction durations with milestone dates for the construction period.

His experience with the P6 software is has proven successful in tracking the detailed tasks during construction. Useful to both the Owner and consultants in keeping the project on track, it also provides a sure way of protecting the Owner in the event the contractor fails to meet the schedule.

Mr. Sproch has provided scheduling services for the following:

- Westchester Medical Center
- Sound Shore & Mt Vernon Hospital
- Town of Stratford, CT
- West Haven, CT
- Richmond Library, Marlborough, CT
- Town of New Canaan, CT
- Eldred Central School District, NY
- Greenwich Public Schools, CT
- Pelham Union Free School District, NY
- Nassau Community College, NY
- Pocantico Hills Central School District, NY

Prior to joining Savin, Mr. Sproch's experience includes:

Managed architectural trade crews and support departments for a 27-building, 1.9 million s.f. educational complex. Represented Owner in weekly meetings regarding personnel and housing needs in order to meet established schedules. Provided comments at meetings for all construction disciplines to review each week's construction progress, the release/review of building plans, and adjustments needed in the construction schedule. Produced weekly agenda and meeting minutes.

Established personnel load levels to meet construction schedule as well as ancillary departments. Monitored staffing needs and recruited eligible part-time and full-time workers. Reviewed applications and expedited necessary paperwork for new personnel in all areas.

Robert J. Kalpin

Estimator

EDUCATION

B.A. – New York Institute of Technology, Old Westbury, NY, 1978.

COMPUTER LITERACY

Word, Excel, & AutoCAD

RELEVANT EXPERIENCE

Mr. Kalpin will be the lead person in charge of preparation of estimating and scheduling for your project. Mr. Kalpin's role will include the following responsibilities during pre-construction and construction phases:

- Prepare construction cost estimates (Schematic, Design Development, Construction Documents) by architectural takeoffs and utilizing Timberline Estimating.
- Prepare estimate reports.
- Recommend bid packages.
- Recommend alternates to bid.
- Cross-check contract documents to ensure completeness and accuracy.
- Review general conditions and requirements and suggest changes to protect the Owner.

Mr. Kalpin has over 30 years of experience on a broad range of projects. His current scheduling, estimating and construction management experience at Savin includes:

- Pelham UFSD - $24 million capital projects include upgrades and renovations to High School, electrical service upgrades at 4 elementary schools, roof repairs and replacements at the High School and Siwanoy Elementary School.
- Yonkers Public Schools – $7 million – renovation in 2007 & $16 million – renovation in 2008.
- Pocantico Central School District – $26 million infrastructure; renovations.
- North Shore Central School District – School Additions
- Port Jervis CSD - $16 million renovations and reconstruction
- Tuckahoe UFSD – $13.6 million – new three story addition to the high school & renovations to the elementary school

Architectural Project Manager/Construction Contract Administrator - Monitoring of Public School construction projects from bid award to final closeout; owner meetings for review of capital and bond projects, and SED approvals, review of Contract Documents for constructability and MEP coordination. Coordination and tracking of submissions, permits, and testing inspections. Construction inspection for quality control and schedule conformance. Analysis of contractor payment applications and change order proposals. Inspection of completed projects and preparation of final punch lists. Some of the projects include:

- Eastport – South Manor Secondary School, Eastport, NY; new 350,000 square foot High School and various other school building projects.

Architectural Project Manager - Development of Construction Contract Documents from conceptual design and Owner's program, review for building code and SED requirements and construction cost estimating. Inspections for quality control, construction progress, and review of payment applications and change order proposals.

Assistant Project Manager –Field inspection, schedule coordination and detailing of high-rise curtain wall installations. Projects include: Barney's, NY, 660 Madison Avenue, NYC; and Foley Square Courthouse, Foley Square, NYC; New 30 story Federal Courthouse.

HVEA ENGINEERS

Christopher J. Sotanski
Senior Testing Technician

Mr. Sotanski has over 4 years experience in the testing of Construction Materials. He holds many certifications relevant to the field; most of his experience was working at PANYNJ on a term agreement for the Freedom Tower and JFK Runway Projects.

CERTIFICATIONS/ SPECIALIZED TRAINING

- ACI Aggregate Testing Technician – Level I
- ACI Concrete Field Testing Technician – Grade I
- ACI Concrete Lab Technician – Grade I
- ACI Concrete Strength Testing Technician
- ACI Concrete Special Inspector
- Certified Nuclear Density Testing Technician
- OSHA 10-Hour Safety Trained
- OSHA 40-Hour Hazwoper Certified
- NYS HMA Density Testing Inspector

EDUCATION

- **Grantham University**– Bachelors of Science, Engineering Management and Technology Expected May 2015

SELECTED PROJECT EXPERIENCE

- **MNR 26596, Fordham Station Improvements (2014 – present)**
  Mr. Sotanski is serving as senior testing technician on this project which includes on-site and laboratory testing of concrete, nuclear density testing of compacted fills, crosshole sonic logging of drilled shafts, and a variety of laboratory services.

- **PANYNJ, Goethals Bridge Replacement Project (2014 – present)**
  Mr. Sotanski is serving as senior testing technician on this project which includes on-site and laboratory testing of concrete, nuclear density testing of compacted fills, and a variety of laboratory services.

- **NYCDEP, Rondout-West Branch Tunnel Bypass Shafts, Contract BT1 (2013 – 2014)**
  Mr. Sotanski served as senior testing technician on this project – which included: Laboratory trial batching of concrete for mix design, including testing of aggregates (gradations, specific gravities, and sulfate soundness), fresh concrete tests following batching, compressive strength tests, shrinkage tests, and heat signature of concrete; Field testing of placed concrete, including casting cylinders for compressive strength and heat signature of concrete.

- **MNR 16394: Rock Slope Remediation, Pawling & Brewster, NY, Putnam County (2013 – present)**
  Mr. Sotanski is serving as senior testing technician for this project; work includes concrete field and lab testing, grout field and lab testing, bolt proof testing (pullout testing of rock anchor bolts).

- **FHWA, Liberty Island Emergency Docks Repairs (2013)**
  Mr. Sotanski served as senior testing technician on this project which included concrete field testing (slump, air, temp, unit weight, casting cylinders) and lab testing of concrete (compressive strength testing, coulomb testing)

- **Senior Testing Technician, D262100: Dingle Ridge Road, Brewster, NY, Putnam County – NYSDOT (2013)**
  Mr. Sotanski served as senior testing technician for this project. He assisted in the collection of field data for Crosshole Sonic Logging (CSL) of 8' diameter drilled shafts.

- **D262218, Route 134 Rehabilitation, Ossining, NY (2013)**
  Mr. Sotanski served as senior testing technician for the NYSDOT project which included nuclear density testing of asphalt for the three courses of asphalt (60 series pavement).

- **PANYNJ, SWF-164.021A, Stewart Airport (2013)**
  Mr. Sotanski served as senior testing technician on this project which included laboratory testing (gradation, modified proctor) of subbase material followed by on-site Nuclear Density Testing of subbase and asphalt materials.

HVEA ENGINEERS

Andrew J. Feldt
Supervising Lab Technician/Field Technician

Mr. Feldt has a broad range of experience in construction inspection, with a strong emphasis in construction materials testing. His projects have ranged from concrete and masonry to asphalt milling and paving. Mr. Feldt has worked on projects for the NYSDOT, USACE, and many municipal and private owners.

EDUCATION

- B.S. Civil Engineering, Stevens Institute of Technology – May 2006
- E.I.T, New York - 2013

CERTIFICATIONS/ SPECIALIZED TRAINING

- ACI Aggregate Testing Technician – Level I
- ACI Concrete Field Testing Technician – Grade I
- ACI Concrete Laboratory Testing Technician – Level I
- ACI Concrete Strength Testing Technician
- ACI Concrete Construction Special Inspector
- Certified Nuclear Density Testing Technician
- ICC Spray-applied Fireproofing Special Inspector
- ICC Structural Masonry Special Inspector
- NETTCP Soil & Aggregate Inspector
- NYS AGC HMA Density Testing Inspector
- OSHA 10-Hour Safety Trained

SELECTED PROJECT EXPERIENCE

- **Field Testing Technician, NYCDEP, Rondout-West Branch Tunnel Bypass Shafts (2013 – present)**
  Serves as a QA Concrete Field/Lab Tech for this project; work includes lab trail batching for concrete mix design. HVEA has completed trial batches for eight classes of concrete (four points per mix) in their laboratory; testing fresh concrete for unit weight, slump, air and temperature, casting cylinders, casting shrinkage bars; lab testing for compressive strength and shrinkage results. Once the mix was accepted and batching for field placement began, additional work is being performed; which included field testing of fresh concrete and heat signature of concrete, and lab testing for compressive strength.

- **Field Testing Technician: D262218, Route 134 Improvements, Ossining, NY**
  Mr. Feldt is served as a field testing technician (DTI) on this paving project. He was responsible for compaction testing by nuclear methods, coring operations of asphalt and generating reports.

- **Inspector, D262037, PIN 9067.39 – Route 17 (Future I86), Sullivan County line to Exit 106, Sullivan County - NYSDOT (2012-2013)**
  Served as a Level III Inspector for this project. Work includes asphalt milling and paving, and various safety improvements

- **Testing Engineer**, Atlantic Testing Laboratories (2010 – 2011)
  - Mr. Feldt served as a Supervisory Testing Engineer for Atlantic Testing Laboratories, in their Hudson Valley Region. In this role, he performed and supervised inspection efforts and a wide ranging testing program for several agency, municipal and private clients. Services included:
    - Embankment/subgrade preparation (including compaction)
    - Structural concrete formwork and reinforcing
    - Reinforced masonry construction
    - Concrete slabs and flatwork
    - Hot mix asphalt; both field and plant inspection

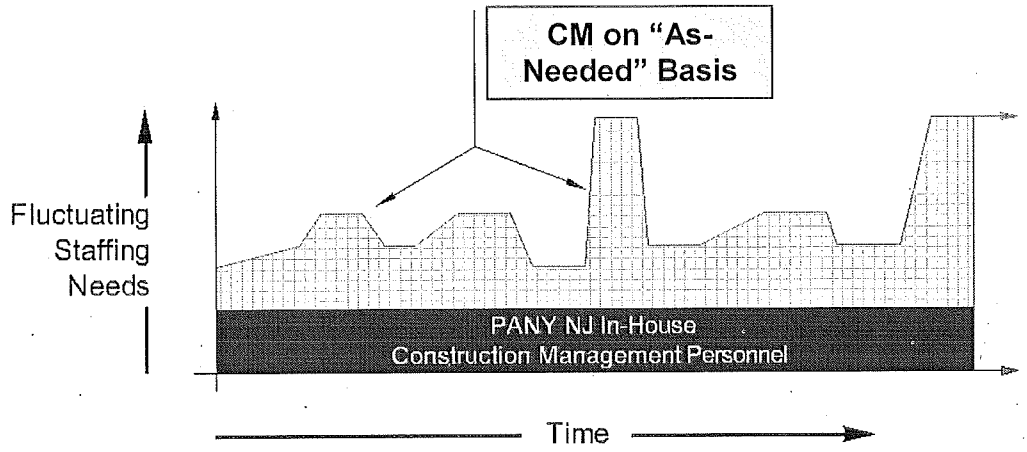
- **Technician**, Atlantic Testing Laboratories (2006 – 2009)
  - Mr. Feldt served as a field inspector/technician on a variety of construction projects for a broad range of agency and private owners. In this role, he reviewed project specifications, identified inspection responsibilities and protocols, established testing schedules and executed the inspection/certification plan.

Section C: Management and Technical Approach

Project Understanding

In order to supplement and support its in-house engineering and construction management staff on storm related resiliency capital projects, the Port Authority has developed professional construction management services on a "call-in" or as-needed type agreement. This means that if a Port Authority Engineer of Construction or Resident Engineer is in need of construction management staff, inspectors, administrators or cost estimators to augment in-house resources, he may request them under a "call-in" type agreement.

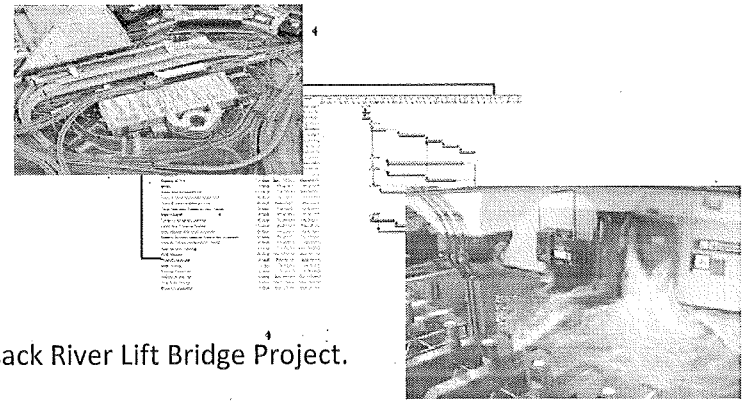
As delineated below, in order to be successful the consultant must have the ability to staff up (and down) to continually provide the Port Authority with access to the particular technical staff expertise it needs to help it efficiently and cost effectively manage the constantly changing project management workload.



For staff at Port Authority facilities, it is the consultant's role to provide the Port Authority with resumes of quality candidates, schedule interviews and set up the individual(s) at the respective site in as expeditious a manner as possible. It is also the consultant's role to ensure that field staff has the equipment and training required, that their direct rates are within the rates established in the contract, that they are monitored by the firm's Project Manager and that they adhere to Port Authority procedures.

For tasks performed at consultant offices or other specialty tasks such as scheduling or cost estimating, it is the role of the Consultant to assign staff to the task quickly, identify any additional information needed to perform the task and complete it proficiently. Savin has performed numerous such tasks for the Authority, as outlined below:

- Schedule Analysis of Howland Hook Marine Terminal Open Area Paving & Utilities Project.
- Cost estimating for the Jackson Avenue School near Teterboro Airport.
- Assistance with the Port Authority's "Lesson Learned Initiative" including reports for the following projects:
  - Lincoln Tunnel, LT-524
  - Red Garage, JFK-134.100B
  - Terminal B, EWR-434.070



- Claims assistance for the Hackensack River Lift Bridge Project.
- Assistance with Post Superstorm Sandy Cleanup at Exchange Place, Hoboken & World Trade Center PATH Stations.

Savins experience extends to nearly every facility operated by the Port Authority as shown in Figure 1.

Project Organization

Having provided professional services in connection with several "call-in" type projects, including for the Port Authority, we have learned how best to structure ourselves so as to meet the needs of the project and the Port Authority's expectations. We believe that it is important to have a single point of contact between the Authority and the Savin team. For this project, this individual will be Hussein M. Elzoghby, P.E.

With over 27 years of experience, Mr. Elzoghby has been the project manager for nearly all of Savin's "call-in" or "As-Needed" type projects and all projects for the Port Authority. He will receive all Authority requests for services and manage the Team's extensive and growing pool of construction management staff to provide the most suitable candidates for tasks requiring staffing. For other tasks such as constructability/bidability reviews, scheduling or estimating, he will identify the most suitable in-house staff member to perform the requested task in a timely fashion. He will follow up with the individual(s) requesting the task to ensure it was completed satisfactorily. He will be available to the Port Authority seven days a week, and 24 hours a day if necessary. In the event that he is out for an extended duration, a backup project manager will be designated. He has also been intimately involved in all of Savin's assignments including claims analyses, schedule analyses and the Authority's "Lessons Learned Initiative". The anticipated project organization designed to afford the Port Authority with maximum access to Savin resources is represented in the attached Figure 2. Attachment E outlines the proposed staffing plan further.

SAVIN ENGINEERS EXPERIENCE AT PORT AUTHORITY FACILITIES

3 - ICC Certified as Structural Steel and Bolting Inspector
4 - NACE Level 1 Coating Certified

Savin Engineers, P.C.

Section C: Management and Technical Approach

Communication & Cooperation

During the construction phase of a project, communication will be maintained amongst the Authority Team through the following process:

a) After bids are received, the Designer and the Construction Manager will create a spreadsheet to facilitate a comprehensive analysis. Afterwards, the Authority will receive an advisory review. The Construction Manager, in conjunction with the Designer, will qualify Contractors, advise the Authority on award of contract, and issue letters of intent to provide to potential contractors. The Construction Manager, with the Designers input, will then prepare a list of anticipated submittals.

b) The Construction Manager, Designer and Authority Team will hold a kickoff meeting. The Construction Manager will review contractor information, bonds, insurance, financial statements and subsequently provide the Authority with the results.

c) The Construction Manager will organize the Contractors to utilize the same format for RFI's and submittal cover sheets. The Designer will be provided with a submittal schedule from each Prime Contractor, thereby allowing them to allocate time for his assigned project staff to review product submittals.

d) Meetings are held periodically with the Authority's Health and Safety Committee. Health and safety concerns that are related to the construction and methods for correcting the conditions are discussed. A follow-up on any open issues is provided at the next meeting. The Health and Safety Committee meetings are most often times held on a monthly basis.

e) On a weekly basis, the Construction Manager will provide the Designer with updated submittal and RFI logs, to coordinate efforts to keep all work moving progressively.

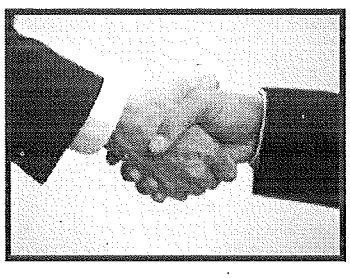
f) During the construction phase, the Construction Manager will provide the Authority with an Executive Summary. This publication will contain a construction update, RFI log, submittal log, daily reports, meeting minutes, and financials, challenges and project photography.

g) Meetings will be held with the Authority, Designer and Construction Manager, at the project site, to conduct an actual site walk through.

To ensure a "Spirit of Cooperation" among **Savin Engineers**, Designer and the Authority's Team during each phase of the project, **Savin Engineers** advocates the following Partnering Process for the Project.

I. <u>Establish Strategic Goals:</u>

1. Finish the project on time.
2. Produce a quality product.
3. Adhere to our code of conduct:
   Cooperation Communication Honesty & Integrity
   Safety Mutual Respect and Trust
4. Continue to implement the partnering process.



II. <u>Establish Owner's & Designers Expectations of the Contractor Team:</u>

1. Maintain schedule.
2. Anticipate problems; review documents, including specifications in advance; discuss differences as a team.
3. Provide a Safe Job
4. Continuity of Personnel (same staff each meeting).
5. Know and Understand Contract Requirements.
6. Provide the quality of work as designed and specified.
7. Communicate issues early, before they become major.
8. Provide adequate notice on request for inspections.
9. Prompt response to agree-upon punch list items.
10. Maintain on-going As-Built drawings per contract.
11. Provide projected work schedule at job meetings.
12. Mutual cooperation.
13. Timely submittal of shop drawings based on priority.
14. Early issue resolution.
15. Procurement schedule for critical items.
16. Minimize paper work.

III. <u>Establish Contractor's Expectations of Owner and Designer:</u>

1. Prompt payment.
2. Fast turnaround with FRI. questions, field issues.
3. Flexibility regarding good construction practices.
4. Rapid construction change directives.
5. Rapid turnaround of priority shop drawings.
6. Field Coordination
   a. Timely Inspection
   b. Timely Punch List
   c. Turnover
7. Identify when "clock" starts on substantial completion
8. Minimize paper work

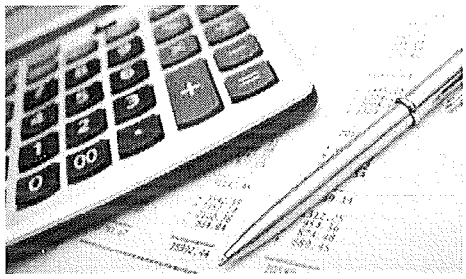
Scheduling & Minimizing Disruption

The CPM schedule not only keeps the project on track, but is a powerful tool in avoiding construction delays and, if necessary, in formulating a claim against a defaulting contractor. The schedule is established during the post bid phase and then is updated monthly during the following phases. Our scheduling is separated as a task by our scheduler who can be at the site monthly and then updates the schedule. This services as a check and balance against the activities in the field.

The steps we take include:

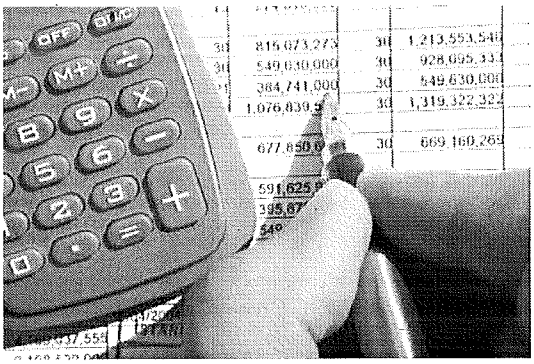
1. Creation of a master project schedule itemizing tasks and durations for all Team members. The draft schedule on the following pages is the first step in creating this schedule.
2. Report based upon our communication plan, adherence to the schedule.
3. Recommend pre-bind of materials is schedule is aggressive
4. Establish pre-bidder qualifications to be part of the specifications.
5. Solicit bids in multiple bid packages beyond the four Prime Contractors. Allowing for decreased costs by saving General Contractor overhead and profit.
6. Closely monitoring work in progress.
7. Implement quality control plan.
8. Secure all closeout documents.
9. Coordinate training of new equipment.
10. Maintain cost records and assist Yonkers in final reports.
11. Provide final project report.

Cost Estimating



The project's budget will be established by the Authority's team. It is important that the budget be maintained. This is achieved by monitoring the budget during the pre-construction and construction phases. The first tool of monitoring of the budget during the pre-construction phase is via cost estimating as described below.

The purpose of cost estimating is to provide the Owner with budget confirmation by monitoring construction cost trends to achieve highly competitive bids within the established budget. This is accomplished by:

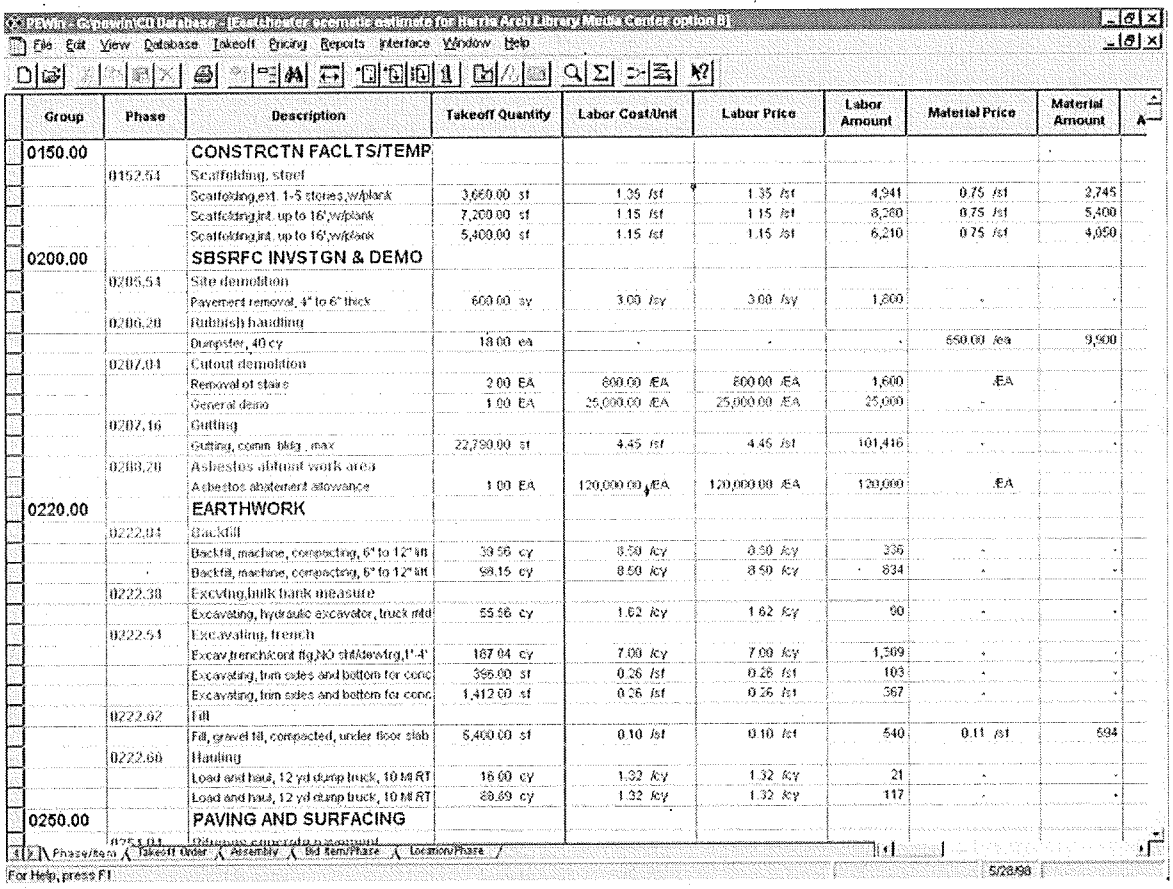


- Performing detailed takeoffs and pricing.
- Preparing estimate reports for Owner review.
- Recommending alternate bid packages and general condition changes, if needed, to protect the Owner.

Savin utilizes three cost estimating systems to obtain construction costs with a customized program database by WinEst (Win Estimator Inc):

- ***Means Database Software***
  - Means data, adjusted by region and updated periodically, is utilized to produce unit costs of typical and usual items.
- ***Savin Unit Costs Database***
  - Savin maintains unit costs from recently bid jobs and applies these in estimating projects of a similar nature and/or geographic location.
- ***Costs for Specialties***
  - Each project contains specialty items. Unit costs for such are obtained through contact with the manufacturer of the item and installers.

A sample of an estimate is shown below;



Group	Phase	Description	Takeoff Quantity	Labor Cost/Unit	Labor Price	Labor Amount	Material Price	Material Amount
0150.00		CONSTRCTN FACLTS/TEMP						
	0152.54	Scaffolding, steel

During the estimating process, the drawings are also reviewed to see how to reduce costs while maintaining the project design.

Project Accounting

Since control of the contractors depends largely upon the ability to accurately track change orders, requisitions and payments, our project accounting department tracks costs from the pre-construction phase until project closeout. Requests for payment, previous payment amounts and approved change orders are cross-checked before being signed by the Designer. Payment amounts are recommended, open balances and retainages are reported and, finally, job specific, contractor specific lien releases are provided. An Executive Summary Report keeps the Authority Team apprised of the financial status of the project on a bi-monthly basis. Monthly reports have been customized as needed.

The result is a comprehensive report, which tracks In addition, our office tracks the following contractor requirements: Contract, performance bonds, payment and labor bonds and approved schedules of values, list of vendors/subcontractors, safety submissions, product submittals and shop drawings. Especially important, certificates of insurance are continually monitored to assure that the Authority is protected.

Change Order Resolution and Claims

Savin Engineers endeavors to hold to a "no change order policy" exclusive of Owner driven scope changes.

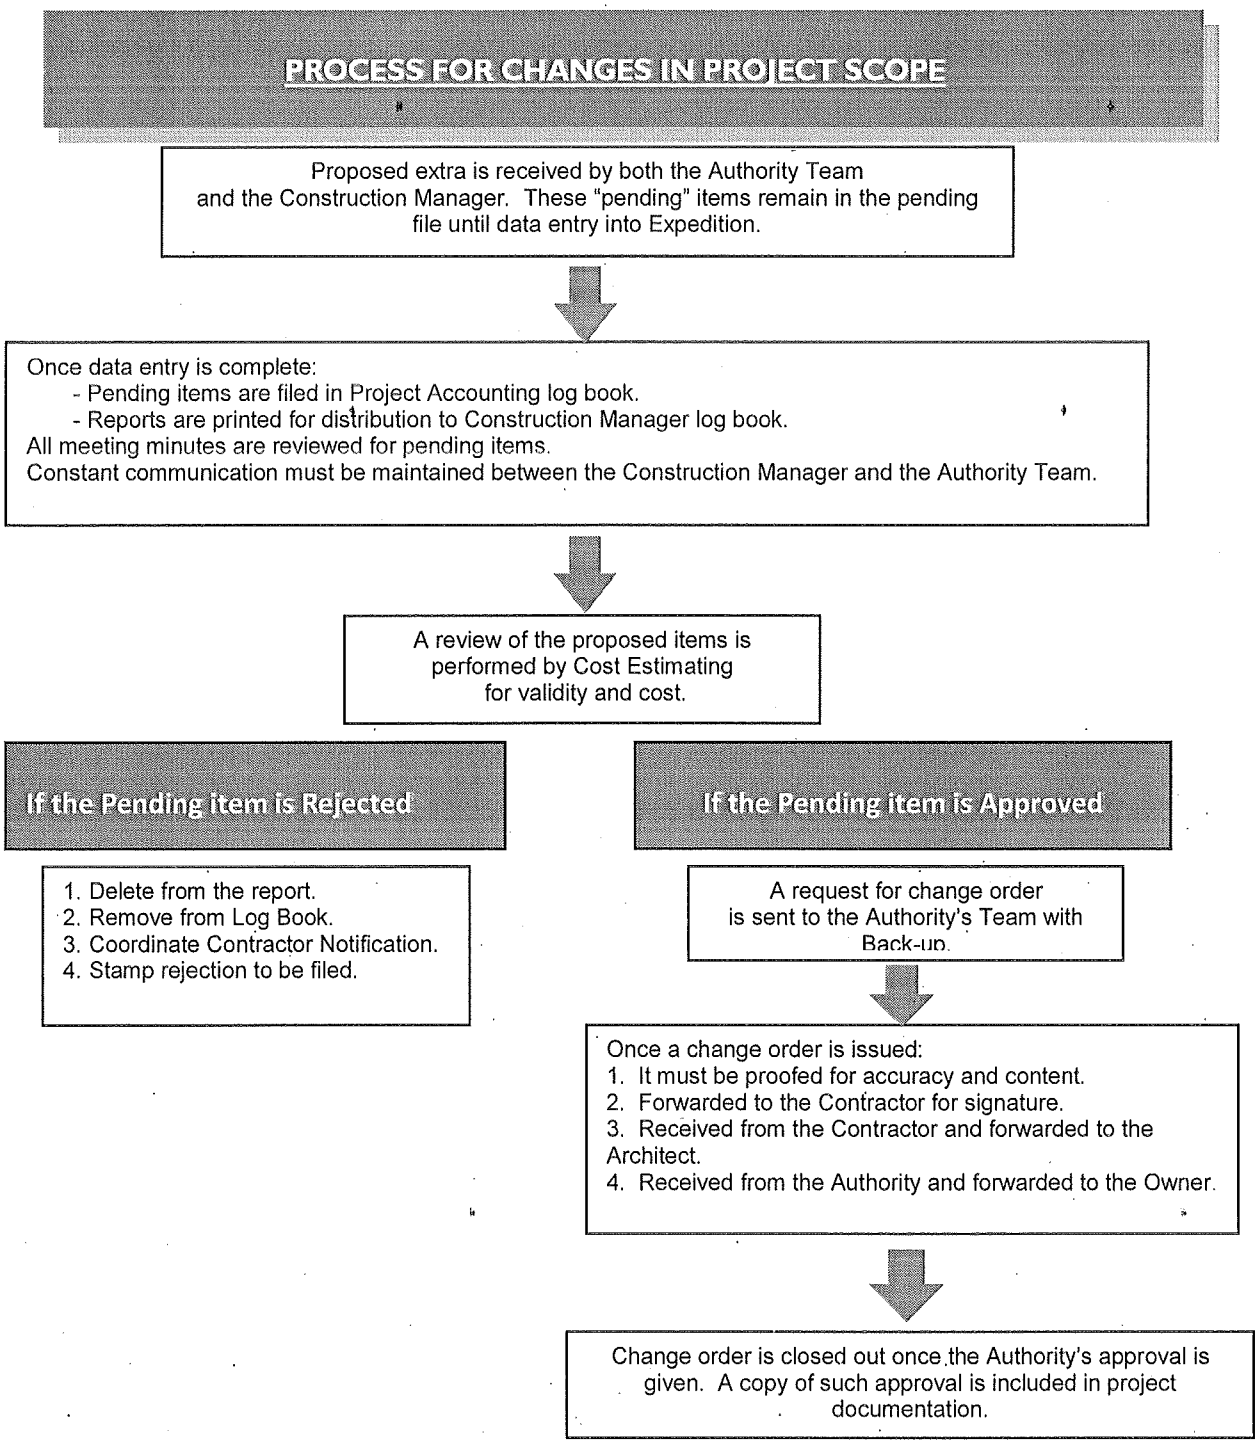
This goal of **Savin Engineers**, results in change orders in the value of 1.5% – 2% of the project costs. We are able to meet this by implementing the following:

1. Detailed plan reviews prior to bid by all disciplines.
2. Include specific cost allowances as part of base bids.
3. Analyze requests for change orders according to the following flow chart.

Our goal is to hold the line on project costs in order for the Authority to use the funds more effectively elsewhere.

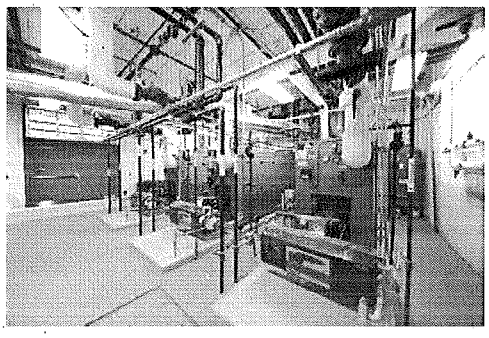
The flow chart on the following page outlines our methodology in handling change orders when they arise:

Change Order Resolution and Claims...(cont'd)



Section C: Management and Technical Approach

Quality Control/Quality Assurance



The following are the objectives of the **Savin Engineers** Quality Control/Quality Assurance Program (QC/QA):

- To obtain the level of quality to commensurate with the project plans, specifications and industry standard practices.
- Early identification of defective or deficient work minimizes schedule and cost impacts.
- Ensure that project documentation and "paper trail" is available and concise for use in project administration and resolving open issues.

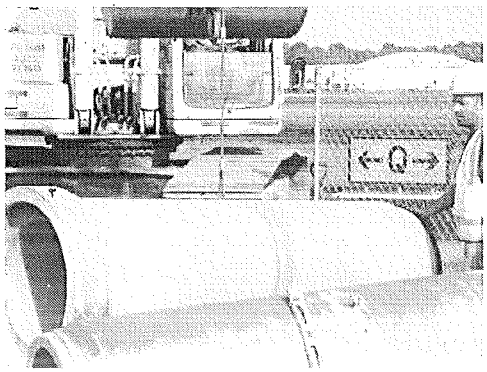
Savin Engineers staff members are instructed to adhere to the QC/QA set forth below. At the construction phase, these guidelines when implemented properly, keep the program on schedule while compliance to the construction documents (plans and specifications) are enforced.

Savin staff will work with the project team to develop a program to establish the quality project levels designated for the project by the Owner. These objectives will be achieved by implementing the following:

- Establish project specific procedures for monitoring the quality of the work.
- Assurance that as part of the contract documents, each contractor submits a quality control plan, defining how they will meet the intended quality control standards outlined in the contract documents. This includes but is not limited to mandatory testing and inspections.
- Establish level of acceptable quality by review of project plans, specifications, submittals, product literature, and manufacturer's installation instructions prior to start of a trade or activity.
- Maintenance of a current and accurate set of plans, specifications, shop drawings and submittals on site to accurately review against work in place.
- Identify activities of work requiring special testing, inspection, or coordination with authorities having jurisdiction. The Construction Administrator will establish project specific procedures for implementation and record keeping of these activities.
- Daily monitoring of work in place including taking of records and photographs. Where necessary, video, specialized procedures and training.
- Issuance of prompt written directives to stop work in areas of non-compliance.
- Review contractors'[1] schedule of values prior to invoicing against engineers QC/QA estimate. Maintain strict control in the review of contractors' requests for payment, by carefully reviewing schedule progress and quantity of placed work.
- Establish clear definitions of change order approval process, and maintain strict control that no additional work is approved without proper authority.
- Monitoring and issuance of updates to the agreed C.P.M. schedule outlined in the contract documents. Assess delays against the responsible contractor.

Quality Control/Quality Assurance...(cont'd)

- Project documentation is to reside primarily in Expedition, and will include the following; Daily reports, Meeting Minutes, RFI Logs, Submittal Logs, Insurance log, Contractor/Payment Requisitioning Log, Correspondence, and Photographs.
- Reviews and assistance for the Construction Team in the receipt of closeout documents.
- Explanatory meetings for review of closeout documents with the Owner.



During the course of the program, the **Savin Engineers** QC/QA will carry out comprehensive internal quality audits to see that the foregoing has been implemented and maintained. **Savin Engineers** will implement this program fairly and impartially.

The onsite functions of the Construction Administrator does not in any way mitigate the contractual obligations of each contractor to provide quality performance. Contractors are solely responsible for the quality of their work.

Project Close-out

Project Finalization is defined as the period where the project is converted to warranties and maintenance procedures and protocols to maintain, in fact, the capital investment made today will expand the useful life of the material and/or products.

The services provided are as follows:

- *Final Punch List Inspection*
- *Final Accounting Audit*
- *Final QA/QC Reports*
- *Coordination of the Designer Final Inspection*
- *Turn Over of Site Documents*
- *Receipt, Review and Processing of:*
  - ✓ *Manuals - Guarantees/Warranties*
  - ✓ *Manuals - Procedures/Spare Parts*
  - ✓ *Release of Liens (Subcontractors)*
  - ✓ *Release of Liens (Prime Contractor)*
  - ✓ *Contractor's Affidavit of Payment of Debts and Claims*
  - ✓ *Consent of Surety*
  - ✓ *Submission of As-Built Drawings*
  - ✓ *Certificate of Current Insurance*
  - ✓ *Contractor's Guarantee of Insurability*
  - ✓ *Certification of Wage Rates*
  - ✓ *Final Applications for Payment*
  - ✓ *On call assistance after project close-out*

Staff Training

In addition to providing quality staff where and when needed, Savin is dedicated to regular and relevant training. Whether it is the latest innovations in paving, the proper methods for taking slump and air measurements, Hazmat refresher courses or CPM scheduling certification, we provide our staff with the necessary training for the work they are currently involved in or likely to become involved in. Recent examples of this include special inspection training in categories such as:

- ACI Concrete Special Inspector
- Structural Steel and Bolting Inspection
- ACI – Structural Masonry Special Inspector
- Hot Mix Asphalt Construction
- IBC Code Provisions

In addition Savin conducts annual in-house training for office and field staff. The topics for these seminars are selected based on relevance to our clients' projects and have included:

- Troubleshooting Concrete Construction – ACI
- Concrete Repair for Transportation Structures - ACI
- Fundamentals of Protective Coating for Industrial Structures – SPCC
- Repair of Concrete Bridge and Parking Decks – ACI
- Hot Mix Asphalt Pavement – Asphalt Institute

We believe this type of regular training helps our clients improve the quality of their constructed projects.

Section D: DBE Participation

We have included Hudson Valley Engineering Associates, PC on our team. They are a certified DBE firm. We have included their certification in this section.

ATTACHMENT D-1

DBE GOALS STATEMENT

The undersigned Bidder has satisfied the requirements of the Contract in the following manner (Complete the appropriate spaces):

The Bidder is committed to meeting the DBE utilization goal set forth in this Contract.

or

The Bidder is unable to meet the DBE utilization goal set forth in this Contract, but is committed to a minimum of 17% DBE utilization on this Contract and submits the attached narrative and documentation demonstrating good faith efforts consistent with Appendix A of 49 CFR 26 to meet the DBE utilization goal set forth in this Contract.

Attach as many pages as necessary to provide a full and complete narrative and supporting documentation of good faith efforts made. This narrative shall be submitted on company letterhead and signed.

It is the present intent of the Bidder to utilize the specific DBE firms identified in Appendix A2 in the performance of the Work of this Contract. If for any reason, one or more of the DBE firms identified in Appendix A2 are unable or unwilling to participate, the Bidder will make good faith efforts to replace the DBE firm with another DBE firm in accordance with Part II clause entitled "DBE Program".

Re: **DBE ANNUAL AFFIDAVIT REVIEW NOTICE**

Dear Ms. Mia K. Nadasky:

The New York State Department of Transportation (NYSDOT), a Certifying Partner in the New York State Unified Certification Program (NYSUCP), is pleased to advise you that your firm continues to meet the eligibility criteria established by the U.S. Department of Transportation Disadvantaged Business Enterprise regulations codified at 49 CFR, Part 26 and remains **CERTIFIED** as a Disadvantaged Business Enterprise (DBE). Your firm is certified as a DBE with the NYSUCP to provide the service listed below:

Service Area:
Highway Design, Construction Inspection, Construction Management, Community Participation Services, Urban Planning

NAICS CODE:
237310 – Highway, Street and Bridge Construction
DOT WORK CODES:
040B – Right of Way Mapping
050C – Construction Management
NAICS CODE:
541330 – Engineering Services
DOT WORK CODES:
010A – Highway Design Phases I-IV
010B—Highway Design Phases V-VI
010C – Roadway Lighting
010D – Drainage
010E – Utilities
010F -- Constructability
010G – Estimating
010H – Specifications
010I -- Bridge Inspection
010J – Bridge Design Phases I- IV

010K – Bridge Design Phases V-VI
010L – Traffic Engineering
010M – Traffic Engineering
010N – Signals
010O – Signing
010P – Hydraulics
010Q – Hydrology
050A – Construction Inspection

NAICS CODE:
541380 – Testing Laboratories

DOT WORK CODES:
050B – Material Sampling, Testing and On-site Inspection

NAICS CODE:
541820 – Public Relations

Your firm is eligible to participate as a DBE on NYSDOT, Metropolitan Transportation Authority, Port Authority of New York and New Jersey and Niagara Frontier Transportation Authority federally assisted projects in the identified service area.

Your firm's certification status with the NYSUCP will remain effective for as long as your firm continues to meet all DBE certification eligibility requirements and the ownership and control of the firm, upon which DBE certification was granted, has not changed. However, you are required to submit, annually, on the anniversary date of this notice, a sworn affidavit affirming that there have been no changes in your firm's economic disadvantaged status, ownership or control. In the event that there are changes, please be advised that you are required to notify the NYSDOT, within 30 days, of any changes in your business ownership, control and/or operations including address, telephone number, business services and capabilities. Failure to adhere to these requirements may result in the removal of DBE certification.

Your firm will be included in the NYSUCP Directory (http://biznet.nysucp.net) which will indicate the type of work that your firm has been certified to perform. Please note that any of the Certifying Partners of the NYSUCP reserves the right to review your firm's certification eligibility prior to your firm's participation on a federally assisted project for their agency or at any time that it is determined that such reevaluation is warranted.

We are pleased to have you as a continued participant in the NYSUCP and wish you much success.

Should you have any questions, please contact Jackie.Jones@dot.ny.gov or (518) 485-1834.

Sincerely,

Jacqueline E. Jones

NON-DISCLOSURE AND CONFIDENTIALITY AGREEMENT
BETWEEN

[1]

AND

THE PORT AUTHORITY OF NEW YORK AND NEW JERSEY

THIS NON-DISCLOSURE AND CONFIDENTIALITY AGREEMENT (this "**Agreement**") is made as of this [2] day of [3], [4], by and between **THE PORT AUTHORITY OF NEW YORK AND NEW JERSEY** (the "**Port Authority**") a body corporate and politic created by Compact between the States of New York and New Jersey, with the consent of the Congress of the United States, and having an office and place of business at 225 Park Avenue South, New York, New York, 10003, and [5] having an office and place of business at [6] ("**Recipient**").

WHEREAS, the Port Authority desires, subject to the terms and conditions set forth below, to disclose to Recipient Protected Information (as defined below) in connection with [7] (collectively, the "Project(s)", or "Proposed Project(s)"); and

WHEREAS, the Recipient acknowledges that the Port Authority, in furtherance of its performance of essential and critical governmental functions relating to the Project, has existing and significant interests and obligations in establishing, maintaining and protecting the security and safety of the Project site and surrounding areas and related public welfare matters; and

WHEREAS, in furtherance of critical governmental interests regarding public welfare, safety and security at the Project site, the Port Authority has collected information and undertaken the development of certain plans and recommendations regarding the security, safety and protection of the Project site, including the physical construction and current and future operations; and

WHEREAS, the Port Authority and Recipient (collectively, the "**Parties**") acknowledge that in order for Recipient to undertake its duties and/or obligations with regard to its involvement in the Project, the Port Authority may provide Recipient or certain of its Related Parties (as defined below) certain information in the possession of the Port Authority, which may contain or include protected, confidential, privileged, classified, commercial, proprietary or sensitive information, documents and plans, relating to the Project or its occupants or other matters, the unauthorized disclosure of which could result in significant public safety, financial and other damage to the Port Authority, the Project, its occupants, and the surrounding communities; and

WHEREAS, Recipient recognizes and acknowledges that providing unauthorized access to, or disclosing such information to third parties in violation of the terms of this Agreement could compromise or undermine the existing or future guidelines, techniques and procedures implemented for the protection against terrorist acts or for law enforcement, investigation and

prosecutorial purposes, and accordingly could result in significant irreparable harm and injury; and

WHEREAS, in order to protect and preserve the privilege attaching to and the confidentiality of the aforementioned information as well as to limit access to such information to a strict need to know basis, the Port Authority requires, as a condition of its sharing or providing access to such protected, confidential, privileged, classified, commercial, proprietary or sensitive information, documents and plans, that the Recipient enter into this Agreement and that its Related Parties thereafter acknowledge and agree that they will be required to treat as strictly confidential and/or privileged any of such information so provided, as well as the work product and conclusions of any assessments and evaluations or any recommendations relating thereto, and to also fully comply with applicable federal rules and regulations with respect thereto; and

WHEREAS, as a condition to the provision of such information to Recipient and certain Related Parties, the Recipient has agreed to enter into this Agreement with respect to the handling and use of such information and to cause Related Parties to join in and be bound by the terms and conditions of this Agreement.

NOW, THEREFORE, in consideration of the provision by Port Authority of Information for Project Purposes (as each such term is defined below) and for other good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged by the Recipient and each Related Party that receives such Information, the Recipient and each such Related Party agrees, as follows:

1. **Defined Terms.** In addition to the terms defined in the Recitals above, the following terms shall have the meanings set forth below:

(a) **"Authorized Disclosure"** means the disclosure of Protected Information strictly in accordance with the Confidentiality Control Procedures applicable thereto: (i) as to all Protected Information, only to a Related Party that has a need to know such Protected Information strictly for Project Purposes and that has agreed in writing to be bound by the terms of this Agreement by executing a form of Acknowledgment as set forth in Exhibit A or Exhibit B, as applicable; and (ii) as to Confidential Privileged Information, only to the extent expressly approved in writing and in advance by the Port Authority, and then only the particular Confidential Privileged Information that is required to accomplish an essential element of the Project.

(b) **"Information"** means, collectively, all information, documents, data, reports, notes, studies, projections, records, manuals, graphs, electronic files, computer generated data or information, drawings, charts, tables, diagrams, photographs, and other media or renderings containing or otherwise incorporating information that may be provided or made accessible at any time, whether in writing, orally, visually, photographically, electronically or in any other form or medium, including, without limitation, any and all copies, duplicates or extracts of the foregoing.

(c) "**Protected Information**" means and includes collectively, Confidential Information, Confidential Privileged Information, Sensitive Security Information (SSI), Critical Infrastructure Information (CII) or Health Insurance Portability and Accountability Act (HIPPA) Information and Information that is labeled, marked or otherwise identified by or on behalf of the Port Authority so as to reasonably connote that such information is confidential, privileged, sensitive or proprietary in nature. The term Protected Information shall also include all work product that contains or is derived from any of the foregoing, whether in whole or in part, regardless of whether prepared by the Recipient, the Port Authority or others, or when the Port Authority receives such information from others and agrees to treat such information as Protected. The following Information shall not constitute Protected Information for the purpose of this Agreement:

(i) Particular Information, other than Confidential Privileged Information, that is provided to the Recipient by a source other than the Port Authority, provided that such source is not subject to a confidentiality agreement, or similar obligation, or understanding with or for the benefit of the Port Authority, with respect to such Information and that the identity of such source is not itself part of such Protected Information.

(ii) Information that is or becomes generally available to the public other than as a result of a disclosure by the Recipient or a Related Party in violation of this Agreement.

(iii) Information that is known to or was in the possession of the Recipient or a Related Party on a non-confidential basis prior to the disclosure of such Information by the Port Authority.

(d) "**Confidential Information**" means and includes collectively, any and all Information, documents and materials entitled to protection as a public interest privilege under New York State law and as may be deemed to be afforded or entitled to the protection of any other privilege recognized under New York and/or New Jersey state laws or Federal laws. It also includes information that contains sensitive financial, commercial or other proprietary business information concerning or relating to the Port Authority, its projects, operations or facilities that would be exempt from release under the Port Authority Freedom of Information Code.

(e) "**Confidential Privileged Information**" means and includes collectively, (i) Information that reveals security risks, threats, vulnerabilities, documentation that identifies specific physical security vulnerabilities or revealing specific security vulnerabilities details related to emergency response protocols, egress plans, flow paths, egress capacities, (diagrams, codes, standards) etc., which is not publicly available." and any and all Information, documents and materials entitled to protection as a public interest privilege under New York State law and as may be deemed to be afforded or entitled to the protection of any other privilege recognized under New York and/or New Jersey state laws or Federal laws, and (ii) certain Critical Infrastructure Information.

(f) "**Confidentiality Control Procedures**" means procedures, safeguards and requirements for the identification, processing, protection, handling, care, tracking and storage of

Protected Information that are required under applicable federal or state law, the Port Authority Handbook, or by the terms of this Agreement.

(g) **"Critical Infrastructure Information"** (CII) has the meaning set forth in the Homeland Security Act of 2002, under the subtitle Critical Infrastructure Information Act of 2002 (6 U.S.C. §131-134), and any rules or regulations enacted pursuant thereto, including, without limitation, the Office of the Secretary, Department of Homeland Security Rules and Regulations, 6 C.F.R. Part 29 and any amendments thereto. CII may also be referred to as "Protected Critical Infrastructure Information" or "PCII", as provided for in the referenced rules and regulations and any amendments thereto.

(h) **"Sensitive Security Information"** (SSI) has the definition and requirements set forth in the Transportation Security Administrative Rules & Regulations, 49 CFR 1520, (49 U.S.C. §114) and in the Office of the Secretary of Transportation Rules & Regulations, 49 CFR 15, (49 U.S.C. §40119).

(i) **"Health Insurance Portability and Accountability Act"** (HIPAA) Information Employees, associates or other contract personnel who have access to Protected Health Information (PHI) must refer to, and comply with, the Privacy Policies and Procedures to Protect Personal Health Information. Privacy regulations issued under the Health Insurance Portability and Accountability Act of 1996 ("HIPAA" or "Privacy Laws") place restrictions on the Group Health Plans of the Port Authority and PATH (the "Plans") ability to use and disclose Protected Health Information ("PHI").

(j) **"Port Authority Handbook"** means The Port Authority of New York and New Jersey. Information Security Handbook, as may be amended by the Port Authority, from time to time.

(k) **"Project Purposes"** means the use of Protected Information strictly and only for purposes related to Recipient's and its Related Parties' participation and involvement in the Project, and only for such period of time during which Recipient and its Related Parties are involved in Project related activities.

(l) **"Related Party"** and **"Related Parties"** means the directors, employees, officers, partners or members of the Recipient, as applicable, and the Recipient's outside consultants, attorneys, advisors, accountants, architects, engineers or subcontractors or sub-consultants (and their respective directors, employees, officers, partners or members) to whom any Protected Information is disclosed or made available.

2. **Use of Protected Information.** All Protected Information shall be used by the Recipient in accordance with the following requirements:

(a) All Protected Information shall be held in confidence and shall be processed, treated, disclosed and used by the Recipient and its Related Parties only for Project Purposes and in accordance with the Confidentiality Control Procedures established pursuant to Paragraph 2(c), below, including, without limitation, the Port Authority Handbook, receipt of which is acknowledged by Recipient and shall be acknowledged in writing by each Related Party by signing the Acknowledgment attached hereto as Exhibit A or Exhibit B, as applicable, and

applicable legal requirements. Protected Information may be disclosed, only if and to the extent that such disclosure is an Authorized Disclosure.

(b) Recipient and each Related Party acknowledges and agrees that (i) any violation by the Recipient or any of its Related Parties of the terms, conditions or restrictions of this Agreement relating to Protected Information may result in penalties and other enforcement or corrective action as set forth in such statutes and regulations, including, without limitation, the issuance of orders requiring retrieval of Sensitive Security Information and Critical Infrastructure Information to remedy unauthorized disclosure and to cease future unauthorized disclosure and (ii) pursuant to the aforementioned Federal Regulations, including, without limitation, 49 C.F.R. §§ 15.17 and 1520.17, any such violation thereof or mishandling of information therein defined may constitute grounds for a civil penalty and other enforcement or corrective action by the United States Department of Transportation and the United States Department of Homeland Security, and appropriate personnel actions for Federal employees.

(c) Recipient and each Related Party covenants to the Port Authority that it has established, promulgated and implemented Confidentiality Control Procedures for identification, handling, receipt, care, and storage of Protected Information to control and safeguard against any violation of the requirements of this Agreement and against any unauthorized access, disclosure, modification, loss or misuse of Protected Information. Recipient and each Related Party shall undertake reasonable steps consistent with such Confidentiality Control Procedures to assure that disclosure of Protected Information is compartmentalized, such that all Protected Information shall be disclosed only to those persons and entities authorized to receive such Information as an Authorized Disclosure under this Agreement and applicable Confidentiality Control Procedures. The Confidentiality Control Procedures shall, at a minimum, adhere to, and shall not be inconsistent with, the procedures and practices established in the Port Authority Handbook.

(d) The Port Authority reserves the right to audit Recipient's Confidentiality Control Procedures, and those of each Related Party, as applicable, to ensure that it is in compliance with the terms of this Agreement.

(e) The Port Authority may request in writing that the Recipient or any Related Parties apply different or more stringent controls on the handling, care, storage and disclosure of particular items of Protected Information as a precondition for its disclosure. The Port Authority may decline any request by the Recipient or any of its Related Parties to provide such item of Protected Information if the Recipient or any of the Related Parties do not agree in writing to apply such controls.

(f) Nothing in this Agreement shall require the Port Authority to tender or provide access to or possession of any Protected Information to the Recipient or its Related Parties, whether or not the requirements of this Agreement are otherwise satisfied. However, if such Protected Information is provided and accepted, the Recipient and its Related Parties shall abide by the terms, conditions and requirements of this Agreement.

(g) The Recipient and each Related Party agrees to be responsible for enforcing the provisions of this Agreement with respect to its Related Parties, in accordance with the Confidentiality Control Procedures. Except as required by law pursuant to written advice of

competent legal counsel, or with the Port Authority's prior written consent, neither the Recipient, nor any of the Related Parties shall disclose to any third party, person or entity: (i) any Protected Information under circumstances where the Recipient is not fully satisfied that the person or entity to whom such disclosure is about to be made shall act in accordance with the Confidentiality Control Procedures whether or not such person or entity has agreed in writing to be bound by the terms of this Agreement or any "Acknowledgement" of its terms or (ii) the fact that Protected Information has been made available to the Recipient or such Related Parties, or the content or import of such Protected Information. The Recipient is responsible for collecting and managing the Acknowledgments signed by Related Parties pursuant to this Agreement. Recipient shall, at the Port Authority's request, provide the Port Authority a list of all Related Parties who have signed an Acknowledgment, and copies of such Acknowledgments.

(h) As to all Protected Information provided by or on behalf of the Port Authority, nothing in this Agreement shall constitute or be construed as a waiver of any public interest privilege or other protections established under applicable state or federal law.

3. **Disclosures and Discovery Requests.** If a subpoena, discovery request, Court Order, Freedom of Information Request, or any other request or demand authorized by law seeking disclosure of the Protected Information is received by the Recipient or any Related Party, Recipient shall notify the Port Authority thereof, to the extent permitted by law, with sufficient promptness so as to enable the Port Authority to investigate the circumstances, prepare any appropriate documentation and seek to quash the subpoena, to seek a protective order, or to take such other action regarding the request as it deems appropriate. In the absence of a protective order, disclosure shall be made, in consultation with the Port Authority, of only that part of the Protected Information as is legally required to be disclosed. If at any time Protected Information is disclosed in violation of this Agreement, the Recipient shall immediately give the Port Authority written notice of that fact and a detailed account of the circumstances regarding such disclosure to the Port Authority.

4. **Retention Limitations; Return of Protected Information.** Upon the earlier occurrence of either the Port Authority's written request or completion of Recipient's need for any or all Protected Information, such Protected Information, all writings and material describing, analyzing or containing any part of such Protected Information, including any and all portions of Protected Information that may be stored, depicted or contained in electronic or other media and all copies of the foregoing shall be promptly delivered to the Port Authority at Recipient's expense. In addition, as to Protected Information that may be stored in electronic or similar form, such Protected Information shall be deleted and completely removed so that such Protected Information is incapable of being recovered from all computer databases of the Recipient and all Related Parties. The Recipient may request in writing that the Port Authority consent to destruction of Protected Information, writings and materials in lieu of delivery thereof to the Port Authority. The Port Authority shall not unreasonably withhold its consent to such request. If the Port Authority consents to such destruction, the Recipient and each Related Party shall deliver to the Port Authority a written certification by Recipient and such Related Party that such Protected Information, writings and materials have been so destroyed within such period as may be imposed by the Port Authority. Notwithstanding the foregoing, to the extent required for legal or compliance purposes, the Recipient may retain copies of Protected Information (in any format), provided that (a) the Port Authority is notified in writing of such retention, and (b) Recipient

continues to abide by the requirements of this Agreement with respect to the protection of such Protected Information.

5. **Duration and Survival of Confidentiality Obligations.** The obligations under this Agreement shall be perpetual (unless otherwise provided in this Agreement) or until such time as the Protected Information is no longer considered protected, confidential and/or privileged by the Port Authority.

6. **Severability.** Each provision of this Agreement is severable and if a court should find any provision of this Agreement to be unenforceable, all other provisions of this Agreement shall remain in full force and effect.

7. **Injunctive and Other Relief.** Recipient and each Related Party acknowledges that the unauthorized disclosure and handling of Protected Information is likely to have a material adverse and detrimental impact on public safety and security and could significantly endanger the Port Authority, its facilities (including, without limitation, the Project site), its patrons and the general public and that damages at law are an inadequate remedy for any breach, or threatened breach, of this Agreement by Recipient or its Related Parties. The Port Authority shall be entitled, in addition to all other rights or remedies, to seek such restraining orders and injunctions as it may deem appropriate for any breach of this Agreement, without being required to show any actual damage or to post any bond or other security.

8. **Governing Law.** This Agreement shall be governed by and construed in accordance with the laws of the State of New York, without regard to conflict of laws principles. The Port Authority (subject to the terms of the Port Authority Legislation (as defined below)) and the Recipient specifically and irrevocably consent to the exclusive jurisdiction of any federal or state court in the County of New York and State of New York with respect to all matters concerning this Agreement and its enforcement. The Port Authority (subject to the terms of the Port Authority Legislation (as defined below)) and the Recipient agree that the execution and performance of this Agreement shall have a New York situs and, accordingly, they each consent (and solely with respect to the Port Authority, subject to the terms of the Port Authority Legislation (as defined below)) to personal jurisdiction in the State of New York for all purposes and proceedings arising from this Agreement. "**Port Authority Legislation**" shall mean the concurrent legislation of the State of New York and State of New Jersey set forth at Chapter 301 of the Laws of New York of 1950, as amended by Chapter 938 of the Laws of New York of 1974 (McKinney's Unconsolidated Laws §§7101-7112) and Chapter 204 of the Laws of New Jersey of 1951 (N.J.S.A. 32:1-157 to 32:1-168).

9. **Notices.** Any notice, demand or other communication (each, a "**notice**") that is given or rendered pursuant to this Agreement by either party to the other party, shall be: (i) given or rendered, in writing, (ii) addressed to the other party at its required address(es) for notices delivered to it as set forth below, and (iii) delivered by either (x) hand delivery, or (y) nationally recognized courier service (e.g., Federal Express, Express Mail). Any such notice shall be deemed given or rendered, and effective for purposes of this Agreement, as of the date actually delivered to the other party at such address(es) (whether or not the same is then received by other party due to a change of address of which no notice was given, or any rejection or refusal to accept delivery). Notices from either party (to the other) may be given by its counsel.

The required address(es) of each party for notices delivered to it is (are) as set forth below. Each party, however, may, from time to time, designate an additional or substitute required address(es) for notices delivered to it, provided that such designation must be made by notice given in accordance with this Paragraph 9.

10. **Entire Agreement.** This Agreement contains the complete statement of all the agreements among the parties hereto with respect to the subject matter thereof, and all prior agreements among the parties hereto respecting the subject matter hereof, whether written or oral, are merged herein and shall be of no further force or effect. This Agreement may not be changed, modified, discharged, or terminated, except by an instrument in writing signed by all of the parties hereto.

11. **Counterparts.** This Agreement may be executed in one or more counterparts, each of which shall be deemed to be an original, but all of which shall be one and the same document.

12. **Parties Bound.** This Agreement shall be binding upon the Recipient and its respective successors. The foregoing shall not be affected by the failure of any Related Party to join in this Agreement or to execute and deliver an Acknowledgement hereof.

13. **Authority.** The undersigned individual(s) executing this Agreement on behalf of the Recipient below represent(s) that they are authorized to execute this Agreement on behalf of the Recipient and to legally bind such party.

14. **Disclosure of Ownership Rights or License.** Nothing contained herein shall be construed as the granting or conferring by the Port Authority of any rights by ownership, license or otherwise in any Information.

15. **No Liability.** Neither the Commissioners of the Port Authority, nor any of them, nor any officer, agent or employee thereof, shall be charged personally by the Recipient with any liability, or held liable to the Recipient under any term or provision of this Agreement, or because of its execution or attempted execution or because of any breach, or attempted or alleged breach thereof.

16. **Construction.** This Agreement is the joint product of the parties hereto and each provision of this Agreement has been subject to the mutual consultation, negotiation, and agreement of the parties hereto, and shall not be construed for or against any party hereto. The captions of the various sections in this Agreement are for convenience only and do not, and shall not be deemed to, define, limit or construe the contents of such Sections.

CERTIFICATION REGARDING LOBBYING PURSUANT TO 31 U.S.C. 1352

The undersigned
R. Srinivasaraghavan
(name of authorized officer)
certifies, to the best of my knowledge and belief, that:

- No Federal appropriated funds have been paid or will be paid, by or on behalf of the undersigned, to any person for influencing or attempting to influence an officer or employee of an agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with the awarding of any Federal contract, the making of any Federal grant, the making of any Federal loan, the entering into of any cooperative agreement, and the extension, continuation, renewal, amendment, or modification of any Federal contract, grant, loan, or cooperative agreement.

- If any funds other than Federal appropriated funds have been paid or will be paid to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with this Federal contract, grant, loan, or cooperative agreement, the undersigned shall complete and submit Standard Form LLL, "Disclosure of Lobbying, Activities" in accordance with its instructions.

- The undersigned shall require that the language of this certification be included in the award documents for all subawards at all tiers (including subcontracts, subgrants, and contracts under grants, loans, and cooperative agreements) and that all subrecipients shall certify and disclose accordingly.

This certification is a material representation of fact upon which reliance was placed when this transaction was made or entered into. Submission of this certification is a prerequisite for making or entering into this transaction imposed by, 31, U.S. C. § 1352 (as amended by the Lobbying Disclosure Act of 1995). Any person who fails to file the required certification shall be subject to a civil penalty of not less than $10,000 and not more than $100,000 for each such failure.

Note: Pursuant to 31 U.S.C § 1352(c)(I)-(2)(A), any person who makes a prohibited expenditure or fails to file or amend a required certification or disclosure form shall be subject to a civil penalty of not less than $10,000 and not more than $100,000 for each such expenditure or failure.

The Contractor certifies or affirms the truthfulness and accuracy of each statement of its certification and disclosure, if any. In addition, the Contractor understands and agrees that the provisions of 31 U.S.C. § 3801, et seq., apply to this certification and disclosure, if any.

RE: Proposal for Indefinite Quantity Contracts (IQCs) For Performance of Expert Professional Construction Management and Inspection Services for Federally Funded Storm Related Resiliency Projects on an "As-Needed" Basis Through 2018

Dear Sir or Madam,

The Gannett Fleming Engineers and Architects, P.C. and **Tectonic Engineering & Surveying Consultants, P.C. Joint Venture** represents a combination of two powerhouse firms that are most capable of providing a qualified, experienced Team, and high-quality, efficient services to meet the needs of construction management and inspection projects delegated under the Port Authority of New York and New Jersey's (PANYNY's) indefinite quantity contracts. Enclosed please find one reproducible original, six copies, and six compact disc copies of our proposal, as well as a copy of our firm's financial information.

Our firm represents a nearly 100-year tradition of excellence, with almost 2,000 employees on staff in 60 offices nationwide, including five offices strategically located in New York and New Jersey. Our Team offers a wide array of expertise and specialized knowledge relevant to this project. **We have held numerous "As-Needed" construction management contracts, and are currently providing such services to the PANYNJ under the Performance of Expert Professional Construction Management and Related Technical Services contract for 2011-2014.**

Our local presence in New York and New Jersey makes us intimately familiar with the devastating impact Hurricane Sandy has had on our infrastructure. **We have been involved with over 15 storm hardening and resiliency programs, including the PANYNJ Performance of Facility Surveys for the Hurricane Sandy Damage Assessment project at Brooklyn Pier Sheds 7, 9, and 11 in Brooklyn, NY.** Our firm's experience with Hurricane Sandy work and our extensive knowledge of this task order's requirements will be assets to the PANYNJ.

Tectonic Engineering & Surveying Consultants, P.C. is a thriving, New York-based multidiscipline engineering firm. Founded in 1986, the firm offers expertise in construction management, resident engineering, and construction inspection services. They have provided construction management services on transportation, transit, and building-related construction projects to multiple major New York agencies, including the PANYNJ, NYCT, LIRR, NYCDDC, NYCDPR, and NYCSCA.

Two Penn Plaza • Suite 552 • 380 Seventh Avenue • New York, NY 10121-0101
t: 212.967.9833 • f: 212.268.6684
www.gannettfleming.com

Gannett Fleming TECTONIC

Our Team will be managed by **Project Manager James T. Gibbons** and **Deputy Project Manager Reza Marandi, PE, CCM,** both of whom have extensive experience managing similar construction inspection projects for the PANYNJ. Mr. Gibbons has 27 years of experience, and is a Manager of Construction Services for the firm in New Jersey and the Metropolitan New York area. He directs operations throughout the area; provides overall project management services; and will serve as our liaison with the PANYNJ. Mr. Gibbons is familiar with PANYNJ standards and specifications, and is currently responsible for supervising overall contract compliance for our ongoing On-Call Construction Inspection for Various Facilities contract with the PANYNJ. Mr. Gibbons will be supported by Reza Marandi, PE, CCM, a Project Manager at Tectonic Engineering & Surveying Consultants, P.C. with 30 years of experience. Mr. Marandi will utilize his experience gained from managing multi-million dollar capital construction projects for the NYCDEP to facilitate tasks awarded under these contracts.

To enhance our services, our Team includes **KS Engineers, P.C. (DBE), Toll International, LLC, (DBE), VRX, Inc. (DBE), and NY Professional Services,** four highly-qualified subconsultants who have a wealth of similar experience. KS Engineers, PC will provide personnel to support the tasks required by this contract, including constructability/bidability, inspection services, and construction management and resident engineering services. Toll International, LLC will provide schedule development and monitoring, as well as cost estimation services. VRX, Inc. and NY Professional Services will provide inspection support. These firms have been added not only to meet the PANYNJ's DBE participation goal, but also because of their similar experience and familiarity with the requirements of this contract.

Collectively, our Team is able to draw from a pool of over 250 professional engineers, construction managers, inspectors, and other construction professionals to respond to any task order assignment. Our familiarity with the PANYNJ, experience on similar "As-Needed" and other contracts for various clients, and our expertise on resiliency and hardening contracts will all help make certain that we exceed the PANYNJ's expectations on this contract.

We appreciate this opportunity to continue our relationship with the PANYNJ, and look forward to building upon our history of providing quality service. Should you have any questions or need any additional information, please contact me at (212) 967-9833, Ext. 5229.

Very truly yours,
GANNETT FLEMING ENGINEERS AND ARCHITECTS, P.C.

James R. Laurita, PE
Vice President and Regional/Area Manager

AGREEMENT ON TERMS OF DISCUSSION

The Port Authority's receipt or discussion of any information (including information contained in any proposal, vendor qualification, ideas, models, drawings, or other material communicated or exhibited by us or on our behalf) shall not impose any obligations whatsoever on the Port Authority or entitle us to any compensation therefor (except to the extent specifically provided in such written agreement, if any, as may be entered into between the Port Authority and us). Any such information given to the Port Authority before, with or after this Agreement on Terms of Discussion ("Agreement"), either orally or in writing, is not given in confidence. Such information may be used, or disclosed to others, for any purpose at any time without obligation or compensation and without liability of any kind whatsoever. Any statement which is inconsistent with this Agreement, whether made as part of or in connection with this Agreement, shall be void and of no effect. This Agreement is not intended, however, to grant to the Port Authority rights to any matter which is the subject of valid existing or potential letters patent. The foregoing applies to any information, whether or not given at the invitation of the Authority.

Notwithstanding the above, and without assuming any legal obligation, the Port Authority will employ reasonable efforts, subject to the provisions of the Port Authority Freedom of Information Code and Procedure (FOI Code) adopted by the Port Authority's Board of Commissioners on March 29, 2012, which may be found on the Port Authority website at: http://www.panynj.gov/corporate-information/pdf/foi-code.pdf, not to disclose to any competitor of the undersigned information submitted which are trade secrets which, if disclosed, would cause injury to the competitive position of the enterprise, and which information is identified by the Proposer as proprietary, as more fully set forth in the FOI Code, which may be disclosed by the undersigned to the Port Authority as part of or in connection with the submission of a proposal.

ATTACHMENT B

AGREEMENT ON TERMS OF DISCUSSION

The Port Authority's receipt or discussion of any information (including information contained in any proposal, vendor qualification, ideas, models, drawings, or other material communicated or exhibited by us or on our behalf) shall not impose any obligations whatsoever on the Port Authority or entitle us to any compensation therefor (except to the extent specifically provided in such written agreement, if any, as may be entered into between the Port Authority and us). Any such information given to the Port Authority before, with or after this Agreement on Terms of Discussion ("Agreement"), either orally or in writing, is not given in confidence. Such information may be used, or disclosed to others, for any purpose at any time without obligation or compensation and without liability of any kind whatsoever. Any statement which is inconsistent with this Agreement, whether made as part of or in connection with this Agreement, shall be void and of no effect. This Agreement is not intended, however, to grant to the Port Authority rights to any matter which is the subject of valid existing or potential letters patent. The foregoing applies to any information, whether or not given at the invitation of the Authority.

Notwithstanding the above, and without assuming any legal obligation, the Port Authority will employ reasonable efforts, subject to the provisions of the Port Authority Freedom of Information Code and Procedure (FOI Code) adopted by the Port Authority's Board of Commissioners on March 29, 2012, which may be found on the Port Authority website at: http://www.panynj.gov/corporate-information/pdf/foi-code.pdf, not to disclose to any competitor of the undersigned information submitted which are trade secrets which, if disclosed, would cause injury to the competitive position of the enterprise, and which information is identified by the Proposer as proprietary, as more fully set forth in the FOI Code, which may be disclosed by the undersigned to the Port Authority as part of or in connection with the submission of a proposal.

Attachment C-1

Proposer Prerequisite A

Firms must have Certificates of Authorization to practice Professional Engineering in the states of New York and/or New Jersey and minimum of five (5) years experience, from the date of proposal submission, which includes performing construction management services as outlined in Attachment A for major transportation facilities.

* Note - Duplicate form as necessary *

Reference RFP Section II – Proposer Prerequisites
If Proposer is a common law joint venture, specify which entity's experience is being cited below to satisfy Prerequisite A.

Client Name/ Contracting Entity	ConnDOT
Contract Start Date	2005
Contract End Date	2009
Brief description of Scope of work	Gannett Fleming Engineers and Architects, P.C. was responsible for the technical inspection and administration of the $70 million reconstruction and widening of I-95 in New Haven. The major components of this project included staged construction for the widening of I-95 while maintaining average daily traffic of more than 140,000 vehicles. The project also included the replacement of four flyover bridges, construction of a new interchange and connector roadways, replacement of I-95 mainline bridges, and the construction of more than 1,500 meters of retaining walls.
Client Contact Name / Title	Mark Rolfe, Transportation District Engineer
Client Contact Email Address	[redacted]
Client Contact Phone Number	[redacted]

Client Name/ Contracting Entity	ConnDOT
Contract Start Date	2008
Contract End Date	2011
Brief description of Scope of work	Gannett Fleming Engineers and Architects, P.C. was responsible for overseeing a $45 million widening of U.S. Route 7 in Danbury, CT. The project was 2.1 miles long and involved widening U.S. Route 7 from two lanes to four lanes, with approximately 1/2 mile of this length being a divided highway. Work activities included excavating approximately 100,000 cubic meters of soil; implementing extensive roadway drainage improvements; and performing aerial and underground utility relocations.
Client Contact Name / Title	Kenneth Fargnoli, Transportation District Engineer

Firm's Qualifications and Experience

Gannett Fleming
Engineers and Architects, P.C.
Excellence Delivered As Promised

FIRM'S QUALIFICATIONS AND EXPERIENCE

The Gannett Fleming Engineers and Architects, P.C. and Tectonic Engineering & Surveying Consultants, P.C. Joint Venture has vast experience with the work required under all tasks of this indefinite quantity contract. Our firms bring a wealth of construction management and inspection service experience, as well as a successful track record, to this PANYNJ project. We have recently provided such services to a variety of transportation agencies throughout the Northeast region, including the PANYNJ.

This Joint Venture possesses the right combination of leadership and an in-depth knowledge of the services required to successfully execute this project. Gannett Fleming Engineers and Architects, P.C. and Tectonic Engineering & Surveying Consultants, P.C. have a longstanding, successful relationship as not only subconsultants to one another, but also as Joint Venture partners. Our recent successes and present relationship with PANYNJ will allow us to proceed with a familiar approach and no extra time, effort, or learning required. We are ready, willing, and able to deliver this project in a high-quality, efficient, and cost-effective manner. The following represents a sample of our recent, relevant projects.

GANNETT FLEMING ENGINEERS AND ARCHITECTS, P.C.

Performance of Expert Professional Construction Management and Related Technical Services as Requested on a Call-In Basis During 2011-2014

Name, address, point of contact, and telephone number:
Port Authority of New York and New Jersey, 2 Gateway Center, Newark, NJ 07102
Paul Salvatore, PE, (201) 595-4892

Project location: Various Locations, NY and NJ

Duration of the contract: 3 years

Dates: 2012-Present

Approx. $ amount of contract: $1.4M

Annual staff hours of full and part time labor expended in the performance of the contract:
2012: 1,964.50 hours, **2013:** 2,259.00 hours, **2014:** 1,182.50 hours

Representatives: Paul Salvatore, PE, (201) 595-4892

Gannett Fleming Engineers and Architects, P.C. is responsible for providing construction management and inspection for many of the PANYNJ facilities over this four year period. Projects are assigned on an as needed basis through task orders, and can include projects on bridges, tunnels, airports, seaport, or any of the Port Authority's buildings. Scope of work includes any discipline including, civil, structural, electrical/mechanical, architectural, marine and many others.

Our staff ensures the quality of construction in accordance with the contract plans and specifications and that the project adheres to applicable codes and standards of the PANYNJ. Gannett Fleming is responsible for consulting on technical issues, field resolutions, and recommendations during various stages of the projects. This project included the following assignments:

PN 954.801 - Demolition of Buildings 117,121 and 162
Project consisted of the demolition of three structures, removal of asbestos, plugging a flume with concrete, backfilling and grading and installation of a security fence. ($713,850.00)

PN 654.538 - Relocation of Sanitary Force Main and Replacement of PSE&G Duckbank at Berth 3
Project consisted of installation of a 8" steel pipe, installation of several manholes and handholes installing conduits from existing PSE&G manholes and conduits for a communications line, resurfacing the road and repairing curbs, fence and guardrails. ($1,123,000.00)

PN 954.901 - New Jersey Marine Terminals - Highway Advisory Radio System
Project consisted of installing concrete foundation for the electronic signs and the power supply cabinet, installing antenna, electronic signs relay equipment and underground conduits. ($1,009,512.00)

PN 654.031 - Berth 14 Wharf Reconstruction
Work consisted of demolition of the concrete sea wall, excavation of fill material, removal of damaged timber matting, installation of Gabian baskets filled with rocks in tiers, removal of damaged wooden piles and inspection of all piles. ($2,100,867.00)

PN 654.537 - Corbin St. Berth 3 Reconstruction
Project consisted of demolition of sea wall, removal of fill material, removal of force sewer main, relocation of utilities, driving piles, building a concrete slab, installing mooring points, paving and upgrading electric and lighting. ($22,000,000.00)

NJDOT Region Central Three Year Construction Inspection Term Agreement, Contract 2011BCM836F

Name, address, point of contact, and telephone number:
New Jersey Department of Transportation, 100 Daniels Way, Freehold, NJ 07728
George Carroll, [redacted]

Project location: Central New Jersey

Duration of the contract: 3 years

Dates: 2011-Present

Approx. $ amount of contract: $3M

Annual staff hours of full and part time labor expended in the performance of the contract:
2011: 3,096.00 hours, **2012:** 2,995.00 hours, **2013:** 5,887.00 hours, **2014:** 3,455.00 hours

Representatives: George Carroll, [redacted]

Gannett Fleming Engineers and Architects, P.C. is providing construction management, inspection and scheduling services for this three year "On-call" type CM/CI contract. Our firm is responsible for responding to multiple simultaneous Task Orders for personnel required by NJDOT for various construction projects in Region Central over the three-year term agreement. Projects typically include road and bridge construction, rehabilitation or repair. Scopes of work can include, milling, asphalt paving, excavation, subbase/base/embankment placement, drainage repairs, concrete barrier placement, pavement markings and delineators, bridge deck/abutment/ pier and joint repairs, bridge deck waterproofing membrane, concrete vertical and sloping curb, sign structures, traffic signals, utilities, landscaping, and all related Maintenance and Protection of Traffic. Responsibilities include ensuring contractor meets compliance with NJDOT plans and specifications; reviewing all lab reports and enforcing corrective action on all defective material and workmanship; and ensuring that all correspondence, daily reports, test reports, material receipts, material submittals, permit approvals, and all documentation are filed properly with NJDOT. Assignments to date include: I-287 Reconstruction, Somerset County; Maintenance Roadway

Reconstruction-301, Monmouth County; I-295 Pavement Repair and Rehabilitation, Burlington County; and Route 31 Shabacong Creek Bridge Replacement, Hunterdon County.

We are also responsible for reviewing Primavera CPM schedules (in P3/P6) for various projects for conformance with NJDOT Scheduling standards and Specific Contract milestones, and making recommendations to Resident Engineer on approval, and any needed changes. Reviews include Primavera files and narrative reports for baseline schedules and monthly updates, and also include the use of "Claim Digger" software to assess logic and other monthly changes. Schedule review tasks completed to date include: Rt 35/36 Interchange Eatontown NJ (advance review); Route 184 Reconstruction project, Middlesex NJ; I-287 Reconstruction, Somerset County; and Rt 71/88 Barrier Gate Project.

NJDOT Region South Three Year Construction Inspection Term Agreement, Contract 2011MEO842C

Name, address, point of contact, and telephone number:
New Jersey Department of Transportation, One Executive Plaza, Route 70 West, Cherry Hill, NJ 08002
Jaime Marie Oplinger, PE, Supervising Engineer, [redacted]

Project location: Southern New Jersey

Duration of the contract: 3 years

Dates: 2011-Present

Approx. $ amount of contract: $3M

Annual staff hours of full and part time labor expended in the performance of the contract:
2011: 1,200.50 hours, **2012:** 7,501.00 hours, **2013:** 6,497.00 hours, **2014:** 939.00 hours

Representatives: Jaime Marie Oplinger, PE, Supervising Engineer, [redacted]

Gannett Fleming Engineers and Architects, P.C. is providing services for this three-year, $3M, Construction Inspection Term Agreement. Our firm is assigning and managing multiple personnel as required by NJDOT on various construction projects in Region South through separate Task Orders, including the following:

- Maintenance Roadway Repair Contract South, S-105
- Maintenance Roadway Repair Contract South, S-106
- 2012 Pavement Preservation Contract
- 2011 Pavement preservation Contract
- Movable Bridge Repairs Projects 2011/2012/2013 – including repairs on Rt 130 Raccoon Creek Bridge, Rt 130 Oldmans Creek Bridge, Rt 50 Tuckahoe Creek Bridge, NJ Rt 44 Mantua Creek Bridge, NJ Rt 7 Hackensack River, Wittpenn Bridge; NJ Rt 71 Shark River Bridge, and NJ Rt 29 Tunnel Bridge, Trenton bridges.
- Maintenance Concrete Bridge Repairs Projects 2011/2012/2013
- Guiderail Repairs Contract
- Multiple Drainage Repair and Reconstruction Contracts

NJDOT Region South Three Year Construction Inspection Term Agreement, Contract 2012BCM887B

Name, address, point of contact, and telephone number:
New Jersey Department of Transportation, 1035 Parkway Avenue, PO Box 600, Trenton, NJ 08625

Approx. $ amount of contract: $3M

Annual staff hours of full and part time labor expended in the performance of the contract:
2012: 37.00 hours, **2013:** 1,907.50 hours, **2014:** 3,238.00 hours

Representatives: Giresh Patel, Consultant Coordinator, [redacted]

Gannett Fleming Engineers and Architects, P.C. is providing construction management and inspection services for this three-year, $3M, Construction Inspection Term Agreement. Responsible for assigning and managing multiple personnel required by NJDOT on various construction projects in Region South through separate Task Orders, including the following:

- 2013 Maintenance Roadway Repair Contract South, S-305
- Route 30/Grove Street Resurfacing contract
- I-295 Advance ITS Contract for"Direct Connect" CPM Schedule Review, Burlington County
- I-295 "Direct Connect" CPM Schedule Review, Burlington County
- Region South Long Life Pavement Contract
- Region South Bridge Painting Contract

NJDOT Three-Year Statewide Construction Inspection Agreement for Bridges, Movable Bridges, and Tunnels, Contract 2013MES949

Name, address, point of contact, and telephone number:
New Jersey Department of Transportation, 1035 Parkway Avenue, PO Box 600, Trenton, NJ 08625
Ray Kauffman, [redacted]

Project location: Statewide, New Jersey

Duration of the contract: 3 year

Dates: 2014-Present

Approx. $ amount of contract: $3M

Annual staff hours of full and part time labor expended in the performance of the contract:
2014: 2,849.50 hours

Representatives: Ray Kauffman [redacted]

Gannett Fleming Engineers and Architects, P.C. is providing construction inspection on various assignments for the New Jersey Department of Transportation as part of a three-year agreement. Our firm will provide inspection services for miscellaneous bridge, movable bridge, and tunnel projects. Projects have included:

- Construction inspection and support services for Movable Bridge repair projects for NJ Rt. 7 Wittpenn Bridge; NJ Rt. 71 Shark River Bridge; and Rt. 88/13 Point Pleasant Canal Bridge;
- Construction inspection and support services for Movable Bridge repair projects for NJ Rt. 47 Grassy Sound Bridge, NJ Rt. 7 Wittpenn Bridge; and Rt. 130 Raccoon Creek Bridge;
- Construction inspection and support services for Movable Bridge repair projects for NJ Rt. 71 Shark River Bridge, Rt. 88/13 Point Pleasant Canal Bridge;
- Field inspection and support services Statewide for Bridge Maintenance Structural Steel and Aluminum Repair Contract; and
- Field inspection and support services Statewide for Bridge Concrete Repair Contract.

Construction Management Services for the Hudson Line Stations

Name, address, point of contact, and telephone number:
Metro-North Railroad, 347 Madison Avenue, New York, NY 10017
Geoff Dopsch, Assistant Director of Facilities Engineering, [redacted]

Project location: Westchester County, NY

Duration of the contract: 7 years

Dates: 2004-2011

Approx. $ amount of contract: $1.7M, $5.4M

Annual staff hours of full and part time labor expended in the performance of the contract:
2004: 314.00 hours, **2005:** 2,589.50 hours, **2006:** 3,237.00 hours, **2007:** 9,807.50 hours, **2008:** 16,364.00 hours, **2009**: 12,863.00 hours, **2010:** 10,021.00 hours, **2011:** 2,021.00 hours

Representatives: Geoff Dopsch, Assistant Director of Facilities Engineering, [redacted]

Gannett Fleming Engineers and Architects, P.C. performed construction management services for the rehabilitation of 16 commuter rail stations on the MNR Hudson Line and the restoration of Historic Yonkers Station Building. Services include contract administration, quality assurance to substantiate that the work performed by the contractor meets the contract intents and designs, the processing and verification of the contractor's monthly payment request, review and maintenance of the project schedule, coordination with local communities and municipalities, project progress meetings, preparation of monthly progress reports, review of as-built documents, and contract close-out.

The Hudson Line Station Rehabilitation project consists of the staged replacement of 200,500 LF of high-level platforms, 9,300 LF of canopies, twelve pile-supported elevators, six new elevators, seven new pedestrian overpasses, rehabilitation of three existing overpasses, stairs, railings, rehabilitation of three undergrade bridges including bridge abutment repairs, bridge bearings replacement and structural repair to bridge stringers and girders, construction of 600 LF of retaining walls, rehabilitation of the existing retaining walls, construction of Doublewall system retaining wall, new heated shelters, electrical upgrades, improved lighting, variable-message sign system, public address system, station amenities, and landscaping. Stations on the Hudson Line include Morris Heights, University Heights, Marble Hill, Spuyten Duyvil, Riverdale, Ludlow, Yonkers, Glenwood, Greystone, Hastings-on-Hudson, Dobbs Ferry, Ardsley-on-Hudson, Irvington, Philipse Manor, Scarborough, and Ossining Stations, and the implementation of parking area improvements.

Work at the Historic Yonkers Station Building included major improvements of the station building, Yonkers is a Beaux Arts style station built in 1911 by the New York Central Railroad. It was designed by the noted

architectural firm of Warren and Wetmore and is eligible for listing on the State and National Register of Historic Places. Some of the items for the Yonkers Station Restoration included:

- Repair of intricate terracotta cornice, oak benches, and domed ceiling;
- Replacement of all exterior doors and windows;
- Repair of all exterior masonry;
- New tuck pointing;
- Replication and installation of single remaining chandelier;
- Replace all roofing, including fascia, leaders and gutters;
- Replication and installation of four missing chandeliers in their original locations;
- Replication and installation of historic clock above the ticket windows;
- Creation of a portal on the west wall opening onto a new riverfront esplanade; and
- New glass-enclosed elevators with a river view.

Construction Engineering and Inspection Services for New Britain-Hartford Busway, CT Fastrak Contract 3, Project Nos. 63-643/ 93-180

Name, address, point of contact, and telephone number:
Connecticut Department of Transportation, 359 South Main Street, Thomaston, CT 06787
Michael Mendick, [redacted]

Project location: West Hartford and Newington, CT

Duration of the contract: 3 years

Dates: 2012-Present

Approx. $ amount of contract: $14M

Annual staff hours of full and part time labor expended in the performance of the contract:
2012: 16,204.50 hours, **2013:** 28,785.50 hours, **2014:** 13,377.00 hours

Representatives: Michael Mendick, [redacted]

Our firm is providing construction engineering and inspection services associated with all of the structures on a $130.6 million bus rapid transit construction project. The project (Contract 3) entails the middle and largest section of the $567 million New Britain-Hartford Busway. It is being constructed partially along abandoned railroad right-of-way and partially along active Amtrak right-of-way. The Contract 3 projects consists of the construction of seven out of 11 stations serving the busway, and faces the challenges of coordinating with Amtrak and seven designers of record, four other adjacent construction projects, contract schedules with multiple milestones, geotechnical issues, structural (bridges) construction in congested downtown areas, and environmental concerns. Project 63-643 will replace the at-grade crossing on Flatbush Avenue with a gradeseparated crossing. This requires a bridge over the Amtrak right-of-way and embankment approaches to the bridge. The construction of these embankment approaches will require the use of wick drains, pile foundations, and installation of Geofoam lightweight fill to accommodate the existing soil conditions. Project 93-180 will construct the busway from Cedar Street in Newington to Sigourney Street in Hartford.

This requires the construction of more than five miles of roadway, 44 retaining walls, eight new bridges, approximately eight miles of drainage including drainage pipe jacking under the active Amtrak railroad, seven stations, wetland mitigation, and a gravel access road for Amtrak.

Reconstruction of I-95/I-91/CT Route 34 Interchange, Project No. 92-619, Contract E-2

Name, address, point of contact, and telephone number:
Connecticut Department of Transportation, 140 Pond Lily Avenue, P.O. Drawer L, New Haven, CT 06525
Mark D. Rolfe, District Engineer, [redacted]

Project location: New Haven, CT

Duration of the contract: 4 years

Dates: 2008-2012

Approx. $ amount of contract: $9.3M

Annual staff hours of full and part time labor expended in the performance of the contract:
2008: 2,843.00 hours, **2009:** 20,570.00 hours, **2010:** 25,969.50 hours, **2011:** 24,884.50 hours, **2012:** 3,810.50 hours

Representatives: Mark D. Rolfe, District Engineer, [redacted]

Gannett Fleming Engineers and Architects, P.C. is providing construction engineering and inspection services for this interchange reconstruction project in New Haven, CT. A major component of the project includes the construction of a new ramp bridge to carry I-95 northbound traffic to Route 34 westbound and to downtown New Haven. The new bridge replaces an existing left-hand exit ramp and bridges. A twin steel box-girder bridge spanning over both directions of I-95 requires nighttime steel erection using 20-minute traffic stoppages.

The project includes the staged construction widening and replacement of two existing Route 34 and I-95 bridges and the vertical realignment and widening of the converging I-91 and I-95 southbound ramps to Route 34 westbound. Ten new retaining walls will be constructed to support the new ramp alignments and relocate the I-95 entrance and exit ramps. The retaining walls use an architectural form liner to simulate stone. The project also includes the installation of approximately 600 precast, concrete friction piles for new foundations; extensive use of lightweight fill for embankment construction; installation of new highway drainage; illumination; signalization; and incident management system installations.

An Internet collaboration server-based project management system is used for all project correspondence and electronic submittal and review. The construction contract requires a contractor-prepared quality control management plan. This is one of several major contracts that are underway simultaneously as part of a coordinated $2 billion I-95 corridor improvement program which is being implemented in the New Haven area.

Project features include: maintenance of average daily traffic of more than 140,000 vehicles on I-95; construction of a new twin steel box-girder ramp bridge; staged construction widening and replacement of two existing bridges; vertical realignment and widening of converging I-91/I-95 southbound ramps to Route 34 westbound; construction of ten retaining walls with architectural form liners to simulate stone; installation of 600 precast concrete friction piles; embankment construction using lightweight fill; inspection of highway drainage installations; relocation of the overhead signs onto new sign supports; installation of a new incident management system (IMS) and illumination along I-95.

Project 92-533/569, Contract C-2, Reconstruction of I-95 from Stiles Street to the New Haven/East Haven Town Line

Name, address, point of contact, and telephone number:
Connecticut Department of Transportation, 2800 Berlin Turnpike, Newington, CT 06131
Mark D. Rolfe, [redacted]

Project location: New Haven and East Haven, CT

Duration of the contract: 4 years

Dates: 2005-2009

Approx. $ amount of contract: $7.3M

Annual staff hours of full and part time labor expended in the performance of the contract:
2005: 3,892.00 hours, **2006:** 20,166.00 hours, **2007:** 24,681.50 hours, **2008:** 15,378.00 hours, **2009:** 45 hours

Representatives: Mark D. Rolfe, [redacted]

Gannett Fleming Engineers and Architects, P.C. performed a technical inspection and administration of the $70 million reconstruction and widening of I-95 project in New Haven. One of the major components of this project included staged construction for the widening of I-95 between the frontage roads in East Haven and the east approach of the Pearl Harbor Memorial Bridge in New Haven while maintaining average daily traffic of more 140,000 vehicles.

The project included the replacement of four flyover bridges over I-95, the construction of a new interchange and connector roadways, the replacement of I-95 mainline bridges, and the construction of more than 1,500 meters of retaining walls that use an architectural form liner to simulate stone. The project also included drilled shafts for pier foundations; more than 200,000 cubic meters of fill embankments for the new interchange and connector roadways; new highway drainage, illumination, and signalization; and incident management system (IMS) installations. This project was one of several major contracts that are part of a coordinated $2 billion I-95 corridor improvement program being implemented in the New Haven area. Multiple contracts are underway simultaneously.

Construction Engineering and Inspection for the Reconstruction of Route 7, Project No. 34-260, Phase 2

Name, address, point of contact, and telephone number:
Connecticut Department of Transportation, 359 South Main Street, Thomaston, CT 06787
Lewis Cannon, [redacted]

Project location: Danbury and Ridgefield, CT

Duration of the contract: 3 years

Dates: 2009-2012

Approx. $ amount of contract: $5.2M

Annual staff hours of full and part time labor expended in the performance of the contract:
2009: 14,211.00 hours, **2010:** 15,919.00 hours, **2011:** 11,231.50 hours, **2012:** 1,138.00 hours

Representatives: Lewis Cannon, [redacted]

Gannett Fleming is providing construction engineering and inspection services for the reconstruction of 2.1 miles of roadway beginning north of Starrs Plain Road and ending north of the Route 7 and Wooster Heights Road interchange in Danbury. U.S. Route 7 is classified as a principal urban arterial roadway for the primary north/south route in western Fairfield County. This is a continuation of the Phase 1 project to address capacity, operational, and safety deficiencies by improving the horizontal and vertical alignment. The roadway is being widened to two lanes in each direction. Because Route 7 is built in a narrow valley, much of the road has steep slopes on one side and wetlands on the other side. Impacts to wetlands are being minimized as much as possible. Wetland mitigation sites were constructed during Phase 1 activities to compensate for impacts between this project and the previous two miles.

Project Features:

- Construction (315 meters) of pile supported roadway above a wetland with an excess of 1,000 drilled and driven concrete piles
- Construction (96 meters) of pile supported embankment through a portion of wetland using timber driven piles
- Construction of a two lane, single span bridge over a local road
- 100,000 cubic meters of excavation
- Installation of new closed and open storm drainage systems
- Installation (3000 meters) of pavement underdrains
- Construction of a concrete masonry wall with an architectural form liner
- Installation of a new incident management system (IMS) at six locations along Route I-84 and one site on Route 7
- Relocation of overhead and underground utilities

Newtown Creek Water Pollution Control Plant Construction Management Services

Name, address, point of contact, and telephone number:
New York City Department of Environmental Protection, 90-65 Horace Harding Expressway, 5th Floor, Corona, NY 11368
Kevin Donnelly, Assistant Commissioner, Wastewater Capital Program, [redacted]

Project location: Brooklyn, NY

Duration of the contract: 10 years

Dates: 2008-Present

Approx. $ amount of contract: $1.4M

Annual staff hours of full and part time labor expended in the performance of the contract:
2008: 4,162.00 hours, **2009:** 11,285.00 hours, **2010:** 13,490.50 hours, **2011:** 18,825.00 hours, **2012:** 18,418.50 hours, **2013:** 23,127.50 hours, **2014:** 10,233.00 hours

Representatives: Kevin Donnelly, Assistant Commissioner, Wastewater Capital Program, [redacted]

Gannett Fleming is providing construction management services for 14 construction contracts to upgrade the Newtown Creek Water Pollution Control Plant (WPCP). Work involves upgrades to the central residuals building and the Newtown Creek sludge barging facilities, modifications to the main building's northwest wing, and reconstruction of the Kingsland Avenue, South Battery, and South Control buildings.

The New York City Department of Environmental Protection's Newtown Creek WPCP upgrade is under a consent order from the U.S. Environmental Protection Agency and the New York State Department of Environmental Conservation. Several construction and operational consent order deadlines must be met during this contract term.

The WPCP, located in Brooklyn's Greenpoint section, is undergoing a major, long-term upgrade that began in 1999. Our firm will provide construction management services during Phase 3 of the upgrade program, scheduled for completion in 2018.

Renovation of PSE&G Electrical Substation Control Buildings

Name, address, point of contact, and telephone number:
PSE&G, 4000 Hadley Road, South Plainfield, NJ 07080
Gino J. Leonardis, PMP, Senior Project Manager, [redacted]

Project location: East Rutherford and Ridgefield, NJ

Duration of the contract: 2 years

Dates: 2012-2014

Approx. $ amount of contract: $3.3M

Annual staff hours of full and part time labor expended in the performance of the contract:
2012: 1,041.00 hours, **2013:** 4,806.50 hours, **2014:** 30 hours

Representatives: Gino J. Leonardis, PMP, Senior Project Manager, [redacted]

Gannett Fleming is currently completing a $600,000 construction management contract for PSE&G for the renovation of 2 existing electrical substation control buildings. Project scope consists of asbestos abatement, the demolition of existing doors and frames, removal of existing windows, toilet partitions and accessories and the furnishing and installation of a concrete stone veneer wall system, insulated metal wall panels, painting of interior walls and ceilings, new doors and frames, VCT and vinyl base, terrazzo floor repairs, window security screens, toilet partitions and accessories, roofing repairs, roof ladder, roof parapet metal coping, lighting and devices, plumbing fixtures, sump pumps and thru wall fans and ductless split system air conditioners. Gannett Fleming was responsible for monitoring contractors' work for compliance with contract documents, prepared daily and weekly progress reports, reviewed contractor payment requisitions and coordinated with client on staging of work in occupied buildings.

TECTONIC ENGINEERING & SURVEYING CONSULTANTS, P.C.

PANYNJ Call-In Agreements #426-10-004 and #426-10-006
Professional Materials Testing and Inspection Services for the Freedom Tower

Name, address, point of contact, and telephone number:
Port Authority Technical Center, 241 Erie Street, Room 234, Jersey City, NJ 07310-1397
Casimir J. Bognacki, PE, (201) 216-2984

Project location: Manhattan, NY

Duration of the contract: 6 years

Dates: 2009-2014

Approx. $ amount of contract: $1.4M

Annual staff hours of full and part time labor expended in the performance of the contract:
4,000 hours

Representatives: Casimir J. Bognacki, PE, (201) 216-2984

Tectonic Engineering & Surveying Consultants, P.C. is providing inspection and testing services in compliance with the International Code Council for concrete field inspection and testing, and core drilling under agreement #426-10-004 and spray-applied fire resistant materials (SFRM) used on structural members and assemblies under agreement #426-10-006.

Concrete services involve:

- Portland Cement concrete field testing by ACI Certified technicians.
- Portland Cement concrete placement inspectors by ACI Certified Special Inspectors.
- Portland Cement concrete laboratory testing by ACI Certified Concrete Strength Testing technicians.
- Precast and prestressed concrete inspections at the plants following the quality control program for plants and production of precast and prestressed concrete products.
- Core drilling; sampling and handling procedures as defined in A.S.T.M. C 42.

Documents are prepared according to our approved quality control/assurance program.

MTA/NYCTA No. 7 Line Extension, Contract C-26503, Construction of Running Tunnels, C-26510: Site J Vent Building, and C-26505, Install Systems and Finishes

Name, address, point of contact, and telephone number:
MTA/NYCTA Capital Construction, S3 II Tunnel Constructors, JV, 21 Penn Plaza, Suite 702, New York, NY 10001
Orlando Espinoza, [redacted]

Project location: Manhattan, NY

Duration of the contract: 2 years

Dates: 2010-2012

Approx. $ amount of contract: $400,000

Annual staff hours of full and part time labor expended in the performance of the contract:
2,400 hours

Representatives: Orlando Espinoza, [redacted]

Tectonic Engineering & Surveying Consultants, P.C. is providing geotechnical and special inspection/materials testing services for the $1.1 Billion construction of the No. 7 Line running tunnels, Site A Vent Building, Site J Vent Building and furnishing and installing systems and finishes for the new expansion. The project involves the construction of 7,000FT of two 22FT diameter running tunnels, and the construction of two new subway stations at Tenth Avenue/41st Street and 34th Street/11th Avenue near the Hudson Yard on the West Side of Manhattan. Construction of the new running tunnels and station involves extensive rock excavation using conventional drill and blast methods and tunnel boring machines (TBM's) to carve out the caverns to accommodate the new station. Ancillary work involves the installation of drilled shafts, rock anchors, rock bolts and shotcrete to support the excavated faces. Other aspects of the work includes complete above and below grade construction of the Sites A & J Vent Buildings and installation of all the systems and finishes including trackwork and signalization, escalators, elevators, etc.

As representative for MTA, Tectonic is a sub consultant to the joint venture contractor, Skanska Railworks JV, responsible for performing geotechnical special inspections and third party materials laboratory testing. Responsibilities include blast and vibration monitoring, review of vibration mitigation plans, geologic mapping of excavated faces, inspection of rock reinforcement including rock bolts and passive dowels, inspection of subgrades, witnessing and monitoring of rock anchor testing including water pressure testing of anchor boreholes, inspection of rock drains, inspection of final shotcrete placement, underpinning, boring inspection, and logging of exploratory probe holes. Tectonic is also providing special inspections, laboratory testing and QA/QC services during the excavation for the tunnels and caverns, dewatering, tunnel lining and construction of structures involving field and plant inspection and testing of concrete, shotcrete, structural steel, masonry, grouting, fireproofing, mechanical/ventilation systems and electrical systems, etc. Tectonic is also responsible for development of shotcrete qualifications testing program including preparation of design mixes and performance of laboratory and field trial tests. Other duties include preparation of daily, weekly and monthly inspection reports, attendance at progress meetings and liaison with onsite MTA representatives.

REI Services for Contracts HWSEMERG1, HWSEMERG2, & HWSEMERG3: Emergency Sidewalk Repairs

Name, address, point of contact, and telephone number:
NYCDDC, 30-30 Thomson Avenue, Long Island City, NY 11101-3045
Eric C. Macfarlane, PE, [redacted]

Project location: Brooklyn, Queens, Staten Island, and Manhattan, NY

Duration of the contract: 4 years

Dates: 2010-2012

Approx. $ amount of contract: $4.5M

Annual staff hours of full and part time labor expended in the performance of the contract:
20,000

Representatives: Bob Yueh, [redacted]

Tectonic Engineering & Surveying Consultants, P.C. provided Resident Engineering Inspection services for the Emergency Sidewalk Repairs contracts with NYCDDC to oversee the reconstruction of sidewalks and curbs pulled up by fallen trees caused by the 2010 Tornado and the subsequent property damage caused by Hurricane Irene in 2011 and Hurricane Sandy in October of 2012.

Tectonic provided administration and inspection services to facilitate timely repairs and ensured the quality of the Contractor's reconstruction work. Scope of work included the removal of fallen/damaged trees and tree stumps, replacing the storm damaged sidewalks, streets, bus stops, curbs, grass areas, pedestrian ramps, and associated infrastructure sewer drains, service and water service connections and hydrants.

Repair efforts were quickly coordinated as soon as debris was removed from the affected areas. Priority was given to severely damaged areas across Brooklyn, Queens, Manhattan and Staten Island. During the recovery efforts in connection to Hurricane Sandy, Tectonic mobilized eighteen people in a matter of two days to cover the activities of three contractors, each with multiple crews performing work over an expansive area of the City.

KS ENGINEERING, P.C.

Performance of Expert Professional Construction Management Services (MBE/WBE) on a "Call-In" Basis 2007, 2008 and 2009

Name, address, point of contact, and telephone number:
PANYNJ, 241 Erie Street, Room 228. Jersey City, NJ 07310-1397
James Starace, Deputy Director of Engineering, (212) 435-7449

Project location: Various Locations, NY and NJ

Duration of the contract: 2 years

Dates: 2007-2009

Approx. $ amount of contract: $1.2M

Annual staff hours of full and part time labor expended in the performance of the contract:
13,000 hours

Representatives: James Starace, Deputy Director of Engineering, (212) 435-7449

Services provided under this contract generally consisted of performing construction management and inspection services of structural steel, structural concrete, asphalt and concrete paving, painting of structural steel, electrical, mechanical, construction contract administration, constructability review, construction scheduling, and cost estimating. To date, KS Engineers, P.C. has been given the following construction management assignments under this "Call-In" agreement:

- **EWR 264.003 – Lower Level Expansion and B-1 Circulation** – Provided Project Scheduler. The scope of work of this contract was to develop the at-grade space in Terminal B into a new domestic baggage claim hall on the lower level of Terminal B, including two new substations. Approximate contractual amount of $53M.
- **LGA 124.029, ARFF –** Provided Assistant Resident Engineer responsible for electrical/mechanical building construction at the ARFF project and for work on other general LGA contracts, including volume of electrical/mechanical work, such as a High Pressure Water Storage and Pump Station.
- **NJ Marine Terminal –** Provided Civil Inspector for monitoring activities at Marine Terminal construction sites. The work included installation, testing, and inspecting civil works. KSE provided oversight to ensure that construction progresses as scheduled and contract specifications are adhered to.
- **EWR, CTA Toll Plaza & Terminal B Renovations** – Provided Electrical Inspector responsible for the inspection of the installation and/or commissioning of electrical equipment (including high tension), communication and fire alarm systems, and electrical rehabilitation of existing building systems (including switchgears, switchboards, emergency generators, and fire alarm systems).
- **PANYNJ Office of the Engineer of Construction** – Provided Contract Specialist responsible for the collection of construction data from all Port Authority construction projects and producing reports on various construction management subjects.
- **PATH** – Provided Electrical Construction Inspector responsible for the oversight of multiple discipline work performed by numerous contractors on the PATH railroad system. Work assignments include the rehabilitation of electrical power and lighting equipment, system upgrades for alarm and communication equipment, and site work at stations, rail yards, and tunnels.

- **New York Marine Terminal, Howland Hook & Teterboro Airport, PIDS** – Provided Senior Inspector responsible for building demolition at Howland Hook and the inspection and testing phase of the Perimeter Intrusion Detection System at Teterboro Airport, which involved fencing sensors and a radar system.
- **Howland Hook/Brooklyn Piers** – Provided Senior Office Engineer responsible for various construction projects at Howland Hook/Brooklyn Piers, Port Authority Teleport and selective contracts at airport locations, with a construction cost of up to $150 million. Responsibilities also include processing of contractor requisitions and verifying labor, equipment, and materials.

Construction Management for No. 7 Subway Line Extension Project

Name, address, point of contact, and telephone number:
MTA Capital Construction, NYC Transit, Peter Turton, Project Director, [redacted]

Project location: Manhattan, NY

Duration of the contract: 7 years

Dates: 2007-Present

Approx. $ amount of contract: $4M

Annual staff hours of full and part time labor expended in the performance of the contract:
7,000 hours

Representatives: Peter Turton, Project Director, [redacted]

KS Engineers, P.C. is presently working in the tunnel under the Street level Site "A" that is located on the East Side at 11th Avenue between 25th and 26th Streets, as shown in the above picture. Work in this area includes deck and concrete edge pans, safety lines, temporary lights, and tower stairs. We are also working on Site "P", located on the East Side at 11th Avenue between 34th and 35th Streets, as shown in the picture below. This project includes coordination between the contractor and the MTA Capital Construction (MTACC) Construction Manager.

KS Engineers, P.C. is providing construction management services for this project that will extend the No. 7 Line westward under West 41st Street and southward under Eleventh Avenue to the southerly terminus at West 25th Street. The extension provides a 7,100-foot-long, two-track railroad with two lay-up tracks for the storage of six trains. It also provides two new stations, one at West 41st Street and Tenth Avenue and a two-track terminal station on Eleventh Avenue at West 34th Street.

Construction Quality Assurance and Construction Engineering and Inspection Services for the Goethals Bridge Replacement Project

Name, address, point of contact, and telephone number:
NYNJ Link Developer LLC, 125 West 55th Street, New York, NY 10019-5369
Luke Chenery, [redacted]

Project location: Manhattan, NY

Duration of the contract: 5 years

Dates: 2013-2018

Approx. $ amount of contract: $11.8M

Annual staff hours of full and part time labor expended in the performance of the contract:
7,171 hours (to date)

Representatives: Luke Chenery, [redacted]

The Goethals Bridge Replacement project is the Port Authority's first new major bridge replacement in more than 80 years, and it is the first surface transportation public-private partnership (PPP) in the Northeast Region. The $973 million, 40-year, design-build-finance-maintain contract will replace the Goethals Bridge and approach roadways with a new alignment which will consist of the construction of a cable-stayed bridge over the Arthur Kill south of the existing bridge. The new bridge will contain six 12-foot wide travel lanes, three lanes in each direction; a 12-foot wide outer shoulder and a five-foot wide inner shoulder on each roadway; a 10-foot wide sidewalk/bikeway along the northern edge of the New Jersey-bound roadway; and a central area to be maintained between the eastbound and westbound roadway decks, sufficient to accommodate the provision of future transit service. It also will provide state-of-the-art bridge technology, including Roadway Weather Information Systems that will collect environmental data such as wind speed, visibility, and pavement temperature. There will also be a Traffic Detection System that will use sensors embedded in the roadway to provide alerts on traffic build-up and incident responses.

KS Engineers, P.C. was retained as the lead consultant by the Developer (NYNJ Link Developer LLC) of this PPP project, to provide independent Construction Quality Assurance and Construction Engineering and Inspection services.

Section B:
Staff Qualifications and Experience

Gannett Fleming
Engineers and Architects, P.C.
Excellence Delivered As Promised

STAFF QUALIFICATIONS AND EXPERIENCE

The Gannett Fleming Engineers and Architects, P.C. and Tectonic Engineering & Surveying Consultants, P.C. Joint Venture has put together a Team capable of performing all of the tasks required under this contract. Our Project Team will be led by **Project Manager James T. Gibbons,** a seasoned Manager of Construction Services with 27 years of experience. Mr. Gibbons directs operations throughout the area; provides overall project management services; and serves as a liaison with the PANYNJ. **His recent experience with the PANYNJ includes providing overall contract supervision services for the 2011-2014 On-Call Construction Inspection contract.**

Mr. Gibbons will be supported by **Deputy Project Manager Reza Marandi, PE, CCM,** a Director of Construction Management at Tectonic Engineering & Surveying Consultants, P.C. Mr. Marandi is a Professional Engineer with 30 years of experience managing multi-million dollar capital construction projects. His former role as was Chief of Water Quality, Wastewater Facilities, and In-House Design Projects for the NYCDEP, where he was in charge of the three largest construction programs. Mr. Marandi will support Mr. Gibbons, and enable our Team to complete any project required under this contract.

We have assembled a Team of highly qualified construction managers, resident engineers, certified inspectors, schedulers, and cost estimators who have a wealth of relevant experience. Our team members have served on a number of projects for New York State and New York City agencies, and have recently provided these services to the PANYNJ, PATH, NYSDOT, NYCDOT, NYCSCA, NYCDDC, NYCHA, and more. Our combination of relevant experience and our familiarity with the PANYNJ leaves no doubt that our Team is the most qualified for this task order.

SUBCONSULTANTS

Our Team is structured to best serve the PANYNJ. To this end, we are including three DBE-certified subconsultant firms and one non-DBE firm that have the expertise to support and enhance our services. These firms have been organized to provide the "best of the best" in the roles that fit each firm and capitalize on their similar experience. Each of our subconsultant firms have been added to the Team based on their relevant experience, task expertise, and value that they will add to our services.

KS Engineers, Inc. (DBE) is a multidisciplinary engineering firm providing construction management/monitoring and inspection, civil engineering, structural engineering, geotechnical engineering, landscape architecture, aerial mapping ground control, boundary survey, topographic survey, right-of-way, and GPS mapping services to various governmental clients at the state, federal, and local level, as well as to private clients. The firm provides comprehensive construction management, inspection, and monitoring services on key projects in the region. KS Engineers, Inc. has a longstanding relationship with the PANYNJ and is intimately familiar with PANYNJ project management, design, and CAD standards. The firm has several active Call-In Agreements with the PANYNJ, including agreements for construction management services and condition inspection services. Their intimate knowledge of the PANYNJ and successful experience on contracts of this type will only serve to support and enhance the services required under this contract.

Our Team will also be supported by **VRX, Inc. (DBE), Toll International, LLC (DBE), and New York Professional Services One, LLC.** These firms will provide personnel to support our schedule development and monitoring, quality assurance inspection, and cost engineering/estimating services, as necessary.

BIOS OF KEY PERSONNEL

Our Team is comprised of key personnel who have repeatedly proven their ability to deliver a wide variety of construction management and inspection services to our clientele. Our staff's familiarity with this contract's potential scope of work, as well as with PANYNJ requirements and procedures, uniquely qualifies our Team to provide the services requested under this task order. Brief biographies of our key staff members are provided below, with resumes for all personnel at the end of this section. As indicated on our organization chart on page 8 of **Section C – Management/Technical Approach,** Tectonic Engineering & Surveying Consultants, P.C. are indicated by (T), and K.S. Engineers, P.C. personnel are indicated by (KSE).

Project Management

Charles R. Norrish, III, PE is a Vice President, Regional Office Manager, and Regional Construction Manager responsible for providing services in the Northeast Region. He has 41 years of experience, and as such, is responsible for directing operations throughout the area, has overall project management responsibilities, serves as a liaison with departments of transportation and other agencies, and assigns personnel. Mr. Norrish will serve as a Principal-in-Charge of this contract.

Walter A. Gross, PE (T) is Vice President of Tectonic Engineering & Surveying Consultants, P.C.'s infrastructure division, and presents over 30 years of experience with public works, water supply, waste water treatment, and solid waste engineering projects, applying civil engineering site design and program management experience. He has successfully managed numerous projects for NYC agencies from design to construction. His management responsibilities include defining work scopes, allocating resources, overseeing the project team, supporting technical design, and managing construction oversight. Serving as another Principal-in-Charge for this contract, Mr. Gross will work together with Mr. Norrish to support the Project Manager, and provide oversight for each project awarded.

Doreen M. Bartoldus, PE, CCM, LEED GA, ENV SP will provide QA/QC Management services for this contract. Ms. Bartoldus is a Vice President of Regional Construction Services with 35 years of experience, and is responsible for water, wastewater, and facility construction management initiatives. She participates in complex, multi-phase, multi-prime construction contracts, involving design, resident engineering, construction management, design liaison, quality control inspection and testing, and project management. Her expertise also encompasses construction management of multi-prime and billion dollar construction projects incorporating a wide variety of facilities.

Edward Torossian, PE (T) is the Corporate Director of QA/QC and Independent Audits at Tectonic Engineering & Surveying Consultants, P.C., and will provide training and Quality Assurance/Vendor oversight as a QA/QC Manager for this contract.

TASK A/TASK B – Constructability/Bidability and General Engineering/Construction Staging

John D. Purdy, PE will provide oversight of the Constructability and General Engineering tasks. He is a Facilities Group Manager responsible for managing and directing the multidiscipline design of buildings, other facilities, and bridges and the complete development of plans and specifications for conceptual, preliminary, and final phases of projects. He is also responsible for contract compliance, budgets, schedules, and the coordination of project disciplines and subconsultants. **Mr. Purdy is an invaluable addition to our Team, as he has experience working with PANYNJ since 1986.**

Brian W. Dorr, PE is a Project Manager with 22 years of experience responsible for all facets of highway and interchange construction projects, as well as site development projects. His experience includes geometric

designs, traffic control and staging, utility relocations, construction cost estimates, signing, permitting, earthwork calculations, soil erosion, right-of-way engineering, and construction support.

James A. Upright, PE (T) James Upright will be responsible for Tasks A and B for this IQC. Mr. Upright currently holds the position of Senior Engineer at Tectonic Engineering & Surveying Consultants, P.C. His duties include analyzing environmental data and GIS data, preparation of environmental reports, and general environmental engineering oversight. Mr. Upright is a New York State licensed Professional Engineer with over twenty years of experience.

TASK C – Schedule Development and Monitoring

David M. Gorski, EIT will provide Schedule Development and Monitoring Services for this contract. Mr. Gorski is a Senior Project Scheduler with 44 years of experience, and is responsible for developing and monitoring project design and construction schedules using Primavera Project Planner (P3, P6)/SureTrak, Microsoft Project, and Open Plan software; providing document control services; developing project and change order engineer's estimates; developing computer-applicable tracking systems for document control, project progress reports, change orders, and construction time analyses; and performing project and task management activities.

Stanley Michalowski will also provide Schedule Development and Monitoring services as part of Task C. He is currently a Senior Scheduler with 37 years of experience responsible for developing complete project schedules, budgets, and cost to complete. Mr. Michalowski provides detailed information on project phasing and staffing plans and calculates escalation costs, and prepares charts and graphs to support this information for presentation purposes.

TASK D – Quality Assurance Inspection

INSPECTORS

Victor Nicasio will serve as an Inspector for projects required under this contract. He is currently a Senior Inspector with 25 years of experience responsible for managing construction operations, supervising personnel, and overseeing work zone safety. He is also responsible for project documentation, estimates, change orders, as-built records, and utility coordination. He has extensive experience on construction, rehabilitation, renovations, upgrade, maintenance and critical emergency on-call projects on inter-state highways, bridges, mass transit and light rail and track systems, train stations, electrical lines and substations, public schools and public housing developments and municipal projects. **Mr. Nicasio is currently providing inspection services on our ongoing On-Call Construction Inspection contract with the PANYNJ.**

Gary L. Splain, NICET IV will provide inspection services for this contract. Mr. Splain is a Chief Inspector with 33 years of experience who is responsible for structural designs and the technical inspection of construction projects in New York, Connecticut, New Jersey, Pennsylvania, and other areas for the firm. His responsibilities also include reviewing shop drawings and providing other construction-phase services.

Clay A. Corjulo, NICET III is a Senior Inspector with 19 years of experience responsible for quality assurance specifications and pay quantity calculations for all earthwork and paving operations. He also assists the resident engineer with staff supervision and project recordkeeping.

Raimundo Gorrin, NICET IV, ACI is a Construction Inspector with 16 years of experience. He is responsible for inspecting and observing construction activities throughout projects. His tasks include providing detailed construction reports, updating as-built files, and coordinating activities between contractors and owners.

Thomas A. Wargo, NICET IV is a Senior Inspector with 29 years of experience, and is responsible for providing contract administration services and inspecting construction to verify its completion in accordance with contract requirements and specifications.

Paul K. Burpulis, NICET IV is an Inspector with 36 years of experience in the supervision of construction, inspection of all contractor operations, and coordination of inspection personnel, as well as overseeing work zone safety. He is responsible for project records including processing estimates, as-built plans, and quantity records, shop drawing review, utility coordination, and change order negotiating and recommendation for approval.

James J. Banack, NICET II is an Inspector with 33 years of experience. He is responsible for performing construction inspections on transportation projects involving highways, bridges, and mass transit facilities. His work includes roadway realignment, roadway resurfacing, bridge rehabilitation, and utility relocation/installation projects.

Brian M. Vosberg, EIT is a Construction Inspector with 15 years of experience. He is responsible for inspecting and observing construction activities throughout projects. His tasks include measuring field quantities, preparing daily inspection reports, supervising contractor activities, and making sure of compliance with contract documents.

Hitesh Patel is an Inspector with 26 years of professional experience in the construction of major facilities for government clients. He has experience serving in a variety of roles, including Resident Engineer, Assistant Resident Engineer, Chief Inspector, and Office Engineer.

Donald Olla will also provide inspection duties under this contract. Mr. Olla is an Inspector with 30 years of experience. He has served as a Resident Engineer on a number of transportation projects, having worked for the NJDOT for nearly 29 years. His responsibilities include acting as the Owner's direct representative to the contractor and project stakeholders, direct supervision of the project field inspection/engineering staff, performing quality assurance oversight of major items of work in progress, and ensuring projects are constructed in conformance with the plans and specifications for the owner.

Mohammed Bhuiyan, ICC (T) has over 20 years of experience in designing, supervising and managing construction projects, both in the public and private sectors. As a civil engineer, he was responsible for ensuring specification compliance in such categories as masonry, concrete, pile driving, soils, rebar and curtain panel walls.

Olayinka Ogundalu, ACI (T) is an Inspector with 20 years of experience. He is experienced in all phases of civil engineering construction and supervision, and his duties include inspections for concrete placement, steel reinforcement, installation, fireproofing, masonry, fire stopping and soil compaction.

James Orcutt, NICET III (T) is a Supervisor of Construction Inspection Services and a Senior Construction Inspector at Tectonic Engineering & Surveying Consultants, P.C. with 45 years of experience. Mr. Orcutt is responsible for the inspection of contractor's work to verify compliance with design plans and specifications, coordination and supervision of inspection staff, preparation of daily reports, review and approval of contractor's payment requisitions, coordination of filed design changes, shop drawing review, and preparation of as-built drawings. Construction inspection responsibilities include concrete inspection, earthwork construction, steel reinforcement inspection, roadway construction, masonry inspection, and structural steel inspection.

Ronghao Chen, PE (T) has over 25 years of experience in the construction field, ranging from contract management to performing inspections. He is very familiar with various aspects of construction, such as

HVAC/mechanical, plumbing, electrical, roof and foundation work, demolition, structural stability, pile driving, soil work, concrete, steel, masonry and asphalt.

Reynaldo M. Libunao, Jr. (KSE) has 18 years of international and domestic experience with project management, power, telecommunications and lighting distribution design for residential, commercial, educational, recreational, infrastructure and marine facilities. In addition, he has excellent organization skills and is able to use different tools to streamline the design process and generate accurate calculations.

Scott V. Plant, PE (KSE) is a Resident Engineer for Structural Engineering at KS Engineers, P.C. in New Jersey and New York. He has over 25 years of experience and currently provides resident engineering services for many of the local transportation agencies in the New York and New Jersey marketplace, including the NJ Turnpike Authority, NYSDOT, NYCDOT, MTA-Metro-North, and MTA-Bridges and Tunnels.

Steve Mar (KSE) has experience in high tension electrical engineering, construction technology, contract administration and building operations in a career that spans more than 30 years. He has the ability to work effectively under minimal supervision handling simultaneous projects and meeting deadlines. Mr. Mar has a solid reputation for upholding high standards and realizing organizational goals and objectives.

Shelton Rimple (KSE) is an Electrical Construction Inspector in New Jersey and New York with 18 years of experience. He provides inspection for installation of electrical systems, fire alarms, and fiber optic communications systems for residential, commercial, and institutional buildings and subway stations.

INSPECTORS WITH NACE CERTIFICATION

Ken Eckel, NACE II is a Construction Inspector with over 14 years of experience responsible for structural inspection duties, such as bridge painting and coatings inspection.

Farid Nowbahar, NACE I (T) has 20 years of construction supervision experience, mostly working on NYSDOT and NYCDOT projects involving bridge maintenance and painting components. He offers in-depth knowledge of abatement methods.

Ahmed Husain Zubair, NACE II (KSE) has more than 15 years of experience in construction inspection. His experience covers both highway and bridge work, including bridge structural painting and paint removal; scheduling; cost estimation; processing change orders; sanitary sewer and water main installation; air monitoring; maintenance and protection of traffic; surveying monuments; excavation; sub-base concrete and asphalt pavement; erection of electric poles; sidewalk installation; etc.

Sheldon Williams, NACE II (KSE) has more than 10 years of experience, and is currently a Construction Inspector for painting and structural work. He has significant experience in the New York area, and has provided inspection services for both the NYSDOT and the NYCDOT.

INSPECTORS WITH ACI ICC CERTIFICATION

Brian S. Walker, NICET IV, ICC/ACI Concrete, ICC Masonry will provide civil/structural inspection services for projects under this contract. Mr. Walker is a Civil/Structural Inspector with 12 years of experience. He is responsible for performing inspection services to verify completion in accordance with contract requirements and specifications as part of a construction management team. He provides technical and professional viewpoints, and inspects civil and structural elements of construction work including reinforced concrete, masonry, structural steel, pile driving, grading, and asphalt paving. He is also responsible for providing support and experience to mechanical and electrical inspections.

Kenneth J. Langone, ICC/ACI Concrete will provide civil/structural inspection services under this indefinite quantity contract. He has 12 years of experience and is responsible for inspecting and documenting construction activities in accordance with plans and specifications.

Aalen Adham, ACI ICC (T) has 11 years of experience as both a Residential Engineer and Special Inspector on various types of heavy duty construction projects. His responsibilities include providing detailed reports, satisfying inspection permits requirements, and performed materials testing services.

Thomas Carter, ACI ICC (T) has 25 years of experience performing special inspections and providing laboratory testing services. His duties include field inspection and testing of concrete, masonry, structural steel, fireproofing, and ensuring the quality of work and compliance with laws, regulations, codes, and requirements meet client standards.

Harendrakumar Sharma, ACI ICC (T) is an inspector with 28 years of experience whose responsibilities include performing technical inspection and plant/equipment evaluation services for concrete plants and related materials. Mr. Sharma also assesses quality assurance conditions of concrete mixing trucks, moisture content (ASTM-94) scale calibration, and performs field sieve analysis. He also performs inspections involving masonry, soils, asphalt, fire stopping, fire proofing, and curtain walls.

Carlos Jimenez, ACI ICC (T) is an inspector with 25 years of experience in fire stopping, masonry, curtain wall inspections, concrete structure, soils, materials, geology and road surfacing. Mr. Jimenez also has supervisory experience in the construction industry.

Muhammed S. Nissan, ACI ICC (T) has 12 years of experience and is currently an inspector whose responsibilities include performing technical inspection and plant/equipment evaluation services for concrete/ballast/asphalt plants and related materials; assessing quality assurance conditions of concrete mixing trucks, moisture content (ASTM-94) scale calibration, and performing field sieve analysis. Inspected masonry, curtain wall, fireproofing and fire stopping work performed.

Albert Agosto, ACI ICC, ICC SS & Bolting, CWI (T) has 35 years of experience in testing, welding, mechanical and civil work. He is responsible for inspecting and training inspectors in proper protocol for welding inspections. During his career, Mr. Agosto has experience performing numerous inspections, such as concrete, welds, bolts, curtain walls, piles, structural steel, shop work, high-pressure pipes, fire stopping, and bore piping.

Kwesi A. Amegah, ACI ICC (KSE) has more than 20 years of multifaceted experience encompassing inspection, civil and structural engineering as a Civil Engineer. His experience in construction inspection and bridge inspections including completion of various in-depth inspection programs in the New York metropolitan area. He also has experience in civil design including roadway replacements involving drainage, sewers, utilities, curbs and sidewalks. In addition, his structural experience includes the removal, replacement and reinforcement of steel and concrete bridge elements.

Zory Deresh, ACI ICC (KSE) has more than 30 years of experience in civil and structural engineering, as well as construction inspection and management/oversight.

Frederick H. Koomson, ACI ICC (KSE) is presently a Senior Inspector with 35 years of experience. He is currently responsible for the Reconstruction of Frederick Douglas Circle Project in Manhattan for the NYCDDC. The project involves reconstruction of this circle to include the erection of Figure monument in tribute to Frederick Douglas, fountain and constellation wall and quilt pattern design. The project also includes installation of 48", 20" and 12" sewers, heritage and standard traffic signal and street lighting, along with complete granite curb, sidewalk and roadway construction, and tree planting.

INSPECTORS WITH ICC SS & BOLTING CERTIFICATION

Albert Agosto, ACI ICC, ICC SS & Bolting, CWI (T) has 35 years of experience in testing, welding, mechanical and civil work. He is responsible for inspecting and training inspectors in proper protocol for welding

inspections. During his career, Mr. Agosto has experience performing numerous inspections, such as concrete, welds, bolts, curtain walls, piles, structural steel, shop work, high-pressure pipes, fire stopping, and bore piping.

Ibrahim Gaber, AWS-CWI, ACI ICC (T) has over 24 years of professional experience in all aspects of construction and mechanical workings. His responsibilities at current and past projects have included maintaining material, conducting inspections, reporting to clients and managing the jobs. Mr. Gaber has experience performing welding, mechanical, concrete, fire proofing and plant inspections.

Rochelle Lancey, ICC SS & Bolting (KSE) has nearly 29 years of experience in engineering. Her experience ranges from heavy/highway construction inspection to subdivision/land development construction surveillance and escrow contract monitoring. Her project experience includes engineering design, inspection, field surveying, quantity computations, bidding and contract ratification, construction surveillance, construction materials testing, review of subdivision and land development plans, developing specifications of municipal projects for local government clients as well as private clients.

TASK E – Contract Administration

TASK PROJECT MANAGERS

Robert J. Holland is a Construction Project Manager with 23 years of experience responsible for business development; recruitment, contract initialization, administration, and maintenance; oversight of construction management and construction inspection activities and personnel; and quality assurance and improvement.

Kevin R. Boerner, PE is a Project Manager with 17 years of experience who is responsible for providing inspection and contract administration services. His tasks include review of payment requests, shop drawing review and coordination, project scheduling, change order reviews and negotiations, contractor request for information (RFI) reviews and coordination, and meeting attendance and coordination.

Raymond Fischlein, PE (T) is a Project Manager with over 41 years of experience. Mr. Fischlein's responsibilities include technical supervision of staff, assignment of personnel, budget control, proposal preparation and client liaison, quality assurance oversight of highway and bridge projects for various state, county, and local governments. His duties also include contract administration, monitoring employee performance, and oversight of construction activities.

Mark Stier, PE (T) is a Senior Vice President of Geotechnical and Construction Inspection Services at Tectonic Engineering & Surveying Consultants, P.C., and provides technical direction and supervision for geotechnical engineering and construction inspection staff. He is responsible for review of performance of geotechnical evaluations and construction inspection/ materials testing for residential, commercial, and public facilities; and preparation and review of geotechnical reports.

Russell Gauss, PE (T) is an MEP/HVAC Manager with 33 years of experience. Mr. Gauss specializes in controlled inspections, engineering and project management including but not limited to scheduling coordination, estimating, contracting, documentation and performing controlled inspections, testing and analysis. He also has expertise in construction design development and review of specifications, submittals, training, surveying, and layout.

Alan Z. Yu, PE (T) is a Structural Steel Engineer at Tectonic Engineering & Surveying Consultants, P.C. with 30 years of experience. He is responsible for supervising structural steel inspectors and in-house Quality Control. Duties involve training and oversight of steel inspectors to make certain of and maintain the highest level of performance and quality.

Raul Mendoza, ACI, NICET II (T) is an experienced Inspector in various fields and phases of the construction industry. His inspector abilities and experience is based on projects for federal, state and city agencies and private organizations. His abilities are directed on QA/QC level checking projects, completion under contract specifications. His experience includes; concrete/asphalt field and plant work, soil inspection, soil testing, rebar, masonry/curtain wall and fire stopping.

CONSTRUCTION MANAGERS/RESIDENT ENGINEERS

Kenneth Y. Cho, PE is a Project Manager/Resident Engineer with 39 years of experience. He is responsible for major transportation projects involving inspections and structural designs for bridges, highways, tunnels, shops and maintenance facilities, and railways. Mr. Cho is also responsible for field condition surveys.

Michael Grzeskowiak, PE is a Resident Engineer with 39 years of experience in project and construction management for public and private clients on post office, courthouse, school, airline, airport, electrical substation, highway, landfill, and remediation projects. His responsibilities include managing new construction and renovation work, contract administration, project schedule, budget, quality control, contractor payments, estimates, change order negotiations, field directives, daily reports, shop drawings, and project close-out.

Lazarus Francino, PE is a Resident Engineer/Construction Manager with 28 years of experience in all phases of engineering planning, design, scheduling, construction, and financial controls. He has extensive knowledge in building systems, utility infrastructure, highways, sewage treatment, and information technology industries. His experience includes directing construction management teams, design professionals, and support personnel toward the successful completion of projects and career growth, as well as planning and managing the financial aspects of all project phases.

Edward Powers, PE will serve as a Construction Manager/Resident Engineer for this contract. Mr. Powers is a Resident Engineer with 31 years of experience, and is primarily responsible for administering construction contracts to upgrade sewage treatment plants. He performs extensive coordination with contractors, plant operations, designers, and the NYCDEP Bureau of Environmental Design and Construction to make certain that work meets design intent and contract specifications and is beneficially useful to the user in plant operations. He also manages inspection, scheduling, change order, permitting, document control, and safety staff.

Alfred Johnson, PE, ACI is a Construction Inspector with 34 years of experience and an extensive background in the planning, design, and construction management of civil and transportation construction projects. His responsibilities include contractor oversight, construction supervision, and coordination. He has also managed quality assurance/quality control (QA/QC) inspections, reviewed projects submittals and requests for information (RFI), and performed contract administration and closeout.

Peter Roloff, PE (T) is a Resident Engineer with more than 16 years of field inspection experience as on a wide variety of transportation projects. He has been assigned as a Resident Engineer to the Borough of Manhattan for 7 years and has established a reputation as an outstanding Resident Engineer capable of handling the complex issues that are typically encountered in projects in Manhattan such as work zone traffic control, utility interferences and relocation, maintaining quality-of-life for local residents and businesses, gaining an in-depth knowledge of subsurface city-owned and privately-owned utility layouts, managing and documenting changes in utility layout, working with other agencies, etc.

George P. Murphy, PE (T) is a Construction Manager with 40 years of experience whose responsibilities include the management of geotechnical site investigations incorporating soil and rock borings, borehole

image processing, test pits, piezocone testing, piezometers, monitoring wells, inclinometer installation and monitoring, and rock structure/geologic mapping. Responsibilities also include the performance of engineering evaluations, geotechnical report preparation and the management of supporting staff performing same and QA/QC duties for the construction of buildings, bridges, roads, earth dams, telecommunications projects and utilities. Projects have included spread footings, mats, drilled shafts, mini piles, piled and rock anchored foundations, underpinning, the application of surcharging, light–weight fill and wick drains, reinforced earth slopes and retaining walls.

Edward G. O'Leary (T) is a Resident Engineer possessing in excess 35 years of experience in civil highway and bridge projects, gained in the Metro New York area (Route 9A for NYSDOT) as well as in Region 8, NYSDOT, where he was an Area Supervisor. He has handled more than $500M in construction work, and has been assigned as Resident Engineer with Tectonic Engineering for the past 8 years, where he has performed his duties with distinction for a variety of clients. Mr. O'Leary is capable of managing infrastructure construction contracts with relative ease, and has a clear understanding of the work at hand, the paperwork required, payment procedures, correspondence, how to track all submittals, how to manage the schedule, including identifying potential delays and proposing remedial action, and preparing change orders.

Partha C. Saha, PE (T) is a Construction Manager with nearly 5 years of experience and knowledge of an extensive range of mechanical and structural areas covered including: diesel engines, hydraulic systems, electrical ac and dc, refrigeration, steam boilers, CNC plasma table, decorative, and structural steel/aluminum metal fabrication.

Raymond W. Cholewka, PE (KSE) is a Resident Engineer with 42 years of experience for KS Engineers, P.C. in New Jersey and New York. He provides engineering services for construction management of major transportation and wastewater projects, with special emphasis on bridge construction and rehabilitation projects for the NYSDOT, NYCDOT, and ConnDOT Highways and Bridges.

Attef (Al) Z. Farag, PE (KSE) is a Resident Engineer with 24 years of experience. His responsibilities include resident engineering inspection and project management, construction supervision, preparation of reports, project evaluations, clarification of DDC policies and procedures, negotiation of change orders, clarification of technical construction details, processing of payments, and punchlist and project close-out. He has performed QA/QC functions on various projects, prepared proposals for additional work, and worked with inspectors to both upgrade and maintain their skills.

Carl H. Ortmann, PE (KSE) is a Resident Engineer for Structural Engineering in New Jersey and New York with 24 years of experience. He provides engineering services for major bridge and highway projects, building foundations, power plants, and transit structures. He provides on-site administrative and technical supervision on heavy construction projects, directs multi-trade craft work forces, and determines methods of construction, manpower levels, material quantities, equipment, temporary facilities and work schedules. In addition, he supervises construction activities, materials and equipment received for compliance with company directives, contract drawings, specifications, approved submittals and standards of accuracy.

TASK F- Cost Engineering/Estimating Services

Cost Estimators

Richard K. Wille, CDT will provide cost estimation services for this contract. Mr. Wille is a Cost Estimator with 21 years of experience responsible for the development of preliminary and final construction cost estimates for various highway and bridge projects. He integrates the cost estimate with the project schedule to make sure that the estimate accurately reflects the cost of construction. His estimates account

for project location, accessibility, available work and staging areas, work-hour restrictions, and maintenance of rail and/or vehicular operations.

Gregory L. Paquin will also serve as a Cost Estimator for this contract. Mr. Paquin is a Senior Inspector with 25 years of experience, and is responsible for contract administration and the technical inspection of transportation facility, highway, and bridge construction projects.

STAFF COMMITMENT

The staff assigned to this project are committed to serve when called upon by PANYNJ. The assembled Team has experience managing on-call and task-order assignments throughout the Northeast. The staff that is presented in this proposal will be available to propose on and execute projects as they are assigned. We will do this by monitoring work load levels of key individuals to make sure that they always have capacity to handle additional work for PANYNJ assignments during the contract timeframe.

In the event that a proposed staff member is not available, we will notify the PANYNJ and propose a replacement with similar capabilities. However, our goal, which we have proven on past PANYNJ programs, is to use the staff proposed herein.

Education
B.S., Civil Engineering, University of Massachusetts Dartmouth, 1989

M.S., Civil Engineering, Columbia University, 1999

Current Responsibilities

Mr. Gibbons is a Manager of Construction Services for the firm in New Jersey and the Metropolitan New York area.. He directs operations throughout the area; provides overall project management services; serves as a liaison with state, bi-state, and local transportation agencies; and recruits, assigns, and manages department personnel.

Summary of Experience

PANYNJ - Performance of Expert Professional CM and Related Technical Services as Requested on a Call-In Basis During 2011-2014, Various Facilities, Various Locations, NY & NJ, *PANYNJ.* Project Manager, responsible for supervising the overall contract compliance from date of award to completion. Also ensured quality of construction in accordance with the contract plans and specifications and that the project adhered to applicable codes and standards of the PANYNJ. Consulted on technical issues, field resolutions, and recommendations during various stages of the projects. Implemented effective communication of progress/ problems between Senior Management, Field Staff, Contractors, and Inspectors.

As-Needed Construction Administration, Inspection and Support Services, Contract PSC-13-2923, *MTA B&T.* Project Manager for this six-year, indefinite quantity, Construction Inspection Agreement for the Triborough bridge and Tunnel Authority. The contract scope includes both non-Federal and Federal contracts, the latter being specifically for the coverage of Super Storm Sandy related/Federally funded rehabilitation projects. Scope includes civil, architectural, structural electrical/mechanical/HVAC projects on any of the Authority's 7 bridges, 2 tunnels or building facilities. Responsible for assigning and managing multiple personnel required on the various construction projects.

Three-Year Statewide Construction Inspection Agreement for Bridges, Movable Bridges, and Tunnels, Contract 2013MES949 NJ, *NJDOT.* Project Manager for this three-year, $3M, Construction Inspection Term Agreement. Responsible for assigning and managing multiple personnel required by NJDOT on various construction projects statewide through separate Task Orders, including the following: NJ Rt 7 Wittpenn Bridge; NJ Rt 71 Shark River Bridge, Rt 88/13 Point Pleasant Canal Bridge, NJ Rt 47 Grassy Sound Bridge, Rt 130 Raccoon Creek Bridge, and all steel and concrete repair contracts on bridges statewide.

Region South Three Year Construction Inspection Term Agreement, Contract 2011MEO842C, *NJDOT.* Project Manager for this three-year, $3M, Construction Inspection Term Agreement. Responsible for assigning and managing multiple personnel required by NJDOT on various construction projects in Region South through separate Task Orders, including the following: MRRC S-105, MRRC S-106, 2012 Pavement Preservation Contract, 2011 Pavement Preservation Contract, Movable Bridge Repairs projects, including repairs on Rt. 130 Raccoon Creek Bridge, Rt. 130 Oldmans Creek Bridge, Rt. 50 Tuckahoe Creek Bridge, NJ Rt. 44 Mantua Creek Bridge, NJ Rt. 7 Hackensack River, Wittpenn Bridge, NJ Rt. 71 Shark River Bridge, NJ Rt. 29 Tunnel Bridge, and Trenton bridges, Maintenance Concrete Bridge Repairs Projects, Guiderail Repairs Contract, and Multiple Drainage Repair and Reconstruction Contracts.

Region Central Three Year Construction Inspection Term Agreement, Contract 2011BCM836F, Central NJ, *NJDOT.* Project Manager for this three-year, $3M, Construction Inspection Term Agreement. Responsible

for assigning and managing multiple personnel required by NJDOT on various construction projects in Region Central through separate Task Orders, including the following: I-287 Reconstruction, Somerset County; MRRC-301, Monmouth County; I-295 Pavement Repair and Rehabilitation, Burlington County; Route 31 Shabacong Creek bridge replacement, Hunterdon County; MRRC Central, Sub-Region C-2, Contract C206, Somerset County; and Cokesbury Rd over I-78 bridge Deck Replacement, Hunterdon County.

Region South Three Year Construction Inspection Term Agreement, Contract 2012BCM887B, *NJDOT.* Project Manager for this three-year, $3M, Construction Inspection Term Agreement. Responsible for assigning and managing multiple personnel required by NJDOT on various construction projects in Region South through separate Task Orders, including the following: 2013 MRRC Contract S-305; Route 30/Grove Street Resurfacing contract; I-295 Advance ITS Contract for"Direct Connect" CPM Schedule Review, Burlington County; I-295 "Direct Connect" CPM Schedule Review, Burlington County; Region South Long Life Pavement Contract; and Region South Bridge Painting Contract.

TB-13, Triborough Bridge Queens Approach Deck and Roadway Replacement, Queens, NY, *TBTA.* Construction Project Manager responsible for handling the budget and the project schedule with Primavera software and providing overall supervision of this $17 million project. Work included the removal of concrete sidewalks, parapets, median barrier, curtain walls, cap beams, and superstructure and approach slabs; the replacement of the existing drainage system; the installation of new cast-in-place cap beams and column encasement; the installation of new underdeck lighting and the reinstallation of bridge lighting and communications systems; and the installation of new approach slabs, precast pedestals, bearings, precast superstructure units, and precast/prestressed curtain walls. The work was performed without any long-term lane closures using only daily lane closures. A unique aspect of the project required the construction of new cap beams below the existing cap beams so that the existing structure could be blocked and wedged to the new cap beams for support during the sequential removal of the bridge deck throughout the 10 stages of construction. The existing superstructure and a portion of the substructure were removed in panels using circular and wire concrete cutting saws for demolition. The new Inverset deck slab/superstructure units were installed in a similar panelized fashion.

Supervision of Construction Services for Contract No. P100.203, Bridge Deck Repairs and Resurfacing, MP 0 to 126, and Contract No. P100.204, Bridge Deck Repairs and Resurfacing, MP 126 to 172, Various Locations, NJ, *NJTA.* Project Manager for this supervision of construction services contract for two separate projects valued at $6.2M and $7.0M respectively, with scope including extensive repairs to 44 bridge superstructures and substructures. Responsibilities included coordination of lane closings with traffic operations and supervision of inspection staff and contractor's work. Work includes bearing replacements; bearing repairs; steel girder repairs; cleaning and painting of structural steel; concrete bridge deck panel replacements; bridge barrier parapets; beam guide rail and attachments; concrete deck; abutment and concrete pier spall repairs of various types and depths; deck joint repair and replacement; membrane waterproofing; milling; HMA concrete paving; pavement markings; delineators; and related MPT.

US Army National Guard, Camp Edwards, Falmouth, MA – 1987-1988

REZA MARANDI, PE, CCM

Current Responsibilities

Mr. Marandi is a results-oriented Engineering Professional with over 28 years of experience with the Department of Environmental Protection (DEP) in managing multi-million dollar capital construction projects such as the Combined Sewer Overflow "CSO" Program, Landfill Remediation Program, and the Pumping Station Construction Program. He also serves as Resident Engineer for in-house projects and Chief/Accountable Manager for consultant projects for Water Quality and Wastewater Facility Divisions. Mr. Marandi has a strong knowledge of engineering construction and design and environmental regulations for water, wastewater and hazardous materials. His areas of expertise include Construction, Design & Planning, Water, Wastewater & CSO Projects, Management & Leadership, Cost Management, Quality Assurance, Conflict Resolution, Contract Procurement, Regulatory Compliance and Landfill Remediation Projects.

PE: New York – No. [redacted] (1997)

Summary of Experience

REI Services for the Reconstruction of College Point Boulevard, Queens, NY, *NYCDDC.* Resident Engineer for this $12.5 million dollar project which involves the Extension and/or Replacement of Distribution Water Mains at designated locations on College Point Boulevard, Queens. The work impacted various communities and consequently the project team ensured that the public notification of service disruption was conducted in accordance with the Agency protocol and in a timely manner. Tectonic provided services for incidental work in connection with this project such as: relocation of hydrants; installation of new hydrants; restoration of roadway, curbs and sidewalks; and protection utilities, etc.

Primary Settling Tank Odor Control Building Reconstruction, Coney Island Wastewater Treatment Plant, Brooklyn, NY. Chief of Water Quality Construction/Accountable Manager for this project. The Primary Settling Tank Odor Control Building was constructed between 1996 and 1998 and placed into successful operation in 1999 as part of the plant upgrade. The building houses a two-stage odor control system, wet chemical scrubbers followed by carbon absorbers, for the primary settling tanks and influent channel. The primary settling tank influent channel and tanks are also covered and ventilated to control odors from traveling into the surrounding neighborhood. On August 6, 2003, a fire occurred in Carbon Absorber Vessel No. 4. The fire destroyed several carbon absorbers, associated ductwork, mechanical, and electrical systems. Also, other portions of the building systems were damaged and smoke residue was deposited in most parts of the building. A Declaration of Emergency was declared on August 7, 2003, which determined that emergency contracts would be required to assess, clean and repair/reconstruct the damaged Odor Control System within the Odor Control Building. There were several goals of the building reconstruction:

- Provide a staged approach to maintain sufficient odor control treatment levels
- Maintain sufficient odor control treatment levels for the duration of the building and odor control system reconstruction
- Improve the existing odor control system technology
- Improve the building life safety systems

CSO-OH-TF, Outer Harbor Throttling Gate, Staten Island, NY. Resident Engineer/Accountable manager for Construction of an underground throttling gate in Staten Island. Work included but not limited to reviewing 90% design, procurement process from bid opening to contract registration, managing contractor activities to excavate relocate existing 12 inch water main, gas main and other underground utilities, install excavation support system, install dewatering equipment, excavate/test & remove fill material, install form and pour base slab, walls and roof for the throttling gate chamber within an existing live 96" combined sewer pipe. This gate will be used by DEP Plant Operation to throttle incoming CSO flow into the plant.

