Route 17 Bridge over Wallkill River (D258965), NY; 1/06-11/07, $17M. Resident engineer for the construction of 110.0m long two span post-tensioned girder bridge construction. Project involved replacement of existing three span bridge by two span pre-cast, pre-stressed, post tensioned concrete bulb-tee girders with reinforced bridge deck, median & shoulder barriers, approach & sleeper slabs, approach roadways, drainage, box-culvert, guide rail and landscaping work. Duties included being the Owner's direct on-site representative to the contractor, direct supervision of a Construction Project's Field Inspection/Engineering staff, field inspection of major items of work (beam erection, deck placement, approach roadway construction, major traffic shifts, etc), performing quality assurance oversight of major items of work in progress and/or ensuring that the project is constructed in accordance with the plans and specifications for the owner. Client: NYSDOT, Region 8.

Reconstruction of Reads Lane (HWQ230G-R), New York, NY; 1/03-1/06, $2M. Resident engineer for the curb-to-curb reconstruction of approximately one mile of Reads Lane. Inspection duties include installation of 8"&12"water main, 15"sanitary & storm sewer construction on timber piles, curbs & sidewalk installation, the reconstruction of roadway with 10"concrete base and 2"asphalt wearing course, MPT, night work, HMA, street and traffic signs installation, electrical poles installation, landscaping and pavement marking works. Duties included being the Owner's direct on-site representative to the contractor, direct supervision of a small Construction Project's Field Inspection/Engineering staff, performed field inspection of the major items of work due to nature of the project and the size of staff, performing quality assurance oversight of major items of work in progress and/or ensuring that the project is constructed in accordance with the plans and specifications for the owner. Client: NYCDOT/NYCDDC.

Reconstruction of Sheridan Expressway, NY (D258767); 1/02-6/03, $27M. Office Engineer/Assistant Resident Engineer. Inspection responsibilities included; major items of work for the reconstruction of Sheridan Expressway MPT, night work, deck placement, bearing and pedestal replacement of Westchester Avenue bridge over I-895 as well as, bridge foundation repair of seven steel columns, which support, Bridge over Westchester Avenue. Client: NYSDOT, Region 11

Jeffrey Brugge, P.E.
Resident Engineer

Professional Profile
Mr. Brugge has 17 years of experience on construction projects in the New York metropolitan area. He served as a resident engineer, an assistant resident engineer, office engineer, community liaison, and construction inspector on a variety of projects.

Project Experience
Replacement of the Upper Level Deck of the Suspended Span of the Verrazano-Narrows Bridge, VN-80B, Staten Island, NY; 7/13-Present. Resident Engineer. This $236-million project involves reconstruction to replace the upper level roadway superstructure of the Verrazano-Narrows Bridge. The work includes removal of existing upper level roadway deck and barrier, installation of new upper level orthotropic deck, overlay, drainage systems, sign structures, lighting, barrier, painting and miscellaneous utility work. Mr. Brugge is responsible for overseeing and managing the entire construction management/inspection team, including various subconsultants and technical advisors. Client: Triborough Bridge and Tunnel Authority

Replacement of the Queens Approach at the Bronx-Whitestone Bridge, BW-89C, Queens/Bronx, NY; 4/11-7/13. Assistant Resident Engineer. The $110-million project involved construction management and inspection services required to support the construction work of Project BW-89C, Replacement of the Queens Approach at the Bronx-Whitestone Bridge. The replacement work included installation of mini-pile foundations, temporary support structures, temporary and permanent traffic barrier systems, fire stand pipe system, new lighting and communications; maintenance and protection of traffic; incidental lead abatement; and coordination with the community and other public agencies in this densely populated traffic corridor. Mr. Brugge's responsibilities included performing various pre-construction tasks by providing a constructability review and independent quantity take-off used during the qualification process of the prospective low-bid contractor. He was also responsible for assembling and implementing a job-specific Quality Management System Manual and Project Health & Safety Plan for the project. He also managed a team of inspectors through the construction supervision and documentation of 384 Auger-pressure-grouted (APG) piles followed by the placement of concrete pile caps combining for over 2000 yd3. He was involved with the implementation of various MPT schemes across the bridge; attended and assisted the client at multiple community meetings with presentations and Q&A sessions; and he also interacted with the public in their homes and businesses, addressing a variety of questions and concerns they have over the construction in their neighborhood. Client: Triborough Bridge and Tunnel Authority

Bronx-Whitestone Bridge Bronx/Queens Approach, BW-89/WBM-342, Bronx, NY; 9/09-4/11. Assistant Resident Engineer. This $192-million project involved the staged removal and replacement of the Bronx Approach superstructure and substructure from the Bronx Toll Plaza to the Bronx Anchorage. Work included the installation of excavation support systems, mini-pile foundations and temporary steel support systems to support the existing structure during the staged construction. There were massive concrete placements for new concrete footings and piers. Mr. Brugge's responsibilities on the project included providing inspection supervision for the emergency underdeck concrete repairs on the Bronx Approach, coordination of MPT throughout the various stages of permanent lane closure on the Bridge, and inspection supervision of all on-grade roadway construction. Mr. Brugge also developed Engineer's Estimate for the negotiation of extra work items on the project, issued meeting minutes and worked with the client in coordinating other large scale projects on the Bridge. Client: Triborough Bridge and Tunnel Authority

Bronx-Whitestone Bridge Cable/Suspender Rope Rehabilitation, BW-85/86/WBM-339, Bronx, NY; 3/08-9/09. Assistant Resident Engineer/Office Engineer. Provided construction management and inspection services for coating removal and application and cable/suspender rehabilitation for Project BW-85/86/WBM-339, Select Cable Panel

Proposed Project Assignment
Construction Manager

Jeffrey Brugge, P.E.
Resident Engineer

Opening/Suspender Rope Removal and Replacement and Painting at the Bronx-Whitestone Bridge. Mr. Brugge's responsibilities included supervising a team of inspectors ensuring proper inspection and documentation of suspender rope replacement, unwrapping/wedging/rewrapping of the Main Cable, removal and replacement of select main cable wires for sampling purposes as per the BTC method and the NCHRP, tensioning of cable band bolts, testing and documentation of the surface preparation and painting of all suspender ropes, main cables, the exteriors of the Bronx and Queens towers, and select area inside the towers. The work included various types of containments, methods of surface preparation, and paint application. Mr. Brugge maintained all documents related to the project using a filing system and method approved by the client, created and maintained various correspondence logs using database programs and reviewed scheduling updates via Primavera Project Planner. Mr. Brugge coordinated lane closures and construction with various contractors working within the facility. Mr. Brugge attended project meetings where he recorded and issued minutes. Client: Triborough Bridge and Tunnel Authority

Manhattan Bridge Rehabilitation of Lower Roadways, Contract 11, #BRC156A, New York, NY; 2/05-3/08. Senior inspector on this $150-million project that involved the reconstruction of lower roadway; removal and replacement of floorbeams, stringers, bearings and deck in approaches and suspended spans; rehabilitation of anchorage chambers; installation of new lighting and traffic signs on lower roadway; rehabilitation of travelers in suspended spans; replacement of maintenance platforms at towers; and repair of flagged conditions. He was responsible for inspection of removal/replacement of lower roadway including deck, stringers and floorbeams and maintenance and protection of traffic (MPT). He was also involved with the inspection of anchorage rehabilitation including replacement of 7 in., 9 in. and 18 in. thick floors; vertical and overhead concrete spall repairs to walls and ceiling; crack sealing by epoxy injection and chemical grouting; re-routing of output ducts for the dehumidification system; security upgrades to the anchorage including the installation of new windows and gratings; and rehabilitation of the Brooklyn Bridge Plaza Park including planting of new trees, placement of architectural concrete (lithocrete), installation of new drainage system and lighting. Client: New York City Dept. of Transportation

Manhattan Bridge Rehabilitation of North Spans over East River, Contract 10, #BRC156C, New York; NY; 7/01-2/05. Senior inspector for this $175-million project that involved rehabilitation of the north upper roadway approach and suspended spans. He inspected the removal/replacement of north upper roadway including deck, stringers and floorbeams, MPT, rehabilitation of the colonnade arch which included complete renovation of the five floors of interior, new stairs, walls, elevator, HVAC, fire and intrusion alarms. Client: New York City Dept. of Transportation

Manhattan Bridge Painting and Interim Rehabilitation, Contract 8C, #BRC1568C, New York, NY; 2/01-7/01. Inspector. This $124-million project involved the rehabilitation of the Manhattan plaza area, Manhattan Arch and Colonnade; replacement of the structural steel stringer and floorbeam support system for the west side subway tracks; replacement of truss bearings on top of the piers of both approach spans; rehabilitation of eyebars anchoring one of the main suspension cables; and removal of existing paint from the entire west side, both towers and two main cables, and replacing with new coating. His responsibilities included inspection of the erection of structural steel and MPT. Client: New York City Dept. of Transportation

Williamsburg Bridge North Roadways Reconstruction, Contract 7, New York, NY; 5/00-2/01. Construction Inspector. This project involved REI services to replace the entire approach structure and the framing/deck areas on the main bridge. This involved the reconstruction of the north inner and outer roadways. Mr. Brugge's responsibilities included preparation for demolition and removal of bridge deck, and installation of orthotropic bridge deck. He also verified measurement and force accounts. Client: New York City Dept. of Transportation

Williamsburg Bridge BMT Structure Rehabilitation, Contract 6, #BRC253BB, New York, NY; 6/99-8/99. Construction Inspector. Operations covered included modification of bracing struts at the Manhattan/Brooklyn towers, repair of south truss bottom chord, and removal and replacement of bearing grease pan covers at various locations on the main bridge. Responsibilities involved inspections at Manhattan/Brooklyn approach pier caps; preload Manhattan/Brooklyn pier cap anchor bolts; lateral brace and web reinforcement repairs main span; demolition of Manhattan/Brooklyn approach BMT structure; pre-assembly of TA track girders; at Brooklyn approach TA track girders; and installation of Brooklyn approach debris shield. Construction cost: $176 million. Client: New York City Dept. of Transportation

Daniel Chasse, P.E.
Resident Engineer

Professional Profile
Mr. Chasse is a qualified construction inspector with experience in the inspection of major suspension bridge rehabilitation projects in the New York City area.

Project Experience
Replacement of the Queens Approach at the Bronx-Whitestone Bridge, BW-89C, Queens/Bronx, NY; 11/13-Present. Chief Inspector. The $110-million project involves construction management and inspection services required to support the construction work of Project BW-89C, Replacement of the Queens Approach at the Bronx-Whitestone Bridge. The replacement work includes installation of mini-pile foundations, temporary support structures, temporary and permanent traffic barrier systems, fire stand pipe system, new lighting and communications; maintenance and protection of traffic; incidental lead abatement; and coordination with the community and other public agencies in this densely populated traffic corridor. Mr. Chasse's responsibilities include supervision of the Contractors daily field work activities. These activities include demolition of existing superstructure (concrete deck, girders, floorbeams and bracing); installation of new steel (girders, bearings, and bracing); placement of new concrete deck (haunches, studs, rebar and concrete); longitudinal grooving and sealing of new deck; and MPT stage switches. Mr. Chasse's office duties include reviewing Inspectors daily reports; reviewing shop drawings; preparing change order estimates; communicate with Client and Contractor on a daily basis; and attend/hold construction meetings. Client: Triborough Bridge and Tunnel Authority

Manhattan Bridge Rehabilitation of Cables and Suspenders, Contract 14, #BRC156R, New York, NY; 3/10-11/13. Assistant Resident Engineer. This $149-million project involved the unwrapping and rewrapping of cables; replacement of suspenders; replacement of necklace lighting messenger cables and cable hand ropes; installation of new access platforms to existing tower platforms; reversal of lower roadway and operation of HOV lane and replacement of multi-rotational bearings at the Towers; replacement of light poles and luminaries on South upper roadway; replacement of lane control radar on South upper roadway; and retrofit of track stringers and diaphragm connections and other miscellaneous work. Mr. Chasse was responsible for supervision of daily work activities out on the job site which includes rehabilitation to the suspended spans main cable, installation of new access platforms at towers, retro-fit of subway track stringers, replacement of tower bearings, replacement of south upper roadway lighting system, daily maintenance and protection of traffic (MPT) operations and seeing that the Contractor is adhering to their Health and Safety Plan. Office duties include reviewing Inspectors daily reports, preparing Engineers daily diary, reviewing Contractors monthly pay estimates, Time and Material work, preparing and reviewing Contractors change orders, reviewing Transit Authority monthly payments and communicating with the Client and other agencies on a daily basis as needed. Client: New York City Dept. of Transportation

Verrazano-Narrows Bridge Rehabilitation of Structural Steel Repairs, VN-32, New York, NY; 1/09-3/10. Resident Engineer. This project involved construction administration, on-site inspection, and testing and support services. Included repair of deteriorated subfloorbeams, stringers, stiffener/connection plates, cracked/broken missing welded connection plates, reinforce deteriorated stringer top flange and remove and replace deteriorated bolts, rivets, and drainage piping. Mr. Chasse's responsibilities included preparing Engineer's daily project diary and monthly progress reports; preparing agenda, conducting job meetings and distributing minutes from job meetings; ensuring that contract administration, quality control, schedule control and safety are properly adhered to; holding weekly safety meetings with field staff; answering questions directed by TBTA and contractor; touring jobsite on a daily basis to inspect work activities; reviewing contractor's submittals such as Health and Safety Plan, QA Plan,

Daniel Chasse, P.E.
Resident Engineer

RFI's along with others and providing comments to TBTA and contractor; visiting off site fabrication plants to witness fabrication of steel, coating applications and shop assembly; reviewing and commenting on contractor's test reports; reviewing inspectors daily reports (IDR'S); and communicating and working with outside agencies such as United States Coast Guard and with other consultants at the facility where there is interference between jobs. Client: Triborough Bridge and Tunnel Authority

Verrazano-Narrows Bridge Rehabilitation of the Lower Level Approaches, VN-17A, New York, NY; 4/07-1/09. Assistant Resident Engineer. This project involved the administration and quality assurance inspection of all work associated with the rehabilitation of the lower level approaches of the Verrazano-Narrows Bridge. Mr. Chasse's responsibilities included assigning inspectors their daily work operations, overseeing inspectors out in the field and providing any assistance they might need regarding field inspection, performing field inspections for removal and installation of new approach span deck, attending progress meetings along with other various type meetings and providing assistance to the resident engineer on a daily basis. Client: Triborough Bridge and Tunnel Authority

Bronx-Whitestone Bridge Deck Replacement - BW-82, Bronx, NY; 7/04-4/07. Senior Inspector. This $150-million project involved the reconstruction of the suspended spans deck with an orthotropic steel deck. The project also involved the installation of new maintenance travelers, electrical and communications systems, fire protection system and inspection platforms. Mr. Chasse's responsibilities included inspection of demolition of existing deck elements and installation of approximately 260,000 sq ft of orthotropic deck. Client: Triborough Bridge and Tunnel Authority

Manhattan Bridge Rehabilitation of North Spans over East River, Contract 10, #BRC156C, New York; NY; 12/03-7/04. Senior Inspector. This $175-million project involved rehabilitation of the north upper roadway approach and suspended spans; installation of a new north side bikeway; replacement of the north side truss bearings on the approaches; repainting of the north half of the bridge including the cables and trusses; and installation of an Intelligent Traffic System (ITS) including CCTV's. Mr. Chasse's responsibilities included reviewing contract records and analysis of time and material reports for possible claim by contractor. He also met with the resident engineer and contractor staff to verify MURK forms. Client: New York City Dept. of Transportation

Robert F. Kennedy (Triborough) Bridge Deck Replacement of the Randall's Island Junction Structure, Phase I - TB-63, New York, NY; 11/00-11/03. Senior Inspector. The $125-million project was actually comprised of two major reconstruction efforts: the complete replacement of the Randall's Island Junction Structure, and the redecking of the Bronx Approach. Mr. Chasse's responsibilities included structural steel erection; concrete placement of footings, columns and piers; and installation of multi-rotational seismic bearings. Client: Triborough Bridge and Tunnel Authority

Manhattan Bridge Painting and Interim Rehabilitation, Contract 8C, #BRC1568C, New York, NY; 9/97-10/00. Mr. Chasse served as senior inspector on this $124-million construction project, which involved the rehabilitation of the historical Manhattan plaza, arch and colonnade; replacement of the structural steel stringer and floorbeam support system for the south side subway tracks; replacement of the truss bearings on the piers of the approach spans; and recoating of the south side of bridge including both towers and two main cables. His responsibilities included inspection of subway floorbeams, stringers and track removal, lead paint containment, bridge jacking, and concrete testing. Client: New York City Dept. of Transportation

Williamsburg Bridge BMT Structure Rehabilitation, Contract 6, #BRC253BBA, New York, NY; 4/99-5/99. Inspector. This $176-million project consisted of the demolition and reconstruction of the entire BMT transit structure on the Williamsburg Bridge. Mr. Chasse was responsible for organizing and leading the quality assurance inspections and quantity reporting for all structural steel and reinforced concrete demolition and construction on this project. Client: New York City Dept. of Transportation

Manhattan Bridge West Side Approach and Suspended Spans Rehabilitation, Contract #BRC156E, New York, NY; 7/94-4/97. Inspector. Mr. Chasse's responsibilities on this $96-million project included inspection of reconstruction of west walkway - replacement of steel supported concrete grid deck and fencing across entire bridge; reconstruction of west upper roadway approach and suspended spans; replacement of roadway stringer beams and new concrete deck with waterproofing system and micro surfacing overlay; rehabilitation of trusses - replace/reinforce corroded truss components, lacing bars, batten plates, truss diagonals and truss chords; stiffening of trusses and new upper/lower lateral end frames; rehabilitation of walkway and replacement of deteriorated wires of the main cable; east maintenance walkway - new open grating across entire bridge; and monitoring MPT. Client: New York City Dept. of Transportation

Ilya Gologorskiy, P.E.
Resident Engineer

Professional Profile
Mr. Gologorskiy is a resident engineer with over 25 years of highway/roadway bridge construction engineering and inspection experience in urban infrastructure construction projects.

Project Experience

Bayonne Bridge Navigational Clearance Program (BBNCP) Construction Management, NY/NJ; 11/13-3/14. Resident Engineer. This project involved construction management services for the $743-million Bayonne Bridge Navigational Clearance Program (BBNCP). This extraordinarily complex, once-in-a-lifetime project replaced more than 5,000 feet of viaduct and re-frame the existing steel arch structure to accommodate a new roadway 65 feet above the existing roadway. Mr. Gologorskiy was responsible for evaluation of the proposed project change orders; quantity and price estimate of the project changes; and price negotiation with the contractor. Client: Port Authority of NY & NJ

REI Services in Connection with the Protective Coating of Various Bridges in the Bronx, Bronx, NY; 3/14-Present. Resident Engineer. This project involves resident engineering and coatings inspection during repainting of various bridges in Bronx, NY. Mr. Gologorskiy is responsible for reviewing contractor's submittals, including maintenance and protection of traffic (MPT) plans, shop drawings, design calculations, catalog cuts; providing engineering clarification; verifying compliance of installation and removal of Class 1A, Class 3P and rapid deployment containments with approved plans, details and specifications (SSPC); reviewing contractor's schedules and implementing necessary adjustments; reviewing contractor's payment requisitions and providing client with the engineer's estimate for the payments and generating all related documentation; resolving all environmental issues related to containment, lead abatement and waste management; and overseeing and coordinating all MPT related operations during day and night shifts. Client: New York City Dept. of Transportation

Staten Island Railroad Bridges, Staten Island, NY; 6/11-11/13. Resident Engineer. This project involved resident engineering and inspection services in connection with protective coating of Staten Island Railroad (SIRR) Bridges. Mr. Gologorskiy was responsible for reviewing contractor's submittals, which included but was not limited to, maintenance and protection of traffic (MPT) plans, shop drawings, design calculations, catalog cuts; providing engineering clarification; verifying compliance of installation and removal of Class 1A, Class 3P and rapid deployment containments with approved plans, details and specifications (SSPC); reviewing contractor's schedules and implementing necessary adjustments; reviewing contractor's payment requisition and providing client with the engineer's estimate for the payments and generating all related documentation; resolving all environmental issues related to containment, lead abatement and waste management; and overseeing and coordinating all MPT related operations during day and night shifts. Mr. Gologorskiy coordinated the project operations with SIRTOA and MTA. Client: New York City Dept. of Transportation

Recoating of Six Belt/Shore Parkway Bridges, Brooklyn, NY; 3/10-6/11. Resident Engineer. This $5-million project included old paint removal and new paint application at six bridge locations over the Belt/Shore Parkway in Brooklyn, NY. Mr. Gologorskiy was responsible for reviewing contractor's submittals, which includes but is not limited to, maintenance and protection of traffic (MPT) plans, shop drawings, design calculations, catalog cuts; providing engineering clarification; verifying compliance of installation and removal of Class 1A, Class 3P and rapid deployment containments with approved plans, details and specifications (SSPC); reviewing contractor's schedules and implementing necessary adjustments; reviewing contractor's payment requisition and providing client with the engineer's estimate for the payments and generating all related documentation; resolving all environmental issues related to containment, lead abatement and waste management; and overseeing and coordinating all MPT related operations during day and night shifts. Client: New York City Dept. of Transportation

Ilya Gologorskiy, P.E.
Resident Engineer

Reconstruction of Sands Street, Brooklyn, NY; 2008-2010. Mr. Gologorskiy served as resident engineer on this $4-million project which included the installation of a new bike lane and reconstruction of the street drainage system; concrete curbs and sidewalks; concrete base and asphalt pavement; 12-in. combined sewer; 20-in. distribution water main; and street lighting, traffic control and fire alarm systems. Client: New York City Dept. of Design and Construction

Reconstruction of Flushing Avenue, Brooklyn, NY; 2004-2010. Resident/Office Engineer. This $44-million project included reconstruction of 30-in. to 72-in. trunk water main; 8-in. to 20-in. distribution water main; 15-in to 54-in. combined sewer; street drainage system; concrete curbs and sidewalks; concrete road base and asphalt pavement; and street lighting, traffic control and fire alarm systems. This project involved New York State funding. Mr. Gologorskiy reviewed the contractor's schedule (prepared with MS Project); requested and/or implemented necessary adjustments during project duration; maintained and kept all contract documentation; computerized contractor's payment and quantity record system; as-built drawing and support documentation; reviewed and approved trunk main geometry and fabrication drawings, road design drawings, sheeting design, etc.; requesting all documents necessary for contract change orders from the contractor and/or utility companies; negotiating with contractor regarding technical procedures and price for the work and materials under the change orders; estimating new items price and time and material needed; producing, submitting and getting approval of four overruns and 26 change orders for pier/plate protection system, restoration of 32-in. sewer with DEP approved lining method, curb design and layout; additional distribution water main, building underpinning, etc.; renegotiating with the contractor prices for the existing contract items; working with NYCDOT, NYCDEP and NYSDOT; and coordinating with utility companies, subconsultants and community. Client: New York City Dept. of Design and Construction

Installation of Pedestrian Ramps, Brooklyn, NY; 2002-2004. Resident Engineer. This $4-million project included reconstruction of more than 2,000 corners in the Borough of Brooklyn. He was responsible for a crew of five inspectors and office engineers. Mr. Gologorskiy worked closely with New York City Dept. of Design and Construction and the New York City Dept. of Transportation. Client: New York City Dept. of Design and Construction

Installation of Pedestrian Ramps, Citywide, NY; 2000-2002. As office engineer, Mr. Gologorskiy was responsible for maintenance of all project documents per NYCDOT Manual of Uniform Record Keeping (MURK) including inspector's daily reports, payment items, and monthly payment requisitions; keeping all invoice and project documentation (correspondence, data sheets, QA and DDC reports, approvals, etc.); maintaining computerized engineer's estimate system; and maintaining computerized contractor's payment and quantity record system using Microsoft Access database and Microsoft Excel spreadsheets. Client: New York City Dept. of Design and Construction

Citywide Resurfacing Contract, NY; 1999-2000. Office Engineer. Mr. Gologorskiy was responsible for maintenance of all project documents per NYCDOT MURK including inspector's daily reports, payment items, monthly payment requisitions; maintenance of computerized engineer's estimate; and maintenance of computerized contractor's payment and quantity record system using Microsoft Access database and Microsoft Excel spreadsheets. Client: New York City Dept. of Design and Construction

Reconstruction of 16th Avenue Bridge, Brooklyn, NY. Assistant Office Engineer. Mr. Gologorskiy assisted the office engineer with recordkeeping in accordance with MURK; assisted with revision of the inspector's daily reports; and kept records of safety and project meeting minutes. Client: New York City Dept. of Transportation

Route 9A Reconstruction, New York, NY. Inspector. Mr. Gologorskiy was involved the inspection of water main replacement, installation of electrical lines for Con Edison, installation of new and adjustment o the old electrical boxes. The project also involved performing field tests, calculations and maintenance.

Citywide Resurfacing Contract, NY; 1998-1999. Inspector. Mr. Gologorskiy supervised the excavation, compaction of the subgrade, form preparation and pouring the concrete for the concrete curbs and sidewalks; supervised installation of the new concrete base for pavement, adjustment and modification of the existing utility structures, grinding of existing asphaltic concrete wearing course paving of the new asphaltic concrete wearing course; performed field concrete tests including slump test, air content test and preparation of the cylinders for laboratory tests; performed MPT during the construction; performed the field measurements and calculation of the estimating of the work quantities; and performed elevation measurements. Client: New York City Dept. of Design and Construction

Robert Leo, P.E.
Resident Engineer

Professional Profile
Mr. Leo is an assistant resident engineer with extensive construction experience on reconstruction projects within the New York area.

Proposed Project Assignment
Construction Manager

Project Experience
Replacement of the Upper Level Deck of the Suspended Span of the Verrazano-Narrows Bridge, VN-80B, Staten Island, NY; 12/12-Present. Assistant Resident Engineer. This $236-million project involves reconstruction to replace the upper level roadway superstructure of the Verrazano-Narrows Bridge. The work includes removal of existing upper level roadway deck and barrier, installation of new upper level orthotropic deck, overlay, drainage systems, sign structures, lighting, barrier, painting and miscellaneous utility work. Mr. Leo is currently responsible for providing supervision and oversight during the abrasive blasting/painting of main bridge north/south/median truss cells and joint locations, relocation of existing upper level luminaires, removal of existing upper level light poles, removal of upper level junction boxes, water main installation along service road, installation of Safespan shielding underneath the entire upper roadway from anchorage to anchorage, installation and removal of Safespan cell and joint work platforms underneath the lower roadway, installation of temporary construction signs and daily MPT operations. He reviewed the Contractor's Health and Safety Plan, Lead Health and Safety Plan, Emergency Demobilization Plan, Emergency Contingency Plan, Confined Space Plan, Fire Protection Plan, Maintenance and Protection Drawings, Underdeck Shield Installation Plans and Waste Management Plan. Mr. Leo is also responsible for performing quantity take offs for various electrical, painting, and structural steel and concrete items. Client: Triborough Bridge and Tunnel Authority

Brooklyn Bridge Rehabilitation of the Approach Spans and Ramps and Painting of the Entire Bridge, Contract 6, New York, NY; 9/12-12/12. Assistant Resident Engineer. This project involved construction management and inspection services for the $509-million rehabilitation of this Iconic National Landmark. The scope of work for the project included replacement of approach roadway in Manhattan and Brooklyn over the arch blocks; rehabilitation of the Manhattan side ramp structures with widening and deck and bearing replacements; rehabilitation of the approach steel structures with full superstructure replacement of the York and Main Street structures and orthotropic deck installation at Franklin Square; seismic retrofitting of the main bridge, Franklin Square and ramp structures; painting of the ramp structures and suspended spans in their entirety; restoration of historic features. Mr. Leo provided supervision and oversight during the installation, alignment, shielded metal arc welding, carbon arc gouging and submerged arc welding of the Franklin Square Arch Orthotropic Deck panels. He was also involved with orthotropic deck panel measurements being taken which includes diaphragm/floorbeam offsets, root openings, vertical alignment, warpage and shrinkage; checking and monitoring welding parameters per approved WPS such as filler metals, electrode size, amperage, voltage, travel speed, preheat, interpass temperature, post heat and post cool are checked and monitored; checking and monitoring SMAW and SAW welding electrodes and submerged arc welding flux handling and storage requirements; and observing and properly documenting magnetic particle testing and ultrasonic testing for welds. Client: New York City Dept. of Transportation

Williamsburg Bridge Reconstruction of Miscellaneous Rehabilitation of the Main Bridge, Contract 8, #BRC253CCA, New York, NY; 12/04-3/10 as Chief Inspector; 3/10-9/12. Assistant Resident Engineer. This $280-million project involved the construction engineering and inspection for the rehabilitation of the main bridge. The scope of work for the project included abrasive blasting and painting of main bridge stiffening trusses, rehabilitation and strengthening of the main towers, rehabilitation of the intermediate towers and installation of seismic shear keys, main cable saddle repair and restraint, rehabilitation of wind tongue and wind chord, main tower and intermediate tower bearing installation, main tower leg removal and replacement, stiffening truss top and bottom chord rehabilitation, traveling maintenance platform installation, re-profiling of main span vertical curve by incrementally adjusting suspender cables, modification of orthotropic

footwalk deck expansion joints, waterproofing and surfacing of orthotropic roadway deck, installation of ornamental balconies and electroliers, integration of intelligent transportation operating system, seismic retrofit of the intermediate towers, installation of contraflow barrier and erection of barrier transfer machine facility, including augured concrete piles. Mr. Leo's responsibilities included supervision and oversight during Manhattan/Brooklyn tower wind tongue system replacement, seismic retrofit of intermediate towers, main cable neoprene wrapping, suspender rope adjustments, removal/replacement of existing traveler system, rehabilitation of existing north Brooklyn/Manhattan anchorage comfort station, replacement of Manhattan/Brooklyn tower bracing members for panel point 30 bearing replacement, boring for pin installation, and the replacement of PP 10/15 roller bearings, modular joint rehabilitation and Kent Avenue bulkhead restoration. Client: New York City Dept. of Transportation

Robert F. Kennedy (Triborough) Bridge Deck Replacement on Suspended Spans and Queens Viaduct - TB-64A, Queens, NY; 5/02-12/04. Team Leader. This project involved REI services to replace the Queens Approach span deck with pre-cast panels, and replace the suspension bridge roadway with a new orthotropic deck panel system. Mr. Leo's responsibilities on this $165-million project included inspection and oversight during road deck saw-cutting, road deck removal; installation, fit-up and SMAW/SAW welding of new orthotropic deck section; fit-up and electroslag welding of Queens anchorage and Wards Island/Queens tower modular expansion joint separation beams; checking/verifying east and west main cable band bolt tension; the inspection and oversight during replacement of Wards Island anchorage upper/lower truss pins and wind pin; T48 bonded surface aggregate application; stud welding of side barriers and installation; survey of orthotropic panel locations; relocation and re-setting of existing side barriers; inspection of welding procedure and welder qualification test plates for conformance with AWS standards; and quality assurance and documentation of all work operations for compliance with contract specifications and applicable regulations, codes and standards. Client: Triborough Bridge and Tunnel Authority

Williamsburg Bridge North Roadways Reconstruction, Contract 7, #BRC253CA, New York, NY; 9/00-5/02. Team Leader. This $248-million project involved the construction engineering and inspection for the reconstruction of the north inner and outer roadways. Mr. Leo's responsibilities included the inspection of the north wind chord repairs; north truss bottom chord repairs; demolition of north roadway floorbeams, stringers, railing and grating; the fit-up of orthotropic deck; submerged arc welding of orthotropic deck, floorbeam, lateral brace and orthotropic deck installation, barrier installation, north footwalk demolition and shear connector installation; inspection of rock and soil piles with the Tubex method on the Manhattan and Brooklyn approach; abrasive blast paint removal and painting of existing floorbeams and bottom chords on main span; inspecting existing floorbeam and lateral brace repairs; monitoring shrinkage and warpage at submerged arc welded orthotropic deck joints; inspection of north outer roadway orthotropic deck shot blasting; and Stirling Lloyd waterproofing membrane application and Trinidad asphalt paving. Client: New York City Dept. of Transportation

Williamsburg Bridge BMT Structure Rehabilitation, Contract 6, #BRC253BBA, New York, NY; 7/98-9/00. Inspector. Operations covered included modification of bracing struts at the Manhattan/Brooklyn towers, repair of south truss bottom chord, and removal and replacement of bearing grease pan covers at various locations on the main bridge, and finalizing structural steel items. His responsibilities on this $176-million project involved inspection of Manhattan/Brooklyn approach pier caps; preload Manhattan/Brooklyn pier cap anchor bolts; lateral brace and web reinforcement repairs main span; demolition of Manhattan/Brooklyn approach BMT structure; pre-assembly of TA track girders; set Brooklyn approach TA track girders; installation of Brooklyn approach debris shield; inspection of abrasive blast paint removal and painting of existing overhead truss above BMT structure on main span; inspection of south inner/outer orthotropic deck shot blasting; Stirling Lloyd waterproofing membrane application and Trinidad asphalt paving. Client: New York City Dept. of Transportation

Williamsburg Bridge South Roadways Reconstruction, Contract 5, #BRC253BAA, New York NY; 9/96-7/98. Inspector/Field Engineer. This $310-million project involved the construction engineering and inspection for the reconstruction of the south inner and outer roadways. Mr. Leo's responsibilities included field measurements, inspection of contractor's conformance to contract plans and specifications, and preparation of inspector's daily reports. Mr. Leo was responsible for preparing daily MURK II forms for American Bridge on the Williamsburg Bridge. Client: New York City Dept. of Transportation

Marc Matalon, P.E.
Resident Engineer

Professional Profile
Mr. Matalon is an experienced engineer in all areas of bridge, highway, and site construction and rehabilitation. He has been in charge of engineering duties on large bridge and tunnel rehabilitation projects, and has been commended by clients for his exceptional organization skills.

Project Experience
Bayonne Bridge Navigational Clearance Program (BBNCP) Construction Management, NY/NJ; 9/13-Present. Assistant Resident Engineer. This project involves construction management services for the $743-million Bayonne Bridge Navigational Clearance Program (BBNCP). This extraordinarily complex, once-in-a-lifetime project will replace more than 5,000 feet of viaduct and re-frame the existing steel arch structure to accommodate a new roadway 65 feet above the existing roadway. Mr. Matalon is the lead GPI full-time field representative on the project. He works directly with Port Authority project staff in coordinating work operations between the contractor and the Bayonne Bridge operations staff. Mr. Matalon's duties include the organization of technical meetings, progress meetings and schedule meetings. He also coordinates construction inspection staff on a daily basis by matching contractor activities with GPI QA inspection staff. Client: Port Authority of NY & NJ

Total Years Experience 27

Belt Parkway Bridges REI Services - Rockaway Parkway Bridge, Contract #HBK1091, Brooklyn, NY; 9/09-8/13. Resident Engineer. The project involved demolition of entire existing, four-span, multi-stringer bridge superstructure with existing steel cap beams, and substructures, including abutments, wingwalls, and pier columns and footings; installation of a new single span replacement bridge consisting of a steel multi-stringer superstructure with reinforced concrete deck and substructures, including reinforced concrete abutments and wingwalls on new piled footings, and mechanically stabilized earth retaining walls; reconstruction of approach roadways and four entrance and exit ramps within the project limits; and installation of new concrete barrier, new bridge and guide railing, new lighting standards, new drainage systems including catch basins and drainage pipes, new overhead sign structures, and new swale BMP grading, drainage and planting. Mr. Matalon was responsible for the resident engineering inspection of all aspects of this $60-million project. Client: New York City Dept. of Transportation

Manhattan Bridge Rehabilitation of Lower Roadways, Contract 11, #BRC156A, New York, NY; 2/05-8/09. Assistant Resident Engineer. This $150-million project involved the reconstruction of lower roadway; removal and replacement of floorbeams, stringers, bearings and deck in main span and side spans; rehabilitation of anchorage chambers; installation of new lighting and traffic signs on lower roadway; rehabilitation of travelers in suspended spans; replacement of maintenance platforms at towers; painting of bridge in suspended and approach spans; and repair of flagged conditions. Mr. Matalon was responsible for supervision of office staff and directly assisted resident engineer in supervision of all daily activities. He was also responsible for overseeing the maintenance of the project records in conformance with the Manual of Uniform Record Keeping (MURK) and for processing contractor monthly payments, and for monitoring contractor EEO compliance. Client: New York City Dept. of Transportation

Manhattan Bridge Rehabilitation of North Spans over East River, Contract 10, #BRC156C, New York, NY; 2/01-2/05. Assistant Resident Engineer/Office Administrator. This $175-million project involved rehabilitation of the north upper roadway approach and suspended spans; installation of a new north side bikeway; replacement of the north side truss bearings on the approaches; repainting of the north half of the bridge including the cables and trusses; and installation of an Intelligent Traffic System (ITS) including CCTV's. Mr. Matalon was responsible for supervision of office staff and assistant to resident engineer for all daily activities. He was also responsible for

change orders and processing daily time and material records in conformance with NYSDOT Manual of Uniform Record Keeping (MURK). Client: New York City Dept. of Transportation

Manhattan Bridge Painting and Interim Rehabilitation, Contract 8C, #BRC1568C, New York, NY; 1997-10/01. Assistant Resident Engineer/Office Administrator. This $124-million project involved the rehabilitation of the Manhattan plaza area, Manhattan Arch and Colonnade; replacement of the structural steel stringer and floorbeam support system for the west side subway tracks; replacement of truss bearings on top of the piers of both approach spans; rehabilitation of eyebars anchoring one of the main suspension cables; and removal of existing paint from the entire west side, both towers and two main cables, and replacing with new coating. Mr. Matalon was responsible for supervising an office staff of six, including an office engineer and assistant office engineer in the performance of all field office administrative duties for this construction project. Client: New York City Dept. of Transportation

Rehabilitation of Ventilation, Mechanical, Electrical and Drainage of Three Vehicular Tunnels, Battery Park Underpass, First Avenue Tunnel, Park Avenue Tunnel, Contract #HBMC023, New York, NY; 1999. Resident Engineer. Mr. Matalon was responsible for the supervision of all aspects of this $17-million project, including coordination with various agencies affected by this work such as NYSDOT, NYC Parks Dept., United Nations, and local community associations. A vital part of the interaction with these agencies involved coordinating the maintenance and protection of traffic (MPT) for the three tunnels as they are all located in heavily populated areas of Manhattan with high traffic volumes that can be directly affected by the installation of motorized fan motors and rehabilitation of fan housings bearings, fan supports and dampers at Battery Park Underpass; installation of new CO monitoring systems at all three tunnels; installation of new electrical systems in all three tunnels including new motor control centers and programmable logic controllers; installation of new lighting controls, new traffic controls and signals for all three tunnels; complete replacement of the roadway lighting systems at Park Avenue Tunnel and refurbishing the existing roadway lighting at First Avenue Tunnel and Battery Park Underpass; cleaning, repairing and relining the existing drainage systems in all three tunnels and installation of a new standpipe system in the Battery Park Underpass. Client: New York City Dept. of Transportation

Manhattan Bridge South Side Approach and Suspended Spans Rehabilitation, Contract 5, #BRC156E, New York, NY; 1992-1997. Assistant Resident Engineer. This $96-million project involved CEI for the rehabilitation of south side Manhattan and Brooklyn approaches extending from Flatbush Avenue in Brooklyn to Canal Street in Manhattan. Work involved the replacement of reinforced concrete-filled grid deck and structural steel stringers and diaphragms, installation of new steel expansion joints and replacement of downspout drainage system for the two west side approach spans, installation of a truss stiffening system for both west side spans and completion of the stiffening system for the east side spans, and completion of rehabilitation of pedestrian west walkway including new extension ramp in Manhattan. Mr. Matalon was responsible for supervising an office staff of five, in the performance of all construction field office administrative duties for this rehabilitation project. Client: New York City Dept. of Transportation

Manhattan Bridge Traveler System and Lower Level Interim Rehabilitation, #D253248, New York, NY; 1990-1992. Office Engineer. Mr. Matalon was responsible for analyzing contractor's cost proposals and derived independent engineer's cost estimates for extra work, field inspected change order requests, drafted order-on-contracts, wrote contract specifications, created and maintained automated filing system using microcomputers for shop drawings, correspondence, change orders, etc. He acted as liaison between contractor, engineer-in-charge and resident engineer and worked directly with the EIC and NYSDOT Region 11 personnel on contract termination, including the review of claims, negotiation of legitimate payment to the contractor, and finalization of the D500040 contract. Client: New York State Dept. of Transportation

Manhattan Bridge New Maintenance - Reconstruction of Westerly Walkway, #D500040, New York, NY; 1987-1990. Assistant Office Engineer. Mr. Matalon was responsible for computation of the monthly estimate for payment to the contractor, review and log of inspector's daily reports and shop drawings, performed independent cost estimates for extra work, performed field inspection for quality control, assisted office engineer and resident engineer with all administrative duties. Client: New York State Dept. of Transportation

Jimmy Moorey, P.E.

Assistant Resident Engineer

Project Experience

Bayonne Bridge Navigational Clearance Program (BBNCP) Construction Management, NY/NJ; 5/13-Present. Chief Inspector. This project involves construction management services for the $743-million Bayonne Bridge Navigational Clearance Program (BBNCP). This extraordinarily complex, once-in-a-lifetime project will replace more than 5,000 feet of viaduct and re-frame the existing steel arch structure to accommodate a new roadway 65 feet above the existing roadway. Mr. Moorey is the lead geotechnical inspector on the project. He is responsible for ensuring that over 200 six-ft-diameter drilled shafts are constructed in accordance with the project plans and specifications. He is overseeing the drilled shafts test program including O-cell load test and production shafts installation; integrity checks including rock socket sidewall video camera inspection to ensure quality of rock socket and to confirm permanent casing tip is properly seated into competent rock; and mini-SID inspections to ensure the proper cleanout of the base of the shaft. Also, crosshole sonic testing is used to confirm the integrity of the concrete inside the drilled shafts. Additionally, he is providing oversight for the H-pile and open-end pipes driving program including PDA (Pile Driving Analyzer) tests, sub-surface investigations, support of excavation, rock anchors including pull test, mechanically stabilized earth wall, bridge demolition, bridge segmental, geotechnical instrumentation and monitoring. Client: Port Authority of NY & NJ

World Trade Center, New York, NY; 4/08-1/09; 7/10-3/11. At Tower 2 and the Port Authority Vehicle Security Center, Mr. Moorey served as lead resident geotechnical engineer/inspector for excavation support systems, depth and shallow foundations, rock anchors and tie-back. At the FREEDOM Tower and Tower 3 and Tower 4, Mr. Moorey served as resident engineer/inspector working under a New York State registered engineer/supervisor for excavation support systems, drilled shaft depth and shallow foundations.

2nd Avenue Subway, New York, NY; 1/09-4/09. Mr. Moorey served as resident engineer/inspector for excavation support systems.

CUNY/BMCC - Fitterman Hall, New York, NY; 1/10-7/10. Resident engineer/inspector for depth foundations.

CUNY/City College - Advanced Science Research Center, New York, NY; 1/09-1/10. Mr. Moorey served as resident engineer/inspector for shallow foundations.

The Edge of Williamsburg, New York, NY; 10/07-4/08. Mr. Moorey served as resident engineer/inspector working under a New York State registered geotechnical supervisor for depth foundations.

Newark Airport Traffic Operations Services (On-Site), Newark, NJ; 2006. Junior Technician. This project involved performing day-to-day on-site traffic operational services as well as various field studies, traffic engineering analyses and CADD drafting services under the direct supervision of the Port Authority traffic engineering staff. Various engineering and operational assignments under the 2002/2003/2004 Technical Support Service agreement for this facility have been successfully completed. Mr. Moorey's responsibilities on this project included sign inspection and cost estimate. Client: Port Authority of NY & NJ

Town of Hempstead Sign Management System: Design & Implementation, Merrick, NY; 2006. Junior Technician. This project involved performing inventory on 25,000 traffic signs on Town roadways and developing

a digital sign management system for Town employees' use. The project also involved developing contract drawings and providing construction inspection. Mr. Moorey was responsible for ball banking; signs inspection; and field investigation. Client: Town of Hempstead

Re-routing Vehicles for Cypress Hills Cemetery Bridges over the Jackie Robinson Parkway, Queens, NY; 1/06-3/06. Junior Technician. This fast-paced project involved the development of alternative detours for re-routing traffic during the closure of the Jackie Robinson Parkway, and the design of the Maintenance and Protection of Traffic (MPT) scheme, including all signs, control devices and VMS's required within the project limits for the approved detours. Mr. Moorey's responsibilities included field visit to conduct detour route inventory; review of traffic analysis (Synchro and HCS spreadsheet); quantity estimation; preparation of presentation materials for various DOT meetings; traffic signs design to accommodate traffic during demolition; and CADD drafting. Owner: New York City Dept. of Transportation

Other experience Mr. Moorey possesses includes:

Depth Foundations
Resident engineer with numerous responsibilities including: performance of control inspection of various types of drilled piles including rock socket drilling, rock socket video inspection in accordance with NYC Building Code; monitoring pile driving operations including H-piles, titan piles, closed-end taper tube piles, pre-stress concrete piles, timber piles, and closed end pipe piles; preparation and generation of pile driving records, checking and confirming pile integrity; overseeing load testing of piles including PDA (Pile Driving Analyzer), vertical and lateral.

Shallow Foundations
Inspected and indentified rock classifications in accordance with NYC Building Code. Mr. Moorey determined embedment length for footings and rock sockets for shear walls with bearing capacity over 60 tsf.

Excavation Support Systems
Secant walls and steel sheet piles installation including setting of rebar cages/core beams, tieback, pulled test, pressure grout, and rock nailing.

Other Related Field Experience
Subsurface investigation including test pits, STP, Shelby tube, rock core consisting core recovery and RQD, installation of piezometer, and cross holes seismic testing. Control inspection of water proofing, under slab drainage system and soil backfill including SSDS (Sub-slab drainage system).
Control inspection of rock anchors installation including pull tests, graph result for each test.
Monitored noise and vibrations caused by rock blasting, downloaded and interpreted data from seismograph.

Laboratory Experience
Performed laboratories soil tests including gradation and hydrometer, sieves analysis, standard and modern Proctor, Atterberg limits, specific gravity, direct shear, and water content.

As a geotechnical engineer, Mr. Moorey obtained the following design experience.

- Designed Retaining walls, drilled shaft, steel sheet pile walls including cantilever and anchored walls.
- Calculated bearing capacity and settlement analysis for various types of footings.
- Performed slope stability analysis and ran various finite element analysis models simulating future construction and predicting possible failure wedges.
- Prepared final boring logs and soil profiles, indentified soil and rock strata including water table and location of piezometer. Developed soil design parameters based on STP and available lab reports. Prepared geotechnical reports and provided foundation recommendations.
- Quantity estimates of cuts and fills.

Neophytos Neophytou, P.E.
Deputy Resident Engineer

Professional Profile
Mr. Neophytou is a deputy resident engineer with diverse experience on the rehabilitation of transportation facilities. He has been involved with asphalt placement operations, structural rehabilitation, earthwork (cut/fill), surveying, bridge painting and drainage installation. Previously, he has performed the duties of office engineer on several projects, handling the preparation of payments to the contractor, preparing change orders, and maintaining all job files including correspondence, certifications, as-builts, RFIs and ECMs.

Project Experience
Reconstruction of Willis Avenue Bridge, New York, NY; 3/08-Present. Deputy Resident Engineer. This project involves replacement of the existing movable bridge and approaches with a new structure, built offline from the existing structure. Mr. Neophytou's responsibilities include supervision of senior inspectors; supervision of environmental issues regarding river/land operations; demolition of the river piers via conventional and blasting/explosive demolition methods; construction of new piers/foundations in the river including caisson installation, pier box installation, large volume concrete placement for the foundations, and the arch piers; installation of a new movable bridge (swing span) which was built off site and delivered on a specially-made barge system; removal of the existing swing span and camelback structures over the Harlem River structures. These structures were removed in their entirety as complete units onto the barge system and transferred to scrap yards, offsite; structural steel installation and construction of new approaches to the swing span; complex concrete deck replacements; installation of new fender system of the piers in the river which consisted of a large number of FRP piles (Fiberglass Reinforced Plastic – solid) with concrete wale beam and FRP composite lumber and panels (solid); overseeing and monitoring a state-of-the-art scour monitoring system for the existing piers and bulkheads while constructing the new structure; and overseeing electrical/mechanical operations of the swing span. Client: New York City Dept. of Transportation

Macombs Dam Bridge over the Harlem River Rehabilitation, Contract #BRX287R, New York, NY; 8/99-3/08. Acting Resident Engineer. This $145-million rehabilitation project included structural steel replacement and reinforcement for ±3,000 ft total length of viaducts, a camelback, a swing span, ramps over Metro-North Railroad, structures over Harlem River Drive and Major Deegan Expressway. Mr. Neophytou was in responsible charge of 12 senior structural steel inspectors overseeing operations such as structural steel welding of concrete filled steel grid (±100,000 sq ft section of ±10 ft x 8 ft) ensuring proper welding procedures and requirements; complex jacking operations for bearing replacement; concrete deck replacement (±200,000 sq ft) ensuring proper mix designs, preparatory work and requirements; asphalt overlays on the approaches; lead abatement and painting; electrical work; heat straightening of existing eye bars; installation of new eye bars at swing span and camelback; ±1 million lbs of new structural steel joist system; installation of new cross and longitudinal trusses (+0.5 million lbs); submarine cables installation and extensive MPT on Major Deegan Expressway and Harlem River Drive for full deck replacement with framing; and mechanical installations of machinery. Mr. Neophytou prepared reports and computations for the monthly estimates for payments to the contractor, compiling all necessary information for preparation of change orders; he reviewed records of material certifications and prepared as-built drawings for submission. The replacement of the decks was executed within three time limited/restricted milestones of six winter months each and was completed on time and under budget. From November 2006 to March 2008, Mr. Neophytou filled the position of resident engineer and was in responsible charge of overseeing all operations related to the mechanical and electrical operations at the swing span until its final acceptance by the city; project close out process which includes quantities closeouts, final submissions for as-builts and shop drawings, finalization reviews of monthly

estimates and extra work payments; and has acted as liaison to daily activities and arrangements until the final inspection from all participating agencies. Client: New York City Dept. of Transportation

Roslyn Viaduct Underdeck Netting, Route 25A, Contract #D-257251, Roslyn, NY; 1/99-7/99. Mr. Neophytou served as office engineer/senior inspector for the construction inspection of this $1.4-million bridge joint repair painting and underdeck safety netting installation project. The project included commercial blast cleaning for 16 expansion joints and installation of approximately 1,000 galvanized wire safety nets utilizing various scaffolding systems. Client: New York State Dept. of Transportation

Nassau County Paving Inspection, Nassau County, NY; 7/97-11/97 and 7/98-1/99. As an inspector, Mr. Neophytou provided daily inspection of asphalt milling and placement for the resurfacing of various Nassau County area roads. Other duties included oversight of the contractor's daily maintenance and protection of traffic (MPT), and consult with the County's resident engineer on payment quantities. Client: Nassau County Dept. of Public Works

Rehabilitation of Various Parks (Newbridge, Oceanside Park), Bellmore/Oceanside, NY; 11/97-7/98. Mr. Neophytou served as resident engineer/inspector on this project, which involved in demolition and reconstruction of existing basketball courts, tennis courts, roller hockey rink (cut/fill, paving, accessories); rehabilitation of existing handball walls; demolition and reconstruction of playground areas; installation of new insurance safety playground structures; installation of safety surface; gazebo structures; curbs; paving; planting of trees and shrubs; landscaping; and drainage improvements including installation of new drainage and modifications of existing drainage. Client: Town of Hempstead, Dept. of Parks and Rec.

Contract Closeout for NYCDOT Bureau of Bridges, Engineering Service Agreement, New York, NY; 4/97-7/97. As an office engineer, Mr. Neophytou performed contract finalization and closeout of approximately 40 NYC Bureau of Bridges contracts, with and without federal and state aid. Work included review of project records to determine which documents were required for closeout procedure. Missing documents were obtained or generated in order to process a final estimate package. These packages were monitored throughout the processing route to its completion point. Client: New York City Dept. of Transportation, Bureau of Bridges

Woodfield Road Inspection, West Hempstead, NY; 9/96-4/97. Chief Inspector/Office Engineer. This project involved construction inspection services for this roadway rehabilitation project consisting of street reconstruction, curb and sidewalk replacement, modification of the existing drainage system, traffic intersection and street lighting modifications. Client: Nassau County Dept. of Public Works

Doxey Brook Improvement, Project #H60130M, Lynbrook, NY; 11/94-8/96. Mr. Neophytou served as engineer of construction for construction inspection of drainage improvements to Doxey Brook located in a residential section of Lynbrook, NY. The $9.5-million project entailed installation of 3,800 ft of pre-cast concrete box culvert up to 8 ft x 14 ft, weighing 20 tons each, placed in excavations up to 11 ft in depth utilizing vibratory steel sheet piling and well point systems. Large and complex turning chambers and headwalls were poured in place. Reinforced concrete pipe 5 ft in diameter was jacked under heavily traveled Peninsula Boulevard. The project also required major utility relocations including 138 kv oil-o-static electric lines and 2 ft x 60 ft welded water main offsets. Traffic signals, street lighting and related conduit; sidewalk, curb, driveway, sanitary sewers, and highway drainage were installed. Asphalt pavement and shoulder reconstruction was also performed. Client: Nassau County Dept. of Public Works

Routes 35 and 100, and the Rehabilitation of the Pines Bridge over the Muscoot Reservoir, Contract #D254062, Westchester County, NY; 5/93-5/94. Mr. Neophytou served as an inspector on this $10-million project which included major rock removal, excavation and embankment construction, major drainage improvements, bridge deck, approach slab and bearing replacement, modification of abutments and wingwalls, installation of three armored joints, cribwall construction, major soil erosion and water pollution control along the NYC reservoir system, local, state and federal wetlands. Complex multi-phase construction detours and maintenance and protection of traffic (MPT) were required for these heavily traveled routes prior to and during asphalt paving operations. His specific responsibilities included inspection of asphalt placement operations, placement of the subbase, concrete curb installation, earthwork as well as excavation and embankment construction. Client: New York State Dept. of Transportation

Douglas Reese, P.E.
Resident Engineer

Professional Profile

Mr. Reese is a resident engineer with in-depth experience in the design and construction of bridges, highways, buildings, drainage and sewage facilities, site work and utility installation. He has been responsible for the inspection of demolition and construction of structural steel and reinforced concrete bridge elements, steel flag repairs, rehabilitation of suspension bridge main cables, removal and replacement of bridge suspender cables, and lead-based paint removal and coating applications in accordance with SSPC standards and New York City Dept. of Transportation protocol. Mr. Reese's design experience includes buildings, retaining walls, piles, box culverts, bridge abutments, composite girders, computer-aided design and analysis. He is also familiar with AASHTO, NYSDOT, ASTM, NFPA, AISC, and ACI specifications, as well as the NYSDOT bridge inspection rating system.

Project Experience

Brooklyn Bridge Rehabilitation of the Approach Spans and Ramps and Painting of the Entire Bridge, Contract 6, New York, NY; 3/10-Present. Resident Engineer. This project involves construction management and inspection services for the $509-million rehabilitation of this Iconic National Landmark. The scope of work for the project includes replacement of approach roadway in Manhattan and Brooklyn over the arch blocks; rehabilitation of the Manhattan side ramp structures with widening and deck and bearing replacements; rehabilitation of the approach steel structures with full superstructure replacement of the York and Main Street structures and orthotropic deck installation at Franklin Square; seismic retrofitting of the main bridge, Franklin Square and ramp structures; painting of the ramp structures and suspended spans in their entirety; restoration of historic features. Mr. Reese's responsibilities include direct daily supervision of a team of engineers, technicians and support staff; daily coordination with the construction contractor, the New York City Dept. of Transportation, the engineer-in-charge and various city and state agencies. The resident engineer is a key participant at technical meetings held with the contractor and bridge designers and works closely with the project outreach staff. Client: New York City Dept. of Transportation

Williamsburg Bridge Reconstruction of Miscellaneous Rehabilitation of the Main Bridge, Contract 8, #BRC253CCA, New York, NY; 8/05-3/10. Resident Engineer. This $280-million project involved the construction engineering and inspection for the rehabilitation of the main bridge. The scope of work for the project included abrasive blasting and painting of main bridge stiffening trusses, rehabilitation and strengthening of the main towers, rehabilitation of the intermediate towers and installation of seismic shear keys, main cable saddle repair and restraint, rehabilitation of wind tongue and wind chord, main tower and intermediate tower bearing installation, main tower leg removal and replacement, stiffening truss top and bottom chord rehabilitation, traveling maintenance platform installation, re-profiling of main span vertical curve by incrementally adjusting suspender cables, modification of orthotropic footwalk deck expansion joints, waterproofing and surfacing of orthotropic roadway deck, installation of ornamental balconies and electroliers, integration of intelligent transportation operating system, seismic retrofit of the intermediate towers, installation of contraflow barrier and erection of barrier transfer machine facility, including augured concrete piles. Mr. Reese's responsibilities included the direct daily supervision of a team of engineers, technicians and support staff; and the daily coordination with the construction contractor, the New York City Dept. of Transportation, the engineer-in-charge and various city and state agencies. The resident engineer is a key participant at technical meetings held with the contractor and bridge designers and works closely with the project outreach staff. Client: New York City Dept. of Transportation

Douglas Reese, P.E.
Resident Engineer

Williamsburg Bridge Reconstruction of Miscellaneous Rehabilitation of the Main Bridge, Contract 8, #BRC253CCA, New York, NY; 6/03-8/05. Chief Inspector. This $195-million project involved the construction engineering and inspection for the rehabilitation of the main bridge. Mr. Reese's responsibilities included directing the daily field inspection efforts of several crews of engineers and technicians and performing quality assurance for the inspection crews and their reporting effort on the project. His responsibilities also included the creation of inspection report specialty forms; inspection staff supervision and training; assignment of inspector's daily responsibilities; database tracking of punch listed work; review of daily inspection reports; anchorage security coordination with the New York City Police Dept. and the client; and project progress appraisals. Client: New York City Dept. of Transportation

Williamsburg Bridge North Roadways Reconstruction, Contract 7, #BRC253CA, New York, NY; 1/01-6/03. Chief Inspector. This $248-million project involved the construction engineering and inspection for the reconstruction of the north inner and outer roadways. Mr. Reese was responsible for leading quality assurance inspections for all main bridge operations. Main bridge operations included removal of existing structural roadway deck systems and pedestrian promenade deck systems, and installation of orthotropic roadway and pedestrian promenade deck systems, concrete filled steel grid deck, drainage system, fire department dry standpipe system, and Trinidad and latex modified asphalt wearing courses applied over a special three-coat Stirling Lloyd waterproofing membrane system. The orthotropic deck is delivered to the project as 20 ft by 40 ft panels. They are joined, in the field, at 20 ft transverse splices using submerged arc welding. The quality assurance inspections of the orthotropic deck installation required full-time visual inspections and documentation. Job-specific forms were created to track the joint fit-up, weld quality and adherence to welding specifications, distortion of base metals, and weld defect repairs required following 100% ultrasonic inspection. Client: New York City Dept. of Transportation

Williamsburg Bridge BMT Structure Rehabilitation, Contract 6, #BRC253BBA, New York, NY; 12/97-6/01. Chief Inspector. This $176-million project consisted of the demolition and reconstruction of the entire BMT transit structure on the Williamsburg Bridge. Mr. Reese was responsible for organizing and leading the quality assurance inspections and quantity reporting for all structural steel and reinforced concrete demolition and construction on this project. Client: New York City Dept. of Transportation

Williamsburg Bridge South Roadways Reconstruction, Contract 5, #BRC253BAA, New York NY; 1/95-12/97. Senior Inspector. This $310-million project involved the construction engineering and inspection for the reconstruction of the south inner and outer roadways. Mr. Reese served as a senior level inspector responsible for the detailed inspections required for the proper installation of the new orthotropic deck panels to the demanding horizontal and vertical tolerances of ± 1/4 in. over the panel's 40-ft length. As the project's lead AWS certified welding inspector, Mr. Reese performed the welding inspections required to install the orthotropic deck panels. As team leader, Mr. Reese also headed up one of the inspection teams responsible for erecting the flexible work platforms to be used for containment operations and bridge paint removal along the Williamsburg Bridge approaches. He also acted as team leader during the lead paint removal operations, which were conducted on a day and night shift basis. Over 300,000-sq-ft of paint removal was required on this contract for structural connection faying surfaces and for demolition "cut lines." Client: New York City Dept. of Transportation

Williamsburg Bridge Main Cable Rehabilitation, Contract 4, #BRC253A, New York, NY; 4/93-1/95. Senior inspector directly responsible for inspection of emergency steel flag repairs which involved monitoring and reporting work on a force account basis, and coordinating work efforts with contractor's field engineers with a focus towards increasing cost efficiency; removal and replacement of suspender cable and truss connectors which required that existing tensile forces be measured, released and retensioned; the application of the Neoprene Cable Wrap System where he held a team leader position. The neoprene application proved to be highly sensitive to environmental conditions and workmanship, which necessitated keen observation, and a proactive approach to inspection. Mr. Reese helped the inspection team by organizing and gathering data from the plans/specifications for inputting into computer databases which proved indispensable to the tracking of Contract No. 5 (BRC-253B), Reconstruction of Williamsburg Bridge South Roadways. Client: New York City Dept. of Transportation

Brendan Scahill, P.E.
Resident Engineer

Professional Profile
Mr. Scahill is a professional engineer with many years of diversified design and inspection experience. During his career, Mr. Scahill has worked extensively on East River Bridge Crossings, including the Brooklyn, Williamsburg, Queensboro, Robert F. Kennedy (Triborough), and Bronx-Whitestone Bridges. His experience includes orthotropic deck installation, cable rehabilitation, and structural steel fabrication.

Project Experience
Replacement of the Upper Level Deck of the Suspended Span of the Verrazano-Narrows Bridge, VN-80B, Staten Island, NY; 2/13-Present. Resident Engineer. This $236-million project involves reconstruction to replace the upper level roadway superstructure of the Verrazano-Narrows Bridge. The work includes removal of existing upper level roadway deck and barrier, installation of new upper level orthotropic deck, overlay, drainage systems, sign structures, lighting, barrier, painting and miscellaneous utility work. Mr. Scahill's responsibilities on this project will be divided into two phases. The first phase will be the quality assurance oversight during the fabrication of the orthotropic deck panels in China; and the second phase will be to provide quality assurance during the field installation of the orthotropic deck panels on the jobsite. Mr. Scahill will be an active participant in the Authority's quality assurance program ensuring that the contractor's quality control program is effectively being implemented. He will witness the fabrication welding, testing processes and will evaluate the destructive sample results. He will develop and maintain quality assurance tracking systems for better documentation of the fabrication process and to minimize fabrication issues from the moment of discovery. Upon completion of the fabrication process and the delivery of the orthotropic deck panels to the jobsite, his focus will turn to the field installation. He has provided supervisory oversight on the field installation on four large-scale New York City orthotropic deck projects. He has extensive knowledge and understanding of AWS D1.5 and NYSSCM welding codes. Client: Triborough Bridge and Tunnel Authority

Bronx-Whitestone Bridge Replacement of the Bronx Approach and Miscellaneous Repairs to the Queens Approach, BW-89, Bronx, NY; 11/08-2/13. Resident Engineer. This $192-million project involved the staged removal and replacement of the Bronx Approach superstructure and substructure from the Bronx Toll Plaza to the Bronx Anchorage. Work included the installation of excavation support systems, mini-pile foundations and temporary steel support systems to support the existing structure during the staged construction. During the construction of the substructure, there were massive concrete placements for concrete footings and piers. For the duration of the project, traffic on the bridge was maintained with five lanes open to traffic. During the staged construction, work was staged demolition of the existing roadway, installation of multiple continuous steel girders, placement of a staged composite concrete deck, installation of permanent concrete barrier and installation of permanent street lighting. Other work items on the project included new utility systems at the Bronx Toll Plaza, installation of new salt storage dome building and miscellaneous steel and concrete deck repair on the Queens Approach structure. Mr. Scahill's responsibilities on the project included construction management and inspection of the major steel components on the jobsite. He provided quality assurance for the Authority during the fabrication of steel girders and other steel components. He oversaw the fabrication and installation of the temporary steel support systems for the existing roadway structure. Mr. Scahill supervised field inspectors during the structure demolition and steel erection stages of the construction. He provided oversight to ensure that all work was performed in accordance to the contract documents. Client: Triborough Bridge and Tunnel Authority

Brendan Scahill, P.E.
Resident Engineer

Bronx-Whitestone Bridge Deck Replacement - BW-82, Bronx, NY; 1/05-11/08. Assistant Resident Engineer. This $150-million project involved replacing the roadway deck at the suspended spans of this major suspension bridge with orthotropic deck panels installed in a lane-by-lane sequence. Daily realignment of temporary moveable barriers allowed an additional lane to be utilized for north bound or south bound traffic during morning and evening rush hours, as appropriate. The work included replacement of median and side barriers, deck finger joints, stiffening girder pins, lateral bracing, and roadway, tower and navigation lights. Also included in the project scope is painting of structural steel, construction of a new underdeck moveable traveler system, replacement of electrical feeders and substations, and installation of a new fiber optic control and communication system. All of these operations were carried on while maintaining traffic on this high-volume toll facility. Mr. Scahill's responsibilities included the performance of constructibility reviews, cost estimates and claim evaluations; supervision of all field inspection work for the installation of new orthotropic deck panels; and monitoring the Contractor's performance and compliance for work performed in accordance to the Contract Documents. Client: Triborough Bridge and Tunnel Authority

Robert F. Kennedy (Triborough) Bridge Deck Replacement on Suspended Spans and Queens Viaduct - TB-64A, Queens, NY; 1/01-12/04. Resident Engineer. This $144-million project involved replacing the existing concrete deck roadway (eight traffic lanes) with a new orthotropic deck system (252,000 sq ft) while maintaining seven traffic lanes in an urban environment. REI services included the replacement of the Queens approach span deck with pre-cast panels, replace the suspension bridge suspender ropes and installation of a new roadway lighting system on the bridge structure. As resident engineer, Mr. Scahill was responsible for the field inspection effort and also involve in the fabrication process of the 392 orthotropic deck panels which require coordination between all parties. Client: Triborough Bridge and Tunnel Authority

Williamsburg Bridge North Roadways Reconstruction, Contract 7, #BRC253CA, New York, NY; 1/00-12/00. Assistant Resident Engineer. This $248-million project involved the construction engineering and inspection for the reconstruction of the north inner and outer roadways. Responsibilities included the inspection of the north wind chord repairs; north truss bottom chord repairs; demolition of north roadway floorbeams, stringers, railing and grating; the fit-up of orthotropic deck; submerged arc welding of orthotropic deck, floorbeam, lateral brace and orthotropic deck installation, barrier installation, north footwalk demolition and shear connector installation; inspection of rock and soil piles with the Tubex method on the Manhattan and Brooklyn approach; abrasive blast paint removal and painting of existing floorbeams and bottom chords on main span; inspecting existing floorbeam and lateral brace repairs; monitoring shrinkage and warpage at submerged arc welded orthotropic deck joints; inspection of north outer roadway orthotropic deck shot blasting; and Stirling Lloyd waterproofing membrane application and Trinidad asphalt paving. Client: New York City Dept. of Transportation

Williamsburg Bridge BMT Structure Rehabilitation, Contract 6, #BRC253BBA, New York, NY; 1/99-1/00. Assistant Resident Engineer. This $176-million project involved the construction engineering and inspection for the reconstruction of the BMT structure. Mr. Scahill's responsibilities included the supervision of the demolition of the existing structure and the steel erection of the new structure. Client: New York City Dept. of Transportation

Williamsburg Bridge South Roadways Reconstruction, Contract 5, #BRC253BAA, New York NY; 2/96-1/99. Assistant Resident Engineer. This $310-million project involved the construction engineering and inspection for the reconstruction of the south inner and outer roadways. Mr. Scahill's responsibilities included the supervision of the placement of the orthotropic deck on the main bridge. Mr. Scahill was in charge of field supervision for the $9-million emergency repair work to the north roadways. Client: New York City Dept. of Transportation

Williamsburg Bridge Main Cable Rehabilitation, Contract 4, #BRC253A, New York, NY; 10/95-2/96. Assistant Resident Engineer. For this $88-million project, Mr. Scahill was responsible for coordinating strand removal and replacement of Main Cable A at the Manhattan Anchorage. Supervised field personnel in the completion of the remaining cable work including wire wrapping, neoprene wrapping and footwalk erection. Client: New York City Dept. of Transportation

Williamsburg Bridge Main Cable, Contract 4, #BRC253A, New York, NY; 5/92-10/95. Senior Inspector. Instruction of contractor personnel in the procedures of the wire rope suspender removal and replacement. Monitored the application of linseed oil and compaction to the main cables. Client: New York City Dept. of Transportation

Richard Seamon, P.E.
Project Manager

Professional Profile

Mr. Seamon is a proven leader with over 28 years of experience in construction project and program management. He is highly skilled at managing all aspects of the construction process from the notice to proceed to final closeout on programs/projects up to $500M. Mr. Seamon has successfully managed projects across numerous industry sectors including K-12 schools, airports, light rail and surface transportation. He productively managed staffs of up to 40 full time engineers, designers, inspectors, project controls and administrative staff. He also has extensive experience both as an Owners Representative and as a Contractor, which provides for the unique ability to understand construction issues from both sides. Mr. Seamon's specific experience includes management of over 50 school construction projects during the design, construction and/or closeout phases; the reconstruction of Harrisburg International Airport; a one-mile extension of the Newark International Airport monorail; implementation of E-ZPass technology, and the construction and rehabilitation of bridges and reconstruction of highways throughout New Jersey.

Project Experience

E-ZPass Implementation, JFK Airport, Newark Liberty International Airport and LaGuardia Airport, NY & NJ; 2001-2002, $30M. As project manager for the design-build contractor, supervised the scheduling, design, installation, testing and commissioning of the E-ZPass technology at all three major area airports. Since this was a new program implementation, the coordination included working together with other PA contracts to bring all aspects of the E-ZPass system online. This coordination was paramount given that all installations were made in active toll plazas, requiring a seamless transition from work area to revenue collection on a daily basis. Client: Xerox (formerly ASCOM Transport Services)

Rehabilitation of Newark International Airport Monorail, Newark, NJ; 2000-2001, 45M. Resident Engineer. Upon completion of the monorail extension, the original portion of the monorail was closed for major renovations. Developed the quality assurance plan for this program including compressive strength (grout), welding, painting and MP and UT testing as detailed in AWS D1.5 section 12 Fracture Control Program. Also, managed the procurement of QA inspection and testing, ensured the daily implementation of the QA program which ran on 3 shifts per day, 6 days per week for 7 months. Created pre-construction cost estimate for rehabilitation program that, in the end, was within 1% of the actual costs incurred. Client: Bombardier

Newark International Airport Monorail Extension, Newark, NJ; 1998-2000, $140M. Resident Engineer. Managed the redesign, fabrication and erection of the mile long monorail extension at Newark Airport. This included managing the day-to-day construction activities of the client's general contractor, as well as the interaction with the PANYNJ and its numerous capital projects and contractors. Managed the steel fabrication QA program, which included the requirements of AWS D1.5, Fracture Critical Program. Managed the steel coatings QA program, which included painting of the exterior of the guideway and thermal spray coating the interior. Coordinated all erection activities, including having to insert individual girders into and through the new rail-link train station. Defended client against $10M worth of claims predominately due to a major design change with the clients' final responsibility being less than 80% of the submitted value. Managed the submission and approval of more than 1,200 individual pages of structural steel shop drawings including the development of a database with reports tailored for reporting status to both the client and the project owner. Created repair procedure for replacement of damaged conduit inside of 96' long steel box beam. Managed confined space training and implementation of entry permit requirements. Managed all aspects of the construction of a 3,500 square foot substation for the monorail. Client: Bombardier.

Harrisburg International Airport Improvements, Susquehanna Area Regional Airport Authority, Harrisburg, PA; 2003-2004, $240M. Promoted in March 2003 to serve as Construction Manager for this program. Managed the bidding process for 24 separate contracts, worth approximately $110M, over a 5-month period. Managing staff of 25 persons including field managers and inspectors, cost and schedule engineers and administrative staff. This fast-track project opened for revenue service, on schedule, on August 29, 2004. The program consisted of a new 340,000 square-foot

terminal building with twelve multiple-use jet gates; a 1M square-foot multi-modal transportation center capable of handling charter, commercial and public transportation buses, hotel shuttle vans, limousines, rental cars, taxis and 2,700 public parking spaces all connected by climate-controlled moving walkways; a 10,000-foot-long parallel taxiway; a 40-acre airport apron; reconstruction of the airport loop road and a CAT III Instrument Landing System. Within the new 12-gate terminal, a new out-bound baggage handling system was designed and constructed with "in-line" threat detection. Coordination of this installation included integration of the conveyor system with three L3 baggage-screening machines and achievement of TSA certification of the new system. **This fast-track project opened for revenue service, on schedule, on August 29, 2004.** Client: Susquehanna Area Regional Airport Authority

Harrisburg International Airport Improvements, Harrisburg, PA; 9/02-3/03, $240M. As Assessment Team Leader, successfully analyzed the overall program for cost, quality, schedule and interface concerns. Drafted the PMP and Responsibility Matrix for the revised CM team and redeveloped the scope and procurement plan for the Terminal Apron demolition, remediation and reconstruction saving three months of construction time. This encompasses +/-15% of the entire cost of the project. This change in the procurement of these projects allowed the demolition, abatement and remediation to begin up to three months earlier than originally anticipated. Client: Susquehanna Area Regional Airport Authority.

DRJTBC Easton Phillipsburg Bridge CM-437A; 6/13-Present, $29.6M. Project Manager. This project is a multi-faceted rehabilitation of the Easton-Phillipsburg (Route 22) Toll Bridge and related facilities. Rehabilitation project elements include bridge painting, pavement repairs, deck replacement and repair, substructure repairs, bearing replacement, electrical upgrades and toll plaza upgrades. Project includes multiple bridge structures: Main River Bridge, Broad Street Viaduct, Route 22 over SR 611, Route 22 over Bank Street, Route 22 over 3rd Street and the pedestrian tunnel at Bushkill Street. As project manager, Mr. Seamon' duties include being the liaison to the Owner; overseeing CM/CI Field Inspection/Engineering staff; performing quality assurance oversight of procedures required by GPI' contract; managing invoices for work performed; overseeing subconsultants; providing engineering and public outreach support to the DRJTBC. Client: DRJTBC

NJTA P3448 GSP Widening MP 90.5 to 93.5 (Contract P200.200, $75M) & MP 93.5 to 99.5 (Contract No. P200.201, $101M); 9/12-Present. Project Manager. These contracts involve the restoration of shoulders and other safety improvements by widening the GSP mainline to provide for 12-foot-wide left and right shoulders and 12-foot- wide travel lanes and incorporating current NJTA standards for pavement super-elevation and transitions, roadside treatments, and roadside clear zones. Contract P200.200 includes the replacement of seven bridges, the widening and redecking of two existing bridges, the water management basins, signing, lighting, and other miscellaneous work necessary and incidental to the completion of the project. Contract P200.201 includes the replacement of three bridges, the widening and redecking of seven existing bridges, the extension of existing culverts, construction of 13 new permanent sign structures, drainage improvements, 14 storm water management basins, signing, lighting, and other miscellaneous work necessary and incidental to the completion of the project. As Project Manager, Mr. Seamon' duties include being the liaison to the Owner; overseeing CM/CI Field Inspection/Engineering staff; performing quality assurance oversight of procedures required by GPI' contract; managing invoices for work performed; overseeing subconsultants; developing ongoing status reporting for client; managing invoices from utility companies. Client: NJTA

New Jersey Turnpike Interchange 6 to 9 Widening Program; 2009-201, $2.7B. Resident Engineer for Contract No. T869.120.802 (approximately $36M) Interchange 8A Ramp TSI and local roadways grading, drainage, paving, and structures from MP 70.9 to 74.4 in the Townships of Cranbury, Monroe and South Brunswick, Middlesex County. As part of a Joint Venture, GPI is providing construction management services for the Interchange 6 to 9 Widening Program (The Program). The Program is the Turnpike's most significant construction project in the 58-year history of the Authority. Mr. Seamon is serving as the Resident Engineer for Contract 802 which includes four (4) new bridge structures (three spanning the mainline and one new flyover ramp at Exit 8A). In this capacity, Mr. Seamon manages a team of five inspectors, as well as coordinates critical QA/QC inspectors from Keytech for asphalt, concrete, High Performance Concrete, structural steel, bridge bearings and MSE Wall (precast concrete and select aggregate) components. Client: NJTA

Jayendra Shah, P.E.
Resident Engineer

Professional Profile
Mr. Shah has many years of experience as a civil engineer in the design and construction inspection of bridges and highways. Mr. Shah was part of the Williamsburg Bridge Project Team since the first major rehabilitation project of its series. Mr. Shah has served as an inspector, office engineer, chief inspector, assistant resident engineer, and resident engineer on some of the largest projects in the New York metropolitan area.

Project Experience
Rehabilitation of Battery Park Underpass and West Street Underpass, New York, NY; 11/12 – Present. Resident Engineer. After suffering severe damage to electrical, mechanical, ventilation, and lighting systems during Superstorm Sandy, the Battery Park and West Street underpasses require significant rehabilitation to return them to pre-storm working condition. Mr. Shah is responsible for resident engineering inspection, equipment procurement, and support for the ventilation systems. The ventilation systems required the following new equipment: trailer mounted 220KVA generators; two-speed, double-winding motors; VFDs (Variable Frequency Drives); and a variety of other mechanical/electrical materials. This fast-track emergency work purchase order needed to be prepared and submitted for DCAS (Dept. of Citywide Admin. Services) and FEMA for federal funding approval. Client: New York City Dept. of Transportation

Belt Parkway Bridges REI Services - Gerritsen Inlet Bridge, Brooklyn, NY; 3/13-Present. Resident Engineer. This $104.5-million project involves total replacement of Gerritsen Inlet Bridge on the Belt Parkway in the Borough of Brooklyn. The major work includes removal and disposal of main spans including concrete deck, steel girders, floor beams and stringers, approaches, concrete superstructure, closure walls, timber piles, concrete piers, pier caps, columns, abutments, wingwalls, street lighting, transformer room, transit ducks, steel conduits, navigation lights, and trees and vegetation. The project also involves construction of cofferdams, installation of new cast-in-place concrete piles at piers and abutments, construction of new reinforced concrete piers including pier columns and plinth, reinforced concrete abutments and wingwalls, installation of new multi rotational (MR) bridge bearings, construction of haunch steel girders, diaphragms, bracing, concrete deck, installation of inspection platform at each pier, concrete barrier at fascia and bike path, sidewalk bridge railing and protective screening, median concrete barrier, construction of approach roadway, pavements including embankment, regrading with grass, construction of new bike path connecting existing bike path, construction of new drainage system including drainage and outfall structures, installation of new fender system, navigation lighting, new street lighting, traffic signs, etc. Mr. Shah is responsible for resident engineering inspection and managing the entire project activities. He will make sure work is performed as per plans and specifications; project milestones are met; project remains on schedule; budget requirements are met; quality is maintained; unforeseen issues are addressed and problems are solved satisfactorily; maintenance and protection of traffic requirements are met to minimize inconvenience to motorists, pedestrians and the public; make sure the contractor adheres to construction procedures as specified and approved by NYCDOT; supervise the staff to see that the contractor performs the work to meet field conditions; make sure contractor maintains the site and cleans up work site as specified. Mr. Shah is also responsible for coordination with various agencies to obtain approvals and to make sure specified standards are met. Involved agencies: Construction Support Service – URS, Federal Highway Administration, NYS Department of Transportation, NYS Department of State, NYS Historic Preservation Office, NYS Department of Environmental Conservation, New York City Department of Parks and Recreation, NYC Department of Environmental Protection, NYC Department of City Planning, NYC Public Design Commission (Formerly NYC Art Commission), National Marine Fisheries Service, US Coast Guard, US National Parks Service, US Army Corps of Engineers, local community boards. Client: New York City Dept. of Transportation

Jayendra Shah, P.E.
Resident Engineer

Williamsburg Bridge Reconstruction of Miscellaneous Rehabilitation of the Main Bridge, Contract 8, #BRC253CCA, New York, NY; 8/03-3/13. Resident Engineer. The scope of work for the project included abrasive blasting and painting of main bridge stiffening trusses, rehabilitation and strengthening of the main towers, rehabilitation of the intermediate towers and installation of seismic shear keys, main cable saddle repair and restraint, rehabilitation of wind tongue and wind chord, main tower and intermediate tower bearing installation, main tower leg removal and replacement, stiffening truss top and bottom chord rehabilitation, traveling maintenance platform installation, re-profiling of main span vertical curve by incrementally adjusting suspender cables, modification of orthotropic footwalk deck expansion joints, waterproofing and surfacing of orthotropic roadway deck, installation of ornamental balconies and electroliers, integration of intelligent transportation operating system, Kent Avenue void rehabilitation, modular joint repairs, PP29 deck pin rehabilitation, fender system installation, installation of tower top aviation lights with lightning protection system, FDNY's acceptance testing of dry standpipe system, bent and panel point designations throughout the bridge, flag repairs generated by NYSDOT's biennial inspection of 2006, 2008 and 2010, seismic retrofit of the intermediate towers, installation of contraflow barrier and erection of barrier transfer machine facility, including augured concrete piles. Mr. Shah's responsibilities included supervising and training inspection engineering staff of 12 for the steel reinforcement of main towers and trusses, abrasive blasting and recoating of the north and south trusses and interiors of the main tower legs, rehabilitation of anchorages, seismic retrofit steel and concrete work at the intermediate towers, bearing replacement at PPO, PP30, PP10, PP15, resolving field operation issues, technical field issues with designer, attending project monthly progress meeting, reviewing cost proposal and preparing construction and REI change orders. Client: New York City Dept. of Transportation

Williamsburg Bridge North Roadways Reconstruction, Contract 7, #BRC253CA, New York, NY; 1/01-8/03. Senior Engineer. This $248-million project involved the construction engineering and inspection for the reconstruction of the north inner and outer roadways. Mr. Shah's responsibilities included managing an engineering staff of five, monthly estimate preparation, quantity take-offs and cost estimates, review of contract documents and contractor's proposal, evaluation of overruns and underruns, draft and prepare action letters to contractor, memos, flag close out notifications and engineering cost estimates for change order preparation. He was also responsible for reviewing, checking and paying T & M work payments using E-Z Murk software and monitoring the finalization of contract, change order items, reviewing finalized IDRS and preparing final payment package. Client: New York City Dept. of Transportation

Williamsburg Bridge BMT Structure Rehabilitation, Contract 6, #BRC253BBA, New York, NY; 7/99-1/01. Office Engineer. Mr. Shah's responsibilities on this $176-million project included managing an engineering staff of five, monthly estimate preparation, quantity take-offs and cost estimates, review of contract documents and contractor's proposal, evaluation of overruns and underruns, draft and prepare action letters to contractor, memos, transmittals, status reports and general correspondence for all structural steel flag repairs work, and other office work and preparation of engineering cost estimates for change order work. Client: New York City Dept. of Transportation

Williamsburg Bridge South Roadways Reconstruction, Contract 5, #BRC253BAA, New York NY; 2/96-7/99. Senior Office Engineer. Mr. Shah's responsibilities included the management and administration of time and material work of approximately $310 million for a staff of eight, monthly change order payments review and preparation per NYCDOT requirements, wage rate analysis, labor union regulation verification, checking of scope of work and payment guidelines under contract change requests. He was also responsible for contract proposal and agreement compliance, change order preparation for extra work and field changes, price negotiation with contractor, flag condition report check, review and track fabrication sketches and shop drawings, completed flag notification submittal to NYCDOT, create, design and modify computer database (ALPHA5) for computerized force account record keeping, conduct training sessions of MURK guidelines and T and M work procedures for contractor and inspectors, timely preparation of budget analysis, cost projection and final payment package. Client: New York City Dept. of Transportation

Williamsburg Bridge Main Cable Rehabilitation, Contract 4, #BRC253A, New York, NY; 2/92-2/96. Office Engineer. Mr. Shah's responsibilities on this $88-million project included managing a staff of three, monthly estimate preparation, quantity take-offs and cost estimates, review of contract documents and contractor's proposal, evaluation of overruns and underruns, preparation of engineering cost estimates for change order work, finalization of final payment package and project closeout. Client: New York City Dept. of Transportation

Philip Trapani, P.E.
Resident Engineer

Professional Profile
Mr. Trapani is a professional engineer with extensive experience in bridge and highway reconstruction projects. He has considerable experience in inspection practices involving lead paint removal, painting, steel removal and erection, mass concrete placement, concrete pavement, and concrete curbs and barriers on major metropolitan bridges and highways.