CSO-EK-11G/E/H, Newton Creek Aeration Facility. Resident Engineer/Accountable Manager for construction of above ground facility to house two compressors, related equipment, controls, electrical conduits & MCC, installation of air piping inside upper English Kill basin to add oxygen into various section of the basin to increase demand oxygen and improve water quality and marine life at the basin. Work include but not limited to attending and reviewing 90% design meeting, procurement process from bid opening to contract registration, managing contractor activities such as site survey etc., excavation and relocation of 12 inch water main, gas main, install cofferdam along the basin, installing timber piles and grade beams with base slab, construction of one story CMU building, installation of HVAC system, installation of electrical system and breaker panel, installation of Motor Control Center MCC to control operation of two compressors and other units. This facility was designed to add air into the existing English Kill basin via 1500 feet of air pipes to add air to the basin and improve water quality, help curb odors during warmer months by eliminating anoxic conditions (lack of oxygen) and benefit ecology in basin.

CSO-ER-BR1, Bronx River Floatables Facilities. Resident Engineer/Accountable Manager for construction of four underground chambers including all necessary equipment, electrical and controls to remove floatables during rain events from incoming combined sewer overflow CSO pipes and to prevent them from tipping into the Bronx River and the long Island sounds. Work included but not limited to attending & reviewing 90% design meeting, procurement process from bid opening to contract registration, managing contractor activities such as site survey etc., to construct two netting facilities and two under flow screening facilities which included excavation and removal of 12 inch water main at Bronx Park Ave. at which we coordinated our new water main with NYCDDC for their upcoming contract, soil testing/ remediation and disposal of hazardous soil, installing excavation support system around existing live combine sewer pipe, installation of rebar, and form work and placement of concrete for base slab, walls and roof slab.

CSO-JT-G/E, Shellbank Basin Destratification. Resident Engineer/Accountable Manager for this project to construct an air compressor facility station along the Jamaica Bay by Shellbank Basin in Howard Beach. This above ground facility was designed to improve water quality in the basin; help curb odors during warmer months by eliminating anoxic conditions (lack of oxygen) and benefit ecology in Shellbank Basin. Work included but not limited to attending & reviewing 90% design meeting, procurement process from bid opening to contract registration, managing contractor activities such as site survey etc., and construction of an above ground facility supported on wooden piles and concrete slab, installation of 4 pipelines in the Shellbank Basin, each pair composed of two lines 1 inch for air and ¾ inch for buoyancy. In addition, we installed two oil free compressors, HVAC system, electrical system, controls and piping for an automatic operation during summer season.

Amtrak Contractor (2013)

Current Responsibilities

Mr. Norrish is a Vice President, Regional Office Manager, and Regional Construction Manager responsible for providing services in the Northeast. He directs operations throughout the area, has overall project management responsibilities, serves as a liaison with departments of transportation and other agencies, and assigns personnel.

Summary of Experience

Hudson Line Stations Rehabilitation, Phase 2B, Westchester, NY, *MTA Metro-North Railroad.* Project Manager responsible for overseeing the construction of the $50 million, 39-month staged reconstruction of platforms at Philipse Manor, Scarborough, and Ossining Stations. The rehabilitation includes the replacement of 4,500 LF of high-level platforms, 1,500 LF of canopies, six pile-supported elevators, a new pedestrian overpass, rehabilitation of two existing overpasses with Americans with Disabilities Act (ADA) improvements, ADA ramps, new heated shelters, electrical upgrades, improved lighting, a variable-message sign system, a public address system, and station amenities. Responsible for maintaining the project schedule through the use of the critical path method schedule, providing coordination with the Construction Support Service group in addressing the various requests for information regarding design modifications and unforeseen field conditions, and coordinating and communicating with local communities and municipalities for various construction efforts affecting commuters and vehicular traffic.

Project Nos. 63-643 and 93-180, New Britain-Hartford Busway, Hartford, West Hartford, and Newington, CT, *ConnDOT.* Project Manager responsible for providing technical inspection and administration services for a $130.6 million bus rapid transit construction project. The project (Contract 3) entails the middle and largest section of the $567 million New Britain-Hartford Busway. It is being constructed partially along abandoned railroad right-of-way and partially along active Amtrak right-of-way. The Contract 3 project consists of the construction of 7 out of 11 stations serving the busway and faces the challenges of coordinating with Amtrak and seven designers of record, four other adjacent construction projects, contract schedules with multiple milestones, geotechnical issues, structural (bridges) construction in congested downtown areas, and environmental concerns. Project 63-643 will replace the at-grade crossing on Flatbush Avenue with a grade-separated crossing. This requires a bridge over the Amtrak right-of-way and embankment approaches to the bridge. The construction of these embankment approaches will require the use of wick drains, pile foundations, and installation of Geofoam lightweight fill to accommodate the existing soil conditions. Project 93-180 will construct the busway from Cedar Street in Newington to Sigourney Street in Hartford. This requires the construction of more than 5 miles of roadway, 44 retaining walls, 8 new bridges, approximately 8 miles of drainage, including drainage pipe jacking under the active Amtrak railroad, 7 stations, wetland mitigation, and a gravel access road for Amtrak.

CSO-OH-TF, Outer Harbor Throttling Gate, Staten Island, NY. Resident Engineer/Accountable manager for Construction of an underground throttling gate in Staten Island. Work included but not limited to reviewing 90% design, procurement process from bid opening to contract registration, managing contractor activities to excavate relocate existing 12 inch water main, gas main and other underground utilities, install excavation support system, install dewatering equipment, excavate/test & remove fill material, install form and pour base slab, walls and roof for the throttling gate chamber within an existing live 96" combined sewer pipe. This gate will be used by DEP Plant Operation to throttle incoming CSO flow into the plant.

CSO-EK-11G/E/H, Newton Creek Aeration Facility. Resident Engineer/Accountable Manager for construction of above ground facility to house two compressors, related equipment, controls, electrical conduits & MCC, installation of air piping inside upper English Kill basin to add oxygen into various section of the basin to increase demand oxygen and improve water quality and marine life at the basin. Work include but not limited to attending and reviewing 90% design meeting, procurement process from bid opening to contract registration, managing contractor activities such as site survey etc., excavation and relocation of 12 inch water main, gas main, install cofferdam along the basin, installing timber piles and grade beams with base slab, construction of one story CMU building, installation of HVAC system, installation of electrical system and breaker panel, installation of Motor Control Center MCC to control operation of two compressors and other units. This facility was designed to add air into the existing English Kill basin via 1500 feet of air pipes to add air to the basin and improve water quality, help curb odors during warmer months by eliminating anoxic conditions (lack of oxygen) and benefit ecology in basin.

CSO-ER-BR1, Bronx River Floatables Facilities. Resident Engineer/Accountable Manager for construction of four underground chambers including all necessary equipment, electrical and controls to remove floatables during rain events from incoming combined sewer overflow CSO pipes and to prevent them from tipping into the Bronx River and the long Island sounds. Work included but not limited to attending & reviewing 90% design meeting, procurement process from bid opening to contract registration, managing contractor activities such as site survey etc., to construct two netting facilities and two under flow screening facilities which included excavation and removal of 12 inch water main at Bronx Park Ave. at which we coordinated our new water main with NYCDDC for their upcoming contract, soil testing/ remediation and disposal of hazardous soil, installing excavation support system around existing live combine sewer pipe, installation of rebar, and form work and placement of concrete for base slab, walls and roof slab.

CSO-JT-G/E, Shellbank Basin Destratification. Resident Engineer/Accountable Manager for this project to construct an air compressor facility station along the Jamaica Bay by Shellbank Basin in Howard Beach. This above ground facility was designed to improve water quality in the basin; help curb odors during warmer months by eliminating anoxic conditions (lack of oxygen) and benefit ecology in Shellbank Basin. Work included but not limited to attending & reviewing 90% design meeting, procurement process from bid opening to contract registration, managing contractor activities such as site survey etc., and construction of an above ground facility supported on wooden piles and concrete slab, installation of 4 pipelines in the Shellbank Basin, each pair composed of two lines 1 inch for air and ¾ inch for buoyancy. Current Responsibilities

Mr. Gross is Vice President of Tectonic's infrastructure division, and presents over 30 years of experience with public works, water supply, waste water treatment, and solid waste engineering projects, applying civil engineering site design, and program management experience. Mr. Gross has successfully managed numerous projects for NYC agencies from design to construction. His management responsibilities include defining work scopes, allocating resources, overseeing the project team, supporting technical design, managing construction oversight. Mr. Gross has served as the Project Principal on numerous NYCDEP construction management contracts, including their largest construction management contract ever awarded.

Summary of Experience

Newtown Creek WPCP Construction Management, *NYCDEP.* Chairman of the JV Board for the Shaw/Baker/Gannett Fleming tri-venture, responsible for providing senior management oversight of CM services during construction for the $1.5 billon upgrade of the Newtown Creek WPCP, located in Brooklyn, NY.

26th Ward WPCP Emergency Generator Construction Management, *NYCDEP.* Member of the Board of Managers for the Black & Veatch/Shaw/D&B tri-venture responsible for providing senior management oversight of CM services during the installation of new emergency generators at the 26th Ward WPCP, located in Brooklyn, NY.

North River Emergency Design and Construction, *NYCDEP.* Project Principal responsible for providing senior level management and oversight of CM services for the emergency repair of the fire-damaged diesel pumps and related structural damage at the North River WPCP.

Owls Head Grit & Scum Building Construction Management, Brooklyn, NY, *NYCDEP.* Project Director responsible for providing senior level management and oversight of CM services for the construction of the new grit & scum handling facility at the Owls Head WPCP.

Delaware Aqueduct (Shaft 6) Tunnel Leak Remediation Construction Management, *NYCDEP.* Member of the Board of Managers for the Jenny/Stone & Webster/URS tri-venture, providing senior management oversight of CM services for the inspection of the leaking tunnel section and bulkhead structure, in preparation for the unwatering of the Delaware Aqueduct located in upstate NY.

Downstate General Engineering Requirements, Various Locations, NYC, *NYCDEP.* Member of the Board of Managers for the HAKS/Shaw joint venture, providing senior management oversight of CM services for the upgrade of various WPCPs throughout NYC.

Mother Clara Hale Bus Depot Construction Management, *MTA/NYCTA*. Project Principal for the new Mother Clara Hale Bus Depot construction management project, which will utilize various Green Building Features, allowing NYCT to efficiently and sustainably service the growing number of bus riders throughout

the city. The Mother Clara Hale Bus Depot will be one of the first LEED-certified Bus Depots of its type in the country.

City Tunnel No. 3 Design, Roosevelt Island, NYC, *NYCDEP.* Performed reinforced concrete and steel design tasks for the construction of Shaft 2B at the Hillview Reservoir in Yonkers, New York, and for the construction of Shaft 13B on Roosevelt Island, New York City, for the NYCDEP. Was also involved with engineering design services during construction.

Inspection of City Tunnels Nos. 1, 2 & 3, *NYCDEP.* Performed the design, inspection and structural evaluation of various NYCDEP water supply structures for Water Tunnel Nos. 1, 2 and 3, including Uptake and Downtake Chambers located at the Croton and Kensico Reservoirs. Tasks included the development construction bid documents, including the creation of project drawings, specifications and construction cost estimate for their structural and architectural rehabilitation. Also provided NYCDEP with engineering design services during construction.

City Tunnel No. 3 Design, *NYCDEP.* Performed reinforced concrete and steel design tasks for the construction of Shaft 2B at the Hillview Reservoir in Yonkers, New York. Tasks included the development of project drawings, specifications and construction cost estimate, for the NYCDEP. Also provided NYCDEP with engineering design services during construction.

City Tunnel No. 3 Design, *NYCDEP.* Performed reinforced concrete and steel design tasks and for the construction of NYCDEP Water Tunnel #3 Shaft 13B on Roosevelt Island, New York City. Tasks included the development construction bid documents, including the creation of project drawings, specifications and construction cost estimate.

Fresh Kills Landfill Closure, *NYC Department of Sanitation.* Design Program Manager for the design of all major storm water control structures at the Fresh Kills Landfill. Prepared NYSDEC approved tidal/freshwater wetlands permit application. Also developed SPDES compliant monitoring station designs for all 17 storm water detention basin discharge locations at Fresh Kills, including the creation of construction drawings, sampling and monitoring equipment specifications, and a final engineering report.

Fresh Kills Landfill Stormwater Basin Design, NYC, *NYCDOS.* Directed the design of all major stormwater control structures at the Fresh Kills Landfill. Prepared NYSDEC approved tidal/freshwater wetlands permit application. Also developed SPDES compliant monitoring station designs for all 17 stormwater detention basin discharge locations at the Fresh Kills, including the creation of construction drawings, sampling and monitoring equipment specifications, and a final engineering report.

Pennsylvania Avenue & Fountain Avenue Landfill Closure, *NYCDEP.* Design Manager responsible for coordination with construction manager for the closure of the Pennsylvania & Fountain Avenue Landfills in Brooklyn, New York, for the NYCDEP. Services included contractor submittal review, production of revised construction drawings and specifications, production of engineering cost/benefit and budget analyses, site field inspections, and monthly client and contractor meetings. Total construction costs: $160 million.

Summary of Experience

Newtown Creek Water Pollution Control Plant, Brooklyn, NY, *NYCDEP.* Project Principal responsible for construction management services for 14 construction contracts to upgrade the Newtown Creek wastewater pollution control plant (WPCP). Work involves upgrades to the central residuals building and the Newtown Creek sludge barging facilities, modifications to the main building's northwest wing, and reconstruction of the Kingsland Avenue, South Battery, and South Control buildings. Construction cost is $1.6 billion. Responsibilities include supervising the resident engineer, inspections, and project controls staff; coordinating with joint venture partners; and serving as liaison with NYCDEP on technical, operational, and staffing issues.

Microturbine Construction Management and Resident Engineering Services, Biological Nutrient Removal Update, Great Neck, NY, *Great Neck Water Pollution Control District.* Project Manager responsible for providing comprehensive engineering services to increase plant energy efficiency for the expansion of a 5.3-mgd wastewater treatment plant. Microturbines, using digester gas, were selected as the most suitable cogeneration technology for the plant capacity. Power from the cogeneration facility will be used on site to reduce plant electricity demand and part of the waste heat used by heat exchanges to heat the digester and building working space. Responsible for the feasibility study, final design, and construction management services. Provided coordination for the plant upgrade and operation; assistance with performance testing and start-up; and preparation of operation and maintenance manuals.

Tallman Island Wet Weather Maximization, Powells Cove, Queens, NY, *NYCDEP.* Construction Manager/Project Manager leading the construction management/resident engineering team managing the installation of the New Whitestone Interceptor. The $22 million construction project included approximately 2,500 feet of 7-foot by 7-foot precast box culvert, cast-in-place connection chamber, diversion chamber, four turning chambers, and the upgrade of three regulators.

R-149 Installation of Natural Gas Service and Removal of Underground Bulk Storage Tanks, Rockaway, Queens, NY, *NYCDEP.* Design Liaison managing design issues during construction including change orders, requests for interpretation, and clarifications. The project Contract R-149 calls for the installation of a natural gas service and for the removal of underground bulk storage tanks at the Rockaway Wastewater Treatment Plant. The project also included other modifications and improvements to boilers, facility structure modifications, and other appurtenances to complete the work.

Phase 2 Ultraviolet (UV) Light Disinfection Facility, New York, NY, *NYCDEP.* Construction Manager for the Catskill/Delaware Water Supply System, a UV light disinfection facility constructed in Lower Westchester County, New York. With a design capacity of 2 bgd, it is the largest UV facility in the world. As construction manager for Phase 2, facility construction and off-site projects, managed the on-site staff and was responsible for health and safety, scheduling, change orders, resident inspection and quality assurance, and document control. This $1.4 billion construction project included a construction staff of 53. Two years into the project, there were no recorded accidents or claims, and the project was 3 months ahead of schedule and received excellent rating from the client.

Distribution Chambers Construction, New York, NY, *NYCDEP.* Project Manager responsible for engineering services during construction for three construction contracts valued at approximately $104 million for the NYCDEP's Tunnel 3, Stage 2 Distribution Chambers in Queens and Brooklyn, New York. The scope of work included installation of water tunnel shafts, 48-inch and 72-inch-diameter riser piping and valves, two underground concrete chambers, and distribution piping and tie-ins to existing water mains in Queens and Brooklyn. Responsibilities included shop drawing review, change order scope and estimate preparation and negotiation, requests for information, and coordination among designer, owner, and contractor. Also managed home office and on-site inspection staff, attended all progress meetings, and resolved design/construction issues for this project.

Primary Settling Tank Odor Control System Reconstruction, New York, NY, *NYCDEP.* Construction Manager for the $18 million reconstruction of the odor control system at NYCDEP's Coney Island Water Pollution Control Plant, responsible for managing the resident engineering and inspection staff, as well change order preparation and negotiation, claims avoidance and resolution, schedule monitoring, and coordination with plant operations staff.

Current Responsibilities

Mr. Torossian is a QA/QC & Laboratory Director experienced in laboratory quality systems. Performed and supervised extensive field and laboratory testing and inspection of construction materials for a wide range of commercial, industrial, municipal and residential projects.

Summary of Experience

Tappan Zee Hudson River Bridge Crossing Project Contract D214134, Tarrytown, NY, *NYSDOT and NYSTA.* QA/QC & Lab Manager for this contract. The New York State Department of Transportation and the New York State Thruway Authority selected Tectonic Engineering & Surveying Consultants to perform Quality Assurance and Quality Control services. Specific project involves the development of a bridge crossing of the Hudson River close to the Tappan Zee Bridge, and the demolition of the existing bridge. Quality Assurance and Quality Control services include masonry, steel, soils, concrete, mechanical and pile driving analyzer testing. (On-going)

Various Contracts, Various Locations, NY, *TBTA.* Tectonic is providing construction inspection services to ensure compliance with construction plans, specifications and building code requirements for various projects. Projects include: MTA Bridges & Tunnels - Construction Material Testing, and Aecom USA, Inc. - TBTA Randall's Island RK-65R.

RFK Bridge, Bronx, NY, *TBTA.*Tectonic is a sub-consultant to the HNTB Corporation. Tectonic is providing testing services for the Toll Plaza Study at the RFK Bridge.

Verrazano-Narrows Bridge Contract # VN-03B, NYC, *TBTA.* Tectonic was a sub-consultant for STV Incorporated. Tectonic provided construction inspection and testing services for the Verrazano-Narrows Bridge.

Retainer Contract for Inspection Services at Various Locations throughout NYC, Contract No. 47580001, *NYCEDC.* QA/QC & Lab Manager for this contract where Tectonic is providing on-call construction inspection services at various locations throughout NYC. Assignments include: Brooklyn Army Terminal, Cyclone Roller Coaster, Siphon Project at 355 Front Street, HHC Skilled Nursing Facility and Gansevoort Chiller Plant.

Contract #20090029460, Controlled Inspections and Testing Laboratory Services, *NYCHA.* QA/QC & Lab Manager for this contract where Tectonic is providing controlled inspection and testing laboratory services under a three-year, $3M contract for the rehabilitation of

Housing Authority properties throughout NYC. Services to date cover: roofing, structural steel, structural stability, all concrete, reinforced masonry, and masonry units. Assignments include: Kingsboro Houses, Whitman Ingersoll, Unity Plaza, Armstrong I & II, Ocean Hill Housing, Tapscott Housing, Bay View Housing, Marlboro Balconies, Stapleton Houses, Richmond Terrace Community, Independent Towers, Amsterdam Avenue, Drew Hamilton, A.C. Powell Blvd. Housing, Wise Towers, Rutgers Houses, Bayside Apts., Soundview, Throggs Neck Houses, Woodside Houses, Boston Secor, Mott Haven, Highbridge Gardens, Shelton Apts., South Jamaica Houses, Latimer Gardens, Conlon LIHFE, Murphy Houses, and St. Mary's Park Houses.

Special Inspection and Laboratory Testing Services SCA09-00013R, *NYCSCA.* QA/QC & Lab Manager for this project where Tectonic is providing inspection, testing and engineering services under a $7M contract. Scope of work include: concrete design mix, concrete, structural steel, non-destructive testing (NDT), asphalt, soils, fire-stopping, masonry, curtain wall, emergency generator inspections, mechanical controlled inspections (fuel burning/ fuel storage, noise control inspector, refrigerator system, high pressure steam, pipe weld inspector, emergency lighting, fire alarm testing, detention system, smoke test, and heating systems/ boilers).

Controlled Inspection and Laboratory Testing Services SCA10237, *NYCSCA.* QA/QC & Lab Manager for this project where Tectonic is providing management, inspection and testing services under the $7M contract to ensure compliance with construction plans, specifications and building code requirements for various schools across the boroughs of Manhattan, Queens and the Bronx. Scope of work includes concrete, structural steel, asphalt, soils, masonry, curtain wall and mechanical inspections. Certain assignments involve supervising the demolition of existing school buildings and construction of new buildings replete with classrooms, auditoriums, gymnasiums, cafeterias, administration offices, cellars, etc.

Controlled Inspection and Laboratory Testing Services SCA00045R, *NYCSCA.* QA/QC & Lab Manager for this project where Tectonic is performing inspection and testing services to ensure compliance with construction plans, specifications and building code requirements for various schools under the $11M requirement type contract.

Special Inspections and Materials Testing Laboratory Services #RQ_A&E_1R, *NYCDDC.* QA/QC & Lab Supervisor for this three-year, task-order contract valued at $3M where Tectonic was retained to provide Special Inspection and Laboratory Testing services for Correctional, Courts, DEP, and Juvenile Justice facilities. Services cover: boring/test pits, piling, sub-grade, controlled fill, underpinning, soil bearing pressure, welding, aluminum (shop inspection and field erection), laminated wood, high strength bolts, cable fittings, smoke test, fire stops, ventilation/refrigeration systems, fuel burning/storage, noise control, soil, curtain walls, shoring, structural stability and integrity of existing structures, reinforced masonry, masonry units, all concrete, concrete design mix, sprinklers, chimneys, emergency lighting, heating systems, drywell installation, wood floor trusses. Also supervising identical services under additional contracts RQ_A&E_2R and RQ_A&E_3R.

New York - No.[redacted] (1992)
New Jersey - No. [redacted] (1996)

Current Responsibilities

Mr. Purdy is a Facilities Group Manager responsible for managing and directing the multidiscipline design of buildings, other facilities, and bridges and the complete development of plans and specifications for conceptual, preliminary, and final phases of projects. He is also responsible for contract compliance, budgets, schedules, and the coordination of project disciplines and subconsultants. Mr. Purdy is an invaluable addition to our Team, as he has worked with the PANYNJ since 1986.

Summary of Experience

Inspections of Facilities Impacted by Hurricane Sandy, Brooklyn, NY, *PANYNJ.* Project Manager for the inspection of several facilities impacted by Hurricane Sandy. Responsible for the inspection and letter report of hurricane/wind damage to three Pier Buildings at Red Hook port facilities at Piers 7, 11, and 12. Pier Sheds 7 and 11 are warehouses for goods while Pier Shed 12 is also known as the Brooklyn Cruise Terminal.

PATH Downtown Restoration Program, New York, NY, and Jersey City, NJ, *PANYNJ.* Tunnel (Structural) Project Manager responsible for structural inspections, analyses, and designs for structural rehabilitation. Work included demolition of all elements within the tunnel lining, duct bank replacement, the structural rehabilitation of two tubes under the Hudson River, and improvements to the Exchange Place Station. The improvements adjacent to the station consisted of blasting rock between adjacent tunnels to create new crossovers and lengthen the existing platforms for ten-car trains. Ventilation was reviewed and changes were incorporated into the construction effort.

Port Authority Trans-Hudson (PATH) Harrison Maintenance Facility, Harrison, NJ, *PATH.* Facilities Manager responsible for task-order assignments for upgrades to an existing shop to accommodate a new rail fleet. Tasks included various shop modifications and upgrades to accommodate the new rolling stock.

PATH 33rd Street Station Study, Manhattan, NY, *PANYNJ.* Project Manager responsible for a study to determine the source of seepage in a subway station. Seepage had been causing premature deterioration of the vault's steel framing members. The study involved probes into a utility vault contaminated with asbestos, the dye-testing of adjacent utilities, and a survey of utilities in the area. The probes allowed the use of remote cameras to survey the interior of the utility vault to assist in determining the sources of water infiltration. The study recommended repairs to remediate seepage and further deterioration.

PATH Station Inspections, Various Locations, NY and NJ, *PANYNJ.* Structural Project Engineer responsible for structural integrity inspections of seven stations built circa 1915. Performed inspections and determined the present condition of the stations, assessed their structural adequacy for continued service into the future, and prepared a report recommending short- and long-term repairs needed to preserve the present functions of the stations.

Condition Surveys of Four Structures at Journal Square Transportation Center, Jersey City, NJ, *PANYNJ.* Project Manager responsible for condition surveys and structural inspections of the façade and soffits of the administration building, entire parking garage structure, underside of transportation center framing over the track areas and CH Martin hardware store, and the JFK Boulevard bridge, which also traverses the tracks. Work involved identifying areas of structural deficiency or damage, including water infiltration, and developing repair recommendations for the structures.

Escalator Replacement at Bus Level, Journal Square Transportation Center, Jersey City, NJ, *PANYNJ.* Facilities Project Manager responsible for the replacement of eight public escalators. Responsibilities included oversight of structural renovations to existing supports, replacement of roadway precast-concrete members, installation of sump pumps, construction of new machine rooms, ventilation upgrades, and electrical installation.

Condition Survey of Journal Square Parking Garage, Journal Square Transportation Center, Jersey City, NJ, *PANYNJ.* Project Manager responsible for budget and schedule development, project management, quality checks, and client coordination for the inspection of a parking structure, auto ramp, and toll booths. Tasks included coordination with PATH personnel, management of field teams and inspection equipment, and report development.

World Trade Center Complex, New York, NY, *PANYNJ.* Project Manager responsible for providing structural engineering services at the World Trade Center complex. Projects involved studies and/or designs for improvements and rehabilitation at the five-building complex, including the two 110-story towers.

2008 Condition Survey of the BMW Parking Structure, New Jersey Marine Terminal, Bayonne, NJ, *PANYNJ.* Project Manager responsible for budget and schedule development, project management, quality checks, and client coordination for the inspection of a parking garage. Tasks included coordination with Port Authority and BMW personnel, management of field teams and inspection equipment, and report development.

2008 Condition Survey of Journal Square Parking Garage, Journal Square Transportation Center, Jersey City, NJ, *PANYNJ.* Project Manager responsible for budget and schedule development, project management, quality checks, and client coordination for the inspection of a parking structure, auto ramp, and toll booths. Tasks included coordination with Port Authority Trans-Hudson (PATH) personnel, management of field teams and inspection equipment, and report development.

2008 Condition Survey of Buildings 75, 78, 79, and 138, John F. Kennedy International Airport, Queens, NY, *PANYNJ.* Project Manager responsible for budget and schedule development, project management, quality checks, and client coordination for the inspection of two building facilities and one building facade. Tasks included coordination with airport personnel, security, management of field teams and inspection equipment, and report development.

2007 Condition Survey of Buildings 31, 121, 122, 123, 209, and 215, John F. Kennedy International Airport, Queens, NY, *PANYNJ.* Project Manager responsible for budget and schedule development, project management, quality checks, and client coordination for the inspection of six building facilities. Tasks included coordination with airport personnel, security, management of field teams, and report development.

Chronological History of Employment

Gannett Fleming – 1979-Present

BRIAN W. DORR, PE

Assignment
Constructability/Bidability

Years of Experience With Firm
22

With Other Firms
0

Education
B.S., Structural Design and Construction Engineering, The Pennsylvania State University, 1990

Professional Registrations
PE: New Jersey – [redacted] (1999)

Current Responsibilities

Mr. Dorr is a Project Manager responsible for all facets of highway and interchange construction projects, as well as site development projects. His experience includes geometric designs, traffic control and staging, utility relocations, construction cost estimates, signing, permitting, earthwork calculations, soil erosion, right-of-way engineering, and construction support.

Summary of Experience

Design Services for Replacement of Authority State Police Facilities, Multiple Locations, NJ, *NJTA.* Project Manager for the replacement of four New Jersey State Police (NJSP) barracks buildings, two on the New Jersey Turnpike and two on the Garden State Parkway. The project required a detailed site analysis for selection of two new sites. The building design is for a new state-of-the-art State Police barracks "prototypical" building design that is flexible and adaptable for three of the locations and a distinct building design for the Newark site. Responsible for developing cost-effective contract documents, including plans, specifications, and estimates (PS&E), which meet the needs of the NJTA and NJSP. Responsible for managing the development of plans, reports, and specifications; coordinating and communicating with the NJTA and NJSP; obtaining required permits; and managing scope, schedule, and budget. Each facility will incorporate sustainable design elements and be designed to current codes and Commission on Accreditation for Law Enforcement Agencies standards.

Design Services for Condition Assessment and Prioritization of Repair for Authority Maintenance Facilities, NJ, *NJTA.* Deputy Project Manager responsible for condition assessment, prioritization reports with costs to return facilities to a state of good repair, development of a prototype design of a new maintenance facility, and final design of a new 18,000-square-foot replacement maintenance facility at Turnpike District 6. The project required intensive coordination with NJTA personnel throughout the design development. The new District 6 maintenance facility design required utility service upgrades, site improvements, and site staging to maintain operations during construction. All design was performed to achieve a Leadership in Energy and Environmental Design (LEED) Silver certification. Responsible for coordination of all disciplines and design development of plans, specifications, and cost estimates (PS&E). Spearheaded approach and coordinated project team in obtaining permits, including New Jersey Department of Environmental Protection freshwater wetlands, soil erosion and sediment control, stormwater management, and New Jersey Department of Community Affairs permits. Responsible for maintaining project design schedules and budgets.

Holmdel Motor Vehicle Facility, Monmouth County, NJ, *NJTA.* Project Manager for the design of a 4,400-square-foot motor vehicle repair facility owned by the NJTA and operated by the New Jersey State Police. Project included design of a three-bay repair garage with adjoining parts room, offices, restrooms, and locker rooms. Responsible for coordination between disciplines and design development of plans, specifications, permits, and cost estimates. Coordinated all utility services and site upgrades. Maintained project design schedules and budgets. Managed the construction support services during construction.

I-78/Garden State Parkway Interchange 142 Improvements, Essex and Union Counties, NJ, *NJTA.* Utility Engineering Team Leader responsible for the utility engineering efforts for this project. Coordinated these efforts with 11 utility companies and Conrail, which resulted in $2 million of utility relocation work. Coordination with Conrail was required due to the widening of an I 78 bridge and its partial redecking over a Conrail abandoned rail spur. Prepared checklists and utility agreement plans and developed specifications for utility relocations in accordance with Chapter 10 of the NJDOT Procedures Manual. Work efforts were also performed in accordance with the state's utility accommodation policy found in Section 16:25 of the New Jersey Administrative Code.

NJ Route 18, Sections 2F, 7E, and 11H, Middlesex County, NJ, *NJDOT.* Project Manager responsible for construction support services on this $144 million multi-interchange project, which includes the total reconstruction and widening of 2.1 miles of NJ Route 18 to grade separate one interchange and construct collector-distributor roadways. The project includes the construction of 4 new roadway bridges, 2 new pedestrian bridges, 1 new culvert, 27 new retaining walls, and 7 new noise walls; the replacement of 1 pedestrian tunnel and 1 bulkhead; the installation of 16 new sign structures and 6 new or upgraded traffic signals; the rehabilitation of 1 historical wall; and the implementation of an extensive new intelligent transportation system (ITS). It also includes substantial utility relocations. In addition, the project involves the construction of additional parkland for the City of New Brunswick, including a public boat launching facility; the reconfiguration of an existing public park to include an amphitheater and picnic pavilion; and the use of extensive streetscape elements and architectural features. Construction features the use of drilled shafts/caissons, caisson pipe jacking and boring operations, architectural form liners, a concrete arch structure, and extensive architectural elements. Responsibilities involve providing day-to-day support services for NJDOT's resident engineer and staff for field issues, attending weekly progress meetings with the contractor's team, coordinating work efforts with utility companies and municipalities, managing the shop drawing review and approval process, reviewing the contractor's value engineering proposals, and assisting NJDOT's team of engineers and inspectors with project issues. The project has required regular community partnering meetings and public outreach efforts to keep the public and major stakeholders informed about traffic shifts, road closures, and construction progress.

U.S. Routes 1 and 9, Haynes Avenue Over the Waverly Yards, Newark, NJ, *NJDOT.* Project Manager/Task Leader for Railroad Agreements responsible for the development of railroad agreement plans for the reconstruction of the Haynes Avenue viaduct over Amtrak Northeast Corridor and Conrail tracks. The project involved deck and parapet reconstruction, steel repairs, girder jacking, and bridge bearing replacements alongside active rail lines. It required the temporary bonding and grounding of the existing structure and the protection of the existing catenary system during demolition work. Responsibilities included coordinating with Amtrak and Conrail for the development of project work restrictions and allowable outages, as well as temporary track protection requirements. It also included making certain that the design was in concurrence with NJDOT utility and railroad procedures, as well as with the state's utility accommodation policy found in Section 16:25 of the New Jersey Administrative Code. All work was performed in accordance with Chapter 10 of the NJDOT Procedures Manual.

Current Responsibilities

As a Senior Engineer, Mr. Upright is responsible for environmental, hydrogeologic, and geotechnical investigations. His environmental responsibilities include analyzing environmental data; analysis of GIS data, preparation and review of GIS maps and environmental reports, and supervision and engineering oversight of monitoring well installations; and collection of environmental soil and water samples. Mr. Upright is also responsible for hydrogeologic tasks, including groundwater modeling, well siting analysis; inspection and analysis of well pump tests; and preparation of pump test reports. His geotechnical responsibilities include analysis of geotechnical data; and preparation of geotechnical reports, controlled inspections of foundation subgrades, soil and rock anchor installations and pile driving. Additional construction inspection responsibilities include: earthwork placement; in-place density testing of soils with nuclear density gauge; and preparation and review of field inspection reports.

Summary of Experience

Madison Yards, New York, NY, *MTA Metro-North Railroad.* Senior Geotechnical Engineer responsible for this project which consisted of the construction of elevator and escalator shafts for the Madison Yards portion of the MTA's East Side Access Project. Performed controlled inspections of installation and performance and proof tests for strand and bar anchors in compliance with NYC Code requirements and project specifications. Prepared anchor inspection summary reports. Performed NYC required subgrade inspections for footings for pile caps and elevator shafts to verify that the footings were bearing on 25 tsf bedrock.

44th Street Vent Plant, New York, NY, *MTA Metro-North Railroad.* Senior Geotechnical Engineer for this project which consisted of the construction of a new vent plant for the MTA's East Side Access project adjacent to Grand Central Terminal. Performed NYC required subgrade inspections for footings for footings and piers to verify that the footings were bearing on 10 tsf bedrock.

Tappan Zee Bridge Marina, NY, *NYSTA.* Engineering Geologist responsible for providing site inspection of sediment samples by contractor using vibracore sampling technique for the Tappan Zee Bridge Marina Project involving assisting the NYSTA in obtaining a New York District Army Corps of Engineers and an Environmental Protection Agency approved permit to dredge at the Tappan Zee Bridge Marina.

York College Academic Core Building Dewatering Investigation, Queens, NY, *DASNY.* Project hydrogeologist responsible for this project which consisted of evaluating the subsurface conditions to

determine the design parameters for a permanent dewatering system. Designed a subsurface investigation and well installation for a pump test. Directed soil boring and pumping and monitoring well installation. Performed pump test and collected data from monitoring well network. Analyzed pump test data to determine hydraulic conductivity of the aquifer. Modeled current groundwater conditions using Visual MODFLOW and then modeled a preliminary groundwater dewatering system to determine optimum well locations and approximate quantity of the dewatering system discharge. Evaluated potential methods for disposing of dewatering discharge. Performed an additional investigation to determine if an infiltration field was a feasible method for disposing of the dewatering effluent which included directing a subsurface investigation of potential infiltration field locations and performing groundwater modeling using Visual MODFLOW to model the effects of the pumping and recharge system.

Owl Hollow Fields Environmental Monitoring, Staten Island, NY, *NYC Department of Parks and Recreation.* Project Engineer for this project where Tectonic was selected as the NYSDEC Independent Environmental Monitor for the remedial capping of an 11 acre PCB and solid waste contaminated site at Freshkills Landfill in Staten Island during its conversion into community soccer fields. Tectonic is responsible for verifying that all aspects of Site Management Plan are complied with during remedial activities. Performed oversight of the remedial removal of PCB contaminated soil hotspot, monitored soil excavations and fill delivery and placement activities, and prepared bi-weekly activity summary reports summarizing site monitoring activities for submittal to NYSDEC. Also performed air monitoring using PID and real-time particulate monitors per the approved CAMP in the SMP.

Central Park Police Precinct Environmental Services, New York, NY, *NYCDDC.* Project Engineer responsible for providing technical direction and oversight of a project that involves renovating an existing police precinct building to a modern facility within a historic landmark building. There are known to have been two (2) 550 gallon gasoline underground storage tanks (USTs) and one 8,000 gallon fuel oil UST located adjacent to the existing building on the property. During a previous environmental subsurface investigation, soils impacted with fuel oil were identified on the property up to the edge of the building and within the building footprint. As technical engineer, performed the remedial investigation and prepared the Remedial Investigation Report. Prepared a Remedial Action Plan consisting of an active vapor intrusion control system; underdrains to control groundwater potential impacted with VOCs; and prepared reports including a HASP and CAMP in accordance with TAGM 4031 guidelines. Designed subslab SVE extraction wells and coordinated the design of a SVE treatment system to extract VOCs from the subslab soils and coordinated design of the SVE treatment system in a custom designed vault located adjacent to the structure. Obtained approval for SVE system from NYSDEC.

Adams UST Spill Investigation and Remedial Closure, Highland Mills, NY, *NYSDEC.* Project Engineer responsible for performing technical services for the investigation of a spill caused by an underground storage tank located adjacent to the site residence. Performed remedial investigation, prepared a remedial investigation report and provided a remedial action plan in accordance with NYSDEC STARS guidance for SVOC petroleum hydrocarbons to determine the area impacted on the property. Also provided direct coordination with the environmental contractor that performed remedial removals of contaminated soil. Prepared a NYSDEC closure report, including results of investigation and documentation of the tank removal with associated transportation manifests and disposal tickets.

Education
A.S., Applied Science-Civil Engineering, Erie County Technical Institute (now Erie Community College), 1969

B.S., Structural Design and Construction Engineering Technology, The Pennsylvania State University, 1994

Professional Registrations
EIT: Pennsylvania – No. [redacted] (1995)

Current Responsibilities

Mr. Gorski is a Senior Project Scheduler responsible for developing and monitoring project design and construction schedules using Primavera Project Planner (P3, P6)/SureTrak, Microsoft Project, and Open Plan software; providing document control services; developing project and change order engineer's estimates; developing computer-applicable tracking systems for document control, project progress reports, change orders, and construction time analyses; and performing project and task management activities. He is assigned as the main contact for Pennsylvania Department of Transportation (PennDOT) Districts 2-0, 3-0, 4-0, 5-0, and 11-0, and provides project scheduling support, technical reviews, and quality assurance functions for PennDOT's Bureau of Design, Highway Quality Assurance Division.

Summary of Experience

Port Authority Trans-Hudson (PATH) Car Cleaning Facility at Waldo Yard, Jersey City, NJ, *PANYNJ.* Chief Scheduler responsible for the engineer's estimate and documentation for facilities and site improvements for an automatic railcar wash facility and the conversion of an existing running repair shop to a facility for comprehensive cleaning of all PATH cars.

MTA Long Island Rail Road and Vanderbilt Yard Relocation, Brooklyn, NY, *Forest City Ratner Companies, Atlantic Yards LLC.* Chief Scheduler responsible for developing the project construction schedule. The project scope included the demolition of existing rail storage and support facilities in phases to facilitate the lowering of the existing yard and construction of new storage track, vehicle roadways to the depressed yard, yard support facilities, bridge structure spanning the yard allowing street level vehicle movement, and improved roadways.

Office Renovation-NYPD Brooklyn Municipal Building, Brooklyn, NY, *City of New York Police Department, Brooklyn Court Section.* Chief Scheduler responsible for developing the project construction schedule. The schedule addressed the renovation of 5,800 square feet of office, storage, and operational spaces, as well as mechanical and electrical replacements and improvements. The renovation required select repair or demolition of existing amenities; installation of new flooring; wall treatments; suspended ceilings; complete toilet room renovations; room lighting; electrical services and upgrades; and heating, ventilation, and air-conditioning (HVAC) services and upgrades. The estimated construction cost was $1.8 million.

Appellate Division, Roof and Miscellaneous Operational Space Upgrade, Manhattan, NY, *New York City Department of Citywide Administrative Services.* Chief Scheduler responsible for developing the project construction schedule. The schedule addressed the renovation of office, storage, and operational spaces; roof replacement; exterior masonry repair; weatherproofing; the mechanical system; and electrical replacement and upgrades. The internal space renovation totaled 6,500 square feet, with 7,000 square feet of roof replacement. The estimated construction cost was $3.3 million.

Harmon Maintenance Complex Phase IV/Stage 1, Croton-on-Hudson, NY, *MTA Metro-North Railroad.* Lead Scheduler responsible for developing the project design schedule for each design discipline. Also in charge of developing the project phasing and construction schedule. The multidisciplinary effort involves multiple fixed facility improvement projects at the maintenance complex.

LIRR Shop Improvements Project, Queens, NY, *MTA Long Island Rail Road.* Scheduler responsible for the preparation of the project's 19-month design schedule, which included monthly progressing of design tasks and monitoring delivery dates. Updates were submitted to the design team and client for information and status review. Also responsible for the preparation of a construction and implementation schedule for shop improvements, which included demolition, new construction, machine equipment installation and relocation, and staging of work to maintain uninterrupted shop operations.

Henry Hudson Service Facility, New York, NY, *MTA Bridges and Tunnels.* Scheduler responsible for the preparation of a project construction schedule for phased heating, ventilation, and air-conditioning (HVAC) improvements for a service facility. The construction required the phased replacement of HVAC equipment, which included installing temporary HVAC equipment and the demolition and installation of new pumps, associated piping, pump controls, air dampers, and other miscellaneous improvements.

Grand Avenue Bus Depot and Central Maintenance Facility, Queens, NY, *MTA New York City Transit.* Chief Project Scheduler responsible for the design schedule portion of a bus maintenance facility design-build project. The team consisted of three design firms and the building contractor for a 750,000-square-foot, three-level maintenance facility. Project requirements included weekly updates to the design schedule based on design and drawing completion. Ten discipline matrices were developed to facilitate measuring design progress and establish invoicing of the lump sum design contract.

East Side Access Project, Mid-Day Storage Yard, Queens, NY, *MTA Long Island Rail Road.* Chief Scheduler responsible for the development of a design schedule. Based on a defined scope of work and budget work effort, a multi-firm/design discipline design schedule was developed to represent the physical project components, design phases, design reviews, and task and subtask interdependencies. The project's physical components consisted of yard trackage, site utilities, a yard service building, a train wash facility, yard car appearance maintenance platforms, fire water pump buildings, yard power and lighting, and equipment for signals and communications. Special geotechnical work was also incorporated into the design schedule.

Seawall and Promenade at the Cross Bay Bridge Facility, Brooklyn, NY, *MTA Bridges and Tunnels.* Chief Scheduler responsible for the development of a construction schedule representing site work improvements along a pedestrian park.

NJ Route 18 Extension, Section 2A, Piscataway, NJ, *NJDOT.* Chief Scheduler responsible for the development of a constructability schedule for a highway relocation and extension project. The project required the phased construction of 6 bridge structures, 13 ramps, 10 retaining walls, and 2.6 km of four-lane highway, as well as 8 secondary roads and a multipurpose pathway. A unique coding structure was developed to filter, group, and summarize construction activities for schedule review and planning.

34

Education
A.A.S., Applied Science, Control Data Institute New York, 1976

Current Responsibilities

Mr. Michalowski is a Senior Scheduler responsible for developing complete project schedules, budgets, and cost to complete. He provides detailed information on project phasing and staffing plans and calculates escalation costs, and prepares charts and graphs to support this information for presentation purposes.

Summary of Experience

Newtown Creek Wastewater Treatment Plant Upgrades, Brooklyn, NY, *New York City Department of Environmental Protection.* Senior Scheduler responsible for developing project schedules, budgets, and cost to complete for each contract under the Phase 3 upgrade of the 310 mgd wastewater treatment plant. Provided detailed information on project phasing and staffing plans and calculated escalation costs. Prepared charts and graphs to support this information for presentation purposes.

World Trade Center Restoration, New York, NY, *PANYNJ.* Senior Scheduler managing cost estimating and scheduling departments. Responsible for all scheduling-related issues as related to the Freedom Tower, Memorial, Towers 2, 3, 4, and 5; vehicle security center; chiller plant; transit hub; park; streets; and plazas.

Owls Head Water Pollution Control Plant Scheduler Assistance, Brooklyn, NY, *New York City Department of Environmental Protection.* Senior Scheduler providing project scheduling services at the plant's construction field office to support construction management efforts for an upgrade to the plant's residuals building and modifications to its odor control system.

East Side Access Project, LIRR to Grand Central Station, New York, NY, *MTA Long Island Rail Road (LIRR).* Senior Scheduler responsible for re-baselining effort for the project, which was completed successfully. The schedule was fully integrated with the design and construction of more than 30 sub-projects. Identified 6,000 cost-loaded activities that defined the design portion of the project. The design efforts included environmental, geotechnical, drainage, track alignment, right-of-way, maintenance and protection of traffic, utilities, survey, plumbing, grading, ventilation, and tunnel boring machine tunneling. Using Primavera's P3, Microsoft's Excel, and Corel Presentations as some of the primary tools, provided a thorough analysis of the project staging and identified potential scheduling and productivity issues. Interfaced with the risk management team to develop risk and hazard-related elements of the project. Developed a 200-page reference manual related to project risks and hazards, which included preliminary hazard analysis, hazard analysis, hazard and operability study, fault tree analysis, failure modes and effects analysis, and safety and security certification.

Jamaica Station Construction, Jamaica, NY, *MTA Long Island Rail Road (LIRR).* Senior Scheduler and Project Controller responsible for developing scheduling coding requirements for LIRR's Jamaica Station. Coordinated track outages for Atlantic Avenue with several contractors, which involved merging schedules. Created station track occupancy charts. Set up a system for taking and archiving progress pictures. Provided an analysis of train routing with Main, Montauk, and Atlantic Lines. Coordinated concurrent work with the concrete tie program and the Jamaica Control Center/John F. Kennedy International Airport AirTrain project. Conducted an analysis of platform/track capacity with drop off and go methods.

Developed drawings for Jamaica to identify and track progress. Identified serious scheduling flaws with the schedules in conflict with track outages.

New York City Transit Station Rehabilitation, New York, NY, *MTA New York City Transit.* Consultant and Technical Support in the areas of project management and scheduling. Participated in bid documentation and awards. Responsible for equipment and material procurement. Prepared documentation for schedule development and construction operations. Organized progress monthly narrative reports including project closeouts and owner turnover.

Staten Island Courthouse Renovation, Staten Island, NY. Senior Scheduler responsible for work on construction projects, including time extensions and impact analysis. Developed construction schedules for plumbing, fire protection, electrical, telecom, and security.

Director of Scheduling and Project Controls, NY, *VJ Associates.* Senior Scheduler providing support for completion of wastewater treatment facilities, school construction, and transportation. Responsible for data center construction and renovation. Installed, tested, and commissioned equipment including uninterruptible power supply; generators; heating, ventilation, and air-conditioning (HVAC); computer-room air-conditioning units; air-cooled and liquid-cooled chillers; and cooling towers. Also in charge of the integrated testing of equipment.

CLAY A. CORJULO

Assignment
Inspector

Years of Experience With Firm
10

With Other Firms
9

Education
B.A., Geology, Hartwick College, 1986

Professional Registrations
Troxler Nuclear Testing Equipment Certification: No. [redacted] 1993)

NICET Level IV - Highway Construction: No. [redacted] (1995)

ATSSA Traffic Control Technician: No. [redacted] (1999)

ACI Concrete Field Testing Technician - Grade I: No. [redacted] (2001)

Current Responsibilities

Mr. Corjulo is a Senior Inspector responsible for quality assurance specifications and pay quantity calculations for all earthwork and paving operations. He also assists the resident engineer with staff supervision and project recordkeeping.

Summary of Experience

Widening of U.S. Route 7, Danbury and Ridgefield, CT, *ConnDOT.* Senior Inspector for a $17 million, 2.1-mile-long highway widening. This portion of U.S. Route 7 is classified as a principal urban arterial and is the primary north-south route in western Fairfield County. The existing highway had capacity and geometric deficiencies that caused unsafe driving conditions and delays. Improvements included widening the highway from two lanes to four lanes and adding left-turn lanes at three realigned intersections. It will also improve safety and relieve traffic congestion by improving roadway geometry and implementing two new signalized intersections. A three-cell box culvert was constructed on one of the side streets as part of the intersection realignment, and an existing box culvert under the highway was improved. The changes in geometry required extensive earthmoving activities, including rock blasting operations. The roadway drainage system will also be greatly improved. At the southern end of the corridor, drainage was handled with a closed system; the remainder of the corridor will have an open drainage system. The new pavement was Superpave. The changes resulted in the loss of 2.31 acres of wetland habitat but created 3.48 acres of new wetlands.

NY Route 17 and I-84 Interchange Reconstruction, Orange County, NY, *New York State Department of Transportation, Region 8.* Senior Inspector for a $68 million reconstruction contract. Responsibilities include inspecting structures, paving, and blasting, as well as recordkeeping, testing, and supervising field inspection staff. The project involves improvements to NY Route 17 between Exits 121 and 122 at the I-84 Interchange. Improvements to NY Route 17 include 2 miles of full-depth pavement replacement and 2 miles of mill and fill, as well as full-depth reconstruction of the I-84 Interchange ramp system. Highway and structures work includes the following:

- NY Route 17 East/West over I-84 Bridge - Involved rehabilitation, including replacement of the superstructure, backwalls, pedestals, and bearings with repair work to the existing pier.
- Reconstruction of existing NY Route 17EB, including profile and alignment change and retaining wall construction, to accommodate new travel lanes and ramps. Responsible for inspection duties including all traffic shifts and phase work associated with staging requirements.
- Construction of new East Main Street roadway and intersection for access to new Regional Medical Center in Orange County, New York. Responsible for inspection duties including all traffic shifts, local maintenance and protection of traffic coordination, and earthwork activities. This work required several months of blasting to complete and was performed in a hospital zone.

- NY Route 17 bridge over NY Route 211 - Involved replacement of the bridge rail with a single-slope concrete barrier, and mill and fill of asphalt on bridge approach slabs.
- Final paving of NY Route 17East/West mainline to project limits and all interim phase work paving activities to completion.

Garden State Parkway, Bridge Repairs and Resurfacing, Milepost 0 to 126, NJ, *NJTA.* Senior Inspector for a $25 million bridge repair and resurfacing project. The repair work required high intensity construction cycles to complete deck repairs with minimum traffic issues. Responsibilities included record keeping, testing, field inspection, and item payments. Additional responsibilities included providing on-site field source documentation from remote areas to transmittal and processing field changes with the main office.

NY Route 6 Bridge Replacement, Contract D260755, PIN 8390.76, Brewster and Carmel, NY, *NYSDOT.* Senior Inspector for a $4 million bridge replacement over a future Putnam County bikeway. The replacement required staged construction for the removal and replacement of a bi-directional, two-lane bridge on Route 6, which is the primary access route to Carmel. Responsibilities included record keeping, testing, field inspection, and item payments. Also prepared monthly estimates, project correspondence, and meeting minutes.

Resurfacing and Safety Improvements on I-684, Contract D015455, PIN 8113.33, Harrison, NY, *NYSDOT.* Senior Inspector for asphalt concrete reconstruction and the rehabilitation of five highway bridges. Duties included inspection of milling operations, deck patching, and placement of asphalt concrete pavement.

Resurfacing and Safety Improvements on I-91, East Windsor and Enfield, CT, *ConnDOT.* Senior Inspector for a $12 million rehabilitation of I 91. The project was 7.5 miles long and involved removing an existing bituminous surface, repairing the concrete base, and resurfacing with Superpave. The project also included rehabilitating six bridge decks, replacing the metal beam guide rail, and adjusting drainage structures.

I-95 Reconstruction, Stamford, CT, *ConnDOT.* Senior Inspector responsible for overseeing bridge and roadway construction for a $28 million bridge and highway reconstruction project.

S.R. 3/I-91 Interchange, Wethersfield, CT, *ConnDOT.* Senior Inspector responsible for overseeing an $18 million bridge and roadway construction project. Tasks included the inspection of many roadway and bridge-related activities.

U.S. Route 17 Reconstruction, Alamo, NV, *Nevada Department of Transportation.* Senior Inspector responsible for assisting in the oversight of 17 miles of state highway reconstruction for an $11 million project.

U.S. Route 66 Widening and Railroad Bridge Replacement, Middletown, CT, *ConnDOT.* Senior Inspector responsible for overseeing roadway and bridge construction. Tasks included inspecting railroad bridge and track construction, coordinating the installation of public utilities, and overseeing the placement of drainage structures and bituminous concrete paving.

NICET Level I - Bridge Safety Inspection: No. [redacted] (2008)

NICET Level IV- Highway Construction: No. [redacted] (2009)

ACI Concrete Field Testing Technician - Grade I: No. [redacted] (2013)

Current Responsibilities

Mr. Gorrin is a Construction Inspector responsible for inspecting and observing construction activities throughout projects. His tasks include providing detailed construction reports, updating as-built files, and coordinating activities between contractors and owners.

Summary of Experience

Maintenance Roadway Repair Services, Monmouth County, NJ, *NJDOT.* Assistant Resident Engineer for this $6.7 million resurfacing project along various locations and sections of NJ Routes 9, 33, 34, and 66 in Monmouth County, New Jersey. Project includes 335,000 square yards of milling existing pavement, 12,000 tons of intermediate course paving, and 37,000 tons of surface course paving. Responsibilities included making sure that contractor met compliance with NJDOT plans and specifications; reviewing lab reports and enforcing corrective action on defective material and workmanship; and making certain that correspondence, daily reports, test reports, material receipts, material submittals, permit approvals, and documentation were filed properly with NJDOT. Tasks also included preparing and reviewing daily inspection reports; submitting traffic interference reports to NJDOT Traffic Operations; coordinating inspections; scheduling traffic lane closures and work zone safety inspections including light towers necessary for nighttime operations; and scheduling materials testing necessary by NJDOT. Also inspected pavement milling, hot-mix asphalt paving, drainage repairs, barrier placement, pavement markings and delineators, bridge deck and joint repairs, bridge deck waterproofing membrane, concrete vertical and sloping curb, and seeding and mulching. Also inspected maintenance and protection of traffic and verified proper lighting levels during night work.

Maintenance Roadway Repair Contract, U.S. Route 1 Northbound and Southbound and U.S. Route 22 Eastbound and Westbound, Middlesex and Somerset Counties, NJ, *NJDOT.* Road Construction Inspector for this $6.5 million resurfacing project. Project consisted of resurfacing various sections of roadway along U.S. Routes 1 and 22. Responsibilities included supervising/scheduling inspection staff and inspecting various items including 3,000 square yards of full-depth concrete pavement repair, more than 347,000 square yards milling of existing pavement, more than 59,000 tons of hot-mix asphalt intermediate and surface course paving, striping, and reflective pavement markers. Also monitored contractor maintenance and protection of traffic and environmental and erosion controls. Work was conducted using nighttime operations.

Con Edison M-29 345 kV Transmission Feeder Upgrade, Yonkers, NY, *Con Edison and City of Yonkers.* Senior Inspector for this 2-mile, $15 million section of Con Edison's $425 million 345 kV transmission feeder upgrade project through the City of Yonkers, New York. Responsible for coordinating work with subcontracted utility and excavation contractors, the City Department of Public Works and Con Edison, and local entities, as well as inspecting contract work. The project scope included extensive maintenance and protection of traffic in a heavily congested urban area including road closures and detours, hot-mix asphalt (HMA) pavement excavation, trench excavation/sheeting/shoring, installation of 12,000 LF of 10-inch conduit and 6-inch cooling oil return conduit, installation of 12 precast-concrete vaults, backfill and compaction, and pavement restoration with HMA pavement. The project required night work.

I-195 Eastbound From West of Ivanhoe Brook to West of NJ Route 9, Resurfacing and Guide Rail Upgrades, Monmouth and Ocean Counties, NJ, *NJDOT.* Assistant Resident Engineer and Road Construction Inspector for this $10.8 million interstate highway resurfacing project. The project consisted of resurfacing 15 miles eastbound from Milepost (MP) 12 to MP 27.1, repairs to three bridges, and extensive guide rail upgrades. Responsibilities included supervising/scheduling inspection staff and inspecting various items including more than 300,000 square yards milling of existing pavement, more than 130,000 tons of Superpave hot-mix asphalt intermediate and surface course paving, striping, reflective pavement markers, rumble strips, and more than 2 miles of beam guide rail. Bridge work inspected included Type B concrete deck repairs, asphaltic bridge joints, membrane waterproofing, and Superpave overlay. Also monitored contractor maintenance and protection of traffic and environmental and erosion controls. Work was conducted using nighttime operations.

NJ Route 440 Southbound Resurfacing From I-95 Interchange to South of Kreil Avenue, Perth Amboy, NJ, *NJDOT.* Road Construction Inspector for this $5.9 million resurfacing project. Project consisted of resurfacing 4 miles of NJ Route 440 southbound from the Outerbridge Crossing from New York to limits of I-287 north. Responsibilities included making sure of proper traffic control and safety with the traffic control coordinator including lane closures, ramp closures, and detours. Scheduled and assigned inspection duties to staff and inspected items including 8,000 square feet of full-depth concrete pavement repairs, 5,200 square yards of spray-applied waterproofing membrane to existing bridge decks, 29,000 square yards of milling, 109,500 square yards of diamond grinding of existing concrete pavement under overpasses, 2,400 cubic yards of roadway excavation, 28,000 tons of Superpave hot-mix asphalt paving, 4,900 LF beam guide rail replacement, line striping, reflective pavement markers, and rumble strips. Project conducted entirely under nighttime closures.

I-195 Resurfacing, Eastbound From NJ Route 9 Interchange to NJ Route 34 Interchange, Westbound From Mingamahone Brook to NJ Route 34 Interchange, Monmouth County, NJ, *NJDOT.* Road Construction Inspector for this $6.2 million interstate highway resurfacing project. Project consisted of resurfacing 7.89 miles eastbound from NJ Route 9 to limits of U.S. Route 130 and 3.2 miles westbound from limits of U.S. Route 130 westbound to C.R. 547. Responsibilities included inspection of items including traffic control and safety, 182,000 square yards milling of existing pavement, more than 90,000 tons of Superpave hot-mix asphalt intermediate and surface course paving, striping, reflective pavement markers, and rumble strips. Work was conducted using nighttime operations.

Current Responsibilities

Mr. Wargo is a Senior Inspector responsible for providing contract administration services and inspecting construction to verify its completion in accordance with contract requirements and specifications.

Summary of Experience

Project Nos. 63-643 and 93-180, New Britain-Hartford Busway, Hartford, West Hartford, and Newington, CT, *ConnDOT.* Senior Inspector responsible for providing technical inspection and administration services for a $130.6 million bus rapid transit construction project. The project (Contract 3) entails the middle and largest section of the $567 million New Britain-Hartford Busway. It is being constructed partially along abandoned railroad right-of-way and partially along active Amtrak right-of-way. The Contract 3 project consists of the construction of 7 out of 11 stations serving the busway and faces the challenges of coordinating with Amtrak and seven designers of record, four other adjacent construction projects, contract schedules with multiple milestones, geotechnical issues, structural (bridges) construction in congested downtown areas, and environmental concerns. Project 63-643 will replace the at-grade crossing on Flatbush Avenue with a grade-separated crossing. This requires a bridge over the Amtrak right-of-way and embankment approaches to the bridge. The construction of these embankment approaches will require the use of wick drains, pile foundations, and installation of Geofoam lightweight fill to accommodate the existing soil conditions. Project 93-180 will construct the busway from Cedar Street in Newington to Sigourney Street in Hartford. This requires the construction of more than 5 miles of roadway, 44 retaining walls, 8 new bridges, approximately 8 miles of drainage, including drainage pipe jacking under the active Amtrak railroad, 7 stations, wetland mitigation, and a gravel access road for Amtrak.

Project 92-533/569, Contract C2, Reconstruction of I-95 in New Haven From Stiles Street to the New Haven/East Haven Town Line, New Haven and East Haven, CT, *ConnDOT.* Senior Inspector for the technical inspection and administration of the $70 million reconstruction and widening of I-95 in New Haven. The major components of this project included staged construction for the widening of I-95 between the frontage roads in East Haven and the east approach of the Pearl Harbor Memorial Bridge in New Haven while maintaining average daily traffic of more than 140,000 vehicles. The project included the replacement of four flyover bridges over I-95, the construction of a new interchange and connector roadways, the replacement of I-95 mainline bridges, and the construction of more than 1,500 meters of retaining walls that use an architectural form liner to simulate stone. The project also included drilled shafts for pier foundations; more than 200,000 cubic meters of fill embankments for the new interchange and connector roadways; new highway drainage, illumination, and signalization; and incident management system installations. This project is one of several major contracts that are part of a coordinated $1 billion

I-95 corridor improvement program being implemented in the New Haven area. Multiple contracts are underway simultaneously.

Reconstruction of I-95/I-91/CT Route 34 Interchange, Project No. 92-619, Contract E2, New Haven, CT, *ConnDOT.* Senior Inspector for a project involving construction engineering and inspection services for a $91 million interchange reconstruction. The contract includes the use of an Internet collaboration server-based project management system for all project correspondence and electronic submittal and review. The construction contract also requires a contractor-prepared quality control management plan. The major component of the project includes the construction of a new ramp bridge to carry I-95 northbound traffic to CT Route 34 westbound and downtown New Haven. The new bridge will replace the existing left-hand exit ramp and bridges. A twin steel box-girder bridge spanning over both directions of I-95 will require nighttime steel erection using 20-minute traffic stoppages. The project also includes the staged construction widening and replacement of two existing CT Route 34 and I-95 bridges and the vertical realignment and widening of the converging I-91 and I-95 southbound ramps to CT Route 34 westbound. Ten new retaining walls will be constructed to support the new ramp alignments and relocate the I-95 entrance and exit ramps. The retaining walls use an architectural form liner to simulate stone. The project also includes the installation of approximately 600 precast-concrete friction piles for new foundations; the extensive use of lightweight fill for embankment construction; installation of new highway drainage; illumination; signalization; and incident management system installations. This is one of several major contracts that are underway simultaneously and part of a coordinated $1 billion I-95 corridor improvement program being implemented in the New Haven area.

Project No. 92-527, Rehabilitation and Painting of Bridge No. 333, CT Route 34 Over Metro-North Railroad (MNR)/Amtrak Tracks and Union Avenue, New Haven, CT, *ConnDOT.* Senior Inspector for the construction inspection of a new enclosed inspection platform under the center span of CT Route 34 where it crosses MNR and Amtrak mainline tracks. Work involved inspecting the rehabilitation of the deteriorated structural steel sections of the bridge and structural steel work, including the replacement of approximately 2,500 deteriorated rivets and the structural repair work at the finger joints. Work also involved inspecting the removal and replacement of the existing bridge drainage along the east abutment and at Pier 1. Other duties involved calculating quantities for monthly estimates and performing material sampling and testing.

Church Street South Extension Over the New Haven Interlocking and Rail Yard, New Haven, CT, *ConnDOT.* Senior Inspector responsible for construction inspections during the extension of Church Street from downtown New Haven to Sargent Drive. The construction of this new section of roadway included nine bridge spans. The main bridge span carrying Church Street over active Northeast Corridor railroad tracks consists of a 320-foot, galvanized, through-truss segment, which was assembled and erected on temporary supports outside the main track envelope and placed in its final position using a high-capacity crane in one overnight lifting operation. Responsibilities included inspecting the installation of a 12-foot by 4-foot box culvert, prestressed-concrete pile-supported piers, tide gate/culvert cambers, and reinforcing steel; backfill placement; concrete forming; structural steel erection; and concrete and asphalt placement.

Current Responsibilities

Mr. Splain is a Chief Inspector for structural designs and the technical inspection of construction projects in New York, Connecticut, New Jersey, Pennsylvania, and other areas for the firm. His responsibilities include reviewing shop drawings and providing other construction-phase services.

Summary of Experience

Project Nos. 63-643 and 93-180, New Britain-Hartford Busway, Hartford, West Hartford, and Newington, CT, *ConnDOT.* Senior Inspector responsible for providing technical inspection and administration services for a $130.6 million bus rapid transit construction project. The project (Contract 3) entails the middle and largest section of the $567 million New Britain-Hartford Busway. It is being constructed partially along abandoned railroad right-of-way and partially along active Amtrak right-of-way. The Contract 3 project consists of the construction of 7 out of 11 stations serving the busway and faces the challenges of coordinating with Amtrak and seven designers of record, four other adjacent construction projects, contract schedules with multiple milestones, geotechnical issues, structural (bridges) construction in congested downtown areas, and environmental concerns. Project 63-643 will replace the at-grade crossing on Flatbush Avenue with a grade-separated crossing. This requires a bridge over the Amtrak right-of-way and embankment approaches to the bridge. The construction of these embankment approaches will require the use of wick drains, pile foundations, and installation of Geofoam lightweight fill to accommodate the existing soil conditions. Project 93-180 will construct the busway from Cedar Street in Newington to Sigourney Street in Hartford. This requires the construction of more than 5 miles of roadway, 44 retaining walls, 8 new bridges, approximately 8 miles of drainage, including drainage pipe jacking under the active Amtrak railroad, 7 stations, wetland mitigation, and a gravel access road for Amtrak.

Reconstruction of I-95/I-91/CT Route 34 Interchange, Project No. 92-619, Contract E2, New Haven, CT, *ConnDOT.* Senior Inspector for a project involving construction engineering and inspection services for a $91 million interchange reconstruction. The contract includes the use of an Internet collaboration server-based project management system for project correspondence and electronic submittal and review. The construction contract also requires a contractor-prepared quality control management plan. The major component of the project includes the construction of a new ramp bridge to carry I-95 northbound traffic to CT Route 34 westbound and downtown New Haven. The new bridge will replace the existing left-hand exit ramp and bridges. A twin steel box-girder bridge spanning over both directions of I-95 will require nighttime steel erection using 20-minute traffic stoppages.

The project also includes the staged construction widening and replacement of two existing CT Route 34 and I-95 bridges and the vertical realignment and widening of the converging I 91 and I-95 southbound ramps to CT Route 34 westbound. Ten new retaining walls will be constructed to support the new ramp alignments and relocate the I-95 entrance and exit ramps. The retaining walls use an architectural form liner to simulate stone. The project also includes the installation of approximately 600 precast-concrete friction piles for new foundations; the extensive use of lightweight fill for embankment construction; installation of new highway drainage; illumination; signalization; and incident management system installations. This is one of several major contracts that are underway simultaneously and part of a coordinated $1 billion I-95 corridor improvement program being implemented in the New Haven area.

Erie Basin Warehouse, Brooklyn, NY, *PANYNJ.* Structural Inspector responsible for a maintenance/safety inspection of a four-story, stone masonry and timber warehouse.

Hillside Shop and Yard, Queens, NY, *MTA Long Island Rail Road.* Engineering Designer responsible for structural design and design checking efforts for this car repair shop and maintenance facility.

New York Portion of the New Haven Line, Mount Vernon to Port Chester, NY, *MTA Metro-North Railroad.* Structural Inspector for the preparation of repair drawings for catenary structures involved with the re-electrification of an 11-mile portion of the New Haven Line from Mount Vernon to Port Chester. Performed inspections of structural repairs during the construction phase of the project.

Project No. 92-603, Reconstruction of Howard Avenue Bridge Over I-95, New Haven, CT, *ConnDOT.* Senior Inspector for the technical inspection and administration of the $14 million reconstruction of the Howard Avenue Bridge, located in the historic City Point neighborhood. The major components of the project included the bridge replacement using staged construction, relocation of the overhead signs from the bridge parapets onto new tubular arch sign supports, installation of new incident management system conduit and hand holes, and construction of modular retaining walls and sound walls along the northbound and southbound sides of I-95. The project also included the installation of a 52-inch jacking sleeve under I-95 to facilitate the relocation of the sanitary sewer line from beneath the previous bridge. The purpose of the reconstruction was to shift the bridge abutments away from I-95 to allow for future widening of the existing highway, as part of the New Haven Harbor Crossing (NHHC) Corridor Improvement Program. Multiple contracts are simultaneously underway throughout the corridor. The NHHC Program is part of a $1 billion I 95 improvement endeavor being implemented in the New Haven area over the next several years.

Project No. 92-526, Church Street South Extension Over the New Haven Interlocking and Rail Yard, New Haven, CT, *ConnDOT.* Senior Inspector for the extension of Church Street from Union Avenue to Sargent Drive. The length of the project was 2,907 feet, which included a 1,274-foot-long bridge over the New Haven Rail Yard. A 320-foot-long through-truss span over Amtrak and Metro-North Railroad mainline tracks was assembled on temporary supports and then lifted onto its pier supports in one nighttime operation. A high-capacity crane was used to lift the 840-ton truss into its final position. Responsibilities included construction inspections for bituminous concrete roadway; storm drainage structures; the driving of precast-concrete piles to support concrete bridge abutments and piers; structural steel girder and truss assembly and erection; reinforced-concrete bridge deck, including MMFX reinforcing bars; highway lighting and traffic signalization; concrete driveways and sidewalks; and the final restoration of landscaping.

NICET Level II - Highway Construction: No. [redacted] (2008)

NETTCP Concrete Inspector - No. [redacted] (2010)

Current Responsibilities

Mr. Banack is an Inspector responsible for performing construction inspections on transportation projects involving highways, bridges, and mass transit facilities. His work includes roadway realignment, roadway resurfacing, bridge rehabilitation, and utility relocation/installation projects.

Summary of Experience

Project Nos. 63-643 and 93-180, New Britain-Hartford Busway, Hartford, West Hartford, and Newington, CT, *Connecticut Department of Transportation (ConnDOT).* Construction Inspector responsible for providing technical inspection and administration services for a $130.6 million bus rapid transit construction project. The project (Contract 3) entails the middle and largest section of the $567 million New Britain-Hartford Busway. It is being constructed partially along abandoned railroad right-of-way and partially along active Amtrak right-of-way. The Contract 3 project consists of the construction of 7 out of 11 stations serving the busway and faces the challenges of coordinating with Amtrak and seven designers of record, four other adjacent construction projects, contract schedules with multiple milestones, geotechnical issues, structural (bridges) construction in congested downtown areas, and environmental concerns. Project 63-643 will replace the at-grade crossing on Flatbush Avenue with a grade-separated crossing. This requires a bridge over the Amtrak right-of-way and embankment approaches to the bridge. The construction of these embankment approaches will require the use of wick drains, pile foundations, and installation of Geofoam lightweight fill to accommodate the existing soil conditions. Project 93-180 will construct the busway from Cedar Street in Newington to Sigourney Street in Hartford. This requires the construction of more than 5 miles of roadway, 44 retaining walls, 8 new bridges, approximately 8 miles of drainage, including drainage pipe jacking under the active Amtrak railroad, 7 stations, wetland mitigation, and a gravel access road for Amtrak.

Reconstruction of I-95/I-91/CT Route 34 Interchange, Project No. 92-619, Contract E2, New Haven, CT, *ConnDOT.* Construction Inspector for this project involving construction engineering and inspection services for a $91 million interchange reconstruction, responsible for technical inspection of bridge and roadway improvements. The major component of the project includes the construction of a new ramp bridge to carry I-95 northbound traffic to Route 34 westbound and downtown New Haven. The new bridge will replace the existing left-hand exit ramp and bridges. A twin steel box-girder bridge spanning over both directions of I-95 will require nighttime steel erection using 20-minute traffic stoppages. The project also includes the staged construction widening and replacement of two existing Route 34 and I-95 bridges and the vertical realignment and widening of the converging I-91 and I-95 southbound ramps to Route 34 westbound. Ten new retaining walls will be constructed to support the new ramp alignments and relocate the I-95 entrance and exit ramps. The retaining walls use an architectural form liner to simulate stone. The project also includes the installation of approximately 600 precast-concrete friction piles for new foundations; the extensive use of lightweight fill for embankment construction; installation of new highway

drainage; illumination; signalization; and incident management system installations. Duties included monitoring installation of concrete pile foundations and preparation of pile driving logs; inspecting steel reinforcement and cast-in-place concrete placement for bridge foundations and bridge deck construction; performing field testing for quality control of concrete in accordance with ASTM standards; inspecting earth embankment and roadway construction; and performing field density determination for compaction of soils, gravel, and bituminous pavements in accordance with contract requirements and ASTM standards. Prepared daily work reports to document inspections and documented labor, equipment, and materials for extra work as needed.

Project 92-533/569, Contract C2, Reconstruction of I-95 in New Haven From Stiles Street to the New Haven/East Haven Town Line, New Haven and East Haven, CT, *ConnDOT.* Inspector for the technical inspection and administration of the $70 million reconstruction and widening of I-95 in New Haven. The major components of this project included staged construction for the widening of I-95 between the frontage roads in East Haven and the east approach of the Pearl Harbor Memorial Bridge in New Haven while maintaining average daily traffic of more than 140,000 vehicles. The project included the replacement of four flyover bridges crossing I 95; the construction of a new interchange and connector roadways; the replacement of I-95 mainline bridges; and the construction of more than 1,500 meters of retaining walls, which use an architectural form liner to simulate stone. The project also included drilled shafts for pier foundations; more than 200,000 cubic meters of fill embankments for the new interchange and connector roadways; new highway drainage, illumination, and signalization; and incident management system installations. This project is one of several major contracts that are part of a coordinated $1 billion I-95 corridor improvement program being implemented in the New Haven area. Multiple contracts are underway simultaneously.

Berger Lehman Associates, PC, Rye, NY. Inspector for the construction of major bridges, roadways, and drainage facilities and structures; the assessment of environmental issues; and the completion of electrical installations and structural painting.

Cianbro Corporation, Pittsfield, ME. Project Engineer/Superintendent/Equipment Operator for major bridge construction projects. Work involved developing contract construction documents and work plans, determining work required for permanent and temporary construction, completing field layout work, erecting and rigging structures, tracking project profiles and preparing financial reports, preparing project schedules, procuring materials, managing the daily work activities of field personnel, writing requests for information, submitting requests for changes, and serving as a site safety supervisor.

Close, Jensen & Miller, PC, Wethersfield, CT. Project Coordinator/Project Engineer/Construction Advisor/Painting Advisor/Technician responsible for processing contract construction bid documents and plans for the Connecticut Department of Transportation. Responsibilities included reviewing consultant design plans; preparing contract specifications and special provisions, as well as preparing inland wetland and watercourse permit applications for submission to the Connecticut Department of Environmental Protection; preparing and coordinating agreements for utility relocation work; and preparing right-of-way documents and maps for type study reports.

Current Responsibilities

Mr. Vosberg is a Construction Inspector responsible for inspecting and observing construction activities throughout projects. His tasks include measuring field quantities, preparing daily inspection reports, supervising contractor activities, and making sure of compliance with contract documents.

Summary of Experience

Supervision of Construction Services, Contract P100.203, Bridge Deck Repairs and Resurfacing, Milepost (MP) 0 to MP 126, Garden State Parkway, NJ, *New Jersey Turnpike Authority (NJTA).* Bridge Assistant Resident Engineer for this $6.2 million contract that provided supervision of construction services and contract administration with scope including extensive repairs to 26 bridge superstructures and substructures. Responsibilities included coordination with resident engineer, client, contractor, and staff, coordination of lane closings with NJTA Traffic Operations, and direct inspection of contractor's work for compliance with the contract. Work includes bearing replacements and repairs, structural steel repairs, concrete bridge deck panel replacements, bridge barrier parapets, beam guide rail and attachments, concrete deck, abutment and concrete pier spall repairs of various types and depths, deck joint repair and replacement, membrane waterproofing, milling, hot-mix asphalt paving, pavement markings, delineators, and all related maintenance and protection of traffic. The project also includes extensive night work.

Supervision of Construction Services, Contract P100.187, Bridge Deck Repairs and Resurfacing, Milepost (MP) 0 to MP 126, Garden State Parkway, NJ, *NJTA.* Bridge Assistant Resident Engineer for this $5.5 million project involving extensive repairs to 25 bridge superstructures and substructures. Responsibilities included coordination of lane closings with traffic operations and supervision of inspection staff and contractor's work. Work includes replacing concrete bridge deck panels; repairing deck spalls; repairing and reconstructing deck joints; repairing headers; removing asphalt surfacing; replacing bridge barrier parapets; placing new membrane waterproofing; resurfacing approach roadways and bridge decks; and performing substructure repairs, pavement markings, beam guide rail improvements and attachments, and related maintenance and protection of traffic with extensive night work. Transitioned from Senior Inspector on Contract P100.186 to Assistant Resident Engineer on Contract P100.187 during this project.

Supervision of Construction Services, Contract P100.186, Bridge Deck Repairs and Resurfacing, Milepost (MP) 126 to MP 172, Garden State Parkway, NJ, *NJTA.* Bridge Construction Inspector responsible for providing inspection services for this $7 million project involving extensive repairs to 28 bridge superstructures and substructures. Responsibilities included coordination of lane closings with traffic

operations and supervision of contractor's work. Work also included replacing and repairing bearings; replacing concrete bridge deck panels; repairing deck spalls; repairing and reconstructing deck joints; repairing headers; removing asphalt surfacing; replacing bridge barrier parapets; placing new membrane waterproofing; resurfacing approach roadways and bridge decks; and performing substructure repairs, pavement markings, beam guide rail improvements and attachments, and related maintenance and protection of traffic. The project also included extensive night work.

Supervision of Construction Services, Contract P100.079, Bridge Deck Repairs and Resurfacing, Milepost (MP) 0 to MP 126, Garden State Parkway, NJ, *NJTA.* Bridge Construction Inspector for this $4 million project involving extensive repairs at 26 bridge structures and hot-mix asphalt resurfacing. Responsibilities included inspecting concrete bridge deck panel replacements including bridge barrier parapet, beam guide rail, and various appurtenances, spall repairs of various types and depths, deck joint repair and replacement, membrane waterproofing, milling, hot-mix asphalt paving, pavement markings and delineators, and all related maintenance and protection of traffic. The project also included extensive night work.

I-78 Eastbound Roadway Rehabilitation, NJ, *New Jersey Department of Transportation (NJDOT).* Road Construction Inspector for this $3.5 million project that consisted of 0.75-mile of concrete roadway excavation, full-depth roadway boxout, subgrade, subbase, drainage repairs, and new hot-mix asphalt pavement in three lifts. Also approximately 150 concrete roadway slabs were to be replaced with new precast-concrete slabs on the U.S. Route 22 eastbound ramp to I-78 eastbound. All work was done in three stages and was performed during day and nighttime operations that also included striping, rumble strips, pavement marker installation, and maintenance and protection of traffic.

I-78 Resurfacing and Guide Rail Upgrades, NJ, *NJDOT.* Road Construction Inspector for the resurfacing and guide rail work from east of Tunnel Road to Beaver Brook. Responsibilities included providing full-time inspection and supervision services to make sure of compliance with the contract plans and specifications for milling and repaving of asphalt roadways, installation of guide rail, end treatments and bridge barrier, and installation of non-vegetative surface. Additional responsibilities included quantity measurements, preparation of daily reports, and coordination with NJDOT personnel throughout the duration of the project, as well as monitoring of contractor's maintenance and protection of traffic. The project also included extensive night work.

New Jersey Turnpike Miscellaneous Structure Repairs, Contract R-1500, NJ, *NJTA.* Bridge Construction Inspector for the miscellaneous structure repair work for 23 structures on the New Jersey Turnpike Mile 0 to Mile 122, Pearl Harbor Memorial Turnpike Extension, and Newark Bay-Hudson County Extension. Responsibilities included providing full-time inspection and supervision services to make sure of compliance with the contract plans and specifications for deck and joint repairs, waterproof membrane, hot-mix asphalt concrete overlays, substructure repairs, installation of guide rail, end treatments, and bridge barrier. Additional responsibilities included quantity measurements, preparation of daily reports, monitoring of contractor's maintenance and protection of traffic, and coordination with NJTA personnel throughout the duration of the project.

Current Responsibilities

Mr. Patel has 26 years of experience serving in a variety of roles, including Resident Engineer, Assistant Resident Engineer, Chief Inspector, and Office Engineer. He has professional experience in the construction of major facilities for government clients.

Summary of Experience

Route 29, 33, 156 and US 202NB, MRRC – C106, Hunterdon & Mercer County, NJ, *NJDOT.* Resident Engineer responsible for various routes throughout Central Region MRRC C106 Project NJDOT. Contract work includes new curb, sidewalk, milling and paving on this $6.5 million project. Duties includes coordinate with contractor including traffic set up, field changes, change order, monthly meeting and monthly estimate. Prepare, weekly report, monthly estimates, EEO, Payroll and change order. Also schedule field inspectors, reviewing daily report, enter into NJDOT system, and prepare daily report and diary.

Route I-287 Resurfacing and Deck Replacement, Morris County, NJ, *NJDOT.* Assistant Resident Engineer responsible for this $28 million bridge and roadway inspection project. Work included the replacement of existing bridge deck in 4 stage, approach roadway, guide rail, paving and utilities work, milling and HMA resurfacing and striping of 7 miles of high volume highway. All work was performed off peak hours during nighttime with temporary lane closures. Coordinated with contractor including traffic set up and field changes.

Route 1 and Harrison Street Operational Improvement Project, Mercer County, NJ, *NJDOT.* Resident Engineer responsible for this $0.8 roadway inspection project along Route 1 and Harrison Street. Contract work included widening of Harrison Street, installation of new signal lights, opticom system, drainage and utilities work. Coordinate with contractor including traffic set up, field changes, change order, monthly meeting and monthly estimate. Prepare, weekly report, monthly estimates, EEO, Payroll and change order. Also schedule field inspectors, reviewing daily report, enter into NJDOT system, and prepare daily report and diary.

Route 1 Millstone River Bridge Replacement, Mercer County, NJ, *NJDOT.* Resident Engineer responsible for this $20 million dollar bridge inspection project. This project was a high profile bridge replacement project on heavily traveled, congested Route 1 near Trenton Capital district. Contract work includes replacement of existing bridge in 4 stage, approach roadway, guide rail, paving and utilities work. Coordinate with contractor including traffic set up, field changes, change order, monthly meeting and monthly estimate. Coordinate with various agencies of NJDOT including materials inspection, DEP, subcontractor approval, weekly report, monthly estimates, EEO, Payroll and change order. Also schedule field inspectors, reviewing daily report, enter into NJDOT system, and prepare daily report and diary.

Route 22 Milling and Resurfacing, MRRC – C103, *NJDOT.* Resident Engineer on this 10 mile roadway inspection project. Responsibilities included the oversight of all milling and HMA resurfacing operations

and stripping on this high volume highway thru a congested business district. All work was performed off peak hours during nighttime with temporary lane closures.

Rt. 1 Milling and Resurfacing, MRRC – C103, *NJDOT.* Resident Engineer on this 8 mile roadway inspection project. Responsibilities included the oversight of all milling and HMA resurfacing and striping operations on this high volume highway thru congested business district. All work was performed off peak hours during nighttime with temporary lane closures.

Alexander Road Bridge over Amtrak Northeast Corridor, *NJDOT.* Resident Engineer on this multimillion dollar roadway inspection project. Contract work included milling and paving various locations throughout the central region including main line and various ramps. Coordinated with contractor including traffic set up, field changes, change order, monthly meeting and monthly estimate. Coordinated with various agencies of NJDOT including materials inspection, subcontractor approval, weekly report, monthly estimates, EEO, Payroll and change order. Also scheduled field inspectors, reviewing daily report, enter into NJDOT system, and prepare daily report and diary.

I-195 Westbound Resurfacing, Ocean County, NJ, *NJDOT.* Resident Engineer on this 4 mile, $15 million Interstate Highway resurfacing inspection project. Responsibilities including office engineering duties with ACES and final closeout in accordance with NJDOT policies and procedures. Contract work including milling, resurfacing, extensive maintenance and protection of traffic, bridge deck waterproofing, Superpave HMA paving including base, intermediate and surface courses. The majority of work performed off peak hours during nighttime with temporary lane closures.

I-95 Resurfacing, Mercer County, NJ, *NJDOT.* Resident Engineer on this 8 mile, $19 million Interstate Highway resurfacing inspection project the Scudder Falls Bridge to Route 1. Responsibilities included office engineering duties with ACES and final closeout in accordance with NJDOT policies and procedures. Contract work including milling, resurfacing, extensive MPT, bridge deck repairs and waterproofing, Superpave HMA paving consisting of base, intermediate and surface courses. The majority of work performed off peak hours during nighttime with temporary lane closures. Mr. Patel received 2 commendations from the NJDOT on this assignment for his knowledge, experience and quick action.

Region North Term Agreement, Route 46(43) 23 & 80 Interchange, Wayne Township, Passaic County, NJ, *NJDOT.* Bridge Construction Inspector on this $65 million bridge inspection project that consisted of 9 bridges, 8 retaining walls, 19 overhead sign structures, 6 cantilever sign structures, roadway paving, drainage and utilities at this complex interchange known as the "spaghetti bowl".

Route 9, Section 23, Freehold, NJ, *NJDOT.* Bridge Construction Inspector on this $15.8 million roadway/ bridge project consisting of widening and safety improvements to Route 9 NB and SB. The work includes reconfiguring roadway approaches and four ramps and replacing the two span bridge structure over Conrail and County Route 522 resulting in a total of six lanes, three NB and three SB. Inspected all bridge items including substructure, superstructure, rebar, and concrete deck and various roadway items, including subbase, DGA, HMA paving, striping, marking, drainage and Maintenance and Protection of Traffic during both day and night time operations for this high traffic volume roadway.

Current Responsibilities

Mr. Burpulis is a NICET IV Inspector with 36 years of experience in the supervision of construction, inspection of all contractor operations, and coordination of inspection personnel, as well as overseeing work zone safety. He is responsible for project records including processing estimates, as-built plans, and quantity records, shop drawing review, utility coordination, and change order negotiating and recommendation for approval.

Summary of Experience

6 to 9 Widening Project, *NJTA.* Senior Project Professional responsible for the $52 million NJTA 6 to 9 Widening Project. Inspection included subbase soil placement and compaction, grade A and DGA soil placement, compaction which included rough and fine grading; the installation of U-Drain, RCP drain pipe, FES, manholes and inlets; basin and swale excavation, and grading; placement and grading of topsoil, seeding and matting operations; Gabion Mattress Ditch Protection and Rip-Rap installation; Beam Guide Rail installation; Superpave HMA base, intermediate, and top course installation, and compaction. Also responsible for permanent and temporary pavement striping; milled rumble strips; maintenance and protection of traffic; removal and installation of temporary concrete barriers; and concrete inspection, slump, air content, temperature, and test cylinders. Performed force account inspection, punch list inspection and Hurricane Sandy inspections. Responsible for keeping track of quantities and daily reports.

Route 52 Causeway Contract B, *NJDOT.* Senior Project Professional responsible for the inspection on the $250 million New Jersey Department of Transportation Rt. 52 Causeway Contract B. Inspection included lead pile driving inspection 30"x30", 24"x24", and 14"x14" prestressed concrete piles; reinforcement bar inspection of foundations, columns, pier caps; inspection of the installation of sheet piles for temporary cofferdams, and the removal of the sheet piles; installation of permanent sheet piles for bulkheads. Also performed inspections of bearing pad installation, installation of 94.5" precast concrete beams; inspection of concrete placement pours for foundations, columns, and pier caps; inspection of the installation, and removal of the construction access trestle. Responsible for keeping track of quantities and daily reports.

Route I-95 Resurfacing from Route 29 to South of Scotch Road, and from South of Lower Ferry Road to South of Route 1, *NJDOT.* Road Construction Inspector for this 8 mile, $19M Interstate Highway resurfacing project for the New Jersey Department of Transportation. Scope of work included milling, resurfacing and all related work, and Maintenance and Protection of Traffic. Responsibilities included inspection of: profile milling of up to 13" on road surfaces, 170,000 tons of Superpave HMA paving including base, intermediate, and surface courses, 22,000 tons of Modified Open Graded Friction Course, (MOGFC), installation of geotextile fabric, waterproofing membrane on bridge decks, polymerized joint adhesive, temporary and final line striping, installation of Reflective Pavement Markers, installation of Rumble strips, landscaping,

grading, and seeding. Responsible for keeping track of item quantities and daily reports. Worked on closing out project and performing the final punch list and as-built drawings.

Taxiway P at Atlantic City International Airport, Atlantic City, NJ, *SJTA.* Senior Construction Inspector for this $8.5 million project that included the inspection of the installation of and grading of sub-base soils and Dense Graded Aggregate, asphalt paving base course, intermediate course, and surface course including test strips of all asphalt paving courses, runway markings, paint striping, top soil placement, grading operations, landscaping operations including seeding of grass areas. Electrical inspection included the installation of wiring cables for taxiway centerline lighting, taxiway edge lighting, taxiway guidance signs, and the installation of fiber optic cable. Responsible for project close out and performing the final punch list.

Rehabilitation of the Beach Thoroughfare Bridge Structure, Atlantic City, NJ, *NJT.* Senior Construction Inspector for the demolition and inspection of the Thoroughfare Bridge. Duties included demolition of wood sheeting, concrete spall repairs to six piers, concrete form installation, concrete pours, and the installation of PVC sheeting and whalers. Responsible for keeping track of quantities and daily reports on all projects, performing project close out and final pinch list.

Central Region Term Agreement, *NJDOT.* Senior Inspector for milling and paving operations on Routes 18, 33, and 9. Responsibilities included monitoring contractor operations for substantial conformance to the plans and specifications (placement of proper material, thickness of lifts, grade of final wearing course, proper compaction of material, field measurement of placed material, computation of quantities placed during work shift, etc.). Work performed by the contractor includes milling of existing asphalt concrete to improve grades and remove deteriorated material, placement of new wearing surface for improved rideability, extensive maintenance and protection of traffic (including night operations), pavement markings and minor guide rail repairs.

Route 95 Resurfacing Project, *NJDOT.* Senior Project Professional responsible for inspection on the $19 million New Jersey Department of Transportation Route 95 Resurfacing Project. Inspection included profile milling of up to 13" on road surfaces, and placement of Superpave Asphalt. Paving operations comprised placement of base course, intermediate course, surface course, and a MOGFC rubber mix. Performed inspection of the installation of geotextile fabric, a waterproofing membrane on bridge decks, and a polymerized joint adhesive; inspection of temporary stripes and final stripes; and the placement and installation of Reflective Pavement Markers and the installation of Rumble strips. Provided inspection of landscaping, grading, and seeding. Responsible for assigning work tasks for 3 inspectors; keeping track of quantities and daily reports; entering daily reports on NJDOT Aces program; project close-out; and performing the final punch list.

Inspector

Years of Experience With Firm
1

With Other Firms
24

Education
Civil Engineering, Union County College, 2005

Professional Registrations
NJSAT, Asphalt Paving Construction Technologist, 2006

ACI Concrete Field Testing Technician Grade 1, 2000

Current Responsibilities

Mr. Nicasio is a Senior Inspector responsible for managing construction operations, supervising personnel, and overseeing work zone safety. He is also responsible for project documentation, estimates, change orders, as-built records, and utility coordination. He has extensive experience on construction, rehabilitation, renovations, upgrade, maintenance and critical emergency on-call projects on inter-state highways, bridges, mass transit and light rail and track systems, train stations, electrical lines and substations, public schools and public housing developments and municipal projects.

Summary of Experience

Construction Inspection for Various Facilities, NY and NJ, *PANYNJ and PATH.* Construction Inspector responsible for supervising the overall contract compliance from date of award to completion. Also ensured quality of construction in accordance with the contract plans and specifications and that the project adhered to applicable codes and standards of the Port Authority of NY/NJ. Consulted on technical issues, field resolutions, and recommendations during various stages of the projects. Implemented effective communication of progress/ problems between Senior Management, Field Staff, Contractors, and Inspectors. This project included the following assignments:

Critical and Emergency Projects

- Inspected the clean-up and repair of the World Trade Center after the 1993 terrorist attack.
- Coordinated the emergency work of draining flood waters and cleanup of affected PATH tunnels and stations during the 1992 flood crisis. Restored all track services in less than 24 hours.

Roads and Highways

- Replaced a critical roadway/ramp leading to the George Washington Bridge with pre-cast concrete slabs while maintaining daytime vehicular traffic.

Bridges and Tunnels

- Repaired the trunions and replaced the handrails on the Hackensack Lift Bridge.

PATH Commuter Train Stations

- Construction of a tunnel under active passenger and cargo railroad tracks.
- Pavonia – Renovated the entire Pavonia Station including the demolition of workshops, installation of electrical wiring, installation of commuter escalators and elevators.
- Christopher Street - Upgraded the electrical substation, installed new power feed and wiring and lighting fixtures.
- Exchange Place - Installed commuter elevators, ceiling panels throughout the station and platform tiles.
- 33rd St. Station - Installed Safety Warning Strip at the edge of platform. Installed CCTV in the security room.

- Harrison Station - Worked on structural repairs of the entire station. Installed a new platform decking and fire stand pipe.

Electrical Substations

- Upgraded the signal relay rooms in Journal Square and Christopher Street train stations and Harrison train yard.
- Installed and transferred signal cable for Class A railroad while maintaining passenger operations.
- Installed and balanced fan shaft and bearing, replaced exhaust fans at the track level at the former World Trade Center/PATH.
- Installed a new wiring system that provided remote access from Hoban Control Center (PATH Control Center).

Air Rail Project at JFK International Airport, NY, *PANYNJ/ Slattery Skanska.* Senior Inspector responsible for providing day-to-day field inspection and technical support to the Project Manager of the Air Rail Project, ($2 billion, eight-mile) the light rail system that now links the New York City subway systems and the Long Island Railroad with JFK International Airport. Supervised projects related to the relocation of utilities for installations of foundations and columns of the rail superstructures.

Bronx-Whitestone Bridge, Bronx, NY, *MTA Bridges & Tunnels.* Safety Officer responsible for conducting daily construction safety briefings; monitoring and inspecting work conditions in compliance to OSHA's General Industry and Scaffolding standards; developing a proactive site safety procedures; and diligently assessing conditions to prevent hazardous situations.

Train Stations, Plainfield, South Orange, and East Orange, NJ, *NJ TRANSIT.* Senior Field Inspector responsible for inspecting the reconstruction and rehabilitation of the historic NJ TRANSIT commuter train stations without regular, particularly rush hour, service interruption. Ensured that the restoration of the historic stations stayed true to its original structural design and aesthetic integrity. Upgraded the stations and built waterproof viaduct, elevated platform level, and built new ramps and elevator structure to comply with ADA standards.

Various New York City Public School Projects, New York, NY, *NYCSCA, Noble Strategy, LLC.* Project Officer responsible for managing various simultaneous NYC public school projects in partnership with URS Corporation. Provided mentorship assistance to small and minority-owned contractors to ensure code and safety compliance, tracking of accurate documentation including design, submittals, progress meetings, payments, close out requirements and deadline completion without school operational disruptions.

29

Education
A.A.S., Construction/Civil and Mechanical Engineering Technology, Mercer County Community College, West Windsor Campus

Professional Registrations
Asphalt Paving Construction Technologist: NJSAT (2011)

Traffic Control Coordinator: Rutgers, The State University of New Jersey (2011)

Current Responsibilities

Mr. Olla is an Inspector with 30 years of experience. He has served as a Resident Engineer on a number of transportation projects, having worked for the NJDOT for nearly 29 years. His responsibilities include acting as the Owner's direct representative to the contractor and project stakeholders, direct supervision of the project field inspection/engineering staff, performing quality assurance oversight of major items of work in progress, and ensuring projects are constructed in conformance with the plans and specifications for the owner.

Summary of Experience

Rt. 35, MP 0 to 4, Hurricane Sandy Restoration, DP #13130, *NJDOT.* Resident Engineer for this $80M project, resulting from National Disaster, Super Storm Sandy and its destructive effects along the New Jersey Coastal Barrier Islands including NJ Rt. 35 MP 0 to MP 12. 5. The project was the 3rd of three Contracts awarded from the Sandy Federal Relief Funds to rebuild Rt. 35 in its entirety from MP 0 to MP 4. The work included extensive Traffic Staging and Detouring to remove the existing roadway to its subbase and rebuild with Fabric Material, Dense Graded Base Course, multiple lifts of Asphalt, New Curb and ADA compliant sidewalk and curb ends. Massive gas, electric, sanitary sewer and water relocations. Massive deep underground storm sewer drainage requiring deep dewatering operations and 5 massive 9,000 Gallon per minute pump stations. The Project includes the use of the Departments Air Void Specification and International Roughness Specification. This was one of the 3 Sandy Restoration Contracts under the directive of the State of New Jersey Governor's Office. This project involved the cooperation of the 4 towns and county involved in this project with an advanced time schedule requiring multiple work crews hours and days to keep on schedule Duties included being the Owner's direct representative to the contractor and project stakeholders, direct supervision of the project field inspection/engineering staff, performing quality assurance oversight of major items of work in progress and ensuring the project is constructed in conformance with the plans and specifications for the owner.

Rt. 1 Various Locations, North of College Road to NJ 91 Connector, DP #12115, *NJDOT.* Resident Engineer for this $8.6M project involving the milling and resurfacing of 8 miles of Rt. 1 in Middlesex County as well as Intersection and Signal Improvements at New Road. The Project includes the use of the Departments Air Void Specification and International Roughness Specification. This project had a combination of day and night work and involved multiple locations. Duties included being the Owner's direct representative to the contractor and project stakeholders, direct supervision of the project field inspection/engineering staff, performing quality assurance oversight of major items of work in progress and ensuring the project is constructed in conformance with the plans and specifications for the owner.

MRRC C106, DP #12429, *NJDOT.* Resident Engineer for this $6.5M project involving the milling and resurfacing of five locations throughout Mercer and Hunterdon County. In addition new ADA complaint sidewalk and curb was installed. The Project includes the use of the Departments Air Void Specification and International Roughness Specification. This project had a combination of day and night work and involved

multiple locations with coordination with the Trenton Thunder Minor Baseball Team Home Game Schedule as well as the Town Of Lambertville. Duties included being the Owner's direct representative to the contractor and project stakeholders, direct supervision of the project field inspection/engineering staff, performing quality assurance oversight of major items of work in progress and ensuring the project is constructed in conformance with the plans and specifications for the owner.

Route 33 Bridge over Rocky Brook, Emergency Repairs Contract No. 014123100, DP #12113, Borough of Hightstown, Mercer County, *NJDOT.* Resident Engineer for this $0.65M project involving emergency bridge repair of the Rocky Brook Bridge in Hightstown, Mercer County. Contract included concrete bridge deck and parapet replacement, drainage improvements, milling and HMA placement, maintenance and protection of traffic, coordination of complex permanent detours, concrete ADA compliant sidewalk and vertical curbing, pavement markings and traffic striping, signal improvements and the removal of an underground abandoned oil tank. The project included extensive coordination with the Borough of Hightstown, Township of East Windsor and various agencies, NJ State Police Truck Enforcement, DEP and NJDOT ensuring compliance with safety, permits, materials inspections, and subcontractor approval, daily and weekly reports, monthly estimates, EEO, payroll, change orders, contract acceptance and closeout. This project had a combination of day and night work. Duties included being the Owner's direct representative to the contractor and project stakeholders, direct supervision of the project field inspection/engineering staff, performing quality assurance oversight of major items of work in progress and ensuring the project is constructed in conformance with the plans and specifications for the owner.

Rt. 129 Resurfacing Contract No. 000093100, From Route 1 to Lamberton Road Connector, DP #10131, City of Trenton, Mercer County, *NJDOT.* Resident Engineer for this $3.56M project involving overlaying 4 Bridge Decks with a "Polyester Polymer Concrete Overlay". This item was a specialty item requiring the Prime Contractor to bring in a subcontractor from the State of California who specializes in the placement of this material. The placement required a specialized paving machine being fed from a mobile mixing truck. The material was infused with a polymer compound and a special aggregate mix. This was placed at a depth of ¾ of an inch and set up to traffic within 1 hour. Other work included milling and paving of existing pavement with HMA intermediate and surface courses, concrete curb and sidewalk, drainage upgrades, maintenance and protection of traffic, striping, pavement markings and reflectors and associated activities. Duties included being the Owner's direct representative to the contractor and project stakeholders, direct supervision of the project field inspection/engineering staff, performing quality assurance oversight of major items of work in progress and ensuring the project is constructed in conformance with the plans and specifications for the owner.

ACI Concrete Construction Special Inspector – No. [redacted]

ACI Concrete Field Testing Technician -Grade 1 – No. [redacted]

ICC Structural Masonry Special Inspector – No. [redacted]

NICET Level II - Transportation Engineering Technology/ Highway Construction

Current Responsibilities

Mr. Bhuiyan has over 20 years of experience in designing, supervising and managing construction projects, both in the public and private sectors. As a civil engineer, he was responsible for ensuring specification compliance in such categories as masonry, concrete, pile driving, soils, rebar and curtain panel walls.

Summary of Experience

Controlled Inspections and Testing Laboratory Services, *NYCHA.* Performed masonry inspections at various housing projects through the five boroughs. Recorded findings in a daily field report, and notified clients/project managers on site conditions. Assignments include Unity Plaza, Armstrong Houses I&II, Ocean Hill Houses, Tapscott Houses, Independence Tower, Soundview Houses, Woodside Houses and South Jamaica Houses.

Special Inspections and Materials Testing Laboratory Services #RQ_A&E_2R, *NYCDDC.* Providing special inspection services under a three-year, task-order contract for Cultural, Police and Fire facilities and Libraries. Inspection and testing of all material, equipment and operations are conducted with strict adherence to the New York City Building Code and comply with contract drawings and specifications. Assignments include: CSV Vaults, States Island Museum, La MaMa Annex, Riverside Health Center, Catherine Street Family Residence.

Special Inspections and Materials Testing Laboratory Services #RQ_A&E_1R, *NYCDDC.* Providing special inspection services under a three-year, task-order contract for Correctional, Courts, DEP, and Juvenile Justice Facilities. Inspection and testing of all material, equipment and operations are conducted with strict adherence to the New York City Building Code and comply with contract drawings

Special Inspection and Laboratory Testing Services SCA09-00013R [Contract# C11275], *NYCSCA.* Inspector responsible for provided inspection and testing services for a two year term contract. Ensured both the quality of work performed by construction contractors and their subcontractors, as well as compliance with all applicable laws, regulations, codes, requirements etc. Assignments include: PS32X, PS058X, PS279, PS175X, IS139X, IS131X, John F. Kennedy, PS11X, PS70X, Morris High School, PS6X, IS194, PS134, PS112, PS108 and IS166.

Controlled Inspection and Testing Laboratory Services Contract, Various Sites, NYC, *NYCDDC.* Inspector whose responsibilities include performing masonry inspections under citywide Controlled Inspection and Testing Laboratory Services contract. Additional duties entail maintaining daily field reports, noting deficiencies and working together with various parties to resolve any problems to aid in project completion.

Retainer Contract for Inspection Services at Various Locations throughout NYC, Contract No. 47580001, *NYCEDC.* Inspector for this contract where Tectonic is providing on-call construction inspection services at various locations throughout NYC. Assignments include: Highline M&O Facility.

Contract C-000010237/10601, Consultant Services for Controlled Inspection, Various Boroughs, NYC, *NYCSCA.* Responsibilities include performing masonry inspections. Various project locations. Reporting circumstances of field activity to Project officers. Maintaining supportive documentation of field activities and Contractor operations.

NS Engineers P.C., NY. Project Engineer for the following projects:

184 Kent Avenue, Brooklyn, NY
Performed structural design and site safety guideline of 40 feet long x 14 feet deep excavation for elevator Pit No. 2, coordinated and inspected the construction work.

Morris HS, 665 East 166th Street, Bronx, NY
Structural condition assessment of existing building and provided safety guidelines for Terracotta replacement & restoration.

38-20 Beach Channel Drive, Far Rockaway, NY
Performed Auto Cad drawings as per building code for the approval of NYC department or building for supported pipe scaffold system also calculation to check the structural stability of slab & beams.

251 East 51st Street, New York, NY
Inspected the site and calculation to check structural condition of existing slab beam, retaining walls of basement vault.

Gateway School, Queens, NY, *NYCHA*
Performed structural calculation for 18 reinforcements concrete lintels restoration of different length from 10 to 25 feet.

225 East 99th Street, New York, NY, *NYCHA*

Washington Houses – 14 Buildings, *NYCHA*
Performed calculations for design of suspended scaffold, brick pointing, replacement roofs, parapet coping and guards.

93-95 Lewis Avenue, Brooklyn, NY, *NYCHA.*
Performed structural engineering calculation for replacement of roof, brick pointing, repair caulking and suspended scaffold.

PS 128 69-10 65th Drive, Middle Village, NY, *NYCSCA*
Designed and developed contract structural plans and specification for supported pipe scaffold with fire rated tarpaulin, replacement windows and also designed for parapet coping.

Current Responsibilities

Mr. Plant is a Resident Engineer for Structural Engineering for KS Engineers in New Jersey and New York. He provides Resident Engineering services for many of the local transportation agencies in the New York and New Jersey marketplace, including the NJ Turnpike Authority, NYSDOT, NYCDOT, MTA-Metro-North, and MTA-Bridges and Tunnels.

Summary of Experience

Manhattan West Platform - Brookfield Properties, New York, NY. Project Manager for this project involving the construction of a segmental girder platform over LIRR track to the Hudson Yards and Amtrak's Northeast Corridor. The platform is constructed with 16 segmental girders composed of 33 precast segments which are post-tensioned and grouted together to form one girder. The each girder is placed adjacent to each other on cap beam bearings to create the working platform for high-rise building construction. As Project Manager, Mr. Plant's responsibilities include management and supervision of independent 3rd party post-tensioning and grouting inspection, and secondary inspection of bearing installation, anchorage elastomeric coating, temporary post-tensioning and material handling.

14th Street Viaduct Construction Management, Hudson County, Harrison, NJ. Resident Engineer for the existing 14th street viaduct is a 30 span, 1459 feet long bridge running east to west from Willow Avenue to Manhattan Avenue in the city of Hoboken, Hudson County, NJ. The viaduct crosses over several local streets such as Madison Street, Jefferson Street, Adams Street, Grand Street, Clinton Street and also NJ Transit rail tracks towards the west end under Span 28. The existing bridge superstructure comprises of multiple steel girders in most of the spans except two truss spans - one over Adams Street and the other over the NJ Transit tracks. The substructure units are steel bents supported on piles. The existing bridge structure has been showing signs of deterioration and has required a few emergency repairs. This contract is for providing construction management service for this project. As Resident Engineer, Mr. Plant's duties included being the Owner's direct on-site representative to the contractor, direct supervision of the Construction Project's Field Inspection / Engineering staff, performing quality assurance oversight of major items of work in progress and ensuring that the project is constructed in accordance with the plans and specifications for the owner. Specific items overseen/inspected by Mr. Plant included:

- MPT on local roads.
- Construction of pedestrian precast concrete tunnel and retaining walls.
- Installation of lighting conduits and wiring.
- Rock excavation for new abutment construction.
- Substructure construction of reinforced concrete footings, pier columns and caps.

Rehabilitation of Dodd St and Clark St Bridges, Essex County, NJ. Resident Engineer for this project involved design engineering and construction inspection services for the Replacement of the Center Street Bridge over Third River in the Township of Nutley, and the Rehabilitation of of Dodd Street Bridge over Second River in East Orange and the Rehabilitation of Clark Street Bridge over Toney's Brook in Glen Ridge. As Resident Engineer, Mr. Plant's duties included being the Owner's direct on-site representative to the contractor, direct supervision of the Construction Project's Field Inspection / Engineering staff, performing quality assurance oversight of major items of work in progress and ensuring that the project is constructed in accordance with the plans and specifications for the owner. Specific items overseen/inspected by Mr. Plant included:

- MPT on local roads.
- Complete demolition of a temporary sidewalk bridge over Second River.
- Superstructure construction of elastomeric bearings, precast concrete deck beams and barrier parapets.
- Reconstruction of asphalt driveway aprons

New Jersey Turnpike Widening Program Contract 201, Bordentown, NJ, *NJTA*. Resident Engineer for this project included the construction of one mile of three northbound and southbound outer travel lanes, seven MSE walls, three steel-framed bridges, narrowing two existing bridges, VMS and static sign structures, tunnel and under-bridge lighting. As Resident Engineer, Mr. Plant was responsible for a constructability review program wide, construction inspection and material testing supervision, field issue resolution, utility and agency coordination, change order/claim resolution, and payment processing.

World Trade Center Vehicle Security Center, Manhattan, NY, *PANYNJ*. Estimator for this project included all estimation of work involved with the proposed construction of the Vehicle Security Center. As Estimator, Mr. Plant's responsibilities included performing quantity take-offs and developing costs for all building trade work.

Professional Registrations
NACE Level 2 Coating Inspector

Rutgers Traffic Control Coordinator (TCC) (2011)

SSPC C -3 Supervisor/ Competent Person Training for Deleading of Industrial Structures

Current Responsibilities

Mr. Eckel is an Inspector at Gannett Fleming responsible for structural inspection duties, such as bridge painting and coatings inspection.

Summary of Experience

Verrazano-Narrows Bridge, Brooklyn, NY, *TBTA.* Responsible for inspection of SP10 blast, 100% containment, and three coat painting system, monitoring lead emissions from containment. Also made certain that all safety regulations were followed by seven paint crews working daily. Inspection responsibilities included lead removal, bridge painting (three coat paint system), traffic control, monitoring containment, hazardous material, environmental safety, and lane closures.

Region South Term Agreement, Contract 2010-1 Route 55 and Contract 2011-1 Maintenance Bridge Painting, Various Locations, NJ, *NJDOT.* Coatings Inspector responsible for construction inspection services for this federally funded contract. Contract 2010-1 involved 11 bridges along Route 55 in Deptford, Mantua, and Washington Townships, Gloucester County. Contract 2011-1 involved maintenance bridge painting. Responsible for monitoring containment operations, MPT, quality of coating materials, proper storage, mixing, application, inspecting coating for compliance with contract specifications, surface preparation, and managing and training the inspection force.

Contract No. T100.147, Bridge Painting Structure No. 84.24, *NJDOT.* This contract included the removal of approximately 180,000 square feet of existing lead based paint to a near-white (SSPC SP-10) blast cleaning standard, utilizing a full containment system during all blasting and repainting activities. The work also involved abrasive blasting (SSPC SP-10) and painting of approximately 70,000 square feet of weather steel within the widened portions of Structure No. 84.24S and throughout Structure No. 84.24N. The work on the weathering steel specifically involved the beam-ends, areas below the bridge deck joints and areas as directed in the field during construction. The existing paint system was replaced with a NJTA-approved three coat system (Zinc-Rich Primer/Epoxy Intermediate/Urethane Finish). Work also included deck joint seal replacements on the northbound Inner and Outer Roadways (Structure No. 84.24N), MPT and other incidental work called out in the contract documents. Inspection responsibilities included lead removal, bridge painting (three coat paint system), traffic control, monitoring containment, hazardous material, environmental safety, and lane closures

Region South Maintenance Bridge Painting, 2009-1, Camden County, NJ, *NJDOT.* This $3M Consultant Fee (overall construction value: $18M) bridge painting inspection project involved removal of lead based paint and repainting the structures including the concrete abutments for various bridges in Camden County, NJ. Responsible for monitoring containment operations, MPT, quality of coating materials, proper storage, mixing, application, inspect coating for compliance with contract specification, surface preparation, also managing and training the inspection force. Inspection responsibilities included lead removal, bridge

painting (three coat paint system), traffic control, monitoring containment, hazardous material, environmental safety, and lane closures.

Construction Supervision of Pile Repairs, Contract R-1518, *NJDOT.* This $8M project involved construction of supplemental pier caps with drilled micropiles, concrete pile repairs and pile encapsulation with fiber wraps and prefabricated shells, fender systems, slope protection improvements, bridge jacking, environmental inspections, cofferdams, substructure waterproofing/watersealing and other related miscellaneous work items in a marine environment at Structure Nos. 0.42L, 1.66, 7.85, 17.50 and 18.45. The majority of work will be performed over waterways during daytime hours using long-term shoulder closings.

Benjamin Franklin Bridge, Phase IV, *DRPA.* Responsible for the coating inspection of the main span of the Benjamin Franklin Bridge as part of this overall project having a total construction cost $87M. Inspection responsibilities included lead removal, bridge painting (three coat paint system), traffic control, monitoring containment, hazardous material, environmental safety, and lane closures.

Benjamin Franklin Bridge, Phase III, *DRPA.* Responsible for the inspection of the interior and exterior of the Camden and Philadelphia towers. Inspection of containment, blast and three coat painting system on exterior of tower and SP3 paint removal and two coat moisture paint system of interior cells of tower. Inspection responsibilities included lead removal, bridge painting (three coat paint system), traffic control, monitoring containment, hazardous material, environmental safety, and lane closures.

Benjamin Franklin Bridge, Phase II, *DRPA.* This project involved inspection of blast and profile, and taking dry film thickness readings of three coat paint systems. Observed safety and lead emissions from containment. Monitored ambient conditions and made daily reports. Inspection responsibilities included lead removal, bridge painting (three coat paint system), traffic control, monitoring containment, hazardous material, environmental safety, and lane closures.

Walt Whitman Bridge, *DRPA.* Performed coatings evaluation of 240 bearings. This included taking total dry film thickness reading, performing adhesion tests, copper sulfate testing, photographs, a report and recommendations of all the findings and results of all the tests submitted at the end of the project. Inspection responsibilities included lead removal, bridge painting (three coat paint system), traffic control, monitoring containment, hazardous material, environmental safety, and lane closures.

KTA-Tator, Inc.
Certificate of Attendance: Level III Coatings Inspection – No. [redacted] (2002)

Current Responsibilities

Mr. Nowbahar has 20 years of construction supervision experience, mostly working on NYSDOT and NYCDOT projects involving bridge maintenance and painting components. He offers in-depth knowledge of abatement methods.

Summary of Experience

Emergency Sidewalk Repairs, Hurricane Sandy, Various Locations in the 5 Boroughs, NYC, New York, *NYCDDC.* Inspector responsible for providing Inspection services for the reconstruction of sidewalks and curbs pulled up by fallen trees caused by Superstorm Sandy in early November of 2012. Tectonic is providing administration and inspection services to facilitate timely repairs and ensure the quality of the Contractor's reconstruction work. Repair efforts are quickly coordinated as soon as debris is removed from the affected areas.

DO30974 Term Agreement for Construction Inspection Services – Region 8, New York, *NYSDOT.* Inspector whose duties included performing construction inspections on the $3.5M term agreement for bridge replacement or rehabilitation and highway reconstruction projects varying in scope and duration.

DO30905 Term Agreement for Construction Inspection Services – Region 8, New York, *NYSDOT.* Inspector whose duties include performing construction inspections on the $3.5M term agreement for bridge replacement or rehabilitation and highway reconstruction projects varying in scope and duration.

D261371 Painting of 61 Bridges on I-84 under Term Agreement D030654 in Region 8, *NYSDOT.* Senior Inspector responsible for inspecting bridge painting of 61 Bridges across Region 8, NY. The painting of the bridges involve steel shot removal of paint, Class A containment of lead paint, extra intermediate 5 coat painting, night work requiring night lights, arrow boards and MPT. Two of the 61 bridges arch over railroads and are located in Orange County. Three bridges over water are located in Orange and Dutchess Counties.

Bridge Painting of 8 Bridges on I-84 under Term Agreement D030574 in Region 8, *NYSDOT.* Inspector responsible for inspecting blasting and painting of 8 bridges. Work involved localized paint removal, primer intermediate stripe coat and finish, Class A containment of lead paint, night work and MPT for local county lanes.

D260542 PIN 8809.85.321 Bridge Maintenance Painting in Dutchess and Putman Counties under Term Agreement D015696 in Region 8, *NYSDOT.* Senior Inspector responsible for this $1.87M project which involves painting 9 bridges on I-84 east of Newburgh/Beacon Bridge. Work involved localized paint removal, primer intermediate stripe coat and finish, Class A containment of lead paint, night work and MPT.

Rehabilitation of 5 Bridges, Westchester, Dutchess and Putnam Counties, NY, *NYSDOT.* Inspector responsible for blasting and painting with Erie Painting. Work involved localized paint removal, primer intermediate stripe coat and finish, Class A containment of lead paint, night work and MPT.

Rehabilitation of 5 Bridges, Westchester, Dutchess County, NY, *NYSDOT.* Inspector responsible for paint removal using Peel-Away and painting with Pensa Contracting Inc. Work involved localized paint removal, primer intermediate stripe coat and finish, Class A containment of lead paint, night work and MPT.

Inspection of 16 Bridges, Staten Island, NY, *NYSDOT.* Inspector responsible for blasting and Painting with Delphi Contracting and Decorating. Work involved localized paint removal, primer intermediate stripe coat and finish, Class A containment of lead paint, night work and MPT.

Rehabilitation of 8 Bridges on I-495, *NYSDOT.* Inspector whose duties included change bearings, joints and concrete. Work involved localized paint removal, primer intermediate stripe coat and finish, Class A containment of lead paint, night work and MPT.

Queens Resurfacing Project at Seven Different Locations, *NYSDOT.* Construction Inspector NICET Level II for this project which involved asphalt concrete paving and installation of pedestrian ramps. The 7 locations included Van Wyck Expressway, Francis Lewis Boulevard, Roadway below Whitestone Bridge, 164th Street, Horace Harding Expressway, Liberty Avenue and Farmer Boulevard. Duties included material inspection, field measurements for concrete, asphalt, catch basins and manholes as per contract specification. Also responsible for contractual payments. Total Construction Cost was $12M.

NACE CIP Level 3 – Peer Review with Marine

Current Responsibilities

Mr. Zubair is a Construction Inspector for KS Engineers in New Jersey and New York. He provides inspection for both highway and bridge work, including bridge structural painting and paint removal; scheduling; cost estimation; processing change orders; sanitary sewer and water main installation; air monitoring; maintenance and protection of traffic; surveying monuments; excavation; sub-base concrete and asphalt pavement; erection of electric poles; sidewalk installation; etc.

Summary of Experience

DRJTBC, Upper Black Eddy-Milford Toll-Supported Bridge, Contract No. TS-444A, Milford, PA - Painting and structural inspector for the rehabilitation of the Upper Black Eddy - Milford Toll-Supported Bridge, a three (3) span Warren truss structure with a total length of approximately 700 feet between abutment backwalls. Work included: replacement of entire existing floor system, including 3 1/2" thick concrete filled inverted T-beam deck, steel stringers, steel floorbeams, associated deck joints, and lower chord lateral cross-bracings with new galvanized structural steel members; replacement of the entire length of existing steel plate sidewalk with a new sidewalk while maintaining the existing sidewalk cantilever brackets; installation of new sidewalk support stringers and tension ties; identify areas of steel sectional loss and check for damage and loose rivets and approve locations for rivet replacements; replacement of existing truss fixed and expansion bearings in all spans; cleaning and painting of all structural steel utilizing a Class 1 A Containment System and surface prep std of SSPC SP-10 level of abrasive blast cleaning of steel and application of a three coat zinc system; replacement of entire existing lighting system and CCTV with system; replacement of entire existing pedestrian railing with a new decorative pedestrian railing and replacement of abutment backwalls; repair of deteriorated areas of concrete and stone masonry at all abutments and piers; removal and replacement of existing near and far approach curbs and sidewalks in the immediate vicinity of the bridge; milling and overlaying of both approach roadways; cleaning of existing inlets and pipes; installing traffic stripes within the project limits, and installing new traffic control signs. All construction work performed under a full-time detour.

DRPA, Construction Monitoring Services for the Walt Whitman Bridge Steel Painting, NJ & PA - Construction Inspector/Bridge Painting Inspector responsible for the inspection of surface preparation for the coating of steel members that included removal of existing lead-based paint and application of new high-performance coating system to the Philadelphia deck-truss spans, the Philadelphia twin-girder simple spans, and the 2 lower-layer interior cells of the Philadelphia Tower and the Gloucester Tower. The project also included maintenance painting of the Philadelphia girder spans and the approach overpass bridge structures in New Jersey and Pennsylvania. Work included application of 3 coats of paint for the steel members, using Class 1A containment for abrasive blasting. Primer, intermediate, and final coat were applied and reports were prepared for placement in contract document files.

NYSDOT Region 11, Nassau Expressway & Interim Nassau Expressway Pavement Rehabilitation & Resurfacing (Including painting of 7 bridges) - Chief Inspector responsible for providing civil engineering expertise to the whole construction project of rehabilitation of 7 bridges and ramps. Responsibilities included protecting client's interest through quality control and mitigation of schedule problems relating to completion deadlines. Monitor CPM schedule and progress of work as per schedule deadlines. Check RFIs, evaluate RFIs feasibility and coordinate with field inspectors and design consultant and contractor. Widening of highway ramps. Installation of new sub base and concrete pavements. Shoring and replacement of bridge decks. Replacement of bridge bearing. Operations involve shoring and hydraulic jacking of bridges. Installation of Calcium Patch to replace deteriorated concrete on approach slabs at abutment locations. Review shop drawings, perform site inspection, ensure all construction proceeds in accordance to contract specifications and approved shop drawings. Oversee MPT setup and sign installations. Check installation of vehicle arresting barrier net. Coordinate and liaise with different City and State agencies to mitigate upcoming problems and conflicts. CALL INFORM traffic communication about all lane closures and openings. Review and sign off Daily Work Records of Construction Inspectors daily reports. Performed office engineering duties also by obtaining work completion information from all inspectors daily reports and tallied the quantities completed with quantities approved for payment and matched the same with CEES quantities data entry.

NYSDOT, Project Cleaning & Painting of 26 Bridges on Major Deegan Expressway (Contract #D257788), NY - Bridge Painting Inspector responsible for overseeing lead removal and protective coating of 26 bridges on I-87. Work entailed environmental protection, air monitoring, and construction of Class A containment for surface preparation of steel in accordance with NACE 3/SSPC 6 and NACE4/SSPC 7 standards; quality control; engineering safety; environmental compliance specially pertaining to lead removal; design of highway construction zone, maintenance and protection of traffic, and night time construction illumination. Coordinated with traffic advisory and NYPD Highway Patrol Police.

NYCDOT, Protective Coating of East 149 Street Bridge & Woodlawn Road Bridge over Metro-North Railroad, NY – Bridge Painting Inspector responsible for inspection of lead removal and painting using Class B containment and power-tool cleaning. Performed air monitoring and analysis of particulate concentration using personal data RAM machine. Supervised hazardous waste disposal, environmental compliance, and maintenance and protection of traffic.

< 1

With Other Firms
10

Education
High School Diploma, Trinidad

Professional Registrations
AWS- CWI: No. [redacted]

NACE CIP Level 1, Level 2:
No. [redacted]

Current Responsibilities

Mr. Williams is a Construction Inspector for KS Engineers in New Jersey and New York. He provides welding and painting inspection services, including inspection for bridge painting for multiple contracts with NYSDOT. His experience includes performing QA/QC oversight for welding operations and conducting reviews of quality checks for welding and radiographic work.

Summary of Experience

REI Services for Component Rehabilitation of 10 Bridges, Brooklyn, NY, *NYCDOT.* Inspector. Scope of work includes constructability review of the design documents; CPM review of schedule and updates; continuous REI services and material testing; and public outreach. Construction cost - $6.35 million.

Region 10 Term Agreement, Contract D030568 for Bridge Painting, Nassau & Suffolk County, NY, *NYSDOT.* Inspector. Inspected bridge painting for multiple contracts on all of the Region's major highways including: Rte 27, Southern State Parkway, Long Island Expressway, Northern State Parkway, Rte 25, Rte 25A, Meadowbrook Parkway, Rte 135 and more. Much of the work was performed at night with WZTC for lane closures. Work included containment and hazardous waste (lead paint) removal prior to installing primer, and a minimum of two coatings. Construction cost - $20 million.

Croton Water Treatment Plant, Bronx, NY. QA General Field Inspector. Supervised all welder qualification tests. Reviewing of weld procedures and welder qualifications. Oversight of all welding operations and NDE requirements. Supervised mapping and tracking of weld, the receiving and installation of equipment (Tanks, pumps, UV units), all QC contractors welding/painting/and mechanical. Walking of packages consisting of pneumatic testing. Pre-hydro and post hydro testing. Supervised all painting and mechanical contract. Piping system restoration. Supervised NDE inspection using the PT and MT process. Construction codes: ASME Section IX, ASME B31.1, ASME Section V, AWS D1.1, and AWS D1.6.

Croton Water Treatment Plant Raw and Treated Water Tunnels Connecting UV Plant, Bronx, NY. QA Welding Inspector. Supervised all welder qualification tests. Oversight all welding operations and NDE requirements. Review all welding procedures and qualifications. Supervised mapping and tracking of the weld. Supervised NDE inspections using the PT process. Construction codes are AWS D1.1.

Teal/Bimodal, Houston, TX, *S&B Engineers and Constructors, Ltd.* QA Welding Inspector. Responsible for conducting visual and dimensional examinations. Oversight all welding operations. Walking of packages consisting of pre-hydro, hydro, and post-hydro test. Mapping and tracking weld. Performed NDE inspections using the PT and the MT process. Construction codes are: ASME Section V, ASME Section VIII, ASME Section IX, ASME section B31.1, and AWS D1.1.

Meeker II Gas Plant, Meeker, CO, *S&B Engineers and Constructors, Ltd.* QA/QC Welding Inspector. Conduct visual and dimensional examinations. Oversight all welding operations. Walking of packages consisting of pre-hydro, hydro, and post hydro. Supervised all painting of mechanical contract. Mapping and tracking welds. Supervised NDE inspections using the PT and MT process. Construction codes: ASME Section V, ASME Section VIII, ASME Section IX, ASME Section B31.1.

Oil States Industries, Inc. Houston, TX. QC Welding Inspector. Oversight of all welding operations. Dimensional verifications of fabricated structures. Supervised all painting of mechanical contract. Visual acceptance of weld and weld mapping. Supervised NDE inspections using the PT and MT process. Construction codes AWS D1.1 and API 1104.

Borco Oil Refinery, Upgrade Project, Freeport, Bahamas. (C.W.I.) Welding Inspector. Conducted/reviewed quality checks of all welding and radiographic. Testing procedures during the upgrade phase of Borco Oil Refinery tanks and associated piping. Construction codes are ASME Section V, ASME Section VIII, ASME Section IX, and ASME B31.3

Weld Services, Trinidad and Tobago. (C.W.I.) Welding Inspector. Welding of piping and structural members in accordance with the American Society of Mechanical Engineers code requirements during the shop fabrication phase of various projects. Responsible for visual acceptance of completed weldments. Construction codes are: ASME Section V, ASME Section VIII, ASME Section IX, and ASME Section B31.3.

NACE CIP Level 1

NACE CIP Level 2

Current Responsibilities

Mr. Ali is a Construction Inspector for KS Engineers in New Jersey and New York. He provides construction inspection for roadway reconstruction, bridge rehabilitation, and bridge painting projects, including milling and paving work, and existing lead paint removal utilizing class 1A containment systems. Has also performed office engineering duties, including review of all daily reports, estimates, and calculations.

Summary of Experience

Professional Construction Services for Driscoll Bridge Repainting and Miscellaneous Improvements, NJ and PA, *NJTA.* NACE Inspector for this project that included: existing lead paint removal utilizing class 1A containment systems; steel surface preparation; painting structural steel; performing of tests to confirm compliance with the contract specifications; miscellaneous improvements to the structure.

FHWA Maintenance Bridge Painting Contract 2010-3, Routes 35 and 37, NJ, *NJDOT.* Inspector on this project that included: existing lead paint removal utilizing class 1A containment systems; steel surface preparation; painting structural steel; performing of tests to confirm compliance with the contract specifications; maintenance and protection of traffic controls.

REI Services in connection with the Reconstruction of Manhattan Bridge (Contract #14), Rehabilitation of Cables & Suspenders, Boroughs of Manhattan and Brooklyn. This is a multimillion dollar project involving rehabilitation of main components of the Manhattan bridge, job responsibilities include preload verification of suspenders, removal of old suspender, installation of new suspender box and a new suspender as per approved design and procedures. The suspender loaded as per guideline of Weidlinger Associates. The job responsibilities also include removal of faying surfaces continuity and bearing plates and installation of the same, inspection of surface preparation Anchor profile, WFT, DFT and recording of ambient. Installation of work platform on Main cables TA platform and underdeck platform as per approved drawings and procedures. Services to be performed include detailed inspection and on-site field tests of all materials and items of work as is customary; field measurement and collection of data necessary to submit monthly and final estimates and progress reports; preparation of record plans showing all changes from the contract plans. A diary describing the progress of the work, specific problems encountered and all other pertinent information relative to the execution of the contract, and all records, shall be kept in accordance with the Manual for Uniform Record Keeping (MURK).

CI Services for Median Crossover Crash Protection Contract No. 11, Livingston and Morris Townships, NJ. *NJDOT.* Inspector responsible for the installation of double sided Guide Rail in the median of sections of Rt. 280, 287 and 124. Work included installation of double sided Guide rail, site clearing, installation of non-vegetative fabric and asphalt, bridge parapet modifications, Guide Rail end treatments, topsoil and seeding and maintenance and protection of traffic.

Construction Inspection Services for Construction of the Tonnelle Avenue Underpass, a part of the Trans-Hudson Express (THE) Tunnel Project", *NJ Transit.* Inspector, responsible for construction inspection of a railroad underpass at Tonnelle Avenue in North Bergen. The underpass will be adjacent to where the $8.7 billion project goes underground, allowing the two new rail tracks to begin their descent under Palisades Mountain. In addition to the Tonnelle Avenue underpass, the contract calls for relocation of utilities and construction of a new railroad embankment immediately west of Tonnelle Avenue. Tonnelle Avenue's four traffic lanes will remain open during construction, except for some night-time periods when traffic volumes are low. The underpass project was expected to be completed in 2012.

Roadway Rehabilitation, NY, *NYSTA.* Field/Office Engineer responsible for review of all the daily reports, estimates, calculations and stored them in CEASE software. Prepared change orders and negotiated settlement with the Contractor. Inspected milling of existing asphalt followed by base and top coat of new asphalt, (Super Pave) concrete from MP16.2 to MP 29.5 (project worth: Multi- Million Dollar). Full and partial depth repairs, core sampling, re-establish ditches, clearing and grubbing, **drainage repair**, new sign structures, bridge deck repairs, bridge joint repairs, concrete noise barrier repair, replacement of inductance loops, axle sensors and temperature sensors, installation of Star's and Pavement striping. Supervised all construction activities as per design parameters laid out in the Contract (E.I.C Richard Falletta).

General Construction Projects, NY, *Ram Construction, Paradise Construction, East Coast Construction & Design Inc., Royal America Inc.* Project/ Office Engineer responsible for supervising construction projects for different NY State Agencies such as: Departments of Housing, Health, Parks, and Recreation. Preparation cost estimates and bids for building and facilities construction in the NY/NJ area. Prepared and reviewed quantity estimates for all building materials. Inspected building structure in accordance with existing NYC Building Codes, and reviewed beam selection using software. Work also included inspection of fire sprinkler system, HVAC and electrical system. Used software to check selection of HVAC and Air Handling Unit.

ICC Reinforced Concrete Special Inspector - No. [redacted] (2011)

ICC Structural Masonry Special Inspector - No. [redacted] (2012)

Envision™ Sustainability Professional (ENV SP): Institute for Sustainable Infrastructure (2014)

Current Responsibilities

Mr. Walker is a Civil/Structural Inspector responsible for performing inspection services to verify completion in accordance with contract requirements and specifications as part of a construction management team. He provides technical and professional viewpoints. He also assists in contract administration services, including review of contract documents, plans, and specifications; reviews contractor construction procedure, material, and safety submittals; reviews and verifies quantity payments made for completed work; reviews and prepares quantity takeoffs; and reviews and marks up as-built drawings. He attends weekly superintendent's meetings for work coordination and scheduling. Mr. Walker also inspects civil and structural elements of construction work including reinforced concrete, masonry, structural steel, pile driving, grading, and asphalt paving. He is also responsible for providing support and experience to mechanical and electrical inspections.

Summary of Experience

WP-283, Newtown Creek Wastewater Pollution Control Plant (WPCP) Central Residuals Building, Brooklyn, NY, *NYCDEP Bureau of Engineering, Design, and Construction.* Civil/Structural Inspector representing the NYCDEP for the construction of an approximately $400 million new central residuals building, including structures and equipment, heating, ventilation, and air-conditioning (HVAC), plumbing, and electrical work. The facility will contain, within influent screening, equipment for flows through 96-inch influent pipes, sludge screening systems, raw wastewater flow metering, degritting systems, skimming concentration systems, and materials conveyance systems. The building also includes an elaborate odor-control facility, as well as freight and passenger elevators. The central residuals building is one of many buildings being constructed on the 36-acre, heavily industrialized, Greenpoint Avenue site concurrently with other building and treatment tank upgrades. The more than $1 billion upgrade to the treatment facility will meet a consent order issued by the federal government. The combined service area of the Newtown Creek WPCP covers approximately 25.4 square miles and includes the three boroughs of Brooklyn, Queens, and Manhattan, with a combined sewage flow of 310 mgd. Treatment activities of the flow will include modified aeration with activated sludge without settling, effluent disinfection, 60 percent removal of biological oxygen demand, and 70 percent removal of suspended solids. The existing site previously contained a fuel terminal, operations building, and maintenance building.

Prior to the start of field construction, the site was excavated various grades below sea level. Approximately 1,050 steel cylinder piles were installed and concreted for the support of the residuals building. Support of underground utilities will be through the use of 60-ton H piles installed during the building construction. Additional construction activities of note involve the installation of tunnels; site work improvements; a sitewide fire alarm system; modifications to existing pumps, appurtenant piping, and valves; extension of 8-inch and 10-inch high-pressure water line for fire service with new hydrants and valves throughout the site; architectural modifications and additions; and the coordination and interfacing of four main contractors and their subcontractors. The new building included the construction and installation of both a passenger and a freight elevator.

Project No. 34-260, Widening of U.S. Route 7, Danbury, CT, *ConnDOT.* Construction Inspector for a $45 million widening of U.S. Route 7, which is the second phase of ConnDOT Project No. 34-315. This portion of U.S. Route 7 is classified as a principal urban arterial and is the primary north-south route in western Fairfield County. The existing highway has capacity and geometric deficiencies that cause unsafe driving conditions and delays. The project is 2.1 miles long and involves widening U.S. Route 7 from two lanes to four lanes; approximately 0.5 mile of this length is a divided highway. The project will improve safety and relieve traffic congestion by improving roadway geometry. Work activities include excavating approximately 100,000 cubic meters of soil; implementing extensive roadway drainage improvements; performing aerial and underground utility relocations; and constructing a pile-supported roadway above a wetland, a pile-supported embankment through a small portion of wetland, and a two-lane, single-span bridge over a local road. The new pavements will use Superpave. The project has also included adding seven sites to ConnDOT's statewide incident management system. The sites comprise variable message signs set on concrete foundations along a 10-mile section of I-84 starting at the New York State line. Five of the signs also have cameras mounted on masts. The signs and cameras are connected to and controlled by ConnDOT's Highway Operations Center in Newington. The sites are hardwired for power and communications. The installation required coordination among several subcontractors, the utility company, and ConnDOT.

Administration Building Construction, Milton, PA, *Milton Regional Sewer Authority.* Inspector for the construction of an administration building that involved multiple contracts and made schedule adherence a priority. Inspection services required knowledge of the plumbing, mechanical, and electrical work being performed. The steel structure was constructed on a concrete foundation. Inspected interior building work to make certain that the requirements of the building plans were being adhered to, which required knowledge of International Building Codes and Americans with Disabilities Act (ADA) provisions. Inspected the excavation and placement of 8-inch water main line from existing site to main building. Approximately 100 feet of new line was installed as part of the new building construction. The newly installed water lines were encased in concrete as required by the PADEP due to close proximity of live sewer lines.

Sewer Line Review, Tyrone, PA, *Northern Blair County Regional Sewer Authority.* Third-Party Reviewer of a construction project that involved claims among the owner, contractor, and engineer. Reviewed construction documents for the client and evaluated the validity of claims among parties involved. Assisted with presentations of findings to board members and advised on results to correct errors in contract writing. Reviewed video camera footage of newly installed lines and determined serviceability.

Support of underground utilities will be through the use of 60-ton H-piles installed during the building construction. Additional construction activities of note involve the installation of tunnels; sitework improvements; a sitewide fire alarm system; modifications to existing pumps, appurtenant piping, and valves; architectural modifications and additions; and the coordination and interfacing of four main contractors and their subcontractors.

Wantagh State Parkway Intelligent Transportation System (ITS) Equipment, Nassau County, NY, *New York State Department of Transportation.* Level II Inspector responsible for inspecting the installation of ITS equipment and roadway lighting along the Wantagh State Parkway between the Northern State Parkway and Ocean Parkway. Inspected the installation of variable message signs, closed-circuit television (CCTV) camera highway advisory radio transmitters, transmit probe surveillance readers, antennas, and fiber-optic cable communications network to connect with Inform in Hauppauge. Also inspected extensive roadway and ramp closures and other work zone traffic-control measures, upgraded lighting requiring the addition of semi-cutoff systems, and the installation of eight cameras.

Ronkonkoma Hub Transit-Oriented Planning Study, Town of Brookhaven, Farmingville, NY. Land Use Planner responsible for acquiring data on existing conditions of 181 acre area which included GIS data from the municipality. Used ArcView GIS to depict existing conditions, existing zoning, modifications to zoning, parking and ultimately sites suitable for TOD development. As part of a team of planners and engineers, we conducted a survey of residents and business owners within the area.

Multi-site Residential Developments, Nassau and Suffolk County, NY. Project Engineer responsible for designing and inspecting the installation of on-site sanitary and drainage systems for single family residential properties. Using AutoCad Land Development Desktop the property survey showing existing conditions would be drafted. The sanitary and drainage systems would be designed as per county requirements and drafted onto the drawing to meet required setbacks.

CVS Pharmacy, Multi-site Commercial Developments, Various Locations. Project Engineer responsible for preparing feasibility studies (due diligence reports) and site plans throughout New York and New Jersey. As the preferred engineer in the Northeast US to the client, third party reviews of all other engineered plans by other firms were also conducted. The promulgation of said reports included the existing conditions of the project location, zoning assessment to depict applications required, permitting timeline to acquire approvals (e.g. variances, site plan approval, etc...), conceptual site plan using AutoCad Land Development Desktop and site construction cost estimates.

Eschbacher VHB Engineering, Surveying & Landscape Architecture, P.C. (now called Vanasse Hangen Brustlin, Inc.) Planner/Project Engineer responsible for a variety of engineering services, including:

- Preparation of feasibility studies, zoning analyses, and massing plans for developers, owners, and national retailers in Long Island, the five boroughs of New York City, and New Jersey.
- Field reconnaissance on properties to compile information for due diligence reports.
- Preparation of various municipal applications for site plans to the Health Department, Planning Commission, Planning Department, and Building Department.
- Coordination and attendance at meetings with the New York State Department of Environmental Conservation, New York City Department of Environmental Protection, New York State Department of Transportation, and others to identify project-related concerns and issues.
- Preparation of opinions of probable costs for site development projects.
- Coordination and attendance at meetings with major utility companies to obtain existing infrastructure information and availability of utilities to subject properties.
- Preparation of environmental assessment forms required by municipalities for new projects and assistance with the preparation of the Phase I environmental site assessments.
- Preparation of conceptual site plans, parking studies, and subdivision plans.
- Preparation of contracts, including budgeting and management.
- Coordination of projects with real estate representatives and construction managers of national pharmacy and fast-food chains.
- Design of sanitary and drainage plans for single-family residential properties in Nassau and Suffolk Counties.

Eschbacher VHB Engineering, Surveying & Landscape Architecture, P.C. (now called Vanasse Hangen Brustlin, Inc.) – 2006-2008
Stantec, Inc., Melville, NY – 2000-2005

AALEN ADHAM, ACI ICC

Assignment
Inspector with ACI ICC

Years of Experience With Firm
1

With Other Firms
10

Education
B.S. Civil Engineering, Damascus University, 1992

Professional Registrations
ACI Concrete Construction Special Inspector – No. [redacted]

ACI Concrete Field Testing Technician – Grade 1 – No. [redacted]

ICC Sprayed-Applied Fireproofing Special Inspector

Troxler Certified for Soil Nuclear Testing (2003)

Current Responsibilities

Mr. Adham has experience as both a Residential Engineer and Special Inspector on various types of heavy duty construction projects. Responsibilities at current and past projects include providing detailed reports, satisfying inspection permits requirements and performed materials testing services.

Summary of Experience

Special Inspections and Materials Testing Laboratory Services #RQ_A&E_2R, *NYCDDC.* Providing special inspection services under a three-year, task-order contract for Cultural, Police and Fire facilities and Libraries. Inspection and testing of all material, equipment and operations are conducted with strict adherence to the New York City Building Code and comply with contract drawings and specifications. Assignments include: PSAC II Office Space, Brooklyn Children's Museum, Wave Hill House, Police Academy.

Manhattanville Development, NY, *Columbia University.* Inspector responsible for inspecting erection and bolting, compiling daily field reports; keeping in close contact with the client and the project manager to ensure compliance and prompt resolution to any deviations.

Expansion and Renovation of the Jacob K. Javits Convention Center, NYC. As Field Engineer, provided inspection services for the expansion of the Javits involving a 100,000 s.f. multi-level structure to accommodate 40,000 s.f. of exhibition space and 60,000 s.f. of space reserved for registration areas, support and core functions (i.e. restrooms and food service areas) and truck court with loading docks. Contract also extends to the renovation of the exterior curtain wall, the replacement of the roof and roof-top mechanical units, and the replacement of mechanical, electrical and life safety systems.

MTA East Side Access, Manhattan Tunnels & New Grand Central Terminal Station, *MTA LIRR.* As Field Engineer, provided fire proofing and concrete inspection services for the new LIRR East Side station under Grand Central Terminal will offer new entrances, a concourse, eight tracks on four platforms lower than the existing lower-level Metro-North tracks, and a mid-level mezzanine. The new terminal will increase the number of tracks at Grand Central from 67 to 75.

L+M Development Partners – Navy Green. Responsibilities include performing reinforcement inspections, compiling field reports, documenting observations and notifying the proper parties of work progress.

SOR Testing Laboratories, Cedar Grove, NJ. Special Inspector responsible for serving as a field residential structure engineer and special inspector on a multitude of projects. Inspections performed include reinforcement inspections, concrete field testing, shotcrete, structural masonry inspections, sprayed fire resistive materials inspections, soil bearing evaluation and nuclear in place density testing, Auger drilled and pile driving monitoring as well as asphalt nuclear in place density testing.

Projects included:

- The North Bergen Connection, and the New county road route, and bridge in Secaucus, NJ from June 2001 to May 2003.
- Somerset medical center building additions and parking deck from June 2003 to December 2004 in Somerset, NJ.
- AAA Building for Mack Cali in Hamilton, NJ from January 2005 to December 2005.
- Mack Cali building office and parking Deck in Red Bank, NJ from February 2006 to April 2007.
- Parsippany Campus for Mack Cali from May 2007 to February 2008.
- Hoboken Medical center Emergency building for William Blanchard from March 2008 to November 2008.
- Genzym Bio surgical new building for Torcon in Ridgefield Park, NJ from February 2009 to May 2009.
- Embassy Suite New Hotel for Sun construction in Elizabeth, NJ from June 2009 to November 2009
- Newark stadium for EI Associates from February 2010 to June 2010
- St Joseph Hospital Critical care building and parking deck from July 2010 to present

Chronological History of Employment

Tectonic – 2013-Present
L&M Development Partners - 2011
SOR Testing Laboratories – 2011-2010

THOMAS CARTER, ACI ICC

Current Responsibilities

Mr. Carter is a Concrete/Masonry Inspector with 23 years of experience. He is responsible for performing welding and bolting inspections, providing inspection and testing services, and ensuring compliance.

Summary of Experience

Special Inspections and Materials Testing Laboratory Services #RQ_A&E_2R, *NYCDDC.* Responsible for performing welding and bolting inspections under citywide Controlled Inspection and Testing Laboratory Services contract. Duties include recording all finding in daily field reports and updating the client with any deficiencies found in the field. Assignments include: Wave Hill Houses, PS1 Kiosk, Jefferson Market Library, Children's Museum, PSAC II, Rod Rogers Dance Studio, and Creative Arts Center.

Special Inspection and Laboratory Testing Services SCA09-00013R [C11275], *NYCSCA.* Provided inspection and testing services for a two year term contract. Ensured both the quality of work performed by construction contractors and their subcontractors, as well as compliance with all applicable laws, regulations, codes, requirements etc. Assignments include: Morris High School, IS137X, Bronx Coalition High School, PS70X, IS139X, PS83X, IS52X, PS 32X, etc.

Controlled Inspections and Testing Laboratory Services – Contract #20090029460, *NYCHA.* Providing controlled inspection and testing laboratory services under a three-year, $3M contract for the rehabilitation of Housing Authority properties throughout NYC. Assignments include: Murphy Houses, South Jamaica Houses, Armstrong Houses I & II and Woodside Houses.

World Trade Center – Tower 4, Manhattan, NY, *Silverstein Properties.* Inspector for this project where Tectonic is performing controlled inspections and testing during the construction of World Trade Center Tower 4. Providing field inspection and testing of concrete, masonry, structural steel, fireproofing and firestopping, etc.

Manhattanville Development, New York City NY, *Columbia University.* Inspector responsible for inspecting erection and bolting, compiling daily field reports; keeping in close contact with the client and the project manager to ensure compliance and prompt resolution to any deviations.

With Other Firms
29

Education
B.S., Civil Engineering, University of Michigan College of Engineering, 1985

Professional Registrations
ACI Field Testing Technician-Grade I

ACI Concrete Construction Special Inspector (CCSI)

Current Responsibilities

Mr. Amegah is a Senior Construction Inspector for KS Engineers in New Jersey and New York. He provides construction inspection and bridge inspections, including completion of various in-depth inspection programs in the New York metropolitan area. He also has experience in civil design, including roadway replacements involving drainage, sewers, utilities, curbs, and sidewalks. In addition, his structural experience includes the removal, replacement, and reinforcement of steel and concrete bridge elements.