Total Years Experience 29

Project Experience
Rehabilitation of Kew Gardens Interchange/Van Wyck Expressway, New York, NY; 8/10-Present. Resident Engineer. The project involves construction inspection services for the reconstruction of the Van Wyck Expressway (I-678), between 86th Avenue and the Grand Central Parkway in Queens County. This $150-million project involves the complete replacement of five bridges, the reconstruction of one bridge along with the reconstruction of a pedestrian tunnel and the widening of the Van Wyck Expressway. Mr. Trapani's responsibilities include the daily supervision and management of construction inspectors covering the Contractors' work activities, the review of the Contractors' CPM, requests for information, shop drawings, miscellaneous catalog cuts, holding coordination meetings and weekly technical meetings and coordinating work activities with other utility agencies including NYC-MTA, Time Warner Cable, Con Ed, NYCDEP, NYCDEC, NYC Parks and NYCOCMC. Client: New York State Dept. of Transportation

Brooklyn Bridge Rehabilitation of the Approach Spans and Ramps and Painting of the Entire Bridge, Contract 6, New York, NY; 2/10-8/10. Resident Engineer. This project involved construction management and inspection services for the $509-million rehabilitation of this Iconic National Landmark. The scope of work for the project included replacement of approach roadway in Manhattan and Brooklyn over the arch blocks; rehabilitation of the Manhattan side ramp structures with widening and deck and bearing replacements; rehabilitation of the approach steel structures with full superstructure replacement of the York and Main Street structures and orthotropic deck installation at Franklin Square; seismic retrofitting of the main bridge, Franklin Square and ramp structures; painting of the ramp structures and suspended spans in their entirety; restoration of historic features. Mr. Trapani's responsibilities included project start-up coordination meetings; the direct supervision of day-to-day operations conducted by the contractor; managing inspection personnel; review of the Contractor's CPM and work zone health, site security plan and maintenance and protection of traffic (MPT) submissions; creating databases used to track shop drawings, Engineering Clarification Memos, site security, and correspondence. Client: New York City Dept. of Transportation

Replacement of Brooklyn Bridge Travelers, Contract #BRC270TA, Boroughs of Manhattan and Brooklyn, NY; 11/06-2/10. Resident Engineer. This project involved the replacement of four movable maintenance platforms (travelers) with a state-of-the-art mechanical driven traveler system, the replacement of the traveler rails, hangers and connections, localized lead paint removal, and the replacement of the electrical system. Mr. Trapani's responsibilities included the direct supervision of day-to-day operations conducted by the contractor and managing inspection personnel and subconsultants; and review the Contractor's CPM and work zone health, site security plan and maintenance and protection of traffic (MPT) practices to ensure a safe environment for the traveling public and contractor's personnel. Client: New York City Dept. of Transportation

Long Island Expressway/Cross Island Parkway, Exits 29-32, Queens, NY; 3/03-12/07. Resident Engineer. This project involved construction inspection services for the rehabilitation of the Long Island Expressway/Cross Island Parkway (LIE/CIP) interchange. Mr. Trapani's responsibilities included the direct supervision of day-to-day operations conducted by the contractor. He managed inspection personnel and subconsultants; ensuring that the contractor's work, cost management, and project progress were consistent with the Baseline Schedule; conducting monthly CPM review meetings to analyze and validate project impacts; review of work zone health and safety measures and MPT

practices to ensure a safe environment for the traveling public and contractor's personnel; processing monthly payments to the contractor; resolving and negotiating agreements on disputed items of work; review and analysis of contractor's claims of extra compensation due to delay based on the CPM schedule, contract documents and NYSDOT Standard Specifications; coordination of daily activities with various city agencies, utility companies, and contractor to achieve desirable solutions in timely fashion for the project progress; and conducting monthly task force meeting to update all concerned community attendees about the progress of the project. Client: New York State Dept. of Transportation

Marine Parkway Bridge MP-01 Resident Engineering and Inspection, New York, NY;1997-3/03. Assistant Resident Engineer/Office Engineer. This $90-million project involved the reconstruction of one of the largest vertical lift span bridge in New York. The project included the redecking of the entire structure. The approaches were replaced with a precast concrete deck and the through trusses and lift span with an open steel grid deck. Also included in the work were substantial structural steel repairs, the deleading of the structure using Class 1A containment, painting the entire structure, a new drainage system and a new bridge decorative lighting system. Mr. Trapani was also involved with the creation of a computerized document control system using Expedition, by Primavera. This document control system computerized all the correspondence, submittals, and transmittals, kept track of quantities and created monthly payments. Client: Triborough Bridge and Tunnel Authority

Williamsburg Bridge South Roadways Reconstruction, Contract 5, #BRC253BAA, New York NY; 1994-1997. Senior Office Engineer. This was a $310-million project where Mr. Trapani was in charge of the material quality assurance program and the contractor's monthly payments. His responsibilities included shop drawing tracking and distribution, preparing RFP packages and writing material testing quality assurance programs. On this project, both agencies, NYCDOT and NYSDOT, had declined to perform their normal shop inspection and testing programs. Mr. Trapani was in charge of obtaining quotes and contracting different private agencies to perform these tasks. He wrote the procedures for the agencies to follow, requested proposals and analyzed the bids. Mr. Trapani also prepared the contractor's monthly payment package (averaging $3.5 million per month), which included checking all of the inspector's daily reports and payment calculations. Client: New York City Dept. of Transportation

Williamsburg Bridge Main Cable Rehabilitation, Contract 4, #BRC253A, New York, NY; 7/91-10/94. Assistant Office Engineer. This $88-million construction inspection and resident engineering project for the rehabilitation of the suspension system for this bridge involved unwrapping, treating, and rewrapping the main suspension cables, replacement of all suspender cables with change to a redundant system, rehabilitation of the anchorages, replacement of necklace lighting, rehabilitation of tower tops, wire splicing, replacement of Transit Authority structures, and removal of cable enclosures inside anchorage structures. Mr. Trapani's specific responsibilities included reviewing materials acceptance certification documentation; checking of IDRs and payment calculations; checking contractor's monthly estimate; reviewing, recording, and tracking of shop drawings; preparing letters, memos, and transmittals for general office correspondence; supervision and organization of the materials testing program; record keeping; and obtaining price proposals from vendors and testing laboratories. Client: New York City Dept. of Transportation

Interborough Parkway Inspection, #D252310, Glendale, NY; 12/88-7/91. Construction Inspector. On this $48-million reconstruction project, Mr. Trapani supervised eight inspectors on the testing procedures of concrete, asphalt and soils in accordance with ASTM and AASHTO. His responsibilities included supervision of the materials laboratory and testing of materials; inspection of the rehabilitation of eight bridges and two retaining walls; and inspection covering mass concrete placements, concrete pavement, concrete curb and barrier, asphalt pavement, cuts, fills, drainage work and pavement striping. Mr. Trapani spent the major portion of this project performing various inspection tasks in the field, but toward the end he was assigned to the office to draft cross sections and performed closeout work. Client: New York State Dept. of Transportation

Manhattan Bridge Rehabilitation of Main Cable and Cable Anchorage in Chamber "C", #D500498, New York, NY; 10/87-12/88. Construction Inspector. Mr. Trapani's responsibilities on this $13.8-million project included the removal and placement of mass concrete, waterproofing of the anchorage roofs, installation of steel girders and castings, as well as miscellaneous main cable work. Client: New York State Dept. of Transportation

Guerman Vainblat, P.E.
Resident Engineer

Professional Profile
Mr. Vainblat has over 32 years of experience in construction and engineering. His experience includes project management, field supervision, teaching, training and instructional activities, lecturing, quality control, testing and inspection, and report writing. Mr. Vainblat has extensive knowledge of the structural design of reinforced concrete, masonry, steel and wood structures, corrosion prevention and protective coatings. As a resident engineer, assistant resident engineer and chief inspector, Mr. Vainblat has performed review of drawings, specifications and coating related submittals, and verified compliance of construction work with codes, drawings and contract documents, and processed payments. Monitored and inspected construction activities, including MPT, excavation, and demolition, the repair and new construction of bridges, roadways, sidewalks, pavements, steel reinforcement, structural steel, concrete placement and testing, lead paint removal and protective coatings application.

Proposed Project Assignment
Construction Manager

Registration/Certifications
2003/Professional Engineer/NY
2010/NACE Certified Coating Inspector Level 3
2009/ICC Structural Steel and Bolting Special Inspector

Education
MA/1981/Civil Engineering

Course Work
2010 - NYCDOT Lead Supervisor Course
2010 - NACE 2 Training Course
2009 - 10-Hour OSHA Training Course
2008 - NACE 1 Training Course
1994 - AWS Certified Welding Inspector Course

Total Years Experience 33

Project Experience
2006-2010 Port Authority On-Call Construction Management Services - Jet Blue Parking Structure at John F. Kennedy International Airport, Queens, NY; 8/07-7/08. Civil/Structural Inspector. As part of this on-call construction management services project, Mr. Vainblat was assigned to perform inspection services of the new, five-story parking structure at John F. Kennedy International Airport's Jet Blue Terminal. This structure is pre-cast concrete on a structural steel frame. Client: Port Authority of New York & New Jersey

Brooklyn Bridge Rehabilitation of the Approach Spans and Ramps and Painting of the Entire Bridge, Contract 6, New York, NY; 4/10-Present. Resident Engineer. This project involves construction management and inspection services for the $509-million rehabilitation of this Iconic National Landmark. The scope of work for the project includes replacement of approach roadway in Manhattan and Brooklyn over the arch blocks; rehabilitation of the Manhattan side ramp structures with widening and deck and bearing replacements; rehabilitation of the approach steel structures with full superstructure replacement of the York and Main Street structures and orthotropic deck installation at Franklin Square; seismic retrofitting of the main bridge, Franklin Square and ramp structures; painting of the ramp structures and suspended spans in their entirety; restoration of historic features. Mr. Vainblat is responsible for inspection of painting operation including lead paint removal, total coating systems replacement and coating of new steel; supervision and training of paint inspectors and chief inspectors; analyzing project progress; developing and giving monthly progress presentations; and working as resident engineer office team member. Client: New York City Dept. of Transportation

Protective Coating of Grand Central Parkway over BQE Bridges, Queens, NY; 7/08-5/10. Resident Engineer. The project involved resident engineering inspection, environmental monitoring/hazardous waste management and construction support services for the protective coating of five Grand Central Parkway/BQE Bridges. Mr. Vainblat was responsible for the day-to-day operation, supervising chief inspector, paint inspector and environmental inspection, operation of field office, community notification and environmental monitoring. Client: New York City Dept. of Transportation

Guerman Vainblat, P.E.
Resident Engineer

Port Authority On-Call Training; 4/10. Instructor. Mr. Vainblat was responsible for developing and teaching a 16-hour curriculum for Structural Steel and Bolting Special Inspector Course. Client: Port Authority of New York & New Jersey

Reconstruction of Roadways and Bulkheads located in the Gerritsen Beach, Contract #HWK1152-R, Brooklyn, NY; 4/07-7/07. Mr. Vainblat served as resident engineer for this project that involved the installation of new bulkheads and outfalls, street restoration including new storm and sanitary sewer, new water main, sidewalks and pedestrian ramps. His responsibilities included review of permits, submittals and approvals, and inspection of outfall items. Client: New York City Dept. of Design and Construction

Installation of Sidewalks and Pedestrian Ramps, Contract #HWS2006Q1, Queens, NY; 6/06-5/07. Mr. Vainblat served as resident engineer for this project involving the installation of new sidewalks and pedestrian ramps. His responsibilities included review of permits, submittals and approvals and inspection. Client: New York City Dept. of Design and Construction

Combined Sewer Replacement and New Water Main Installation at Various Locations, SEQ2590, Flushing, Queens, NY; 10/5-4/06. Mr. Vainblat served as resident engineer for this project involving street restoration including new storm and sanitary sewer, new water main, sidewalks and pedestrian ramps. His responsibilities included review of permits, submittals and approvals and inspection. Client: New York City Dept. of Design and Construction

Restoration of 72nd Street, Contract # HWQP180, Woodside, NY; 7/05-10/05. Mr. Vainblat served as chief inspector for this project involving replacement of existing sewer, installation of new water main and street restoration, and installation of new light poles, retaining walls, parapets, sidewalks and pedestrian ramps. Client: New York City Dept. of Design and Construction

Throgs Neck Bridge Structural Steel Repair and Drainage System Improvement, TN-81, Bronx, NY; 12/02-7/05. Mr. Vainblat served as assistant resident engineer for this project involving removal of existing steel, structural steel repairs, finger joint repairs, new drainage installation, suspender cables rehabilitation, cleaning, preparing and painting of the structural steel, staged construction and MPT. Client: Triborough Bridge and Tunnel Authority

Component Rehabilitation of Nine Bridges, New York, NY; 4/06-6/06. Mr. Vainblat served as chief inspector/resident engineer for this project, which included demolition of two arch bridges over Jackie Robinson Parkway, demolition and removal of concrete deck and structural steel, new structural steel, concrete overlay, deck, parapet walls on various bridges, pedestrian ramps, sidewalks, abutment walls repair, water main repairs, culverts rehabilitation, staged construction and MPT on bridges, highways, railroads, and local streets. Client: New York City Dept. of Transportation

New 33rd Precinct Station House, New York, NY; 2000-2001. Mr. Vainblat inspected steel fabrication and erection (including structural welding, bolting, and metal decking), reinforced masonry, and performed non-destructive testing (Magnetic Particle) of the welds. Client: New York City Dept. of Design and Construction

New Power Generator House at Rikers Island, New York, NY. As senior inspector, Mr. Vainblat inspected structural steel, reinforced masonry and precast concrete. Client: New York City Dept. of Design and Construction

REPRESENTATIVE AND PERTINENT EXPERIENCE

Mr. Belov presents over thirty years' experience in engineering and construction. His diversified experience includes construction inspection of mechanical, electrical, and structural work for infrastructure, transit, toll plaza, and facilities. His specific electrical experience includes inspection of contractors' means and methods for medium and low voltage feeders, cable, conduit, transformers, highway lighting, sign lighting, fiber optic cable, ITS systems, and communication systems and components in accordance with plans and specifications.

- **ITS/Electrical Inspector, NJDOT, I-78 Rehab Contract B** – Served as ITS/Electrical Inspector for Contract B ($72 million) involving reconstruction of 5 miles of express and local lanes in Hillside, NJ., including new roadway slabs, resurfacing, joint repairs, bridge deck repairs and resurfacing, median divider, guide rail, drainage, striping, and fiber optic cables for DMS and ITS. The project extends from MP53.40 to MP58.43 just east of the Garden State Parkway interchange. Inspected installation of ITS systems and components including communication hub modifications, 10,200 feet of 2" conduit, 20,900 feet of fiber optic cable Type A, 3,300 feet of fiber optic cable, Type F 14,300 feet of 1-1/4" flexible conduit, 3 DMS controller modifications, and various junction boxes. (11/12 – Present)

- **Senior Inspector, NJ Turnpike Authority, Newark Bay Bridge Improvements** – Served as ITS/Electrical Inspector on this $94 million project including reconstruction of the bridge deck, and various structural roadway, electrical/ITS, and lighting improvements to the Newark Bay Bridge and Newark Bay-Hudson County Extension from MP N0.00 to N6.00. Scope of work involved removal of 7,200 LF of existing concrete deck and replacement with precast concrete sections. The project also included upgrades for aviation and navigational lighting systems. (6/10 – 10/12)

- **Senior Electrical Inspector, Port Authority of NY & NJ, WTC PATH Hub** - Work on this $2.2 billion project consists of PATH facilities, PATH Terminal Building, underpinning of No. 1 Subway, Pedestrian connections, and LMDC facilities, infrastructure and tenant alterations to Tower No. 7. Performed daily inspections, site visits, and prepared daily narratives for WTC projects:
  - PATH-WTC-TOWER ONE TCA WTC-1OO1-Utility Relocation - Duties included: EIC for workers in PATH area, reviewing contract and as-built drawings & documents, daily, and final inspection for electrical systems and components.

- WTC-Tower # 7 TAA #7001... TAA#7039 Fit Out (4, 10 ... 42, 50 ... 53 Floors) - Duties included reviewing drawings & documents, daily, above ceiling and wall inspection for electrical part of projects.
- WTC -Tower #4 TCA #4000.07-MEP Under Ground & MEP Above Ground - Duties included reviewing drawings, documents and payments, daily inspection, attend and analyzing test results for electrical systems and components. (2/06 – 6/10)

- **Senior Inspector, Triborough Bridge and Tunnel Authority, Project TB-09 B, Deck Replacement for Harlem Lift Span.** Served as bridge inspector for $42 million project for orthotropic deck replacement of the Harlem River Lift Span, Approach Truss Spans and Fender System Replacement. Inspected contractors means and methods for installation of deck panels, structural steel, pull boxes, conduit, light poles, electronically operated gates, traffic signals, sign lighting, and navigation lights. (12/02 – 7/05)

- **Senior Inspector, Port Authority of NY and NJ, Various PATH Projects.** Responsible for inspection of ventilation improvement and substation at Hoboken Terminal; Hackensack River Bridge control tower and motor generator building, including security improvements(CCTV, public address, and intercom systems); drainage improvements at West Side Avenue and rehabilitation of Tonnelle Avenue retaining wall; and replacement of 2-5MVA transformers for 15KV distribution system at Substation 2A. (6/01 – 11/02)

- **Senior Inspector, TB-62, Electrical Relocation on the Triborough Bridge, Triborough Bridge and Tunnel Authority.** Served as bridge inspector for this $5 million project involved the relocation of electrical and communications systems located in the medians of the Queens and Manhattan approaches. Responsible for inspecting installation of new wiring and raceway systems, connections to existing power sources, relocation of lighting and signal systems, illuminated signs located on the bridge, and communication components. (12/00 – 4/01)

- **Senior Electrical/Mechanical Inspector, TB-09A, Rehabilitation of the Harlem Lift Span, Triborough Bridge and Tunnel Authority**. Responsibilities on this $25 million project included bridge construction inspection of modification of existing span drive mechanical system, removal and replacement of the main and auxiliary counterweight ropes, rehabilitation of the main span motors and power distribution system installation of transformers and lighting panels, motor control center, drop cables, lighting receptacles, intercom, telephone, security and fire alarm systems as well as rehabilitation and/or replacement of HVAC systems in the lift span machinery rooms and tower houses. (1/99 – 11/00)

- **Senior Inspector, Project TN-37, Triborough Bridge and Tunnel Authority, Rehabilitation of Throgs Neck Bridge.** Served as bridge electrical inspector on this $7.5 million project. Responsibilities included inspecting the installation of all electrical hardware and power feeder and distribution networks for the bridge and approach roadway lighting systems, toll collection systems and fire and communications systems. In addition to overseeing inspection forces, was directly involved in field design changes, Change Order preparation, preparation of partial payments and preparation of As-Built quantities and drawings. (11/97 – 12/98)

VINCENT S. BUCCI, P.E. — **Senior Construction Engineer/Inspector**

ASSIGNMENT

Senior Construction Engineer/Inspector

EDUCATION

New Jersey Institute of Technology, MS, Civil and Environmental Science
New Jersey Institute of Technology, BS, Engineering Science

REGISTRATION

Licensed Professional Engineer in the State of New Jersey
ACI Concrete Field Testing Technician Grade I expiration 11/18/2014
NJ Asphalt Technology Certificate expiration 6/10/2015
TCC Rutgers CAIT Certificate December, 2009
NJDCA Special Inspector for Concrete Placement, Reinforced Concrete, and Structural Masonry

REPRESENTATIVE AND PERTINENT EXPERIENCE

Mr. Bucci has over 35 years experience in engineering and construction for highway infrastructure, municipal, and water treatment facilities. He has an extensive background in multi discipline engineering, planning, and monitoring for contract conformance to budgets and CPM schedules. Mr. Bucci has hands on experience with utilities and water main installation and testing up to 36 inch diameter pipe plus associated excavation, sewer pipe, conduits, backfill, subbase and road pavement. He is familiar with various contract delivery systems; including lump sum, unit price, and net cost contracts and procedures.

- **Senior Construction Inspector, NJ Turnpike, 6 to 9 Widening** – Inspected contractor's work associated with relocation of utilities to eliminate interferences with this $2 billion high volume expressway project. Prepared daily reports using CAPEX software. (07/10 – Present)

- **Senior Construction Inspector, NJDOT, I-78 Contract C Rehabilitation** – Inspected paving operations, asphalt placement for base and intermediate course, switch over of 6,000 feet of construction barrier, and maintenance and protection of traffic during night time operations. Completed DC-29 reports on a daily basis. (04/10 – 06/10)

- **Senior Construction Inspector, NJDOT, Route 22 EB Shuttle Bus Turnouts, Union, NJ** – Served as Senior Inspector for all phases of work which included temporary traffic control, crash cushion and barrier curb setup; removal of existing reinforced concrete U-turn ramp sections; installation of pre-cast electrical junction boxes, conduits, meter box foundations, meter cabinets, lighting poles, arms, luminaries and wiring; RCP removal, new RCP and inlet installation and pipe cleaning; concrete curb removal and new curb and sidewalk construction, subbase construction, HMA placement, guide rail installation, milling and overlay operations; traffic and pedestrian signage and striping; bus shelter assembly and erection. Duties included daily DC-29 reports for monitoring construction, traffic safety and environmental conditions, material certification compliance and quantity verification, change of plan review and as-built drawing completion. (09/09 – 02/10)

- **Senior Inspector, Bayonne Bay Infrastructure for the Bayonne Municipal Utility Authority (BMUA)** - $47 million phased infrastructure redevelopment project at the Bayonne Peninsula, formerly known as the Marine Ocean Terminal, included new water, sanitary, storm systems and resurfacing of Harbor Bay Blvd. involving one mile of two lane milling and paving with HMAC. The extensive storm water systems included approximately 3,000 ft. of precast reinforced concrete box culverts of various sizes set at slopes of .1% to .3% with flap gates controlling discharge into the Bayonne Bay. (04/08 – 05/09)

- **Senior Inspector, Northeast Quadrant Stormwater Management Project, Cranford Township, Union County, NJ** - $5 million 116 MGD storm water pump station consists of five 75 hp submersible pumps discharging through five 30 inch ductile iron pipes to a common outfall. It included a 66' x 80' cofferdam, 3' thick structural foundation slab and up to 30" thick reinforced concrete walls and top slabs, accounting for approximately 2000 c.y. of concrete. It also included a 1000 HP diesel powered emergency generator. (09/06 – 03/08)

- **Senior Inspector, City of Paterson Combined Sewer Overflow (CSO) Projects** - $4.5 million project at two locations consisted of subsurface structures, the larger (40' x 80') of which required a cofferdam adjacent to the Passaic River. The majority of work consisted of cast-in-place reinforced concrete (approx. 1000 c.y.) and several pre-cast components. (12/04 – 06/06)

- **Senior Inspector, Clyde Potts Water Treatment Facility for the Southeast Morris County Utility Authority (SEMCUA)** in Mendham, NJ. - $7 million project consisted of demolition of an obsolete water treatment plant and construction of a cast-in-place membrane filtration facility with a capacity of 1.2 MGD. Construction included structural concrete and structural masonry utilizing approximately 700 cubic yards of concrete. (08/03 – 09/04)

- **Senior Inspector, Combined Sewer Overflow (CSO) Solids/Floatable Control Facilities, Elizabeth, NJ** – Inspector for $9 million project encompassed 34 sites including both precast and cast-in-place subsurface structures for existing combined sewer lines and installation of new separated sanitary and storm lines and appurtenances. (09/02 - 07/03)

- **Senior Inspector, Water Main Installation, Roseland and Florham Park, NJ** – Inspected water main installation, including milling and paving with HMAC, of one mile of Eisenhower Parkway, a heavily traveled thoroughfare in Essex County. Inspected installation in accordance with plans and specs and maintenance and protection of traffic. (03/02 – 08/02)

- **Resident Engineer, Kakeout Dam & Dike Rehabilitation** – Borough of Butler, NJ – Project consisted of armoring approximately 1500 square yards of downstream face of the earthen dam with a 12" thick reinforced concrete slab, rebuilding the top of dam roadway with reinforced concrete; armoring 1200 square yards of the upstream dam embankment with gabion baskets 1' thick and similarly armoring the Dike at the opposite end of the Butler Reservoir. (06/00 – 12/01)

- **Chief Engineer/Assistant Engineer, County of Essex, NJ** – Worked as direct county employee for 27 years prior to retiring. Administered annual capital improvement program for 5,800-acre County Park system. Provided design, engineering and preparation of plans and specifications for major improvements involving 18 parks and 3 reservations. (1972 – 1999)

John Chiang, P.E.
Inspector

Professional Profile
Mr. Chiang is an inspector who has experience in the design of site plan layout, storm water systems, and on-site sanitary systems; preparation of environmental remedial reports; environmental impact and water quality volume analysis; and the utilization of state, town, and health codes to acquire construction permits.

Proposed Project Assignment
Field Engineer – Civil/Structural Inspector

2010 - 10-Hour OSHA Training Course

Total Years Experience 4

Project Experience
Bayonne Bridge Navigational Clearance Program (BBNCP) Construction Management, NY/NJ; 12/13-Present. Senior Inspector. This project involves construction management services for the $743-million Bayonne Bridge Navigational Clearance Program (BBNCP). This extraordinarily complex, once-in-a-lifetime project will replace more than 5,000 feet of viaduct and re-frame the existing steel arch structure to accommodate a new roadway 65 feet above the existing roadway. Mr. Chiang is part of the main span structural steel rehabilitation team. The 1,625-ft main bridge will be the only remaining portion of the bridge complex, but will be significantly modified to accommodate a newly steel framed roadway deck approximately 60 ft above the existing deck surface. In order to do this, the existing bridge needs to be significantly reinforced and strengthened to allow for a new portal to be opened and construction loads introduced during the staged construction sequencing. Mr. Chiang is responsible for ensuring that the contractor is following approved means and methods during the installation of chord reinforcement plates and selective demolition. Client: Port Authority of NY & NJ

Manhattan Bridge Rehabilitation of Cables and Suspenders, Contract 14, #BRC156R, New York, NY; 6/10-12/13. Mr. Chiang served as senior inspector on this $149-million project which involved the unwrapping and rewrapping of cables; replacement of suspenders; replacement of necklace lighting messenger cables and cable hand ropes; installation of new access platforms to existing tower platforms; reversal of lower roadway and operation of HOV lane and replacement of multi-rotational bearings at the Towers; replacement of light poles and luminaries on South upper roadway; replacement of lane control radar on South upper roadway; and retrofit of track stringers and diaphragm connections and other miscellaneous work. He was responsible for the removal and replacement of wire rope suspender assemblies, main cable rehabilitation, structural steel repairs, and the placement of traffic control devices for daily lane closures and lane reversals on the bridge. He was also responsible for writing Daily Inspection Reports and making progress payments based on estimates of work complete; monitoring and recording work progress schedule(s) using spread sheets; and meeting with Contractor and client (NYCDOT) personnel daily to discuss progress, quality assurance, and to resolve any work-related issues. Client: New York City Dept. of Transportation

Rehabilitation of the Brooklyn-Queens Expressway (I-278), Park Avenue Viaduct, D259766, Kings County, NY; 1/07-8/07. Inspector. This $138-million project involved construction engineering and inspection for the widening, redecking and repainting of this viaduct with complex MPT on and below this heavily traveled structure. Rehabilitation of this high-volume, major interstate urban highway/bridge includes replacement of more than 400 bearings and 1,500 meters of bridge expansion joints. Also included is extensive coordination with agencies and local communities. Mr. Chiang worked on the Tillary Street on-ramp in Stage IIA/IIB. Responsibilities included monitoring work that included the demolition of the decking that included three-span lengths, with each span approximately 19 meters long. For the steel structure, steel girders, steel diaphragms, and bearing seats were replaced with new ones. He was mainly responsible for the abutment at the Tillary Street on-ramp. The old wingwalls, pedestals (bearing and steel girders placed above peds) and backwall were torn down. The contractor

placed new concretes to replace the old. The contractor had placed concrete for the sleeper slab and approach slab. Mr. Chiang monitored the contractor's work to make sure he adhered to the contract drawings and specifications. This included field checking rebar placement, testing concrete, monitoring the curing of concrete structures, and making payments for completed work. Client: New York State Dept. of Transportation

While with another firm, 9/07-5/10, Mr. Chiang provided design for a variety of projects that included site plan layout, storm water systems, and on-site sanitary systems; preparation of environmental remedial reports; environmental impact and water quality volume analysis; and the utilization of state, town, and health codes to acquire construction permits. These projects include:

Beacon Hill Estates, Branford, CT. Designer/Civil Engineer. Mr. Chiang was responsible for reviewing and designing a storm water drainage system, creating profile sections for a proposed storm water drainage and sanitary system, vertical horizontal road profiles, and headwall details as per town standards.

Saw Mill River Daylighting, Yonkers, NY. Designer/Civil Engineer. Mr. Chiang performed field visits to note existing site conditions; assisted with site plan design including creating street alignment and profile sections for two roadways running parallel to the river; designed details for storm drainage structures, asphalt pavement, and sidewalk; performed water quality tests for the Saw Mill River; and assisted with the environmental assessment report by analyzing data collected with the water quality test and boring log information in accordance with NYSDEC requirements.

New Hyde Park Streetscape, New Hyde Park, NY. Designer/Civil Engineer. This project involved designing and coordinating grading and drainage improvements for roadway that spanned 11 blocks. Mr. Chiang's responsibilities included accounting for vehicle circulation, pedestrian safety, handicap accessibility, drainage and grading improvements, storm system drainage improvements, sidewalk bumpouts, and coordination of existing utilities and proposed improvements. He designed drainage structures as per village and NYSDOT standards. The site drainage design involved horizontal and vertical alignment of piping structures. The improvements emphasized the alleviation of ponding on the roadway and provided for a safer walking area for pedestrians.

Central Islip Library, Central Islip, NY. Designer/Civil Engineer. Mr. Chiang designed erosion control plan for NYSDEC construction permit in accordance with NYS Erosion and Sedimentation Control Standards. He documented current as-built conditions of the sanitary system; and assisted the project engineer with site plan design and revised design for sanitary piping crossings for as-built conditions. The design of the on-site sanitary systems were modified in-field to maintain groundwater separation distance and utility separation distances as per Suffolk County Health Dept. requirements.

Mazella Property, Park Place II, Mastic, NY. Designer/Civil Engineer. Mr. Chiang designed site layout of a parking lot and building footprint; designed storm water drainage detention system and on-site sanitary system; obtained boring log to design storm water drainage system and sanitary system as per site soil conditions and groundwater level; obtained health department approval and assisted with town board planning approval for the civil plans; and designed a landscape plan to maintain required street frontage requirements for proposed project and provided required green space in accordance with Town of Brookhaven standards.

Mill River Residential Site Plan, Brookville, NY. Designer/Civil Engineer. Mr. Chiang prepared slope stabilization analysis using "cut" and "fill" volume analysis to determine areas of the site that required the least amount of excavation work. He also designed site layout and building location to minimize disturbance of steep slopes.

George R. Davis, P.E.
Resident Engineer

Professional Profile
Mr. Davis has supervised construction work valued in excess of $300M, involving all phases of bridge, highway, utility and railroad construction and reconstruction. He has served as Resident Engineer on many rehabilitation projects involving structural steel and concrete deck replacements on both riveted and bolted structures. Projects have included extensive construction staging and traffic maintenance. Mr. Davis has performed design, construction claim review and constructability review on numerous projects. He has spent his long engineering career rehabilitating, constructing and reconstructing bridges in the NJ/NY Area.

Project Experience
New Jersey Turnpike Interchange 6 to 9 Widening Program; 4/09-Present, $1.5B. Field Project Engineer for *Sections 7 & 8 (approximately $283.7 for five contracts)* constructing new "cars/trucks/buses" lanes (outer roadways) – 3 lanes in each direction between interchanges 8 and 8A, adding a third lane to the "cars/trucks/buses" lanes (outer roadways) in each direction of the 10-lane dual-dual roadway between Interchanges 8A and 9, and fabrication of sign structures for use throughout the widening program. Also coordinated constructability review of contract documents during design phase for the 31 construction contracts. Mr. Davis oversaw the following contracts:

- ***Contract No. T869.120.701 (approximately $67M)*** *MP 69.3 to 70.6 in the Township of Cranbury, Middlesex County.* This contract involves reconstruction of the existing northbound and southbound mainline roadways, including the replacement of Structure No. 69.85, and construction of the proposed NSO and SNO roadways, including Structure Nos. 69.85SO and 69.85NO. This project also includes the replacement of Cranbury Station Road over the mainline; roadway improvements at Hightstown-Cranbury Station Road and a short length of Conrail track realignment. Additionally, there is one culvert extension, six retaining walls, and installation of three overhead sign support structures.
- ***Contract No. T869.120.702 (approximately $37.4M)*** *MP 68.3 to 69.3, Townships East Windsor and Cranbury, Mercer and Middlesex Counties.* This contract included the widening of the Turnpike mainline (roadway and bridge) for 1 mile, as well as one bridge structure over the Turnpike.
- ***Contract No. T869.120.801 (approximately $17.4M)*** *Mile 74.3 to Mile 82.3 in the Townships of Monroe, South Brunswick and East Brunswick and the Borough of Milltown, Middlesex County.* This 8 mile contract adds a third lane to the SNO roadway, modifies the deceleration and acceleration lanes at Service Area 8N and includes pavement, guiderail, drainage and lighting. Additionally, the Contract includes the construction of a noise barrier and four overhead VMS structures.
- ***Contract No. T869.120.802 (approximately $38.9M)*** *Mile 70.9 to Mile 74.4 in the Townships of Cranbury, Monroe and South Brunswick, Middlesex County.* Contract 802 included four (4) new bridge structures (three spanning the mainline and one new flyover ramp at Exit 8A). A significant portion of the work on Contract 802 is Utility Coordination with multiple relocations required by Verizon, PSEG (both gas and electric), JCPL, Above Net, AT&T, G4S (Adesta), Monroe Township Utility (water and sewer), NJ American Water and the Rockefeller Group Foreign Trade Zone (sewer).

George R. Davis, P.E.
Resident Engineer

- ***Contract No. T869.120.803 (approximately $123M)*** *Mile 70.9 to Mile 82.3 in the Townships of Monroe, South Brunswick and East Brunswick and the Borough of Milltown, Middlesex County.* This project provides for the construction of approximately three miles of the proposed Turnpike inner and outer roadways south of Interchange 8A. The contract also includes the construction of two Service Area flyover ramps with curved structural steel erection, one culvert extension and two mainline structures over Cranbury Brook and the reconstruction of four ramps at Interchange 8A. Additionally, 30 sign structures, eight stormwater management basins, 22 retaining walls, including high cast in place retaining walls, and the third lane on the NSO roadway between Interchange 8A and Interchange 9 will be constructed.
- ***Contract No. T869.120.901 (approximately $3.2M)*** Advanced fabrication of Overhead Span Sign Structures for VMS and VSLS. Fabricated 40 VMS/VSLS span sign structures for use throughout the widening program.
- ***Contract No. T869.120.902 (approximately $4M)*** Fabrication of Overhead Support Structures for Static Signs. Fabricated 101 Span-, Cantilever- and Butterfly-type structures for use throughout the widening program.
- ***Contract No. T869.120.903 (approximately $2.1M)*** Advanced fabrication of Overhead Span HCMS Support Structures. Fabricated 40 HCMS span sign structures for use throughout the widening program.

Client: NJTA.

NYSTA Tappan Zee Bridge Design-Build Quality Assurance; 4/13-Present, $3.14B. Resident Engineer. GPI, as part of the winning team for the Tappan Zee Bridge Replacement project, will provide independent quality assurance services for design and construction. This bridge replacement project involves a signature 3-mile crossing over the Hudson River that is to be the widest bridge of that length in the world. The plan addresses major concerns of the aging bridge that had a high accident rate, lengthy traffic jams and complete lack of mass transit capability. Key features include: twin spans with a total of eight general traffic lanes, plus emergency lanes and extra-wide shoulders for immediate bus service when opened; unique towers that tilt outward for additional strength and also eliminate the need for cross beams; a first-ever dedicated bicycle and pedestrian path with safe, scenic spots and cultural information about the region's heritage, as well as capability for bus rapid transit, light rail or commuter rail; and a new night light display with potentially changing patterns. As the independent quality assurance engineer for design and construction, GPI will be responsible for providing a quality review of the work being performed, and overseeing and/or performing quality audits of the design-builder's management, design and construction activities, the design-builder's quality control procedures, verification sampling and testing and the quality of the final product, utilizing ISO 9001 standards. Client: NYSTA.

Driscoll Bridge Widening and Rehabilitation, Contract 104-1213; 10/07-4/09, $100M. Resident Engineer. This contract involved replacing deteriorated concrete bridge deck slabs, traffic control, demolition, clearing site bridge, superstructure replacement, substructure repairs, repairing deck spalls, repairing and reconstructing deck joints, repairing headers, removing asphalt surfacing, placing new membrane, resurfacing approach roadways and bridge decks, repairing sidewalks, parapet and curb surfaces, replacement of parapets, pavement striping, and structural steel repairs from Mile 0 to Mile 83 and the Pearl Harbor Memorial Turnpike Extension. As Resident Engineer, duties included being the Owner's direct on-site representative to the Contractor, direct supervision of a Construction Project's Field Inspection/Engineering staff, performing quality assurance oversight of major items of work in progress and/or ensuring that the project is constructed in accordance with the plans and specifications for the owner. Client: NJTA.

Manthan Desai, E.I.T.
Inspector

Proposed Project Assignment
Field Engineer – Civil/Structural Inspector

Registration/Certifications
2013/Engineer In Training

Education
MS/2011/Construction Management
BE/2008/Civil Engineering

Course Work
2010 - 10-Hour OSHA Training Course

Professional Affiliation
American Society of Civil Engineers (ASCE)

Total Years Experience 6

Professional Profile
Mr. Desai possesses the following experience.

Project Experience
Rehabilitation of Kew Gardens Interchange/Van Wyck Expressway, New York, NY; 9/10-Present. Inspector. The project involves construction inspection services for the reconstruction of the Van Wyck Expressway (I-678), between 86th Avenue and the Grand Central Parkway in Queens County. This $150-million project involves the complete replacement of five bridges, the reconstruction of one bridge along with the reconstruction of a pedestrian tunnel and the widening of the Van Wyck Expressway. Mr. Desai is responsible for inspecting daily construction work activities which includes installation of sub base, installation of silt fence, steel fence, and installing of traffic sign. He is also responsible for inspection of the drilling of piles for retaining walls, tie-backs, micro-piles, lagging, and steel ties; inspection of concrete pouring for the foundation of bridge and retaining wall; ITS removal and installation; steel erection for the structure; demolition of structure; lagging, backfill of embankment; and formwork for the structure. Client: New York State Dept. of Transportation

Route 17, Century Road Bridge and Midland Road Bridge, Paramus, NJ; 5/10-9/10. Trainee/Junior Engineer. On this $5-million bridge reconstruction project, Mr. Desai was responsible for reviewing the contract plans and specifications; layout of contract plans with the senior field engineer; and creating and maintaining a daily construction report.

Shangrila Construction, Gujarat, India; 10/08-6/09. Field Engineer. This is a $50-million sewage treatment plant near one of the largest rivers in the state. He observed leveling and concreting of digester and clarifier; discussed project plans with senior field engineers; and submitted daily inspection and safety reports.

Skills
MS Word, MS Excel, MS PowerPoint

John Goon
Electrical Inspector

Professional Profile
Mr. Goon is an electrical inspector with diversified experience in the electrical, mechanical, civil and architectural fields.

Proposed Project Assignment
Field Engineer – Electrical Inspector

Registration/Certifications
2010/NICET II

Education
BS/1988/Electrical Engineering

Course Work
2007 - 10-Hour OSHA Training Course

Total Years Experience 28

Project Experience

2011-2014 Port Authority On-Call Construction Management Services - John F. Kennedy International Airport, Queens, NY; 9/11-Present. Electrical Inspector. As part of this on-call construction management services project, Mr. Goon is assigned to projects at JFK Airport and is involved with inspecting installation of new electrical equipment for compliance with contract, Port Authority standards and NYC codes; documenting and maintaining daily narratives on contract projects; reviewing plans, specifications and shop drawings, processing and reviewing contractor submittals, change orders and estimates; interacting with architects, engineers, contractors and Port Authority officials; and coordinating scheduled electrical shutdowns with Port Authority Electrical Shop and various departments. Specific assignments he is assigned to include:

- Cargo Areas C and D Communication Vaults
- Restricted Vehicle Service Road Bridge J2 Replacement
- Restricted Vehicle Service Road Bridge J8 Replacement
- Replacement of Tank Gauging System at Satellite Fuel Farm
- Rehabilitation of Taxiways FA and FB

Client: Port Authority of NY & NJ

2006-2010 Port Authority On-Call Construction Management Services - John F. Kennedy International Airport, Queens, NY; 10/06-1/12. Electrical Inspector. As part of this on-call construction management services project, Mr. Goon was assigned to projects at JFK Airport. The Port Authority supplemented their own staff with consultant-provided personnel to manage and administer construction contracts at their owned and operated facilities. His responsibilities included inspecting installation of new electrical equipment for compliance with contract, Port Authority standards and NYC codes; documenting and maintaining daily narratives on contract projects; reviewing plans, specifications and shop drawings, processing and reviewing contractor submittals, change orders and estimates; interacting with architects, engineers, contractors and Port Authority officials; and coordinating scheduled electrical shutdowns with Port Authority Electrical Shop and various departments. Projects he was assigned to include:

- Jet Blue Terminal
- Hangar 17 Parking Facility
- JFK Expressway
- Bulk Fuel Farm and Satellite Fuel Farm
- JFK Red Garage
- AOA Guard Post Security Posts
- Rehabilitation of Traffic Signal System
- Rehabilitation of Cargo Service Road and North Service Road
- Central Taxi Hold Improvements
- JFK Expressway Outbound Widening
- JFK Airport 800 Mhz Trunked Radio In-Building Coverage Expansion Phase 1 & 2
- Perimeter Strengthening
- Central Substation and CTA 5KV Distribution System Upgrade

John Goon
Electrical Inspector

- Replacement of Van Wyck Substation
- Rehabilitation of Cargo Pad "C"
- Central Taxihold Improvements
- Reconstruction and Access Improvements
- JFK Runway Weather Information System Installation
- Runway 13R-31L Reconstruction and Access Improvements
- Replacement of Existing 5KV Outdoor Switchgear at Buildings 241 and 269

Client: Port Authority of NY & NJ

Port Authority of New York & New Jersey, New York, NY; 1998-2006. Senior Electrical Inspector, Construction Management Division. Mr. Goon's responsibilities included management of various capital construction projects at the World Trade Center site, and JFK and LaGuardia Airports including oversight of contractors performing mechanical, plumbing, electrical, civil, and architectural installations. He performed building condition assessment surveys; controlled inspections and quality checks to ensure compliance with contract specifications, drawings, applicable codes and OSHA safety standards; resolved construction issues and contractor conflicts amicably; rehabilitation and renovation of existing building facilities, commercial office spaces and industrial complexes; analyzed and responded to contractors' "Request For Information"(RFI's) on all electrical, mechanical and architectural issues on the project; prepared Post Award Contract Changes (PACC's) for any extra work due to field conditions or change to scope of work on construction and renovation projects; reviewed and provided comments on design submittals for the various construction projects emphasizing all NYC Building Code requirements and compliance with Port Authority standards and specifications; served as liaison for tenant construction projects and facilitated communication between the architect, consultant engineers, contractors, and the resident engineer; coordinated with Port Authority facilities: electrical and mechanical; Port Authority Operations and Police; Risk Management, and Quality Assurance; monitored and reviewed schedule of construction projects; hosted progress meetings and prepared meeting minutes; supervised Time and Material (T/M) projects to ensure that project goals are achieved within forecasted budget and time constraints; conducted desk audits of contractor's Extra Work billings: Change Order, Net Cost, T/M, Emergency Delays and claims to verify for quantity, time and material accuracy; reported the progress of daily construction activities, completed daily reports, and any work scope changes to the resident engineer; negotiated with the contractors using cost effective strategies; supervised and mentored new engineering and construction interns.

DVL Consulting Engineers, Inc., Teaneck, NJ; 1996-1998. Project Management Officer/Engineering. Mr. Goon's responsibilities included directing planning of rehabilitation projects for prisons, churches, post offices, hospitals, and SCA schools; streamlining scope of work, budget, and cost estimates; administering and overseeing ongoing renovation of SCA schools and related commercial office spaces; designating responsibilities and tasks to design and field survey group; reviewing and approving site plans and incoming support services; evaluating and verifying specifications and engineering progress reports; heading meetings with Engineers (various disciplines) and Architects.

STV, Inc., New York, NY; 1994-1995. As an electrical engineer, Mr. Goon's responsibilities included planning lighting and power distribution systems for hospitals, industrial facilities and SCA schools for electrical design group; lead engineer for team during design phase of single line and riser diagrams, motor control centers, and panel schedules; proposed feeder sizing and branch circuits for overcurrent protection; oversaw conversion of logic diagrams into schematic emergency power, grounding systems and calculation of voltage drops; reviewed and finalized site plans and lighting protection systems; handled project issues with architects, engineers and vendors.

Henry Hudson Bridge Rehabilitation, New York, NY; 1993-1994. Mr. Goon served as a construction management field inspector where his responsibilities included supervising electrical, mechanical, civil, architectural, and structural work.

Brian Gormley, E.I.T.
Inspector

Professional Profile
Mr. Gormley is an inspector with the following experience.

Project Experience
Bayonne Bridge Navigational Clearance Program (BBNCP) Construction Management, NY/NJ; 3/14-Present. Inspector. This project involves construction management services for the $743-million Bayonne Bridge Navigational Clearance Program (BBNCP). This extraordinarily complex, once-in-a-lifetime project will replace more than 5,000 feet of viaduct and re-frame the existing steel arch structure to accommodate a new roadway 65 feet above the existing roadway. Mr. Gormley is responsible for the supervision of drilled shafts installation, prestressed concrete segment assembly, structural steel installation, and concrete placement. Client: Port Authority of NY & NJ

Brooklyn Bridge Rehabilitation of the Approach Spans and Ramps and Painting of the Entire Bridge, Contract 6, New York, NY; 5/10-3/14. Present. Inspector. This project involved construction management and inspection services for the $509-million rehabilitation of this Iconic National Landmark. The scope of work for the project included replacement of approach roadway in Manhattan and Brooklyn over the arch blocks; rehabilitation of the Manhattan side ramp structures with widening and deck and bearing replacements; rehabilitation of the approach steel structures with full superstructure replacement of the York and Main Street structures and orthotropic deck installation at Franklin Square; seismic retrofitting of the main bridge, Franklin Square and ramp structures; painting of the ramp structures and suspended spans in their entirety; restoration of historic features. Mr. Gormley's responsibilities included reviewing contract drawings and specifications, observing work done in the field by the contractor, and consulting with the contractor to verify that the work was being completed as designed. Client: New York City Dept. of Transportation

Mr. Gormley has designed a hydraulic feed system for a theoretical company to transfer water 9,400 ft using a given flow rate, piping material, and water temperature avoiding cavitation in the pumps; designed a gearbox to produce a given output using two gears; designed and built improvements to an evaporative cooler for optimal usage in any environment; and used CFD-ACE to run computer simulations to parts designed using Autodesk Inventor.

Proposed Project Assignment
Field Engineer – Civil/Structural Inspector

Registration/Certifications
2013/ICC Structural Steel and Bolting Special Inspector
2012/Engineer In Training/NY
2014/FHWA Safety Inspection of In-Service Bridges
2012/AWS Certified Welding Inspector
2010/ACI Concrete Field Testing Technician Grade 1
2013/ICC Reinforced Concrete Special Inspector

Education
BS/2009/Mechanical Engineering

Course Work
2014 - Safety Inspection of In-Service Bridges NHI Certificate of Training
2011 - Confined Space Training
2010 - 10-Hour OSHA Training Course

Total Years Experience 4

Joseph Greenman, E.I.T.
Project Manager

Professional Profile
Mr. Greenman has been actively involved in the construction industry for many years and has a broad base of knowledge and experience of the business as both contractor and consultant manager. He worked for contractors earlier in his career, provided construction management for large construction firms, and served as a vice president/project manager for a construction company. His responsibilities have included estimating, coordination of subcontractors, maintenance of safety programs, maintaining cost records, progress reports, and scheduling.

Proposed Project Assignment
Field Engineer – Civil/Structural Inspector

Registration/Certifications
1995/Engineer In Training
2002/NICET III/NY

Education
BS/1980/Construction Management
AS/1978/Civil Engineering

Course Work
2011 - Corps of Engineers Quality Control Management for Contractors (CQM-C)
2011 - Advanced Project Management in Primavera P6 #106
2011 - Project Management in Primavera P6 #102
2007 - 10-Hour OSHA Training Course
NACE Coatings Inspector Level 2 Trained
ATSSA Traffic Control Flagger/Technician
ATSSA Certified Traffic Control Supervisor

Professional Affiliations
American Society of Civil Engineers (ASCE

Total Years Experience 34

Project Experience
2011-2014 Port Authority On-Call Construction Management Services - Tenant Supervision, Jersey City, NJ; 1/13-Present. Senior Civil/Structural Inspector. This project involves assisting the Port Authority's manager with supervising and coordinating the development and delivery of the Real Estate Services Department's program. Mr. Greenman is responsible for overseeing the general contractor and all daily work schedules which includes attendance at a daily morning meeting with the general contractor to discuss the work scheduled for that day and whether or not there are any critical work issues that need to be addressed. He is responsible for issuing work orders to the general contractor for each subcontractor's work; review and processing each invoice and submission to the Port Authority for approval and payment; recording all invoices, work orders, meeting minutes, sketches, RFI's and important memos and e-mails for record and audit purposes; preparation of daily log which is submitted to the assistant director for his information; coordination of all furniture deliveries for the build out floors as well as any day 2 furniture changes that occur; and attendance at weekly group meetings in order to update the Port Authority on the status of the projects. Projects to date include:

- **2 Montgomery Street, Jersey City, NJ, Phase II** – This project involves the installation of a new emergency generator, new cooling tower, and total upgrade to the present data center on the 2nd floor. The first floor is also being developed for potential retail stores.
- **Inspector General's Office Space, Korean Air Cargo Building at JFK Airport** – This project involves the demolition of new space and build out of approximately 6,500 sq ft and includes new HVAC, electric, offices, conference room, interview rooms, lunch area bathroom and storage rooms. In addition, workstations for approximately 30 people will be installed.

Client: Port Authority of NY & NJ

Port Authority of New York and New Jersey, Office Space Services Division; 3/06-3/11. Project Manager. This project involved construction management services for several office facilities in New York City and at the Port Authority's Jersey City Tech Center (PATC), which housed many of the offices that were in the World Trade Center. The projects involved the build out of the vacant 8th and 9th floors at 115 Broadway in New York City, each floor is approximately 13,500 sq ft and the 2nd floor at 116 Nassau Street which is approximately 8,500 sq ft. Also involved on the new World Trade Center, Site Logistics Coordination Center where he monitored all delivery men, material and equipment entering the World Trade Center Construction site. Work at each building included the construction management of various trades which included demolition, general construction, HVAC, plumbing, electrical, furniture, telecommunications, and relocation of personnel upon completion. Client: Port Authority of NY & NJ

Joseph Greenman, E.I.T.
Project Manager

Port Authority of New York and New Jersey, Public Safety Department, Police Academy; 11/04-2/06. Project Manager. This project involved construction of approximately 13,400 sq ft of office space into the new Port Authority Police Academy and construction of various office improvements within the PATC. Various aspects of construction included metal stud and drywall construction, suspended acoustical ceiling panel construction, HVAC, fire sprinkler system, plumbing, audio visual and telecommunications, locker rooms with shower facilities, and training rooms. Mr. Greenman's responsibilities included recordkeeping/management and review of contractors' schedule of operations, minor inspection on daily construction, meeting minutes and distribution. Client: Port Authority of NY & NJ

Port Authority of New York and New Jersey, Public Safety Department, Central Police Desk and Emergency Operations Center; 5/03-10/04. Project Manager. This project involved construction of approximately 10,000 sq ft of office space to house new state-of-the-art audiovisual and radio dispatch equipment which was installed for these three new offices. Elements of the project also included HVAC, fire/sprinkler system, plumbing, finish carpentry, metal stud and drywall construction, suspended metal pan and acoustical ceiling panel construction, glass partitions, telecommunications, audio visual, and kitchen units for break rooms. Client: Port Authority of NY & NJ

Underwater Engineering Services, Inc., a subsidiary of GPI/Greenman-Pedersen, Inc.; 4/11-6/12. Project Manager/Scheduler. Mr. Greenman created and updated Primaverva P6 CPM Project Schedules for various construction projects. These projects include:

- $7.2-million C-41 Canal Bank Stabilization Project - South Florida Water Management
- $1.3-million Elks-Cane Slough Stormwater Treatment Detention Area – City of Port St Lucie
- $1.4-million Lennard Square Stormwater Detention Area-City of Port St. Lucie
- $572,000 Broward County Ocean Outfall Pipe Cover Material Rehabilitation

Long Island Expressway - Grand Central Parkway to Van Dam Street Reconstruction Management, Queens County, NY; 10/02-5/03. Senior Inspector. This $221-million project began at the Queens Midtown Viaduct and continued east approximately six miles to College Point Boulevard. This project consisted of the removal and replacement of the asphalt roadway, installation of an Intelligent Transportation System (ITS), installation of retaining walls, noise barriers, reconstruction of bridge decking, painting of the ramps and bridge structures, landscaping, and maintenance and protection of traffic (MPT). Mr. Greenman's responsibilities included the inspection and supervision of bridge reconstruction, daily reporting, payment quantities and materials testing. Client: New York State Dept. of Transportation

Macombs Dam Bridge over the Harlem River Rehabilitation, Contract #BRX287R, New York, NY; 4/99-10/02. Senior Inspector/MPT Safety Officer. This $145-million project involved highly-complex MPT, phasing and detour routing to completely redeck and reconstruct all portions of the Macombs Dam Bridge and its interchanges, approaches, and ramps (which are elevated viaduct sections). The project also involved total lead abatement painting of bridge and approach structures, replacement of the historic swing bridge mechanism, and installing additional structural steel trusses. Mr. Greenman's duties involved daily inspection of MPT and full safety compliance in accordance with OSHA regulations. His responsibilities also involved an overview of all safeguards for the protection of persons and property, and any special precautionary and protective measures in compliance to plans and specifications. He was also involved with procurement of permits, maintenance of variable message signs and closed circuit TV system within and beyond the project limits during the life of the contract. Oversaw tow trucks, which provided rapid response to vehicular breakdowns. Client: New York City Dept. of Transportation

RAFI HAMID, PE

Civil Engineer

Education
MS, Civil Engineering, State University of New York, Buffalo, USA, 1984
BS, Civil Engineering, NED University, Karachi, Pakistan 1981

Registrations
- Professional Engineer (NY)

Over 27 years of experience both engineering design and supervision services for construction projects. Design and construction experience covers all aspects of residential and commercial buildings, dams, bridges, tunnels foundation and structural engineering. Involved in project management of all phases from program receipt through project Initiation, all design phases, bid documents, follow up through bid-award-registration, and design issues. Extensive structural design experience that covers all aspects of dams and their ancillary structures, bridges, tunnels and drainage structures, preparation of design criteria and design reports, technical specifications and contract documents. Designed several large span pre-stressed concrete and steel bridges and performed biennial inspection of more than 200 bridges in the Greater New York area. Team Leader for the condition evaluation of the 63rd street tunnel in connection with the East Side Access Project.

New York City Department of Design & Construction (NYC DDC), Edgemere Urban Renewal Area Project, New York NY

Assisted CM Team for the Installation of water mains, storm and sewer lines, BMP etc. Familiar with DDC's SCOPS, field manual and manual for inspection of distribution water main installation, DEP's standard sewer and water main specification etc. DOT's Standard Highway Specifications.

New York City Department of Environmental Protection (NYCDEP), New Croton Aqueduct Rehabilitation Project, New York NY

Served as Assistant Resident Engineer. This 33 mile long New Croton Aqueduct was placed in service in 1890 to supply about 290 million gallons a day (mgd) of water to portions of Westchester County, the Bronx, and Manhattan. The work involves improving structural stability of 31-mile long lined aqueduct and 34 deep brick lined shafts with contact and consolidation grouting, brick replacement, crack repair, epoxy coating, installation of pressure caps, repairing historic gatehouses, electrical work, replacement of piping, pumps, motors and casing in municipal shafts serving water to various villages in Westchester county, installation of 60-feet long concrete plug to divert raw water through tunnels to new Croton Water Treatment Plant (WTP). Improving the drainage system at various gatehouses and shafts by installing new roof drains, raceway wall drains, dry wells, sump pumps & interior piping, setup/maintain un-watering tunnel portions, water quality testing of samples. Set up lane closure for shafts works, access roads repairs etc. Duties included managing and supervision of two technical assistants and twelve inspectors, ensuring work is completed in accordance with the specification and approved shop drawings/submittal, site visits, technical meetings, preparation of bi-weekly job progress and monthly progress reports, overseeing the preparation and negotiation of change orders, review of contractors claims monitoring, review and approval of monthly payments requisitions, contractor schedule, as-built drawing preparation, closing RFI's, maintaining permits, non-compliance reports, sub-contractor approvals, ensuring Health and Safety Plans implemented, liaison relationship with DEP, coordination with Contractor and designer, reviewing technical approval for any structure related cost reduction, resolve construction problems. Winner of ACEC Diamond Award for 2011. Construction cost $ 120 Million.

New York City Department of Environmental Protection (NYCDEP), Combined Overflow Sewage Project, New York, NY S

Served as a Senior Engineer on NYCDEP Paerdegat Basin Combined Sewer Overflow Facility; Brooklyn (Prevents 1.2 Billion Gallons of Untreated Wastewater From Flowing into Jamaica Bay During Storms Each Year). Responsible for inspection of four below-ground CSO retention tanks holding 30 million gallons plus another 20 million gallons in the connecting lines will prevent not only the discharge of 50 million gallons into Jamaica Bay during rain events but will also screen out debris from entering into waterway. Odor control building included five exhaust air trains, carbon filters and variable speed fans to eliminate odor from the plant. The pump back building helps send the retained waste water back to the Coney Island Wastewater Treatment Plant after the rain subsides. A large size crew facility and community board buildings. Responsible for inspection of influent channel, sanitary and storm sewers, bored piles, retaining walls, sheet piling, excavations, structural steel framing with moment connections

using TC Bolts, stainless steel metal roofing covered with nail board, titanium and ice water sheeting, masonry work, reinforced and pre-cast floor slabs, concrete encasements, aluminum curtain walls, coiling doors, louvers, epoxy and resilient flooring , cementations fire proofing, fire stopping, gypsum board, acoustical tiles, caulking and numerous other items. Construction Cost $ 404 Million.

New York State Department of Transportation (NYSDOT), Tappan Zee Bridge Fender System, New York

Construction of new fender system for two main bridge piers. Scope of work included removal of old timber fender system, driving 48" diameter battered steel pipe piles using steel templates, welding of shear studs to the pipe piles, construction of a RC sub-cap beam, installation of pre-cast post tensions T-panels on sub-cap beam using 750 T overhead crane installed on barge, placement of gravel and tremie concrete, reinforcement cages and HP concrete in pipe piles, construction of caps on the pre-cast panels and post-tensioning operation. Construction Cost $ 50 Million.

New York State Department of Transportation (NYSDOT), Biennial Inspection of Bridges in Queens, New York, NY

Responsible for the inspection of 200 bridges based on NYSDOT Biennial inspection guidelines. Responsibilities included inspection of all bridge components, documenting safety by issuing yellow and red flags to the Department of Transportation in order to implement further action, rating bridge members, developing auxiliary forms for hazardous conditions, updating inventory of bridges and inputting data into BIPPI software

Metropolitan Transportation Authority (MTA), Long Island Railroad (LIRR), 63rd Street Tunnel in Connection with East Side Access Project, New York, NY

Responsible for visual condition survey of more than 200 buildings and their basements located 200 ft at either side of the tunnel alignment under Park Avenue from 2nd avenue to Grand Central Terminal. Structural integrity inspection of existing 8,000 ft of lower tubes of the tunnel, which include machine bored, drill and blast, pre-cast tubes and cut & cover sections. The inspection consists of 100% visual and 10% hands-on and was carried out using moving scaffold and ladders. Reviewed existing structural drawings and CAD drawings depicting the defects that were prepared for the entire tunnel. Prepared comprehensive condition evaluation reports. Also, performed condition evaluation of ancillary structures throughout the tunnel which include ventilation facilities.

Metropolitan Transportation Authority (MTA), New York City Transit (NYCT), Environmental Inspection, New York, NY

Scope of work included construction inspection in connection with lead based removal for the rehabilitation of over 150 subway stations, viaducts, bridges and elevated structures. Responsible for lead removal according to the SSPC guidelines, site safety and coordinating with NYCT construction team.

New York State Department of Environmental Protection (NYSDEP), Catskill and Delaware Reservoir Systems, Catskill, NY

Responsible for condition evaluation of six large dams (Gilboa and Olive Bridge Dams on Catskill Reservoir, Cannons Ville, Downsville, Never sink and Merriman Dams on Delaware water shed) including inspection and drainage galleries, spillways, intake and outlet chambers, screen house and other facilities. Dams were inspected using belaying techniques. Prepared comprehensive reports for each individual dam including drawings for remedial work and preliminary cost estimates.

YAZEED KHAYYAT, PE

Senior Signals and Systems Engineer

Key Qualifications
- ✓ Extensive Major Capital Transit Project Experience
- ✓ Expert Signals Engineer

Education
- MS, Project Management, Keller Graduate School of Management
- BS, Electrical Engineering, Valparaiso University

Registrations
- Professional Engineer (NJ & MD)

Yazeed has proven records of managing multi-discipline engineering programs for the transit industry. His success is attributed to his 27 years in-depth understanding of projects' elements from a consultant, contractor, and client perspectives coupled with his hands-on experience with multi-engineering technologies and methods. Yazeed has managed several high profiles, complex, and high cost transit projects successfully. Through detailed examination of projects anticipated and actual performance, Yazeed specializes in identifying projects risks early and his innovative methods to mitigate the risks.

Authority (IRTA) METRA – Signal Upgrade Program – Chicago, IL Technical Lead
Technical lead, as part of a technical team Yazeed prepared train signal upgrade preliminary design document. The document was based on field surveys and staff workshops/meetings. The document identified METRA's existing as well as objectives from upgrading the signal system. The document was based on effective balance of desired outcome and available technologies/methods of implementing signal systems. As the second largest commuter rail operator in North America, METRA serves approximately 310,800 commuters each weekday through the operation of eleven rail lines connecting the city of Chicago with six surrounding counties in Illinois, and also providing service to Southeast Wisconsin and Northern Indiana.

New Jersey Transit (NJT) – Atlantic City-Brigantine Connector – Atlantic City, NJ Technical Evaluator as Technical Evaluator, analyzed cost and logistical proposals submitted for track realignments and associated signal and communications relocation due to relocation of train-fueling islands and infrastructure. The evaluation included detailed analysis of labor and material indicated in the proposal and a recommendation based on American Railway Engineering and Maintenance-Request for Proposal (RFP), DTFT60-13-R-00001 P. 17 *Federal Transit Administration (FTA) Triennial Review (TR) Program* of-Way Association (AREMA) regulations and NJT practices and policies. As a result, Yazeed's evaluation enabled the client to realize significant cost savings.

Chicago Transit Authority (CTA) – Midway Orange Line – Chicago, IL
Resident Engineer
Yazeed was the resident engineer representing CTA on this new project that included 7 substations and associated infrastructure to the Orange Line connecting Midway Airport to the city center and the other service lines. Yazeed's responsibilities included daily monitoring of construction, coordinating interface with other systems such as track, stations, communications, and Supervisory Control and Data Acquisition (SCADA). He prepared daily log and presented the Authority in various construction meetings. Because of his in-depth knowledge of traction power, Yazeed also provided technical guidance to contractors and integrators.

Chicago Transit Authority (CTA) – Traction Power Maintenance – Chicago, IL
Testing Engineer
Yazeed performed various design and maintenance duties on the entire CTA system, comprised of 43 substations, nine tiebreaker houses, 15 subway-switching rooms, and several hundred miles of cables. His design included modifications to existing equipment such as rectifiers, transformers, and switching devices. Yazeed implemented several of his designs, which enhanced the operation of the traction power system. In addition to the existing substations, Yazeed participated in reviewing and modifying new substation designs and power distribution networks. As a result of CTA's expanding its service, Yazeed also participated in the design and implementation of substation expansion to a total of 50 substations.

Chicago Transit Authority (CTA) – Supervisory Control and Data Acquisition (SCADA) System Design – Chicago, IL
Resident Engineer
Resident Engineer for CTA SCADA project that included design and installation of RTU at 43 substations, 15 subway locations, and a redundant master control station at the control center. Yazeed was responsible for maintaining the existing Visicode supervisory control system (analog Request for Proposal (RFP), DTFT60-13-R-00001 P. 18 *Federal Transit Administration (FTA) Triennial Review (TR) Program* relay based system). During the design phase, Yazeed reviewed and modified the design to effectively meet CTA's requirements. To ensure compliance with specifications, he participated in the factory acceptance testing of the SCADA system, where he verified the quality and functionality of the system. To ensure a smooth transition from the Visicode system to SCADA, a detailed plan was implemented that included pre- and post-SCADA installation activities. The plan ensured that the substation control was not jeopardized during system transition.

Metropolitan Transportation Authority (MTA), Long Island Railroad (LIRR) – Supervisory Control and Data Acquisition (SCADA) System Design – New York, NY
Implementation Task Leader
Yazeed was responsible for designing and implementing a cutover plan to replace the SCADA system without interrupting service to LIRR's system which included 108 substations, four breaker houses, 22 motor generators, 280 high voltage utility switches/breakers, 187 cathode breakers, 585 DC feeders, 86 third rail electrically operated switches, 190 high tension signal switches, and over 1,000 miscellaneous status indications.

Detroit Department of Transportation (DDOT) – Service Improvements Utilizing Automatic Vehicle Location (AVL) – Detroit, MI
Project Manager
Yazeed lead a team of experts to guide DDOT personnel to verify the AVL system data and to utilize the data to enhance eservice delivery. DDOT AVL is installed on approximately 500 buses and includes hardware/software and wireless communications infrastructure to enable monitoring of bus movement and collection of vital service data such as schedule adherence and passenger counting. Yazeed's efforts included field verification of data accuracy and conducting training sessions to generate and analyze service performance reports. Based on the analysis, Yazeed trained DDOT personnel to better understand the short-, mid-, and long-term impact of the generated reports and effective methods of enhancing service delivery.

Nashville Metropolitan Transit Authority (NMTA) – Service Improvements Utilizing Automatic Vehicle Location (AVL) – Nashville, TN
Technical Lead
To improve service delivery and to maximize funding opportunity, the NMTA and MNPS embarked on a collaborative project to implement AVL on 400 transit vehicles, 100 paratransit vehicles, 1,500 public school buses, and 400 support vehicles. Yazeed assisted NMTA/MNPS prepare the procurement document including technical and special provisions, evaluate received bids, and negotiate a mutually beneficial contract.

Connecticut Transit (CTTransit) – Hydrogen Fuel Cell Bus Facility – Hartford, CT Project Manager Project manager preparing safety design documents to enable CTTRANSIT's 400-diesel bus facility to safely accommodate hydrogen fuel cell buses. Leading a team of design experts, Yazeed evaluated CTTRANSIT's facility and prepared a safety design document that was presented to management and local jurisdiction having authority, insurance carriers, and fire officials. The document identified potential risks and mitigation along with operation procedures. The design was fully compliant with applicable codes and standards without any classification of equipment. This proven method resulted in large construction cost savings while maximizing safety at the facility. **Illinois Regional Transportation**

ASSIGNMENT

Senior Construction Engineer/Inspector

EDUCATION

New Jersey Institute of Technology, MS, Transportation Engineering, 1993
Hertfordshire University, BS, Structural and Geotechnical Engineering, 1979

REGISTRATION

Licensed Professional Engineer in the State of New York
Member of ACI, American Society of Civil Engineers
ACI Concrete Field Testing Technician – Grade 1 Expires 06/27/2018
Mix Design Certificate – Completed on July 18, 2014
OSHA 10 hr. Construction Certification – Completed May 11, 2013
Work Zone Safety Awareness – Completed on May 2, 2013
Traffic Control Coordination Designation – Expires 9/30/2015

REPRESENTATIVE AND PERTINENT EXPERIENCE

Mr. Johnson has 32 years' experience in engineering and construction for infrastructure, transportation, and government facilities. He has an extensive background in heavy civil, structural, engineering and inspection for compliance with plans and specifications. He is familiar with NJ Turnpike and Port Authority systems, and procedures contract requirements; including lump sum, unit price, and net cost contracts and procedures.

- **Senior Construction Inspector, PANYNJ, EWR AirTrain Base System Running Surface Major Rehab** – Served as Construction Inspector on a major rehab of sections of the EWR AirTrain base system guideway running surface. Monitored and documented contractor's on-site resources. Visual verification quality of work from catwalks. Visual inspection work in-progress from catwalks. Witnessed various tests. Provided daily progress reports. (5/1/14 – 5/31/14)

- **Senior Construction Inspector, NJDOT Maintenance Movable Bridge and Tunnel Repair Contract 2012, DP# 11406 at Rte. 130 Raccoon Creek Bridge, Bridgeport; Rte. 130 Oldman's Creek Bridge, Oldman's Twp.; Rte. 40/322 Inside Thorofare, Atlantic City; Rte. 50 Tuckahoe Creek Bridge, Tuckahoe; Rte. 44 Mantua Creek Bridge, Paulsboro; Rte. 7 Hackensack River, Whittpenn Bridge, Jersey City; Rte. 71 Shark River Bridge, Belmar and Rte. 29 Tunnel Bridge, Trenton, New Jersey** - Responsible for the inspection of maintenance construction on the above bridges, Maintenance construction work includes but not limited to steel work and repair, concrete work and spall repair, bridge deck joint repair, stress gauging and counter weight balancing, replacing counter weight steel plates with lead blocks, lane closure for maintenance and protection of traffic, electrical installation and testing, bridge sheaves and sidewalk repair. (12/13 – 4/14)

- **Senior Construction Inspector, NJDOT, Reconstruct, Rehab, and Repave Rt. 30 Roadway from Grove Street to Brand Avenue (DP 13131), Camden County, NJ** – Responsible for the inspection

of roadway work on Rt. 30 between Grove Street and Brand Avenue. Roadway work included demolishing existing handicap ramps, aprons and sidewalks, and then rebuilding them to meet DOT standards and specifications; Milling and repaving Rt. 30 between Grove Street and Brand Street; and lane closure for maintenance and protection of traffic. (11/13 – 12/13)

- **Senior Construction Inspector, NJDOT, Pavement Preservation (DP 13420) on I-295 NB and SB between MP 32.1 to MP 41.0 including EB and WB Ramps within the limits in Camden and Burlington Counties, NJ** – Responsible for inspection of pavement preservation on I-295 NB and SB roadways from MP 32.1 to MP 41.0 including EB and WB ramps within the limits. Pavement preservation work included milling and paving sections of I-295 and some ramps; micro-milling and paving the remaining sections of I-295 and some ramps; repaired spalls on remaining ramps; replace sections of head curbs, bicycle grates and face plates along I-295 and ramps. Fog sealed sections of shoulder areas along I-295; and lane closure for maintenance and protection of traffic. (8/13 – 11/13)

- **Assistant Transportation Engineer, NJ Turnpike Operations** - Reviewed MPT design plans for various projects to determine compliance with Turnpike regulations. Reviewed plans for wireless antenna installation for compliance with Turnpike specs and regulations. (2009 – 2011)

- **Senior Construction Inspector, Port Authority of New York and New Jersey, Various PATH Projects** – Responsible for inspection of various tunnel, utility, yard, and station projects for compliance with plans and specifications. Prepared daily narrative reports for Resident Engineer for Construction Division. (2008 - 2009)

- **Senior Inspector, New Jersey Turnpike, Bridge Deck Repairs and Resurfacing (Mile 83 to Mile 122)** - Responsible for construction inspection for structural components, concrete, and steel rebar during night time operations and coordination, review, construction and budget planning, oversaw quantity estimates, and submittals of shop drawings, RFIs and change orders; reviewed and approved contractor's monthly requisitions/payments; etc. utilizing CAPEX software. (2/07 - 3/08)

- **Senior Inspector, MTA-Bridges and Tunnels, Various Projects/Work Orders Queens Midtown Tunnel, Throgs Neck and Bronx Whitestone Bridges** - Senior inspector on various projects including construction of an access roadway to the Queens Anchorage at Bronx Whitestone Bridge. Traffic Island reconfiguration, Parking lot construction and rehabilitation of Pipe gallery utility tunnel and lighting system at QMT. Concrete pier repairs, installation of new steel systems (railings, ladders, cages, etc) in Bronx and Queens Anchorages plus upgrade EZ-Pass power and communication systems at Throgs Neck Bridge.(5/05 - 2/07)

- **Resident Engineer, Burlington County Bridge Commission, Structural Repairs, Tacony-Palmyra Bascule Span** - Senior Resident Engineer responsible for this $3.5 million project that included the removal of existing and installation of the new track plates, structural repairs of the bridge pier rack frames, pier cap floors and walls. This involved milling the existing girder, marine and vehicular outages, concrete placement, maintenance and protection of traffic and also replacement of existing bumper blocks. Miscellaneous repairs were performed in response to bi-annual inspection report. (2/04 - 4/05)

Gregory Lau
Electrical Inspector

Professional Profile
Mr. Lau is an inspector with experience on roadway and bridge projects involving inspection of electrical facilities such as closed circuit TV cameras, bridge and building lighting systems, electronic traffic control devices, security systems, fiber optic cables, maintenance and protection of traffic procedures, and other components of NYS INFORM system.

Proposed Project Assignment
Field Engineer – Electrical Inspector

Project Experience

Brooklyn Bridge Rehabilitation of the Approach Spans and Ramps and Painting of the Entire Bridge, Contract 6, New York, NY; 6/10-Present. Electrical Inspector. This project involves construction management and inspection services for the $509-million rehabilitation of this Iconic National Landmark. The scope of work for the project includes replacement of approach roadway in Manhattan and Brooklyn over the arch blocks; rehabilitation of the Manhattan side ramp structures with widening and deck and bearing replacements; rehabilitation of the approach steel structures with full superstructure replacement of the York and Main Street structures and orthotropic deck installation at Franklin Square; seismic retrofitting of the main bridge, Franklin Square and ramp structures; painting of the ramp structures and suspended spans in their entirety; restoration of historic features. Mr. Lau is responsible for the inspection of the demolition and installation of new roadway on the Manhattan and Brooklyn approaches and ramps. He will also perform maintenance and protection of traffic (MPT) when needed. He was also responsible for the electrical inspection of the replacement of the street lamps and underdeck luminaires along the ramps; the electrical inspection of CCTV cameras and associated equipment near the Manhattan Bridge; the electrical inspection of the replacement of the dehumidification system in the anchorages; and the inspection of the dry standpipe system. Client: New York City Dept. of Transportation

Williamsburg Bridge Reconstruction of Miscellaneous Rehabilitation of the Main Bridge, Contract 8, #BRC253CCA, New York, NY; 2/07-6/10. Electrical Inspector. This $280-million project involved the construction engineering and inspection for the rehabilitation of the main bridge. The scope of work for the project included abrasive blasting and painting of main bridge stiffening trusses, rehabilitation and strengthening of the main towers, rehabilitation of the intermediate towers and installation of seismic shear keys, main cable saddle repair and restraint, rehabilitation of wind tongue and wind chord, main tower and intermediate tower bearing installation, main tower leg removal and replacement, stiffening truss top and bottom chord rehabilitation, traveling maintenance platform installation, re-profiling of main span vertical curve by incrementally adjusting suspender cables, modification of orthotropic footwalk deck expansion joints, waterproofing and surfacing of orthotropic roadway deck, installation of ornamental balconies and electroliers, integration of intelligent transportation operating system, seismic retrofit of the intermediate towers, installation of contraflow barrier and erection of barrier transfer machine facility, including augured concrete piles. Mr. Lau's responsibilities included electrical inspection of installation of electroliers, two bridge travelers, ITOS/CCTV/VVDS systems, anchorage and bridge lighting and lane control system using fiber optic and VMS signs. Client: New York City Dept. of Transportation

Northern State Parkway ITS/INFORM Upgrade, Contract #D259535, Nassau & Suffolk Counties, NY; 11/06-2/07. Electrical Inspector. The project involved construction inspection services for the $13.6-million upgrade to the NYSDOT, Reg. 10, INFORM System. The project features included installation of rigid conduit and fiber optic cable from the Reg. 10 INFORM Control Center in Hauppauge to the Queens County line. The new fiber optic system included nine Travel Time Signs, (EZ Pass) Tag Readers, Acoustic Vehicle Sensors, Closed Circuit TV cameras, and transmit antennas. All necessary support system hardware, controllers, and system software were also installed. This high-tech project required very sophisticated installation, testing and acceptance procedures. Mr. Lau was responsible for the inspection of all construction activities performed by the contractor. Client: New York State Dept. of Transportation

Gregory Lau
Electrical Inspector

Staten Island Bridges Rehabilitation, Staten Island, NY; 9/03-11/06. Electrical Inspector. The project involved construction management services for structural, civil, mechanical, electrical, and bridge painting services. Mr. Lau's responsibilities included inspection of electrical facilities including bridge and building lighting, electronic traffic control devices security systems and fiber optic cables, and review of design and testing of electrical and electronic equipment. As electrical inspector for the central access door control system, he was responsible for construction management services for electrical, structural and mechanical services; inspection of new security system for cameras, motion sensors, card access and doors using Lenel OnGuard and Verint; and assists in the design of the testing parameters. Client: Port Authority of NY & NJ

ABT Builders, Inc., Nutley, NJ; 8/02-3/03. As a supervisor, Mr. Lau managed several trades to renovate a restaurant in Newark Airport Terminal C. He acted as liaison to Port Authority inspectors to ensure that all renovations were within code and was responsible for keeping the project on schedule and within budget.

MTI Technology, Inc., Hazlet, NJ; 2/00-3/02. As systems engineer, Mr. Lau designed data storage structures utilizing devices in a fibre channel data network; managed multiple, simultaneous projects from delivery to implementation and support; designed a Windows NT 4.0 network for MTI equipment to simplify support and access; and maintained customer documentation.

Vestals, Inc., New York, NY; 9/99-2/00. As systems engineer, Mr. Lau maintained Windows NT 4.0 hosts and streaming video servers and wrote documentation.

Fleet Financial, New York, NY; 6/98-8/99. As systems engineer, Mr. Lau designed, implemented and tested Windows NT 4.0 network for all branch offices; automated software updates for workstations; created security policies implemented in the organization; trained internal personnel on the new network; and wrote documentation.

Fleet Financial, New York, NY; 6/96-6/98. LAN Administrator. Mr. Lau led this project that involved converting paper documentation to electronic format by archiving data to CDs as off-lien and near-line data. He supported end-users on hardware and software issues, and wrote documentation.

Micro 2000 Computers, Carle Place, NY; 2/94-6/96. As a service engineer, Mr. Lau operated and maintained customer service center.

Proconics International, East Fishkill, NY; 6/92-9/93. Mr. Lau served as a field engineer responsible for maintaining a fleet of automated wafer handlers for microchip production at IBM.

Other Skills:
Windows NT, 2000, and XP; MS-DOS, MS-Office
Backup Software: Legato Networker and Veritas NetBackup
Knowledge of storage architectures SAN, NAS, and DAS
Brocade fibre channel switches
Implementing security policy in computer networks
TCP/IP and Novell networks, Unix and Linux

Barry Matarangas, P.E.
Resident Engineer

Professional Profile
Mr. Matarangas is a licensed Professional Engineer with over 32 years of experience in the construction field. He is experienced with high profile projects and the complexities of working in urban areas of high volume commuter traffic. He has worked on the Commodore Barry Bridge, Williamsburg Bridge, the East 10th Street Bridge, and performed various bridge inspections. Throughout his career, he has taken on the project management responsibilities. His extensive and varied construction experience has provided him with the tools to assure a successful project.

Project Experience
Ocean Avenue Bridge over Long Island Railroad, Brooklyn, NY; 8/13-Present, $3.2M. Resident Engineer. GPI will provide REI services to NYCDOT for the component rehabilitation of the Ocean Avenue Bridge over the LIRR in the Borough of Brooklyn, NY. The work scope will include the removal of the existing concrete parapets on both sides of the bridge which will be replaced with new steel bridge railing and protective fencing; replacement of deteriorated sections of the bridge; rehabilitation of bridge abutment concrete components and installation and replacement of new steel stringers, bearings; and installation of new armorless joints. Several other miscellaneous tasks will be completed including the demolition of an existing building under the bridge; removal and replacement of an existing watermain with a new steel watermain; removal of graffiti and application of new anti-graffiti coating; and resurfacing the existing asphalt pavement. Traffic will be protected and maintained throughout the rehabilitation of the various bridge components. As the RE, Mr. Matarangas is responsible for conducting progress meetings, engineering & RFI submittals, change order analysis, schedules inspection staffing requirements on a weekly basis and reviews all of the Inspector's Daily Construction reports. He also reviews all monthly quantities and payments submitted by the contractor and provides in depth CPM analysis for the client and defends claims by the contractor against the client. Client: NYCDOT

Commodore Barry Bridge Miscellaneous Structural Repairs (CB-18-2010); 9/11-12/12, $20M. Resident Engineer. GPI performed construction management services for the Commodore Barry Bridge Miscellaneous Structural Repairs project. The work included the rehabilitation and/or replacement of bearings, gusset planes, steel barrier, below deck walkway modifications plus miscellaneous concrete and steel repairs for the Commodore Barry Bridge and one approach bridge at US Route 322 over US Route 130. Duties included being the Owner's direct on-site representative to the contractor, direct supervision of a Construction Project's Field Inspection/Engineering staff, performing quality assurance oversight of major items of work in progress and/or ensuring that the project is constructed in accordance with the plans and specifications for the owner, checking accuracy of inspection reports, monitoring progress schedule and progress, resolving conflicts between inspection staff and contractor, preparing change orders, preparing monthly pay estimates and project close-out. Client: DRPA .

NJDOT Region North Resurfacing, Route 80 Polifly; 8/09-6/12, $15.2M. Resident Engineer. This Federally funded project included bridge deck spall repairs (both full and partial depth), bearing work, joint repairs, resurfacing of approximately 8 miles of I-80 EB express and local lanes as well as, concrete pavement repairs and safety improvements from Paterson to Hackensack, NJ as part of the Federal Highway "American Recovery and Reinvestment Act of 2009". The project involved milling and HMA paving of mainline roadway, reconstruction of inlets, curbs, guiderail, full and partial depth concrete pavement repairs, bridge deck repairs and pavement markings. The majority of contract work was performed during continuous weekend night closures allowing commuter traffic going to New York City unimpeded access for the Monday morning AM commute. The close proximity to the major Hudson River crossings involved in depth coordination with the NJTA, Port Authority of NY/NJ and the transit agencies. Duties included being the Owner's direct on-site representative to the contractor, direct supervision of a

Barry Matarangas, P.E.
Resident Engineer

Construction Project's Field Inspection/Engineering staff, performing quality assurance oversight of major items of work in progress and/or ensuring that the project is constructed in accordance with the plans and specifications for the owner, checking accuracy of inspection reports, monitoring progress schedule and progress, resolving conflicts between inspection staff and contractor, preparing change orders, preparing monthly pay estimates and project close-out. Performed many project duties utilizing ACES and Microsoft Office. Client: NJDOT

Route 120 Paterson Plank Road (Contract No. 002043262) MP 2.76 to MP 2.09, Boroughs of East Rutherford and Carlstadt, Bergen County, NJ; 8/10-9/11, $30M. Resident Engineer. The project improves traffic flow by reconstructing and widening Route 120 Paterson Plank Road through the addition of an auxiliary right lane in each direction between the Route 17 and Murray Hill Parkway intersections. The Paterson Plank Road Bridge over Route 17 is being widened on the eastbound side and the Route 120 bridge over NJ TRANSIT's Pascack Valley Line is being widened on both sides. New traffic signals are being installed at the intersection with Murray Hill Parkway and the Route 17 northbound on-and-off ramps. A new drainage system is also being installed on Route 120. Mr. Mataragas is responsible for administering the project covering all aspects of construction relating to road plans, environmental plans, grading plans, cross sections, traffic control and staging plans, demolition plans, pile plans, bridge plans and additional change of plans for both road and bridges. Interpretation of Standard Specifications and Special Provisions (specific to project). Reports submitted on a daily basis and pay quantities submitted for estimate purposes. In addition, Owner's direct on-site representative to the contractor, direct supervision of a Construction Project's Field Inspection/Engineering staff, performing quality assurance oversight of major items of work in progress and/or ensuring that the project is constructed in accordance with the plans and specifications for the owner, checking accuracy of inspection reports, monitoring progress schedule and progress, resolving conflicts between inspection staff and contractor, preparing change orders, preparing monthly pay estimates and project close-out. Performed many project duties utilizing ACES and Microsoft Office. Client: NJDOT.

East 10th Street Pedestrian Bridge; 2002-2006, $3.5M. Construction Manager for the renovation of the East 10th Street Pedestrian Bridge over the FDR. Client: NYCDOT

Williamsburg Bridge, Contract #7, Pedestrian Walkway; 2002-2006. Senior Construction Inspector of the superstructure steel for the pedestrian walkway at the Williamsburg Bridge. Project work was included in Contract #7 of the total bridge rehabilitation. The addition of the pedestrian walkway superstructure was at the north and south faces of the east approach. Client: NYSDOT

Juilliard School at Lincoln Center & NYU Genomics Laboratory; 2006-2009. Project Superintendant, Engineer. Project Engineer and Superintendent of Structures. Responsibilities included reviewing engineering submittals by subcontractors, negotiating change orders, developing trade schedule, issuing RFI's, remediating non-conformances and directing subcontractor field work to meet project schedule. Client: NYU

Various Building Projects; 1996-2001; **Project Manager (PM), Project Engineer (PE).**

- Project Engineer for this $80M airside development project at JFK Airport, International arrivals/departures building, Terminal 4.
- Project Manager for the $12.5M foundation & slab construction of the 60,000 sq. ft. transfer station for USA Waste, Bronx, NY. Ref: Ben Reinholtz, Morse Diesel (company no longer exists)
- Project Manager for the $1.7M utility & fuel line relocation for Continental Airlines airside baggage facility at Newark Airport. Ref: Lou Pizzani, Tishman construction
- Project Manager for the $4.3M construction of pile caps, grade beams & slabs at Essex County Jail, Newark, NJ. Ref: Jim Carr, Gilbane Construction
- Project Manager for the $6.5M construction of foundation & slab at Harborside Financial Center – Plaza 5, Jersey City, NJ for Mack-Cali Development. Ref: Roger Gardella, Director of Construction

As the Project Manager for the above projects, Mr. Matarangas was the concrete subcontractor to the CM on the project. His responsibility as the PM was to implement the project schedule as a subcontractor, negotiating change orders, issue RFI's, submit engineering submittals and direct the project superintendant with regard to cost and labor and implementing the project schedule according to the overall project's needs.

ASSIGNMENT

Senior Construction Engineer/Inspector

EDUCATION

B.S., Mechanical Engineering, 1975, Polytechnic University, Brooklyn, NY

REGISTRATION

Licensed Professional Engineer in the State of New York
OSHA 30 Hour, 40 Hour Site Safety Manager

REPRESENTATIVE AND PERTINENT EXPERIENCE

Mr. Matin has over 25 years of engineering and construction inspection experience in transportation and industrial projects, including 18 years with New York City Transit. His experience includes construction management, supervision, inspection, design review and planning for various New York City Transit Authority projects. He was responsible for supervision of multi-discipline trades, including electrical and mechanical. Mr. Matin witnessed testing of electrical and mechanical equipment and components to meet performance criteria. He is proficient in computer software including CAPEX, MS Word, Excel, Critical Path Method (CPM), and AutoCAD.