Summary of Experience

Construction Management Services, NY Marine Terminal, Howland Hook & Teterboro Airport, PIDS, NY and NJ, *PANYNJ.* Senior Inspector responsible for building demolition at Howland Hook, Staten Island contractor oversight as part of work at NYMT. Mr. Amegah is participating in the testing phase and inspection of the perimeter intrusion detection system, fencing sensors and radar system both day and night at PANYNJ Airport. Also supervised the assembly of large erosion mats made of concrete sections encased in geotextile material being fabricated in Bayonne for future relocation and installation.

Route I-495 Mill & Fill Exit 57 to 64, Towns of Brookhaven & Islip & Village of Islandia, Long Island, NY, *NYSDOT.* Senior Inspector providing inspection and other related services for 19.9 million dollar project involving grinding existing asphaltic concrete wearing concourse and repaving. Inspection services also include site maintenance and safety protection.

Resident Engineering Inspection Services for HWCR08B, Citywide Milling Project Involving Grinding Existing Asphaltic Concrete Wearing Course, Manhattan and the Bronx, NY , *NYC Dept. of Design & Construction.* Inspector responsible for this $7 million project, providing inspection and other related services for projects involving grinding existing asphaltic concrete wearing concourse at various locations on an as-needed basis. Some issues that involve inspection services include site maintenance and safety, protect tree from construction debris, milling two inches of existing asphalt, smaller milling machine was used to grind asphalt in hard to reach places such as around catch basin or corner of a curb and a sweeper was used behind milling machine to clean up the debris. Tasks include all services necessary and required for the inspection, management and administration of this project, for the required construction work to be properly executed, completed on time and conforms to the plans, specifications and requirements of the construction contract.

Resident Engineering Inspection Services for HW2CR08B, Grinding and Milling of Various Streets in the Borough of Manhattan, NY, *NYC Dept. of Design & Construction.* Senior Inspector responsibilities included inspection of milling of roadway pavement resurfacing in the borough of Manhattan for NYCDDC. Responsible for managing inspection staff, reviewing and approving field changes, resolving any construction problems, claims and disputes, supervision of contractor's work, processing of contractor's monthly payments, coordinated with the various community boards, NYCDDC and other related agencies.

Construction Inspection Services for I-84 Widening between Waterbury and Cheshire, CT, *Connecticut Dept. of Transportation.* Senior Inspector provided inspection services for the widening of Interstate 84 between Waterbury and Cheshire, CT. Responsible for inspection of reinforced concrete pipes and the inspection of modifications made to existing interstate bridges. Also responsible for the investigation of catch basins.

Resident Engineering Inspection Services for Richmond Road, New York, NY, *NYC Dept. of Design & Construction.* Senior Inspector provided field inspection and preparation of daily reports for the installation of sewers, water main, and roadway replacement for this roadway in Staten Island, NY. The scope of work included the installation of a new 72-inch trunk main in Richmond Road between Narrows Road and Duzer Street and in Vanderbilt Avenue between Van Duzer Street and Tompkins Avenue. A new 60-inch water main was also installed in Swan Street between Van Duzer Street and Bay Street.

Construction Inspection for Capital Reconstruction Projects, *NYC Dept. of Design & Construction.* Senior Inspector responsible for NYCDDC capital reconstruction projects, including replacement of major roadways in Brooklyn and Queens and associated drainage, sewer, utilities, curbs, and sidewalks.

Rehabilitation of Inwood Hill Park Pedestrian Bridge New York, NY, *NYC Dept. of Transportation.* Senior Inspector Providing inspection services for the rehabilitation of bridge components including partial reconstruction of pedestals, repairs to bottom of staircase stringer, removal and replacement of landing plate, partial removal and replacement of deck, field cleaning and painting of staircase. Construction Management & Inspection Services for Cleaning and Painting of the Harlem River Lift Span and Approach Spans (PSC-06-2802), Harlem and Citywide, NY – Triborough Bridge and Tunnel Authority

Current Responsibilities

Mr. Amegah is a Construction Inspector for KS Engineers in New Jersey and New York. He provides services in civil and structural engineering, as well as construction inspection and management/ oversight.

Summary of Experience

Tectonic Engineering & Surveying Consultants. Construction Special Inspector. Responsible for comprehensive site inspection, including reinforcing steel, fire stopping, fire resistance rated construction and fireproofing.

Long Island Materials Testing Lab, College Point, NY. Senior Civil-Structural Construction Inspection Engineer. Duties included identification of structural integrity problems in buildings under construction, and working with blueprints and specifications. Responsible for comprehensive site inspection, including reinforcing steel, fire stopping, fireproofing, welding, high strength bolts, decking, roofing, masonry, ultrasonic testing of welding, structural steel fabrication, and inspecting concrete at the batch plant and in the field. Performed follow-up audits of corrective actions. Prepared engineering inspection and weekly progress reports. Experienced in inspection of federal, state, city, and commercial projects. Gained extensive knowledge of construction codes and regulations.

City Construction Corporation, Tbilisi, Republic of Georgia. Civil Construction Engineer-Superintendent. Specialized in residential and commercial construction: apartment and office buildings, schools, hospitals, and industrial plants. Managed all phases of construction from excavation to commissioning of the building. Scheduled and coordinated work with subcontractors. Responsible for the quality and completion of work according to the time schedule.

TD Construction Corp., Tbilisi, Republic of Georgia. Assistant Superintendent. Responsibilities included repair and reconstruction of industrial and civil buildings, and supervision of excavations for building foundations. Estimated materials and labor costs. Controlled and enforced compliance with safety regulations.

FRED KOOMSON

Assignment
Inspector with ACI ICC

Years of Experience With Firm
6

With Other Firms
29

Education
Associates Degree City and Guilds of London Institute - Certificate of Civil Engineering

Professional Registrations
ACI Concrete Construction Special Inspector (CCSI)

Current Responsibilities

Mr. Koomson is a Civil Inspector for KS Engineers in New Jersey and New York. His responsibilities include performing bridge inspection, roadway inspection for milling, paving with concrete and asphalt, reconstruction, drainage, sewer and water main installation. He provides construction oversight to ensure that project schedules and specifications are adhered to, and keeps daily logs.

Summary of Experience

New Jersey Marine Terminal Construction, *PANYNJ.* Civil Inspector monitoring activities at Marine Terminal construction sites. Work includes installation, testing and inspecting Civil works. Provides oversight to ensure construction progresses as scheduled and contract specifications are adhered to. Prioritizes multiple assignments, maintain deadlines, and works in a team environment. Inspects construction site daily and works with contractors to schedule deliveries, follow safety requirements, adhere to quality and code compliance; files daily narratives and progress reports detailing personnel, equipment, materials and work summary. Mr. Koomson provided construction inspection on the following individual projects under this assignment:

- **Multi-Facilities Projects (MFP)** at Port Newark & Port Elizabeth covering change order work covering involving roadway, ports and terminals, etc.
- **Port Elizabeth** – North Ave/McLester St. Curve Realignment – work consisted of roadway realignment, including paving, utilities, traffic controls, overhead signage, caissons, storm water treatment units and related work.
- **Port Elizabeth Expressrail,** Elizabeth Lead Tracks & South Bay Avenue - work consisted of construction of second lead track into Expressrail, reconstruction of existing lead track, construction of rail bridge over McLester St., reconstruction of Bay Ave., construction of new South Bay Ave. roadway, utility and other related work.
- **Port Newark** – Berth 8 & Berth 10 Wharf Reconstruction - work consisted of demolition of existing wharf, dredging and berth deepening, steel pile & steel sheet piling installation, installation of gabion walls, concrete deck reconstruction, paving & utilities.
- **Port Newark** – Port Street Interim Traffic Improvements - work consisted of removal of concrete islands and traffic controls; installation of guiderails, traffic barriers, signage, pavement markings and electrified traffic control devices at Port Street and vicinity.
- **Port Newark** – Berths 36 & 63 Wharf Reconstruction - work consisted of removal and disposal of existing wharf, dredging, upland disposal of dredged materials, steel pipe piles, sheet piles and other marine construction, paving, utilities and related work.
- **Immediate Repairs, Berths 10–12 -** repair of concrete encased piles.
- **Immediate Marine Rehabilitation,** repair of concrete encased piles.
- **Concrete Roadway Rehabilitation** – Repairs to North Avenue Bridge & Corbin Street Ramp; work included removal of deteriorated concrete and placement of new concrete and Latex Modified Concrete.
- **Immediate Repairs - Corbin Street** – excavated deteriorated concrete and replaced with Latex Modified Concrete (LMC). (05/08 – Present)

HWK614B1, Reconstruction of Bergen Avenue Area in Brooklyn, *NYCDDC.* A $27.7 million project for NYC DDC. The work includes the installation of sidewalks, roadway, center mall, storm and sanitary sewers and the complete street and sidewalk reconstruction within approximately 16 residential blocks just west of Paerdegat Basin. The storm sewers were built on piles while most of the sanitary sewers were placed on the same lane as the existing sewers that was removed.

Contract MED-579/Abandonment of Existing High Pressure Fire System in Lower Manhattan, *NYCDDC.* – responsible for the inspection of the removal of hydrants, hydrant valve boxes and main line valve boxes. Inspection of concrete and asphalt restoration, surveys and does the preparation of Punch list for the final inspection. Also, he does testing and inspection of the concrete (Slump test, Air test, Temperature), plus the inspection, and MPT.

Installation of Sewers in Linwood Avenue, Staten Island, NY, *NYCDEP.* Project No. SE-247A/SER002155. This project involved installation of 12" ESVP gravity sewers and 5'6" x4" concrete box culvert sewers. His duties include record keeping, project status/completion reports, documentation supporting contract payments, balance of materials, fixed assets reports, field cards, in-service notification and change orders.

New Jersey Turnpike between Interchange 8 and 13 Linden City, Union County, *NJTA.* Senior Construction Inspector for the widening project.

Victory Boulevard Sewer Project, Staten Island, NY (SE208A/362A). This project included installation of gravity sewers, utility crossing and pavements and sidewalk restoration.

Staten Island Water Main Project (RED-328), *NYCDEP, Bureau of Water Supply and Wastewater Collection.* The Contract includes the installation of 26,000 linear feet of 48 inch truck water main and 10 inch and 12 inch sanitary and storm sewers, pipe jacking, utility crossings, valve and regulator chambers, blow-off and air release manholes, and large scale MPT.

Education
City College School of Architecture, New York, NY (143 Credits)

Hunter College, New York, NY (transferred 1st year credits to City College)

Professional Registrations
ICC Structural Steel & Bolting Inspector: No. [redacted]

Current Responsibilities

Ms. Lancey is a Structural Engineering Construction Inspector for KS Engineers in New Jersey and New York. She provides inspection services ranging from heavy/highway construction inspection to subdivision/land development construction surveillance and escrow contract monitoring. Her experience includes engineering design, inspection, field surveying, quantity computations, bidding and contract ratification, construction surveillance, construction materials testing, review of subdivision and land development plans, developing specifications of municipal projects for local government clients as well as private clients.

Summary of Experience

WTC Towers 1, 3 & 4, *PANYNJ.* Senior Inspector. From Jan 2, 2008 to March 31, 2008, she was assigned to WTC Tower 1:

- Foundation, footings and concrete columns were being completed, and the work in basement levels Zone B, B3, and elevator core had begun. Observed the excavation into rock, rebar and concrete installation of footings, foundations and slurry liner wall. Discussed current issues with the contractors, consulting engineers MRCE and Cantor, and PA surveyors, and prepared a Daily Narrative for the PA records reporting the progress of the work with reference to contract drawings and specifications.
- Ms. Lancey also attended pre-construction meetings for Tower 3 and general WTC coordination meetings. I reviewed and made comments on submittals, and payments as requested.

From April 1, 2008 to Dec 2008, assigned to WTC Towers 3, 4, 7

- In the field, the contract for the construction was just commencing on Towers 3 & 4. She observed and reported on blasting operations, excavation to grade, and subsequent concrete and rebar installations for footings, slabs and shear walls. She also monitored rock anchor and caisson drilling, installation and testing. She represented the RE on incidents of an environmental nature, such as fuel spills, and coordinated with PA staff to improve site safety.
- At Tower 7, the office was performing final sign-off for Certificate of Occupancy for mechanical and electrical installations. Ms. Lancey participated in routine progress inspections, and punch list walk-through of completed work.
- In the office, continued duties in reviewing of shop drawings, including crane and stair towers, as directed. Also reviewed Tishman's daily reports for accuracy. Participated in meetings prior to and during blasting operations.

From 12/09 to 5/10-Inspector on WTC Tower 1 under the direction of Port Authority RE Christopher Hart.

- Field duties included observation and reporting on contract work. Initially, reported on civil; mechanical and electrical progress. As staff increased, she concentrated on the civil work. Daily Reports included details of concrete installations for the core and slabs, masonry walls, and steel structure. Worked in cooperation with PA Materials inspectors, PA Safety personnel, Cantor Structural Engineers, Tishman, and various contractors on behalf of the RE.

Prepared a daily report on Safety Observations, which was forwarded to Tishman and Hart. Coordinated inspection of architectural finishes with Tishman, prepared punch list and sign-off. This included exposed concrete wall finishes, curtain wall, woodwork, and flooring.

Construction Project Manager/Resident Engineer. *NYCDDC.*

- Project Manager for government projects in a variety of settings, including: firehouses, police and fire facilities, schools and community centers.
- Manage projects and budgets ranging from $1-15M
- Review design documents, shop drawings and specifications for accuracy and completion.
- Coordinate all work performed by Agency and Consultant architects, engineers, surveyors, and testing services.
- Supervised field installations for mechanical, electrical, and plumbing in addition to general construction for prime and sub-contracts.
- Coordinate and conduct progress meetings, maintain work schedules, approved detailed estimates and payments.
- Drafted, negotiate and authorize change order requests. Prepared punch list.
- Liaison between client, consultants, and various government agencies
- Ensure deadlines are met and projects are within budget
- Generate reports and correspondence for project tracking
- Experience in Lump Sum, Unit Price, Job Order Contracting, and Time and Material contracts.

A few of her projects included NYPD Property Clerk Storehouse-Interior and exterior restoration, auxiliary power, lighting and security system; NYPD CRS-Rooftop parking replacement, skylights; Maspeth Town Hall-Historic interior and exterior restoration, windows, underground drainage, landscaping and playgrounds, new electric service, lighting, HVAC, sprinkler and security system; Montessori Learning Center-New roof and rooftop playground, interior upgrade and HVAC; and Kingsbay Senior Center-New kitchen, new electric service and lighting, interior upgrade, HVAC.

Current Responsibilities

Mr. Holland is a Construction Project Manager responsible for business development; recruitment, contract initialization, administration, and maintenance; oversight of construction management and construction inspection activities and personnel; and quality assurance and improvement.

Summary of Experience

Maintenance Roadway Repair Contract South, Sub-Region S-3, Contract Number S305, Routes 30, 47, 54, and 147, NJDOT Agreement No. 2012BCM887B, Atlantic and Cape May Counties, NJ, *NJDOT.* Project Manager for this $4.1 million roadway repair contract. Project includes milling and paving of existing pavements of various routes in South Region with hot-mix asphalt intermediate and surface courses, underlying concrete and full-depth pavement repairs, concrete curb and Americans with Disabilities Act (ADA) compliant sidewalk, drainage upgrades, maintenance and protection of traffic, striping, pavement markings and reflectors, and associated activities. The project requires extensive maintenance and protection of traffic and also requires night work. Responsible for overseeing field inspection staff and coordinating with the NJDOT Resident Engineer, Field Manager, and Regional Consultant Coordinator.

U.S. Route 30 Grove Street to Brand Avenue, NJDOT Agreement No. 2012BCM887B, Haddon Heights, Lawnside, Lindenwold, and Clementon Boroughs, Camden County, NJ, *NJDOT.* Project Manager for this $4.0 million roadway repair contract. Project includes milling and paving of existing pavements of U.S. Route 30 in South Region with hot-mix asphalt intermediate and surface courses, underlying concrete and full-depth pavement repairs, concrete curb and Americans with Disabilities Act (ADA) compliant sidewalk, drainage upgrades, maintenance and protection of traffic, striping, pavement markings and reflectors, and associated activities. The project requires extensive maintenance and protection of traffic and also requires night work. Responsible for overseeing field inspection staff and coordinating with the NJDOT Resident Engineer, Field Manager, and Regional Consultant Coordinator.

Federal Highway Administration Long-Life Pavement Markings Contract, South - 2012, Routes U.S. 9, NJ 29, U.S. 30, NJ 31, U.S. 40, NJ 70, NJ 87, U.S. 130, NJ 133, NJ 138, NJ 162, NJ 171, NJ 172, U.S. 206, and U.S. 322, NJDOT Agreement No. 2012BCM887B, Federal Project No. STP-C00S(279), Atlantic, Burlington, Camden, Cape May, Cumberland, Gloucester, Mercer, Middlesex (South of I-287), Monmouth, Ocean, and Salem Counties, NJ, *NJDOT.* Project Manager for this $5.93 million roadway maintenance long-life pavement markings contract on multiple routes statewide. Contract work included thermoplastic and epoxy long-life pavement markings, raised reflectorized pavement markers, and all associated maintenance and protection of traffic. The project requires extensive night work. Tasks involve subcontractor approval, weekly reports, monthly estimates, Equal Employment Opportunity, payroll, and change orders. Responsible for overseeing field inspection staff and coordinating with the NJDOT Resident Engineer, Field Manager, and Regional Consultant Coordinator.

NJ Route 29 Bank Stabilization, Milepost 10.01 and Milepost 21.3, Contract No. 009114020, Ewing and Delaware Townships, Mercer and Hunterdon Counties, NJ, *NJDOT.* Field Manager (Project Manager) responsible for performing Field Manager duties for this $1.6 million bank stabilization contract. Contract included installing stone slope protection, furnishing and driving 990 LF of steel H-piles (HP12x53), resetting guide rail, and providing restoration. Responsibilities also included coordinating with various agencies, Delaware and Raritan Canal Commission, and NJDOT, making sure of compliance of materials inspections, and overseeing subcontractor approval, daily and weekly reports, safety, monthly estimates, Equal Employment Opportunity, payroll, and change orders.

NJ Route 72 Manahawkin Bay Bridge Contract 2, Bridge Construction, Contract No. 026118012, West of Garden State Parkway to Long Beach Island, Stafford Township and Ship Bottom Borough, Ocean County, NJ, *NJDOT.* Field Manager (Project Manager). Performed Field Manager duties for this $89 million contract. Contract 2 includes the construction of the following components:

- A new parallel structure over Manahawkin Bay
- Two retaining walls at bridge approaches
- Fender systems
- Bulkhead reconstruction
- Scour countermeasures
- Highway lighting, including decorative lighting on the new bridge
- Bridge approach roadways
- New storm drainage systems
- Stormwater wetlands
- Intelligent transportation system (ITS) facilities from Garden State Parkway to Long Beach Island
- Electric transmission utility cable relocations
- A parking lot, including a retaining wall

Responsibilities also included coordinating with various agencies, the New Jersey Department of Environmental Protection, and NJDOT, making sure of compliance with safety, and overseeing permits, materials inspections, subcontractor approval, daily and weekly reports, monthly estimates, Equal Employment Opportunity, payroll, and change orders.

NJ Route 72 Eastbound and Westbound Over NJ Route 9, Bridge Deck Replacement, Contract No. 023113240, Stafford Township, Ocean County, NJ, *NJDOT.* Field Manager (Project Manager) responsible for performing Field Manager duties for this $3.5 million bridge deck replacement contract. Contract included high-performance concrete bridge deck replacement including concrete parapets, sidewalk, and approaches, concrete crack repairs via pressure injections, elastomeric joint assembly repairs, epoxy waterproofing, near white blast cleaning and painting of steel structures, and Type 1 concrete spall repairs. Associated improvements included maintenance and protection of traffic, milling/hot-mix asphalt pavement placement, drainage improvements, concrete vertical curbing, stripping, temporary traffic lights, and signal. Responsibilities also included coordinating with various agencies, the New Jersey Department of Environmental Protection, Pinelands Commission, and NJDOT, making sure of compliance with safety, and overseeing permits, materials inspections, subcontractor approval, daily and weekly reports, monthly estimates, Equal Employment Opportunity, payroll, and change orders.

ACI Concrete Field Testing Technician - Grade I (2012)

Asphalt Paving Construction Technologist: New Jersey Society of Asphalt Technologists (2013)

Current Responsibilities

Mr. Boerner is a Resident Engineer providing inspection and contract administration services. His tasks include review of payment requests, shop drawing review and coordination, project scheduling, change order reviews and negotiations, contractor request for information (RFI) reviews and coordination, and meeting attendance and coordination.

Summary of Experience

Supervision of Construction Services for Contract #P100.230, Bridge Deck Repairs and Resurfacing, MP 0 to MP 126, *NJTA.* Senior Inspector for this contract that included providing supervision of construction services and contract administration for this $5.5M contract, with scope including extensive repairs to 16 bridge superstructures and substructures. Responsibilities included coordinating with the Resident Engineer, client, contractor, and staff, and providing direct inspection of contractor's work for compliance with the contract. Work includes bearing replacements and repairs, concrete bridge deck panel replacements, bridge barrier parapets, beam guide rail and attachments, concrete deck, abutment and concrete pier spall repairs of the various types and depths, deck joint repair and replacement, membrane waterproofing, milling, HMA paving, pavement markings, delineators, and all related MPT. The project also includes extensive night work.

Bridge Painting and Structural Repair, Contract 3-C, Camden County, NJ, *PATCO.* Resident Engineer for this project which includes the construction oversight and monitoring for the repainting and structural repairs to 31 rail and motor vehicle bridges serving the PATCO Philadelphia – Lindenwold Rapid Transit Line Facility. The scope of work includes: bridge steel surface preparation and painting; structural steel repairs; preparation and sealing of exposed concrete; lead paint abatement; application of epoxy waterproofing sealcoat; bridge deck joint sealer replacement; concrete cracks/spalling and beam encasement repairs; retaining wall rehabilitation and repairs; steel sign pole support modifications; bituminous pavement repairs and surface site work; fence repairs, vegetation removal, and handrail removal and replacement. Administrative duties include review of payment requests, shop drawing review and coordination, project scheduling, change order reviews and negotiations, contractor RFI reviews and coordination, and meeting attendance.

ARRA Resurfacing Program, Essex County, NJ, *County of Essex.* Resident Engineer for this 18 mile County Roadway resurfacing project. Scope of work included milling, resurfacing and all related work, and MPT. Responsibilities included inspection of: profile milling on road surfaces, 100,000 tons of Superpave HMA paving, polymerized joint, temporary and final line striping, installation of loop strips, concrete curb and sidewalk, landscaping, grading, and seeding. Responsible for monitoring Contractor's Maintenance and Protection of Traffic. Responsible for keeping track of item quantities and daily reports. Worked on closing out project and performing the final punch list and as-built drawings.

Replacement of County Bridge No. 14 on Springfield Avenue Over the Rahway River, Township of Cranford, Cranford, NJ, *County of Union.* Resident Engineer for the demolition of the existing bridge structure and the construction of a new 85-foot single-span bridge using structural steel beams, cast-in-place concrete footings, abutments, and wingwalls. The superstructure included reinforced-concrete deck slab with stone-faced concrete parapets and cap stone. Associated improvements included roadway and bridge approach realignments, sanitary sewer siphon, multiple utility relocations and coordination, maintenance and protection of traffic, granite block curbing and sidewalk, and landscaping. The project was also subject to New Jersey Department of Environmental Protection wildlife restrictions with regard to construction activities and scheduling. Administrative duties included review of payment requests, shop drawing review and coordination, project scheduling, change order reviews and negotiations, contractor RFI reviews and coordination, and meeting attendance and coordination.

Union County ARRA Resurfacing Program, County of Union, NJ, *County of Union.* Project Manager/Resident Engineer for the county-wide resurfacing of this $7M county roadway resurfacing project within various municipalities throughout Union County. The scope of work included milling and resurfacing the roadways with 35,000 tons of Superpave HMA, installation of temporary and final line striping, resetting of all storm inlets utilizing bicycle safe grates, installation of NJDEP approved curb pieces, concrete curb and sidewalk, landscaping, grading, and seeding. Also monitored Contractor's MPT. Both nighttime and daytime paving operations occurred during the course of construction. Construction administration services included daily inspection reporting, bid quantity reviews, change order reviews and recommendations, payment reviews and recommendations, shop drawing reviews, RFI's, and project close-out. This ARRA project was one of the County's largest roadway projects and involved a major coordination effort between the County and surrounding communities.

Replacement of County Bridge No. 1400-790 on Inamere Road over the Whippany River in the Township of Morris, NJ, *County of Morris.* Resident Engineer for the project, which included the demolition of the existing bridge structure and construction of a new 50-foot single span bridge structure using pre-stressed concrete beam, cast in place footings, abutments and wing walls, along with ninety-eight steel H-piles. The superstructure included a reinforced concrete deck slab with stone faced concrete parapets and cap stone. Associated improvements included roadway and bridge approach re-aligment using NJDOT superpave hot mix asphalt; water quality drainage improvements; multiple utility (gas, electric, telephone, cable, sewer and water) relocations and coordination; maintenance and protection of traffic, guide rail; granite block curbing and sidewalk; and landscaping.

NJDOT Fiscal Year 2005 Municipal Aid, Sherbrooke Road Reconstruction, Ewing Township, NJ, *Township of Ewing.* Engineer-of-Record/Resident Engineer working as the Township Engineer-of-Record/Resident Engineer in the design of construction plans and construction oversight of 2,000 LF of Sherbrooke Road. Project elements included field survey, roadway reconstruction of hot-mix asphalt stabilized base and surface course and subgrade, maintenance and protection of traffic, curb and sidewalk improvements, and project closeout. Coordination activities involved the Township of Ewing, NJDOT, County of Mercer, and Soil Conservation District.

As a Project Manager at Tectonic, Mr. Fischlein's responsibilities include technical supervision of staff, assignment of personnel, budget control, proposal preparation and client liaison, quality assurance oversight of highway and bridge projects for various state, county, and local governments. His duties also include contract administration, monitoring employee performance, and oversight of construction activities.

Summary of Experience

D030934, Construction Inspection for the Reconstruction of Route 17 Interchange at Exit 122, Stage II and Interchange Modifications at Exit 121, I-84, Rehabilitation of Route 17 Bridge over I-84, *NYSDOT.* Project Manager for this project which consists of relocating and reconfiguring the Route 17 Interchange with Crystal Run Road (Exit 122). Design consists of new loop and diagonal type ramps to a realigned Crystal Run Road (East Main Street). EB Route 17 fully reconstructed on new profile, three (3) new bridges and several new retaining walls. Rehabilitate Route 17 Bridge over I-84. Significant traffic control issues involving Route 17 traffic. I-84 traffic and numerous local traffic generators; including the Orange County Medical Center, four restaurants, three hotels, a Corporate Park, State Police facility, the Horton Medical Building, etc.

D030549 Construction Inspection on the Rte 17 Upgrade to I-86 in the Town of Wallkill, Orange County, NY, *NYSDOT.* Project consists of upgrading State Rt. 17 to Interstate standards between Exit 116 and Exit 121. When completed the project will include 3.6 miles of full depth pavement replacement, 3.1 miles of mill and fill, 3.3 miles of crack and seat with mill and fill work on the various ramps. It will also include rehabilitating Scotchtown Road bridge over Rt. 17, the Rt. 17 bridge over Rt. 17K, the Rte17 bridge over Rt. 211, the Rt. 17 bridge over the Norfolk Southern RR and the Rt. 17 bridge over I-84. A new bridge will be constructed to carry Rt. 17 over a new Town Road just north of I-84.

D030905 Term Agreement for Construction Inspection Services, Region 8, *NYSDOT.* Project Manager responsible for providing construction inspection services on a wide variety of projects under a term agreement with NYSDOT. Road and bridge type projects for on-site inspection of work included: paving, bridge maintenance, guide rail, crack sealing, signs, signals, graffiti, SPEDES, soil borings, bridge painting, etc.

D030654 Term Agreement for Construction Inspection Services, Region 8, *NYSDOT.* Project Manager responsible for providing construction inspection services on a wide variety of highway and bridge type projects in Region 8. Inspection work to include paving, earthwork, new bridge construction, bridge maintenance, guide rail, crack sealing, signs signals, graffiti removal, SPEDES work, soil borings, bridge painting, drainage work, curb, sidewalks, etc. Peak staff anticipated to be 25 to 30 on 18 projects. Work started in December 2008. Estimated Construction costs at $35M.

D030574 Term Agreement for Construction Inspection Services, Region 8, *NYSDOT.* Project Manager responsible for providing construction inspection services on a wide variety of highway and bridge type projects in Region 8. Inspection work to include paving, earthwork, new bridge construction, bridge maintenance, guide rail, crack sealing, signs signals, graffiti removal, SPEDES work, soil borings, bridge painting, drainage work, curb, sidewalks, etc. Peak staff anticipated to be 25 to 30 on 18 projects. Work started in December 2008. Estimated Construction costs at $35M.

D015696 Term Agreement for Construction Inspection Services for NYSDOT, Region 8, *NYSDOT.* Work consists of providing construction inspection services on a wide variety of highway and bridge projects. Inspection work consisted of paving, bridge maintenance, guide rail, crack sealing, signs, signals, graffiti removal, SPEDES, soil borings, bridge painting, drainage, retaining walls, new bridge construction, etc. Peak staff for 2007 was 28 on approximately 15 projects. Work started in March 2008. Highway and Bridge Construction Costs estimated at $25M.

D213766 Term Agreement for Construction Inspection Services, *NYSTA.* Project Manager responsible for providing construction inspection and material testing services on various projects under a term agreement with the NYSTA. Services included providing inspection personnel on road and bridge type projects for on-site inspection of the work including soils, concrete, asphalt, environmental and material testing. Responsibilities included contract administration and construction management.

D015649 Term Agreement for Construction Inspection Services for Region 8, *NYSDOT.* Project Manager responsible for providing construction inspection services on a wide variety of highway and bridge projects under a term agreement with NYSDOT. Services to include providing inspection as follows: paving, bridge maintenance, guide rail, crack sealing, signs, signals, graffiti, SPEDES, soil borings, bridge painting, etc. Peak staff for 2007 was 27 inspectors on approximately 18 projects. Highway and Bridge Construction Costs estimated at $30M.

Project Construction of Ramp X on SB Taconic State Parkway and Route 9A/100, *NYSDOT.* Project Manager for this project which involved constructing a ramp to carry SB Route 9A/100 traffic up and over Route 9A/100 and onto SB Taconic State Parkway. Project includes a new bridge to carry the ramp over Route 9A 100; construction of the ramp; relocation of an existing bikeway; extensive drainage work; rehabilitation of a bridge on Route 9A/100 over the Pocantico River; overhead sign work and extensive wetland mitigation work including removal of invasive species. The bridge has a pile foundation and a curved girder deck, single span with spliced steel.

Term Agreement on NYSTA TANY 07-21B/D213680- Painting of Two Bridges on the New York Division, *NYSTA.* Project Manager responsible for providing inspection and field office support services for the painting of the Cross County Parkway Bridge over the NYS Thruway and the NYS Thruway Bridge Mile Square Road in Yonkers.

Term Agreement on NYSTA TANY 05-37/D213542, *NYSTA.* Project Manager responsible for the installation of Epoxy and other Pavement Markings at various locations in the New York Division- $0.7M. Responsible for providing inspection support services for this pavement marking contract.

CETCO Certified Geosynthetic Installation Inspector (2008)

Troxler Certified (1999)

Current Responsibilities

As Senior Vice President of Geotechnical and Construction Inspection Services, Mr. Stier provides technical direction and supervision for geotechnical engineering and construction inspection staff. Responsible for review of performance of geotechnical evaluations and construction inspection/ materials testing for residential, commercial, and public facilities; and preparation and review of geotechnical reports.

Summary of Experience

Madison Yards, New York, NY, *MTA Metro-North Railroad.* Senior Geotechnical Engineer responsible for this project which consisted of the construction of elevator and escalator shafts for the Madison Yards portion of the MTA's East Side Access Project. Performed controlled inspections of installation and performance and proof tests for strand and bar anchors in compliance with NYC Code requirements and project specifications. Prepared anchor inspection summary reports. Performed NYC required subgrade inspections for footings for pile caps and elevator shafts to verify that the footings were bearing on 25 tsf bedrock.

44th Street Vent Plant, New York, NY, *MTA Metro-North Railroad.* Senior Geotechnical Engineer for this project which consisted of the construction of a new vent plant for the MTA's East Side Access project adjacent to Grand Central Terminal. Performed NYC required subgrade inspections for footings for footings and piers to verify that the footings were bearing on 10 tsf bedrock.

Tappan Zee Bridge Marina, NY, *NYSTA.* Engineering Geologist responsible for providing site inspection of sediment samples by contractor using vibracore sampling technique for the Tappan Zee Bridge Marina Project involving assisting the NYSTA in obtaining a New York District Army Corps of Engineers and an Environmental Protection Agency approved permit to dredge at the Tappan Zee Bridge Marina.

York College Academic Core Building Dewatering Investigation, Queens, NY, *DASNY.* Project hydrogeologist responsible for this project which consisted of evaluating the subsurface conditions to determine the design parameters for a permanent dewatering system. Designed a subsurface investigation and well installation for a pump test. Directed soil boring and pumping and monitoring well installation. Performed pump test and collected data from monitoring well network. Analyzed pump test data to determine hydraulic conductivity of the aquifer. Modeled current groundwater conditions using Visual MODFLOW and then modeled a preliminary groundwater dewatering system to determine optimum well locations and approximate quantity of the dewatering system discharge. Evaluated potential methods for disposing of dewatering

discharge. Performed an additional investigation to determine if an infiltration field was a feasible method for disposing of the dewatering effluent which included directing a subsurface investigation of potential infiltration field locations and performing groundwater modeling using Visual MODFLOW to model the effects of the pumping and recharge system.

Owl Hollow Fields Environmental Monitoring, Staten Island, NY, *NYC Department of Parks and Recreation.* Project Engineer for this project where Tectonic was selected as the NYSDEC Independent Environmental Monitor for the remedial capping of an 11 acre PCB and solid waste contaminated site at Freshkills Landfill in Staten Island during its conversion into community soccer fields. Tectonic is responsible for verifying that all aspects of Site Management Plan are complied with during remedial activities. Performed oversight of the remedial removal of PCB contaminated soil hotspot, monitored soil excavations and fill delivery and placement activities, and prepared bi-weekly activity summary reports summarizing site monitoring activities for submittal to NYSDEC. Also performed air monitoring using PID and real-time particulate monitors per the approved CAMP in the SMP.

Central Park Police Precinct Environmental Services, New York, NY, *NYCDDC.* Project Engineer responsible for providing technical direction and oversight of a project that involves renovating an existing police precinct building to a modern facility within a historic landmark building. There are known to have been two (2) 550 gallon gasoline underground storage tanks (USTs) and one 8,000 gallon fuel oil UST located adjacent to the existing building on the property. During a previous environmental subsurface investigation, soils impacted with fuel oil were identified on the property up to the edge of the building and within the building footprint. As technical engineer, performed the remedial investigation and prepared the Remedial Investigation Report. Prepared a Remedial Action Plan consisting of an active vapor intrusion control system; underdrains to control groundwater potential impacted with VOCs; and prepared reports including a HASP and CAMP in accordance with TAGM 4031 guidelines. Designed subslab SVE extraction wells and coordinated the design of a SVE treatment system to extract VOCs from the subslab soils and coordinated design of the SVE treatment system in a custom designed vault located adjacent to the structure. Obtained approval for SVE system from NYSDEC.

Adams UST Spill Investigation and Remedial Closure, Highland Mills, NY, *NYSDEC.* Project Engineer responsible for performing technical services for the investigation of a spill caused by an underground storage tank located adjacent to the site residence. Performed remedial investigation, prepared a remedial investigation report and provided a remedial action plan in accordance with NYSDEC STARS guidance for SVOC petroleum hydrocarbons to determine the area impacted on the property. Also provided direct coordination with the environmental contractor that performed remedial removals of contaminated soil. Prepared a NYSDEC closure report, including results of investigation and documentation of the tank removal with associated transportation manifests and disposal tickets.

Chronological History of Employment

Tectonic – 2002-Present

RUSSELL GAUSS, PE

Current Responsibilities

Mr. Gauss is a Licensed Professional Engineer in New York and Florida who specializes in controlled inspections, engineering and project management including but not limited to scheduling coordination, estimating, contracting, documentation and performing controlled inspections, testing and analysis. He also has expertise in: construction design development and review of specifications, submittals, training, surveying and layout.

Summary of Experience

Special Inspections and Materials Testing Laboratory Services #RQ_A&E_2R, *NYCDDC.* Project Manager for various task-orders under a three year term contract for Cultural, Police and Fire facilities and Libraries. Inspection and testing of all material, equipment and operations are conducted with strict adherence to the New York City Building Code and comply with contract drawings and specifications. Assignments include: New Kensington Branch Library, Cortelyou Branch Library, Studio museum in Harlem, Queens Botanical Garden, and Brooklyn Historic Society.

Term Agreement for Construction Inspection and Materials Testing Services, *DASNY.* Tectonic provided construction inspection services on a multi-year Term Agreement contract for construction inspection and materials testing services for various State Facilities. Assignments Include: CUNY Lehman College Science Facility.

Law School Dorm, NY, *Fordham University.* Inspector responsible for providing construction inspection services for the $250M new 460,000 GSF Law School and Dormitory at the Lincoln Center Campus of Fordham University. Inspections include inspection of concrete, steel and masonry.

Policy Academy, NY, *NYCDDC.* Tectonic is providing special inspection services for the $1.5 Billion construction of the New York Police Academy under our citywide Controlled Inspection and Testing Laboratory Services contract. Responsible for all inspections and testing with strict adherence to NYCDOB standards.

LGA Bus Depot Bus Washers, Queens, NY, *MTA.* Resident Engineer for this $1.9 million dollar MTABC new bus washers construction project in Queens, NY.

Delta Testing Laboratories, Inc., Mt. Vernon, NY. Technical Director responsible for the Technical & Quality Management of Field and Laboratory Operations for a Construction Inspection/Materials Testing Laboratory that provides Quality Control and Inspection Sign-Off of Building Construction and Site Development.

- Responsible for supervising and the evaluation of field and laboratory technicians and providing daily management support.
- Provide Quality Assurance by meeting with clients and contractors in the field to validate reports and to coordinate details, specifications and Building Department requirements.
- Supervised and performed controlled inspections in NYC and surrounding metropolitan area at major projects such as schools, hospitals, theaters, office buildings, shopping centers and residential units. Specializing in the inspection of construction with regard to soils & subgrade, pile installation, reinforcing steel, formwork, concrete, structural steel, structural stability, integrity of building modifications and investigation of material failures.
- Performed MEP controlled inspections at commercial and residential job sites for various life safety systems, fire suppression systems and refrigeration systems. Guidance for implementation of performing Energy Code inspections.
- Supervise, perform and witness Mechanical, Electrical and Plumbing functional operational test including but not limited to fire suppression / detection systems, emergency generators, fire pumps, emergency lighting, domestic water and storm piping at construction projects.
- Provided technical oversight and supervisory guidance to achieve and maintain various accreditations such as AMRL, CCRL, AASHTO and "IAS which is presently in progress".

Testwell, Inc., Ossining, NY. Technical Director responsible for Senior Management of a Field Inspection and Materials Testing Laboratory for the quality control of building construction and site development. Responsible for final review of Inspection and Testing reports used for Technical report (NYC: TR-1, 2 & 5) sign-off for projects within the Tri-State area and well as Florida. Employed to provide technical direction to help facilitate the closing of the company.

- Provided Technical oversight of NYC's largest Material Testing Laboratory and supervisory guidance to maintain various accreditations such as NVLAP, AMRL, CCRL and AASHTO.
- Responsible for supervising the scheduling and evaluation of field and laboratory technicians and provided daily management support
- Responsible for final review of all field and laboratory reports prior to final TR signoff and sealing of documents to be submitted to clients and Building Departments.
- Provided Quality Assurance by meeting with clients and contractors in the field to validate reports and to coordinate detailed specifications and Building Department requirements.
- Coordinated with the A/R Department for preparation of invoices for Laboratory testing and billing reconciliation.
- Performed final field inspection on projects requiring final TR sign-off and coordination with project expeditors.
- Technical Management of the Company wind down during Chapter 11 status; technical closeout of projects and coordinating the transition of quality control of our clients.

Summary of Experience

Consultant Services for Controlled Inspection, Various Boroughs, NY, *NYCSCA.* Responsibilities include performing Controlled Inspection and testing inspections of Concrete placed on-site and of batch plant operations, as well as masonry, soils, subgrade, earthwork, rebar, asphalt, fire proofing and fire stops; Various project locations. Reporting circumstances of field activity to Project Officers. Maintaining supportive documentation of field activities and Contractor operations.

Term Agreement for Construction Inspection and Materials Testing Services, *DASNY.* Inspector responsible for performing fire stopping, fire proofing, masonry, soils, rebar and concrete inspections at various sites, such as York College Performing Arts Center, NY Psychiatric Center, Bernard Fineson. Reported findings to client to ensure compliance to specifications.

World Trade Center, Tower 4, Manhattan, NY, *Silverstein Properties.* Inspector responsible for inspecting concrete at Ground Zero to ensure specification compliance. Constantly in communication with the client and the Project Managers to notify all parties of any issues. Working together with various trades to create a productive work environment.

Center for Sports, *Adelphi University.* Performed various construction inspection services to verify that all work was being done in accordance with the project specifications. Conducted masonry, rebar, and soils inspections. Communicated with the client and reported findings.

Inspection Services, Various Sites, NYC, *NYCDDC.* Inspector responsible for performing soils, concrete, coring, rebar, masonry, fire stopping, and fire proofing inspections under citywide Controlled Inspection and Testing Laboratory Services contract.

Quality Control Plan Administrator, GRACE Industries, LLC. Established a quality control Plan. Ensured that material meets specifications, corrected mix problems, and controlled material temperature.

- Ensured compliance with environmental regulations by working with environmental consultant.
- Prepared Mix designs for Batch plant and drum plants. Guaranteed mix designs in a timely fashion, within deadlines and ensured that designs were approved.
- Other responsibilities also included performing laboratory assessments and providing equipment inventory, maintenance, calibration, cleanliness, and supplies.
- Produced daily, weekly, monthly, and year-end production reports. (Material made, rap used, ac used, raw materials, gross sales, best customers, etc.)
- Full time QC/QA manager at the plant during production.
- Made sure material meets specifications on Port Authority, NYS DOT, and NYC DOT jobs.
- Held weekly progress and quality control meetings.
- Submitted price quotes, mix designs, specifications, job cost estimates to all Grace clients.
- Establish a digital filing system for quality control, in which all test results and daily quality control reports were scanned in and filed electronically. Reports were then available via email and fax.

Highway and Street Maintenance Inspector, NYCDOT. Responsibilities included, monitoring the activities of City Paving Crews at various locations within the 5 boroughs. Verified material placement and performed density tests for Asphalt Compaction analysis.

Material Testing Lab Field Inspector. Worked as a Construction Material Technician/Inspector performing services including, sub-grade in-place density of soil and moisture control using nuclear gauge, collected samples and performed 1 point proctor on site. Inspected masonry/curtain panel, fire proofing and fire stopping. Conducted Rebar inspections, field testing of fresh concrete and placement according to ACI procedures. Worked on Asphalt paving projects for Port Authority, State, City and Private Organizations.

Current Responsibilities

Project Manager/Resident Engineer for major transportation projects involving inspections and structural designs for bridges, highways, tunnels, shops and maintenance facilities, and railways. Mr. Cho is also responsible for field condition surveys.

Summary of Experience

Hudson Line Stations Rehabilitation, Phase 2B, Westchester, NY, *MTA Metro-North Railroad.* Senior Resident Engineer responsible for overseeing the construction of the $50 million, 39 month staged reconstruction of platforms at Philipse Manor, Scarborough, and Ossining Stations. The rehabilitation included the replacement of 4,500 LF of high-level platforms, 1,500 LF of canopies, 6 pile-supported elevators, a new pedestrian overpass, rehabilitation of 2 existing overpasses with Americans with Disabilities Act (ADA) improvements, ADA ramps, new heated shelters, electrical upgrades, improved lighting, a variable-message sign system, a public address system, and station amenities. Responsible for maintaining the project schedule through the use of the critical path method schedule, providing coordination with the Construction Support Service group in addressing the various requests for information regarding design modifications and unforeseen field conditions, and coordinating and communicating with local communities and municipalities for various construction efforts affecting commuters and vehicular traffic.

Mid-Hudson Line Inbound Stations, Phase 2A, Westchester, NY, *MTA Metro-North Railroad.* Senior Resident Engineer responsible for overseeing the construction for the $15 million, 18 month staged reconstruction of platforms at Hastings-on-Hudson, Dobbs Ferry, and Irvington Stations. The rehabilitation included the replacement of 2,000 LF of high-level platforms, 800 LF of canopies, Americans with Disabilities Act (ADA) ramps, new heated shelters, electrical upgrades, improved lighting, a variable-message sign system, a public address system, and station amenities. Maintained the project schedule with the critical path method schedule. Provided coordination with the Construction Support Service group in addressing the various requests for information regarding design modifications and unforeseen field conditions. Also coordinated track usages with other projects in the same block.

Mid-Hudson Line Station Overpasses, Westchester, NY, *MTA Metro-North Railroad.* Senior Resident Engineer responsible for overseeing the construction for the $36 million staged reconstruction of platform extensions at four rail stations, replacement of three overpasses with Americans with Disabilities Act (ADA) improvements including new elevators, and the reconstruction of a retaining wall.

Hudson Line Stations and the Historic Preservation of the Yonkers Station, Yonkers, NY, *MTA Metro-North Railroad.* Resident Engineer responsible for providing construction management services for a $66 million historic restoration of Yonkers Station, the staged reconstruction of platform extensions at nine stations,

replacement of three overpasses with Americans with Disabilities Act (ADA) improvements including construction and rehabilitation of elevators, and the construction of river access for the Department of Environmental Conservation including landscaping.

Journal Square Transportation Buildings, Jersey City, NJ, *PANYNJ.* Project Manager responsible for scheduling, coordination, and structural inspections of transportation buildings, including the building fascia, during two annual inspections. Tasks included researching documents, leading an inspection team of four structural engineers, developing an inspection schedule, coordinating with the Port Authority personnel for accessing the office spaces for inspection, and coordinating with equipment vendors for inspection support. Also prepared a report including findings and recommendations for improvements.

Teterboro Airport, Teterboro, NJ, *PANYNJ.* Project Manager responsible for coordination and structural inspections of 15 hangars and buildings. Responsible for coordinating the researching of documents, organizing an inspection team of four engineers, developing an inspection schedule, and controlling the budget.

Hudson River Tunnel A, New York, NY, and Jersey City, NJ, *PANYNJ.* Team Leader for a condition survey of 125 feet of tunnel ceiling for the Port Authority Trans-Hudson (PATH) Tunnel A under the Hudson River. Mapped out deficiencies and sounded the tunnel for possible delamination in the parging. Inspected both brick and concrete segments of the tunnel.

Lincoln Tunnel Exhaust Duct Inspection, Manhattan, NY, *PANYNJ.* Team Leader for the in-depth inspection of the 200-foot concrete offset exhaust duct in the Lincoln Tunnel. Sounded the concrete surfaces with a hammer and mapped out cracks, hollow-sounding areas, spalls, and the locations of exposed reinforcing bars. Painted deficient areas for ease of repair.

41st Street Access Tunnel Inspection, Manhattan, NY, *PANYNJ.* Team Leader for the in-depth inspection of the 500-foot access tunnel from 41st Street to the Port Authority's Bus Terminal. Sounded the side retaining walls and the top structural slab with a hammer and mapped out cracks, hollow-sounding areas, spalls, and the locations of exposed reinforcing bars.

John F. Kennedy International Airport, Queens, NY, *PANYNJ.* Team Leader for a structural integrity inspection of Building 55 at a major airport.

Condition Surveys, Queens, NY, and Jersey City, NJ, *PANYNJ.* Team Leader for condition surveys of Hanger 17 at the John F. Kennedy International Airport and the east exterior wall at the Henderson Street Car Shop in Jersey City.

Condition Survey, John F. Kennedy International Airport, Queens, NY, *PANYNJ.* Team Leader for a condition survey of Building 178 at a major airport. Responsible for the field efforts and report preparation for this structural integrity inspection

Current Responsibilities

Mr. Grzeskowiak is a Resident Engineer experienced in project and construction management for public and private clients on post office, courthouse, school, airline, airport, electrical substation, highway, landfill, and remediation projects. He has managed both new construction and renovation work with direct responsibility for project schedule, budget, and construction including contract administration, quality control, contractor payments, estimates, change order negotiations, field directives, daily reports, meeting minutes, shop drawings, submittals, requests for information, commissioning, space turnover, and project closeout. Mr. Grzeskowiak supervises architectural, structural, electrical, plumbing, and heating, ventilation, and air-conditioning (HVAC) field inspection staff, administrative and document control staff, and curtain wall, security, elevator, and asbestos removal inspection consultants.

Summary of Experience

Renovation of Electrical Substation Control Buildings, East Rutherford and Ridgefield, NJ, *Public Service Electric and Gas Company (PSE&G).* Construction Manager for the $600,000 renovation of two existing electrical substation control buildings. Project consisted of asbestos abatement, the demolition of existing doors and frames, removal of existing windows, and the furnishing and installation of a concrete stone veneer wall system, insulated metal wall panels, painting of interior walls and ceilings, new doors and frames, vinyl composition tile and vinyl base, terrazzo floor repairs, window security screens, toilet partitions and accessories, roof ladder, roof parapet metal coping, lighting and devices, plumbing fixtures, sump pumps, and through wall fans and ductless split system air-conditioners. Monitored contractors' work for compliance with contract documents, prepared daily and weekly progress reports, reviewed contractor payment requisitions, and coordinated with client on staging of work in occupied buildings and scheduling of safety watchers.

Replacement of 26 kV Substation Transformers, Bloomfield, NJ, *PSE&G.* Construction Manager for $300,000 replacement of 26 kV breakers at PSE&G Toney's Brook substation. Work included the removal of existing breakers, removal and environmental disposal of existing coolant, coordination with client for outages to perform the work, and installation of new breakers, relays, wiring, and testing.

Design Services for Replacement of Authority State Police Facilities, Multiple Locations, NJ, *NJTA.* Construction Engineer for performing constructability reviews on the NJTA Program Management Building Assessment Program for the following projects:

- Construction of Troop D Bloomfield Station - Parkway Milepost (MP) 153.0 NB
- Replacement of New Jersey State Police Troop D Newark Barracks
- Construction of Troop D Moorestown Station - Turnpike MP 37 NB

- Construction of Troop D Galloway Station - Parkway MP 42.0
- Rehabilitation of Toll Utility Buildings - South, Interchanges 2, 3, 4, 5, 6, 6A, 7, and 7A
- Rehabilitation of Toll Utility Buildings - Central, Interchanges 8A, 9, 10, 11, 13, 13A, and 14
- Rehabilitation of Toll Utility Buildings - North, Interchanges 14A, 14B, 14C, 15E, 15W, 16E 18E, 16W, 17, and 18W.

Responsibilities also included reviewing the design documents for these seven projects and providing comments to the design team.

Newark Liberty International Airport, Newark, NJ, *PANYNJ.* Project Engineer on projects totaling $20 million responsible for managing construction contracts, coordinating consultants, supervising contractors, negotiating change orders, and managing budgets and schedules on projects that included the construction and renovation of runways, taxiways, roadways, bridges, passenger lounges, automotive shop, warehouse, and parking facilities.

Newark Liberty International Airport, Newark, NJ, *Continental Airlines.* Project Manager for the renovation of airline terminal, operations, and office facilities at Newark Liberty International Airport, including $1.2 million renovation of terminal offices and operating facilities for Aircraft Maintenance, Inflight, and Flight Operations personnel and $3 million pump station construction. Managed design and construction of cargo building expansion and renovation. Provided project design oversight and construction management for a $15 million, 75,000-square-foot wide body aircraft hangar. As Configuration Manager, coordinated the planning efforts of a team of consultants for Continental's $600 million Global Gateway Program, providing technical support with scheduling, estimating, construction phasing, interface with the Port Authority of New York and New Jersey, field surveys, reports, and presentations.

PS/IS 237K New School Construction, Brooklyn, NY, *New York City School Construction Authority.* Lead Project Officer for the construction of a new, $56 million, four-story, 140,000 square-foot primary/intermediate school. Project consisted of demolition of existing building, underpinning of adjacent structure, classrooms, cafeteria, auditorium, gymnasium, locker rooms, switchgear room, fire pump, offices and playground, installation of electrical, HVAC, plumbing, sprinkler, fire alarm, audiovisual, and security systems, passenger and freight elevators, emergency generator, curtain wall, architectural finishes, and commissioning. Building had exterior masonry walls with brick face and interior partitions, as well as rooftop gas heating and cooling units.

U.S. Attorney Tenant Fit Out, Brooklyn, NY, *General Services Administration.* Resident Engineer for the $19 million, 180,000-square-foot fit-out project for the U.S. Attorney. Project consisted of seven floors of HVAC, plumbing, electrical, and security systems and finishes installed in a newly renovated historic courthouse and post office building. Facilities included offices, computer room/data center, library, holding cells, sally port, conference rooms, press room, security doors, hardware, glass, and cameras.

Underground Storage Tanks, New York, NY, *New York City Department of Design and Construction.* Resident Engineer for the $15 million project for the construction of soil and groundwater remediation systems and the upgrade and replacement of underground fuel storage tanks at multiple police precincts throughout New York City. Installed Veeder-Root leak detection and monitoring systems.

Current Responsibilities

Mr. Francino is a Resident Engineer/Construction Manager with 28 years of experience in all phases of engineering planning, design, scheduling, construction, and financial controls. He has extensive knowledge in building systems, utility infrastructure, highways, sewage treatment, and information technology industries. His experience includes directing construction management teams, design professionals, and support personnel toward the successful completion of projects and career growth, as well as planning and managing the financial aspects of all project phases. Mr. Francino is a Resident Engineer working on projects ranging in construction cost from $0.5 million to $32 million and planning yearly construction budgets of $75 million.

Summary of Experience

SUNY Stony Brook Wastewater Treatment Plant Improvements, Stony Brook, NY, *Suffolk County Department of Public Works.* Resident Engineer on an $18 million improvements project of a 2.5 mgd wastewater treatment plant. The multi-prime project includes new denitrification and gravity belt thickener buildings/facilities, relocation of existing stormwater recharge basin, upgrade of electric service equipment, multiple motor control center modifications, and more than 2000 LF of underground electric duct banks.

Udall's Mill Pond Dredging, Great Neck, NY, *Nassau County Department of Public Works.* Engineering and Construction Manager on the $6 million project dredging 36,000 cubic yards of sediment from Udall's Mill Pond. The project included hydraulic dredging, geotube dewatering with polymer system, disposal of material in a Department of Environmental Conservation-approved site, and the removal of invasive vegetation and planting of native wetlands plant materials.

Bay Park Sewage Treatment Plant Dechlorination Facility, East Rockaway, NY, *Nassau County Department of Public Works.* Resident Engineer on the $4.2 million multi-prime project. Responsible for construction of a sodium bisulfite dechlorination facility. Included retrofitting an existing building with piping, pumps, control valves, containment area, chemical tanks, process controls system, electric system, fire alarm and suppression, and communications. Also included the installation of sampling lines and chemical injection lines into the 84-inch outfall pipe 25 feet below grade.

Bay Park Sewage Treatment Plant Hot and Chilled Water Replacement, East Rockaway, NY, *Nassau County Department of Public Works.* Project Controls for $6.5 million replacement of piping and control valves for sewage treatment plant heating and cooling system. Worked with the owner to develop objectives including constraints that would keep the contractor's operations under control. Developed schedule logic, durations, and cost loaded schedule. Updated the schedule, and prepared engineer's certificate for monthly payments. Reviewed the contractor's progress identifying deficiency and suggesting tasks and work blocks requiring additional focus and resources. All project milestones were completed on schedule as well as substantial completion.

Ransom Beach Comfort Station, Bayville, NY, *Town of Oyster Bay.* Engineering and Construction Manager for the multidiscipline design for a new comfort station. Coordinated survey, architectural, structural, and mechanical, electrical, and plumbing subconsultants, and coordinated permit application process. As Resident Engineer responsible for all construction disciplines for the multi-prime $950,000 construction project.

Mitchell Field Parking Lot, Uniondale, NY. Project Engineer/Construction Manager during the design and construction phases for the construction of a 750-car parking lot and entrances to serve a children's museum, recreational facility, and office building. Construction included drainage, lighting, and sidewalks.

Piping Rock Country Club Maintenance Building, Locust Valley, NY. Design and Construction Manager of site work and utilities including parking, asphalt entrance and exit, drainage, septic system, water service with a double check valve, electric, and fire service for a 20,000-square-foot maintenance building.

Newbridge Creek, Bellmore, NY. Resident Engineer/Construction Manager during the construction of 2,000 feet of culvert through a residential area. Responsible for claims, change orders, project schedule, contractor and subconsultant direction, and interaction with local residents and school, as a representative of the town.

Mediacom National Call Center, Middletown, NY, *Mediacom.* Project Manager for Mediacom National Call Center build-out. Responsible for the project planning and scheduling during the construction phase of a 520-seat national call center. This project included the construction of a new building in Pensacola, Florida, and retrofit of an existing Mediacom call center in Des Moines, Iowa. The work included identification and tracking of critical equipment and materials deliveries, construction force scheduling, and project plan updates and reports.

Cablevision Connecticut Call Center Consolidation, Bridgeport, CT, *Cablevision.* Project Manager for construction of the consolidation of multiple small local call centers into one centralized location. The project was the demolition and renovation of a 10,000-square-foot multi-floor office space. Responsibilities included scheduling trades and technical workforces; scheduling equipment and material deliveries; and maintaining and publishing the project plan and reports.

Education
B.S., Agricultural/Environmental Engineering, Cornell University, 1983

Construction Documents Technologist, Construction Specifications Institute, 2000

Construction Contract Administrator, Construction Specifications Institute, 2001

Professional Registrations
PE: New York – No. [redacted] (1992)

Current Responsibilities

Mr. Powers is a Resident Engineer responsible for administering construction contracts to upgrade sewage treatment plants. He performs extensive coordination with contractor, plant operations, designer, and the New York City Department of Environmental Protection Bureau of Environmental Design and Construction to make certain that work meets design intent and contract specifications and is beneficially useful to the user in plant operations. He also manages inspection, scheduling, change order, permitting, document control, and safety staff. Mr. Powers reviews and approves payments and accepts or rejects work performed.

Summary of Experience

Newtown Creek Wastewater Pollution Control Plant Upgrade, Queens, NY, *NYCDEP.* Resident Engineer for the process wrap-up contract involving the installation of new 38 kV switchgear, internal inspections and modifications for digesters, new service water system for digester and centrifuge facilities, and numerous other process improvements.

Newtown Creek Wastewater Pollution Control Plant Upgrade Services, Brooklyn, NY, *NYCDEP.* Resident Engineer/Assistant Resident Engineer on various contracts, including:

- Resident Engineer for NC-41F/EF/HF, $120 million demolition and foundation contracts to prepare for construction of central residuals facility. Job finished ahead of schedule.
- Resident Engineer for NC-105EG, a $4 million service contract to rent and maintain two 2 MW emergency generators to provide backup power to the facility. Contract extended until other contracts put new permanent emergency generators on line.
- Resident Engineer for NC-35F, a $35 million foundation contract to prepare for construction of new North Battery. Job finished ahead of schedule.
- Resident Engineer for NC-31C, a $25 million procurement contract to fabricate, test, and start-up 24 centrifuges. Job met fabrication completion milestones and pilot centrifuge installation milestone, however ultimate completion delayed years by delay to install centrifuges by 31G contractor.
- Resident Engineer for NC-29G, a $3 million roadway and utility installation. Job finished ahead of schedule.
- Assistant Resident Engineer for NC-27G/E/H/P, $15 million contracts to construct utilities, roadways, new construction management building, new Wards Island interim laboratory, and new interim water building.

Coney Island Wastewater Pollution Control Plant Upgrade, Brooklyn, NY. Assistant Resident Engineer for CI-19G/E/H/P, $20 million contracts to construct new recycle flow pump station and utilities.

Fresh Kills Landfill, Staten Island, NY, *New York City Department of Sanitation.* Construction Management Engineer responsible for performing the construction management of the closure of landfill sections. Responsibilities ranged from quality assurance manager to chief geosynthetic inspector. Involved in reviewing payment requests and construction methods and resolving nonconformance issues. Quality assurance activities dealt with a 40-millimeter high-density polyethylene (HDPE) geomembrane, drainage geocomposite, soil, and granular materials. Activities involved coordinating sampling and testing for preconstruction and conformance and preparing a certification report for the above items.

Landfill Closure, Van Buren, NY, *Town of Van Buren.* Site Superintendent responsible for scheduling, construction methods, labor supervision, change order proposals and negotiations, and payment requests.

Die Casting Remediation, Syracuse, NY. Superintendent responsible for scheduling, construction methods, labor supervision, change order proposals and negotiations, and payment requests.

Hazardous Waste Remediation Work, Various Locations, NY, *NYSDEC.* Provided work plan development, supervised field activities, and prepared technical reports for hazardous waste Phase 2 investigations and site remediation.

Owls Head Water Pollution Control Plant, Kings County, NY. Assistant Resident Engineer responsible for identifying construction problems and time constraints, supervising the inspection crew, and establishing complete details of field conditions. Reviewed shop drawings, report writing, record keeping, and payments and negotiated change orders.

Design Projects, Staten Island, NY. Responsible for the designs of sewage treatment plants, as well as storm and sanitary drainage for new housing developments. Provided consultation services and filing of plans, including New York City Department of Environmental Protection, State Pollution Discharge Elimination System, and Environmental Assessment Form applications in order to obtain approval and permits.

Summary of Experience

3-Year Maintenance and Construction Inspection Agreement, Maintenance Movable Bridge and Tunnel Repair Contract 2013/14, DP# 13433 at Route 71 Shark River Bridge, Belmar, NJ, *NJDOT.* Construction Inspector responsible for the inspection of maintenance construction on the Shark River Bridge including but not limited to steel work and repair, concrete work and spall repair, and lane closure for maintenance and protection of traffic.

Region South Maintenance Term Agreement – Construction Inspection and Administration Services, Reconstruction, Rehabilitation, and Repaving of Route 30 Roadway From Grove Street to Brand Avenue (DP 13131), Camden County, NJ, *NJDOT.* Construction Inspector responsible for the inspection of roadway work on Route 30 between Grove Street and Brand Avenue. Roadway work included demolishing existing handicap ramps, aprons, and sidewalks and then rebuilding them to meet NJDOT standards and specifications; milling and repaving Route 30 between Grove Street and Brand Avenue; and closing lanes for maintenance and protection of traffic.

3-Year Maintenance and Construction Inspection Agreement, Pavement Preservation (DP 13420) on I-295 Northbound (NB) and Southbound (SB) Between Milepost (MP) 32.1 and MP 41.0 including Eastbound (EB) and Westbound (WB) Ramps Within the Limits in Camden and Burlington Counties, NJ, *NJDOT.* Construction Inspector responsible for the inspection of pavement preservation on I-295 NB and SB roadways from MP 32.1 to MP 41.0 including EB and WB ramps within the limits. Pavement preservation work included milling and paving sections of I-295 and some ramps; micro-milling and paving the remaining sections of I-295 and some ramps; repairing spalls on remaining ramps; replacing sections of head curbs, bicycle grates, and face plates along I-295 and ramps; fog-sealing sections of shoulder areas along I-295; and closing lanes for maintenance and protection of traffic.

Maintenance Movable Bridge and Tunnel Repair Contract 2012, DP No. 11406, Various Locations, NJ, *New Jersey Department of Transportation.* Construction Inspector responsible for the inspection of maintenance construction on the U.S. Route 130 Raccoon Creek Bridge, Bridgeport; U.S. Route 130 Oldmans Creek Bridge, Oldmans Township; NJ Route 50 Tuckahoe Creek Bridge, Tuckahoe; NJ Route 44 Mantua Creek Bridge, Paulsboro; NJ Route 7 Hackensack River, Wittpenn Bridge, Jersey City; NJ Route 71 Shark River

Bridge, Belmar; and NJ Route 29 Tunnel Bridge, Trenton. Maintenance construction work included steel work and repair, concrete work and spall repair, bridge deck joint repair, stress gauging and counterweight balancing, replacement of counterweight steel plates with lead blocks, lane closure for maintenance and protection of traffic, electrical installation and testing, bridge sheaves, and sidewalk repair.

New Construction and Rehabilitation on New Jersey Turnpike and Garden State Parkway, NJ, *NJTA.* Assistant Traffic Engineer responsible for reviewing new and rehabilitation construction plans and specifications to make certain they complied with safety and NJTA requirements and that daily traffic operations were not adversely affected.

Rock Slope Stabilization at George Washington Bridge Rock Cut Position, New York, NY, *Amtrak.* Construction Manager responsible for providing construction management services such as reports, progress status, safety oversight, claims management, specifications compliance, and contractor coordination services.

Various Projects and Work Orders, Queens Midtown Tunnel (QMT), Throgs Neck Bridge (TNB), and Bronx-Whitestone Bridge (BWB), New York, NY, *MTA Bridges and Tunnels.* Senior Resident Engineer/Construction Manager for the construction of an access roadway to Queens anchorage at the BWB. Projects also included traffic island reconfiguration, parking lot construction, and rehabilitation of pipe gallery tunnel, doors, and lighting systems at the QMT; concrete pier repairs and installation of new steel systems, such as railings, ladders, and cages, in the Bronx and Queens anchorages; and upgrade of E-ZPass power and communication systems at the TNB.

Reconstruction of West 72nd Street Station (Broadway and 7th Avenue Line), New York, NY, *Metropolitan Transit Authority.* Construction Manager involved in this station reconstruction project. The construction of the station included the realignment and reconstruction of more than 300 feet of existing subway tunnel and track, as well as construction of a new rehabilitation of an existing control building.

Bridge Deck Repairs and Resurfacing at Milepost (MP) 83 to MP 122 and the Newark Bay-Hudson County Extension, Middlesex, Union, Hudson, and Bergen Counties, NJ, *NJTA.* Senior Resident Engineer/Construction Manager responsible for reviewing cost and budget planning; overseeing quantity estimates and submittals of shop drawings, RFIs, and change orders; and reviewing and approving contractor's monthly requisitions and payments.

Current Responsibilities

Mr. Roloff has more than 16 years of field inspection on a wide variety of transportation projects. He has been assigned as a Resident Engineer to the Borough of Manhattan for 7 years and has established a reputation as an outstanding Resident Engineer capable of handling the complex issues that are typically encountered in projects in Manhattan, such as work zone traffic control, utility interferences and relocation, maintaining quality-of-life for local residents and businesses, gaining an in-depth knowledge of subsurface city-owned and privately-owned utility layouts, managing and documenting changes in utility layout, working with other agencies, etc. Mr. Roloff possesses 9 years of direct experience on NYCDDC projects and 4 years of project management experience on NYCDDC projects with BMP work. He has a thorough understanding of NYCDDC/DEP/DOT policies, procedures, and specifications, and works proactively towards identifying and resolving issues that can potentially impede the project's progress.

Summary of Experience

MED-610 REI Services for the Trunk Water Mains at 8th Avenue in Manhattan, *NYCDDC.* Resident Engineer responsible for providing inspection, management and coordination for the $20M installation of trunk water mains in the West Village area, private utilities relocation and capital work at 8th Avenue from West 12th Street to West 13th Street to connect Shaft 27B (Water Tunnel #3) to the distribution system in Manhattan. Elements of work include installation of various diameter (36", 48") steel trunk water main and DIP water mains (20", 12", 8"), 16" DIP combined sewers, rehabilitation of 4' – 0" x 2' -8" elliptical sewers, catch-basins, connections, manholes, 4" and 7" pigmented and non-pigmented sidewalks and pedestrian ramps, concrete, steel-faced and granite curb, roadway rehabilitation (3" asphalt over concrete base), street and traffic lights, street and traffic signs, tree mitigation and planting. The project site presents major challenges such as Traffic Management, Community Outreach, Construction and Utilities Management.

Resident Engineering Inspection Services For The Cobblestone Reconstruction Of Peck Slip, Manhattan, *NYCDDC.* Resident Engineer for the Cobblestone Reconstruction of Peck Slip in Manhattan. The project is located within a densely populated residential and commercial neighborhood with extremely congested vehicular and pedestrian traffic; requiring a high level of vigilance to ensure that local businesses, residents and other stakeholders are protected and that their concerns are properly addressed, and in a timely manner. Work involves: special care excavation for archaeological work, relocation of several utility interferences and retrofitting of existing utilities, installation of 20" and 12" water mains, catch-basins and sewer connections, manholes, mass excavation, 15" ESVP and 16" DIP sewers, granite curb, pigmented and non-pigmented sidewalks and pedestrian ramps, concrete, steel-faced and granite curbs, working within a historic district, reconstruction of cobblestone roadway, working with SCA while they converted an old post office (Peck Slip Station) to a school, construction of an park between Front Street and South Street on Peck Slip, special street appurtenances/hardware, installation of telecommunication facilities.

Reconstruction of Beekman Street and Park Place in Manhattan (HWMWTCA6E), *NYCDDC.* Resident Engineer on this $14.6M Contractor-Utilities joint bid project which includes a full reconstruction of Beekman St. from Gold St. to Park Row and Park Place from W. Broadway to Broadway. Work involves installation of Con Edison, ECS, Time Warner facilities as well as replacement/ installation of various diameter (24", 20", 18" and 15") combined sewer and type 2 and 3 catch basins; 20" water main; Lower Manhattan distinctive street and traffic lightings; installation of new granite curbs; sidewalks and pedestrian ramps (pigmented and non-pigmented), removal of trolley tracks and yokes, mass excavation, installation of bus pads; 3" thick curb-to-curb asphalt on 9" thick concrete base roadways; pavement marking and street/traffic signage.

Sewer and Water Main Infrastructure Projects on Staten Island, *NYCDDC.* Resident Engineer for the construction of water mains, storm and sanitary sewers, and coordination with private utilities. Specific project experience includes storm sewer mains, new sanitary sewers, water main replacement, pile driving and road reconstruction in high traffic roadways. Projects include:

- **Catch Basins at Various Locations, Staten Island SER-002278,** *NYCDDC.* ($1.1M)
- **Installation of Storm and Sanitary Sewers and Replacement of Water Mains in Ridgecrest Avenue, Staten Island,** *NYCDDC.* ($4.1M)
- **Installation of Storm and Sanitary Sewers and Replacement of Water Mains in Flint Street, Staten Island, SER-200187,** *NYCDDC.* ($1.8M)

Stormwater Management Projects on Staten Island, *NYCDEP.* Project Engineer for projects with New York City Department of Environmental Protection and Department of Design and Construction. Project size ranges from $5M to $23M. Specific project experience included construction management, inspection, project scheduling, construction cost estimates, shop drawings and payments. Responsibilities included direct negotiations with contractors and scheduling and heading project progress meetings. Projects include:

- **Installation of Storm and Sanitary Sewers, Replacement of Water Mains and Best Management Practices in Clermont Avenue, Staten Island, SE-763,** *NYCDDC.* ($23M)
- **Installation of Storm Sewers and Best Management Practices in Edgegrove Avenue, Staten Island, SER-20088,** *NYCDDC.* **($6M)**
- **Installation of Storm and Sanitary Sewers, Replacement of Water Mains and Best Management Practices in Lenevar Avenue, Staten Island, SE-769**, *NYCDDC.* ($16M)
- **Installation of Storm and Sanitary Sewers, Replacement of Water Mains and Best Management Practices in Arbutus Avenue, Staten Island, SE-759,** *NYCDDC.* ($18M)

NYSDOT Construction Work Zone Safety Course

Current Responsibilities

Mr. O'Leary possesses over 35 years of experience in civil highway and bridge projects gained in the Metro New York area (Route 9A for NYSDOT) as well as in NYSDOT Region 8 where he was an Area Supervisor. He has handled in excess of $500 million in construction work, and has been assigned as Resident Engineer with Tectonic Engineering for the past 8 years, where he has performed his duties with distinction for a variety of clients. Mr. O'Leary is capable of managing infrastructure construction contracts with relative ease, and has a clear understanding of the work at hand, required paperwork, payment procedures, correspondence, submittal tracking, schedule managing, including identifying potential delays and proposing remedial action, and preparing change orders.

Summary of Experience

Construction Division, Poughkeepsie, NY, *NYSDOT.* Construction Supervisor responsible for the management, contract administration and coordination of over fifty construction projects in Westchester County. Duties included assignment, supervision, and monitoring and evaluating the performance of six to eight engineers –in charge, ten to twelve state inspectors and forty to fifty consultant project engineers and construction inspectors assigned to the various contracts. Additional responsibilities included the oversight of the regional geotechnical group, whose tasks included the design and materials testing and approvals related to earthwork throughout the region.

D258235 - Route 22 Bridge over Muscoot Reservoir, *NYSDOT.* This $7.3M project included the placement of a prestessed concrete bridge over the reservoir and the reconstruction of the pavement and roadway widening of Routes 22 and 35 in the vicinity of the bridge. This contract also included new traffic signals, signs, guide rail, drainage facilities and the construction of detention basins to protect the reservoirs from sediment due to runoff.

D259801 - Replacement of Memorial Highway and Division Street Bridges over I-95 and the Metro-North Railroad, *NYSDOT.* This $23M project included the staged demolition of three existing bridges, the replacement of two two-span continuous type bridges and one simple-span bridge and the rehabilitation of one bridge. Also included in this contract was the reconstruction of adjacent roadways and a considerable amount of private and public utility relocations and replacements. Extensive coordination was required with the Metro-North Railroad, the New York State Thruway Authority, the City of New Rochelle, United Water, Verizon and Con Edison.

D258972 - Cross-Westchester Expressway (I-287) Reconstruction Stage 2, *NYSDOT.* This $81M project included the staged construction of four new bridges, the rehabilitation of three existing bridges, the rehabilitation of twenty-four lane-miles of pavement and the construction of eight miles of new pavement. This project also included over three miles of retaining wall and noise wall construction. In addition, this project involved the construction of sign structures, guide rail, traffic signals, ITS facilities, drainage facilities, waterlines, gas lines and electrical lines. Extensive coordination was required with the New York

State Thruway Authority, Town of Elmsford, Town of Greenburgh, Westchester County, Tennessee Gas Pipeline, Verizon and Con Edison.

D258924 - Taconic State Parkway Reconstruction Stage 2, *NYSDOT.* This $62M project encompassed the expansion of the TSP from four lanes to six lanes in the Town of Yorktown. The project included the construction of fourteen lane-miles of new pavement and extensive earthwork to raise the elevation of the Parkway. In addition, the construction of four new vehicular bridges and a pedestrian bridge was accomplished. Also included were retaining walls and noise walls, drainage work, temporary waterway diversions, sign structures, ITS facilities traffic signals, guiderail, curb, and the establishment of wetlands and hiking trails. This project is located within the NYC watershed area so it was necessary to incorporate considerable erosion and sediment control measures throughout the course of the project. Coordination was required with the Town of Yorktown, Con Edison, Verizon and the Algonquin Gas Pipeline.

D258286 - Cross-Westchester Expressway (I-287) Reconstruction Stage 2A, *NYSDOT.* This $41M project included the staged construction of four new bridges and the reconstruction of twelve lane-miles of pavement. This contract also included extensive rock blasting, retaining walls, noise walls, sign structures, ITS facilities, traffic signals, drainage facilities, water mains, gas lines and electrical lines. Extensive coordination was required with the New York State Thruway Authority, the Town of Greenburgh, Verizon and Con Edison.

D258528 - Route 22 Bridge over Rye Lake Rehabilitation, *NYSDOT.* This $9.4M project replaced the existing bearings and transverse steel stringers and installed an Exothermic deck system and micro silica overlay. The work was done at night by utilizing a temporary bridge that was removed and re-installed on a daily basis to keep the bridge in service during the day. Additional work included concrete repairs on the substructure, the installation of an oil-water separator, bridge rail, guide rail, traffic signs, drainage work and resurfacing of the bridge approaches. Extensive coordination was required with the New York City Department of Environmental Protection and the Town of North Castle.

D260380 - Bridge Rehabilitation- 16 Bridges, *NYSDOT.* This $5.3M project included the reconstruction of monolithic decks, concrete substructure and superstructure repairs, bridge bearings, bridge rail, guide rail, bridge joint systems, sidewalk and curb. The work was performed at various project locations throughout Westchester County.

D259249 - Wilmot Road Reconstruction, *NYSDOT.* This $3.8M project involved the removal and replacement of six lane miles of asphaltic concrete together with new sidewalks, granite curbs and retaining walls. A new drainage system was constructed which included the staged construction of a major drainage line across the Hutchinson River Parkway. New traffic signals and sign structures were erected. There were extensive relocations of existing overhead and underground electrical and telephone lines. Extensive coordination was required with the City of New Rochelle, Con Edison and Verizon.

D258915 - Bridge Rehabilitation- Five Bridges, *NYSDOT.* This $3.7M project included the rehabilitation of five bridges on Route 9A and the Taconic State Parkway in Westchester County. The work included the reconstruction of monolithic decks, concrete repairs to substructures and superstructures, the painting of structural steel, bridge bearings, bridge rail, guide rail, bridge joint systems, sidewalk and curb.

Chronological History of Employment

Tectonic – 2008-Present
NYSDOT – 1995-2008

PARTHA C. SAHA, PE

Current Responsibilities

Mr. Saha is a Construction Manager with an extensive range of mechanical and structural experience, and is knowledgeable of diesel engines, hydraulic systems, electrical ac and dc, refrigeration, steam boilers, CNC plasma table, decorative and structural steel/aluminum metal fabrication.

Summary of Experience

Special Inspection and Laboratory Testing Services SCA09-00013R [C11275], New York City, NY, *NYCSCA.* Provided inspection services for a two year term contract. Ensured both the quality of work performed by construction contractors and their subcontractors, as well as compliance with all applicable laws, regulations, codes, requirements etc. Assignments included: PS178 and John F. Kennedy High School.

Retainer Contract for Inspection Services at Various Locations throughout NYC, Contract No. 47580001, Various Locations, New York City, NY, *NYCEDC.* Tectonic is providing on-call construction inspection services at various locations throughout NYC.

Dynamic Structures Inc.733 Yonkers Avenue, Yonkers, NY.
Construction Project Manager whose duties and responsibilities who:

- Estimated and created budgets for construction projects.
- Oversaw all on-site project activity to ensure projects are completed on schedule, within budget, and in accordance with engineering design.
- Performed inspection of construction activities to ensure conformance with approved designs/plans.
- Scheduled client meetings, conducted needs assessment, explained design concerns and cost effective options, planned, estimated and manage the projects from start to finish.
- Approved sub-contractor and vendor invoices.
- Ensured that construction plans are in agreement with customer expectations and identify points at which contractual obligations will have been met.
- Reviewed engineering designs, drawings, blueprints, and other related engineering documents to identify potential problems ahead of time and proactively implement solutions.
- Took corrective action as needed during projects and/or consulted with construction project manager to resolve issues arising during projects.
- Prepared site inspection/oversight reports documenting the progress to date.
- Scheduled inspections
- Coordinated proposed changes in design with consultants and construction manager while maintaining schedule and budget.

Environment Systems Inc. Assistant Engineer/Construction Inspector and Draft Person who:

- Worked with senior engineer to assist project encompassed the management of the entire construction process from submittal approval to commissioning of plumbing, HVAC, Building Management and Temperature control System and Mechanical systems. Field engineering and equipment selection of various components. Coordination of work with other contracts including schedule development and payment controls.
- Performed inspection work for Structural Safety-Structural Stability, Structural Steel –Welding, Structural Steel – Erection and Bolting, Exterior insulation finish systems(EIFS), Excavation work – (Sheeting, Shoring, and Bracing), Smoke control systems, Fire alarm test, Mechanical system, Mechanical demolition, Sprinkler systems, Stand pipe systems, Heating systems, Fire Stop, Suspended scaffold, Steel pipe scaffold, Platforms constructions and attachments to the steel and concrete platforms. Supervised concrete and foundations work ensuring contractor compliance to quality and safety issues of the projects. Also involved in developing test documentation and preparation of daily job reports.
- Worked with senior engineers to design Building management System (Network Architecture diagram, BACNET MS/TP Network loop, CP I-LON control wiring diagram, Power meter/monitor control wiring diagram, FCU,RTU air flow and control wiring diagram, Reheat flow and control wiring diagram, Control Panel layout, Equipment schedule), design of HVAC, Sprinkler system, heating and cooling load calculation and drafting. Used AutoCAD as a design tool.

Projects included: All City Leadership Secondary School. New Building Project, 321 Palmetto street, Brooklyn, NY 11237, Fulton street terminal, Grand central terminal for MTA City transit authority.

Edward Dickman Architectural Company, Great Neck, Long Island, NY. Mechanical Engineer/Construction Inspector whose responsibilities included construction inspection of reinforced concrete lintel attachment to the building structural steel. As per site safety plan the contractor complied with the quantity and safety issues of the projects. Prepared daily construction inspection reports. Involved in the design of HVAC, load calculation, Sprinkler system, Electrical Layout. Conducted scheduling meeting with government agencies, coordinated work with contractors and review cost proposals. Prepared technical reports and scope of work for engineering projects, construction cost estimation and assisted the other members of the project team. Responsible for CADD Design work of various building projects for Architectural and Civil drawing (Including Floor plan, Elevation, Sections according to NYS Building code).Used AutoCAD as a design tool.

Xenon Company, Edison, NJ. Junior Mechanical Engineer whose duties and responsibilities involved the design of HVAC, load calculation, Sprinkler system, Electrical Layout, reviewed Architectural and civil drawing and assisted the senior Engineers in a team. Used AutoCAD for detailed drafting.

Current Responsibilities

Mr. Cholewka is a Resident Engineer for KS Engineers in New Jersey and New York. He provides engineering services for construction management of major transportation and wastewater projects, with special emphasis on bridge construction and rehabilitation projects for the NYSDOT, NYCDOT, and ConnDOT Highways and Bridges.

Summary of Experience

Bollard Project at Newark-Liberty, John F. Kennedy, and LaGuardia Airports, New York, NY and Newark, NJ, *PANYNJ*. Resident Engineer. Supervised construction of crash barriers on the Port Authority Bollard Project at three major NYC Airports. The work involved constructability reviews and bid package preparations for 12 separate contracts plus construction management of two individual contracts at La Guardia Airport (Terminals C & D).

15th Avenue Bridge over Sea Beach Line, Brooklyn, NY, *NYCDOT*. Resident Engineer. Supervised repair of cracked deck and sidewalk on 4 span 15th Avenue Bridge over Sea Beach Line (N Train) for the NYCDOT in Brooklyn, NY. Work included installation of micro silica concrete overlay on milled sidewalks and application of epoxy resin sealer to penetrate and fill cracks in precast post-tensioned piers. Attended safety training for MTA-NYC Transit Track Safety Certification. Worked closely with NYC Transit Inspectors & Flagmen at 18th Ave. & New Utrecht Ave. Subway Stations during General Outages.

New Croton Aqueduct (NCA) Rehabilitation Project, New York, *NYCDEP*. CM Site Safety Officer. Successfully reduced the accident rate by promoting compliance by the CM field inspection staff and the Contractor's work force with their respective Health and Safety Plans (HASP) for this $100 Million unique repair project. Updated the CM HASP and reviewed job hazard analyses for all major work activities. Participated in routine safety audits conducted by BEDC EHS representatives and documented all significant safety and environmental incidents with independent reports that identified root causes and recommended corrective actions.

Interstate 86 Upgrade of Route 17, Orange County, NY, *NYSDOT*. Resident Engineer. Supervised 12 inspectors and field office staff providing construction inspection services for the $65 Million Interstate 86 upgrade of Route 17 in Orange County for the NYSDOT (Region 8). This 9 mile stretch of highway from Exit 116 to Exit 121 at Middletown was successfully rehabilitated on time by using Primavera P6 software for schedule control. Sections of roadway were milled, rubblized, and resurfaced, including a 4 mile section with full depth reconstruction. Three bridges underwent various repairs and upgrades including replacement of concrete deck, back walls, pedestals, and bearings. Also supervised the construction of a new multi-steel girder bridge carrying Route 17 over a future Town of Wallkill connecting road between two shopping centers in Middletown. Environmental considerations mandated the construction of 6 wetland mitigation areas on project. Work involved coordination with Metro North RR personnel for the rehabilitation of an existing bridge carrying Route 17 over the Port Jervis Commuter RR line.

Bowery Bay Water Pollution Control Plant, New York, *NYCDEP*. Resident Engineer. Supervised a field staff of 12 inspectors during construction for the upgrade of the NYCDEP Bowery Bay Water Pollution Control Plant. This $200 Million project included construction of new process air headers for aeration tanks, installation of 5 new process air blowers, replacement of sluice gates and actuators for the final settling tanks and installation of new influent bar screens. In addition, successfully reconstructed concrete tanks, provided mini-pile foundations for temporary blowers and performed lead paint abatement for the removal of old piping and other hazardous waste material, following OSHA guidelines and procedures.

I-95 Rehabilitation, Bridgeport, CT, *ConnDOT*. Resident Engineer. Coordinated and managed 18 inspectors and office staff involved in the supervision of construction for 7 replacement bridges along a mile long section of Interstate I-95 in southern Connecticut. Work included temporary sheet piling with tie-back anchor installations, reinforced-earth retaining walls, 8' diameter drilled shaft caissons, post-tensioned pier cap beams as well as curved steel girder erection, and placement of concrete for new abutments, wingwalls and bridge decks. This $122 Million, six-year ConnDOT project required management of hazardous waste materials and other environmental concerns encountered along this heavily traveled transportation corridor. Work involved extensive coordination with Metro North Railroad flagmen and power division personnel for 4 track outages necessary during existing bridge removal and new steel girder erection over catenary power cables of the New Haven Commuter RR line.

12

Education
B.S., Civil Engineering, Ain-Shams University, Egypt, 1978

Professional Registrations
PE: New York – No. [redacted]

Current Responsibilities

Mr. Farag is a Resident Engineer for Civil Engineering for KS Engineers in New Jersey and New York. His responsibilities include resident engineering inspection and project management, construction supervision, preparation of reports, project evaluations, clarification of DDC policies and procedures, negotiation of change orders, clarification of technical construction details, processing of payments, and punchlist and project close-out. He has performed QA/QC functions on various projects, prepared proposals for additional work, and worked with inspectors to both upgrade and maintain their skills.

Summary of Experience

SEX20045, Resident Engineering Inspection Services for Storm Sewer in Waterbury Avenue, Borough of the Bronx, *NYCDDC.* Resident Engineer responsible for providing resident engineering services for the construction of storm sewers in Waterbury Avenue and its vicinity in the Bronx. Work includes new storm, sanitary and combined sewers to be installed in several street locations. The project site is bounded by Waterbury Avenue to the north, Stadium Avenue to the east, Layton Avenue to the south and Throgmorton Avenue to the west. Various diameters of 10" ESVP to 36" RCP sewers will be installed. Sewers will be constructed on concrete cradles or encased in concrete. Some sewers will be relined using a DEP approved method of lining existing sewers. The project also includes reconnecting existing house sewer lines to the newly installed sewers. New water mains are also to be installed as part of this project. The new mains will be 8" or 12" diameter restrained joint ductile iron pipe. Water main work will include new fire hydrants, main line valves, valve boxes and any other appurtenances associated with the existing water mains. Trench and/or street restoration will be included in the project. Some streets, depending upon existing conditions, may have to be reconstructed. New curbs and sidewalks that are disturbed during construction, will be replaced as needed.

HWMWTCA7A, Resident Engineering Inspection Services for the Reconstruction of Harrison Street, Borough of Manhattan, NY, *NYCDDC.* Resident Engineer responsible for this $18 million project that of involves the construction of water mains; construction of sewers, catch basins and chute connections; utility construction and relocation. Work include construction of new curbs and sidewalks; roadway reconstruction, installation of street lighting and traffic signals; and landscaping.

MED-595, Installation of Trunk Water Mains in Astor Place and Cooper Square, Manhattan, NY, *NYCDDC.* Resident Engineer responsible for this $11.6 million project that includes the installation of 12" & 20" water distribution mains, new butterfly valves, valve and connection chambers, blowoff valves and chambers, flowmeters with chambers, access manholes with chambers, and modifications within shaft 19. In addition, new 30", 36" and 48" steel trunk water mains to interconnect Shaft 31B from City Tunnel #2 at East 4th Street, to Shaft 19 from City Tunnel #1 at Cooper Square. New 24" DIP will also connect new 24" regulator valves to the new trunk water mains.

REI Services for HW2CR08, REI Services for Citywide Involving Grinding Existing Asphaltic Concrete Wearing Course, Manhattan and The Bronx, NY, *NYCDDC.* Resident Engineer responsible for this $7.5 million project, responsible for resident engineering inspection services of grinding existing asphaltic concrete wearing courses on a task order basis in Manhattan and the Borough of New York City. Inspection services for the project includes: site maintenance and safety; Post "No Parking" signs 48 hours in advance; protection of trees from construction debris; marked out all hardware to avoid any damage during milling operations; saw cutting around the hardware and at intersections; placing plates over catch basins to void any debris from falling into basins; milling 2" of existing asphalt; sweeper used behind milling machine to clean up the debris; ramping of all hardware with temporary asphalt; and adjusted all hardware.

Reconstruction of 10th Avenue from 206th Street to 218th Street, Manhattan, NY, *NYCDDC.* Resident Engineer for this project that won the 2009 ACEC New York GOLD Award for Engineering Excellence. Project entails new sewer construction and rehabilitation of existing sewers using lining method, construction of 36" steel water mains in addition to 20" & 12" water main network. It also includes curb and sidewalk construction, sidewalk assessment, streetlight and traffic work, roadway paving, arboriculture and traffic protection. The work also involves new 45"x29" elliptical RCP sewer lines, catch basins, chute connection, manholes, paving with concrete base and asphalt wearing course and landscaping. All construction activities are done with coordination with TA since train elevated tracks are running along the project location.

D010292, Construction Inspection Services for Reconstruction & Restoration of Brooklyn-Queens Expressway, Queens, NY, *NYSDOT.* Deputy Project Manager responsible for providing construction inspection and technical support services for 8 lane-miles of roadway excavation and reconstruction with horizontal and vertical realignments and drainage installation. This project also included replacement or rehabilitation of 17 vehicular bridges, replacement or rehabilitation of 2 railroad bridges, extensive retaining wall reconstruction and soil stabilization along the right-of-way, extensive utility improvements/relocations for both NYC and privately-owned facilities, TSM/ITS installations, and extensive MPT was involved to ensure that traffic was maintained.

CI Bruckner Expressway Reconstruction (T.N.E.) Pelham Parkway, Bronx County, NY, *NYSDOT Region 11.* Deputy Project Manager responsible for providing construction inspection services for this project involving the reconstruction of a 1½ mile section of the Bruckner Expressway from the Throgs Neck Expressway interchange, at the southern end, to Pelham Parkway exit, at the northern end. Work included the replacement of an existing pavement with a new 50-year concrete pavement structure (excavation, placement of subbase, subgrade and new concrete roadway), an addition of new flush full-depth concrete shoulders, replacement of barrier, replacement of guide rails, new drainage, overhead signage, new street lighting, new pavement markers, and landscaping.

With Other Firms
22

Education
M.S., Civil Engineering, Manhattan College, Bronx, NY, 1985

B.S., Civil Engineering, Manhattan College, Bronx, NY, 1980

Professional Registrations
Professional Engineer - NY and CT

Current Responsibilities

Mr. Ortmann is a Resident Engineer for Structural Engineering for KS Engineers in New Jersey and New York. He provides engineering services for major bridge and highway projects, building foundations, power plants, and transit structures. He provides on-site administrative and technical supervision on heavy construction projects, directs multi-trade craft work forces, and determines methods of construction, manpower levels, material quantities, equipment, temporary facilities and work schedules. In addition, he supervises construction activities, materials and equipment received for compliance with company directives, contract drawings, specifications, approved submittals and standards of accuracy.

Summary of Experience

George Washington Bridge Lower Level, New York, *PANYNJ*. Team leader for the Priority, Safety and Routine Verification inspection of the lower level including the lower level roadway and framing, the bottom chord of the stiffening truss, the New Jersey abutment and New York anchorage, and the travelers including their support framing and connections. The purpose of this inspection was to determine the overall condition of the lower level structure and to identify structural and non-structural deficiencies.

Center Avenue Bridge over the Upper and Lower Approaches to the George Washington Bridge, NJ, *PANYNJ*. – Team leader for the inspection and verification of the existing condition of the bridge elements including the roadway, superstructure, substructure and appurtenances to determine the rehabilitation or replacement design options.

Contract D261292 I-278 Staten Island Expressway Improvements, Staten Island, NY, *NYSDOT*. - Senior Project Manager providing on-site project management for the $74.8 million I-278 Staten Island Expressway Improvement Project including 2.78 Km of asphalt and concrete highway reconstruction including the demolition and widening of three (3) bridges with precast concrete deck units and the construction of a new on-ramp using precast concrete deck units. Maintenance of site storm water run-off and implementing compliance with the environmental protection requirements for Brady's Pond. Installation of new drainage systems, new roadway lighting and ITS installations. Maintenance and protection of traffic included 4 stages of construction.

World Trade Center, Tower 1, Manhattan, NY. Project Manager for the $40 million construction of the 120,000 SF foundation for Tower 1 including rock excavation, support of excavation, drilling and grouting of rock anchors, placement of reinforcing steel and concrete for the core, building perimeter footings, slab on grade. Coordination with the PATH and Port Authority Resident Engineer's Office personnel.

Reconstruction of West 72nd Street Station, NY, *MTA NYC Transit*. Project Manager for the $35 million completion of the renovation and restoration of the existing landmark station house, construction of a new station building including installation of elevators, lengthening of both existing platforms, complete electrical upgrade including new station lighting, floor and wall finishes, and expansion of Verdi Park pedestrian plaza. Coordination of over 40 subcontractors and suppliers.

New York Post Port Morris Printing Facility, Bronx, NY. Project Manager for the $22 million demolition and replacement of reinforced concrete 2nd floor inserting area in stages while newspaper production maintained. Erection of structural steel to reinforce existing 80 foot long floor trusses.

Astoria Energy Power Plant, Phase 1, Astoria, NY. Project Manager for the $9 million installation of structural steel support structure, unloading from barges and erection of 12 modular air cooled condensers weighing 280 tons each, erection of steam duct and riser sections weighing up to 60 tons and miscellaneous mechanical equipment. Reviewed and submittal of crane placement and erection plans.

Newark International Airport Parking Structure, Newark, NJ, *PANYNJ.* Project Superintendent for the 485 million construction of a six-level parking structure including erection of steel columns and support beams, erection of prestressed concrete double tee deck units, cast in place double threaded reinforced concrete helix access ramps. Installation of elevator shafts and elevators, site work, electrical work, erection of a prestressed concrete 3 span bridge and approach roadways, parking lot, entry and exit plazas and canopies in Parking Lot E. Coordination of subcontractors and suppliers.

Triborough Bridge Randall's Island Junction Structure and Bronx Truss over the Bronx Kill, NY, *MTA TBTA.* Assistant Resident Engineer for this $145 million project including the Bronx Truss that has a main span of 383 feet and a total length of 1,217 feet. Project work included demolition of the existing substructure and superstructure on the Bronx Approach and replacement with new cast in place concrete substructure with precast concrete deck panels. The Bronx Truss reinforced concrete deck was removed and replaced with steel orthotropic deck panels on the Bronx Truss. Inverset deck panels were placed on the Queens-Bronx Mainline, and curved welded plate girders with composite reinforced concrete deck for the Junction Structure ramps. A full length construction shield provided debris collection and fall protection for the workers, mariners and the Bronx Kill. Multiple construction stages with extensive Maintenance and Protection of Traffic (MPT) Plans to maintain vehicular traffic and toll revenue for the facility. Project constructed in accordance with NYSDOT's construction specifications.

Replacement of Bridge Nos. 00343, 04864, 04866, in Guilford, CT, *ConnDOT.* Resident Engineer for the $3 million replacement of Route 1 Bridge over the West River with 104 foot prestressed concrete box beams on new concrete abutments with bituminous concrete approaches.

RICHARD K. WILLE, CDT

Assignment
Cost Estimator

Years of Experience With Firm
1

With Other Firms
20

Education
B.A., Business Management, Elizabethtown College, 1997

Professional Registrations
Construction Documents Technologist (CDT): Construction Specifications Institute (2004)

Current Responsibilities

Mr. Wille is a Cost Estimator responsible for development of preliminary and final construction cost estimates for various highway and bridge projects. He integrates the cost estimate with the project schedule to make sure that the estimate accurately reflects the cost of construction. He estimates account for project location, accessibility, available work and staging areas, work-hour restrictions, maintenance of rail and/or vehicular operations, phasing requirements, local wage rates, mobilization costs, perceived liability, similar construction volume in the area, and subcontracted work.

Summary of Experience

Con Edison, CNG Upgrades and Storm Hardening Design, Eastview Service Center, NY. Cost Estimator for the modernization and storm hardening of the CNG, diesel and gasoline fueling systems at the Eastview Service Center. The project consists of the removal and replacement of CNG equipment, including compressor skid, storage cylinders, scrubber and fuel dispensing system; removal and replacement of underground diesel and gasoline storage tanks; fuel dispensers and associated controls, lighting and power feeds. Core Issues include: the removal of existing underground tanks in light of excavation activity in close proximity to the existing buildings, excavation and installation of new fuel tanks at the site with higher water table, and installation of new flood sensitive equipment at levels above the Advisory Base Flood Elevation.

Delaware River Port Authority, Port Authority Transit Corporation (PATCO) Elevator Design and Construction Administration Services, South Jersey, NJ. Cost Estimator for this project where Gannett Fleming is providing design and construction administration services for the installation of eight elevators in six existing Port Authority Transit Corporation stations for the Delaware River Port Authority in New Jersey.

County of Lackawanna Transit System (COLTS), Transportation Center – Planning and Preliminary Design, Scranton, PA. Cost Estimator for this project where Gannett Fleming is conducting a planning study and providing preliminary design services for the proposed COLTS transportation center in Scranton. The primary challenge concerning the site planning and design is accommodating a bus terminal building, bus docking facilities, and associated parking on a 2-acre site.

PreConstruction Management, Inc., Camp Hill, PA. President/Founder of a preconstruction services firm specializing in conceptual estimating, construction cost estimating, value engineering, project scheduling, constructability reviews, and procurement strategies. Clientele includes architects, engineers, and facility owners.

Alexander Building Construction, Preconstruction Services, Harrisburg, PA. Manager/Member of the executive management team responsible for the leadership, strategic direction, and senior management of the firm. Responsible for all preconstruction activities including construction management, acquisition of hard-bid projects, and preconstruction consulting. Managed the preconstruction activities of estimators, project managers, project assistants, and contract administrators in two offices.

R.S. Mowery & Sons, Inc., Carlisle, PA. Senior Estimator responsible for conceptual estimating, bidding, and purchasing of design-build and hard-bid projects valued to $45 million. Design-build projects included a $14.4 million ABF truck terminal expansion and a $2 million natatorium/aerobics facility.

Lobar, Inc., Dillsburg, PA. Senior Estimator responsible for conceptual estimating, negotiating, bidding, and purchasing projects valued to $55 million. Acquired a variety of projects including the firm's largest school contract ($16 million) to that time, school additions and renovations, a vo-tech school, military quarters, a U.S. Army Corps of Engineer's visitors' center, prison additions and renovations, and commercial additions and renovations. Acquired and implemented a military job order contract worth $40 million over 5 years. Designed and implemented a subcontractor/supplier database system. Contracts acquired in fiscal year 1997/8 exceeded $30 million.

GREGORY L. PAQUIN

Assignment
Cost Estimator

Years of Experience With Firm
10

With Other Firms
15

Education
B.S., Civil Engineering, Roger Williams College, 1989

Professional Registrations
Certified Troxler Nuclear Density Gauge Operator - No. 30022 (1990)

NICET IV - Highway Construction: No. [redacted] (2000)

Current Responsibilities

Mr. Paquin is a Senior Inspector responsible for contract administration and the technical inspection of transportation facility, highway, and bridge construction projects.

Summary of Experience

New Britain-Hartford Busway, Contract 3, West Hartford, CT, *ConnDOT.* Construction Manager/Lead Construction Estimator responsible for negotiating with the prime contractor for review of major change orders and construction claims by use of heavy civil and facility construction estimating techniques to prove appropriate construction methods and value in change orders.

Reconstruction of I-95 Over Bridgeport Harbor, Bridgeport, CT, *ConnDOT.* Senior Inspector/Resident Engineer responsible for overseeing construction and the technical inspection of the bridge substructure over both land and water. Work included the construction of cofferdams, the excavation of materials causing environmental concern, the construction of bearing piles and pier substructures, the post-tensioning of pier caps, and the installation of caissons. In addition, the project involved girder jacking over Metro-North Railroad tracks, superstructure girder erection, and the construction of lightweight concrete bridge decks. Also reviewed Primavera schedules and change orders.

On-Call Construction Engineering Contract, Southwestern CT, *ConnDOT, District 3, Office of Construction.* Assistant District Environmental Coordinator responsible for supervising and monitoring numerous highway and bridge projects to enforce permit-regulated compliance and adherence to agency guidelines (state, federal, U.S. Coast Guard, U.S. Army Corps of Engineers, water authority, and ConnDOT best management practices). Performed construction-phase and preconstruction environmental plan review services. Developed contaminated and hazardous material recognition and awareness among ConnDOT personnel. Coordinated the excavation and handling of contaminated soils within the guidelines of the Connecticut Department of Environmental Protection's Solid Waste and Chemical Division.

Bus Maintenance and Transportation Facility, Norwalk, CT, *Norwalk Transit District.* Resident Engineer for the construction of a state-of-the-art transportation facility including two new buildings, a 20,000-square-foot administration and maintenance complex and a 35,000-square-foot service and storage building. The structures, which are architecturally significant, were built of custom structural steel and curved roof trusses. There is a public art gallery in the administrative reception area. The maintenance area includes bus lifts, interior cranes, lubrication transport systems, boiler rooms and hydronic heating systems, and compressed air systems. A service lane consists of a bus wash, fuel and fluid management systems, and an exterior glycol snow-melt slab. Civil work consisted of large-scale production blasting, heavy earth hauling, and stone crushing operations; storm and sanitary sewer installations; fuel system installations; rock slope stabilization; and paving.

Renovation and Expansion of an Existing Transit Facility, Danbury, CT, *Housatonic Area Regional Transit District (HART).* Resident Engineer responsible for the supervision of construction activities. Coordinated reviews of contractor submittals and shop drawings; reviewed and analyzed design and construction problems; and prepared project correspondence and documents. Also conducted regular progress meetings with the contractor and owner and prepared meeting minutes. Reviewed and analyzed recommendations for the contractor's monthly payment requests, claims, time extensions, proposals, and price negotiations for extra work. Provided a monthly construction status report for HART and conducted a quarterly formal presentation concerning the project's status for HART's regional board of directors. Reviewed and analyzed the contractor's critical path schedule and monthly updates. The significant feature of this bus transit facility project was the scheduling, maintenance, and coordination of transit operations for HART's 61 fleet vehicles and staff. The staged construction entailed two new buildings to house a 7,000-square-foot administration complex and a 35,000-square-foot pre-engineered bus storage facility, as well as the renovation of one existing maintenance building.

Pier Rehabilitation of S.R. 8 Viaducts, Seymour, CT, *ConnDOT.* Inspector responsible for examining substructure concrete repairs, the installation of a cathodic protection system, the erection of a new seismic restraint pier cap post-tensioning system, and shotcrete coatings. Office engineering responsibilities consisted of the preliminary review of design changes and construction order cost analyses.

Rehabilitation of Platforms "B" and "C" at Union Station, New Haven, CT, *ConnDOT.* Office Engineer/Construction Inspector responsible for initiating and maintaining project records through the use of ConnDOT's Construction Management Reporting system, Lotus 1-2-3, and Earthworks; coordinating and carrying out construction orders; and preparing monthly payment estimates and quantity calculations, cost-plus records, and claims. Inspection duties included the erection of platform precast "T" beams and canopy structural steel; the construction of a hoistway and the installation of an elevator; the construction of sheet piling and the excavation of contaminated soil; the construction of facility mechanical and electrical systems; and the construction of a sewage evacuation system for railcars, including a pump house facility, a vac-out system, and a stormwater pipe network.

Lake Glen Dam, Woodbridge, CT, *South Central Connecticut Regional Water Authority.* Construction Inspector responsible for providing construction management and inspection services for gatehouse repairs. Supervised mechanical repairs to and the refurbishment of gate valves, stem guides, and other operational gatehouse components. Coordinated diving for an inspection of the exterior condition of the gatehouse and required repairs, as well as the removal and replacement of intake trashracks. Oversaw the use of specialty coating systems and structural concrete repairs on this project.

Lake Bethany Dam, New Haven, CT, *South Central Connecticut Regional Water Authority.* Construction Inspector responsible for providing structural condition surveys of the dam, spillway, pipe bridge, and blow-off bridge for a hydraulic structure investigation. Also investigated subsurface and concrete core borings.

Management and Technical Approach

PROJECT MANAGEMENT APPROACH

Gannett Fleming Engineers and Architects, P.C. and Tectonic Engineering & Surveying Consultants, P.C. are proud to join forces as a Joint Venture to offer the PANYNJ a highly qualified Team to provide the requested Construction Management Services. Our Team is full service, multi-disciplinary, and maintains offices in both New York and New Jersey, in close proximity to all of the PANYNJ's facilities and offices. Together, the firms have extensive experience providing construction management services for local transportation and facilities agencies on bridges, tunnels, airports, seaports, buildings and transit/rail facilities. The Team has numerous Professional Engineers, NICET, ACI, ICC and NACE Certified inspectors, as well as trained estimators, schedulers and contract administrators, all with relevant similar project experience. In addition, Tectonic Engineering & Surveying Consultants, P.C. maintains and operates two fully accredited materials laboratories with extensive relevant construction materials testing experience, and offers these services in support of this contract.

Our management technique will be focused – it will make sure of continuous and timely communication and coordination with PANYNJ project personnel and our Project Manager, to allow for proper data flow and decision-making. The Project Schedule will be the time map that our Task Manager and Team will follow in performing the project work. The Project Budget will establish and measure the level-of-work effort to be expended for each project task and milestone. Monthly Progress Reports will be prepared to report the progress accomplished and look ahead for the next month's workload.

PROJECT ORGANIZATION

Successful completion of this work assignment depends upon the technical ability and experience of our assigned staff, as well as our ability to effectively manage that staff. Our Team has gained this experience by inspecting, assessing, planning, designing, and constructing various types of railway and other transportation facilities throughout the New York Metro area. Much of this experience has come through our long history of providing services to PANYNJ over the past 30 years.

Due to his extensive experience with both the PANYNJ and this contract's required services, **Mr. James T. Gibbons** will serve as our Project Manager for this assignment. Mr. Gibbons is a graduate degreed civil engineer and department manager with 27 years of relevant experience who has worked on numerous construction inspection projects for other major transportation agencies. He has served as project manager on construction management projects ranging from less than $1M to over $100M for several agencies including: PANYNJ, MTA B&T, NJDOT, NJTA, DRPA, DRJTBC, and NYSDOT. In addition to serving as our Project Manager for the last three years on the above noted Call-In contract for the PANYNJ, he has served as Project Manager on over ten additional "On-Call" type construction management contracts for other local agencies over the last few years. He is intimately familiar with the conduct and management of "On-Call" construction management contracts, and is familiar with the PANYNJ's staff, policies, and procedures. Mr. Gibbons will manage the staff, schedule, budget and overall quality of our work for the PANYNJ. *Through the utilization of a single point of contact, the PANYNJ can directly communicate with the Mr. Gibbons.*

Due to the wide range of potential task order assignments that could be assigned, we envision that some Task Orders may be managed directly by Mr. Gibbons, while others may be assigned a Task Order Project Manager with specific expertise for that task. In this case, the communication flow would still funnel through Mr. Gibbons to the Authority's Project Manager. This approach ensures the project team the

ability to assign the most qualified personnel to execute the task, but maintains the same lines of communication.

Subconsultants

Our intent is to provide the PANYNJ with a highly qualified Team that has expertise in all of the requested disciplines, an unmatched depth of resources, the ability to exceed the contract specified 17% DBE goal. In order to accomplish this, we have added four highly qualified subconsultant firms to our Team, three of which are certified DBE firms.

Our Team is proud to offer the services of **KS Engineers, P.C.**, a prominent DBE firm with offices in New York and New Jersey, to augment our team's staff. KS Engineers, P.C. is a highly qualified professional engineering firm and provides comprehensive construction inspection and management services on key infrastructure and facilities projects throughout the NY/NJ metropolitan area. The firm has extensive expertise providing all levels of inspectors as well as resident engineers, office engineers and various support staff for key transportation agencies including the PANYNJ, MTA, NYCDDC, NYSDOT, NJDOT, NYCDOT, Metro-North, NYCT, and NJ Transit.

VRX Inc. and **Toll International, LLC** will serve as additional DBE partners for this assignment, and will help the Team meet key staffing needs while contributing to our DBE goal. VRX, Inc. maintains a staff of qualified inspectors holding certifications from ICC, ACI and NACE, and has relevant experience providing construction inspection services for similar local public agencies. Toll International, LLC specializes in cost engineering and CPM scheduling and has successfully provided similar services for other local agencies.

Finally, the Joint Venture Team will offer the services of **New York Professional Services One, LLC,** an emerging small engineering firm with additional engineering design, inspection and construction management experience on civil, Mechanical, Electrical and Plumbing (MEP), and HVAC projects. New York Professional Services One, LLC employs a highly qualified staff of engineers and will support our Team on any assignment that may be required.

Our Team has extensive experience providing "Call-In" type construction management and related technical services for other local transportation and facilities agencies, including for the PANYNJ itself. Since 2011, we have provided nearly identical services through the Expert Professional Construction Management Services and Related Technical Services as Requested on a "Call-In" Basis during 2011 – 2014 contract. Together, we offer a pool of over 250 qualified construction professionals in the immediate area including: managers, engineers, inspectors, materials technicians, schedulers and estimators. In addition, the Team has the backing of the design offices and other assets of the various firms if needed for any assignment. Our proposed staff has vast expertise providing construction management services for any type project that may be required at any of the PANYNJ's facilities including; bridges and tunnels, airports, seaports, transit and rail buildings. In addition, our Team's firms have extensive experience working together on a variety of other construction management contracts, and have extensive recent experience providing design, assessment and construction management services for Hurricane Sandy related and other resiliency projects.

An organization chart depicting the structure of our Team, as well as responsibility for each task that may be required under this contract, is available on the following page.

TECHNICAL APPROACH

Consultant Tasks

The following is our understanding of the specific types of Task assignments that may be requested by the Authority, and our understanding and approach to accomplishing those tasks:

TASK A – CONSTRUCTABILITY/BIDABILITY AND GENERAL ENGINEERING REVIEW

Constructability

We will provide an ongoing analysis of the constructability of designs during the Design Development (Stage II) and final Design and Contract Document Preparation (Stage III). Drawings and specifications will be reviewed by a team of experienced and knowledgeable construction engineers. The constructability review will be performed for each project to assure the plans are being developed with consideration given to the provision of adequate construction access, innovative techniques, and typical construction challenges faced by construction managers and inspectors. Our approach to constructability reviews will be to provide a review scaled to meet the context of the specific project and to allow the actual construction staff assigned to the project to be involved in the review process. Simple projects may be reviewed by the identified Construction Manager or Resident Engineer only, while more complex projects may be reviewed by several team members with construction or contractor experience.

The following is a partial list of items that may be reviewed:

- Compliance with local codes and standards;
- Compliance with applicable State and Federal Standards;
- Compliance with applicable industry standards (ACI, AASHTO, AREMA, AISC, etc.);
- Completeness of documents;
- Consistency and verification that none of the contract documents conflict with one another;
- Coordination of items across all disciplines;
- Verification of critical dimensions;
- Sufficiency of details and elevations to complete the work;
- Review Notes for correctness and to verify if additional notes are required;
- Verification of cross references to details and elevations;
- Verification that the design allows sufficient room to use whatever equipment is required to do the work;
- Verification that material specifications are clear and sufficiently detailed. If substitutions are allowed, process must be fully described;
- Proper sequence of construction;
- Payment submission requirements and procedures;
- Penalty/Incentive clauses and requirements; and
- "As Built "drawing requirements and procedures.

Construction Process review items include:

- If a preconstruction conference is required;
- If restoration of project areas and easements adequately covered in the contract documents;
- Adequacy of testing requirements;
- Adequacy of traffic control, if required;
- Adequacy of contract documents relating to environmental or archaeological issues;
- Project Schedule, including selection of milestones and tentative completion dates; and

- Project Schedule submission requirements and distribution.

Bidability

We will review bid documents to verify they are complete and make clear the requirements to potential bidders. We will verify that the package is complete and items, addenda and changes made are included. This will include a copy of the agreement that will be used when a bidder is selected. A review will be made to determine if any applicable information on wage rates should be included.

The format will be reviewed including determining if the table of contents is complete and accurate, pages are proper numbered and relevant specifications are included. In addition the following reviews will be performed by our staff:

- A determination of the adequacy of the advertising period;
- The scheduling of any pre-bid conferences;
- Contract duration;
- Establishment of any liquidated damages;
- Minimum number of days for pricing after bids are opened to bid award;
- Bid bond requirements;
- Necessity for a contact for pre-bid inquires;
- Instructions for modifying and/or withdrawing a bid prior to bid award are adequate;
- If specifications detail clearly how low bidder will be determined;
- If all terms such as responsible and responsive adequately defined for bidders; and
- Review of insurance requirements such as public liability, property damage, workmen's compensation fire, etc.

Bid Form

- Contract will be reviewed to determine if it is the proper type: Lump Sum, Unit Price or other.
- Verify there is no overlap of bid items.
- What proposal costs, if any, are ineligible.
- Verify that major work items if any are included in proposal.
- Verify that key pay items are clearly defined
- Verify that unit price quantities agree with the plans, specification, bid advertisement and proposal
- Determine if mechanism for adjusting unit prices, should quantities differ significantly from estimates, is appropriate.
- Determine if there is a need to require bidders include a list of major equipment manufacturers and suppliers.
- Determine if bidders should list major subcontractors.

TASK B – CONSTRUCTION STAGING

Our Team will review the entire staging plan, including but not limited to the contractor access routes, site access locations and staging areas. Construction staging prior and during construction process will be continually reviewed and recommendations for changes will be made. We will study facility operations to identify the impact of staging on operations and patron usage in order make recommendations to minimize problems. Our Team will make sure that the work done will be limited to those areas necessary for the performance of the work and not interfere with the operations of the facility without the approval of the Chief Engineer. We understand that it is not permitted to leave objects or equipment unattended on sidewalks, roadways or structures at any time. We will further make sure that vehicular and pedestrian traffic has a priority over consultant and contractor operations. The traffic control plan and pedestrian

access will be reviewed including options/alternatives on how to maintain operations and patron convenience.

TASK C –SCHEDULE DEVELOPMENT AND MONITORING

Our Team has several highly qualified personnel on staff that are trained and experienced with approved scheduling software such as Primavera, and are proficient in developing, maintaining, and reviewing cost – loaded Critical Path Method (CPM) Schedules. They have experience preparing schedules from scratch or monitoring schedules prepared by contractors on a wide variety of types of projects, including highways, and bridges, airports, ports and buildings. We will provide review of the baseline schedule for compliance with the contract documents, standard construction practices and recommended practices for scheduling. We place emphasis on ensuring the schedule utilizes the contract duration, the phasing and sequence of work, crew loading and allowance for inclement weather. During the project we will monitor and document all schedule issues and attend progress meetings to report on the projects status offering solutions for regaining lost time.

Each contract will have its own unique schedule that will clearly indicate and address:

- Critical Path
- Staging
- Project interferences
- Operational restraints of the facility
- Other requirements

Schedules will be updated continuously commencing at the receipt of bids. We will make recommendations of solutions when problems are identified to minimize or eliminate any impact on the schedule. Schedule issues will be thoroughly documented. We will attend progress meetings to report on progress.

Our Team will verify that the schedule utilizes the contract duration, phasing and sequence of work, crew loading and allowances for inclement weather. State of the art software will be used to track changes between project updates. A continuous review will be made of the contractors schedule for consistency with contract requirements and we will make comments and recommendations. We use comparison software, such as Schedule Analyzer and Claim Digger, for determining and tracking changes between updates, and assign responsibility for any loss or gain in time during update periods.

TASK D – QUALITY ASSURANCE INSPECTION

We envision this Task, in conjunction with Task E (Contract Administration), to be the primary focus of this assignment. Our Team has a large pool of inspectors and engineers with a wide variety of certifications including those specified in the RFP; PEs, ACI Concrete Special Inspection, ICC Structural Steel and Bolting, and NACE coatings certifications, as well as numerous other relevant credentials. These personnel have extensive similar experience performing services identical to those requested here on other projects and for other agencies. Our Project Manager will monitor and oversee the work of our staff and oversee the coordination of construction work with the activities of the PANYNJ, affected agencies and utilities, and other parties as necessary. Our inspection staff will monitor contractor compliance with contract documents and the quality level established by the PANYNJ, taking a proactive approach to determining and addressing problems before they occur.

If a potential problem or concern is discovered, we will immediately begin working to expediently correct the problem in a cost-effective manner, report it to the PANYNJ if appropriate. Additionally, we will act to ensure that there is no non-conforming or damaged work. We will act on test failures and provide for corrective measures, remove and replace, or reduce payment for failed materials.

Inspection

Our Team will perform construction inspection services to include checks of the contractor's construction stakeout and grades, detailed inspection of construction, inspection of on-site materials, inspection of plant materials, monitoring of workmanship and final measurement of work and calculating quantities, which will verify that projects are completed in conformance with plans and specifications. This includes civil, structural, electrical and mechanical systems. Our inspectors have expertise in field testing, such as compaction, slump, and chlorination (if necessary). Inspection duties will include supervising the sampling and field-testing indicated by the specifications.

In addition, both Gannett Fleming Engineers and Architects, P.C. and Tectonic Engineering & Surveying Consultants, P.C. hold IAS Accreditation/Certification for various Special Inspections disciplines. Gannett Fleming Engineers and Architects, P.C. has received accreditation for Special Inspections of Cast in Place Concrete, and Tectonic Engineering & Surveying Consultants, P.C. is certified in the inspection of Cast in Place Concrete, Structural Steel and Bolting. This additional level of inspection certification will help to ensure that our Team provides the highest quality oversight for the PANYNJ.

Monitoring Contractor Safety

Many of the PANYNJ's projects will be in and around on-going operations and the traveling public.

We recognize that the construction contractor for each project is solely responsible for the safety of his workers and subcontractors working on the site. We will review the contractor's detailed accident/safety program and any other safety related submittals. Our Team is fully committed to having a safe project, which includes the safety of our staff. A site safety plan will outline the duties of the inspection staff and the measures undertaken to monitor the safety of that staff. Inspection personnel will employ safety equipment necessary for field work, including hard hats, reflective vests, goggles, work boots, ear protection, respirators, first aid kits, gloves, safety harnesses, and belts.

If we observe what we consider to be an unsafe condition, it will be reported immediately to the contractor. If the condition represents an imminent danger, the contractor will be immediately directed to stop work until the matter is resolved. Any accidents will be reported immediately to the PANYNJ Project Manager, and documentation of the incident will be maintained at the project office. A summary of any accidents or safety-related problems will be contained in the Monthly Report.

Prior to beginning field inspection of a project assignment, a safety meeting will be held with field personnel. This meeting will serve to review safety procedures and re-emphasize the importance of safety and housekeeping issues. Additionally, the specific requirements of the safety manual will be discussed. Some of the issues addressed will include:

- Proper clothing for construction personnel
- Use of hard hats, reflective vests, and goggles
- Inspection of high structures using safety belts and harnesses
- Inspection of confined spaces, including use of respirators and air monitors and emergency exist
- Burning and welding permits
- Housekeeping and dust control

TASK E – CONTRACT ADMINSTRATION

Construction Management

Our Team will provide contract administration services hand in hand with the construction inspection services just described in Task D in order to ensure that the projects meet PANYNJ construction budgets

and schedules. We understand that our Team will act as the agent of the PANYNJ, and that project correspondence except contractual issues will be directed to our Team's Project Manager.

Reporting and Administrative Documentation

We acknowledge the importance of accurate and detailed documentation to the successful completion of a project. Our documentation will detail the work performed by the Contractor for conformance with contract documents, the quality and quantity of the work performed, recording pertinent information related to the completion, and progress of project work. We will recommend acceptance for payment of completed work based on field measurements and calculations in compliance with the contract documents. Our documentation will allow for complete auditing of the project during and after project performance.

Documentation is not the only key to a successful project; inspection of the contractor's work and enforcement of the applicable regulations and specifications is equally as important. Inspection of the work for conformance with the contract drawings is critical to verifying the project will meet the standards of the PANYNJ.

Project Meetings

Our Project Managers will schedule, attend, and record project related meetings, which includes the preparation of agendas, sign-in sheets, minutes and resolution of follow-up items. Meetings can be conducted at the PANYNJ offices (we will coordinate with Department Staff to reserve conference rooms in the reservation system, if necessary); project sites; consultant offices; or our offices. When appropriate, our Project Managers will request attendance by relevant PANYNJ staff and management, and will make the PANYNJ aware of scheduled meetings. Project Meetings will be maintained on a public calendar. Public Involvement activities (as appropriate) will be closely coordinated by our Team, and will involve the PANYNJ's Project Manager or designee.

Project Coordination and Correspondence

Our Team will work in an ongoing capacity with both designers and Authority staff to resolve issues, provide technical guidance and effectively communicate various aspects of the project as necessary. Project correspondence will be directed to the Project Manager, except contractual-related items, which will be directed to a project principal. Project correspondence, including email, will be archived for future access and reference, and viewing by project personnel. Outgoing correspondence will be reviewed by PANYNJ management and staff, based on the context of the issue. Simple, day-to-day questions and coordination we will copy the PANYNJ if requested. Correspondence which could affect scope, schedule or budget will be coordinated with the PANYNJ prior to replying externally. Critical or especially sensitive correspondence will be prepared for use or forwarded directly by PANYNJ management. Our Team will refer to themselves as "Consultant team member" or similar. Written correspondence will be provided on PANYNJ letterhead and email signature blocks will be adjusted to reflect our role as consultant staff to maintain a professional decorum and provide clarity that communication from our Team is truly on behalf of the PANYNJ.

Reports

We will enact proper documentation and record keeping practices in accordance with procedures and requirements in order to maintain complete, current, and accurate records of project progress. Our inspectors will accurately complete, compile, and submit Inspector's Daily Reports (IDRs) to the PANYNJ in a timely fashion. Our staff will keep accurate quantity documentation. Project records will be signed and dated, referenced to original documentation, and kept in a fireproof location. Data will be kept in both electronic and hard copy.

We recognize that it is critical to assemble and maintain project documentation in a detailed format in order to allow for proper auditing of project records upon completion of construction and to defend the PANYNJ against claims, if necessary. Our inspection staff will be knowledgeable of the PANYNJ's documentation procedures before assignment, allowing us to efficiently manage upcoming work with no learning curve or training.

Project Administration

Our Project Managers will oversee administrative functions of the project as well, except those related to contracts. These items include review of consultant invoices for completeness, correctness, and accuracy of percent-complete assessments. We will work with the contractor to correct any errors or oversights and transmit completed invoices to the PA for concurrence and processing. We will track overall project budget status and compare it to actual or "physical" percent to complete (Earned Value Method) to assess adequate progress. Budget Status will appear on monthly status reports. In addition to monitoring consultant expenditures, staff will perform periodic (at least annual) review of project budgets through reviews of updated cost estimates to be provided by designers. This effort will be used to verify proper capital programming, especially for larger projects. For those larger projects, we can provide professional estimating services for independent estimates, if desired.

Shop Drawing Receipt and Distribution

We understand the shop drawing process is vital to the successful completion of any project. GF / JMT's role is to either review the shop drawings in-house or forward them to the designer or appropriate agency for review and approval. However, our participation in the shop drawing process does not stop there. We will coordinate with the Contractor, as well as with their CPM scheduler, to determine which submittals are critical to the project completion. We will inform the reviewing agency (designer or architect) of what submittals are critical and must be returned within the maximum time allowable by the contract specifications. We will establish with the reviewer the dates the drawings must be returned by and will coordinate a second reviewer if time restrictions do not allow for timely completion of the review for return to the Contractor.

Requests for Information (RFIs)

Our Team will expedite the flow of RFIs between the contractors and the design engineers to verify the contractor gets timely, complete clarifications from the design engineer. Timely, clear direction prevents the contractor from filing claims for delay.

Cost Control System

We will implement an effective computer cost control system. This system will be based on the level of accountability and schedule of values established by the project specifications. Using this information, we will monitor the work and associated costs incurred, for each project, during each pay period. We will revise and refine the approved project budget including changes as they occur. Variances will be identified to our Construction Manager immediately.

Preparation of Contractor Payment Applications

We will review/approve payment applications of the contractor in accordance with the PANYNJ's Construction Guidelines. We will meet with the contractor before submitting the estimate to verify all parties agree upon the quantities included in the estimate. This will mitigate the time required for final settlement of the contract. Timely completion of the estimates will be a function of our accurate documentation.

Change Order Process

We will review and evaluate requests for changes and, if warranted, submit recommendations to the PANYNJ. Our field staff will promptly act upon requests for change orders in order to keep the work progressing. Change orders are generated at the job level. When a changed condition is encountered, a change order is generated at the site with the reasons for the change and a cost estimate. These documents are the basis for a change order after PANYNJ approval. Our cost estimating staff will provide independent, accurate estimates of the cost and schedule impact of the proposed changes. The negotiations or directions to the contractor that result in a change in contract price or time will be presented to the PANYNJ Project Manager in writing for approval prior to commencement.

We will review and check the reasonableness of construction cost estimates prepared by the contractor during the construction. This review will include the following steps:

- Verification of material pricing through direct takeoff of major quantities and solicitation of prices from vendors.
- Verification of labor pricing used in the estimate.
- Estimated production rates will be compared with industry norms and, where appropriate, adjusted to reflect site-specific increases or decreases.
- Independent development and/or review of preliminary construction schedules for the purpose of estimating equipment utilization. Pricing will be based on standard pricing guides, adjusted to account for a degree of contractor-owned equipment.
- Independent development of indirect costs and profit estimates, based upon an assessment of job conditions.
- Confirmation that cost elements (both added costs and credit are included in the pricing).
- Confirmation that relevant documentation is complete and included with the request.

Results of this analysis will be presented in written form with recommended revisions or modifications to the contractor's cost estimate.

Substantial Completion

Based on project document requirements, we will advise the PANYNJ when the contractor has complied with substantial completion for his work. At the contractor's request, we will review the scope of work and develop a punch list of incomplete or unsatisfactory items and schedule for completion. We will promptly notify the PA of the contract substantial completion date and closely monitor punch list work until it is satisfactorily complete and acceptable.

Final Completion

We will determine final completion of the project and conduct a final inspection. It is our goal that a punch list will not be required from final inspection, as the work will already be completed to the satisfaction of the PANYNJ. Throughout the duration of construction, we will inform the contractor of punch list items for each work activity. This practice helps the contractor do the work one time and minimizes punch lists at the completion of the contract. Any punch list items that do exist will be monitored until completion. Following the contractor's completion of punch list items, a final inspection will be held which shall include our Team, the contractor, the design consultant, and the PANYNJ, if desired. Following an acceptable walkthrough, a recommendation for final acceptance of the work will be given. We will secure and transmit the required guarantees, affidavits, releases, bonds, waivers, and record drawings to the PANYNJ Project Manager upon completion.

Final Report

At the conclusion of each construction contract, we will prepare a final project report. Each report will contain a concise narrative executive summary. Following the executive summary, a brief description of the design logic (as appropriate) will be presented, as well as a review of the construction methods and schedule accountability. The construction section will address the overall quality of construction, major quantities, special issues encountered, corrective actions taken, construction methods, and contract compliance. The end of the report will tabulate and list contract modifications, test results, change orders, the final contract schedules, lessons learned and the name and address of the general contractor and all subcontractors. Recommendations for improvements based on lessons learned from the project will also be included in the final report.

Development of Record Drawings

Accurate and complete record drawings provide critical information for subsequent engineering or construction efforts, as well as operations and maintenance activities. Our inspector will use Inspector daily reports (IDR's) executed change orders, RFIs, approved shop drawings, and survey data as a "checklist" of items to be included on the record drawings. The drawings will be completed within 30 days of project completion and reflect the final conditions and design modifications as directed during the course of construction.

Final Settlement of Contract

Our inspection staff will monitor contract closeouts to verify receipt of deliverables. We will finalize contract modifications and determine final quantities for final payment. Our Project Manager will prepare and process certificates of final inspection, and acceptance certificates of completion, where required. We will also prepare and process the final payment releases.

In cases of claim or dispute situations, if necessary and as directed by the PANYNJ, we will assemble pertinent background information. We will analyze the merits of the claim or dispute, and recommend to the PANYNJ merit or entitlement, if any. Our Construction Manager will also prepare estimates of entitlement, if appropriate, and assist the PANYNJ in final resolution.

TASK F. COST ENGINEERING/ESTIMATING SERVICES

Our Team has extensive experience preparing and reviewing cost estimates for design work, or change orders. We have performed this same function on our own Call-In Design contracts for the PANYNJ and other agencies, and have provided Peer Reviews of cost estimates prepared by other designers, and have extensive experience preparing cost estimates for changed conditions or change orders. Our staff is familiar with a variety of estimating software systems, and also uses relevant historical data from our own and other projects.

Claims Review:

Upon receipt of any notification of claim, potential claim, or dispute, our Construction Manager will immediately notify the PANYNJ project engineer of same in writing. The Construction Manager will thoroughly investigate the circumstances of the event to determine if it has merit. Based on his findings, the Construction Manager will make a recommendation as to the merit, entitlement, or other resolution to the PANYNJ. We will maintain files on each claim, potential claim, or dispute, whether resolved or unresolved.

Our general work plan for a complete claims review and analysis assignment involves the services from initial claim evaluation to assisting counsel with case preparation and expert witness testimony consists of a

five-phase process: We understand under certain circumstances, a quick response may be needed; thus we will monitor that adequate staff is employed on each task in order to complete the analysis to meet the PANYNJ's response schedule.

- **Phase I:** Initiation-We will meet with the PANYNJ Project Manager and determine data available from both the Contractor and PANYNJ, including inspector's daily reports CPM schedules and pertinent correspondence.
- **Phase II:** Claims Research and Evaluation-Conduct a comprehensive review of the documents and analyze the facts.
- **Phase III:** Data Compilation and Resolution -Once the claim is understood we will prepare a defense strategy after meeting with PANYNJ personnel and the Contractor. We will communicate through meetings and status updates with the appropriate PANYNJ personnel.
- **Phase IV:** Claims Recommendation Report and/ or Presentation Meeting-Upon completing our analysis, our claims analyst will participate in a presentation of the findings and conclusions and the recommended course of action will be outlined in detail to the PANYNJ staff. At that time, we will also provide copies of the final report containing the findings and conclusions, recommendations and settlement options. The expert report will contain time impact analysis (TIA) computations, cost estimates, schedule delay and efficiency impacts, calculations of recoverable damages and penalties, loss of productivity, liability of exposure to contractor damages, evaluations and recommendations of the findings and conclusions with supporting documentation
- **Phase V:** Litigation Preparation/Testimony- Contingent upon the individual project task, we will assist and participate in any deposition and discovery procedures with the Office of Counsel (terminology), if required, during the defense strategy and negotiation stages of the claim.

We also provide training on Review and Analysis of claims. The different types of claims are discussed ranging from Different Site Conditions to Loss of Productivity. Emphasis is placed on adequate notice, establishing merit, calculation of damages and options for resolving the claim amicably. Several techniques in graphical presentation of the facts and figures, so the claim can be easily understood are also covered.

TASK G – RESOURCES

In addition to our experienced construction management and inspection staff, the Gannett Fleming Engineers and Architects, P.C. and Tectonic Engineering & Surveying Consultants, P.C. Joint Venture can make available to PANYNJ the full resources of their respective design offices. Our Team has extensive design experience with the PANYNJ and with other local agencies. Both firms are multidiscipline companies and are also able to provide architects, environmental engineers, traffic engineers, and surveyors to augment our staff as needed. These resources can include but are not limited to: structural design, scheduling, environmental screening, GPIS/SUE, ROW Acquisition, and value engineering. All of these services can be made available to the PANYNJ on an "As-Needed" basis as required.

Material Testing

Tectonic Engineering & Surveying Consultants, P.C. is one of the largest construction inspection and materials testing firms serving New York City and the greater metropolitan area. They are one of only a few professional engineering firms with in-house laboratory capability, and have labs in their in our Long Island City and Newburgh, NY offices. Both laboratories are licensed by the NYC Building Department. Tectonic offers an expert laboratory team and over 150 inspectors with certifications by the American Concrete Institute (ACI) for Concrete Field Testing and Construction Special Inspector, the International Code Council (ICC), the American Welding Society (AWS) and the National Institute for Certification in Engineering Technologies (NICET) Levels I to IV. The Long Island City laboratory is also accredited by NVLAP. It provides

materials testing services for steel, concrete, aggregate, masonry, soils, plant inspection, field testing of asphalt, mechanical/electrical systems, fireproofing, firestopping, etc. They conduct testing according to ASTM E329, outlining the Standards and Recommended Practices of Inspection and Testing Agencies. Since 1993, Tectonic participates in the Cement and Concrete Reference Laboratory (CCRL) proficiency sample and on-site inspection program. *They are also accredited by AASHTO under their AASHTO Materials Reference Laboratory (AMRL) program.*

QUALITY APPROACH

Corporate Quality Policy

Good project quality management techniques are important to ensure project deliverables and end results meet or exceed the PANYNJ's expectations. We are committed to providing the highest level of quality for this project and have a track record of establishing, documenting, implementing, and continually striving to improve its QMS. Our QMS system was developed in accordance with the requirements of the ISO 9001:2008 standard, designed to reduce costs by minimizing waste and errors and increasing productivity.

Our Corporate Quality Policy is "to provide professional services that meet the requirements of clients and involve all personnel in continually improving work processes." We recognize the critical importance of quality in our work products and procedures, as well as our customers' expectations. Gannett Fleming Engineers and Architects, P.C. is committed to consistently providing quality work products. This commitment is embodied in our corporate Quality Policy, implemented through our Project Management and Quality Guidelines, and enforced through our standard operating procedures, work instructions, and audit procedures.

These systems, standards, and goals are all reinforced via our Corporate Learning Management System (LMS). To emphasize the continued importance of these objectives, we establish corporate goals on an annual basis, which include specific client satisfaction and performance goals.

By meeting these objectives and specific goals, it is our intent to:

- Demonstrate its ability to consistently provide services that meet the project goals for PANYNJ, and
- Achieve PANYNJ's satisfaction through the effective application of our management systems, including processes for monitoring and measurement, continual improvement, and the prevention of nonconformities.

The QMS stresses "meeting the requirements" by following established processes (Standard Operating Procedures and Work Instructions) to meet customer expectations, and assessing customer satisfaction through a formal evaluation process. In the end, PANYNJ's success is Gannett Fleming Engineers and Architects, P.C.'s success.

QUALITY MANAGEMENT IMPLEMENTATION

The implementation of Quality Management has two components: the Project Execution Plan (PEP), which is the documentation of the specific Quality Management process applied to a project, and the QA/QC review, which is the implementation of that process. These two components go hand-in-hand to create a quality product that meets the project objectives, schedule, and budget.

Project Controls

PROJECT EXECUTION PLAN

An integral component to the success of a project management plan is a well-defined, task-specific PEP. The task-specific scope of work provides the project requirements including the scope of work, budget, and schedule. This work will be compiled in a narrative and resource plan called the PEP.

Our firm requires that every project have PEP. The PEP contains the specific scope of work for each task and subtask and will address each task and subtask in terms of commencement and completion dates, methods of accomplishment, Gannett Fleming Engineers and Architects, P.C. and PANYNJ interface responsibilities, concerns, and problems, including a full list of activities to complete the effort and the responsible personnel. In addition, incurred and anticipated expenditure of hours and all associated costs necessary to perform the work will be included. PEPs also address quality plans, risk, procurement (i.e. subconsultants), and closeout. An initial PEP will be developed upon our first task order, and the PEP will be updated as required to reflect new task order assignments, task changes, and other project modifications.

The basic PEP elements include the following:

- Definition of task scope of work at a level of detail which will allow defining specific deliverables and responsibility;
- Development of an overall plan and schedule to complete the project;
- Development of resource estimates;
- Preparation of a base plan which integrates the elements of scope, schedule, and resources; and
- Routine evaluation of progress achieved and resources used against the base plan, to be able to forecast time remaining, and estimated resources required for completion.

The PEPs are documented in our Project Management and Quality Guidelines: the foundation of our QMS and our ISO 9001:2008 Management System certification. Lessons learned from completed projects are used to improve our project execution processes for future projects.

BUDGET CONTROLS

On a "Call-In" contract, budget controls are necessary to monitor multiple tasks and subtasks. Our Project Manager will set budget controls by using the Work Breakdown Structure (WBS), which is used in conjunction with the Gannett Fleming Engineers and Architects, P.C. project accounting system, BST. By properly setting up the WBS, Mr. Purdy will be able to monitor man-hours available and spent, and will be able to identify if efforts are above or below milestone expectations. Our accounting system has the ability to identify actual costs in real time. As such, he can determine effort spent and effort to complete in real time.

The WBS will subdivide the task specific scope of work into manageable subtasks. Tasks and subtasks will define a particular segment of the project, phase and/or deliverables, and will have one or more activities which represent the work to be performed within the task. An estimate of the hours required for each work package will be developed which will create the approved project budget. Establishing hours and costs by task represent a defined level of work effort for completion of a product deliverable.

PROJECT SCHEDULE CONTROLS

The project schedule will be the product of a coordinated effort between Mr. Purdy and PANYNJ. The schedule will be the map that guides the project from start to finish. Realistic time durations for task completion and PANYNJ review will be agreed upon, and corresponding milestone dates for submittals will

be established. He will monitor the schedule and alert PANYNJ in a timely manner of any stalled activities or delayed responses, and will work with PANYNJ to resolve project schedule issues.

Following acceptance and approval of the task schedule, the schedule will be monitored and updated monthly. As the tasks progress, actual activity finish dates will be used to update the schedule and to establish available task float. Actual completion dates may generate new critical activities. At times, budgeted or assigned staff may need to be revised to meet schedule requirements.

Monitoring the resource-loaded schedule will allow Gannett Fleming Engineers and Architects, P.C. to identify and meet any short-term schedule needs.

Quality Assurance and Quality Control (QA/QC) Review Process

The implementation of the quality plans presented in the PEP consist, generally, of the verification of work products (i.e. checking) and the review of the QC activities (i.e. quality assurance). Work products produced by Gannett Fleming Engineers and Architects, P.C. are carefully checked, or "verified", in accordance with the requirements of our detailed Work Instructions. These QC activities are thorough and consistent across the organization. The work instructions guide the professionals regarding appropriate processes and items to verify and consider as they conduct their review. The work instructions also describe the iterative process followed by the producer and reviewer of the work products to result in work products that meet the requirements of the project scope of work and the standard of practice. All work instructions are available to each employee through a link on our Intranet. Each checker is required to either formally "fill-out" the Work Instruction Form or follow specific direction for noting completion of verified review (initials and checkmarks on reports and calculation sheets, initial boxes on check prints, etc.).

Following the verification of the work products, they are reviewed by a higher level professional who verifies the work products have been checked and meet the requirements of the scope of work and standard of practice. No work products or services are delivered to our customers before they undergo both QA and QC processes. All work products prepared by our subconsultants are subjected to the same QA review applied to our work products.

In keeping with our Project Management and Quality Guidelines, an overall Quality Assurance Plan (QAP) will be developed for the contract. The Plan will clearly outline the lines of communication, staff commitment and procedures required to effectively execute this project. The QAP outlines the broad project requirements including:

- Document File Setup
- Changes in Scope Procedures
- Project Budgets
- Project Monitoring/Control
- Staffing
- Project Reviews
- Schedule
- Project Closeout
- Kick-off Meeting
- Budget Reports
- Progress Reporting
- Billing Procedures

In addition to project management activities, the QAP will also indicate quality control procedure requirements. These procedures, developed through the Continuous Quality Improvement (CQI) program,

will be used for day-to-day project activities, in preparing project deliverables. The QAP will also identify the role of the Quality Assurance Manager as being responsible for performing audits on the progress of the project and making sure that all review comments, both internal and external, are addressed.

Work Processes

PROJECT INITIATION

Upon award of this task order, Mr. Gibbons will create a task-specific PEP. The PEP is a living document that will govern the work processes throughout the duration of the assignment and serve as our performance standard for project auditing.

FIELD OPERATIONS

Upon approval of the task order and receipt of a written notice to proceed, we will commence with the work. We will conduct a field inspection of the project's required areas and verify existing field conditions. Mr. Gibbons will establish and coordinate field verification and inspections with the PANYNJ.

CONCEPTUAL DESIGN

A review of various options for design alternates will be developed with associated probable costs of construction established to define which alternates should be advanced to preliminary/final design. The goal at this stage will be to determine which alternates should be advanced further.

OUT-OF SCOPE WORK

Any issues that appear to be outside the Scope of Work as defined in the task order will be brought to the attention of the PANYNJ's Project Manager immediately. No work will commence on such tasks until authorization is received from PANYNJ.

DELIVERABLES

Deliverables for task specific work is expected to contain prints (for interim submissions) and mylars (for final submissions) for drawings. Other deliverables include custom specifications, construction cost estimates with unit price back-up and quantity calculations, design calculations, and a construction schedule. In addition, the plans and specifications will be submitted in electronic format on CD-ROM.

Deliverables for studies, including structural analyses and alternative analyses, are anticipated to be bound reports containing a narrative, recommendations, list of assumptions and design criteria, applicable graphics, design calculations, field notes, and any other data supporting the recommendations.

PROJECT CLOSE-OUT

One of the most over-looked aspects of a project is its proper close-out. Beginning with a thorough review of the scope of work to make certain all loose ends have been completed and ending with a Final Invoice, the close-out of a project makes sure that the project has terminated in an orderly fashion. The PEP for this project will contain procedures and checklists to make sure this is performed in accordance with Gannett Fleming Engineers and Architects, P.C. standards.

PROGRESS REPORTING

Mr. Gibbons will prepare progress reports for the duration of the project. This will include input from all disciplines. The report format will include:

- Accomplishments and progress by task;

- Contract cost outlined by task including authorizations, changes, and requests for extras to date and showing the incurred cost to date for each task;
- Action items required by Gannett Fleming Engineers and Architects, P.C., including significant anticipated interface problems which could potentially delay the project if not resolved;
- Gannett Fleming's summary and professional evaluation of the technical concerns, progress, and budget of the task; and
- Progress planned for the next month.

Actual progress achieved and hours expended shall be reported and evaluated monthly by the Consultant to effect control of the project. This information will be provided two weeks after the close of the previous month's activities. Actual invoices for labor and expense which support the reporting of hours will follow within 15 days after close of the previous month, for work performed during that month. Where deviations from base plan schedule, resource plan, or budget are identified, an analysis will be made noting appropriate corrective action.

KICK-OFF MEETING

The project will commence with a "kick-off" meeting between PANYNJ and Mr. Gibbons. The purpose of this meeting will be to review, verify, and clarify the task specific scope of work as identified in the RFP. Understanding the requirements of the project is important so that our Team and the PANYNJ operate on the "same page". The proper start of a project should result in no surprises later on.

DATA AND INFORMATION ACQUISITION MEETINGS

During the course of the "kick-off" meeting, PANYNJ will be asked to provide updated site plans, structural drawings, property description information, available hours to conduct field surveys/assessments, and other information for the task. This request will benefit PANYNJ, because reducing the field survey effort decreases preparation time and the resulting cost.

We will meet with the various PANYNJ stakeholders while working closely with PANYNJ to gain an understanding of the project's functional requirements. This process is iterative and may require a number of meetings to make certain the project will meet the requirements of all stakeholders.

MONTHLY PROGRESS MEETINGS

Monthly progress meetings will serve as a forum to review job progress, to resolve issues, and to make decisions. These meetings will also be the place to review and discuss submittal reviews. Meeting minutes will be kept by our Project Manager to record the project progress, decisions, open items, and actions agreed to.

Communication Plan

COMMUNICATION WITH PANYNJ

Our Project Manager will be responsible for all work assignments and will issue reports to our Project Principal. Our project management personnel will meet on a monthly basis (or more frequently, as required, based on this task's activities) to review the progress and status of this assignment. As previously stated, our Project Manager will be the single point of contact on all specific task assignments and will interface with PANYNJ. As part of maintaining a clear line of communication, Mr. Gibbons will use regularly scheduled meetings and progress reports to update the PANYNJ Project Manager on specific work assignments.

Contact with the various PANYNJ stakeholders will be coordinated with the PANYNJ Project Manager. These meetings, telephone calls, and other information exchanges will be documented. We will make sure that PANYNJ is always engaged, understands our approach, and authorizes our expected deliverables to each task order. These meetings will be held and/or attended and treated as valuable and important opportunities to make sure project issues are addressed and project expectations are on schedule and on budget. We will diligently identify potential out of scope work, submit required documentation, and receive PANYNJ approval before performing any items not included in the agreed upon scope of services. We will also look for offsetting credits for scope reductions as appropriate.

SUMMARY

The Gannett Fleming Engineers and Architects, P.C. and Tectonic Surveying & Engineering Consultants, P.C. Joint Venture is very pleased to have this opportunity to present our project management plan for this contract. Our Team has an unparalleled track record of providing quality construction management, inspection, engineering, architectural, and planning services to clients. We have consistently proven our ability to commit experienced personnel to all work assignments, and have continually exhibited our responsiveness to meeting stringent technical requirements and project schedule goals. Our knowledge and experience with PANYNJ, its facilities, and its expectations, and our familiarity with this scope of work, are keys to the success of this project.

Please fill in the NDA as described below. All original NDA's must be forwarded to the Port Authority contact with a copy to the Port Authority Law Department (as described on Page 8 of the NDA).