- **Senior Construction Inspector, PANYNJ, EWR AirTrain Base System Running Surface Major Rehab** – Served as Construction Inspector on a major rehab of sections of the EWR AirTrain base system guideway running surface. Monitored and documented contractor's on-site resources. Visual verification quality of work from catwalks. Visual inspection work in-progress from catwalks. Witnessed various tests. Provided daily progress reports. (5/1/14 – 5/31/14)

- **Senior Inspector, NJTA, OPS A3319, Installation of VMS Signs** - Responsible for inspection for sign structure installation, excavation, drilled shafts, rebar, concrete, electrical, conduits, fiber optic cable, CCTV Cameras, and controls for NJ Turnpike Contract North T600.102B. Witnessed tests for system control panel, fiber optic cable, and wireless access point (WAP) sensors in pavement. (2/12 – 10/13)

- **Senior Inspector, TBTA, BBT Rehabilitation** - Inspection of drainage system in conjunction with installation of new switch gear for ventilation, electrical control panel, and electrical conduit and cable. (11/11-2/12)

- **Safety Engineer, Safety Dynamics** – Responsible for overseeing contractor's worker activities to comply with safety requirements. Project included station modernization and rehabilitation, replacement of third rail, tunnel and station lighting, signal room, electrical distribution room and platform replacement. (2/9 – 11/11)

- **Construction Manager, Bass Construction Corp., NY** - Managed all phases of construction projects ensuring efficient administration of the company. Performed design, pre-construction, and general construction tasks. Supervised project development in cooperation with architects, engineering

staff and customers. Analyzed project budget, scope, and schedule. Directed and supervised tradesmen and semi-skilled laborers ensuring compliance with contract plans and specifications. Projects included medical office facility with 50 ton HVAC system, including equipment, air handlers, sheet metal, duets, electrical, and control systems. (4/02 – 1/09)

- **Consulting Engineer, New York City Transit Authority, Various Projects** - Construction supervision of new $10-$20 million emergency fan plants and pump stations in Manhattan and Queens. The projects involved field testing, inspection of control panel, and valves for compliance with plans and specifications. Witnessed performance testing of fans and associated components to meet performance criteria. Performed overall administration of the project. (3/98 – 4/02)

- **Resident Engineer, New York City Transit Authority, Various Projects** - Construction supervision of employee's facilities and police crew quarters in Manhattan, Brooklyn and Queens. Construction cost was in the range of $2 million for each facility. Projects involved construction inspection of plumbing, electrical, fire protection, elevator, and HVAC equipment and components. Maintained liaison with contractors, agencies, and operations for overall administration of the project. (1993 – 1998)

- **Resident Engineer, New York Transit Authority, Maintenance Facility** - Responsible for construction inspection of renovation and modification of car maintenance, repair complex and car wash facility in Staten Island. The intent of the $10 million projects was to perform levels of maintenance on Staten Island. For more complex work, cars were shipped to Coney Island. Construction inspection involved erection of structural steel, electrical and lighting, plumbing, tracks, fire protection, and HVAC system. Responsible for monthly reports, progress meetings, close out, and turnover to operations after project acceptance. (2/85 – 12/93)

Thomas Moen, EIT
Resident Engineer

Professional Profile
Mr. Moen is a senior inspector who is has most recently served as an assistant resident engineer for multiple bridge painting projects for the NJDOT on Rte 280 and Rte 80. With over 20 years of experience, he has also been responsible for supervising daily on-site steel operations, inspecting installation of main bridge track support members including stringers, longitudinal bracing columns for conformance with contract and shop drawings, and monitoring demolition of main span track support steel.

Project Experience
Goethals Bridge, Staten Island Bridges Rehabilitation, Staten Island, NY Contract # 274.094; 3/04-3/07, $60M. Senior Inspector. The project involved deck repairs and replacement of barrier and sidewalk. The project involved construction management services for structural, civil, mechanical, electrical, and bridge painting services. Responsibilities included inspection of Goethals Bridge construction including concrete deck repairs, removal of deteriorated concrete and steel, preparation of deck for rapid setting concrete, repairs to structural steel and bridge railing, surface preparation and painting of the structural steel and railing repair areas, and concrete parapets and inspection of MPT. Senior inspector on night shift for three years of this project which involved the removal and replacement of existing scuppers, joints, curb barrier, and sidewalk on eastbound and westbound roadways, as well as milling, deck repairs, waterproofing, repaving, and replacement of cantilever floor beams. Track quantities for payments. Client: Port Authority of NY & NJ

Passaic County Replacement of West Brook Road Bridge over the Wanaque Reservoir, Structure No. 1600-491 Boroughs of Ringwood and Wanaque; 10/13-Present. Project includes construction engineering and inspection of the replacement of West Brook Road Bridge) over the Wanaque Reservoir. The existing bridge is a seven-span simply supported concrete T-girders bridge case monolithically with a reinforced concrete deck. The bridge replacement project consists of construction of a new two lane, two-way bridge on a new alignment south of the existing bridge and demolition of the existing bridge. The new bridge will be a three span continuous steel plate girders structure approximately 650 feet long over the Wanaque Reservoir on a new alignment south of the existing bridge. Client: Passaic County

NJDOT Bridge Paint Contract 2012-2, Route 80 Bridges; 6/12-10/13, $6M. Inspector. This bridge painting contract involves the painting of six bridges along Route 80 in Passaic County. This project involves the removal of existing old lead based paint and repainting with a Northeast Protective Coating Committee (NEPCOAT) approved coatings system. The projects incorporate traffic control on a high speed highway, MPT, nightwork, staging, and environmental (Lead Abatement) constrains unique to repainting on major urban bridges. The construction services contract involves the managing of four separate painting contracts with three independent painting contractors. Extensive coordination is done on a daily basis with each paint contractor including coordination with other trades working on the highways. Communication and coordination with local municipalities are addressed for structures that span local streets. Duties included the on-site inspection of the contractor's means and methods for foundation excavation, steel piles, and sub and superstructure reinforced concrete bridge items. Client: NJDOT

NJDOT Region North Maintenance Engineering & Operations CM/CI 2011 (#2011MEO842A) Term Agreement – Task Order #1 Bridges and Task Order #5 Concrete Repairs; 12/11-4/12, $3M consultant fee. Inspector. **GPI is providing Maintenance Construction Inspection Services for** Maintenance Construction Inspection for a 3-yr Term Agreement for various 100% State Funded Contracts and Permit Projects in Region North. The majority of the maintenance work is located in the counties of Bergen, Essex, Hudson, Morris, Passaic, Sussex, Union, and Warren. Work includes construction inspection for maintenance drainage, paving, bridge concrete repair and moveable bridge repair contracts. Duties included the on-site inspection of the contractor's means and methods for foundation excavation, steel piles, and sub and superstructure reinforced concrete bridge items. Client: NJDOT

Thomas Moen, EIT
Resident Engineer

NJDOT Region North Multiple Bridge Cleaning and Painting Projects, Interstate Bridge Painting Contract Route I-280, Contracts 1 ($8M) and 3 ($6M) , and Route I-80, Contract 2 ($7M), Essex County, NJ; 4/11-Present. Inspector Bridge Painting. This is a FEDERAL STIMULUS PROJECT FUNDED BY ARRA for the painting of 17 bridges on Route I-280 in Essex County. These bridge painting projects involve the removal of hazardous material (existing old lead based paint) and repainting with a Northeast Protective Coating Committee (NEPCOAT) approved coatings system. The projects incorporate traffic control on a high speed highway, staging, and environmental (lead abatement) constraints/controls unique to repainting on major urban bridges. The construction services contract involves the managing of four separate painting contracts with three independent painting contractors. Responsible for monitoring containment operations (hazardous material/environmental), monitor implementation of approved Health and Safety Plan, MPT, quality of coating materials, proper storage, mixing, application of coating materials, inspect coating for compliance with contract specification, surface preparation, paint removal, also managing and training the inspection force. Inspect as needed on any one of multiple projects, must follow-through with RE to assure schedule (day/night) and proper NJDOT reporting. Client: NJDOT

NJDOT Region North Multiple Bridge Cleaning and Painting Projects, Route I-80, Contract 2, Morris and Passaic Counties, NJ (Multiple Projects); 8/11-11/11, $7M. Inspector Bridge Painting. This was a FEDERAL STIMULUS PROJECT FUNDED BY ARRA for the painting of five bridges on Route I-80. This bridge painting project included the removal of hazardous material (existing old lead based paint) and repainting with a Northeast Protective Coating Committee (NEPCOAT) approved paint/coatings system. The project incorporated traffic control on a high speed highway, staging, and environmental (Lead Abatement) constraints unique to repainting on major urban bridges. The construction services contract involved the managing of four separate painting contracts with three independent painting contractors. Involved communication and coordination with local municipalities as well as interagency coordination with work on other major roadways. Responsible for monitoring containment operations (hazardous material/environmental), monitor implementation of approved Health and Safety Plan, MPT, quality of coating materials, proper storage, mixing, application of coating materials, inspect coating for compliance with contract specification, surface preparation, paint removal, also managing and training the inspection force. Inspect as needed on any one of multiple projects, must follow-through with RE to assure schedule (day/night) and proper NJDOT reporting. Client: NJDOT

Manhattan Bridge Rehabilitation of Cables and Suspenders, Contract 14, #BRC156R, New York, NY; 12/10-4/11, $149M. Senior Inspector. This project involved the unwrapping and rewrapping of cables; replacement of suspenders; removal and replacement of coatings system, lead abatement, replacement of necklace lighting messenger cables and cable hand ropes; installation of new access platforms to existing tower platforms; reversal of lower roadway and operation of HOV lane and replacement of multi-rotational bearings at the towers; replacement of light poles and luminaries on South upper roadway; replacement of lane control radar on South upper roadway; and retrofit of track stringers and diaphragm connections and other miscellaneous work. Mr. Moen was responsible for inspection of the contractor's means and methods for the following: MPT, monitoring of contractor's LHSP, containment in an urban setting, removal of existing lead paint system; inspection of power tool clean (SSPC SP-3) for installation of new continuity plates, suspender cable anchoring boxes, and new cable bands; application of three-coat paint system; and monitoring weather conditions to make sure it's acceptable for paint application and curing. Duties also included the on-site inspection of the contractor's means and methods for bridge coatings system, foundation excavation, steel piles, sub and superstructure reinforced concrete bridge items, drainage piping and structures, subgrade, subbase, DGABC, and bituminous paving in lifts. Client: New York City Dept. of Transportation

Manhattan Bridge Rehabilitation of Lower Roadways, Contract 11, #BRC156A, New York, NY; 3/07-9/07, $150M. Senior Inspector. Responsibilities included monitoring of contractor's demolition of existing lower roadway deck slab at the Brooklyn plaza and anchorage; inspection of backfilling operations, installation of rebar and formwork in preparation for new deck slab, cast-in-place barrier and abutment wall at Brooklyn plaza; inspection of painting of bridge in suspended and approach spans including containment operations, MPT, surface preparation, hazardous waste removal and storage, quality of coating materials, proper storage, mixing, application, inspect coating for compliance with contract specification, surface preparation, and application of three coat paint system; inspection of rebar and formwork placement for new deck slabs and cast-in-place barrier, and the installation of the waterproofing system at the Brooklyn and Manhattan Anchorages. Client:, New York City Dept. of Transportation

Ignacio Ortega
Assistant Resident Engineer

Professional Profile
Mr. Ortega has been a senior field engineer for over 16 years. His experience in heavy electrical construction includes experience in 34.5 KV, 27KV, 15KV, and 480V. His skills include Electrical Power Systems, Lighting, Traction Power, Signaling SCADA, UPS Systems, Cathodic Protection, Grounding Systems, Fiber Optic, CCTV, HVAC Controls, Fire Alarms, Building Management Systems and Access Control Systems.

Proposed Project Assignment
Field Engineer – Electrical Inspector

Education
BS/Civil Construction Technology
AA/Electrical Engineering Technology

Course Work
2011 - New York City Dept. of Buildings 4-Hour Supported Scaffold User Certificate
2007 - 10-Hour OSHA Training Course
Substation Engineering
Power Distribution Service, Public Service Energy & Gas
Medium Voltage Splicing & Terminations
High Voltage Safety
Fiber Optic-Splicing, Installation and Testing
Design, Installation and Trouble Shooting of Emergency & Standby Generation Systems
Certified Electrical Estimators, Commercial/Industrial Construction
On-Track Safety for Contractors, Amtrak Railways
EWER Monorail Safety, PA
30-Hour OSHA Training Course

Total Years Experience 26

Project Experience

2011-2014 Port Authority On-Call Construction Management Services - Replacement and Upgrade of the Christopher Street Substation for PATH, New York, NY; 11/11-Present. Assistant Resident Engineer. The focus of the project is to replace and upgrade electrical traction power substation equipment at the Christopher Street Substation. Mr. Ortega is responsible for coordinating contractor's supervisory personnel regarding schedule, sequence, and method of work; reviewing contractor's inspection surveying and testing request and subsequent completed reports; monitoring conformance with the contractor's schedule; field inspections of the work in progress in consultation with both resident engineer's and contractor's supervisory staff; preparing written and oral reports to the resident engineer on contractual and procedural matters; reviewing and approving all payment applications; and reviewing the contractor's shop drawings as delegated by the resident engineer. Client: Port Authority of NY & NJ

2006-2010 Port Authority On-Call Construction Management Services - PATH, NJ; 1/10-11/11. Assistant Resident Engineer. As part of this on-call construction management services project, Mr. Ortega was involved with the Port Authority PATH's Police Command Center Renovation. Mr. Ortega was responsible coordinating contractor's supervisory personnel regarding schedule, sequence and method of work; reviewing contractor's inspection surveying and testing request and subsequent completed reports; monitoring conformance with the contractor's schedule; field inspections of the work in progress in consultation with both resident engineer's and the General Contractor's supervisory staff; preparing written and oral reports to the resident engineer on contractual and procedural matters; reviewing and approving all payment applications; and reviewing the contractor's shop drawings as delegated by the resident engineer. Client: Port Authority of NY & NJ

2006-2010 Port Authority On-Call Construction Management Services - Security Capital Program, Various Locations, NY; 9/06-9/11. Assistant Resident Engineer. As part of this on-call construction management services project, Mr. Ortega was involved with the Port Authority Capital Security Program which involves the hardening of all Port Authority facilities throughout the multi-facility Port Authority district. Mr. Ortega was responsible coordinating contractor's supervisory personnel regarding schedule, sequence and method of work; reviewing contractor's inspection surveying and testing request and subsequent completed reports; monitoring conformance with the contractor's schedule; field inspections of the work in progress in consultation with both resident engineer's and contractor's supervisory staff; preparing written and oral reports to the resident engineer on contractual and procedural matters; reviewing and approving all payment applications; and reviewing the contractor's shop drawings as delegated by the resident engineer. Client: Port Authority of NY & NJ

Ignacio Ortega
Assistant Resident Engineer

Port Authority Bus Terminal Construction Program, New York, NY; 7/04-9/06. Senior Electrical Inspector. This project involved the replacement of three of the original chillers, chillers 1, 2 and 4, at the bus terminal. The chillers were replaced with state-of-the-art 900-ton chillers with peripheral subsystems including new 5KV starters, new 5KV feeders, four 100 hp motors, a building management system for automation and a new firm alarm system. Work was installed and commissioned without any disruption to the facility. Mr. Ortega was responsible for the installation, commissioning and integration of the 5KV System and ancillary electrical/communication subsystems for three new 900 ton chillers; resolving all field conflict issues; analyzing and evaluating omissions in technical construction documents and providing possible solutions to design group; reviewing and approving subcontractors payment applications; constructability review of all 90% electrical drawings; contractor compliance with federal and state construction safety requirements; and coordinating all electrical work with Port Authority Bus Terminal Facility and Operations Staff. Client: Port Authority of NY & NJ

PATH Restoration, WTC Site, New York, NY; 2002-2004. As senior electrical inspector, Mr. Ortega's responsibilities included the installation and integration of the 27KV, 15KV, 480V, DC Traction Power, SCADA and multiple communication systems at the temporary PATH station at the WTC Site. He was also responsible for contractor compliance with contractual obligations, pertinent specifications and codes, contractor compliance with quality control plan, analyzed and evaluated omissions in technical construction documents and provided solutions to the resident engineer's office. Mr. Ortega was also responsible for system startup on various electrical/communication sub-systems, contractor compliance with federal and state construction safety requirements. He provided technical assistance and coordinated work activities for four junior members of the electrical inspection/engineering team and reviewed and approved subcontractor's payment applications. Client: Port Authority of NY & NJ

Airlink Station, Newark Airport, Newark, NJ; 2001-2002. Senior Field Engineer. This project involved the installation and integration of the communication system at the Airlink Station. Mr. Ortega's responsibilities included resolving all field conflict issues, analyzed and evaluated omissions in technical construction documents and provided solutions to design group. He represented the Port Authority at project meetings with various federal agencies, state agencies, contractors, design professionals and utility companies. He was also responsible for system startup on various electrical/communication sub-systems, contractor compliance with federal and state construction safety requirements and represented the "construction team" at Port Authority senior management meetings. Client: Port Authority of NY & NJ

North East Corridor Extension Project, Newark, NJ; 1998-2001. As field inspection engineer, Mr. Ortega's responsibilities included contractor compliance with contractual obligations, pertinent specifications and codes, reviewed and approved subcontractors' payment applications. He represented the company at project meetings with various federal agencies, state agencies, contractors, design professionals and utility companies, analyzed and evaluated construction documents to ascertain changes to the original scope of work, and provided the timely flow of technical information to the field. He was also responsible for contractor compliance with federal and state construction safety requirements and coordinated deliveries of construction equipment to job site.

Base EWR Monorail, Newark, NJ; 1994-1997. Mr. Ortega served as contract administrator where his responsibilities included verifying contractor compliance of contractual obligations and pertinent specifications and codes. He reviewed and approved subcontractor's payment applications, and identified "close out" requirements to expedite contract completion. He also worked with the quality assurance department to prepare and conduct QA audits, and was involved in the selection of subcontractors.

While with another firm, Mr. Ortega was involved with project management and coordination of field operations during various projects; 1988-1994.

Edward T. Roche, P.E.
Senior Inspector

Professional Profile
Mr. Roche is a detail oriented professional engineer with diverse experience in the field of the construction of bridges, structures, and highway projects. He is currently assistant resident engineer on the NJTA 6-9 Widening Program. He has previously worked as a Resident Engineer for the NJDOT's Route 1&9 and Delancy Ramp Widening project and has worked on rehabilitation and construction projects for other major bridges in the New Jersey/New York area including the Driscoll Bridge, George Washington Bridge, Macombs Dam Bridge over the Harlem River, and the Williamsburg Bridge.

Proposed Project Assignment
Field Engineer – Civil/Structural Inspector

Registration/Certifications

Project Experience

Port Authority of New York & New Jersey On-Call Construction Management Services - George Washington Bridge, Fort Lee, NJ; 4/03-1/07, $250M for On-Call Contract. Senior Inspector. Responsibilities included quality assurance inspections of structural steel and reinforced concrete repairs on the George Washington Bridge. This included daily planning and monitoring of MPT as well as preparation of reports for compliance with contract plans and specifications. Also documenting work with photos and progress reports for various contracts at the different bridges and tunnels. Client: PANY&NJ

NJDOT Route 35 Sandy Restoration, MP 9 to 12.5, Mantoloking to Point Pleasant; 3/14-Present, $35.9M. Resident Engineer. NJDOT Route 35 Sandy Restoration, MP 9 to 12.5, Mantoloking to Point Pleasant; 3/14-Present, $35.9M. Resident Engineer. As a subconsultant to Ammann & Whitney, GPI is performing construction inspection for the first stage of the Route 35 construction. Through this 3.5 mile section of the project, one lane exists in each direction. Project includes: full depth roadway reconstruction of Route 35 for 3.5 miles including new curbs and sidewalks; construction of a new stormwater drainage system including four underground pump stations; sewer & water main replacement & relocation; construction of replacement bulkheads. Duties include being the Owner's direct on-site representative to the contractor, direct supervision of a Construction Project's Field Inspection/Engineering staff, performing quality assurance oversight of major items of work in progress and/or ensuring that the project is constructed in accordance with the plans and specifications for the owner. Client: NJDOT

New Jersey Turnpike Interchange 6 to 9 Widening Program, Contract 502; 6/10-3/14, $38.9M. Resident Engineer (5/13-3/14); Assistant Resident Engineer (6/10-5/13). *Contract No. T869.120.502 (approximately $38.9M) Grading, Drainage, Paving & Structures NSO/SNO Roadways MP 62.0 to 63.4, Township of Robbinsville, Mercer County.* Mr. Roche started on this project as Assistant Resident Engineer and in 2013 was promoted to Resident Engineer. The project is substantially complete. This contract involved the construction of the mainline outer roadways in the southern portion of Section 5 including a proposed U-Turn structure, reconstruction of the Gordon Road and Sharon Road overpasses and two mainline structures over Assunpink Creek. This contract also included two stormwater management basins, seven sign structures, one noise barrier and retaining walls. ARE Duties included, in the absence of the RE, being the Owner's direct on-site representative to the contractor, direct supervision of a Construction Project's Field Inspection/Engineering staff, performing quality assurance oversight of major items of work in progress and/or ensuring that the project is constructed in accordance with the plans and specifications for the owner. He was responsible for as-built quantities, assisting in the preparation of contractor payments, traffic control, assigning staff to cover contractor operations. Mr. Roche also performed inspection duties including for foundation excavation, steel piles, sub and superstructure reinforced concrete bridge items, drainage piping and structures, subgrade, subbase, DGABC, and bituminous paving in lifts. Client: NJTA

Route 1 & 9 Northbound Ramp to Delancy Street Reconstruction, Newark, Essex County, NJ; 7/09-6/11, $1.3M. Resident Engineer. This project replaced the Route 1&9 northbound ramp to Delancy Street and installed a new traffic signal at the intersection of Route 1 & 9 and Delancy Street in Newark. The project consisted of road reconstruction utilizing full depth pavement (i.e. subgrade, subbase, Dense Graded Aggregate Base Course, and

bituminous HMA base and Superpave surface course pavement), drainage improvements, and included roadway lighting, signing and signal improvements. Client: NJDOT

NJTA Contract 104-1213, OPS P3094 Driscoll Bridge Widening and Rehabilitation; 2/07-8/09, $100M. Senior Inspector. This project was the largest single dollar value construction contract in the history of NJTA. GPI, subconsultant to PB Americas, for the rehabilitation of the superstructure of the first two bridges. In the first stage of construction, the original bridge (now designated as the "Northbound Outer" or "NBO" bridge) received a major overhaul, with northbound traffic being maintained on the second bridge ("Northbound Inner" or "NBI") in six lanes (only 9'-8" wide) plus the counterflow lane on the new ("Southbound" or "SB") bridge. During the next stage, traffic was switched to the newly rehabilitated NBO (plus counterflow lane), and the process was repeated on the NBI structure. The work on each bridge included complete removal of the existing deck, curbs, barriers, lighting and drainage; replacement of all existing main girder bearings with electrometric or isolation bearings; installation of new bolsters between existing stringers and floorbeams to adjust the top-of-steel elevations to conform to the new deck cross-slopes; miscellaneous steel repairs; installation of new deck joints and composite concrete deck using HPC concrete and epoxy-coated reinforcing steel; bridge drainage system; concrete barriers and new bridge lighting. On the NBO structure, an existing overstress condition in the floorbeams was eliminated by using high-strength post-tensioned strands attached to anchorages and deviators at the bottom flange of every floorbeam. Approach roadway drainage and paving and new overhead signage completed the work. Client: NJTA

Macombs Dam Bridge over the Harlem River, Contract #BRX287R, New York, NY; 11/00-4/03, $145M. Senior Inspector. The Macombs Dam Bridge is the oldest swing bridge in New York City. Responsibilities included providing construction engineering and inspection of the Macombs Dam Bridge over the Harlem River. Duties also included the preparation of reports for contractor payments including verification of quantities and compliance with contract plans and specifications. Client: NYCDOT

Williamsburg Bridge, Contract #7, North Roadways Reconstruction, New York, NY; 6/00-9/00, $13M. Inspector. Resident engineering and inspection for the reconstruction of the North Inner and Outer Roadways. Major work items included the construction of the new North Approach structure, construction of the new Marcy Avenue substructure (elevated structure which connects the North Roadways to the BQE) including the installation of 700 bored-in-piles; construction of new reinforced concrete pile caps, piers, retaining walls and abutments; new superstructure consisting of steel girders with a concrete filled grid deck; and new drainage and bridge lighting. In addition, work also involved new underdeck inspection of walkways, the replacement of the existing pedestrian walkway with a new orthotropic deck walkway, and replacement of the deck and framing system on the main bridge with an orthotropic deck system and accompanying barriers; and extensive MPT plans. Client: NYCDOT

Williamsburg Bridge, Contract #6, BMT Structure Rehabilitation, New York, NY; 4/99-6/00, $176M. Senior Inspector. This project consisted of the demolition and reconstruction of the entire BMT transit structure on the Williamsburg Bridge. Responsible for organizing and leading the quality assurance inspections and quantity reporting for all structural steel and reinforced concrete demolition and construction on this project. Duties included the preparation of reports for compliance and payment acceptability. Client: NYCDOT

Goethals Bridge, Contract AKG 274.022, New York, NY; 7/00-8/00. Senior Inspector. This project involved structural repairs, cleaning and painting of the New York and New Jersey approaches of a major steel truss bridge. Responsibilities included monitoring the collection and disposal of lead paint, inspection of containment systems, application and testing a new paint system. Responsibilities also included monitoring MPT on the NJ Turnpike and coordinating lane closures with the NJ State Police. Client: PANY&NJ

Riverside South, New York, NY; 5/97-4/99, $20M. Structural Engineer/Construction Inspector. This project involved the construction of new infrastructure to access two new high-rise buildings on the West side of Manhattan including the construction of three new bridges, two of which are over active Amtrak lines, and the construction of 600 LF of new roadway on 100,000 cy of fill. Responsible for ensuring contractor compliance with plans and specifications; review and coordination of shop drawings; record keeping according to MURK; inspection of caps, columns, piers, retaining walls; erection of structural steel and precast units, bearings, armored joint systems; construction of bridge decks and approach slabs; and bridge construction in accordance with NYCDOT Bureau of Bridges and NYSDOT standards and specifications. Client: Trump/New World

ASSIGNMENT

Senior Construction Inspector

EDUCATION

M.S., Civil Engineering, University of Washington, Seattle, WA, 1970
B.S. Civil Engineering, 1966

REPRESENTATIVE AND PERTINENT EXPERIENCE

Mr. Sachdev has over 30 years of engineering and construction inspection experience in transportation and industrial facilities, including over 25 years with New York City Transit. His experience includes construction management, supervision, inspection, design review, auditing, and planning for various New York City Transit Authority, Board of Water Supply, and NYC Department of Environmental Protection projects. He has inspected track, structures, concrete, paving, and ancillary railroad systems, electrical, and mechanical systems for compliance with plans, drawings, and specifications. He is familiar with NYC Transit and Port Authority systems and procedures.

- **Senior Construction Inspector, Port Authority of New York & New Jersey, EWR AirTrain Base System Running Surface Major Rehab** – Served as Construction Inspector on major rehab of sections of the EWR AirTrain base system guideway running surface. Monitored and documented contractor's on-site resources. Visual verification quality of work from catwalks. Visual inspection work in-progress from catwalks. Witnessed various tests. Provided daily progress reports. (5/1/2014 – 5/31/2014)

- **Senior Field Inspector at Tectonics Engineering**- Inspection of various DDC construction projects - New Police Academy, Coney Island Hospital Extension, Queens Museum and S. I. Children's Museum extensions etc. Inspected pile driving and drilling, subgrade, shoring, concrete and rebars for the foundations. (5/11 - 01/13)

- **Senior Construction Engineer/ Inspector, Port Authority of New York & New Jersey, Port Commerce Facilities** - Inspected contractor's work related to intermodal facility at Port Ivory, Howland Hook and tenant alteration applications at Port Newark/Elizabeth, including modifications to Administration Building, emergency water main and track repair and tenant alterations at Teleport, involving new office space and utilities for various companies. Projects at Brooklyn Piers included fender repairs, pile repairs, dredging, emergency paving repairs, and security guard booth. (4/06 – 11/10)

- **Senior Construction Inspector, Port Authority of New York & New Jersey, Restoration of PATH Service to Manhattan** - Inspected contractor's work connected with the $360 million project, including temporary PATH station at WTC, rehabilitation and expansion of Exchange Place Station, and rehabilitation of Tunnels "E" and "F". Verified compliance with plans and specifications. Prepared daily narratives and reports. Also responsible for coordination with train master for removal of blast material for new crossover tunnels, inspection of additional PATH projects including CCTV upgrade at South Street Yard, including new light poles, foundation excavation, and concrete placement; additional elevators at Pavonia Station; and chemical grouting at various locations. (2002-2004)

- **Resident Engineer, New York City Transit, Rehabilitation of New Lots Line, Brooklyn, NY** - Construction supervision and coordination of Elevated Subway Line Project. The project involved replacing structural steel girders, seat brackets, column rehabs, track work, stair replacement, and mezzanine hanger repair, replacement of structural concrete and water proofing of thru-spans. (1999-2001)

- **Resident Engineer, New York City Transit, Rehabilitation of Various Pump Rooms in Brooklyn and The Bronx, NY.** The work involved providing new electrical service, pumps, discharge lines, valves, new structural slab, new doors and lighting, etc. (1995-1999)

- **Resident Engineer, New York City Transit, Handicap Ramps for SIRTOA Stations, Staten Island, NY.** The project consisted of providing over 500 feet of ramps over pile foundations at two elevated stations, Dongan Hills and Great Kills. (1993-1995)

- **Resident Engineer, New York City Transit, Rehabilitation of Castleton Avenue and Yukon Avenue Bus Depot, Staten Island, NY.** The projects involved new bus lifts, structural slab, new roll up doors, lighting, electrical service, oil separator tank and discharge pipes, paving, new parking lots and fencing. (1993-1995)

- **Resident Engineer, New York City Transit, Structural Rehabilitation of SIRTOA, Right of Way, Staten Island.** The project consisted of providing new retaining walls, crib walls, soil stabilization, riprap and sheet piling along SIRTOA right-of-way at various locations. (1991-1993)

- **Resident Engineer, Parking Lots at Two SIRTOA Stations, Staten Island.** Construction of parking lots at Dongan Hills and Annandale Stations including excavation, drainage, paving, and striping. (1990-1991)

- **Engineer Auditor, New York City Transit**, Engineering audit of various Transit Authority projects. Auditing of payments, material, and additional work orders. (1985-1990)

- **Civil Engineer, New York City Transit**, Planning, scope and property acquisition of various projects. (1977-1985)

- **Assistant Civil Engineer, New York City Department of Environmental Protection.** Sewage treatment plants at Ward Island and Port Richmond. Inspection of pile foundation and structural walls for sewage treatment plans. (1976)

- **Assistant Civil Engineer, New York City Board of Water Supply, Third Water Supply Tunnel.** Design review and checking working drawing for the third water supply tunnel. (1970-1976)

Saif Salahuddin, P.E.
Assistant Resident Engineer

Professional Profile
Mr. Salahuddin is C-3 Supervisor/Competent Person certified with extensive experience in construction management and construction inspection projects. He has over 20 years of experience on large scale infrastructure projects. Mr. Salahuddin has provided specialized engineering services in the field of construction engineering, construction management, and in the planning and design of highly complex, multi-million dollar transportation infrastructure projects to almost all the major government agencies in the Tri-State area including the NJDOT, NYSDOT, NYCDOT, NYSTA, NYCDDC and various other local government agencies.

Project Experience
New Jersey Turnpike Interchange 6 to 9 Widening Program; 11/12-Present, $2.7B. Senior Inspector for Contract No. T869.120.803 (approximately $118M) NSO/SNO Roadways and Service Area 7S Ramps Grading, Drainage, Paving, Structures & Lighting Milepost 70.6 to Milepost 82.6. This contract provides for the construction of approximately three miles of the proposed Turnpike inner and outer roadways south of Interchange 8A. This contract will eliminate the existing merge/diverge, which will require a significant amount of construction staging. The contract also includes the construction of two Service Area flyover ramps, one culvert extension and two mainline structures over Cranbury Brook and the reconstruction of four ramps at Interchange 8A. Additionally, 30 sign structures, eight stormwater management basins, 22 retaining walls and the third lane on the NSO roadway between Interchange 8A and Interchange 9 will be constructed. Construction is anticipated to commence in the second quarter of 2012 and be completed in the second quarter of 2014. Client: NJTA

Resurfacing of Route 35 from South of Cherry Tree Road to Route 9, Middletown, Holmdel, Hazlet, Aberdeen, & Old Bridge Townships, Keyport & Sayerville Borough, City of South Amboy, Monmouth & Middlesex Counties, NJ; $3.9M, 8/12-11/12. Senior Inspector. This project included HMA surface course milling and paving; construction of new handicap ramps in conformance with ADA guidelines, sidewalk and curb improvements; drainage structure improvement; landscaping, new traffic striping and traffic signal improvements. In addition, the work included bridge deck partial depth repair, bridge sidewalk and curb repair, spall repair and deck joint repair at various bridges throughout the project limits. As a Senior Inspector, Mr. Salahuddin was responsible for inspection of all work items to ensure that they were in compliance with plans and specifications, payment processing, worksite safety and as-built reports. Client: NJDOT Region Central

New Jersey Turnpike Interchange 6 to 9 Widening Program; 7/11-8/12, $2.7B. Senior Inspector for Contract No. T869.120.102 (approximately $53M) NSO/SNO Roadways Grading, Drainage, Paving, Structures, & Lighting MP 48.7 TO 50.5, Townships of Springfield & Mansfield, Burlington County. This project was the first contract in a series to add 3 outer lanes to the NJ Turnpike from interchange 6 to 9. The contract included excavation, storm water management facilities, MSE retaining walls, culverts extensions, pipe jacking, construction barrier, guard rails asphalt roadway construction, striping, signage and a stream relocation. Responsibilities included submittal approvals/tracking, force account tracking, pay estimates, change orders, managing the inspectors, electronic reporting and the coordination of traffic controls, bridge demolition and construction, site clearing, excavation, drainage, precast culvert construction, precast parapet installation, MSE walls, structural concrete for substructures and superstructures, HPC bridge decks, asphalt paving, and electrical work. The project was constructed utilizing a combination of long term lane closures with construction barriers, temporary lane closures and lane shifting. Client: NJTA

New Jersey Turnpike Interchange 6 to 9 Widening Program; 1/10-6/11, $2.7B. Senior Inspector for Contract No. T869.120.202 (approximately $32.1M) for NSO/SNO Roadways Grading, Drainage, Paving, and Structures from MP 55.1 to 56.5 in the Townships of Bordentown and Chesterfield. This project involved the construction of two new outer roadways, each consisting of three 12-foot lanes and a 12-foot right shoulder as well as the reconstruction of the Bordentown Chesterfield Road (CR 528) and the Ward Avenue bridges over the Turnpike, five retaining walls,

two butterfly sign structures, one cantilever sign structure, four overhead VMS structures, drainage and three storm water management basins, ITS, and relocate transverse utilities. As Senior Inspector, Mr. Salahuddin was responsible for the on-site inspection of the contractor's means and methods for foundation excavation, steel piles, sub and superstructure reinforced concrete bridge items, drainage piping and structures, subgrade, subbase, DGABC, and bituminous paving in lifts. Client: NJTA

Route 287 Resurfacing from New Jersey Turnpike to Stelton Road, Edison, NJ; 4/08-1/10, $40M. Assistant Resident Engineer. This $40-million fast track project included 130,000 tons of Superpave HMA construction, 46,000 square feet of full depth concrete pavement repair, 155,000 pounds of slab stabilization with polyurethane grout, and extensive bridge repairs and state-of-the-art ITS components. This section is an extensively traveled corridor and facilitates both commuter cars and heavy truck traffic. Duties included inspection of the contractor's means and methods for the major items of work including: milling, reset heads, concrete curbs, surface preparation, HMA superpave items, and maintenance and protection and traffic, nightwork, repair and replacement of existing concrete lane pavement both full depth and partial depth repairs as well as stabilization measures at existing joints, followed by a 4" overlay over a 5.8-mile stretch of 3 and 4 lane interstate roadway both NB and SB. Duties also included being the Owner's direct on-site representative to the contractor, direct supervision of a Construction Project's Field Inspection/Engineering staff, performing quality assurance oversight of major items of work in progress and/or ensuring that the project is constructed in accordance with the plans and specifications for the owner. Client: NJDOT

Route 33, Section 9A in Monmouth County, NJ; 5/06-4/08, $18M. Lead Engineer. Provided construction management services for this important roadway project that included widening and reconstruction of Rte. 33, Rte. 35 and Rte. 71 with new geometric and pavement features. Duties included inspection of the contractor's means and methods for the major items of work including: milling, reset heads, concrete curbs, surface preparation, HMA superpave items, and maintenance and protection and traffic, nightwork, installation of new traffic signal, relocation of existing utilities and installation of new underground utilities including water, gas, electric & telephone; new storm water drainage system, asbestos abatement, landscaping and extensive MPT. The construction of new full-depth flexible pavement on clayey subgrade conditions with high water table required subgrade undercut and replacement with crushed stone wrapped in geotextile fabric for almost the entire project limits. Responsible for all phases of construction including constructability and design reviews, field supervision of all items of construction, payment processing, coordination of work with various agencies, QA/QC, review of shop drawings, CPM schedule, as-built reports and final estimates. Client: NJDOT

Rehabilitation of Park Avenue, Nelson Avenue, Bergen Avenue & Kearny Avenue Bridges, Hudson County, NJ; 10/05-04/06, $3M. Resident Engineer. Provided construction management services for the total rehabilitation of these structurally deficient bridges including floorbeams, girders,columns, abutments, full-depth deck repair, cast-in-place deck replacement; reviewed design calculations, shop drawings, and CPM schedule to ensure timely and cost effective completion of the project. It also included lead-based paint removal and application of new coating, asphalt paving, and extensive MPT for being in extremely busy areas. Coordinated work with various government agencies; ensured project's compliance with all the federal, state and local codes, including applicable safety and environmental regulations. In addition, investigated field conditions for any design changes and suggested design alternatives. Client: Hudson County

Reconstruction of Queens Boulevard & Honeywell Street Bridges, Queens County, NY; 1/01-3/02, $60M. Senior Engineer. This highly complex project entailed complete demolition and replacement of two structurally deficient bridges over one of the most heavily traveled RR tracks in New York City. In consultation with the Resident Engineer, Mr. Salahuddin was directly in-charge of day-to-day and over-all management and supervision of all phases of construction of these multiple-span steel bridges with composite deck slab, including QA/QC. Investigated field conditions to conduct constructability reviews and to solve construction problems. Supervised work assigned to different team members; reviewed construction quantities, processed payments and change orders. This project also involved lead and asbestos abatement, and extensive RR & vehicular traffic safety. All of this had to be accomplished on accelerated schedule. Due to pro-active management and planning approach, this project was completed ahead of schedule, saving the City of New York millions of dollars. Client: NYCDOT

Jeffrey Schramm, P.E.
Senior Construction Inspector

Professional Profile
Mr. Schramm is a senior inspector with the following experience.

Project Experience
2011-2014 Port Authority On-Call Construction Management Services - John F. Kennedy International Airport, Queens, NY; 4/12-Present. Senior Construction Inspector. As part of this on-call construction management services project, Mr. Schramm is assigned to projects at JFK Airport. These projects include:

Proposed Project Assignment
Field Engineer – Civil/Structural Inspector

Registration/Certifications
2008/Professional Engineer/NY

Education
BS/1997/Civil Engineering

Course Work
2008 - 10-Hour OSHA Training Course, #36-003700831

Total Years Experience 17

- **Pavement Rehabilitation of Van Wyck Expressway North and South Service Roads, JFK-924.703.** His responsibilities include coordination of daily activities with Port Authority Operation and Contractor; working with Port Authority materials to ensure quality of work installed; preparation of Daily Narrative of work performed which is submitted to the Assistant Resident Engineer; preparation of Controlled Inspection reports; review of payments; review and approval of T&M tickets; keeping track of quantities installed for the project's classified items; and working with Port Authority Quality Assurance Division to inspect completed portions of the project and preparing a punch list.

- **Rehabilitation of Taxiways FA & FB, JFK-184.029.** His responsibilities include coordination of daily activities with Port Authority Operation and Contractor; working with Port Authority materials to ensure quality of work installed; preparation of Daily Narrative of work performed which is submitted to the Assistant Resident Engineer; preparation of Controlled Inspection reports; review of payments; review and approval of T&M tickets; keeping track of quantities installed for the project's classified items; and working with Port Authority Quality Assurance Division to inspect completed portions of the project and preparing a punch list.

- **Runway 4L-22R RSA Compliance/Runway Reconstruction, JFK-104.002.** Mr. Schramm is working with the project management and the design group in to work out staging, scheduling and general planning for the job.

- **Taxiway R Rehabilitation for the JFK Resident Engineer's Office, JFK-1029.** This project involved inspecting installation of new electrical equipment for compliance with contract, Port Authority standards and NYC codes; documenting and maintaining daily narratives on contract projects; reviewing plans, specifications and shop drawings, processing and reviewing contractor submittals, change orders and estimates; interacting with architects, engineers, contractors and Port Authority officials; and coordinating scheduled electrical shutdowns with Port Authority Electrical Shop and various departments. He was responsible for managing the daily field operation for this project. His responsibilities included coordination of daily activities with Port Authority Operation and Contractor; working with Port Authority materials to ensure quality of work installed; preparation of Daily Narrative of work performed which is submitted to the Assistant Resident Engineer; preparation of Controlled Inspection reports; review of payments; review and approval of T&M tickets; keeping track of quantities installed for the project's classified items; and working with Port Authority Quality Assurance Division to inspect completed portions of the project and preparing a punch list.

Client: Port Authority of NY & NJ

Jeffrey Schramm, P.E.
Senior Construction Inspector

Biological Nutrient Removal Plant Upgrades to the Wards Island Waste Water Treatment Plant, New York, NY; 6/07-4/12. Mr. Schramm managed a staff of field inspectors covering the WI-79G, 79E, 79H and 79P contracts totaling over $250 million in value. His responsibilities included review and approval of all inspector reports and contractor's time and material sheets; coordinating contractor's daily activities with DEP plant operations and inspection staff; review of contractor's payments; managing all change order work and unit price items; preparation of punchlist and close out documentation for all disciplines and contracts; working with engineer of record to resolve field issues and drafting RFCs for their review; working with various branches of DEP including Division of Design Services, Audits, Operations and Engineering; acting as structural field liaison for the construction of the Croton Water Treatment Plant Facility; representing the structural engineer of record onsite for the $1.2 billion CRO-312G DEP contract; review and approval of shop drawings and RFC/RFI's; assisting office staff with change order preparation, coordination of design changes and serving as point of contact for all field issues; working directly with construction management staff and contractor on a daily basis to prioritize submittals for review and expediting issues that required the design engineers input; and coordination and resolution of field issues concerning all disciplines of the project.

Interstate Industrial Corporation, Clifton, NJ; 3/06-6/07. Mr. Schramm served as project engineer for the $100-million concrete substructure and superstructure contract for the New Yankee Stadium and a $7-million site work contract for the west side expansion of Green Acres Mall located in Valley Stream, NY. He was responsible for reviewing drawings; providing sketches and working drawings to field personnel; creating daily reports for tracking and recording of quantities installed for budget and schedule use; composing and submitting RFIs to engineer of record; reviewing and approving subcontractor and material supplier's invoices; and attending weekly engineering, RFI and QA meetings with general contractor and engineer of record. Mr. Schramm served as point of contact for quality assurance program and non-conformance repair work.

JFK International Airport, Queens, NY; 11/02-3/06. Mr. Schramm worked as a consultant in the Resident Engineers Office at JFK airport. He managed a wide variety of jobs ranging from runway and taxiway rehabilitation to tenant terminal construction. Projects included the Relocation of Taxiway A West; Rehabilitation of Runway 13L/31R; JetBlue Hangar 81B; American Airlines Terminal 9; and an Emergency Repair Work Order Contract. He was responsible for review of payment applications; preparation and negotiation of change orders; and tracking unit price classified quantities. Mr. Schramm built upon his knowledge of civil engineering by managing jobs in other disciplines such as mechanical and electrical. He was involved in all disciplines of new terminal and hanger inspection and construction coordination; conducted building inspections with engineer of record, tenant representatives and Port Authority personnel for life safety systems, utilities, fire proofing, HVAC systems and structural components; he worked as liaison between contractors, tenants and facility operations; he had extensive knowledge of landside and airside airport operations along with a good understanding of Port Authority tenant construction procedures.

Atlantic City-Brigantine Connector, Atlantic City, NJ; 11/97-11/02. Mr. Schramm acted as a structural engineer on this $200-million design-build project responsible for the design and preparation of drawings.

Reconstruction of Route 3N, Boston, MA; 11/97-11/02. Mr. Schramm acted as a structural engineer on this design-build-operate-maintain contract including the reconstruction and complete redesign of 22 miles of highway. Specifically, he was responsible for final design and drawings of a 12-span, 1,400-ft-long prestressed concrete girder bridge and a six-span prestressed concrete girder. Work included complete geometry design, design of steel superstructure girders and elastomeric bearings. During the construction phase, he continued to be responsible for shop drawing coordination for all disciplines as well as making multiple field visits as part of on-call services to the contractor.

JUGAL SOOD, PE

Resident Engineer

Mr. Sood has over 30 years of experience in general and heavy Civil Construction projects including demolition of all sizes, remedial action planning, field monitoring and supervision. He has extensive experience in providing, mechanical, electrical, and civil/structural resident engineering and inspection support. Additionally, he has developed engineering plans, prepared job specifications, created and coordinated teams to meet project completion deadline and conducted field inspections for various code compliances.

Key Qualifications

- ✓ Licensed Professional Engineer
- ✓ Extensive New York Public Agency Experience

Education

- MS, Civil Engineering, Polytechnic Institute of Brooklyn
- BS, Civil Engineering, Indian Institute of Technology

Registrations

- Professional Engineer (NY)

Certifications

- Resident Engineer's Training
- Railroad Signal Specialist II
- Mechanical Inspector's Training
- Electrical Inspector's Training
- OSHA 30 hr. Site Safety Training
- New York City Site Safety Manager Training
- 40 Hr. OSHA HAZMAT Training

Software

- Primavera Expedition

Metropolitan Transportation Authority (MTA) New York City Transit (NYCT) – Various Projects – NY
Resident Engineer

Led a team of engineers in monitoring and direction of Lexington Ave. Rehabilitation Project, ($250 mil.). Scope included water remedy repairs, and out of face track replacement, structural repairs, tunnel rehabilitation, pump rooms, and various code compliance and fan plants.

Managed Tunnel Rehabilitation & Lighting Project ($15.2 mil.).

Responsible for daily construction activities, change order scope/estimate, field decisions and code compliance for the progress of the project. Supervised construction & rehabilitation of Electrical Distribution Rooms.

Managed and pursued project correspondence, design interface, labor occasions estimating, change orders scope/estimate, contractor oversight, audit participation & response, O&M manuals/test procedures, constructability review, and coordination with other departments/agencies/community boards & DOT permits.

Managed Civil/Structural Engineering work for Flushing Line Signal Rehabilitation Project.

Supervised building of various signal rooms, inspection of structural rehabilitation of various sunken steel columns and pile driving etc. Responsible for dealing with various departments and agencies regarding Environmental work.

Managed Civil/Structural Engineering work for Williamsburg Bridge. Managed daily construction activities and field decisions for the progress of the projects and various code compliances. Responsible for preparation of civil/structural engineering change orders.

Formulated and implemented policy, plans, developed scope of work and recommendations, reviewed proposals and supervised the professional staff involved in inspection and various code compliance of structural rehabilitation of 54th Ave. – Vernon Blvd. Fan Plant and Pump Room, Long Island City ($15.7 mil).

Managed daily construction activities of new underground structural steel building, various code compliance and field decisions for the progress of rehabilitation of Johnson St. Fan Plant, Brooklyn ($15.8mil) supervised construction of sewer, water main, property line boxes and underpinning of buildings.

AMTRAK – Various Projects – New York, NY
Resident Engineer

Responsible for the interface between Amtrak and the construction contractor, supervision of the inspection staff and coordination with other projects underway in the tunnels, ventilation and evacuation shafts. Majority of the work completed during weekend track outages.

Scope of the $30 million project included installation of 72,000 linear 6-inch diameter dry fire standpipe, associated valves and appurtenances, fire department connections and risers at portals and ventilation/evacuation shafts in the East River tunnels [Lines1, 2, 3 & 4] and the North River tunnels [Tracks 2 & 3](AMTRAK).

Responsibilities also included processing of contractor progress payments, change orders and contractor evaluation and development of the inspection, testing and maintenance program for the completed system.

New York City Department of Design & Construction (NYC DDC) – Various Projects – New York, NY
Resident Engineer

Responsible for the inspection, payment, change orders, New York City code compliance, supervision and control of the performance of work for reconstruction of the north and south side on 110th Street between 5th Ave. & Frederick Douglas Blvd., in the borough Manhattan – HWMP 185 (The City of New York Department of Design and Construction).

The project included new granite curb, concrete sidewalk, concrete doormat, concrete header, hexagonal asphalt block and granite block sidewalks, street lights & traffic signal work, garden planters, signage and tree planting & transplanting.

Team Leader / Civil Engineer

Responsible for the closing out of numerous construction and consultant engineering contracts under the Capital Budget Program. Coordinated engineers, consultants and various other city and state agencies, to expedite and execute Capital Improvement Contracts.

Supervised a team of five engineers to ensure the timely processing of all final costs / partial costs to construction contractors and engineering consultants for Capital Projects. Verified the construction contractor compliance with engineering plans and specifications.

New Jersey Turnpike Authority (NJTA) – Various Projects – NJ
Resident Engineer

Responsible for supervision of the inspection for signage and foundation footings from Exit 8 to Exit 16 on New Jersey Turnpike. The project included construction of the footings for the signs, installing of the electrical sign supports, new sign and repair of old signs.

Coordinated with the Project Managers, Assistant Vice President, and Engineering Audit Officer in connection with the closeout of the contracts in regards to the processing of final estimate/partial estimates of all capital improvement and maintenance contracts.

New York City Department of Transportation (NYCDOT) –Emergency Reconstruction Project– New York, NY
Resident Engineer

Responsible for supervising the Emergency Reconstruction of West Abutment and Wingwalls of Borden Avenue Bridge over Dutch Kills (BIN 2-24041-0), NYCDOT. The scope of work includes cofferdam, dewatering system, utility work, new footings, new abutments and wing walls.

Phenol Zamor
Electrical Inspector

Professional Profile
Mr. Zamor has many years of experience as an electrical inspector and in the field of design.

Project Experience
Bayonne Bridge Navigational Clearance Program (BBNCP) Construction Management, NY/NJ; 10/13-Present. Electrical Inspector. This project involves construction management services for the $743-million Bayonne Bridge Navigational Clearance Program (BBNCP). This extraordinarily complex, once-in-a-lifetime project will replace more than 5,000 feet of viaduct and re-frame the existing steel arch structure to accommodate a new roadway 65 feet above the existing roadway. Mr. Zamor is responsible for inspection of electrical equipment installation in New York and New Jersey buildings; installation of adaptive signals at various locations on roadways; installation of fiber optic cable, devices and panels for CCTV cameras; routing of electrical conduit and installation of panel schedules; pulling conductors in conduit and performing insulation resistance tests; installation of temporary and permanent roadway lighting systems; installation of SCADA systems; and installation of aesthetic lighting systems. He also checks for compliance with the National Electric Code, specifications and other approved documents. Client: Port Authority of NY & NJ

Proposed Project Assignment
Field Engineer – Electrical Inspector

Education
MS/1993/Electrical Engineering
BS/1992/Electrical Engineering

Course Work
2014 - NYC DOB 4-Hour Supported Scaffold (2018)
2014 - NYC DOB Confined Space Awareness
2010 - 10-Hour OSHA Training Course
2005 - 40-Hour OSHA Training Course
1986-1988 - Pre-Engineering/Computer Science, Medgar Evers College

Professional Affiliation
National Fire Protection Association

Total Years Experience 20

Manhattan Bridge Rehabilitation of Cables and Suspenders, Contract 14, #BRC156R, New York, NY; 8/10-10/13. Electrical Inspector. This $149-million project involved the unwrapping and rewrapping of cables; replacement of suspenders; replacement of necklace lighting messenger cables and cable hand ropes; installation of new access platforms to existing tower platforms; reversal of lower roadway and operation of HOV lane and replacement of multi-rotational bearings at the Towers; replacement of light poles and luminaries on South upper roadway; replacement of lane control radar on South upper roadway; and retrofit of track stringers and diaphragm connections and other miscellaneous work. Mr. Zamor was the senior inspector for the removal and replacement of roadway lighting, main cable necklace lighting and ranging radar detectors. He also monitored the schedule, wrote reports, reviewed contractor submittals, and assisted in cost estimates for all electrical issues on the project. Client: New York City Dept. of Transportation

Bronx-Whitestone Bridge Bronx/Queens Approach, BW-89/WBM-342, Bronx, NY; 11/08-8/10. Electrical Inspector. This $192-million project involved the staged removal and replacement of the Bronx Approach superstructure and substructure from the Bronx Toll Plaza to the Bronx Anchorage. Work included the installation of excavation support systems, mini-pile foundations and temporary steel support systems to support the existing structure during the staged construction. There were massive concrete placements for concrete footings and piers during the construction of the substructure. Traffic on the bridge was maintained with five lanes open to traffic during the project. During the staged construction, work was staged demolition of the existing roadway, installation of multiple continuous steel girders, placement of a staged composite concrete deck, installation of permanent concrete barrier and installation of permanent street lighting. Other work items on the project included new utility systems at the Bronx Toll Plaza, installation of new salt storage dome building and miscellaneous steel and concrete deck repair on the Queens Approach structure. Mr. Zamor's responsibilities included inspection of protective shield on or around switchgear equipment during demolition and construction; installation of all temporary and new electrical equipment such as transformers, lighting and power panels, variable message signs and variable speed limit signs; conduit and pullboxes placement; pulling and splicing of conductors; erection of temporary and permanent roadway luminaires; removal and reinstallation of Con Edison transformer and associated feeders; and removal of existing 5-kV feeders and installation of new 5-kV feeders. Client: Triborough Bridge and Tunnel Authority

Phenol Zamor
Electrical Inspector

Bronx-Whitestone Bridge Deck Replacement - BW-82, Bronx, NY; 7/04-11/08. Electrical Inspector. This $150-million project involved the reconstruction of the suspended spans deck with an orthotropic steel deck. The project also involved the installation of new maintenance travelers, electrical and communications systems, fire protection system and inspection platforms. A temporary movable barrier was also being utilized to provide for efficient traffic flow during the eight reconstruction stages scheduled for this project. Mr. Zamor's responsibilities included inspection of electrical conduit placement, installation of conductors, field splicing of wires, placement of pull boxes, erection of roadway lighting fixtures, installation of tower flood lighting, and connections to power feed transformers from Con Edison. Client: Triborough Bridge and Tunnel Authority

Roosevelt Island Bridge over East River Channel, Queens, NY; 10/02-5/04. As an electrical inspector, Mr. Zamor's responsibilities included the preparation of plans, specifications and cost estimates for complete electrical control system rehabilitation of the bridge. Client: New York City Dept. of Transportation

Route 5 Bridge over Chickahominy River, Richmond, VA; 10/00-5/04. Mr. Zamor served as an electrical inspector on this project that involved the design and layout of incoming power cables, conduits and submarine cables with terminal boxes. Client: VTrans

Hamilton Avenue Bridge over the Gowanus Canal, Brooklyn, NY; 10/99-5/04. Electrical Inspector. This project involved the complete electrical control system rehabilitation of bridge including roadway lighting auxiliary equipment, cost estimates and specifications. Client: New York City Dept. of Transportation

Atlantic Beach Bascule Bridge, Lawrence, NY; 8/96-8/00. Electrical Inspector. This project involved the design and layout of conduit routing for bridge incoming power and auxiliary equipment, cost estimates and specifications. The project also involved staging construction phases, shop drawings review and construction support. Client: New York City Dept. of Transportation

Shore Road Bridge over Hutchinson River, Bronx, NY; 2/02-9/02. Electrical Inspector. This project involved the inspection of electrical equipment during construction. Client: New York City Dept. of Transportation

Carlton Vertical Lift Bridge, Bath, ME; 10/99-2/01. Electrical Inspector. This project involved the complete electrical rehabilitation of bridge including auxiliary estimates, specifications and construction support. Client: Maine Dept. of Transportation

Memorial Bridge, Portsmouth, NH; 11/99-3/01. Electrical Inspector. This project involved the design and installation of closed circuit television (CCTV) and specifications. Mr. Zamor provided shop drawings review and cost estimates. Client: New Hampshire Dept. of Transportation

Marine Parkway Lift Bridge, Brooklyn, NY; 10/96-6/04. Electrical Inspector. This project involved the design and layout of traffic control devices and roadway lighting. He also provided shop drawings review, construction support, design and layout of decorative lighting system. Client: Triborough Bridge and Tunnel Authority

Cedar Creek Bridge, Georgetown, DE; 7/95-7/96. Electrical Inspector. Mr. Zamor was responsible for the design and inspection of the electrical control for warning gates and traffic signals including cost estimates, specifications and shop drawings review. Client: Delaware Dept. of Transportation

East Washington Avenue Single Bascule Leaf Bridge, Bridgeport, CT; 9/95-8/99. Electrical Inspector. Mr. Zamor's responsibilities included the complete electrical control system design, construction cost estimates and specifications, including associated lighting and traffic auxiliaries. He also provided shop drawing review and construction supports. Client: Connecticut Dept. of Transportation

Route 36 Bridge over Shrewsbury River double Bascule Bridge, NJ; 3/94-6/94. Electrical Inspector. Mr. Zamor's responsibilities included the design and preparation of plans for conduit installation for bridge auxiliaries. Client: New Jersey Dept. of Transportation

McArdle Bridge, Boston, MA; 10/93-11/93. Electrical Inspector. This project involved the design special protective covering for flexible cables to movable spans. Client: Massachusetts Dept. of Transportation

US Route 136 Swing Bridge, Westport, CT; 6/94-9/94. As an electrical inspector, Mr. Zamor was responsible for shop drawing review and design modifications. Client: Connecticut Dept. of Transportation

ASSIGNMENT

Electrical Engineer

EDUCATION

Polytechnic Institute of New York University, Master of Science in Electrical Engineering (Power Engineering), 2012-present
New York City College of Technology/CUNY, Bachelor of Technology Degree in Computer/Electrical Engineering, 2006-2008

REPRESENTATIVE AND PERTINENT EXPERIENCE

Mr. Adesanya has over five years of experience in electrical engineering and design to include CCTV design, construction, integration, Troubleshooting, Power electronics systems diagnostic/design, Fiber optical communication installation/repair, ITS construction/network integration, Rail road systems installation/maintenance, and Power system synchronization.

- **Electrical Engineer/Inspector, New York State Department of Transportation, ITS, D261233 Project, Throgs Neck Expressway, Bronx, NY -**
  - Monitor daily electrical construction work through observation and testing to verify the work complies with NYSDOT Contract Documents Plans and Specifications on state highways in NYC.
  - Troubleshooting equipment problems that range from communication failures involving fiber-optics to power/electric failures. Utilizing blue prints/repair manuals/testing for existing International Transportation Systems which includes CCTV video cameras, variable message signs, highway advisory radios, radar detectors, minihubs, shelters and master controllers throughout Manhattan, Bronx, and Queens Counties.
  - Complete daily inspections report in written and computer spreadsheet formats to document the quantity and item numbers for the components of work completed by the contractor and report to the EIC.
  - Review traffic protection procedures; Maintain daily records of the numbers and classification of workers employed by the Contractors using the Authority's Site Manager System and Prepare daily reports of all construction and engineering field work using the Authority's Site Manager system. (12/13 – Present)

- **Electrical Engineer/Inspector, New York State Department of Transportation, D261780 Project -**
  - Monitor daily electrical construction work through observation and testing to verify the work complies with NYSDOT Contract Documents Plans and Specifications on state highways in NYC.
  - Troubleshooting equipment problems that range from communication failures involving fiber-optics to power/electric failures. Utilizing blue prints/repair manuals/testing for existing International Transportation Systems which includes CCTV video cameras, variable message signs, highway advisory radios, radar detectors, minihubs, shelters and master controllers throughout Manhattan, Bronx, and Queens Counties.

- Complete daily inspections report in written and computer spreadsheet formats to document the quantity and item numbers for the components of work completed by the contractor and report to the EIC.
- Review traffic protection procedures; Maintain daily records of the numbers and classification of workers employed by the Contractors using the Authority's Site Manager System and Prepare daily reports of all construction and engineering field work using the Authority's Site Manager system. (03/12 – 12/13)

- **Electrical Engineer/Inspector, New York State Department of Transportation ITS, D261223 Project, Throgs Neck Expressway, Bronx, NY**
  - Monitor daily electrical construction work through observation and testing to verify the work complies with NYSDOT Contract Documents Plans and Specifications on state highways in NYC.
  - Troubleshooting equipment problems that range from communication failures involving fiber-optics to power/electric failures. Utilizing blue prints/repair manuals/testing for existing International Transportation Systems which includes CCTV video cameras, variable message signs, highway advisory radios, radar detectors, minihubs, shelters and master controllers throughout Manhattan, Bronx, and Queens Counties.
  - Complete daily inspections report in written and computer spreadsheet formats to document the quantity and item numbers for the components of work completed by the contractor and report to the EIC.
  - Review traffic protection procedures; Maintain daily records of the numbers and classification of workers employed by the Contractors using the Authority's Site Manager System and Prepare daily reports of all construction and engineering field work using the Authority's Site Manager system. (03/10 – 03/12)

- **Electromechanical System Lab Technician, New York City College of Technology, Brooklyn, NY -**
  - Render technical support to the electromechanical students and responsible for analyzing and creating a detailed report for the Lab maintenance.
  - Making repairs on motors, relays and control, gears, solenoids, starter, rollers, master controllers, switches and routers in the Lab.
  - Responsible for circuitry simulations, interface with software and troubleshooting electromechanical systems. (06/2007)

- **Networking Support, New York City Transit Authority, ENY Maintenance Shop, Brooklyn, NY -**
  - Performing preventive, remedial maintenance and inspections on rail cars and network equipment.
  - Performing analytical and technical reports and preparing specifications for the networks and field operation.
  - Developing, planning and assisting in engineering design and networks in the shop.
  - Developing blueprints, wiring diagram, schematics with contract drawing, writing technical specifications and running diagnostic operating test (DOT) on R143, R160 rail cars. (01/2009 – 03/2010)

Peter Alley
Assistant Resident Engineer

Professional Profile
Mr. Alley possesses nearly 30 years of experience in the construction management field. He has been involved in all aspects of project management including bid to completion, estimating, field engineering and quality control, implementing and maintaining safety throughout the work site, direct supervision of work forces, coordinating subcontractors, project scheduling, onsite record management, and contact with owner representatives.

Proposed Project Assignment
Civil/Structural Inspector

Course Work
2014 - NYC DOB 4-Hour Supported Scaffold (2018)
2014 - NYC DOB Confined Space Awareness

Total Years Experience 29

Project Experience
Bayonne Bridge Navigational Clearance Program (BBNCP) Construction Management, NY/NJ; 7/13-Present. Assistant Resident Engineer. This project involves construction management services for the $743-million Bayonne Bridge Navigational Clearance Program (BBNCP). This extraordinarily complex, once-in-a-lifetime project will replace more than 5,000 feet of viaduct and re-frame the existing steel arch structure to accommodate a new roadway 65 feet above the existing roadway. Mr. Alley is responsible for facilitating solutions to many of the technical issues associated with the contractor's means and methods developed to build precast pier elements and roadway segment sections. He played a major role early in the project in partnering with the contractor and designer to establish a working group whose sole purpose was to work collaboratively to solve several challenges discovered during shop drawing development and contractor-initiated optimization plans. This group was very successful in working through these challenges and developing workable and buildable details necessary to precast pier elements and roadway segments. Client: Port Authority of NY & NJ

14th Street Viaduct Replacement, Hudson County, NY; 6/11-7/13. On-Site Construction Manager. This was a $48-million bridge replacement project in an urban area featuring an elaborate temporary structure to support half of the existing bridge during staged construction, pile foundations, cast-in-place concrete with extensive architectural features and a steel superstructure with long continuous spans. Client: Hudson County

Route 36 Highlands Bridge, NJ; 2008-2010. On-Site Construction Manager. This $125-million segmental bridge project featured the staged construction of two, 1,300-ft-long precast segmental box girder structures across the Shrewsbury River. Balanced cantilever construction was used, and the piers were constructed using post-tensioned precast concrete box sections. Other features included 54-in. diameter concrete piles, floating cofferdams, phased demolition of the existing bascule bridge and other ancillary road and bridge items. This schedule-critical project was successfully completed on time. Mr. Alley's responsibilities included the daily coordination of all work activities and the responsibility for overall project quality control, safety and field engineering to ensure the schedule was met. Client: New Jersey Dept. of Transportation

Dover Rail Yard Pedestal Pit, NJ; 12/06-8/08. On-Site Construction Manager. This $7-million project involved the installation of a 950-ft-long precast concrete maintenance pit and associated utilities in an active electrified rail yard. Client: New Jersey Transit

Other major projects he has been involved with include:

Route 1 & 9, Magnolia Avenue Bridge Replacement, NJ; 2006-2007. This $6-million road and structure project featured a bridge replacement and three retaining walls. Client: New Jersey Dept. of Transportation

Route 78 Section 5CD, Newark NJ; 2005-2007. This was a $13-million road reconstruction and retaining wall project. Client: New Jersey Dept. of Transportation

Peter Alley
Assistant Resident Engineer

Route 46, VanHouten Avenue Interchange, NJ; 2005-2008. This $16-million road and structure project featured a bridge replacement and four retaining walls. Client: New Jersey Dept. of Transportation

Replacement of the Mantoloking Bridge, NJ; 12/03-5/06. This $21-million project featured the construction of a 1,000-ft-long bridge with a double bascule span over the Barnegat Bay. Client: Ocean County

Bay Head Rail Yard Improvements, NJ; 10/03-4/06. This $11-million project featured a 950-ft-long maintenance pit and the associated utility upgrades. Client: New Jersey Transit

Route 21, Contract TSM6 #1, Newark NJ; 4/02-6/05. This $42-million road and structure project featured a roll-in replacement of a NJT railroad bridge, multiple retaining walls with architectural treatments, a sewer screening facility, complete utility replacements, and road reconstruction. Client: New Jersey Dept. of Transportation

Expressrail Project in Port Elizabeth, NJ; 2001-2003. This $20-million road and rail project featured a depressed roadway structure and a railroad bridge. Client: Port Authority of NY & NJ

Route 9, Section 15D, NJ; 2001-2003. This $12-million project involved a bridge with large diameter concrete cylinder piles. Client: New Jersey Dept. of Transportation

Montclair Connection, NJ; 1999-2002. This involved multiple contracts totaling $30 million involving construction of the connection between the Montclair Line and the Boonton Line. Work included the electrification of a portion of the Boonton Line, a new station, and an electrified rail yard. Client: New Jersey Transit

Route 21 & Route 46, Sections 6K & 14P, NJ; 7/97-10/00. This $32-million project involved the construction of a new interchange. Key features included asphalt paving, 42-in. diameter water line, drilled shafts, large cofferdams, multiple retaining walls, sound walls and steel superstructure bridge, all with architectural treatment. Client: New Jersey Dept. of Transportation

Route 517, NJ; 8/95-11/96. This project involved the "roll-in" of a railroad bridge. Client: New Jersey Dept. of Transportation

Route 287, NJ; 7/92-10/93. This project involved various subcontracts totaling $16 million. Mr. Alley managed this accelerated concrete paving project that allowed for the opening of Rt. 287 eight months ahead of schedule. Client: New Jersey Dept. of Transportation

Route 287, Section 20J, NJ; 4/90-7/93. This was a $20-million new highway and bridge project. Client: New Jersey Dept. of Transportation

Other projects Mr. Alley was involved on include:

Widening of Exit 7, NJTA
Median Barrier between Exits 2 and 3, NJTA
Reconstruction of Washington Street, NJDOT
Route 206 Bypass, NJDOT
Various Municipal Projects

Hill and Dale Construction Co., L.L.C, Oldwick, NJ; 7/94-8/95. As owner/manager, Mr. Alley was a contractor that performed road and site construction. Major projects included a 900-ft road extension in Tewksbury Township as well as other residential site and septic projects.

Cipico Construction Inc.; 2/85-3/86. Superintendent/Field Engineer
Engineering Associates of New York; 7/84-2/85.Construction Inspector

Alyson Aulet-Valentine
Civil Structural Inspector

Professional Profile
Ms. Aulet-Valentine is a civil structural inspector with 16 years of experience working on many New York State and City projects.

Project Experience
2011-2014 Port Authority On-Call Construction Management Services - George Washington Bridge, Fort Lee, NJ; 11/11-Present. As a civil structural inspector, Ms. Aulet-Valentine is involved with the inspection of the joint replacement of the upper level deck. The project also involves the replacement of orthotropic deck, scupper and pipe run replacement, expansion finger joint repairs, main/secondary floorbeam repairs, stringer and stringer bearing repairs, deck rib connections, barrier repairs, paving, and coordination of maintenance of traffic. Client: Port Authority of NY & NJ

Proposed Project Assignment
Civil/Structural Inspector

Registration/Certifications
2011/NICET IV
2012/ICC Structural Steel and Bolting Special Inspector
2011/ACI Concrete Field Testing Technician Grade 1

Course Work
2014 - NYC DOB 4-Hour Supported Scaffold (2018)
2014 - NYC DOB Confined Space Awareness
2013 - PA NDA Training
2010 - 10-Hour OSHA Training Course
2010 - CMAA Cost Management
2010 - CMAA Contract Administration
2010 - CMAA Project Management
2009 - CMAA Professional Practice
2009 - CMAA Construction Safety Management

Total Years Experience 17

Replacement of Willis Avenue Bridge over the Harlem River, New York and Bronx, NY; 8/08-11/11. Ms. Aulet-Valentine served as senior inspector on this $636-million project. The project involved new and temporary bridges, approaches and ramps; 27 piers which included timber and steel piles; sheet piles; tiebacks and tie rods; whalers; temporary and permanent caissons installation; rebar for structures; girders and box beams installation; temporary and new pedestals; pier caps and abutments; precast and cast in place barrier curb; asphaltic pavements; concrete sidewalks and pavements utilizing many improved mix designs; excavation and backfilling; testing of materials; cofferdams; drainage structures such as manholes, catch basins, underdrain .122m to ' 1.50m; existing drainage video inspections; concrete pipe .305m to 0.457m; water mains; hydrants; bridge drainage systems; installation of chain link fence for structures; guide rail installation; maintenance and protection of traffic (MPT); environmental inspection; safety inspections; office work and many other job related duties. Client: New York City Dept. of Transportation/New York State Dept. of Transportation

Repair of the Tappan Zee Bridge, TANY 05-31B, NY; 5/08-9/08. Ms. Aulet-Valentine served as a senior inspector on this $148-million project. The project involved superstructure replacement of lanes 1, 2, 6, and 7 from span 1 to span 178; replacement of structural pavements onto existing piers; saw cutting and grouting of longitudinal and transverse joints; grouting of floor beams; testing of grout; rivet replacement with high strength bolts; MPT; and other miscellaneous work. Client: New York State Thruway Authority

Water Tunnel Project, New York, NY; 12/07-8/08. Ms. Aulet-Valentine served as a senior inspector on this $280-million project that involved installation of 48-in. riser pipes; air testing and torque of bolts around riser pipes; construction of new shafts; distribution and riser chambers; placement of various types of concrete and assisted in testing of materials; installation of false work; elevator; and access shafts rebar and ensured site safety as per "OSHA regulations. Client: New York City Dept. of Environmental Protection

Resurfacing of New York State Thruway (I-87), MP 16.2-29.4, NY; 2005-2007. Ms. Aulet-Valentine served as a senior inspector for cold milling of asphalt pavement, new asphalt concrete pavement; full depth pavement repairs; re-establishing ditches; structures; bridge deck repairs (13 bridges); bridge joint repairs; concrete noise barrier repairs; traffic signal installation; replacement of inductance loops, axle sensors, and temperature sensors; installations of stars; pavement striping; and removal and installation of drainage structures, pipe, guide rail, and sign structures. Client: New York State Thruway Authority

Alyson Aulet-Valentine
Civil Structural Inspector

Various Milling and Paving Projects, Routes 303, 304, 6, 59, 17 and 45, Various Locations, NY; 2005. Ms. Aulet-Valentine served as a senior inspector for milling and paving of bituminous concrete, joint sealing and inductance loop replacement, axle sensors and MPT. Client: New York State Dept. of Transportation

Resurfacing of New York State Thruway (I-87), MP 17.9 – 22.9, Various Locations, NY; 2004-2005. Ms. Aulet-Valentine served as senior inspector for the installation of pavement edge under drain and outlets into existing drainage systems. The project also involved milling of existing roadway and placing new hot asphalt mixes on mainline, partial; depth patch repairs; tack coats; temporary and new pavement markings; sawing and sealing of joints; installation of loop detectors; and MPT. Client: New York State Thruway Authority

Reconstruction of Median and Resurfacing of I-95, Darien and Norwalk, CT; 2002-2004. NICET II. This project involved the installation of new conduit, hand holes, control cabinets, conductor cables and temporary lighting, removal and placement of bridge seats, partial depth patches, bridge decks and median barrier, drilling and grouting of anchor bolts, installation of H-beams, painting and paint removal, lead health protection, deformed steel bars and false work. The project also involved pre-cast structure barrier, barrier caps, full depth repair, lighting foundations, sign foundations, saw cut, sawing and sealing joints; milling of existing roadway, placement of new and temporary hot mix asphalt, tack coat on mainline and pavement markings earth excavation, sub-base, sub-grade, topsoil and granular fill; installation and removal of catch basins, manholes, 12 in. – 48 in. RCP and ACCMP pipe, excavation, sedimentation control systems and relining of existing damage ACCMP pipes; and maintenance and protection of traffic, management of controlled material, office work, cost-plus, RWIS system, fire suppression systems, fence installation and guide rail systems. Client: Connecticut Dept. of Transportation,

Brooklyn Queens Expressway, 25th Street to Broadway, Queens, NY; 2000-2002. NICET II. This project involved the removal and placement of bridge decks, abutments, railroad bridge and core drilling. The project also involved installation of timber and H-piles, H & I beams, tiebacks, gress walls, deformed steel bars, torque of bolts and false work; milling of roadway and placement of temporary hot asphalt; and removal and installation of temporary and new electrical conduit, junction boxes, controller cabinets, under bridge lighting, messenger cable, traffic poles (timber and steel) and light poles. Client: New York State Dept. of Transportation

Reconstruction of the Westside Highway, Segment No. 7 Route 9A, New York, NY; 1997-2000. NICET II. This project involved the excavation and installation of manholes, catch basins, pipe connections and lateral chutes fire hydrants and median under drain. The project involved installation of telephone manholes, PVC duct and pre-cast concrete for utility companies, new and temporary traffic signals and posts, new and temporary, three phase lighting, control boxes traffic cameras, ITS and junction boxes; construction of (PCC) European roadway, including joint systems, hinge joints, contraction and expansion joints; and installation of support piles for drainage basins and H-piles for elevated roadway and torque bolts, replacement of bridge deck, deformed steel bars and placement of underwater piles for piers. Client: New York State Dept. of Transportation

LPE

Balachanthiran Balakrishnan [Bala]

Professional Profile

Balachanthiran Balakrishnan is an electrical inspector with diversified experience in the electrical, mechanical, civil and architectural fields. He possesses the following experience.

Project Experience

Electrical Inspector / Project Engineer, JFKIA ***2005 – Present***

Port Authority On-Call Construction Management Services

Responsibilities include inspecting installation of new electrical equipment for compliance with contract, Port Authority standards and NYC codes; documenting and maintaining daily narratives on contract projects; reviewing plans, specifications and shop drawings, processing and reviewing contractor submittals, change orders and estimates; interacting with architects, engineers, contractors and Port Authority officials; and coordinating scheduled electrical shutdowns with Port Authority Electrical Shop and various departments. Projects he was involved are listed below:

John F. Kennedy International Airport, Queens, NY ***2007– Present***

- JFK- Airport Checkpoint Digital CCTV ACDTV Phase II Terminal 1,2,7,8 And System Integration.
- JFK- Upgrade Delta Barrier Control Panels and Traffic Control Improvements (Guard. Post G, J, O,S,V,W and 106).
- JFK- Unmanned AOA Gates Hardening- Phase 1
- JFK- Wide Narrowbanding of VHF and UHF Radio System
- JFK - Taxiway P Rehabilitation
- JFK-PIDS- Perimeter Intrusion Detection System
- JFK- Delta-Rehabilitation T/W A and B
- JFK -Green Garage
- JFK- 800 MHZ Phase 1; 2 and 3
- Runway 13R/31L Reconstruction and Access Improvement
- Rehabilitation of Cargo Service Road.
- Rehabilitation of South Cargo Service Road.
- Rehabilitation Taxiway E; Y; and YA.
- Underground Storage Tank Abandonments, Removals and Repairs at Various Locations.
- Building 14 Chillers and Heater Replacement

Jamaica Station Queens, NY ***2005– 2007***

- Air Train Jamaica Station
- Van Wyck Expway BEAUTIFICATION PROGRAM - Jamaica Station Parking lot
- Van Wyck Expway BEAUTIFICATION PROGRAM-SUTPHIN BLVD RELIFING
- Van Wyck Expway BEAUTIFICATION PROGRAM **Street** Signs; Piano Keys, Jazz Names and Information Kiosks.

Electrical Inspector / Field Engineer, Water Treatment Plant, Washington DC
DC WASA (Consultant) ***2003 – 2004***

- Supervised field installations, maintenance of electrical process Instruments and Controls as well as Mechanical equipments.
- Performs inspections of all electrical work in progress on a continual basis and completes final checkout of electrical installations to ensure quality and conformance to specifications and codes prior to turnover to client for startup
- Monitored the time scheduled equipments to NEC codes, NEMA standard and specification.
- Handled Planning, coordinating, periodic maintenance and troubleshooting.
- Programmed power panel distribution and luminaries' schedules.

LPE

- Responsible for on-site Cable & Raceway design databases and associated interface with electrical installations and tests
- Assists the technical coordination activities of the lock-out and tag-out program
- Calculated the sizing of UPS systems, emergency generators and co-generator plants

Assistant Manager, Armond, Washington, DC *2001 – 2003*

- Maintained filing system for work in progress and completed jobs.
- Monitored overall profitability, accurately projecting production costs and product pricing.
- Compiled all employee hours and forwarded to payroll department via e-mail.
- Handled all incoming calls.

Electrical Testing Engineer, Dynamic Technical Service *2000 - 2001*

- Perform testing, commissioning, provisioning, switching and trouble-shooting fiber optic Network Elements. This includes DS0, DS1, DS3, OC48, OC192 and LH OPTera.
- Worked with Systems configuration, this includes Linear, Non-Linear and Ring systems.
- Computed the expert analysis of network data associated test results and optimized the network performance.
- Resolve technical issues by interfacing with multiple levels of technical support within the customer company.
- Re-Engineered the projects on "traffic bearing" Networks (Live Systems).
- Supervised between eight to fifteen contractors in the field.
- Testing the equipments such as TTC307 DS3 Test Set, DWDM test, ProComm Plus Optical Power Meter, Back Reflection Meter, RF Power Meter, Site Master, T-Bird Carrier Analyzers, Optical Microscope, Fluke DMM, Visual Fault Locator, ProComm Plus, T-BERD T3/DS3 Analyzer

RF Testing Engineer , Motorola, Malaysia *1992 – 1995*

- Performed the testing, calibration, and preventive maintenance of RF Sift testers.
- Handled the Preventive Maintenance of Burnout box and the RF Test fixtures.
- Tested equipments such as Network Analyzer (HP), Spectrum Analyzer (HP), power meter, power sensor and 20-dB attenuator, Filters- low pass and high pass, Signal Generator (HP), Coupler- Bi-directional and T -type, Amplifier 40dB, and Laser trim use to trim the resistor chip.
- Built 50 ohms RF cables. N-type, SMA-type and BNC-type.
- Built 1GHZ RF tester, built 2GHZ RF tester, Built Two tone RF tester, and Built RF Sift tester.
- Built Universal work holder use for the stability of RF tester, Upgrade from sift tester to 2GHZ tester.

EDUCATION

- M.Sc. in Management Information System Security, Colorado Technical University *2004 - 2005*
- B.Sc. in Electrical Engineering, West Virginia University Institute of Tech *1997 - 1999*
- Dip in Electrical Engineering Institute Technology Negeri,, Malaysia *1989 - 1992*
- Nortel Sonet O & M MCI Worldcom, Career Enhancement University, TX *2000 - 2000*

COMPUTER SKILLS

Windows XP, Window Vista; Windows 2000; Microsoft Office; Mat Lab

COURSE WORK

2011 - 24-Hour FAA Training-
2007 - 10-Hour OSHA Training Course

Lynnette Baptiste
Construction Inspector

Professional Profile
Ms. Baptiste is a construction inspector who has attended and completed the JUMP Program for construction inspection. She gained experience by training on the job site.

Proposed Project Assignment
Civil/Structural Inspector

Registration/Certifications
2007/ACI Concrete Field Testing Technician Grade 1
2012/Rutgers Traffic Control Coordinator Designation
2008/NICET II

Course Work
2013 - 30-Hour OSHA Construction Safety & Health Course, #12-601111736
2012 - Construction Management Course Completion
2008 - 1-Hour Lead Awareness Training
2007 – 10-Hour OSHA Training Course, #001186185

Total Years Experience 9

Project Experience

Brooklyn Bridge Rehabilitation of the Approach Spans and Ramps and Painting of the Entire Bridge, Contract 6, New York, NY; 5/10-Present. Construction Inspector. This project involves construction management and inspection services for the $509-million rehabilitation of this Iconic National Landmark. The scope of work for the project includes replacement of approach roadway in Manhattan and Brooklyn over the arch blocks; rehabilitation of the Manhattan side ramp structures with widening and deck and bearing replacements; rehabilitation of the approach steel structures with full superstructure replacement of the York and Main Street structures and orthotropic deck installation at Franklin Square; seismic retrofitting of the main bridge, Franklin Square and ramp structures; painting of the ramp structures and suspended spans in their entirety; restoration of historic features. Ms. Baptiste's responsibilities include surveying, excavation for new foundations, micro-pile installation, removal of protective shield system, and installation of temporary work platforms and shields. She will also be involved with structural steel and concrete inspection. Client: New York City Dept. of Transportation

Rehabilitation of the Brooklyn-Queens Expressway (I-278), Park Avenue Viaduct, Brooklyn, NY; 8/05-5/10. Construction Inspector. This $138-million project involved construction engineering and inspection for the widening, redecking and repainting of this viaduct with complex Maintenance and Protection of Traffic (MPT) on and below this heavily traveled structure. Rehabilitation of this high-volume major interstate urban highway/bridge included replacement of more than 400 bearings and 1,500 meters of bridge expansion joints. Also included was extensive coordination with agencies and local communities. Ms. Baptiste attended and completed school (JUMP) for construction inspection. She trained on job site for construction inspection. She assisted with office documentation of construction activities. Other responsibilities included inspecting demolition of structural concrete (deck, backwall and concrete placement); inspecting the installation of deck formwork and removal, concrete placement curing, Stage 1B, Stage IIA/IIB, IVA/IVB and VA; shear studs connectors for bridges installation at various stages; temporary deck stabilizer assembly installation and removal Stage IB; single slope half-section concrete fascia barriers; formwork installation, concrete placement; formwork removal and curing; rehabilitation of abutment – Stage IIA/IIB and assisted with others; and single slope full section concrete median barrier installation, concrete placement plus curing/final stage. Client: New York State Dept. of Transportation

EMAD BEBAWY

Inspector

Key Qualifications
- ✓ Over 20 Years of Experience
- ✓ Extensive Tunneling Experience

Education
- BS, Architectural Engineering, Cairo University of Engineering

Certifications
- American Concrete Institute (ACI) – Level I
- OSHA 30 Hour Certificate
- OSHA 10 Hour Certificate

Training
- MNRR Railway Safety Training
- Hazardous Waste Operations Training (HAZWOPER)
- Confined Space Training

Mr. Bebawy is an experienced professional with over 20 years of experience in construction management. He has held various positions to include, Construction Inspector, Office Engineer, and Resident Engineer. Responsibilities have included: inspection of infrastructure and facilities, construction supervision, quality control and quality assurance, and critical path method scheduling. He has extensive experience with concrete, earthwork, reinforced steel, asphalt, masonry, fireproofing, soil and foundation inspection, record keeping, concrete inspection, quantity calculation measurements, preparing daily and weekly reports for management and clients, attending project management meetings, overseeing contract preparation, supervising and assigning field inspection work, preparing submittals and correspondence files, and participating in field reviews.

New Jersey Transit (NJT) – Bloomfield Station Improvements – Bloomfield, NJ
Senior Construction Inspector

He served as an inspector performing controlled inspections that included soil, reinforced steel, concrete and fireproofing. The station averages approximately 2,700 weekday trips and is a major transfer point to and from several NJ Transit bus lines that serve communities north and west of the station.

New York City Department of Environmental Protection (NYCDEP) – Avenue V Pumping Station – Brooklyn, NY
Tunneling and Construction Inspector

He provided field inspection and quality control and quality assurance support on a $120 million pumping station facility upgrade project. Construction phase items included: excavation of multiple shafts and pits, pile sheeting, bracing, concrete and rebar inspection, micro-tunneling (drilling and jacking), placement of various pipes utilizing open-cut systems, running air and leakage tests, backfill, soil compaction, and roadway restoration to include base concrete and asphalt finishing.

New York City Department of Environmental Protection (NYCDEP) – City Water Tunnel No. 3 – New York, NY
Tunneling and Construction Inspector

As Tunneling and Construction Inspector he provided field inspection and quality control and quality assurance support on a $70 million, 9-mile tunnel project. The project consists of a 9-mile, 12'4" diameter, 550 feet deep tunnel and the construction of 9 shafts and distribution chambers. The scope of work includes tunnel excavation, raised bore excavation of the shafts, drill and blast excavation, mucking, grout freezing, grouting, reinforced concrete, concrete lining, installation of pipes and water pumps, leakage testing, and backfill.

New York City Department of Environmental Protection (NYCDEP) – Renovations and Upgrades of Kensico, Bogbrook, and Muscoot Damns – Bedford, NY
Tunneling and Construction Inspector

Inspection work included road restoration, maintaining and replacing mechanical water valves and gates, and inspection of masonry work.