Field Form Number	Description of Data to be Entered
[1]	Insert Name of Your Company (All caps)
[2]	Insert Calendar Date
[3]	Insert Month
[4]	Insert Year
[5]	Insert Name of Your Company (All caps)
[6]	Insert Company's full street address (no P.O. boxes) – city, state, and zip code
[7]	Insert Agreement No. or Awarded Contract, Duration of Agreement or Contract, and Official Title of Agreement or Project.
[8a], [8b] & [8c]	Insert Name and address of Port Authority contact
[9]	Print Your Name (Signatory must be a Principal of the Company)
[10]	Print Your Title – (Signatory must be a Principal of the Company)
[11]	Insert Date Signed (Should match date on Page 1)

The NDA signor must also sign an Exhibit A Related Party Individual Acknowledgment. All Prime employees that will come in contact with information must sign an Exhibit A Related Party Individual Acknowledgment.

NON-DISCLOSURE AND CONFIDENTIALITY AGREEMENT
BETWEEN

[1]

AND

THE PORT AUTHORITY OF NEW YORK AND NEW JERSEY

THIS NON-DISCLOSURE AND CONFIDENTIALITY AGREEMENT (this "**Agreement**") is made as of this 16 day of July, 2014, by and between **THE PORT AUTHORITY OF NEW YORK AND NEW JERSEY** (the "**Port Authority**") a body corporate and politic created by Compact between the States of New York and New Jersey, with the consent of the Congress of the United States, and having an office and place of business at 225 Park Avenue South, New York, New York, 10003, and Gannett Fleming Engineers and Architects, P.C. having an office and place of business at Two Penn Plaza, Suite 552, 380 Seventh Avenue, New York, NY, 10121-0101 ("**Recipient**").

WHEREAS, the Port Authority desires, subject to the terms and conditions set forth below, to disclose to Recipient Protected Information (as defined below) in connection with PANYNJ RFP 38268, RFP for Indefinite Quantity Contracts (IQCs) for Performance of Expert Professional Construction Management and Inspection Services for Federally Funded Storm Related Resiliency Projects on an "As-Needed Basis Through 2018 (collectively, the "Project(s)", or "Proposed Project(s)"); and

WHEREAS, the Recipient acknowledges that the Port Authority, in furtherance of its performance of essential and critical governmental functions relating to the Project, has existing and significant interests and obligations in establishing, maintaining and protecting the security and safety of the Project site and surrounding areas and related public welfare matters; and

WHEREAS, in furtherance of critical governmental interests regarding public welfare, safety and security at the Project site, the Port Authority has collected information and undertaken the development of certain plans and recommendations regarding the security, safety and protection of the Project site, including the physical construction and current and future operations; and

WHEREAS, the Port Authority and Recipient (collectively, the "**Parties**") acknowledge that in order for Recipient to undertake its duties and/or obligations with regard to its involvement in the Project, the Port Authority may provide Recipient or certain of its Related Parties (as defined below) certain information in the possession of the Port Authority, which may contain or include protected, confidential, privileged, classified, commercial, proprietary or sensitive information, documents and plans, relating to the Project or its occupants or other matters, the unauthorized disclosure of which could result in significant public safety, financial and other damage to the Port Authority, the Project, its occupants, and the surrounding communities; and

WHEREAS, Recipient recognizes and acknowledges that providing unauthorized access

to, or disclosing such information to third parties in violation of the terms of this Agreement could compromise or undermine the existing or future guidelines, techniques and procedures implemented for the protection against terrorist acts or for law enforcement, investigation and

prosecutorial purposes, and accordingly could result in significant irreparable harm and injury; and

WHEREAS, in order to protect and preserve the privilege attaching to and the confidentiality of the aforementioned information as well as to limit access to such information to a strict need to know basis, the Port Authority requires, as a condition of its sharing or providing access to such protected, confidential, privileged, classified, commercial, proprietary or sensitive information, documents and plans, that the Recipient enter into this Agreement and that its Related Parties thereafter acknowledge and agree that they will be required to treat as strictly confidential and/or privileged any of such information so provided, as well as the work product and conclusions of any assessments and evaluations or any recommendations relating thereto, and to also fully comply with applicable federal rules and regulations with respect thereto; and

WHEREAS, as a condition to the provision of such information to Recipient and certain Related Parties, the Recipient has agreed to enter into this Agreement with respect to the handling and use of such information and to cause Related Parties to join in and be bound by the terms and conditions of this Agreement.

NOW, THEREFORE, in consideration of the provision by Port Authority of Information for Project Purposes (as each such term is defined below) and for other good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged by the Recipient and each Related Party that receives such Information, the Recipient and each such Related Party agrees, as follows:

1. **Defined Terms**. In addition to the terms defined in the Recitals above, the following terms shall have the meanings set forth below:

(a) "**Authorized Disclosure**" means the disclosure of Protected Information strictly in accordance with the Confidentiality Control Procedures applicable thereto: (i) as to all Protected Information, only to a Related Party that has a need to know such Protected Information strictly for Project Purposes and that has agreed in writing to be bound by the terms of this Agreement by executing a form of Acknowledgment as set forth in Exhibit A or Exhibit B, as applicable; and (ii) as to Confidential Privileged Information, only to the extent expressly approved in writing and in advance by the Port Authority, and then only the particular Confidential Privileged Information that is required to accomplish an essential element of the Project.

(b) "**Information**" means, collectively, all information, documents, data, reports, notes, studies, projections, records, manuals, graphs, electronic files, computer generated data or information, drawings, charts, tables, diagrams, photographs, and other media or renderings containing or otherwise incorporating information that may be provided or made accessible at any time, whether in writing, orally, visually, photographically, electronically or in any other form or medium, including, without limitation, any and all copies, duplicates or extracts of the foregoing.

(c) "**Protected Information**" means and includes collectively, Confidential Information, Confidential Privileged Information, Sensitive Security Information (SSI), Critical Infrastructure Information (CII) or Health Insurance Portability and Accountability Act (HIPPA) Information and Information that is labeled, marked or otherwise identified by or on behalf of the Port Authority so as to reasonably connote that such information is confidential, privileged, sensitive or proprietary in nature. The term Protected Information shall also include all work product that contains or is derived from any of the foregoing, whether in whole or in part, regardless of whether prepared by the Recipient, the Port Authority or others, or when the Port Authority receives such information from others and agrees to treat such information as Protected. The following Information shall not constitute Protected Information for the purpose of this Agreement:

(i) Particular Information, other than Confidential Privileged Information, that is provided to the Recipient by a source other than the Port Authority, provided that such source is not subject to a confidentiality agreement, or similar obligation, or understanding with or for the benefit of the Port Authority, with respect to such Information and that the identity of such source is not itself part of such Protected Information.

(ii) Information that is or becomes generally available to the public other than as a result of a disclosure by the Recipient or a Related Party in violation of this Agreement.

(iii) Information that is known to or was in the possession of the Recipient or a Related Party on a non-confidential basis prior to the disclosure of such Information by the Port Authority.

(d) "**Confidential Information**" means and includes collectively, any and all Information, documents and materials entitled to protection as a public interest privilege under New York State law and as may be deemed to be afforded or entitled to the protection of any other privilege recognized under New York and/or New Jersey state laws or Federal laws. It also includes information that contains sensitive financial, commercial or other proprietary business information concerning or relating to the Port Authority, its projects, operations or facilities that would be exempt from release under the Port Authority Freedom of Information Code.

(e) "**Confidential Privileged Information**" means and includes collectively, (i) Information that reveals security risks, threats, vulnerabilities, documentation that identifies specific physical security vulnerabilities or revealing specific security vulnerabilities details related to emergency response protocols, egress plans, flow paths, egress capacities, (diagrams, codes, standards) etc., which is not publicly available." and any and all Information, documents and materials entitled to protection as a public interest privilege under New York State law and as may be deemed to be afforded or entitled to the protection of any other privilege recognized under New York and/or New Jersey state laws or Federal laws, and (ii) certain Critical Infrastructure Information.

(f) "**Confidentiality Control Procedures**" means procedures, safeguards and requirements for the identification, processing, protection, handling, care, tracking and storage of

Protected Information that are required under applicable federal or state law, the Port Authority Handbook, or by the terms of this Agreement.

(g) **"Critical Infrastructure Information"** (CII) has the meaning set forth in the Homeland Security Act of 2002, under the subtitle Critical Infrastructure Information Act of 2002 (6 U.S.C. §131-134), and any rules or regulations enacted pursuant thereto, including, without limitation, the Office of the Secretary, Department of Homeland Security Rules and Regulations, 6 C.F.R. Part 29 and any amendments thereto. CII may also be referred to as "Protected Critical Infrastructure Information" or "PCII", as provided for in the referenced rules and regulations and any amendments thereto.

(h) **"Sensitive Security Information"** (SSI) has the definition and requirements set forth in the Transportation Security Administrative Rules & Regulations, 49 CFR 1520, (49 U.S.C. §114) and in the Office of the Secretary of Transportation Rules & Regulations, 49 CFR 15, (49 U.S.C. §40119).

(i) **"Health Insurance Portability and Accountability Act"** (HIPAA) Information Employees, associates or other contract personnel who have access to Protected Health Information (PHI) must refer to, and comply with, the Privacy Policies and Procedures to Protect Personal Health Information. Privacy regulations issued under the Health Insurance Portability and Accountability Act of 1996 ("HIPAA" or "Privacy Laws") place restrictions on the Group Health Plans of the Port Authority and PATH (the "Plans") ability to use and disclose Protected Health Information ("PHI").

(j) **"Port Authority Handbook"** means The Port Authority of New York and New Jersey. Information Security Handbook, as may be amended by the Port Authority, from time to time.

(k) **"Project Purposes"** means the use of Protected Information strictly and only for purposes related to Recipient's and its Related Parties' participation and involvement in the Project, and only for such period of time during which Recipient and its Related Parties are involved in Project related activities.

(l) **"Related Party"** and **"Related Parties"** means the directors, employees, officers, partners or members of the Recipient, as applicable, and the Recipient's outside consultants, attorneys, advisors, accountants, architects, engineers or subcontractors or sub-consultants (and their respective directors, employees, officers, partners or members) to whom any Protected Information is disclosed or made available.

2. **Use of Protected Information.** All Protected Information shall be used by the Recipient in accordance with the following requirements:

(a) All Protected Information shall be held in confidence and shall be processed, treated, disclosed and used by the Recipient and its Related Parties only for Project Purposes and in accordance with the Confidentiality Control Procedures established pursuant to Paragraph 2(c), below, including, without limitation, the Port Authority Handbook, receipt of which is acknowledged by Recipient and shall be acknowledged in writing by each Related Party by signing the Acknowledgment attached hereto as Exhibit A or Exhibit B, as applicable, and

applicable legal requirements. Protected Information may be disclosed, only if and to the extent that such disclosure is an Authorized Disclosure.

(b) Recipient and each Related Party acknowledges and agrees that (i) any violation by the Recipient or any of its Related Parties of the terms, conditions or restrictions of this Agreement relating to Protected Information may result in penalties and other enforcement or corrective action as set forth in such statutes and regulations, including, without limitation, the issuance of orders requiring retrieval of Sensitive Security Information and Critical Infrastructure Information to remedy unauthorized disclosure and to cease future unauthorized disclosure and (ii) pursuant to the aforementioned Federal Regulations, including, without limitation, 49 C.F.R. §§ 15.17 and 1520.17, any such violation thereof or mishandling of information therein defined may constitute grounds for a civil penalty and other enforcement or corrective action by the United States Department of Transportation and the United States Department of Homeland Security, and appropriate personnel actions for Federal employees.

(c) Recipient and each Related Party covenants to the Port Authority that it has established, promulgated and implemented Confidentiality Control Procedures for identification, handling, receipt, care, and storage of Protected Information to control and safeguard against any violation of the requirements of this Agreement and against any unauthorized access, disclosure, modification, loss or misuse of Protected Information. Recipient and each Related Party shall undertake reasonable steps consistent with such Confidentiality Control Procedures to assure that disclosure of Protected Information is compartmentalized, such that all Protected Information shall be disclosed only to those persons and entities authorized to receive such Information as an Authorized Disclosure under this Agreement and applicable Confidentiality Control Procedures. The Confidentiality Control Procedures shall, at a minimum, adhere to, and shall not be inconsistent with, the procedures and practices established in the Port Authority Handbook.

(d) The Port Authority reserves the right to audit Recipient's Confidentiality Control Procedures, and those of each Related Party, as applicable, to ensure that it is in compliance with the terms of this Agreement.

(e) The Port Authority may request in writing that the Recipient or any Related Parties apply different or more stringent controls on the handling, care, storage and disclosure of particular items of Protected Information as a precondition for its disclosure. The Port Authority may decline any request by the Recipient or any of its Related Parties to provide such item of Protected Information if the Recipient or any of the Related Parties do not agree in writing to apply such controls.

(f) Nothing in this Agreement shall require the Port Authority to tender or provide access to or possession of any Protected Information to the Recipient or its Related Parties, whether or not the requirements of this Agreement are otherwise satisfied. However, if such Protected Information is provided and accepted, the Recipient and its Related Parties shall abide by the terms, conditions and requirements of this Agreement.

(g) The Recipient and each Related Party agrees to be responsible for enforcing the provisions of this Agreement with respect to its Related Parties, in accordance with the Confidentiality Control Procedures. Except as required by law pursuant to written advice of

competent legal counsel, or with the Port Authority's prior written consent, neither the Recipient, nor any of the Related Parties shall disclose to any third party, person or entity: (i) any Protected Information under circumstances where the Recipient is not fully satisfied that the person or entity to whom such disclosure is about to be made shall act in accordance with the Confidentiality Control Procedures whether or not such person or entity has agreed in writing to be bound by the terms of this Agreement or any "Acknowledgement" of its terms or (ii) the fact that Protected Information has been made available to the Recipient or such Related Parties, or the content or import of such Protected Information. The Recipient is responsible for collecting and managing the Acknowledgments signed by Related Parties pursuant to this Agreement. Recipient shall, at the Port Authority's request, provide the Port Authority a list of all Related Parties who have signed an Acknowledgment, and copies of such Acknowledgments.

(h) As to all Protected Information provided by or on behalf of the Port Authority, nothing in this Agreement shall constitute or be construed as a waiver of any public interest privilege or other protections established under applicable state or federal law.

3. **Disclosures and Discovery Requests.** If a subpoena, discovery request, Court Order, Freedom of Information Request, or any other request or demand authorized by law seeking disclosure of the Protected Information is received by the Recipient or any Related Party, Recipient shall notify the Port Authority thereof, to the extent permitted by law, with sufficient promptness so as to enable the Port Authority to investigate the circumstances, prepare any appropriate documentation and seek to quash the subpoena, to seek a protective order, or to take such other action regarding the request as it deems appropriate. In the absence of a protective order, disclosure shall be made, in consultation with the Port Authority, of only that part of the Protected Information as is legally required to be disclosed. If at any time Protected Information is disclosed in violation of this Agreement, the Recipient shall immediately give the Port Authority written notice of that fact and a detailed account of the circumstances regarding such disclosure to the Port Authority.

4. **Retention Limitations; Return of Protected Information.** Upon the earlier occurrence of either the Port Authority's written request or completion of Recipient's need for any or all Protected Information, such Protected Information, all writings and material describing, analyzing or containing any part of such Protected Information, including any and all portions of Protected Information that may be stored, depicted or contained in electronic or other media and all copies of the foregoing shall be promptly delivered to the Port Authority at Recipient's expense. In addition, as to Protected Information that may be stored in electronic or similar form, such Protected Information shall be deleted and completely removed so that such Protected Information is incapable of being recovered from all computer databases of the Recipient and all Related Parties. The Recipient may request in writing that the Port Authority consent to destruction of Protected Information, writings and materials in lieu of delivery thereof to the Port Authority. The Port Authority shall not unreasonably withhold its consent to such request. If the Port Authority consents to such destruction, the Recipient and each Related Party shall deliver to the Port Authority a written certification by Recipient and such Related Party that such Protected Information, writings and materials have been so destroyed within such period as may be imposed by the Port Authority. Notwithstanding the foregoing, to the extent required for legal or compliance purposes, the Recipient may retain copies of Protected Information (in any format), provided that (a) the Port Authority is notified in writing of such retention, and (b) Recipient

continues to abide by the requirements of this Agreement with respect to the protection of such Protected Information.

5. **Duration and Survival of Confidentiality Obligations.** The obligations under this Agreement shall be perpetual (unless otherwise provided in this Agreement) or until such time as the Protected Information is no longer considered protected, confidential and/or privileged by the Port Authority.

6. **Severability.** Each provision of this Agreement is severable and if a court should find any provision of this Agreement to be unenforceable, all other provisions of this Agreement shall remain in full force and effect.

7. **Injunctive and Other Relief.** Recipient and each Related Party acknowledges that the unauthorized disclosure and handling of Protected Information is likely to have a material adverse and detrimental impact on public safety and security and could significantly endanger the Port Authority, its facilities (including, without limitation, the Project site), its patrons and the general public and that damages at law are an inadequate remedy for any breach, or threatened breach, of this Agreement by Recipient or its Related Parties. The Port Authority shall be entitled, in addition to all other rights or remedies, to seek such restraining orders and injunctions as it may deem appropriate for any breach of this Agreement, without being required to show any actual damage or to post any bond or other security.

8. **Governing Law.** This Agreement shall be governed by and construed in accordance with the laws of the State of New York, without regard to conflict of laws principles. The Port Authority (subject to the terms of the Port Authority Legislation (as defined below)) and the Recipient specifically and irrevocably consent to the exclusive jurisdiction of any federal or state court in the County of New York and State of New York with respect to all matters concerning this Agreement and its enforcement. The Port Authority (subject to the terms of the Port Authority Legislation (as defined below)) and the Recipient agree that the execution and performance of this Agreement shall have a New York situs and, accordingly, they each consent (and solely with respect to the Port Authority, subject to the terms of the Port Authority Legislation (as defined below)) to personal jurisdiction in the State of New York for all purposes and proceedings arising from this Agreement. "**Port Authority Legislation**" shall mean the concurrent legislation of the State of New York and State of New Jersey set forth at Chapter 301 of the Laws of New York of 1950, as amended by Chapter 938 of the Laws of New York of 1974 (McKinney's Unconsolidated Laws §§7101-7112) and Chapter 204 of the Laws of New Jersey of 1951 (N.J.S.A. 32:1-157 to 32:1-168).

9. **Notices.** Any notice, demand or other communication (each, a "**notice**") that is given or rendered pursuant to this Agreement by either party to the other party, shall be: (i) given or rendered, in writing, (ii) addressed to the other party at its required address(es) for notices delivered to it as set forth below, and (iii) delivered by either (x) hand delivery, or (y) nationally recognized courier service (e.g., Federal Express, Express Mail). Any such notice shall be deemed given or rendered, and effective for purposes of this Agreement, as of the date actually delivered to the other party at such address(es) (whether or not the same is then received by other party due to a change of address of which no notice was given, or any rejection or refusal to accept delivery). Notices from either party (to the other) may be given by its counsel.

The required address(es) of each party for notices delivered to it is (are) as set forth below. Each party, however, may, from time to time, designate an additional or substitute required address(es) for notices delivered to it, provided that such designation must be made by notice given in accordance with this Paragraph 9.

10. **Entire Agreement.** This Agreement contains the complete statement of all the agreements among the parties hereto with respect to the subject matter thereof, and all prior agreements among the parties hereto respecting the subject matter hereof, whether written or oral, are merged herein and shall be of no further force or effect. This Agreement may not be changed, modified, discharged, or terminated, except by an instrument in writing signed by all of the parties hereto.

11. **Counterparts.** This Agreement may be executed in one or more counterparts, each of which shall be deemed to be an original, but all of which shall be one and the same document.

12. **Parties Bound.** This Agreement shall be binding upon the Recipient and its respective successors. The foregoing shall not be affected by the failure of any Related Party to join in this Agreement or to execute and deliver an Acknowledgement hereof.

13. **Authority.** The undersigned individual(s) executing this Agreement on behalf of the Recipient below represent(s) that they are authorized to execute this Agreement on behalf of the Recipient and to legally bind such party.

14. **Disclosure of Ownership Rights or License.** Nothing contained herein shall be construed as the granting or conferring by the Port Authority of any rights by ownership, license or otherwise in any Information.

15. **No Liability.** Neither the Commissioners of the Port Authority, nor any of them, nor any officer, agent or employee thereof, shall be charged personally by the Recipient with any liability, or held liable to the Recipient under any term or provision of this Agreement, or because of its execution or attempted execution or because of any breach, or attempted or alleged breach thereof.

16. **Construction.** This Agreement is the joint product of the parties hereto and each provision of this Agreement has been subject to the mutual consultation, negotiation, and agreement of the parties hereto, and shall not be construed for or against any party hereto. EXHIBIT A

ACKNOWLEDGMENT BY RELATED PARTY INDIVIDUAL

I, James R. Laurita, PE ("**Related Party**"), am employed as a(n) President by Gannett Fleming Engineers and Architects, P.C.. I have been provided with and have read the Non Disclosure and Confidentiality Agreement between Gannett Fleming Engineers and Architects, P.C. (the "**Recipient**") and The Port Authority of New York and New Jersey (the "**Port Authority**") dated July 16, 2014 (hereinafter the "**Agreement**"), and the Port Authority Handbook attached to the Agreement. I understand that because of my employer's relationship with Port Authority, both my employer and I may be provided with access to, and/or copies of, sensitive security materials, protected or confidential information. If it is required for me to review or receive Protected Information, as it is defined in the aforementioned Agreement, I acknowledge that I will be bound by each and every term and provision contained therein, and that failure to do so may include, but is not limited to, the imposition of disciplinary action and sanctions, and/or the institution of legal action seeking injunctive relief, monetary and/or criminal penalties for violation of law and/or Port Authority policies and procedures, as well as for violation of federal and/or state regulations.

To the extent that I am currently in the possession of, or have previously come into contact with, marked information as it relates to the aforementioned Agreement, I agree to conform my handling procedures for Protected Information to the practices and procedures set forth and defined herein, or risk loss of access to said Information, removal from said Project and/or subjecting myself to the aforementioned disciplinary actions and/or civil and criminal penalties.

NON-DISCLOSURE AND CONFIDENTIALITY AGREEMENT
BETWEEN

TECTONIC ENGINEERING & SURVEYING CONSULTANTS P.C.
AND

THE PORT AUTHORITY OF NEW YORK AND NEW JERSEY

THIS NON-DISCLOSURE AND CONFIDENTIALITY AGREEMENT (this "**Agreement**") is made as of this 9th day of July, 2014, by and between **THE PORT AUTHORITY OF NEW YORK AND NEW JERSEY** (the "**Port Authority**") a body corporate and politic created by Compact between the States of New York and New Jersey, with the consent of the Congress of the United States, and having an office and place of business at 225 Park Avenue South, New York, New York, 10003, and TECTONIC ENGINEERING & SURVEYING CONSULTANTS P.C. having an office and place of business at 29-16 40th Avenue, Long Island City, NY 11101 ("**Recipient**").

WHEREAS, the Port Authority desires, subject to the terms and conditions set forth below, to disclose to Recipient Protected Information (as defined below) in connection with (RFP No.: 38268), 5 Year Period, Request For Proposals For Indefinite Quantity Contracts (IQCs) For Performance Of Expert Professional Construction Management And Inspection Services For Federally Funded Storm Related Resiliency Projects On An "As-Needed" Basis Through 2018 (collectively, the "Project(s)", or "Proposed Project(s)"); and

WHEREAS, the Recipient acknowledges that the Port Authority, in furtherance of its performance of essential and critical governmental functions relating to the Project, has existing and significant interests and obligations in establishing, maintaining and protecting the security and safety of the Project site and surrounding areas and related public welfare matters; and

WHEREAS, in furtherance of critical governmental interests regarding public welfare, safety and security at the Project site, the Port Authority has collected information and undertaken the development of certain plans and recommendations regarding the security, safety and protection of the Project site, including the physical construction and current and future operations; and

WHEREAS, the Port Authority and Recipient (collectively, the "**Parties**") acknowledge that in order for Recipient to undertake its duties and/or obligations with regard to its involvement in the Project, the Port Authority may provide Recipient or certain of its Related Parties (as defined below) certain information in the possession of the Port Authority, which may contain or include protected, confidential, privileged, classified, commercial, proprietary or sensitive information, documents and plans, relating to the Project or its occupants or other matters, the unauthorized disclosure of which could result in significant public safety, financial and other damage to the Port Authority, the Project, its occupants, and the surrounding communities; and

WHEREAS, Recipient recognizes and acknowledges that providing unauthorized access to, or disclosing such information to third parties in violation of the terms of this Agreement

could compromise or undermine the existing or future guidelines, techniques and procedures implemented for the protection against terrorist acts or for law enforcement, investigation and prosecutorial purposes, and accordingly could result in significant irreparable harm and injury; and

WHEREAS, in order to protect and preserve the privilege attaching to and the confidentiality of the aforementioned information as well as to limit access to such information to a strict need to know basis, the Port Authority requires, as a condition of its sharing or providing access to such protected, confidential, privileged, classified, commercial, proprietary or sensitive information, documents and plans, that the Recipient enter into this Agreement and that its Related Parties thereafter acknowledge and agree that they will be required to treat as strictly confidential and/or privileged any of such information so provided, as well as the work product and conclusions of any assessments and evaluations or any recommendations relating thereto, and to also fully comply with applicable federal rules and regulations with respect thereto; and

WHEREAS, as a condition to the provision of such information to Recipient and certain Related Parties, the Recipient has agreed to enter into this Agreement with respect to the handling and use of such information and to cause Related Parties to join in and be bound by the terms and conditions of this Agreement.

NOW, THEREFORE, in consideration of the provision by Port Authority of Information for Project Purposes (as each such term is defined below) and for other good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged by the Recipient and each Related Party that receives such Information, the Recipient and each such Related Party agrees, as follows:

1. **Defined Terms**. In addition to the terms defined in the Recitals above, the following terms shall have the meanings set forth below:

(a) **"Authorized Disclosure"** means the disclosure of Protected Information strictly in accordance with the Confidentiality Control Procedures applicable thereto: (i) as to all Protected Information, only to a Related Party that has a need to know such Protected Information strictly for Project Purposes and that has agreed in writing to be bound by the terms of this Agreement by executing a form of Acknowledgment as set forth in Exhibit A or Exhibit B, as applicable; and (ii) as to Confidential Privileged Information, only to the extent expressly approved in writing and in advance by the Port Authority, and then only the particular Confidential Privileged Information that is required to accomplish an essential element of the Project.

(b) **"Information"** means, collectively, all information, documents, data, reports, notes, studies, projections, records, manuals, graphs, electronic files, computer generated data or information, drawings, charts, tables, diagrams, photographs, and other media or renderings containing or otherwise incorporating information that may be provided or made accessible at any time, whether in writing, orally, visually, photographically, electronically or in any other form or medium, including, without limitation, any and all copies, duplicates or extracts of the foregoing.

(c) "**Protected Information**" means and includes collectively, Confidential Information, Confidential Privileged Information, Sensitive Security Information (SSI), Critical Infrastructure Information (CII) or Health Insurance Portability and Accountability Act (HIPPA) Information and Information that is labeled, marked or otherwise identified by or on behalf of the Port Authority so as to reasonably connote that such information is confidential, privileged, sensitive or proprietary in nature. The term Protected Information shall also include all work product that contains or is derived from any of the foregoing, whether in whole or in part, regardless of whether prepared by the Recipient, the Port Authority or others, or when the Port Authority receives such information from others and agrees to treat such information as Protected. The following Information shall not constitute Protected Information for the purpose of this Agreement:

(i) Particular Information, other than Confidential Privileged Information, that is provided to the Recipient by a source other than the Port Authority, provided that such source is not subject to a confidentiality agreement, or similar obligation, or understanding with or for the benefit of the Port Authority, with respect to such Information and that the identity of such source is not itself part of such Protected Information.

(ii) Information that is or becomes generally available to the public other than as a result of a disclosure by the Recipient or a Related Party in violation of this Agreement.

(iii) Information that is known to or was in the possession of the Recipient or a Related Party on a non-confidential basis prior to the disclosure of such Information by the Port Authority.

(d) "**Confidential Information**" means and includes collectively, any and all Information, documents and materials entitled to protection as a public interest privilege under New York State law and as may be deemed to be afforded or entitled to the protection of any other privilege recognized under New York and/or New Jersey state laws or Federal laws. It also includes information that contains sensitive financial, commercial or other proprietary business information concerning or relating to the Port Authority, its projects, operations or facilities that would be exempt from release under the Port Authority Freedom of Information Code.

(e) "**Confidential Privileged Information**" means and includes collectively, (i) Information that reveals security risks, threats, vulnerabilities, documentation that identifies specific physical security vulnerabilities or revealing specific security vulnerabilities details related to emergency response protocols, egress plans, flow paths, egress capacities, (diagrams, codes, standards) etc., which is not publicly available." and any and all Information, documents and materials entitled to protection as a public interest privilege under New York State law and as may be deemed to be afforded or entitled to the protection of any other privilege recognized under New York and/or New Jersey state laws or Federal laws, and (ii) certain Critical Infrastructure Information.

(f) "**Confidentiality Control Procedures**" means procedures, safeguards and requirements for the identification, processing, protection, handling, care, tracking and storage of

Protected Information that are required under applicable federal or state law, the Port Authority Handbook, or by the terms of this Agreement.

(g) **"Critical Infrastructure Information"** (CII) has the meaning set forth in the Homeland Security Act of 2002, under the subtitle Critical Infrastructure Information Act of 2002 (6 U.S.C. §131-134), and any rules or regulations enacted pursuant thereto, including, without limitation, the Office of the Secretary, Department of Homeland Security Rules and Regulations, 6 C.F.R. Part 29 and any amendments thereto. CII may also be referred to as "Protected Critical Infrastructure Information" or "PCII", as provided for in the referenced rules and regulations and any amendments thereto.

(h) **"Sensitive Security Information"** (SSI) has the definition and requirements set forth in the Transportation Security Administrative Rules & Regulations, 49 CFR 1520, (49 U.S.C. §114) and in the Office of the Secretary of Transportation Rules & Regulations, 49 CFR 15, (49 U.S.C. §40119).

(i) **"Health Insurance Portability and Accountability Act"** (HIPAA) Information Employees, associates or other contract personnel who have access to Protected Health Information (PHI) must refer to, and comply with, the Privacy Policies and Procedures to Protect Personal Health Information. Privacy regulations issued under the Health Insurance Portability and Accountability Act of 1996 ("HIPAA" or "Privacy Laws") place restrictions on the Group Health Plans of the Port Authority and PATH (the "Plans") ability to use and disclose Protected Health Information ("PHI").

(j) **"Port Authority Handbook"** means The Port Authority of New York and New Jersey. Information Security Handbook, as may be amended by the Port Authority, from time to time.

(k) **"Project Purposes"** means the use of Protected Information strictly and only for purposes related to Recipient's and its Related Parties' participation and involvement in the Project, and only for such period of time during which Recipient and its Related Parties are involved in Project related activities.

(l) **"Related Party"** and **"Related Parties"** means the directors, employees, officers, partners or members of the Recipient, as applicable, and the Recipient's outside consultants, attorneys, advisors, accountants, architects, engineers or subcontractors or sub-consultants (and their respective directors, employees, officers, partners or members) to whom any Protected Information is disclosed or made available.

2. **Use of Protected Information.** All Protected Information shall be used by the Recipient in accordance with the following requirements:

(a) All Protected Information shall be held in confidence and shall be processed, treated, disclosed and used by the Recipient and its Related Parties only for Project Purposes and in accordance with the Confidentiality Control Procedures established pursuant to Paragraph 2(c), below, including, without limitation, the Port Authority Handbook, receipt of which is acknowledged by Recipient and shall be acknowledged in writing by each Related Party by signing the Acknowledgment attached hereto as Exhibit A or Exhibit B, as applicable, and

applicable legal requirements. Protected Information may be disclosed, only if and to the extent that such disclosure is an Authorized Disclosure.

(b) Recipient and each Related Party acknowledges and agrees that (i) any violation by the Recipient or any of its Related Parties of the terms, conditions or restrictions of this Agreement relating to Protected Information may result in penalties and other enforcement or corrective action as set forth in such statutes and regulations, including, without limitation, the issuance of orders requiring retrieval of Sensitive Security Information and Critical Infrastructure Information to remedy unauthorized disclosure and to cease future unauthorized disclosure and (ii) pursuant to the aforementioned Federal Regulations, including, without limitation, 49 C.F.R. §§ 15.17 and 1520.17, any such violation thereof or mishandling of information therein defined may constitute grounds for a civil penalty and other enforcement or corrective action by the United States Department of Transportation and the United States Department of Homeland Security, and appropriate personnel actions for Federal employees.

(c) Recipient and each Related Party covenants to the Port Authority that it has established, promulgated and implemented Confidentiality Control Procedures for identification, handling, receipt, care, and storage of Protected Information to control and safeguard against any violation of the requirements of this Agreement and against any unauthorized access, disclosure, modification, loss or misuse of Protected Information. Recipient and each Related Party shall undertake reasonable steps consistent with such Confidentiality Control Procedures to assure that disclosure of Protected Information is compartmentalized, such that all Protected Information shall be disclosed only to those persons and entities authorized to receive such Information as an Authorized Disclosure under this Agreement and applicable Confidentiality Control Procedures. The Confidentiality Control Procedures shall, at a minimum, adhere to, and shall not be inconsistent with, the procedures and practices established in the Port Authority Handbook.

(d) The Port Authority reserves the right to audit Recipient's Confidentiality Control Procedures, and those of each Related Party, as applicable, to ensure that it is in compliance with the terms of this Agreement.

(e) The Port Authority may request in writing that the Recipient or any Related Parties apply different or more stringent controls on the handling, care, storage and disclosure of particular items of Protected Information as a precondition for its disclosure. The Port Authority may decline any request by the Recipient or any of its Related Parties to provide such item of Protected Information if the Recipient or any of the Related Parties do not agree in writing to apply such controls.

(f) Nothing in this Agreement shall require the Port Authority to tender or provide access to or possession of any Protected Information to the Recipient or its Related Parties, whether or not the requirements of this Agreement are otherwise satisfied. However, if such Protected Information is provided and accepted, the Recipient and its Related Parties shall abide by the terms, conditions and requirements of this Agreement.

(g) The Recipient and each Related Party agrees to be responsible for enforcing the provisions of this Agreement with respect to its Related Parties, in accordance with the Confidentiality Control Procedures. Except as required by law pursuant to written advice of

competent legal counsel, or with the Port Authority's prior written consent, neither the Recipient, nor any of the Related Parties shall disclose to any third party, person or entity: (i) any Protected Information under circumstances where the Recipient is not fully satisfied that the person or entity to whom such disclosure is about to be made shall act in accordance with the Confidentiality Control Procedures whether or not such person or entity has agreed in writing to be bound by the terms of this Agreement or any "Acknowledgement" of its terms or (ii) the fact that Protected Information has been made available to the Recipient or such Related Parties, or the content or import of such Protected Information. The Recipient is responsible for collecting and managing the Acknowledgments signed by Related Parties pursuant to this Agreement. Recipient shall, at the Port Authority's request, provide the Port Authority a list of all Related Parties who have signed an Acknowledgment, and copies of such Acknowledgments.

(h) As to all Protected Information provided by or on behalf of the Port Authority, nothing in this Agreement shall constitute or be construed as a waiver of any public interest privilege or other protections established under applicable state or federal law.

3. **Disclosures and Discovery Requests.** If a subpoena, discovery request, Court Order, Freedom of Information Request, or any other request or demand authorized by law seeking disclosure of the Protected Information is received by the Recipient or any Related Party, Recipient shall notify the Port Authority thereof, to the extent permitted by law, with sufficient promptness so as to enable the Port Authority to investigate the circumstances, prepare any appropriate documentation and seek to quash the subpoena, to seek a protective order, or to take such other action regarding the request as it deems appropriate. In the absence of a protective order, disclosure shall be made, in consultation with the Port Authority, of only that part of the Protected Information as is legally required to be disclosed. If at any time Protected Information is disclosed in violation of this Agreement, the Recipient shall immediately give the Port Authority written notice of that fact and a detailed account of the circumstances regarding such disclosure to the Port Authority.

4. **Retention Limitations; Return of Protected Information.** Upon the earlier occurrence of either the Port Authority's written request or completion of Recipient's need for any or all Protected Information, such Protected Information, all writings and material describing, analyzing or containing any part of such Protected Information, including any and all portions of Protected Information that may be stored, depicted or contained in electronic or other media and all copies of the foregoing shall be promptly delivered to the Port Authority at Recipient's expense. In addition, as to Protected Information that may be stored in electronic or similar form, such Protected Information shall be deleted and completely removed so that such Protected Information is incapable of being recovered from all computer databases of the Recipient and all Related Parties. The Recipient may request in writing that the Port Authority consent to destruction of Protected Information, writings and materials in lieu of delivery thereof to the Port Authority. The Port Authority shall not unreasonably withhold its consent to such request. If the Port Authority consents to such destruction, the Recipient and each Related Party shall deliver to the Port Authority a written certification by Recipient and such Related Party that such Protected Information, writings and materials have been so destroyed within such period as may be imposed by the Port Authority. Notwithstanding the foregoing, to the extent required for legal or compliance purposes, the Recipient may retain copies of Protected Information (in any format), provided that (a) the Port Authority is notified in writing of such retention, and (b) Recipient

continues to abide by the requirements of this Agreement with respect to the protection of such Protected Information.

5. **Duration and Survival of Confidentiality Obligations**. The obligations under this Agreement shall be perpetual (unless otherwise provided in this Agreement) or until such time as the Protected Information is no longer considered protected, confidential and/or privileged by the Port Authority.

6. **Severability**. Each provision of this Agreement is severable and if a court should find any provision of this Agreement to be unenforceable, all other provisions of this Agreement shall remain in full force and effect.

7. **Injunctive and Other Relief**. Recipient and each Related Party acknowledges that the unauthorized disclosure and handling of Protected Information is likely to have a material adverse and detrimental impact on public safety and security and could significantly endanger the Port Authority, its facilities (including, without limitation, the Project site), its patrons and the general public and that damages at law are an inadequate remedy for any breach, or threatened breach, of this Agreement by Recipient or its Related Parties. The Port Authority shall be entitled, in addition to all other rights or remedies, to seek such restraining orders and injunctions as it may deem appropriate for any breach of this Agreement, without being required to show any actual damage or to post any bond or other security.

8. **Governing Law**. This Agreement shall be governed by and construed in accordance with the laws of the State of New York, without regard to conflict of laws principles. The Port Authority (subject to the terms of the Port Authority Legislation (as defined below)) and the Recipient specifically and irrevocably consent to the exclusive jurisdiction of any federal or state court in the County of New York and State of New York with respect to all matters concerning this Agreement and its enforcement. The Port Authority (subject to the terms of the Port Authority Legislation (as defined below)) and the Recipient agree that the execution and performance of this Agreement shall have a New York situs and, accordingly, they each consent (and solely with respect to the Port Authority, subject to the terms of the Port Authority Legislation (as defined below)) to personal jurisdiction in the State of New York for all purposes and proceedings arising from this Agreement. "**Port Authority Legislation**" shall mean the concurrent legislation of the State of New York and State of New Jersey set forth at Chapter 301 of the Laws of New York of 1950, as amended by Chapter 938 of the Laws of New York of 1974 (McKinney's Unconsolidated Laws §§7101-7112) and Chapter 204 of the Laws of New Jersey of 1951 (N.J.S.A. 32:1-157 to 32:1-168).

9. **Notices**. Any notice, demand or other communication (each, a "**notice**") that is given or rendered pursuant to this Agreement by either party to the other party, shall be: (i) given or rendered, in writing, (ii) addressed to the other party at its required address(es) for notices delivered to it as set forth below, and (iii) delivered by either (x) hand delivery, or (y) nationally recognized courier service (e.g., Federal Express, Express Mail). Any such notice shall be deemed given or rendered, and effective for purposes of this Agreement, as of the date actually delivered to the other party at such address(es) (whether or not the same is then received by other party due to a change of address of which no notice was given, or any rejection or refusal to accept delivery). Notices from either party (to the other) may be given by its counsel.

The required address(es) of each party for notices delivered to it is (are) as set forth below. Each party, however, may, from time to time, designate an additional or substitute required address(es) for notices delivered to it, provided that such designation must be made by notice given in accordance with this Paragraph 9.

NON-DISCLOSURE AND CONFIDENTIALITY AGREEMENT
BETWEEN

KS Engineers, P.C.

AND

THE PORT AUTHORITY OF NEW YORK AND NEW JERSEY

THIS NON-DISCLOSURE AND CONFIDENTIALITY AGREEMENT (this "**Agreement**") is made as of this 14th day of July, 2014, by and between **THE PORT AUTHORITY OF NEW YORK AND NEW JERSEY** (the "**Port Authority**") a body corporate and politic created by Compact between the States of New York and New Jersey, with the consent of the Congress of the United States, and having an office and place of business at 225 Park Avenue South, New York, New York, 10003, and KS Engineers, P.C. having an office and place of business at 494 Broad Street, 4th Floor, Newark, NJ ("**Recipient**").

WHEREAS, the Port Authority desires, subject to the terms and conditions set forth below, to disclose to Recipient Protected Information (as defined below) in connection with RFP NO.: 38268, INDEFINITE QUANTITY CONTRACTS (IQCs) FOR PERFORMANCE OF EXPERT PROFESSIONAL CONSTRUCTION MANAGEMENT AND INSPECTION SERVICES FOR FEDERALLY FUNDED STORM RELATED RESILIENCY PROJECTS ON AN "AS-NEEDED" BASIS THROUGH 2018 (collectively, the "Project(s)", or "Proposed Project(s)"); and

WHEREAS, the Recipient acknowledges that the Port Authority, in furtherance of its performance of essential and critical governmental functions relating to the Project, has existing and significant interests and obligations in establishing, maintaining and protecting the security and safety of the Project site and surrounding areas and related public welfare matters; and

WHEREAS, in furtherance of critical governmental interests regarding public welfare, safety and security at the Project site, the Port Authority has collected information and undertaken the development of certain plans and recommendations regarding the security, safety and protection of the Project site, including the physical construction and current and future operations; and

WHEREAS, the Port Authority and Recipient (collectively, the "**Parties**") acknowledge that in order for Recipient to undertake its duties and/or obligations with regard to its involvement in the Project, the Port Authority may provide Recipient or certain of its Related Parties (as defined below) certain information in the possession of the Port Authority, which may contain or include protected, confidential, privileged, classified, commercial, proprietary or sensitive information, documents and plans, relating to the Project or its occupants or other matters, the unauthorized disclosure of which could result in significant public safety, financial and other damage to the Port Authority, the Project, its occupants, and the surrounding communities; and

WHEREAS, Recipient recognizes and acknowledges that providing unauthorized access to, or disclosing such information to third parties in violation of the terms of this Agreement could compromise or undermine the existing or future guidelines, techniques and procedures implemented for the protection against terrorist acts or for law enforcement, investigation and prosecutorial purposes, and accordingly could result in significant irreparable harm and injury; and

WHEREAS, in order to protect and preserve the privilege attaching to and the confidentiality of the aforementioned information as well as to limit access to such information to a strict need to know basis, the Port Authority requires, as a condition of its sharing or providing access to such protected, confidential, privileged, classified, commercial, proprietary or sensitive information, documents and plans, that the Recipient enter into this Agreement and that its Related Parties thereafter acknowledge and agree that they will be required to treat as strictly confidential and/or privileged any of such information so provided, as well as the work product and conclusions of any assessments and evaluations or any recommendations relating thereto, and to also fully comply with applicable federal rules and regulations with respect thereto; and

WHEREAS, as a condition to the provision of such information to Recipient and certain Related Parties, the Recipient has agreed to enter into this Agreement with respect to the handling and use of such information and to cause Related Parties to join in and be bound by the terms and conditions of this Agreement.

NOW, THEREFORE, in consideration of the provision by Port Authority of Information for Project Purposes (as each such term is defined below) and for other good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged by the Recipient and each Related Party that receives such Information, the Recipient and each such Related Party agrees, as follows:

1. **Defined Terms.** In addition to the terms defined in the Recitals above, the following terms shall have the meanings set forth below:

(a) **"Authorized Disclosure"** means the disclosure of Protected Information strictly in accordance with the Confidentiality Control Procedures applicable thereto: (i) as to all Protected Information, only to a Related Party that has a need to know such Protected Information strictly for Project Purposes and that has agreed in writing to be bound by the terms of this Agreement by executing a form of Acknowledgment as set forth in Exhibit A or Exhibit B, as applicable; and (ii) as to Confidential Privileged Information, only to the extent expressly approved in writing and in advance by the Port Authority, and then only the particular Confidential Privileged Information that is required to accomplish an essential element of the Project.

(b) **"Information"** means, collectively, all information, documents, data, reports, notes, studies, projections, records, manuals, graphs, electronic files, computer generated data or information, drawings, charts, tables, diagrams, photographs, and other media or renderings containing or otherwise incorporating information that may be provided or made accessible at any time, whether in writing, orally, visually, photographically, electronically or in any other

form or medium, including, without limitation, any and all copies, duplicates or extracts of the foregoing.

(c) **"Protected Information"** means and includes collectively, Confidential Information, Confidential Privileged Information, Sensitive Security Information (SSI), Critical Infrastructure Information (CII) or Health Insurance Portability and Accountability Act (HIPPA) Information and Information that is labeled, marked or otherwise identified by or on behalf of the Port Authority so as to reasonably connote that such information is confidential, privileged, sensitive or proprietary in nature. The term Protected Information shall also include all work product that contains or is derived from any of the foregoing, whether in whole or in part, regardless of whether prepared by the Recipient, the Port Authority or others, or when the Port Authority receives such information from others and agrees to treat such information as Protected. The following Information shall not constitute Protected Information for the purpose of this Agreement:

(i) Particular Information, other than Confidential Privileged Information, that is provided to the Recipient by a source other than the Port Authority, provided that such source is not subject to a confidentiality agreement, or similar obligation, or understanding with or for the benefit of the Port Authority, with respect to such Information and that the identity of such source is not itself part of such Protected Information.

(ii) Information that is or becomes generally available to the public other than as a result of a disclosure by the Recipient or a Related Party in violation of this Agreement.

(iii) Information that is known to or was in the possession of the Recipient or a Related Party on a non-confidential basis prior to the disclosure of such Information by the Port Authority.

(d) **"Confidential Information"** means and includes collectively, any and all Information, documents and materials entitled to protection as a public interest privilege under New York State law and as may be deemed to be afforded or entitled to the protection of any other privilege recognized under New York and/or New Jersey state laws or Federal laws. It also includes information that contains sensitive financial, commercial or other proprietary business information concerning or relating to the Port Authority, its projects, operations or facilities that would be exempt from release under the Port Authority Freedom of Information Code.

(e) **"Confidential Privileged Information"** means and includes collectively, (i) Information that reveals security risks, threats, vulnerabilities, documentation that identifies specific physical security vulnerabilities or revealing specific security vulnerabilities details related to emergency response protocols, egress plans, flow paths, egress capacities, (diagrams, codes, standards) etc., which is not publicly available." and any and all Information, documents and materials entitled to protection as a public interest privilege under New York State law and as may be deemed to be afforded or entitled to the protection of any other privilege recognized

under New York and/or New Jersey state laws or Federal laws, and (ii) certain Critical Infrastructure Information.

(f) **"Confidentiality Control Procedures"** means procedures, safeguards and requirements for the identification, processing, protection, handling, care, tracking and storage of Protected Information that are required under applicable federal or state law, the Port Authority Handbook, or by the terms of this Agreement.

(g) **"Critical Infrastructure Information"** (CII) has the meaning set forth in the Homeland Security Act of 2002, under the subtitle Critical Infrastructure Information Act of 2002 (6 U.S.C. §131-134), and any rules or regulations enacted pursuant thereto, including, without limitation, the Office of the Secretary, Department of Homeland Security Rules and Regulations, 6 C.F.R. Part 29 and any amendments thereto. CII may also be referred to as "Protected Critical Infrastructure Information" or "PCII", as provided for in the referenced rules and regulations and any amendments thereto.

(h) **"Sensitive Security Information"** (SSI) has the definition and requirements set forth in the Transportation Security Administrative Rules & Regulations, 49 CFR 1520, (49 U.S.C. §114) and in the Office of the Secretary of Transportation Rules & Regulations, 49 CFR 15, (49 U.S.C. §40119).

(i) **"Health Insurance Portability and Accountability Act"** (HIPAA) Information Employees, associates or other contract personnel who have access to Protected Health Information (PHI) must refer to, and comply with, the Privacy Policies and Procedures to Protect Personal Health Information. Privacy regulations issued under the Health Insurance Portability and Accountability Act of 1996 ("HIPAA" or "Privacy Laws") place restrictions on the Group Health Plans of the Port Authority and PATH (the "Plans") ability to use and disclose Protected Health Information ("PHI").

(j) **"Port Authority Handbook"** means The Port Authority of New York and New Jersey. Information Security Handbook, as may be amended by the Port Authority, from time to time.

(k) **"Project Purposes"** means the use of Protected Information strictly and only for purposes related to Recipient's and its Related Parties' participation and involvement in the Project, and only for such period of time during which Recipient and its Related Parties are involved in Project related activities.

(l) **"Related Party"** and **"Related Parties"** means the directors, employees, officers, partners or members of the Recipient, as applicable, and the Recipient's outside consultants, attorneys, advisors, accountants, architects, engineers or subcontractors or sub-consultants (and their respective directors, employees, officers, partners or members) to whom any Protected Information is disclosed or made available.

2. **Use of Protected Information.** All Protected Information shall be used by the Recipient in accordance with the following requirements:

(a) All Protected Information shall be held in confidence and shall be processed, treated, disclosed and used by the Recipient and its Related Parties only for Project Purposes and in accordance with the Confidentiality Control Procedures established pursuant to Paragraph 2(c), below, including, without limitation, the Port Authority Handbook, receipt of which is acknowledged by Recipient and shall be acknowledged in writing by each Related Party by signing the Acknowledgment attached hereto as Exhibit A or Exhibit B, as applicable, and applicable legal requirements. Protected Information may be disclosed, only if and to the extent that such disclosure is an Authorized Disclosure.

(b) Recipient and each Related Party acknowledges and agrees that (i) any violation by the Recipient or any of its Related Parties of the terms, conditions or restrictions of this Agreement relating to Protected Information may result in penalties and other enforcement or corrective action as set forth in such statutes and regulations, including, without limitation, the issuance of orders requiring retrieval of Sensitive Security Information and Critical Infrastructure Information to remedy unauthorized disclosure and to cease future unauthorized disclosure and (ii) pursuant to the aforementioned Federal Regulations, including, without limitation, 49 C.F.R. §§ 15.17 and 1520.17, any such violation thereof or mishandling of information therein defined may constitute grounds for a civil penalty and other enforcement or corrective action by the United States Department of Transportation and the United States Department of Homeland Security, and appropriate personnel actions for Federal employees.

(c) Recipient and each Related Party covenants to the Port Authority that it has established, promulgated and implemented Confidentiality Control Procedures for identification, handling, receipt, care, and storage of Protected Information to control and safeguard against any violation of the requirements of this Agreement and against any unauthorized access, disclosure, modification, loss or misuse of Protected Information. Recipient and each Related Party shall undertake reasonable steps consistent with such Confidentiality Control Procedures to assure that disclosure of Protected Information is compartmentalized, such that all Protected Information shall be disclosed only to those persons and entities authorized to receive such Information as an Authorized Disclosure under this Agreement and applicable Confidentiality Control Procedures. The Confidentiality Control Procedures shall, at a minimum, adhere to, and shall not be inconsistent with, the procedures and practices established in the Port Authority Handbook.

(d) The Port Authority reserves the right to audit Recipient's Confidentiality Control Procedures, and those of each Related Party, as applicable, to ensure that it is in compliance with the terms of this Agreement.

(e) The Port Authority may request in writing that the Recipient or any Related Parties apply different or more stringent controls on the handling, care, storage and disclosure of particular items of Protected Information as a precondition for its disclosure. The Port Authority may decline any request by the Recipient or any of its Related Parties to provide such item of Protected Information if the Recipient or any of the Related Parties do not agree in writing to apply such controls.

(f) Nothing in this Agreement shall require the Port Authority to tender or provide access to or possession of any Protected Information to the Recipient or its Related Parties, whether or not the requirements of this Agreement are otherwise satisfied. However, if such

Protected Information is provided and accepted, the Recipient and its Related Parties shall abide by the terms, conditions and requirements of this Agreement.

(g) The Recipient and each Related Party agrees to be responsible for enforcing the provisions of this Agreement with respect to its Related Parties, in accordance with the Confidentiality Control Procedures. Except as required by law pursuant to written advice of competent legal counsel, or with the Port Authority's prior written consent, neither the Recipient, nor any of the Related Parties shall disclose to any third party, person or entity: (i) any Protected Information under circumstances where the Recipient is not fully satisfied that the person or entity to whom such disclosure is about to be made shall act in accordance with the Confidentiality Control Procedures whether or not such person or entity has agreed in writing to be bound by the terms of this Agreement or any "Acknowledgement" of its terms or (ii) the fact that Protected Information has been made available to the Recipient or such Related Parties, or the content or import of such Protected Information. The Recipient is responsible for collecting and managing the Acknowledgments signed by Related Parties pursuant to this Agreement. Recipient shall, at the Port Authority's request, provide the Port Authority a list of all Related Parties who have signed an Acknowledgment, and copies of such Acknowledgments.

(h) As to all Protected Information provided by or on behalf of the Port Authority, nothing in this Agreement shall constitute or be construed as a waiver of any public interest privilege or other protections established under applicable state or federal law.

3. **Disclosures and Discovery Requests.** If a subpoena, discovery request, Court Order, Freedom of Information Request, or any other request or demand authorized by law seeking disclosure of the Protected Information is received by the Recipient or any Related Party, Recipient shall notify the Port Authority thereof, to the extent permitted by law, with sufficient promptness so as to enable the Port Authority to investigate the circumstances, prepare any appropriate documentation and seek to quash the subpoena, to seek a protective order, or to take such other action regarding the request as it deems appropriate. In the absence of a protective order, disclosure shall be made, in consultation with the Port Authority, of only that part of the Protected Information as is legally required to be disclosed. If at any time Protected Information is disclosed in violation of this Agreement, the Recipient shall immediately give the Port Authority written notice of that fact and a detailed account of the circumstances regarding such disclosure to the Port Authority.

4. **Retention Limitations; Return of Protected Information.** Upon the earlier occurrence of either the Port Authority's written request or completion of Recipient's need for any or all Protected Information, such Protected Information, all writings and material describing, analyzing or containing any part of such Protected Information, including any and all portions of Protected Information that may be stored, depicted or contained in electronic or other media and all copies of the foregoing shall be promptly delivered to the Port Authority at Recipient's expense. In addition, as to Protected Information that may be stored in electronic or similar form, such Protected Information shall be deleted and completely removed so that such Protected Information is incapable of being recovered from all computer databases of the Recipient and all Related Parties. The Recipient may request in writing that the Port Authority consent to destruction of Protected Information, writings and materials in lieu of delivery thereof to the Port Authority. The Port Authority shall not unreasonably withhold its consent to such request. If the

Port Authority consents to such destruction, the Recipient and each Related Party shall deliver to the Port Authority a written certification by Recipient and such Related Party that such Protected Information, writings and materials have been so destroyed within such period as may be imposed by the Port Authority. Notwithstanding the foregoing, to the extent required for legal or compliance purposes, the Recipient may retain copies of Protected Information (in any format), provided that (a) the Port Authority is notified in writing of such retention, and (b) Recipient continues to abide by the requirements of this Agreement with respect to the protection of such Protected Information.

5. **Duration and Survival of Confidentiality Obligations.** The obligations under this Agreement shall be perpetual (unless otherwise provided in this Agreement) or until such time as the Protected Information is no longer considered protected, confidential and/or privileged by the Port Authority.

6. **Severability.** Each provision of this Agreement is severable and if a court should find any provision of this Agreement to be unenforceable, all other provisions of this Agreement shall remain in full force and effect.

7. **Injunctive and Other Relief.** Recipient and each Related Party acknowledges that the unauthorized disclosure and handling of Protected Information is likely to have a material adverse and detrimental impact on public safety and security and could significantly endanger the Port Authority, its facilities (including, without limitation, the Project site), its patrons and the general public and that damages at law are an inadequate remedy for any breach, or threatened breach, of this Agreement by Recipient or its Related Parties. The Port Authority shall be entitled, in addition to all other rights or remedies, to seek such restraining orders and injunctions as it may deem appropriate for any breach of this Agreement, without being required to show any actual damage or to post any bond or other security.

8. **Governing Law.** This Agreement shall be governed by and construed in accordance with the laws of the State of New York, without regard to conflict of laws principles. The Port Authority (subject to the terms of the Port Authority Legislation (as defined below)) and the Recipient specifically and irrevocably consent to the exclusive jurisdiction of any federal or state court in the County of New York and State of New York with respect to all matters concerning this Agreement and its enforcement. The Port Authority (subject to the terms of the Port Authority Legislation (as defined below)) and the Recipient agree that the execution and performance of this Agreement shall have a New York situs and, accordingly, they each consent (and solely with respect to the Port Authority, subject to the terms of the Port Authority Legislation (as defined below)) to personal jurisdiction in the State of New York for all purposes and proceedings arising from this Agreement. **"Port Authority Legislation"** shall mean the concurrent legislation of the State of New York and State of New Jersey set forth at Chapter 301 of the Laws of New York of 1950, as amended by Chapter 938 of the Laws of New York of 1974 (McKinney's Unconsolidated Laws §§7101-7112) and Chapter 204 of the Laws of New Jersey of 1951 (N.J.S.A. 32:1-157 to 32:1-168).

9. **Notices.** Any notice, demand or other communication (each, a **"notice"**) that is given or rendered pursuant to this Agreement by either party to the other party, shall be: (i) given or rendered, in writing, (ii) addressed to the other party at its required address(es) for notices

delivered to it as set forth below, and (iii) delivered by either (x) hand delivery, or (y) nationally recognized courier service (e.g., Federal Express, Express Mail). Any such notice shall be deemed given or rendered, and effective for purposes of this Agreement, as of the date actually delivered to the other party at such address(es) (whether or not the same is then received by other party due to a change of address of which no notice was given, or any rejection or refusal to accept delivery). Notices from either party (to the other) may be given by its counsel.

The required address(es) of each party for notices delivered to it is (are) as set forth below. Each party, however, may, from time to time, designate an additional or substitute required address(es) for notices delivered to it, provided that such designation must be made by notice given in accordance with this Paragraph 9.

with a copy to:	_____ _____ _____

10. **Entire Agreement.** This Agreement contains the complete statement of all the agreements among the parties hereto with respect to the subject matter thereof, and all prior agreements among the parties hereto respecting the subject matter hereof, whether written or oral, are merged herein and shall be of no further force or effect. This Agreement may not be changed, modified, discharged, or terminated, except by an instrument in writing signed by all of the parties hereto.

11. **Counterparts.** This Agreement may be executed in one or more counterparts, each of which shall be deemed to be an original, but all of which shall be one and the same document.

12. **Parties Bound.** This Agreement shall be binding upon the Recipient and its respective successors. The foregoing shall not be affected by the failure of any Related Party to join in this Agreement or to execute and deliver an Acknowledgement hereof.

13. **Authority.** The undersigned individual(s) executing this Agreement on behalf of the Recipient below represent(s) that they are authorized to execute this Agreement on behalf of the Recipient and to legally bind such party.

14. **Disclosure of Ownership Rights or License.** Nothing contained herein shall be construed as the granting or conferring by the Port Authority of any rights by ownership, license or otherwise in any Information.

15. **No Liability.** Neither the Commissioners of the Port Authority, nor any of them, nor any officer, agent or employee thereof, shall be charged personally by the Recipient with any liability, or held liable to the Recipient under any term or provision of this Agreement, or because of its execution or attempted execution or because of any breach, or attempted or alleged breach thereof.

16. **Construction.** This Agreement is the joint product of the parties hereto and each provision of this Agreement has been subject to the mutual consultation, negotiation, and agreement of the parties hereto, and shall not be construed for or against any party hereto. The captions of the various sections in this Agreement are for convenience only and do not, and shall not be deemed to, define, limit or construe the contents of such Sections.

EXHIBIT A

ACKNOWLEDGMENT BY RELATED PARTY INDIVIDUAL

I, Harry Baker ("**Related Party**"), am employed as a(n) Vice President by KS Engineers, P.C.. I have been provided with and have read the Non Disclosure and Confidentiality Agreement between Gannett Fleming Engineers and Architects, P.C./Tectonic Engineering & Surveying Consultants, P.C. Joint Venture (the "**Recipient**") and The Port Authority of New York and New Jersey (the "**Port Authority**") dated July 14, 2014 (hereinafter the "**Agreement**"), and the Port Authority Handbook attached to the Agreement. I understand that because of my employer's relationship with Gannett Fleming Engineers and Architects, P.C./Tectonic Engineering & Surveying Consultants, P.C. Joint Venture, both my employer and I may be provided with access to, and/or copies of, sensitive security materials, protected or confidential information. If it is required for me to review or receive Protected Information, as it is defined in the aforementioned Agreement, I acknowledge that I will be bound by each and every term and provision contained therein, and that failure to do so may include, but is not limited to, the imposition of disciplinary action and sanctions, and/or the institution of legal action seeking injunctive relief, monetary and/or criminal penalties for violation of law and/or Port Authority policies and procedures, as well as for violation of federal and/or state regulations.

To the extent that I am currently in the possession of, or have previously come into contact with, marked information as it relates to the aforementioned Agreement, I agree to conform my handling procedures for Protected Information to the practices and procedures set forth and defined herein, or risk loss of access to said Information, removal from said Project and/or subjecting myself to the aforementioned disciplinary actions and/or civil and criminal penalties.

(name of authorized officer)
certifies, to the best of my knowledge and belief, that:

- No Federal appropriated funds have been paid or will be paid, by or on behalf of the undersigned, to any person for influencing or attempting to influence an officer or employee of an agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with the awarding of any Federal contract, the making of any Federal grant, the making of any Federal loan, the entering into of any cooperative agreement, and the extension, continuation, renewal, amendment, or modification of any Federal contract, grant, loan, or cooperative agreement.

- If any funds other than Federal appropriated funds have been paid or will be paid to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with this Federal contract, grant, loan, or cooperative agreement, the undersigned shall complete and submit Standard Form LLL, "Disclosure of Lobbying, Activities" in accordance with its instructions.

- The undersigned shall require that the language of this certification be included in the award documents for all subawards at all tiers (including subcontracts, subgrants, and contracts under grants, loans, and cooperative agreements) and that all subrecipients shall certify and disclose accordingly.

This certification is a material representation of fact upon which reliance was placed when this transaction was made or entered into. Submission of this certification is a prerequisite for making or entering into this transaction imposed by, 31, U.S. C. § 1352 (as amended by the Lobbying Disclosure Act of 1995). Any person who fails to file the required certification shall be subject to a civil penalty of not less than $10,000 and not more than $100,000 for each such failure.

Note: Pursuant to 31 U.S.C § 1352(c)(I)-(2)(A), any person who makes a prohibited expenditure or fails to file or amend a required certification or disclosure form shall be subject to a civil penalty of not less than $10,000 and not more than $100,000 for each such expenditure or failure.

The Contractor certifies or affirms the truthfulness and accuracy of each statement of its certification and disclosure, if any. In addition, the Contractor understands and agrees that the provisions of 31 U.S.C. § 3801, et seq., apply to this certification and disclosure, if any.

REQUEST FOR PROPOSALS FOR THE PERFORMANCE OF EXPERT PROFESSIONAL CONSTRUCTION MANAGEMENT AND INSPECTION SERVICES AS REQUESTED ON A "CALL-IN" BASIS DURING 2015 THROUGH 2018 (RFP #39247)

AGREEMENT ON TERMS OF DISCUSSION

The Port Authority's receipt or discussion of any information (including information contained in any proposal, vendor qualification, ideas, models, drawings, or other material communicated or exhibited by us or on our behalf) shall not impose any obligations whatsoever on the Port Authority or entitle us to any compensation therefor (except to the extent specifically provided in such written agreement, if any, as may be entered into between the Port Authority and us). Any such information given to the Port Authority before, with or after this Agreement on Terms of Discussion ("Agreement"), either orally or in writing, is not given in confidence. Such information may be used, or disclosed to others, for any purpose at any time without obligation or compensation and without liability of any kind whatsoever. Any statement which is inconsistent with this Agreement, whether made as part of or in connection with this Agreement, shall be void and of no effect. This Agreement is not intended, however, to grant to the Port Authority rights to any matter, which is the subject of valid existing or potential letters patent. The foregoing applies to any information, whether or not given at the invitation of the Authority.

Notwithstanding the above, and without assuming any legal obligation, the Port Authority will employ reasonable efforts, subject to the provisions of the Port Authority Freedom of Information Code and Procedure adopted by the Port Authority's Board of Commissioners on March 29, 2012, which may be found on the Port Authority website at: http://www.panynj.gov/corporate-information/pdf/foi-code.pdf, not to disclose to any competitor of the undersigned, information submitted which are trade secrets or is maintained for the regulation or supervision of commercial enterprise which, if disclosed, would cause injury to the competitive position of the enterprise, and which information is identified by the Proposer as proprietary, as more fully set forth in the FOI Code, which may be disclosed by the undersigned to the Port Authority as part of or in connection with the submission of a proposal.

Certificate PA-20373

This certificate acknowledges that the above named firm is certified as a **Minority-owned Business Enterprise.** This company has met the criteria for ownership and control as established by the Port Authority Policy for Revised Minority, Woman and Small Business Enterprise (M/W/SBE) Programs, dated June 10,1993.

This certification will remain in effect for five years from the date of notice and may be extended only upon submission by you, and acceptance by the Port Authority of a recertification application attesting that the ownership and control of the business, on which this certificate is granted, has not changed. This office must be notified within 30 days of any material changes in the business which affect ownership and control. Failure to do so may result in the revocation of this certification and/or imposition of other sanctions.

Re: Proposal for the Performance of Expert Professional Construction Management and Inspection Services as Requested on a "Call-In" Basis During 2015 Through 2018
RFP #39247

Dear RFP Custodian:

The Joint Venture Team of **D&B Engineers and Architects, P.C.**, known as Dvirka and Bartilucci Consulting Engineers, and **KS Engineers, P.C. (D&B/KSE JV)**, in association with its highly qualified subconsultants, is pleased to submit our proposal for the Construction Management and Inspection Services as requested on a "call-in" basis during 2015 through 2018.

We have developed a Team that will result in success! The **D&B/KSE JV Team** offers that ideal mixture of construction managers, resident engineers, inspectors, project control specialists, safety and risk managers, and technicians that can devise methods to avoid potential problems and solve actual problems, thus continuing our record of high-level performance. Our Team has worked together on many projects and has an excellent working rapport – we will promptly mobilize and commence work when needed.

During organization of the Project Team, two key items were kept in mind: availability of staff, and on-call and PANYNJ experience. We have the ability to respond rapidly to any task assignment, and the ability to staff multiple projects simultaneously. **We anticipate both night-time and weekend work, and we understand that 24-hour coverage may be necessary. We also understand that if 24-hour coverage is necessary, we will provide the necessary and qualified staff on all shifts.** With this in mind, we have created a highly talented array of firms and personnel to execute this contract – "as-needed".

The **D&B/KSE JV Team** includes the following subconsultants, each bringing a critical component of specialized expertise to the Team as discussed in further detail in our Qualifications Statement:

- **Haider Engineering, P.C.** - Construction Management/Inspection
- **Johnson, Mirmiran & Thompson, Inc.** - Construction Management/Inspection
- **EnTech Engineering, P.C.** - Construction Management/Inspection
- **Toll International LLC (MBE/DBE)** - Project Controls

Our Team not only meets, but exceeds the minimum requirements set forth on page 1 of the RFP. The chart below illustrates our Team's compliance with the "Proposer Requirements". As requested, the résumés for all proposed personnel are provided in ***Section E*** of the Technical Proposal.

Proposer Requirement	Requirement Met?
A. Firm Experience:	
1. an office in the Greater New York, New Jersey Metropolitan Area and must have at least 50 individuals on staff who have demonstrated experience performing construction management and/or construction inspection services in the Greater New York/New Jersey Metropolitan Area.	✓
2. a Certificate of Authorization to practice Professional Engineering or Architecture in the states of New York and/or New Jersey.	✓
B. Staff Experience:	
1. at least ten (10) of which must be engineers/architects licensed in the states of New York and/or New Jersey.	✓
2. at least ten (10) of which must be ACI Concrete Construction Special Inspector	✓
3. at least three (3) of which must be ICC Certified as a Structural Steel and Bolting Inspector	✓
4. at least one (1) of which must be NACE Level 1 coatings certified.	✓

The **D&B/KSE JV Team** understands the importance of maintaining a project schedule and ensuring that the project is completed within budget. **Our Team has a large pool of staff and unmatched local resources to support the effort required for the subject contract.** The **D&B/KSE JV Team** is committed to providing the PANYNJ with the experience of the personnel outlined in our portfolio and to complete our professional services with the same level of expertise that we have provided the Authority in the past.

D&B/KSE JV, together with its sub-consultants, is a unique combination of professional organizations, each of which contributes its own uniqueness to the services to be provided under this contract, the result of which is a well-diversified project team - we will have no learning curve. We hope to further show the Authority that we are the most highly qualified and why we are the best choice for this contract.

We are excited and we appreciate the opportunity to submit our Proposal, and look forward to a working relationship with the PANYNJ. We will bring new talent and fresh ideas to the PANYNJ's program. We also look forward to helping the PANYNJ further its goals of bringing quality infrastructure projects to fruition safely, on time, and within budget. The **D&B/KSE JV Team's** proposal provides for the full range of services requested by the RFP, without exception.

Our **locally**-based firms have over four decades of construction management/inspection experience, and together we have worked on all major components of New York City infrastructure. We give you our personal assurance and commitment that this **D&B/KSE JV Team** will excel in managing, administering, and providing all Construction Management, Inspection, and Procurement Services necessary to achieve excellence on this contract - thank you for the opportunity!

Very truly yours,

John Schreck , P.E.
Vice President at D&B

Kamal Shahid, P.E.
President at KSE

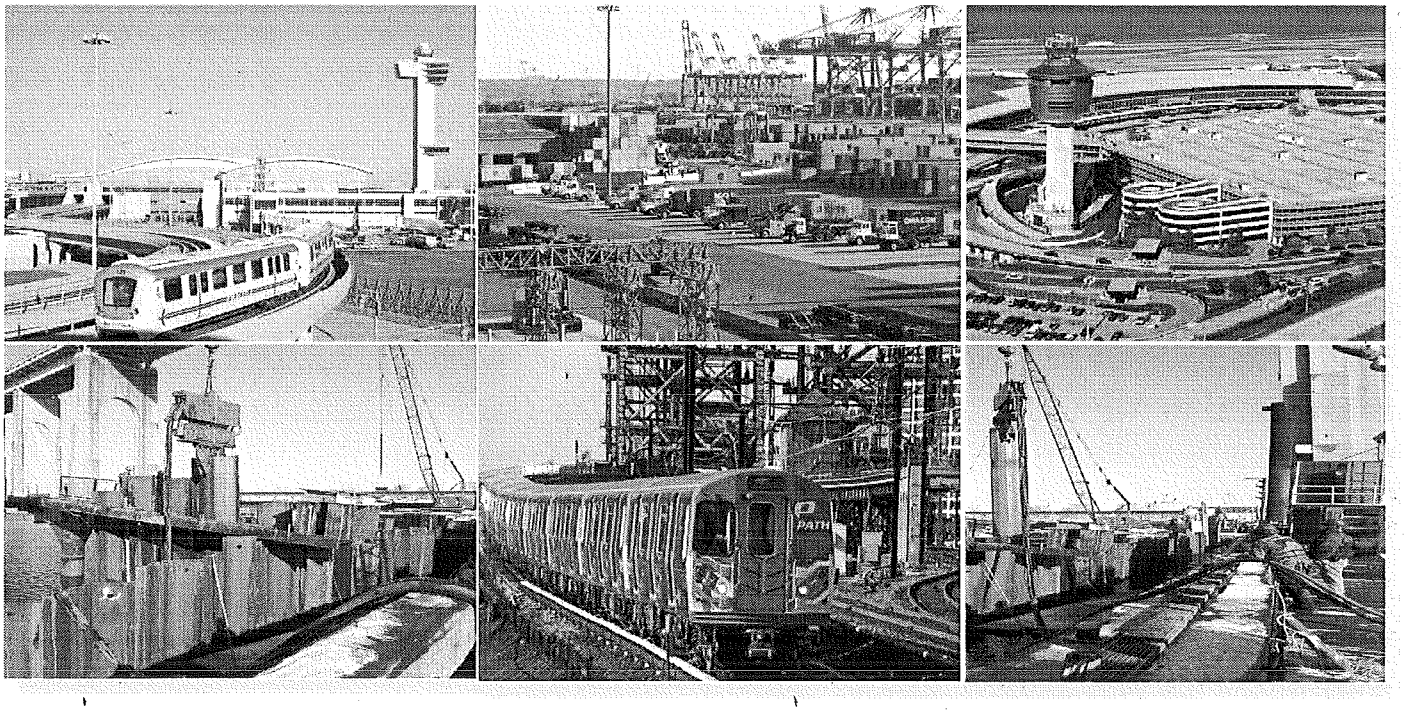
Section D

Multiplier



JOINT VENTURE

D&B ENGINEERS AND ARCHITECTS, P.C.
KNOWN AS DVIRKA AND BARTILUCCI CONSULTING ENGINEERS

KSE KS Engineers, P.C.

D | Multipliers

Multiplier: Overhead and Fee Summary

Our Team's proposed multiplier rate for home office and field/area office staff is illustrated in the table below. The overhead reports for D&B Engineers and Architects, P.C. and KS Engineers, P.C. can be found following this page.

Direct labor costs for services rendered by a Consultant or a Sub-Consultant shall be the actual hourly rate, multiplied by the actual hours, multiplied by their respective approved Multiplier:

Location	Direct Labor	Fringe	Subtotal	G&A	Subtotal	Profit	Total Multiplier
Home Office	**1.0**	**44.4%**	**1.444**	**73.8%**	**2.182**	**10%**	**2.40**
PA Office / Field	**1.0**	**44.4%**	**1.444**	**46.51%**	**1.909**	**10%**	**2.10**

* Multiplier Rate: includes all burdens, including but not limited to: overhead, general and administrative expenses, fringes and fees. Home multiplier is applicable for all work performed for the Port Authority at the Consultant's home office, and shall include direct salary, profit, general administrative costs and fees (including but not limited to building, office, communication, professional and Payroll/salaries expenses), and additional allowances or factors for mandatory or customary benefits such as fringe (including but not limited to sick leave, holidays, vacation, pension), and similar contributions and benefits for additional services. Field multiplier, if necessary, is applicable for all work performed over an extended period of time for the Port Authority at the Port Authority's facilities, or at the office sites provided to the Consultant by the Port Authority. The field multiplier shall include all costs included in the home multiplier, except those that are related to the maintenance of an office (including but not limited to communication and building expenses). The multiplier rate is based on the firm's most recent audited/or reviewed financial statements. Audited/or reviewed financial statements must cover a full calendar and fiscal year period.

JOINT VENTURE

KAMAL SHAHID, P.E.

Professional Experience

Mr. Shahid has more than 30 years of diversified experience in managing the inspection and rehabilitation design of vehicular and railroad bridges, sign structures, tunnels, buildings and highways. As represented by more than 150 projects in past 20 years, he also offers extensive construction inspection and management experience for roadways, bridges and buildings.

PANYNJ, Profession Structural Engineering Services as Requested on a Call-In Basis during 2012, 2013, 2014, NY and NJ – Project Manager / Principal-in-Charge for structural engineering services on a call-in basis for PANYNJ facilities, including the region's major commercial airports, marine terminals and its interstate tunnels and bridges which are vital "Gateways to the Nation". Services performed generally consist of preparing structural engineering studies, condition surveys, designs, contract drawings, technical specifications, and construction cost estimates for new facility structures, and the renovation and rehabilitation of existing structures. Individual assignments under this contract included:

- Task 01 - Structural Design Services for Express Rail Port Jersey - Intermodal Container Transfer Facility (ICTF) at Greenville Yard
- Task 02 - Structural Design - Port Newark Expressrail Corbin Street Intermodal Rail Support Facility Phase 2A PNCT Intermodal Yard Expansion
- Task 03 - CADD Support Services for GWB-244.049 Median Barrier Rehabilitation and Traffic Safety Improvements
- Task 04 - Contract Preparation and Post-Award Duties for the Newark Liberty International Airport Switchhouses #1 and #3 under Contract No. EWR-934.001

PANYNJ Construction Quality Assurance (QA) and Construction Engineering and Inspection (CEI) Services for the Goethals Bridge Replacement Project. Senior Project Manager / Principal-in-Charge. KS Engineers, P.C. (KSE) was retained as the lead consultant by the Developer (NYNJ Link Developer LLC) of this PPP project, to provide independent Construction Quality Assurance (QA) and Construction Engineering and Inspection (CEI) services. KSE's role as CEI includes the following primary tasks:

- Develop approved Construction QA Manual and QA Audit Checklists
- Develop and implement fully electronic QA inspection forms and recordkeeping system using Microsoft SharePoint
- Perform independent QA inspection at each hold point
- Perform independent material testing to verify/audit Design-Builder's Quality Control Program
- Provide an off-site inspection to audit Design-Builder's Fabrication Quality Control Program
- Provide limited field survey and underwater inspection to verify construction quality
- Issue Non Conformance Reports (NCR), and Corrective Action Plans (CAP) as required
- Maintain Submittal Log, RFI Log, Shop Drawing Log, and Material Certification Log

JOINT VENTURE

JOHN SCHRECK, P.E.

Professional Experience

Mr. Schreck has a broad range of design and construction management experience in civil, environmental, solid waste, transportation and highway engineering disciplines. Mr. Schreck has extensive experience in the design and construction management of civil and coastal infrastructure improvement projects for clients throughout Long Island and New York City.

As Vice President of D&B, he oversees technical activities and serves as either principal-in-charge (PIC) or quality assurance/quality control advisor on major projects. Mr. Schreck's responsibilities include the coordination of engineers, drafters, planners, environmental scientists, and client liaison. He is also responsible for civil engineering on several municipal engineering projects involving bridge infrastructure improvements, site development and downtown area improvements. His experience helps to ensure that each project is completed on time and within budget.

Mr. Schreck has technical expertise in issues relating to storm water management, roadway/highway/sewer/traffic design and construction management, shoreline protection, coastal and flood mitigation concepts, and he has extensive experience with coastal and waterfront engineering. A summary of Mr. Schreck's project PIC experience includes:

- REI - NYCDDC Gateway Estates – Phase D roadway and utility installation project, where the firm is providing resident engineering/inspection services. This comprehensive construction will include new sanitary and storm sewers; water mains, utilities as well as creation of new streets in the proposed residential development.

- Construction management services for Miscellaneous Projects in the Downstate Area (CTYWDCM-3B) - New York City Department of Environmental Protection (NYCDEP). Assignments include: Oakwood Beach WWTP 5KV Substation Reconstruction (Contract OB-125) contract in Staten Island; Port Richmond WWTP Boiler Upgrade (Contract PR-113) contract in Staten Island; Orchard Beach Pumping Station Replacement in the Bronx; and Superstorm Sandy Emergency Pumping Stations Repair Citywide.

- MTA - Triborough Bridge and Tunnel Authority: Construction Administration and Inspection Services for Project QM-40S, Superstorm Sandy Restoration and Mitigation and Projects QM-40/QM-18, Rehabilitation of the Tunnel Walls, Roadway and Manhattan Exit Plaza at the Queens Midtown Tunnel.

- Construction management services for Miscellaneous Projects at various NYCDEP Bureau of Wastewater Treatment (BWT) facilities.

- MTA NYCT - Indefinite Quantity Engineering Services for Superstorm Sandy-related Repair and Resiliency Projects and Miscellaneous Construction. D&B Engineers and Architects, P.C., as a subconsultant, has been selected to provide engineering services, including design services and construction management and inspection services, for Federally funded Superstorm Sandy-related projects for repair, resiliency and other miscellaneous construction. Resiliency projects shall include the design and construction of mitigation measures to prevent and/or mitigate future damage to the NYC transit system caused by severe meteorological events, for example, hurricane or flood.

- County Road 16 (Portion Road) Rehabilitation from Ronkonkoma Avenue to Nicolls Road: Suffolk County DPW - ARRA.

JOINT VENTURE

ROBERT L. RAAB, P.E., BCEE, CCM

Professional Experience

Mr. Raab has over 35 years of environment and civil engineering experience on the federal and local government level. His experience in the public sector includes the United States Environmental Protection Agency (EPA) - Region 2, both as a Project Manager with the Environmental Impacts Branch (6 years) and as Section Chief with the Superfund Program (6 years), and later with the City of Long Beach (22 years) where he held the position of Commissioner of Public Works/City Engineer. In all of these assignments, Mr. Raab was instrumental in developing news programs, overseeing complete project development from planning through post-construction and introducing sustainable methodologies.

At Dvirka and Bartilucci Consulting Engineers (D&B), Mr. Raab has been assigned an array of tasks including the development of technical proposals, cost estimates and construction management related to sanitary and storm water rehabilitation and construction projects. Mr. Raab has utilized his extensive project management, construction oversight experience and negotiation skills to provide assistance in managing contractor operations. Currently, he is Project Manager at the Bridgeport Water Pollution Control Authority providing technical expertise to reduce the Combined Sewer Overflow (CSO) discharges. He is currently serving as the firm's construction manager at the Oakwood Beach and Port Richmond WPCPs where he has been providing technical and administrative support to the firm's RE teams. At Oakwood Beach he has worked closely with the contractors and DEP technical and operations staff to address and expedite Con Edison concerns regarding the new switchgear system that have resulted in serious delays. In this capacity Mr. Raab has attained a working knowledge of Con Edison protocols and practices.

Currently Mr. Raab is D&B's Project Executive for the recently initiated NYCDDC Gateway Estates – Phase D roadway and utility installation project, where the firm will be providing resident engineering/inspection services. This comprehensive construction will include new sanitary and storm sewers; water mains, utilities as well as creation of new streets in the proposed residential development.

He has also providing technical support at New York City Department of Environmental Protection's (NYCDEP's) Avenue "V" Pumping Station Rehabilitation and Force Main Construction Project and has been the firm's Project Manager for NYCDEP's Task Order Contract Program (EE-DSGN-4).

Mr. Raab has been working closely with the Bridgeport Water Pollution Control Authority (BWPCA) to develop solutions to eliminate/redirect storm water flows entering the City's aged combined sewer system. The goal is to reduce the frequency of CSO discharges to area waterways. Five of the most problematic sewershed areas have been identified by the BWPCA for evaluation. In each case, two phases of construction are being proposed. The first phase involves the TV inspection, cleaning and CIPP lining of the existing combined sewers to eliminate infiltration from this high ground water area. The focus of Phase B is to remove (separate) storm water from the combined sewer system. The installations of

separate storm sewers are being proposed to collect runoff from roadways and other paved surfaces. This should result in the diversion of over 60 % of storm water out of the waste stream. Funding for these projects is from the Clean Water Act which is administered by the Connecticut DEP.

Through his experience at Avenue "V", he has developed a familiarity and understanding of NYCDEP regulations and protocols. In addition, Mr. Raab has been instrumental in evaluating the construction contractor's operations, troubleshooting and solving problems, and assisting in change order preparation and technical reports relating to ongoing construction. Further, he has personally taken on the initiative of finding ways to streamline the administrative process by taking a pro-active approach, which is "anticipate issues" then "facilitate a response." His experiences with the NYCDEP coincide with his managerial style, which stresses continued communication and coordination.

Mr. Raab has also served as the firm's Project Manager for an Asset Management/Risk Assessment Project undertaken for a major New York municipality. As Manager, he was responsible for working closely with the client to define project goals and to tailor the level of effort of the field assessment and data collection tasks to meet project objectives. Scoring systems were developed to identify "fundable projects" for use in the development of future capital improvement plans.

In addition to construction management services, Mr. Raab has spearheaded the preparation of feasibility studies for potential sewering opportunities, throughout Suffolk County, New York. One particular study prepared in 2013 for the SCDPW, evaluated sewering opportunities for a large, primarily residential area, where capital cost for installation exceeded $1 billion

Mr. Raab's experience prior to D&B includes:

City of Long Beach, New York, Commissioner of Public Works/City Engineer

- Responsible for the planning, design and construction of projects related to the City's infrastructure, including roadways, bridges, wastewater treatment and water purification facilities, water mains, sanitary and storm sewers, hazardous and petroleum spill remediation, parks, playgrounds, beach structures, shore erosion, municipal buildings, recycling and solid waste facilities, bulk-heading, water tanks, sludge management, street lighting maintenance, etc.

- Oversaw consultant activities and coordinated activities with local, state and federal regulatory agencies.

- Oversaw the preparation of in-house design packages for playgrounds, roadway reconstruction projects, etc.

- Prepared procedural and response documents such as Emergency Water Supply Plan, Solid Waste Management Plan, LWRP, Water Conservation Strategy and Recycling Ordinance, etc.

- Coordinated the City's participation in FEMA's National Floor Insurance Program Community Rating System.

- Served as Long Beach's Project Manager for Corps of Engineers, Long Beach Island Storm Damage Reduction Project.

- Developed and implemented a Citywide Roadway Evaluation Plan.

JOINT VENTURE

GUNJAN U. KHANDWALA, P.E.

Professional Experience

Mr. Khandwala has over six years of experience as an Assistant Resident Engineer working on various construction projects for the NYCDEP and NYCDOB residential and commercial construction. Mr. Khandwala assists the Resident Engineers on managing multiple large construction projects simultaneously from procurement through closeout; supervising office and field staff. Tasks include, but are not limited to, design services during construction, data analysis, drawings, specifications, SOPs, change orders, RFIs, shop drawing review, field inspections and report preparations with data collection. Mr. Khandwala is familiar with CPM scheduling, HASP review and implementation, QMPs and PMI. Mr. Khandwala is experienced with all aspects of construction, including expertise with site civil, concrete, mechanical, HVAC and plumbing work.

Mr. Khandwala's project history includes:

Dvirka and Bartilucci Consulting Engineers (D&B)

D&B was awarded a contract to develop and implement a Construction Management Program for the NYCDEP BWT. Mr. Khandwala was chosen to assist the Resident Engineer on this effort. Mr. Khandwala serves as Assistant Resident Engineer for this project, coordinating and supervising large staff of Inspectors, Safety Officers and Engineers addressing/resolving field issues during construction. This unique project requires coordination with multiple engineering sections, as well as operations at all waste water treatment plants and collection facilities located in NYC area. The project includes on-call work requiring overnight and weekend emergency response. He has implemented the system to build a paper-free, electronic inspection program based on Tablet PCs. He is also responsible for training new inspectors, coordinating on all construction documentation, report fillings and maintaining QM/QC of all inspection reports submitted from all inspectors.

NYCDEP - Ave V Force Main Upgrade ($97,756,000) Brooklyn, NY / NYCDEP-Ave V Pump Station Upgrade ($56,000,000) Brooklyn, NY

Mr. Khandwala worked as Senior Inspector/Engineer. His responsibilities included day-to-day field inspections of work performed by mechanical/HVAC contractor, pro-active coordination with the utility companies and regulatory services, preparation of inspection reports, track shop drawings, coordination with contractor, identify and track potential issues, assisting Resident Engineers. Mr. Khandwala was also responsible for the coordination of RFIs, change orders and shop drawing approvals. He worked on processing all payment requests submitted by contractors and prepared as-built drawings as per field conditions.

Impact Testing and Control Inspections, Inc., New York

Mr. Khandwala worked as Field Engineer/Inspector for various NYCDOB residential and commercial projects. He was responsible for inspection of concrete, mechanical, sprinkler and HVAC construction work on various projects. Mr.

[redacted]

Years Experience

Office Location

Woodbury, NY

Khandwala is familiar with NYSECC and various other construction inspections. He observed the contractors workforce to ensure compliance with safety and design requirements, prepared inspection reports for the construction projects from procurement through close-out and submitted to Professional Engineer for final sign-off. He worked on NYCDOB TR-1 and TR-2 inspections and designed concrete mixes for required strength and specifications and submitted as NYCDOB TR-3 for Professional Engineer's sign-off. Mr. Khandwala also worked on NYCDOB TR-8 inspections.

TWS Contracting Corporation, New York

Mr. Khandwala worked as HVAC Designer and was responsible for the design/drawings of the mechanical and HVAC work for various construction projects at a privately owned engineering company. He prepared mechanical plans and layouts utilizing Auto-CAD and maintained change orders, proposal files, complete change order files with revised field drawings, bulletins and initiating change orders for final review and signature. He was responsible for scheduling and task distributing for various construction projects. He prepared fabrication drawings and submitted for the fabrication of duct work, inspection and quality check for the fabricated duct work and labeling for particular construction projects.

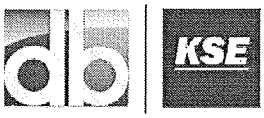
JOINT VENTURE



DIEGO ALAIMO, P.E.

Professional Experience

Mr. Alaimo has over 40 years of successful experience in design and construction management of bridges, water main, sewers, and transportation projects. He is a registered professional engineer in New York, New Jersey, Connecticut, Pennsylvania and Florida. He has managed complex engineering projects throughout the Northeast from proposal, to design and construction. These projects have ranged in size from one to eighty five million dollars.

PANYNJ, Construction Quality Assurance (QA) and Construction Engineering and Inspection (CEI) Services for the Goethals Bridge Replacement Project, NY & NJ – KSE's Project Executive responsible for this $973 million Goethals Bridge Replacement project that is the Port Authority's first new major bridge replacement in more than 80 years, and the first surface transportation public-private partnership (PPP) in the Northeast Region. The 40-year, design-build-finance-maintain contract will replace the Goethals Bridge and approach roadways with a new alignment which will consist of the construction of a cable-stayed bridge over the Arthur Kill south of the existing bridge. The new bridge will contain six 12-foot wide travel lanes, three lanes in each direction; a 12-foot wide outer shoulder and a five-foot wide inner shoulder on each roadway; a 10-foot wide sidewalk/bikeway along the northern edge of the New Jersey-bound roadway; and a central area to be maintained between the eastbound and westbound roadway decks, sufficient to accommodate the provision of future transit service. It also will provide state-of-the-art bridge technology, including Roadway Weather Information Systems that will collect environmental data such as wind speed, visibility, and pavement temperature. There will also be a Traffic Detection System that will use sensors embedded in the roadway to provide alerts on traffic build-up and incident responses.

NYCDDC, HWMP116, Reconstruction of Astor Place, Manhattan, NY - Project Executive responsible for the inspection of this $15.7 million REI project that include the removal of abandoned trolley tracks and yokes, water mains, new main line valves and fire hydrants that are part of the water main installations, as well as relocation of a few fire hydrants. The new sewer and drainage facilities require new manholes. New steel faced concrete curbs, and granite curbs will be installed along the sidewalks and roadways. New sidewalks will be either 4" or 7" concrete, and new pedestrian ramps will be constructed at designated intersections. Some of the sidewalk locations are to be pigmented, designating the historic significance of the area. New kiosks are to be installed and they will have water service facilities. A large portion of the project includes reconstruction of Cooper Square where new granite curbs granite benches and granite planters will be installed, along with trees and shrubbery plantings. Responsibilities include preparing and distributing monthly and weekly construction reports DOT and DDC; preparing and processing payments, as-built construction cards; and reviewing, monitoring inspectors reports, quantities and costs.

JOINT VENTURE

CHRISTOPHER KOEGEL, P.E., CCM

Professional Experience

Mr. Koegel's professional experience lies primarily in the construction management and design of wastewater, water supply and civil engineering projects. Due to this experience, he is also an expert constructability analyst.

Mr. Koegel has been working closely with the Bridgeport Water Pollution Control Authority (BWPCA) to develop solutions to eliminate/redirect storm water flows entering the City's aged combined sewer system. The goal is to reduce the frequency of CSO discharges to area waterways. Five of the most problematic sewershed areas have been identified by the BWPCA for evaluation. In each case, two phases of construction are being proposed. The first phase involves the TV inspection, cleaning and CIPP lining of the existing combined sewers to eliminate infiltration from this high ground water area. The focus of Phase B is to remove (separate) storm water from the combined sewer system. The installations of separate storm sewers are being proposed to collect runoff from roadways and other paved surfaces. This should result in the diversion of over 60 % of storm water out of the waste stream. Funding for these projects is from the Clean Water Act which is administered by the Connecticut DEP.

From November 8, 2006 to the present, Mr. Koegel has played a major role, in the management of the Rehabilitation of the Avenue V Pump Station and Force Main in Brooklyn, NY. Serving initially as the Deputy Resident Engineer for the new force main installation and station rehabilitation, his responsibilities were elevated to Acting Resident Engineer for the force main portion of the project. This high-visibility New York City Department of Environmental Protection (DEP) project is valued at $100M and is slated to be completed by the end of 2010. It involves the installation of 18,500 LF of 42" force main and 13,000 LF of 48" force main. Three different work methods were required to install the force main including open cut excavation, jacking and microtunneling techniques. In addition, critical coordination was necessary with the NYC Parks Department in order to protect trees and vegetation.

Mr. Koegel has played a vital role in dealing and resolving an array of complex technical issues including dewatering problems, tunneling rescue operations, coordination with other city agencies and the redesign of a large portion of the work. Mr. Koegel has also worked on the development of SOP's (Standard Operating Procedures) to be utilized by the Department and become familiar with the majority of NYCDEP's standard operating procedures. His success can best be measured by the status of the project, i.e., on time and within budget.

A sampling of relevant project responsibilities include:

- Contract Document Study/Review/Enforcement
- Submittal/Shop Drawing Review
- Create Progress Meeting Agendas/I & T Presentations
- Run Meetings/ Deliver Presentations to NYCDEP
- Subcontractor/Vendor Management

- Coordinating Daily Concrete Inspection Program
- Executive Weekly/Monthly/Annual Reports/PMIS
- Coordination of Site Inspectors/Arborists/Community Liaison/Office Engineers, etc.
- Coordination of Daily Work Activities
- Review/Approve Payments
- Change Orders (Quantity Take Offs, Justification, Negotiation, Design)
- Correspondence (Claims/Field Memos/RFIs /RFCs/RFDs/Community Letters)
- Coordination Drawings, CPM/Schedule Analysis, Environmental, Health & Safety Issues.

Prior to his current assignment, Mr. Koegel, as an Assistant Resident Engineer and Inspector for the company's Environmental and Wastewater Group, was involved in the study of, project design, site inspection and project management for the following NYCDEP projects:

- CAT 210-C- Catskill Aqueduct Chlorine Line Replacement at Kensico, Emergency Contract On the CAT 210-C Emergency Contract, Mr. Koegel monitored the construction phase including but not limited to: excavation, trenching, sheeting, vault and pipe installation (as well as additional plumbing), concrete and asphalt installation, grading, hydroseeding. His other work on the project includes writing the daily reports, maintaining project photos, coordinating the site visitor list, punch list work, change orders, payments, site management and overall project coordination between the Contractor and NYCDEP.
- CRO 322-A- Reconstruction of Kensico Fluoride Facilities (Mechanical & Electrical Upgrade) Mr. Koegel has been involved in the pre-construction phase and responsible for such tasks as monitoring construction; review of plans and specifications; preparation of permit logs; daily reports; project photos; drawing and specification review; public information paper; subcontractor reference checks; project meeting agendas/minutes; emergency contact list; construction cost indexes; as well as the review of the documents, such as, subcontractor and vendor approvals; HASP; shop drawings; and, schedule of values.
- CAT 274A- Installation of Temporary Siphons at Gilboa Dam
- CAT 274B- Temporary Notch at Gilboa Dam
- CAT 276- Temporary Flood Control at Ashokan Field Campus

He became very familiar with the overall structure of New York City's Water Supply System, as well DEP project coordination requirements and organization hierarchy. During the construction phase, for the above projects, Mr. Koegel monitored and was involved with the following tasks:

- Mobilization/Deliveries
- Utility installation for temporary trailers (phone, water, sewer, electric)
- Site access list/coordination with DEP Police
- Erosion and sediment control installation
- Temporary facility foundation construction

JOINT VENTURE

JOHNSON UDOYE, P.E.

Professional Experience

Mr. Udoye has more than 25 years of experience in inspection, field engineering, construction inspection and administration related to the inspection, maintenance, repair, construction and rehabilitation of water treatment facilities, infrastructure, bridges and highways, buildings and other facilities.

Mr. Udoye's specific experience is summarized below:

Port Authority of New York and New Jersey, Condition Survey of Signs and Lighting Structures of New York

Mr. Udoye performed condition surveys of Manhattan bridges: Holland Tunnel, Lincoln Tunnel and Port Authority Bus Depot.

New York City Department of Transportation, Coney Island Avenue Bridge over the Belt Parkway, Brooklyn, New York

As Chief/Senior Inspector, Mr. Udoye performed construction inspection and maintenance of records for complete replacement of Coney Island Bridge over Belt Parkway. The existing three-span bridge was demolished and replaced with a new two-span continuous structure. The two-year, $10 million project was completed using stage construction and required night work over the heavily traveled Belt Parkway.

New York City Department of Transportation, Rehabilitation of Hutchinson River Parkway Bridge over Amtrak Railroad

As Office Engineer/Chief Inspector, Mr. Udoye supervised the construction inspection staff, prepared payment documents, reviewed material documents and maintained daily and monthly record books as per NYCDOT and NYSDOT MURK requirements. He monitored railroad force accounts and reviewed payments for force account reimbursement. Mr. Udoye assisted the Resident Engineer in preparation of monthly reports and change orders.

New York State Department of Transportation, Reconstruction of Two Bridges and Rehabilitation of Three Bridges on I-684/Route 22

As Senior Inspector, Mr. Udoye supervised other inspectors and provided general supervision of construction procedures, including pile driving activities. He also prepared daily reports, schedules, payment authorizations, in-place quantities, workmanship, job safety, etc.

New York City Department of Transportation, Reconstruction of Dereimer Avenue

As Chief Inspector, Mr. Udoye supervised other inspectors and provided general supervision of construction procedures, including pile driving activities. He prepared daily reports, schedules, payment authorizations, in-place quantities, workmanship, and job safety.

New York City Transit Authority, Lincoln Tunnel Bridges, Biennial Inspection

As Senior Inspector, Mr. Udoye supervised other inspectors and provided general supervision of construction procedures, including pile driving activities. He prepared daily reports, schedules, payment authorizations, in-place quantities, workmanship, and job safety.

New York City Department of Environmental Protection - CM Services-Reconstruction of Primary Settling Tanks Odor Control Building, Coney Island, WPCP, New York

Mr. Udoye provided on-site Resident Engineering for construction activities, start up and testing, contract administration, inspection, QA/QC, preparation of partial payments, weekly executive/permit log reports, monthly I & T reports, negotiations, preparation of change orders and close out activities.

New York City Department of Environmental Protection – Spring Creek Auxiliary Water Pollution Control Plant Stabilization Upgrade, Brooklyn/Queens, New York

As Resident Engineer/Office Engineer, Mr. Udoye was responsible for construction monitoring, inspection and office engineering for the modernization of the storm water treatment plant.

New York City Department of Environmental Protection – GIS Sewer Mapping Project

As a field engineer, Mr. Udoye supervised the electronic scanning and indexing of the NYCDEP sewer records at Borough offices as a prerequisite to the rectification and digitizing of a GIS sewer mapping of all New York City sewers. Over 180,000 source documents were scanned under this effort and resulted in an interactive data base for 6,000 miles of sewers including 300,000 manholes and structures.

New York City School Construction Authority, PS 47 Prototypical Mini School Addition

As Senior Inspector, Mr. Udoye supervised other inspectors and provided general supervision of construction procedures, including pile driving activities. He prepared daily reports, schedules, payment authorizations, in-place quantities, workmanship, and job safety.

Tri-City Sewer Commission, Hoboken Wastewater Treatment Upgrade

As Senior Inspector, Mr. Udoye supervised other inspectors and provided general supervision of construction procedures, including pile driving activities. He prepared daily reports, schedules, payment authorizations, in-place quantities, workmanship, and job safety.

JOINT VENTURE

RAYMOND W. CHOLEWKA, P.E.

Professional Experience

Mr. Cholewka has 45 years of experience in construction management of major transportation and wastewater projects, with special emphasis on bridge construction and rehabilitation projects for the NYSDOT, NYCDOT, and ConnDOT Highways and Bridges.

Port Authority of New York & New Jersey (PANYNJ), Bollard Project at Newark-Liberty, John F. Kennedy, and LaGuardia Airports, New York, NY and Newark, NJ - Resident Engineer. Supervised construction of crash barriers on the Port Authority Bollard Project at three major NYC Airports. The work involved constructability reviews and bid package preparations for 12 separate contracts plus construction management of two individual contracts at La Guardia Airport (Terminals C & D).

New York City Department of Transportation (NYCDOT), 15th Avenue Bridge over Sea Beach Line, Brooklyn, NY - Resident Engineer. Supervised repair of cracked deck and sidewalk on 4 span 15th Avenue Bridge over Sea Beach Line (N Train) for the NYCDOT in Brooklyn, NY. Work included installation of micro silica concrete overlay on milled sidewalks and application of epoxy resin sealer to penetrate and fill cracks in precast post-tensioned piers. Attended safety training for MTA-NYC Transit Track Safety Certification. Worked closely with NYC Transit Inspectors & Flagmen at 18th Ave. & New Utrecht Ave. Subway Stations during General Outages.

New York City Department of Environmental Protection (NYCDEP), New Croton Aqueduct (NCA) Rehabilitation Project, New York - CM Site Safety Officer. Successfully reduced the accident rate by promoting compliance by the CM field inspection staff and the Contractor's work force with their respective Health and Safety Plans (HASP) for this $100 Million unique repair project. Updated the CM HASP and reviewed job hazard analyses for all major work activities. Participated in routine safety audits conducted by BEDC EHS representatives and documented all significant safety and environmental incidents with independent reports that identified root causes and recommended corrective actions.

New York State Department of Transportation (NYSDOT), Interstate 86 Upgrade of Route 17, Orange County, NY - Resident Engineer. Supervised 12 inspectors and field office staff providing construction inspection services for the $65 Million Interstate 86 upgrade of Route 17 in Orange County for the NYSDOT (Region 8). This 9 mile stretch of highway from Exit 116 to Exit 121 at Middletown was successfully rehabilitated on time by using Primavera P6 software for schedule control. Sections of roadway were milled, rubblized, and resurfaced, including a 4 mile section with full depth reconstruction. Three bridges underwent various repairs and upgrades including replacement of concrete deck, back walls, pedestals, and bearings. Also supervised the construction of a new multi-steel girder bridge carrying Route 17 over a future Town of Wallkill connecting road between two shopping centers in Middletown. Environmental considerations mandated the construction of 6 wetland mitigation areas on project. Work involved coordination with Metro North RR

personnel for the rehabilitation of an existing bridge carrying Route 17 over the Port Jervis Commuter RR line.

NYCDEP, Bowery Bay Water Pollution Control Plant, New York - Resident Engineer. Supervised a field staff of 12 inspectors during construction for the upgrade of the NYCDEP Bowery Bay Water Pollution Control Plant. This $200 Million project included construction of new process air headers for aeration tanks, installation of 5 new process air blowers, replacement of sluice gates and actuators for the final settling tanks and installation of new influent bar screens. In addition, successfully reconstructed concrete tanks, provided mini-pile foundations for temporary blowers and performed lead paint abatement for the removal of old piping and other hazardous waste material, following OSHA guidelines and procedures.

JOINT VENTURE

DENNIS F. KOEHLER, P.E.

Professional Experience

As Senior Vice President of the firm with over 40 years of experience, Mr. Koehler has acted as Project Engineer on over 500 mechanical wastewater and water works projects. Prior to his association with our firm, Mr. Koehler worked for the New York State Department of Transportation and was a first Lieutenant in the United States Army Corps of Engineers. Mr. Koehler has devoted most of his career to providing services to New York City agencies where he has planned, designed and provided construction management services.

Mr. Koehler has recently completed as Project Manager, the following New York City Department of Environmental Protection (NYCDEP) pumping station projects listed below that were affected by Superstorm Sandy:

- Mason Avenue Pumping Station
- 49th Street Pumping Station
- Nevins Street Pumping Station
- 2nd Avenue Pumping Station
- South Beach Pumping Station
- Seagirt Pumping Station
- Van Brunt Pumping Station
- Rosedale Pumping Station
- Cannon Avenue Pumping Station
- Bush Terminal Pumping Station
- Nautilus Pumping Station
- Doug Bay Pumping Station
- Roosevelt Island South Pumping Station
- Roosevelt Island North Pumping Station
- Design of the $80 million Gowanus facilities upgrade for the NYCDEP. Mr. Koehler was the prime designer of the upgrading on the ongoing Gowanus pumping station to harden the facilities and assets from future storms. In order to protect the station, the electric controls were raised two feet, a dam-like barricade was installed to protect the generator fuel tank from floating, and automatic rising flood gates were designed and installed to protect the garage bay doors.

Mr. Koehler was selected by the NYCDEP to head the D&B QA/QC Team which involved reviewing much of the design, resilience and flood mitigation work being prepared by the NYCDEP "in-house design" group. To date, this QA/QC has been assigned the following projects:

- Orchard Beach Pumping Station.
- Throgs Neck Pumping Station.
- Newtown Creek Dechlorination System.
- Hannah Street Pumping Station.
- Rikers North Pumping Station.

On all these projects, the basis of design report and the 30%, 60% and 90% plans and specifications were reviewed and a "Quality Review Comment Tracking Log" was submitted by the Team and used during the work sessions that followed each review.

Mr. Koehler has performed as the lead Project Director on five separate Construction Management (CM) contracts held with the New York City Department of Environmental Protection (NYCDEP) in the City's upstate watershed and water supply system including CM contract's WSHD-3BCM, WSHD-2BCM, WSHD-1CM, GILDAM-1CM and CRO-288. As the Project Director, he is responsible for day-to-day management and oversight of a staff of Resident Engineers, inspectors and administrative personnel assigned to various construction projects within the watershed.

Mr. Koehler was Project Manager on the $20 million City Island Force Main project. This project involved the design and construction management of one temporary and two permanent subaqueous force mains crossing 9,000 lf of Eastchester Bay. All work was performed as an emergency contract to the City of New York Department of Environmental Protection.

Mr. Koehler is the Project Director on GILDAM-CM02, Construction Management Services on the Gilboa Dam Renovation Project. In this capacity, Mr. Koehler works in administering construction of the project and providing technical advice regarding construction related matters.

Mr. Koehler was Project Manager/Engineer on the following projects:

- $6 million upgrading of five New York City sewage/storm water pumping stations. Project involved facilities plans, flow monitoring and extensive bypassing of existing flows.
- Construction management for the $120 million NYCDEP Avenue "V" pumping station and force main.
- Design of the Port Jervis Sewage Treatment Plant and Pumping Station upgrade.
- $5 million Bush Terminal pumping station, regulator, overflow and force main project for the New York City Department of Environmental Protection. This project involved the construction of a new pumping station 40 feet into the ground while being only 20 feet away from the Gowanus Bay. The project involved the design of an extensive sheeting and dewatering operation during construction.
- $11 million upgrading of the Conner Street and Ely Avenue pumping stations for the NYCDEP. Project also included the installation of a new 24" diameter force main and rehabilitation of two internal overflows and a regulator chamber.
- $7.5 million rehabilitation of the Lawrence and Peck and Little Neck Pumping Stations for the NYCDEP.
- $10 million rehabilitation of the City Island and Marble Hill Pumping Stations for the NYCDEP.
- $10 million design of the Neptune Avenue Pumping Station for the NYCDEP.
- DEL 173: Safety and process improvements to Delaware District WWTF.
- DEL 221: Interim improvements to Port Jervis WWTF and pumping stations.

KRISHNAMURTHY GOPALAKRISHNAN, P.E. (GOPAL)

Professional Experience

Mr. Gopalakrishnan's (a.k.a. Gopal's) professional experience includes over 37 years in the area of civil, hydraulic and environmental engineering with special expertise in wastewater treatment plant facilities planning, design, construction management and operations, start up and training.

Gopal has been with Dvirka and Bartilucci Consulting Engineers (D&B) for seven years. During this period, he has worked on the following projects:

- Gopal has been currently working as Project Manager for NYCDEP BWT Construction Inspection Services Contract. In this responsibility, he visits all the plants on a regular basis where BWT's contractor is performing work, reviews the work with the contractor and D&B staff during the inspection.

- Gopal worked as Project Manager on a Risk Assessment, Prioritization and Asset Management (RAPAM) project to evaluate all wastewater, water supply, roads, bridges and other infrastructure of a public agency where the total assets number more than 250,000 and over 1,000 sludge pumps. The size of this project is unusually large in comparison to other clients, where the typical quantity may range from hundreds to thousands of assets. The purpose of this project is to create a comprehensive and sustainable asset management program. The product of this exercise will be the development of a list of fundable projects for inclusion in current Capital Improvement Plans, as well as in future plans. This particular project has required extensive coordination with our client's design and operating bureaus and management departments.

- Passaic Valley Sewerage Commissioners Plant, Newark, NJ
  - Return sludge piping
  - Mixed liquor channel skimmings removal
  - Final tank drive replacement

- New York City Department of Environmental Protection
  - Task Order Contract
  - Wards Island – CBS/PBS Upgrade
  - Coney Island – CBS/PBS Upgrade
  - Oak Beach – CBS/PBS Upgrade
  - Avenue V PS - Construction Management of Pump Station and Force Main
  - Coney Island and North River – TRC Project
  - BWT CM Project
  - OB/PR CM Project
  - Total Residual Chlorine Project – North River and Coney Island
  - BWT Construction Inspection Services

Gopal retired from the New York City Department of Environmental Protection (NYCDEP) after 17 years of service. Prior to that time, he spent over 12 years in the private sector. His responsibilities at NYCDEP covered many program areas in several positions, including Director of Facilities Engineering, Chief of Facilities Planning, Bureau Chief Contracting Officer, and Engineering Specialist in the Division of Sludge Engineering and Planning. In the private sector, his responsibilities covered facilities planning, design and construction supervision of wastewater treatment plants.

At the NYCDEP Bureau of Wastewater Treatment, Gopal held various positions. As Director of Facilities Engineering, he was responsible for:

- Operations, start up and training for all wastewater facilities systems, which include process systems, boiler systems, emergency generators and substation equipment.

- All capital and expense construction projects for the bureau that annually amounted to $30 to $40 million in capital contracts and $10 million in expense contracts which covered structural, civil, mechanical, electrical, instrumentation and service contracts.

- Management of all support services such as electrical services, heavy equipment services, instrumentation services, Information System (MIS) and management planning for all of the 14 wastewater treatment plants and pumping stations.

- Coordination of all major capital projects including facilities planning, design and construction in all of the plants, pumping stations and CSO facilities; and preparation of capital budget and evaluation of all new products and equipment.

As Chief of Facilities Planning, he acted as Bureau Chief Contracting Officer. Also, he was responsible for:

- Management of various research projects involving Biological Nutrient Removal in pilot and full-scale; and studies on primary tank and final tank performance.

- Registration, maintenance and upgrade of all CBS/PBS tanks in all plants and pumping stations.

- Testing of various new equipment and products.

- Review of design and construction coordination of all major capital projects, such as:
  - 26TH Ward WPCP
  - Bowery Bay WPCP
  - Jamaica WPCP
  - Hunts Point WPCP
  - Newtown Creek WPCP
  - Tallmans Island WPCP
  - Wards Island WPCP
  - Flushing Bay CSO
  - Paerdeget Basin CSO
  - Avenue "V" Pumping Station
  - Gowanus Pumping Station.

JOINT VENTURE

db | KSE

CHRISTOPHER W. FRANCIS

Professional Experience

Mr. Francis' engineering experience includes both design and construction management inspection in civil, wastewater and water supply projects. Mr. Francis is responsible for multiple water main improvements and water storage tank construction and rehabilitation projects, handling the Project Management, design, field coordination and inspection during construction.

Mr. Francis is the firm's coatings inspection and condition assessment engineer. He is a NACE Level II certified coatings inspector and a ComTrain certified tower climber. He performs Health Department required semi-annual sanitary inspections and pre-bid condition assessments on elevated and ground level tanks for various Water Districts and Authorities on Long Island, as well as inspection during construction during paint and rehabilitation projects. He has extensive experience with identifying corrosion and breakdown of coatings on steel, aluminum, cast iron and concrete structures used in potable, waste and secondary containment applications.

Some current tank rehabilitation projects have included:

- Preparation of plans and specifications for the proposed construction of a new 500,000 gallon elevated water tank in Wantagh, New York, for Aqua New York.
- Project Manager for the construction of a new 600,000-gallon elevated water storage tank in the Village of Sea Cliff, New York for Aqua New York.
- Prepared plans and specifications for the repairs, modifications and painting of the 500,000 Gallon Spring Close Highway elevated water tank in East Hampton, New York for the Suffolk County Water Authority.
- Prepared plans and specifications for the repairs, modifications and painting of the 1.0 MG Lambert Avenue elevated water storage tank in Copiague, New York for the Suffolk County Water Authority.
- Prepared plans and specifications for the repairs, modifications and painting of the 1.0 MG Pleasant Avenue elevated water storage tank in Centereach, New York for the Suffolk County Water Authority.
- Prepared plans and specifications for the repairs, modifications and painting of the .75 MG Astor Avenue elevated water tank in St. James, New York for the Suffolk County Water Authority.
- Prepared plans and specifications for the structural steel and antenna mount modifications and painting of the 1.3 MG Laurel Hill Road elevated water storage tank in East Northport, New York for the Suffolk County Water Authority.

[redacted]

[redacted]

[redacted]

- Prepared plans and specifications for the installation of a vinyl liner at the community pool for the Incorporated Village of Mineola in Nassau County, New York.

- Prepared plans and specifications for the repairs, modifications and painting of Well #4 clearwell and packed tower base for the Albertson Water District in Nassau County, New York.

- Prepared plans and specifications for the repairs to the packed tower base for the Incorporated Village of Williston Park in Nassau County, New York.

Mr. Francis previously was the firm's Project Manager for wireless telecommunication project designs. He has over 13 years' experience in this fast paced industry. His responsibilities included overall project management, site design, structural recommendations, utility coordination and construction management for well over 1,000 telecommunication sites within the tri-state region for the five national wireless service providers. Mr. Francis has appeared before planning, zoning and architectural Review Boards on Long Island and has extensive knowledge of zoning requirements for Long Island's individual townships and villages. He is also familiar with the requirements of New York City's Building Department and Landmarks Preservation Commission. Mr. Francis has created a standard library of approved construction methods for antenna and cable attachment on elevated water storage tanks that maintain the integrity of tank paint coatings, as well as protect the water supply from contamination. He continues to present telecom solutions to water suppliers in Port Washington, Albertson, Sands Point and Suffolk County (Suffolk County Water Authority) for their water tanks during telecom installation upgrade drawing reviews.

Mr. Francis is also responsible for Well Rehabilitation and Well Pump Replacement projects. He has put together plans, specifications, witnessed pumping tests and video inspections of the well, coordinated field activities of inspection staff and made replacement cost recommendations to private and municipal clients in Port Washington, Albertson, Great Neck, Levittown, Mineola and Williston Park. These projects include coordination with the Nassau County Health Department to get the wells approved and back in service after repair. Mr. Francis has personally inspected most of these jobs while also providing project management.

Mr. Francis gained significant construction management experience in the installation of the subaqueous force main at City Island. This $20 million endeavor for the New York City Department of Environmental Protection involved the installation of two 14" HDPE wastewater force mains that connect City Island to the Bronx mainland under Eastchester Bay. Mr. Francis has worked as Field Engineer and Inspector on this project through both temporary and permanent phases of construction. His responsibilities included construction inspection and implementing field recommendations, as well as inspecting the condition of new pipe, accuracy of pipe fusing and the construction of valve chambers on each shoreline.

Mr. Francis has additional experience in the inspection of swimming pool revitalizations. He was Field Engineer for Wantagh Park pool improvement project in Wantagh, NY, and Project Engineer for the Village of Mineola pool liner improvement in Mineola, NY. Such work involved the management of the construction activities by three separate contractors and field investigations for Nassau County Department of Public Works.

Mr. Francis has done field inspections of road improvement projects located at Williston Park and Port Washington, assisting project engineers with surveying and daily inspection.

JOINT VENTURE

MATTHEW R. DeVINNEY, P.E.

Professional Experience

Mr. DeVinney's professional experience includes a variety of multimedia environmental compliance projects for municipal and industrial clients, involving the management of hazardous and nonhazardous waste, air emissions, storm water discharges, spill prevention planning, petroleum and chemical bulk storage and regulatory compliance audits. Mr. DeVinney's experience also includes a variety of environmental design projects, including environmental remediation, wastewater treatment, chemical and petroleum storage tanks and building construction.

Mr. DeVinney's specific experience is summarized below:

- Mr. DeVinney provided technical support for the Dormitory Authority of the State of New York (DASNY) to advance the "New York Rising" Program with coordination and final review of Tier 2 Environmental Reviews that are required under the National Environmental Policy Act (NEPA) and New York State Environmental Quality Review Act (SEQRA). The Tier 2 reviews were conducted by a number of D&B personnel on properties where homeowners had applied for disaster relief funding to repair damage sustained during Hurricane Sandy. The review process included conducting database searches and creation of 15 or more custom maps for each property in ArcGIS Explorer Desktop to document the property's proximity to environmental, aesthetic or historic resources and to identify potential nearby sources of environmental contamination. The D&B Quality Assurance/Quality Control (QA/QC) team provided group/individual training, tracking forms and guidance for use by the D&B personnel completing the initial review process. The resulting completed checklists, associated maps and other documentation for each property were then subjected to an internal review by the D&B QA/QC team to ensure that the client received an accurate and consistent review report. The QA/QC team was also responsible for downloading site inspection files, assigning sites for initial review, tracking the status of each assignment through the preparation and review process, and uploading review report files when completed.

- Serves as Project Manager for an on-going environmental monitoring program at the Staten Island Courthouse construction project for the Dormitory Authority – State of New York. D&B's role in the overall construction project included several different areas of expertise. First, D&B provided the client and its contractors guidance on the management of soil to be excavated from the site as part of the construction of the new courthouse building. This involved reviewing analytical data from current and historical soil samples collected at the site and interpreting the data with respect to the definitions of "historic fill", hazardous waste, hazardous substances, hazardous materials, naturally occurring asbestos, as well as possible disposal or use/reuse scenarios and options. The results of each analysis and data interpretation were presented to the client in a series of "quick turnaround" letter reports prior to initiating and throughout the

mdevinney@db-eng.com

duration of the excavation work. During construction, D&B reviewed contractor submittals related to off-site transportation and disposal of contaminated soil, including destination facility permits and acceptance criteria. In addition, since Naturally Occurring Asbestos (NOA) was identified on-site, D&B provided technical assistance and guidance related to the excavation and handling of this material. D&B provided on-site monitoring during soil excavation to oversee the excavation operation with respect to use/reuse versus proper off-site transportation and disposal of excavated soil. Finally, D&B implemented an air monitoring program which involved the installation of four perimeter air monitoring stations at upwind, downwind and crosswind locations to monitor particulate emissions emanating from the construction site during excavation activities. Project specific thresholds were monitored and the client was notified of any exceedances. Monitoring frequency was based upon the activities completed and varied throughout the program, but was generally once per week. Daily field activity reports were generated to summarize and present data obtained from the on-site monitoring and air monitoring activities. A final report summarizing the overall program will be prepared at the completion of the project. Mr. DeVinney's responsibilities during the project involved overall project management, project scoping, oversight of field personnel, review and concurrence regarding all soil management scenarios, and preparation of monthly reports.

- Served as Project Engineer as a member of the design team in support of the remedial design phase of the Former Bouchard Junkyard Project for the New York State Department of Environmental Conservation. Responsibilities during the remedial design phase included the following: evaluation of soil washing remediation technology, including feasibility and implementation, evaluation of the alternate remedial option of excavation and off-site disposal, providing recommendations for implementation of the alternate remedy, preparation of design documents for the excavation and off-site disposal of PCB contaminated soils and sediment, and preparation of detailed construction cost estimates.

- Served as Project Engineer as a member of the design team in support of the remedial design phase of the Dewey Loeffel Site for the New York State Department of Environmental Conservation. This project included the extraction of leachate contaminated groundwater from a former industrial landfill and treatment of the extracted leachate in an industrial waste treatment facility. Responsibilities included evaluation of remedial and pre-design investigation data to develop influent characteristics for the extracted leachate and development of an extensive process flow diagram to treat the extracted leachate to meet NYSDEC imposed effluent criteria. Treatment process operation included using oil/water separation, aeration, equalization, chemical precipitation and membrane filtration, neutralization, air and steam stripping, carbon adsorption, reverse osmosis and post aeration. In addition, the process flow diagram included a regenerative thermal oxidizer with acid gas scrubber, evaporator, sludge thickeners and filter press to manage process waste streams. Mr. DeVinney was responsible for selecting, sizing and specifying process equipment, developing contract drawings for both the treatment plant as well as the leachate extraction system, an on-site landfill for the disposal of soil generated during construction, and the preparation of detailed construction cost estimates.

- Served as Project Engineer during the pre-design investigation phase of the New Cassel Industrial Area project for the New York State Department of Environmental Conservation. The project included the collection of groundwater samples from existing monitoring wells and installation of temporary vertical profile wells to characterize groundwater quality. Mr. DeVinney's responsibilities included assisting with scoping the field program, management of the field program activities, evaluation of environmental data, preparation of the pre-design investigation report, which considered the feasibility of the installation of in-well air stripping technology to remediate site contaminants, and recommending the alternate remedy of groundwater extraction and treatment based upon hydrogeologic and environmental data.

JOINT VENTURE

RONALD C. DELO, P.E., BCEE

Professional Experience

Mr. Delo's professional experience includes over 39 years in the area of civil and environmental engineering with special expertise in wastewater treatment plant and solid waste management facilities planning, design, construction management and operations. A major part of his duties and responsibilities has included evaluating the efficiency and effectiveness of wastewater equipment and processes and developing plans, designs, administering construction, coordinating startup, testing and training and directing the operation of upgraded wastewater equipment and processes.

Mr. Delo is D&B's head of QA/QC and auditing of CM sites on all NYCDEP projects. His responsibilities include; prepare and continuously improve site specific CM Quality Management Plans (QMPs) including detailed procedures and checklists for the various construction activities for each construction project, provide training of the CM staff on the QMPs, perform QA/QC audits and surveillances of the construction management projects including exit interviews and client satisfaction reports and work with CM staff on corrective actions and preventive actions for deficiencies noted during audits and surveillances.

Mr. Delo's specific experience is summarized below:

- Senior Quality Assurance Director/Project Manager: Mr. Delo is the Project Manager for two projects for Orange County, New York involving evaluation, design and construction administration for new influent screenings equipment and rehabilitation of four existing sand filters. In addition, Mr. Delo has prepared and implemented construction management quality management plans and environmental, health and safety management plans for several NYCDEP construction projects including training of the construction management staff on the plans and on the DEP's Standard Operating Procedures. He provides audits of the construction projects to verify compliance with the plans and to assist the construction management teams in delivering high quality construction projects on time, on budget, safely and environmentally compliant."

- Director, Department of Environmental Management and Engineering, Town of Orangetown: Mr. Delo was responsible for all planning, siting, permitting design, construction, operation and maintenance, administration and financial matters for capital and operating programs of the Town Sewer Department, which includes a 12.75 mgd secondary wastewater treatment plant, 48 pumping stations and approximately 200 miles of sewers. He served as Town's storm water management officer and engineer for drainage and various public works and environmental projects and issues including over $12 million for new soccer and baseball complexes and a major flood mitigation project. Mr. Delo served as professional and

rdelo@db-eng.com

technical advisor to the Supervisor and Town Board for major redevelopment projects of recently acquired surplus state psychiatric center property involving development of public and private recreation facilities, remediation of asbestos/lead paint laden structures/site and private development of a portion of the property. He developed a multiyear capital improvement plan to address aging and deteriorating infrastructure for the Sewer Department including over $50 million in current improvements and spearheaded effort to create a Town Sewer District and establish a new rate system for sewer charges which more equitably distributed the cost of sewer service, as well as developed a plan for the establishment of a Town Drainage District in order to address stormwater management issues facing the Town.

- The Executive Director of the Rockland County Sewer District No. 1: Progressed from Engineer II to Engineer III to Assistant Director and became Executive Director in 1989. Mr. Delo was responsible for all planning, siting, permitting, design, construction, operation and maintenance, administration and financial matters for both capital and operating programs of the Sewer District, including over $300 million in capital improvements and expansion of facilities.

  Mr. Delo initiated and led an effort to solve both the public health and environmental problems of failing septic systems in an area of the County previously unsewered and providing a new water source through development of an advanced wastewater treatment plant to serve this unsewered area with the highly treated effluent discharged back to the aquifer as a new water source. In addition, he developed innovative ways of funding and procuring theses new facilities and services including obtaining special State legislation for the first design/build/operate wastewater facility constructed in New York State and obtaining numerous Federal and State grants and low cost financing for same.

- Engineer for the New York State Department of Transportation - Construction Division: Responsible for engineering and administration of various types of highway construction including roads, bridges, drainages, etc.

- Solid Waste Management Authority: Mr. Delo served as Executive Director of the Rockland County Solid Waste Management Authority from its creation in 1994 until 2004. Mr. Delo was asked to take this additional position because of an impressive track record at the Sewer District and the confidence the various elected officials in the County had in his ability to get difficult jobs done in a professional, efficient and effective manner. In this position, Mr. Delo immediately designed and implemented a budget and a user charge system to fund the Authority.

  Mr. Delo oversaw the siting, permitting, design, construction, operation and maintenance of several local, state, and national award winning solid waste management facilities including a permanent household hazardous waste facility, a biosolids cocomposting facility, a materials recovery facility and a preprocessing facility/transfer station.

  Solid waste management facilities of the Authority now serve as regional facilities providing service to communities outside of the County, thereby serving their solid waste management needs in an efficient and effective manner while providing financial benefit to the ratepayers in Rockland County.

  Mr. Delo was instrumental in acquiring over $10 million in grants and $22 million in low interest financing for the Authority's facilities and programs.

JANARTHAN KIRUPANANTHAN

Professional Experience

Mr. Kirupananthan serves as project engineer for the Wastewater Collection and Treatment Division. His experience includes technical engineering reviews and evaluations for project planning, design, specifications and detailed plan reviews.

Mr. Kirupananthan's experience includes the following wastewater collection and treatment projects:

- Assisting with the technical design of plans and specifications, including technical engineering reviews for Port Washington Water Pollution Control District.
- Technical engineering reviews for Great Neck Water Pollution Control District.
- Technical engineering reviews for City of Long Beach, New York Ave Pumping Station.
- Technical engineering reviews for Nassau County, including Bay Park Sewage Treatment Plant and Ray Street Pumping Station.
- Technical engineering reviews for Suffolk County, Bergen Point Wastewater Treatment Plant.
- Creating charts/graphs, excel sheets, pictures, figures, drawings for the technical data and other supporting documents essential for Engineering Reports, Proposals, etc.
- Assisting the field engineers with research, data on materials/equipment and other technical support.
- Assisting office staff with transmittals, RFI's and keeping construction managements logs up to date.

EDDIE DIANGCO

Professional Experience

Mr. Diangco has 24 years of extensive working experience in various engineering practices involving QA/QC and field engineering with an emphasis on inspection and testing during fabrication/erection in refineries, GOSP and well-head platforms (offshore), Industrial and Power station projects and other phases in the Oil/Gas and Petrochemical industry. Involved in piping, welding, painting, structural installation and non-destructive testing. Inspection for Masonry, Concreting, Fire Proofing, Fire Stopping, Structural Steel/Bolting and other related controlled inspection during the construction, restoration and upgrading of different Schools of New York City School Construction Authority, Private Schools, Hospitals, Commercial and Residential Buildings. His relevant project experience includes:

Future Tech Consultant, Multiple Projects, Multiple Clients, Multiple Sites - Construction Special Inspector (Structural Steel/Bolting, Masonry – Reinforced Concrete) for multiple projects including public and private schools, hospitals, residential and commercial buildings. Duties and responsibilities included the review of approved plans, specifications, mock-up panel samples, concrete design mix and submittals for special inspection requirements. Checked and verified specified sizes, type, grade of materials and all embedded ties, reinforcement, inserts, seismic clips and anchoring. Checked and verifed weather-proofing, insulation, wall fire rating, joint sizes profile, plumbness and alignment. Checked and monitored mortar mixing, retempering, handling, placement, and protection during severe cold and hot weather. Witnessed and verified reinforcement and connector placement, masonry and grout placement, and skidmore test for high strength bolts. Took representative samples for mortar and grout. Checked and verified reinforcing steel spacing, securing, splicing/lapping, minimum cover and form works. Monitored concrete discharge, adding of water/slump, time intervals, placement and consolidation. Verified bolt sizes, length, grade, type, connection type, faying surfaces, bolt holes, torque requirement and tightening method. Notified the Contractor, Architect or Engineer of records and building officials of any deviation and discrepancies by written reports.

Municipal Testing Laboratory, New York City Public Schools, Multiple Sites - Construction Special Inspector (Structural Steel/Bolting, Masonry – Reinforced Concrete) for work on New York City Public Schools. Served as a Special Inspector during the construction, restoration and upgrading of schools. Duties and responsibilities included the review of approved plans, specifications, mock-up panel samples, concrete design mix and submittals for special inspection requirements. Checked and verified specified sizes, type, grade of materials and all embedded ties, reinforcement, inserts, seismic clips and anchoring. AL-Hoty Establishment KSA, Saudi Aramco Northern Area Facilities (Onshore/Offshore) - Sr. Project Inspector (Piping / Welding / Painting). On-Shore Scope of Work: JBTETH II, 36"ø(Juaymah to Berri Gas Plant Pipeline), Fire water upgrading at Ras Tanura Refinery. Off-Shore Scope of Work: UMP jacket and deck module installation, Sub sea pipe line installation and testing, well-head hook-up and SCADA integration, multi-phase flow meter installation and testing, scraper facility installation and various platforms upgrading at Safaniya, Zuluf, Marjan Berri and Abu-Safah oil field. Duties and responsibilities included the review, comment and concurrence with Contractor's quality manual, plan, procedures and ITP's in accordance with Saudi Aramco quality standard. Reviewed Contractor's proposed QA/QC organization staffing and evaluated actual performance for acceptance. Attended scheduled QA/QC coordination meetings. Monitored, assessed and performed quality surveillance of the quality management system. Witnessed activities commonly denoted as hold, witness and inspection point. Interfaced with and assisted the Project Management Team in enforcing, recommending and interpreting Saudi Aramco standards and specifications. Performed final punch-listing of the facilities prior to the signing of the Mechanical Completion Certificate.

ZORY DERESH

Professional Experience

Mr. Deresh has more than 30 years of experience in civil and structural engineering, as well as construction inspection and management/oversight. His representative project experience includes:

Tectonic Engineering & Surveying Consultants - Construction Special Inspector. Responsible for comprehensive site inspection, including reinforcing steel, fire stopping, fire resistance rated construction and fireproofing.

Long Island Materials Testing Lab, College Point, NY - Senior Civil-Structural Construction Inspection Engineer. Duties included identification of structural integrity problems in buildings under construction, and working with blueprints and specifications. Responsible for comprehensive site inspection, including reinforcing steel, fire stopping, fireproofing, welding, high strength bolts, decking, roofing, masonry, ultrasonic testing of welding, structural steel fabrication, and inspecting concrete at the batch plant and in the field. Performed follow-up audits of corrective actions. Prepared engineering inspection and weekly progress reports. Experienced in inspection of federal, state, city, and commercial projects. Gained extensive knowledge of construction codes and regulations.

City Construction Corporation, Tbilisi, Republic of Georgia - Civil Construction Engineer-Superintendent. Specialized in residential and commercial construction: apartment and office buildings, schools, hospitals, and industrial plants. Managed all phases of construction from excavation to commissioning of the building. Scheduled and coordinated work with subcontractors. Responsible for the quality and completion of work according to the time schedule.

TD Construction Corp., Tbilisi, Republic of Georgia - Assistant Superintendent. Responsibilities included repair and reconstruction of industrial and civil buildings, and supervision of excavations for building foundations. Estimated materials and labor costs. Controlled and enforced compliance with safety regulations.

JOINT VENTURE

FRED KOOMSON

Professional Experience

Mr. Koomson has 35 years of construction inspection experience including performing bridge inspection, milling, roadway paving with concrete and asphalt, roadway reconstruction, drainage, sewer and water main installation. His experience includes providing construction oversight to ensure project schedule and specifications are adhered and keeping daily logs. These services have been provided for various agencies including the PANYNJ, NYCDDC, and NYCDEP. His other relevant project experience is as follows:

PANYNJ, New Jersey Marine Terminal Construction – Civil Inspector monitoring activities at Marine Terminal construction sites. Work includes installation, testing and inspecting Civil works. Provides oversight to ensure construction progresses as scheduled and contract specifications are adhered to. Prioritizes multiple assignments, maintain deadlines, and works in a team environment. Inspects construction site daily and works with contractors to schedule deliveries, follow safety requirements, adhere to quality and code compliance; files daily narratives and progress reports detailing personnel, equipment, materials and work summary. The following is a brief description of tasks that Mr. Koomson has completed for KSE under this assignment:

- Contract MFP-926.527, New Jersey Marine Terminals Building and Site Work Order - The work under this contract consists generally of general building construction for miscellaneous facility improvements including repair, rehabilitation, demolition and construction of various interior and exterior building systems such as curtain wall, roof, concrete slab, ceiling, floor tile, interior finish construction and fit up, painting, mechanical, HVAC, electrical, electronics, sprinklers, plumbing, conveying systems, interior landscaping and various utility runs within buildings and site work related, but not limited to repair, rehabilitation, demolition and construction of concrete and or asphalt paving, landscaping, concrete pads, sidewalks, curbs, erosion control, cracks and slurry seals irrigation, pavement striping, lighting, concrete traffic barriers, signage, traffic signals, electrical/communications ductbanks and wiring, drainage structures and piping, guide rails, exterior screening, exterior screening, exterior demising walls, fencing, and various utility runs to building lines and maintenance of traffic and work area protection at the New Jersey Marine Terminals of Port Newark, Elizabeth-Port Authority Marine Terminal and Port Jersey [Work Order #'s 1; 2; 5: 180 Heater Installation; 6; 8; 10; 14:Corbin and Tyler Street Sign Work; 17: Portable Guard Booth Installation; 18: Flood Protection at Build 260 and 111 Protective measures]
- Contract MFP-926.323, Port Newark Rail Repair via Work Order - The work under this contract consists generally of general repairs to, or replacement of, existing railroad track and turnouts, such as replacement of cross timers, surface and appurtenances and gauging of track, repair, rehabilitation, demolition and construction of drainage maintenance of traffic and Work area protection, pavement markings.

- Contract MFP-926.525, New Jersey Marine Terminals Paving and Utility Rehabilitation via Work Order - The work under this contract consists generally of asphalt milling, paving and installation of underground utilities, at Port Newark, Elizabeth Port Authority Marine Terminal, Port Jersey Marine Terminal North and South [Work Order #'s 1 Port St to Doremus; 4 BMW access road rebuild at Port Jersey; 10 Shoreline Restoration]
- Contract MFP-926.317, New York and New Jersey Marine Terminal Facilities Railroad Track Rehabilitation via Work Order - The work under this contract consists generally of performing general repairs to, or replacement of, existing railroad track and turnouts and or components of turnouts, replacement of rails and appurtenances and gauging of track, repair, rehabilitation, demolition and construction of concrete and/or asphalt pavement; concrete pads and walls; guide rails and fencing utilities; drainage; maintenance of at Port Newark, Elizabeth-Port Authority Marine Terminal. [Work Order #2 Berth 15 – 17 – 19; #4 Toyota Shoreline]
- Contract MFP-926.526, New Jersey Marine Terminals Priority Marine Rehabilitation via Work Order - The work under this contract consists generally of marine construction above and below deck; marine structure work; timber pile work; structural and concrete work including pile extensions and shortening; pile wrapping; excavation at the mud-line; cleaning of piles; chipping of concrete underwater, replacement of concrete underwater, installation of exterior or interior piles.
- MFP 926.319, New Jersey Marine Terminals Paving and Utility Rehabilitation via Work Order - The work under this contract consists generally of asphalt milling, paving, installation of storm drainage structures, piping and related work via Work Orders(s) at Port Newark , Elizabeth Port Authority Marine Terminal and Port Jersey

Multi Facility Fender System Rehabilitation – Removal, replacement, and disposal of damaged fender system; installation of vertical sheeting; re-securing of fender piles; reinstallation of rubber blocks at Berth 21-25, Berth 1 at Bayonne

JOINT VENTURE

ROCHELLE LANCEY

Professional Experience

Ms. Lancey has about 29 years of experience in engineering. Her experience ranges from heavy/highway construction inspection to subdivision/land development construction surveillance and escrow contract monitoring. Project experience includes engineering design, inspection, field surveying, quantity computations, bidding and contract ratification, construction surveillance, construction materials testing, review of subdivision and land development plans, developing specifications of municipal projects for local government clients as well as private clients. Her representative project experience includes:

Port Authority of New York & New Jersey (PANYNJ), WTC Towers 1, 3, 4 & 7 - Senior Inspector. From Jan 2, 2008 to March 31, 2008, she was assigned to WTC Tower 1:

- Foundation, footings and concrete columns were being completed, and the work in basement levels Zone B, B3, and elevator core had begun. Observed the excavation into rock, rebar and concrete installation of footings, foundations and slurry liner wall. Discussed current issues with the contractors, consulting engineers MRCE and Cantor, and PA surveyors, and prepared a Daily Narrative for the PA records reporting the progress of the work with reference to contract drawings and specifications.
- Ms. Lancey also attended pre-construction meetings for Tower 3 and general WTC coordination meetings. I reviewed and made comments on submittals, and payments as requested.

From April 1, 2008 to Dec 2008, assigned to WTC Towers 3, 4, 7

- In the field, the contract for the construction was just commencing on Towers 3 & 4. She observed and reported on blasting operations, excavation to grade, and subsequent concrete and rebar installations for footings, slabs and shear walls. She also monitored rock anchor and caisson drilling, installation and testing. She represented the RE on incidents of an environmental nature, such as fuel spills, and coordinated with PA staff to improve site safety.
- At Tower 7, the office was performing final sign-off for Certificate of Occupancy for mechanical and electrical installations. Ms. Lancey participated in routine progress inspections, and punch list walk-through of completed work.
- In the office, continued duties in reviewing of shop drawings, including crane and stair towers, as directed. Also reviewed Tishman's daily reports for accuracy. Participated in meetings prior to and during blasting operations.

From 12/09 to 5/10-Inspector on WTC Tower 1 under the direction of Port Authority RE Christopher Hart.

Field duties included observation and reporting on contract work. Initially, reported on civil, mechanical and electrical progress. As staff increased, she concentrated on the civil work. Daily Reports included details of concrete installations for the core

and slabs, masonry walls, and steel structure. Worked in cooperation with PA Materials inspectors, PA Safety personnel, Cantor Structural Engineers, Tishman, and various contractors on behalf of the RE.

Prepared a daily report on Safety Observations, which was forwarded to Tishman and Hart. Coordinated inspection of architectural finishes with Tishman, prepared punch list and sign-off. This included exposed concrete wall finishes, curtain wall, woodwork, and flooring.

New York City Department of Design & Construction (NYCDDC) – Construction Project Manager/Resident Engineer.

- Project Manager for government projects in a variety of settings, including: firehouses, police and fire facilities, schools and community centers.
- Manage projects and budgets ranging from $1-15M
- Review design documents, shop drawings and specifications for accuracy and completion.
- Coordinate all work performed by Agency and Consultant architects, engineers, surveyors, and testing services.
- Supervised field installations for mechanical, electrical, and plumbing in addition to general construction for prime and sub-contracts.
- Coordinate and conduct progress meetings, maintain work schedules, approved detailed estimates and payments.
- Drafted, negotiate and authorize change order requests. Prepared punch list.
- Liaison between client, consultants, and various government agencies
- Ensure deadlines are met and projects are within budget
- Generate reports and correspondence for project tracking
- Experience in Lump Sum, Unit Price, Job Order Contracting, and Time and Material contracts.

MICHAEL KOKOSZKA, E.I.T.

Professional Experience

Mr. Kokoszka's professional experience centers primarily in construction management, specializing in wastewater, water supply and civil engineering projects. His professional experience includes:

As an office engineer, Mr. Kokoszka performs daily project management tasks in support of the Resident Engineer for the NYC DDC Gateway Estates Phase D project (Contract # HD-161D). Day to day responsibilities include management of field inspection staff, organization of all project related submittals/correspondence/ meeting minutes, preparation of cost estimates and processing of monthly contractor payments.

As a Forensic Engineer, Mr. Kokoszka performed integrity monitorship for the following projects:

- New York City Rapid Repairs Program in Broad Channel, Queens – Mr. Kokoszka engaged in day-to-day inspections of residential properties relating to heating, hot water and electrical repairs. He provided engineering audits of prevailing wage documents and invoices.

- Alexander Hamilton Bridge NYSDOT Contract #D261253 – Mr. Kokoszka engaged in oversight of bridge rehabilitation work including compliance, quality assurance and requisition/change order reviews.

- Moynihan Station Civic and Land Use Improvement Project – Phase 1 – Mr. Kokoszka developed engineering oversight protocols in order to monitor contractor's compliance with contract documents and all applicable laws, codes and regulations

As a Civil Engineer Inspector, Mr. Kokoszka performed inspections on capital construction projects relating to sewer mains, water mains, roadway reconstruction and environmental disposal. He ensured compliance with all relevant contract and specification requirements and wrote daily reports with detailed takeoffs and calculations.

As an Assistant Project Manager, Mr. Kokoszka managed multi-million dollar public contracts on a day-to-day basis. He prepared detailed estimates and proposals for painting, specialty coatings, intumescent fireproofing, and hazardous material remediation (Lead, PCB, Mercury) based on specifications for New York City Transit and DEP projects. He implemented company-wide environmental remediation and disposal program in accordance with all applicable local and federal regulations.

JOINT VENTURE

STEPHEN J. LAUN, P.E.

Professional Experience

Mr. Laun is a Project Engineer in D&B's Water Supply Division assisting with design and construction of multiple water supply projects. Mr. Laun also performs site and roadway surveys in preparation for design of water mains and water treatment plant improvements. His projects have included the following:

- Project Engineer for the design and construction of the rehabilitation and upgrade of the Well 4 facility for the Sands Point Water District.
- Project Engineer for the construction of a new 2.0 MGD well and associated treatment facilities for the Levittown Water District.
- Performed distribution system modeling to evaluate alternative water sources for the Westchester Joint Water Works.
- Project Engineer for the design and construction of a 2.0 MGD ion exchange treatment system for nitrate removal at Port Washington Water District Well 4.
- Project Engineer for the design and construction of a 1.0 MGD packed tower aeration system at Port Washington Water District Well 6.
- Project Engineer for the design at the Springdale Road Booster Pumping Station for Westchester Joint Water Works.
- Designed booster pump station for seasonal use for Westchester Joint Water Works.
- Provided construction services for the construction of a 2.0 MGD granular activated carbon (GAC) treatment facility for the Roosevelt Field Water District in the Town of Hempstead.
- Project Engineer for the design and construction of a 4.0 MGD ion exchange treatment facility for nitrate removal for the Roosevelt Field Water District in the Town of Hempstead.
- Project Engineer for the design and construction of a 1.0 MGD packed tower aeration system for the Port Washington Water District.
- Project Engineer for the design and construction of a 3,000-gallon underground caustic soda storage tank at Well 17 in the Westbury Water District.
- Project Engineer for the design of water main improvements for the Water Authority of Great Neck North.

- Performed distribution system modeling for the Port Washington Water District to evaluate pump station and water storage alternatives.
- Performed distribution system modeling for Glenwood Water District to evaluate water supply alternatives.

Prior to joining D&B in 2010, Mr. Laun worked on a wide range of engineering and science related projects including:

Manhattan College Graduate Research Assistant (2008-2009):

- Designed and conducted experiments to determine metal leaching from on premise plumbing due to various disinfectants.
- Designed and conducted experiments to determine the effects of nitrifying bacteria on harvested lead pipes.
- Designed and conducted experiments to determine copper and manganese leaching from manganese-bronze coupons.
- Ran the ICP for metals analysis.

Manhattan College Undergraduate Research Assistant (2007-2008):

- Performed analysis on metal leaching from lead and copper pipes.

Island Technology (2002-2006):

- Land Surveyor.
- Worked as field crew for a surveying company.
- Plotted surveys on the Sight Survey drawing program.

Els Associates (2004-2006):

- Land Surveyor.
- Worked as field crew for a surveying company.

JOINT VENTURE

PAUL ANTONIO, P.E.

Professional Experience

Mr. Antonio is a Construction Manager/Resident Engineer with a strong background in civil and mechanical engineering. His expertise includes design, construction, cost estimating for NYCDEP water pollution control plants, wastewater treatment plant collection systems, main sewage pumping systems, chemical storage systems, pumping stations, digestion facilities, aeration tanks, clarifiers, primary clarifiers, and gas compression facilities. He also provides specialized services for the design and construction of odor control, heating, plumbing, fire protection, storm drainage, dredging, machine design, and generalized piping systems. In addition, Mr. Antonio also has experience in providing planning, design, cost estimating, and construction administration of HVAC, plumbing, and electrical systems for commercial offices, residential high- and low-rises, hospitals, prisons, parks facilities and a wide variety of transportation facilities.

Mr. Antonio's professional experience includes:

26th Ward WPCP, Brooklyn, NY, NYCDEP: Design DSDC and CM for various plant upgrades, including the hypochlorite chemical disinfection building, chemical distribution systems, natural gas metering and distribution system, temporary and permanent, fuel storage tanks, plumbing systems, plant-wide city water loop including cross-connection control, civil/site and yard piping plans, above ground and underground fuel storage tanks, plant wide heating system, process air system and digester gas collection/storage/ compression system. Additional services included designing operation procedures and control systems for the raw sewage pumping system, fuel tanks, process air, and the plant-wide heating system. Mr. Antonio identified the break and worked on the emergency repair design for the raw sewage header. As a result of all of these assignments, Mr. Antonio is extremely familiar with the 26th Ward process facilities and personnel.

Avenue V Pumping Station, Brooklyn, NY, NYCDEP: Project Manager for the upgrade of this 80-mgd facility. Mr. Antonio developed the plans and provided design and expansion services during construction for the upgrade and renovation of the pump station. Services included negotiating and securing the route of the 18,000 feet of force main pipeline through the borough of Brooklyn through five parks and a US Army Base. Provided design services for facility concept, detailed concept, cranes, plumbing, fire protection, and civil site layout. He also was heavily involved in DSDC and provided assistance to the CM.

Promenade Park, Brooklyn, NY, NYCDEP and NYCDPR: Project Manager, Resident Engineer for Construction Management for the rehabilitation of OH-1 a three barrel CSO outfall and OH-17 a 78" CSO outfall, ten storm outfalls ranging in size from 18" to 48" diameter. The project included the rehabilitation of one mile of the ribbon park, placement of riprap, and the seawall reconstruction. The project involved the total rehabilitation of the two NYCDEP sewer outfalls that were in disrepair. The responsibilities included assessing payment terms, approving payments, negotiating change orders, and ordering additional work. The services

also included, concrete inspection, pile inspection; rebar inspection, formwork inspection, placement of concrete, including tremie concrete, underwater construction, paving, and waterfront revitalization work. The project also required the replacement of twelve trees and the protection of twenty trees.

Bay Park WPCP, Nassau County, NY, Nassau County Department of Public Works: Project Manager, Construction Manager and Design Engineer for chemical storage facilities, chemical defoament, hypochlorite and sodium hydroxide pump and tank systems for odor control, process piping, digester compressor system, fire protection, civil/site layout, and storage warehouse layout, as part of ongoing upgrade/expansion program. Mr. Antonio designed the aeration tank odor control system design, civil/site plans, yard piping plans, underground fuel storage tanks, and chemical storage and feed systems.

Biological Nutrient Removal Demonstration Project, Mamaroneck, NY: In this project for Westchester County Department of Environmental Facilities, Mr. Antonio was Project Manager and Construction Manager for the construction and operation of the BNR full scale demonstration project. This project included methanol chemical injection system installation, and sodium hydroxide storage system upgrades. This project was winner of the NYACE Diamond Award for Engineering Excellence for 2001.

Croton Water Treatment Plant, Bronx, NY, NYCDEP: Design Engineer for plumbing, gas and fire protection systems.

Briarcliff Pumping Station, Sleepy Hollow, NY: Design Engineer for plumbing and fire protection systems.

University of Connecticut Water Reuse Facilities, CT: Design Engineer for plumbing, and fire protection systems.

Bretton Woods WPCP, Centereach, NY: Resident Engineer for the Construction Management for plant upgrade. This work included the addition of an equalization tank, the rehabilitation of two polishing filters, the installation of an additional blower and the upgrade to a pumping station. Mr. Antonio assessed payment terms, approved payments, negotiated change orders, and ordered additional work. The CM services also included, concrete inspection, rebar inspection, formwork inspection, placement of concrete, and paving.

Peekskill Water Pollution Control Plant, Peekskill, NY: Project Manager, Construction Manager and Design Engineer for hypochlorite storage tank upgrades, and thickener tanks odor control system utilizing carbon adsorbers.

Paerdegat CSO Facilities Project, Brooklyn, NY, NYCDEP: Design Engineer for project, which included upgrade of the Paerdegat Pumping Station, a 55-mgd facility. Mr. Antonio designed a pump-around, which enabled the Pumping Station in operation during construction. He provided design services for facility concept, detailed concept, crew quarters, work shop, plumbing, fire protection, dredging, and civil site layout.

Newtown Creek WPCP, Brooklyn, NY, NYCDEP: Design and DSDC Engineer for major plant upgrade, including digester gas holder, plant-wide fire protection systems, plumbing systems, plant-wide city water loop including cross-connection control, main building service water system, civil/site plan, and natural gas metering/distribution system, and percent for art plant decorative fountain.

Port Jervis WWTP and Pump Stations, Port Jervis, NY, NYCDEP: Design Engineer for total plant upgrading including all process improvements, plumbing systems, HVAC systems, city water loop including cross-connection control, civil/site plan, and natural gas metering and distribution system.

JOINT VENTURE

db | KSE

JAMIL ANTONIO F. MIRANDA, P.E.

Professional Experience

Mr. Miranda has more than 12 years of experience as a Resident Engineer (RE). During most of this time, he has performed RE and Assistant Resident Engineer (ARE) services at the 26th Ward WWTP.

Mr. Miranda's specific experience is summarized below:

Construction Management Services in Connection with Miscellaneous Projects at Various Bureau of Wastewater Treatment Locations (NYCDEP)New York.

Mr. Miranda is serving as a Resident Engineering for Construction Management Services in connection with the capital program managed by the Bureau of Wastewater Treatment (BWT) consisting of job order contracts (JOCs) ongoing at multiple wastewater pollution control plants, pump stations, and other satellite facilities for CSO storage, in-stream aeration and support. His duties included:

- Supervised and appointed multiple disciplined inspectors, and environmental health and safety officers for providing inspection services at various BWT locations specific to plant civil improvements, pump and piping replacement, chemical system piping upgrades, actuator and sluice gate replacement, and electrical systems.

- Facilitated pre-construction, field, and progress meetings and coordinated on-going work with Plant Operations, contractors, and BWT Engineers to anticipate possible construction issues and minimize any impacts to plant processes.

- Identified and prepared lessons learned documents during construction activities which were geared towards assisting BWT in providing future guidance to mitigate project schedule, change orders, and streamline futuredesign projects.

26th Ward Wastewater Treatment Plant (NYCDEP) Brooklyn, New York (BEDC Projects)

As part of this BWT CM work, Mr. Miranda is performing ARE work at 26th Ward for the following:

- Bar Screen Replacement (26W-136) – The Bar Screen Replacement project calls for the reconstruction of six existing primary mechanical bar screens, two secondary mechanical bar screens and two belt conveyors at 26th Ward.

- Reconstruction of 32 Scum Troughs in 8 Preliminary Tanks (11-2600-DKCGE-012.00) – The 32 existing scum troughs and their supports, operators, and other appurtenances shall be removed,from the six preliminary tanks. Each scum trough is approximately 16 feet long. Each tank has four passes, one

trough per pass. The work includes the demolition and installation of new scum troughs, bearing assemblies and lever operators.

- Installation of Gas Detection System at 26 Ward WPCP (10-2600-SJEEE-006.00) – The work includes the installation of a gas detection system. The gas detection system consists of various types of detectors warning abnormal conditions throughout the plant and is connected to the control room work station through remote controllers via fiber-optic network.

As Assistant Resident Engineer for the BEDC Construction Management Services of $150 million plant improvements project, including a total Biological Nutrient Removal upgrade, Mr. Miranda was responsible for the following:

- ARE for all CM work under this assignment.
- Met deadline for consent order judgment date mandated by the Department of Environmental Conservation for the first operational Biological Nutrient Removal plant in New York City.
- Represented the resident engineer in client and contractor coordination and correspondence on outstanding project issues.
- Prepared project reports, including annual reports, monthly reports, and public information papers.
- Led coordination drawing meetings and assisted in the coordination of the work among general, electrical, and HVAC contractors.
- Screened contractor Requests for Information (RFIs) and ensured validity based on contract documents to eliminate potential delay claims.
- Prepared correspondence to the contractor, NYCDEP, and construction management staff on key issues of the project to ensure issues are memorialized and accurately depicted for future use.
- Reviewed contractor payments and facilitated field audits with NYCDEP auditors.
- Supervised civil, mechanical, HVAC, electrical, and instrumentation field inspectors.
- Served as the liaison between design engineers, NYCDEP and plant operations.

Wards Island Wastewater Treatment Plant (NYCDEP) New York, New York

Mr. Miranda provided on-site Resident Engineering forConstruction Management Services of a $230 million plant improvements project, including a total Biological Nutrient Removal upgrade. His duties included:

- Supervised construction management staff including assistant resident engineer, lead inspector, multiple disciplined inspectors, schedule engineer, cost and change order engineers, environmental health and safety managers, and administrative assistants at the 65% construction completion stage of the project ensuring pro-activeness and accountability for their work.

JOINT VENTURE

JOSEPH R. MARONE, JR.

Professional Experience

Mr. Marone has over 45 years of experience as an Electrical Inspector and Licensed Electrician. Throughout his career he has accrued 30 years of experience in Electrical and General Construction Supervision which includes, but is not limited to, accurate take-offs, estimating, budgeting, contracting, purchasing and invoicing. Mr. Marone has experience in full site construction management and land development as well. Customer satisfaction is a high priority for Mr. Marone. He effectively schedules, monitors and inspects all facets of electrical work to ensure quality.

Mr. Marone is able to work in conjunction with architects, engineers, developers, contractors, inspectors, city officials, decorators, agents and home owners effortlessly.

For over 20 years, Mr. Marone owned his own business where he was responsible for all phases of electrical work. He completed wiring for commercial, industrial and residential applications, as well as blue-print reading, schematics of electrical systems, trouble shooting of multi-zone heating and air conditioning systems, control and fire alarm installations.

Mr. Marone's professional experience includes the following:

New York City Department of Environmental Protection – Wards Island Water Pollution Control Plant – Bronx and Manhattan Grit Chambers

Mr. Marone was assigned as Lead Inspector for Heavy Construction. He performed daily inspection for civil, mechanical, HVAC and electrical, construction and contractors for structure and equipment renovation of Bronx and Manhattan Grit Chamber. Mr. Marone was responsible for monitoring all phases of construction in accordance with the contract documents, reviewing the contractor's shop drawings in compliance with the contract, and monitored various installations; tracking the contractor's daily work schedule and preparing daily Resident Reports; and was responsible for estimating installed quantities of materials and equipment for payment purpose. Mr. Marone reviewed and monitored the contractor's CPM schedule for progress.

On Call NYCDEP BWT Electrical Inspection

Mr. Marone is currently performing electrical inspection for the installation of conduits, wiring and control panels at the Red Hook Wastewater Treatment Plant (WWTP). He also is inspecting electrical substation construction at the Oakwood Beach WWTP. At the Richmond Avenue Pumping Station, Mr. Marone is inspecting main pumping station controls and instrumentation.

AHMED HUSAIN ZUBAIR

Professional Experience

Mr. Zubair has more than 15 years of experience in construction inspection. His experience covers both highway and bridge work, including bridge structural painting and paint removal; scheduling; cost estimation; processing change orders; sanitary sewer and water main installation; air monitoring; maintenance and protection of traffic; surveying monuments; excavation; sub-base concrete and asphalt pavement; erection of electric poles; sidewalk installation; etc. He is proficient in the following programs/systems: SureTrak, Primavera, AutoCAD 2002, MURK, ASTM standards, ACI codes, and AASHTO Specifications for Highway Bridges. Mr. Zubair's relevant experience includes:

DRJTBC, Upper Black Eddy-Milford Toll-Supported Bridge, Contract No. TS-444A, Milford, PA - Painting and structural inspector for the rehabilitation of the Upper Black Eddy - Milford Toll-Supported Bridge, a three (3) span Warren truss structure with a total length of approximately 700 feet between abutment backwalls. Work included: replacement of entire existing floor system, including 3 1/2" thick concrete filled inverted T-beam deck, steel stringers, steel floorbeams, associated deck joints, and lower chord lateral cross-bracings with new galvanized structural steel members; replacement of the entire length of existing steel plate sidewalk with a new sidewalk while maintaining the existing sidewalk cantilever brackets; installation of new sidewalk support stringers and tension ties; identify areas of steel sectional loss and check for damage and loose rivets and approve locations for rivet replacements; replacement of existing truss fixed and expansion bearings in all spans; cleaning and painting of all structural steel utilizing a Class 1 A Containment System and surface prep std of SSPC SP-10 level of abrasive blast cleaning of steel and application of a three coat zinc system; replacement of entire existing lighting system and CCTV with system; replacement of entire existing pedestrian railing with a new decorative pedestrian railing and replacement of abutment backwalls; repair of deteriorated areas of concrete and stone masonry at all abutments and piers; removal and replacement of existing near and far approach curbs and sidewalks in the immediate vicinity of the bridge; milling and overlaying of both approach roadways; cleaning of existing inlets and pipes; installing traffic stripes within the project limits, and installing new traffic control signs. All construction work performed under a full-time detour.

DRPA, Construction Monitoring Services for the Walt Whitman Bridge Steel Painting, NJ & PA - Construction Inspector/Bridge Painting Inspector responsible for the inspection of surface preparation for the coating of steel members that included removal of existing lead-based paint and application of new high-performance coating system to the Philadelphia deck-truss spans, the Philadelphia twin-girder simple spans, and the 2 lower-layer interior cells of the Philadelphia Tower and the Gloucester Tower. The project also included maintenance painting of the Philadelphia girder spans and the approach overpass bridge structures in New Jersey and Pennsylvania. Work included application of 3 coats of paint for the steel members, using Class 1A containment for abrasive blasting. Primer, intermediate, and final coat were applied and reports were prepared for placement in contract document files.

SCOTT PLANT, P.E.

Professional Experience

Mr. Plant has over 25 years of experience providing Resident Engineering services for many of the local Transportation Agencies in the New York and New Jersey marketplace including: NJ Turnpike, NYSDOT, NYCDOT, MTA-Metro North and MTA-Bridges and Tunnels.

Manhattan West Platform - Brookfield Properties, New York, NY – Project Manager for this project involves the construction of a segmental girder platform over LIRR track to the Hudson Yards and Amtrak's Northeast Corridor. The platform is constructed with 16 segmental girders composed of 33 precast segments which are post-tensioned and grouted together to form one girder. The each girder is placed adjacent to each other on cap beam bearings to create the working platform for high-rise building construction. As Project Manager, Mr. Plant's responsibilities include management and supervision of independent 3rd party post-tensioning and grouting inspection, and secondary inspection of bearing installation, anchorage elastomeric coating, temporary post-tensioning and material handling.

14th Street Viaduct Construction Management, Hudson County, Harrison, NJ – Resident Engineer for the existing 14th street viaduct is a 30 span, 1459 feet long bridge running east to west from Willow Avenue to Manhattan Avenue in the city of Hoboken, Hudson County, NJ. The viaduct crosses over several local streets such as Madison Street, Jefferson Street, Adams Street, Grand Street, Clinton Street and also NJ Transit rail tracks towards the west end under Span 28. The existing bridge superstructure comprises of multiple steel girders in most of the spans except two truss spans - one over Adams Street and the other over the NJ Transit tracks. The substructure units are steel bents supported on piles. The existing bridge structure has been showing signs of deterioration and has required a few emergency repairs. This contract is for providing construction management service for this project. As Resident Engineer, Mr. Plant's duties included being the Owner's direct on-site representative to the contractor, direct supervision of the Construction Project's Field Inspection / Engineering staff, performing quality assurance oversight of major items of work in progress and ensuring that the project is constructed in accordance with the plans and specifications for the owner.

Specific items overseen/inspected by Mr. Plant included:

- MPT on local roads.
- Construction of pedestrian precast concrete tunnel and retaining walls.
- Installation of lighting conduits and wiring.
- Rock excavation for new abutment construction.
- Substructure construction of reinforced concrete footings, pier columns and caps.

Rehabilitation of Dodd St and Clark St Bridges, Essex County, NJ – Resident Engineer for this project involved design engineering and construction inspection services for the

Replacement of the Center Street Bridge over Third River in the Township of Nutley, and the Rehabilitation of of Dodd Street Bridge over Second River in East Orange and the Rehabilitation of Clark Street Bridge over Toney's Brook in Glen Ridge. As Resident Engineer, Mr. Plant's duties included being the Owner's direct on-site representative to the contractor, direct supervision of the Construction Project's Field Inspection / Engineering staff, performing quality assurance oversight of major items of work in progress and ensuring that the project is constructed in accordance with the plans and specifications for the owner. Specific items overseen/inspected by Mr. Plant included:

- MPT on local roads.
- Complete demolition of a temporary sidewalk bridge over Second River.
- Superstructure construction of elastomeric bearings, precast concrete deck beams and barrier parapets.
- Reconstruction of asphalt driveway aprons

New Jersey Turnpike Authority, New Jersey Turnpike Widening Program Contract 201, Bordentown, NJ – Resident Engineer for this project included the construction of one mile of three northbound and southbound outer travel lanes, seven MSE walls, three steel-framed bridges, narrowing two existing bridges, VMS and static sign structures, tunnel and under-bridge lighting. As Resident Engineer, Mr. Plant was responsible for a constructability review program wide, construction inspection and material testing supervision, field issue resolution, utility and agency coordination, change order/claim resolution, and payment processing.

PANYNJ, World Trade Center Vehicle Security Center, Manhattan, NY – Estimator for this project included all estimation of work involved with the proposed construction of the Vehicle Security Center. As Estimator, Mr. Plant's responsibilities included performing quantity take-offs and developing costs for all building trade work.

Williams & Associates / Adience Corporation	Civil Engineer / Project Engineer	1988 - 1990

JOINT VENTURE

EUGENE MARCIANO, P.E., PhD

Professional Experience

Mr. Marciano has over thirty-six years of experience in Project Management as well as the preparation of geotechnical and geotechnical earthquake design recommendations and reports for large to small projects, including buildings, dams, and bridges, nuclear stations, rock cuts, and cut and cover tunnels. He specializes in earthquake engineering and numerical methods applied to practical design. In addition he provides construction observation and inspection services as well as reviewing and responding to Contractor's submittals and RFIs..

Rimkus Consulting Group, Inc., Property Inspections for Hurricane Irene, Sandy, and other storms, New York – Geotechnical Inspector for the inspections and reports for structural, geotechnical, and architectural damages in metropolitan New York City area.

The Waterfront Community Center, Pile Foundation, NJ, Newark Housing Authority – Lead Inspector for 500 timber piles, review Contractor submittals including perform WEAP analyses as part of review, oversight of PDA testing, review CAPWAP results, establish blow count required as part of specified driving criteria, resolve difficult driving conditions due to shallow construction debris.

Fort Calhoun Nuclear Station, Omaha, NE, Seismic Review Class I Structures – Geotechnical Consultant in charge of review of consultants' reports and calculations by Stevenson & Associates and GEI Consultants, prepared Narrative Report for Closure Document, and served as subject matter expert (SME) for Technical Review Board (TRB) presentations, addressing seismic reevaluation of the Class I Containment Structure and Auxiliary Building and the Class II Turbine Building for the potential impact of soils loosened by piping during record 2011 flooding.

NYCDOT, Willis Avenue Swing Bridge Replacement Project, Manhattan & Bronx, NY – As Geotechnical Project Manager, lead design by five geotechnical and structural engineers of foundations, bulkheads, and excavation support, over random fill and deep soft deposits, including the following items. Design the new drilled shaft, drilled pile, and HP pile groups; for the center and rest piers, thirty approach piers, abutments, and wing walls. Perform GROUP and FBPier analyses of pile groups and drilled shaft groups for wind and seismic design loads. Design a new replacement of the Manhattan relieving platform bulkhead for the required scour and seismic load. Design a new anchored sheet pile bulkhead to replace the deteriorated Bronx timber cribbing. Design excavation support and prepare the demolition-and - construction sequences to replace the main span and approach foundations while maintaining the maintenance and protection of traffic (MPT) sequences and protecting the existing buried utilities. Prepare innovative detailing to fit excavation support for a pier in the narrow Harlem River Drive Median. Prepare innovative soldier-pile-and-lagging installation for the First Avenue approach that uses tie-rods to avoid using tiebacks beneath the nearby buildings and streets, and use a perimeter of low sheeting outside the soldier-pile-and-lagging walls to dewater and

Years Experience

Office Location
Newark, NJ

Contact

remove timber platforms and timber piles. Prepare the demolition-and-construction sequence to replace the Manhattan relieving platform bulkhead. Analyze and detail the construction of new footings overlapping the existing platform. Design a temporary anchored HZ pile wall to protect the adjacent Harlem River Drive. Prepare the sequence for the low overhead room beneath the existing bridge span and to maintain the MPT sequences. Design new bulkheads at adjacent properties, needed because of deteriorated bulkheads and design scour depths. Prepare construction sequences for cofferdams to construct the replacement bulkheads and the new bulkheads. Performed stability evaluation for deep seated stability and seismic permanent displacement of Manhattan bulkhead through the underlying organic and varved deposits.

NYSDOT, Roslyn Viaduct Bridge Replacement, NY – Project Manager for design excavation support for piers, retaining walls, abutments. Review Contractor submittals, RFIs. Modify excavation support designs for Contractor's alternative means and methods. Consult to NYSDOT for Contractor's proposed fix for drilled pile group rejected by NYSDOT resident, including perform calculations for asymmetrical arrangement of approved piles.

JOINT VENTURE

VITALIY BYKOV

Professional Experience

Mr. Bykov has 20 years of demonstrated experience in electrical high-voltage and low-voltage systems. He is excellent in identifying and meeting customer needs and building trusting relationships with repeat customers. He has excellent listening and communication skills with an ability to work under pressure and meet deadlines. He has vast knowledge with the installation and inspection of security systems, knowledge of devices, traffic control systems and ITS and TMS Systems.

MTA New York City Transit (NYCT), E-34020, Replace 3 Escalators - A-36116 Renovate Station "Court Square", New York, NY - Engineer-Inspector. Provided inspection on a field. Checked the correct use of safety equipment and devices. Made various tests: soil test, slump test, air test etc. Checked and calculated quantities of operations made by the contractor. Made daily work reports of operations, adding necessary sketches and diagrams. Reported to resident engineer about any violations and wrongly proceeding operations. Checked compliance of work performed by contractor with contract drawings and specifications.

New York State Department of Transportation (NYSDOT), Region 11, Installation New Fiber Optic Communication Line, CCTV and Intelligent Traffic System, Preventive Maintenance and Installation of New Equipment at "Old Country Road" Long Island, NY - Engineer-Inspector. Provided inspection on a field. Checked the correct use of safety equipment and devices. Provided control and local adjustment to CCTVs: Pelco, American Dynamic, Cohu, etc. Provided control and local adjustment to VMS Controllers MARK4 and Dectronic, to Radar Systems. Made various tests: soil test, slump test, air test etc. Checked and calculated quantities of operations made by the contractor. Provided payments to contractor for the operations completed. Made daily work reports of operations, adding necessary sketches and diagrams. Reported to the resident inspector about any violations and wrongly proceeding operations.

Engineer-Inspector (for TRC, Pomona, NY) - Provided inspection on a field. Controlled and adjusted Traffic Light Control Systems. Made various tests: soil test, slump test, air test etc. Checked and calculated quantities of operations made by the contractor. Provided payments to the contractor for the operations completed. Made daily work reports of operations, adding necessary sketches and diagrams. Reported to the resident inspector about any violations and wrongly proceeding operations. Checked the correct use of safety equipment and devices.

Security Consultant (for FGI Security Inc., Brooklyn, NY) - Provided initial estimates to clients. Chose necessary equipment, ranging from CCTV, DVRs, to observation and monitoring devices and control systems installed on proprietary panels or running on notebooks or desktops. Installed video cameras and devices. Installed fire alarms/burglar alarms with manufacturer's control panels and sensors. Installed intercom systems and door access control systems that integrated with existing door locks. This included Time-in/Time-out for employee personnel for time and attendance. Installed smart home equipment which could run wirelessly or off a

network. Ensured that all the wiring was correctly installed and operational. Programmed and troubleshot all equipment. For systems running on computer hardware, programming included devices, networks, and remote administration. Trained users in all operations and emergency measures. Supported installed systems, responded to client inquiries and integrated new devices to existing systems when necessary.

Power Line Electric Corp., Albany, NY - Installation of traffic signal systems at various intersections in Westchester, Putnam, and Orange Counties, NY. Installation of overhead and underground systems.

Electrician (Olympic, Brooklyn, NY) - Electrical wiring and installation, including fixtures, receptacles, switches, and distribution panels. Wiring for CCTV, fire and burglar alarms, and intercoms with door access control.

JOINT VENTURE

KSE

HARSHAD (HARRY) SHAH, P.E.

Professional Experience

Mr. Shah has over 35 years of in-depth experience in all aspects of bridge inspections. His experience includes structural engineering design assignments on a broad spectrum of projects. His bridge inspection experience includes over 500 bridges of varying degrees of complexity and has also included scour and seismic potential. His inspection experience includes structural review of all previous inspections, inspection of Fracture Critical Members, FHWA SI&A Form updates and structural analysis to determine load ratings. Mr. Shah has over 204 months of bridge related experience. Some of his relevant project experience includes:

PANYNJ - Bayonne Bridge Structural Steel Rehabilitation and Removal of Lead Based Paint and Repainting of the New York and New Jersey Viaducts- Team Leader for the condition inspection for repairs of the approach spans, main spans, trusses, suspender cables and cable sockets, railings, and catwalks on the Bayonne Bridge. Included in the inspections were steel and concrete substructure and superstructure structural members accessed by walking, climbing, ladder, bucket truck, and snooper.

PANYNJ, Facility Condition Survey Services As Requested on a "Call-In" Basis During 2006, 2007 and 2008 – Assignment # 4 Biennial Inspection for LaGuardia Airport Bridges – Team Leader responsible for the condition inspection and report preparation of 16 bridges at LaGuardia Airport in Queens, NY. The bridges include 2 airport entrance roadways over the Grand Central Parkway, departure ramps adjacent to and partially within terminal buildings, 2 enclosed pedestrian walkway bridges connecting the parking garage buildings (Lot 2) to Central Terminal building, and several connector ramp bridges over airport access roads within airport limits. Inspection also includes inspection of overhead sign structures mounted to the bridge structure as well as bridge fascia mounted sign structures.

PANYNJ, Facility Condition Survey Services As Requested on a "Call-In" Basis (MBE/WBE) During 2006, 2007 and 2008 – Assignment # 3 – Condition Survey for 16 Buildings at Elizabeth Port Marine Terminal – Team Leader responsible for condition surveying services on a "Call-In" basis was responsible for the condition survey and report preparation of Buildings 1130, 4030, 4060, 4070, 5000, 5020, 5030, 5060, 5070, 5080, 5090, 5110, 5120, 5130, 5140, and 5160 at Elizabeth Port Marine Terminal. Purpose of the inspection was to determine the condition of the buildings' structure and to identify any structural or non-structural deficiencies that might present potential safety hazards and to develop recommendations for correcting any deficiencies found to prevent further deterioration requiring major repair work. All building structural elements received a 100% visual inspection with 10% hands-on, up-close inspection including connections.

PANYNJ, Facility Condition Survey Services As Requested on a "Call-In" Basis During 2006, 2007 and 2008 – Assignment # 2 – Condition Survey of High Mast Light Towers at Port Newark and Port Elizabeth Marine Terminal – Project Engineer,

assisting in the preparation and quality assurance of reports for high mast towers located at Howland Hook Terminal and Elizabeth Marine Terminal.

MTA Bridges & Tunnels, 2012 Biennial Inspection of Robert F. Kennedy Bridge – Group B (PSC 11-2899B) – Team Leader for the in-depth inspection of Robert F. Kennedy Bridge, approach spans and pedestrian ramp bridges. The elements inspected included top of deck, wearing surface, deck joints deck structural, riveted plate girders, welded plate girders, floorbeams, stringers, reinforced concrete t-beams, concrete pier caps and columns, steel pier caps and columns, bracing systems, light poles, underdeck lighting, drainage system and signage.

NYSDOT, 2011 – 2012 Underwater Bridge Inspection – East Regions 1, 2, 7, 8 and 9, Various Locations, NY – On-Site P.E. Team Leader for the inspection of substructure units (SSU) and report preparation for bridges located throughout the East Regions of New York State. The SSUs received a visual and tactile inspection by diving inspection teams.

MTA Bridges & Tunnels, 2011 Biennial Inspection of Marine Parkway and Cross Bay Bridges (PSC 10-2881C) – Team Leader responsible for in-depth inspection of the Marine Parkway Bridge and Cross Bay Bridge ramp structures. Scope of work consisted of the review of existing documentations, inspection of all structural components, i.e., decks, structural framing, lift span, towers, and thru trusses, sign and sign-supporting structures, and light poles, and providing an inspection report.

NYSDOT 2011-2012 Large Culvert Inspection Project in Region 1, 2 & 7 (D030601) – QC Engineer for the inspection of 181 culverts in various counties throughout NYSDOT Region 1, 2 & 7. Work consisted of the collection of inventory data as well as an in-depth hands-on inspection of culvert headwalls, wingwalls, structural members, roadway items, channel items, superstructures, substructures, highway safety features, and substructure scour.

JOINT VENTURE

LISA CANTON

Professional Experience

Ms. Canton has extensive leadership experience in construction project administration, document controls, document publishing, contract administration, construction specifications, administrative assistance, and strong PC skills.

NYCTA, CM-1256 Construction Management Services for the Fulton Street Transit Center, New York, NY - Document Control Specialist responsible for providing construction management services for this $880 mega million project. The Metropolitan Transportation Authority and MTA Capital Construction are building a new Fulton Street Transit Center in the general vicinity of Fulton Street and Broadway, incorporating six existing Lower Manhattan subway stations which includes: Fulton Street for nos. 2, 3, 4, 5, J, M and Z trains; Broadway-Nassau Street for A and C trains; Chambers Street / World Trade Center for E train; and Cortlandt Street for R and W trains. The FSTC project's goal is improve access to and connections between 12 subway lines for hundreds of thousands of daily commuters and Lower Manhattan residents and visitors, and will link NYC Transit facilities with PATH service and the World Trade Center site. Construction of the Fulton Street Transit Center is underway and parts of the new station have already been opened for commuter use.

CH2M HILL, Inc., Gainesville, FL - Document Controls Assistant responsible for submittals during Construction (SDC) Coordinator. Served as the Southeast Regional (SER) Lead Point-of-Contact for construction services coordination; by providing leadership to peers in administrative communication by training external SER staff on corporate database procedures; and providing the technical skills necessary to coordinate, research, and track construction Submittals, compiling engineer comments on submittals; processing submittals after engineer dispositions; working on fast paced deadlines for Requests for information (RFI's), Clarification/Interpretation Requests, Field Orders, and Operation & Maintenance Manuals for reviewing design engineers, client, field representatives & Project Managers; providing technical assistance and training of SDC coordinators in tracking construction procedures using Expedition (Primavera- Contract Manager); maintaining Project Records during the phase, and archiving at closeout; assisting Operations Leader (OL) with meeting staff utilization goals, communication on project chartering meetings/provide copy of project instructions to OL. Maintained project schedule and submittal reports for all in-house projects, including duration and provide primary project point-of-contact with direct informative technical feedback meetings on a biweekly basis.

Document Publishing Specialist, Lead Construction Specifications Coordinator - Responsible for setting up CSI master specifications for projects in Panagon database, tracking specification sections, attending project meetings, processing and proofing specifications and references, communicating with Project Assistants and Engineering team on the project, scheduling, forwarding, and assembling the contract documents for reproduction, distributing the contract documents for

internal, Client, Plan Rooms, and Contractor distribution. Bidwork procedures include selling contract documents to bidding contractors, subcontractors, and equipment suppliers; creating, compiling and distributing addenda on project to distribution list; and sending out weekly bidder's list to companies interested in networking with bidders in the event they win bid. Conforming documents which include revising all changes per addenda to specifications; and preparing signed Contract Documents for client and awarded contractor to use in the field during construction. Assisting engineers and other processors to meet their deadlines so that workload and deadlines are compatible.

Administrative Assistant - Served as the only administrative assistant for the Environmental Department of 23 engineers. Had independently prepared reports for the Senior Environmental Department Manager and coordinated presentations and production (graphics, editing and reproduction), routinely solved problems and questions for engineers; performed workload leveling for administrative work group; drafted and tracked project and subcontractor invoices; setup and maintained financial and procurement databases and tracking systems; developed new or recommended revised procedures; coordinated conferences, weekly & monthly staff and client professional meetings and organized community events. Collected and compiled data in response to special requests; screened calls, arranged meetings and engineer travel; and maintained the schedule for senior management and other personnel.

Document Publishing Specialist, Construction Specifications Processor - Setting up CSI master specifications for a project in Word Perfect & SAROS software, tracking specification sections, attending project meetings, processing and proofing specifications and references, communicating with Project Assistants and Engineering team on the project, scheduling, forwarding, and assembling the Contract Documents for reproduction, distributing the Contract Documents for internal, Client, Plan Rooms, and Contractor distribution. Bidwork procedures include selling Contract Documents to bidding contractors, subcontractors, and equipment suppliers; creating, compiling and distributing addenda on project to distribution list; and sending out weekly bidder's list to companies interested in networking with bidders in the event they win bid. Conforming documents which include revising all changes per addenda to specifications; and preparing signed Contract Documents for client and awarded contractor to use in the field during construction. Assisted engineers and other processors to meet their deadlines so that workload and deadlines are compatible.

JOINT VENTURE

ATTEF (Al) Z. FARAG, P.E.

Professional Experience

Mr. Farag has 24 years of experience including work with bridge inspection, milling, roadway paving with concrete and asphalt, roadway reconstruction, curb and sidewalk construction, drainage, sewer and water main installation. Mr. Farag's responsibilities include resident engineering inspection and project management, construction supervision, preparation of reports, project evaluations, clarified DDC policies and procedures, negotiated change orders, clarified technical construction details, processing payments, punchlist and project close-out. He has performed QA/QC functions on various projects, prepared proposals for additional work and worked with inspectors to both upgrade and maintain their skills. Some of his relevant project experience includes:

NYCDDC, SEX20045, Resident Engineering Inspection Services for Storm Sewer in Waterbury Avenue, Borough of the Bronx - Resident Engineer responsible for providing resident engineering services for the construction of storm sewers in Waterbury Avenue and its vicinity in the Bronx. Work includes new storm, sanitary and combined sewers to be installed in several street locations. The project site is bounded by Waterbury Avenue to the north, Stadium Avenue to the east, Layton Avenue to the south and Throgmorton Avenue to the west. Various diameters of 10" ESVP to 36" RCP sewers will be installed. Sewers will be constructed on concrete cradles or encased in concrete. Some sewers will be relined using a DEP approved method of lining existing sewers. The project also includes reconnecting existing house sewer lines to the newly installed sewers. New water mains are also to be installed as part of this project. The new mains will be 8" or 12" diameter restrained joint ductile iron pipe. Water main work will include new fire hydrants, main line valves, valve boxes and any other appurtenances associated with the existing water mains. Trench and/or street restoration will be included in the project. Some streets, depending upon existing conditions, may have to be reconstructed. New curbs and sidewalks that are disturbed during construction, will be replaced as needed.

NYCDDC, HWMWTCA7A, Resident Engineering Inspection Services for the Reconstruction of Harrison Street, Borough of Manhattan, NY - Resident Engineer responsible for this $18 million project that of involves the construction of water mains; construction of sewers, catch basins and chute connections; utility construction and relocation. Work include construction of new curbs and sidewalks; roadway reconstruction, installation of street lighting and traffic signals; and landscaping.

NYCDDC, MED-595, Installation of Trunk Water Mains in Astor Place and Cooper Square, Manhattan, New York - Resident Engineer responsible for this $11.6 million project that includes the installation of 12" & 20" water distribution mains, new butterfly valves, valve and connection chambers, blowoff valves and chambers, flowmeters with chambers, access manholes with chambers, and modifications within shaft 19. In addition, new 30", 36" and 48" steel trunk water mains to interconnect Shaft 31B from City Tunnel #2 at East 4th Street, to Shaft 19 from City

Tunnel #1 at Cooper Square. New 24" DIP will also connect new 24" regulator valves to the new trunk water mains.

NYCDDC, REI Services for HW2CR08, REI Services for Citywide Involving Grinding Existing Asphaltic Concrete Wearing Course, Manhattan and The Bronx, NY - Resident Engineer responsible for this $7.5 million project, responsible for resident engineering inspection services of grinding existing asphaltic concrete wearing courses on a task order basis in Manhattan and the Borough of New York City. Inspection services for the project includes: site maintenance and safety; Post "No Parking" signs 48 hours in advance; protection of trees from construction debris; marked out all hardware to avoid any damage during milling operations; saw cutting around the hardware and at intersections; placing plates over catch basins to void any debris from falling into basins; milling 2" of existing asphalt; sweeper used behind milling machine to clean up the debris; ramping of all hardware with temporary asphalt; and adjusted all hardware.

NYCDDC, Reconstruction of 10th Avenue from 206th Street to 218th Street, Manhattan, NY - Resident Engineer for this project that won the 2009 ACEC New York GOLD Award for Engineering Excellence. Project entails new sewer construction and rehabilitation of existing sewers using lining method, construction of 36" steel water mains in addition to 20" & 12" water main network. It also includes curb and sidewalk construction, sidewalk assessment, streetlight and traffic work, roadway paving, arboriculture and traffic protection. The work also involves new 45"x29" elliptical RCP sewer lines, catch basins, chute connection, manholes, paving with concrete base and asphalt wearing course and landscaping. All construction activities are done with coordination with TA since train elevated tracks are running along the project location.

NYSDOT, D010292, Construction Inspection Services for Reconstruction & Restoration of Brooklyn-Queens Expressway, Queens, NY - Deputy Project Manager responsible for providing construction inspection and technical support services for 8 lane-miles of roadway excavation and reconstruction with horizontal and vertical realignments and drainage installation. This project also included replacement or rehabilitation of 17 vehicular bridges, replacement or rehabilitation of 2 railroad bridges, extensive retaining wall reconstruction and soil stabilization along the right-of-way, extensive utility improvements/relocations for both NYC and privately-owned facilities, TSM/ITS installations, and extensive MPT was involved to ensure that traffic was maintained.

The RBA Group	Resident Engineer/Office Engineer/Inspector	1990 – 2002

JOINT VENTURE

FRANK A. FREGA, P.E.

Professional Experience

Mr. Frega has 41 years of experience in the planning, design, and rehabilitation of transportation infrastructure (highways, bridges, transit, and airports). His expertise includes project management, investigations and traffic studies, highway/civil design, preparation of contract documents, constructability reviews, traffic control during construction, QA/QC reviews, and construction services. The clients he has served include the New Jersey Department of Transportation, New Jersey Turnpike Authority-Parkway Division, South Jersey Transportation Authority, Port Authority of NY & NJ, and numerous private sector clients. Mr. Frega implements the requirements of the NJDOT Procedures Manual. His representative project experience includes:

PANYNJ, Architectural and Engineering Services for the Replacement and Upgrade of the PATH Harrison Station, Harrison, NJ – Project Manager for the Civil Design of site improvements associated with the major development of the Harrison Station on the Port Authority Trans-Hudson rapid transit line. In response to the ongoing transformation of Harrison's former industrial district along the Passaic River with high-profile mixed-use residential, commercial, and recreational development projects such as Red Bulls Soccer Stadium, the Port Authority of NY & NJ is investing in the redevelopment of the existing transit station to increase its capacity, and establish the station as a central hub for the surrounding community. The station's redevelopment plan involves the creation of four distinct but unified plaza areas with signature head house buildings to define the geographic reaches of the station. For each plaza area, KSE is responsible for the Civil Design of the site utilities, grading and drainage including LEED/Sustainability, and access and egress for vehicles and pedestrians. In addition, KSE designed off-site improvements, including a major storm drainage line, to the adjacent Hudson County arterial serving the station area, Frank E. Rogers Boulevard, as well as maintenance and protection of traffic plans for vehicles and pedestrians during construction of the roadway improvements.

PANYNJ, Professional Civil Engineering Services on a "Call-In" Basis for 2011, 2012 and 2013 – Task 1: High Pressure Fire Protection System (FPS) - Valve Replacement of Valves H15 and H16, John F. Kennedy International Airport (JFK), Queens County, NY – Project Manager for Stage III and IV services for the design of the replacement of the JFK High Pressure Fire Protection System (FPS) valves H15 and H16 with resilient seated valves together with each valves adjacent pipe sections. This will eliminate leaking at the valves and their couplings to the FPS resulting from inadequate initial installation procedures.

PANYNJ, Professional Civil Engineering Services on a "Call-In" Basis for 2011, 2012 and 2013 – Task 2: Modification of Contract Documents for the Rehabilitation of Cargo Road and the Parking Area in the vicinity of the Reese Aviation FedEx Maintenance Facility at Stewart International Airport (SWF) – Project Manager for Stage III and IV design services for the modification of previously completed contract documents for the milling and resurfacing of Cargo Road and the design of a parking

lot expansion in the vicinity of the FedEx Maintenance Hangar. The original construction contract was placed on-hold at the conclusion of design and in the interim, the Authority completed an in-house design for runway incursion mitigation immediately adjacent to the Cargo Road project. The intent of the modification design is to eliminate any potential conflicts between the roadway and runway projects.

PANYNJ, Professional Civil Engineering Services on a "Call-In" Basis for 2011, 2012 and 2013 – Task 4: Pavement Rehabilitation – North Boundary, Easton, and North Hangar Roads at JFK – Project Manager for Stage III and IV services for the civil design of milling and resurfacing of each roadway, and the replacement of asphalt surface courses at each of the intersections of the project roadways with Portland cement "white topping" surface courses. The intent is to eliminate pavement distresses along each project roadway, especially at key intersections which have experienced severe rutting from the turning movements of large vehicles.

PANYNJ, Professional Civil Engineering Services on a "Call-In" Basis for 2011, 2012 and 2013 – Task 6: Switch House 2 Climate Control and Related Work – Project Repackaging at JFK – Stages III and IV services for civil design to break-out the construction of MEP upgrade for switch House 2. Previously completed design work for Switch House 2 was reviewed and updated for the standalone project.

PANYNJ, LaGuardia Airport East 102nd Street Bridge, Flushing, Queens County, NY - Project Manager for the analysis and design of signing and striping safety improvements to the loop ramp at the northern end of the bridge. The project also involved the design of a protected pedestrian walkway and sidewalk improvements along the bridge from the terminal area to Ditmars Boulevard.

JOINT VENTURE

GEORGE KAY, P.E.

Professional Experience

Mr. Kay has more than 30 years of experience in the engineering and design of Mechanical/HVAC systems for pharmaceutical, laboratories, clean room manufacturing, and related manufacturing facilities. His project types range from new multi-story facilities designed and constructed within large campus environments to expansive retrofit and renovation of existing operating plants to create change of use and function of facilities. He has served as Principal HVAC Engineer for pharmaceutical, major airport expansion and specialty chemical projects. In addition he has extensive experience with design of high containment pharmaceutical facilities, laboratories, research and development facilities, clean rooms, sterile rooms, solid and liquid charging rooms, and low humidity areas. He also has experience with design of HVAC systems for food processing plants including sterile processing, packaging rooms, and cold rooms. Particular expertise with implementation of barrier technology, building area pressurization, HEPA filtration, laminar flow booths, fume hoods, scrubbers, dust collectors, and air handling systems for tablet coating equipment.

Senior Mechanical / HVAC Engineer (CSA Group - Temporary Position) - Responsible for engineering, inspections, review, design, and construction coordination of HVAC systems for diverse client facilities. This includes studies, preliminary and detail design of existing and new facilities.

- CBS Studio Complex, New York Study and upgrade of existing building steam distribution system. The project includes inspection and survey of the entire facility, generating of systems schematic diagrams, specifications, verification of current building requirements.
- Newark Housing Authority,' Newark - Replacement and upgrade of existing building cooling tower and condenser water system. The project includes inspection, review and verification of existing; necessary engineering calculations, project drawings / specifications, and interface with clients in-house personnel.
- Dell - Roosevelt, Quincy, WA - Design and engineering of Critical Facilities Project. Includes computer room chilled water systems, emergency generator building with associated diesel fuel oil piping systems and support offices.
- Dell - Quickstart, Miscellaneous locations (Toronto, Frankfurt, etc.) Design and engineering of Data Center Facilities. Chilled water distribution for computer room type of under floor systems, packaged boiler and pumping room, plus support areas.
- Hagerty Insurance, Traverse City, MI - New data center facility, chilled water piping data center distribution, HVAC systems for office areas and conference rooms for the facility.
- Bristol Myers Squib, Hopewell, NJ - Design and engineering of Medarex Integration Project. Included are laboratories, computer rooms, and support offices.

REYNALDO M. LIBUNAO, JR.

Professional Experience

Mr. Libunao has 18 years of international and domestic experience with project management, power, telecommunications and lighting distribution design for residential, commercial, educational, recreational, infrastructure and marine facilities. He is a proven team player with the ability to coordinate with people. In addition he has excellent organization skills and is able to use different tools to streamline the design process and generate accurate calculations.

New York City Department of Environmental Protection (NYCDEP), WP-283 Newtown Creek WPCP Plant Upgrade, Greenpoint, Brooklyn, NY - Senior Electrical Inspector. Oversees the new construction of the Central Residuals Building (NC-41) and the Upgrade of the existing South Battery (NC-47). These projects are Wick's Law contracts, covering four prime contractors (G – Structural, E – Electrical, P - Plumbing and H – HVAC). Contract NC-41 is the construction of the Central Residuals Building, consists of a Secondary Screening, a Grit Disposal, Skimming Systems which segregates and channels this primary treatment residual to dumpster containers for proper disposal. This treatment process has a Consent Order Decree Milestone of $20 million from the state and federal authorities that will be achieved more than one year ahead of schedule for the City of New York.

Contract NC-47 provided the full upgrade of the existing South Battery consisting of a grit removal facility, aeration and settling tanks, and a return activated sludge pumping station, similar to the new North and Central Batteries. All aeration tanks will be covered and provisions made for a process air system including blowers, odor control and a polymer feed system. Odor equipment and controls will be in the newly constructed South Control Building. Contract NC-47 also includes the wrap-up of miscellaneous items in the North and Central Batteries such as modifications to the spray water nozzles, the spray water system and the seal water system.

- Responsible for enforcing the National Electrical Code, New York Electrical Code and other related codes and regulations, including Department of Environmental Protection Construction Rules and Regulations. Interprets codes in the field. Authorizes acceptable alternative methods of code compliance within limits of authority.
- Works under the guidance of the Project's Resident Engineer.
- Reviews Contract Documents to address possible conflicts in advance. Formulates "Request for Clarifications (RFC)" to the Engineer to resolve conflicts.
- Review "Request for Information (RFI)" from Contractors to make recommendations to the Engineer and shorten review process.
- Maintains close coordination with other trade inspectors to assure nothing is compromised.
- Performs field investigations of electrical activities, assuring all applicable code requirements are satisfied and corrected by the electrical contractor. Activities involved installation of conduit, wires/ cables, enclosures, panel boards,

disconnect switches, Motor Control Centers, Susbstations/ Transformers, Automatic Transfer switches, Local Control Panels for Power, Lighting, Fire Alarm, Access control, Public Address, Communications, LV Controls, Gas Monitoring, and HVAC systems.

- Conducted Fire Alarm System Inspection prior to AHJ Inspections to catch any issue that may cause the AHJ to issue a Letter of Defect or a Violation.
- Address and correct issues in the field, if possible, to avoid delays.
- Completes and maintains records of daily report of the electrical contractor's daily activities. Issues correction notices.
- Conducted Equipment Testing for Acceptance.
- Delegate work and provide guidance to electrical inspectors.
- Evaluate Contractor's monthly progress payment requisitions. Reconciled contract changes and claims with the contractor.
- Prepared a detailed punch list of unfinished or non-compliant installations.

New York Fire Department (NYFD), Berths 11 and 12 Rehabilitation- Brooklyn Navy Yard, Brooklyn, NY - Electrical Engineer. Responsible for providing engineering services to the Fire Department of New York for the Rehabilitation and Upgrade of Electrical Service for Berths 11 and 12 at the Brooklyn Navy Yard. The upgrade included the installation of a substation at the dock to provide power for new electrical and mechanical equipment for the new vessels of the Fire Department.

U.S. Coast Guard, Pier Reconstruction, Cape May, NJ - Electrical Engineer. Responsible for providing engineering services to Arthur Henry Inc and Viteri Construction Management for the design-build of the reconstruction of the 300 ft section of Pier 4 at the U.S. Coast Guard Training Center in Cape May, NJ. The structure was designed with the utility trenches along both sides of the pier to accommodate new electrical and mechanical utilities for the USCG Vessels and the existing floating dock.

Pier 86 – Intrepid Museum, Manhattan, NY - Electrical Engineer. Responsible for the planning, design and assistance during the construction phase of electrical systems of Pier 86 for Hudson River Park Trust with costs of $30.5 million. The project consists of demolition of the existing pier and detail design of the new pier and design repairs. Participated in the design of the new facilities and landscaping on the proposed Upland Park.

JOINT VENTURE

SHELDON WILLIAMS

Professional Experience

Mr. Williams has more than 10 years of experience as a welding and painting inspector including inspection for bridge painting for multiple contracts with NYSDOT. His experience includes performing QA/QC oversight for welding operations and conducting review of quality checks for welding and radiographic work. His representative project experience includes:

NYCDOT, Resident Engineering and Inspection Services for Component Rehabilitation of 10 Bridges, Brooklyn, NY - Inspector. Scope of work includes constructability review of the design documents; CPM review of schedule and updates; continuous REI services and material testing; and public outreach. Construction cost - $6.35 million.

NYSDOT, Region 10 Term Agreement, Contract D030568 for Bridge Painting, Nassau & Suffolk County, NY - Inspector. Inspected bridge painting for multiple contracts on all of the Region's major highways including: Rte 27, Southern State Parkway, Long Island Expressway, Northern State Parkway, Rte 25, Rte 25A, Meadowbrook Parkway, Rte 135 and more. Much of the work was performed at night with WZTC for lane closures. Work included containment and hazardous waste (lead paint) removal prior to installing primer, and a minimum of two coatings. Construction cost - $20 million.

Croton Water Treatment Plant, Bronx, NY - QA General Field Inspector. Supervised all welder qualification tests. Reviewing of weld procedures and welder qualifications. Oversight of all welding operations and NDE requirements. Supervised mapping and tracking of weld, the receiving and installation of equipment (Tanks, pumps, UV units), all QC contractors welding/painting/and mechanical. Walking of packages consisting of pneumatic testing. Pre-hydro and post hydro testing. Supervised all painting and mechanical contract. Piping system restoration. Supervised NDE inspection using the PT and MT process. Construction codes: ASME Section IX, ASME B31.1, ASME Section V, AWS D1.1, and AWS D1.6.

Croton Water Treatment Plant Raw and Treated Water Tunnels Connecting UV Plant, Bronx, NY - QA Welding Inspector. Supervised all welder qualification tests. Oversight all welding operations and NDE requirements. Review all welding procedures and qualifications. Supervised mapping and tracking of the weld. Supervised NDE inspections using the PT process. Construction codes are AWS D1.1.

S&B Engineers and Constructors, Ltd., Teal/Bimodal, Houston, TX - QA Welding Inspector. Responsible for conducting visual and dimensional examinations. Oversight all welding operations. Walking of packages consisting of pre-hydro, hydro, and post-hydro test. Mapping and tracking weld. Performed NDE inspections using the PT and the MT process. Construction codes are: ASME Section V, ASME Section VIII, ASME Section IX, ASME section B31.1, and AWS D1.1. (

S&B Engineers and Constructors, Ltd., Meeker II Gas Plant, Meeker, CO - QA/QC Welding Inspector. Conduct visual and dimensional examinations. Oversight all welding

operations. Walking of packages consisting of pre-hydro, hydro, and post hydro. Supervised all painting of mechanical contract. Mapping and tracking welds. Supervised NDE inspections using the PT and MT process. Construction codes: ASME Section V, ASME Section VIII, ASME Section IX, ASME Section B31.1.

Oil States Industries, Inc. Houston, TX - QC Welding Inspector. Oversight of all welding operations. Dimensional verifications of fabricated structures. Supervised all painting of mechanical contract. Visual acceptance of weld and weld mapping. Supervised NDE inspections using the PT and MT process. Construction codes AWS D1.1 and API 1104.

Borco Oil Refinery, Upgrade Project, Freeport, Bahamas - (C.W.I.) Welding Inspector. Conducted/reviewed quality checks of all welding and radiographic. Testing procedures during the upgrade phase of Borco Oil Refinery tanks and associated piping. Construction codes are ASME Section V, ASME Section VIII, ASME Section IX, and ASME B31.3

Weld Services, Trinidad and Tobago - (C.W.I.) Welding Inspector. Welding of piping and structural members in accordance with the American Society of Mechanical Engineers code requirements during the shop fabrication phase of various projects. Responsible for visual acceptance of completed weldments. Construction codes are: ASME Section V, ASME Section VIII, ASME Section IX, and ASME Section B31.3.

STEVE MAR

Professional Experience

Mr. Mar has experience in high tension electrical engineering, construction technology, contract administration and building operations in a career that spans more than 30 years. He has the ability to work effectively under minimal supervision handling simultaneous projects and meeting deadlines. Mr. Mar has a solid reputation for upholding high standards and realizing organizational goals and objectives. His relevant experience includes:

Port Authority of NY & NJ (PANYNJ), Multiple Contracts, New York & New Jersey - Field Engineer/Construction Inspector. Administrated multiple contracts in New York & New Jersey Port Commerce Department and The Port Authority Trans Hudson Corporation (PATH) train as (CMD / EIC). Worked closely with PA Resident Engineer (RE), PA Assistant Resident Engineer (ARE), PA Project Manager, Engineer of Record (Architect/Engineer), and Contractors to ensuring the projects are delivered on time and within budget. Reviewed scope of work, contract submittal, materials, PACC (Change Orders), Request for Proposal (RFI), and approved contractor progress payments. Performed daily Controlled Inspections and reviews to insure work on construction projects are completed in accordance with contract drawings, specifications, and National / Local Codes and construction project standard (ANSI, NFPA, NEMA, and UL). Scheduled project kick-off meetings and monthly meetings with main contractor and subcontractor to perform ongoing construction project. Analyze budgets and schedules for contract compliance. Projects included:

- Inspected and supervised installation of 2 units of 1000KVA, 4160/480/277V-3phase substation. Coordinated with local power company (Con-Ed) to bring the main substation in services. (Mr. Mar received Port Authority recognition via a "Team Project Award" in 2004.
- Expansion of 124 acres of Port Ivory in Staten Island, NY. A former shipping port operated by Proctor & Gamble. Demolition of existing office buildings, warehouse, power plant, smoke stacks, and structural steel bridges.
- NYC Container Terminal Berth Strengthening and Wharf Extension in Staten Island, NY. Installed new cathodic corrosion wiring throughout the new 300 feet of wharf extension as well as a new substation, fiber optic cabling, cross over bridges, train tracks, air compressors, high mast electrical light towers, sewage drainage, and fire hydrants.
- At PATH train performed Engineer in Charge (EIC) – Installed new security fence and repaired concrete along existing Summit Avenue Bridge in Jersey City, NJ. While the test was not to disrupt the daily PATH train rush hours operation and people/traffic on the street level.
- Replaced/ Installed new PATH railroad tracks, ties, ballast stones, bridge walkway stringers bolts in the Newark PATH Dock Bridge.
- At PATH's South Street Yard in the elevated McCarter Highway bridge in Newark. Installed new Automatic Train Control System. Along with new electrical bungalow, Train Single, and Fiber–optic communication room.

[redacted]

[redacted]

[redacted]

- At PATH Journal Square Transportation Center – Platforms, Turnstile Area, Moore Tower, Removal of loose concrete over active tracks and underside of John F. Kennedy Blvd. Repaired (2) deteriorated concrete columns. As a EIC's I'm responsible for the safety of workers on working along the active train tracks and the coordination with the Trainmaster for movement of work flat and Hy-rail trains on site.
- Lead inspector for PA. Reactivation of Arthur Kill Vertical Lift Bridge from New York to New Jersey and the national rail network.

New York City Department of Housing Preservation & Development, Multiple Projects, Citywide, NY - Assistant Electrical Engineer worked under Chief Engineer's direction, to supervise and schedule ongoing rehabilitation of city owned building. Monitored various contractors' progress and quality of work. Prepared cost analysis of extra work orders, RFIs, and change orders.

JOINT VENTURE

EDWARD McMANUS

Professional Experience

Field Quality Control Inspector with 20 years of experience in civil and electrical inspection, especially electrical substations. Expertise in construction management tank installation, the removal and remediation of petroleum contaminated sites, and public utility substation operations. Recognized for attention to detail and communication skills.

MTA LIRR, Bridge Painting (for Atlantic Traffic & Design Engineers, Inc.) - Construction Inspector for Maintenance and Protection of Traffic (MPT) for the Meadowbrook Parkway Bridge Painting Contract. Painting work done in accordance with national MUTCD and NYSDOT Specifications.

NYCDEP, Sodom and Bog Brook Dams, Brewster, NY - Construction Inspector, Senior Quality Specialist II. Responsible for the inspection of drilling and installing anchors and sheathing.

NYCDDC, Management Remediation of Petroleum Contaminated Sites, New York, NY - Senior Quality Specialist II. Provided direct supervision of four Field Inspectors. Responsible for the coordination of two to five Subcontractors and Subconsultant design firms.

- Ensured the fieldwork at 15 tank and 44 remediation sites, complied with plans, specifications, applicable laws and regulations, and was completed according to schedule. Additional duties included approving requisitions.
- Team nominated for CMAA Achievement Award. Won Gold Award Environmental American Society of Engineers of NY.

NYCDDC, New York City Fire Department Storage Tank Program, New York, NY - Quality Control Inspector. Closed, removed, upgraded, and installed petroleum storage tank systems.

New York State Department of Transportation (NYSDOT), Reconstruction on Route 25A - Construction Inspector. Responsible for the asphalt resurfacing, drainage, traffic signal, sidewalk rehabilitation, full-depth pavement repairs (calcium chloride), sidewalks; six curbs, resetting catch basins, and traffic signal installation.

New York City Department of Transportation (NYCDOT) - Various Locations - Construction Inspector. Responsibilities included the resurfacing with 1½ inch asphaltic concrete wearing course, installation of pedestrian ramps, and new curbs with sidewalks.

NYCDOT, 64 Avenue Reconstruction Project - Construction/Electrical Inspector. Responsible for placement of base concrete, asphalt, and replacement of street lighting.

Triborough Bridge and Tunnel Authority (TBTA), Queens Ventilation Building - Construction Inspector. Responsible for masonry restoration and roof replacement.

Pilgrim Psychiatric Center - Senior Mechanical Inspector. Responsible for rehabilitation of three seven-story buildings approximately 500,000 square feet.

MTA MNR, 110th Street Substation, New York, NY (for Morrison Knudsen Engineers, Inc, New York, NY) - Construction Engineer. Responsible for Construction Management for Traction Power.

MTA MNR, Grand Central Terminal, New York, NY (for Gibbs & Hill, Inc., New York, NY) - Electrical Inspector. Responsible for PCB transformer removal and replacement, construction of four transformer houses and high voltage loop.

MTA MNR, Traction Power Substation in Grand Central Terminal, New York, NY (for Shah Associates, Consulting Engineers, New York, NY) - Electrical inspector. Primary responsibilities included ensuring that the General Contractor and Subcontractor comply with specifications, contract drawings, approved materials, and the National Electrical Code.

SHAILESH M. MODI, P.E.

Professional Experience

Mr. Modi has 20 years of structural/bridge construction experience including being responsible for removal, installation and rehabilitation of substructure/superstructure of bridges and full-depth inspections of existing bridges. He also has experience with reviewing, checking and preparing construction documents, contract agreements, shop drawings, change orders and specifications. Mr. Modi has extensive NYCDOT, NJDOT and NJTA bridge experience having worked on many multi-million dollar project assignments as Resident Engineer, Office Engineer and Inspector.

PANY&NJ; Call-In Facilities Condition Survey of light standards and traffic signal structures -2013; JFK International Airport, New York - Team Leader for the inspection and condition survey for approximately 3,000 light poles/traffic signals throughout JFK Airport which included 90% visual and 10% hands-on inspection. Prepared weekly work schedule, MPT lane closures considering peak traffic times during the day and holiday work restrictions, Coordinated with PA Facility personnel including Operations, Police and PA Tenants, Coordinated Escort service for the Air-side light pole inspection. Prepared in-depth condition reports with GPS location for each light/traffic signal poles, identified structural and non-structural deficiencies. Issued immediate repair letters and identified safety and priority conditions. Updated the location maps for each light pole and traffic pole structures.

PANYNJ/Condition Survey of the Port Newark, NJ Marine Terminal – Team Leader for the condition survey of 17 Port Jersey South Buildings which includes interior and exterior architectural appurtenances, structural elements and connections (100% visual and 10% hands-on), utility supports and ceiling system. Performed inspection of more than 100 Lighting Structures and 25 High-Mask Lighting Towers.

PANY&NJ; Call-In Facilities Condition Survey for 2009-2011; JFK Air Port, New York - Team Leader for the inspection of condition survey for approximately 4,000 light poles/traffic signals in vicinity of JFK Airport limits. Prepared in-depth condition reports with GPS location for each light poles/traffic signal poles and issued Safety and Structural flags with the repair recommendations according to the conditions.

EWR Newark International Airport, Monorail Rail link Station, Newark, NJ - Field Engineer responsible for Construction Management and Supervision of daily construction activities such as structural steel erection and foundation work for monorail guideways and for the Rail Link Station, structural and architectural finishes for the Rail link Station. Station work included pile driving for poured concrete foundations, new concrete high-level platforms, passenger waiting room with HVAC and passenger facilities, passenger elevators and escalators and passenger information and communication systems. Utility work such as new water supply, storm drainage and sewer line connection to station. Coordination among the contractors and subs, quality assurance for the whole project including reviewing contractor's Shop Drawings, RFIs and Change orders. Also, was involved in Water Tank construction Project - steel pile driving, foundation work, water tank

construction, preparing PACCs and office work. This construction project 's value was $400 million dollars.

NYSDOT, Bridge Component Rehabilitation project for Nine Bridges, Henry Hudson Parkway, Manhattan, New York - Office Engineer/Inspector responsible for the partial payments to the contractor, reviewing and checking construction documents, contract agreements, shop drawings and specifications, including: Updating database entry for all unit items and T&M work, keeping all correspondences, material acceptance records, Murk reports, approvals, and submittals up to date. As a Inspector, performed inspection of concrete and asphalt placement on the deck structure, structural steel repair work at Riverside Drive Bridge, installation of stone arch masonry, concrete arch deck repair, inspection of sheeting and steel pile driving and construction supervision at Henry Hudson Parkway Bridge.

College Point Corporate Park Sanitary Sewer Project, Queens, New York - Senior Inspector, responsible for the construction of a new 400 gpm pumping station, gravity sewer and force main, valve chamber, wet valve and pressure relief manholes in College Point/Corporate Park, Queens. Performed inspection of driving steel piles, sheet piling and installation of precast structures for the pump station. Responsible for the partial payments, updating the back-ups from Inspector's Daily Murk sheets.

TBTA-Throgs Neck Bridge and PA-G.W. Bridge (Special verification Inspection) – Team Leader, performed bridge inspection for the critical areas of the bridge members and under rated bridge components including preparation of the final reports.

NJDOT, Train Pre-emption for Traffic Signals North II; Bergen, Morris and Monmouth Counties, NJ - Resident Engineer for installation/modification of existing traffic signals in proximity to rail road crossings to provide control of the traffic signals when train signal gates are activated and prevent intersection blocks and backups. Scope of work includes installation of underground conduit, cables, signal controller units, traffic signals, foundations, manufacturer and field testing of controllers, curb replacement, sidewalks, milling and HMA paving, site safety and maintenance and protection of traffic.

JOINT VENTURE

LAWRENCE T. O'ROURKE, P.E.

Professional Experience

Mr. O'Rourke has more than 35 years experience with all types of construction; including highways and bridges, commercial buildings and other heavy construction. He has served as Resident Engineer with proven track record of getting multi-million dollar projects consistently completed on time and within budget. Mr. O'Rourke is a decision maker who can sort through multiple sources of information to arrive at a conclusion quickly and correctly for the best course of action to be pursued. He has the ability to recognize potential problems and correct them before they happen. He acted as a motivator with ability to work with and coordinate all persons involved with a project; including owners, government officials, professionals and contractors.

NJ Transit, Construction Inspection Services for Construction of the Tonnelle Avenue Underpass, a part of the Trans-Hudson Express (THE) Tunnel Project" - Resident Engineer, responsible for construction of a railroad underpass at Tonnelle Avenue in North Bergen. The underpass will be adjacent to where the $8.7 billion project goes underground, allowing the two new rail tracks to begin their descent under Palisades Mountain. In addition to the Tonnelle Avenue underpass, the contract requires demolition of two commercial buildings, construction of new electrical and fire pump rooms, relocation of utilities and construction of a new railroad embankment immediately west of Tonnelle Avenue. Tonnelle Avenue's four traffic lanes will remain open during construction. The underpass project is expected to be completed in 2012. (04/09 – Present)

Essex County, NJ – Construction Inspection Services for Roadway Resurfacing and Incidentals Program – Project Manager and Resident Engineer for several projects to provide survey, inspection and quality assurance staffing for reconstruction of approximately 15 miles of roads at a cost of $15 million throughout Essex County. Work includes construction of new curbs, sidewalks and ADA ramps, milling of existing asphalt pavement and resurfacing with new asphalt, resetting and reconstruction of inlets and manholes, utility relocations and striping. Work also includes installation of new traffic signals and controls.

Meadowlands Management, LLC. NJSC Roadway and NJTA Ramps Improvements, Meadowlands Agreement with Xanadu, Roadways and Ramp, Secaucus, NJ - Resident Engineer for this relocation and improvements to NJSE Authority roadways in the Meadowlands Sports Complex and improvements to the NJTA ramps into the complex Project was responsible for pile driving, roadway excavation, grading and drainage, soil erosion and sediment control, roadway excavation,, concrete abutments,. installation of pre-cast concrete beams, concrete deck placement, drainage headwalls, parapets, highway lighting, line striping, guide rail, Maintenance and Protection of Traffic, and installation of overhead sign structures.

Hudson County, NJ, Construction Inspection Services for Construction of Pedestrian Bridge over JFK Boulevard at 32nd Street, North Bergen and Union City, NJ – Resident Engineer responsible for construction of a $4.1 million pedestrian bridge and related work. Work includes extensive vehicular and pedestrian MPT,

construction of new curbs, sidewalks and ADA ramps, milling of existing asphalt pavement and resurfacing with new asphalt, drainage modifications, utilities, striping and installation of new traffic signal. Work also includes foundations, reinforced concrete and structural steel for elevator/stair towers for 92' long prefabricated steel truss pedestrian bridge. The bridge work includes metal deck pans, concrete deck, decorative stone masonry, glass and metal panel curtain wall, roofing, mechanical, electrical and plumbing work, lightning protection, interior lighting and controls, gypsum board partitions, doors and hardware, suspended ceiling and finishes, and security access and surveillance systems. The work also includes installation of a 2500 pound rated hydraulic passenger elevator in each tower.

Parsippany-Troy Hills, NJ - Assistant Township Engineer

- Managed up to 15 field and office engineers, surveyors, inspectors and secretarial staff.
- Supervised design of plans and specifications, field layout and construction of "in house" road and drainage construction.
- Served as liaison between Township and NJ Department of Transportation officials.
- Assisted Township Engineer in approval of site plans and subdivisions.
- Performed inspections of buildings and homes and issued recommendations for certificates of occupancy and posting maintenance bonds.
- Prepared and presented various reports to Mayor and Township Council at public meetings.
- New Jersey Department of Transportation - Resident Engineer, Highway Inspector. Served as Resident Engineer on numerous highway and bridge projects.
- Ensured contractors' work conformed with plans and specifications and was completed within specified time.
- Managed field and office engineers and inspectors.
- Authorized payment to contractors for work performed.
- Reviewed change order requests and authorized action.
- Issued project correspondence and reports.

CARL H. ORTMANN, P.E.

Professional Experience

Mr. Carl Ortmann has more than 30 years of experience in the successful completion of major bridge and highway projects, building foundations, power plant and transit structures. He has provided on-site administrative and technical supervision on heavy construction projects, directed multi-trade craft work forces and determined methods of construction, manpower levels, material quantities, equipment, temporary facilities and work schedules. In addition, he supervised all construction activities, materials and equipment received for compliance with company directives, contract drawings, specifications, approved submittals and standards of accuracy. Mr. Ortmann has been in charge of monitoring the quality of work completed and provides quality assurance as required, coordinated submittals to owners, overseen work progress and schedule compliance to ensure a completed project within budget and schedule, resolved field and drawing problems, and reviewed and implemented change orders. He coordinated scheduling of subcontractors and suppliers, reviewed project safety manual and monitored compliance with safety procedures. His relevant experience includes:

PANYNJ, George Washington Bridge Lower Level, New York - Team leader for the Priority, Safety and Routine Verification inspection of the lower level including the lower level roadway and framing, the bottom chord of the stiffening truss, the New Jersey abutment and New York anchorage, and the travelers including their support framing and connections. The purpose of this inspection was to determine the overall condition of the lower level structure and to identify structural and non-structural deficiencies.

PANYNJ, Center Avenue Bridge over the Upper and Lower Approaches to the George Washington Bridge, NJ – Team leader for the inspection and verification of the existing condition of the bridge elements including the roadway, superstructure, substructure and appurtenances to determine the rehabilitation or replacement design options.

NYSDOT, Contract D261292 I-278 Staten Island Expressway Improvements, Staten Island, NY - Senior Project Manager providing on-site project management for the $74.8 million I-278 Staten Island Expressway Improvement Project including 2.78 Km of asphalt and concrete highway reconstruction including the demolition and widening of three (3) bridges with precast concrete deck units and the construction of a new on-ramp using precast concrete deck units. Maintenance of site storm water run-off and implementing compliance with the environmental protection requirements for Brady's Pond. Installation of new drainage systems, new roadway lighting and ITS installations. Maintenance and protection of traffic included 4 stages of construction.

World Trade Center, Tower 1, Manhattan, NY - Project Manager for the $40 million construction of the 120,000 SF foundation for Tower 1 including rock excavation, support of excavation, drilling and grouting of rock anchors, placement of reinforcing steel and concrete for the core, building perimeter footings, slab on grade. Coordination with the PATH and Port Authority Resident Engineer's Office personnel.

NYC Transit, Reconstruction of West 72nd Street Station, NY - Project Manager for the $35 million completion of the renovation and restoration of the existing landmark station house, construction of a new station building including installation of elevators, lengthening of both existing platforms, complete electrical upgrade including new station lighting, floor and wall finishes, and, expansion of Verdi Park pedestrian plaza. Coordination of over 40 subcontractors and suppliers.

CARL H. ORTMANN, P.E.

New York Post Port Morris Printing Facility, Bronx, NY - Project Manager for the $22 million demolition and replacement of reinforced concrete 2nd floor inserting area in stages while newspaper production maintained. Erection of structural steel to reinforce existing 80 foot long floor trusses.

Astoria Energy Power Plant, Phase 1, Astoria, New York - Project Manager for the $9 million installation of structural steel support structure, unloading from barges and erection of 12 modular air cooled condensers weighing 280 tons each, erection of steam duct and riser sections weighing up to 60 tons and miscellaneous mechanical equipment. Reviewed and submittal of crane placement and erection plans.

PANYNJ, Newark International Airport Parking Structure, Newark, NJ - Project Superintendent for the 485 million construction of a six-level parking structure including erection of steel columns and support beams, erection of prestressed concrete double tee deck units, cast in place double threaded reinforced concrete helix access ramps. Installation of elevator shafts and elevators, site work, electrical work, erection of a prestressed concrete 3 span bridge and approach roadways, parking lot, entry and exit plazas and canopies in Parking Lot E. Coordination of subcontractors and suppliers.

TBTA, Triborough Bridge Randall's Island Junction Structure and Bronx Truss over the Bronx Kill, New York - Assistant Resident Engineer for this $145 million project including the Bronx Truss that has a main span of 383 feet and a total length of 1,217 feet. Project work included demolition of the existing substructure and superstructure on the Bronx Approach and replacement with new cast in place concrete substructure with precast concrete deck panels. The Bronx Truss reinforced concrete deck was removed and replaced with steel orthotropic deck panels on the Bronx Truss. Inverset deck panels were placed on the Queens-Bronx Mainline, and curved welded plate girders with composite reinforced concrete deck for the Junction Structure ramps. A full length construction shield provided debris collection and fall protection for the workers, mariners and the Bronx Kill. Multiple construction stages with extensive Maintenance and Protection of Traffic (MPT) Plans to maintain vehicular traffic and toll revenue for the facility. Project constructed in accordance with NYSDOT's construction specifications.

Electrical Engineer/Inspector (AECOM, New York, NY) - MTA Montague Tunnel Project (Subway Restoration Project) - Work involved track repair and other related work. E.g. it also included data and communication systems, temporary lighting, removal of damaged cable, wiring and switch boxes, circuit breaker boxes, panels, relay boxes, transformer boxes and different junction boxes and brackets. These were all replaced. Work was accomplished while working on Electrical Live Power Tracks. Inspection work involved demolition work, e.g. circuit breaker houses, duct banks, removal of old negative cables, signal cables, communication and data cables, old signal boxes. Also installation of new Electrical, signal and data communication cables, installation of new switch boxes, signal Boxes, I/J boxes, cutting trenches under the restructuring of duct banks and pouring of concrete. Work also included inspection of track, survey work on the tracks for rails. Also Inspection of water leaks inside the Tunnel and repair of leaks with chemical grouts. Inspection of bolts and replacement where necessary of the damaged bolts inside the tunnel's structural frame ring. Supervised workers and prepared daily reports.

Engineer/Inspector (MTL, Engineering Testing Co, Hicksville, NY) - Responsible for conducting field inspections, performing lab tests, monitoring and testing structural parts of buildings including concrete, rebar, masonry work, and soil. Responsible for checking and writing reports.

Electrical Engineer/Inspector (Tectonic Engineers, Queens, NY) - Responsible for providing inspection services at various NYC building sites.

Electrical Engineer/Inspector (Hepco, Rutherford, NJ) - Responsible for providing inspection services for communication installations for the MTA subway project at various locations.

Electrical Engineer/Inspector (SI Engineering, New York, NY) - Responsible for providing inspection services for the TBTA's project on the Marine Parkway Bridge, Brooklyn, NY. Responsibilities included checking the electrical portion of the construction of the TBTA's new service building. Checked the main electrical power supply, emergency power supply, ATS, circuit breakers, disconnect switches, conduits, wiring, cables, switches, panels, light fixtures, lights, emergency lights, light poles, alarms, motion sensors, intercom system, power plant design, HVAC and other mechanical equipment /device electrical connections., telephone and data communication cables. Prepared daily reports.

Estimator/Inspector (Action Electric Co, Queens, NY) - Worked as an estimator and inspector for multiple NYC projects for agencies including the MTA, various hospitals, schools and college buildings. Responsibilities included taking off quantities and preparing estimates.

Engineer/Inspector (US Engineering Lab, Rahway, NJ) - Responsible for providing inspection services on multiple projects.

Junior Electrical Designer/Engineer (Energy, Melville, Long Island, NY) - Responsible for work on multiple design/build Electrical/Mechanical Systems. Responsibilities included designing electrical systems for hospitals, colleges, factories, sports stadium and other buildings. Calculated loads for lighting, receptacles and equipment. Checked switches, panels, UPS, illumination of the buildings. Provided field inspection, checked for compliance with NEC and other codes. Prepared CAD drawings and inspection reports. Served as a Validation Engineer at Schering-Plough Pharmaceuticals, Kenilworth, NJ.

Junior Engineer/Designer (Con Edison, New York, NY) - Responsible for preparing drawings for new projects involving maintenance of the existing power network. Field checked existing facilities, monitored different situations, checked load calculations and the replacement of transformers, computer assisted network analysis, checked work for compliance in accordance with NEC and other applicable electrical codes. Prepared CAD drawings. Made field inspections and prepared inspection reports.

Junior Electrical Engineer, NYC, Parks & Recreation, Department of Electrical Engineering, Flushing, NY - Responsible for designing and checking the electrical power supply, circuits, lighting, and pumps etc. in different facilities at existing and newly built city parks. Checked work for compliance in accordance with NEC and other applicable electrical codes. Prepared CAD drawings, made field inspections and prepared inspection reports.

ROLSTON A. SAUL, P.E.

Professional Experience

Mr. Saul offers 23 years of engineering experience performing structural integrity inspection of highway and railroad bridges, buildings, and other structures including all types of steel complex bridges and concrete long-span bridges in accordance with AASHTO, AREMA NYSDOT, NYCDOT, PONTIS Federal Coding Guide, and local requirements. His relevant experience has been gained while working for the Port Authority of New York and New Jersey, Triborough Bridge Tunnel Authority, New York State Department of Transportation and New Jersey Department of Transportation. His relevant experience includes:

PANYNJ, Facility Condition Survey Services As Requested on a "Call-In" Basis During 2006, 2007 and 2008 – Assignment # 3 – Condition Survey of High Mast Light Towers at Howland Hook Marine Terminal – Team Leader responsible for the condition survey of 43 high mast light towers at the Howland Hook Marine Terminal in New York. All high mast light towers received a 100% hands-on inspection including all structural framing and connections, luminaire assembles and connections, structural support systems, visible portions of the foundations, and other appurtenances attached to the light towers including floodlights and signs.

PANYNJ, Facility Condition Survey Services As Requested on a "Call-In" Basis (MBE/WBE) During 2006, 2007 and 2008 – Assignment # 2 2007 Condition Survey of the Facades of Lincoln Tunnel Ventilation Buildings – Team Leader responsible for the inspection and report writing for facade inspections of the Lincoln Tunnel Ventilation Buildings (2 buildings in New Jersey and 3 buildings in New York) to assure the structural integrity of the exterior walls in regards to safety of the general public. Also responsible for verifying the status of repairs identified in the previous inspection report. The inspection was carried out using a 22' wide moving scaffold positioned at several locations along each face of the buildings to provide a hands-on inspection of the facades.

PANYNJ, 2005 Biennial Inspection of Lincoln Tunnel New Jersey Approach Roadways, NJ - Assistant Team Leader for inspection of bridges along the NJ Turnpike. Assisted in identifying the bridge components, defects, and quantification of the defects. Prepared the NJDOT Biennial Inspection Reports and the Port Authority Condition Survey Reports.

PANYNJ, Central Refrigeration Plant and Bus Station Rehabilitation, NYC, NY – Structural Engineer responsible for the structural and architectural design efforts involved in the installation of a new refrigeration plant that is to be located on two new structural slabs over I-95. Designed an ADA compliant curb and a concrete barrier around the opening above the cooling towers.

PANYNJ, Lincoln Tunnel Ventilation Buildings, NYC, NY - Structural Engineer responsible for the rehabilitation of the historic ventilation buildings at the Lincoln

Tunnel. Reviewed shop drawings and design calculations as necessary for compliance with applicable codes and specifications.

PANYNJ, Port Authority Bus Terminal Rehabilitation, New York - Structural Engineer responsible for the structural and architectural design efforts associated with the replacement of the existing cooling towers at the PA Bus Terminal. Work included rehabilitation of the structural steel supports, catwalk grating supports, and the roof above the Drop-in Center.

PANYNJ, JFK International Airport, Queens NY – Assistant Team Leader responsible for inspection of light poles, lighting structures, and radio communication towers at JFK International Airport. Inspection consisted of checking for defects such as cracked welds, holes at the base of the structures, dents and holes as a result of vehicular impact, exposed electrical cables, using D-meters to determine section loss and any defect that might impair the functioning of the structure. Responsible for the preparation of the Port Authority Condition Survey Report and updating of the structures' location plans.

PANYNJ, JFK International Airport Light Rail Transit System, Manhattan - Queens, NY – Structural Engineer responsible for assisting in the design of the foundations for this light rail transit system. Work included the following: checking of utility locations relative to the foundation and making recommendations as to utility relocation or design of special foundation; determining loads for the piers as necessary; and reviewing the design of retaining walls as necessary.

Job # 1000 – MTA LIRR, Underwater Inspection of 32 LIRR Bridges, NY – On-Site P.E. Team Leader for the underwater inspection of seven (7) of 32 LIRR bridges. Upon completion of the inspection, reports were prepared according to the requirements of the Long Island Rail Road. The seven bridge reports were finalized, reviewed, revised, and sent to the MTA for review, and all comments were processed.

JOINT VENTURE

RACHOT SENISRISANT, P.E.

Professional Experience

Mr. Senisrisant has more than 13 years of experience, including eight years as an Office Engineer on NYCDDC projects. With strong computer literacy and attention to detail, Mr. Senisrisant is reliable and dependable. He has the ability to manage and prioritize projects to meet assignment deadlines in a fast paced environment. Mr. Senisrisant's recent relevant experience includes:

PANY&NY, Condition Survey and Preparation of Report for 78 Major Sign Structures and 582 Ground Signs for the JFK International Airport, NY - Structural Engineer responsible for the biennial inspection for 24 terminal buildings; bridges at JFK International Airport including preparation of BIN folders, condition survey report for 24 bridges and load rating for 5 new bridges. Also responsible for providing structural analysis and design for substructures, such as structure basement, underground garage, footing foundations; barrier structures including bridges, retaining walls. Tasks included structural inspections for barrier structure including bridges; preparation of final reports, plans and specifications for structural design projects; review shop drawings and construction details; and preparation of construction documents using AUTOCADD and MicroStation programs.

NYCDDC, Resident Engineering Inspection Services for HW2CR12B, Grinding Existing Concrete Wearing Course in Preparation of Resurfacing, Boroughs of Manhattan and the Bronx, NY - Assistant Resident Engineer responsible for this $14.3 million contract, providing inspection and other related services for projects involving grinding existing asphaltic concrete wearing concourse at in Manhattan and the Bronx locations on an as-needed basis. Some issues that involve inspection services include site maintenance and safety, protect tree from construction debris, milling 2" of existing asphalt, smaller milling machine was used to grind asphalt in hard to reach places such as around catch basin or corner of a curb and a sweeper was used behind milling machine to clean up the debris. Tasks include all services necessary and required for the inspection, management and administration of this project, for the required construction work to be properly executed, completed on time and conforms to the plans, specifications and requirements of the construction contract.

NYCDDC, HWMWTCA7A, Resident Engineering Inspection Services for the Reconstruction of Harrison Street, Borough of Manhattan, NY - Office Engineer responsible for this $2.1 million project that of involves the construction of water mains; construction of sewers, catch basins and chute connections; utility construction and relocation; construction of new curbs and sidewalks; roadway reconstruction, installation of street lighting and traffic signals; and landscaping and punch list work. Tasks include preparing field cards; fixing asset summaries, in service sheets and tap cards; preparing and approving contractor payments under Time & Material records; evaluating the contractor's performance; managing staffs and assign individual responsibility; corresponding with the contractor and other agencies; preparing orders-on-contract; managing progress meetings; preparation

of progress estimates and maintaining the payment book. Also check inspectors' daily reports for accuracy and compliance with specifications. Monitor material certification with every installation.

NYCDDC, HWS2006C, REI Services for Construction of Emergency Sidewalk Contract, Citywide, NYC - Resident Engineer/Office Engineer responsible for this $4.1 million project. Work include supervising, inspecting and controlling the performance of the construction including milling, paving of streets; installation of concrete sidewalks; steel faced curbing, pedestrian ramps, bus pads, street traffic signals, pavement markings, catch basins and planting of new trees; construction of new medians under PLANYC; reconstruction of roadway along the medians. Coordinate with the City agencies including NYCDDC, NYCDOT, NYCDEP, NYCDPR, NYCMTA and the utility companies. Prepare the monthly progress reports and other project reports to the New York City agencies. Maintain project records. Tasks include preparing field cards; fixing asset summaries, in service sheets and tap cards; preparing and approving contractor payments under Time & Material records; evaluating the contractor's performance; managing staffs and assign individual responsibility; corresponding with the contractor and other agencies; preparing orders-on-contract; managing progress meetings; preparation of progress estimates and maintaining the payment book. Also check inspectors' daily reports for accuracy and compliance with specifications. Monitor material certification with every installation.

NYSDOT, D020028, Brooklyn-Queens Expressway (BQE) from 61st Street to Broadway Interchange, Highway and Bridge Design Phase V-VI, New York, NY - Structural Engineer for the reconstruction of this project (1.5 KM) including portions of the Interchange, horizontal and vertical realignments, retaining walls, ramps, drainage, bridges, sign structures, signing and pavement markings, noise barriers, lighting and Maintenance & Protection of Traffic (MPT). Condition Survey and preparation of reports for retaining walls along the BQE. Responsible for providing structural analysis and design for substructures, such as structure basement, underground garage, footing foundations; barrier structures including bridges, retaining walls. Tasks included structural inspections for barrier structure including bridges; preparation of final reports, plans and specifications for structural design projects; review shop drawings and construction details; and preparation of construction documents using AUTOCADD and MicroStation programs.

KS Engineers, P.C.	Resident Engineer – Civil Engineering	2002 - Present
P. Construction & Materials Company Limited	Structural/Field Engineer	1998 - 1999

JOINT VENTURE

MAHMOOD (PERRY) SHAHANGIAN, P.E.

Professional Experience

Mr. Shahangian possesses more than 40 years of experience with regard to the supervision and coordination of highway construction contracts for the NYCDDC, NYSDOT, New Jersey Turnpike, NJDOT, DRPA, PA Turnpike, and Penn DOT. A registered professional engineer in New Jersey and several other states, his experience as a Resident Engineer and Project Manager includes his supervision of contract administration, progress of field design changes, preparation of progress reports and pay estimates, approval of change orders, and working directly with District and State Engineers. Representative examples of his experience include the following:

NYSDOT, Staten Island Expressway (I-278), Bridge Rehabilitation and TSM Measures, Staten Island, NY - Resident Engineer on this $26 million contract which involved the construction of a bus lane in the median of the SI Expressway starting from 200 meters west of Manor Road to the Verrazano Bridge in Staten Island. The work included the rehabilitation of twelve expressway bridges to accommodate the bus lanes, painting of the bridges within the project and the construction of new noise walls along the project. Painting of the structures required the removal of existing paint within a Class A containment system. Responsibilities included construction inspection, shop drawing submittals, monthly estimates, and coordination with other agencies regarding progress schedule, order-on-contract, as-built drawings and finalization of the project.

NYSDOT, Region 11, Route 9A "Where and When" Emergency Repairs, Manhattan, New York City, NY - Resident Engineer under this contract that involved the completion of emergency and non-emergency work along Route 9A from Battery Place to West 59th Street. Specifically, he was assigned to oversee the construction of a $16 million temporary steel pedestrian bridge (Vesey Street Bridge) over Route 9A (West Street), which was complicated by heavy pedestrian traffic and reconstruction work at the WTC site. The 220-foot steel truss structure is 20 feet wide and can accommodate between 4,500 and 6,000 people per hour at peak periods of use. Responsibilities included construction inspection, shop drawing submittals, monthly estimates, and coordination with other agencies regarding progress schedule, order-on-contract, as-built drawings and finalization of the project.

NYSDOT, Long Island Expressway / Clearview Expressway Interchange Improvement, Borough of Queens, NY - Chief Inspector on this $30 million project that included the rehabilitation of 8 roadway bridges and 8 on-grade ramps using a phased construction sequence. Work included new concrete pavement and concrete bridge decks, new accel/decel lanes on the ramps, new drainage, safety improvements, new landscaping and new lighting.

Pennsylvania Department of Transportation, Maintenance Painting of Bridges on S.R. 0030, S.R. 4020 and S.R. 118 - Lancaster and York Counties, PA - Construction

Years Experience
40 Years

Office Location
Newark, NJ

Contact
info@ksenj.com

Inspector charged with monitoring the completion of maintenance painting work on three (3) bridge structures in Central Pennsylvania. Work that he oversaw included surface preparation by blast cleaning to a near-white condition; application of the prime, intermediate and finish coats to the desired thickness; and implementation of protective measures concerning the environment, persons and property.

Pennsylvania Department of Transportation (District 5-0), Bridge Safety Inspections and Preliminary Designs for Rehabilitation, Northampton and Schuylkill and Northampton Counties, PA - Project Engineer responsible for the overall direction of bridge safety inspections, including the subsequent preliminary design activities associated with noted deficiencies, for two structures on S.R. 611 and S.R. 1002 in Northampton County, and one on S.R. 125 in Schuylkill County. Safety inspections involved evaluating the existing condition of each structure including research of its maintenance history, physical measurement of its features, documentation of its existing condition (including any deterioration, cracks, settlements, etc.) and classification as to its rehabilitation needs.

NYCDDC, QED-990, Installation of Water Mains in Vermont Place between Cypress Avenue and Jackie Robinson Parkway, Borough of Queens and the Installation of Distribution Water Mains in the Corlear Avenue and 238th Street Area, Borough of the Bronx - Resident Engineer responsible for this $17 million project that includes replacement of a 48" diameter trunk main, installation of access manholes, a butterfly valve, blowoff, a 12" and 20" regulator, insulated flange joints and chambers. Lining of an existing 12" diameter water main beneath the Jackie Robinson Parkway, and replacement of 125 feet of 18" diameter ESVP combined sewer pipe in Cypress Avenue. New 8", 12" and 20" diameter distribution water mains will replace existing water mains at the Bronx location. Upon completion the roadways and sidewalks will be restored.

JOINT VENTURE

CHRISTINE STANTON

Professional Experience

Ms. Stanton is a Contract Specialist for KS Engineers in New Jersey and New York. Her responsibilities include preparation of Subcontracts, Vendor Agreements, Change Orders for Owners and Subcontractors; processing requests for information and submittals; management of insurance certificates; and maintaining current logs (Change Orders, Contracts, Drawing Lists and Insurance) using Primavera Expedition.

PANYNJ, Construction Management Services on a "Call-In" Basis – Field Position for Contract Specialist for Construction Management Division, Jersey City, NJ – Contract Specialist working out of the Office of the Assistant Chief Engineer – Construction and the Engineer of Construction, Construction Administration, Engineering Department at the Port Authority Tech Center in Jersey City, New Jersey. Responsible for consultant invoices, purchase order budgets, new call-in agreement requests, distribution of bid-tabs, non-disclosure agreements, and the bid log.

NJSDA, Construction Management Services for Roberto Clemente School, Paterson, NJ – Document Control Engineer – This project consists of the renovation of an existing 8,200 sq. ft. commercial building into four (4) kindergarten classrooms, one (1) multi-purpose room, a kitchen and administration spaces. The project also includes building a parking lot on a different site adjacent to the building site. Scope of work also includes a new roof and 5 HVAC roof top units. The existing building is one (1) story on grade steel frame structure that has no basement.

Project Document Control Administrator (Hudson Meridian Construction Group, New York, NY)

- Prepare Subcontracts and Vendor Agreements
- Prepare Change Orders for Owner and Subcontractors
- Process request for information and submittals
- Manage and obtain insurance certificates
- Maintain current logs (Change Orders, Contracts, Drawing Lists and Insurance) using Primavera Expedition
- Code all invoices and requisitions
- Set up and maintain files for correspondence and submittals
- Set up and maintain Control Books and PM Binders
- Assist Director of Field Operations/Project Executive

Project Document Control Administrator (Jeffrey M. Brown Associates, New Jersey / New York)

- Prepare Subcontracts and Purchase Orders
- Prepare Change Orders for Owner and Subcontractors
- Process all change management, request for information and submittals utilizing Expedition
- Manage and obtain all insurance certificates

- Maintain current logs Change Orders, Change Proposals, Contracts, Cost Worksheet, Drawing Lists,

Insurance and Potential Change Orders) using Primavera Expedition
- Request, gather and process all closeout material
- Review and distribute all faxes and incoming mail using DocStar
- Set and maintain files for correspondence and submittals

Project Secretary
- Managed a field office for a construction site
- Handled all calls for this site
- Scheduled and coordinated meetings between management, owners and subcontractors
- Ordered all supplies needed for the jobsite
- Maintain all filing

Training Center Coordinator (J.D. Edwards and Company, Rutherford, NJ)
- Provided receptionist service for a training facility housing over 300 students
- Prepare and coordinate training and marketing material for all classes
- Act as corporate "point person", providing clients with assistance on issues ranging from using the software to accessing the Internet

Office Receptionist
- Provided receptionist services for an office housing over 500 employees
- Processed administrative requests utilizing the Microsoft Office
- Managed the appointments for several key company officers, as well as conference rooms, utilizing Microsoft Outlook
- Acted as the "backup" Office Manager, during the Office Manager's vacation periods

JOINT VENTURE

HSU-HUEI (LEO) SUN, P.E.

Professional Experience

Mr. Sun has more than 34 years of demonstrated success as a project engineer, designer, and inspector on a variety of projects, including bridges, highways, buildings, rail, and transmission towers, as well as commercial and industrial facilities for multiple public and private clients. His expertise includes the design of complex bridge and building structures and detailed inspections, as well as load rating analysis, coordination, and cost estimation. His representative project experience includes:

PANYNJ, JFK International Airport, Rehabilitation of Outfalls 10 & 13 - Senior Structural Engineer for the replacement of Outfalls 10 and 13 at JFK Airport. The work included the preparation of contract documents and construction cost estimates. The project included the construction of precast concrete culverts and cast-in-place concrete retaining walls. Duties included performing site visits, preparation of contract drawings including plans, specifications and cost estimates. During construction, performed site visits and reviewed shop drawings.

PANYNJ, Structural Design Services for Express Rail Port Jersey - Intermodal Container Transfer Facility (ICTF) at Greenville Yard – Senior Structural Engineer performed design calculations for the steel soldier pile retaining walls and concrete retaining wall at the ICTF trailer. Also prepared contract drawings for the foundation of substation, ICTF trailer, underground compressed air pits, and underground horn pits to receive trailing cable from the RMG cranes.

MTA Metro-North Railroad, Poughkeepsie Station Building Improvements - Phase III, Poughkeepsie, NY - Structural Engineer for the crack and spall repairs at the north station wall; repairs to the deteriorated steel canopy, and extension of the concrete retaining wall north of the station. The work consisted of four distinct tasks: Data Collection and Site Investigation; Preparation of Preliminary Documents; Final Design and Preparation of Detailed Plans, Specifications, and Construction Cost Estimates; and Bidding and Construction Period Services. In addition, MNR, town, county, and utility company records were also reviewed. An in-depth inspection was performed to ascertain the condition of the retaining walls, canopy, and other elements at the site.

MTA NYCT, Overcoat Painting of Elevated Structures from Dyckman Street to 218th Street, Broadway -7th Avenue Line, Manhattan, NY - Senior Engineer performing the condition inspection of structural steel prior to overcoating. Reports were prepared documenting the section losses noted during the inspection.

County of Mercer, Replacement of Bridge 641.1 carrying Sweetbriar Avenue (CR 649) over Miry Run, Hamilton Township, NJ - Senior Structural Engineer for the engineering services of the replacement of Bridge 641.1. The bridge consisted of a 72-foot-long, three-span, pre-stressed concrete T-beam superstructure, supported on reinforced concrete substructure units with concrete pile foundations. The bridge

was determined to be structurally deficient, with a sufficiency rating of 30.0, and scour-critical based on the Stage II in-depth scour evaluation.

County of Hudson, Improvement to the Single Span Arch on West Hudson Park Road over Davis Avenue, Harrison, NJ - Senior Structural Engineer for the design of the improvements to the single span arch. The bridge was functionally obsolete and the objective of this project was to improve the existing deck geometry curb to curb width of 22' -9" to 28'; and to increase the existing vertical clearance of 13'-9" to 16' to meet AASHTO standards.

NYSDOT, Route 42 Design Built Bridges over West Kill, Greene County, NY - Lead Engineer for the design, inspection, and rehabilitation services including removal and replacements of two bridges with steel girder on integral abutments, reconstruction of the roadway embankment and pavement. Review shop drawings and respond field request.

NYSDOT, Replacement of the Route 121 Bridge over the Stone Hill River; Bedford, NY - Senior Structural Engineer for design services associated with the replacement of a concrete jack-arch bridge originally constructed in 1910. To design a new prestressed concrete beam bridge including specifications and cost estimate.

NYSDOT, Replacement of the Taconic State Parkway Bridges (NB & SB) over Angell Hill Road; Austerlitz, NY - Senior Engineer providing bridge design for the replacement the two three-span structures with two single-span prestresssed concrete box beam bridges.

DONALD J. WARNETT, P.E.

Professional Experience

Mr. Warnett has more than 35 years of experience including work with roadway reconstruction, roadway excavations, water mains, utility work, regulators, sewer construction, tunneling, NYCTA subway facilities, etc. Mr. Warnett's responsibilities have included resident engineering inspection and project management, construction supervision, preparation of reports, project evaluations, in-house contract documents, plan and specification review and coordination, bid soliciting and evaluation, award processing, scheduling, technical inspection, processing of change orders, payment approval, punch listing and project close-out procedures, liaison with community boards, the public and with other City, State and Federal agencies.

NYCDDC, HWXP2022, Reconstruction of Conner Street Bulkhead, Borough of the Bronx, NY - Resident Engineer responsible for providing resident engineering inspection services for this project. The goal of this construction project is to reconstruct the Conner Street Bulkhead in the Bronx. The location of the bulkhead is at the end of Conner Street and the Hutchinson River in a NYCDOT maintenance yard. The existing bulkhead needs extensive work. A portion of the bulkhead has collapsed and more will crumble unless it gets replaced. The wall will be replaced with a new pile-supported reinforced concrete wall. Due to the marine environment, the use of stainless steel re-bars and class GG concrete has been specified. Also, because of tidal fluctuations, a cofferdam is required. In addition, a turbidity curtain is required to satisfy environmental regulations.

NYCDDC, HWMWTCA7A, Resident Engineering Inspection Services for the Reconstruction of Harrison Street, Borough of Manhattan, NY - Resident Engineer responsible for this $18 million project that of involved the construction of water mains; construction of sewers, catch basins and chute connections; utility construction and relocation; construction of new curbs and sidewalks; roadway reconstruction, installation of street lighting and traffic signals; and landscaping. The contract uses joint bidding for private utility work and includes private utility replacement. Portions of the project are within proximity to NYC Transit Authority facilities. The NYCTA reviews the contractor's means and methods of construction where work is within close proximity to their facilities.

NYCDDC, Reconstruction of Bergen Avenue, Borough of Brooklyn, NY - Resident Engineer on this $36 million inspection project that included the installation of storm and sanitary sewers and complete street and sidewalk reconstruction within approximately 46 residential blocks just west of the Paerdegat Basin in the Borough of Brooklyn. The street and sidewalk aspect of the work included new street lighting, installation of fire alarm boxes, curbs, catch basins, handicap access ramps and street markings throughout the limits of the project. The storm and sanitary sewers were built on concrete cradles placed atop piles, while most of the sanitary sewers were placed in the same lane as the existing sewers that were removed. Some water mains were replaced. Some wide blocks had a center mall. The reconstruction

of the street was difficult do to excessive settlement of the soil. In these areas the roadbed was stabilized using filter fabric.

NYCDDC, MED-595, Installation of Trunk Water Mains in Astor Place and Cooper Square, Manhattan, New York - Resident Engineer responsible for this $23 million project that included the installation of 12" & 20" water distribution mains, new butterfly valves, valve and connection chambers, blowoff valves and chambers, flowmeters with chambers, access manholes with chambers, and modifications within shaft 19. In addition, new 30", 36" and 48" steel trunk water mains to interconnect Shaft 31B from City Tunnel #2 at East 4th Street, to Shaft 19 from City Tunnel #1 at Cooper Square. New 24" DIP will also connect new 24" regulator valves to the new trunk water mains. Restoration of the various roadways was performed for this project. Depending upon the extent of the roadway excavations, this work involved full width reconstruction or trench restoration. Any sidewalks and curbs disturbed were replaced.

NYCDDC, HWM-1667W, Reconstruction of Frederick Douglass Circle Boulevard, Borough of Manhattan, NY - Resident Engineer responsible for this $23 million project located on the Cathedral Parkway 110th Street from Frederick Douglass Boulevard to Morningside Avenue and also on Manhattan Avenue West 109th Street to West 120th Street. This project is part of the revitalization of the Harlem Gateway Corridor. A significant memorial will be built to honor Frederick Douglass, a great African-American leader. The project included installation of water mains from 12" to 48'', catch basins, sidewalk, concrete base and pavement. The project also included: distribution water mains and sewer reconstruction; sidewalks, curbs and pedestrian ramps; traffic signals and street lights; tree pruning and planting; constellation wall on the inner circle; and granite paving work on the inner circle.

CHRONOLOGICAL HISTORY OF EMPLOYMENT

Firm	Role	Duration
KS Engineers, P.C.	Resident Engineer – Civil Engineering	2008 - Present

JOINT VENTURE

PARIS ZHANG, P.E.

Professional Experience

Ms. Zhang is a seasoned design and construction focused Civil Engineer fully licensed to serve in the State of New York and private business to assess, plan, manage, and complete innovative civil engineering projects. She highly educated with deep professional experience in international arenas; ready to leverage composite skills in civil design engineering and environmental engineering to benefit various projects. She is equally adept at working with private and public clients including state and federal governments, military facilities, and large / small corporations.

Civil Engineer (State of Hawaii, Department of Education, Honolulu, HI) - Planned, coordinated, organized, directed, and controlled a variety of engineering and architectural services for State of Hawaii. She handled end-to-end processes which included planning, designing, inspecting, and managing construction projects; skillfully facilitated quality control, contracting, construction management, and equipping facilities and other improvements for state schools and agencies. Also completed planning design and logistics while directing teams, operations, and construction / architectural services; handled project coordination and budgets, while facilitating quality control initiatives to meet project objectives. She coordinated with vendors and contractors to complete construction projects.

Civil Engineer (City & County of Honolulu, Department of Design and Construction, Honolulu, HI) - Ms. Zhang provided expertise with designing and managing installments of civil infrastructure facilities including streets and highways, drainage and flood control systems, and environmental engineering related projects. She handled diverse projects from concept to completion to include bridge and road rehabilitation, reconstruction, monitoring, and inspection; drainage improvements; emergency repairs; flood control; rock slide risk inspections; seismic retrofits; and stream and storm drainage improvements. Managed process to identify engineering project needs, design solutions, create architectural drawings / blueprints, and communicate with contractors and design makers. She repeatedly conceived and created civil engineering design solutions to save city costs while providing lasting, high-quality structural improvements.

Project Engineer (Dick Pacific Construction Co., Ltd., Honolulu, HI) - Ms. Zhang served as construction engineer on major commercial and military construction contracts. She provided leadership on projects from initial construction scheduling through all construction planning and completion stages. Interpreted architectural and engineering designs, reviewed blueprints and documents, planned logistics, and participated in budget and systems review to ensure projects aligned with requirements, costs, and risk parameters. Also communicated with teams, managers, field / site crews, and construction professionals / vendors to oversee all project phases. She delivered construction expertise and technical support for project planning, design, and design interpretation. Prepared change proposals, participated in cost negotiations, and processes subcontractor / supplier documentation and contracts.

PARIS ZHANG, P.E.

Representative Projects follows:

- FY05 MCA PN 57226 Drum Road Upgrade, Phase I, Helemano Military Reservation, Oahu, Hawaii. Prepare Request for Equitable Adjustment for the Drum Road Phase I project. The scope of the project is to upgrade of existing dirt and gravel road to a wider, all weathered roadway. The project includes to improved sight distances at hairpin turns, roadside protections at drop-offs, provide slope stabilization and rock-fall mitigation, and to demolish existing and install new structures at the existing 16 stream/gulch crossing. The project includes 7.15 miles roadway and the original cost estimate is 24 million.
- Hilton Hawaiian Village Grand Waikikian Tower Construction, Honolulu, HI. Scope of this project involves construction of a 38-story concrete tower with 331 timeshare units, six-levels of parking, and extensive water features, pool, restaurant area. Responsible for providing technical support for project planning, design and design interpretation. Assisted field supervision in cost studies and cost control. Assisted in the buyout process. Prepared change proposals and participated in cost negotiations. Processed change orders to subcontractors and suppliers. Drafted and issued subcontracts.
- Civil Design Engineer (URS Corporation, Honolulu Office, HI) - Designed diverse engineering projects, including projects for military as well as city facilities, systems, and structures. Performed technical analysis, site reviews and inspections, and environmental research and assessment; provided data to generate site engineering reports, cost estimates, proposals, and contracts. Handled studies, calculations, simulations, permits, and plans to establish structures, create restoration plans / projects, and complete installations to meet regulations and requirements.

JOINT VENTURE

LISA ANN LAUTATO

Professional Experience

Ms. Lautato's 19 years of experience includes planning, design and construction management services on wastewater treatment facilities, pumping stations and collection systems.

Ms. Lautato's experience includes various wastewater rehabilitation projects for Great Neck Water Pollution Control District, Port Washington Water Pollution Control District and Brookhaven National Laboratory. These projects included facility upgrades and/or improvements, review of televised inspections of the wastewater collection system, recommending methods of repair and/or maintenance, research into various trenchless technologies, on-site inspection of sanitary sewer pipe relining and on-site inspection for the replacement of sanitary sewer pipe.

Ms. Lautato has performed construction management services, including shop drawing review for NYSEFC, Suffolk County Bergen Point Wastewater Treatment Plant Final Clarifier and Appurtenant Facilities/Connections project; and shop drawing review and on-site inspection for Westchester County, Yonkers Joint Wastewater Treatment Plant, Primary Thickener and Dewatering Facility Odor Abatement project and primary and secondary treatment covering system and odor control.

Ms. Lautato's involvement in design projects includes the conversion of Nassau County's Inwood Sewage Treatment Plant to a pumping station and 3-mile force main, miscellaneous improvements at Port Washington Water Pollution Control District pumping stations, treatment plant and their wastewater collection system. Her responsibilities ranged from obtaining as-built information, layout and selection of equipment and processes, and developing and assembling contract specifications and drawings.

Ms. Lautato has prepared applications to Nassau County Health Department and Fire Marshal offices for approval of fuel and chemical storage tank installations for compliance with chemical/fuel bulk storage requirements.

Ms. Lautato's experience in engineering/construction includes on-site inspection of the construction of a new emergency generator facility and new process equipment at the Cedar Creek Water Pollution Control Plant, Nassau County, New York. Specifically, Ms. Lautato's responsibilities included witnessing emergency generator load tests, hydrostatic testing of process piping systems, installation of diffuser systems in new aeration tanks, miscellaneous surveying, shop drawing review and interface with contractors.

Ms. Lautato also conducted on-site inspection on a $2,800,000, three prime contract, modernization project of three Nassau County wastewater pumping facilities and a $1,750,000 three prime contract, modernization of two Nassau County pumping facilities, including a major wastewater ejector station.

These projects included excavation work that utilized steel sheeting and deep well and well point dewatering systems, trenchless technologies (slip lining), force main construction,demolition work, structural concrete and steel work, road work and site restoration Ms. Lautato's experience also includes piping installation, sewage pump installation and testing, installation and load bank testing of generators, construction and testing of electrical distribution control systems, installation and balancing of ventilation and odor control systems, and installation and testing of buried fuel storage tank systems.

Ms. Lautato has extensive experience in trenchless technologies related to sanitary sewer system upgrades, including system evaluations (SSES), design of cured-in-place/fold-and-form lining systems and bursting replacement utilizing HDPE piping, jacking/boring systems, as well as construction management services for the implementation of these projects.

JOINT VENTURE

SYED IMRAN ALI

Professional Experience

Mr. Ali has 29 years of experience including construction inspection for roadway reconstruction, bridge rehabilitation and bridge painting projects including milling and paving work, existing lead paint removal utilizing class 1A containment systems. Has also performed office engineering duties including for review of all the daily reports, estimates, and calculations. Some of his relevant project experience includes:

NJTA, Professional Construction Services for Driscoll Bridge Repainting. and Miscellaneous Improvements, NJ and PA - NACE Inspector for this project that included: existing lead paint removal utilizing class 1A containment systems; steel surface preparation; painting structural steel; performing of tests to confirm compliance with the contract specifications; miscellaneous improvements to the structure.

NJDOT, FHWA Maintenance Bridge Painting Contract 2010-3, Routes 35 and 37, NJ - Inspector on this project that included: existing lead paint removal utilizing class 1A containment systems; steel surface preparation; painting structural steel; performing of tests to confirm compliance with the contract specifications; maintenance and protection of traffic controls.

NYSDOT, REI Services in connection with the Reconstruction of Manhattan Bridge (Contract #14), Rehabilitation of Cables & Suspenders, Boroughs of Manhattan and Brooklyn - This was a multimillion dollar project involving rehabilitation of main components of the Manhattan bridge, job responsibilities include preload verification of suspenders, removal of old suspender, installation of new suspender box and a new suspender as per approved design and procedures. The suspender loaded as per guideline of Weidlinger Associates. The job responsibilities also include removal of faying surfaces continuity and bearing plates and installation of the same, inspection of surface preparation Anchor profile, WFT, DFT and recording of ambient. Installation of work platform on Main cables TA platform and underdeck platform as per approved drawings and procedures. Services performed included detailed inspection and on-site field tests of all materials and items of work as is customary; field measurement and collection of data necessary to submit monthly and final estimates and progress reports; preparation of record plans showing all changes from the contract plans. A diary describing the progress of the work, specific problems encountered and all other pertinent information relative to the execution of the contract, and all records, shall be kept in accordance with the Manual for Uniform Record Keeping (MURK).

NJDOT, CI Services for Median Crossover Crash Protection Contract No. 11, Livingston and Morris Townships, NJ - Inspector responsible for the installation of double sided Guide Rail in the median of sections of Rt. 280, 287 and 124. Work included installation of double sided Guide rail, site clearing, installation of non-vegetative fabric and asphalt, bridge parapet modifications, Guide Rail end treatments, topsoil and seeding and maintenance and protection of traffic.

SYED IMRAN ALI

NJ Transit – Construction Inspection Services for Construction of the Tonnelle Avenue Underpass, a part of the Trans-Hudson Express (THE) Tunnel Project" - Inspector, responsible for construction inspection of a railroad underpass at Tonnelle Avenue in North Bergen. The underpass will be adjacent to where the $8.7 billion project goes underground, allowing the two new rail tracks to begin their descent under Palisades Mountain. In addition to the Tonnelle Avenue underpass, the contract calls for relocation of utilities and construction of a new railroad embankment immediately west of Tonnelle Avenue. Tonnelle Avenue's four traffic lanes will remain open during construction, except for some night-time periods when traffic volumes are low. The underpass project was expected to be completed in 2012.

ALBERT W. BAIRD, P.E.

Professional Experience

Albert Baird has 30 years of building and heavy construction experience on a wide range of projects including schools, terminal buildings, garages, correction building and facilities, utilities, installation of gas pipe lines, petroleum pipelines, installation sewer pipe lines and water mains, catch basins, installation of dams, waterfront construction, dredging, bridges and highway construction, pile driving, boreholes in soil and rock formations, construction testing, stratification of soil, soil testing, and geophysical test methods. Albert has been holding positions over the last 16 years as Resident Engineer, Construction Manager, Project Manager and Quality Control Manager. His experience includes construction management and supervision, job scoping, constructability review, contract bid estimate, review job scope, review design development drawings and specifications, pre-bid and pre-construction meeting, contract documents preparation and review, coordination of trades, contract administration, field inspection oversight, RFI review, review of shop drawings, project meetings, daily and monthly project reports, punch lists, as-built drawing review, close-outs, cost and time management, document control, estimating, CPM scheduling review and updates, change order preparation and negotiations, inspection and quality assurance. As a Construction/Project Manager always obtains clear project objectives, and manages the constraints of cost, time and quality. Implements the needs of the Client and adapts the procedures of the Client. An effective team player. Concerns and attempts to reduce project risk.

United States Army Corps Of Engineers/Brayman Construction Corp., Dover Dam Safety Assurance, Tuscarawas County, Ohio ($30 Million) - Quality Control Manager: Responsible for adequate control to ascertain full compliance with contract, verify control, inspection and testing, review Activity Hazard Plan to assure that safety requirements are met, verify testing procedures comply with contract requirements, identify pass/fail results, review contract drawing, shop drawings, catalog data, ,submittals and RFIs, submit daily reports, verify drilling, grouting, borehole and encapsulation water tightness, anchor installation, post tensioning of rock anchor, concrete placement and testing, river slope water control system, and road construction procedures.

New York State Power Authority (NYPA), Hydroelectric Infrastructural Repair and Maintenance Projects ($1Million .upwards) Project Engineer: Installation of Sluice Gates, River Bank repairs, setting of stream control systems, environmental and erosion control systems, roadway repairs, boreholes on dams and dykes, placement of concrete, and piezometer and instrumentation installations for dams and dykes. Job scoping, construction drawing and specification review, bid packaging, pre-bid and pre-construction meetings, construction management activities.

(DDC/DEP, Remsen Ave. Two-story Administration Building and Garage Reconstruction ($40Million), LEED "Silver" rating, CM/Build services: April 2011 to October 2011 Construction Manager: The construction scope of activities included the construction of foundation and two story building plus cellar, installation of catch

JOINT VENTURE

ROBERT W. BANBURY

Professional Experience

Mr. Banbury has over 20 years experience in construction management and inspections. His objective is to use knowledge and experience to provide service above expectations in the execution and delivery of projects to which he is assigned, and as such, achieve client satisfaction and contribute to the success of the management team. He is a highly motivated individual able to work alone or in a team structure. In addition, he possesses strong interpersonal and communication skills, consistently meets deadlines and is detail oriented with excellent problem solving, technical and analytical skills.

Senior QA/QC Engineer, Fort Lauderdale-Hollywood International Airport Runway Expansion Project (CES Consultants/Parsons Transportation Group Construction Project Management Team, Fort Lauderdale, FL) - Scope of work involved includes, but is not limited to, ensuring contract compliance for soil improvements, embankment earthwork, paving, drainage, concrete bridge structures, roadways, deep foundations, utility building, underground utility systems, preparing reports, reviewing contractor's payment applications and extensive traffic maintenance associated with expanding and elevating Runway 9R-27L, and constructing new parallel and connecting cross-field taxiways. Construction value of design-build and design-bid-build work packages is $180M and $250M respectively.

Construction Inspector/Assistant Resident Project Representative, Trenton-Mercer Airport Taxiway Rehabilitation Project, (DY Consultants, Garden City, NY) - Performed construction management and inspection services for rehabilitation and upgrading of taxiways. Duties included but were not limited to the following: Inspection of taxiway milling, paving and reconstruction, drainage and airfield lighting/signage (NAVAIDS) improvements, pavement markings and maintenance of traffic. Reviewing and processing of RFI's, change orders and payment requisitions. Measured quantities, participated in progress meetings and prepared reports.

Senior Project Manager, MIA Mover System Project (DBOM), Concourse D Extension Apron Project, Concourse D Extension APM Station Completion Project and North Terminal Development Elevator/Escalator/Moving Walkway Installation Project at Miami International Airport. (HNTB Corporation, Miami, FL) - Provided construction management and administration services for various building and civil engineering projects involved in aviation transportation capital and facilities improvement program. Projects included construction of design-build automated people mover (APM) system, apron pavement and underground utility systems, and concourse/terminal buildings, including installation of electro-mechanical conveyance systems. Duties included but were not limited to the following: Inspection of piling installations (precast and in-situ augercast reinforced concrete piles), reinforced concrete pile caps and piers, prestress concrete and structural steel box-girder beams, and reinforced concrete guideway and transit station to ensure compliance with contract documents, DOT standards, material testing procedures and applicable codes. Inspected cofferdam sheet pile installation to

dewater excavation and install utility pipelines and structures. Monitored and managed construction costs by reviewing, analyzing and negotiating contractors' change orders, claims and payment requisitions. Reviewed project schedules for progress payment approvals and claims analysis. Construction value of contracts varied between $4M and $250M.

Project Manager, Concourse F Life Safety Master Plan Phase 1 Project at Miami International Airport. (M.C. Harry Associates, Inc. Miami, FL) - Performed construction coordination between the owner, contractor and design professionals for the expansion of fire alarm/fire protection systems including demolition and renovation of existing facilities and other associated work. Scope of work involved upgrading MEP, fire alarm, fire protection, public address and lighting systems and architectural finishes to achieve code compliance for existing airport building facility; structural repair of post-tension beam structure for existing floor and roof assemblies. Provided construction administration services. Duties included but were not limited to the following: Conducted construction progress meetings and prepared minutes. Maintained and updated RFI, change order, submittal/shop drawing, non-conformance report (NCR), as-built drawing and correspondence logs for project. Reviewed contractor's shop drawing/submittals for compliance with specifications and applicable codes. Documented and prepared progress reports and monitored project schedule. Estimated costs for additional work and reviewed contractor's proposals and progress payment applications for approval. Inspected work for conformance with contract provisions and prepared punch lists. Prepared and submitted project deliverables to client for contract close-out. Worked in conjunction with design professionals and contractor to provide cost-effective solutions to problems encountered during construction due to differing site conditions, and answered RFI's. Construction value of contract was $10M. Contract was completed on schedule and within budget.

JOINT VENTURE

GEORGE R. BROBERG, P.E., P.P

Professional Experience

Mr. Broberg has 44 years of diversified experience in managing the design and construction inspection of multi-disciplined state, county and municipal public infrastructure projects including roads, bridges, traffic signals, water systems, sewer and drainage systems, and residential and commercial projects. He is hands-on, pro-active, cost-conscious, recognized as a strong leader capable of getting the project/objective complete on time and within/under budget to the satisfaction of the client. Some of his relevant experience includes:

NYC Department of Parks and Recreation (NYCDPR), Survey and Borings for Stormwater Greenstreets – Citywide - Project Director responsible for overseeing an extensive program of soil borings, permeability testing, and survey work to compile design data under New York City's aggressive program to beautify neighborhoods and improve the quality of stormwater runoff throughout the five Boroughs by converting unused impervious areas of street right-of-way into pervious green space that will capture rainfall and percolate it into the existing soil. Under the Queens program, Mr. Broberg is responsible for the drilling of approximately 110 borings and associated laboratory testing, completing permeability testing at 120 locations, and the collecting of survey data and base map preparation for 250 sites. He is overseeing the preparation of a summary data report, and managing the activities of subcontractors who perform the borings and complete laboratory testing of the samples, and KSE's field inspectors and survey crews.

NYCDPR, Survey and Borings for Right-of-Way Bioswales and Greenstreets in the Hunts Point Watershed HP-007 in the Bronx - Project Director responsible for overseeing an extensive program of soil borings, permeability testing, and survey work to compile design data under New York City's aggressive program to beautify neighborhoods and improve the quality of stormwater runoff throughout the five Boroughs by converting unused impervious areas of street right-of-way into pervious green space that will capture rainfall and percolate it into the existing soil. Under the Hunts Point program in the Bronx, Mr. Broberg is responsible for the drilling of approximately 50 borings and associated laboratory testing, completing permeability testing at 100 locations, and the collecting of survey data and base map preparation for 120 sites. He is overseeing the preparation of a summary data report, and managing the activities of subcontractors who perform the borings and complete laboratory testing of the samples, and KSE's field inspectors and survey crews.

NYCDPR, Professional Services for the Preparation of Designs for the Reconstruction of Sidewalks Damaged by Adjacent City-owned Trees, Citywide - Project Director responsible for overseeing the completion of field investigations and the preparation of construction plans for repairs to sidewalks damaged by the tree roots of adjacent City-owned trees. KSE is responsible for the evaluation and design for several thousand locations in all five Boroughs of New York City. Work involves field inspections of each damaged sidewalk location, the development of appropriate remedial repairs, and the

preparation of simple construction plans and quantity take-offs. The work is being completed on an extremely accelerated schedule.

NJ Schools Development Authority, Geotechnical Engineering for the New Halloran Elementary School Building for the Elizabeth Public School District – Project Manager for this project which included provided geotechnical engineering services as part of a feasibility study for a new four-story, 144,900 GSF elementary school building at the Elizabeth Public School's Halloran School. Geotechnical services entailed two separate field investigation programs which included deep soil borings, laboratory testing of the samples collected from the split spoon sampler, and preparation of Geotechnical Investigation Phase I and II Reports that recommended a deep foundation support system for the building. The proximity, to the building's footprint, of a major existing Joint Meeting of Essex and Union Counties (JMEUC) 13.5-foot-wide by 8.5-foot-high interceptor sewer passing through the site was a major consideration in the development of the foundation support system design. KSE worked closely with the JMEUC to develop the design criteria for the allowable soil loading that could be transferred to the new structure. Other major considerations in the development of the geotechnical recommendations were the existence of historic fill on the site, groundwater levels, the existence of relatively shallow bedrock, and an increased flood plain elevation published by the Federal Emergency Management Agency (FEMA), based on the effects of Super Storm Sandy.

Delaware River Joint Toll Bridge Commission (DRJTBC), I-78 Toll Bridge Parapet Upgrade and PA Approach Paving Improvements -- Project Manager and Design Services Task Leader for the improvements to the Pennsylvania approach roadway to the Interstate 78 Toll Bridge, the Welcome Center, and various parapets on the main river and approach bridge structures. KSE was retained to provide project coordination, a public participation program, design services, and construction administration. As Project Manager, Mr. Broberg was responsible for developing and implementing a Public Participation Program early in the Preliminary Design phase of the project. He was also responsible, as Design Services Task Leader, for the base mapping, a concept study, preliminary and final design, and post-design services.

JOINT VENTURE

CHRISTOPHER LeHANKA

Professional Experience

Mr. LeHanka has over 13 years of experience as an Environmental Engineer working on asset management and wastewater projects. His tasks have included WWTP sanitary system design, data analysis, shop drawing reviews, report preparation, cost estimating, data collection and construction inspection.

His professional experience includes the following:

- Provided Design Services During Construction (DSDC) services including review/ processing of submittals (Shop Drawings and RFI's) attend progress meetings, coordinating with resident engineering/inspection team, addressing/resolving field issues during construction, and review/processing of Change Orders for the Chemical Bulk Storage and Petroleum Bulk Storage system upgrades for NYC DEP Coney Island.

- Provided DSDC services including review/ processing of submittals (Shop Drawings and RFI's) attend progress meetings, coordinating with resident engineering/ inspection team, addressing/resolving field issues during construction, and review/processing of Change Orders for Great Neck Water Pollution Control District Waste Water Treatment Plant improvements and expansion to 5.3 MGD.

- Evaluated physical conditions of pumping systems, force mains and associated process equipment (assets) for the assets ability of to meet operational requirements now and in the future to provide a cumulative risk rating that can be used to identify priority asset groups for capital project improvements.

- Managed a multi-disciplined team (Mechanical, Structural, and Electrical) for cumulative risk assessment for over 60 pumping stations (CFN and CFS) for NYCDEP.

- Performed desks top assessments of NYC DEP BWT force mains for CFN and CFS based upon physical condition, performance and criticality to the system.

- Prepared detailed construction cost estimates for the Integrated SCADA Systems, pumping station, and regulator chamber upgrades for the Tallman Island and Red Hook drainage areas.

- Chemical Bulk Storage and Petroleum Bulk Storage system compliance inspection in accordance with 6 NYCRR PARTS 595-599 and 6 NYCRR PARTS 612-614 for NYC DEP Coney Island, Wards Island and Oakwood Beach Waste Water Treatment Plants.

- Prepared cost estimates, plans and specifications for Chemical Bulk Storage and Petroleum Bulk Storage system upgrades for NYC DEP Coney Island, Wards Island and Oakwood Beach Waste Water Treatment Plants.

- Prepared Polymer System design drawings, specifications and cost estimates for the Suffolk County Department of Public Works.

- Prepared drawings, specifications, cost estimates and performed construction inspection for the Great Neck Water Pollution Control District for the following projects:
  - Waste Gas Burner System
  - Primary Digester Mechanical Upgrades
  - Pump Station and Force Main Installation
  - Sludge Hauling Contracts

- Preparing drawings, specifications and construction cost estimates for collection system improvements for the Port Washington Water Pollution Control District.

- Preparing heating and ventilation specifications, drawings and cost estimates for the City of Long Beach and modifications to the City's Bus Garage.

- Prepared liquid waste receiving station design drawings, specifications and cost estimates for the Passaic Valley Water Pollution Control Facilities.

- Inspection of sewer pipe removal, installation, manhole replacement for Entenmann's Bakery/George Weston Bakeries, Inc.

- Collected/analyzed flow meter data and prepared reports for the GNWPCD's inflow study and for the NYC's Coney Island Interceptor Flow Study.

- Prepared cost estimates for NYC DEP's Gowanus wastewater pumping station facilities upgrade, which included structural, mechanical, process, HVAC and plumbing work totaling $55 million.

- Field measuring to prepare as-builts for the Gowanus Pumping Station.

- Involved with all aspects of the Facilities Plan for the Gowanus Facilities Upgrading, including incoming flow monitoring, as-builts and preliminary hydraulics.

- Guest lecturer on ventilation design for wastewater treatment plants for Manhattan College and guest lecturer on aerobic digesters for Brookhaven National Laboratory.

JOINT VENTURE

MICHAEL J. SCOLPINO

Professional Experience

Mr. Scolpino is a Construction Inspector with 29 years of experience in civil/mechanical engineering. His areas of expertise include concrete structures, water main and sewer construction, water treatment plant construction and HVAC. Mr. Scolpino's specific experience is summarized below:

CONSTRUCTION INSPECTOR

Construction Management Services for Various BWT Locations

- This contract is to assist BWT in developing and implementing a Construction Management Program. This unique project requires coordination with multiple engineering sections, as well as operations at all wastewater treatment plants and collection facilities located in NYC area. The project includes on-call work requiring overnight and weekend emergency response.

- Mr. Scolpino served as senior inspector on these projects where his responsibilities included day-to-day field inspections of civil and mechanical work performed, preparation of electronic inspection reports, coordination with contractor, identify and track potential issues, and assisting Resident Engineers.

Construction Management Services for Miscellaneous Projects in the Downstate Area (CTYWDCM-3B) - New York City Department of Environmental Protection (NYCDEP)

Assignments include:

- Oakwood Beach Wastewater Treatment Plant (WWTP) 5KV Substation Reconstruction (Contract OB-125) contract in Staten Island ($15 million)

- Port Richmond WWTP Boiler Upgrade (Contract PR-113) contract in Staten Island ($27 million);

- Orchard Beach Pumping Station Replacement in the Bronx ($2.7 million)

- Mr. Scolpino served as senior inspector on these projects where his responsibilities included day-to-day field inspections of work performed by general/mechanical/ electrical contractors, pro-active coordination with the utility companies and regulatory services, preparation of inspection reports, track shop drawings, coordination with contractor, identify and track potential issues, and assisting Resident Engineers. Mr. Scolpino was also responsible for the coordination of RFIs, change orders and shop drawing approvals. He worked on processing all payment requests submitted by contractors and prepared as-built drawings as per field conditions.

Certifications

New York City Construction Superintendent

Specialized Training

10 Hour OSHA Construction Safety Course

7 Hour Site Safety Managers Course

Supported Scaffold Training

EPA - Lead Renovation, Repair and Painting Course

Years Experience

29

Office Location

Woodbury, NY

Queensbridges Houses – New York City Housing Authority:

- Replacement of 18, 250HP gas fired steam boilers in six plants, consisting of two phases. Each plant included excavation, shoring, cutting of areaway and foundation walls, rigging of boilers, rebuilding of walls and backfilling excavations, scheduling and monitoring the rebar and concrete inspections. Work also included the rebuilding of the entire boiler room steam system and installation of new electrical systems for power, lighting and boiler panels.

- Worked on the coordination of all steam and domestic water shutdowns with the development managers and borough heating divisions.

- Responsibilities included conducting weekly toolbox safety talks with the project foreman, performing site safety walkthroughs. Scheduling of rebar, concrete and compaction inspections. Filling out daily reports, contractor sign-in sheets, as well as reviewing contractor's monthly requisition and payroll verification reports.

MEP/GENERAL SUPERINTENDENT

Zinc Building – 21 Condominium Units, Including 3 Duplex Units:

- MEP Superintendent, whose responsibilities included the coordination of mechanical trades for a new eight story building. In addition, completed the second half of project as an assistant general superintendent, including punch list and tenant closeouts.

School of Visual Arts – 36 Unit Dormitory:

- Responsibilities included the inspection of all mechanical work and assurance of all code and specification compliance.

Gansevoort Hotel – 18 Story Hotel:

- Reviewed and expanded the scopes for all MEP trades.

- Managed the MEP coordination meetings, as well as performing mechanical superintendent duties.

International Toy Center and 20 Exchange Place, New York City:

- Supervised disconnects and removal of all existing plumbing, sprinkler, HVAC and electrical systems, as well as general demolition of the commercial tenant spaces for conversion to residential use.

- Coordinated ACM removal and air-monitoring.

- Helped develop and expand scopes and specifications for all MEP trades.

JOINT VENTURE

db | KSE

KHOSROW NAMDAR, P.E. (NORMAN)

Professional Experience

Mr. Namdar is a Structural Engineer with over 42 years of design, construction and project management experience in wastewater treatment plant and pumping station designs, steel and concrete building structures design.

As a Senior Engineer, Mr. Namdar is responsible for managing and directing the structural design of projects and the complete development of plans and specifications for the conceptual, preliminary, and final phases of structural design and rehabilitation for maintenance facilities, municipal and industrial buildings, and water and wastewater facilities. He is also responsible for contract compliance, budgets, schedules and the coordination of project disciplines.

Prior to joining the firm, Mr. Namdar has experience working on the following projects:

New York City Department of Environmental Protection (NYCDEP)

- Gowanus Pumping Station Facility Upgrades, Brooklyn, NY – Structural Engineer responsible for evaluating the existing facilities and planning the demolition of an existing building and existing brick tunnel. Provided detailed analyses and designs for a new building and for the revision and extension of an existing wastewater pumping station and below grade concrete chambers. A system of "jet grouting" was used for dewatering excavated areas.
- Oakwood Beach Wastewater Treatment Plant, Staten Island, NY – Structural Engineer responsible for the design, modifications and additions to an existing concrete chlorine tank at the treatment plant.
- Reconstruction of Delaware Aqueduct Shafts 9,10 and 17, Westchester and Putnam Counties, NY – Structural Engineer responsible for extensive peer review of structural drawings and design calculations for several new structures and additions to existing structures. Also designed a new retaining wall system.
- Reconstruction of Pumping Stations at Cross River Dam and Croton Falls Dam, Westchester and Putnam Counties, NY – Structural Engineer responsible for developing design documents for new platforms and pump support frames in the existing Cross River Shaft 13 building, for a new pump station building at Croton Falls.

Mr. Namdar also has engineering experience with many other agencies, towns and municipalities such as:

- Locust Valley Water District, Locust Valley, NY – Structural Engineer responsible for coordinating design and site inspection services during the construction of a new addition to the existing Locust Valley Water District building.

- Village of Northport, Northport, NY – Structural Engineer responsible for coordinating the design and preparation of foundation drawings for sand and salt storage structure.

- New York City Supreme Court Building, New York, New York – Provided repair and rehabilitation details, including replacement of portions of concrete slabs, repair of cracked and spalled concrete and repair of deteriorated steel framing.

- Great Neck Water Pollution Plant Control District, Wastewater Treatment Plant, Great Neck, New York – responsible for completing constructability review report for engineering drawings, and proposing revisions and additions to the drawings contents.

- Wastewater Treatment Plant Upgrade, Northport, New York – Structural Engineer responsible for coordinating the design and the preparation of drawings and specifications for a reinforced-concrete equalization tank, supported on pressure-injected auger-cast piles.

- William Gallo Bulkhead, Asharoken, New York – Structural Engineer responsible for evaluating an existing rock wall/bulkhead and designing a new rock wall to protect beachfront property.

- Pulaski Street Parking Garage, Glen Cove, New York – Inspection and assessment of a parking level and physical condition of the floor, loading condition of the floor, loading condition and structural analysis of third floor elements to evaluate their capacity to safely support expected loads, based on New York State Building Codes.

- William Gallo Bulkhead, Asharoken, New York – Structural Engineer responsible for evaluating an existing rock wall/bulkhead and designing a new rock wall to protect beachfront property.

As a Project Structural Engineer, Mr. Namdar was responsible for design services, the preparation of working drawings and specification, and multidisciplinary coordination for the construction of commercial and industrial buildings, telecommunications facilities, office buildings and building additions. While in this role, Mr. Namdar's responsibilities included but are not limited to the following:

- Design of high rise buildings.

- Dynamic analyses of the structures for seismic forces.

- Design of power plants structures, equipment foundations and pipe supports.

- Cast-in-Place Concrete and Structural Steel Framing.

JOINT VENTURE

MICHAEL NEUBERGER, P.E.

Professional Experience

Mr. Neuberger has been responsible for design and construction management duties related to power, control, and instrumentation systems for municipal wastewater treatment facilities, sewage pump stations, and water supply facilities. Projects and duties of specific interest are as follows:

- Electrical Project Engineer for the design of the Wards Island Grit and Screenings Facility for the New York City Department of Environmental Protection, including extension of the existing plant 4 kv distribution; an outdoor double-ended 1.5 MVA unit substation; motor control center; and process controls for the odor control system.

- Electrical Project Engineer for the design of secondary grit and sludge screening facilities for the Passaic Valley Sewerage Commissioners (PVSC), Newark, NJ, including process control systems, P&IDs and integration into plant SCADA systems.

- Electrical Project Engineer for design of an odor control facility at the Cedar Creek Water Pollution Control Plant for the Nassau County Department of Public Works, including process controls, ventilation controls, motor control center, fire alarm system, and intercommunication system.

- Electrical Project Engineer for the design of a packed tower aeration system for the Town of Hempstead, NY, at their Levittown Water District for Wells 5A and 6B, including packed tower control system; chemical treatment control system; primary electrical service; diesel engine standby generator set housed in a walk-in enclosure; and reduced voltage solid state motor starters for the well and booster pumps.

- Electrical Resident Engineer for the construction of a sludge dewatering facility at the Middlesex County Utilities Authority, Sayreville, NJ, including coordinating digital and analog alarm and status inputs from the process equipment to the new RTUs (Remote Terminal Units) for the existing plant distributed data acquisition system; verification of conformance of alarm and status indications with contract documents (specifications, drawings, P&ID diagrams); integration of PLC based and analog based process control equipment; and extensive contact with both electrical contractor and instrumentation systems subcontractor.

- Construction management for the implementation of an Allen-Bradley PLC based control system for effluent backwash control at the Somerset Raritan Valley Sewerage Authority, NJ, including shop drawing review of the integrated control system, and electrical construction inspection.

- Energy studies for LIPA as their Technical Advisor for their Year 2000 Energy Conservation Initiative. Supervision of energy study reports for both facility upgrades and new construction, including evaluation of proposed energy conservation improvements and economic analysis.

In addition, his assignments have included:

- Design and construction management for a PLC-based SCADA system for the Port Washington Water Pollution Control District, NY. The system is comprised of RTUs at 15 remote pumping stations communicating with a central station computer.

- Design of Continuous Emission Monitoring (CEM) systems for sewage sludge incinerators for the Westchester County Department of Public Works, NY, and the Port Washington Water Pollution Control District, NY. Duties included preparation of plans and specifications, design of data acquisition computer systems, and integration with facility process controls.

- Design of an air monitoring system for hydrogen sulfide at the odor threshold level for the Westchester County Department of Public Works, NY, including a meteorological station; data logging equipment; and a data acquisition computer system.

- Electrical power and control systems design of municipal wastewater treatment facilities for the Southwest Sewer District, Suffolk County, NY; and the Westchester County Department of Public Works, NY. He has also participated in field services for municipal wastewater treatment facilities for Long Beach, NY; the Great Neck Water Pollution Control District, NY; the Port Washington Water Pollution Control District, NY; and Somerset Raritan Valley Sewerage Authority, NJ.

- Electrical power and control systems design of municipal sewage pumping facilities for the New York City Department of Environmental Protection and the Nassau County Department of Public Works, NY, including: preparation of plans and specifications for the rehabilitation of existing radio and telephone telemetry systems; and design of constant speed and variable speed sewage pump control systems.

- Electrical power and control systems design of water supply facilities for the City of Long Beach, NY; Port Washington Water District, NY; Town of Hempstead, NY; Village of Albertson, NY; Village of Mineola, NY; and the Village of Williston Park, NY.

- Standby generation facility designs. Duties included preparation of plans and specifications for the installation of new diesel and natural gas generator sets, design of automatic and manual load transfer schemes, and construction management (shop drawing review, witness load tests). Projects included pumping stations for the Port Washington Water Pollution Control District, NY; the Great Neck Water Pollution Control District, NY; Town of Hempstead, NY; the Nassau County Department of Public Works, NY; the Village of Massapequa Park, NY; and the Village of Williston Park, NY.

Mr. Neuberger has experience in high voltage distribution design of overhead and underground facilities up to 138 kv. His responsibilities included the computer and manual modeling of voltage profiles, load flow analyses, fault analysis, field data acquisition and analysis, and cost benefit analyses of engineering alternatives for the replacement and upgrading of distribution and substation equipment. He has also performed detailed design of high voltage overcurrent protection systems, and field construction engineering services.

JOINT VENTURE

MILFORD ALEXANDER

Professional Experience

Mr. Alexander is a Construction Inspector with 16 years of experience in Civil/Structural Engineering. His areas of expertise include concrete structures, water main and sewer construction, highways, bridges, buildings, landfills, and water treatment plant construction.

Since joining Dvirka and Bartilucci Consulting Engineers, Mr. Alexander has been responsible for inspecting the reconstruction of existing roadway made of reinforced concrete and asphalt pavement. This work includes: demolition and removal; grading and compaction; shoring and excavation; installation of formwork; placing of reinforce concrete pavement and curb; maintenance and protection of traffic using various traffic control devices; pavement markings; rehabilitation of reinforce concrete weir located below street level; along with this there was the placing, grading and compaction of asphalt pavement to line and grade.

Mr. Alexander inspected the laying and pressure testing of 10" diameter steel pipe in underground tunnel; repairing 4" diameter steel pipe, broken water main; demolition and installation of scum trough and collector drive motors, at various waste water treatment plant, primary settling tanks.

Mr. Alexander monitored the emergency bypass pump/diesel generators at various Department of Environmental Protection Plant Pumping Stations in the aftermath of Hurricane Sandy.

Mr. Alexander is responsible for tracking quantities of various civil/mechanical field construction line items; providing daily upgrades on various emergency work using an electronic communication system; liaison with contractor and client concerning various field construction activities; taking daily progress photograph; ensuring that the contractor was performing field work according to contract drawings and specifications and; generating a computerized daily Inspector's Report.

Mr. Alexander's experience as Construction Inspector includes:

<u>NYC Department of Environmental Protection</u>

Construction Management Services in Connection with Miscellaneous_Projects at Various Bureau of Wastewater Treatment Location

Mr. Alexander was responsible for the inspection of various projects at numerous BWT locations including the Replacement of 57 Tide Gates Citywide project. This work involved multiple layers of coordination including DOT and Port Authority permitting, tidal and low flow wastewater work limitations, gas monitoring and many others. The work was constrained by an EPA consent order and the schedule was met. Mr. Alexander was a Sr. Inspector on this assignment.

malexander@db-eng.com

Region 10, Long Island – New York State Dept. of Transportation

Duties included:

- Inspect the cleaning, repairing, rebuilding and replacing of existing drainage structures.
- Restoration of landscape, rigid and flexible pavement.
- Maintenance and protection of traffic.

Upgrade of Road and Bridges on I-95 NYS Thruway

Duties included:

- Inspecting the removal and construction of asphalt and concrete pavement, concrete barriers, culverts, drains, bridge deck repairs, traffic signs, pavement markings, wood and metal fencing, guiderails, landscaping and painting.

NYCDEP - Bowery Bay Water Treatment Plant Upgrade

Duties included:

- Inspecting the demolition and construction of various structures made of reinforce concrete, structural aluminum, structural steel, and fiberglass reinforce plastics.
- Structures such as sub stations buildings, fifty feet high process air tower, baffle walls, wet wells, topping slabs, overhead support of 60"Ø process air pipe and electrical conduits, concrete and asphalt pavements, foundation pad and the driving of 10"Ø hallow steel piles.
- Other duties involved, the tracking of time and material quantities for various change order work, the taking of daily progress photographs, generating a daily report, preparing payment and the reviewing of as built drawings.

Pennsylvania Avenue Landfill Project in Brooklyn, NYC.

Duties included:

- Civil and Electrical Inspection Services.
- Inspect the laying of precast concrete pipes, box culverts, and the pouring of various reinforce concrete structures.
- Excavation and shoring of trenches, erection of steel cofferdams adjacent to beach areas; the construction of revetment, sediment ponds, silt fences; and interceptor trench for leachate system.
- Installation of extraction wells, high-density polyethylene pipes, flare stack, hydrants, geomembrane liner, geotextile fabric, gabions, reno mattresses, telephone and electrical cables.

Other project responsibilities as Construction Inspector for various projects include:

- Site inspection for the upgrade, replacement and remediation of underground storage tanks containing hazardous material at various TBTA facilities.
- Site inspection during the restoration of the Concrete Bridge Deck of the Tappan Zee Bridge.

JOINT VENTURE

ABDELHAMED A. ALI

Professional Experience

Mr. Ali's professional experience includes the following:

NYCDDC - E. Houston Rehabilitation – Senior Inspector

The project included the placement of different size of water main pipes, wet connections, service connection, water trunks, sidewalk construction, concrete and granite curb, concrete placement, electric conduits and traffic signals installations, the construction of new four lane roadway pavement, traffic control MPT. Tasks included office work such as reviewing of change order submittals and reviewing shop drawings, processing contractor's monthly payments and attending contract progress meetings.

NYCDOT Green Point Bridge Rehabilitation -Senior Inspector

The contract involved with the removal of the existing steel grid deck and replacement with a precasted steel grid concrete deck. The work also included steel members repairs and replacements, traffic control MPT. The tasks included office work such as reviewing of change order submittals and reviewing shop drawings, processing contractor's monthly payments and attending contract progress meetings.

NYSDOT LIE Bridges Expansion Joints Replacements - Chief Inspector

The project involved with the removal of the existing steel expansion joints of 32 bridges over the Long Island Expressway (LIE) and replacement with elastomeric joints. The work included construction concrete removal, steel joints removal, structure concrete placement, bridge jacking system ,removal and replacement of bridge bearing, traffic control MPT. The tasks included office work such as reviewing of change order submittals and reviewing shop drawings, processing contractor's monthly payments and attending contract progress meetings.

NYSDOT BQE Roosevelt Avenue Roadway Reconstruction - Senior Inspector

The project involved new roadway concrete and asphalt pavements, concrete full depth roadway repairs, sidewalk construction, concrete curb, concrete placement, electric conduits, traffic signals installations, the installation of the ITS camera system, fiber optic conduits installations drainage and catch basin work, MPT traffic and office work. Tasks included office work including reviewing of change order submittals and reviewing shop drawings, processing contract monthly payments, and attending contract progress meetings.

NYSDOT, Route 9A, Where and When Maintenance Repairs – Chief Inspector

The project involved concrete full depth roadway repairs, sidewalk construction, concrete curb, concrete placement, electric conduits and traffic signals installations,

the installation of the ITS camera system, fiber optic conduits installations drainage and catch basin work, MPT traffic and office work. Tasks included supervising the inspection team during execution of the above activities. Office work included reviewing of change order submittals and reviewing shop drawings, processing contract monthly payments, and attending contract progress meetings.

NYCDOT, Rehabilitation of the Queensboro Bridge - Senior Inspector

Project involved steel member replacement, roadway deck repair; concrete deck foundation placement, expiation joints installations, construction of bridge's new drainage system, manholes, basin, electric and utilities work. Tasks included field inspection, office work included O.O.C. reviews, and monthly payment progress.

NYSDOT, Belt Parkway Sign Structures and Reconstruction, Brooklyn – Chief Inspector

Project involved encompassing the construction of new 14 overhead sign structures. Project also included excavation work, concrete forms, reinforced concrete placement, and steel erection of the proposed sign structures, drainage system installations and electric work. Tasks included field inspection and office work included change order reviewing, shop drawing reviewing, and attending contract progress meetings.

NYC Transit Authority, 240th Street, Subway Yard Rehabilitation, Bronx – Field Design Support

Project involved new steel members erecting, steel repair work ,installation of jacking system, concrete slab removal and reconstruction, retaining wall building and street painting, drainage, water main and utilities work. Duties included field inspection, shop drawing review and change order submittal.

NYCDOT, Williamsburg Bridge, Reconstruction of the Northern Roadways - Team Leader

Project consisted of the demolition and reconstruction of four northern roadway lanes on the bridge approaches and main span and included the removal of the existing structure of excavations, new foundations, concrete placement of columns, pier caps, structural steel erection, the grid deck, new concrete deck placement, the installation of new drainage system and utilities including the inspection of installation of new electric conduits, cables, junction boxes, light poles, the installation of the ITS camera system, fiber optic conduits and steel surface painting. Tasks included field inspection and office work such as changed orders and shop drawing, processing monthly payments, and attending progress meetings.

NYSDOT, Rehabilitation of the Atlantic Bridge, LI, NY- Chief Inspector

Project involved new concrete deck placement, steel members replacement, the installation of jacking system, the installation of the bridge's new drainage system, electric work, bridge steel structure panting. Marine work included the construction of new bulkhead and piers. Tasks included supervision of the inspection team, office work O.O.C., shop drawing review, monthly payments, and progress meetings.

NYSDOT Region 10, Rehabilitation and Painting of Robert Moses Bridge, NY – Chief Inspector

Project involved maintenance and protection of traffic, rigging and scaffolds, bridge's steel structure painting including surface preparation and primary paint coat application, intermediate and finish coats. Led inspection team in performance of painting inspection. Tasks included field inspection for the above contract work, office work, monthly payments, and progress meetings.

JOINT VENTURE

JOSEPH F. BAADER

Professional Experience

As a member of the firm with over 40 years of experience, Joseph Baader has served as Construction Cost and Change Order Specialist for many NYCDEP and other municipal client wastewater treatment plant and pumping station projects. As a result, Mr. Baader is familiar with all civil, process, structural, architectural, electrical, HVAC and mechanical systems and equipment related to the water and wastewater industry. Other types of projects where Mr. Baader has provided these services include transmission lines, distribution systems, sewage collection systems and storage tanks.

Mr. Baader has performed the following duties related to the construction projects described below:

- Prepared detailed construction cost estimates for the preparation of engineer's estimates prior to bidding.
- Analyzed bidding results.
- Acted as Owner's representative in negotiating change orders and construction costs with contractors.
- Developed a cost control system to allow the resident engineering staff, design engineers, Owners and construction managers to analyze and respond quickly to field conditions reflecting cost changes.
- Assisted other Contract Change Control Engineers in preparing cost analysis.
- Maintained project cost files.
- Designer, Project Engineer and Cost Estimator on the rehabilitation of 20 NYCDEP pumping stations.
- Prepared construction cost estimates for improvements to the Bergen Point WWTP sludge dewatering and storage project.
- Designer and Cost Estimator on the $80 million NYCDEP Gowanus Facility Upgrade which included major process, mechanical, structural and architectural work.
- Project Manager and Construction Administrator on construction of two mile long 10-inch high density polyethylene force main project using open trench and horizontal directional drilling techniques for Entenmann's Bakery, Bayshore, New York.
- Chief Cost Estimator on the NYCDEP SCADA System Design for all pumping stations, regulator and waste water treatment plants.

- Field representative on the construction of the temporary and permanent land based and subaqueous City Island force main for the New York City Department of Environmental Protection.

- Cost Estimator on $20.6 million replacement of the 12,000 lineal foot City Island force main between City Island and the Bronx mainland. The project involved design of land based piping and valve chambers, the subaqueous installation of temporary and permanent high density polyethylene piping and the retrofitting and replacement of the existing pumping station's main sewage pumps.