Merck Pharmaceuticals – Facilities Improvement – Rahway, NJ
Senior Construction Inspector

Performed inspection of soils, foundations, reinforced steel, concrete, masonry, fireproofing, and asphalt work.

Kenneth Boykin
Inspector

Professional Profile
Mr. Boykin has 29 years of inspection experience, which includes construction inspection with a background emphasizing bridge construction and reconstruction projects. He has been responsible for providing inspection for the reinforcement of steel placement and concrete placement, as well as finishing and post-tensioning of the superstructure, pile/drilled shafts, seals, footing, pier columns, beam setting, deck formwork and concrete placement.

Proposed Project Assignment
Structural Inspector

Course Work
2014 - NYC DOB 4-Hour Supported Scaffold (2018)
2014 - NYC DOB Confined Space Awareness

Total Years Experience 44

Project Experience
Bayonne Bridge Navigational Clearance Program (BBNCP)
Construction Management; NY/NJ; 10/13-Present. Structural Inspector. This project involves construction management services for the $743-million Bayonne Bridge Navigational Clearance Program (BBNCP). This extraordinarily complex, once-in-a-lifetime project will replace more than 5,000 feet of viaduct and re-frame the existing steel arch structure to accommodate a new roadway 65 feet above the existing roadway. Mr. Boykin is responsible for establishing a quality assurance inspection program for the installation of precast roadway segments. The segments will be installed using conventional crane and launching gantries by the balanced cantilever method. This method requires that discrete steps be followed when installing segments, pulling tendons, post tensioning and grouting operations. Once into superstructure construction, Mr. Boykin will be responsible for ensuring that the contractor conforms to approved means and methods, applicable standards and the specifications when installing the precast segments. Client: Port Authority of NY & NJ

South Park Bridge Replacement, Seattle, WA; 1/12–9/13. Bridge Inspector. This draw bridge replacement required the construction of the operating tower piers as well as installation of the draw leaves and operating equipment. The foundations for the operating towers were cast-in-place caissons that were sunk to plan elevation by dredging the inside of the caisson. Mr. Boykin was responsible for the placement of formwork, installation of reinforcing steel, placement of concrete and interior finishes of the equipment, and personnel areas of the towers. He also set the structural steel beams, tightness of the mounting bolts, as well as the placement of the bridge deck. Mr. Boykin's responsibilities also included creation of daily inspector's reports, keeping track of and recording material quantities, meeting the requirements of the environment permits, working in partnership with the contractor and the owner; and demolition of the existing bridge.

Route 36 Bridge, Highlands, Monmouth County, NJ. Senior Structures Inspector. Mr. Boykin was responsible for creating stressing, grouting, and segmental erection site source records and record forms. His responsibilities also included erection of precast segments and grouting and stressing of cantilever as well as continuity and transverse tendons; communication with the contractor's erection and stressing representative as well as the erection engineer and workers; and training the NJDOT. Client: New Jersey Dept. of Transportation

Modification of CSXT Bridge 193 at Mile Post L653.44 (AKA - CSXT Mobile River Bridge Replacement), Hurricane, AL; 11/10–12/11. Senior Bridge Inspector. This project required the construction of two drilled shaft supported footings to support the 135-ft-high lift towers (two towers on each footing), each footing contained over 1,300 cu yds of concrete. All work was performed over the Mobile River with the use of tug boats and barges. The new truss was constructed on temporary steel bents in the Mobile River. When the new truss was complete, it was floated down river on two barges where the existing span was floated out on barges as the new span was floated into position. This work was completed within 30 hours to maintain the train schedules. The bridge was operational in 72 hours to restore river traffic. Mr. Boykin was responsible for overseeing the construction of the drilled shafts; installation of the reinforcing steel in the drilled shafts and footings; Skidmore testing; documentation of the 1-in. A325 bolts for snug tight and which required "turn of the nut tensioning"; checking the fit of the milled to bear surfaces of the upper chord truss members; and assuring adherence to the truss erection plan.

Alico Road 11-75 Interchange, Lee County, FL; 2005–2007. Associate Project Administrator. Mr. Boykin began this project as a senior bridge inspector. This reconstruction project consisted of the replacement of the I-75 overpass over Alico Road, new on and off ramps, drainage improvements, signals, lighting and landscaping along a mile of

very heavily-traveled Alico Road. Mr. Boykin was responsible for managing all field inspectors and conducting monthly CEI safety meetings; troubleshooting a variety of field issues; verifying the contractor's quality control process; processing supplemental agreements, field supplemental agreements; and conducting weekly contractor progress meeting and monthly dispute resolution board meetings. Client: Florida Dept. of Transportation, Dist. 1

Ringling Causeway Bridge, Sarasota, FL; 2003–2004. Inspector. This project consisted of construction engineering and inspection services for the erection of this major design-build segmental bridge replacement project for the existing two-lane bridge. The CEI team and design-build team utilized the newly-implemented QC 2000 specifications, making this a pilot project for future FDOT construction projects. Mr. Boykin's responsibilities included inspection of segmental erection, post-tensioning, grout placement, material sampling and testing, and contract administration. Mr. Boykin oversaw the completion of the final estimate.

Hurricane Relief, Polk County, FL. Inspector. Polk County was devastated by three hurricanes that crossed the county from three different directions within one month. In this five-month assessment project, Mr. Boykin played dual roles as team leader and hurricane relief inspector trainer. His objective was to identify legible debris and oversee the removal of that debris within the guidelines set forth by FEMA.

State Road 291 (Davis Highway), Carpenter's Creek Bridge, Pensacola, FL; 2001–2003. Project Administrator/ Senior Bridge Inspector. This $3.2-million project consisted of replacement of existing box culvert with a single-span bridge structure, including construction of a temporary Acrow bridge to detour traffic during construction; reconstruction of Davis Highway 1,000 ft on either side of the bridge; clearing and dredging Carpenter Creek; and installation of shore and bank rip-rap. Mr. Boykin was responsible for construction engineering, supervising inspection, material sampling and testing, contract administration, and conducting weekly contractor progress meetings.

SR 10A (US 90) Escambia River Bridge, Pace, FL; 2001–2004. Senior Bridge Inspector. This project involved the total replacement of the existing eastbound bridge over the Escambia River, the replacement of the river crossing spans, and widening of the westbound structure. This project ran concurrent to the State Road 291 (Davis Highway). Mr. Boykin was responsible for supervising six project inspection field personnel; material testing; record keeping of all aspects of construction of the new structures; and the demolition of the existing structures. Mr. Boykin also participated in the completion of the final estimate.

Bayou Taxes Bridge, Pensacola, FL; 1998–2001. Senior Inspector. This project involved the replacement of the existing two-lane structure and the reconstruction of Cervantes Street to accommodate the increased height of the new structure including drainage improvements. Because this busy city thoroughfare could not be closed at anytime, it was necessary to remove and replace one half of the structure while maintaining normal traffic on the remaining half and the detour structure during construction. Mr. Boykin was responsible for all bridge and roadway inspection. His duties included oversight of a four-man inspection crew, inspection of Acrow Bridge installation, pile driving, substructure and superstructure, as well as urban roadway inspection. He was also responsible for overseeing all field documentation of inspection activities and completion of the final estimate.

Fuller Warren Bridge, Jacksonville, FL; 1996–1998. Inspector. This project involved the construction of a new high-level structure to replace the existing narrow lift span bridge. This included the realignment of I-95 through downtown Jacksonville. Mr. Boykin was assigned to the installation of drill shaft substructure. His duties included the inspection and record keeping of all aspects of 36-in, 48-in. and 73-in. drilled shaft foundations and pier footings including concrete placement. Mr. Boykin trained other inspectors in drill shaft inspection and oversaw the setting of the ASHTO beams, installation of concrete sheet-pile seawalls.

Buckman Bridge, Jacksonville, FL; 1994–1996. Inspector. This project consisted of the widening from two lanes to four lanes of both spans of a three-mile, twin-span bridge crossing the St. John River. More than 1,500 prestressed concrete piles and 8-in. cast-in-place concrete decks were included in the project, as well as bridge and navigational lighting of a new fender system, and approach roadways to accommodate the new traffic lanes, drainage pipe and structures, embankment asphalt paving, signage, pavement markings, and repairs to existing bridge substructures. Mr. Boykin's responsibilities included setting concrete beam; installation and bolting of steel beams; and installation of reinforcing steel, superstructure formwork and concrete placement and curing, and recordkeeping. During this period, Mr. Boykin co-authored the Inspector Guidelines for Bridge Inspection with Mr. Steve Plotkin.

LPE

Alonzo R. Bryson

PROFESSIONAL EXPERIENCE

Project Inspector, Resident Engineer's Office, Stewart Airport, NY *06/ 2010 - Present*
LPE Enterprises / Port Authority of NY/NJ
Responsible for monitoring all contractor work activities as related to the following projects including, but not limited to: replacement and installation of runway edge and centerline lighting, runway, taxiway and roadway paving operations, AOA and non- AOA drainage structure installations, chain linked fence installation, runway and taxiway signage installation, runway and taxiway pavement markings placement, supervision of drilling operations for bridge drilled shaft construction; installation of precast concrete manholes and handholes, placement of concrete for electrical ductbank construction, installation of galvanized and pvc conduit for electrical services, installation of electrical power and communications cables, replacement of in pavement runway approach and flasher lights.

- SWF 164.009 - Rehabilitation of Taxiway Edge Lighting and Installation of Flashing Guard Lights
- SWF 164.021A - Rehabilitation of Cargo & Parking area for Building 2290
- SWF 164.041 - Runway Incursion Mitigation Phase 1B
- SWF 164.039 - Rehabilitation of Runway 9-27 & Runway 16-34
- SWF 164.019 - Rehabilitation of runway 9 Approach Lighting and Cable

Project Inspector, Resident Engineer's Office, LaGuardia Airport, NY *02/99 – 06/2010*
LPE Enterprises / Port Authority of NY & NJ
Responsible for the monitoring of all contractor work activities as related to the following projects including, but not limited to; demolition of existing concrete deck slabs, structural decks, and pile caps; preparation and placement of concrete for pile cap rehabilitation, girder joints, pile in fill and deck slab rehabilitation; Installation of conduit for T/W lighting and garage lighting; Setting of precast concrete girders and pile caps. Installation of water and sewer mains; Removal, replacement and installation of electrical conduit, wire, cable and related equipment; Installation of runway and taxiway lights and lighting systems, signs, signage and pavement markings; Asphalt placement, asphalt for rehabilitation, repair and resurfacing of runways, taxiways and adjacent areas; Concrete placement for reconstruction of terminal floor slabs; Placement of concrete for repair of deck girders and patching of deck undersides; Erection of Jersey barriers and chain linked fencing for AOA and perimeter security enhancements; Erection and installation of bollards for Terminal security upgrades.

- SWF 164.009 - Rehabilitation of Taxiway Edge Lighting and Installation of Flashing Guard Lights
- SWF 164.021A - Rehabilitation of Cargo & Parking area for Building 2290
- SWF 164.041 - Runway Incursion Mitigation Phase 1B
- SWF 164.039 - Rehabilitation of Runway 9-27 & Runway 16-34
- LGA 700 - Runway Deck FAA Conduit Externalization
- LGA 124.021 - Runway 4-22 Pavement Rehabilitation & Electrical Upgrades
- LGA 124.027 - Rehabilitation of Taxiway "B" From T/W "G" to "V"
- LGA 124.147 - Rehabilitation Of Hangar 4 Apron & Taxiways
- LGA 705 - Rehabilitation Of CTB Concourse Slabs
- LGA 715 - Pile Supported Structure Rehabilitation
- LGA 124.140 - Rehabilitation Of Runway 13-31 & Associated Taxiways
- MF 100.506 w.o. #13 - LGA Fencing at AOA Perimeter
- MF 100.507 w.o. #9 - MAT Frontage Protection
- MF 100.507 w.o. #18 - Perimeter Strengthening
- MF 100.509 w.o. #15 - CTB Bollard Protection
- MFA 200 w.o. # 2-18 - Repair Of Passenger Loading Bridge
- MFA 930.909A - West End Delta Shuttle Barrier & Fence
- LGA 124.071 – Airport Central Terminal Parking Garage Lighting and Painting
- LGA 609 – Rehabilitation Of Pile Caps
- LGA 124.068 – Pile Caps & Girders Installation,
- LGA 900.409A – Realignment of T/W "R",

LPE

- LGA 990.310- Runway Expansion Joint Replacement at Bulkhead,
- LGA 669 - Pile cap, Bulkhead and Girder Rehabilitation.
- LGA 650 - Castellated Beam replacement
- LGA 686 - Utilities Rehabilitation. Along Runway Drive
- LGA 697- Replacement of Sanitary Force Main Hangar 7 to NYC CS

Senior Inspector, Promatech Inc., North Brunswick, NJ *10/98 – 01/99*
NYCDDC: Rehabilitation of Shore Blvd. Bulkhead ,½ mile pier replacement
Responsible for supervision of all contractor work activities including timber sheeting removal, steel sheeting installation, tie rod removal and re-installation, placement of structural concrete.

Project Officer, NYC School Construction Authority, Long Island City, NY *02/98 – 09/98*
Responsible for the simultaneous management of multiple projects including but not limited to prescope investigation and design review, bid preparation, bid review and analysis, budget management, scheduling, site supervision, cost estimating, change order evaluation and preparation, payment requisition review and processing.

Assistant Project Manager, TDX/Becom Joint Venture, Long Island City, NY 10/95 – 01/98
NYC School Construction Authority: Modernization of PS 175K/HS Redirection 5-Story Modernization and 2-Story Addition. Duties included review of contract work schedule, supervision of contractor and subcontractor work activities, cost estimating, change order review, analysis and evaluation, monthly report preparation and job meeting coordination.

Office Engineer, Leroy Callender, PC, New York, NY *02/94 – 09/95*
NYC Department of Transportation: Reconstruction of Malcolm X Blvd. Duties included preparation and maintenance of project records such as inspectors daily reports, material acceptance record book, monthly payment requisitions, EEO reports and wage rate interviews, subcontractor approvals, safety and project meeting minutes.

Assistant Project Manager NYC School Construction Authority, NY *12/87 – 01/94*
Construction of PS 6K and Modernization of Various Public Schools – Borough of Queens.
Progressed from Project Supervisor through Assistant Project Manager responsible for the review of contractors' work schedule, daily site supervision, coordination of contractor and subcontractor work activities, cost estimating, change order review and evaluation.

Senior Inspector, NYS Department of Transportation, NY *08/81 – 11/87*
Demolition of Miller Avenue Viaduct Over Rte 9A, West Side Highway 42nd St – 57th St., Long Island Expressway Widening 69th St – 90th, Construction of 150th St. Bridge Over Nassau Expressway.

CERTIFICATION

National Institute Of Certification in Engineering Technologies, NICET Level III Certified

Wesley Campbell, E.I.T.
Electrical Inspector

Professional Profile
Mr. Campbell has 13years of experience working in the construction field, as well as electrical engineering. He has knowledge of New York and New Jersey construction codes and standards, and holds a certification in National Electrical Codes. He has been involved with New York City Dept. of Transportation, Metropolitan Transit Authority Bridge and Tunnel, and Port Authority of New York and New Jersey projects, and is familiar with their guidelines and practices.

Mr. Campbell received the Team Excellence Award in 2002 for the Williamsburg Bridge, Contract 7, construction engineering and inspection project.

Proposed Project Assignment
Electrical Inspector

Registration/Certifications
2005/Engineer In Training

Education
BS/2001/Electrical Engineering

Course Work
2010 - OSHA Confined Space Training
2008 - 10-Hour OSHA Training Course

Total Years Experience 13

Project Experience
Holland Tunnel, New York and New Jersey; 6/13-Present. Electrical Inspector. This project involves the rehabilitation of the existing ventilation fan system for the Holland Tunnel. Mr. Campbell is responsible for construction inspection and coordination, net cost auditing, and engineering review of proposals. Client: Port Authority of NY & NJ

Willis Avenue Bridge Reconstruction, Resident Engineering and Inspection Services, New York, NY; 6/08-6/13. Electrical Engineer/Inspector. The $612-million project involved replacement of the movable Willis Avenue Bridge located over the Harlem River. The existing bridge carrying Willis Avenue over the Major Deegan Expressway, which is located immediately adjacent to the terminus of the Willis Avenue Bridge approach in the Bronx was reconstructed. In addition, a new connector ramp bridge structure to the northbound Major Deegan Expressway and adjacent at-grade modifications, including the pedestrian and bicycle amenities were also constructed. Mr. Campbell was responsible for inspecting electrical contractor activities for the replacement of the movable bridge swing span, the Manhattan and Bronx approaches, and electrical service centers. His, responsibilities included providing comments for contractor material submittals, requests for information, and shop drawings during acceptance stages; evaluating cost overruns and change order requests; witnessing the testing of electrical equipment during factory testing, offsite construction of the swing span, and installation of electrical distribution and control equipment in the Albany, NY, area; and investigating power and street lighting related issues and problems for resolution. Client: Willis Avenue Bridge Company, Joint Venture/New York City Dept. of Transportation

Rehabilitation of 145th Street Bridge over the Harlem River, New York, NY; 9/06-6/13. Electrical Engineer/Inspector. This project involved resident engineering and inspection services for the rehabilitation of the 145th Street Bridge over the Harlem River. The rehabilitation work consisted of replacing the entire superstructure, including a new double truss swing span that were constructed utilizing new drum girder and distribution girders, floorbeams, stringers, and partially concrete filled grating; the installation of new sidewalks with railings along the outside of both trusses; rehabilitation of all substructures and retrofitting of substructures for seismic forces; reconstruction of the Bronx and Manhattan approach structures; replacement of existing bearings with new elastomeric or isolation bearings; machinery construction work, including furnishing and installing new turning machinery and a new span supporting and stabilizing machinery; electrical construction work, including the installation of new electrical service feeders; and architectural work, including rehabilitation of existing gate houses and other architectural features on the approaches. Due to the bridge's proximity to Yankee Stadium, the entire structure was kept operational to traffic prior to, during, and after events held at Yankee Stadium. This resulted in most of the construction work taking place during the baseball off-season, which is typically November through March. Mr. Campbell was responsible for witnessing the installation of new electrical control systems. Client: New York City Dept. of Transportation

Wesley Campbell, E.I.T.
Electrical Inspector

Macombs Dam Bridge Rehabilitation, New York, NY. Electrical Engineer / Inspector. This project involved construction inspection services for the rehabilitation of the Macombs Dam Bridge, which included the West 155th Street Viaduct; the West Approach Plaza over Harlem River Drive and Seventh Avenue; the swing span over the Harlem River; the deck and camelback trusses over Metro-North and Conrail railroads; the Major Deegan interchange, consisting of the east approach and four ramps; and the Jerome Avenue Viaduct. He was responsible for witnessing onsite acceptance testing and troubleshooting of movable bridge electrical systems. Client: New York City Dept. of Transportation

Holland and Lincoln Tunnels ITS Improvements, Jersey City, NJ; 12/03- 7/06. Electrical Inspector. This project involved construction management services for ITS installation and improvements at both facilities. Mr. Campbell monitored safety of all personnel in assigned work areas. His responsibilities included inspection of construction for Holland Tunnel and Lincoln Tunnel Intelligent Transport System (ITS) as per Port Authority contract specifications, NY and NJ Construction Code guidelines, and NEC regulations. Electrical systems inspected included wiring of communications cabinets, circuit breakers, and installation of conduit, both overhead and underground. He was also responsible for inspection of fiber optic cable installation, splicing and testing, and fiber optic termination cabinet installation; the inspection, installation and maintenance of closed circuit television, vehicle detection systems, security card entrance systems, and variable message sign systems; the opening, closing and maintenance of traffic protection during lane closures; acting as liaison between Port Authority Construction Management Department, Holland Tunnel Facility personnel, and contractor; preparation of written report on field operations and project progress recorded in Daily Narrative; updating and maintaining net cost data; and assisting in work proposal estimations and cost analysis. Client: Port Authority of New York & New Jersey

Williamsburg Bridge North Roadways Reconstruction, Contract 7, #BRC253CA, New York, NY; 10/01-12/03. Inspector. This project involved REI services to replace the entire approach structure and the framing/deck areas on the main bridge. This involved the reconstruction of the north inner and outer roadways. Mr. Campbell's responsibilities included inspecting and reporting daily on field operations and monitoring the safety of all workers in assigned work areas; inspecting field operations as per NYC Construction guidelines, NEC electrical code, and contract specifications and plans, and field measure quantities; inspecting all electrical operations on the Williamsburg Bridge including roadway lighting, footwalk lighting, street lighting, navigation light installation, fiber optic cable installation, dry-type transformer installation, traffic signal installation, and photoelectric control unit installation; inspection, installation and operation of bridge security systems, closed circuit television, vehicle video detection systems, variable message sign systems, and lane reversal signal systems; and monitoring equipment tests at job site and at the traffic command center. Client: New York City Dept. of Transportation

As a consultant, Mr. Campbell provided manufacturing companies with proposals based on Lean Principles to improve process times for plant operations from customer order to product shipment. Also provided consultation on redesigning plant layout to coordinate plant operations more effectively.

Garfield Cardinez
Senior Inspector

Professional Profile
Mr. Cardinez has many years experience in highway and bridge construction inspection, on multi-million-dollar projects.

Proposed Project Assignment
Civil/Structural Inspector

Registration/Certifications
1990/NICET IV
2010/ACI Concrete Field Testing Technician Grade 1

Course Work
2000 - NYCTA - Track Safety
1996 - NYSDOT - Lead Awareness
1985-1989 - Continual Technical Studies, Pratt Institute
1984 - NYSDOT - Maintenance and Protection of Traffic

Total Years Experience 38

Project Experience

Belt Parkway Bridges REI Services - Gerritsen Inlet Bridge, Brooklyn, NY; 4/14-Present. Senior Inspector. This $104.5-million project involves total replacement of Gerritsen Inlet Bridge on the Belt Parkway in the Borough of Brooklyn. The major work includes removal and disposal of main spans including concrete deck, steel girders, floor beams and stringers, approaches, concrete superstructure, closure walls, timber piles, concrete piers, pier caps, columns, abutments, wingwalls, street lighting, transformer room, transit ducks, steel conduits, navigation lights, and trees and vegetation. Mr. Cardinez is responsible for inspection of field operations – PCC pavement including dowel installation, reinforcement mesh placement, concrete placement, field measuring and paying the contract quantity. Also involves drainage structure installation, approach building, grading and compacting the soil at bridge abutment to approaches as per contract plan and specifications. Client: New York City Dept. of Transportation

Belt Parkway Bridges REI Services - Rockaway Parkway Bridge, Contract #HBK1091, Brooklyn, NY; 7/12-1/14. Senior Inspector. The project involved the demolition of the entire existing, four-span, multi-stringer bridge superstructure with existing steel cap beams, and superstructures, including the abutments, wingwalls, and pier columns and footings; installation of a new single-span replacement bridge consisting of a multi-stringer superstructure with reinforced concrete deck and superstructure, including reinforced concrete abutments and wing walls on new piled footings, and mechanically stabilized earth retaining walls; reconstruction of approach roadway and four entrance and exit ramps within the project limits; and installation of new concrete barrier, new bridge and guide railing, new lighting standards, new drainage systems including catch basins and drainage pipes, new overhead sign structures, and new swale BMP grading, drainage, and planting. Mr. Cardinez' responsibilities included inspection and computation of quantities for the excavation protection system; interim steel sheeting; stud shear connectors for bridges; installation of ductile iron pipe; catch basin – Type 2 (NYC), Type 3 (NYC), drop pipe manhole (NYC) (on piles); NYC standard manhole Type A-3 (on piles) and also Types B-1, B-2, C-1, and E-1; steel backed timber guiderail and perforated corrugated polyethylene underdrain tubing, 230 mm. diameter; concrete for rectangular footing for overhead sign structure; footing concrete and concrete for structure and superstructure slab with integral wearing surface; PCC pavement, Level 2, Class C, Type 1l construction of longitudinal and transverse joints; installation of precast median concrete barrier; clearing and grubbing; unclassified excavation and disposal; inspection of Superpave 12.5 mm F1 and 19 mm, 70 series; and preparation of daily reports. Client: NYCDOT

Belt Parkway Bridges REI Services - Paerdegat Bridge, Contract#HBK1024, New York, NY; 10/11-4/14. Senior Inspector. This project involved the demolition of the entire 13-span, multi-stringer bridge superstructure and substructure including abutments, wingwalls, and the piers consisting of concrete pile columns to a minimum of 600 mm below the mud line. The replacement structures were new three-span and five-span bridges consisting of a Class HP reinforced concrete superstructure slab supported by high performance steel box girders and substructures including reinforced concrete abutments, wingwalls, and multi column piers on new pile foundation. Mr. Cardinez was responsible for testing and placement of concrete on the bridge deck and approaches; cast-in-place permanent concrete barrier for the bridge over Paerdegat Basin; the inspection of the proposed lighting installation and temporary lighting installation for the entire bridge and pedestrian/bikeway path; bridge flag repairs which includes steel surface preparation to SSPC-SP11, power tool cleaning to bare metal; and daily reports and progress payments. Client: NYCDOT

Reconstruction of Willis Avenue Bridge, New York, NY; 11/07-10/11. Senior Inspector. This project involved replacement of the existing movable bridge and approaches with a new structure, built offline from the existing structure. Mr. Cardinez was responsible for drilling for Nx core in preparation for caissons and drilled shaft; bored in

piles on FDR in preparation for pier installation; impact repair on Bruckner Boulevard; removal of sidewalk, parapet and concrete deck; removal and installation of structural steel; rehabilitation of Major Deegan northbound and southbound; demolition of on ramp; structural concrete removal, drainage and electrical removal; placing subbase, permeable base and pavement concrete, cast in place and precast barrier installation; drainage removal on Major Deegan northbound and southbound; northbound rehabilitation including removal and disposal of existing concrete deck and subgrade; placing subbase, permeable base, and concrete pavement; flag repairs on river span and Willis Avenue exit and Bruckner Boulevard exit ramp; flag repairs including steel repairs and asphalt paving; repairs on swing span which were done on barge and involved some drilling of Nx coring; and testing, inspection and observation of concrete, compaction of soils and asphalt. Client: NYCDOT

Manhattan Bridge Rehabilitation of Lower Roadways, Contract 11, #BRC156A, New York, NY; 5/05-11/07. Mr. Cardinez served as senior inspector on this $150-million project that involved the reconstruction of lower roadway; removal and replacement of floorbeams, stringers, bearings and deck in main span and side spans; rehabilitation of anchorage chambers; installation of new lighting and traffic signs on lower roadway; rehabilitation of travelers in suspended spans; replacement of maintenance platforms at towers; and repair of flagged conditions. His responsibilities included inspection of erection of work platforms, removal and replacement of lower roadway deck, floor beams, stringers and bearings; inspection of rehabilitation of both Brooklyn and Manhattan anchorages, including floors, walls, ceiling and crack sealing by epoxy injection. Client: New York City Dept. of Transportation

Manhattan Bridge Rehabilitation of North Spans over East River, Contract 10, #BRC156C, New York; NY; 11/01-6/05. Mr. Cardinez served as senior inspector for this $175-million project that involved rehabilitation of the north upper roadway approach and suspended spans. He was responsible for inspection of truss repairs and replacement of north upper roadway elevated structure and tunnel roof areas; inspection of new bikeway construction; masonry cleaning; ITS fiber-optic conduit and pull box placement; retaining wall and concrete pavements on grade and on structure; and inspection of colonnade/arch restoration including interior work such as new elevator installation, stairs, walls, fire and intrusion alarm. Client: NYCDOT

Manhattan Bridge Painting and Interim Rehabilitation, Contract 8C, Contract #BRC1568C, New York, NY; 11/00-2/01. Senior Inspector. This $124-million project involved the rehabilitation of the Manhattan plaza area, Manhattan Arch and Colonnade; replacement of the structural steel stringer and floorbeam support system for the west side subway tracks; replacement of truss bearings on top of the piers of both approach spans; rehabilitation of eyebars anchoring one of the main suspension cables; and removal of existing paint from the entire west side, both towers and two main cables, and replacing with new coating. Mr. Cardinez' responsibilities included inspection of the erection of structural steel, and restoration of the colonnade and arch including masonry repairs and cleaning, concrete curbs and sidewalk areas. Client: New York City Dept. of Transportation

Queensboro Bridge, Contract 2 to 5, Queens, NY; 1984-2000. Mr. Cardinez served as chief inspector on a federal aid project for the rehabilitation of the Queensboro Bridge. His responsibilities included inspection of all field work; structural demolition and replacement, concrete placement for bridge decks, pavement slabs, cast in place and precast, permanent concrete traffic barriers, drainage demolition and replacement, street light installation, painting and maintenance and protection of traffic. His responsibilities also included supervising and coordinating the schedules of a 15-person field inspection team; preparation of daily reports; compiling and computing quantities for payment; giving lectures for inspectors on the hazards and requirements of lead paint removal and proper procedures for evaluating class "A" containment and for implementing time and material documents.

Williamsburg Bridge North Roadways Reconstruction, Contract 7, #BRC253CA, New York, NY; 7/00-11/00. As senior inspector, Mr. Cardinez' responsibilities on this $248-million project included the inspection of the downspout system below SIR and SOR. Inspected punch list of cleaning and painting eyebars in Brooklyn and Manhattan anchorage, also kick plates in debris shield platform in both Brooklyn and Manhattan approaches. Client: NYCDOT, Division of Bridges

Mhed Charles
Senior Inspector

Professional Profile
Mr. Charles is a senior inspector who is familiar with bridge design, biennial and construction inspections using Structural Steel Construction Manual and AAHSTO, in conformance with specification guidelines and contract plans. He is also familiar with concrete and asphalt placement over bridges and roadways and their testing, before placement. He has experience in cable bridges/removal of existing wire wrapping, re-wrapping with new wire, painting and removal and replacement of suspenders and stays assemblies.

Project Experience
Belt Parkway Bridges REI Services - Paerdegat Bridge, Contract#HBK1024, New York, NY; 7/12-Present. Senior Inspector. This project involves the demolition of the entire 13-span, multi-stringer bridge superstructure and substructure including abutments, wingwalls, and the piers consisting of concrete pile columns to a minimum of 600 mm below the mud line. The replacement structures are new three-span and five-span bridges consisting of a Class HP reinforced concrete superstructure slab supported by high performance steel box girders and substructures including reinforced concrete abutments, wingwalls, and multi column piers on new pile foundation. Mr. Charles is responsible for installation of the columns and the floorbeams that were part of the falsework; overseeing the placement of the pedestals over the new concrete pier columns and the abutments; overseeing the placement of the girders and the removal of the falsework system; overseeing the placement of the wingwalls; the soils compaction for the embankments; placement of Class HP concrete on the new Deck; overseeing the removal of sheet pilings that formed the cofferdams around the piers; reinforcement of wingwalls and deck as per contract documents; reinforcing existing bridge steel since it is the only access road for 45-ton trucks; setting new drainage system along the new approaches; raising the new manholes and installation of underdrain filters after excavation; verification of soils compaction; setting mesh and joints for the roadways; testing concrete as per ACI 318.08 to ensure quality and acceptance; and report preparation. He is also involved with punch lists, close-outs, and updating as-built drawings. Client: New York City Dept. of Transportation

Belt Parkway Bridges REI Services - Rockaway Parkway Bridge, Contract #HBK1091, Brooklyn, NY; 7/12-Present. Senior Inspector. The project involves the demolition of the entire existing, four-span, multi-stringer bridge superstructure with existing steel cap beams, and superstructures, including the abutments, wingwalls, and pier columns and footings; installation of a new single-span replacement bridge consisting of a multi-stringer superstructure with reinforced concrete deck and superstructure, including reinforced concrete abutments and wing walls on new piled footings, and mechanically stabilized earth retaining walls; reconstruction of approach roadway and four entrance and exit ramps within the project limits; and installation of new concrete barrier, new bridge and guide railing, new lighting standards, new drainage systems including catch basins and drainage pipes, new overhead sign structures, and new swale BMP grading, drainage, and planting. Mr. Charles is responsible for installation of the columns and the floorbeams that were part of the falsework; overseeing the placement of the pedestals over the new concrete pier columns and the abutments; overseeing the placement of the girders and the removal of the falsework system; overseeing the placement of the wingwalls; the soils compaction for the

embankments; placement of Class HP concrete on the new Deck; overseeing the removal of sheet pilings that formed the cofferdams around the piers; reinforcement of wingwalls and deck as per contract documents; reinforcing existing bridge steel since it was the only access road for 45-ton trucks; setting new drainage system along the new approaches; raising the new manholes and installation of underdrain filters after excavation; verification of soils compaction; setting mesh and joints for the roadways; testing concrete as per ACI 318.08 to ensure quality and acceptance; and report preparation. Client: New York City Dept. of Transportation

Williamsburg Bridge Reconstruction of Miscellaneous Rehabilitation of the Main Bridge, Contract 8, #BRC253CCA, New York, NY; 4/05-7/12. MPT Officer. This $280-million project involved the construction inspection for the rehabilitation of the main bridge, including abrasive blasting and painting of main bridge stiffening trusses, rehabilitation, strengthening and seismic retrofit of the main and intermediate towers and installation of seismic shear keys, and major upgrades and retrofits for the main cable saddles, wind tongue and wind chord, main and intermediate tower bearings, main tower legs, stiffening truss chords, traveling maintenance platforms, suspender cables, orthotropic footwalk roadway deck and expansion joints, ornamental balconies and electroliers, intelligent transportation operating system, and traffic barrier system. Since 2007, Mr. Charles acted as the MPT officer responsible for keeping all MPT agencies informed as required; calculating taper lengths per MUTCD; monitoring daily traffic zone safety, pothole repair, vehicle clearances and truck detour routes; concrete barrier modifications (for contra-flow); installation of a BTM machine security gate; replacement of existing traffic signal pole and lights at the Manhattan Plaza; and daily verification of working roadway, navigation and aviation lights. Mr. Charles also performed inspection for restoration of the north comfort stations (installation of spiral ladders, reinforcing of roof and floor systems), and seismic retrofit repairs for Piers 10, 15 and 20 concrete and stone materials. In addition, Mr. Charles served as senior inspector responsible for documenting suspender adjustments, cable band bolts retightening, and neoprene wrapping of main cables, main tower bearing and gusset plate replacement, South Outer Roadway asphalt paving placement, and Brooklyn tower cleaning and painting. His responsibilities also included installing end span platforms (Manhattan/Brooklyn end spans under the MTA tracks), Manhattan portal bird screens, Pier 0 East/West and Pier 20 East/West bearing covers, permanent inspection access platforms and main span traveler track beams and new platforms to support aviation lights at tower tops, outer roadway and bridge plaza gantries, sign structures and VMS signs with photocells, conduits, junction boxes and traveler system cable feeds under the bridge main span, seismic bearing installation and steel seismic retrofits at the intermediate towers, delineators at the Brooklyn Plaza, bridge approach impact attenuators, permanent street signs, and main tower wind tongues; modifications for ADA (American Disability Act) compliance at foot walk expansion joints, approach roadway modular joints, Cable A, D necklace lighting (including arc fusion splicing of fiber optic cables and testing of CCTV and VVDS system components), bridge standpipe system to meet FDNY code, and footwalk drainage system; removal and replacement of diagonal trusses cross bracings, temporary stair towers, railings and gratings at the Bridge towers; modular seal neoprene joints, top and lower roadway CCTV cameras. Mr. Charles provided coordination of MPT operations with NYPD and NYCDOT officials, performed daily lane closure and construction signs surveys, assisted in foundation location for Manhattan plaza electroliers, inspected roadway striping and performed voids rehabilitation of the Kent Avenue yard along Pier 20E. Client: New York City Dept. of Transportation

Manhattan Bridge Rehabilitation of Lower Roadways, Contract 11, #BRC156A, New York, NY; 2/04-4/05. Mr. Charles was a senior inspector for this $150-million project which involved the reconstruction of lower roadway; removal and replacement of floor beams, stringers, bearings and deck in main span and side spans; rehabilitation of anchorage chambers; installation of new lighting and traffic signs on lower roadway; rehabilitation of travelers in suspended spans; replacement of maintenance platforms at towers; painting of bridge at suspended and approach spans; and repair of flagged conditions. He was responsible for truss repairs and replacement of truss bearings on the approaches. Client: New York City Dept. of Transportation

Manhattan Bridge Rehabilitation of North Spans over East River, Contract 10, #BRC156C, New York; NY; 2/01-2/05. Mr. Charles was a senior inspector for this $148-million project which involved rehabilitation of the north upper roadway approach and suspended spans. He was responsible for truss repairs and replacement of truss bearings on the approaches. Client: New York City Dept. of Transportation

Christopher Colon
Inspector

Professional Profile
Mr. Colon is a construction inspector who has attended and completed the JUMP Program for construction inspection. He gained experience by training on the job site. He is currently involved as a construction inspector on the following project.

Project Experience
Rehabilitation of Kew Gardens Interchange/Van Wyck Expressway, New York, NY; 10/10-Present. Inspector. The project involves construction inspection services for the reconstruction of the Van Wyck Expressway (I-678), between 86th Avenue and the Grand Central Parkway in Queens County. This $150-million project involves the complete replacement of five bridges, the reconstruction of one bridge along with the reconstruction of a pedestrian tunnel and the widening of the Van Wyck Expressway. Mr. Colon is responsible for the inspection of structural concrete, rebar installation, clearing and grubbing, tree removal, barrier installation and removal, piles, seeding and structural concrete and steel removal. Client: New York State Dept. of Transportation

Rehabilitation ofthe Brooklyn-Queens Expressway (I-278), Park Avenue Viaduct, D259766, Kings County, NY; 5/08-10/10. Trainee. This $138-million project involved construction engineering and inspection for the widening, redecking and repainting of this 850,000 sq ft viaduct with complex MPT on and below this heavily traveled structure. Rehabilitation of this high-volume, major interstate urban highway/bridge included replacement of more than 400 bearings and 1,500 meters of bridge expansion joints. The structure had seismic reinforcement installed which included retainers and plates at the top of columns and additional stiffeners and plates at the base. The project also included extensive coordination with agencies and local communities. Mr. Colon was assigned to this project to receive on-the-job training for construction inspection through the JUMP Program. Client: New York State Dept. of Transportation

As an intern, 9/05-2/06, Mr. Colon assisted a team of over 20 architects and staff in general office functions including filing, duplication and distribution of mail, office supplies and records.

Project Experience

Brooklyn Bridge Rehabilitation of the Approach Spans and Ramps and Painting of the Entire Bridge, Contract 6, New York, NY; 3/13-Present. Inspector/Assistant Office Engineer. This project involves construction management and inspection services for the $509-million rehabilitation of this Iconic National Landmark. The scope of work for the project includes replacement of approach roadway in Manhattan and Brooklyn over the arch blocks; rehabilitation of the Manhattan side ramp structures with widening and deck and bearing replacements; rehabilitation of the approach steel structures with full superstructure replacement of the York and Main Street structures and orthotropic deck installation at Franklin Square; seismic retrofitting of the main bridge, Franklin Square and ramp structures; painting of the ramp structures and suspended spans in their entirety; restoration of historic features. Ms. Coy is responsible for the inspection of the structure replacement of York and Main Street in accordance with the proposed shop drawings. She is also responsible for the inspection of the demolition and replacement of the existing concrete deck and back wall, removal of the granite stones, verifying compliance with the shop and contract drawings for the removal of the steel railing, diaphragms, and replacement of the entire steel structure. She also assists the office engineer with contract payments, change order payments, material acceptance documentation, processing of Time & Material (T&M) packages, checking IDRs, and contract items quantities. Client: New York City Dept. of Transportation

Williamsburg Bridge Reconstruction of Miscellaneous Rehabilitation of the Main Bridge, Contract 8, #BRC253CCA, New York, NY; 4/11-3/13. Assistant Office Engineer. This $280-million project involved the construction engineering and inspection for the rehabilitation of the main bridge. The scope of work for the project includes abrasive blasting and painting of main bridge stiffening trusses, rehabilitation and strengthening of the main towers, rehabilitation of the intermediate towers and installation of seismic shear keys, main cable saddle repair and restraint, rehabilitation of wind tongue and wind chord, main tower and intermediate tower bearing installation, main tower leg removal and replacement, stiffening truss top and bottom chord rehabilitation, traveling maintenance platform installation, re-profiling of main span vertical curve by incrementally adjusting suspender cables, modification of orthotropic footwalk deck expansion joints, waterproofing and surfacing of orthotropic roadway deck, installation of ornamental balconies and electroliers, integration of intelligent transportation operating system, seismic retrofit of the intermediate towers, installation of contraflow barrier and erection of barrier transfer machine facility, including augured concrete piles. Ms. Coy was responsible for maintaining all databases and office files including shop drawings, catalog cuts, ECMs, construction procedures, field change sheets, flag repair and hazardous waste monthly report. She was also responsible for handling all incoming and outgoing correspondence and submittals to appropriate parties; coordinating and processing Traffic Enforcement Agent (TEA) payments; checking and finalizing Time & Material (T&M) packages, checking IDRs and finalizing contract items, putting change order documentation in order, preparing monthly progress meeting, submission of monthly construction report, complying IDRs and Engineer's diary, updating progress tracking of change orders, and preparing weekly coast guard as well as anticipated work over water memorandums. Client: New York City Dept. of Transportation

Luz Coy
Inspector

Access to the Region's Core (ARC) Trans-Hudson Express Tunnel Project, New York, NY; 7/10-10/10. As a civil engineer, Ms. Coy led a field team for the above project and was responsible for assessing, surveying and documenting pre-construction conditions of the properties. She drafted floor plans of surveyed buildings; rated buildings and structures within the project tunnel's zone prior to construction; inspected and documented buildings and structures along and adjacent to the tunnel; and conducted community outreach to ensure project goals were met.

Institute of Urban Development (IDU), Bogota, Colombia; 9/00-6/01. As a civil engineer, Ms. Coy evaluated structural conditions of a housing complex composed of 100 units. She performed visual and hands-on inspection of the interior and exterior of multi-family houses; photographed, documented and collected data of existing conditions to complete the inspection report; and conducted community outreach to ensure project goals were met.

Institute of Urban Development (IDU), Cundinamarca, Colombia; 10/99-1/00. As a civil engineer, Ms. Coy evaluated field conditions for the design and construction of a concrete roadway between two adjacent towns; and administered topographic survey and data collection of the roadway field location in the preconstruction phase of the project.

Institute of Urban Development (IDU), Antioquia, Colombia; 2/98-2/99.As an assistant inspector, Ms. Coy conducted hands-on field inspection of the structural condition of the bridges, railroad, culverts and drainage systems, registering defects, photographing damaged locations and writing reports. She also surveyed and inspected 180 miles of railroad track and documented findings for a later rehabilitation phase.

Research Projects:

Sustainability in Civil Engineering Project: Ms. Coy investigated large-scale fuel cell feasibility for wastewater treatment plant. She researched the benefits associated with the installation of 4.8 MW carbonate fuel cell at Newtown Creek wastewater treatment plant in New York to reduce greenhouse gases and generate power. The City College of New York; Fall 2010.

Advance Hydraulic Project: Ms. Coy performed water surface profiles calculations using HEC-RAS for the Red Fox River in Colorado. The City College of New York; Spring 2010.

Hydrology Project: As part of a team, Ms. Coy designed a retention pond in Orange County, NY, using HEC-HMS modeling software. She performed flood analysis. Applied TR-55 method; Fall 2009.