- Construction Manager and Cost Engineer on the upgrade of the Merrick Avenue, Wantagh Park, Alhambra Road and Biltmore Boulevard pumping stations representing a total of $6.0 million in construction for the Nassau County Department of Public Works.

- Cost estimating engineer on the $4.5 million upgrading of the Conner Street and Ely Avenue Pumping Stations for New York City Department of Environmental Protection.

- Designer, Inspector and Cost Estimator on upgrade of Entenmann's Wastewater Pumping Stations including the Main Lift Pumping Station, Bakery Wastewater Pumping Station, Cooling Water Pumping Facility and various sanitary wastewater submersible pumping stations.

- Designer, Inspector and Cost Estimator on the upgrade of the Bayview Avenue, Manhasset Valley and Grist Mill Pumping Stations for the Great Neck Water Pollution Control District. Project involved design of a variable speed system and complete rehabilitation of all mechanical equipment.

- Designer and Estimator on the $22 million expansion of the 4.0 mgd Trickling Filter Plant for Port Washington Water Pollution Control District, New York. Project also included interceptor sewers and complete rehabilitation of two existing pumping stations.

- Design Project Manager and Cost Estimator on the $2.2 million City of Long Beach, Modifications to City Garage, project. Work included a feasibility study and preparation of contract documents for both interior and exterior upgrading of this Bus and Vehicle Maintenance Facility with employee areas.

- Designer and Estimator on the $13 million addition to the Sludge Handling Facilities for Somerset Raritan Valley Sewerage Authority, New Jersey, Project including a new incinerator, rehabilitation of pumping stations, new storage tank and belt press sludge dewatering facilities.

- Designer, Inspector and Estimator on the $28 million expansion of the 4.0 mgd Trickling Filter Plant for Great Neck Water Pollution Control District, New York. Project included force mains, pumping stations, interceptor and outfall sewers.

- Designer and Estimator on the $5 million addition to Sludge Handling Facilities for Northwest Bergen County Utilities Authority, New Jersey. Project included a new 13 ft. diameter fluidized bed sludge incinerator, a truck-in sludge receiving station and a sludge storage tank.

- Designer and Estimator on the Portland-Pomfret-Dunkirk $3 million Sanitary Sewer and Pumping Station Project. Project included construction of sanitary sewers and five pumping stations.

- Designer and Estimator on the $10 million project for sewering the Central Chautauqua Lake Sewer District, New York. Project also included six pumping stations.

JOINT VENTURE

GARRETT M. BYRNES, P.E.

Years Experience
14+

Office Location
Woodbury, NY

Contact
gbyrnes@db-eng.com

Professional Experience

Mr. Byrnes has more than 17 years of experience in the planning and design of wastewater conveyance and treatment facilities for various municipal clients. His detailed experience includes the following:

- New York City Department of Environmental Protection: Gowanus Facilities Upgrade / Brooklyn, NY. Project Engineer for the $60 million upgrade of the Gowanus Wastewater Pumping Station Gowanus Canal Flushing System. The wastewater pumping station upgrade includes expansion to a design capacity of 30 mgd, construction of a 200 mgd CSO screening system, and installation of a 5,500 linear foot force main. The flushing system upgrade includes a screening chamber, hydraulically optimized intake chamber, and three vertical, axial flow, submersible pumps with a design capacity of 300 mgd. Mr. Byrnes' responsibilities included the evaluation of upgrade alternatives, oversight of hydraulic modeling, design of the wastewater and flushing pump systems, modeling of odor emissions, preparation of a facility plan, and the development of contract drawings and specifications.

- Nassau County Department of Public Works: Bay Park WWTP – Modifications to Influent Pumping System / East Rockaway, NY. Project Engineer for the $6 million upgrade and reconstruction of the influent pumping system for a 70 mgd wastewater treatment plant. Mr. Byrnes' responsibilities included flow monitoring, evaluation of upgrade alternatives, preparation of a technical design report, preparation of maintenance of plant operations procedures, and development of contract drawings and specifications.

- New York City Department of Environmental Protection: Reconstruction of Storm Water Pumping Stations, Bronx, NY. Project Manager for the planning and design of the $15 million reconstruction of the Jerome Avenue, Metcalf Avenue, 233rd Street, and White Plains Road storm water pumping stations with design flows ranging from 2 to 20 mgd. Mr. Byrnes' responsibilities included the determination of design flows, evaluation of upgrade alternatives, preparation of facility plans, cost estimating, and development of contract drawings and specifications.

- New York City Department of Environmental Protection: Reconstruction of the Port Jervis Wastewater Treatment Plant and Pumping Stations, Port Jervis, NY. Project Manager for the planning and design of the $25 million upgrade and reconstruction of an existing 2.5 mgd wastewater treatment plant and three sanitary pumping stations. Mr. Byrnes' responsibilities included coordination with regulatory agencies, assessment of existing conditions, evaluation of upgrade alternatives, preparation of a facility plan, cost estimating, and the development of contract drawings and specifications.

- New York City Department of Environmental Protection: Coney Island Water Pollution Control Plant – Chemical and Petroleum Bulk Storage System Upgrades, Brooklyn, NY. Project Engineer for the $8 million upgrade of facility wide chemical and petroleum bulk storage systems to attain compliance with regulatory requirements. Mr. Byrnes' responsibilities included the evaluation of existing conditions and the development of contract drawings and specifications.

- Westchester County Department of Public Works: Yonkers Joint Wastewater Treatment Plant – Sludge Thickening Upgrade Projects, Yonkers, NY. Project Engineer for the planning and design of $4 million in upgrades to existing sludge thickening systems, including the complete upgrade of the existing primary sludge gravity thickening system and the installation of a new secondary sludge gravity belt thickening system. Mr. Byrnes' responsibilities included the preparation of technical design reports, cost estimates, contract drawings and specifications, and construction oversight.

- Bridgeport Water Pollution Control Authority: West Side Wastewater Treatment Plant – Dechlorination Facilities, Bridgeport, CT. Project Manager for the planning and design of a $0.7 million dechlorination system for a 30 mgd wastewater treatment plant to ensure consent order compliance. Mr. Byrnes' responsibilities included the evaluation of dechlorination alternatives, preparation of an engineering report, development of contract drawings and specifications, and construction oversight.

- Suffolk County Department of Public Works: Bergen Point WWTP – Sludge Treatment and Disposal, West Babylon, NY. Project Engineer for the upgrade of existing sludge treatment and disposal systems, including the installation of a new sludge blending system and belt press dewatering system. Mr. Byrnes' responsibilities included the design of sludge pumping and blending systems.

- New York City Department of Environmental Protection: Neptune Avenue Pumping Station, Coney Island, NY. Project Engineer for the planning and design of a 45 mgd sanitary pumping station and dual force mains. Mr. Byrnes' responsibilities included the evaluation of alternative sites, flow monitoring, modeling of odor emissions, and preparation of a facility plan.

- Bridgeport Water Pollution Control Authority: East Side Wastewater Treatment Plant – Odor Abatement Study, Bridgeport, CT. Project Manager for the study of odor emissions from a 12 mgd wastewater treatment plant. Mr. Byrnes' responsibilities included the oversight of a facility wide odor survey, modeling of odor emissions via the USEPA's ISC-ST3 dispersion model, and the evaluation and recommendation of odor containment and treatment systems.

- New York City Department of Environmental Protection: City Island and Marble Hill Pumping Stations, Bronx, NY. Project Engineer for the $10 million upgrade and reconstruction of the 1.5 mgd City Island Pumping Station (sanitary) and the 15 mgd Marble Hill Pumping Station (combined sanitary/storm water). Mr. Byrnes' responsibilities included the evaluation of upgrade alternatives, flow monitoring, cost estimating, preparation of facility plans, development of contract drawings and specifications, and design services during construction.

- New York City Department of Environmental Protection: City Island Force Main, Bronx, NY. Project Engineer for the $20 million installation of a 10,500 linear foot subaqueous wastewater force main performed in two phases as an emergency contract. Mr. Byrnes' responsibilities included the evaluation of the existing force main, determination of cause of failure, investigation of force main installation method alternatives, development of contract drawings and specifications, and construction oversight.

JOINT VENTURE

PETRONILO IBADLIT

Professional Experience

Mr. Ibadlit is a very experienced inspector who brings to the table years of practical experience gained from coordinating and monitoring contractor performance. He has excellent credentials as a project administrator having being responsible for successful completion of many projects in his career. Mr. Ibadlit's professional experience includes:

Electrical Inspector - Project: $150 million Avenue V Pumping Station Upgrade, Including the New Pumping Station and Avenue V Force Main Project, Borough of Brooklyn, NYC

The project consists of upgrading the Avenue V Pump Station and is divided into several stages of work. First installing a temporary submersible pumping system in regulator AVI, Bypass Manhole 2 will encapsulate the 36-inch sanitary line, Bypass Manhole 1 and a wet well extension, removal of the bypass pump system, new wet well extension, new generator fuel tank vault, new generator building, storage building and underground fuel tank, installation of underground utilities, site grading, paving and landscaping. Installation of the bypass channel, Bypass Manhole 3 and a connection to the wet well, shut down the old pump station and construction of the new pump station.

Mr. Ibadlit is responsible for technical review of engineering packages comprised of following systems: power distribution and equipment, illumination, fire alarm and protection, lightning protection and grounding, monitoring and security, data/voice communication and cathodic protection system. Perform engineering and commissioning using PANELBUILDERS 32, QUANTUM, FAUNC, WONDERWARER, MATH CAD, RSVIEW32, CIMPLICITY, PMCS, and VERSAPRO and perform construction inspection for conformance with design and contract specification. Prepare and implement directives for corrective actions. Evaluate modifications, change orders and prepare recommendations for negotiations and approvals. Coordinate and review the CPM schedule and perform all other inspections and evaluations.

Electrical Engineer - Project: DEP Hunts Point Water Pollution Control Plant, Bronx, New York

As an Engineer/Inspector, Mr. Ibadlit was responsible for review and approves electrical and mechanical installation for the sewer treatment facilities; review field changes, assist owner's representative to review invoices and contract change order. He was also responsible for coordinating with owner's representatives, Electrical Consultant and Contractor to ensure quality project closeouts, including timely completion of punch list and resolution of claims. Mr. Ibadlit was responsible for testing and startup of various electrical and mechanical systems during turnover for owner's final acceptance.

PETRONILO IBADLIT

Electrical Field Engineer – Various Projects: Metro North Railroad, Croton Station, Westchester County, New York; LIPA Generation Project, Bethpage, NY - 49 Megawatt Gas Turbine Power Plant, New York; NY Power Authority, NYC, Harlem River 100 Megawatt Gas Turbine Power Plant

Mr. Ibadlit was responsible for the installation of 13.2 KV transmission line and switchgears, testing and startup; managing the electrical and mechanical contractors. During bid process, his responsibilities included: takeoff estimates and pricing, review of vendor's bid, presentation of bid to owner representatives, final negotiation upon being named an apparent low bidder. During construction, he reviewed and supervised contractor's performance, reviewed and approved monthly invoices, acted as interface with Engineering Consultants and owner's representative to resolve field condition issues and numerous change orders. He was also involved in negotiation of contractor's claims for scope changes.

Field Engineer/Inspector - Project: DEP Newtown Creek Sewer Treatment Plant

As a field Engineer/Inspector, Mr. Ibadlit was responsible for reviewing and approval of electrical and mechanical installation for the sewer treatment facilities and administration and construction management building; reviewing field changes, assisting owner's representative to review invoices and contract change order. He was also responsible for coordinating with owners' representatives, electrical consultant and contractor to ensure quality project closeouts, including timely completion of punch list and resolution of claims. He was also responsible for testing and startup of various electrical and mechanical systems during turnover for owner's final acceptance.

Project Engineer - Project: Department of Sanitation, Freshkill Landfill Gas and Odor Control Project, Staten Island, New York

Mr. Ibadlit was responsible for construction of 13.2 KV transmission line and three 10 MVA substations and three flare stations. During construction, he reviewed and supervised contractor's performance, reviewed and approved monthly invoices, acted as interface with engineering consultants and owner's representative to resolve condition issues and numerous change orders. He was also involved in negotiations for contractor's claim for scope changes.

Electrical Supervisor/ Inspector – Various Projects: Rehabilitation of Three TBTA Bridges, New York City, New York; Construction of Sludge Dewatering Facilities for the DEP, City of New York, Wards Island, New York; Harlem Hospital Center New Ambulatory Care Bldg., New York City, New York; Metropolitan Hospital, State of the Art Neonatal and Delivery Ward, New York City, NY; Reconstruction of Atlantic Terminal, Brooklyn, New York; Street Reconstruction, Merrick, New York; MTA Bus Depot

Mr. Ibadlit was responsible for construction inspection of repairs to substructure and superstructure of the Triborough Bridge, Verrazano Bridge and Marine Parkway Bridge. His responsibilities included supervision of electrical inspectors, overseeing installation of 10 MVA, 13.2 K/4160V and 10,000 KVA, 4160/480V substations, underground high voltage duct bank, MCC's cables and conduits, testing f electrical equipment and start-up engineer. He was responsible for trade contract coordination and installation of three electrical contracts including the tracking of submittal and responses for RFIs; review payment requisitions for work in place. Mr. Ibadlit was responsible for the demolition and construction of the Neonatal Labor and Delivery Suite, Mechanical and Electrical installation. He was also responsible for record keeping and construction inspection of the excavation, sewer, water and drainage system, curbs, sidewalks, concrete and asphalt pavements, and street landscaping. He was responsible for construction inspection during reconstruction of 7,800 LF local residential roadways and supervised all electrical and mechanical installation at various bus garage rehabilitation projects.

JOINT VENTURE

db | KSE

MICHAEL CARROLL, P.E., CEM

Professional Experience

Mr. Carroll is experienced in design and construction for wastewater, water supply and hazardous waste projects. His duties have included designing electrical distribution, control and instrumentation, lighting and fire alarm systems, as well as inspection, shop drawing review and on-site project coordination.

Experience and duties of specific interest include:

- Design and construction activities for a GAC Building for the Town of Hempstead Department of Water. Duties included electrical distribution system and heating system design, and shop drawing review.
- Electrical inspection of 4.3 KV substation upgrade and electrical installations in NYCEP wastewater treatment facilities.
- Shop drawing review of 480 volt switchgear, motor control centers and instrumentation systems for the Great Neck Water Pollution Control Plant, Great Neck, New York.
- Electrical inspection and in-field coordination of conduit routing and installation at the NYCEP Avenue "V", Bay 16th Street Pump Station, Brooklyn, New York.
- Performed load calculations, lighting conservation calculations, voltage drop calculations, and AIC rating calculations for a multitude of projects.
- Shop drawing review of municipal swimming pool chlorination systems for Nassau County, New York.
- Shop drawing review of equipment in industrial facilities, including specialized sensors and monitors.
- Oversee megger testing of existing 480 volt feeder cables at the Bay Park Sewage Treatment Plant, Nassau County, New York.
- Design of photovoltaic power generation systems.
- Performed detailed analysis of building power consumption and conducted a NYSERDA energy study for updated high efficiency lighting and equipment, including power generating micro-turbines.
- Participated in design and construction meetings to discuss project milestones and address construction concerns.
- Designed a 3D model in Revit MEP to coordinate the installation of mechanical and electrical equipment and devices.

JOINT VENTURE

THOMAS M. VOSTINAR

Professional Experience

Mr. Vostinar has 28 years of experience in the design, implementation, commissioning, maintenance and operation of a magnitude of industrial equipment and controls. Mr. Vostinar also has 25 years experience working with the NYC Department of Environmental Protection (NYCDEP) and 3 years as a consultant engineer.

As a Facility/Construction Manager, Mr. Vostinar was responsible for the daily operations and engineering activities of a multi-million dollar wastewater treatment facility. He participated in the design, implementation, operation, and maintenance of 27kv and 5kv power distribution systems, 5kv power generation and emergency generation systems, HVAC and odor control systems, pneumatic and hydraulic systems, fluid distribution systems and electronic monitoring and controls systems was essential to ensure uninterrupted operation of facility. His duties included the preparation and review of the facility's budgetary needs for capital and expense requirements; coordination and supervision of the facility's Environmental, Health and Safety Program and safety training, ensuring compliance with Federal and local regulatory agencies; identification and implementation of improvements to the facility's operational and maintenance procedures by applying new technologies and standards; and directly managing the preventive and corrective maintenance of facility's electrical and mechanical systems.

As a Construction/Commissioning Engineer, Mr. Vostinar performed various construction activities with a primary role in contractual compliance, equipment acceptance and testing, system commissioning and project startup. His responsibilities included working in conjunction with Construction Management and Contractors to assist in the design, planning and scheduling of electrical, mechanical and process control systems.

Mr. Vostinar's professional experience includes:

NYCDEP, North River WPCP - Plant Operations Emergency Restoration Commissioning/Startup Engineer

Mr. Vostinar performed emergency services work and restored operations to the North River WWTP after a fire severely damaged the main sewage pumps, process air blowers, influent screening systems, the associated power, control and auxiliary systems, and the necessary life support systems which included the fire alarm, gas detection and communication systems.

Mr. Vostinar was responsible for system restoration of power distribution, life safety, distributed control and HVAC systems as part of the Incident Commanders organizational assignment structure. The primary objective was to assess, prioritize, direct and coordinate all electrical and instrumentation control contractors during the stabilization of the damaged equipment. The subsequent phase was to execute an assessment of the condition and stability of critical equipment and associated

auxiliary systems, and to prepare a determination, defining the scope of temporary electrical work necessary to restore limited operations to the facility and curtail the bypass of raw sewage.

NYCDEP, Hunts Point WPCP - Phase II, Plant Upgrade
Commissioning/Startup Engineer

Mr. Vostinar provided design and construction services for wastewater process control and monitoring system. This included plant-wide instrumentation and distributed control (DCS), medium and low voltage power distribution, power generation, engine/generator instrumentation, synchronization and auxiliary systems. Mr. Vostinar also provided startup and testing technical and engineering support services for electrical, HVAC and process control systems, as well as shop drawing review.

As Project Manager, Mr. Vostinar developed and implemented functionality test procedures utilized to ensure the accuracy and dependability of the SCADA system, without any interruption of plant operations. These procedures resulted in creating a plug and play environment which eliminated the down time of critical process equipment, enhanced the ability to detect and correct control logic issues prior to installation, significantly reduced the installation and commissioning time, and ultimately lead to the recapturing of lost time and the preservation of the project schedule.

NEW YORK CITY DEPARTMENT OF ENVIRONMENTAL PROTECTION - BUREAU OF WASTEWATER TREATMENT

Coney Island Water Pollution Control Plant
Senior Stationary Engineer Electric, Deputy Superintendent

Mr. Vostinar's responsibilities included:

- Preparation and review of the facility's budgetary needs for capital and expense requirements.
- Assisted in the design, planning and scheduling of electrical, mechanical and process control capital project.
- Served as the facility liaison for various construction activities, with a primary role in contractual compliance, equipment acceptance and testing, system commissioning and project startup.
- Coordinated and supervised the facility's Environmental, Health and Safety program and safety training, ensuring compliance with Federal and Local Regulatory Agencies.
- Identified and implemented improvements to the facility's operational and maintenance procedures by applying new technologies and standards.
- Managed the preventive and corrective maintenance of facility's electrical and mechanical systems, utilizing Oracle's Computerized Maintenance Management System.
- Maintained and updated new assets, employee information, and the facility's auto-timesheet within CMMS.
- Responsible for the daily scheduling of a staff of 100+ employees, ensuring adequate staffing for a 24 hour / 7 day operation.

Port Richmond Water Pollution Control Plant,
Stationary Engineer Electric, Maintenance Engineer
Mr. Vostinar supervised the electrical and mechanical activities of various trades, 60+ employees, managed the purchasing and procurement system for inventory and equipment needs, and generated of the corrective and preventive maintenance work orders.

JOINT VENTURE

MICHAEL RODRIGUEZ, AIA, LEED-AP

Professional Experience

Mr. Rodriguez serves as the firm's Director of Architecture. He has extensive architectural design and construction management experience with an exemplary record of performance. His professional experience lies in the planning, design and construction management of new construction, as well as additions, alterations and rehabilitation of projects in public and private sector facilities. He has specialized in school work for the New York City School Construction Authority (NYCSCA) and also other school clients.

Mr. Rodriguez has served as Project Manager for residential high-end high-rise condominiums. His daily duties consisted of interfacing with clients, contractors, and supervision of design team members consisting of in-house and external consultant members. Mr. Rodriguez's responsibilities included initial zoning/code evaluation project management, design development, field inspections, space planning, feasibility studies and the preparation and review of specifications. Mr. Rodriguez blended the efforts of the Design Architect and Architect of Record from design into construction of large scale residential buildings, supervised the staff for the construction administration for a Richard Meier designed building, and started the design and construction integration of an 18 story townhouse building as part of a 5 building new residential development.

Mr. Rodriguez's specific project experience is summarized below:

- Residential - One Prospect Park Brooklyn, NY: Project Manager for 15 story 114 unit residential building. Program consisted of 220 space subsurface garage, 1500 sf recreation space, and rooftop public and private terraces. The building will be structurally one building with the adjacent elevator addition to the Union Temple. Numerous code and zoning special conditions were undertaken and approved. Building will consist of flat plate concrete structure and aluminum glass curtain wall. The building will have 20,000 sf of outdoor space via balconies and terraces.

- Residential - "The Edge" Brooklyn, NY: Project Manager for two buildings in a 5 building complex on is a 17 story 94 unit residential building. Program consisted of 300 space subsurface garage, 3500 sf recreation amenity space, and private terraces. Numerous code and zoning special conditions were undertaken and approved. Building will consist of flat plate concrete structure and aluminum glass and brick window wall. The building will have 20,000 sf of outdoor space via the interior court yards. The second building is a low rise moderate income rental apartment building. The building will be constructed of steel frame concrete plank structural floor and brick and block exterior façade.

- Ports/Piers, Port Newark Container Terminal, New Vehicle Maintenance Building, Newark, New Jersey: Designer responsible for the construction documents and post-design development for the maintenance

building in the redevelopment and rehabilitation of the 155-acre container terminal site. Work included the demolition of ten structures totaling more than 300,000 square feet. New construction included an administration building, a maintenance building, and a dispatch/check-in building for International Longshoremen's Association (ILA) personnel. The 33,000-square-foot maintenance building houses the shops necessary to service the straddle carriers and all other vehicles that operate on the site, and contains four bridge cranes, vehicle lifts, a centralized bulk fluids distribution system, spare parts storage, offices, and locker room facilities.

- Economic Development Corporation, Whitehall Ferry Terminal, New York City, New York: Assisted in the development of contract documents for the new Staten Island Ferry terminal. I worked as part of the architect of record team (TAMS Engineers and Architects). Developed plans, sections and details for the new modern design style ferry terminal. I coordinated the in house staff for drawing production.

- New York City School Construction Authority, Limestone Parapet Restoration of Automotive High School, Brooklyn, New York: Mr. Rodriguez was the Project Manager responsible for the project from scope of work to construction documents, to the restoration of the entire parapet wall, approximately 1400 l.f.

- New York City School Construction Authority, Renovation and Rehabilitation of School PS 134K, Brooklyn, New York: As Project Manager, Mr. Rodriguez was responsible for the project from scope of work to construction documents, including the renovation of the student toilets, installation of wood windows and floor to ceiling gymnasium upgrades. He assembled SCA historic school presentation and managed daily team assignments and the design development and construction documents for the project.

- New York City School Construction Authority, Renovation and Rehabilitation of School PS 10SK, Brooklyn, New York: As Project Manager, Mr. Rodriguez was responsible for the construction documents and assigning daily team tasks. The project scope of work consisted of extensive masonry repair and repainting, concrete repair, parapet wall reconstruction, installation of new railing at roof and interior plaster repair and painting. Mr. Rodriguez conducted site investigations and oversaw progress of construction documents and detail development.

- New York City School Construction Authority, Renovation and Rehabilitation of School PS 142M, Manhattan, New York: Mr. Rodriguez was the Project Manager during construction phase services for masonry repair, lintel replacement, addition of relieving angles, installation of new aluminum windows and curtain wall replacement. He was responsible for meeting management (including construction reports), construction documents compliance, and review of submittals and shop drawings.

- New York City School Construction Authority, Restoration of Newcomers High School, Queens, New York: As Project Manager, Mr. Rodriguez was responsible for the project from scope of work to construction documents for the renovations to the roofing projects, repair to exterior foundation cracking, and construction on new enclosures for three small roofs. Duties also included the coordination of the HVAC upgrades throughout the school. Mr. Rodriguez conducted extensive site investigation work, including site visits, initial drawings of elevations and plans, the development of details from the beginning and from existing details, design development, construction documents, and drawing coordination.

JOINT VENTURE

ROBERT J. DeGIORGIO, P.E., CPESC

Professional Experience

Mr. DeGiorgio has 21 years of experience in environmental and mechanical designs for municipal, industrial, wastewater and hazardous waste remediation projects for government, private and industrial clients. His technical expertise encompasses wastewater, remedial and process design, water supply, construction, startup, operations and maintenance, and storm water management. He has managed and supervised a staff of multi-disciplined engineers for a variety of land development, municipal and water projects.

Mr. DeGiorgio's prior experience includes the following:

Sanitary Wastewater, Water Supply and Sewer Systems:

- City of Long Beach, Pump Station Improvements (2007). Mr. DeGiorgio is the project manager and lead engineer for the rehabilitation of three pump stations in the City of Long Beach. Each pump station is rated for 1 to 2 MGD and requires mechanical, structural, electrical and safety upgrades. Design elements include new dry pit submersible pumps, new emergency generators, valve stations, bypass capability, communitors, sluice gates and safety equipment. The construction value is estimated to be $5,000,000.

- Town of High Falls, New York, Mohonk Road Superfund Site: Water Treatment Plant (2007). Mr. DeGiorgio was retained by Watermark Environmental and the USACE to provide commissioning and oversight services for the start up of this 100,0000 gallon per day municipal water treatment facility. The raw water source is the New York City Croton aqueduct. Raw water is treated with gravity multi-media sand filtration, chemical injection and disinfected with chlorine prior to be pumped for finished water storage. Mr. DeGiorgio oversaw the plant commissioning and verified the system was commissioned in accordance with NYS DOH and Ulster County requirements. This included bacteriological testing, equipment start up and shakedown and final report writing. The construction value on this project is about $22 million.

- Planning, Design and Design Services During Construction for Reconstruction of Four Pumping Stations. Mr. DeGiorgio was the Deputy Project Manager for this New York City Department of Environmental Protection (NYCDEP) effort, which consisted of the development of a facility plan and design for the reconstruction of the Bayswater Avenue, 15th Avenue, 122nd Street and New Douglaston Pumping Stations. In addition, the project included the development of reliable efficient and low maintenance operation for each pumping station and the resulting design services during construction for each pumping station. The following aspects of each pumping station were addressed: influent structures; structural/architectural; mechanical and electrical equipment; safety; discharge force mains; tidal gates; utility service; security; emergency generation and pumping; and telemetry.

Land Development and Municipal:

- United Water, New York, Main Extension Designs. Mr. DeGiorgio was the principal in charge of the design and health department approval for various water main extensions proposed by United Water. The work entailed the design of the extension including valves, hydrants, air relief and specifications necessary for Rockland County Health Department approval. Main extension varied in size from 8 inches to 24 inches and varied in length from 1,000 feet to 10,000 feet.

- WP3 Residential Land Development, Water Supply Design. Mr. DeGiorgio was the principal in charge of the investigation and design of a water supply system for a 450 unit development project in Woodbury, New York. A yield of over 400 GPM of new well water source was developed for the project. The project included two 200,000-gallon storage tanks, three booster stations and approximately 10 miles of water main designed to serve in three primary pressure zones. Wastewater upgrades included the expansion of an existing 100,000 GPD extended aeration plant to a 370,000 GPD membrane bioreactor plant.

Industrial Wastewater:

- Wastewater Treatment Plant. As Project Manager, Mr. DeGiorgio provided engineering and operating services for a 50 GPM wastewater treatment facility. He served as a lead operator by reviewing daily operations, making recommendations to optimize system performance and reviewing as built details. Responsibilities included process review and optimization, operation and maintenance manual preparation, developing preventive maintenance programs, process hazard analysis and operator training.

- NASA, John F. Kennedy Space Center, Florida. Mr. DeGiorgio was responsible for the preparation of technical specifications for a low temperature condensation prototype system for the application of nitrogen tetroxide vapor recovery and emission control during loading and transfer operations.

Storm Water:

- Storm Water Pollution Prevention Planning. Mr. DeGiorgio authored and directed over a dozen storm water pollution prevent plans (SWPPPs) for a variety of land development, wastewater and industrial projects. Areas of disturbance varied from 1 acre to over 500 acres and plans typically included erosion and sediment control design, water quality and quantity assessments and post construction maintenance plans.

Remediation:

- Metro-North Railroad (NY), Construction Management. Mr. DeGiorgio was the Project Manager for the oversight of the construction of a $1,000,000 soil vapor extraction/air injection remediation system. Responsibilities included oversight of the daily construction, monthly reporting, field construction decisions, quality assurance reports and shop drawing review and tracking.

- New York State Department of Transportation, Soil Vapor Extraction/Air Sparging System. Mr. DeGiorgio was the Project Manager for the design, construction, and operation and maintenance of a SVE/AS remediation system at this former UST site. Responsibilities included plan and specifications development for landfill cap system maintenance and sparging system, construction oversight and system operation and maintenance.

JOINT VENTURE

STEPHEN M. DUDAR, P.E.

Professional Experience

Mr. Dudar has over 30 years of experience as a Civil Engineer, including 27+ years of experience working for the New York City Department of Environmental Protection (NYCDEP). He is a Professional Engineer with many years of hands-on experience in field construction and engineering. Mr. Dudar has extensive construction background in all major fields with a proven ability to meet strict court imposed Consent Decree Order deadlines. He effectively manages and communicates, both in writing and verbally, with contractors and City agencies. He has represented the NYCDEP regarding all construction related matters, policy, personnel affairs and budget issues.

While at the NYCDEP, Mr. Dudar held various positions including Executive Construction Manager, Site Project Manager/Resident Engineer, and Chief of the Bureau of Engineering Design and Construction's (BEDC's) Engineering Standard Division. As Chief of Engineering Standards, he was responsible for:

- Developing business practices (or work flows) to improve and document NYCDEP's capital delivery processes.
- The development of all the CM Standard Operating Procedures (SOPs) and converting the BEDC Project Delivery Manual into Design SOPs.
- Working with the BEDC Specification Section to improve contract language prior to bid of contracts.
- In charge of the effort to perform 36 Quality Assurance/Quality Control site audits.
- Performed SOP training.

Specific projects that Mr. Dudar was responsible for included:

- Owls Head Upgrade
- Newtown Creek Upgrade
- Croton Filtration Plant
- Hillview Reservoir Projects
- 26 Ward Upgrade
- Bowery Bay Upgrade
- Avenue V Pump Station and Force Main CSO Project

Prior to working with the NYCDEP, Mr. Dudar has experience as an Equipment and Facilities Engineer where he developed procedures in support of commercial nuclear power plants. He has prepared both onsite and offsite Emergency Planning Procedures for the Zimmer Plant (CG&E), the Marble Hill Plant (PSI), and the

Professional Societies
Construction Management Association of America (CMAA)

Years Experience

Office Locations
White Plains, NY
Woodbury, NY

Contact
sdudar@db-eng.com

Shoreham Plant (LILCO). He has also prepared document control procedures for the Salem (1 & 2) and the Hope Creek Plants (PSE&G).

As a Project Procurement Coordinator, Mr. Dudar's primary duties included coordinating activities of the Traffic, Inspection and Buying Groups in the Purchasing Department to ensure optimum resolutions and decisions during the engineering/construction of a process plant (especially in QA/QC issues).

As an Application Engineer, Mr. Dudar performed the following engineering tasks:

- On rotary lobe and screw compressors, sized units by calculating discharge temperature, temperature rise, compression ratio, ACFM, BHP, speed noise level, slip displacement, and specific gravity.
- Determined if process gas would be harmful to unit, and, if so, suggested design alternatives.
- Calculated two-stage systems, if required.
- On process centrifugal compressors, chose the type of compressor to fit the process based on specifications, efficiency requirements
- Used the process curve to determine the type of compressor curve to quote; worked with the factory Design Engineer in designing the System.

As a Career Development Trainee, Mr. Dudar performed the following engineering tasks:

- Designed water treatment programs for HVAC systems
- Designed chemical injection systems and chose the type of chemical.
- Subjects covered included: boiler scale control, chemical cleaning of boilers, slime and algae control of cooling towers, and acid cleaning of cooling water systems.
- Visited equipment and boiler rooms to inspect the equipment for water treatment and performed take-offs.

JOINT VENTURE

db | KSE

ROLAND J. FESEL

Professional Experience

As a Senior Resident Engineer and Inspector, Mr. Fesel has abundant construction management experience. Presently, Mr. Fesel is the Construction Liaison for the Tallman Island WPCP Plant Upgrade. The $400 million upgrade includes modification of the existing aeration tanks from step feed to full BNR capabilities. The upgrade also includes a new return sludge pumping station and blower building, a 27KV Substation, replacement of the MSPs, a new force main from the MSPs to the Primary tanks, replacement of the digester roofs, thickener pumps, process air header, service boilers and numerous miscellaneous items. Mr. Fesel coordinates the contractor's work as it effects plant operations and consults with plant management to avoid plant upsets. In addition he reviews contract drawings and documents for overlooked items and possible safety concerns. Mr. Fesel develops relationships between New York City Department of Environmental Protection (NYCDEP) operations, construction management and the construction contractor to improve the flow of work and communications.

Mr. Fesel has been a Resident Engineer on NYCDEP Kensico fluoride feed installation. His previous assignment was Assistant Resident Engineer on the Inner Harbor Regulator Improvement Project. In addition, he has a thorough knowledge of mechanical, structural and electrical design criteria for wastewater projects. He has provided design recommendations and constructability review on the Neptune Pumping Station, Gowanus Pumping Station and Flushing Tunnel and the Pumping Station Design Guideline document. He prepares and reviews construction cost estimates and manages change order preparation processing.

As a wastewater treatment plant operator and senior stationary engineer, Mr. Fesel has 30 years of experience in many wastewater treatment plants and collection systems. Prior to his association with the firm, he worked for the NYCDEP as Superintendent of Collection Facilities and as an Assistant Plant Chief of the Newtown Creek WPCP. While with the NYCDEP, Mr. Fesel oversaw numerous construction projects as an inspector and an operations advisor. Mr. Fesel understands the NYCDEP operation and start up protocols and has participated in many DEP operator training seminars.

Mr. Fesel also was Acting Supervisor of the Great Neck Water Pollution Control District for nine months where he prepared and reviewed construction cost estimates and managed the operations of the treatment plant, pumping stations and sewer collection system.

Mr. Fesel oversaw various construction projects at the Newtown Creek Water Pollution Control Plant while being Assistant Plant Chief and contributed to the initial phase of the current upgrade. He was also involved with discussions with Senior DEP personnel on flow control options for the Newtown Creek WPCP upgrade.

As Chief of Collection Facilities,North, Mr. Fesel's headquarters (for eight years) was located at the Tallmans Island WPCP. He is thoroughly familiar with NYCDEP

Certifications

30+

treatment plant processes, equipment and layout, and the plants personnel. Often Mr. Fesel was called upon to assist the plant in solving some of their emergencies including in-plant operating problems and the failure of their Powell's Cove pump station.

The Tallmans Island drainage area was Mr. Fesel's responsibility for approximately 15 years and Mr. Fesel worked the area for at least 20 years. He oversaw the construction of the Flushing Bay Retention Facility Phase 1 and 2, which pumps CSO to the Tallmans Island Plant.

Mr. Fesel performed construction inspections of the Inner Harbor project for the last 2 years where he was Resident Engineer and supervised the inspectors, reviewed their reports and performed his own inspections on mechanical, electrical and structural improvements. Mr. Fesel was also involved in monitoring the Contractor's schedule, MOPO and procedures to avoid problems with poor maintenance of traffic and pedestrian safety.

His previous work also included:

- NYCDEP Pump Station Construction Projects
  - Newtown Creek (initial phases)
  - Tallman Island WPCP Process Analysis
  - 108th Street Pump Station
  - Jerome Avenue Pump Station
  - White Plains Pump Station
  - Little Neck Pump Station
  - Commerce Avenue Pump Station
  - City Island Pump Station and Force Main
  - Zerga Avenue Pump Station
  - Gildersleeve Pump Station
  - Clearview Pump Station
  - Marble Hill Pump Station
  - Hunts Point Food Market Pump Station

- NYCDEP Combined Sewer Overflow (CSO) Projects
  - Corona Avenue Vortex Facility Prototype Swirl Concentrators for Combined Sewer Overflow
  - Flushing Bay Retention Facility – Phase 1 and 2

- NYCDEP Construction Constructability Review
  - NYCDEP Alley Creek CSO Storage Facility
  - NYCDEP Inner Harbor CSO Facilities
  - NYCDEP 9A Project
  - NYSDEC Hutchinson River SCO Facility

- NYCDEP Construction Inspection/Assistant Resident
  - NYCDEP Inner Harbor CSO Facilities
  - Newtown Creek
  - Flushing Bay Retention Facility
  - Corona Avenue Vortex Facility
  - All Pumping Stations and CSO Construction
  - Kensico Reservoir Fluoride Facility

JOINT VENTURE

THOMAS P. FOX, P.G.

Professional Experience

Mr. Fox has over 25 years of experience covering a broad range of soil, surface water, and groundwater investigations and remediation projects involving hazardous waste and petroleum contaminated sites. Through his work, Mr. Fox has gained extensive experience in managing complex, multidisciplinary projects. In addition to project management, Mr. Fox's responsibilities include proposal development, client and legal counsel liaison, and contract negotiations. His responsibilities also include negotiations with regulatory agencies and developing cost-effective remediation strategies for sites containing a wide array of contaminants. Mr. Fox is very experienced in development of bid specifications for subcontractor procurement, as well as the management of subcontracts.

Mr. Fox's technical responsibilities include the planning and management of site investigation and remediation assignments including remedial investigation/feasibility studies (RI/FSs) of state and federal Superfund sites. His technical skills include: developing cost-effective studies to assess the impact of a wide range of contaminants on the environment, wildlife and human health; assessing fate and transport of contaminants within complex hydrogeological settings; developing geochemical approaches to better define the nature and extent of groundwater and surface water contamination; and performing aquifer tests needed to design groundwater pump and treat systems. Mr. Fox has extensive experience in dealing directly with federal, state and local level environmental regulatory personnel on a wide range of projects. In addition, Mr. Fox has managed and performed numerous Phase I and II environmental site assessments and underground storage tank (UST) closure programs. He has completed and managed more than 160 environmental assessments and audits for commercial and industrial properties on Long Island, New York; New York City; New York State; Connecticut; Pennsylvania; and New Jersey.

Mr. Fox served as project manager and lead technical specialist on a LIRR project involving the investigation and remediation of mercury contaminated soil at 20 electrical substations under the NYSDEC Voluntary Cleanup Program and included. The soil contamination was associated with the historical use of mercury rectifiers as part of the electrified rail system. The project included the collection of surface soil, subsurface soil and groundwater samples for chemical analysis and an exposure assessment to identify potential human health and environmental exposure pathways. Additionally, the LIRR project included the investigation and remediation of several dry wells and cesspools located a t each of the substations as part of the USEPA Underground Injection Closure (UIC) Program. The project also included the development of a Remedial Action Work Plan (RAWP) for each substation and the development of remedial design specifications and remediation oversight at 6 of 20 substations. As the project progresses, additional substations will be remediated in the future.

Working for a confidential client, Mr. Fox served as project manager and senior hydrogeologist for a groundwater investigation project located in Glenwood Landing,

tfox@db-eng.com

New York, which involved conducting a record review and several phases of field investigations to determine the likely source of groundwater contamination that was discovered on the client's property. The groundwater contamination consisting of chlorinated VOCs, primarily PCE - a common dry cleaning solvent, was not typical of the client's historical and current site operations. Furthermore, extensive on-site investigations conducted by others failed to identify any on-site source of this contamination. Regardless of these facts, the NYSDEC was requiring the client to remediate the contamination. The record search completed by D&B identified at least four potential sources of the chlorinated VOCs located within a mile and upgradient of the client's site including three dry cleaning businesses. In addition, groundwater sampling performed by D&B as part of the project identified a chlorinated VOC plume at least one-half of a mile in width that could not have originated from the client's property based on regional hydrogeology. Despite this compelling evidence, the NYSDEC would not release the client from the responsibility of remediating the contamination. As a final effort to support our position, a computerized groundwater model was developed for the site and surrounding area that was used to simulate groundwater flow and contaminant migration. The groundwater model clearly supported D&B's position that the observed contamination could not have originated from the client's site but could have come from one or more of the suspected upgradient sources. The results of the modeling effort were provided to the NYSDEC in October 2009. As of January 2010, the NYSDEC has yet to provide the client with a final decision as to remediating the identified groundwater contamination.

As part of the New York State Environmental Restoration Program (ERP), Mr. Fox served as project manager and lead hydrogeologist for the investigation of a former MGP site located near the Hudson River in Cold Spring, New York. Working for the Village of Cold Spring, the firm performed a subsurface investigation within and downgradient of the former MGP site. Mr. Fox worked closely with the NYSDEC project manager in the development of the investigation scope which included the collection of 8 surface soil samples, the advancement of 25 soil borings by Geoprobe, and the installation of 5 groundwater monitoring wells also by Geoprobe. Indoor and sub slab air samples were also collected in order to assess the potential for vapor intrusion occurring in a nearby building. The investigation also included the collection of sediment samples from the Hudson River to determine if the river had been impacted. Based on the investigation results, Mr. Fox developed an exposure assessment, which in turn was utilized in the development of site-specific remedial action objectives. A remedial strategy was developed for the former MGP based on the remedial action objectives and an evaluation of remedial technologies. The selected remedy included the excavation and off-site disposal of the most heavily impacted soil in and around the former MGP site along with long term monitoring of downgradient groundwater.

Under contract with the Long Island Railroad (LIRR), Mr. Fox served as project manager and lead technical specialist for a Site Investigation/Remedial Alternatives Study conducted at an unregulated landfill located in Yaphank, New York. The project was completed under the NYSDEC Voluntary Cleanup Program and included the completion of 58 soil borings, the collection of surface and subsurface soil samples for chemical analysis and the collection of 12 groundwater samples from existing monitoring wells for chemical analysis. The project included an exposure assessment to identify potential human health and environmental exposure pathways. The project included the completion of an IRM in order to mitigate off-site exposure pathways. As part of the Remedial Alternatives Study, an evaluation of potential remedial alternatives for final site closure was completed. Based on this evaluation, it was determined that capping the site, improving site security and the implementation of land use restrictions would be the most appropriate remedial actions for the permanent closure of the site.

JOINT VENTURE

JOSEPH GARIBALDI

Professional Experience

Mr. Garibaldi has over 32 years of experience in the operation, construction and inspection of wastewater, water treatment plants, water mains, force mains, storm water drains, well stations, sewage lift stations, which included pumps, compressors, blowers, metering equipment, controls and electrical systems. His recent experience includes the following:

- Plant Superintendent – 26th Ward WWTP: Mr. Garibaldi was in responsible charge of all aspects of the 26th Ward WWTP, the 26th Ward Dewatering Facility and the Spring Creek AWWTP. His areas of responsibility included, but were not limited to, operations, maintenance, dewatering, budgeting, safety, labor relations, public relations, construction coordination, administration, process, personnel management and logistics. He established operational and maintenance procedures for all assets while constantly implementing changes necessary to improve efficiencies throughout the facility. Mr. Garibaldi was designated as the responsible individual with regard to all environmental health and safety matters throughout the facility and ensured compliance on various issues with oversight agencies. He worked closely with the agency, engineering consulting companies and construction companies in all facility construction projects and was responsible for a total personnel count of approximately 100 New York City Department of Environmental Protection employees.

  Some of the construction projects that Mr. Garibaldi was heavily involved with encompasses categories such as, but not limited to: new electrical feeders, substations, electrical switchgear, circuit breakers, new and re-building of boilers, new main sewage pumps, new engine/generators and main plant mechanical upgrade. These projects took place in the three sites that Mr. Garibaldi was responsible for, the 26th Ward Plant, the Dewatering facility at 26th Ward, and the Spring Creek CSO facility. In addition, Mr. Garibaldi operated and was involved in improvements to the sludge digestion systems.

- Deputy Plant Superintendent – 26th Ward WWTP: Under the general direction of the Plant Superintendent, Mr. Garibaldi performed all the functions associated with the position of Deputy Plant Superintendent, including maintenance, operations, logistics, purchasing, budgeting, and public relations. He was in direct charge of the 26th Ward Dewatering Facility for approximately one and one half years. During this assignment, he successfully accomplished some pre-planned goals, such as 5 day operation, maintenance on the watches, implementation of the "prime" computer system and increased productivity and discipline. Mr. Garibaldi was also successful in making some simple modifications to equipment to return necessary units to service thereby avoiding large financial outlays by the agency. He was an "empowered" user of the FISA Purchasing System and was involved with numerous projects, including design of capital improvements and upgrades to various plant systems. He planned and

Years Experience
30+

Office Location
Woodbury, NY

implemented some major "contracting-in" jobs at the plant, including the transferring of the unused Oakwood Beach gas compressors to 26th Ward. He was involved in numerous bureau committees such as re-engineering, automation, electrical training, electric work allocation and defining maintenance.

- Deputy Chief – Collection Facilities South: Under general supervision of the Chief, CFS, Mr. Garibaldi operated Collection Facilities South for the Bureau of Clean Water. His duties and responsibilities included: preparation and implementation of the CFS budget, scheduling, management of the MRS system, setting priorities and long range plans for modifications to CFS facilities, purchasing to meet CFS needs, public relations, direct supervision of CFS Headquarters and crew chiefs (SEEs). Locations included Paerdegat PS, Gowanus PS, Staten Island Crew Quarters, Avenue V PS, all southern NYC regulators and tide gates, 38 unmanned pumping stations and a total personnel count of approximately 60. Other areas of Mr. Garibaldi's direct involvement included: collaboration with various New York City and other governmental agencies under normal and emergency situations that occurred in the operation of CFS, consultations with various private construction companies to discuss and/or amend design and engineering of various upgrades to CFS facilities, all other duties and responsibilities generally associated with the Deputy Chief position for the Bureau of Clean Water, DEP.

- Maintenance Engineer – Newtown Creek WPCP: As the Maintenance Engineer at the Newtown Creek WPCP, Mr. Garibaldi was in charge of all the maintenance at the plant including setting priorities and establishing procedures for all the maintenance work. His duties included teaching subordinates the "how to" on various maintenance jobs necessary at the facility. Mr. Garibaldi maintained all the PM and CM records, oversaw the cost accounting system and records, handled all equipment status reports including Vehicle Status and Container Surveys, he was responsible for entering data during the initial stages of computerization of the MRS, cost accounting and other systems. He also was responsible for the tool room and all the pertinent data including parts and inventory records. In addition, he worked with engineers and contractors in the installation of new equipment and became familiar with the functions of this equipment with regard to process as well as electro-mechanically. He was very involved with the purchasing of parts and supplies for that facility.

- Stationary Engineer Electric (Newtown Creek WPCP): As the steady day Engineer at the Newtown Creek WPCP, Mr. Garibaldi's duties and responsibilities were widely varied. Being an S.E.E. "on the board" in a power generating plant, he developed an expertise in the concept as well as the practicality of electrical generation and power distribution. He gained the experience of an emergency automatic shutdown and the intricate process of restoration of power, or putting the plant "back on line". In the area of prime movers, Mr. Garibaldi gained a working knowledge of large diesel engines, specifically the Enterprise 2800 HP, 12 cyl. duel fuel engine. He worked closely with the lead machinist in the development of an excellent safety check program. His electrical troubleshooting abilities as well as his knowledge of various circuit breakers, transformers, etc., was sharpened due to his experience at Newtown Creek. In addition, the plant's treatment process was quite unique compared to other plants, and therefore, broadened his concept of troubleshooting various process problems.

JAMES HARLEY

Professional Experience

Mr. Harley is a Civil Engineer with eight years of experience in water supply, civil engineering and surveying. Mr. Harley's experience also includes the preparation of documents necessary for New York City agency approvals, including but not limited to, New York City Department of Environmental Protection (NYCDEP) and the New York City and State Department of Transportation (NYCDOT & NYSDOT). The following is a summary of Mr. Harley's relevant project experience:

- Village of Sands Point Department of Water – Project Engineer for the construction of a new 600 gpm water supply well and the associated treatment facilities. Treatment includes greensand filtration for iron & manganese as well as chemical feed facility upgrades.
- Long Island American Water Corporation – Project Engineer for the construction of a new 1,400 gpm well to replace the existing Well 2-1. The project included well construction and permitting from Nassau County Department of Health (NCDH) and New York State Department of Environmental Conservation (NYSDEC).
- Long Island American Water Corporation – Project Engineer for the construction of a new 1,400 gpm well to replace the existing Well 15-2. The project included well construction and permitting from Nassau County Department of Health (NCDH) and New York State Department of Environmental Conservation (NYSDEC).
- Town of Hempstead Department of Water – East Meadow Water District – Design and construction of a 4.0 MGD Granular Activated Carbon (GAC) filtration system for Wells 1 and 3. The project included replacement of well pumps and permitting with Nassau County Department of Health (NCDH).
- Water Authority of Great Neck North (WAGNN) – Project Engineer for the design of a 6.0 MGD packed tower aeration system for the Community Drive Station. Project included pump replacement and chemical facility upgrades. Permits from Nassau County Department of the Health (NCDH) were required.
- Port Washington Water District (PWWD) – Project Engineer for the design of a 1,200 gpm Nitrate Treatment Facility for the Well 4 Station. Project included well pump upgrades, chemical facility modifications, sanitary sewer connection and drainage improvements. Permits were required from the Nassau County Department of Health (NCDH), Port Washington Water Pollution Control District (PWWPCD), Village of Flower Hill and the Nassau County Department of Public Works (NCDPW).
- Port Washington Water District (PWWD) – Project Engineer for the design of 10,000 feet of 8 inch water main in the Manhassett Isle area. Project includes permitting with the Nassau County Department of Health (NCDH) and local road restoration permits.

JAMES HARLEY

- J.P. Morgan Chase, 270 Park Avenue, New York, NY - Project Manager responsible for rehabilitation project of the international headquarters of J.P. Morgan Chase. Responsibilities included designing and overseeing construction of the new plaza, including all sidewalk, stonework, waterproofing, landscaping, drainage, etc. Project involved coordination with Metro North, New York City DOT, as well as other design consultants.

- Citigroup Crosswalks, Long Island City, NY – Project Manager responsible for the design of pedestrian security project for the safety of Citibank employees commuting between their two facilities. Responsibilities included overseeing all design and coordination work for proposed pedestrian island, traffic signal coordination and crosswalks for Citigroup's Long Island City #1 and #2 buildings.

- Promenade South (West Side Highway – Lower Manhattan), New York, NY - Design Engineer responsible for design of drainage system throughout the project, as well as designing water main system. Work also included the creating and re-design of bikeway alignment. Responsible for all submissions to the NYCDEP.

- Route 9A (West Side Highway – Lower Manhattan), New York, NY – Engineer responsible for all utility designs throughout the project. Assisted with design of roadway.

- Brooklyn Queens Expressway (Queens Blvd. To Broadway), Woodside, NY - Engineer responsible for assisting in the design of proposed utilities. Responsible for estimation of quantities such as utilities and earthwork quantities.

- Kings Plaza Builders-Pavers Plan (Flatbush Ave.), Brooklyn, NY - Design Engineer responsible for design of new bus terminal at Kings Plaza. Work included design of drainage system and striping layout. Responsible for estimation of quantities throughout the project.

- South Ferry Terminal Project, New York, NY - Design Engineer responsible for locating and re-designing of existing utilities. Work included design of sewer, electric, telephone, gas, and water mains. Responsible for all restoration design and drawings.

- 57th Street MTA Elevator, New York, NY - Design Engineer responsible for all utility relocation and coordination, as well as maintenance and protection of traffic designs. Work also included all grading design for affected sidewalks.

- Artemis Construction (Project Manager) New York, NY - Internship where duties included overseeing rehabilitation of apartment building. Designated as Project Manager and handled all construction aspects related to the project, including coordination of all subcontractors involved, such as electricians, plumbers, masons, laborers, etc.

- Charleston Bus Annex, Staten Island, NY – Utility and roadway improvements to accommodate the proposed MTA Bus Depot. Responsibilities included design and profiling of utilities, coordinating the environmental impact and marshland mitigation for the proposed sewer outfall, and coordinating and preparing submissions for all roadway design with adjacent owners and various Agencies.

- LOMTO, Woodside, NY – Provide service for the proposed LOMTO Federal Credit Union facility. Responsibilities included design of all utility work, parking lot grading, and sidewalk restoration.

- Columbia University, New York, NY – Responsible for all design of sewers, water mains and gas mains for Columbia University's Manhattanville campus.

JOINT VENTURE

ALAN SCOTT HARVEY

Professional Experience

Mr. Harvey has 14 years of experience in Construction Consultation and Site Safety. For the past 7 years, Mr. Harvey has gained hands-on experience as a Site Safety Representative. His responsibilities consist of being on-site during all working hours supervising, conducting Job Safety Training meetings and responsible for implementing the Health and Safety Plan of a $115 million rehabilitation project at an operating New York City waste and water treatment plant. Mr. Harvey managed staff to ensure that appropriate personal protective equipment is available and utilized at all times, monitored daily site operations for compliance with the Health and Safety Plan (HASP) and identified hazards and protect employees from these hazards until corrective actions can be implemented by safety professionals. Mr. Harvey was also responsible for coordinating safety inspection activities with the Resident Engineer, completing accident and incident reports and completing daily checklists to validate compliance with safety rules and regulations.

Throughout his career, Mr. Harvey has accrued 7 years of experience in Construction Consulting, which includes but is not limited to, consulting with architects and customers on design plans for residential home improvements, and managing all aspects of the project including design, estimating, planning and construction. Mr. Harvey was also responsible for performing framing, remodeling, wall replacement and other construction related to remodeling residential homes, calculating the cost of materials for each project and lastly purchasing of necessary materials and equipment to complete each project while staying within the allotted budget.

Throughout his years of experience, Mr. Harvey has developed strong verbal communication skills as well as strong writing communication skills with staff, customers, Resident Engineers, Architects and more.

JOINT VENTURE

FREDERICK HAUSMANN

Professional Experience

Mr. Hausmann has experience in the following:

Croton Water Tx. Plant/Off Site Contract CRO-312OS-G: (Value $98,000,000.00)

- Site Safety Representative for NYC Department of Environmental Protection project CRO-312OS-G.
- Regulated procedures for the abatement, storage and disposal of Hazardous/Non-Hazardous materials and Universal Waste.
- Maintained compliance with NYC agencies by obtaining appropriate permits.
- Supervised confined space entries on a daily basis and maintained compliance with OSHA and DEP.
- Developed and Maintained aggressive respiratory protection program.
- Responsible for evaluating safety and health program and implement improvements where appropriate.
- Handled responsibilities of providing safety guidelines and compliance through health and safety training programs.
- Perform the tasks of identifying and evaluating hazardous materials.
- Responsible for eliminating incidents by implementing Root Cause Corrective Actions.
- Performs evaluation of compliance through on-site reviews on a daily basis.
- Maintained Material Safety Data Sheets (MSDS) on chemicals used in the workplace and evaluated methods of reducing employee exposure.

Avenue V Pumping Station Force Main Contract PS-79: (Value $97,756,000.00)

- Site Safety Representative for NYC Department of Environmental Protection project PS-79 F.
- Ensured company compliance with OSHA, FDNY, DOT, DOB, EPA and DEP policies.
- Identified all hazards associated with work tasks and developed JHAs (Job Hazard Analysis) to eliminate or reduce the workers exposure.
- Maintained compliance and reported monthly for Local Law 77.
- Performed regular audit to maintain compliance with EPA's SWPPP.
- Regulated the storage and handling of all flammables, combustibles and chemicals and maintained appropriate MSDSs.

Years Experience

5+

Office Location

Woodbury, NY

fhausmann@db-eng.com

- Inspected work locations on daily basis and took corrective actions for all environmental and safety related issues.
- Maintained an overall safety rating of 99.0% with ETASC.
- Conducted weekly audits with ETASC.
- Conducted weekly safety meetings.
- Ordered and provided training for all PPE and safety equipment required to complete work task safely.
- Issued Hot Work permits and regulated Safe Hot work procedures.
- Maintained and calibrated air monitors.

Manhattan Water Tunnel 538C: (Value $120,000,000.00)

- Responsible for the over sight of 85 employees consisting of Carpenters, Laborers and Sandhogs by ensuring that company procedures and policies are adhered to in addition to DEP policies while maintaining OSHA, FDNY, DOB, DEC and DOT compliance.
- Prepare and review job hazard analysis with crews in order to provide a thorough understanding of the work activity and the potential hazards associated.
- Responsible for Environmental, Health and Safety training of employees.
- Conducted investigations for accidents and documented findings.
- Conducted Environmental and Safety audits.
- Responsible for safety and environmental engineering.
- Conducted weekly safety meetings.

Newtown Creek Contract 32G: (Value $195,000,000.00)

- Site Safety Representative for NYC Department of Environmental Protection project 32G.
- Responsible for the assessment and enforcement of all safety, health and environmental policies.
- Conducted weekly safety meetings.
- Researched FDNY, DOB and OSHA codes/standards to ensure compliance with changing standards and regulations.
- Developed site/job specific safety measurements.
- Wrote daily and monthly safety reports.
- Developed and regulated an aggressive property loss prevention/management program.
- Conduct investigations for accidents and documented findings.

JOINT VENTURE

FREDERICK W. HOEFFNER

Professional Experience

Mr. Hoeffner has over 25 years of diverse experience in construction management and inspection, emphasizing civil projects. This includes mechanical piping, excavation, sheeting, dewatering, concrete, bridge painting and rehabilitation, roadwork, drainage, sewers, parking lots and recreational/park facilities. He has a multifaceted perspective and broad understanding of all trades and project needs. Mr. Hoeffner has comprehensive knowledge in civil construction techniques and civil engineering, and a proven ability to meet stringent specifications, regulatory factors and deadlines. Mr. Hoeffner has consistently ensured the most productive, cost-efficient and highest quality solutions to heavy construction improvement projects. Mr. Hoeffner is an ACI Certified Special Concrete Inspector.

Mr. Hoeffner's specific experience is summarized below:

- Construction Inspector and Permit/Site Plan Review for Various Capital Projects: Painting of Bridges at Various Locations – Suffolk County Department of Public Works

  Mr. Hoeffner is currently the Resident Engineer for this improvement project that includes the painting/rehabilitation of six bridges at various locations in Suffolk County. The work includes vacuum maintenance cleaning, priming and painting of structural steel, environmental ground protection systems, vacuum blasting containment systems, treatment and disposal of contaminated paint, and coordination with various agencies including the Long Island Rail Road.

- 26th Ward Water Pollution Control Plant: NYCDEP ($40M)

  Mr. Hoeffner assisted in the construction management/inspection of the regulator reconstruction (Contract 14) and the emergency generator upgrade (Contract 13) projects. Contract 13 consists of installing three medium-speed 2.5 MW diesel generators and a 600kw diesel unit. This contract also includes the construction of a new Battery Room Facility. Contract 14 includes the reconstruction of the existing regulator (R-1). The regulator diverts combined sewerage to the plant and in wet weather diverts overflow to Hendrix Creek. The regulator work includes relocation of existing utilities, demolition and reconstruction of portions of the regulator floor slab, walls and weir, and the installation of a temporary dewatering and bypass pumping systems. Mr. Hoeffner is serving as the A. Resident Engineer for this project.

- Skillfully orchestrated the complete spectrum of the Town of Islip's Capital Improvement Program with responsibility for a $12 million annual budget. The work encompassed plumbing and piping improvements for chemical feed systems, culvert/drainage improvements, roadway/bridges improvements, full-depth pavement repairs, micro-resurfacing and concrete contracts, which consistently met or exceeded the DPW's expectations.

- Served as the go-to-person/advisor to the engineering, inspection and planning departments on all public works projects for the Town of Islip. He was a member of the project team tasked with creating and instituting constructive recommendations for roadways, drainage/culvert systems and various facilities.

fhoeffner@db-eng.com

- Efficiently analyzed and revised new bid proposals with specifications for all roadwork and drainage contracts, and accurately reviewed executed bids for recommendation to Town Supervisors.

- Oversaw highway, engineering and inspection protocols for change orders, RFIs and payment and execution covering all if the Department's roadwork projects. He directed interdepartmental drainage, pavement repairs, along with emergency management of all storm related work.

- Participated in filing for New York State CHIPS Programs and Multi-Modal Grants.

- Reviewed all road opening permits for approval and inspection of restoration of the roadways by utility companies, contractors and homeowners.

- Effectively scheduled and supervised project personnel and office staff, provided close support, motivated strong work teams and ensured consistent work excellence and responsiveness.

- Participated in equipment demonstrations for review to obtain the best quality at the least cost.

Mr. Hoeffner was the owner/operator of Hoeffner Industries, Inc. Mr. Hoeffner:

- Developed and managed this heavy construction business from a zero base to profitability with hands-on P&L control. Scope of work included estimating, bidding and managing the complete spectrum of various new/restoration/renovation projects for roadways, sewers/drainage, parking lots, recreational/athletic parks for school/fire districts, villages, towns and counties, respectively, across Long Island.

- Effectively dealt with project change requests, project tracking, mobilization of resources and the coordination of efforts to ensure completion of each client's objectives. He defined procedures/guidelines that ensured compliance with their goals while working closely with architects, engineers, consultants and regulatory authorities and accurately interpreted project plans/blueprints. He served as an instrumental force in developing and implementing new ideas, ways of thinking and problem solving techniques to project operations and presented viable options that facilitated results.

- Selected, negotiated and purchased materials, services and equipment, obtaining the best quality at the least cost. He prepared, negotiated and interpreted construction contracts and controlled project budgets. Conducted site inspections to determine suitability of potential project sites.

- Adhered to regulatory and environmental agency rules and regulations, and ensured overall project quality control and implemented effective material handling procedures.

- Coordinated work with all trades and utilizing time management skills.

JOINT VENTURE

EDWARD J. REILLY

Professional Experience

Mr. Reilly has over 34 years of experience in the design and construction management of water and wastewater treatment systems, landfill design and construction, and solid waste management. He has performed the duties of a design engineer, project manager and resident engineer throughout his career. Specific experience in wastewater, groundwater remediation, water supply, treatment facilities and soil gas management in the capacity of both office engineer, project manager and construction inspector is provided below. Mr. Reilly has also been involved in the startup of facilities, troubleshooting and instruction of personnel.

New York City Department of Environmental Protection (NYCDEP) – Risk Assessment

Mr. Reilly has performed the mechanical evaluations for the purpose of risk assessment at 13 of the City's 14 water pollution control plants and 7 of 8 dewatering facilities. Mr. Reilly has served as the lead mechanical evaluator for all of the process equipment including, but not limited to, sluice and slide gates, bar screens, main sewage pumps and valves, settling tank collectors and drives, sludge pumps and valves, diffusers, aerators and mixers, grinders, scum management equipment, dewatering facilities, centrifuges, conveyors, chemical feed equipment, effluent water pumps, HVAC, boilers and related facility appurtenances. These duties include mechanical evaluation and extensive record keeping.. As a result of this experience, he is familiar with NYCDEP water pollution control facility construction and operation. During many of these site visits, he has observed construction in progress and understands DEP environmental safety and health requirements.

Mr. Reilly has recently performed the mechanical evaluations for the purpose of risk assessment at 52 of the City's 96 pump stations. Mr. Reilly served as the lead mechanical evaluator for all of the main sewage pumps, piping and valves, bar racks, grinders, sluice gates, slide gates, HVAC, plumbing, sump pumps, and related facility appurtenances. These duties included mechanical evaluations and ratings to assess current conditions and future reliability. This experience has made Mr. Reilly very familiar with the NYCDEP facilities, operations and problem areas. Mr. Reilly also performed these evaluation duties at the Hudson River Pump Station (Chelsea).

Mr. Reilly also provided QA/QC review of the field collected data prior to incorporation into the database.

New York City Department of Environmental Protection (NYCDEP) – In-house Design

Pump Stations – Mr. Reilly is a member of a team of D&B engineers providing services to the NYCDEP In-House Design Staff relative to the Department's design for the complete rehabilitation of the pumping station to include constructability and biddability reviews of 30/60/90% designs. These services pertain to all of the

disciplines. Mr. Reilly's involvement addresses the civil, mechanical, HVAC and plumbing systems. The services involve design reviews, critiques and commentary, as well as discussion with Department personnel of the pros and cons of various approaches and design options. These services are provided in a collaborative effort with the Department staff to afford the staff the benefits of D&B's insight and experience in pumping station design and construction. These activities have included the Orchard Beach Pumping Station, Throgs Neck, Rikers Island North and Hannah Street pumping stations.

Newtown Creek Dechlorination Facility – Mr. Reilly is a member of a team of D&B engineers providing services to the NYCDEP In-House Design Staff relative to the Department's design for the addition of dechlorination facilities to the Newtown Creek Water Pollution Control Facility. These services pertain to all engineering disciplines, as well as a feasibility analysis to convert a portion of the existing Disinfection Building for the purpose of receiving, storing and applying dechlorination chemicals. Mr. Reilly's involvement addresses the mechanical, HVAC and plumbing systems associated with the control, process and application of the dechlorination chemicals to the downstream end of the chlorination tanks. This involvement will continue through the preparation of the facility design by the In-House Design Staff by means of collaboration, the sharing of design experience and insight, and assistance with design tasks as the need arises. Mr. Reilly has performed constructability reviews for the 30% and the 90% design submittals prepared by In-House design. When necessary, Mr. Reilly has performed portions of the design or prepared conceptual designs as part of the IHD design effort.

Water Supply Facilities

New York City Department of Environmental Protection (NYCDEP) – Gilboa Dam

- Mr. Reilly has performed constructability and bidability reviews for Contract CAT 212B – Gilboa Dam Reconstruction and is currently involved in the constructability review for CAT 212C – Low Level Outlet. Mr. Reilly has performed reviews relative to all civil and mechanical processes, equipment and work. The outcome of the review process has provided for clarification in the bidding documents with its associated savings to the Department. Mr. Reilly has gained excellent insight to the limits of working upstate during these recent reviews.

Wastewater Treatment Facilities

Fairfax County, Virginia

- Preparation of design and contract documents for the dechlorination and discharge to surface waters of cooling tower blowdown waters for a 3,000 tpd resource recovery facility. Dechlorination was required for the protection of aquatic life in the receiving waters. Process included the use of sodium bisulfite, chemical mixing facilities and dosing equipment.

Village of Ossining

- Design and preparation of plans, specifications and managerial duties to divert alum sludge from the sanitary sewer and provide on-site storage for truck loading and off-site disposal.

- Design of two variable speed pumping units to accommodate filter backwash effluent.

Town of Parsippany - Troy Hills, New Jersey

- Performed start-up, testing and commissioning of a 16 mgd advanced wastewater treatment facility. Mr. Reilly served as Resident Engineer during the startup, testing and commissioning period, providing inspection and troubleshooting and instruction of personnel. Duties also included construction administration, attendance at all meetings, preparation of meeting minutes and processing of change orders, reviewing contractor invoices, answering RFC and RFI, shop drawing review, and other office engineer responsibilities.

Bergen Point, Suffolk County, New York

- Performed a mechanical evaluation of the 30 mgd Bergen Point Wastewater Treatment Plant.
- Mr. Reilly prepared a condition assessment report detailing the entire facility.

Cedar Creek WPCP, Nassau County, New York

- Prepared a design for the expansion of the primary settling tanks.
- Mr. Reilly performed as Project Manager in orchestrating all managerial duties including documentation of design information and progress meeting minutes.

Dover, Pennsylvania

- Prepared hydraulic design for all process equipment and the design for aerated grit chambers.

Village of Ocean Beach, New York

- Design and construction observation for removal and replacement of granular activated carbon and rehabilitation of GAC towers.
- Mr. Reilly performed resident engineering/inspection/office engineer duties for this completed project.
- Provided operator training and assistance to facility personnel, process modifications and remedial designs.
- Permitting, design and construction supervision for water supply well.

Gloucester County Utilities Authority, New Jersey

- Design of a hybrid aeration system incorporating the addition of fine bubble diffused aerators to an existing mechanical aeration system.
- Mr. Reilly served as Engineer and performed managerial and administration duties as well.

Brookhaven National Laboratory

- Performed a study of 15 buildings to assess the magnitude and opportunities to manage noncontact cooling water associated with, but not limited to, refrigeration, air conditioning, water treatment, analytical equipment and research projects.

- Supervised the performance of a leak detection survey for 15 miles of water main in a campus setting. Prepared statement of findings and recommendations. Mr. Reilly kept records and meeting minutes recording the progress of the work.

Groundwater Remediation

New York State Department of Environmental Conservation (NYSDEC) – Dewey Loeffel, Nassau, New York

- Mr. Reilly served as the lead designer for a leachate collection and treatment facility for an inactive hazardous waste landfill. The treatment process includes oil/water separation, aeration stripping, microfiltration, tray stripping, activated carbon, steam stripping, reverse osmosis and post aeration. Ancillary processes include sludge dewatering and crystallization for residuals disposal.

Town of Islip, New York

- Design and preparation of plans and specifications for a 350 gpm groundwater treatment facility for the removal of volatile organics by air stripping and inorganics by precipitation and filtration. Treated water to be recharged to the aquifer system. Project Manager for construction, start-up and operator training and assistance.

- Preparation of a Phase II Investigation for a Class 2A Inactive Hazardous Waste Site including design and construction supervision for the installation, sampling and analysis of groundwater monitoring wells.

Town of Smithtown, New York

- Design, preparation of plans and specifications, and construction observation for 25+ groundwater monitoring wells.

- Preparation of a hydrogeologic site investigation for the permitting and construction of a municipal solid waste landfill.

JOINT VENTURE

THOMAS SCHAEFER, E.I.T.

Professional Experience

Mr. Schaefer is an Engineer at Dvirka and Bartilucci Consulting Engineers (D&B) where his job duties include performing miscellaneous project design and construction management tasks for civil and wastewater improvement projects. Mr. Schaefer has invaluable experience working on NYCDEP projects and has intimate knowledge of the standard operating procedures (SOPs) and other NYCDEP rules and regulations.

As an Engineer at D&B, Mr. Schaefer has experience in the following:

Construction Management Services for Miscellaneous Projects in the Downstate Area (CTYWDCM-3B) - New York City Department of Environmental Protection (NYCDEP)

Assignments include:

- Oakwood Beach Wastewater Treatment Plant (WWTP) 5KV Substation Reconstruction (Contract OB-125) contract in Staten Island ($15 million)
- Port Richmond WWTP Boiler Upgrade (Contract PR-113) contract in Staten Island ($27 million);
- Orchard Beach Pumping Station Replacement in the Bronx ($2.7 million)

Mr. Schaefer is an Engineer on these projects where he is responsible for assisting with construction management.

Construction Management Services for Various BWT Locations

This contract is to assist BWT in developing and implementing a Construction Management Program. This unique project requires coordination with multiple engineering sections, as well as operations at all wastewater treatment plants and collection facilities located in the New York City area. The project includes on-call work requiring overnight and weekend emergency response.

Mr. Schaefer is responsible for assisting field engineers with research, data and other technical support necessary to continue providing BWT construction management services for various projects at numerous plants and pump stations. Mr. Schaefer was also responsible for assisting with inspection for the installation of new V-Notch Weir gates for the Wards Island WWTP.

Superstorm Sandy Pump Station Recovery (Oct. 2012 - Dec. 2012)

Over 30 NYCDEP Pump Stations providing a necessary service to NYC failed during the Sandy storm. Most were flooded with saltwater and effectively destroyed. Mr.

Schaefer assisted with the recovery effort which included performing round the clock inspection, coordination and fueling for the 30 damaged stations. All 30 stations were made operational within 84 hours.

Riverhead Drive Erosion Control Improvements

Mr. Schaefer is an Engineer involved with this project located at Sound Beach, N.Y. Mr. Schaefer was responsible for the assessment of damage from Superstorm Sandy. He was also responsible for the review, development and design of construction specifications and drawings, and contract documents. The major items of work included:

- Repair of bulkhead
- Extending an existing gabion system slope protection

Construction of Pre-Engineered Garage at Allenwood Park ($0.2M)

Mr. Schaefer is the Engineer on this project located in Great Neck, N.Y., where the principal items of work include: pouring concrete foundation, erection of pre-fabricated garage, installation of various electrical and heating appliances and site work. Mr. Schaefer is responsible for assisting the project engineer with design of the project.

Rockland County Transfer Station Improvements ($2M)

Mr. Schaefer is an Engineer involved with this project located in West Nyack, N.Y. Mr. Schaefer was responsible for the review and development of construction specifications and contract documents. The major items of work included:

- Repair and reattachment of geomembrane cap to building and equipment foundations.
- Installation of protective steel plate at tunnel wall.
- Installation of methane gas venting system.
- Demolition of existing building siding and roll-up doors.
- Installation of new building siding and roll-up doors.
- Construction of concrete masonry walls in office building.
- Demolition and removal of existing office building internal walls, locker room fixtures, floor coverings, ceiling tiles, windows and framing, doors and framing and installation of new office internal walls, floor coverings, bathroom fixtures, shower fixtures, locker room fixtures, windows and frames, doors and frames, and ceiling tile systems.

Rockland County Site Grading Improvements, New Scale and Scale House Installation ($2M)

Mr. Schaefer is an Engineer involved with this project located in West Nyack, N.Y. Mr. Schaefer was responsible for the review and development of construction specifications and contract documents. Mr. Schaefer was also responsible for assisting the project engineer with design of the project. The major items of work included:

- Demolition and removal of existing scale and scale house.
- Installation of new scale and scale house.

Office Location
Woodbury, NY

Contact
aschlessingerman@db-eng.com

Professional Experience

Mr. Schlessingerman has over 4 years of experience as a Project Manager and a Construction Inspection for the New York City Department of Environmental Protection (NYCDEP). He is an Engineer in Training (registered to take the Professional Engineer Exam in October, 2013) with many years of hands-on experience in field construction, engineering, and program management. As a NYCDEP Accountable Manager, Mr. Schlessingerman has been responsible for numerous engineering tasks in connection with the delivery of the BEDC's Capital Program ($5 Billion), serving in BEDC Engineering Support Division. The DEP Capital Program requires design framework and construction management support to ensure that projects are being delivered to the highest standards. Mr. Schlessingerman developed Standard Operating Procedures, oversaw consultant program management contracts, conducted Constructability/Bidability Reviews, and led the BEDC CM Quality Assurance Program as the Lead Auditor/Program Manager. Mr. Schlessingerman has a strong background in project management coming from successfully managing projects at DEP Bureau of Engineering Design and Construction. Most recently, Mr. Schlessingerman has been key in BEDC's CMIS initiative for a Department wide CMIS Program.

While at the NYCDEP, Mr. Schlessingerman showed strengths in program management and developing design and construction management framework through policies and procedures. In NYCDEP, Mr. Schlessingerman's organized approach to work and high quality of work has put him working on important initiatives towards the success of NYCDEP.

Mr. Schlessingerman was responsible for providing Engineering Support to the Bureau of Engineering Design & Construction Project Delivery Teams. In this role, Mr. Schlessingerman has worked in depth on many of the Department's major projects including Newtown Creek Upgrade, Croton Water Treatment Plant, CAT/DEL UV Plant and, West Branch Rondout Bypass Tunnel.

Because of Mr. Schlessingerman's hard work ethic as an engineer, he was regularly tasked with critical projects for the BEDC Deputy Commissioner. Such tasks have included the review of the Engineer Estimate for the Hurricane Sandy Contractors for housing assessments and overnight inspection work at the North River Plant during the fire. Specific tasks include:

BEDC Project Delivery System (PDS) - In an effort to standardize the business, engineering, and project delivery for all BEDC's projects, the PDS was developed. The PDS is a series of over 150 Standard Operating Procedures (SOPs). Each SOP serves as framework for how designs and construction are to be performed. To develop these SOPs, research had to be conducted working with project teams and identifying problems that can be mitigated/eliminated with the implementation of an SOP. Under this task, Mr. Schlessingerman has authored many technical SOPs that required knowledge of engineering principles and practices.

BEDC Engineering Support Reviews (Constructability and Bidability) - In this role, Mr. Schlessingerman assisted project teams in the review of designs during their 30/60/90/Final submittals. For these reviews, Mr. Schlessingerman has helped from a Consultant Contract which I manage. Mr. Schlessingerman served as the overall reviewer and project manager. Mr. Schlessingerman developed checklists based on applicable codes, best practices observed, and lessons learned (list derived from the research of change orders) to be used to check design submittals against. Projects successfully reviewed include:

- North River (NR) Fire Investigation: After a fire at the NR Water Pollution Control Plant, a forensic engineering review was performed to determine the cause of the fire. We worked with the project team reviewing, specs, drawings, and operations to draft a report stating the reasons.

- CRO-502 Kensico Dam Road Closure Mitigation: Recommendations were given to the Design Engineer preventing major problems in the project's schedule.

- Tallman's Island Wet Weather Maximization: Review of the specs and drawings were performed on the 60% submittal to determine the best dewatering scheme and excavation method to be used.

BEDC CM Quality Assurance Program - BEDC established a new unit for Construction Quality Assurance that reports directly to the BEDC Deputy Commissioner. This unit is part of Engineering Support for which Mr. Schlessingerman served as a Technical Auditor/Accountable Manager and work with other Technical Auditors.

BEDC Program Wide Construction Management Information System - In an effort to standardize the way BEDC does business, streamline reporting, and improve the quality of the information being reported from the field, BEDC has implemented an program wide CMIS. Mr. Schlessingerman has served on the BEDC CMIS panel, selecting the proper vendor. With Mr. Schlessingerman's knowledge of CM SOPs, he knew what it took to select and implement an appropriate vendor with tablet driven inspection reports.

Newtown Creek Project Delivery Team - For two years, Mr. Schlessingerman was part of the Construction Management team responsible for overseeing the delivery of the Newtown Creek Final Upgrade. This plant is the largest water pollution control plant in NYC that is designed to process up to 700 MGD (wet weather flow) of sewage and is one of the largest capital projects under construction in Brooklyn, NYC valued at $3 Billion. As a proactive hands-on engineer, Mr. Schlessingerman wore many hats to move the project along including shop drawing review, hydraulic analysis, inspection of work, load calculations, reporting, equipment testing and calibration, and Constructability Review.

Mr. Schlessingerman served as a part of the DEP Project Delivery Team responsible for the delivery of the Newtown Creek Project. This is a multi-phase project, which at the time had 20 active contracts. He was assigned to the NC-31 Sludge digester complex. This project was for the construction of eight egg shaped tanks each holding 3 million gallons of sludge. This project was valued at $500 Million dollars (including change orders). We were tasked with completing a critical milestone which was to test, fill, and turnover 4 of the 8 tanks. He assisted both with the construction team performing inspections and the Design Team performing DSDC tasks. They were able to successfully turnover the 4 digesters to the operating bureau then move on to testing the remaining 4 digesters. As a member of the DEP Project Delivery team for Newtown, his tasks included working with design consultant and architects, construction management team, and contractors. He was a team member of the engineering team responsible for analyzing the interim and permanent replacement methods; checking design submittals including design calculations, reports and drawings; assuring that cost estimates were accurate and cost-effective; and preparing design and construction schedules.

JOINT VENTURE

MICHAEL P. SCIARRILLO, AIA, NCARB

Professional Experience

Mr. Sciarrillo's professional experience offers proven performance in coordinating design and construction projects from concept to completion in residential, commercial, and institutional arenas. He is well versed in client relationship management, has a keen ability to listen to client's vision, render architectural sketches and manages all phases of the construction project.

As an Architect at D&B Engineers and Architects P.C., Mr. Sciarrillo has been involved in creating construction documents; processing submittals, shop drawings and change orders; running construction progress meetings; and providing onsite construction inspections. He has been able to successfully handle all phases of Construction Administration for multiple ongoing projects, while meeting deadlines and budgets. The major client has been the New York City School Construction Authority (NYCSCA).

NYCSCA Educational Project experience with the firm includes:

- P.S. 250, Bronx, New York – Masonry/ Roofs/ Parapets - $4.5 million construction cost.
- P.S. 123, Brooklyn, New York – Roofs/ Exterior Masonry/ Flood Elimination/ Corridor Floors/ Paved Areas - $9.4 million construction cost.
- P.S. 148, Brooklyn, New York – Exterior Masonry/Parapets - $7.4 million construction cost.
- P.S. 435, Manhattan, New York – Roofing, Parapets, and Exterior Masonry- $4.5 million construction cost.
- P.S. 50, Queens, New York – Exterior Masonry – $2.1 million construction cost.
- P.S. 108, Queens, New York – Exterior Masonry - $2.8 million construction cost.
- P.S. 226, Queens – Containerization - $400,000 construction cost.
- I.S. 228, Brooklyn, New York – Corroded Steel Stairs - $1.2 million construction cost.
- P.S. 117, Queens, New York – Containerization - $500,000 construction cost.
- P.S. 213, Brooklyn, New York – Exterior Masonry/Roofs/Site work - $7.6 million construction cost.

Years Experience

Office Location
White Plains, NY

msciarrillo@db-eng.com

- P.S. 298, Brooklyn, New York – Exterior Masonry/Roofs/Windows - $7.3 million construction cost.
- I.S. 275, Brooklyn, New York – Accessibility - $3.5 million construction cost - Design and Construction Administration Services for Accessibility Upgrades.
- P.S. 145, Brooklyn, New York – Exterior Masonry/Roofs/Windows - $6 million construction cost – Design and Construction Administration Services for Exterior Masonry, Roofing, and Windows.
- I.S. 278, Brooklyn, New York – Roofs/Exterior Masonry/Flood Elimination - $7.3 million construction cost.

Additional project experience with the firm includes:

- Town of East Hampton, New York– Solid Waste Management Facility, Administration Building- $1million construction cost.
- Town of Port Washington, New York –Packed Tower Aeration System- $4 million construction cost.
- Albertson Fire District, New York – Interior renovations and Roof Replacement on two-story firehouse building.
- Syosset, New York – Greenhouse design and site layout for a private school.
- Village of Monroe, New York – Designs for rehabilitation of downtown storefronts and streetscapes including the inclusion of green building elements.
- City of New Rochelle, New York – Building condition analysis, LEED feasibility report for historic railroad station, including interior spaces.
- Clarkstown, New York – Architectural design and drawings for two-story administration wing of transfer station, with offices/staff spaces.
- Bergan Point, New York – Architectural design and drawings for new two story building and renovation to existing three story building-$6 million construction cost.
- DASNY: Brooklyn College of Technology, New York – Architectural design and drawings for Namm Hall Loading Dock -$1 million construction cost.

JOINT VENTURE

NILABJA SEN, P.E.

Professional Experience

Mr. Sen is a Civil/Structural Engineer with over 46 years of design, construction and project management experience in wastewater treatment plant and pumping station designs, steel and concrete building structures, highways and bridges, parking garages and marine structures. Mr. Sen is experienced with the following codes, standards and computer programs utilized extensively during his professional career:

- Building Design Codes and Standards: NYC Building Code, Building Code of New York State, Minimum Design Loads for Buildings and Other Structures ASCE 7, Uniform Building Code (UBC), International Building Code (IBC), The BOCA National Building Code, AISC Steel Construction – Allowable Stress Design Manual, Load and Resistance Factor Design Manual, Cold Formed Steel Design Manual, Building Code and Commentary ACI-318, Code Requirements for Environmental Engineering Structures ACI-350, Seismic Design of Liquid Containing Concrete Structures ACI 350.3, Building Code Requirements for Masonry Structures ACI-530, Precast and Prestressed Concrete Design Manual, Aluminum Design Manual, AITC- Timber Construction Manual, Structural Welding Code AWS D1.1, ANSI/TIA-222-G-2005.

- Highways and Bridges: AASHTO- Standard Specifications for Highway Bridges, Pedestrian Bridge Design Manual, Manual for Condition Evaluation of Bridges, NYS DOT-Bridge Manual, Steel Construction Manual, Bridge Welding Code AWS D1.5.

- Structural Computer Programs: STRUDL, G.T. STRUDL, STAAD Pro, ANSYS Finite Element Analysis, Visual Basic, PCA Programs- Column, Beam.

- Mr. Sen has used the above referenced computer programs to perform linear, static, dynamic, and nonlinear finite element analyses of building structures and plate structures. He also has written software programs on composite section properties of structural members. The program was used in existing building renovation work.

Mr. Sen's experience with Dvirka and Bartilucci Consulting Engineers (D&B) includes:

- Transfer Station, Rockland County, New York – Reviewed modular retaining wall design documents; performed design and detailing of tipping floor upgrading including designing of a new grade beam; designed and developed details for the new scale and scale house foundations; designed reconstruction of the existing concrete deterioration of the tipping floor; designed new pile caps and complete replacement of the deteriorated concrete slab and foundation; and performed periodic field visits to observe construction.

nsen@dvb-engr.com

- Performed detailed structural finite element design of balcony structures supporting existing and new antennae and coax cables for elevated water tanks in Suffolk County. The balcony structures were reinforced when necessary to carry the additional loads from the antennas and subsequent cables.

- Reviewed vendor supplied calculations and installation drawings on antenna support structures for various water tanks in Nassau and Suffolk Counties.

- Structural design for new reinforced concrete treatment facilities at the Bergen Point WWTP.

Prior to joining the firm, Mr. Sen has experience working on the following projects:

- Performed inspection and structural analysis for several office buildings at Brookhaven National Laboratory located in Upton, New York to assess their condition and provide suitable remedial measures as necessary to upgrade the buildings to restore them to sound condition.

- Red Garage Parking Structure, JFK Airport, NY – Prepared and reviewed design computations and contract plans for this five-story 1,900+ car space garage at JFK Airport for Port Authority of NY and NJ. Reviewed shop drawings.

- JFK Expressway Outbound Widening - Designed three overhead sign structures and a retaining wall of about 200 ft length between the inbound and outbound JFK Expressways as a part of the JFK Expressway Widening project for Port Authority of New York and New Jersey.

- Rector Street Temporary Pedestrian Bridges - Following 9/11 incident, two temporary pedestrian bridges were constructed over route 9A on an emergency basis. Mr. Sen was involved in developing the layout plans and design of the footings for these bridges. Mabey pre-fabricated bridge segments and towers were used for superstructures to save time. Prepared cost estimates for these bridges.

- Rector Street Permanent Pedestrian Bridge – Mr. Sen was involved in developing a conceptual plan for a permanent pedestrian bridge near the existing temporary bridges. The conceptual plan has been submitted to the Battery Park City Authority and NYS DOT for review and approval. This conceptual design consists of a steel superstructure enclosed in a fiberglass tube supported on wine glass shaped concrete towers.

- Widening and Rehabilitation of CR83 Road Bridge over LIE – The objective was to widen and raise the existing bridge to accommodate additional traffic on route CR83 and provide more headroom clearances over LIE. Performed analyses and design of the bridge deck, stringer beams, pedestals, bearings, piers and footings.

- Bruckner Expressway/Cross Bronx Expressway Interchange – The rehabilitation of this interchange bridge was designed by Hardesty & Hanover, LLP. Mr. Sen was assigned to review the steel fabrication, erection and temporary tower shop drawings.

- Colonial Road Bridge over Long Island Rail Road – Performed feasibility studies for three alternate replacement proposals for this 100-year old bridge located in the Village of Thomaston, Nassau County, NY.

Previous Experience:

Senior Scheduler and Claims Analyst: Review project specifications and drawings in order to prepare and create schedules for construction projects. Maintain and review in conjunction with WDF Project Management staff, regular updates with accompanying narrative. Review, analyze and prepare Claims for delayed projects. Issue RFIs, prepare Change Order and Delay Claim proposals.

Bid Estimator: Review project bid specification, drawings and existing conditions in preparation for bid estimates.

Project Manager/Manager, Change Order Department: Incorporated computerized document management system acquired from the Fourth Avenue Enterprise Piping Corp. acquisition. Initiated and maintained the Change Order Department to organize change orders for the GC and HVAC divisions for over 100 projects. Prepared and negotiated with WDF Project Management, change orders submitted to the owner, primarily School Construction Authority projects.\

4th Avenue Enterprise Piping: Initiated and implemented the computerization of exclusive paper-based project management documentation utilizing Primavera Expedition. Initiated and maintained vendor contract data, purchase orders, material release orders, RFI's and change orders for all HVAC projects. Prepared and negotiated change orders submitted to the owner, primarily School Construction Authority projects.

In June of 2002, the 4th Avenue Enterprise Piping was acquired by WDF, Inc.

AMCC Corp./Anthony Marino Construction Corp.: As Assistant Project Manager, Mr. Valentin performed duties associated with Project Management field work, including but not limited to issuance of RFIs, attend project meetings, prepare change orders, perform field photography, prepare daily reports, maintain time sheets on field personnel and report labor hours to payroll for all field personnel.

JOINT VENTURE

db | KSE

BRIAN M. VEITH, P.E.

Professional Experience

Mr. Veith has approximately 26 years of experience in the environmental engineering field involving remedial investigations, feasibility studies, site assessments, remedial designs and multimedia environmental compliance pursuant to federal, state and local regulatory requirements. As the senior licensed professional engineer (PE) in the Environmental Remediation and Multimedia Compliance Division, Mr. Veith's primary responsibilities include ensuring the technical integrity and quality of all documents that are prepared by the Division that must be sealed by a licensed Professional Engineer pursuant to the New York State Education Law.

As part of the firms work with the Dormitory Authority State of New York (DASNY), Mr. Veith has been providing senior project management support to the Tier 2 Environmental Review Process associated with the New York Rising Program being administered jointly by the Governor's Office of Storm Recovery (GOSR) and the Housing Trust Fund Corporation (HTFC) of New York State Housing and Community Renewal (HCR). In this capacity, Mr. Veith has directed the preparation of the technical scopes of work and cost estimates, coordination of project staffing and schedules, development of standard operating procedures, and final technical review and sign-off of all project deliverables. Mr. Veith's responsibilities encompassed the senior review of the Tier 2 Environmental Review Process which is required under the National Environmental Policy Act (NEPA) and New York State Environmental Quality Review Act (SEQRA). This involved the technical review of the completed Tier 2 checklists and supporting ArcGIS map documentation as well as the preparation of senior closeout forms to ensure that each submitted package conformed to the procedures and protocols of the New York State Rising program and all U.S. Department of Housing and Urban Development regulatory and programmatic requirements.

Remedial Investigation, Feasibility Studies, Site Assessments, and Remedial Design

Mr. Veith has been responsible for the preparation and implementation of work plans, remedial investigation reports and feasibility studies and development of remedial plans for private sector clients as well as projects advanced under the New York State Superfund Program. These programs were typically designed to determine the nature and extent of contamination at a site and evaluate the need for interim or long-term corrective action. Contamination addressed during these programs included halogenated solvents with dense nonaqueous phase liquids (DNAPL), polychlorinated biphenyls (PCBs), heavy metals and petroleum.

Mr. Veith has also been responsible for conducting numerous environmental site assessments at industrial facilities in support of real estate transactions. Assessments typically included detailed site inspections, the installation of groundwater monitoring wells and soil borings to identify potential areas of environmental concern. Many assessments resulted in the development of remedial programs to address areas of concern and involved engineering oversight for

implementation of the appropriate remedial measures, including decontamination and decommissioning of process units and excavation activities.

Mr. Veith also has considerable design experience. This experience ranges from the design of an oil/water treatment process for an industrial wastewater treatment facility consisting of a 250 gallon per minute dissolved air flotation system with a surface water discharge to the design of a commercial hazardous waste storage facility that incorporated provisions for secondary containment, storm water management and segregation of incompatible waste. Mr. Veith has also been responsible for the design and inspection of numerous chemical bulk storage tank installations. These have included the design of a 6,000-gallon ammonium hydroxide tank system at a cogeneration plant to support a catalytic oxidation system to meet the New York State NOx emission standards, as well as the inspection of over 50 chemical storage tanks at a major semiconductor manufacturing facility. Mr. Veith has also been responsible for the preparation of contract documents consisting of engineering plans and specifications as well as cost estimates to enhance chemical bulk storage tanks at New York City Department of Environmental Protection water supply facilities.

Mr. Veith has been responsible for numerous remedial design projects being conducted under the New York State Superfund Program. These design projects have included various remedial approaches ranging from soil excavation with offsite disposal, soil washing, groundwater extraction and treatment, to the design of a dewatering and treatment system for an industrial waste landfill.

Multimedia Environmental Compliance

Mr. Veith has extensive experience in providing multimedia environmental compliance services to a number of major industrial clients in the tri-state area. Several notable clients have included:

- International Business Machines Corporation
- Consolidated Edison Company of New York, Inc.
- Orange and Rockland Utilities, Inc.
- New York City Department of Environmental Protection
- Metropolitan Transportation Authority
  - Metro-North Railroad
  - Long Island Rail Road
  - Long Island Bus
  - Bridges and Tunnels
  - New York City Transit
- Northrop Grumman Corporation
- Petroleum Heat and Power Company
- Hoffmann-La Roche, Inc.

JOINT VENTURE

MARTHA J. VICTORIA, AIA, NCARB, LEED Green Associate

Professional Experience

Ms. Victoria is a Registered Architect with over fifteen years of experience in design, drafting and construction project management of residential, commercial and institutional buildings. As an Architect at D&B Engineers and Architects, Ms. Victoria has been involved in the preparation of construction documents and estimates for multiple ongoing projects.

Ms. Victoria is well-versed in many areas of architectural design including:

- Project Feasibility Studies include Analysis of Zoning Regulations and Building Codes
- Creates Schematic Designs
- Executes On-Site Inspections, Building Condition Surveys and Detail Drawings
- Prepares, Coordinates and Reviews Drawings and Specifications to ADA standards
- Mechanical Transmittal Analysis and Existing Conditions Assessment
- Designs and Drafts Power and Lighting Plans

D&B project experience for the NYC School Construction Authority includes:

- P.S. 123, Brooklyn, NY - $7.5 million construction cost – Design Services for Removal and Replacement of Entry Stairs, Exterior Masonry, Roof, Dormers and Corridor Floors.
- P.S. 250, Bronx, NY – $4.5 million construction cost – Design Services for Removal and Replacement of Masonry and Facebrick, Roof, Parapet Walls & Coping.
- I.S. 167 Manhattan – $ 5 million construction cost – Design Services for Removal and Replacement of Parapet Walls & Coping, Roof Strip adjacent to Parapet Wall, Facebrick, Masonry Repointing and Windows.

Custom Designing & Engineering

As an Assistant Project Manager, Ms. Victoria worked on projects ranging from 7,000 sf. to 30,000 sf., including renovations and expansions of existing buildings and development of new construction. She participated in the power and lighting design process performing load calculations and electrical riser details.

CHARLES J. WACHSMUTH, P.E.

Professional Experience

Mr. Wachsmuth has over 33 years of experience in the construction and rehabilitation of major water supply, water treatment, wastewater transportation and treatment and other large municipal construction projects. Since November 2000, Mr. Wachsmuth has performed as the lead construction manager on five separate Construction Management (CM) contract's held with the New York City Department of Environmental Protection (NYCDEP) in the City's upstate watershed and water supply system including CM contract's WSHD-3BCM, WSHD-2BCM, WSHD-1CM, GILDAM-1CM and CRO-288. As the construction manager, he is responsible for day-to-day management and oversight of a staff of Resident Engineers, inspectors and administrative personnel assigned to various construction projects within the watershed.

In addition to his duties as the Construction Manager on the Miscellaneous Watershed projects, Mr. Wachsmuth is the Deputy Construction Manager on GILDAM-CM02, Construction Management services on the Gilboa Dam Renovation Project. In this capacity, Mr. Wachsmuth works hand-in-hand with the CM Project Management Team in administering construction of the project and providing technical advice regarding construction related matters.

Mr. Wachsmuth recently provided construction management services to NYCDEP on the highly successful emergency construction contracts associated with interim stability improvements to the City's Gilboa Dam. Work performed on the five emergency contracts included installation of a debris boom across the width of the Schoharie Reservoir; installation of four 48 inch x 30 inch siphons over the crest of the dam; construction of a 250 foot long by 5.5 feet deep relief notch along the crest of the dam; installation of 80 high capacity rock anchors through the core of the dam; and installation of temporary flood control devices at the Ashokan Field Campus.

Through the effort of Mr. Wachsmuth and his team of resident engineers, Inspectors and administrative personnel, all five emergency construction contracts were completed on-time and within budget.

Current CM assignments managed by Mr. Wachsmuth under NYCDEP CM contract WSHD-3BCM include:

- CRO 322A: Reconstruction of Kensico Fluoride Facility
- CRO 322C: Reconstruction of Dunwoodie Fluoride Facility

cwachsmuth@db-eng.com

- DEL 186: Construction of new administrative office and laboratory at Grahamsville
- CAT 225-Replacement of Catskill District Facilities Gantry Cranes

Recent CM assignments managed by Mr. Wachsmuth under NYCDEP CM contract's WSHD-2BCM and WSHD-1CM include:

- CAT 210C: Emergency contract to replace chlorine feed lines to the Catskill Aqueduct at the Kensico Reservoir
- CAT 224: Dredging of inlet channel to Shandaken Intake Chamber
- CRO 367: Miscellaneous structural, electrical and HVAC improvement to Croton Dam Gate House No. 1
- CRO 368: Installation of lighting and surge protection systems at various east of Hudson facilities
- CRO 369: Paving at various water supply facilities
- DEL 332: Emergency reconstruction of Dryden Brook Culvert
- DEL 336: Emergency reconstruction of Chase Brook Road
- CAT 185: Reconstruction of roadway adjacent to Schoharie Reservoir
- DEL 153: Removal of the Dunraven Causeway Bridge
- DEL 98: Repaving of roadways around Rondout and Neversink Reservoir's
- DEL 230: Installation of Ice Fall protection at various west of Hudson water supply facilities

Mr. Wachsmuth is a specialist in project close out and has performed dozens of final close outs on DEP projects.

Mr. Wachsmuth is the firm's Chief Construction Services Division Construction Manager/Resident Engineer (CM/RE). Coupled with Mr. Wachsmuth's Civil Engineering and Construction Management academic background, his over 30 years of active on-site representation offer a comprehensive knowledge of a broad spectrum of construction types. Mr. Wachsmuth's construction experience and knowledge include: wastewater treatment plants; construction of municipal solid waste/hazardous waste landfill closures; hazardous waste remediation, handling, transportation and disposal; storm water collection and interceptor systems; local and road reconstruction; gravity sewers and force mains; marine outfall lines; water mains; wastewater pumping stations; energy recovery facilities; sludge incinerators; chemical treatment systems; odor abatement/treatment systems; and hazardous waste remediation.

Complementing his broad knowledge of varied construction types, Mr. Wachsmuth is intimately knowledgeable with many specific construction aspects, some of which include: hazardous materials (mercury, lead, asbestos, PCBs) removal, remediation and handling; soil mechanics; installation and testing of geosynthetic materials; well drilling; gas extraction; foundations; structural concrete and steel; tunneling utilizing both "jacking" and "liner plate" techniques; architectural systems; electrical distribution and controls; process mechanical systems and controls; pile driving, excavations; and site work.

As CM/RE, Mr. Wachsmuth represents the interest of both the Owner and Engineer. In conjunction with office personnel, it is his responsibility to see that the project is constructed in accordance with the Contract Documents, on time and within budget. In addition to construction administration and inspection duties, it is his responsibility to maintain appropriate logs and files, coordinate project meetings, coordinate the project with governing public agencies and act as liaison between Owner, Engineer, Contractor and local area residents affected by execution of the work.

JOINT VENTURE

MICHAEL R. WIZIOR, P.E.

Professional Experience

Mr. Wizior is a Senior Engineer with over 33 years of experience in civil engineering, excelling in analysis, design and construction. His professional experience includes the following:

Report on the Procurement of Services for the Transfer, Haul and Disposal of Solid Wastes from the Town of Oyster Bay Solid Waste Disposal District (SWDD) – Contract No. DPW 09-999

As a member of the Town's Solid Waste Task Force, Mr. Wizior performed detailed technical analyses of proposals received for the disposal of solid wastes from the SWDD. Results of the analyses were utilized in the overall grading of the proposals and in subsequent multiple rounds of contract negotiations with vendors. Mr. Wizior was the primary author of the final report providing complete explanation and documentation of compliance with requirements of New York State General Municipal Law §120-w for this multi-million dollar long-term contract.

Mr. Wizior also completed a similar assignment for the Town of Brookhaven.

Engineering Report for OBSWDC Transfer Station Permit Renewal Application

Mr. Wizior was the primary author of a report on the Old Bethpage Solid Waste Disposal Complex transfer station including complete discussion of facility description, operations, transportation plan, personnel health and safety training program, and emergency action/response plan. The report was written as requested by New York State Department of Environmental Conservation (NYSDEC) in connection with the Town of Oyster Bay's submitted application for renewal of the transfer station permit, since the Engineering Report on file with NYSDEC was in excess of 25 years old and considered to be obsolete.

Additional responsibilities under this assignment included revising the original submission of the Town's permit renewal application package to the NYSDEC.

Town of Oyster Bay Yard Waste Stream Analysis

Mr. Wizior was the lead engineer on the subject study, the objective of which was to develop detailed specific information for the Town's Department of Public Works regarding the classification and quantification of yard waste generated and placed for disposal by the residents of the Town's Solid Waste Collection District. More specifically, this undertaking also sought to identify which communities and sanitation routes were major yard waste generators. Such information was essential at the time of the study with respect to the Town's then-desire to institute a completely separate yard waste collection program as opposed to the pick-up of unseparated yard waste and municipal solid waste then in effect.

Professional Societies
American Society of Civil Engineers

Years Experience

mwizior@db-eng.com

Mr. Wizior coordinated multiple teams of survey inspectors covering 88 Town sanitation routes over a 6-month time period. Results of the survey effort were analyzed and utilized in the classification and quantification of the Town's yard waste generation. Mr. Wizior was the primary author of the final report presenting all data, analyses results and associated engineering calculations, and recommendations to the Town, the ultimate outcome of which was the Town's implementation of a separate yard waste collection program.

Upon completion of the first year of operation of the separate yard waste collection program, a follow-up primary-authorship assignment resulted in the development of a report entitled, "Final Yard Waste Program Monitoring Report". This report presented the findings of a 9-month observation period at the Town's OBSWDC transfer station of the separate yard waste collection program including discussions of the daily loading of yard waste into contractors' transfer trailers; the conditions of the transfer area during and after daily operations; traffic patterns during entry and exit of the Town's packer trucks and the contractors' transfer trucks/trailers; direction and velocity of the wind on a daily basis; possibility of odors being generated and migrating off the site; and evaluation of the level of participation of the residents in the second year of the full-scale program.

New York State Building Code Compliance Reviews

Mr. Wizior performed Building Code of New York State compliance reviews and constructability reviews on behalf of the Town of Islip for the Southwest Airlines Concourse Improvement Program at Long Island MacArthur Airport for work on both the land side and air side of the facility. He met with project Architect to resolve code compliance issues. Additional responsibilities under this assignment also included interim on-site monitoring during construction of the project.

Mr. Wizior performed Building Code of New York State compliance reviews and constructability reviews on behalf of the Village of Islandia for construction of a Dave & Buster's Entertainment Complex and a new Walmart store in the Village's main shopping center.

Mr. Wizior assisted Town of Islip forces during a 4-month assignment at the Town's Building Department offices to decrease a continually growing backlog of building permit applications for all types of residential construction projects including extensions, additions and new construction. He reviewed plans submitted by Architects/Engineers for the proposed work, resolved design and code issues with the design professional, and ultimately recommended issuance of building permits to allow the proposed work to proceed.

Mr. Wizior provided expedited plan review services for minor and major projects involving both new construction and renovations at North Shore Long Island Jewish Hospital for the Building Department at the Town of North Hempstead including construction of a rooftop heliport for receipt of emergency cases via helicopter transport.

Highway and Drainage Improvement Projects

Mr. Wizior has served as Lead Designer Engineer, Senior Engineer, or QA/CA Engineer on the preparation of plans, specifications and estimate packages (PS&E) developed for the following sampling of projects:

- Nassau County Environmental Bond Act Improvements at Willow Pond - Nassau County DPW.
- South 6th Street - Village of Lindenhurst.
- County Road 67 / Motor Parkway – Suffolk County DPW.
- Paff Avenue / Leonard Avenue Area – Town of Hempstead.
- Grant Avenue – Town of Islip.
- Southern Boulevard – Town of Smithtown.
- Willis Avenue / Whitney Avenue Area – Town of Oyster Bay.
- Hammond Lane – Town of Brookhaven.
- New Highway – Town of Babylon.

DAVID ZAREMSKY, CIH, CSP

Professional Experience

Mr. Zaremsky is a Certified Industrial Hygienist/Certified Safety Professional with extensive and progressive experience in safety and health, industrial hygiene, consulting, construction and environmental instruction training. Mr. Zaremsky is a specialist in construction EH&S issues.

Mr. Zaremsky's professional experience includes the following:

Corporate Safety and Health Director:

Mr. Zaremsky served as a Contract EHS Officer for NYCDEP construction projects throughout the downstate and watershed areas. His responsibilities included the review of contractor HASPs and other submittals, conducting daily/weekly audits of project worksites and ensuring compliance with all relevant Federal, State, local and NYCDEP requirements and regulations. He created Emergency Action Plans, conducted evacuation drills at project sites and performed SWPPP inspections. Other responsibilities included:

- Creating HASPs and EHS Management Plans for construction projects involving wastewater facilities, bridge reconstruction, road realignment, drainage upgrades and remediation activities.
- Training employees on safety plans and OSHA requirements.
- Establishing Corporate HASP, Respiratory Protection and Hazard Communication Programs.
- Successfully maintaining safety performance of projects as measured on NYCDEP compliance audits.

Senior Consultant/Instructor:

Mr. Zaremsky performed numerous CIH/CSP-related IAQ and safety tasks for a variety of clients. He managed data validation, quality control and assurance on worker exposure studies for lead; performed OSHA compliance audits, encompassing safety and health evaluations and workplace risk assessments associated with noise, non-ionizing radiation, ergonomics, respiratory protection, lead, asbestos, and confined spaces for manufacturing, construction and administrative buildings; and created and conducted training for HAZWOPER and lead/asbestos/PCB awareness.

EHS Consultant/Instructor:

Mr. Zaremsky performed IAQ surveys and respirator fit testing for clients and employees. He developed Confined Space Safety, LOTO and Respiratory/PPE program plans, and reviewed HASPs for construction projects. Mr. Zaremsky's other responsibilities included:

[redacted]

Specialized Training

40-Hour OSHA HAZWOPER

8-Hour HAZWOPER Supervisor

4-Hour Supported Scaffold User Training

OSHA 30-Hour Construction Safety

OSHA 500 Trainer Course in Occupational Safety & Health Standards for the Construction Industry

ICS 100, 200, 700 Certification (FEMA)

Lead Safe Work Practices Training

- Creating curricula/exams and conducting instruction for previously untaught subject materials, including welding safety and 24- and 40-Hour HAZWOPER.

- Conducting safety training/instruction for NYCDOB certification (4-hour Supported Scaffold and Site Safety Manager); NYSDOL (Asbestos Project Monitor, Supervisor, Inspector, Allied Trades); OSHA 10- hour lead and asbestos awareness, NIOSH 582, HAZWOPER (24-hour, 40-hour, Supervisor), Confined Spaces, Hazard Communication and Welding Awareness. .

Technical Manager, On-Site Consulting Services

Mr. Zaremsky performed IH services for Safety and Environmental Management including: IAQ surveys, AED deployment and pandemic preparedness. He supervised contractors performing branch office assessments; initiated chargeback program for services resulting in over $20,000 savings to the department each year; and performed over 800 ergonomic evaluations on client workstations reducing the number of workers' compensation claims related to repetitive strains, as well as reducing the costs per claim. Mr. Zaremsky established a program to monitor air quality during deconstruction of the Deutsche Bank Building, which was contaminated as a result of the September 11, 2001 terrorist attack; collaborated with colleagues to create an SOP Manual for processes essential to facilities management; prepared Risk Management Plans for the sulfuric acid battery rooms in several facilities; and edited and maintained a Disaster Preparedness Guide, providing guidance in preparing for disasters.

Industrial Hygienist

Mr. Zaremsky managed air monitoring projects for the NYC Transit. He assessed damages and performed mold and IAQ sampling for NYC schools and property management companies. He trained employees to allow access to NJ Transit tracks; prepared proposals, reports and project budgets; managed site health and safety operations during exhumation of remains from a potter's field as part of a transportation improvement project; and developed and maintained sampling equipment program, ensuring availability and proper function of company supplies.

Emergency Management Professional

Mr. Zaremsky is a certified FEMA Incident Control System (ICS) and National Incident Management System (NIMS) evaluation and control officer. He has participated in restoring areas stricken by emergencies to safe environments.

Presentations

"New Directions for the Industrial Hygienist," AIHA Annual Northeast Industrial Hygiene Conference, New Brunswick, NJ, December 2005

JOINT VENTURE

KWESI AMEGAH

Professional Experience

Mr. Amegah has more than 25 years of multifaceted experience encompassing inspection, civil and structural engineering as a Civil Engineer. His experience in construction inspection and bridge inspections including completion of various in-depth inspection programs in the New York metropolitan area. He also has experience in civil design including roadway replacements involving drainage, sewers, utilities, curbs and sidewalks. In addition, his structural experience includes the removal, replacement and reinforcement of steel and concrete bridge elements.

PANYNJ, Construction Management Services, NY Marine Terminal, Howland Hook & Teterboro Airport, PIDS, NY and NJ – Senior Inspector responsible for inspection of building demolition at Howland Hook, Staten Island contractor oversight as part of work at NYMT. Mr. Amegah is participating in the testing phase and inspection of the perimeter intrusion detection system, fencing sensors and radar system both day and night at PANYNJ Airport. Also supervised the assembly of large erosion mats made of concrete sections encased in geotextile material being fabricated in Bayonne for future relocation and installation.

NYSDOT, Route I-495 Mill & Fill Exit 57 to 64, Towns of Brookhaven & Islip & Village of Islandia, Long Island, NY – Senior Inspector provided inspection and other related services for 19.9 million dollar project involving grinding existing asphaltic concrete wearing concourse and repaving. Inspection services also include site maintenance and safety protection.

NYCDDC, Resident Engineering Inspection Services for HWCR08B, Citywide Milling Project Involving Grinding Existing Asphaltic Concrete Wearing Course, Manhattan and the Bronx, NY - Inspector responsible for this $7 million project, providing inspection and other related services for projects involving grinding existing asphaltic concrete wearing concourse at various locations on an as-needed basis. Some issues that involve inspection services include site maintenance and safety, protect tree from construction debris, milling two inches of existing asphalt, smaller milling machine was used to grind asphalt in hard to reach places such as around catch basin or corner of a curb and a sweeper was used behind milling machine to clean up the debris. Tasks include all services necessary and required for the inspection, management and administration of this project, for the required construction work to be properly executed, completed on time and conforms to the plans, specifications and requirements of the construction contract.

Connecticut DOT, Construction Inspection Services for I-84 Widening between Waterbury and Cheshire, CT- Senior Inspector provided inspection services for the widening of Interstate 84 between Waterbury and Cheshire, CT. Responsible for inspection of reinforced concrete pipes and the inspection of modifications made to existing interstate bridges. Also responsible for the investigation of catch basins.

JOINT VENTURE

AVIRUP DATTA

Professional Experience

Mr. Datta has over 16 years of experience in the field of construction management and constructability review of bridge and highway projects structural rehabilitation, repair work of bridges, and lead and asbestos abatement. Mr. Datta's experience includes hands on inspection of structural integrity, corrosion inspection, concrete testing, deck replacement, hazardous waste management, health and safety compliance, hygiene engineering controls, air monitoring, and paint removal by various methods, and application of paint on various bridge projects.

Mr. Datta's professional experience includes the following:

Resident Representative – Various Improvement/Rehabilitation and Resurfacing Projects in the County of Nassau and Villages, Long Island, New York

As a Resident Representative, Mr. Datta's responsibilities included inspection of rehabilitation project work, inspection of the resurfacing with concrete and asphalt, inspecting and supervising joint and overlay repairs, inspecting full-depth pavement repairs, routine checking adequate curing to prevent cracks also performed inspection of friable asbestos materials such as pipe insulation, piping joints, valve packing, gaskets removal etc. Mr. Datta also provided inspection of traffic control supervision of MPT, putting up signs and road striping (crosswalks, stop bars, etc.), drawing and designing traffic signal plans and road closures as per specifications by Nassau County. Also inspection of electric poles and signal lights computer signal boxes. Installation of offset water main pipes and valves pre-inspection of sub-base preparation and alignment checking of road, writing of Inspectors Daily Reports, cost of work and disputed issues and regulatory compliance with DPW Nassau County, performing various tests such as Slump Test and Air Pressure Test of Concrete, coordinating activities with Regional Office and various other work related agencies and making payments.

Senior Inspector – Priority Repairs to the Park Avenue Tunnel and GCT Train Shed, New York

As a Senior Inspector for the priority repairs to the Park Avenue Tunnel and GCT Train Shed, the project consisted of supervision for the construction of structural improvements within the Park Avenue Tunnel from East 57th Street to East 97th Street, for the repairs to East 72nd Street Emergency Exit under Park Avenue and for certain priority repairs in the Grand Central Terminal (GCT) train shed upper level. The project also consisted of repairs to existing utility bays (installing new shoring or supports) crossing over the tunnel, masonry repairs (pointing and replacement of missing or cracked brick), interior masonry wall repairs (grouting cracks and injecting epoxy into voids in interior brick walls and installing fiberglass sheets as supplemental supports to the walls), concrete repairs (replacement of deteriorated wall foundations and repairs to portions of the tunnel roof that have spalled), steel repairs and heat straightening of certain structural steel members (replace several buckled columns supporting lintels, repairs to members supporting the tunnel roof, including heat straightening of four girders that were struck by passing equipment),

Years Experience

16+

Office Location

Woodbury, NY

repairs to the existing deteriorated support columns in the east tunnel emergency exit located at E. 72nd Street, repairs to several of the vent structures located in the median between northbound and southbound Park Avenue (replacement of portions of the gratings and repairs to the grating supports). Mr. Datta was responsible for coordinating engineering issues such as sites and conditions, etc. between various trades, maintenance of project records and coordinating resolution of field issues with design professionals, maintaining the job schedule, tracking daily progress, and producing daily reports for onsite activity, as well as maintenance of project records and the hoist reservation logs, and writing extra work descriptions and taking daily job photos of work progress.

Park Avenue Tunnel Emergency Exit Repairs at 59th & 86th Street, New York

As a Senior Inspector for the Park Avenue Tunnel Emergency Exit Repair, the project consisted of monitoring and inspection of all construction activities, system implementation work, which included removal and replacement of existing stair support channels, existing stair stringers, checkered landing plate, replacement of corroded hand and guiderails, stair treads, and finally cleaning and painting existing stair and around repaired areas as well as the stair angles and closure plate. The project also consisted of replacement of seals around street hatches at both the East and West side Emergency Exits at 59th Street, as well as 86th Street Emergency Exits. Mr. Datta also conducted inspections to ensure that all work elements were performed and completed in compliance with the project plans, specifications, codes, permits and other applicable regulations as well as maintenance and organization of current set of plans and specs onsite including all processed and approved shop drawings, technical data and samples. He wrote, tracked and logged requests for information (RFI) for clarification of plans and distributed final responses, attached sketches and corrections to the plans keeping the onsite current and accurate. He created punch-lists for contractors' corrective action and maintained logs of Contractor and Engineering Documents (i.e., shop drawings, testing and inspection reports, plans and specifications and bulletins). He maintained the job schedule tracking daily progress, and produced daily reports for onsite activity and also took daily job photos of work progress.

Whitestone Bridge Queens Side Anchorage Cleaning and Painting

As an Office Engineer, Mr. Datta performed maintenance and organization of current set of plans and specs onsite including all processed and approved shop drawings, technical data and samples. He generated order-on-contract, made schedules for inspection crew for daily activities, worked on force accounts and numerous change orders, checked inspector's reports and made progress payments to the contractor. Mr. Datta maintained correspondence logs, minutes of meeting logs, shop drawing logs, RFI logs, force account logs and inter linking each log to necessary correspondences. He performed Change Orders as required and prepared and maintained payments, RFI preparation and administration: write, track and log requests for information (RFI) for clarification of plans and distribute final responses. Mr. Data coordinated engineering issues such as sites and conditions, etc., between various trades and RE. He maintained project records and coordinated resolution of field issues with design professionals, maintained the job schedule, tracked daily progress, and produced daily reports for onsite activity.

As Chief Inspector, this project consists of cleaning and painting of the eye bar chambers, as well as periodic oiling of the cable strands inside the anchorage chambers at 6 month intervals. He also performed detection of cracked and hollow areas within the anchorage concrete base structure surface by performing sounding on the concrete wall surface of the 110 high outside and inside anchorage structure on the Queens side anchorage. The cracks and hollows area were then chipped and cleaned and was patched with new concrete and filled with SIKA epoxy bonding agent.

JOINT VENTURE

DHARAMPAUL DUKHI

Professional Experience

Mr. Dukhi is a construction inspector with over 25 years of experience, skilled at construction methods and practice, mechanics of building constructions (commercial and residential) and building code interpretation. As a senior engineer/inspector, Mr. Dukhi has performed construction inspection and overseen various construction projects such as roads and bridges including: pile driving and tie back construction; road construction work on state and federal projects; foundation work; and materials testing. Mr. Dukhi's professional experience is summarized below:

JFK International Airport

- Resurface the airstrip runaways and taxiways.
- Construction of safety barrier to stop the aircraft in the event of an over run.
- Construction of safety pad in the event that the aircraft cannot stop.

Note: Emphasis on special design mix and testing of material to meet engineering specification and Port Authority of New York standards.

Hudson River Park

- Construction of various parks along the West Side Highway extended into the Hudson River in New York City.
- Entail heavy foundation work, pile driving both concrete and timber pile and dewatering of work area.
- Removal of contaminated material both above and below ground and to ensure at all times the Hudson River does not get contaminated.

Department of Transportation (DOT)

- Work on various projects which consist of resurfacing existing roads and construction of new roads and bridges.

NOTE: Emphasis on foundation work and quality control of construction material used.

La Guardia Airport

- Construction of new boarding gates for US Airways.
- Reconstruction of a concrete taxiway for aircraft which entails heavy foundation work and quality control of special type of construction material to meet State and Federal Regulations.

Long Island Jewish Hospital

- Construction of a new north wing to the existing building.
- Construction of a new multi-level pre-cast concrete garage.

School Construction Authority (SCA)

- Repairs and renovation works to various schools in New York City. Scope of works include structural and architectural work and upgrade of school facilities.
- Evaluate and remove hazardous and contaminated materials both above and below ground such as lead paint and contaminated soil etc.

JOINT VENTURE

JEAN G. DUPRE, P.E.

Professional Experience

Mr. Dupre is a Professional Engineer with over 15 years of experience in highway construction, building construction, and civil engineering. His professional experience includes the following:

Assistant Resident Engineer/Senior Inspector - Tallman Island Wet Weather Maximization and Regulation Modification (NYCDEP) - Powell's Cove Park New Interceptor (College Point, NY)

This project consisted of the installation of a new precast concrete interceptor pipe (6'X6') and storm sewer chambers which included all the following work over about 3,000 feet: driving steel sheeting, excavation, support of excavation (bracing, walers, timber lagging), pile driving filled with concrete, rebar installation, concrete pile cap foundation, pipe installation, backfilling and compaction, steel sheeting removal and maintenance and protection of traffic (detour signs for permanent closure). This project also consisted of the replacement and relocation of an existing 8" water main located on 130th Street between 114th and 111th Avenues, with a new 8" (DIP) pipe, with new hydrant and valve.

Supervising Inspector, Grand Central Parkway, 94th Street Interchange Improvements Project (Queens County, NY).

This project consisted of the rehabilitation of the 94th Street Bridge new superstructure (concrete deck, steel girder and bearings), new substructure (pier, south abutment and wingwall), increase of the span length between the pier and south abutment and widening of the Grand Central Parkway and existing ramp to LaGuardia Airport, steel sheeting with tieback, timber lagging and pile driving. Pavement rehabilitation included full and partial depth concrete slab repairs, installation of new permanent concrete barriers in the median of GCP, milling of HMA pavement and resurfacing, new asphalt pavement overlays, retaining wall (T-wall), drainage structures (new catch basin, manhole, reinforced concrete pipe) .For bridge deck replacement, we installed a new temporary steel bridge on 94th Street to carry the traffic for staged deck reconstruction.

Senior Inspector, Nassau Expressway and Interim Nassau Expressway Pavement and Bridge Rehabilitation and Resurfacing (Queens County, NY)

This project consisted of the rehabilitation of 6 km of PCC and HMA pavement on Nassau Expressway and Rockaway Blvd., the rehabilitation of seven bridges, the roadside improvements with HPBO CBGR, new striping and pavement markings, restoration of 0.8 mile of sidewalk along Rockaway Blvd. for connection to future bike path starting at Brookville Blvd. Pavement rehabilitation included: full and partial depth concrete slab repairs, replacement of existing asphalt concrete pavement with prefabricated concrete slabs, asphalt concrete milling and resurfacing, new asphalt pavement overlays, full and partial depth pavement replacement and concrete pavement diamond grinding. Bridge rehabilitation

Certifications

Years Experience
15+

Office Location
Woodbury, NY

included: deck replacement including rails and lighting, approach slab reconstruction, structural steel painting and bearings replacement on two bridges, superstructure replacement and piers and abutments repair on three bridges, repair of deteriorated deck, cleaning (SP10) and painting of structural steel on two bridges. For bridge deck replacement, we performed temporary shoring systems (structural lifting operations) for staged deck reconstruction and long term lane closure for Maintenance and Protection of Traffic (MPT).

Highway Inspector, Meadowbrook State Parkway Intelligent Transportation System (Nassau County, NY)

The work performed under this contract consists of the installation of eight new Variable Message Signs (VMS), cameras, acoustic detectors and road signs on the above mentioned parkway. The major items of work executed included but were not limited to: survey and stake out to locate the placement of the foundations structures for the cameras and detector poles, VMS sign legs and road signs, control of lane and shoulder closure and detour of traffic as per Maintenance and Protection of Traffic plans, excavation to place underground pipes, pull boxes, precast concrete foundations for cabinets and poles. Concrete was also poured on field for the foundations of the trussed span and cantilever sign structures and tests such as slump, temperature, unit weight and air pressure were performed as per ACI requirements. Conduit jacking across ramp and main line of the parkway, clearing and grubbing to make room for structures were also performed. Top soil placement and turf establishment was performed on all shoulders of the parkway. Mow strip asphalt had been installed around the concrete base of cabinets and poles.

Nassau County Project "2006 Resurfacing Tracking, Phase I"

This project consisted of making a survey on six major roads in Nassau regarding their existing conditions and reporting the findings v(cracks, holes, patching, bumps) in drawing design for future repair. All drawing and sketches were made in strict accordance with project's specifications and NYS rules and regulations.

NYSDOT Installation of Durable Pavement Safety Markings in Nassau and Suffolk Counties

This project consisted of installing new pavement markings (symbols, lines, letters, markers) on various roads and highways in Nassau and Suffolk Counties. Under this job, we provided Maintenance and Protection of Traffic (MPT) in full accordance with the MUTCD, codes rules and regulations of NYS-DOT. We checked if the size, format and brand of the material used were in compliance with the project specifications and requirements. We installed crosswalk, stop bar, turning and straight arrows (Tape and Thermoplastics), yellow and white line (Epoxy) and reflective markers. We did the record keeping of the project by means of M.U.R.K. system and the enforcing of contract plans to NYS-DOT specifications. We provided daily report of Contractor activities, estimated quantities for payroll and prepared field progress and punch list.

Construction Inspector - Municipal Testing Laboratory, Inc.

Mr. Dupre monitored various kinds of masonry and concrete works such as: structural facing tile, exterior cavity wall-column at inside and exterior corner – spandrel beam and relieving angle. He verified if execution of works and materials used complied with New York City School Construction Authority Standard Specifications and the New York State Building Code. He reviewed mortar and/or concrete mix design and mixing procedure eventually, tested and sampled freshly mixed concrete and/or mortar, and monitored concrete field testing (slump, air content, unit weight and temperature). Mr. Dupre approved or rejected the use as per American Concrete Institute (ACI) or American Society for Testing Materials (ASTM) requirements, monitored curing operation after placement, and performed soil and asphalt compaction test using the troxler nuclear gauge.

JOINT VENTURE

JOSE P. VELASCO

Professional Experience

Mr. Velasco is experienced in all phases of construction inspection, supervision, management, design coordination and scheduling. His experience includes construction inspection of highway, bridges and marine projects with emphasis in project management, record keeping, quality control, material testing, closeouts, problem solving, constructability reviews and estimating. Mr. Velasco supervised the fabrication and installation of electrical panel board, raceways, positive feed cups, magnetic elevators and steel skid. He supervised the erection of a five-story glycerin building and the installation of underwater outflow, bulkhead, bulkhead shoe, pile driving, pressure cookers and coolers. He also monitored application of industrial abrasive, coating and sealers to different industries and supervised the installation of industrial pumps.

Mr. Velasco's professional experience includes the following:

Rehabilitation of 56 Bridges on Various Locations, Orange and Rockland Counties
Mr. Velasco was in charge of repainting the bridge girders, replacement of bearings, steel repairs, pedestal replacement, bridge joints replacement and columns concrete repairs.

NYCDEP Croton Aqueduct Rehabilitation and Site Restoration
Mr. Velasco was the Senior Inspector for the removal of shaft covers, removal of ladders, concrete shaft wall repair and grouting of leaks and voids; rehabilitation of the surface structure, blow off chamber, stream raceway and related surface improvements; and rehabilitation of the 7 mile long pressure tunnel lining, including crack repair, brick replacement, contact grouting, consolidation grouting and leak repair.

New York City Department of Transportation, Replacement of Steinway Street Bridge Over Grand Central Parkway, Queens NY.
Senior Inspector for the remaining task to be done namely construction of the bridge sidewalks, ADA ramps, railings, fence, pedestrian and traffic signals, light poles on the bridge and on the GCP median, luminaries installation on the underpass and permanent symbols and marking stripe of the roadway

New York City Department of Transportation, Emergency Repairs of Existing Bridges in Manhattan, Queens, Bronx, Brooklyn and Staten Island. New York.
Mr. Velasco oversaw, inspected and managed the on-going repair of the substructure of bridges on time and material basis. He maintained reasonable manpower and recommend additional depending on the extend of repairs and intricacy of the task, signed and recommended timesheet for timely billing, recommend priorities depending on the condition of the structure and its role with the bridge system.

Years Experience
6

Office Location
Woodbury, NY

TBTA, Replacement of the Exhaust Fan, New York. (Queens and MidTown Tunnels Bldg)
Mr. Velasco was Senior Inspector for the replacement of 23 units of existing exhaust fans, floor concrete placement, replacement of damper doors, installation of fan bearing support and motor pedestals, installation of fixed and floating bearing, inlet cones, rotor of the fan, steel partition wall, u-bolt, drainage system, evase and construction shield, transition assembly, fan housing, fan bearing support and motor anchors, damper operator and 24 hours test run of the new fan, as well as demolition of the existing fan housing and partition wall.

New York State Department of Transportation, Henry Hudson Parkway Maintenance Repair of 19 Bridges, New York.

Mr. Velasco was the Senior Inspector for steel repairs to girders, joint replacement, asphalt overlay, deck repairs, joint resealing, replacement of bearings with elastomeric bearings, epoxy coating of abutments, pedestals and back walls, shaft drilling, column replacement, and repairs to approach slabs and pavement.

New York City Department of Design and Construction, Grinding Various NYC Roadways, New York and Bronx Counties, New York

Mr. Velasco was Senior Inspector for grinding and milling existing streets and roadways and construction of a new asphalt wearing course.

Federal Emergency Management Agency, World Trade Center Fire/Explosion Recovery Effort, New York City

Mr. Velasco was Debris Specialist and inspected and monitored debris removal at the World Trade Center site.

FDR East 60th Pier Rehabilitation, New York

As Structural Engineer, Mr. Velasco was responsible for in-depth inspection, preliminary estimates and structural studies of the present condition of the receiving platform and supports. He was involved in preliminary design for rehabilitation of sheet piles and recommended means of reinforcing the present condition of the bulkhead for comments and studies from NYSDOT.

Metro North, Mount Kisco Bridge, New York

Mr. Velasco was Senior Inspector for the demolition and replacement with box beam stringers. The work included installation of box beam modules and post-tensioning of cable strands, installation of reinforced concrete deck, half section concrete parapet, bridge rail, epoxy deck sealer, stone ballast and rail tracks.

West 26th Street Float Bridge, New York

As Structural Engineer, Mr. Velasco performed structural analysis of the existing structure to determine its reaction during lifting for repair and transporting to Virginia for rehabilitation. He conducted structural analysis for each preliminary design of skirts for piles protection.

New Jersey Department of Transportation, MAGIC Project, New Jersey

Mr. Velasco was the Office Engineer for the installation of fiber optic along Route 80, Interstate 287, Route 46 and George Washington Bridge. He maintained incoming and outgoing correspondence, daily entry of quantities to computer, mark –up for as-built, daily schedule for inspectors, maintained the function of office equipment and office supplies, send out agendas to contractors and parties involved with the project, and wrote minutes of the progress meetings. He scheduled work for inspectors during scheduled no work day or activities.

New York City Department of Transportation, Erskine Bridge, New York

Mr. Velasco was Office Engineer and Inspector of pile driving, deflection of piles and slurry placement of the annular of the grade casing and pile at both abutments. He supervised the relocation of the high pressure pipe from the pump station to the filtration plant that interfered with the construction of the abutment.

JOINT VENTURE

JOHNNIE S. YOUNG

Professional Experience

Mr. Young is a construction inspector with over 32 years of experience. Mr. Young's specific experience is summarized below:

Field Inspector - EDC - Brooklyn Rail No.1369004 and 13690006, Brooklyn, NY

Project involved removal of existing and placement of new railroad tracks, electric ducts, and substation, storm sewer, catch basins, 20-inch, 12-inch and 8-inch water main, sidewalk, curb and roadway reconstruction.

Field Inspector - DDC Capital Project No. RED-363 Staten Island and Brooklyn, NY

Project involved replacement of existing 6 inch water main in various locations within the two boroughs, installation of new 8, 12 and 20 inch water main lines.

Field Inspector, DDC Capital Project No.SE-208C, Harold Street. Staten Island, NY

Project involved installation and replacement of existing water main, sanitary and storm sewer, sidewalk, curb and roadway reconstruction.

Field Inspector, DDC Capital Project No.RED-362, Staten Island and Brooklyn, NY

Project involves replacement of existing 6 inch water mains in various locations with two boroughs, installation of new 8, 12 and 20 inch water inch water main lines. (Rom Engineering P.C.)

Field Inspector, DDC Capital Project No.RED-361, Staten Island and Brooklyn, NY – Water Main Replacement

Project involved replacement of existing 6 inch water main in various locations within two boroughs, installation of new 8, 12 and 20 inch water main lines.

Field Inspector, DDC Capital Project No.RED-359, Staten Island, NY, Water Main Replacement

Project involved replacement of existing 6 inch water main in various locations within the borough, installation of new 8, 12 and 20 inch water main lines.

Field Inspector, DDC Capital Project No.RED-357, Staten Island, NY: Water Main Replacement

Project involved replacement of existing 6 inch water main in various locations within the borough, installation of new 8, 12 and 20 inch water main lines.

Field Inspector, DDC Capital Project No.RED-355, Staten Island, NY: Water Main Replacement

Project involved replacement of existing 6 inch water main in various locations within the borough, installation of new 8, 12 and 20 inch water main lines.

JOHNNIE S. YOUNG

Field Inspector, DDC Capital Project No.RED-353, Staten Island, NY: Water Main Replacement
Project involved replacement of existing 6 inch water main in various locations within the borough, installation of new 8, 12 and 20 inch water main lines.

Field Inspector, DDC Capital Project No.RED-352, Staten Island, NY: Water Main Replacement
Project involved replacement of existing 6 inch water main in various locations within the borough, installation of new 8, 12 and 20 inch water main lines.

Sewer Inspector, DDC St George Road Project No. SE 733-735, Staten Island, NY
Mr. Young was responsible for basic surveying, field testing of concrete, asphalt and soil. He observed backfill, inspected pipes being used and record sidewalk damaged by contractor.

Roadway Inspector, DDC Sharrott Avenue Project No. SE 635, Staten Island, NY
Mr. Young was responsible for basic surveying, field testing of concrete, asphalt and soil. He observed backfill, inspected pipes being used and record sidewalk damaged by contractor.

Sidewalk Inspector, DDC Sidewalk Project, New York, NY
Mr. Young was responsible for the proper use of materials and compaction of soil used on sidewalks that have been violated by New York City.

Telephone Inspector, NYNEX, New York, NY
Mr. Young was responsible for the protection of telephone lines in area of construction sites.

Sewer Inspector, Brooklyn Sewer and Water, New York City Sewer Department
Mr. Young performed basic surveying, field testing of concrete, asphalt and soil. He observed backfill, inspected pipes being used and record sidewalk damaged by contractor.

Construction Inspector, Southern State Parkway, New York State Department of Transportation
Mr. Young was responsible for basic sampling and field testing of materials in the field. He Computed and recorded areas, volumes and cost extensions, performed basic surveying.

Construction Inspector, Whitestone Expressway Reconstruction, New York State Department of Transportation
Mr. Young performed basic surveying, computed and recorded areas, volumes and cost extensions. He inspected and recorded steel beams, concrete, soil and asphalt and record findings.

TECHNICAL SUMMARY

Mr. Emad Qadi is experienced in all types of Bridge construction and Repairs, Construction and Renovation, Trestles, Bridges, Commercial High-rise, Residential, School Construction and Rehabilitation, Railroad, Environmental Cleaning and heavy Civil works. Emad is also experienced in Design Reviews, Estimates Preparation, Preparing and negotiation of Change Orders, CPM schedule review and site visibility studies.

Mr. Qadi is Field Management oriented, possessing a strong grasp of computerized project management control systems, management of contracts, and the interpersonal skills required for building relationships with building occupants and owner personnel. Emad has more than 19yrs experience of which 7 years as a Resident Engineer and 5 years as a Senior Construction Manager.

PROFESSIONAL EXPERIENCE

7/07 – Present
Construction Management Services During 2010, 2011 and 2012 – Newark Airport Construction Inspector Responsibilities are Reviewed Schedule, Specifications, Shop Drawings and processed payment requisitions. Check Daily contractor work and prepared daily reports.
Contact Person: Peter Rozpedowski, Resident Engineer, PA, 973-961-6110

Haider Engineering, P.C., New York Project: NY & NJ Port Authority #410-07-002, Performance of Expert Professional Construction Management Services During 2007, 2008 and 2009 – Newark Airport- Construction Inspector; Responsibilities are Responsibilities are Reviewed Schedule, Specifications, Shop Drawings and processed payment requisitions. Check Daily contractor work and prepared daily reports.
Contact Person: Peter Rozpedowski, Resident Engineer, PA, 973-961-6110

Oct. 06 – End of April 2006. Lead Project Officer New York City, NY – USA: Job totaling $30,000,000.00 work included building a new school and two level 90 feet long bridge over the highway to existing school, foundations, structural steel, Fireproofing, extensive concrete placement, plumbing, electrical, fire sprinkler, intercom system, data lines, fiber optics, security cameras, central air conditioning, roofing, emergency generator installation etc. In charge of all field operations managed 12 Engineers, 12

Subcontractors and 110 Laborers. Reviewed Schedule, Specifications, Shop Drawings and processed payment requisitions.

Mar 2005 - August 2006 MAG Construction, Dubai, UAE, Contracts Manager – Contract Assignment; 66 Story Tower in the Arabian Gulf, total cost $105 MM. Construction included a four-story day care center; Prepared BOQs (Bill of Quantities) based on Architectural Contract Drawings, Prepared, related by trade, Contract Drawings and Specifications for Bidding, Advertised/solicited Subcontractors, Conducted walk-through with potential Subcontractors, Qualified Subcontractors to perform required work, i.e. Bonding, Insurance.

Dec 2003– Mar 2005 QAD, Inc. Upper Montclair, NJ Chief Engineer – General Contractor: Constructed a 16-unit apartment building located in East Orange, NJ, Designed and constructed a 16,000 SF commercial space located in Orange, NJ, Designed and built homes, Designed financed and built residential building in Amman, Jordan, Estimated, scheduled and obtained financing for projects, Prepared Contract Drawings and wrote job specifications, Obtained zoning and building permits.

May 2001– Dec 2003 Jacobs Engineering, New York, NY : Construction Manager of nineteen Public Schools of the State of NJ Health and Safety Program at Paterson Public School System, total construction cost $700 MM; Managed six civil engineers. Reviewed Architectural Designs, structural, electromechanical, entertainment arenas, theater for three schools, worked with independent estimators, prepared phasing plan to conduct construction during School occupancy, Prepared Site Specific Health and Safety Program.
Prepared QA/QC Plans, Determined and prioritized school repairs, i.e. meeting fire code requirements/safety regulations, eterias, HAVC, etc, Advertised for job biddings.

Oct 1996- May 2001 Jacobs Engineering RE/Construction Manager; Extensive Steel/Concrete Repairs at Bayonne and Outer bridge Crossing (The Port Authority of NY and NJ – Client). Brooklyn Polytechnic (Assistant RE): Construction of Dormitory, Stadium and Cafeteria. In Charge of Contract Specifications, Estimates and Design Review and 24Hrs/3 Shift Field Operations, Work Totaling $115 MM.

TECHNICAL SUMMARY

Mr. James A. Yhap NICET IV has more than 22 years of Experience in the field of Construction management, Inspection and supervision. His professional experience includes: reconstruction and rehabilitation of road and bridges, buildings, treatment plant, upgrading drainage systems, construction of pipes, steel erection, deck construction, and demolition. He gained this experience with NYCDEP,TBTA, NYSDOT and other agencies. He has supervised Contractor's work in accordance with Construction Plans and Specifications. Prepared Inspector's Daily Report kept track of Pay Items, Performed Slump and Air-Entrainment Tests to check the consistency of the Concrete. Following are the projects he has worked on:

PROFESSIONAL EXPERIENCE

Haider Engineering P.C- Chief Inspector, 6/13 to 2/14.
ConnDOT CSO 2183, Project No. 0172-0412 & 0172-0413 for Construction Engineering and Inspection Services (Road, Bridge, Aviation) Pavement Marking. This project consisted of installation of Epoxy Resin Pavement Markings on Interstate Routes in the same locations as the existing epoxy resin pavement markings, except when indicated otherwise in the contract documents or by the Engineer in Various Towns in District 2. The new pavement marking that was installed differed from the previous pavement markings, per the contract plans for the updated pavement markings. As an inspector, his assignment was to inspect all contractors work and ensure conformity with the ConnDOT's plans and specification for the duration of the project. Some of his assignment also included maintenance and protection of traffic during project activities. All records were kept in accordance with the Manual of Uniform Record Keeping (MURK).
Contact Person: Mr. John Dunn, Project Engineer, ConnDOT. Tel: (860)823-3262

Haider Engineering P.C-Senior Construction Inspector, 12/08 to 2/13
NYCDEP Contract NC-CM03, New Town Creek CM Services
Contract: NC-CM03, PIN: 82607WP01081: NC-CM03 provides for Construction Management Services in connection with Construction Contracts NC-41 (G, E, H, P), NC-43, NC-47 (G, E, H, P), NC-48, NC-50 and NC-51 (G, E, H, P).
This construction contract involves construction of the Residuals building and all its mechanical components. The Central Residuals Building (CRB) was designed to centralize the removed residuals (screenings, grit, and scum) to facilitate the removal of residuals from the site and to maximize the necessary odor control of these residuals. The CRB will include the following equipment;

- § Secondary Influent Screens
- § Waste Sludge Screens
- § Grit Cyclones
- § Grit Classifiers
- § Skimming Concentrators

§ Residuals container storage and loading areas
§ Manhattan Flow Meters
§ Carbon Absorber Odor Control Systems

This reconstruction involved the demolition of block walls installed in the tanks under the interim upgrade to simulate step feed flow and demolition of tank walls where the new detritor grit facilities and a new common channel upstream of the aeration tanks will be constructed. The complete replacement of tank equipment, piping and auxiliary systems is included in the reconstruction. The existing South Control Building was originally slated for demolition, including construction of a completely new South Control Building. This plan is currently being reviewed for possible schedule benefits from a partial reuse of the existing south control buildings.

Contact Person: Claude Oriol, Project Engineer NYCDEP Phone# (718) 707-4105

02/05 to 12/08-The LiRo Group.,Senior Inspector:
NYCDOT: Rehabilitation inspection of the Brooklyn Tower Esplanade of the Brooklyn Bridge spanning the East River between the boroughs of Manhattan and Brooklyn, NY.
NYCDOT: Rehabilitation inspection of the Gun Hill Road Bridge over Metro-North Railroad in Bronx, NY.

05/02-02/05- Urbitran Associates,Senior Inspector:
NYCDOT: Rehabilitation inspection of the Cross Bay Boulevard Bridge over Conduit Boulevard in Queens, NY. **NYCDOT:** Rehabilitation inspection of the Guy R. Brewer Boulevard Bridge over Belt System-Southern Parkway in Queens, NY.

09/96-05/02 Munoz Engineering P.C, Senior Inspector / Inspector:
NYCDOT: Reconstruction inspection of the Flatbush Avenue Bridge over Belt Parkway in Brooklyn,NY
NYSDOT: Construction inspection of asphalt concrete, milling, and resurfacing on various routes in Westchester, **NY.** **NYSDOT**: Construction inspection of asphalt concrete, milling, and resurfacing on various routes in Putnam and Dutchess, NY.
NYSDOT: construction inspection of sign structure installation on the Major Deegan Expressway in Bronx, NY. NYSDOT: Construction inspection of sign structure installation on I-295, I-695 and 907F in Bronx, NY.
NJHA: Construction inspection of the Garden State Parkway Bridge repair in Monmouth County, NJ. MISC: Topographic surveying of several projects in NY and NJ.
NYSDOT: Construction inspection of guide rail, overhead signs and landscaping improvements on Routes I-278 and 440 in Staten Island, NY. NYCDOT: Reconstruction inspection of the Melrose Avenue viaduct over Conrail in Bronx, NY.
NYSDOT: Overhead Sign Structure Installation on the Major Deegan Expressway in The Bronx, NY
He was responsible for the inspection of daily MPT setups, excavation for sign structure footings and foundations, installation of steel and timber sheeting, placing rebar cages, setting anchor bolts, structural concrete placement, installation of sign posts and columns, installation of overhead cantilever and span trusses, installation of reflectorized sign panels, installation of galvanized steel conduits, installation of luminaires, pulling, testing and terminating of electrical conductors. A number of sign structures were installed on the 72 span Major Deegan Expressway Viaduct and Ramps to the George Washington Bridge. Some were anchored to the existing concrete parapets. Others were bolted on to the existing structural steels. The existing structural steels were drilled and the new sign structure posts and columns were bolted on.
Reference: Mr. Doug Effner, Engineer In Charge (NYSDOT- Region 11)

NYSDOT: Guide Rails, Overhead Signs and Landscaping Improvements on Routes I-278 and 440 in Staten Island, NY (Contract No.
He was responsible for the inspection of daily MPT setups, short and long terms construction signs installation, clearing site, unclassified excavation, guide-rail installation, asphalt mow strip (under guide rail and around bases of sign structure columns) installation, topsoil, fertilizer, grass seeds and mulch installation.

TECHNICAL SUMMARY

Mr. Tahir is NICET-IV certified and has a Master Degree from NJIT (New Jersey Institute of Technology) with over 20 years of experience as a *Resident Engineer/Chief Inspector/Office Engineer* with a demonstrated record of success in Resident Engineering Inspection Services for roadways, sidewalks, bridges, sewers and water main civil, related projects. He gained this experience on NYCDDC, NYSDOT, NYS Thruway and NYCDEP projects. As a **Resident Engineer**, he supervised Contractor's work and the Inspection Staff in a professional manner. He acted as Liaison Person on various projects to coordinate with the various agencies concerned. He has worked on the following Projects:

PROFESSIONAL EXPERIENCE

Haider Engineering, P.C. - (03/2014–Present): Resident Engineer: HWS2013Q, PIN: 8502013HW0052P Resident Engineering Inspection Services for Sidewalk Reconstruction and Replacement Borough of Queens, NY. DDC. Responsibilities includes project record keeping as per MURK, official correspondence, material certifications and acceptances, verification of condition/quality of material delivered and work performed, concrete testing, pre-construction pictures, punch list, as-built, payrolls, daily reports, weekly and monthly project status reports, change orders, contractor's partial payments, meeting minutes, daily work schedule notifications and MPT violations. **Haider Engineering, P.C.** providing Resident Engineering Inspection Services for construction of new concrete and steel faced concrete curb, construction of sidewalk, site safety and liaison of work with city agencies, maintenance protection of traffic; installation of sidewalk on various communities in the Borough of Manhattan; Sidewalk assessments accurate and properly recorded by block, lot and address; Photographs of existing sidewalk conditions for each sidewalk violation properly indexed by address, block and lot; Conducted Field survey to mark the limits of sidewalk to be constructed for designated properties as per DOT list. **Contact Person: Engineer in Charge: Mr. Jocelyn Damis, Deputy Director, Ph# 718-391-1955**

Haider Engineering, P.C. - (02/2013–02/14): Office Engineer: HWCRQ02S, HWP2012R, Construction of Pedestrian Ramps, Borough of Staten Island, NY. DDC. Responsible for project record keeping as per MURK, reports for field inspections, review of contractor's project schedule, meetings and its minutes, monthly contactor's estimates, correspondences and coordination of office and field activities with contractor and the client. Inspector reports, payments, and liaison with City agencies and utility companies.

The inspection work for the Installation of **Pedestrian Ramps and Sidewalks** at the designated locations in the Borough of Staten Island, Assisting the Resident Engineer in Coordination with NYCDOT, NYCDDC to obtain the list of locations for the various properties and coordination with the various communities' boards about the schedule of works. Also checking of the contractor's MPT Plans to make sure the work has been done in a safely manner

Contact Person: Mr. Mansukh Mavani, P.E. EIC, NYCDDC (917) 939-6792

Haider Engineering P.C- (Nov. 12 - 01/2013): Chief Inspector: REI FOR Three (3) Emergency Contracts HWSEMERG4 following 2012 Hurricane Sandy, Boroughs of Queens, Manhattan, Staten Island, Brooklyn and the Bronx. PIN: 8502013HW0040C, 8502013HW0041C, 8502013HW0042C – NYC DDC Haider Engineering, P.C. has provided Construction Inspection Services for the installation of **new sidewalks** at designated locations in various community boards in the boroughs of Staten Island, Brooklyn, Queens, and the Bronx. It included the following:

- Conducted Field survey to mark the limits of Sandy damaged sidewalk from the DOT list
- Computed quantities for each location showing Lot, Block & address
- Replacement of Steel and Concrete faced curbs at designated locations
- Coordination with community board prior and duration of the project
- Checking Contractor's MPT for the safety of pedestrians
- Inspection of the pedestrian ramps to make sure the slope does not exceed 8%
- Inspection of reveal of curb and ramp as per specifications
- Sidewalk assessments accurate and properly recorded by block, lot and address
- Photographs of existing sidewalk conditions for each sidewalk violation properly indexed by address, block and construction. **Contact Person: Mr. Mahesh Rana, E.I.C., NYCDDC, 718-391-1965**

Haider Engineering P.C: (7/2012-10/2012) Chief Inspector-NYCDOT- Reconstruction of Carlton Avenue Bridge over LIRR - Types of works includeed Demolition of sub-structure, Installation of Piles, Abutments, Wing Walls, Beams and Girders, Deck, Approach Slab, Parapet, **Sidewalk, Curbs**, Street lighting and Pavement Marking.
Contact Person: Engineer in Charge: Mr. Tony Ohikuare, Project Engineer, NYCDOT, 212-839-4015

Haider Engineering P.C: (05/2008-07/2012) Resident Engineer - WSHD-2A and 3A CM: Construction Management Services in Connection with Miscellaneous Projects in the New York Watershed Area. PIN: 82606WM00182 & 82606WM00183, DEP. The work under this Contract is to provide Construction Management Services for Capital Project WM-30, which includes the various construction contracts.
DEL-25, "Rehabilitation of Kensico South Effluent Chamber & Catskill Screen Chamber" This is mostly Shaft 18' Chlorination System / New Equipment Installation. Meetings with NYCDEP and to discuss & optimize work plan/procedures to effect completion, without disrupting ongoing chlorination during necessary shut-offs.
DEL-57, This is the Health & Safety / Work Plan for DEL-25. The Report was completed by WESTON SOLUTIONS and submitted to DEP.

Resident Engineer – New York State Thruway Authority Contract for Pavement Resurfacing and Miscellaneous Safety Work between M.P. 11.75± and M.P. 25.03± in Rockland County (2003) Responsibilities involved project record keeping as per MURK, material certifications and acceptances, preconstruction and progress pictures, payrolls, subcontractor's approvals, nighttime lighting plans, contractor's monthly payments, meeting minutes, lane closure notifications, change orders, progress schedule, and punch list. Periodic inspection of contract activities involving full depth repairs, cold milling of existing asphalt concrete pavement and shoulders, resurfacing, routing and sealing joints, pavement striping, installation of S.T.A.R., replacement of inductance loops, modification of existing guide rail systems, miscellaneous drainage work, maintenance & protection of traffic.

Office Engineer – New York State Thruway Authority Contract for Pavement Repair, Interchange Modifications, Bridge Joint Repairs, Noise Wall Modifications from M.P. 16.80± and M.P. 29.54± and Miscellaneous Work in the New York Division of the New York State Thruway in Rockland County (09/2005 – 11/2007)_The work consisted of ramp widening, noise wall modifications, concrete and steel repairs to bridges, armored expansion joints, waterproofing bridge decks, guide rail, rehabilitation of roadway drainage, milling and paving. Responsibilities involved project record keeping as per Manual for Uniform Record Keeping (MURK), material certifications, contractor & subcontractor payrolls, contractor's bi-weekly estimates, meeting minutes, lane closure notifications, Order-on-Contracts (OOC), force account work, progress schedule, Equal Employment Opportunity (EEO) correspondences, periodic field inspections and coordination of daily office and field activities with contractor and the client.

- Cleaning and painting railings on the BQ Expressway for NYCDOT
- As Senior Coatings inspector, duties included inspection of daily power tool surface cleaning operation and generated daily reporst.

Jan 2008 - Dec2010 THOMASSINI ENVIRONMENTAL MANAGEMENT INC;
- As Project Coordinator, responsibilities included monitoring lead-based paint abatement projects in various Day Care facilities, private houses and commercial buildings.

July 2006 - Dec 2007 URBITRAN ASSOCIATES ENGINEERING SERVICES TRIBORO BRIDGE for TBTA, and QUEENSBORO BRIDGE for NYCDOT; as Senior Coating inspector duties included inspection of abrasive blast cleaning and painting operations and writing daily reports.

Mar 2005 - May 2006 HAKS ENGINEERING SERVICES P.C. VERRAZANO NARROWS BRIDGE contract VN-28 TBTA
Drainage improvement and various abrasive blast cleaning and painting projects. As Senior Coating inspector,

duties included reviewing contractor's daily rigging, abrasive blasting and painting operations. Generated daily report.

Feb 2004 - Dec 2004 AMMANN and WHITNEY ENGINEERING P.C. KTA - TATOR INC. Drainage improvement and steel repairs at THROGS NECK BRIDGE for T.B.T.A.;

As senior coating inspector, duties included review and monitoring contractor's rigging, abrasive blast cleaning and painting operations according to specification. Wrote daily reports.

Mar 2003 - Dec 2003 KTA - TATOR ENGINEERING SERVICES P.C. Contract VN - 316 VERRAZANO NARROWS BRIDGE TBTA;

As Senior coating inspector, duties included inspection of abrasive blast cleaning and painting operations. Conducted air monitoring with TSP and PM10 monitors, containment ventilation system and all environmental inspection operations.

Jan 2001 -Jan 2002 MASSAND ENGINEERING L. S. P. C. Williamsburg Bridge painting project for NYC DOT;

As Senior Industrial Hygienist, duties included overseeing contractor's compliance with OSHA, EPA regulations for Health and Safety of workers and Hazardous Waste Management, performed air monitoring with TSP and PM10 monitors and generate daily report.

Feb 1999 – Dec 2001 OMNIK ENVIRONMENTAL MANAGEMENT INC;

- Partial reconstruction Pelham Bay Bridge Bronx NYCDOT
- Restoration and Painting of 174th street bridge NYCDOT
- Painting of 19th bridges on various routes in the town of Huntington, Islip, River Head and Suffolk county NYSDOT. As a Senior Industrial Hygienist and Environmental Overseer Responsibilities included daily oversight of all construction phases: contractor pre-construction, construction and post construction submittals. Performed daily air monitoring with TSP and PM10 monitors, real time monitoring with DATARAM machines. Prepared daily, weekly and monthly reports.

Mr. Fitzroy Stewart has a B.S degree in Civil Engineering with over twenty- five years of experience as office engineer on various Bridges, Roadways, Sewer and Water-Main rehabilitation projects. He is familiar with the methods and procedures of the construction industry. He gained this experience with NYCDDC and other agencies. As an Office Engineer he was responsible for maintaining project records, correspondence files, quantities, preparation of partial payments, change orders, material certifications, reviewing of Inspectors reports, preparation of meeting agenda etc. He gained this experience working on several construction inspection projects. His experience is as follows:

PROFESSIONAL EXPERIENCE

January 2014 – Present: Haider Engineering P.C: Office Engineer.
HWS2013Q, PIN: 8502013HW0052P Resident Engineering Inspection Services for Sidewalk Reconstruction and Replacement Borough of Queens. DDC

Types of works including Construction Inspection for the installation of new sidewalks at designated locations in various community boards in the borough of Queens. The following are type of works:

- Conducted Field survey to mark the limits of Sandy damaged sidewalk from the DOT list
- Computation of quantities for each location showing Lot, Block & address
- Replacement of Steel and Concrete faced curbs at designated locations
- Coordination with community board prior and duration of the project
- Checking Contractor's MPT for the safety of pedestrians
- Inspection of the pedestrian ramps to make sure the slope does not exceed 8%
- Inspection of reveal of curb and ramp as per specifications
- Sidewalk assessments accurate and properly recorded by block, lot and address
- Photographs of existing sidewalk conditions for each sidewalk violation properly indexed by address, block and lot
- Verified that the Contractors have obtained all necessary permits, certificates, licenses or approvals required for the performance of the work
- Supervised the performance of all detailed inspection and field testing of materials
- Preformed all concrete filed tests including temperature, slump, air, unit weight and cylinder
- Performed continuous inspection, quality control and MPT to ensure that all work zone safety devices, including

January 2012 – 12/2013; Haider Engineering, P.C. – Office Engineer
NYCDDC Contract HWRC054-R - REI Services for Improvement of Intersections in Hylan Boulevard From Tarlee Pl to Whitman Ave, From Waterside Pkwy to Fairlawn Ave, and From Hopkins Ave to Montreal Ave, Borough of Staten Island, Community Board No. 3. The project consisted of improvement of 4 intersections at the vicinity of Hylan Boulevard. Work includes: roadway widening, utility relocation, installation of water mains and sanitary sewers, installation of curbs, sidewalks and pedestrian ramp, Maintenance and Protection of Traffic and coordination with the Community.

As an Office Engineer, Responsible for maintenance of field office records, in accordance with the MURK system, includes correspondence, shop drawings, record drawings, materials acceptance records, contractor and sub-

contractor payrolls and EEO records. Review Inspectors' Daily Reports and preparation of bi-weekly estimates, field change payments, order-on-contracts and partial payment for materials.
Contact Person: Monzer Shahin, E.I.C., NYCDDC: (718) 317-2540

(09/08 – Jan. 2012) - Office Engineer: Lockwood, Kessler & Bartlett Inc (Consulting Engineers) Aerial Way, Syosset, NY Rte. 878 Nassau Expwy & Rockaway Blvd. Roadway Pavement & Bridge Rehabilitation from Cross Bay Blvd to Queens/Nassau County Line (NYSDOT, $58.9 Million): The project involved roadway and seven bridge rehabilitations, installation of pre-cast paving slabs along sections of Rockaway Blvd, cold milling and asphalt resurfacing.
As an Office Engineer, Responsible for maintenance of field office records, in accordance with the MURK system, included correspondence, shop drawings, record drawings, materials acceptance records, contractor and sub-contractor payrolls and EEO record keeping; review Inspectors' Daily Reports; preparation of bi-weekly estimates, field change payments, ordesr-on-contract and partial payment for materials.
Contact Person: Thomas M. George, E.I.C, NYSDOT: (516) 239-2535

(03/08 – 9/08) - Office Engineer: Infra Tech Associates (Consulting Engineers) 40 Broad Street, New York, NY Road Rehabilitation, I-87 from MP 16.2 to MP 29.5 (NYSTA, $26.8 Million) Duties included: Review Inspectors' daily reports and enter payment quantities into CEES; process Contractor's monthly estimates; prepare Field Change Order & Order-on-Contract; reconcile final quantities with Contractor and maintain project files.
Contact Person: Richard Falletta, E.I.C, NYSDOT: (914) 332-0016

(05/07 – 3/08) - Office Engineer: Infra Tech Associates (Consulting Engineers) 40 Broad Street, New York, NY, Mill & Fill, N.S. Pkwy from NYC limit to Exit 31 (NYSDOT, $9.1 Million) ; As an Office Engineer, Implemented and maintained field office including an organized filing system in compliance with MURK; reviewed Inspectors daily reports and entered payment quantities into CEES; processed Contractor's bi-weekly progress payments; prepared Field Change Order and Order-on-Contract; reconciled all Field Change Orders with an Order-on-Contract and finalized quantities with Contractor and Prepared final records, as-builds and close-out documents.
Contact Person: Brian McNamara, E.I.C, NYSDOT (516) 625-0297.

(03/04 – 05/07) - Assistant Office Engineer/Inspector: Infra Tech Associates (Consulting Engineers) 40 Broad Street, New York, NY 10004 Reconstruction of Three Bridges in the Bronx, NY (NYSDOT, $54.0 Million)
This project involved the reconstruction of three major bridges: Cross Bronx Expwy (I- 295) Over Randall Avenue; East Tremont Avenue over I-295 extension and I-95 over Throgs Neck Expwy. Elements of work include: deck replacement of Randall Avenue Bridge; Superstructure replacement of East Tremont Bridge with a pre-stressed, precast covered structure, including pier extension and temporary structure. Duties
included: construction inspection at the new I-95 over I-695 Bridge for quality control; monitored the demolition of the existing bridge, temporary and permanent pile driving, cast-in-place piling, concrete and asphalt pouring, excavation and backfill, testing of materials and installation of drainage structures. As Assistant Office Engineer, was responsible for maintaining project records which included all correspondence, minutes of site meetings, request for information (RFI) and shop drawings log; checked Inspectors daily reports and entered payment quantities into CEES. **EIC: Michael McCotter.**

(05/01 – 12/03) - Edwards & Kelcey (Consulting Engineers) 299 Madison Ave, Morristown, NJ 07962
Field Engineer: Managed a $4.0 million dollar construction project in Connecticut for Bechtel Inc. that consisted of the upgrading of 108 telecommunication sites in the AT&T Wireless Network to comply with the next generation technology.

John O. Piodos is an accomplished, multi-faceted Mechanical Engineering Professional with proven ability to plan, administer, coordinate and execute successful mechanical engineering and maintenance programs. Over 21 years of wide ranging experience, encompassing power plants, building facilities, oil refineries, gas plants, waste/water treatment facilities, petroleum plants, Desalination, Fabrication & Piping Inspection

- Diverse professional development, including preventive maintenance, field service engineering, rotating and stationary equipment engineering, mechanical/electrical inspections, technical drawing/drafting and documentation issues.
- A committed team player, with a proven ability to meet and exceed set goals and deadlines as well as work effectively with colleagues and clients at all levels.
- Exceptional focus and follow-through abilities, with a record of significantly improving operational efficiency and productivity.
- Detail oriented multi-task, with exemplary organization and project management skills.
- Gifted communicator, able to effectively translate and analyze complex technical principles.

PROFESSIONAL EXPERIENCE

Haider Engineering, P.C. – Mechanical Inspector: Project Task Order - No. 1, CM-1507 – MTA Project - Consulting Services Related to the Consultant Construction Management and Inspection Services for Montague Tube Rehabilitation ("SANDY" REPAIR PROJECT) in the Borough of Manhattan and Brooklyn, NY. Duration: 03/2014 – Ongoing.

He is currently serving as Mechanical Inspector for NYCT Contract P-36436 - Montague Tube Rehabilitation. This project involves rehabilitation work being performed on the Montague Tube and associated facilities, including Ventilation Plants, Circuit Breaker Houses, Tunnel Lighting, Duct Bench Replacement etc., as a result of damages caused by Hurricane Sandy. Work is being performed around the clock, on a 24 hours basic in accordance with an ambitious schedule to achieve completion within fourteen (14) months. The project's Construction Management Team has many personnel including four Resident Engineers covering the job around the clock and during the weekends. When on duty, his duties include, inspect the contractors work at the site. Monitor all mechanical activities at the site, perform inspections. Coordinate with the various departments of the NYCT, Contractor, and Subcontractors to ensure a smooth collaboration of the various parties during the construction process. Document all inspections and conditions, monitor construction work progress, monitor site relating to mechanical safety conditions, and ensure compliance of the construction work to the contract documents. Estimated construction cost is $100,000,000.00. **Contact Person: Piyush Patel, PE, Construction Manager. (646)252.4035**

Haider Engineering, P.C. (11/08 – 02/14)
Mechanical Inspector, NYCDEP Contract NC-CM03, New Town Creek CM Services - NC-CM03 provides for Construction Management Services in connection with Construction Contracts NC-41 (G, E, H, P), NC-43, NC-47 (G, E, H, P), ICC-48, NC-50 and NC-51 (6, E, H, P) This construction contract involves construction of the Residuals building and all its mechanical components. The Central Residuals Building (CRB) was designed to centralize the removed residuals (screenings, grit, and scum) to facilitate the removal of residuals from the site and to maximize the necessary odor control of these residuals. The CRB will include the following equipment;

- Secondary Influent Screens
- Waste Sludge Screens
- Grit Cyclones

- Grit Classifiers
- Skimming Concentrators
- Residuals container storage and loading areas
- Manhattan Flow Meters
- Carbon Absorber Odor Control Systems

This reconstruction involves the demolition of block walls installed in the tanks under the interim upgrade to simulate step feed flow and demolition *of* tank walls where the new detritor grit facilities and a new common channel upstream of the aeration tanks will be constructed. The complete replacement of tank equipment, piping, electrical and auxiliary systems are included in the reconstruction. The existing South Control Building was originally slated for demolition, including construction of a completely new South Control Building. This plan is currently being reviewed for possible schedule benefits from a partial reuse of the existing south control buildings.
Contact Person: Claude Oriol, Project Engineer NYCDEP Phone# (718) 707-4105

Mechanical Engineer, PORT AUTHORITY OF NEW YORK & NEW JERSEY-Jamaica, NY
Attached to Structural Integrity Program as a Mechanical Engineer/Electrical Engineer
Oversees and handle all aspects of electrical and mechanical deficiencies at JFK International Airport, with responsibility for ensuring timely repair in compliance with NYC Building Code. Conduct comprehensive inspections and building surveys for all electrical and mechanical issues, and subsequently coordinate with relevant occupants to advice on resolution and repair, including boilers, elevators, escalators, passenger loading bridges, fire alarm system, pumps and compressors, chillers, cooling towers & substation transformers. Prepare thorough documentation to track compliance of all inspections. Submit quarterly reports/analysis about the electrical/mechanical equipment deficiencies and indorsed specifications from technical documents to develop plans & implement immediate repair. Perform meetings with JFK-IA airline tenants & tackle some issues pertaining electrical, mechanical, civil, architectural and structural disciplines involve in a comprehensive building survey and proposed preventive maintenance measures to rectify equipment failures. Conduct equipment inventory and inspections of Air Train from Jamaica, Howard Beach, Lefferts Blvd., Federal circle and John F. Kennedy International Airport Terminals. Perform cost analysis of any bidder's cost presentation on certain award projects.

Key Achievements: Increased operational efficiency within the power plant through application of comprehensive preventative maintenance procedures and techniques.
- Spearheaded productivity increases while developing, implementing, and ensuring compliance to safety procedures.

Mechanical Engineer, MARTACK AC CORP. – Long Island, NY (Dec. 2000 to Jan. 2001)
Fulfilled multiple, simultaneous duties, including charging Freon to air conditioning units, performing system leak tests and electrical troubleshooting for unit panels. Oversaw installation of HVAC equipment and accessories, in addition to laying out suction/discharge piping. Thoroughly inspected installed units and prepared specifications for start-up and commissioning for roof top non- condensing units. Key Achievements:
- Completed multi installation and test run of non-condensing units in advance schedule.

Pump Technician, GM PUMPS – Brooklyn, NY (Oct. 1997 to Nov. 2000) Performed installation, repair and troubleshooting of industrial pumps like deep well pumps. Prepared mechanical/electrical parts prior for assembly and traveled to other states to rectify problems with submersible pumps on electrical and mechanical disciplines. Key Achievements:
- Conducted reverse alignment between drive coupling of big horse-power motor and high pressure pumps.

HVAC Building Maintenance Technician, APOLLO HVAC CORPORATION – Long Island, NY (Aug.1995 to Sept. 1997) Oversaw daily operation and maintenance of computerized building air conditioning system; with responsibility for installing new units. Troubleshoot and resolved all technical and operational problems, encompassing centrifugal chillers, pumps, compressors, valves, air-handling units, boilers and auxiliary equipment, cooling towers and control panels.

TECHNICAL SUMMARY

Mr. Louis Vitone has a BS degree in Chemical Engineering and has completed E.I.T (PE Part 1). He has over 20 years of hands-on experience in construction management as a Mechanical Engineer/Inspector. He has worked on numerous projects for various agencies including NYCDEP. He is familiar with Construction Methods and Procedures of NYCDEP and Construction Industry. His experience includes working as Mechanical Inspector at City Water Tunnel #3 and varied engineering and construction management responsibilities at various waste water treatment plants. He has strong technical, organizational and communication skills critical for all aspects of construction management, including liaison with clients and negotiations with contractors, vendors and suppliers.

PROFESSIONAL EXPERIENCE

2/2011 – To Present
Mechanical Inspector:
Haider Engineering, P.C., Farmingdale, New York Project: NYCDEP TCM-52; Construction Management Services in Connection with Contract C358 and C549 Shafts for Completion of the Manhattan Portion of City Tunnel #3, Stage 2 PIN: 82608W000100. The types of works includes: as specified in the drawings or approved, furnish, test, deliver, protect and install 48-inch diameter flanged stainless steel pipe spool pieces, manhole covers pipe spool pieces, with all required fittings and appurtenances located in the riser valve chamber for all the shafts and also for shaft 25B, 31B and 33B in the distribution chamber; and 36-inch diameter flanged stainless steel pipe spool pieces and manhole covers pipe spool pieces with all required fittings, and appurtenances located in the distribution chambers for shafts 24B, 26B, 27B, 28B, 29B, 30B and 32B.
Construction Management Inspection of work related to the Manhattan portion of the City Tunnel No. 3. Work also includes preparation and review and monitoring of Construction Schedules, preparation of field change orders and claim records; shop drawing and CPM schedule

11/2008-1/2011
Cost / Change Order Engineer
Hazen and Sawyer, P.C., Brooklyn, New York, New York City Department of Environmental Protection (NYCDEP):
NYCDEP Project - 26th Ward WWTP: Cost Engineer responsible for negotiating change orders with prime contractors (General, Electrical and HVAC contractors). Also prepared field change orders and served as Change Order whip responsible for corresponding with the NYCDEP change order manager.

- **NYCDEP Project – Jamaica WWTP:** Responsible for negotiating change orders and corresponding with NYCDEP change order manger. Also assisted with Standard Operating Procedures preparation.

1/2004-5/2008

Mechanical Inspector: ARCADIS Engineers, Edison, New Jersey: Ewing Lawrence Sewerage Authority (ELSA), Mountain View Pump Station Upgrade, Ewing, NJ Project Manager responsible for the design and construction administration, including shop drawing review and field inspection of the pump station upgrade. The upgrade included the replacement of **pumps, pipe, valves, grinder, instrumentation, controls and generator. Assisted ELSA in obtaining project funding through the New Jersey Environmental Infrastructure Trust (NJEIT) Fund. Ewing Lawrence Sewerage Authority (ELSA), Main Pump Station Upgrade and Intermediate Pump Station Upgrade and Appurtenant Work, Lawrenceville, NJ** . Responsible for the construction administration and shop drawing review and field inspection for the upgrade which includes the replacement of **pumps, variable frequency drives, sewage grinder, sodium hypo-chlorite metering pumps, storage tanks, and heating cables at scum beaches.**

6/1998-1/2004
Mechanical Inspector:
Schoor DePalma Engineers, Manalapan, NJ

- **June 2003 - January 2004 - Township of Ocean Sewerage Authority, Treatment Plant Improvements, Oakhurst, NJ:** Design of two primary settling tanks including flights and chains, two grit chambers, a grit building including grit dewatering screw, piping and replacement of process-water pumps.
- **September 2002 - April 2003 - Lambertville Sewerage Authority**, Digester Improvements, Anaerobic Digester Conversion to Sludge Storage Tank, Hunterdon County, NJ: Preparation of plans and specifications for converting existing anaerobic digester to a sludge storage tank. Designed replacement of digester roof and designed addition of sludge mixing pumps to mix sludge within the storage tank.
- **February 2002 - August 2002 - North Bergen Central Wastewater Treatment Plant Upgrade, North Bergen, NJ:** Designed upgrade for the Authority's Central Wastewater Treatment Plant. including a new influent pump station including new variable frequency drives, channel mounted grinders, two new Chlorine Contact Tanks, hypo-chlorite mixers and chemical feed piping.
- **July 2001 - January 2002 - Joint Meeting of Essex & Union Counties, Final Clarifiers Upgrade: Plan preparation and specifications for the upgrade of four final clarifiers. Pitman County Club, NJ:** Design and field inspection of a sanitary sewage pump station. Montclair State University Pump Station, Design of a new 75,000 gallon per day pump station. Strickland Street Pump Station, Point Pleasant Borough, NJ Design of new pump station and facilities, including bypass pumping, new pumps, wet well, controls and electrical generator.
- **February 2001 - June 2001 - Modifications and Improvements to the 61st Pump Station, North Bergen Municipal Utilities Authority:** Design and construction management including field inspection for the removal and replacement of two existing sewage **pumps and valves** with two dry pit submersible pumps, a magnetic flow meter, sump pump, dehumidifier and valves and fittings inside the existing 61st Street pump station.
- **July 1998 - February 1999 - Modification and Improvements to Pump Station, East Windsor, NJ:** Design and construction management including field inspection for the installation of a new, below-ground, variable speed pumping station consisting of a dry well and wet well structure. Major construction features.

Inc. – New York Estimate construction costs for various types of facilities, including Transportation Facilities (NYCT, LIRR, PANYNJ, TBTA), Water Pollution Control Facilities (NYCDEP), Office Buildings (DCAS), Hospitals and Schools including the following: NYCT B-62009, Security Upgrade - Eastchester & LaGuardia Bus Depots NYCT C-52116, Electronic Security in Under River Tunnels NYCT C-26012, 86th Street Station (2nd Avenue Subway Line) NYCT C-34906, Upgrade of DC Power System at 207th Maintenance Shop TBTA Queens Midtown Tunnel, Contract QM-30 PANYNJ, Upgrade of Pump House 4 (at LaGuardia Airport) NYCDEP, Bowery Bay Contract BB-59E LIRR, East Side Access, Contract CM012R Senior Engineer Action Const. Consulting / Terraferma Elect. Const. Co. Inc. - New York NYCDEP, Bowery Bay Contract BB-59E (Astoria NY) · Manage all aspects relating to Power System, including Short Circuit and Coordination Study, and Fiber Optic based Communication and Control System for upgrading of Water

Pollution Control Plant. · Review revise and upgrade of Submittals documents to enable approval. · Inspection and Shop testing of equipment, including Motor Control Centers and Medium Voltage Motor Starters. · Coordination with Subcontractors, Manufacturers, Vendors, the Engineer, and the NYCDEP. Upgrade of Water Pollution Control Plant, including new Motor Control Centers, New Medium Voltage Motor Starters for Process Air System, wiring of mixers, pumps, instruments, installation of conduits and boxes, including explosion proof boxes and fittings, Fiber Optic based Electrical Monitoring and Control System, Fiber Optic based Public Address and Telephone System, Panelboards, Transformers, Safety Switches, indoor and outdoor lighting systems etc.

2005-2006 Senior Estimator / Senior Engineer Action Const. Consulting / Terraferma Elect. Const. Co. Inc. – New York

- Estimate construction costs for various types of facilities, including Transportation Facilities (NYCT, LIRR, PANYNJ, TBTA), Water Pollution Control Facilities (NYCDEP), Office Buildings (DCAS), Hospitals and Schools including the following:

2002 – 2004 Quality Manager / Senior Engineer Action Electrical Contracting Company Inc. - New York: NYCT Contract C33173, Construction of Circuit Breaker House and Replacement of DC Cables at East New York Yard -

- Manage all quality aspects for construction projects, including power, communication, lighting, mechanical, structural and civil systems.
- Updated The Contractor's Quality Program Documents and successfully implemented The Quality program.
- Inspection of materials, installation, and inspection during shop testing of equipment.
- Ensured that all required tests are performed, documented and adhere to Contract requirements.
- Coordinated Quality related matters with the Client, Contractor, Sub-Contractors, Vendors, Manufacturers and the NYCT.

This contract included the construction of a new Circuit Breaker House at the East New York Yard - Fifteen (15) new 4000 Amps, 750VDC Circuit Breakers were procured, and installed at the site. Thousands of feet of 2000MCM cables were also installed in new concrete Duct Banks, connecting the new Circuit Breakers to the various Tracks in the Yards. Different Types of Copper Connectors were used to connect the cables. Type LS & QV connectors were used for connections to the third rails using Cadweld, via 500MCM Cables. Several other locations in Manhattan were also included in this contract where existing 4000Amps, 750Volts DC Westinghouse Circuit Breakers were removed refurbished and re-installed. The work included extensive track work in yard and tunnels. Quality Manager / Senior Engineer
Action Electrical Contracting Company Inc. - New York

NYCT Contract E-31268, Fan Plant Wrap-Up (Six Locations), Broadway -7th Ave Line Steinway Tunnel, Lexington 4th Ave Line "A" Division IRT in the Boroughs Manhattan Queens and the Bronx -

- Manage all quality aspects for construction projects, including power, communication, lighting, mechanical, structural and civil systems.
- Updated The Contractor's Quality Program Documents and successfully implemented The Quality program.
- Inspection of materials, installation, and inspection during shop testing of equipment.
- Ensured that all required tests are performed, documented and adhere to Contract requirements.
- Coordinated Quality related matters with the Client, Contractor, Sub-Contractors, Vendors, Manufacturers and the NYCT.

EXPERIENCE:

Mr. Ramirez is a Project/Program Management professional with extensive experience in the inspection and rehabilitation of structures.

His responsibilities as structural/project engineer include all aspects of design, starting from preliminary study and drafting to the final construction phase. A summary of Mr. Ramirez' experience follows:

Johnson, Mirmiran & Thompson - Project Manager - Aided in drafting proposals for Construction Inspection and Construction Management for government agencies. . Project Manager for PA Contract 410-11-048 which provided CM/CI staff to the Construction Division.

Polytran Engineering Associates – Project Manager – As project manager, Mr. Ramirez Responded to RFP's and RFQ's. He also performed **Project Management duties for NJDOT and NJT bridge inspection projects throughout New Jersey.**

HAKS Engineers and Land Surveyors – Mr. Ramirez performed Project Management duties such as:

- NYSDOT Overhead Sign Structures- Region 11
- **Biennial Inspection of the JFK Roadway Bridges** - PANYNJ
- **High Mast Lighting Structures at Port Newark/ Port Elizabeth-** PANYNJ
- Co-authored quality assurance standards for the firm
- Interviewed prospective staff members and recommended hiring
- Responded to RFP's and RFQ's.

Port Authority of New York & New Jersey – Mr. Ramirez was a Principal Engineer for the Port Authority of New York and New Jersey through December 2002. Throughout his career, he was instrumental in many projects. He was Principal Engineer/Program Manager and **creator of the Structural Integrity Inspection Program at the Four (4) Regional Airports** operated by the Port Authority. As such, some of his duties and responsibilities included:

- Created and managed the structural integrity inspection program at Kennedy International Airport, LaGuardia Airport, Newark Liberty Airport and Teterboro Airport. This work included the **cyclical inspection of hundreds of buildings, over 100 bridges and the guideway system for Airtrain at Newark Airport.**
- Administered and directed in house staff and consultants in over 250 projects including the inspection of airline passenger terminal buildings, cargo buildings, control towers, hangar buildings, box sewers, maintenance buildings, facility roadway bridges, taxiway bridges, jetways, and Airtrain Guideways at JFK and EWR.,
- Reviewed consultant proposals, approved consultant staff assigned to projects and supervised the preparation of all inspection reports.
- Worked with Facility and Airline personnel to successfully resolve numerous structural emergencies at the airports over the 17-year period. This also included emergencies related to the Guideway Systems of JFK Airtrain and EWR Airtrain. On call 24/7 to respond to airport emergencies.
- For two years simultaneously managed the PATH inspection program including **inspections of** tunnels, **railroad bridges and track structures** which required familiarity with AREMA Standards. Reorganized existing inspection program and worked with PATH staff to resolve structural emergencies.

- Drafted scopes of work and negotiated the costs of inspections of buildings, bridges and rail facilities
- Supervised the design of emergency repairs and their implementation.
- Co- authored administrative and field inspection procedures for the unit when it was formed in 1985.
- Co-authored the Authority's Building Inspection Manual and Reviewed the Tunnel Inspection Manual.
- Developed the concept of retainer contracts of General Contractors to perform emergency repairs on an on call basis.
- Recommended the implementation of digital technology in the inspection of structures.
- Participated in the search and rescue operations that resulted from the terrorist act of 9/11.
- Participated in the damage assessment and reconstruction of the World Trade Center following the terrorist attack in 1993.
- Trained in emergency management
- Worked with NYC Office of Emergency Management during rescue operations in the aftermath of the 9/11 terrorist attack.

Port Authority of New York & New Jersey - As part of the Design Division, Mr. Ramirez participated in the design of various facilities. Examples of his responsibilities for the Design Division are listed below:

- Lead designer for the Holland Tunnel Sign Structures Project
- **Team Leader for the structural integrity inspections of the George Washington Bridge, the Goethals Bridge, Outerbridge Crossing**, the Port Authority Bus Terminal, the Holland and Lincoln Tunnels.
- Design checker for the PABT Extension Project.
- Chief structural reviewer for the Authority on the proposed Westway Project.
- Chief reviewer of shop drawings for Terminals A, B and C at Newark Airport.
- Construction Engineer of record for the foundations of Terminal C at Newark International Airport. Supervised a small staff in the construction of pile foundations, pile caps and pilasters.
- Performed preliminary design of the Port Authority Bus Terminal Extension building and office tower.

OBIOMA OTI, P.E.
RESIDENT ENGINEER

EDUCATION

ACI Concrete Construction Special Inspector (Exp 10/10/2018)
NJSAT, Asphalt Technologist (Exp 06/30/2016)
Rutgers, Work Zone Safety (2011)
Rutgers, Traffic Control Coordinator (Exp 08/31/2015)

EXPERIENCE:

Mr. Oti has over 30 years of experience in the design, construction management and inspection of bridges, roadways and other facilities. He has worked for numerous clients including the NYCDDC, NYCDOT, NJ Turnpike Authority, and various other agencies.

NJTA, OPS P3418, Contract No. P200.245, Culvert Repairs on GSP ($7.0 M) - Resident Engineer for this project that entails the repair of four culverts (inverts, side walls, joints and arch sections) on the Parkway between MP 114.3 and 121 5. The culverts range in size from 30" diameter RCP to 14' x 9' CMP arch. Repairs at one location included the erection of structural steel ribs, reinforced concrete inverts and knee walls, and the placement of mechanically applied concrete (shotcrete). Another location involved slip lining with Hobas pipe; while another required in-situ resin lining (heat cured). The last location required centrifugally cast concrete pipe repairs. Prior to any repairs, the culverts needed to be cleaned to allow the design engineer to confirm the extent of the required repairs. One specific location required the installation of gabions & "green gabions" to assist in fostering the growth of local vegetation to aid in reducing the velocity of the water on the channel; another work site was located in the Cheesequake State Park. The four project sites required shoulder closings to allow for material delivery and for safe ingress and egress of construction equipment. Any MPT operations were coordinated with the NJTA operations section along with the NJ State Police construction unit. Prepared change orders and used CapEx to input quantities, reports and pay estimates. (3/12–Present) *(Ref: Joseph Johnson, P.E., NJTA, 732/750-5300, x8254)*

NJTA, OPS A3337, Contract No. A200.180, Tpk and GSP ROW & Security Fencing, MP 145 to MP 153 ($2.0 M) – Resident Engineer with responsible charge for the supervision of inspection of this $2 million project involving the installation, repair and replacement of right of way and security fencing along the Parkway from Milepost 142 to 153, and; the installation of fencing at Bond Street under the Turnpike roadway in Elizabeth and along Ramp X off Exist 15E of the Turnpike Roadway in Newark, NJ. Used CapEx to input quantities and reports. (08/10-7/11) *(Ref: John Ernst, NJTA, 732/750-5300, x8238)*

NJTA, Contract R-1485, Signing Improvements and Repairs, MP 82 to MP 117 - $0.7 M - Resident Engineer responsible for supervision of construction of this project consisting of construction of 2 reinforced concrete footings (drilled caissons), installation of structural steel, repairs and re-installation of 3 overhead signs at various locations, replacement of guiderail, MPT in a limited access highway using concrete barriers and flashing arrow boards. Duties included construction and inspection to verify conformance to plans and specifications, review of contractor's estimates using CapEx, preparation of change orders and the coordination of field tests by other consultants. *(07/05-12/06) (Ref: Tom Wilson (Retired) NJTA)*

NYCDOT, HBK1021, Reconstruction of Coney Island Ave. Bridge over Belt Parkway, Brooklyn, NY ($7 M) and HBX636, Reconstruction of Grand Concourse Bridge over East Tremont Avenue, Bronx, NY ($6.5 M) - Resident Engineer responsible for two consecutive NYCDOT projects **(combined value of $13.5 M)** consisting of demolition and removal of existing concrete encased, multi-stringer bridge and construction of multi-stringer replacement bridge (HBK1021 was a four-span and the replacement bridge included seismic upgrade; and HBX636 was a two-span). HBX636 was slated for an 18-month schedule, to be completed in four stages thus allowing continuous flow of traffic during construction. Inspection included construction of new concrete abutments, steel superstructure, reinforced concrete deck and approach slabs, bituminous concrete pavement, concrete sidewalk and curbs and relocation and installation of utilities (HBX636 included relocation of a 30-inch water main). Construction work and maintenance of office records were in conformance with the NYSDOT Standard (MURK) and Contract Supplementary Specifications. Duties also included extensive MPT using concrete barriers, bridge/right-of-way chain link fence and VMS on a limited access highway, supervision of construction inspection crew, including quality control, coordination with testing laboratory and verifying work was completed in accordance with the plans and specifications; maintenance of project records, preparation of daily, weekly and monthly progress reports, monthly estimates, extension of contract time requests and change orders. (07/97-01/00-HBX636 and 01/00-05/03-HBK1021) *(Reference for both projects: Ohene Duodu, P.E., 212/839-4931)*

NYCDOT, HWQ274C, Reconstruction of Brookville Boulevard Area, Queens, NY ($2.5 M) - Resident Engineer responsible for inspection of roadway reconstruction with concrete base and asphalt overlay in a 49 city block area, water mains and sewer systems including modifications to catch basins and manholes, reconstruction of concrete curbs and sidewalks, utilities, landscaping, installation of traffic and street lighting, and maintaining pedestrian and traffic safety. Responsible for overall management of the project including monitoring strict compliance to project specifications, managing and recording construction activities in accordance with MURK format, preparation of payments, change orders, monthly progress reports and reviewing contractors submittals for conformance with the contractual requirements, revision of grades as is necessary, inspection of concrete placement, sampling of concrete for slump and air-entertainment tests, inspection of concrete coring, and close monitoring of contractor's site housekeeping and MPT. *(04/94-06/95) Guy Damas, P.E. (Retired)*

NYCDOT, HBC083, Rehabilitation of Various Bridge Bearings ($1.5 M) - Resident Engineer responsible for rehabilitation of various bridge bearing/replacement at Fort Totten Road under the Cross Island Parkway and replacement of reinforced concrete culvert at Ledyard Place, Staten Island. Work included removal and repair of spalled and deteriorated concrete from bridge abutment walls, installation of expanded metal sheets and construction of protective shield under bridges. In addition to the inspection, verified and checked contractor's claims for payment for Time and Material work, preparation of project files and other required reports, and monitoring maintenance and protection of traffic. Duties also included supervision and coordination of five inspectors, liaison between the NYCDOT Bureau of Bridges, Flags Division, and the contractor. *(03/93-04/94) Reference: Dan Faria (212-839-4900)*

NYSDOT Biennial and Interim Bridge Inspections, Region 11, Manhattan County - Team Leader responsible for structural inspection and documentation as per NYSDOT guidelines of over 25 bridges roadway bridges using bucket trucks, man-lifts and under-bridge inspection units (UBIU). The bridges varied in length, up to 110 spans. (05/07-08/08)

NJDOT Biennial Bridge Inspection of 96 at Various Locations in New Jersey - Team Leader responsible for structural inspection and evaluation of bridge components using bucket trucks, man-lifts and under-bridge inspection units (UBIU) as per NBIS and NJDOT guidelines. (05/05-07/05)

NJ Transit Authority, Biennial Bridge Inspection of 25 at Various Locations in New Jersey - Team Leader responsible for structural inspection and evaluation of bridge components as per NBIS and NJTA guidelines. (05/05-07/05)

NYSDOT, 2004/2004 NYSDOT Biennial and Interim Bridge Inspections, Region 11, Queens County - Team Leader responsible for structural inspection and documentation as per NYSDOT guidelines of over 100 roadway bridges using bucket trucks, man-lifts and under-bridge inspection units (UBIU). The bridges varied in length up to 40 spans. (03/04-06/05)

Biennial Inspection of 34 in-service highway bridges along I-280 – Senior Bridge Engineer responsible for inspection and structural evaluation of bridge components as per NBIS and NJTA guidelines. (07/96-07/97)

AMTRAK Railroad Bridge over the Connecticut River at Niantic, CT – Team Leader responsible for inspection and structural evaluation of bridge components as per NBIS guidelines. (07/96-07/97)

NYC Transit Authority, Facilities Inspection Project CM-951 – Team Leader responsible for structural inspection and evaluation of NYC Transit Authority Facilities including up to 55 linear feet of retaining walls. (06/95-07/96)

WORK EXPERIENCE:

Mr. Mistry is an Inspector with 33 years of extensive experience in construction oversight and engineering inspections. Responsive and responsible team leader with proven ability to complete projects according to project and regulatory standards. Possesses strong customer service and communication skills both written and verbal.

Camden County Municipal Utilities Authority, Phoenix Park-Phase 1 and 20 Green Infrastructure Projects - Resident Engineer for two $1 M concurrently running projects involving demolition of existing sidewalk, concrete slabs, curbs and asphalt paving and construction of Porous Asphalt paving, Pervious concrete sidewalk, rain gardens and parks. (06/14-Present) *(Reference: Andrew Kricun, P.E., CCMUA, 856/541-3700)*

NJDOT, 2011MEO842B, Region Central Maintenance Term Agreement, TO #12, Guide Rail/Attenuator Repairs - Resident Engineer for a $2.7 M project involving maintenance 0f Guide rail for 895 mile of roadway. The project includes repair all damaged guide rail in accordance with NJDOT standard specifications. Duties included maintain the NJDOT guide rail database, review contractors request for daily assignment, prepare lane closure request, field supervision for Traffic Safety and contractor's means and methods, review daily inspector's report, verify quantity , prepare estimates, change orders, coordinate with NJDOT Supervising Engineer, JMT Project Manager and Contractor for progress of the project, prepare bi weekly progress reports, review accident claim reports, including utilizing NJOT Site Manger system for daily reports, quantities, preparing estimates and change orders. (04/13-05/14) *(Reference: Darin Thorn, NJDOT, 732/625-4302)*

Camden County, Replacement of Broadway Bridge over Little Tiber Creek - Resident Engineer/Inspector for the $3.0 million multi-stage bridge demolition and replacement, pile foundation, utility relocation (aerial electric and cable television, underground: gas, water, phone copper cable and fiber optic). Multi Stage MPT for both vehicular and pedestrian traffic which included a truck detour. Duties included: daily reports, biweekly status meetings, photographs, monthly reports, pay estimates, change orders, RFIs, shop drawings, coordination with the County and two municipal jurisdictions along with five different utility companies Bridge work included: demolition of the existing structure and approach concrete roadway, demolition of superstructure (concrete encase steel beams), substructure, installation of shielding, reinforced earth retaining wall, installation of sheet piling, coffer dams, construction of footings, abutments, wingwalls, construction of precast prestressed concrete beams and deck, concrete parapets and concrete sidewalk, construction of new HMA roadway including relocated utilities. The project also included coordination between the Army Corp. of Engineers, the NJDEP, Camden County Soil Conservation office, NJDOT, and the project designer. (12/11-12/12) *(Reference: Kevin Becica, Countty Engineer, 856-566-2971)*

NJTA, OPS P3126, Contact P200.045, GSP Widening, Milepost 70 to 75 – Inspector on the $31.3 million roadway widening and improvements project between GSP MP 63 to 70. Project included reconstruction of 2 interchanges, demolition of the Barnegat NB Plaza toll booths and construction of new SB express toll lanes, new administration building, and 6 miles of roadway widening with staged construction. Duties included the on-site inspection of substructure and superstructure elements, drainage, concrete curb, HMA paving, long life epoxy resin traffic stripes and thermoplastic traffic markings, raised pavement markers, rumble strip; guide rail, landscaping, highway lighting, earthwork, maintenance and protection of traffic, pile foundation, structural concrete for bridge, six cantilever and one overhead sign structure including 6-foot diameter drilled shaft 30-feet deep, including witnessing of Cross Hole Sonic Logging for drilled shaft. Responsible for a total of seven drilled shafts as follows: one overhead and six cantilever sign structures. Verified drilling equipment, layout of the proposed drilled shaft, drilling record, the recovery of the soil and depth of ground water encountered, verify the depth of the shaft to required elevation, including using NJTA CapEx system for daily reports and quantities. (04/10-11/11) *[Night Work] (Reference: Joseph Johnson, NJTA, 732-750-5300)*

PennDOT, Titus Road Improvements, Warrington, PA – Inspector responsible for inspection on the $14M Titus Road improvements for the new Warrington Retail Center, consisting of a new 125' long box beam bridge and 1 mile long connection of Titus Road between PA 132 and PA 611. Duties included the on-site inspection of spread footing concrete foundations, abutment walls, proof rolling, drainage inlets and pipes, underdrain, utility relocations, HMA paving (base & surface), guide rail, traffic signals, curbs and sidewalk, handicap ramps, milling and resurfacing, traffic stripes, pavement markings and maintenance and protection of traffic in accordance with Penn DOT Standards. *(12/99-04/01) (Reference: John J. McElroy, Langan Engineering, 215/864-0640)*

NJTA, OPS P3197, Contracts P200.103, Pavement Restoration and Misc. Improvements and P200.001 (CO #1, Milling and Paving –Inspector on two contracts P200.103 ($4.2 M) and P200.001 (CO #1 $6.0 M) involving milling and resurfacing at various locations along the GSP between Milepost 127 and 172. Duties included the on-site inspection of milling and resurfacing with HMA surface courses; long-life traffic stripes and pavement markings, polymerized joint adhesive, raised pavement markers, rumble strip; guide rail repairs, bridge deck repairs, maintenance and protection of traffic, including utilizing NJTA CapEx system for daily reports and quantities. *(01/10-03/10) [Night Work] (Reference: John Ernst, NJTA, 732/750-5300)*

NJDOT, Route 130 Improvements – Inspector responsible for inspection on a $12M roadway improvement project. Duties included the on-site inspection of proof rolling, drainage, utility relocations, traffic signals, curb, sidewalk, milling and resurfacing, guide rail, HMA paving, traffic stripes, pavement markings, Precast Concrete Structure for Culvert and maintenance and protection of traffic. *(10/05-02/07) (Reference: John J. McElroy, Langan Engineering, 215/864-0640)*

NJDOT, Long Life Pavement Marking Contracts – Region Central – Inspector responsible for inspection of one of several Federally funded Pavement Marking Contracts under a 3-year Pavement Marking Term Agreement. Work occurred at night on various State highways throughout the Region. . Duties included the on-site inspection of removal of existing pavement markings and two-way plowable mono-directional and bi-directional pavement reflectors and castings; cleaning and preparing Portland cement concrete and bituminous surfaces; installation of epoxy resin traffic stripes and thermoplastic traffic markings; cleaning and cutting of road surfaces and installation of new reflectors and castings; and, maintenance and protection of traffic. (07/09-12/09) *[Night Work](Reference: Sharon Pallen RE, NJDOT, 609-377-3580)*

DelDOT, Realignment of ring Road around Christina Mall, White Clay, DE – Inspector responsible for inspection on this $4M Realignment of Ring road around the Christina Mall. Duties included the on-site inspection of subgrade preparation, proof rolling, drainage inlets and pipes, underdrain, utility relocations, HMA paving (base & surface course), traffic signals, guide rail, traffic stripes, pavement markings and maintenance and protection of traffic. (03/08-08/09)

PennDOT, Levittown Town Center Site and PA Route 13 Improvements – Inspector responsible for inspection on a $15M Levittown Town Center site improvements and PA Route 13 upgrades. Duties included the on-site inspection of subgrade preparation, drainage inlets and pipes, utility relocations, traffic signals, curb, sidewalk, milling and resurfacing, guide rail, HMA paving, traffic stripes, pavement markings and maintenance and protection of traffic. (03/07-02/08)

Private Developer, Centerton Road/Route 38 and Marter Avenue Realignment, Mount Laurel, NJ – Resident Engineer responsible for all aspects of construction contract administration (schedule, payment, change order reviews, contract documentation) and for the supervision of inspection of a $45M – 90 acres site and roadway improvements project in Mount Laurel. The project consists of subgrade preparation, drainage inlets and pipes, utility relocations, traffic signals, curbs and sidewalk, milling and resurfacing, guide rail, HAM paving, precast concrete culvert and maintenance and protection of traffic in accordance with NJDOT Standards. Manage Team of 3 Inspectors. Review daily Reports. Assigned Various Duties. Coordinated with NJDOT and Local officials. Review Plans and Specification. (08/03-10/05)

Touro College, 150th Street, 75th Rod, 76th Street and 153rd Street Improvements – Inspector responsible for inspection on the site and civil work improvement of 150th Street, 75th Road, 76th Street and 153rd Street. Duties included the on-site inspection of drainage inlets and pipes, utility relocations, traffic signals, curbs and sidewalk, handicap ramps, milling and resurfacing, guide rail, HMA paving, traffic stripes, pavement markings, Precast Concrete Structure for Culvert and MPT in accordance with NYCDOT standards. (10/01-07/03)

DelDOT, Christina Mall Site Improvements and DE Route 7 Realignment – Inspector responsible for inspection on the $12 M Christina Mall Site Improvements and DE Route 7 Realignment in accordance with DelDOT standards. Duties included the on-site inspection of subgrade preparation, proof rolling, drainage inlets and pipes, underdrain, MSE retaining walls (25 to 30' high) utility relocations, HMA paving (base & surface course), guide rail, traffic signals, traffic stripes, pavement markings and maintenance and protection of traffic. (01/99-11/99)

EXPERIENCE:

Mr. White has over 40 years of experience and has worked for numerous clients including the NJTA (Turnpike and Parkway), NJDOT, TBTA, TVA and refineries, authorities and contracts. He is familiar with the use of CapEx for processing IRFs and CFRs as well as the Authority's policies and procedures, standard drawings and specifications and Manual for Construction.

NJTA, OPS P3363, Contract P300.162, GSP Interchanges 9, 10 & 11 Improvements in Cape May – Assistant Resident Engineer responsible providing CI services for a project involving improvements / eliminations of 3 at-grade interchanges with signalized intersections that connect the Parkway with Shell Bay Ave (CR 674) at Int. 9, Stone Harbor Blvd (CR 657) at Int. 10, and Crest Haven Rd (CR 609) at Int. 11. The intersections will be eliminated by constructing grade-separated bridges (steel girders with reinforced concrete decks and H pile foundations) with integral abutments over the local roads with ramp connections to allow access to and from the GSP and eliminating the local road intersections at the interchanges. The project includes **extensive utility relocations involving ten utility companies** and coordination with local authorities. Major items of construction involved in this project are roadway excavation, embankments (some over 20 feet high), Superpave HMA, Open Graded Friction Course, Reinforced Concrete Pipe, Steel Piles, Abutment Walls, HPC Concrete Decks, Structural Steel, and Landscaping. (02/13-Present) *(Reference: Joseph Johnson, NJTA, 732/750-5300, Ext. 8254)*

NJTA OPS P3429, Contract P200.260, Central Region Pavement Restoration and Misc. Improvements MP 80 to 143 – Resident Engineer responsible for the inspections of this milling and resurfacing contract at various locations long the GSP between MP 80 and 143. Project involves several significant interchanges. Over 6 miles of Asphalt Rubber Open Graded Friction Coarse was placed in the two lane SBI and over 9.5 miles of 12.5H76 Superpave was placed in the three lane SBI. Close coordination with numerous other contracts proceeding in the same location is required to maintain safety and production for numerous contractors. We were called upon to respond to the Emergency Pavement Drop Off Repairs between MP 82 to 94 SB & NB. We also responded to the Emergency Pavement Restoration & Misc. Improvements to Poorman's Parkway. Change in Plans required 5 lane closures and mill and pave the 5 lanes & 2 shoulders at the SB Hi-Speed EZ Pass a length of over 1,000 feet at the electronic loop processing area. This required coordination between The ETC Department, State Police and Traffic Operations. Another addition to the contract required coordination with the State Police, Traffic Operations, the Contractor and his Sub-Contractor that allowed a mobile operation at the NB Driscoll approach to remove(grind) the 10' white skip lines with the 30' gaps and replace them with the 3' white skip lines with the 9' gaps in alignment with the Theoretical Gore. Records are maintained thru the use of CapEx including IFR's and CFR's, with backup on an independent Excel program. (04/12 – 01/13) *(Reference: John Ernst, NJTA 732 750 5300 x 5238)*

NJTA, OPS P3126, Contract P200.045, GSP Widening, MP 70 to 75 – Resident Engineer for contract involving widening of the 5 miles of the Parkway in both directions. Coffer dams were erected in phases prior to the two mainline bridges being removed. The structures were erected using steel piles, placing concrete caps, footing and structures, approach slabs, parapets and decks using Classes A, B, C and HPC concrete. Prestressed concrete box beams were manufactured transported and placed. Work also included lengthening or reconstruction of six culverts extensions and 2 headwall extensions/replacements, roadway excavation, embankment construction, shoulder reconstruction, milling and resurfacing existing Parkway pavement, roadway striping, six cantilevers and one overhead sign structures, drainage construction including recharge swales, delineations, maintenance and protection of traffic, roadway signs, topsoil and seeding, and other miscellaneous work necessary and incidental to the completion of the project. One of the culverts is for Oyster Creek, which is tidal and runs by the nuclear power plant. The project was constructed within designated wetlands, pinelands jurisdiction, and sensitive endangered/threatened habitat and staged traffic shifts employing concrete barrier placement within active traffic lanes. (06/10-03/12) *(Reference: Joseph Johnson, NJTA, 732/750-5300, Ext. 8254)*

NJTA, Contract P200.084, Pavement Restoration, MP 139 to 142 and Misc. Ramps – Resident Engineer responsible for the inspection and supervision of inspection of the $2.1 M milling and resurfacing of existing roadway with hot mix asphalt surface course pavement along the GSP NB and SB mainline roadways from MP 139 to 142 along with NB and SB ramps at Interchanges 139 and 140. Responsibilities included reviewing the contractor's proposed lane closures and detours, manpower, equipment, work schedules, methods of construction, safety measures and payment items; maintenance and protection of traffic; and overseeing the pavement milling operation (pavement removal), the installation of asphalt materials, density testing, roller operations and the application of roadway markings, striping and RPM (raised pavement markers). (09/08-03/09) (*Reference: John Ernst, NJTA, 732/750-5300, Ext. 8238)*

Painting Projects

NJTA, Contract T100.009-1, Repainting Structural Steel – Resident Engineer responsible for the inspection of $1.1 M project involving four bridge structures from MP 100 to 118 on the NJ Turnpike. Bridge painting work included reviewing the contractor's proposed lane and ramp closures, maintenance and protection of traffic, manpower, equipment, materials, work schedules, payment items and safety measures. Duties also included inspection of the removal of existing bridge paint systems, including lead abatement, hand and power tool cleaning, water blasting structural steel; the application of new protective coating systems, protection of the environment, structures, persons and property. Cleaning and paint removal included recyclable abrasive blast cleaning to a near white condition (SP-10) in a Class 3 containment and handling, storage, transport and disposal of hazardous waste. Paint systems were 3 coat epoxy polyamide. (05/07-03/08). *Reference: Mark Bernard, NJTA, 732/750-5300*

NJDOT, Region North Bridge Paint 2005-1, Task #3, Maintenance Bridge Painting 2005-2 – Resident Engineer/Inspector responsible for construction contract administration and for the inspection for $1.2 M repainting structural steel on 7 bridge sin Mahwah, Bergen County, NJ. Work and inspection responsibilities as described for Bridge Painting Contract 00-3 below. *[Night Work]* (01/07-04/07)

NJDOT, Bridge Painting Contract 2001-5/6 – Resident Engineer responsible for two bridge painting contracts. Bridge Painting Contract 2001-5 included seven bridges on Interstate I-78 and one bridge on Route 24. Bridge Painting Contract 2001-6 included five bridges on Interstate I-280. Responsible for construction contract administration and documentation and for the inspection and supervision of inspection of abrasive blast cleaning and painting of 13 highway and railroad bridges. The work included bearings and appurtenances; application of an organic zinc coating system; containment system construction; implementation of Class 1A dust collection and recycling of steel grit abrasive; handling, storage, transport and disposal of hazardous waste; implementation of a Lead Health and Safety Plan; repair of concrete structures and application of epoxy waterproofing seal coat; and MPT implementation. *[Night Work]* (12/02-12/06). *Reference: Mark Bernard, NJTA, 732/750-5300.*

NJTA, Contract R-1424, Repainting Structural Steel – Resident Engineer responsible for $3.0 M project involving repainting structural steel on 12 bridge structures. Duties included reviewing the contractor's proposed lane and ramp closures, MPT, manpower, equipment, materials, work schedules, payment items and safety measures; inspection of removal of existing paint systems, including lead abatement; hand/power tool cleaning; water blasting structural steel; application of protective coating systems; repair of concrete structures and application of epoxy waterproofing seal coat; and protection of the environment, structures, persons and property. Cleaning and paint removal included recyclable abrasive blast cleaning to a near white condition (SP-10) in a Class 3 containment and handling, storage, transport and disposal of hazardous waste. Paint systems were 3 coat epoxy polyamide. (04/02-11/02). *Reference: Mark Bernard, NJTA, 732/750-5300*

TOSCO Refinery, Trainer Facility Bridge and Tank Cleaning and Lining or Coating – Resident Engineer/Inspector responsible for the inspection of polyester laminate glass tank lining and bridge cleaning and coating. Responsibilities as described for Contract 20000-3 above. (10/98-11/98)

Sun Oil Co., Girard Point Tank Cleaning and Coating – Resident Engineer/Inspector responsible for the inspection of application of high build epoxy, solvent based epoxy phenolic (Novalac) and high build urethane systems to interiors and/or exteriors and appurtenances of 7 tanks and condition inspection of 4 tanks. (07/98-08/98)

PROFESSIONAL TRAINING:
NJDOT Specialized Training for Beam Guide Rail Design, Installation and Repairs, Primavera Critical Path Software, NJTA CapEX, NJDOT Site Manager Systems

EXPERIENCE:

Forty (40) years of design, facility operations, environmental and construction management services in transportation and highway construction, wastewater, water, industrial pretreatment, residuals management, energy, and solid waste management industries. Relevant experience includes the following:

NJTA, OPS P3472, Contract P200.195, Culvert Repairs, GSP MP 100 to 140 – Resident Engineer. Responsibilities include administration of the Authority's CapEx construction management system, contractor payments, agency interface, review and approval of contractor MPT and lane closure submissions, and inspector supervision. The $8.9 M project involved CMP culvert repairs, pneumatically applied mortar lining – centrifugally cast, storm drainage system improvements, slope stabilization, ramps reconstruction and repaving. Contract administered as a NJTA "paperless" contract using SharePoint as a shared data base for the NJTA, contractor, design engineer, and construction management. The projected also included (2) 54" x 200 LF x 35 feet deep jacking operations crossing the SBI roadway, ramp reconstruction of Ramp H at NJDOT Rte. 440 and GSP SB entrance 127. Added to the project was an emergency open cut replacement of a failed 78" CMP culvert. The replacement was successfully completed over a HICC weekend cycle across the SB express lane of the GSP. (04/13-Present) *(Reference Andrew McConnell, 732/750-5300 x8272).*

NJDOT, Central Region Operations and Maintenance, Beam Guiderail & Attenuator Repair Contracts 2011, 2012, 2013 – Resident Engineer in charge construction inspection, contract administration through the NJDOT's Site Manager, agency interface, inspection supervision, MPT approval and submission, and database management for $5.0 M per year beam guiderail repair contracts. The project involved work scheduling, inspection and quantity verification of new installation for NJDOT's Rapid Design Services section and emergency and scheduled repair work performed by 3 beam guide repairs crews covering the Central Region of the NJDOT from Hunterdon County to Ocean County. (12/11-04/13) *Reference Darin Thorn, P.E., Supervising Engineer NJDOT Central Region Maintenance 609.584.4302.*

NJDOT, Route 9 & Bay Ave Resurfacing, Lakeside Road to Route 72, Ocean County – Senior Inspector for all aspects of milling 10.6 miles of roadway up to 3" and paving with Binder Rich Intermediate Coarse and SMA 12.5 Surface Course, guide rail repair and replacement, drainage improvements, and ancillary water main construction. Duties included daily on-site inspection of milling depth and paving operations, verification of contractor's maintenance and protection of traffic installation and devices, detour plans, verification of quantities and payment limits, verification of tack and pavement base requirements, verification of contractor's construction schedule, direction for and verification of limits of milling, and installation of temporary and permanent pavement markings and striping. *[Night Work]* (04/11-12/11) *Reference Charles Bassano, NJDOT Resident Engineer, 609/384-4856]*

NYC Department of Design and Construction, MED-584B, Water Main Lining on Madison Avenue in Manhattan, NY – Chief Inspector of Record for a $14.0 M high-profile water main rehabilitation and lining project on Madison Avenue from 37th Street in mid-town to 78th Street up-town using trenchless technology. The 3½ year project involved the installation of 8,700 LF of close fit 48" O.D., SDR 65 - HDPE sliplining into an existing 100 year old 48" I.D. cast iron host pipe. Due to the depth and horizontal location of the water main and conflicting existing utilities, excavation accuracy was critical. Project included (16) mostly hand excavated, 10'x30'x10' deep, timber sheeted, launch/receiving pits. A major aspect of the project was the nightly MPT and coordination of equipment, manpower, and materials into and out of the city due to the lack of temporary storage and laydown on Madison Ave. Excavations required secure road plates each evening so as to allow rush

hour bus traffic on Madison Ave. each morning, without exception. (01/08-04/11) *Reference: Chris Onyechi, NYCDDC Engineer-In-Charge, 212/442-1892.*

Atlantic County Improvement Authority, Improvements to 18 Roadways – Resident Engineer of Record and Office Engineer for all aspects of construction contract administration and inspection for the $2.4 million milling and resurfacing of portions of 18 county roadways at different 27 (actual) roadway locations in various municipalities throughout Atlantic County. Duties included daily on-site inspection of milling depth and paving operations, verification of contractor's maintenance and protection of traffic installation and devices, detour plans, verification of quantities and payment limits, verification of tack and pavement base requirements, verification of contractor's construction schedule, direction for and verification of limits of milling, installation of permanent pavement markings and striping, interfacing with property owners, processing of contractor's progress payments and assistance with the preparation of as-built documents. *[Included Night Work]* (09/06-06/07) *Reference: Jerome Cormier, Executive Director 609/645-5858*

NJDOT, Long-life Pavement Marking Term Agreement, Region South 2007 – Senior Inspector for the removal of existing pavement markings and two-way plowable mono-directional and bi-directional pavement reflectors and castings, cleaning and preparing Portland cement concrete and bituminous surfaces, installation of epoxy resin traffic stripes and thermoplastic traffic markings, cleaning and cutting of road surfaces and installation of new reflectors and castings and the maintenance and protection of traffic. Assisted the Resident Engineer in closeout and preparing as-built documents for Region South 2007. *[Night Work]* (09/07-01/08) *Reference: NJDOT Mehdi Khamazipour, Resident Engineer 856/384-5915*

NJDOT, RSTA Term Agreement 2006-5, Task #3, Maintenance Road Repair Contract #328 Region South – Senior Inspector for the $2.3 million milling and resurfacing of portions of Routes 40 and 56 in Gloucester, Salem and Cumberland Counties. Major items of work included inspection of stabilization of the bridge on Route 56 damaged in heavy rains; inspection of variable depth milling; Superpave surface course; Long-life epoxy pavement stripes, Long-life thermoplastic markings, and raised reflectors and miscellaneous other items. Assisted Resident Engineer in closeout and preparing as built documents. *[Included Night Work]* (6/07-09/07) *Reference: Bill Mullowney, NJDOT Resident Engineer 856/486-6723*

NJDOT, Region Central Pavement Marking Term Agreement 2006-1- Long-Life Pavement Markings Throughout Hunterdon, Mercer, Middlesex, Ocean, Somerset, and Warren Counties – Inspector for the removal of existing pavements markings, placement of long-life epoxy traffic stripes and thermoplastic traffic markings and symbols; installation of two-way plowable bi- or mono-directional white or amber pavement reflectors; and maintenance and protection of traffic. [George Carroll 732/308-4077; Andre Rosen, NJDOT Resident Engineer 732/566-1142] [Night Work]

NJTA, OPS No. P3008 –2005-2006 Construction Contract 134-1249, GSP Interchange 69 Ramp and Toll Improvements – Inspector. Responsibilities included inspection of cut and fill earthwork, milling and resurfacing, maintenance and protection of traffic and lane closures, installation of pavement base material, curb installation, installation of lighting and controls, installation of traffic signal and controls, installation of epoxy pavement stripes and Long-life pavement symbols and markings, installation of plowable pavement reflectors, verification of bid item quantities, monitoring of Pinelands Permit requirements [Joseph Johnson, NJTA Engineer in Charge 732/750-5300] [Night Work]

City of Camden, Rehabilitation of 36", 30" & 24" Water Transmission Main - Resident Engineer of Record and Office Engineer for the rehabilitation of major portions of a cast iron (100 year old) main. The project consisted of the cleaning and cement lining of approximately 71,000 linear feet of 36", 30" & 24" main and the replacement of thirty (30) 36", 30" & 24" in-line valves and systems hydrants, including installation of temporary bypass lines to maintain hydraulic capacity; installation of temporary line stops; internal sealing of leaking joints and reinforcing of deteriorated segments; and, TV inspection/flow pressure testing. (11/04-/06)

Camden County Municipal Utilities Authority (CCMUA) – City of Camden/Campbell Soup Permanent Bypass – Resident Engineer for the re-routing of an existing 36" diameter sanitary sewer around the headquarters of the Campbell Soup Company as part of the City Gateway Improvements Project. The $3.0 M project involved the excavation of (3) 35 feet deep by 18 feet diameter jacking pits, and (2) rectangular receiving pits. The jacking pits were a caisson type installation. The bypass of the existing 36" diameter sanitary sewer was achieved through the installation of 1,500 LF of 36" diameter polycrete pipe using a microtunneling/jacking operation. Accuracy of the upstream and downstream interfaces with the existing 36" sanitary sewer was critical. A total of 4 drives, each between 300 LF and 400 LF at 35 feet were done to complete the installation of the pipe. (04/08-11/08) *Reference: Andrew Kricun, Executive Director and Chief Engineer 856/541-3700*

Résumés

EnTech Engineering, PC.

BACKGROUND

Ms. Gajewski has 31 years of project management and design experience for numerous and wide range of different civil engineering projects in New York Metro area. She has managed and worked in projects involving preliminary and final design for street reconstruction, utility relocation, landscaping, and urban design, subsurface exploration, water and sewer installation, drainage, vault investigation, appurtenances improvement, construction phasing plans, signage and pavement markings, work zone traffic control and staging, asphalt placement, sidewalk installation and repair, roads and highway safety and accident prevention and more. She has extensive experience in designing and managing complex construction projects. Ms. Gajewski has worked closely with ConEdison on several projects and is very familiar with the NYCDDC, NYCDOT, NYCDEP, NYSDOT, NYSDEC, FAA and AASHTO standards, the SEQRA/CEQRA and NEPA process and many other specifications and requirements pertaining to civil engineering design and construction.

PROFESSIONAL REGISTRATION

Professional Engineer in State of New York, No. 074158

PROFESSIONAL EXPERIENCE

Project Manager, NYCDOT HBX1131, Total Design and Construction Support Services for Replacement of Bruckner Expressway over Westchester Creek (Unionport Bridge), Bronx, NY

The project involves replacement of the existing bascule bridge, construction of a new overpass and realignment of the existing connector ramps. Ms. Gajewski is managing and coordinating various tasks assigned to EnTech as a subconsultant on this project. The project is in preliminary design phase and EnTech prepared conceptual staging plans for the bridge replacement. Other tasks will involve preparation of WZTC plans and other civil engineering assignments.

Deputy Project Manager, NYSDOT Region 11, Kew Gardens Interchange Operational Improvement, Queens, NY

Managing and participation in design work of team of engineers developing different conceptual horizontal and vertical alignments, evaluation of feasibility of each of considered alternatives, overseeing and organizing the presentation material for NYSDOT review. This multilevel interchange is notorious for traffic congestion and high accident rate and one of the goals was to provide interchange alignment improvement which will eliminate or alleviate the non-standard condition of mainlines and connector ramps. This interchange has total of 300,000 daily volume of traffic. Responsible for making the final evaluation and recommendation of the preferred alternatives for realignment of the GCP mainline and the associated connector ramps from and to Jackie Robinson Parkway and Union Turnpike.

Deputy Project Manager, NYSDOT Region 11, Safety Improvement and Rehabilitation of Four Bridges on the Bronx River Parkway, Bronx, NY

Responsible for preparation of Design Approval Documents for Site B and site A and managing the civil engineering work related to design of a new horizontal and vertical alignment, typical roadway section, drainage design, coordination of subconsultant's work and coordination with agencies such as NYC Parks Department, MTA, Amtrak, and others. Bronx River Parkway is a major commuting route in New York, carrying daily about 70,000 vehicles. The project objectives were to eliminate structural deficiencies of the bridges

within the project limit and address the corridor safety and geometric deficiencies to improve traffic flow, eliminate the degradation of mainline level of service (LOS) and provide cost-effective accident reduction measures. Both of the project locations are within the NYC parkland and a separate section 4 (f) evaluations were prepared. Coordination with NYC agencies and railroad agencies were required.

Project Manager, NYSDOT Region 11, Bronx River Greenway, Bronx, NY
Responsible for coordination and performance of pavement and drainage design, typical sections, storm water management, signing and striping plans and development of construction phasing plans for this shared-use path. The project's purposes were to enhance the Bronx River's natural qualities, and despite bicycle and pedestrian paths and routes, design included facilities such as floating dock and boat launching area, special landscape elements to enhance native vegetation and provide pleasant environment along the river corridor. The utilization of alternative/green building materials was one of the concerns during the design process. The Public Design Commission of the City of New York awarded the project with Excellence in Design in 2009.

Project Manager, NYSDOT Region 11, Cross Bronx/Throgs Neck/Hutchinson River Expressways, Bronx, NY
Responsible for final design phases of rehabilitation of three major NYC expressways. The project included evaluation of the existing roadways condition, establishing design criteria, typical section design, improvement to geometry of the existing ramps and design of new ramps, design of truck facilities, improvement to toll plazas, new signage system, utility relocation, lighting design and drainage improvement. The construction staging and planning detours were part of the scope. The community outreach program was conducted and extensive coordination with the NYC agencies, community and utility owners was required.

Project Manager, American Airlines, American Airlines Concourse D at JFK Airport, Queens, NY
Relocation of an aircraft parking ramp. The project included evaluation of the existing pavement, design for a relocation of the fuel pits and a new pavement based on FAA standards and requirements and MPT for construction time. Extensive coordination with Port Authority Aviation Fueling and Maintenance Service Division was required.

Gdansk Polytechnic University, Poland

BACKGROUND

Ms. Bayat has over 24 years engineering and construction management experience. She has managed and provided technical expertise for a wide range of construction inspection, management, and environmental projects, including: bridges, highways, roads, transportation facilities, buildings, waste management facilities, and remedial projects. Her strong managerial skills, technical background, and dedication and determination make her an asset for effective implementation and successful completion of complex, large-scale projects.

Project Manager, MTA-TBTA, CM and CI Services for Replacement of Upper Level Roadway Deck of Verrazano Narrows Bridge, Staten Island and Brooklyn, NY
The Verrazano Narrows Bridge is a double-decked suspension bridge that connects the boroughs of Staten Island and Brooklyn in New York City. The upper deck of Staten Island's Verrazano-Narrows Bridge will undergo a $419M replacement scheduled to start in 2012. The original concrete deck dating from the bridge's opening in 1964 will be replaced with lighter-weight orthotropic deck designed to reduce the dead load. The scope of this project includes the replacement of the upper level roadway bridge deck, removal and replacement of the existing concrete, sidewalks and curbs, and the replacement of the bridge railing system. As part of the Construction Inspection Team, managing the staged demolition, construction/erection of steel orthotropic decks, steel bridge structures and repairs, MPT, bridge coating systems, and lighting. EnTech participates in construction inspection activities and provides environmental consulting services related to asbestos, lead paint, and HAZMAT abatement.

Project Manager, MTA-TBTA, CM and CI Services for Structural Rehabilitation at the Henry Hudson Bridge, Bronx, NY
This $6M rehabilitation project is planned to replace various deteriorated structural steel members of the bridge and repair and seal concrete surfaces of the approach piers and skewbacks. As the Project Manager, EnTech was responsible for environmental services associated with lead-based paint removal, painting, asbestos abatement, and hazardous waste removal. Review and approval of the process for lead removal, painting specifications and drawings, work plans, and general civil/structural construction items are included in EnTech's responsibilities.

Project Manager, MTA-TBTA, CI for Dehumidification and Strand Re-Anchoring and Concrete Repairs at the Triborough Bridge Anchorages TB-66, New York, NY
The Triborough Bridge $45M project required structural steel repairs, concrete repairs, main cable strand replacement, and installation of a dehumidification system in conjunction with electrical and environmental work, and hazardous material management. EnTech's responsibilities included review of shop drawings for Queens West Anchorage lower and upper level demolition, reconstruction of the structural concrete parapet, steel erection, supervision of the inspectors, resolving structural issues, and review of daily inspection reports.

Project Manager, NYCDOT, REI Services for the Rehabilitation of Bruckner Expressway Bridges over AMTRAK and CSX Railroad, Bronx, NY
Ms. Bayat is EnTech's Project Manager for Construction Inspection for

Rehabilitation of Bruckner Expressway Bridges over AMTRAK and CSX Railroad Design Build project. The project entails performing in-depth inspections, deck evaluations, rehabilitation reports, preliminary and final design and construction support services for the rehabilitation of the expressway. Resident engineering services include work permits, insurances, work schedule, and a traffic maintenance plan. Active communication between the REI Team and the utilities and railroad companies is an important part of the REI Team responsibilities in order to coordinate the work. EnTech is in charge of providing environmental services regarding the lead-based paint removal and hazardous waste management. Responsibilities include review of related documents and inspecting and overseeing related field operations, testing and monitoring, controlling emissions, air pollution control, and managing soil contamination.

Project Manager, NYSDOT Region 11, Construction Management and Coordination for Route 9A Corridor Reconstruction, Manhattan, NY
EnTech is a Subconsultant on this project and Ms. Bayat is EnTech's Project Manager. Ms. Bayat provides environmental consulting related to "Environmental Performance Commitment" of the 9A-WTC Project. She has reviewed the environmental aspects of the project and has prepared QA/QC report and compliance report. She oversaw the environmental, safety, and MPT for construction projects related to redevelopment of Route 9A. The subconsultant assignments involved coordination of safety and MPT with the overall projects objectives, overseeing safety and OSHA compliance, and environmental monitoring.

Project Manager, NYSDOT Region 11, Construction Management and Coordination for Route 9A Corridor Reconstruction, Manhattan, NY
As a sub-consultant project manager, managed and oversaw safety, MPT and environmental during construction projects related to redevelopment of Route 9A. The assignments involve coordination of safety and MPT with the overall planning initiative for lower Manhattan redevelopment projects. The project responsibilities included review of design and construction documents and drawing to ensure the Safety and MPT plans are consistent with the project objectives. Coordinated Safety and MPT between involved parties, ensured the site conditions were safe, reviewed the collected traffic data, analyzed traffic data, and advised the project manager on any changes on incident management system. Ensured safety and OSHA compliance, environmental monitoring, and OSHA construction safety training as required.

BACKGROUND

Mr. Sacchetti is an experienced resident engineer with 15 years of experience in all aspects of construction inspection and engineering. He has considerable project experience with NYCDDC which includes sewer and water main installation, street reconstruction, sidewalk, curb and pedestrian ramp installations. He has in-depth experience as an office engineer and overseeing construction activities and inspectors, reviewing contractor's submittals including payments, preparing tap cards and field cards, reviewing inspector's reports and checking pay quantities.

Professional Engineer: State of Connecticut [redacted]

PROFESSIONAL EXPERIENCE

Resident Engineer/Office Engineer, NYCDDC HBPED700E, REI Services for Emergency Repair for the Passerelle Pedestrian Bridge, Queens, NY
This $2.2M project involves emergency repairs for the Passerelle Pedestrian Bridge, which spans over LIRR tracks and station and a NYC Transit maintenance facility in Flushing Meadows-Corona Park, Borough of Queens. The emergency repair work was necessary to remove RED FLAG conditions identified at various locations of the bridge in a structural and safety flag report. The work includes installation of temporary chain link fence and gates on/under the bridge deck to protect pedestrians and NYCT facility; emergency reconstruction of the deteriorated structural steel members including stringers and steel columns supporting the bridge structure; removal and reinstallation of LIRR electrical conduits and underdeck lighting and temporary support for NYCT power and signal cables; and removal and replacement of timber pedestrian bridge decking as required. Organized, led, and prepared agendas for progress meetings attended by NYCDDC, NYCDPR, NYCT, LIRR, CSS firm, and the contractor, interpreted contract drawings and specifications, worked with NYCT and LIRR for scheduling access to their sites and providing their required supervision/flagging services. Communicated with the engineer from the CSS firm about site conditions not reflected in the contract drawings, notified NYCDCC about site conditions potentially causing delays to the project, oversaw the work performed by the contractor to ensure that it was done in accordance with contract drawings, specifications, and approved shop drawings, reviewed status and prepared logs for various submittals required from the contractor.

Resident Engineer, NYCDPR Q096-108M, Construction of Natural Grass Ball Fields in Southern Fields, Queens, NY
Provided inspection for this $1.2M project which included monitoring field activities and reporting directly to the agency regarding construction progress and any construction issues encountered in the field. Prepared contractor's payments and the payment calculation book. Analyzed existing survey data and design grades from contract documents to calculate estimated quantities of earth moving operations (cut and fill).

Office Engineer, NYCDDC HWK1181, REI Services for Belt Parkway Rehabilitation from Coney Island Avenue to Knapp Street, Brooklyn, NY
Reviewed contractor's submittals including concrete and asphalt mix designs, shop drawings for drainage structures, protective sheeting designs, and proposals for MPT design plan modifications to ensure compliance with contract documents and NYCDOT, NYCDEP, and NYSDOT standards for this $6.4M project. Prepared and submitted change order ($100K) documentation to the agency for the removal and planting of trees along the parkway. Prepared contractor's partial payments,

organized inspectors' daily reports and checked pay quantities.

Construction Inspector, NYCDDC MED-583AR, REI Services for Installation of Water Mains and Abandon HPWM in Wall Street Area, Manhattan, NY
Provided inspection for this $40M project which included installation of 12" DIP water mains with various mechanical joint fittings and house connections as well as the interferences including private utility lines. Responsible for overseeing the installation of the water mains, oversight of MPT plans, utility relocation/coordination, and water shutdown coordination in accordance with NYCDEP, NYCDDC and NYCDOT construction procedures, plans and specifications. Also responsible for preparing water main tap cards, field cards, daily inspection reports, and as-built drawings.

Construction Inspector, NYCDDC SE-738A/739A, REI Services for Installation of New Sanitary/Storm Sewers in Netherland Avenue Area, Staten Island, NY
Provided inspection services for this $25M project which included installation of major storm and sanitary sewers, placement of 12" DIP water main with various mechanical joint fittings, house connections and full curb-to-curb roadway reconstruction. Inspected, measured and verified quantities with NYCDEP of standard manhole, catch basin and various other appurtenances associated with sewer line work. Inspected, measured and verified item wise quantity of water main, tap connection, gate valve, fire hydrant and other appurtenances associated with water main work. Prepared as built drawing, water main tap cards, field cards and construction reports of completed location for NYCDEP and NYCDDC.

Office Engineer, NYCDDC HWS2008K1, REI Services for Installation of Sidewalk, Curbs and Pedestrian Ramps, Brooklyn, NY
This $4M project involved assisting in the issuance of task orders to the contractor by preparing correspondence and tabulating data including construction locations, sidewalk and curb preliminary quantity estimates, and the time frame for completion. Calculated and tabulated sidewalk assessments that were submitted to the agency for over 500 constructed properties, created and submitted sidewalk construction reports on Microsoft Visio, prepared and submitted change order ($33K) documentation to the agency, prepared contractor's partial and final payments, organized inspectors' daily reports, checked pay quantities and recorded community complaints for the Resident Engineer.

BACKGROUND

Mr. Raza has 22 years of experience in engineering and construction industry. He has excellent technical and managerial skills and has worked on several NYCDDC projects as resident engineer and project manager. These projects included water mains: HWX647B, Reconstruction of Paulding Ave Phase II, and MED595, Installation of Trunk Mains in Astor Place. Mr. Raza is licensed professional engineer in the State of New York and Connecticut. He has bachelor's degree in civil engineering a master's degree in traffic and planning. In addition to his comprehensive knowledge of technical and managerial requirements for efficiently performing as Resident Engineer, his strong background in highway design, traffic engineering, public outreach, and community liaison are effective assets in successfully implementing all aspects of REI construction projects.

PROFESSIONAL REGISTRATION

Professional Engineer: State of New York License No. [redacted]
Professional Engineer: State of Connecticut License No. [redacted]

PROFESSIONAL EXPERIENCE

Project Executive, NYCDDC HWS2009X, REI Services for Prior Notice Sidewalks, Bronx, NY
Mr. Raza ensured the project progressed efficiently. He facilitated and led EnTech project staff from the front through active involvement in the project to deliver a high quality product and to keep pace with this intense construction activity project involving approximately 750 properties in a six-month timeframe. Mr. Raza ensured highly competent staff and technical/administrative resources availability. The project was completed ahead of time, below the budget (75%) and to the full satisfaction of NYCDDC officials.

Project Manager, NYCDDC HWX647B, REI Services for Reconstruction of Paulding Ave Phase II, Bronx, NY
Mr. Raza oversaw the chief inspector responsible for field operations. Enabled and led chief inspector to effectively support the project team in meeting project objectives. Actively site visits to keep deeply involved in the project both technically and administratively. The project is progressing with full satisfaction of NYCDDC officials in reference to field inspection.

Project Manager, NYCDDC MED595, REI Services for Installation of Trunk Mains in Astor Place and Cooper Square Area, NY
As the Project Manager representing EnTech as subconsultant, Mr. Raza ensured highly-qualified senior inspector for the project to effectively support the project team in meeting project objectives. Visited the site on regular bases and met with involved parties and kept involved in the project both technically and administratively. The project is progressing with full satisfaction of NYCDDC officials in reference to field inspection.

Resident Engineer, NYCDDC HWS2007K1, REI Services for the Installation of Sidewalks, Curbs and Pedestrian Ramps, Brooklyn, NY
Mr. Raza oversaw installation of sidewalk, curbs, and pedestrian ramps. The project involved relocation of traffic signals, modifications to existing sewer manholes. The project also involved installation of pedestrian ramps in refuge islands along Ocean Parkway and Coney Island Avenue. The project also involved coordination with utilities companies, and designing and overseeing elaborate MPT along Ocean Parkway and Coney Island Avenue. Responsibilities included: ensuring enforcement of construction and consulting services contracts including completion of the contract within time and budget, technical support and

management of the REI staff; coordination amongst various stakeholders in the project including contractor, various city agencies, schools and the community; oversight of contractor's partial, substantial, and final payments, complaints management in an effective manner and to the total satisfaction of EIC, organizing progress meetings, preparing agenda, minutes of meetings and follow ups, and ensuring full documentation of project closeout.

Resident Engineer, Newark Department of Engineering, Wilson Ave Reconstruction Project, Newark, NJ
Resident Engineer whose responsibilities included periodic project site visits and supervision of contractor's work for compliance with construction plans and NJDOT standard specifications. Duties also included review of itemized quantities and daily inspection reports (IDR) produced by the senior inspectors. Responsible for authorizing or rejecting any change orders requested by the contractor in consultation with EIC. He oversaw the removal and replacement of existing Wilson Ave roadway and made certain the entire project limits were in compliance with construction plans and NJDOT standard specifications. The roadway was replaced with superpave pavement curb to curb. The project involved installation of new steel faced curb, 4-inch think sidewalks and 6-inch think driveways, installation of pedestrian ramps in compliance with American Disability Act (ADA) requirements, cleaning of existing drainage structure, installation of inlets, manholes, and fire hydrant assemblies.

Work Zone Safety/Traffic Engineer, PANYNJ, Construction of Light Rail System from JFK to Jamaica, Queens, NY
Work Zone Safety/Traffic Engineer, responsibilities included extensive planning and supervision of work zone traffic control and safety plans of one of USA's busiest Highway I-678 (Van Wyck Expressway), and local streets during accelerated construction of this precast post-tensioned segment viaduct. Work zone traffic control and safety design for the construction of Jamaica Terminal involving lane closures and related traffic and pedestrian impacts.

BACKGROUND

Mr. Yhap is an experienced civil construction inspector with over 20 years of inspection experience with the NYCDOT, MTA-TBTA and CONNDOT. Mr. Yhap is a NICET IV Highway Construction Inspector and ICC Structural Masonry, Steel and Bolting Special Inspector certified. In addition, he has construction inspection experience on long span suspension bridge cables and suspender ropes.

PROFESSIONAL EXPERIENCE

Construction Inspector, ConnDOT CSO 2183, Project No. 0172-0412 & 0172-0413, Construction Inspection Services (Road, Bridge, Aviation) Pavement Marking, CT

This project consists of installation of Epoxy Resin Pavement Markings on Interstate Routes in the same locations as the existing epoxy resin pavement markings, except when indicated otherwise in the contract documents or by the Engineer in Various Towns in District 2. The new pavement markings to be installed will differ from the existing pavement markings, per the contract plans for the updated pavement markings. As an inspector, his assignment is to inspect all contractors work and ensure conformity with the ConnDOT's plans and specification for the duration of the project. Some of his assignment also includes maintenance and protection of traffic during project activities. All records are been kept in accordance with the Manual of Uniform Record Keeping (MURK).

Chief Inspector, NYCDEP NC-47, CM Services for South Battery Reconstruction and South Control Building, New York, NY

This reconstruction project involved the demolition of block walls installed in the tanks under the interim upgrade to simulate step feed flow and demolition of tank walls where the new detritor grit facilities and a new common channel upstream of the aeration tanks will be constructed. Inspected the complete replacement of tank equipment, piping and auxiliary systems which was included in the reconstruction. The existing South Control Building was originally slated for demolition, including construction of a completely new South Control Building.

Chief Inspector, MTA-TBTA, Throgs Neck Bridge, Bronx and Queens, NY

The project included reconstruction of the main cable and suspender rope investigation, structural steel repairs, painting and catwalk replacement of the Throgs Neck Bridge.

Senior Inspector, Various Projects, New York, NY

- **NYCDOT**: Construction Inspection for replacement of Shore Road Circle Bridge over Amtrak, Bronx, NY
- **NYSDOT**: Construction Inspection of installation of Intelligent Transportation System (ITS) improvements on the Bronx River Parkway and the Hutchinson River Parkway, Bronx, NY.
- **NYCDOT**: Rehabilitation inspection of the Brooklyn Tower Esplanade of the Brooklyn Bridge over the East River, Manhattan & Brooklyn, NY.
- **NYCDOT**: Rehabilitation Inspection of the Gun Hill Bridge over Metro North Railroad, Bronx, NY
- **NYCDOT**: Rehabilitation inspection of the Cross Bay Boulevard Bridge over Conduit Bo, Queens, NY.
- **NYCDOT**: Rehabilitation Inspection of the Guy R. Brewer Boulevard Bridge over Belt System Southern Parkway, Queens, NY.

Senior Inspector, Various Bridge Inspection Projects, New York, NY

- **NYCDOT**: Reconstruction inspection of the Flatbush Avenue Bridge

over the belt Parkway, Brooklyn, NY.
- **NYSDOT**: Construction inspection of sign structure installation of the Major Deegan Expressway, Bronx, NY.
- **NYSDOT**: Construction inspection of sign structure installation on I-295, I-695 and 907-F, Bronx, NY.
- **NJHA**: Construction inspection of the Garden State Parkway Bridge repair, Monmouth County, NJ.
- **NYSDOT**: Construction inspection of guide rail, overhead signs and landscaping improvements on Routes I-278/R-440, Staten Island, NY,
- **NYCDOT**: Reconstruction inspection of the Melrose Avenue viaduct over Conrail,. Bronx, NY

Assistant Team Leader/Inspection, Various Biennial and Bridge Inspection Projects, New York, NY
- **PANYNJ**: Report writing for biennial inspection of three bridges at LaGuardia Airport in Queens.
- **MTA-TBTA**: Biennial inspection of the Throgs Neck Bridge spanning the East River between the boroughs of Queens and Bronx.
- **NYCDOT**: In depth inspection of the Flatbush Avenue Bridge over Belt Parkway in Brooklyn.
- **NYCDOT**: In depth inspection of the Cropsey Avenue Bridge (double leafed bascule) Island Creek and Bank Street Viaduct over an abandoned railroad in Brooklyn, NY.
- **NYSDOT**: Biennial inspection of bridges in the Bronx, Manhattan and Staten Island.

BACKGROUND

Mr. Oyedijo is a NACE Level II inspector with extensive experience in construction projects. His work experience includes coating inspection, earthwork, building, sanitary and highway construction inspection.

PROFESSIONAL EXPERIENCE

Coating Inspector, NYCDOT, REI Services in Connection with Protective Coating of Greenpoint Avenue Bridge over Newtown Creek, Brooklyn and Queens, NY
The duties included NACE coating inspection services. Provided inspection of bridge coating procedures according to specifications and standards, monitoring contractor operations of cleaning and surface preparation, as well as ambient and steel surface conditions for proper painting and proper containment, taking field measurements, collection of data, and preparation of daily IR reports.

Coating Inspector, NYCDOT, Rehabilitation of Bruckner Expressway Bridges Over AMTRAK and CSX Rail Road, The Bronx, NY
This $74M design build project consisted of the rehabilitation of Bruckner Expressway Bridge over AMTRAK and CSX Rail Roads and involves a new superstructure with rehabilitation of the abutments and replacement of the deck. The REI Team is responsible for performing in-depth inspection, deck evaluation, rehabilitation report, review of preliminary and final design and construction support services for the rehabilitation of the expressway, work permits, insurances, work schedule, and evaluating traffic maintenance plan (MPT). The REI Team actively communicates with utilities and Rail Road companies for coordination of the work. Mr. Oyedijo inspected the bridge coating procedures.

Coating Inspector, NYCDOT, East 8th Street Access Bridge over Bay Parkway, Brooklyn, NY
The work included inspection of bridge coating procedures according to the specification. Monitored ambient temperature and humidity, monitored touching up the paint application and the three stage coating process for the bridge.

Project Coordinator, NYCHPD, New York, NY
The work included inspection of buildings for defect as per violation. Provided recommendation of corrective measure needed as per alterations and repairs for the structural, electrical, plumbing and heating system as per HPD specifications. Inspected completed work done by the contractor for compliance with specifications.

Safety and Loss Control Consultant, Staten Island, NY
Implemented safety program to ensure compliance with required Federal, State and Local safety standards. Coordinated with superintendents to ensure safe work site. Conducted weekly safety meetings and toolbox talks and accident investigations.

Construction Inspector/Safety Officer, New York, NY
Supervised the abatement and sand blasting of lead paint for the bridges and water towers. Conducted air monitoring for worker exposure to potentially hazardous materials such as lead dust, asbestos, respirable silica dust and paint solvent vapors using OSHA-established permissible exposure limits.

Safety Inspector, NYCDHP, New York, NY
The work included inspection of properties, preparation and review of cost estimate

alterations and plans consistent with the Department of Housing Preservation. Developed policies and ensured compliance with applicable City, State and Federal rules and regulations governing the abatement of lead hazards. Inspected properties to determine the required plans of action, and coordination of various repair activities and construction with other city agencies or private contractors. Sampled painted surface with RMD device (X-ray) fluorescence to detect the lead content.

Senior Engineering Technician, NYSDOT Region 10, Hauppauge, NY
As the NYSDOT engineering technician, Mr. Oyedijo inspected highway construction, drainage, paving and concrete projects. Inspected contractors to ensure compliance with the plan, specifications, regulations, safety and health rules for reconstruction of the bridge over Swift Creek on Loop Park way, Nassau County. Oversaw reconstruction of New York Route 25 and New Hyde Park intersection.

Hazard Reduction Inspector, New York, NY
Mr. Oyedijo inspected the properties for lead paints and the recommended corrective measures for removal to the contractors working on the project.

SSPC C5 Supervisor

BACKGROUND

Mr. Magnas has 19 years of field experience working on environmental and construction inspection projects. He has experience with pavements, structural concrete, decking, drilling, excavations, foundations, and marine related construction and knowledgeable in Phase I and II environmental assessment and remediation, hazardous material/waste management, and industrial hygiene. Mr. Magnas has worked on brownfields remediation, geology, soil contamination, and building sciences, with a wide range of inspection tools including seismographs, nuclear densometers, x-ray fluorescence, concrete testing, painting instruments, and many more. He has worked on the Willis Avenue, Bruckner, Verrazano, and Henry Hudson bridges to name a few and is familiar with NYCDOT, NYSDOT, NYCSCA, NYCDDC, TBTA and NYCT work practices and procedures. Mr. Magnas is NACE Level II Inspector with extensive bridge blasting and painting experience and is certified with the American Concrete Institute.

PROFESSIONAL EXPERIENCE

Construction Inspector, MTA-TBTA, Construction Administration and Inspection Services for Replacement of Upper Level Deck of Suspended Span of the Verrazano-Narrows Bridge, Staten Island, NY
This project included steel painting with high performance coatings and Class 1A containment. EnTech, as a subconsultant to GPI is providing SSPC and NACE certified inspectors for the blasting and environmental monitoring activities, including but not limited to, overseeing the Class 1A containment inside the bridge, on the bridge and underneath the bridge, blasting of structural steel, checking for visible emissions and ambient Air monitoring and ensuring compliance with the contract requirements, US Coast Guard permit requirements, the OSHA and relevant local, state and federal environmental regulations.

Construction Inspector, MTA-TBTA PSC-11-2892, CM/CI for Project HH-07, Structural Rehabilitation at the Henry Hudson Bridge, Bronx, NY
This $6M project included repair/replacement of deteriorated gusset plates, diagonal members, lacing bars and member web/flanges at various locations. Worked directly under supervision of Resident Engineer. Responsibilities included: checking for damages to the galvanized coating of new steel and fixing the damages; rivet busting and installation of new HS bolts; bolt torquing including the use of calibrated skidmore; repair of concrete abutments; painting/coating inspections; structural steel construction at arch level including replacement of transverse bracing members; installing new bracing member; and coordination in accordance with MTA, NYCDEP, and NYCDOT construction procedures, plans and specifications.

Senior Environmental Engineer, NYCDOT BRCR076A, REI Services for Reconstruction of Willis Avenue Bridge, Bronx, NY
Mr. Magnas was in charge of all environmental issues related to demolition and reconstruction of this major movable bridge project while serving as a river group inspector for all construction in the river. This $612M NYCDOT project involved the replacement of the Willis Avenue Bridge, a swing-type movable bridge over the Harlem River along with approach roadways and spans in Manhattan and the Bronx. The project involved extensive environmental issues including lead-based paint removal, asbestos abatement, mercury, polychlorinated biphenyls, and soil and ground water contamination. Other construction inspection roles included the installation of mini piles, pile caps, columns, pedestals, and steel erection. He inspected the removal of existing approach spans, construction of caissons socketed into bedrock, construction of new footings, abatement and cap beams,

and inspected steel erection including installation of bearings and welding to gilders. He submitted payment quantities for granite, concrete, reinforcement, etc. based on contract drawings and specification. Performed field testing of regular and lightweight concrete and inspected placement of concrete for piers, deck slab, roadway base and sidewalks. Supervised installation of bridge rail and pedestrian fence on the bridge and approaches, the installation of temporary concrete barriers and fence. Oversaw the site activities and reviews the contactor work, completed the review of related reports and documents, the contractors work plan and the health and safety plan. Responsible for sampling of the hazardous materials, review of lab data and made required recommendations accordingly. Ensured proper air monitoring, and coordinated the extensive other construction activities at the site. Supervised and documented payments for contractor activities during the construction of the Willis Avenue Bridge, the installation of new structures and the removal of existing structures.

Senior Environmental Engineer, NYCDOT HBX1123A, REI Services for Rehabilitation of Bruckner Expressway Bridges over AMTRAK/CSX Rail Road, Bronx, NY
This $74M design build project consisted of the rehabilitation of the northbound and southbound Bruckner Expressway Bridge over AMTRAK and CSX Rail Roads and involved a new superstructure with rehabilitation of the abutments and replacement of the deck. Responsible for providing environmental services regarding the lead-based paint removal and hazardous waste management. Oversaw the air monitoring activities. Responsibilities also included review of related documents and inspecting related field operation, testing and monitoring, controlling emissions, air pollution control, and managing soil contamination. Reviewed the health and safety plan, containment system plan and decontamination measures prior to contractor's paint removal operations. Coordinated the environmental activities at the site. Maintained records, documented the daily logs, and produced the final report. Served as a painting inspector overseeing the Class 1A containment around the bridge, the blasting of structural steel, and painting of the steel.

EDUCATION

Multiple X-Ray Fluorescence Training Certificates

BACKGROUND

Mr. Bolling has 18 years of progressive construction inspection experience and office engineer experience for NYCDDC infrastructure projects. He specializes in NYCDDC water mains installation projects. His NYCDDC experience includes retaining structures, street reconstruction, including installation of water mains and sewers, and drainage systems. His experience also includes bridge painting, structural repairs, and drawing preparation. He has been senior construction inspector on several NYCDDC projects. He is a certified NICET Level IV.

PROFESSIONAL EXPERIENCE

Senior Inspector, MTA-TBTA, Brooklyn Battery Tunnel 3 Vent Buildings Restoration Project, Manhattan and Brooklyn, NY
This project consisted of structural concrete repairs to all 3 vent buildings and tunnel shafts. Responsibilities included locating repairs by looking for major cracks, spalling in the walls ceilings, floors and columns. The locations that had visual evidence of deterioration were sounded with a hammer to determine the area repair limits. Enforce safe work environment and use of personal protective equipment at all times. Taking measurements and calculating all quantities of all 3 vent buildings.

Senior Inspector, NYSDOT D258530 and D258078, Emergency Repair and Maintenance Project of BQE Expressway, Brooklyn, NY
The project involved cleaning, painting, structural steel repair, bridge deck replacement and bridge railing upgrade of the Gowanus. Responsible for all nighttime operations, inspected MPT enforced safety specification according to OSHA regulation, emergency and contract full depth concrete deck replacement, partial deck replacement, existing bridge deck demolition, placement of exodermic deck panels, double box beam bridge railing installation, set-up Class A containments and inspection of steel after blasting.

Senior Inspector/Safety Engineer, NYSDOT D258476, Cleaning, Painting and Structural Steel Repairs of the Kosciusko Bridge over Newtown Creek, Brooklyn, NY
This project involved cleaning, painting, and miscellaneous structural steel repairs of the Kosciusko Bridge over Newtown Creek Interstate 278. Duties included inspection of Class A containment system for paint removal, proper handling of paint removal waste, abrasive blasting, vacuuming equipment with HEPA filtering system, fall protection, public safety, MPT, permissible lead exposures, mixing of paint, application of paint to structural steel and galvanized surfaces, shielding operations, clearing and grubbing of pigeon droppings, air monitoring around Class A containment, and miscellaneous steel removal and repairs.

Chief Inspector, NYCDDC HWQ331C, REI Services for Reconstruction of Newport Avenue, Queens, NY
This project administered by the NYCDDC for the NYCDOT involved reconstruction of 9 blocks of Newport Avenue, a two-lane street and 20 blocks of Rockaway Beach Boulevard, a four- lane street with landscaped center medians constructed on 14 of the blocks. Responsibilities were to assign inspectors to operation, check inspectors daily reports, provide oversight to entire jobsite, make field decisions, inspect steel faced curb installation, catch basin installation, storm drainage pipe connection to manholes, sanitary connections, 20-inch water main offsets, concrete sidewalk installation, MPT, concrete testing and sampling, roadway milling, major paving of rigid and flexible pavement operations, electrical conduit and traffic signal hardware installation. Enforce OSHA/NYCDOT safety.

Senior Inspector, NYCDDC HW2CRO2C, REI Services for Roadway Milling, Brooklyn and Queens, NY
This project involved "when and where" asphalt milling and paving contract in Brooklyn and Queens. Duties included measuring square yardage of area milled (yield), and compared yield to trucks loads and paying the lowest quantity.

Senior Inspector, NYSDOT D260782, Noise Barrier Construction Westbound Long Island Expressway, Roslyn Heights, NY
This project consisted of construction of noise barrier. The associated work includes soldier piles for lagging walls, small section of permanent steel sheeting, relocating and installation of sewer force main, roadway concrete repairs, and new pavement with super-pave asphalt on north service road (Power House Road W/B) of Long Island Expressway at Roslyn Road. Responsibilities included in-depth understanding of contract requirements and ensuring contractor compliance with those requirements and NYSDOT standard specifications. Also responsible for overseeing contractors' work at the field, confirming quality and quantity of the work performed by the contractor, verifying monthly payment, preparing daily field logs, and compliance with all related NYSDOT record keeping requirements.

Inspector, NYSDOT D258437, Long Island Expressway/Cross Island Parkway Improvement Project, Nassau County, NY
This was a $130M construction project involving 14 bridges and 30 miles of highway. As the highway/bridge construction inspector, responsibilities included inspection for the construction of concrete retaining wall structure, inspection of soil control/stabilization, sanitary and storm drainage system installation on cradle, 36" water main installation, reinforced concrete foundation installation, maintenance and protection of traffic, bridge steel erection, stay-in-place form placement, responsible for concrete bridge deck placement, bridge demolition, soldier piles and lagging wall, epoxy coated or black re-bar placement and rigid and flexible pavement operations.

Soils Technician

BACKGROUND

Mr. Asem is an experienced structural engineer with 24 years of experience in the engineering and construction industry. He has an in-depth understanding and experience in NYCDDC REI projects and structural engineering. Mr. Asem has extensive NYCDDC construction inspection experience including distribution water main, street reconstruction, sidewalk, curbs and pedestrian ramps projects. He has an exceptional track record on every project (including those with NYCDDC) he has worked on. He holds a bachelor of science in civil engineering and is knowledgeable in all aspects of resident engineering inspection. Mr. Asem has extensive computer and software experience and has used numerous programs as part of his design experience. He is well-versed with computerized design and drafting programs including AutoCAD, MicroStation, AutCAD Land Desktop, Visio 2010, SAP 2000, Etabs, MathCAD, and more.

PROFESSIONAL REGISTRATION

Professional Engineer: State of Connecticut, No. [redacted]
Professional Engineer, State of NY No. [redacted]

PROFESSIONAL EXPERIENCE

Resident Engineer, NYCDDC RWX021, REI Services for Retaining Wall Reconstruction at Cannon Place, Bronx, NY
This $3.8M active project involves replacement of the existing retaining wall along the west side of Cannon Place, replacement of 8" distribution water main with hydrants, replacement of existing 12" combine sewer with type B1 manholes, catch basins type I and basins connections, restoration of roadway base and pavement, pavement markings, concrete curbs, sidewalks, and relocation of utilities. Mr. Asem is responsible for all technical aspects of the project, reviewing contract drawings and addendums, preparing the Resident Engineer Dairy, reviewing MPT, reviewing the daily inspection reports, reviewing pre-construction reports, and oversees the contractor's activities to ensure compliance with safety and pertinent construction specifications.

Office Engineer, NYCDDC MED617, REI Services for Distribution Water Main Extension and Replacement, Manhattan, NY
This $5.85M project involved replacing existing aged 16" water mains with new 20" DIPs. Also, 12" water main tie-ins and 6" hydrant extensions were replaced and updated, fire hydrants installed and upgraded, pavement restored and numerous utility facilities relocation. The project was executed in close proximity to city transit underground facilities. Mr. Asem was responsible for the administrative and technical aspects of the project as well as reviewing the specification and contract drawings, supporting the field staff, preparing the contractor's monthly payment, reviewing daily inspection reports ensuring accuracy and completeness, reviewing contractor's submittals and preparing in service drawings and field cards. He coordinated with other NYCDDC departments, other City agencies and utility companies as per required to ensure smooth implementation of the project.

Project Engineer, NYCDOT HBX1131, Total Design and CSS for Replacement of Bruckner Expressway over Westchester Creek (Unionport Bridge), Bronx, NY
This project is a major NYCDOT movable bridge project with an estimate of $120M for construction. The project involves replacement of the existing bascule bridge, construction of a new overpass and realignment of the existing connector ramps. EnTech is a sub to Hardesty and Hanover. The project is in preliminary design phase. EnTech prepared conceptual staging plans for the bridge replacement, preparation of preliminary staging plans for three stages construction. Other tasks

will involve preparation of MPT plan and other civil engineering assignments. Mr. Asem prepared Conceptual Construction Staging Design including controlling horizontal alignment for AASHTO WB-50 truck.

Senior Inspector/ Office Engineer, NYCDDC HWXP093A, REI Services for Reconstruction of Pratt Avenue, Bronx, NY
This $15M reconstruction project included installation of distribution water mains 6", 8", 12" and 20" installation of combined and storm sewer 12", 15" ESVP also 24", 36" and 48" RCP. The project included installation of catch basins, manholes and hydrants, reconstruction of roadways, curbs, sidewalks, pedestrian ramps, street lighting and traffic lights. As part of the project many utilities were relocated. Responsible for oversight of construction activity, MPT plans, utility relocation/coordination in accordance with NYCDEP, NYCDDC and NYCDOT construction procedures, plans and specifications. Prepared quantity takeoffs, catch basin inventory/as-built, payment estimates, daily inspection reports and Highway and Sewer as-built drawings, controlled plan and payment deviations.

Project Engineer, NYCSCA, Engineering Design Consulting Services for Securing the Playground Structure at Battery Park City School PS 276, Manhattan, NY
The project involved attaching playground equipment to the roof of a school building approximately 40 feet high from the ground level. Mr. Asem provided structural design engineering which included calculating the wind force, designing the attachments and anchor bolts and controlling the base plate for the playground. The design was carried out in reference to NYCDOB code 2008 and AISC material code.

BACKGROUND

Mr. Raitelu has over 9 years of experience in construction inspection services on bridge and highway projects. He has overseen bridge deck replacement, steel repair and installation and painting, paint removal operation, utilities installation and relocation, lighting, drainage, precast concrete and MPT for large and complex projects. His duties have included supervision, coordination, ensuring conformance with contract plans and specifications, preparing as-built drawings measuring quantities, and monitoring contractors operations.

PROFESSIONAL EXPERIENCE

Construction Management, PANYNJ, The Bayonne Bridge Navigational Clearance Program, Staten Island, NY
For this major infrastructure program raising the Bayonne Bridge to allow Navigational Clearance is schedule to be completed in 2018. Responsibilities for this project included CM services related to multi-disciplinary Civil, Structural, Electrical, and Mechanical Engineering, Coatings systems, and CM and Project Support Services specifically related to construction of new approaches. This aspect included structural steel, precast concrete elements, viaduct construction, drilled shafts, and mini piles. Specifically these services involved performing inspection services, constructability reviews, coordinating construction activities with facility operations, permit compliance, contract administration, and preparing construction cost estimates and schedules. Environmental consulting duties consist of reviewing environmental and safety regulations regarding the safety of site workers including OSHA, NY & NJ state regulations, and project HASP and advising the CM team on how to comply with the applicable regulations and requirements. Additional tasks include identification of the safety equipment and attire (PPE) required to be used on-site and identifying authorized vendors to supply the approved materials. Advising the required training for the CM team for working on a HazMat site and confirming knowledge of proper use of safety equipment and attire for workers' protection.

Construction Inspector, NYCDOT, REI Services, Saint George Ferry, Staten Island Ferry Terminal Ramps, NY
REI Services for Design Build for the rehabilitation of Saint George Ferry Staten Island Terminal Ramps for NYCDOT. Scope of work included full and partial deck replacement, concrete abutment repair, rehabilitation of deteriorated steel super and substructure members as well as complete removal and installation of new paint system on all exposed structural steel. Other duties include the inspection of replacement of the bridge lighting and drainage systems, replacement of the underground storm water drainage system from the bridges to the final point of discharge in the Upper New York Bay, installation of a pigeon deterrent system, reconstruction of the North Municipal Parking Field and architectural enhancements to the bus canopies and pedestrian breezeway.

Construction Inspector, NYSDOT, Emergency Repair and Interim Deck Replacement on the Gowanus Expressway, Brooklyn, NY
The work involved deck replacement, BQE connector widening/replacement, lower Gowanus Expressway pavement rehabilitation, structural steel and concrete repairs, structural steel painting, drainage work, and operation of the existing HOV lane. This is a major deck replacement project located in a high speed, high traffic volume urban area. This project includes traffic management strategies such as construction phasing, lane closure restrictions, night and weekend work.

Construction Inspector, NYSDOT, Three Bridges in the Bronx, Bronx, NY
This project involved Resident Engineering Inspection for reconstruction of three bridges in the Bronx. Each construction site involved stage construction work, nighttime operations utilizing cross-overs, Critical Path Method scheduling and public outreach program. Prepared daily reports for MPT, substructure demolition, excavation, concrete placements, steel and pre-cast beam erection, drainage, concrete and asphalt pavement, sidewalk construction, bridge and approach lighting. Other duties included assisting in monitoring pile driving operations, soil sampling and testing, concrete sampling and testing.

Construction Inspector, I-95 NB over Throgs Neck Extension Bronx, NY
Full superstructure, abutment and pier reconstruction of I-95 (N/B) Mainline and Bruckner Boulevard Service Road Bridges, new curved, two span continuous HP steel stringers for improved alignment, concrete piles for pier and abutment footings, double-wall modular units with fascia barrier; approach slabs, pre-cast concrete barrier and concrete pavement, street lighting, ITS, drainage and sign structure installations, mill and fill asphalt on I-695 and landscape, temporary bridge with pedestrian access, temporary H-pile and lagging wall with tie-back system, temporary and permanent GRES walls, and noise walls.

Construction Inspector, East Tremont Avenue over Cross Bronx Expressway Extension (I-295), Bronx, NY
Replacement of 2-span superstructure framing with pre-stressed, pre- cast concrete beams, substructure modifications including extension of pier columns and abutment rehabilitation, approach slabs, pre-cast concrete barrier and drainage, traffic and street lighting installation, electrical, telephone, gas and electrical utility installation on and off structure, mill and fill asphalt on I-295 and landscape work, two temporary bridges with pedestrian access, relocating of utilities, temporary H-pile and lagging wall, and steel PZ sheeting.

Construction Inspector, Cross Bronx Expressway Extension (I-295) over Randall Avenue, Bronx, NY
Deck replacement of 3-span bridge, structural lifting and pedestal/bearing replacement, Class 'A' containment and structural steel painting, precast concrete median barrier installation.

ACI Concrete Field Testing Technician Grade I, 2005
ACI Associate Concrete Construction Special Inspector, 2008
OSHA 10-Hour Construction Safety and Health Training Course, 2008
NJSAT, 2008
PCI Quality Control Personnel Certification, Level I and II, 2008
TCC - Traffic Control Coordinator, Rutgers University

BACKGROUND

Mr. Fenton has 18 years of experience in construction inspection, civil engineering, and architectural inspection. He has worked on several major bridge and tunnel construction projects including 145th Street Bridge, Williamsburg Bridge, Macombs Dam Bridge, 9th Street Vertical Lift Bridge, Madison Avenue Bridge, and Three NYC Vehicular Tunnels. He also has worked on MTA-TBTA, MTA-NYCT and PANYNJ projects providing construction inspection, architectural inspection and condition survey services.

PROFESSIONAL EXPERIENCE

Construction Inspector, NYCDOT BRCR076, REI Services for Reconstruction of Willis Avenue Movable Bridge over the Harlem River, Manhattan and Bronx, NY
On this $612M project over the Harlem River, Mr. Fenton serves as the inspector, supervising contractors activities during the construction of the construction of a new ramp to the Willis Avenue approach, oversee the installation of mini piles, pile caps, columns, pedestals, and steel erection. He inspects the removal of existing approach spans, construction of caissons socketed into bedrock, construction of new footings, abatement and cap beams, and inspected steel erection including installation of bearings and welding to gilders. He supervises MPT activity at the Harlem River Drive, which included daily and long-term closures.

Survey Inspector, NYCDOT HBMC002, Rehabilitation of Three Vehicular Tunnels, New York, NY
Survey Inspector Designer and Conditions Inspector – Design and construction services, including architectural and structural inspection/design. Rehabilitation of ventilation chambers, crew quarters and machinery supports. Rehabilitation of the above grade ventilation structures in Battery Park which functioned as an important landscape elements. Design involved restoration of stone cladding and new roofs and doors, while addressing aesthetics, security, OSHA, and maintenance requirements. Designed placement of fan openings for the Park Avenue Tunnel located in the median of Park Avenue.

Construction Inspector, PANYNJ, Condition Survey Inspection of Newark International Airport Terminal B, Newark, NJ
Verified existing ceiling construction and sprinkler head, supply and return air diffuser locations and electrical runs. Also, verified roof layouts, roofing, and drains conditions.

Construction Inspector, NYCDOT HBX1029, REI Services for Reconstruction of 145th Street Movable Bridge over Harlem River, Bronx and Manhattan, NY
Mr. Fenton inspected reconstruction of granite retaining walls following new roadway profile. Prepared payment quantities for granite, concrete, reinforcement, etc. based on contract drawings and specification. Performed field testing of regular and lightweight concrete and inspected placement of concrete for piers, deck slab, roadway base and sidewalks. Supervised installation of bridge rail and pedestrian fence on the bridge and approaches. Monitored MPT and installation of temporary concrete barriers and fence. Supervised rehabilitation of gatehouses.

Construction Inspector, NYCDOT BRC253CC, REI Services for Rehabilitation of Williamsburg Bridge over the East River, Manhattan and Brooklyn, NY
Responsible for calibrating torque wrench daily and torque testing of the bolted connections on the Manhattan and Brooklyn intermediate and main towers. Supervised platforms installation at main span roadway and upper levels of towers.

Monitored structural repairs tower bearing connections. Monitored cleaning of existing stone masonry using pressure washing with micro-abrasion. Supervised re-pointing of granite facing of Manhattan and Brooklyn anchorages, including the grinding and re-grouting of existing joints and re-pointing of comfort stations, reviewed shop drawings and field verified as-built quantity.

Construction Inspector, NYCDOT BRX287-R, Rehabilitation of Macombs Dam Bridge over Harlem River, Bronx and Manhattan, NY
Reviewed rehabilitation drawings and specifications. Performed inspection of stone face and developed alternative anchorage detail. Inspected architectural components for Landmark Bridge, including structural repairs of the camel back, deck truss, and swing span, and the exteriors/interiors of the operator and gatehouses and machinery room. Reviewed shop drawings and verified as-built field quantities.

Construction Inspector, NYCDOT BRC-291, Reconstruction of 9th Street Vertical Lift Bridge over the Gowanus Canal, Brooklyn, NY
Inspected architectural components of bridge, including concrete for piers, exteriors and interiors of operator and generator houses, and machinery rooms, plus roofing, siding and windows of towers

Condition Inspector, MTA-TBTA, Randall's Island Junction Structure Deck Replacement at the Tri-Borough Bridge, Manhattan, NY
Architectural design and utility survey for design and construction support services for new garage and shop facilities to be located below the rehabilitated junction structure. Responsibilities included code analysis, environmental assessment, civil design, utility investigation and architectural and structural design and coordination of the design of all building systems including electric, HVAC, fire protection and communications. Civil design includes design of outdoor parking area and access roads, grading, drainage and pavement design. Prepared estimates in accordance with TBTA procedures.

BACKGROUND

Mr. Wiater has 10 years of experience working on construction inspection projects for NYCDDC, NYCDOT, NYSDOT and NJDOT. He has excellent understanding of office engineering, construction inspection, concrete and asphalt placement, work zone traffic control and MPT, traffic signs, record keeping, and environmental concerns related to construction projects. He is efficient and has good knowledge and experience in AutoCAD and land surveying.

PROFESSIONAL EXPERIENCE

Office Engineer, NYCDDC S216-415A, Construction Management Services for the Renovation and Rehabilitation of the West 59th Street Marine Transfer Station, Manhattan, NY

This two phase, $47M project involved structural repair of the in-shore platform located east of the pier at the intersection of West 59th Street and Marginal Street. The Phase I work included site work, intersection safety improvements, replacement of the existing single truck scale with two new inbound and outbound truck scales, installation of a new truck ramp ventilation system, removal of the existing control booths and installation of a new control booth at the top of the ramp to house the scale computer equipment and monitoring work stations, and marine dredging south of the north pier and the barge slip. Phase II work included refurbishment of the existing 50,600 square foot pier building. Mr. Wiater's responsibilities included assisting with processing RFIs, project submittals, monthly progress payments, cost and schedule monitoring and reporting, reviewing certified payrolls and extra work bills for compliance with prevailing wage rates and allowable equipment rates, coordinating and scheduling material testing and surveying services, updating the as-built drawings, maintaining project records including daily inspection reports, material conformance and testing reports and material certification, and preparing weekly, monthly and special reports. He coordinated effectively with clients, contractors, subcontractors, public, NYCDOT, NYSDOT, fire department, and police as well as neighboring residents of the project.

Construction Inspector, NYSDOT D261719 Region 10, Rehabilitation of 9 Steel Bridges and Bridge Lifting Operations, North Hempstead in Nassau County and Towns of Babylon, Brookhaven, Islip and South Hampton in Suffolk County, Long Island, NY

This $15M NYSDOT project involved rehabilitation of nine (9) steel bridges including structural lifting operations using hydraulic jacks. Bridges were lifted 1/8" under live traffic conditions. Supporting pedestals from underneath of the bridge were demolished. The bridge was suspended 2'-3' and it was supported on hydraulic jacks. The new reinforcement was placed and new concrete pedestals were poured in place. The nine steel bridges were located over major Expressways, State and County roads in NY. Used "Site Manager" on daily basis to prepare DWR's for work performed in the field. Daily operations included structural steel replacement, replacement of type elastometric fixed and expansion bearings under continuous dead and live load, pedestal and bearing removal, lead paint removal and structural steel painting, environmental ground protection, class B containment, shallow, and deep patching of damaged pillars and pillar caps. Oversaw structural steel lifting operations, structural welding, steel plate retrofit, bolt sampling and skidmore torque testing of bolts. Verified construction materials were on NYSDOT approved list. Inspected and tested concrete Class A, F, and SCC using method of spread, delivered to the work site.

Assistant Office Engineer, NYCDOT BRCR076, REI Services for

Reconstruction of Willis Avenue Bridge over the Harlem River and Willis Avenue Bridge over the Major Deegan Expressway (I-87), Bronx, NY
This $612M project involved removal and replacement of the swing span and reconstruction of approach spans and roadways, mechanical, electrical, structural, and waterfront issues. Mr. Wiater maintained project records in accordance with MURK. Calculated paid quantities of items and ensured paperwork such as certifications of materials, delivery tickets and other related work, monitored progress pay estimates, submitted extra work bills, correspondence and as-built plans, scheduled deliveries of concrete to site, scheduled soil tests, concrete cylinders, and grout samples pickups. Oversaw asphalt placement and soil compaction operations. Prepared engineer's estimate for T&M packages of up to $200K per month. Prepared semi-monthly progress reports of work performed on the project.

Inspector/Assistant Office Engineer, NYSDOT D260347 Region 11, Lighting and Signing Improvements for the Cross Bronx Expressway, Bruckner Expressway and the Hutchinson River Parkway, Bronx, NY
As construction inspector on this $60M NYSDOT project, Mr. Wiater prepared daily logs, reviewed payments for the completed work, oversaw set-up of Work Zone Traffic Control (WZTC) and work safety, and inspected work performed by foremen, iron workers, electricians, carpenters, etc. Coordinated lifting procedures for single span and cantilever truss sign sections. Prepared concrete cylinders for compression testing for sign foundations, and oversaw paving work and placement of concrete barrier. Assured that work was done according to plans and specifications. Prepared bracket mass calculations and labor scheduling, and reviewed construction plans. Worked closely with/under the OE and EIC.

BACKGROUND

Ms. Ryduchowski is a professional engineer with over 25 years of experience in engineering and construction industries. Her experience includes major reconstruction projects, biennial bridge inspections and structural engineering for NYCDOT, NYCDEP, NYSDOT, MTA-TBTA, NYSTA, PANYNJ and NJTA. She has spent over 10 years at NYCDOT's Division of Bridges where she was EIC at the Specifications Section and oversaw complex and important engineering projects. Ms. Ryduchowski is also an Adjunct Professor at CUNY lecturing on Design of Reinforced Concrete Structures.

PROFESSIONAL REGISTRATION

Professional Engineer: State of New York, No. [redacted]
Professional Engineer: State of New Jersey, No. [redacted]

PROFESSIONAL EXPERIENCE

Engineer-In-Charge, NYCDOT, Division of Bridges Specifications Section, New York, NY
Served as a consultant on complex and important engineering project issues to the Division of Bridges. Oversaw preparation and review of bid proposals or reports of complex nature, administered the day-to-day running of the Specifications Section including planning, organizing, coordinating and supervising work of civil engineers. Interacted with Project Groups, Engineering Consultants, NYCDOT ACCO and Legal Division and NYSDOT. Updated NYCDOT construction contract documents including special provisions, boilerplate language, according to revisions of NYS standard specifications. Reviewed contract proposal books, design drawings, addenda and coordinated contract-bidding processes for the Division of Bridges. Incorporated information and data on new materials, equipment, construction practices and techniques into new special specifications. For an abbreviated list of specific projects, see below.

Principal Engineer, DKR Engineering and Testing Services, Lyndhurst, NJ
Projects included structural analysis and evaluation for residential and commercial projects in NJ and NY for various Construction Management Companies and NYC agencies. Performed structural condition inspections, prepared reports. Supervised non-destructive testing of structural elements, performed construction/final inspections, prepared inspection punch lists and reports.

Principal Structural Engineer, Wagh Engineers, Various Projects, NY, NY
Directed and supervised a team of five engineers in bridge structural design and inspection.

Senior Structural Engineer/Project Engineer, NYCDOT, Reconstruction of the Grand Concourse over Metro-North and 172nd Street, Manhattan, NY
Performed structural analysis, designed steel and reinforced concrete bridge structures, reviewed engineering drawings and calculations for Reconstruction of the Grand Concourse over Metro-North and 172nd Street.

Team Leader, Various Biennial Inspections, New York & Tarrytown, NY
Directed and supervised up to three assistant team leaders on the following Biennial Inspection projects:

- NYCDOT, Washington Bridge Manhattan Approaches Biennial Inspection, Manhattan, NY
- NYSDOT, 11th Avenue over LIRR In-Depth Bridge Inspection, Manhattan, NY
- NYSDOT Region 11, Brooklyn Bridge Biennial Inspection, Brooklyn, NY

- NYSTA, Tappan Zee Bridge Special Condition Inspection, Tarrytown, NY
- MTA-TBTA, Henry Hudson Bridge Biennial Inspection, Bronx, NY
- NYSDOT Reg. 11, In-Depth Inspection of the Grand Central Parkway Service Road Bridges, Queens, NY
- NYSDOT Reg. 11, Williamsburg Bridge Biennial Inspection, Brooklyn, NY

Staff Structural Engineer, Port Authority of New York and New Jersey
Performed engineering audit reviews to ensure that structural maintenance programs were in-place and utilized to correct all deficiencies and that structural repairs were correctly designed. Performed review of the major contracts, drawings and specifications for design omissions and compliance with the relevant codes and conducted final inspections during construction. Projects included: Port Authority Bus Terminal, George Washington, Goethals, Bayonne, and Outerbridge; Crossing Bridge, Newark and LaGuardia Airports, JFK Airport (Federal Circle, Taxiway, Highway and Terminals); and Holland and Lincoln Tunnels, PATH & Amtrak Railroad Complex.

EDUCATION

PhD, Civil Engineering
Warsaw Technical University, Poland

MS, Civil Engineering
Warsaw Technical University, Poland

CERTIFICATION

PANYNJ, Construction Audit and Project Management Training
NYSDOT and NJDOT, Bridge Inspection and Rating Training Courses
ASCE/FEMA, Urban Search and Rescue Structural Specialist Training

RELEVANT PROJECT EXPERIENCE

NYCDOT EIC for contracts which were reviewed and procured to consultants:

- HBK1023/HBK1089, Belt Parkway over Mill Basin/Bay Ridge Avenue
- HBQ1112, Fresh Pond and Metropolitan Avenue over LIRR
- HBX1086, Westchester Avenue over Hutchinson River Parkway
- HBX1131, Bruckner Expwy. over Westchester Creek (Unionport Bridge)
- HBK1206, Hill Drive Bridge over Prospect Park Lake
- HBM551 East 34th Street / Park Avenue Tunnel
- HBX1164, City Island Bridge over Eastchester Bay
- BRX287S, Macombs Dam Bridge Seismic Analysis
- HBCR01B, Component Rehabilitation of 10 Bridges
- HBQ1203, Roosevelt Island Bridge over Van Wyck Expressway
- HBCR01C, Component Rehabilitation of 9 Bridges
- HBM1027, Harlem River Drive at 127th Street (Design-Build)
- HBX1152, Bryant Avenue Bridge over Amtrak and CSX
- HBM1138E, Battery Park Underpass and West Street Underpass
- HBM7240, Trans Manhattan Expressway Connector
- HBCMVBE, Emergency Contract – 15 Bridges – Movable Bridges
- HBCY099, When and Where Structural Repairs
- ERB-PM14, Preventive Maintenance for Four East River Bridges
- HBR1217, St. George Ferry Terminal Ramps (Design-Build)
- HBM1120, 11th Ave. Viaduct from W. 30th to W. 33rd St. over LIRR Yard
- HBK668R, 8th Street Access Ramp Bridge over Belt Parkway
- BRC156R, Reconstruction of Manhattan Bridge, Cable Rewrapping etc.
- BRC270C, Brooklyn Bridge over I-278 (BQE) East River Contract #6

Résumés

Toll International LLC

ERIKA BROWN

Experience Highlights
Extensive high-level experience in professional engineering project control specialist for owners of large scale capital construction programs.

Relevant Experience
6 Years

Education
M.S., Engineering Management, New Jersey Institute of Technology, 2010

B.S., Civil Engineering, INTEC, Santo Domingo, Dominican Republic, 2004

Software Skills
Oracle Primavera P6 8.3, MS Office (Word, Excel, PowerPoint, Access and Visio), AutoCAD, STAAD Pro Seismic Analysis and Oracle Primavera Contract Manager 13.1

Certifications
- 30-hour OSHA TOXCHEM.

Ms. Brown is scheduler and control specialist with over six (6) years of relevant experience providing project controls, scheduling and budget management services for public owners with large scale capital construction programs. She holds a Bachelor of Science in Civil Engineering from INTEC and a Master of Science in Engineering Management from New Jersey Institute of Technology. In addition to her experience and education as a project control specialist and environmental engineer, Ms. Brown is skilled with engineering design and construction inspections.

Erika is a gifted technical expert in the development of baseline schedules, work breakdown structures, activity networks and project control performance and variance reports. Additionally, she is highly skilled with construction and maintenance of civil projects, supervision of road construction, and wastewater treatment plans. Ms. Brown has developed an excellent reputation when collaborating with client organizations and third party consultants and has gained experience from both engineers and architects in assimilating their project control, scheduling and budget management concerns. Ms. Brown possesses outstanding English writing abilities and is skilled in developing and delivering presentations along with the required data analysis, preparation of tables and graphic materials that will support the finalized documents.

Ms. Brown professional engineering project control experience includes assisting the New York City Department of Environmental Protection (NYCDEP)in creating and managing their critical path method baselines, updating schedules and monitoring their contractors schedule submittals while adhering to industry best practices including the development and maintenance of the electronic version of the project schedule files, documents and spreadsheets. Additionally, she assisted the NYCDEP by auditing their project control processes and developed a gap analysis of current project control practices against the developed standards and guidelines.

Ms. Brown project control experience and skills includes preparing and delivering presentations. She possesses outstanding verbal and written communication and has received high level training in project control, project scheduling, construction management and engineering modeling. She has conducted technical documentation meetings and discussed issues and performance with clients at all levels of management particularly for owners of large scale and complex capital construction programs from regional government agencies. In addition to her impeccable command of English, Ms. Brown is fluent in several foreign languages including written and verbal communications in both Spanish and Italian.

SIMILAR PROJECT EXPERIENCE

NEW YORK CITY DEPARTMENT OF ENVIRONMENTAL PROTECTION (NYCDEP)
Project Control Specialist
May2010 – Present

- Prepare work breakdown structures (WBS) and deliver variance and summary level reports.
- Review contractor schedules, man-power loading and change orders.
- Run milestone reports for management.
- Analyze critical path and explore mitigation opportunities for potential delays.
- Maintains and monitors project schedules with the use of Primavera P6. Manage Documents such as: RFI's, Meeting Minutes, Punch Lists, Transmittal Log, Submittal Log, Change Order Log and Issues Log.
- Generates and maintains schedule records documentation for change orders negotiations and prepares pricing for comparison table utilizing various sources i.e., vendor contacts, supplier quotes, R.S. means, historical data, among others.
- Serves as a liaison between client and Contractor and organized daily construction activities in the schedule.
- Conducted inspection of completed activities to obtain actual dates from the field along with the estimate of remaining durations to provide to client agency and CG to evaluate the facility for a post-occupancy and acceptance of the site.
- Reviews and verify time sheets, contractor partial payments and project submittals on a daily basis.
- Assist in the negotiation of proposed schedule logic changes with the Contractor.
- Tracks the project schedule and assists with compiling recovery schedules and budgets.
- Attends weekly meetings to discuss schedules, budgets and project milestones.
- Ensures schedule submittals are prepared in accordance with contract specification and that approved materials and construction methods meets standards, codes and adequate safety standards.
- Ensures all required permits are current and available on site prior to initiation of the work.

LWM ENGINEERING GROUP
NEW YORK, NY
Schedule Engineer
Feb 2007 – May 2010

- Prepared schedules for underpinning reinforce concrete and masonry construction contracts. Participated on the correction and supervising delays involving structural distress of these structures.
- Obtained actual completion dates and remaining durations during pile driving and other deep foundation installation.
- Reviewed submittal log for lists of shop drawings and design drawings and checked drawings for potential defects and recommended measures with the use of AutoCAD.

Raif S. Ahmad, PMP, PSP

Civil Engineer – Certified Project Manager

Member of ASCE, PMI and AACE International

Toll International LLC
(212) 920-4115

Key Skills

- . 20 years of experience in Project Management and Project Control since 1993.
- Field technical experience with most kinds of construction work such as Schools, Commercials, Residential, Towers, Highways, Airports, Railroads and Infrastructure Works
- .Strong skills of using Primavera Project Planner P3, P6, SureTrak, MS Project, Digger and SAPro (by Ron Winter Consul.) as a tools for scheduling, and Expedition or Contract Manager CM13 by Oracle.
- Capable in using the Microsoft Office (Word, Excel, PowerPoint, Outlook and MS Visio).
- Good experience in the quantity surveying and estimating using screen take-off and Excel sheets.
- Capable of using Earned Value Management calculating all Variances and Indices.
- Has good knowledge doing Risk Register and Risk Analysis with few experience of Pertmaster.
- Fluent in both Arabic and English Languages.

Work Experience

HNTB/ NJ Transit — **June 2008 to Present**

Assistant Program Manager / Program Control

- **HNTB/ NJ Transit, Super Storm Sandy Recovery Program**
  $1.7 B program of several damaged and resiliency projects that were created by Superstrorm Sandy including building new stations, rails and signal, commuter centers and substations. Leading a group of schedulers to develop and update Resource loaded schedule using Primavera P6 with issuing monthly variance report and executive summary. The duty including
  - Collecting information by communicating with several PMs and agencies that have contribution to the schedule.
  - Attending meetings with the clients.
  - Generating reports and submittals to the federal and state agencies such as USDOT and NJDOT.
  - Assisting of developing project control system and link it to Primavera data base.

Senior Scheduling Engineer / Project Officer II;

- **NYC School Construction Authority/ Scheduling Unit; Long Island City, NYC:**
  Review of Contractors' Baseline schedules and Schedule updates for several school projects in Bronx/Queens, NYC such as Metropolitan and Mott Haven new schools. The duty also includes review Impacted Schedules, Recovery Schedules and Time Impact Analysis (TIA), using Primavera P3, P6, SureTrak, MS Project and Digger. Duties include site visits, meeting attendance, correspondences and recommendation to project officers and senior project officer for any schedule issue. Also involved in review and modify the contract's part that is related to the scheduling and time management. The duty was also including cost estimate for any acceleration schedule and risk analysis (using PertMaster) to provide an objective view of required contingency to account for cost and schedule uncertainty.

PBS&J Company (ATKINS) , Miami, FL, USA — **Sep 2006 to June 2008**

Scheduler / Estimator II,

- **Scheduling Services, Miami Dade County Public Schools (MDCPS), Miami, Florida**
  Responsible for the review and analysis of capital project baseline schedules and schedule updates for various schools. The nature of projects could be for new school buildings such as three prototype middle schools PP1, MM1 and UU1, The effort included the review of the

original project baseline schedule and its compliance with contract documents and scheduling logic, review and analysis of consequent schedule updates and monitoring project progress by site physical observation and project documents reviewing. Also assisting in the review of claims for time extensions and making recommendations to the clients.

- **.Program Management and Control System, School Board of Broward County (SBBC), Fort Lauderdale, Florida**
  The duties included maintenance of the project schedule update system and the development of the project schedule update audit process.
- **Production Scheduling, Florida Department of Transportation (FDOT), District Four, Fort Lauderdale, Florida:**
  Operational support to the periodic update, reporting and maintenance/audit of the District's project schedules. In additional implementation of various retrofits to the project scheduling system, developing the methodology, documenting the implementation process. Duties also were attending meeting with project managers to discuss any delay and how to recover it. The duty also included cost estimate and load it to the schedule.
- **Expansion of Concourse C, Palm Beach International Airport (PBIA), Palm Beach, Florida**
  Monitoring project progress through construction field verification, analyzing project progress through review of schedule submittals and providing the owner with his recommendation regarding schedule accuracy and compliance with contractual requirements. Duties were including site visits and meeting attending to discuss the schedule issue and the time extension request by the GC

Qatar Building Engineering Company, Doha, Qatar	**Mar 1999 to Apr 2006**

Construction Manager / Project Planner:

- **Al Mergab Twin Tower, Doha, Qatar, $40 million**
  Construction of 2 towers of 26 stories, Post-Tensioning and hollow core slabs system, with all infrastructure work and finishing work, the responsibility was including infrastructure, Landscaping and road and walkways works. Managing team of engineers, foremen, skilled and unskilled labour to execute the work in the field and also coordinating with the client. A/E and the agencies.
- **Qatar Petroleum Central Offices Project, Mseaeed, Qatar, $38 million**
  Construction of 4 Towers, 60-meter height, Tower Cranes erection, Piles work, Earth works, Scaffolding design and erection, Post-tensioning work, Curtain wall, External Work, Electrical Substation and Pumps roams, Also was involved in coordinating with Mseaeed's municipality office.

Project Manager

- ***Dukhan Housing Project phase III, Dukhan, Qatar, $3.5 million***
  Construction of 15 Bachelor Senior Staff Bungalows with their services and Infrastructure, Site Management, Shop Drawing Preparing. Project scheduling and estimating.
- **College of Technology, Doha, Qatar, $18.1 million**
  Infrastructure Execution, Road works, Car parking, Earthwork of 300,000 m2 Levelling. Project scheduling.
- **Dukhan Housing Project phase II, Dukhan, Qatar, $7.5 million**
  Construction of 20 Bachelor and 14 married Senior Staff Bungalows with their services and Infrastructure, Site Management, Shop Drawing Preparing. Project scheduling and estimating.
- **Qatar International School Doha, Qatar, $5.8 million**
  Construction of 11 Schools and Multipurpose Buildings with their services and Infrastructure, Site Management, project scheduling by Primavera, Shop and As-built Drawing Preparing, Subcontractor Agreement, Negotiation with the Consultant and Client for a change orders.

SETH JACOBSON, PSP

Experience Highlights:
Extensive experience in CPM Scheduling of infrastructure and building projects.

High level of expertise in Project Management and Project Controls

Total Experience:
18 Years

Education:
Certificate, Construction Total Quality Management, Bovis Lend Lease Leadership Institute

B.S. Industrial Engineering, Shelton State, Tuscaloosa, AL

Certifications
Certified as a Planning and Scheduling Professional (PSP) by the AACEI

Experience as Trainer for Scheduling with P3 and P6
AutoCAD

Membership & Affiliation:
Active Member of PMI and AACEI

Skills:
Primavera P3 and Primavera P6
Primavera Contract Manager/Expedition
Claim Digger and SAPro
AutoCAD
MS Office Suite (Project, Access, Visio, Word, Excel and PowerPoint)

Mr. Jacobson is a self-starter Senior Engineering Scheduler and Project Control Specialist with over 18 years of experience providing project controls services for large scale capital engineering and construction projects. He holds a certificate in Construction Total Quality Management from Bovis Lend Lease Leadership and a degree in Industrial Engineering Institute from Shelton State University. In addition to his professional and academic background, Mr. Jacobson possesses a the highly regarded Project Scheduling Professional (PSP) certification by the Association for the Advancement of Cost Engineering International (AACEI) and is heavily involved with training and membership participation with the Project Management Institute (PMI).

Seth is an expert in the utilization of Oracle Primavera P6, P3, MS Project, AutoCAD and MS Office applications including experience as a trainer and college instructor. His project control experience includes planning, tracking, analyzing and controlling program CPM schedules, preparing all types of cost and schedule reports and monthly, quarterly and ad-hoc cost/schedule reports, performance measurement on schedule variance, cost variance based on critical path analysis and schedule risk analysis.

Mr. Jacobson possesses outstanding written and oral communication skills and is able to interact with professionals at all levels. He serves as adjunct faculty for Construction Project Scheduling with Primavera P6 8.3 and Construction Project Management courses at Bergen Community College.

In addition to his client office experience, Mr. Jacobson has significant field experience having served as Senior Project Control Specialist, Senior Scheduler, Construction Claims Analyst, Project Manager and Scheduling/Construction Management trainer on construction projects.

Seth is experienced in setting priorities and meeting critical time deadlines including managing monthly program schedules, status and ad-hoc reports for program schedule controls and enterprise resource management. Additionally, he is experienced in the administration, configuration, reporting and implementation of Project Scheduling Software, preparation, documentation and enhancement of Project Controls and Scheduling Guidelines as well as the development of cost engineering reporting platforms.

SIMILAR PROJECT EXPERIENCE

Proactive Controls Group
Hackensack, NJ
Senior Project Control Specialist
December 2013-Present

- Evaluate construction schedules for accuracy, reasonableness, and constructability.
- Prepare and update construction/program schedules with input from all stakeholders.
- Serve as a neutral third party on construction projects with problem subcontractors to assist with risk and delay mitigation.
- Prepare and evaluate delay and disruption claims.
- Assist with development of company standards and best practices with regard to project controls.
- Prepare performance measurement reports on schedule variance, cost variance based on critical path analysis and schedule risk analysis

Lovett Silverman Construction Consultants
Mahwah, NJ
Senior Project Controls Analyst
February 2012-November 2013

- Researched and analyzed delay/disruption/loss of productivity reports for construction claims.
- Prepared expert reports regarding construction scheduling issues.
- Prepared, analyzed and updated CPM schedule reports for all sectors of construction including mass transit, transportation, infrastructure, pharmaceutical, commercial, residential, educational, hospitality and stadiums.
- Provide risk assessment reports for construction projects.

Capital Project Management Inc.
Parsippany, NJ
Senior Scheduler / Claims Analyst
December 2008-February 2012

- Researched and analyzed delay/disruption/loss of productivity construction claims.
- Prepared expert reports regarding construction scheduling issues.
- Prepared, analyzed and updated CPM schedules for all sectors of construction including mass transit, transportation, infrastructure, pharmaceutical, commercial, residential, educational, hospitality, sports stadiums, etc.
- Provide risk assessment for construction projects.

DES Consultants Inc.
Elmhurst, NY
Senior Scheduler
May 2005-December 2008

- Provided consulting services to contractors for scheduling related to NYC Department of Buildings, NYC Department of Environmental Protection and Environmental Control Board.

Plaza Construction Corp.
New York, NY
Project Manager
January 2007-June 2008

- Responsibilities include managing the completion of 208 luxury condominium units, assist with design and change order management, tracking completion milestones and directing labor and materials appropriately to meet project goals, interface with local Department of Buildings for inspections and certificate of occupancy acquisition.
- Write scopes of work and compile bid packages for Architectural trades.

TOLL INTERNATIONAL LLC

JOHN PIODOS *Chief Mechanical Inspector*

Education

• Bachelor of Science in Mechanical Engineering (B.S.M.E.), University of Mindanao, Davao City, Philippines

• Associate in Electrical Engineering, Cebu Institute of Technology, Cebu City, Philippines

Licenses and Certifications

• OSHA Construction Safety & Health, Trench Safety Awareness, Thermal Plant Maintenance Training.

• Scheduler (Equipment Control Engineering Training), Confined Space Entry Program, Industrial Fire Training, Aerial Lift Awareness Training, Hazard Communication Training in compliance with OSHA 29.

• Electrical Safety Training with OSHA 29 CFR & 1926 K. Lock-Out/Tag-out Training.

Summary of Experience

Mr. Piodos has over thirty years of industr y experience as a Mechanical Inspector and construction m anagement specialist. He has served as a Chief Mechanical Inspector for a variety of new construc tion and upgrade NYC DEP projects. John is an acco mplished multi faceted Mechanical Engineering Professional with proven ability to plan, adm inister, execute successful mechanical engineering maintenance programs.

• Proven su ccess in con struction management thru supervision and inspection in power plants, building facilities, oil r efineries, gas plants, petroleum plant, waste/water treatment facilities, desalin ation & power plants , steel and piping fabrication & inspection.

• Demonstrated skill in supervision thru inspection of Heat ing Ventilating Air-Conditioning System (HVAC).

• Able to establish preventive maintenance programs, field service engineering on rotating and stationary equi pment, Ability to work we ll independently to conduct mechanical/electrical inspections, successful in generating t echnical drawing & address documentation issues. Demonstrat ed and insured w ell that compliance with applicable codes, standards, speci fications, industrial sa fety, schedules and planning coordination must be observed.

• Committed to m aintaining quality and e fficiency in revie wing and approval of As-Built and Red Line drawings. Able to oversee large projec ts and follow through to completion.

• Committed to excellent service and customer satisfaction with ability to balance and generate proper start-up and comm issioning of the project. Successful in recognizing, analyzing, and solving indorsed submittals and if deficiencies occurred an RFI (request for information), or RFC (request for clarification) has to be issued. Skilled in h andling the constr uction and the s hop drawing prior to installation. Ability to work creatively and effectively with staff and managers and committed to professionalism & development with experience in clear & effective communication.

• Effective trouble shooter when it com es to preventive m aintenance, inspection, installation & operation of pumps (cen trifugal, reciprocating, & rotary), compressors (reciprocating, centrifugal), boilers, generators, heat exchangers, chillers, cooling tower, steam turbine, all types of valves, steel & piping fabrication and installation: like stainless steel, carbon steel, ductile and iron, aluminum, copper tubing, CPVC/ PVC pipe & Subm ersible deep well pum ps. Proven success in construction managem ent with inspection on sim ultaneous projects. Dependable and proven record of maintaining pressure, hydro, DPT (dye penne rant test) for piping leakage te st. Conduct shaft alignm ent thru laser procedure or thru reverse shaft alignment by using two magnetic dial gages.

- **Chief Mechanical Inspector / Construction Management Lead Mechanical Inspector NC-WPCP DEP Water Pollution Control Plant in Newtown-Creek, Brooklyn, NY (1.4 Billion Dollar Project) - (11/2008 to Present)**
  - Performed mechanical arena dealing w/ construction management & material issues.
  - Coordinates engineering construction problems in the field.
  - Inspect construction work for compliance with drawings, specifications, & codes.
  - Participates in the facility performance and acceptance testing program.
  - Imposed industrial safety to be followed by any contractors @ the site project.
  - Strict compliance of applicable codes, standards, specifications to every contractor @ site.
  - Performed Testing & commissioning of the Sewage Treatment Plant.
  - Conduct Hydro/pressure test & DPT & magnetic particle testing on piping.
  - Inspect centrifugal pump shaft alignment, air compressor field test performance.
  - Power testing ratings on generators & motors & overload and high temperature test.
  - Reviewed Daily Reports, request for information and request for clarification.
  - Checked and approved FAC submittals.
  - Provide technical assurance support for rotating equipment in the plant.
  - Insured reliability & integrity of rotating equipment thru preventive maintenance schedule.
  - Checked the Daily Reports of the Mechanical Inspectors & Reviewed and Approved As-built drawings.

Construction Engineer - CHU & GASSMAN Consulting Engineering P.C.
July to October-30, 2008 - 559 Union Avenue, Middlesex, NJ 08846

- Prepared documentation, drawings, specifications, codes for NYCHA project released by NYPA.
- Monitored, supervised, and conducted plumbing & mechanical inspection on steam boilers
- Installed in Rutgers Houses under NYCHA (New York City Housing Authority).
- Monitored the implementation of the Building Steam System Upgrade for Rutgers Houses in NY.
- Monitored the installation of the Steam Water & conducted inspection on its mechanical system.
- Performed thorough inspection on Fan Schedule, Steam Boiler Schedule, Boiler Feed Water Systems Schedule, Vacuum Pump Schedule and Sump Pump Schedule.
- Conducted inspection on the installation of pumps and air compressors and its alignment.
- Performed inspection on energy power system (generators), fuel oil piping systems & fuel storage.

Construction Management/Project Superintendent/Sr. Mechanical Inspector Jan/2/06-June 30, 2008
AECOM, 30TH Floor, 49th Street 3rd Avenue, Manhattan, NY; New York City Housing Authority- All Borough of NY under NYPA Project

- Plan, coordinate and supervise all temporary and permanent works design on mechanical and electrical services for the instantaneous hot water steam heater.
- Ensured compliance with relevant engineering requirements and technical commercial contractual obligations.
- Coordinate the QA/QC for M&E installation and the commissioning works.
- Supervised and coordinated the installation, testing & commissioning of the mechanical system such as piping, indoor/outdoor water distribution plumbing, cold/hot water piping, steam piping and hot water & condensate return piping.

THE PORT AUTHORITY OF NY & NJ

Proposal for:

Performance of Expert Professional Construction Management and Inspection Services as Requested on a "Call-In" Basis During 2015 Through 2018

RFP Number 39247

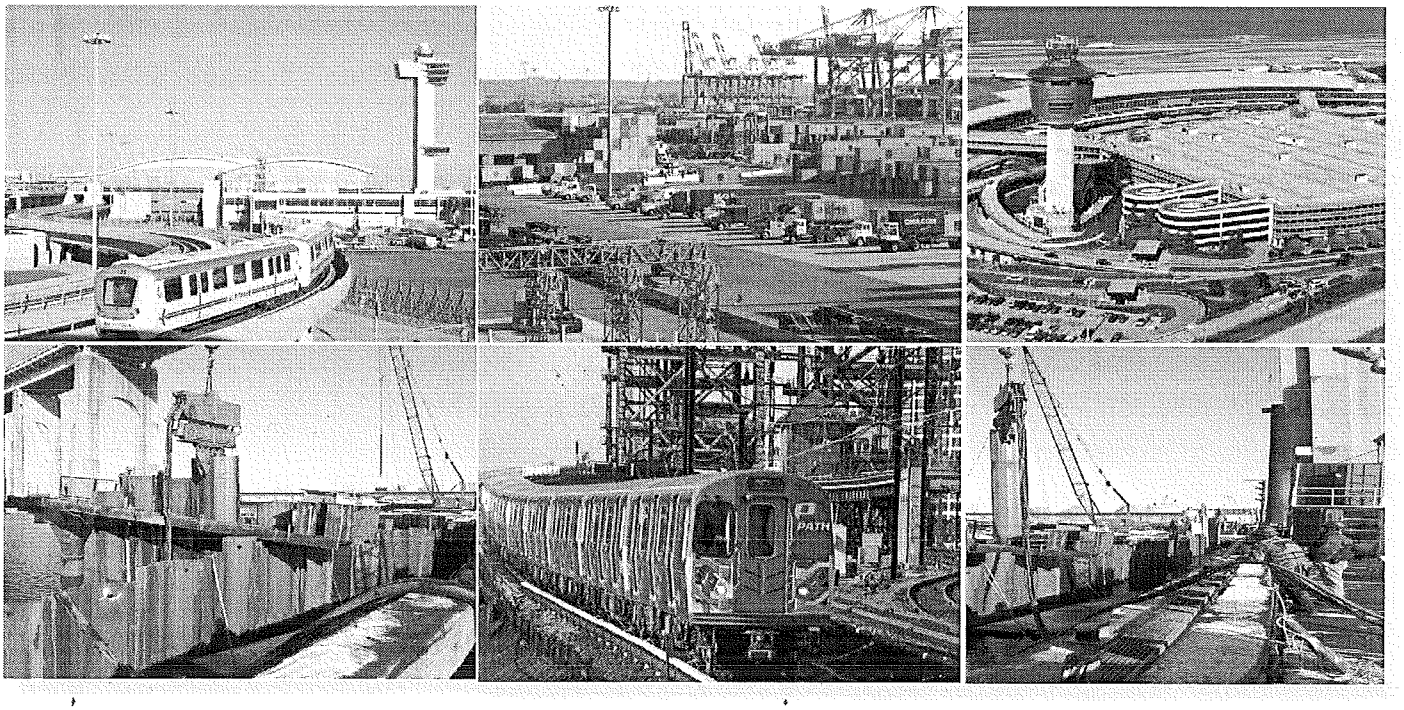
Section F

Firm's Qualifications and Similar Experience in the Last 3 Years



JOINT VENTURE

D&B ENGINEERS AND ARCHITECTS, P.C.
KNOWN AS DVIRKA AND BARTILUCCI CONSULTING ENGINEERS

KSE KS Engineers, P.C.

F | Firm's Qualifications and Similar Experience in the Last 3 Years

The Joint Venture Team of D&B Engineers and Architects, P.C. known as Dvirka and Bartilucci Consulting Engineers and KS Engineers, P.C. (**D&B/KSE JV Team**), in association with its highly qualified subconsultants, is pleased to submit our proposal for the Construction Management and Inspection Services as requested on a "call-in" basis during 2015 through 2018. Our locally-based firms have over four decades of construction management and inspection experience, and this project provides an excellent opportunity to provide our combined local experience, resources and expertise to the Port Authority of NY & NJ (PANYNJ).

The **D&B/KSE JV** Team has a large pool of staff and unmatched local resources to support the effort required for the subject contract. We have the ability to respond rapidly to any and all assignments. The D&B/KSE JV Team has the Organizational Capabilities to accomplish the goals for this project. The proof is that we are successfully doing it now on several on-call contracts. D&B/KSE JV will lead the effort to provide this Organizational Capability and be assisted by the strong leadership and resources of our subconsultants. We have the ability to respond rapidly to any task assignment, and the ability to staff multiple projects simultaneously. Our planned organization is designed to complete and deliver projects in a safe, efficient, and timely manner. We anticipate both night-time and weekend work, and 24-hour coverage may be necessary. We have the resources and organizational capacity to provide the necessary qualified personnel to properly and timely perform the work for this contract. We understand that if 24-hour coverage is necessary, we will provide the necessary and qualified staff on all shifts.

TEAM OVERVIEW

The **D&B/KSE JV** Team includes the following firms:

D&B Engineers and Architects, P.C. - Joint Venture Partner - Project Management, Construction Management, Inspection and Procurement Services.

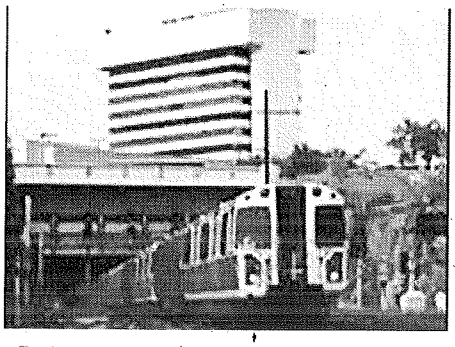
KS Engineers, P.C. - Joint Venture Partner - Project Management, Construction Management, Inspection and Procurement Services.

Subconsultants:

- **Haider Engineering, P.C.** - Construction Management/Inspection
- **Johnson, Mirmiran & Thompson, Inc.** - Construction Management/Inspection
- **EnTech Engineering, P.C.** - Construction Management/Inspection
- **Toll International LLC** (MBE/DBE) - Project Controls

This Team has worked together on many projects and has an excellent working rapport – we will promptly mobilize and commence work when needed. As mentioned, we have recently completed several Construction Management and Inspection Services projects, as follow, that exemplify our prompt and efficient response to NY agencies in need. **Presented in the following pages are some of our Team's relevant experience.** Thank you for the opportunity!

"CALL-IN" BASIS DURING 2013 - 2016", CONSTRUCTION/ELECTRICAL INSPECTION SERVICES, PATH SYSTEM, NEWARK, NJ TO NEW YORK, NY
PORT AUTHORITY OF NEW YORK AND NEW JERSEY



Dates of Service: 2013-2016

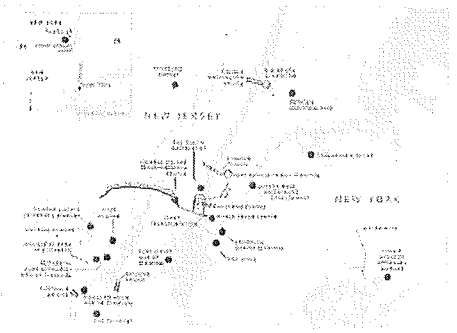
Contract Amount: $128,000 (YTD)

On Schedule/Within Budget: Yes

Owner and Contact:
PANYNJ
2 Montgomery Street
Jersey City, NJ 07302
Paul Salvatore, PE
201.595.4892

Description of Services:
KS Engineers, P.C. (KSE) has been retained by the Port Authority of New York & New Jersey (PANYNJ) to provide Construction/Electrical Inspection Services for the PATH System Upgrades and Improvements, as part of an ongoing Construction Management Services contract. The following is a brief description of tasks completed by Mukheet Ahmed, Construction/Electrical Inspector, for KSE under this assignment:
- Overseeing work assignments that range from the rehabilitation of electrical power and lighting equipment to system upgrades for alarm and communication equipment and site work at stations, rail yards, and tunnels.
- Cooridination of work, supervision of the contractors for infrastructure improvements, and homeland security projects throughout the Port Authority Trans-Hudson (PATH) system. This coordination effort includes working with train schedules to assure minimized impact to revenues and the traveling public. This entails conducting work within a tight and specific time frame and ensuring that service returns on schedule.
- Inspection services includes the work undertaken that involves enhancing electronic communication systems within the PATH system and the installation of an intrusion detection system coupled with a Closed Circuit TV (CCTV) for various sensitive areas.

"CALL-IN" BASIS CONSTRUCTION MANAGEMENT SERVICES – 2010, 2011, AND 2012
PORT AUTHORITY OF NEW YORK AND NEW JERSEY



Dates of Service: 2010-2012

Contract Amount: $2,109,000
as of October 4, 2012

On Schedule/Within Budget: Yes

Owner and Contact:
PANYNJ
241 Erie Street, Room # 238
Jersey City, NJ 07310
Paul Salvatore, P.E
201.595.4892

Description of Services:
Services being provided under this contract generally consist of performing construction management and inspection services of structural steel, structural concrete, asphalt and concrete paving, painting of structural steel, electrical, mechanical, construction contract administration, constructability review, construction scheduling, and cost estimating. To date, KS Engineers, P.C. (KSE) has been given the following construction management assignments under this "Call-In" agreement:
- New Jersey Marine Terminals – Civil Construction Inspection
- New York Marine Terminals – Assistant Electrical Resident Engineer
- Newark-Liberty International Airport – Electrical Inspection Services
- PATH System Upgrades and Improvements – Electrical Inspection Services
- John F. Kennedy International Airport – Project Scheduler
- Contract Specialist

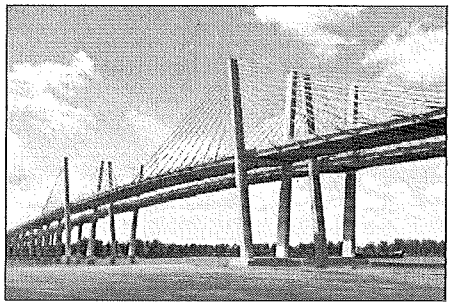
PORT AUTHORITY OF NEW YORK AND NEW JERSEY



Dates of Service: 2010-2012

Contract Amount: $11,826,000 Fee

$973M CCE

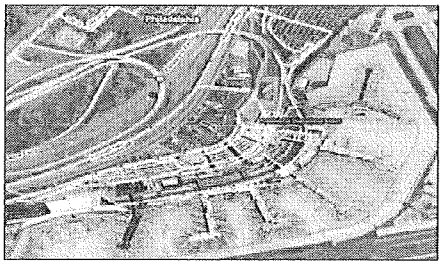
On Schedule/Within Budget: Yes

Client Contact:
NYNJ Link Developer LLC
125 West 55th Street
New York, NY 10019-5369
Luke Chenery
[redacted]

Description of Services:
KS Engineers, P.C. (KSE) was retained as the lead consultant by the Developer (NYNJ Link Developer LLC) of this PPP project, to provide independent Construction Quality Assurance (QA) and Construction Engineering and Inspection (CEI) services. KSE's role as CEI includes the following primary tasks:

- Develop approved Construction QA Manual and QA Audit Checklists
- Develop and implement fully electronic QA inspection forms and recordkeeping system using Microsoft SharePoint
- Perform independent QA inspection at each hold point
- Perform independent material testing to verify/audit Design-Builder's Quality Control Program
- Provide an off-site inspection to audit Design-Builder's Fabrication Quality Control Program
- Provide limited field survey and underwater inspection to verify construction quality
- Issue Non Conformance Reports (NCR), and Corrective Action Plans (CAP) as required
- Maintain Submittal Log, RFI Log, Shop Drawing Log, and Material Certification Log

CONSTRUCTION MANAGEMENT SERVICES FOR ROOF REPLACEMENT FOR B/C CONNECTOR AND C/D CONNECTOR AT THE PHILADELPHIA INTERNATIONAL AIRPORT
PHILADELPHIA INTERNATIONAL AIRPORT, PHILADELPHIA, PA



Dates of Service: 2011-Present

Contract Amount: Varies;
$65,000 to date

On Schedule/Within Budget: Yes

Owner and Contact:
Converse Winkler Architecture,
331 Montgomery Ave
Bala Cynwyd, PA 19004
James Winkler AIA, LEED AP
[redacted]

Description of Services:
KSE has been retained to provide Site Management/Supervision and Roof Inspection services. KSE also assists the PM with construction administration services for shop drawing review, RFIs, review and evaluation of contractors' invoices, maintenance of project records and drawings in accordance with established Aviation guidelines, preparation of punch lists, attendance at construction meetings, and consultation, as requested. KSE's on-site supervision activities include the following:

- Oversee contractors' work to ensure conformity with contract specifications.
- Inspect materials and equipment being incorporated into the work. Review materials to verify that they are handled, stored, and installed properly and that they are in compliance with the plans and specifications of the project.
- Identify/record problems encountered, issue non-compliance notices to the contractor, record any observations of work performed or materials installed in a manner not in compliance with the contract documents, and notify PM.
- Maintain daily reports, record the work performed and significant happenings on the project.
- Observe QC testing performance by the contractor. Maintain testing records, and transmit all records to the PM.

CONSTRUCTION MONITORING SERVICES FOR PAVEMENT REPAIRS AT BENJAMIN FRANKLIN BRIDGE, WALT WHITMAN BRIDGE, AND COMMODORE BARRY BRIDGE – CONTRACT NO. G-25-2012, CM-4505
Delaware River Port Authority, Camden, New Jersey

Dates of Service: 05/2013 – 07/2013

Fee: $15,000 (Fee)

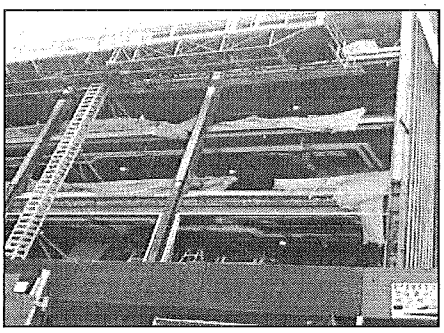
On Schedule/Within Budget: Yes

Owner and Contact:
Michael Venuto
[redacted]

Description of Services:
KSE provided Construction Monitoring and Inspection Services for Contract G-25-2012, specifically for the rehabilitation of site work, sidewalk, tunnel, and pavement repairs at the DRPA Facilities Complex located adjacent to the Ben Franklin Bridge at the NJ approach. The streets, driveways, garage aprons, parking lots, and sidewalks were suffering from moderate deterioration.

The scope of work included full depth pavement reconstruction; bituminous milling; bituminous HMA pavement base course and surface course overlay; miscellaneous demolition (unclassified excavation); repairs and replacement of concrete curbs and sidewalks; new concrete curb and sidewalk construction, including ADA curb ramps; sawcutting; diamond grinding; repairs to the tunnel roof slab; retaining wall foundation and cast-in-place wall construction; new stair handrails; new site fence; cleaning of pipes and inlets; repairs of inlets; new conduit and handhold installation; repairs to lighting; pavement markings; miscellaneous site work; and MPT.

CONSTRUCTION MANAGEMENT SERVICES FOR THE DEPARTMENT OF LABOR BUILDING AT 250 SCHERMERHORN STREET
NEW YORK STATE OFFICE OF GENERAL SERVICES



Dates of Service: 2011-2014

Amount: $201,000; $20M (CCE)

On Schedule/Within Budget: Yes

Owner Contact:
Bruce Trobridge
518.474.0306

Client Contact:
Hill International
John Milano
[redacted]

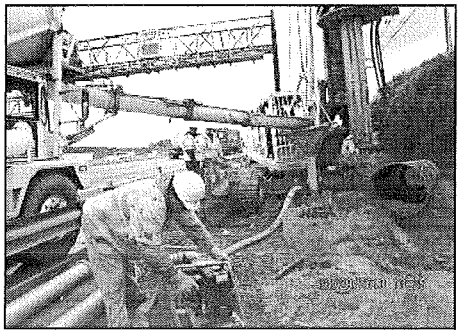
Description of Services:
KS Engineers, P.C. (KSE) provided on-site, full-time project administrative and document contract services, as well as bi-weekly safety inspections.

The project involved the complete interior demolition and reconstruction of a five-story office building for the New York State Department of Labor in Brooklyn, New York. The project also included the addition of one new floor above the fifth floor, a complete new exterior cladding system, and all new mechanical and electrical systems.

KSE also provided Safety Inspectors to periodically review and monitor the contractor(s)' safety program, conduct periodic safety inspections, make verbal and written recommendations, and report on required corrections not implemented by the contractor. Upon request, KSE investigated construction accidents and all other safety-related incidents. KSE Safety Inspectors monitored contractor compliance with City of New York construction safety requirements, OSHA safety requirements, and the safety requirements of any agency having jurisdiction.

INSTALLATION OF VARIABLE MESSAGE SIGN STRUCTURES AT NEW AND EXISTING LOCATIONS ON THE GSP AND NJTPK CONTRACT NO A600.102A; OPS NO A3261

NEW JERSEY TURNPIKE AUTHORITY; NJ TURNPIKE AND GARDEN STATE PARKWAY, NJ



Dates of Service: 2010-2013

Fee: On-Call

On Schedule/Within Budget: Yes

Owner Contact:
Andrew McConnell
[redacted]

Description of Services:
KS Engineers, P.C. (KSE) is providing construction inspection services for this 2009 Capital Construction Program Project. The scope of work under this OPS includes installation of thirty four (34) "site-specific" VMS sign structures at new and existing locations on the TPK and GSP roadways out of which twenty two (22) of the sign support structures will be overhead span type and twelve (12) will be Cantilever type. The contract work includes drilled shaft foundations, steel reinforcement cages, concrete pedestals, fabrication of sign structures and VMS signs, sign structure with VMS signs erection with associated control systems, removal of existing electronic signs and control systems, installation of new electric power and control cabinets for the new signs, required electrical conduits, junction boxes and cables, roadway loop detectors, utility relocations, temporary concrete barrier installation, MPT, coordinate with NJTA Operations and Maintenance Department and NJ State Police traffic directors for the maintenance and protection of traffic through the construction zones, while construction activities are in progress by the contractor.

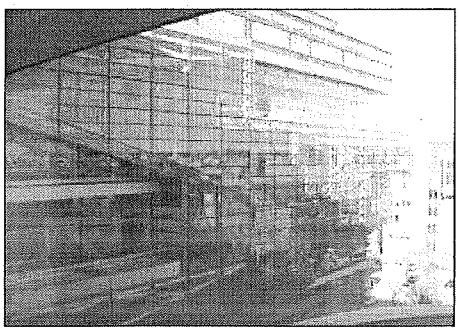
NJ Transit Corporation
One Penn Plaza East
Newark, NJ 07105
Joseph Marcello,
Construction Program Manager
[redacted]

Description of Services:
Under a three-year Task Order Agreement, KS Engineers, P.C. (KSE) has been responsible for providing Construction Management services to NJ Transit Corporation. Services included Rail and Bus Operations, and have included, but not been limited to:

- Constructability Review of Plans
- Project Scheduling and Schedule Analysis
- Cost Estimating and Review
- Construction Administration & Site Inspection
- Shop Drawing Review
- Change Order Analysis
- Claims Assistance
- Construction Value Engineering
- Site Safety Inspection
- Construction Survey

CONSTRUCTION MANAGEMENT AND SITE SAFETY INSPECTION SERVICES FOR BRONX FAMILY AND CRIMINAL COURTHOUSE
DORMITORY AUTHORITY OF THE STATE OF NEW YORK; BRONX, NEW YORK



Dates of Service: 2006-Present

Amount: $476K (Fee); $17M (CCE)

On Schedule/Within Budget: Yes

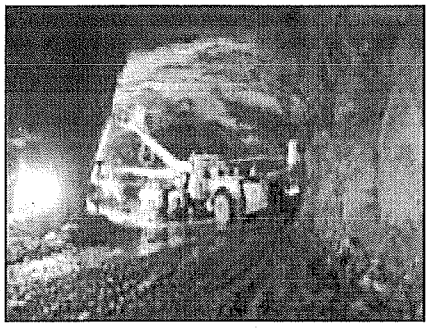
Client Contact:
STV Construction, Inc.
225 Park Ave. South
New York, NY 10003
Dennis K. Nazzaro
[redacted]

Description of Services:
KSE is providing Site Safety Inspection and Construction Inspection services for interior renovations at the Bronx Civil Supreme Courthouse. The purpose of this $17M project is to renovate the interior of the existing Supreme Court Building, which is listed on the National Register of Historic Places and is designated as a New York City landmark. Accordingly, all renovation and preservation efforts must reflect the integrity and historic importance of the prominent structure, and comply with the guidelines and restrictions of the above governing groups. The total construction duration is anticipated to be four years.

CM services will be provided in two phases and executed under three separate contracts (Design Phase, Construction Phase, and General Conditions Works Phase). The existing Courthouse will remain operational during the renovation process.

The phased methodology (horizontal or vertical) – floors, area, and/or quadrants – is being determined in concert with the design consultant during the schematic design phase. Close coordination will be required with the contractor providing elevator modernization, MEP systems, and infrastructure upgrade work, which will be conducted simultaneously by the Department of Citywide Administration Services (DCAS).

CONSTRUCTION MANAGEMENT FOR NO. 7 SUBWAY LINE EXTENSION PROJECT – CM-1311
MTA CAPITAL CONSTRUCTION - NYC TRANSIT; BOROUGH OF MANHATTAN, NY



Dates of Service: 2007-2012

Amount: $4,057,196 (Fee);
$1.5B (CCE)

On Schedule/Within Budget: Yes

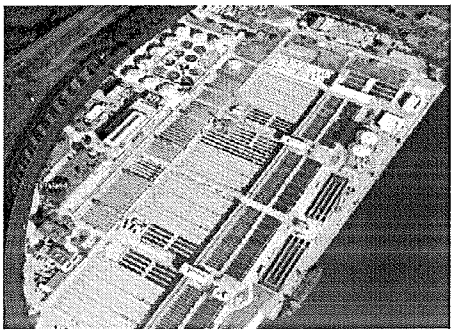
Owner Contact:
Peter Turton
Project Director
[redacted]

Description of Services:
As a subconsultant, KS Engineers, P.C. (KSE) is providing construction management services for this project that will extend the No. 7 Line westward under West 41st Street and southward under Eleventh Avenue to the southerly terminus at West 25th Street. The extension provides a 7,100 feet long two-track railroad with two lay-up tracks for the storage of six trains. It also provides two new stations; at West 41st Street and Tenth Avenue and a 2-track terminal station on Eleventh Avenue at West 34th Street.

KSE is presently working in the tunnel under the Street level Site "A" that is located on the East side at 11th Avenue between 25th and 26th Streets as shown in the above picture. Work in this area includes deck and concrete edge pans, safety lines, temporary lights, and tower stairs. We are also working on Site "P" located on the East side at 11th Avenue between 34th and 35th Streets as shown in the picture below. This project includes coordination between the contractor and the MTACC Construction Manager.

ON-CALL CONSTRUCTION INSPECTION/MANAGEMENT SERVICES BUREAU OF WASTEWATER TREATMENT (PW-072)

NEW YORK CITY DEPARTMENT OF ENVIRONMENTAL PROTECTION



Dates of Service: 2012-2013

Amount: $200M (Various Projects)

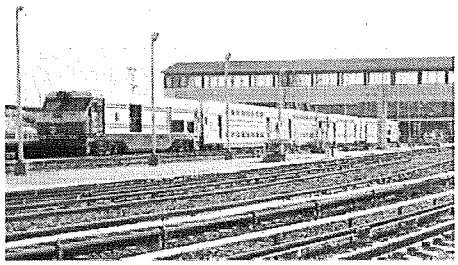
On Schedule/Within Budget: Yes

Owner Contact:
Mr. Najib Farooqi, P.E.
59-17 Junction Blvd.
Corona, NY 11368
[redacted]

Description of Services:
D&B provided field inspection services and complete Construction Management Services for the Bureau of Wastewater Treatment. The inspection services were conducted for various job order contract projects in Wards Island, Hunts Point, Bowery Bay and Tallman Island WPCP's. Also, full CM services were being provided for the 245th St. pumping station and for contract PS-223 Richmond Hill Road Pumping Station. Services included: replacement of gas flare tower; replacement of high level influent gates 2 & 6; scrubber #3 replacement; tide gate replacement in BB drainage area; installation of trench drain for screening and grit container area; primary settling tank mechanical and electrical equipment replacement; replacement of primary screen #4.; installation of tool room ventilation system; repair dock structure; repairs to gas holder; door rehabilitation installation of ladder to access top of gas holder; repair walking bridge at dock; repair of digester overflow box; primary settling tank scum skimmer replacement; grease collection system in chlorine contact tank; cleaning of duck work in old admin. building; installation of drip trays in dewatering building; secondary by pass channel sluice gate actuators; installation of stop planks to repair msp discharge gates; installation of V-notch weir gates in battery C sluice gates; installation of submersible pumps in pump and bowel building; roadway reconstruction by A-gate; transformer enclosure; reconstruction of polymer pumps control panels; replacement of no. 1 generator; replacement of 8 tide gates in WI drainage area; replacement of steam line for digester heating; repair of concrete in thickener area and north and south gallery.

INDEFINITE QUANTITY ENGINEERING SERVICES FOR SUPERSTORM SANDY-RELATED REPAIR AND RESILIENCY PROJECTS AND MISCELLANEOUS CONSTRUCTION

METROPOLITAN TRANSPORTATION AUTHORITY - NYC TRANSIT



Dates of Service: 2013-2018

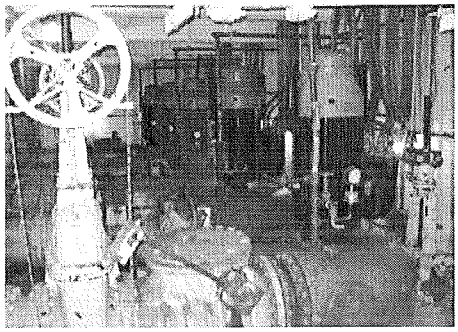
Amount: Varies (NTE $250M)

On Schedule/Within Budget: Yes

Owner Contact:
William Linder
2 Broadway
New York, NY
[redacted]

Description of Services:
D&B Engineers and Architects, P.C., as a subconsultant, has been selected to provide engineering services, including design services and construction management and inspection services, for federally funded Superstorm Sandy-related projects for repair, resiliency and other miscellaneous construction. Resiliency projects include the design and construction of mitigation measures to prevent and/or mitigate future damage to the NYC transit system caused by severe meteorological events such as a hurricane or flood.

CONSTRUCTION MANAGEMENT HURRICANE SANDY PUMP STATION EVALUATIONS/REPAIRS ASSIGNMENT
NEW YORK CITY DEPARTMENT OF ENVIRONMENTAL PROTECTION



Dates of Service: 2012-2014

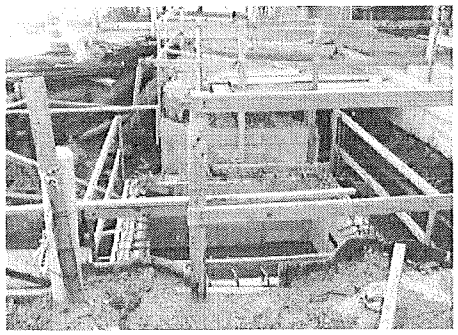
Contract Amount: $35M (estimated)

On Schedule/Within Budget: Yes

Owner Contact:
Mr. Patrick O'Conner, P.E.
Accountable Manager
New York City Department of
Environmental Protection
Bureau of Environmental Engineering
59-17 Junction Blvd.
Corona, NY 11368

Description of Services:
The impact of Superstorm Sandy on the NYCDEP collection system was severe. During the storm, fifty seven (57) wastewater pumping stations (out of a total of ninety six (96)) failed. In the aftermath of the storm, thirty (30) of these stations remained non-functional. The resulting environmental impact, imminent risk of disease and the discontinuity of crucial sanitary services required emergency response and immediate action. Many were significantly damaged by flooding, including extensive damage to electrical systems. D&B provided an around the clock effort to provide construction management/inspection and emergency coordination services. D&B immediately mobilized a staff composed of administrators and inspectors that reported to a central operations center situated at NYCDEP's Lefrak facility to coordinate and oversee the contractors' field activities. The thirty 30 stations rendered non-functional by Superstorm Sandy were returned to a minimal level of functionality within 84 hours of the storm's demise. This effort required mobilization of electricians, inspectors and engineers in an environment devoid of cell phone service, electricity, and gasoline. Additionally securing scarce resources (generators, Godwin pumps, miscellaneous equipment and fuel), and coordinated transportation of these materials during this chaotic period, required true dedication and fortitude and many people working in unison. D&B has received many praises from the DEP for this project.

CONSTRUCTION MANAGEMENT OAKWOOD BEACH SUBSTATION RECONSTRUCTION (OB-125)
NEW YORK CITY DEPARTMENT OF ENVIRONMENTAL PROTECTION



Dates of Service: 2011-2015

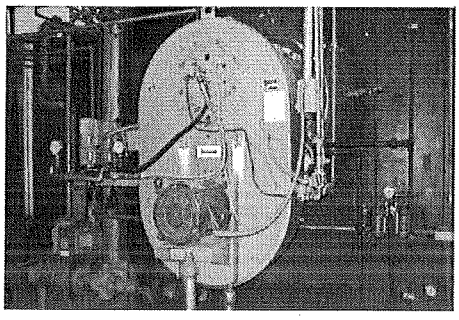
Contract Amount: $13,852,850

On Schedule/Within Budget: Yes

Owner Contact:
Mr. Franco Morizio
NYCDEP
59-17 Junction Blvd.
Corona, NY 11368
[redacted]

Description of Services:
D&B was retained by the NYCDEP to provide construction management services for the Oakwood Beach WWTP 5KV Substation Reconstruction (Contract OB-125) contract in Staten Island. This contract is associated with the American Reinvestment and Recovery Act (ARRA). Services included:
OB-125G: Construction of a new permanent Primary Electrical Switchgear Building and support systems to house replacement switchgear and auxiliary equipment; architectural renovations to the; existing Transformer Enclosure that house two existing Con Edison Transformers; Providing excavation, backfill, and concrete work for 5KV Feeders and modifications to underground feeder distribution systems, All associated instrumentation and controls, mechanical, structural, civil, architectural, HVAC, plumbing, and landscaping work required
OB-125E: Demolition of existing Primary Electrical Substation Switchgear; Furnish and install new switchgear and support systems, associated appurtenances, fire alarm system and lightning protection system; Providing conduit, wiring, and electrical accessories for 5KV feeders, performing modifications to the underground feeder distribution system; Furnish and install a new 2000 KW Portable Diesel Generator.

CONSTRUCTION MANAGEMENT PORT RICHMOND BOILER UPGRADE (PR-113)
NEW YORK CITY DEPARTMENT OF ENVIRONMENTAL PROTECTION



Dates of Service: 2011-2013

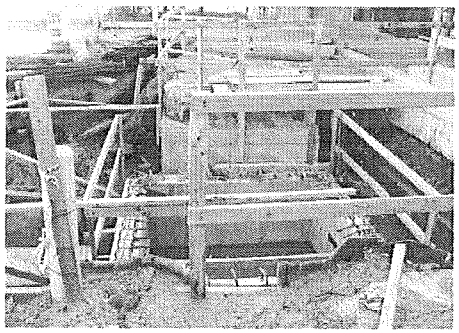
Contract Amount: $27,010,500

On Schedule/Within Budget: Yes

Owner Contact:
James Lauria, P.E.;
Portfolio Manager BEDC
NYCDEP
59-17 Junction Blvd., Corona, NY 11368
[redacted]

Description of Services:
D&B was retained by the NYCDEP to provide construction management services for the Port Richmond WWTP Boiler Upgrade (Contract PR-113) contract in Staten Island. This contract is associated with the American Reinvestment and Recovery Act (ARRA). The principle items of work that D&B will be responsible for under this contract include: Replacement of two existing 900 bhp boilers and one existing 200 bhp boiler with three new 600 bhp fire tube boilers. The existing boilers are fueled by digester gas or fuel oil, and the new boilers will be capable of being fueled by digester gas or natural gas; Replacement of all pumps, valves, expansion tanks, piping and appurtenances within the existing Boiler Room; Replacement of three existing waste heat exchangers and effluent water pumps; Removing existing waste gas burner on the roof of the boiler room and installing new digester waste gas piping and two new waste gas burners on the roof of the Sludge Building; Installation of a new natural gas main to fuel the boilers and serve as pilot for the boilers and waste gas burner; Replacement of four existing digester gas compressors, associated piping and ancillary equipment; Replacement of existing digester gas piping from gas compressor room to boiler room; Performing structural and mechanical repairs to an existing 100,000 cu-ft Wiggins gas holding tank. Replacing the existing heating and ventilation in Motor Control Center Room B; Removing sludge and cleaning the three digesters.

SUPER STORM SANDY 38 PUMP STATION EMERGENCY REHABILITATION
NASSAU COUNTY DEPARTMENT OF PUBLIC WORKS



Dates of Service: 2012-2014

Contract Amount: $400,000

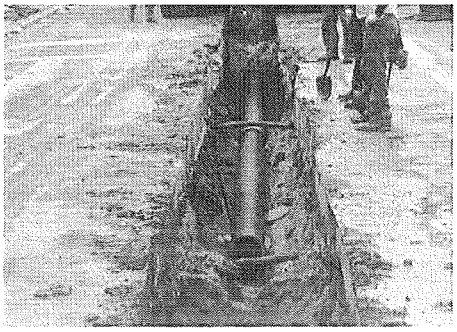
On Schedule/Within Budget: Yes

Owner Contact:
Mr. Franco Morizio
NYCDEP
59-17 Junction Blvd.
Corona, NY 11368
[redacted]

Description of Services:
Superstorm Sandy took its toll on Nassau County's wastewater conveyance and treatment infrastructure. Hard-hit were the 70 mgd Bay Park Sewage Treatment Plant as well as its network of wastewater pump stations. Many of the pump stations were flooded and without utility power rendering them completely out-of-service. D&B was requested to assess the condition of each of the County's 38 pump stations; prepare damage assessment reports along with photo documentation for each with the ultimate goal of restoring the stations and treatment plant to full operation. D&B incorporated mitigation improvements into the work including such items as elimination of a floor-mounted MCC and installation of separate wall-mounted pump starter cabinets, main service cabinet and telemetry panel well above the Superstorm Sandy flood elevation. To prevent flood damage from future storms, mitigation may include one or a combination of the following measures: elevate first floor superstructure to the new 100-year flood elevation; utilize flood gate systems; utilize watertight access doors; raise critical station components above the new 100-year flood elevation; utilize "immersible" type grinder motors; and relocate electrical control panels, relay panels and related components above grade.

RESIDENT ENGINEERING INSPECTION SERVICES FOR THE RECONSTRUCTION OF GRAND CONCOURSE SERVICE ROADS, BOROUGH OF THE BRONX, NY

NEW YORK CITY DEPARTMENT OF DESIGN AND CONSTRUCTION



Dates of Service: 2014-2016

Contract Amount: $27M

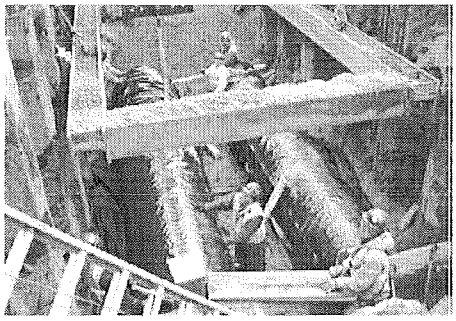
On Schedule/Within Budget: Yes

Owner Contact:
Lambert Monah, PE
Borough Director
30-30 Thomson Avenue
Long Island City, NY 11101
[redacted]

Description of Services:
D&B Engineers and Architects, P.C., as a joint venture, is providing Resident Engineering Inspection Services for the Reconstruction of Grand Concourse Service Roads between East 165 Street and East 172 Street, including widening of median/malls, replacement of combined sewers, relocation of distribution water mains, installation of street lighting and landscaping work. D&B is responsible for all requisite services necessary for the inspection, supervision, management, coordination and administration of the Project. D&B's efforts will ensure that construction work is properly executed, completed in a timely fashion, and conforms to the requirements of the contract documents, and is performed in accordance with accepted industry practice standards. D&B is providing these services for the duration of the Project, including both pre- and post-construction.

AVENUE "V" PUMPING STATION AND FORCE MAINS

NEW YORK CITY DEPARTMENT OF ENVIRONMENTAL PROTECTION



Dates of Service: 2006-2013

Contract Amount: $150M

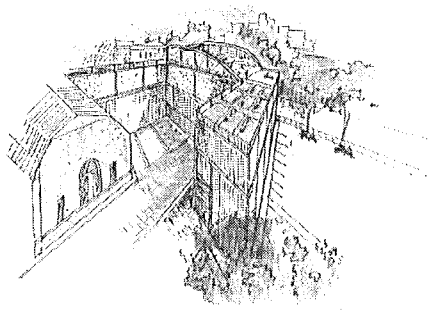
On Schedule/Within Budget: Yes

Owner Contact:
Mr. Warren Gordon, P.E.
NYCDEP
Bureau of Environmental Engineering
59-17 Junction Blvd.
Corona, NY 11368
[redacted]

Description of Services:
D&B provided complete construction management and inspection services for this Wicks Law project, including: review, management and monitoring of construction schedules, maintenance of project documentation; resident engineering inspection services; supervision and inspection of work (including the removal of hazardous materials); EH&S monitoring; preparation of field change orders; processing contractor payments; preparation of delay analyses and claim reports; preparation of a fixed assets survey; preparation of final copies of shop and working drawings; preparation of as-built drawings; microfilming of records; project operation services; preparation of an implementation schedule; plan of operation; and corrective action plan.

The project consisted of an upgrade to the Avenue "V" Pumping Station and the installation of two new ductile iron force mains. The 36" and 48" diameter force mains run along the Belt Parkway and through local Brooklyn streets for a total length of ten miles. Reconstruction of roadways was necessary as well as protection, support and relocation of other underground utilities interfering with the new piping. Various construction techniques were used including open cut, jacking and micro tunneling.

FACILITY UPGRADE – GREEN INFRASTRUCTURE DESIGN GOWANUS CANAL PUMPING STATION
NEW YORK CITY DEPARTMENT OF ENVIRONMENTAL PROTECTION



Dates of Service: 2003-2014

Contract Amount: $141M

On Schedule/Within Budget: Yes

Owner Contact:
Mr. Kevin Clarke
NYCDEP
Bureau of Environmental Engineering
59-17 Junction Blvd.
Corona, NY 11368
[redacted]

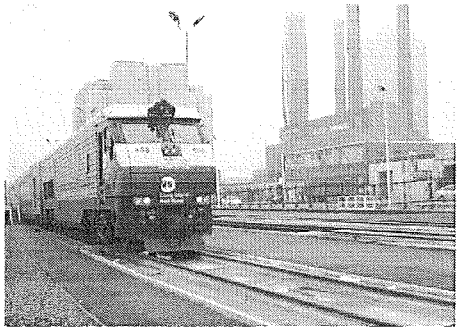
Description of Services:
D&B is leading the Gowanus Facilities Design Team. This multi-million dollar upgrade includes innovations in design and engineering which includes the Flushing Tunnel Pumping System; Flushing Tunnel Pump Building and Gate House, and the Gowanus Pumping Station. D&B is serving the combined sewer system and screening of CSO while creating limited back-ups in the sewer system.

The Green improvements of the Gowanus Pumping Station include:

Vegetated Roof System: The upgrade of the Gowanus Pumping Station includes the construction of a 450-square foot green roof, which is designed to assist in storm water management, energy conservation, and providing a long-term lifecycle expectation. The green roof incorporates low maintenance landscaping consisting of shallow soil depths (<6 inches) with plant varieties that are restricted primarily to mosses, herbs and grasses that can withstand harsh conditions and are indigenous to the region.

Bio-Retention Areas: The site grading and drainage system for the upgrade of the Gowanus Facilities was designed to reduce impervious areas, thereby reducing the volume of run-off generated on-site and maximizing the planting areas, including the addition of bio-retention areas, which are intended to improve the quality of storm water leaving the site in addition to reducing of the overall volume of run-off.

ON-CALL ENVIRONMENTAL SERVICES CONTRACT
METROPOLITAN TRANSPORTATION AUTHORITY - LONG ISLAND RAIL ROAD



Dates of Service: Varies

Contract Amount: Varies

On Schedule/Within Budget: Yes

Owner Contact:
Varies

Description of Services:
Dvirka and Bartilucci Consulting Engineers (D&B) was retained by the Long Island Rail Road (LIRR) System Safety Department in late 2009 to serve as its environmental consultant under a first-of-its kind On-Call Environmental Services Contract. The LIRR selected D&B for this contract given our broad range of environmental expertise and our ability to complete complex, multifaceted projects in an efficient and cost-effective manner. This contract allows the LIRR to issue D&B work assignments for specific projects that could potentially cover a broad range of environmental disciplines, including:

- Remedial Investigation and Site Characterization Studies;
- Remedial Designs;
- Environmental Site Assessments;
- Environmental Management and Compliance;
- Industrial Hygiene Surveys; and
- Human Health Exposure Assessments.

Since the execution of the Contract, the LIRR has released a total of five work assignments to D&B.

CONSTRUCTION MANAGEMENT SERVICES AND RELATED TECHNICAL SERVICES AS REQUESTED ON A "CALL-IN" BASIS DURING 2011-2014 (410-11-048)

VARIOUS PORT AUTHORITY FACILITIES IN NEW YORK AND NEW JERSEY

Dates of Service: 2011-2014

Contract Value: Unknown

On Schedule/Within Budget: Yes

Owner and Contact:
Paul Salvatore
Port Authority of New York
and New Jersey
201.595.4892

Description of Services:
Since the Authority did not have sufficient staff to provide complete CM/CI services for its extensive construction program, as part of a joint venture, JMT and their subconsultants were contracted to provided staff to properly oversee the construction work.

The Authority provided a job specification which included detailed educational and experience requirements, facility where services were to be performed and approximate time required.

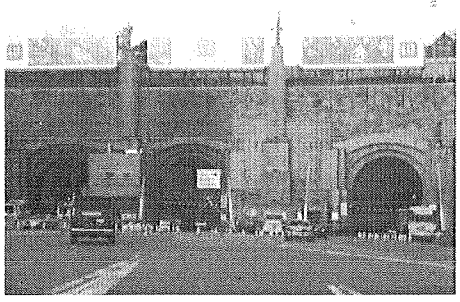
The JV provided resumes which were reviewed by the staff of the facility where they were required. The Resident Engineer then selected those he wished to interview. After the interviews a selection was made.

Facility staff were satisfied with the staff provided and some of those placed were on the job for a over a year. Most of the work took place at the Port Newark/ Port Elizabeth complex and Port Jersey. Representative projects include:

- EP-PJMT- Berths 50-98 and PJ North berths 1 & 2.
- PN- Berth 14 Wharf Reconstruction
- PN- Berth 3 Wharf Reconstruction
- PN- Underdeck Rehab of berths 16, 18, 20, 22 and 24

CONSTRUCTION INSPECTION – BIENNIAL INSPECTION OF LINCOLN TUNNEL NEW JERSEY APPROACH ROADWAYS & ON-GRADE SIGN AND LIGHTING STRUCTURES

VARIOUS PORT AUTHORITY FACILITIES IN NEW YORK AND NEW JERSEY



Dates of Service: 2011-2014

Fee: On-Call

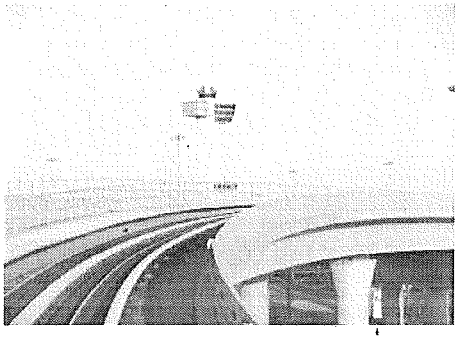
On Schedule/Within Budget: Yes

Owner and Contact:
Robert Drew, PM
Hardesty & Hanover (Prime)

Description of Services:
The Port Authority of New York & New Jersey manages and/or operates all of the region's major commercial airports, marine terminals, and interstate tunnels and bridges. This "call-in" contract required consultants to perform facility condition surveys for these facilities as required and requested. This project consisted of the inspection of the New Jersey Approach Roadways and On-Grade Sign and Lighting Structures of the Lincoln Tunnel. This biennial inspection included site visits, cost estimates, condition inspections of median barriers, guide rails, signage and lighting structures throughout the helix. The upper helix comprises seven structures consisting of both concrete and steel superstructures. The lower helix comprises three structures of varying structure types.

EnTech was a subconsultant to Hardesty & Hanover and participated in the condition surveys and report generation for this PANYNJ asset. This project also required extensive coordination and scheduling as well as Maintenance and Protection of Traffic (MPT).

CONDITION INSPECTION – BIENNIAL FACILITY INSPECTION AND CONDITION SURVEY OF THE JFK INTERNATIONAL AIRPORT ROADWAY BRIDGES, QUEENS, NY
VARIOUS PORT AUTHORITY FACILITIES IN NEW YORK AND NEW JERSEY



Dates of Service: 2011-2014

Fee: $21,460

On Schedule/Within Budget: Yes

Owner and Contact:
Robert Drew, PM
Hardesty & Hanover (Prime)

Description of Services:
This project consisted of inspection of 31 bridges, 77 bridge mounted signs, and 48 lighting structures located in John F. Kennedy Airport in New York. The purpose of the condition survey was to determine the overall condition of these structures and to identify all structural and nonstructural deficiencies. As part of the contract, one report was submitted to NYSDOT and another to PANYNJ.

EnTech, as a subconsultant to Hardesty and Hanover, participated in updating the NYSDOT Biennial Inspection Reports based on the field reports, preparing the deficiency location drawings, and preparing the final Biennial Facility Inspection and Condition Survey Report submitted to the PANYNJ.

PERFORMANCE OF EXPERT PROFESSIONAL TOPOGRAPHIC/BOUNDARY SURVEYING SERVICES AS REQUESTED ON A "CALL-IN" BASIS
VARIOUS PORT AUTHORITY FACILITIES IN NEW YORK AND NEW JERSEY

Dates of Service: 2011-2014

Contract Value: $3M+

On Schedule/Within Budget: Yes

Owner and Contact:
Rich Carlson
[redacted]

Description of Services:
JMT (formerly Kupper), provided survey services for the Port Authority of New York and New Jersey (PANYNJ) under "Call-In" Basis Survey Services Contracts. The surveys were provided at numerous PA NYNJ facilities located in New Jersey, including Newark Liberty International Airport (EWR), Teterboro Airport (TEB), Stewart International Airport (SWF), ElizabethPort and Port Newark.

In addition to surveys and mapping provided by our firm, our survey field personnel have worked with PANYNJ party chiefs as members of PANYNJ field crews for surveys at Teterboro airport (TEB), Port Newark, ElizabethPort, the west portal of the Lincoln Tunnel, the east portal and approach to the Holland Tunnel and a waterfront site in Hoboken.

Surveying Services under the current Call-In contract include the Bayonne Bridge Navigational Clearance project. Boundary, Right-of-Way, Utilities, tree, topographic surveys, as well as, control were part of the contract requirements. CAD mapping was completed and provided in the PA,NYNJ standards and formats.

BAYONNE BRIDGE NAVIGATIONAL CLEARANCE PROJECT
VARIOUS PORT AUTHORITY FACILITIES IN NEW YORK AND NEW JERSEY

Dates of Service: 2011-2014

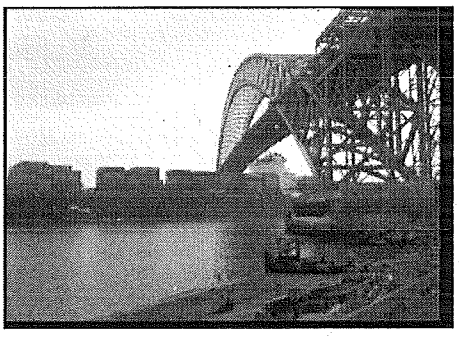
Fee: $300,000

On Schedule/Within Budget: Yes

Owner and Contact:
Rich Carlson
[redacted]

Description of Services:
The PANYNJ is in the process of designing the raising of the bridge deck and roadway of the Bayonne Bridge to allow for the larger ships into the area Ports. As part of this project JMT performed the outbound property surveys along the alignment of the bridge approaches and bridge. The property surveys were performed to meet current ALTA/ACSM Land Title Survey standards.
The Bayonne Bridge passes over the Kill Van Kull and connects the City of Bayonne, NJ with Staten Island (Boro of Richmond) NY. The total length of the bridge including the arch and approach viaducts is 6,695 feet. The bridge and its approaches run through roughly 17 properties within Staten Island NY and 12 properties within the City of Bayonne, NJ, along with some 60 adjoining properties and multiple city blocks.
JMT performed the survey to meet the "Minimum Standard Detail Requirements for ALTA/ACSM Land Title Surveys" effective February 23, 2011 with additional Table A, Optional Survey Responsibilities and Specifications items. The survey also was performed to comply with N.J.A.C. 13:40-1.1 et seq., NY Education Law Land Surveyor Practice Guidelines, and other laws and regulations applicable to land surveying in NJ and NY.

CONSTRUCTION MANAGEMENT (CM) – THE BAYONNE BRIDGE NAVIGATIONAL CLEARANCE PROGRAM FOR 2012- 2018, STATEN ISLAND, NY/BAYONNE, NJ
VARIOUS PORT AUTHORITY FACILITIES IN NEW YORK AND NEW JERSEY



Dates of Service: 2011-2014

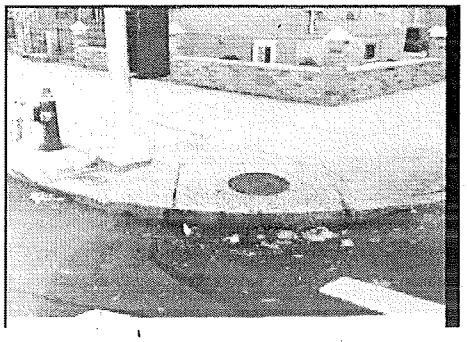
Fee: On-Call

On Schedule/Within Budget: Yes

Owner and Contact:
Gregory Zenk, PE
[redacted]

Description of Services:
Built in 1931 and one of the longest steel arch bridges, the Bayonne Bridge with a fixed suspended deck, connects Bayonne, New Jersey to the Richmond area of Staten Island, New York spanning the Kill Van Kull. The mid-span clearance is 150 feet to permit ocean going vessels to use this entrance to Port Newark and the Elizabeth Port Authority Terminal. Raising the Bridge to approximately 215 feet navigational clearance will allow larger vessels to pass below the bridge and gain access to the port and marine terminals. The bridge has a daily traffic of 20,000 cars.
EnTech is a subconsultant to the Greenman-Pedersen, Inc. (GPI) Engineering team in charge of CM including Civil, Structural, Electrical and Mechanical Engineering, Coatings Systems, and Construction Management and Project Support Services specifically related to construction of new approaches, which includes structural steel, precast concrete elements, viaduct construction, drilled shafts and mini piles. EnTech provides construction management and inspection staff for the performance of various services as determined by GPI. The services of EnTech staff include: performing inspection services, constructability reviews, coordinating construction activities with facility operations, permit compliance, contract administration, and preparing construction cost estimates and schedules.

RESIDENT ENGINEERING INSPECTION (REI) – REQUIREMENTS CONTRACT FOR RESIDENT ENGINEERING INSPECTION SERVICES FOR SMALL INFRASTRUCTURE PROJECTS
NEW YORK CITY DEPARTMENT OF DESIGN AND CONSTRUCTION



Dates of Service: 2011-2014

Fee: On Call - NTE $8M

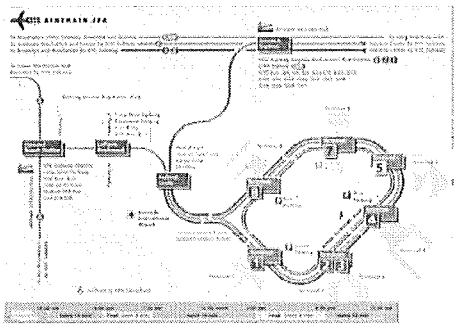
On Schedule/Within Budget: Yes

Owner and Contact:
Rosemary Bussi
NYCDDC
[redacted]

Description of Services:
EnTech, as a prime consultant, is one of seven firms under this requirements contract with the NYCDDC to provide all services necessary and required for the inspection, management, coordination and administration of small infrastructure projects, from commencement through substantial completion, final acceptance, and project close-out. Under this contract EnTech has been the awardee on multiple mini DDC RFPs.

As the REI prime consultant for this contract, EnTech is responsible for contractor compliance with contract documents including NYCDDC and NYCDOT standard specifications and drawings for the installation of sidewalks, steel-faced and concrete curbs, driveways, and pedestrian ramps. The EnTech REI team's tasks include inspecting the standard testing requirements of materials, implementing standard material specifications for concrete, steel-faced curbs, curing compounds, ADA yielding pedestrian ramps, expansion joints, ductile iron pipe for chute connections, hydrant relocations and catch basins, verification of all materials certifications for the preparation of the monthly estimate, coordination with the contractor in scheduling daily work activities, coordinating with Bureau of Quality Assurance for concrete placements, as well as with the materials testing laboratory, processing contractor payment estimates, assisting in the assessment of complex street corners, and creating task orders.

PERFORMANCE OF EXPERT PROFESSIONAL CONSTRUCTION MANAGEMENT SERVICES (MBE/WBE) FOR NEW YORK AIRPORT AND PORT COMMERCE PROJECTS AS REQUESTED ON A "CALL-IN" BASIS 2010, 2011, AND 2012 (PA# 410-11-016):
VARIOUS PORT AUTHORITY FACILITIES IN NEW YORK AND NEW JERSEY



Dates of Service: 2012

Contract Value: Unknown

On Schedule/Within Budget: Yes

Owner and Contact:

PANYNJ
(201) 595-4892

Description of Services:
Haider's services included: Construction Inspection Services, Structural Steel, Structural Concrete, Asphalt and Concrete Paving, Painting of Structural Steel, Electrical, Mechanical; Construction Contract Administration; Constructability Review; Cost Engineering/ Estimating

Task Assignments Included: JFK, LaGuardia and Newark Liberty International Airports.

THE PORT AUTHORITY OF NY & NJ

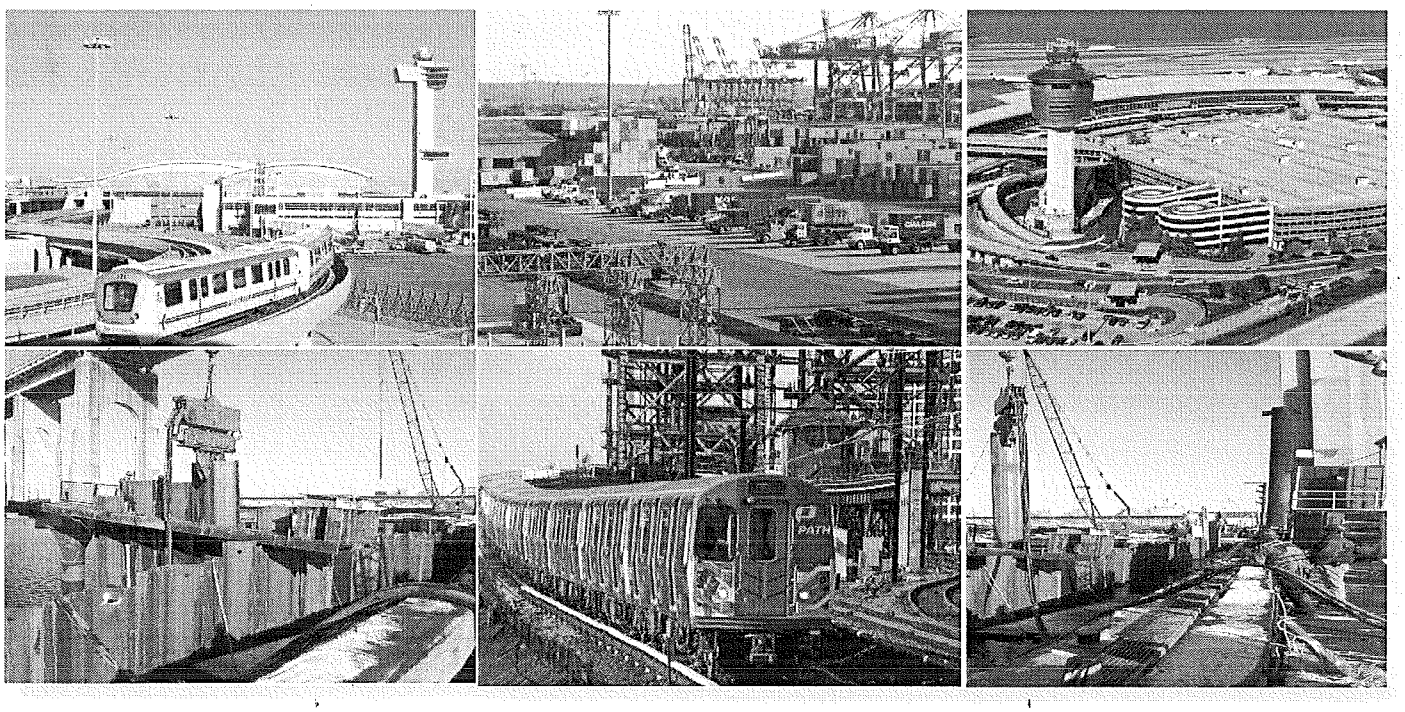
Proposal for:

Performance of Expert Professional Construction Management and Inspection Services as Requested on a "Call-In" Basis During 2015 Through 2018

RFP Number 39247

Section G

Management Approach



JOINT VENTURE

D&B ENGINEERS AND ARCHITECTS, P.C.
KNOWN AS DVIRKA AND BARTILUCCI CONSULTING ENGINEERS

KSE KS Engineers, P.C.

G | Management Approach

D&B Engineers and Architects, P.C. and KS Engineers, P.C. Joint Venture (D&B/KSE JV) will provide Construction Management Services on an on-call basis for the Port Authority of NY and NJ (PANYNJ) under this contract. These services will include, but not be limited to, providing support with construction managers, resident engineers, assistant resident engineers, safety engineers, construction inspectors, contract administrators, office engineers, schedulers, claim analysts, construction auditors, cost estimators, document control specialists, field engineers, etc. The **D&B/KSE JV** strategic approach, as explained in this proposal, has been developed from extensive experience on countless NYC infrastructure projects and has been proven to deliver top-quality projects safely, timely, and within budgetary requirements.

As the PANYNJ states in the Request for Proposal, the specific nature of assignments and projects is not known with absolute specificity at this time. However, based on our prior experience, our extensive knowledge with respect to the various PANYNJ facilities, and our track record of service on similar related projects, **D&B/KSE JV** anticipates the overall general nature of work that will likely be involved. During the preparation of this proposal, we have tried to carefully evaluate possible PANYNJ needs, matching them against our available technical resources. We believe that our thorough understanding of the PANYNJ facilities will enable us to efficiently prepare for any necessary construction management services requested under this contract. For this project, we have combined and structured the expertise of the personnel from our staff and our subconsultant offices resulting in a project team with superior experience and knowledge. From our past experience supplying construction personnel for numerous on-call and project-specific assignments, the D&B/KSE JV Team management group has the experience and knowledge to pre-plan for the anticipated assignments. We firmly believe that such pre-planning will be the key to efficient handling of any individual assignment and/or project that the PANYNJ will consider under this contract.

This project requires a team of professionals with extensive experience in the various areas of construction engineering who will be available at the inception of this project. The personnel proposed as the **D&B/KSE JV** Team are highly experienced in construction engineering in the New York City metropolitan area, and therefore, bring existing knowledge to the project, thereby precluding any learning curve. Team members

are fully aware of the other's strengths. This will help expedite any project, and help keep assignments on schedule and within budget.

Assignments given to the **D&B/KSE JV** Team by the PANYNJ must be managed and staffed by seasoned personnel since the work may likely be performed in a condensed time period (or at off-peak hours – "night operations"). Throughout the course of this project, continual communication and coordination will be maintained through meetings, progress reports and consultation with the PANYNJ to review progress and elicit for discussion any potential conflicts and/or problem areas. The **D&B/KSE JV** Team will always provide PANYNJ with solutions to conflicts and problems to ensure that the project remains on or close to the original schedule and budget.

As described later in this section, the **D&B/KSE JV** Team has developed a management structure to handle assignments for the performance of "call-in" or "on-call" construction management projects. This structure has been developed based upon our experience working with many different agencies on call-in and project specific construction projects. With client input, we have the ability to improve and refine our techniques. We believe that with a clear and distinct structure that delineates project responsibilities and provides for accountability, the **D&B/KSE JV** Team can provide services in a rapid-fire fashion and perform high quality work while maintaining client satisfaction by keeping projects on schedule and within budget. By keeping individual roles distinct, we can avoid many potential pitfalls when performing project work under aggressive time schedule constraints.

G.1 | Project Planning

Call-in contracts do not have a defined scope of services at the outset. Identification of the assignments and definition of the tasks to be performed are components of the overall project. Attachment A of the Request for Proposals lists four major tasks for potential assignments. Specifically, the following four tasks are:

- Construction Inspection Services
- Construction Contract Administration
- Constructability Review
- Cost Engineering / Estimating

Upon receiving an assignment from the PANYNJ, our project principal / project manager will coordinate with our project coordinator and review the specific scope of work for the assignment. If necessary, or if requested by the PANYNJ, we will conduct meetings with the PANYNJ representatives and visit the site(s) to better understand the scope and personnel required for the assignment.

D&B/KSE JV will then identify the personnel available from the D&B/KSE JV Team who, in our judgment, are the best suitable candidates for the assignment. We will submit the resumes of suitable candidates for approval of the PANYNJ project manager or authorized representative. If requested by the PANYNJ, we will arrange interviews for our proposed personnel by the PANYNJ representatives. Based on the scope of work from the PANYNJ, our project manager will develop a detailed staff-hour estimate and cost proposal for the PANYNJ's review and approval. If required, we will modify the staff-hour estimate based upon comments received from the PANYNJ project manager. Upon approval of the cost proposal and receipt of the notice-to-proceed from the PANYNJ for a specific assignment, our project manager will mobilize approved personnel to the project site for the entire duration of the assignment.

G.2 | Resources of the D&B/KSE JV Team

The **D&B/KSE JV** Team has a large pool of staff and unmatched local resources to support the effort required for the subject contract. We have the ability to respond rapidly to any and all assignments. In order to provide the highest-quality construction management services at PANYNJ work sites, the **D&B/KSE JV** Team is committed to providing and maintaining a cadre of technically trained and certified resident engineers and inspectors. Our sub-consultants will supplement our staff as deemed necessary.

Our locally-based firms have over four decades of construction management and inspection experience, and this project provides an excellent opportunity to provide our combined local experience, resources and expertise to the Port Authority of NY & NJ.

We regularly place employment advertisements in local newspapers and construction journals. In addition, we have relationships with several technical staffing agencies in the NY metropolitan area for construction staffing needs. If needed, we can quickly hire additional qualified staff from these sources for any PANYNJ assignments.

Under our current "Call-In" CM Contract with the PANYNJ, there have been 19 different task orders issued to-date. **D&B/KSE JV** proposed personnel for each of these 19 task orders. A total of 13 D&B/KSE JV candidates were selected by the PANYNJ to provide services under these task orders.

D&B/KSE JV has been performing "Call-In" CM/Inspection services for the NYCDEP Bureau of Wastewater Treatment (BWT) with minimal overhead and streamlined support for many projects throughout the City. Some of the BWT's construction work is done on an emergency basis, and also during the low-flow periods that occur during the night. We have, without exception, staffed emergency and overnight work with appropriate personnel, many times with very little notice. Our Team consists of experienced, hard-working individuals who work together in a cohesive manner that results in an embedded a spirit of cooperation and teamwork with all project stakeholders and ultimately delivers successful projects. We have excelled on the BWT effort and in fact have recently received an "excellent" rating from the City for Timeliness of Performance.

NYC – "Excellent 2014 Rating"

..."The Consultant's contract provides for CM/Inspection and EHS services in connection with a variety of capital improvement projects at various BWT facilities. The Consultant's services are provided on an "on-demand basis", and the Consultant continues to exhibit that they are always available and prepared to provide requisite professional services while keeping costs to NYCDEP to the minimum amount realistically possible...Based on the terms of the contract, the consultant has strictly adhered to anticipated schedules and milestones, and has always submitted construction reports on a timely basis and in an extremely professional manner. The Consultant is, always prepared for meetings in all cases and prompt and efficient when report submittal is required. During the past year, the consultant has facilitated the successful completion of over eighty-seven reconstruction projects. The consultant participated in all joint scope, pre-construction, progress meetings and constructability reviews as required by BWT Management. The Consultant is very dependable and always ready to execute their managerial and technical skills with outstanding efficiency."....

G.3 | Supervision of Personnel

It is our understanding that our construction personnel will work at the PANYNJ facilities and report directly to the PANYNJ supervisors. We are completely familiar with this type of arrangement. In fact, we have been working with the PANYNJ, MTA, NJDOT, NYCDEP, NYSDOT, and other state and local transportation agencies for the many years on various call-in construction inspection projects with similar arrangements.

Whether our employees are reporting to **D&B/KSE JV** management, or to our client's representative, we monitor the performance of our employees extremely closely. Without any additional charge to the PANYNJ, our project manager or project coordinator will visit the field office once a month for face-to-face discussions with our employees to discuss progress and any concerns. Our project manager will also meet the PANYNJ project supervisor or resident engineer on a periodic basis to verify client satisfaction and to monitor overall performance. From experience, we have determined that such periodic communication is a very effective management tool in addressing problems before they become a threat to the progress of the project.

Should the PANYNJ be dissatisfied with our staff, we pledge to replace our staff with other qualified staff with minimum notice. This is possible only because we offer such a large pool of available qualified personnel.

G.4 | Training of Personnel

In order to serve our clients in the best possible way, D&B/KSE JV and its subconsultants invest substantial resources in training construction personnel. We believe that money spent on training is essential in providing high quality services and earning repeat business from clients.

In order to comply with the current ICC Special Inspector Certification training requirements, D&B/KSE JV provides continuous training certification courses to our full-time construction professionals. These training courses include, but are not limited to:

- ✓ Structural Steel - Erection & High-Strength Bolting
- ✓ Concrete
- ✓ Soils - Fill Placement
- ✓ Pile & drilled pier installations
- ✓ Pier Foundations
- ✓ Underpinning
- ✓ Excavation - sheeting, shoring, and bracing
- ✓ Mechanical systems

G.5 | Management Information Systems

The use of management information systems allows us to monitor and control project elements. The D&B/KSE JV Team will monitor project status by reviewing the following: task progress; project progress; project expenditure; overall schedule vs. budget conformance; schedule status; and budget status.

The above elements will be utilized to monitor achievement of milestones, recognize project constraints, and highlight problem areas. If at any time a problem is observed, we will review the situation, formulate a solution if required and timely communicate the information to the PANYNJ representative. \

G.6 | Schedule Control

Based on the project objectives and milestones specified in the scope of work, the baseline schedule will be closely monitored. This schedule will indicate project status and the milestone deadlines. By reviewing the schedule, **D&B/KSE JV** will be able to identify potential problem areas and take corrective action before delays or cost overruns occur. Schedule control reinforces the meeting of project milestones while providing a continuous updated status of the work effort.

G.7 | Budget Control

Estimating the task/activity expenditures on a staffing basis monitors the cost plan. Expenditures will be compared to the estimated cost of the task order. This system allows D&B/KSE JV to carefully monitor costs associated with the CM elements of the project.

G.8 | Coordination with the PANYNJ

A major component of this contract requires continual communication with the PANYNJ. Coordination is required for the scheduling of any task orders and the assignment of proper personnel. Client coordination will be maintained through periodic client meetings and the issuance of progress reports throughout the duration of the contract.

G.9 | Open-Door Client/Consultant Visitation Policy

Throughout the course of the contract, **D&B/KSE JV** will welcome office visits by PANYNJ representatives. Besides the continual communication which D&B/KSE JV will be providing for project assignments, this policy will allow the PANYNJ to obtain information on project status as may be required, to interject comments, and to freely review D&B/KSE JV's status throughout the course of the program.

G.10 | Understanding and Management of Technical Services to be Provided

As mentioned previously, the RFP lists four major tasks for potential assignments. Specifically, the following four tasks are:

1. Construction Inspection Services
2. Construction Contract Administration
3. Constructability Review
4. Cost Engineering / Estimating

The following is our management approach to the performance of these four tasks.

Construction Inspection Services

Our field personnel will follow established procedures of the client's construction inspection manual. **D&B/KSE JV** also has a quality assurance manual, which describes particular duties for each position on an inspection team. Since this a call-in contract, each call-in assignment must be handled individually. When the PANYNJ calls for an assignment, we will review information regarding: scope of work; length of assignment; timing of the work; location; level of personnel required; specifics of the assignment (building, roadway, drainage, electrical, mechanical, etc.); staff available for the assignment; and existing site conditions.

We then evaluate these factors and discuss the issues with the PANYNJ project manager. Based on the scope of work from the PANYNJ, our project manager will develop a detailed staff-hour estimate and cost proposal for the PANYNJ's review and approval. If required, we will modify the staff-hour estimate based upon the comments received from the PANYNJ project manager. Upon approval of the cost proposal and receipt of the notice-to- proceed from the PANYNJ for a specific assignment, our project manager will mobilize approved personnel to the project site for the entire duration of the assignment.

We will submit the resumes of suitable candidates for approval of PANYNJ project manager or authorized representative. If requested by the PANYNJ, we will arrange interviews for our proposed personnel by the PANYNJ representatives

Once the submission is approved, we will meet with the anticipated staff to discuss the assignment and the expected deliverables in depth. We will discuss issues with the inspection staff such as: description of the work to be completed by the contractor; material to be used; construction details; method of measurement for items to be incorporated into the work; and the basis of payment for the items of work.

Construction Contract Administration

This task deals specifically with the documentation required to administer the work performed by the contractor at the job site.

The contract administrator, sometimes referred to as the office engineer (OE), is critical to the success of the project. It is the OE's responsibility to literally track every piece of paper that enters and exits the field office. This includes but is not limited to: shop drawings; daily inspector reports; material certifications; correspondence (incoming and outgoing); laboratory reports; monthly payment estimates; record plans maintenance; catalogue cuts; transmittals; RFIs (Requests for Information); and EEO documentation.

CPM Scheduling

The detailed CPM schedules submitted by the contractor for procurement, construction, and installation will form the basis for monitoring the progress of the work. On a bi-weekly basis, the Assistant Resident Engineer and scheduling personnel will meet with the contractors to assess schedule progress and identify problem areas using the detailed schedules. The construction contract documents will include the necessary language to require the contractor to prepare, maintain and update detailed progress schedules in a manner consistent with the Project Construction Schedule prepared by the **D&B/KSE JV** Team.

Once a month, the contractor will be required to generate CPM analysis reports, which will be reviewed against the summary project schedules to identify variances possibly requiring development of work-arounds or other corrective actions. The **D&B/KSE JV** Team will provide a complete analysis of the contractor's monthly submittal for presentation to the Authority. Team members will work closely with the contractor to develop alternative approaches to the work schedule, as situations may require. We will assist the contractor in correcting any schedule deficiencies to help expedite progress.

Constructability Reviews

- ✓ What is the work to be done?
- ✓ When is this work to be done?
- ✓ Where is the work to be done?
- ✓ Who will perform the work?
- ✓ What Materials and Equipment are required to perform the work?
- ✓ Will the safety of all persons in the vicinity of the project and facilities maintained properly?

The **D&B/KSE JV** engineer performing the constructability review on a set of plans asks each of these questions. The D&B/KSE JV engineer will make site visits to the work location, interview the affected parties at the site to determine their needs and requirements, contact material and equipment suppliers and review the staging of the work for potential impacts. By further defining the answer to these questions for each specific project task, management is given the opportunity to utilize the proper resources to accomplish a successful end result.

When an engineer from our staff begins a constructability review, he/she looks at the project in total from both the engineer's point of view and the contractor's point of view.

Questions to be considered include:

- ✓ Can equipment properly access the site to build what is required?
- ✓ How will materials be transported to the work area?
- ✓ Is there sufficient workspace available to do the work?
- ✓ Are working easements required?
- ✓ Is the staging appropriate?
- ✓ Does the schedule logic make sense? Are the successors and predecessors for activities realistic?
- ✓ Is the time frame for the project realistically achievable?
- ✓ Is sufficient material available to do the work in the time specified?
- ✓ Are there items specified with long lead times?
- ✓ Can all operations be performed according to OSHA and the PANYNJ's safety rules and regulations?

"What-if" scenarios are also developed to deal with unanticipated events.

Cost Engineering / Estimating

For assignments requiring this task, an engineer's estimate will be prepared in standard spreadsheet format. **D&B/KSE JV** possesses and maintains a large database of the recent contractor bid unit prices from various state departments and agencies. This database includes the most recent versions of NYSDOT and NJDOT bid price reports. Engineers performing these estimates develop their own independent quantity take-offs to verify that the quantities established by the designer are realistic.

G.11 | Quality Management Program (QMP)

Since our staff will work at the PANYNJ facilities and report to the PANYNJ supervisors, we anticipate our staff will utilize the Port Authority Quality Assurance / Quality Control procedures. We would, however, like to briefly describe the Quality Management Program that **D&B/KSE JV** practices in-house for our project-specific contracts.

The QMP at **D&B/KSE JV** is multifaceted and depends upon many individuals to ensure that it runs properly. There are three main steps involved as follows:

Step 1 - The program begins when we decide to respond to an RFP. Can we provide the service(s) the client is seeking? If we answer "YES", the first step in our QMP has been met successfully.

Step 2 - Most important to **D&B/KSE JV** is the final product our field personnel provide to the client. This includes our Project Manager, who prepares the project-specific QMP with input from the Construction Manager, Construction Administrator, Construction Inspectors, Field Engineers, Schedulers/Estimators and Safety Engineers. It is their responsibility to follow our plan and the contract to achieve the level of service and quality of final product expected by the client. The main office will provide the field personnel with the tools they require to do their job accurately and efficiently, but it eventually falls on them to produce the necessary required results. It is our field personnel who have the means and methods to provide the client with the proper documentation of the work being performed by the contractor and to monitor the work for overall quality and substantial conformance to the requirements of the project's plans and specifications. Our field personnel will use the appropriate manuals and follow the appropriate procedures to provide the service and quality the client needs and expects.

Step 3 - On a monthly basis, our QMP Manager will review the performance of project personnel. He will review project documentation to verify that appropriate procedures of the client manual are being followed. The QMP Manager accomplishes this by reviewing various aspects of the contract for compliance. These include: checking that appropriate client procedures are followed; quantity control of various contract items are tracked against potential overruns; proper placement procedures are used for material incorporated into the project; items used on the project meet the material acceptance criteria; proper testing procedures are followed; lines of communication are both effective and properly used; computations are correct and checked; and we are meeting our contractual requirements for the client.

Subsequent to the monthly review by the QMP Manager, a written report is generated and given directly to the president. This report details project progress, how well project personnel are adhering to the QMP, and what, if anything, needs to be done to get project personnel back in sync with the program. The QMP Manager reports directly to the president and does not report to the project manager of the specific project or to the project personnel. With this independent check of our project personnel, we are confident that we provide the expected level of service and meet our contractual obligations in a timely and professional manner.

G.12 | Summary

D&B/KSE JV has successfully provided "Call-In" services to many public agencies in the tri-state area. D&B/KSE JV currently has personnel working as part of our existing Call-In Agreement with the PANYNJ. This type of work is an integral part of our business; it is not a sideline. We have successfully performed this type of work assignment previously on many occasions and look forward to working with the PANYNJ on this call-in contract.

AGREEMENT ON TERMS OF DISCUSSION

The Port Authority's receipt or discussion of any information (including information contained in any proposal, vendor qualification, ideas, models, drawings, or other material communicated or exhibited by us or on our behalf) shall not impose any obligations whatsoever on the Port Authority or entitle us to any compensation therefor (except to the extent specifically provided in such written agreement, if any, as may be entered into between the Port Authority and us). Any such information given to the Port Authority before, with or after this Agreement on Terms of Discussion ("Agreement"), either orally or in writing, is not given in confidence. Such information may be used, or disclosed to others, for any purpose at any time without obligation or compensation and without liability of any kind whatsoever. Any statement which is inconsistent with this Agreement, whether made as part of or in connection with this Agreement, shall be void and of no effect. This Agreement is not intended, however, to grant to the Port Authority rights to any matter, which is the subject of valid existing or potential letters patent. The foregoing applies to any information, whether or not given at the invitation of the Authority.

Notwithstanding the above, and without assuming any legal obligation, the Port Authority will employ reasonable efforts, subject to the provisions of the Port Authority Freedom of Information Code and Procedure adopted by the Port Authority's Board of Commissioners on March 29, 2012, which may be found on the Port Authority website at: http://www.panynj.gov/corporate-information/pdf/foi-code.pdf, not to disclose to any competitor of the undersigned, information submitted which are trade secrets or is maintained for the regulation or supervision of commercial enterprise which, if disclosed, would cause injury to the competitive position of the enterprise, and which information is identified by the Proposer as proprietary, as more fully set forth in the FOI Code, which may be disclosed by the undersigned to the Port Authority as part of or in connection with the submission of a proposal.

ATTN: RFP Custodian

RE: Proposal for the Performance of Expert Professional Construction Management and Inspection Services as Requested on a "Call-In" Basis During 2015 Through 2018
RFP Number 39247

Ladies and Gentlemen:

Exceptional skilled staff with extensive Port Authority of NY & NJ (Authority) experience is what the Greenman-Pedersen, Inc. (GPI) team offers the Authority for this "Call-In" contract. The proposed GPI team, which includes Maitra Associates, P.C. (MBE), PACO Group, Inc. (MBE), and LPE Enterprises, Ltd. (WBE), has been successfully providing construction management and inspection services since 2006 under two contracts. GPI itself has been providing construction management services to the Authority since 2002. This team knows the various Authority facilities and is readily available for assignments from 2015 through 2018, and we are excited and appreciative of the opportunity to continue providing these services.

Specifically, to address the requirements of the RFP, we offer the following:

A. FIRM EXPERIENCE

1. ***Must have an office in the New York/New Jersey Metropolitan Area and must have at least 50 individuals on staff experienced in performing construction management and/or construction inspection services in the New York/New Jersey Metropolitan Area.***

   Greenman-Pedersen, Inc. has offices in New York and New Jersey, staffed with 198 construction managers and inspectors – ***the largest single source of construction inspection professionals in the NY/NJ region!*** In New York, GPI's offices include Jamaica, Queens, and Babylon, Long Island (the firm's headquarters); in New Jersey, GPI's offices are located in Lebanon and Ocean View. Similar to previous Port Authority of NY & NJ On-Call construction management contracts, work for this project will be managed from GPI headquarters located at 325 West Main Street, Babylon, NY. This office has 208 professionals on staff, 100 of which provide construction management and inspection. As needed, GPI will also call upon personnel from its New Jersey offices, which are staffed with 98 inspectors.

2. **Firms must have a Certificate of Authorization to practice Professional Engineering in the states of New York and/or New Jersey.**

   Greenman-Pedersen, Inc. has Certificates of Authorization to practice professional engineering services in both New York and New Jersey. Copies of these certificates follow this letter.

GPI

B. STAFF EXPERIENCE

Construction Inspection staff shall be experienced in performing construction inspection services in at least one of the following disciplines: Civil, Structural, Electrical and Mechanical Engineering; and shall include the following:

1. At least 10 engineers/ architects licensed in the states of New York and/or New Jersey	41
2. At least 10 must be ACI Concrete Construction Special Inspectors	13
3. At least 3 must be ICC Certified as Structural Steel and Bolting Inspectors	17
4. At least one must be NACE 1 coatings certified	35

** Please see Section E1, for the GPI Team Personnel Matrix which further elaborates on the credentials of our proposed staff. Resumes for these individuals are also included in Section E1 of this document.*

Our proposed project manager is **Gregory Zenk, P.E.**, GPI's director of construction inspection services. Mr. Zenk has served as project manager on a wide variety of construction projects throughout the New York City area. For the last 12 years, during three consecutive indefinite quantity, on-call agreements, Mr. Zenk has been performing in this very capacity; first under our 2002-2006 TB&T services agreement and then under the general 2006-2010 and our current 2011-2014 agreements. He has been instrumental in working with the Authority on addressing technical issues and directing resources to Authority needs, and he clearly understands the delicate balance and unique relationship that must be maintained between facility operations and engineering and construction rehabilitation projects to keep things running smoothly. Most importantly, Mr. Zenk has been working closely with the Authority's Engineer of Construction for more than a decade, assisting with staffing and providing other critical resources needed for construction management of rehabilitation work totaling more than $350 million.

GPI will meet the required MBE/WBE goals of 12% and 5%, respectively, with the talented firms on our team.

Our proposal demonstrates that we have the depth of experienced staff as well as GPI's solid background in construction management and inspection with the Port Authority and other New York metropolitan area transportation agencies. We are extremely interested in continuing our professional relationship with the Port Authority of New York & New Jersey by providing quality construction management and inspection services and thank you for your consideration.

Sincerely,

GREENMAN-PEDERSEN, INC.

M. Denise Carter, P.E.

GPI Greenman-Pedersen, Inc.
Engineering and Construction Services

RESUMES

PROJECT MANAGEMENT

Gregory Zenk, P.E.
Director of Construction Services

Professional Profile

Mr. Zenk is the Director of Construction Services for GPI's New York office. He has spent the majority of his career managing various construction projects. These projects include major long and short span bridge and highway rehabilitation; historic building restoration; water treatment plants; park improvement and rehabilitation; and pier and bulkhead installation, among others.

Mr. Zenk is responsible for construction management and inspection services undertaken by GPI's New York office and serves as project manager on our New York area construction projects. In this position, he is directly involved with the project representatives/resident engineers, inspectors, office engineers, schedulers, and estimators. He is responsible for overall quality control of GPI's construction management and inspection program to ensure that the needs of the client are met, and that the project is in conformance with the requirements of GPI's established quality assurance program.

Mr. Zenk works with staff to select appropriate training and certification programs necessary to ensure that individuals and the department staff stay apprised and up to date on industry practices and procedures. These programs have been associated with organizations such as NACE International, the American Welding Society, the International Code Council, and the American Concrete Institute.

Proposed Project Assignment
Project Manager

Registration/Certifications
1995/Professional Engineer/NY
1999/NACE Certified Coating Inspector Level 3
2000/AWS Certified Welding Inspector

Education
BS/1985/Civil Engineering

Course Work
2009 - 10-Hour OSHA Training Course
Bridge Rehabilitation and Construction, University of Wisconsin
SSPC C-5 Supervisor Competent Person Refresher Training
C-3 Supervisor/Competent Person Training for Deleading of Industrial Structures
ACI Concrete Field Testing Technician Grade Level I Trained

Professional Affiliations
American Society of Civil Engineers (ASCE)
National Association of Corrosion Engineers (NACE)
Society of Protective Coatings (SSPC)
Member of Tau Beta Pi

Total Years Experience 29

Project Experience

Projects on which Mr. Zenk has served as project director/manager include:

- 2006-2010 Port Authority On-Call Construction Management Services, Various Locations, NY, PA NY & NJ
- 2011-2014 Port Authority On-Call Construction Management Services, Various Locations, NY, PA NY & NJ
- On-Call Construction Management Services, 2002-2006, Various Port Authority NY&NJ Facilities, Jersey City, NJ, PA NY & NJ
- REI for the Rehabilitation of High Bridge, Boroughs of Manhattan & Bronx, NY, NYCDDC
  Bayonne Bridge Navigational Clearance Program (BBNCP), NY/NJ, PA NY & NJ
- Engineering Services Agreement (ESA) for Resident Engineering and Inspection Services, New York, NY, NYCDOT
- Brooklyn Bridge Rehabilitation of the Approach Spans and Ramps and Painting of the Entire Bridge, Contract 6, New York, NY, NYCDOT
- Manhattan Bridge Rehabilitation of Cables and Suspenders, Contract 14, New York, NY, NYCDOT
- Williamsburg Bridge North Roadways Reconstruction, Contract 7, New York, NY, NYCDOT
- Williamsburg Bridge Reconstruction of Miscellaneous Rehabilitation of the Main Bridge, Contract 8, New York, NY, NYCDOT
- Queensboro Bridge Lead Paint Removal and Protective Coating, Contract BRC231P, New York, NY, NYCDOT
- Staten Island Railroad Bridges, Staten Island, NY, NYCDOT
- Ocean Avenue Bridge over LIRR, Brooklyn, NY, NYCDOT
- Battery Park Underpass/West Street Emergency Contract, New York, NY, NYCDOT
- Belt Parkway Bridges Program Management Services, Brooklyn, NY, NYCDOT
- Belt Parkway Bridges REI Services – Gerritsen Inlet Bridge, Brooklyn, NY, NYCDOT

Gregory Zenk, P.E.
Director of Construction Services

- Belt Parkway Bridges REI Services - Paerdegat Bridge, Brooklyn, NY, NYCDOT
- Belt Parkway Bridges REI Services - Rockaway Parkway Bridge, Brooklyn, NY, NYCDOT
- Belt Parkway Tidal Wetlands Mitigation, Brooklyn, NY, NYCDOT
- Construction Administration and Inspection for Project QM-40S, Super Storm Sandy Restoration and Mitigation and Project QM-40/QM-18, Rehabilitation of the Tunnel Walls, Roadway and Manhattan Exit Plaza at the Queens Midtown Tunnel , TBTA
- Marine Parkway Bridge Resident Engineering and Inspection, MP-01, New York, NY, TBTA
- Bronx-Whitestone Bridge Bronx/Queens Approach, BW-89/WBM-342, Bronx, NY, TBTA
- Bronx-Whitestone Bridge Deck Replacement - BW-82, Bronx, NY, TBTA
- Bronx-Whitestone Bridge Cable/Suspender Rope Rehabilitation, BW-85/86/WBM-339, Bronx, NY, TBTA
- Bronx-Whitestone Bridge, Miscellaneous Painting, Suspended Rope Collar Replacement and Flag Repairs, and Pin Replacement, Projects WBM 319X and BW 87A & C, New York, NY, TBTA
- Replacement of the Queens Approach at the Bronx-Whitestone Bridge, BW-89C, Queens/Bronx, NY, TBTA
- Rehabilitation of the 2nd Avenue and 36th Street Overpass Bridges at the Queens Midtown Tunnel, QM-82, New York, NY, TBTA
- Robert F. Kennedy (Triborough) Bridge Deck Replacement on Suspended Spans and Queens Viaduct - TB-64A, Queens, NY, TBTA
- Robert F. Kennedy (Triborough) Bridge Deck Replacement of the Randall's Island Junction Structure - TB-63, New York, NY, TBTA
- Throgs Neck Bridge Orthotropic Deck, TN-82A, Bronx, NY, TBTA
- Replacement of the Upper Level Deck of the Suspended Span of the Verrazano-Narrows Bridge, VN-80B, Staten Island, NY, TBTA
- Verrazano-Narrows Bridge Rehabilitation of Structural Steel Repairs, VN-32, Staten Island, NY, TBTA
- Verrazano-Narrows Bridge Rehabilitation of the Lower Level Approaches, VN-17A, Staten Island, NY, TBTA
- CI Services for the Rehabilitation of Three Bridges, Contract 6052-B1-11 Release 'A', Hampton Bays, NY, LIRR
- Rockville Centre Bridge Painting, Rockville Centre, NY, NCDPW
- Replacement of County Road 67, Motor Parkway Bridge at the LIE, Exit 55, Town of Islip, NY, SCDPW
- Improvements to County Road 39, North Road from the Vicinity of County Road 38, North Sea Road to the Vicinity of NY 27, Montauk Highway, Southampton, NY SCDPW
- Construction Supervision and Inspection Services, Harlem Line Drainage Improvements, Phase II, Metro North Railroad

Prior to his project manager assignments, Mr. Zenk worked extensively in the field on projects throughout the New York metropolitan area. These projects include:

Bronx-Whitestone Bridge, Projects WBM 319X and BW 87A & C, Miscellaneous Painting and Suspended Rope Collar Replacement & Flag Repairs and Pin Replacement, New York, NY; 10/00-12/02. Resident Engineer. The two concurrent projects totaling $4 million involved the cleaning and painting of several thousand feet of bridge median barrier, several thousand square feet of tower interior, and critical sections of the bridge suspender cables, the installation of specialized elastomeric collars at the suspender penetrations through the main fascia girders. Also, over 1,000 critical structural steel flag repairs were completed by the contractor. Included in the repairs were the removal and replacement of several steel rocker bearings and pin removal and replacement. The repairs required the installation of complex jacking systems for lifting of the structure during rehabilitation. Mr. Zenk's responsibilities included the supervision of five inspectors and coordination with facility administrative personnel and the contractor. Client: Triborough Bridge and Tunnel Authority

M. Denise Carter, P.E.
Senior Vice President/Branch Manager

Professional Profile
Ms. Carter is a professional engineer with many years of experience in the management of transportation design and construction inspection projects throughout the New York metropolitan area. In her current position as branch manager, Ms. Carter is responsible for overseeing scheduling, staffing, invoicing, quality assurance, constructibility, compliance to contractual obligations, and that the clients' needs and requirements were satisfied for all design and construction engineering inspection projects conducted from GPI's Babylon Branch office. In this position, she is directly involved with all project personnel in all phases of the project. She is responsible for overall quality control of GPI's construction management and inspection program and that project schedule and budget are monitored and reported. Ms. Carter has the authority to commit the resources from within the GPI organization to meet schedules and provide specialized services to all branch clients.

Project Experience
Projects on which Ms. Carter has served or is serving as principal-in-charge include:

- Bayonne Bridge Navigational Clearance Program (BBNCP), NY/NJ, PA NY & NJ
- 2011-2014 Port Authority On-Call Construction Management Services, PA NY & NJ
- 2006-2010 Port Authority On-Call Construction Management Services, PA NY & NJ
- 2002-2006 Port Authority On-Call Construction Management Services, Various Facilities, PA NY & NJ
- Staten Island Bridges, PA NY & NJ
- Journal Square Transportation Center, PA NY & NJ
- Battery Park City Ferry Terminal at the 39th Street Pier, PA NY & NJ
- John F. Kennedy International Airport – Jet Blue Parking Structure, PA NY & NJ
- John F. Kennedy International Airport, PA NY & NJ
- EWR Newark Airport, PA NY & NJ
- Port Authority Bus Terminal – Structural Modifications, PA NY & NJ
- Port Authority Technical Center, PA NY & NJ
- LaGuardia Airport, PA NY & NJ
- Jamaica Station, PA NY & NJ
- George Washington Bridge Painting, PA NY & NJ
- Williamsburg Bridge North Roadways Reconstruction, Contract 7, NYCDOT
- Williamsburg Bridge Reconstruction of Miscellaneous Rehabilitation of the Main Bridge, Contract 8, NYCDOT
- Manhattan Bridge Painting and Interim Rehabilitation, Contract 8C, NYCDOT
- Manhattan Bridge Rehabilitation of North Spans over East River, Contract 10, NYCDOT
- Manhattan Bridge Rehabilitation of Lower Roadways, Contract 11, NYCDOT
- Manhattan Bridge Rehabilitation of Cables and Suspenders, Contract 14, NYCDOT

- Rehabilitation of Bridge No. 02295, Route 136, ConnDOT
- Consolidated Edison Tank Inspections, Consolidated Edison of New York

James Valenti, P.E.
Project Manager

Professional Profile

Mr. Valenti provides comprehensive resident engineering services and project management for bridge rehabilitation/reconstruction projects. In addition to his project management responsibilities, he serves as a certified quality assurance representative (CQAR) and health and safety officer (HASO) for construction projects. Mr. Valenti has extensive experience in environmental compliance enforcement and environmental investigations.

Mr. Valenti currently provides CQAR services for major REI projects at the Verrazano-Narrows and Bronx-Whitestone bridges. In addition to preparing the Quality Management System Manuals (QMSM) for these and other projects, he performs interim internal and full-system quality assurance audits to ensure that the GPI team is adhering to all requirements of the QMSM. He prepares summary reports for client review and performs root cause analysis as necessary to minimize potential for recurrence of quality assurance breaches of protocol. He also serves as a technical quality manager (TQM) for GPI's QP-5 coatings inspection services program.

Project Experience

Replacement of the Upper Level Deck of the Suspended Span of the Verrazano-Narrows Bridge, VN-80B, Staten Island, NY; 7/12-Present. This $236-million project involves reconstruction to replace the upper level roadway superstructure of the Verrazano-Narrows Bridge. The work includes removal of existing upper level roadway deck and barrier, installation of new upper level orthotropic deck, overlay, drainage systems, sign structures, lighting, barrier, painting and miscellaneous utility work. Mr. Valenti is serving as the Certified Quality Assurance Representative (CQAR) for this project. Client: Triborough Bridge & Tunnel Authority

Bronx-Whitestone Bridge Replacement of the Bronx Approach and Miscellaneous Repairs to the Queens Approach, BW-89, Bronx, NY; 5/12-Present. This $204-million project involves the staged removal and replacement of the Bronx Approach superstructure and substructure from the Bronx Toll Plaza to the Bronx Anchorage. Mr. Valenti is serving as the Certified Quality Assurance Representative (CQAR) for this project. Client: Triborough Bridge & Tunnel Authority

Replacement of the Queens Approach at the Bronx-Whitestone Bridge, BW-89C, Queens/Bronx, NY; 3/11-5/12. This project involved construction management and inspection services required to support construction work of Project BW-89C, Replacement of the Queens Approach at the Bronx-Whitestone Bridge. Mr. Valenti served as the Certified Quality Assurance Representative (CQAR) for this project. Client: Triborough Bridge & Tunnel Authority

Bronx-Whitestone Bridge Cable/Suspender Rope Rehabilitation, BW-85/86/WBM-339, Bronx, NY; 1/08-3/08. Resident Engineer. This project involved construction management and inspection services for coating removal and application and cable/suspender rehabilitation for Project BW-85/86/WBM-339, Select Cable Panel Opening/Suspender Rope Removal and Replacement and Painting at the Bronx-Whitestone Bridge. Mr. Valenti provided comprehensive resident engineer services during the start-up period of Project BW-85-86/WBM-339, including establishing the consultant field office: development of all project related inspection protocols and work

plans (QMSM, HASP, Field Inspection Program); establishment of a project-specific filing system; processing of project submittals, schedules and payments; coordination of start-up activities, progress meetings and security controls with the Contractor and the TBTA; and day-to-day project management duties. Client: Triborough Bridge and Tunnel Authority

Rehabilitation of the 2nd Avenue and 36th Street Overpass Bridges at the Queens Midtown Tunnel, QM-82, Queens, NY; 11/05-1/08. Resident Engineer. This project involved providing professional construction management services for the rehabilitation of the 2nd Avenue and 36th Street Overpasses. Work included a variety of different tasks including concrete repairs, cleaning and painting of structural steel, installing new underdeck lighting, new netting, lead and asbestos abatement. Mr. Valenti's responsibilities included on-site project management and oversight during concrete crack and spall repair, rehabilitation and forming; removal of column concrete encasements and installation of curtain walls; repointing of masonry facades; lead-based paint and asbestos removal; installation of vertical access staircase and relocation of electrical components at D Post; roadway striping and coordination of maintenance and protection of traffic operations during multiple construction stages at the Manhattan approach spans to the tunnel. He developed a Quality Assurance Plan and a Health and Safety Plan for consultant staff and supervised a staff of five inspectors during this $2.7-million project. Client: Triborough Bridge and Tunnel Authority

Throgs Neck Bridge, Orthotropic Deck Rehabilitation, TN-82 Phase A, Bronx, NY; 1/04-11/05. Resident Engineer. This project involved the testing of the constructibility, serviceability and performance of the design consultant's solution to the chronic structural problems that have plagued the retrofitted spans since 1989. Mr. Valenti was responsible for day-to-day on-site project management during this $5.4-million project. Specific construction activities included installation of longitudinal shear connectors; removal of and replacement of end and intermediate sub-floorbeams; structural steel repairs; dye penetrant testing and crack arrest hole drilling; shimming of orthotropic deck spans; installation and removal of 60,000 sq ft of suspended work platform system; welding procedure and welder qualification demonstration phase; day- and night-time maintenance and protection of traffic (MPT) coordination. He reviewed contract submittals and shop drawings; negotiated change orders; developed the Quality Assurance Plan and Health and Safety Plan for consultant staff, prepared Constructibility Review Report for project; and supervised a staff of five inspectors. Client: Triborough Bridge and Tunnel Authority

Robert F. Kennedy (Triborough) Bridge Deck Replacement on Suspended Spans and Queens Viaduct - TB-64A, Queens, NY; 11/00-1/04.As assistant resident engineer, Mr. Valenti's responsibilities included on-site project management and oversight during installation of temporary protective shielding for suspension spans and viaduct; suspender rope removal and replacement (368 ropes total at 184 locations) utilizing multiple jacking system scenarios and equipment; removal of approximately 252,000 sq ft of existing road deck and installation of new orthotropic deck; pin replacement at Wards Island anchorage; paint removal (272,000 sq ft); and significant maintenance and protection of traffic coordination during staged construction for this $165-million project. He supervised inspection personnel (eight inspectors), reviewed contract submittals and shop drawings and contractor payments, performed on-site and off-site quality control/assurance inspections during suspender rope fabrication, pouring of rope sockets and preparation for installation, and coordinated development and implementation of quality assurance, safety and environmental controls. He also developed the Quality Assurance Plan and Health and Safety Plan for consultant staff and assumed resident engineer's responsibilities when resident engineer was not on site. Client: Triborough Bridge and Tunnel Authority

REI for the Rehabilitation of High Bridge, Boroughs of Manhattan and Bronx, NY; 9/13-Present. Project Manager. This $50-million project involves resident engineering and inspection services for comprehensive rehabilitation, service upgrades, and historical restoration of this 1,400lin ft aqueduct structure, the oldest existing bridge in NYC. Mr. Valenti is responsible for addressing staffing needs and providing inspection equipment and other resources as required; attending and participating in progress, schedule, and technical meetings; maintaining construction inspection budgets and manpower requirements; providing supervisory support for technical and logistical issues of concern; conducting regular site visits to review work progress; and serving as liaison between consultant and client representatives. Client: New York City Dept. of Design & Construction

RESUMES

CONSTRUCTABILITY REVIEWS / TECHNICAL SPECIALISTS

Resumes are presented in alphabetical order

Frank Gallo, P.E.
Assistant Program Manager

Professional Profile
Mr. Gallo is a professional engineer with extensive experience in bridge and highway reconstruction and rehabilitation projects. In previous years, Mr. Gallo served as Assistant Commissioner for NYCDOT-Bureau of Bridges and supervisor of design and construction and engineer-in-charge for NYSDOT. His responsibilities included management of engineering staff involved on major transportation projects throughout New York City.

Mr. Gallo served as director of construction services responsible for construction management and inspection services undertaken by GPI's Babylon office. In this position, he was directly involved with the project representatives/resident engineers, inspectors, office engineers, schedulers, and estimators. He was responsible for overall quality control of GPI's construction management and inspection program to ensure that the needs of the client are met, and that the project is in conformance with NYSDOT Manual for Uniform Record Keeping (MURK). Mr. Gallo's ability to progress projects on a timely basis, within budget, and his familiarity with the construction industry in the New York metropolitan area, and the many local contractors and unions has been extremely beneficial towards the successful completion of projects undertaken by the firm.

Project Experience
Belt Parkway Bridges Program Management Services, Brooklyn, NY; 5/06-Present. Assistant Program Manager. This project involves program management and resident engineering and inspection services for the rehabilitation/replacement of seven bridges along a 7.5-mile section of the Belt Parkway. Mr. Gallo's responsibilities include the organization of a Program Management Team composed of several subconsultants with the ability to take bridge projects through the design phase to final bid ready documents. This includes coordinating among several designers, the State and City DOTs, and City, State and Federal agencies to obtain final approvals. This is achieved by scheduling meetings, preparing an agenda and producing final minutes. Monthly detailed reports are provided to describe status and to keep the projects on schedule. A community outreach program was created which gives the NYCDOT the ability to identify and meet with the stakeholders to describe the project and to create positive dialogue. The PM team takes the project through the procurement process to final bid. After bids are received and analyzed, and a Notice to Proceed is given, the PM team will provide Resident Engineering inspection, which will include submittal of monthly construction reports for the entire program; reviewing the changes proposed by one (or more) contractor(s) and evaluating the impacts on other projects; approving Contractor(s) Construction Schedules and CPM's of an individual Shore Parkway Bridge; preparing a combined Construction Schedule and CPM for all of the Belt Parkway Bridges construction; conducting bi-weekly coordination meetings with the entire staff including Resident Engineers of an individual Bridge Project including NYCDOT Roadway Bridges Engineer-in-Charge; conducting interim meetings with the staff, Resident Engineers and other involved Agencies on an as-needed basis; making necessary presentations to Community Boards, other involved agencies. Client: New York City Dept. of Transportation

As director of construction services, Mr. Gallo has served as project manager or QA/QC advisor on the following major bridge, roadway and structural rehabilitation projects throughout the metropolitan area:

Frank Gallo, P.E.
Assistant Program Manager

- 2002 On-Call Engineering and Construction Management Services Contract, $25 M, (PA NY & NJ)
- Goethals Bridge Cleaning, Painting and Steel Repairs, $12 M, #AKG-274.022 (PA NY & NJ)
- Williamsburg Bridge South Roadways Reconstruction, Contract 5, $310M, #BRC253BAA (NYCDOT)
- Williamsburg Bridge BMT Structure Rehabilitation, Contract 6, $176M, #BRC253BBA (NYCDOT)
- Williamsburg Bridge North Roadways Reconstruction, Contract 7, $248M, #BRC253CA (NYCDOT)
- Williamsburg Bridge Reconstruction of Miscellaneous Rehabilitation of the Main Bridge, Contract 8, $280M, #BRC253CCA (NYCDOT)
- Manhattan Bridge Painting and Interim Rehabilitation, Contract 8C, $8.9M, #BRC1568CA (NYCDOT)
- Manhattan Bridge Rehabilitation of the North Spans over the East River, Contract 10, $175M, #BRC156CA (NYCDOT)
- Manhattan Bridge Rehabilitation of Lower Roadways, Contract 11, $140M, #BRC156A (NYCDOT)
- Component Rehabilitation of New York City Bridges, $5M, #HBCREPL95D (NYCDOT)
- Jerome Avenue Bridge over Moshulu Parkway Rehabilitation, $3.2M, #HBX1105 (NYCDOT)
- Park Lane South Bridge over the LIRR Demolition and Replacement, $2.7M, #HBQ1005 (NYCDOT)
- Northern Boulevard over Cross Island Parkway, $5.5M, #HBQ1073 (NYCDOT)
- Macombs Dam Bridge over Harlem River Rehabilitation, $3.6M, #BRX-287-R (NYCDOT)
- Queensboro Bridge Lead Paint Removal and Protective Coating, $107M, #BRC231P (NYCDOT)
- Rehabilitation of the Brooklyn-Queens Expressway (I-278), Park Avenue Viaduct, $138M, #D259766 (NYSDOT)
- Long Island Expressway-Grand Central Parkway to Van Dam Street Rehabilitation, $88M, #D257842 (NYSDOT)
- Long Island Expressway/Cross Island Parkway Interchange Reconstruction, $47M, #D258437 (NYSDOT) Brooklyn-Queens Expressway, I-278, Park Avenue Viaduct Paint Inspection, $2.3M, #D257563 (NYSDOT)
- Roslyn Viaduct Underdeck Netting, Route 25A, $1.3M, #D257571 (NYSDOT)
- Rehabilitation of the Brooklyn Queens Expressway and the Park Avenue Viaduct, $138M, #D015524 (NYSDOT)
- Robert F. Kennedy (Triborough) Bridge Queens Approach Concrete Structure Deck Replacement - TB-13, $15.9M, #TB-13 (TBTA)
- Robert F. Kennedy (Triborough) Bridge Rehabilitation of Suspension Cables - TB-17, $9.5M, #TB-17 (TBTA)
- Robert F. Kennedy (Triborough) Bridge Deck Replacement of the Randall's Island Junction Structure, Phase I - TB-63, $62.5M, #TB-63 (QA/QC Manager) (TBTA)
- Robert F. Kennedy (Triborough) Bridge Deck Replacement on Suspended Spans and Queens Viaduct, #TB-64A, $165M (TBTA)
- Bronx-Whitestone Bridge Deck Replacement, $150M, #BW-82 (TBTA)
- Bronx-Whitestone Bridge Painting and Cable Rehabilitation, $12.6M, #BW-10 (TBTA)
- Bronx-Whitestone Bridge Miscellaneous Painting, Suspended Rope Collar Replacement and Flag Repairs and Pin Replacement, $4M, #WBM 319X and BW-87A & C (TBTA)
- Verrazano-Narrows Bridge Inspection, Painting and Structural Repairs, $16M, #VN-29 (TBTA)
- Marine Parkway Bridge, $30M, #MP-01 (TBTA)
- Throgs Neck Bridge Orthotropic Deck, $5.2M, #TN-82 (TBTA)
- Rehabilitation of the 2nd Avenue and 36th Street Overpass Bridges at the Queens Midtown Tunnel, $2.5M, #QM-82 (TBTA)

Anthony Grosso, P.E.
Chief Resident Engineer

Professional Profile
Mr. Grosso has over 20 years of experience in the management of large-scale transportation construction projects. He joined GPI after serving in various capacities with the New York City Dept. of Transportation and earlier New York State Dept. of Transportation. At the end of his tenure with the New York City Dept. of Transportation, Mr. Grosso was the maintenance director, Bureau of Bridges. Prior to this assignment, he served as engineer-in-charge for the New York State Dept. of Transportation and supervised field inspections and rehabilitation and reconstruction of some of the largest structures in the New York Metropolitan area. Mr. Grosso possesses first-hand knowledge of the construction, maintenance, repair and painting of major highway and suspension bridges.

Project Experience
Brooklyn Bridge Rehabilitation of the Approach Spans and Ramps and Painting of the Entire Bridge, Contract 6, New York, NY; 6/10-Present. Chief Resident Engineer. This project involves construction management and inspection services for the $509-million rehabilitation of this Iconic National Landmark. The scope of work for the project includes replacement of approach roadway in Manhattan and Brooklyn over the arch blocks; rehabilitation of the Manhattan side ramp structures with widening and deck and bearing replacements; rehabilitation of the approach steel structures with full superstructure replacement of the York and Main Street structures and orthotropic deck installation at Franklin Square; seismic retrofitting of the main bridge, Franklin Square and ramp structures; painting of the ramp structures and suspended spans in their entirety; restoration of historic features. Mr. Grosso's responsibilities include supervising a staff of over 25 engineers and technicians who provide resident engineering services for the project. He is also involved in the review and acceptance of submittals, shop drawings and field change sheets. Coordination of the contractor's work activities are performed by his staff with NYCDOT, NYSDOT and FHWA representatives. Client: New York City Dept. of Transportation

Rehabilitation of the Brooklyn-Queens Expressway (I-278), Park Avenue Viaduct, D259766, Kings County, NY; 8/05-6/10. Resident Engineer. This $138-million project involved construction engineering and inspection for the widening, redecking and repainting of this 850,000 sq ft viaduct with complex MPT on and below this heavily traveled structure. Rehabilitation of this high-volume, major interstate urban highway/bridge included replacement of more than 400 bearings and 1,500 meters of bridge expansion joints. The structure has seismic reinforcement installed which included retainers and plates at the top of columns and additional stiffeners and plates at the base. Also included is extensive coordination with agencies and local communities. Mr. Grosso's responsibilities included the direct daily supervision of a team of engineers, technicians and support staff; the day-to-day coordination with the construction contractor; and the maintenance of positive community relations in a dense urban area. Client: New York State Dept. of Transportation

Williamsburg Bridge Reconstruction of Miscellaneous Rehabilitation of the Main Bridge, Contract 8, #BRC253CCA, New York, NY; 4/03-8/05. Resident Engineer. This $280-million project involved the construction engineering and inspection for the rehabilitation of the main bridge. The scope of work for the project included abrasive blasting and painting of main bridge stiffening trusses, rehabilitation and strengthening of the main towers, rehabilitation of the intermediate towers and installation of seismic shear keys, main cable saddle repair and restraint, rehabilitation of wind tongue and wind chord, main tower and intermediate tower bearing installation, main tower leg removal and replacement, stiffening truss top and bottom chord rehabilitation, traveling maintenance platform installation, re-profiling of main span vertical curve by incrementally adjusting suspender cables, modification of orthotropic footwalk deck expansion joints, waterproofing and surfacing of orthotropic roadway deck, installation of

ornamental balconies and electroliers, integration of intelligent transportation operating system, seismic retrofit of the intermediate towers, installation of contraflow barrier and erection of barrier transfer machine facility, including augured concrete piles. Client: New York City Dept. of Transportation

Williamsburg Bridge North Roadways Reconstruction, Contract 7, #BRC253CA, New York, NY; 4/99-8/03. Resident Engineer. This $248-million project involved the construction engineering and inspection for the reconstruction of the north inner and outer roadways. The scope of work for this project included: the removal of the north inner and outer roadways; installation of bored-in-piles; construction of new reinforced concrete footings, plinths, columns, pier caps, pedestals, retaining walls and abutments; the installation of roadway superstructure including lighting and drainage; replacement of bridge roadway with orthotropic deck and steel barrier; replacement of truss bearings; and painting of underdeck and installation of IVH system. Client: New York City Dept. of Transportation

Williamsburg Bridge BMT Structure Rehabilitation, Contract 6, #BRC253BBA, New York, NY; 6/97-7/01. Resident Engineer. This $176-million project involved the construction inspection for the replacement of the entire mid-section of the bridge that supports the New York City transit tracks (BMT Line). Work included replacement of approaches and abutments, BMT tracks, structures and stringers, repairs to BMT floorbeams, construction of a new signal instrument room, installation and testing of signal, communications and traction-power systems, replacement of stringers on main bridge main span and painting of overhead truss, north transit hanger and anchorage steel. Mr. Grosso's responsibilities included the supervision of a staff of over 35 engineers and administrative personnel and coordinating with a community relations consultant. Client: New York City Dept. of Transportation

Williamsburg Bridge South Roadways Reconstruction, Contract 5, #BRC253BAA, New York NY; 1996-10/98. Resident Engineer. This $310-million project involved the construction engineering and inspection for the reconstruction of the south inner and outer roadways. Mr. Grosso's responsibilities included the supervision of a staff of over 35 engineers and administrative personnel. Mr. Grosso also coordinated community relations issues to address the local community's concerns and to keep the traveling public apprised of the construction work and resultant road closings on the bridge. The work included the reconstruction of the south roadways; interim bracing of the north roadway and the subsequent demolition of the south roadway framing; construction of a new approach structure, including installation of bored-in-piles; construction of new reinforced concrete pile caps, piers, retaining walls and abutments; and a new superstructure. Client: New York City Dept. of Transportation

Bronx-Whitestone Bridge Painting and Cable Rehabilitation, BW-10, New York, NY; 1994-1996. Mr. Grosso performed resident engineering duties for the first stage of this $21-million project which included surface preparation of the steel superstructure in a Class 1 containment and the application of a three-coat high performing epoxy paint. Client: Triborough Bridge and Tunnel Authority

Brooklyn Bridge Anchorage Rehabilitation, New York, NY; 1983-1988. Engineer-in-Charge. At the time, the largest project let by NYSDOT, Mr. Grosso supervised field inspections in repairing deficient elements of both anchorages of this historic New York City landmark. Work on this $53-million project involved reconstruction of the approach promenades; enlargement and reconstruction of the main cable anchorage pits; spreading of cable strands at the anchorage and removal and replacement of suspender components. He was also responsible for reviewing and approving field changes designed by the support service consultant. Client: New York State Dept. of Transportation

FDR-South Street Viaduct, Manhattan, NY; 1982-1983. Engineer-in-Charge. Mr. Grosso supervised the construction inspection consultant responsible for the removal and replacement of the concrete roadway deck and repairs to deficient structural members of this important interchange. Client: New York State Dept. of Transportation

While serving as maintenance director for the New York City Dept. of Transportation, Bureau of Bridges, 1988-1994, Mr. Grosso directed a group of over 20 people whose duties included designing repair details for structurally deficient elements of bridges throughout the New York Metropolitan area. He also managed a multi-million-dollar bridge painting program where he was responsible for determining schedules, type of surface preparation and protective coating system as part of an overall maintenance program.

Christopher Farschon, P.E.
Project Director

Professional Profile
Mr. Farschon is an Expert Consultant with the Greenman-Pedersen, Inc. Coatings Group (GPI) specializing in marine and atmospheric coatings and corrosion. He began his career designing and managing corrosion engineering projects. This experience provided him with a solid technical foundation for corrosion and coatings related field assignments, contract research studies, consulting, and teaching. Chris has directed consulting and quality assurance inspection work for various transportation departments, fabrication facilities, local municipalities, and federal government facilities. His experiences have been concentrated in the bridge and heavy highway industry where he has worked as a field inspector, resident engineer, project manager, and has helped complete over $2M in research for the Federal Highway Administration. The following is a sample of his work history beginning with his current position at GPI.

Total Years Experience 22

Project Experience
Manhattan Bridge Rehabilitation of Cables and Suspenders, Contract 14, New York, NY; 2010-2011. Technical Advisor. This $149-million project involves the unwrapping and rewrapping of cables; replacement of suspenders; replacement of necklace lighting messenger cables and cable hand ropes; installation of new access platforms to existing tower platforms; reversal of lower roadway and operation of HOV lane and replacement of multi-rotational bearings at the Towers; replacement of light poles and luminaries on South upper roadway; replacement of lane control radar on South upper roadway; and retrofit of track stringers and diaphragm connections and other miscellaneous work. Mr. Farschon provided analysis of material testing results and as-needed QA visits for atypical cleaning and painting activities. Client: New York City Dept. of Transportation

Brooklyn Bridge Rehabilitation of the Approach Spans and Ramps and Painting of the Entire Bridge, Contract 6, New York, NY; 2011–Present. Technical Advisor. This project involves construction management and inspection services for this $509-million rehabilitation project. The project also involves coordination of all project activities, quality assurance inspection of all rehabilitation work, and cost control and payment distribution. Activities involve several distinct areas of work including rehabilitation of the approach roadway pavement above the masonry structures; rehabilitation of the Manhattan side ramp structures; painting of the ramp structures and main span; rehabilitation of the approach steel structures; and full replacement of the York and Main Street Structures. Mr. Farschon was responsible for reviewing materials testing information and providing as-needed QA oversight for painting work. Client: New York City Dept. of Transportation

Project Manager and Lead Consultant to the Triborough Bridge and Tunnel Authority's (TBTA) Paint Group; 1998-Present. The TBTA operates and maintains nine major toll facilities in New York City with a combined structural steel square footage of over 26 million square feet. Mr. Farschon provides consulting services related to technical coatings issues at the TBTA, paint program planning, oversight audits for Authority painting contracts, and specification enhancements for Authority contracts.

Throgs Neck Bridge, Project TN-50, and Bronx-Whitestone, Project BW-84B; 1/06-5/08. Served as design engineer providing lead abatement and coatings design services under TBTA projects TN-50 and BW-84B. Mr. Farschon surveyed portions of the Throgs Neck Bridge and the Bronx-Whitestone Bridge for these projects that incorporated over $50M in corrosion control work. He was responsible for all coatings design services under subcontracts to Modjeski and Masters, Inc.

Christopher Farschon, P.E.
Project Director

Marine Parkway Bridge, Project MP-01, New York, NY; 1997-2003. Served as project manager for REI services under Triborough Bridge and Tunnel Authority (TBTA) Project MP-01, the Deck Replacement and Widening of the Marine Parkway Bridge. Mr. Farschon was responsible for project staffing, all reporting, conflict resolution, budget tracking and budget forecasting. Mr. Farschon was formerly the chief coatings inspector for this project. This project incorporated the use of a computerized document control system for all correspondence tracking.

NYCDOT Quality Assurance Oversight, Various Locations, New York, NY; 4/04-8/08. Served as project manager and lead consultant for a quality assurance oversight contract with the New York City Department of Transportation. Mr. Farschon was responsible for inspection and audit process development and implementation on this unique quality assurance project. Field auditors completed Q/A audits on multiple major painting projects in New York City. Included were the Williamsburg Bridge, Queensborough Bridge, Martha Washington Bridge, East 241st Street Bridge, Manhattan Bridge, Brooklyn Bridge, and multiple smaller bridges throughout the city. This project incorporated traffic control, staging, and environmental constrains unique to repainting on major urban bridges.

Consultant for a dispute involving the cleaning and painting of 9 lock gates for an Army Corps of Engineers facility; 10/08-12/08. Mr. Farschon reviewed the project specifications, surveyed all completed work, provided recommendations for improved contractor work procedures, and provided a report of all findings and analysis. This project involved a multi-coat vinyl coating system for immersion service.

Corson's Inlet Bridge Emergency Repair, Ocean City, NJ and Sea Isle City, NJ; 3/07-10/07. Served as design engineer for corrosion and coatings aspects for the Corson's Inlet Bridge Emergency Repair Contract. This bascule span bridge is located between Ocean City, NJ and Sea Isle City, NJ. Mr. Farschon provided painting specifications via special provision edits to the 2001 NJDOT standard specifications, developed painting cost estimates, and provided construction support services.

Stickle Memorial Bridge, Newark, NJ; 12/05-6/07. Served as design engineer for painting design support for the rehabilitation of the New Jersey DOT's Stickle Memorial Bridge in Newark, NJ. Services included a survey of the coatings and corrosion conditions of the structure, a detailed estimate of time and cost of proposed painting methods, sequencing of the painting work with the mechanical and deck replacement work, and development of NJDOT specification special provisions for field re-painting of the bridge superstructure.

Great Channel Bridge, Stone Harbor, NJ; 6/03-7/05. Served as design engineer for the rehabilitation of the Great Channel Bridge near Stone Harbor, NJ. Mr. Farschon provided detailed paint/corrosion condition surveys, provided the painting specifications via special provision edits to the NJDOT standard specifications, developed construction schedules and cost estimates of the paint work, provided construction inspection, and provided design support services. Services were for the Cape May County Public Works Department under two subcontracts.

Roosevelt Boulevard and Sea Isle Boulevard Bridges; 4/01-6/04. Served as design engineer for the repainting of the main spans of the Roosevelt Boulevard and Sea Isle Boulevard Bridges. Under contract with the Cape May County Department of Public Works, Mr. Farschon provided detailed condition surveys, provided the painting specifications via special provision edits to the NJDOT standard specifications, developed construction schedules and cost estimates of the paint work, and provided construction inspection and design support services.

Hurricane Arch Bridge, UT; 8/01-1/02. Served as design engineer for the rehabilitation of the Hurricane Arch Bridge in Utah. Mr. Farschon provided detailed condition surveys, provided the painting specifications via special provision edits to the State standard specifications, and developed construction schedules and cost estimates of the paint work.

William Ferdinandsen, Jr., P.E.
Program Manager

Professional Profile
Mr. Ferdinandsen is an engineer with extensive experience in the management and inspection of highway and bridge reconstruction projects.

Project Experience
Belt Parkway Bridges Program Management Services, Brooklyn, NY; 8/06-Present. Program Manager. This project involves program management and resident engineering and inspection services for the rehabilitation/replacement of seven bridges along a 7.5-mile section of the Belt Parkway. Mr. Ferdinandsen's responsibilities include providing overall construction management leadership and oversight of the Program Management Team from the advanced design phase of construction through final bid ready status and implementation of construction operations. This involves behind-the-scenes coordination efforts and meeting with designers, the State and City DOTs, and City, State and Federal agencies to obtain final approvals, preparation of monthly detailed reports summarizing the program status and monitoring of each project within the program to ensure they meet schedule and budget goals. Mr. Ferdinandsen provides assistance for the community outreach program which was created to allow the NYCDOT to identify and inform the multiple stakeholders of project progress and to create positive dialogue.

Proposed Project Assignment
Constructability Reviews / Technical Specialist

Professional Affiliations
Institute of Transportation Engineers (ITE)
American Society of Civil Engineers (ASCE)
American Society of Highway Engineers (ASHE)

Total Years Experience 26

Mr. Ferdinandsen's daily responsibilities include coordination, review and resolution of: all pre-construction and construction related issues, the overall master corridor reconstruction schedule, prime and subconsultant analysis of traffic engineering and maintenance and protection of traffic (MPT) plans and schemes, landscape architecture and arborist requirements, environmental permitting requirements and enforcement; and community relations presentations and distributions. Mr. Ferdinandsen conducts comprehensive constructability reviews of the individual bridge plans and specifications to establish the most efficient means of work progression for each bridge reconstruction contract in relation to overall program requirements.

During construction, as leader of the Project Management Team, Mr. Ferdinandsen provides management oversight for Resident Engineering inspection services, including: submittal of monthly construction reports for the entire program; review of changes proposed by one (or more) contractor(s) and evaluating the impacts on other projects; approving individual Contractor's construction schedules for each Shore Parkway Bridge; preparing and reviewing a combined construction schedule for all Belt Parkway Bridges under construction; conducting bi-weekly coordination meetings with the entire staff including individual Resident Engineers and the NYCDOT Roadway Bridges Engineer-in-Charge; conducting interim meetings with the staff, Resident Engineers and other involved Agencies on an as-needed basis; and making necessary presentations to Community Boards and other involved agencies. Client: New York City Dept. of Transportation

Williamsburg Bridge Reconstruction of Miscellaneous Rehabilitation of the Main Bridge, Contract 8, #BRC253CCA, New York, NY; 5/03-6/07. Assistant Resident Engineer. This $280-million project involved the construction engineering and inspection for the rehabilitation of the main bridge. The scope of work for the project included abrasive blasting and painting of main bridge stiffening trusses, rehabilitation and strengthening of the main towers, rehabilitation of the intermediate towers and installation of seismic shear keys, main cable saddle repair and restraint, rehabilitation of wind tongue and wind chord, main tower and intermediate tower bearing installation, main tower leg removal and replacement, stiffening truss top and bottom chord rehabilitation, traveling maintenance platform installation, re-profiling of main span vertical curve by incrementally adjusting suspender cables, modification of orthotropic footwalk deck expansion joints, waterproofing and surfacing of orthotropic

roadway deck, installation of ornamental balconies and electroliers, integration of intelligent transportation operating system, seismic retrofit of the intermediate towers, installation of contraflow barrier and erection of barrier transfer machine facility, including augured concrete piles. Mr. Ferdinandsen's responsibilities included the supervision of the steel reinforcement of the main tower columns, the replacement of steel and bearings on the main and intermediate towers and trusses, the abrasive blasting and recoating of the north and south trusses and the interiors of the main tower column legs, the replacement and installation of CCTV cameras and other ITS equipment, and the rehabilitation of the anchorages, suspension system, cables and cable saddles. Client: New York City Dept. of Transportation

Williamsburg Bridge North Roadways Reconstruction, Contract 7, #BRC253CA, New York, NY; 12/00-5/03. Assistant Resident Engineer. This $248-million project involved the construction engineering and inspection for the reconstruction of the north inner and outer roadways. Mr. Ferdinandsen's responsibilities included the supervision of the placement of the orthotropic roadway and walkway decks on the main bridge, the demolition of existing steel and concrete roadways and walkways, and the erection of new support steel. Client: New York City Dept. of Transportation

Williamsburg Bridge BMT Structure Rehabilitation, Contract 6, #BRC253BBA, New York, NY; 3/98-12/00. Office Engineer. This $176-million project involved the construction engineering and inspection for the reconstruction of the BMT structure. Mr. Ferdinandsen's responsibilities on this project included establishment of an extensive computer database system for the tracking of all project correspondence, submittals and approval requests. Mr. Ferdinandsen also reviewed and logged all correspondence and contractor's submittals, and aided in the resolution of project technical issues in concert with the resident engineer. Client: New York City Dept. of Transportation

Williamsburg Bridge South Roadways Reconstruction, Contract 5, #BRC253BAA, New York NY; 1996-2/98. Senior Inspector. This $310-million project involved the construction engineering and inspection for the reconstruction of the south inner and outer roadways. Mr. Ferdinandsen's responsibilities included resolution of project technical issues in concert with the resident engineer, preparation of construction change orders, and as-built drawing coordination. As this project was funded and administered by the NYCDOT, Mr. Ferdinandsen was able to draw significantly from his considerable experience working for NYCDOT in several divisions and capacities. Client: New York City Dept. of Transportation

New York City Dept. of Transportation - Traffic Engineering & Safety; 1995-1996. Technical Assistant to First Assistant Commissioner/Chief Traffic Officer. Mr. Ferdinandsen's responsibilities included aiding in the executive direction of all policy development and operations in the following offices of NYCDOT: Street Lighting; Traffic Signals; Central Traffic Engineering; Geometric Design and Construction; Maspeth Central Sign Shop; and Office of Safety Programs; developing transportation engineering policies and programs governing all roadway networks in New York City.

New York City Dept. of Transportation - Division of Bridges/Roadways; 1992-1995. Assistant Civil Engineer - Flags Repair Unit. As borough engineer for Manhattan and Staten Island, Mr. Ferdinandsen was responsible for reviewing, routing, and tracking all hazardous and potentially hazardous safety and structural bridge conditions ("flags"), as identified by State and City bridge inspectors and weekly field investigations.

Williamsburg Bridge, New York, NY; 1993-1995. Mr. Ferdinandsen served as project manager for all flag conditions on the main span of this bridge. He worked extensively on flag conditions on the Brooklyn, Manhattan and Queensboro Bridges as well as in the Boroughs of Queens and Brooklyn.

Mr. Ferdinandsen created and coordinated a $36-million (annual) Capital Painting Program for a ten-year period that ensured full lead abatement as well as complete protective coating on all of the larger steel bridges in the NYCDOT bridge inventory. He successfully bid nine capital painting contracts in Fiscal Year 1995.

Thomas A. Napolitano, PE
Director of Construction Services

Professional Profile
Mr. Napolitano is an extremely motivated, highly qualified engineer with over 28 years of experience in the supervision of major transportation reconstruction projects, many of which were federally funded. He has held a variety of positions, of increasingly higher responsibility, including inspector, project engineer, assistant resident engineer, resident engineer, and project manager. He has extensive experience on large-scale urban projects that required complex staging, and maintenance and protection of traffic to successfully complete.

Project Experience

NJTA Interchange 6 to 9 Widening Program; 2009-Present, $3B. Managing Principal. GPI is providing construction management, scheduling, change order management, cost control, resident engineering, inspection and material testing services. The construction involves the addition of 170 lane miles to the New Jersey Turnpike between Interchange 6 in Burlington County, and Interchange 9 in Middlesex County. The project also includes the construction of a new toll plaza at Interchange 8 in East Windsor, Mercer County. Work occurs along approximately 34 miles of the busy highway adding three lanes in each direction between Interchanges 6 and 8A and one lane in each direction between Interchanges 8A and 9. Client: NJTA.

NJ TRANSIT Construction Management Services Task Order Contract; 2013-Present. Project Executive. GPI was selected for a three year task order contract to provide NJ TRANSIT with construction management services including constructability reviews, project scheduling and analysis, cost estimating, construction administration and document control, site inspection, vehicle inspection, shop drawing review, change order analysis, claim assistance and construction value engineering. Task Order to date is to provide Resident Engineer services for the management of construction activity of a third party contractor and NJ Transit Force Account. The assignment has a duration of 18 months and consists of the restoration of the tunnel ventilation system on the Newark City Subway.

NJDOT Route 18, Section 2F, 7E, 11H, New Brunswick, NJ; 2005-2010, $154M. Project Manager on this widening and reconstruction of more than 2 miles of this heavily traveled roadway. Project work was completed in 8 major traffic stages, and includes construction of four new bridges, 27 retaining walls, eight noise barriers, MSE abutments; HPC deck slabs, two major culverts; nine sign bridges; and five cantilever sign structures. GPI provided project management, community outreach, construction inspection, scheduling, and claims management services on this project – which is one of the largest transportation projects the NJDOT has undertaken and winner of 2010 NY Construction Transportation Project of Year! Client: NJDOT

Route 36 Highlands Bridge, Highlands and Sea Bright Boroughs, Monmouth County, NJ; 2007-2011, $125M. Project Manager. GPI provided construction inspection services on this project to replace the existing double leaf bascule bridge over the Shrewsbury River with a new high level fixed structure. The new bridge is precast concrete segmental construction - the second such bridge being built in New Jersey. The new bridge is a high-level fixed structure constructed with a slight shift in the alignment to the south at the channel while meeting the existing alignment at the east and west abutments. The project includes bridge deck widening to provide for a center median and shoulders. In addition, there are two over-head Pedestrian Bridges, one crosses over Rt/36 the other, crosses over the access road to the Gateway National Park, "Sandy Hook". The project also includes New Toll Plaza, ITS, message boards, ramps and roadways, as well as replacing all the adjacent and associated infrastructure, water, sewer, drainage and utilities; installing new highway lighting, temporary and permanent Traffic Signals, and required traffic control and highway safety items. ASCE 2011 Project of the Year. Client: NJDOT

NJTA Driscoll Bridge Rehabilitation, Middlesex County, NJ; 2006-2008, $100M. Project Manager. As a partner with PB Americas, GPI provided construction supervision services for the rehabilitation of the Driscoll Bridge over the Raritan River. The work included replacement of the existing deck with HPC, replacement of existing main girder bearings with electromeric or isolation bearings; and installation of new bolsters between existing stringers and floorbeams. Approach roadway drainage and paving and new overhead signage completed the work. GPI provided

resident engineering and construction inspection on this project - which was the single largest construction contract ever for the New Jersey Turnpike Authority. Client: NJTA

Delaware River & Bay Authority – Task Order Inspection Services; 2005-Present, $75M. Project Manager. GPI is providing construction inspection/management services on a task order basis, for various projects on any of the DRBA facilities. GPI is responsible for all aspects of the construction inspection including: establish lines of communication with the owner, contractor and designer; schedule, coordinate, attend and document all progress meetings; coordinate any meetings with outside agencies, officials or community representatives; process shop drawings and RFIs; request and approve material certifications; review and approve catalog cuts and methods of work and equipment; assure compliance with the contract plans and specifications; document daily inspection reports; evaluate and approve the quality and workmanship of all contract work; maintain as-builts; maintain orderly records of project progress, quantities and costs; process contractor Pay Certificates; review Contractor's claims/requests for change orders and make recommendations to the DRBA. Client: DRBA

Route 1&9 Rahway River Bridge, Construction Inspection; 2004-2009, $20M. Project Manager. Project involves replacement of the Rahway River Bridge carrying Route 1&9. Includes construction of 2 new 1,000'+ long, continuous span, deck placement, curved girder bridge structures (separate NB and SB structures) on new alignment alongside the existing structure; construction of realigned approach roadways; and after transitioning traffic onto the new structure, demolition of the original bridge. Passes through a very congested industrial area, with extensive local traffic, and crosses over local roadways and the Rahway River. As a result of the new alignment, private property will be taken, which will necessitate the demolition of existing buildings that contain asbestos. In addition, due to the industrial nature of the area, there are extensive areas of contaminated soils within the project limits that will require excavating and off-site management as regulated waste. Included work to side streets, rebuilding of roadway along Lawrence Ave. as well as other adjacent roadways, curb, sidewalk, driveways, street lighting, utilities, drainage, extensive traffic control. Client: NJDOT

NJDOT Route 1 & 9 Section 1K & 3M, Construction Inspection; 2006-2009, $40M. Project Manager. Project allowed for realignment of Route 1&9 to connect the existing roadway to the new Rahway River Bridge that was built during the previous contract. There was a tremendous amount of utility relocation, ROW issues, sign structures, fiber optics, electrical work, traffic signals, elaborate MPT, night work, drainage, hmac paving and roadway construction. Client: NJDOT

NJDOT Alexander Road Bridge Construction Services, West Windsor, NJ; 2006-2009, $12M. Project Manager. This $12M project consists of the replacement of the existing Alexander Road Bridge over AMTRAK's Northeast Corridor. The work includes construction of the new bridge, demolition of the existing structure, and staged construction for the replacement of the existing T intersection at North Post and Alexander Road with a roundabout. The project in very near to an NJ Transit Station and includes a detour. Client: NJDOT

NJDOT I-80 Widening, Bergen County, NJ; 2001-2003, $85M. Resident Engineer. GPI provided construction inspection services for this widening of I-80 between the Garden State Parkway and Route 17. The project included widening of several bridges over local roads, streams and railroad tracks, seismic retrofit of several bridges, retaining walls, noise walls, Intelligent Transportation System (ITS) improvements, and drainage improvements. GPI provided full services including inspection, community outreach, scheduling, and claims management. Client: NJDOT

DRPA Ben Franklin Bridge, Camden County, NJ; 1998-2000, $20M. Resident Engineer. GPI provided construction management services for this project to rehabilitate the main cables of this long span bridge. The construction work included structural repairs, painting, and opening up the main cables, repairing broken strands, applying protective oil, and rewrapping the cables to extend the service life of this regionally significant bridge. GPI provided construction inspection, scheduling, community outreach, and claims management services. Client: DRPA

Verrazano-Narrows Bridge Inspection, Structural Repairs and Painting, Staten Island, NY; 9/94-1/98, $17M. Resident Engineer. This project included performing over 600 structural steel flag repairs and painting of over 1.2 million sq ft of structural steel. Mr. Napolitano was also responsible for simultaneous management of a $3M Miscellaneous Repairs project that involved drainage, asphalt and concrete work. Mr. Napolitano's responsibilities included complete project oversight including, supervision of the contractor's operations, supervision of his own staff, coordination with other agencies and with other projects. He was also responsible for the complete oversight of the lead abatement program including; all air monitoring, and erection of two 100-ton work platforms. Client: TBTA

James Tarpey, P.E.
Resident Engineer

Professional Profile
Mr. Tarpey is an experienced resident engineer on major highway and bridge rehabilitation projects. He has been the resident engineer on the Manhattan Bridge for the past 24 years, and is held in high regard by NYCDOT for his efforts. Mr. Tarpey's experience includes aggressive schedules, extensive maintenance and protection of traffic coordination, and working with a multitude of utilities and outside agencies. He is consistently commended for his outstanding professional management and his ability to meet schedules on large, complicated projects.

Project Experience
Manhattan Bridge Rehabilitation of Cables and Suspenders, Contract 14, #BRC156R, New York, NY; 9/09-Present. Resident Engineer. This $149-million project involves the unwrapping and rewrapping of cables; replacement of suspenders; replacement of necklace lighting messenger cables and cable hand ropes; installation of new access platforms to existing tower platforms; reversal of lower roadway and operation of HOV lane and replacement of multi-rotational bearings at the Towers; replacement of light poles and luminaries on South upper roadway; replacement of lane control radar on South upper roadway; and retrofit of track stringers and diaphragm connections and other miscellaneous work. Mr. Tarpey is responsible for the communication and coordination of activities with the contractor ensuring that work is performed in accordance with the contract documents. Working closely with his assistant resident engineer, chief inspectors, project specialists, and NYCDOT EIC and other staff, he is responsible for mediating and/or negotiating extra work resulting from changes in the project scope, coordinating with all agencies, monitoring the Project Team's DBE goals, coordinating with the support consultants, and devoting every effort to ensuring that the job is accomplished on schedule. Client: New York City Dept. of Transportation

Manhattan Bridge Rehabilitation of Lower Roadways, Contract 11, #BRC156A, New York, NY; 2/04-8/09. Mr. Tarpey served as resident engineer on this $150-million project that involved the reconstruction of lower roadway; removal and replacement of floorbeams, stringers, bearings and deck in main span and side spans; rehabilitation of anchorage chambers; installation of new lighting and traffic signs on lower roadway; rehabilitation of travelers in suspended spans; replacement of maintenance platforms at towers; and repair of flagged conditions. He was responsible for the communication and coordination of activities with the contractor ensuring that work was performed in accordance with the contract documents. Working closely with his assistant resident engineer, chief inspectors, project specialists, and NYCDOT EIC and other staff, he was responsible for mediating and/or negotiating extra work resulting from changes in the project scope, coordinating with all agencies, monitoring the Project Team's DBE goals, coordinating with the support consultants, and devoting every effort to ensuring that the job was accomplished on schedule. Client: New York City Dept. of Transportation

Manhattan Bridge Rehabilitation of North Spans over East River, Contract 10, #BRC156C, New York; NY; 2/01-2/05. Mr. Tarpey served as resident engineer for this $175-million project that involved rehabilitation of the north upper roadway approach and suspended spans; installation of a new north side bikeway; replacement of the north side truss bearings on the approaches; repainting of the north half of the bridge including the cables and trusses; and installation of an Intelligent Traffic System (ITS) including CCTV's. He was responsible for the communication and coordination of activities with the contractor ensuring that work was performed in accordance with the contract documents. Working closely with his assistant resident engineer, chief inspectors, project specialists, and NYCDOT EIC and other staff, he was responsible for mediating and/or negotiating extra work resulting from changes in the project scope, coordinating with all agencies, monitoring the project team's DBE goals, coordinating with the support consultants, and devoting every effort to ensure that the job was accomplished on schedule. Client: New York City Dept. of Transportation

James Tarpey, P.E.
Resident Engineer

Manhattan Bridge Painting and Interim Rehabilitation, Contract 8C, #BRC1568C, New York, NY; 8/97-10/01. Mr. Tarpey served as resident engineer for this $124-million project which involved the rehabilitation of the Manhattan plaza area, Manhattan Arch and Colonnade; replacement of the structural steel stringer and floorbeam support system for the west side subway tracks; replacement of truss bearings on top of the piers of both approach spans; rehabilitation of eyebars anchoring one of the main suspension cables; and removal of existing paint from the entire west side, both towers and two main cables, and replacing with new coating. He was responsible for planning, staffing and supervising all aspects of project, as well as coordination with outside agencies, NYCDOT specifications and record keeping procedures. Client: New York City Dept. of Transportation

Rehabilitation of the Manhattan Bridge South Side Approach and Suspended Spans, Contract #BRC156E, New York, NY; 12/92-7/97. Mr. Tarpey served as resident engineer on this $96-million project for the repair of the approaches to the bridge leading from Flatbush Avenue in Brooklyn and Canal Street in Manhattan. This project involved the replacement of reinforced concrete-filled grid deck and structural steel stringers and diaphragms, installation of new steel expansion joints and replacement of downspout drainage system for the two west side approach spans, installation of a truss stiffening system for both west side spans and completion of the stiffening system for the east side spans, and completion of rehabilitation of pedestrian west walkway including new extension ramp in Manhattan. He was responsible for planning, staffing and supervising all aspects of project, as well as coordination with outside agencies; NYCDOT specifications and record keeping procedures. Client: New York City Dept. of Transportation

Manhattan Bridge Modification of Traveler System and Lower Level Interim Rehabilitation, Contract #D253248, New York, NY; 1990-1992. Mr. Tarpey served as resident engineer for the removal and replacement of existing track beams, removal and replacement of existing hangers including modification of partially fabricated hangers and providing new system of yokes, mechanical drive, electrical control, skew correction system and electrical feed system. Also included was the removal and disposal of existing conduits, conductor rails, pull boxes, junction boxes, mechanical machinery and electrical equipment. The project also involved interim rehabilitation to the structural steel support members for the lower roadway of the bridge, rehabilitation of floorbeams, crossbeams and ends of stringers. He was responsible for planning, staffing and supervising all aspects of project, as well as coordination with outside agencies, NYCDOT specifications and record keeping procedures. Client: New York State Dept. of Transportation

Marine Parkway Rehabilitation, New York, NY; 1990. Mr. Tarpey served as resident engineer for the rehabilitation of one of the longest vertical lift bridges in the world. The work included replacement of all wire ropes for the lift span, rehabilitation of the air buffers, rehabilitation of all mechanical elements, drainage upgrade at the toll plaza, complete replacement of deck and supporting steel for the walkway. He was responsible for planning, staffing and supervising all aspects of project, as well as coordination with outside agencies; NYCDOT specifications and record keeping procedures. Client: Triborough Bridge and Tunnel Authority

Brooklyn Bridge Rehabilitation of Main Cable, Contract #D251686, New York, NY; 1985-1990. Mr. Tarpey served as resident engineer for this project that involved replacement of suspenders, stays and cables; rehabilitation of main cable; replacement of cable wrapping wire; new timber and concrete promenades; new roadway and necklace lighting; new bearings on approaches; and complete painting of bridge and approaches including disposal of hazardous waste. He was responsible for planning, staffing and supervising all aspects of project, as well as coordination with outside agencies; NYSDOT specifications and record keeping procedures. Client: New York State Dept. of Transportation

Brooklyn Bridge Rehabilitation of Promenade and Approaches, Contract #D250383, New York, NY; 1983-1985. As office engineer, Mr. Tarpey was responsible for maintaining project office records, preparing contractor estimates and reviewing inspector's reports for completeness, accuracy and format. Client: New York State Dept. of Transportation

RESUMES

CONSTRUCTION MANAGERS / RESIDENT ENGINEERS

Resumes are presented in alphabetical order

Muhammad Khalid Ansari, P.E.
Resident Engineer

Professional Profile
Mr. Ansari is a professional engineer in New York, New Jersey and Connecticut and has more than 24 years construction inspection and construction management experience including three years as resident engineer on the New Jersey Turnpike Interchange 6 to 9 Widening Program. He has also performed constructability reviews for the Program and assisted with closeout of other contracts. In addition to the NJTA, Mr. Ansari has experience supervising large field staff for major bridge and highway projects on Route 495 (approach to Lincoln Tunnel) and other state highways, NYSDOT, NYCDOT/NYCDDC.

Project Experience
DRJTBC Easton Phillipsburg Bridge CM437A; 6/13-Present, $29.6M. Resident Engineer. This project is a multi-faceted rehabilitation of the Easton-Phillipsburg (Route 22) Toll Bridge and related facilities. Rehabilitation project elements include bridge painting, pavement repairs, deck replacement and repair, substructure repairs, bearing replacement, electrical upgrades and toll plaza upgrades. Project includes multiple bridge structures: Main River Bridge, Broad Street Viaduct, Route 22 over SR 611, Route 22 over Bank Street, Route 22 over 3rd Street and the pedestrian tunnel at Bushkill Street. The rehabilitation project elements include: pavement repairs and reconstruction throughout the facility; Main River Bridge and Broad Street Viaduct (deck removal and replacement, cleaning and painting of all structural steel, rehabilitation/replacement of deck drainage system, structural steel and substructure repairs as defined per inspection, and rehabilitate pedestrian railing); remove and replace superstructure of the Route 22 Bridge over SR 611; construct an ADA compliant ramp to the existing pedestrian tunnel under Route 22 at Bushkill Street; replace roadway and bridge lighting throughout the facility – lighting on Snyder Street to match Easton streetscape lighting; Bank Street and 3rd Street bridges (replace bridge bearings, mill and resurface bridge deck, clean and paint stringer ends and fascia beam, miscellaneous repairs); electrical upgrades to toll facility load center in Administration Building; and minor repairs and painting to toll booth facilities. Duties include being the Owner's direct on-site representative to the contractor, direct supervision of a Construction Project's Field Inspection/Engineering staff, performing quality assurance oversight of major items of work in progress and/or ensuring that the project is constructed in accordance with the plans and specifications for the owner. Client: DRJTBC

New Jersey Turnpike Interchange 6 to 9 Widening Program; 2/10-6/13, $2.7B. Resident engineer for Contract No. T869.120.801 (approximately $14.4M) Grading, Drainage, Paving, Structures and Lighting for the Interchange 6 to 9 Widening Program SNO Roadway and Service Area 8N Ramps from Mile 74.3 to Mile 82.3 in the Townships of Monroe, South Brunswick and East Brunswick and the Borough of Milltown, Middlesex County. This 8 mile contract adds a third lane to the SNO roadway, modifies the deceleration and acceleration lanes at Service Area 8N and includes pavement, guiderail, drainage and lighting. Additionally, the contract includes the construction of a noise barrier and four overhead VMS structures. As resident engineer, Mr. Ansari is the Owner's direct on-site representative to the contractor and is responsible for the direct supervision of a construction project's field inspection/engineering staff, performing quality assurance oversight of major items of work in progress and/or ensuring that the project is constructed in accordance with the plans and specifications for the owner. Client: NJTA

Muhammad Khalid Ansari, P.E.
Resident Engineer

NJDOT Maintenance Resurfacing, Region North Contract 304; 2/09-6/10, $5M. Resident engineer on a roadway maintenance project in Hudson (Rte 495 & 3) County. Project involved reconstruction of inlets, manholes, curbs and driveways, milling and HMA paving of mainline roadway, pavement marking, and installation of weigh-in-motion device and controller. All contract works were performed during night time, and approximately 20 lane miles of roadway were milled for 2 inches and paved with HMA and SMA mixes, and at some areas full depth shoulder reconstruction were performed. The project included complex MPT. Being in close proximity to the NYC Hudson River crossings (GWB, Lincoln & Holland Tunnels), extensive coordination was done on a daily basis with the Port Authority of NY&NJ, to coordinate all works with the tunnels and GWB closures. Also, extensive coordination was required with the New Jersey Turnpike Authority due to their own work near Exit 16E. Worked nights, duties included being the Owner's direct on-site representative to the contractor, direct supervision of a Construction Project's Field Inspection/Engineering staff, performing quality assurance oversight of major items of work in progress and/or ensuring that the project is constructed in accordance with the plans and specifications for the owner. Responsible for MPT and performed inspection of major items of work as needed to supplement the inspection staff. Client: NJDOT.

NJTA Interchange 6-9 Widening Constructability - Constructability Reviews, NJ; 4/09-6/09. Reviewer. Responsibilities included review and comment on various construction contracts for this $2.6 billion Widening Dualization Program.

First Ring Road - Interchange Construction Project, Jabriya, Kuwait; 11/07-1/09, $125M. Resident engineer on a major and biggest interchange construction project in downtown Kuwait City. Project involved construction of three elevated bridges with 34 piers, seven at-grade bridges, five troughs with 3000 tension piles, four pedestrian bridges, three utility bridges, three MSE ramps, two retaining walls, approximately two km of box culvert (2.0m X 4.0m) installation, sanitary sewer installation by micro-tunneling, water main installation, and upgrade of approach and surrounding roadways. Duties included being the Owner's direct on-site representative to the contractor, direct supervision of a Construction Project's Field Inspection/Engineering staff, field inspection of critical items of work, performing quality assurance oversight of major items of work in progress and/or ensuring that the project is constructed in accordance with the plans and specifications for the owner.