Technical Skills
AutoCAD, Matlab, ENVI, C language, HEC-HMS, HEC-RAS, Microsoft Word, Excel, PowerPoint

Gary Crozier
Senior Inspector

Professional Profile
Mr. Crozier is a chief/senior inspector with many years of experience on urban bridge rehabilitation and railroad construction projects. He has vast experience with steel and concrete rehabilitation, maintenance and protection of traffic (MPT) coordination, foundation work, utility relocation, drainage, and bridge downspout systems.

Project Experience

Bayonne Bridge Navigational Clearance Program (BBNCP) Construction Management, NY/NJ; 9/13-Present. Task Leader. This project involves construction management services for the $743-million Bayonne Bridge Navigational Clearance Program (BBNCP). This extraordinarily complex, once-in-a-lifetime project will replace more than 5,000 feet of viaduct and re-frame the existing steel arch structure to accommodate a new roadway 65 feet above the existing roadway. Mr. Crozier is responsible for oversight/inspection/quality assurance of all approach span excavation, installation of new drainage/water/sewer lines, excavation permits, soil/rock disposal, trucking onto and off of the project site, coordination between the Port Authority Facility and the general contractor, demolition of the existing toll plaza and the installation of a new automated toll plaza, erection of a new maintenance/storage building and salt dome, placing/compaction of sub base materials, placing of asphalt and concrete for new roadways and barriers. Client: Port Authority of NY & NJ

Belt Parkway Bridges REI Services - Rockaway Parkway Bridge, Contract #HBK1091, Brooklyn, NY; 11/10-9/13. Senior Inspector. The project involved the demolition of the entire existing, four-span, multi-stringer bridge superstructure with existing steel cap beams, and superstructures, including the abutments, wingwalls, and pier columns and footings; installation of a new single-span replacement bridge consisting of a multi-stringer superstructure with reinforced concrete deck and superstructure, including reinforced concrete abutments and wing walls on new piled footings, and mechanically stabilized earth retaining walls; reconstruction of approach roadway and four entrance and exit ramps within the project limits; and installation of new concrete barrier, new bridge and guide railing, new lighting standards, new drainage systems including catch basins and drainage pipes, new overhead sign structures, and new swale BMP grading, drainage, and planting. Mr. Crozier was responsible for the inspection of all aspects of the $60-million project including supervision of two NICET II inspectors. Client: New York City Dept. of Transportation

Belt Parkway Bridges REI Services - Paerdegat Bridge, Contract#HBK1024, New York, NY; 9/10-11/10. Senior Inspector. This project involved the demolition of the entire 13-span, multi-stringer bridge superstructure and substructure including abutments, wingwalls, and the piers consisting of concrete pile columns to a minimum of 600 mm below the mud line. Mr. Crozier was responsible for the inspection of the reinforced superstructure slab supported by high-performance box girders and substructures including reinforced multi-column piers. Client: New York City Dept. of Transportation

Bronx-Whitestone Bridge Bronx/Queens Approach, BW-89/WBM-342, Bronx, NY; 2/09-9/10. Senior Inspector. This $192-million project involved the staged removal and replacement of the Bronx Approach superstructure and substructure from the Bronx Toll Plaza to the Bronx Anchorage. Work included the installation of excavation support systems, mini-pile foundations and temporary steel support systems to support the existing structure during the staged construction. During the construction of the substructure, there were massive concrete placements for concrete footings and piers. For the duration of the project, traffic on the bridge was maintained with five lanes open

Proposed Project Assignment
Civil/Structural Inspector

Registration/Certifications
1996/ACI Concrete Field Technician Grade 1
1987/NICET IV
1997/NACE Coating Inspector Level 1 - Certified
1997/NYSDOT Traffic Control Seminar/NY
1999/ATSSA Traffic Control Supervisor

Education
AAS/1976/Civil Engineering Technology

Course Work
2014 - NYC DOB 4-Hour Supported Scaffold (2018)
2014 - NYC DOB Confined Space Awareness
2011 - OSHA #500 Trainer Course in Occupational Safety & Health Standards for the Construction Industry
2008 - 30-Hour OSHA #500 Construction Safety and Health Trainer Course
2003 - FHWA, Maintenance and Protection of Traffic (MPT) Design and Operation
2000 - AWS Certified Associate Welding Inspector Trained
2000 - OSHA Best Safety Scaffold Training
2000 - Confined Space Training

Total Years Experience 37

to traffic. During the staged construction work was staged demolition of the existing roadway, installation of multiple continuous steel girders, placement of a staged composite concrete deck, installation of permanent concrete barrier and installation of permanent street lighting. Other work items on the project included new utility systems at the Bronx Toll Plaza, installation of new salt storage dome building and miscellaneous steel and concrete deck repair on the Queens Approach structure. Mr. Crozier's responsibilities included the oversight of structural excavation, excavation support system (installation of shoring and structural support), vibration and settlement monitoring, installation of mini-piles, mini-pile static load tests, installation of bar-reinforcing and structural concrete for footings and piers. Client: Triborough Bridge and Tunnel Authority

Williamsburg Bridge Reconstruction of Miscellaneous Rehabilitation of the Main Bridge, Contract 8, #BRC253CCA, New York, NY; 3/03-2/09. Senior Inspector. This $280-million project involved the construction engineering and inspection for the rehabilitation of the main bridge. Mr. Crozier's responsibilities included overview of the total coating replacement, i.e.: lead paint removal by abrasive blasting, application of a four-coat paint system, erection of Class 1A containment system, replacement of the traveler platform system, and installation of jacking system, new M.R. bearings. His responsibilities also included the overview of the stiffening of the intermediate towers, which support the end span of the bridge and overview of removal and installation of maintenance platforms, rails and hangers. Client: New York City Dept. of Transportation

Williamsburg Bridge North Roadways Reconstruction, Contract 7, #BRC253CA, New York, NY; 2/00-3/03. Senior Inspector. This $248-million project involved the construction engineering and inspection for the reconstruction of the north inner and outer roadways. Mr. Crozier's responsibilities included overview of bored-in piles using a duplex drilling method, pressure grouting, post grouting, and tremie grouting in association and in accordance with all Federal, State and City regulations. The project also included Installation of new catch basins, manholes, cut and fill oversight of new approach ramp to the bridge structure. Client: New York City Dept. of Transportation

Williamsburg Bridge BMT Structure Rehabilitation, Contract 6, #BRC253BBA, New York, NY; 7/98-2/00. Chief Inspector (MPT/Safety Engineer). Mr. Crozier's responsibilities on this $176-million project included an overview of all safeguards for the protection of persons and property, maintenance and protection of traffic (MPT), and any special precautionary and protective measures in compliance to plans and specifications. He was also involved with procurement of permits, maintenance of variable message signs and closed circuit TV system within and beyond the project limits during the life of the contract. He also oversaw tow trucks, which provided rapid response to vehicular breakdowns. Client: New York City Dept. of Transportation

Williamsburg Bridge South Roadways Reconstruction, Contract 5, #BRC253BAA, New York NY; 5/97-7/98. MPT/Safety Engineer. Mr. Crozier's responsibilities on this $310-million project included an overview of all safeguards for the protection of persons and property, MPT, and any special precautionary and protective measures in compliance to plans and specifications. He was also involved with procurement of permits, maintenance of variable message signs and closed circuit TV system within and beyond the project limits during the life of the contract. He also oversaw tow trucks, which provided rapid response to vehicular breakdowns. Client: New York City Dept. of Transportation

Manhattan Bridge South Side Approach and Suspended Spans Rehabilitation, BRC156E, New York, NY; 12/92-5/97. As chief inspector for this $96-million project, Mr. Crozier's responsibilities included assignment of field personnel to meet the needs of the contract, ensuring that all work is recorded completely and in a timely fashion. He was also responsible for review of all inspector's reports; progress of work; timely testing of materials; and personnel safety. Project elements included construction of new railing, walkway slab, landscaping, barriers, lighting, elevated steel structure, drainage system and playground; new relief joints; replacement of deck slabs with new concrete-filled steel grid deck panels and armored joints; replacement of drainage system and corroded floorbeam; installation of concrete traffic barrier; replacement of finger joints with new expand joints at the anchorages; replacement of pin supported hangers with new hanger system using bearings and slide plates; installation of new upper and lower lateral bracing and bearings; installation of end frames; diagonal stiffening; waterproof anchorage; roof repair corroded and broken cable wires; and new electrical and lighting system. Client: New York City Dept. of Transportation

Camilo Cruz
Inspector

Professional Profile
Mr. Cruz is an engineer/inspector who is familiar with NYS Standard Specifications, NYSSCM, MUTCD, and other local specifications and guidelines. His experience includes:

Bridge Superstructures: steel erection; installation of caissons/ drilling/ concreting; installation of piles- mini piles- H- piles- timber piles; installation of steel sheeting cofferdams- various types; installation of rebar- foundations- columns- decks- etc; inspection of concrete pours of foundations and deck slabs; inspection of river works such as dredging of the river bottom or excavation/demolition of existing structures; and electrical works such as conduit-cable-light poles installation.

Roadway and Highways: asphalt and concrete pavement; earthwork; cut and fill; drainage; basic maintenance and protection of traffic on local roadway and major highways and striping.

Proposed Project Assignment
Civil/Structural Inspector

Registration/Certifications
ICC Structural Steel and Bolting Special Inspector
ACI Concrete Construction Special Inspector
ACI Concrete Field Testing Technician Grade 1
NETTCP Soils & Aggregate Inspector Certification
NJ Society of Asphalt Technology Certificate
Ocean Corporation, Commercial Scuba Diving

Education
BS/Civil Engineering

Course Work
2014 - OSHA Construction Scaffolding Safety Training
2008 - 10-Hour OSHA
2013 - PA NDA Training

Total Years Experience 7

Project Experience
2011-2014 Port Authority On-Call Construction Management Services - George Washington Bridge, NY; 8/12-Present. Inspector. This project involves joint replacement of the upper level deck. The project also involves the replacement of orthotropic deck, scupper and pipe run replacement, expansion finger joint repairs, main/secondary floorbeam repairs, stringer and stringer bearing repairs, deck rib connections, barrier repairs, paving, and coordination of maintenance of traffic. Mr. Camilo's responsibilities include construction management and inspection services involving structural steel, concrete work, roadway paving, safety, and maintenance of traffic. He is also responsible for preparation of a daily report detailing the work activity, issues, and work progress and tracking of time and material (T&M) on extra work. Client: Port Authority of NY & NJ

Willis Avenue Bridge Reconstruction, NY; 5/09-8/12. Field Inspector. This project involved the replacement of the existing movable bridge and approaches with a new structure, built offline from the existing structure. Mr. Camilo performed field inspection and was responsible for presenting daily reports with details of operations. He also participated in the team of inspectors for river and land works which included, but was not limited, to caissons, foundations, demolition, steel erection, maintenance and protection of traffic, etc. Mr. Camilo also performed the following duties:

- Verified that dimensions in the field were in accordance with contract drawings and payment limits.
- Inspected rebar installation.
- Performed inspections for preparations prior concrete placement.
- Monitored concrete placement procedures and performed concrete testing.
- Observed the mobilization of temporary steel platforms to act as templates to drive H-piles, timber piles, steel sheeting and caissons. Documented blow count, monitored elevations to comply with the shop drawings for acceptable embedment.
- Inspected the vibration and drilling of caissons, for the land and river foundations; verified caisson tip down to bed rock for proper sealing and inspected the concrete placement as well (tremie).
- Inspected steel erection work making sure lifting procedures were safely followed as per the steel construction manual and state standard specifications; inspected and recorded bolt testing making sure that all structural and non-structural components were properly installed and bolts were properly fastened.

Camilo Cruz
Inspector

- Inspected deck slab work, which includes inspecting stay-in-place form installation, making sure heights were correct per the approved haunch tables and tested shear stud connectors.
- Reviewed demolition drawing to assure compliance with field conditions; verified that the positioning of demolition equipment was as per approved drawings; overseen the haulage and disposal of contaminated, non-hazardous material as well as hazardous waste material.
- Inspected the safety aspect of the work site prior, during and after the operation making sure it complied with the standards and personnel followed the job hazard analysis.
- Coordinated and inspected lane closures on the adjacent major highways (Major Deegan Expressway and Harlem River Drive) per the NYCDOT approved permits and ensured the compliance for safety of the contractor's personnel and the public.

Client: New York City Dept. of Transportation/New York State Dept. of Transportation

Route 9A Reconstruction, New York, NY; 1/08-5/09. Field Inspector. Mr. Camilo performed inspections for the reconstruction of Route 9A (West Side Highway). The project included reconstruction of four surface lanes, tunnel approaches, and streets; construction of a promenade above tunnel; and construction of an eight-lane-wide, at-grade roadway facility with an integrated promenade and pedestrian overpass. Responsibilities included:

- Inspecting existing finished concrete roadway demolition to proposed sub-grade, excavation for utility castings, and placement of super-pave asphalt.
- Checking that asphalt materials were at proper temperatures, mixes were correct, and that compaction was completed with proper equipment and correct density according to project specifications.
- Inspecting new PCC European pavement placement, which included performing samples and tests of the transit mix delivered concrete, such as air content tests, slump tests, and temperature and post-concrete care, such as curing additives, saw cutting, and joint sealed.
- Inspecting maintenance and protection of traffic (MPT), and making sure that all construction signs were posted and visible.
- Inspecting pavement and roadwork to make sure that work complied with contract drawings, survey data, and specifications.
- Performing field measurements and calculation of quantities for work completed, inspected earthwork to verify that safe practices were followed.
- Performing calculations for material removed and backfilled, and performed volumetric test during backfilling to ensure proper compaction of materials.
- Inspecting drainage activity, which included performing field checks to obtain stationing and elevation, performing quantity calculations for work completed, making sure drainage structures matched contract drawings, and create as-built drawings for work completed.

Client: New York State Dept. of Transportation

Computer Skills
Microsoft Word, Excel, PowerPoint, AutoCad, Sap2000, Etabs Nonlinear

David Cunningham
Inspector

Professional Profile
Mr. Cunningham is a construction inspector with many years experience working on bridge and structural rehabilitation / reconstruction projects.

Proposed Project Assignment
Civil/Structural Inspector

Registration/Certifications
2007/NICET III
2009/ACI Concrete Construction Special Inspector
2010/NETTCP Soils & Aggregate Inspector Certification/NY
Confined Space Awareness Certification

Course Work
2010 - U.S. NRC Safety and Gauge Operation Certification for the use of Nuclear Moisture/Density Equipment
10-Hour OSHA Training Course

Total Years Experience 13

Project Experience
Rehabilitation of Kew Gardens Interchange/Van Wyck Expressway, New York, NY; 9/10-Present. Inspector. The project involves construction inspection services for the reconstruction of the Van Wyck Expressway (I-678), between 86th Avenue and the Grand Central Parkway in Queens County. This $150-million project involves the complete replacement of five bridges, the reconstruction of one bridge along with the reconstruction of a pedestrian tunnel and the widening of the Van Wyck Expressway. Mr. Cunningham's responsibilities include inspection of various staging operations such as clearing and grubbing, mobilization, installation of temporary lighting and signal equipment as well as minor excavation and paving operations related to staging of work zone. He is also responsible for delegating inspection operations to junior inspectors on site and assisting in the training of the trainee inspectors on site. Client: New York State Dept. of Transportation

2005-2010 Port Authority On-Call Construction Management Services - Staten Island Bridges Rehabilitation, Staten Island, NY; 4/05-9/10. Inspector. The project involved construction inspection for structural, civil, mechanical, electrical, and bridge painting services for the three Staten Island Bridges operated by the Port Authority of New York & New Jersey. Mr. Cunningham's responsibilities included the inspection services for a range of construction operations (see specific assignments listed below for operation details). Mr. Cunningham assured each operation was supervised and executed in direct conformance to applicable specifications (and approved drawings) and maintained large portions of the office engineering for each contract respectively. His responsibilities also included communicating with all federal, state and local agencies involved during construction operations (PA administrators, Coast Guard, OSHA, Army Core of Engineers, DEP, DEC, PA police, NJ state police, NYPD, FDNY, NJ Turnpike Authority, Conrail, NJ Transit, NYS DOT, NJ DOT, PSE&G, National Grid, local community boards etc.)

Specific assignments included:

Fire Hydrant Upgrade, New York Side of Bayonne Bridge, Goethals Bridge and Outerbridge Crossing, Contract #AK-183; 4/09-9/10. This project involved performing large amounts of trench construction for new water mains. Mr. Cunningham assisted the Port Authority materials lab with field sampling of soils and aggregates, and field testing materials to determine its properties. Once trench excavated and sub-grades properly compacted, contractor then place ¾" clean stone for pipe bedding. Contractor then properly installed over 2,000 lin ft of new pipe sections performing various connection types (victaulic, mechanical and bell). Once pipes secured in proper fashion, concrete thrust blocks were poured in place for pressure resistance at elbows and hydrant base. This network of trenches required extensive utility crossings in very sensitive areas. All crossings performed using specific details and instruction provided as per specifications (utility mark-outs refreshed on daily basis). Contractor also removed and replaced any roadway pavement, asphalt and sidewalks which were disrupted during water main installation. Landscaping damaged during construction restored to existing condition (hydro seeding).Contractor performed various types of lane closures to execute this work. His responsibilities included all day-to-day inspections of operations being performed (civil and structural); document control of project including payment applications, RFIs, transmittals, and submittals; performing controlled inspection for specified operations; producing change orders; calculating estimates of work; handling all organization and scheduling of work with facility administration; and creating progress meeting agendas and recording minutes.

David Cunningham
Inspector

Homeland Security Project, Contract #MF 100.509; 8/08-9/10. This project involved the structural hardening of vital bridge areas (steel). The contractor also removed existing cofferdam from waterway below bridge and constructed a security barrier around bridge anchorage. This barrier consisted of concrete filled pipe pilings (secured to bedrock) as well as reinforced whaler system to restrict access to Bridge form waterfront. Mr. Cunningham provided inspection services for structural steel operations and water work.

On-Call Contract to Remediate Red Flag Repairs for Structural Members, Contract # MF 208.907 W.O. # 1-4; 4/08-9/10. This was an on-call contract to remediate red flag repairs for structural members. The contract included structural steel repairs to various locations of Bayonne Bridge. Mr. Cunningham's responsibilities included all day-to-day inspections of operations being performed (civil and structural); document control of project including payment applications, RFIs, transmittals, and submittals; performing controlled inspection for specified operations; producing change orders; calculating estimates of work; handling all organization and scheduling of work with facility administration; and creating progress meeting agendas and recording minutes.

Emergency Back-Up Generators, Contract #AK 166A; 4/08-6/09. This contract included installation of emergency power distribution systems at Bayonne Bridge, Goethals Bridge and Outerbridge Crossing. Mr. Cunningham's responsibilities included all day-to-day inspections of operations being performed (civil and electrical); document control of project including payment application, RFIs, transmittals, and submittals; performing controlled inspection for specified operations; producing change orders; calculating estimates of work; handling all organization and scheduling of work with facility administration; and creating progress meeting agendas and recording minutes.

Maintenance of Structures – Goethals Bridge, Outerbridge Crossing and Bayonne Bridge, Contract #AK-181; 1/07-1/10. This project involved performing various emergency and non-emergency civil repair operations at all three Port Authority Bridges in Staten Island. Work included concrete deck repair (full-depth and partial depth), concrete slab repair (full-depth and partial-depth), sub-grading remediation, drainage repairs, asphalt patch repairs, asphalt resurfacing, sidewalk installation, curb repair, barrier wall repair, road striping and spall repairs of vertical members. Mr. Cunningham's responsibilities included all day-to-day inspections of operations being performed (civil and structural); document control of project including payment application, RFIs, transmittals, and submittals; performing controlled inspection for specified operations; producing change orders; calculating estimates of work; handling all organization and scheduling of work with facility administration; and creating progress meeting agendas and recording minutes.

Upgrade of Traffic Control Devices, Contract #MF 205.907; 6/07-9/08. This contract included removal and replacement of existing guardrail at various locations of the Goethals Bridge. The contractor also performed under deck concrete repairs at bridge mounted guard rail locations. The contractor installed new signage at NJ side of bridge. Mr. Cunningham's responsibilities included all day-to-day inspections of operations being performed (civil and structural); document control of project including payment applications, RFIs, transmittals, and submittals; performing controlled inspection for specified operations; producing change orders; calculating estimates of work; handling all organization and scheduling of work with facility administration; and creating progress meeting agendas and recording minutes.

Outerbridge Crossing, Net Cost Red Flag Repairs, Contract #AKO 284.037; 5/07-12/08. This project involved performing various structural steel repairs at Outerbridge Crossing. Repairs ranged from rivet replacements to cantilevered floor beam bracket replacements. His responsibilities included all day-to-day inspections of operations being performed (civil and structural); document control of project including payment application, RFIs, transmittals, and submittals; performing controlled inspection for specified operations; producing change orders; calculating estimates of work; handling all organization and scheduling of work with facility administration; and created progress meeting agendas and recorded minutes. Mr. Cunningham coordinated with other agencies to perform work within their respective areas including NJ Turnpike Authority, NJ State Police, NJ Transit and Conrail.

Majdi El-Taher
Inspector

Professional Profile
Mr. El-Taher has more than 26 years experience in supervising and coordinating painting inspection projects, contractors' work involving lane and shoulder closing techniques on main roadways, safety precautions on roadways, work-zone traffic control, and surface preparation for steel painting. His duties have included inspecting roadway excavation and backfilling, grading, drainage, bituminous paving, MSE wall, sound barrier installation, bridge demolition, and structural rehabilitation. Specifically, he has inspected permanent and temporary steel sheeting; H, pipe, monotube, and auger-cast piles; structural steel erection; installation of reinforcement steel; concrete placement for footers, substructure and superstructure; latex modified concrete overlay; and micro-silica modified concrete overlay. In addition, Mr. El-Taher's 26 years of experience have also included providing monitoring and office engineering services for structure and roadway construction projects. His office engineering duties have included preparing estimates, force account work, reports, and meeting minutes.

Proposed Project Assignment
Civil/Structural Inspector

Registration/Certifications
2001/NICET IV; 1993/NICET III
2011/ACI Concrete Field Testing Technician-Grade I;
2011/NJSAT
2014/Rutgers TCC Refresher
2010/ACI-CCTC *(Lifetime Certification)*

Education
BS/1985/Civil Engineering

Total Years Experience 26

Project Experience
New Jersey Turnpike Interchange 6 to 9 Widening Program; 7/10-Present, $2.7B. Senior Inspector for Contract No. T869.120.202 (approximately $33M) for NSO/SNO Roadways Grading, Drainage, Paving, and Structures from MP 55.1 to 56.5 in the Townships of Bordentown and Chesterfield. This project involves the construction of two new outer roadways, each consisting of three 12-foot lanes and a 12-foot right shoulder as well as the reconstruction of the Bordentown Chesterfield Road and the Ward Avenue bridges over the Turnpike, five retaining walls, two butterfly sign structures, one cantilever sign structure, four overhead VMS structures, electrical ITS, drainage and stormwater management facilities including three storm water management basins and four manufactured treatment devices, ITS, and extensive utility relocation and coordination. Other work includes noise walls, drilled shafts, H-piles, king piles, curved steel erection, high cast-in-place retaining walls, 77,000 CY of Excavation over 90,000 tons of Superpave Hot Mix Asphalt Courses; Concrete In Substructures and Footings; Reinforcement Steel; Structural Steel (two structures); 17,300 LF of Pipe Piles; MSE Walls; Concrete In Deck or In Headblock, HPC Demolition of two Bridge Structures; Reinforced Concrete Pipe (various types and sizes-17,000 L.F.) 18" Steel Pipe Jacking. As Senior Inspector, Mr. El-Taher is responsible for the on-site inspection of the contractor's means and methods for foundation excavation, steel piles, sub and superstructure reinforced concrete bridge items, drainage piping and structures; subgrade, subbase, DGABC, and bituminous paving in lifts; site clearing, deep steel pile foundations, steel reinforcement, Adesta fiber optic relocation and coordination, new culvert construction, HPC concrete for bridge deck and parapets, storm drainage, detention basins, soil erosion/sediment control measures, new traffic signals, electrical/ITS work, concrete curb and sidewalk, as-built quantities, traffic detours, night-time work/safety, temporary and permanent striping, pavement markers, maintenance and protection of traffic, roadway embankment, DGABC, and HMA base/surface courses; maintenance and protection of traffic, and nightwork. Client: NJTA

Interchange 17, Atlantic City Expressway; 2/09-11/10, $7.8M. Assistant Resident Engineer/Lead Inspector. GPI performed construction management and inspection services for Interchange 17 Ramp Improvements. SJTA announced plans in 2007 to add a third westbound lane from Exit 7 (Garden State Parkway) to Exit 31 (Route 73) on the Atlantic City Expressway. The length of roadway widening was approximately 24 miles, which is about half the length of the expressway. Interchange 17 (Route 50) is located in Hamilton Township, Atlantic County, and is less than a ¼ mile east of the Expressway's Egg Harbor Toll Plaza. The project included completing the missing ramp movements, widening the existing expressway bridge to allow for acceleration/deceleration lanes, installing new ramp, and constructing retaining walls to minimize impacts to surrounding wetlands. In addition, ramp lighting, roadway drainage, infiltration basins and landscaping was required. As part of the project, various improvements to Route 50 were also completed including the installation of two traffic signals where the ramps

intersect Route 50, resurfacing the roadway, and improvements to guide rail and lighting in the area of the interchange. During construction, Route 50 remained open. Improvements on Route 50 were partially funded by the NJDOT, therefore, SJTA and NJDOT specifications and requirements were followed. Since the interchange is in close proximity to the Egg Harbor Toll Plaza, staging and coordination during construction was critical. Existing traffic lanes on the expressway had to be maintained at all times. The 8.39-acre project site was located entirely within the Pinelands National Reserve and falls under the Pinelands Comprehensive Management Plan administered by the New Jersey Pinelands Commission. Duties included the on-site inspection of the contractor's means and methods for foundation excavation, steel piles, sub and superstructure reinforced concrete bridge items, drainage piping and structures, subgrade, subbase, DGABC, and (HMAC) bituminous paving in lifts, maintenance and protection of traffic, and nightwork. Client: SJTA

NJDOT Route 55 South of Lambs Road to Almonesson Creek, Townships of Mantua, Washington & Deptford, Gloucester County, NJ; 10/07-12/08, $9M. Inspector. This project consisted of the resurfacing of all lanes and shoulders and the associated on and off ramps for 9 miles of Route 55 in both the NB and SB roadways. The resurfacing consisted of 2-inch average depth milling and superpave hot mix bituminous paving operations. The project also included temporary and permanent traffic stripes application, and the removal and replacement of beam guide rail and some concrete curb. A Weigh-in-Motion (WIM) station was installed. The project was located within a heavily traveled corridor and required significant maintenance and protection of traffic (MPT). The milling, paving and striping operations were performed using nighttime operations while beam guide rail operations took place during the daytime. Duties included the on-site inspection of the contractor's means and methods for milling, reset heads, concrete curbs, surface preparation, and superpave items, subgrade, subbase, DGABC, and bituminous paving in lifts, maintenance and protection of traffic, and nightwork. Client: NJDOT

NJDOT Route 55 Resurfacing (Lambs Road to Leonard Cake Road); 8/08-3/09, $10M. Inspector. This project consisted of the resurfacing of all lanes and shoulders and the associated on and off ramps for 11 miles of Route 55 from Mile Post 40 to Mile Post 51 in both the NB and SB roadways. The resurfacing consisted of 2-inch average depth milling and superpave hot mix bituminous paving operations. The project also included temporary and permanent traffic stripes application, and the removal and replacement of beam guide rail. The project is located within a heavily traveled corridor and requires significant maintenance and protection of traffic (MPT). The milling, paving and striping operations were performed using nighttime operations while beam guide rail operations took place during the daytime. Duties included the on-site inspection of the contractor's means and methods for milling, reset heads, concrete curbs, surface preparation, and superpave items, subgrade, subbase, DGABC, and bituminous paving in lifts, maintenance and protection of traffic, and nightwork. Client: NJDOT

NJDOT Route 73 & Route 30 Berlin Circle Elimination, Berlin, NJ; 9/07, $40M. Inspector. The work consisted of the elimination of the circle on Routes 73/30 in Berlin. The project entailed noise wall installation, utility relocation, roadway construction on approximately 3 miles of road. This project required coordination with many businesses along Route 30 as well as the Atco train station for NJ Transit. Client: NJDOT

ASSIGNMENT

Senior Construction Inspector

EDUCATION

BSCE, International Harvardian University, 1980
MSCE, New Jersey Institute of Technology, 1989

REGISTRATION

NICET IV - Certified (Transportation and Highways)
OSHA 10 Hour Certified
AC I Level I, Structural Steel and Bolting Inspector

REPRESENTATIVE AND PERTINENT EXPERIENCE

Mr. Espinar has twenty-five years engineering experience as Senior Inspector, Senior Construction Engineer, Resident Engineer, Contract Administrator and Quality Assurance/Quality Control Auditor utilizing ISO 9000 and Port Authority of New York and New Jersey Quality Assurance Standard. In addition, he has extensive hands on experience in the Construction Management of Highways, Bridges, Tunnels, Railroads, Light Rail, and buildings, including retail malls and high rise offices.

- **Senior Inspector, Port Authority of NY & NJ, PA Bus Terminal** – Serving as Senior Inspector for night work for various projects at the bus terminal including CCTV installation, HVAC replacement, concrete slab replacement, and tenant work (TAA). Projects included multi-trade work such as civil, mechanical, electrical, and environmental. (4/11 – Present)

- **Senior Inspector, Port Authority of NY and NJ, Lincoln Tunnel** - Served as inspector for ventilation building modifications including roof repairs, doors, electrical upgrades; replacement of roadway at Toll Plaza, New Jersey Portals and approach ramps for compliance with plans and specifications. Also inspected replacement of tunnel catwalk booth and tunnel grouting and sealing work. (7/05 – 3/11)

- **Senior Inspector, Port Authority of NY and NJ, Holland Tunnel** - Responsible for inspection of installation of new fire standpipe and associated components through both tubes and vent buildings in the Holland Tunnel during night time operations. The scope of work consisted of 4-inch diameter pipe, siamese connections, reducers to 3-inch diameter pipe, brackets, supports, tile replacement, and connections in the ventilation buildings. Witnessed pressure tests conducted by Port Authority Risk Management and New York City Fire Department. (5/04 – 6/05)

- **Senior Inspector, Port Authority of NY and NJ, Lincoln Tunnel** - Responsible for inspection of contractor's activities, quality of work, and daily reports for rehabilitation of tunnel roadway, deck, and bridge approaches on Manhattan side. Scope of work includes partial deck repair, full deck replacement, and repair of steel and retaining walls. (11/01 – 4/04)

- **Quality Assurance Engineer, Port Authority of NY and NJ, Various Projects.** Responsible for monitoring contractor's work on various capital projects and rehabilitation of existing facilities including Lincoln Tunnel, Holland Tunnel, George Washington Bridge, JFK, LaGuardia, and Newark Airports, and Port Newark.

- **Superintendent/Project Engineer, New Jersey Transit, Kearny Connection Project.** Responsible for civil construction on this $72 million railroad project, including excavation, drainage, bed, and track.

- **Lead Civil Engineer, NYCDEP, Dewatering Facility, Water Pollution Control and Decomposed Building Project at Staten Island, New York.** Lead engineer for design of $82 million facility.

- **Resident Engineer/Construction Administrator, Sear Brown Group, Route 1 & 9 in Freehold, NJ.** Roads and bridges, and Freehold Mall, $113 million construction projects.

- **Project Engineer/Resident Engineer, SGS/United States Testing, Various Projects.** Projects included 17th States Street construction of 62 story office tower structural steel building in New York City. Construction of 24 story condominium reinforced concrete building, and Bellevue Annex Hospital construction and rehabilitation projects.

- **Resident Engineer/Project Engineer, Hi-Tri Development Corp.** Assigned to Philphos/Pasar Projects in Isabel Leyte Philippines. Construction of Philippine Phosphate and Smelting Plant in South East Asia. Administrative work experience includes hiring personnel, preparing consulting engineering contract, resolution to engineering design problem, verification of payments, costing, scheduling, and construction management.

ASSIGNMENT

Senior Construction Inspector

EDUCATION

BS, Construction & Contracting Engineering Technology, NJIT, Newark, NJ, 1994

CERTIFICATIONS

ACI Certified Concrete Technician, ACI Concrete Construction Special Inspector, NICET IV, 40 hrs. OSHA Safety Program, 40 hrs. Hazardous Materials Waste Training, Confined Space Safety Training

REPRESENTATIVE AND PERTINENT EXPERIENCE

Mr. Fernandez has 16 years of diversified experience in construction, including drainage, roadways, bridge rehabilitation, airport runways, transportation, and industrial facilities. He has performed multi-discipline construction inspection at Port Authority facilities, including PATH Hub at World Trade Center in Manhattan. Mr. Fernandez interfaced with general contractors, client representatives, material suppliers, and design consultants. He has been the lead inspector for over $300 million in construction projects and is familiar with T&M, unit cost, and lump sum delivery systems.

- **Senior Construction Inspector, Port Authority of NY & NJ, Term Agreement –**
  - > Newark Liberty International Airport, Rehabilitation of Taxiways A, B, PA @ D - Inspected $10 million contract involving rehabilitation of Taxiways A, B, PA @ D, including installation of Taxiway lighting systems, milling and repaving.
  - > Newark Liberty International Airport, Rehabilitation of Runway 4R-22L – Inspected $17 million contract involving rehabilitation of Runway 4R-22L, including installation of runway lighting systems, milling and repaving. (3/12 – Present)

- **Senior Construction Inspector, NYCDEP, Gowanus Pump Station, Brooklyn, NY** – Served as inspector for concrete specified in construction contracts. Conducted field inspection for conformance with NYC Building code and ASTM (4/10 – 2/12)

- **Construction Superintendent, Port Authority of NY & NJ, Various Projects** – Served as Superintendent for Tishman for security and capital improvement projects at various PATH facilities. (4/08 – 3/10)

- **Senior Construction Engineer/Inspector, Port Authority of NY & NJ, WTC PATH Hub** – Work on this multi- billion dollar project consisted of PATH facilities, PATH Terminal Building, underpinning of No. 1 Subway, Pedestrian connections, and LMDC facilities, infrastructure and tenant alterations to Tower No. 7. Performed daily inspections, site visits, and prepared daily narratives. (2/06 – 4/08)

- **Civil Engineering Manager, P & O Ports of North America, Inc., Port Newark Container Terminal ($15 Million)** - Coordinated with Terminal Operations for the construction of high impact/heavy load resistant pavement. Assisted yard & terminal operations with maintenance construction program and overall logistics. (6/05 - 1/06)

- **Lead Inspector/Field Engineer, Newark Liberty International Airport, Rehabilitation of Runway 4R-22L** – Inspected $17 million contract involving rehabilitation of Runway 4R-22L, including installation of runway lighting systems, milling and repaving. (2/04 - 6/05)

- **Lead Inspector, Port Authority of NY & NJ, Newark International Airport** – Lead Inspector for installation of contractors work to ensure compliance with plans and specifications, verified conformance with codes, regulations, and Port Authority guidelines. Provided oversight of the following major drainage projects:
  - > *$27 Million, North Area Drainage Western Section of Brewster Road Major Drainage Relocation and Street Reconstruction* including construction of 2,700 feet of double barrel 5' high by 7' wide drainage culvert, 1,600 feet of drainage pipes with diameters up to 72, 84, and 90 inches; reconstruction of the Brewster Road corridor including, water mains, curbs, sidewalks, street lighting and salt splash paving stones; and hazardous materials handling and disposal in accordance with environmental guidelines.
  - > *$41 Million, North Area Drainage Taxilane UA and Associated Apron* involving the installation of aircraft rated concrete, plus the construction of a peripheral ditch headwall, the installation of 1,100 feet of 90 inch pipe, 600 feet of 66 inch pipe, water mains, curbs, sidewalks and street lighting. Contract also involved hazardous materials handling and disposal in accordance with environmental guidelines.
  - > *$19 Million, Major Drainage Construction & Taxiway Z Relocation* involving the relocation of Taxiway Z, including installation of lighting, 5' high by 7' wide drainage culvert, concrete and asphalt paving. (7/02 - 6/05)

- **Lead Inspector/Office Engineer, Newark Airport Central Terminal Area Bridge and at Grade Roadway ($45 million)** - Contract provided for the construction of a new bridge and at grade roadways, including new storm drainage pipes, underground utilities, walkway canopies, curbs, sidewalks and street lighting and new entrance and exit toll plazas @ CTA hourly & daily parking for revenue control. (5/01 to 5/02)

- **Lead Inspector/Office Engineer, Port Authority of NY & NJ, Newark International Airport** – Lead Inspector for installation of contractors work to ensure compliance with plans and specifications, verified conformance with codes, regulations, and Port Authority guidelines. Provided oversight of the following projects:
  - *$3 Million, Rehabilitation of Expressway Exit Roadways* involving the rehabilitation of bridge decks, spall repairs, removal and replacement of expansion and contraction joints. Waterproofing the bridge decks and milling and paving, while maintaining vehicular traffic exiting the airport.
  - *$2.5 Million, Rehabilitation of Terminals A, B, & C Arrivals Ramps* involving the rehabilitation of bridge decks, spall repairs, removal and replacement of expansion and contraction joints, and waterproofing bridge decks, and MPT. (7/00 to 5/01)

- **Lead Inspector, WTC 5 World Trade Center Standby Power ($53million)** - Construction of a 13.5KV emergency standby power generator plant on the roof of 5 World Trade Center linked to substation on WTC level B6 and to new 5KV substations up to the 42nd, 78th and 108th floors of Towers 1 and 2. Performed floor to floor inspection for electrical conduit, cable, and systems, intermediate substations, tie-ins on level B6 and emergency generator equipment. (2/98 to 7/00)

Fernando Flores
Chief Inspector

Professional Profile
Mr. Flores is an inspector with the following experience in the inspection of bridge reconstruction projects.

Project Experience
Replacement of the Upper Level Deck of the Suspended Span of the Verrazano-Narrows Bridge, VN-80B, Staten Island, NY; 12/12-Present. Chief Inspector. This $236-million project involves reconstruction to replace the upper level roadway superstructure of the Verrazano-Narrows Bridge. The work includes removal of existing upper level roadway deck and barrier, installation of new upper level orthotropic deck, overlay, drainage systems, sign structures, lighting, barrier, painting and miscellaneous utility work. Mr. Flores' responsibilities include monitoring MPT; compliance with MUTCD on job site; and inspection of the survey operation and baseline measurements of the existing structural steel framing to ensure proper fit of new steel orthotropic deck panels. Client: Triborough Bridge and Tunnel Authority

Proposed Project Assignment
NACE Inspector

Registration/Certifications
2001/ACI Concrete Field Technician Grade 1
2003/NACE Coating Inspector Level 1 - Certified
2010/NICET IV

Course Work
2009 - 10-Hour OSHA Training Course
2005 - Keys to Durable Concrete Course – Exterior Flatwork
2000 - SSPC C-3 Supervisor/Competent Person Training for Deleading
NYSDOT - Traffic Control Training Seminar
The Joint Urban Manpower Program – Construction Inspectors

Total Years Experience 16

Manhattan Bridge Rehabilitation of Cables and Suspenders, Contract 14, #BRC156R, New York, NY; 1/10-12/12. Inspector. This $149-million project involved the unwrapping and rewrapping of cables; replacement of suspenders; replacement of necklace lighting messenger cables and cable hand ropes; installation of new access platforms to existing tower platforms; reversal of lower roadway and operation of HOV lane and replacement of multi-rotational bearings at the Towers; replacement of light poles and luminaries on South upper roadway; replacement of lane control radar on South upper roadway; and retrofit of track stringers and diaphragm connections and other miscellaneous work. Mr. Flores' responsibilities included the inspection and oversite of wire rope suspender removal and replacement; main cable rehabilitation such as unwrapping, wire repairs, compaction and rewrapping; coordination and communication with the contractor who is performing daily traffic lane changes such as traffic flow reversals and HOV; writing daily reports which includes estimates for completed work; surface preparation and painting of structural connections; tensioning and recording of cable band bolts torque; removal and replacement of main cable handrope and necklace lighting systems; installation of temporary work platforms along the main cables and under the roadways; and reinforcement of track stringers. Client: New York City Dept. of Transportation

Verrazano-Narrows Bridge Rehabilitation of Structural Steel Repairs, VN-32, New York, NY; 4/09-12/09. Inspector. This project involved construction administration, on-site inspection, and testing and support services. The project also included repair of deteriorated subfloorbeams, stringers, stiffener/connection plates, cracked/broken missing welded connection plates, reinforced deteriorated stringer top flange and removal and replacement of deteriorated bolts, rivets, and drainage piping. Mr. Flores' responsibilities included conducting surveys of the contractor's MPT activities, observing proper placement of temporary traffic control devices, channelization equipment and required signage maintained by the contractor. Client: Triborough Bridge and Tunnel Authority

Bronx-Whitestone Bridge Cable/Suspender Rope Rehabilitation, BW-85/86/WBM-339, Bronx, NY; 5/08-4/09. Inspector. This project involved construction management and inspection services for coating removal and application and cable/suspender rehabilitation for Project BW-85/86/WBM-339, Select Cable Panel Opening/ Suspender Rope Removal and Replacement and Painting at the Bronx-Whitestone Bridge. Mr. Flores was responsible for the inspection of the tower temporary scaffold system. Client: Triborough Bridge and Tunnel Authority

Fernando Flores
Chief Inspector

Manhattan Bridge Rehabilitation of Lower Roadways, Contract 11, #BRC156A, New York, NY; 2/04-5/08. Mr. Flores was an inspector on this $150-million project that involved the reconstruction of lower roadway; removal and replacement of floorbeams, stringers, bearings and deck in main span and side spans; rehabilitation of anchorage chambers; installation of new lighting and traffic signs on lower roadway; rehabilitation of travelers in suspended spans; replacement of maintenance platforms at towers; painting of bridge in suspended and approach spans; and repair of flagged conditions. He was responsible for the inspection of anchorage chamber concrete floor replacement, grout injection for wall crack sealing and vertical and overhead wall patch repairs. Client: New York City Dept. of Transportation

Manhattan Bridge Rehabilitation of North Spans over East River, Contract 10, #BRC156C, New York; 2/01-2/05. Mr. Flores was an inspector on this $175-million project that involved rehabilitation of the north upper roadway approach and suspended spans; installation of a new north side bikeway; replacement of the north side truss bearings on the approaches; repainting of the north half of the bridge including the cables and trusses; and installation of an Intelligent Traffic System (ITS) including CCTV's. He was responsible for the inspection of and removal/replacement of subway stringers and floorbeams, north upper roadway replacement, truss bearing replacement and truss repairs. Client: New York City Dept. of Transportation

Manhattan Bridge Reconstruction, Painting and Interim Rehabilitation, Contract #BRC1568C, New York, NY; 1/98-10/01. Inspector. This $124-million project involved the rehabilitation of the Manhattan plaza area, Manhattan Arch and Colonnade; replacement of the structural steel stringer and floorbeam support system for the west side subway tracks; replacement of truss bearings on top of the piers of both approach spans; rehabilitation of eyebars anchoring one of the main suspension cables; and removal of existing paint from the entire west side, both towers and two main cables, and replacing with new coating. Mr. Flores' responsibilities included the inspection of subway floorbeams, stringers, track removal and installation, lead paint containment and removal, bridge jacking, concrete testing, multirotational truss bearing replacement, grid deck installation, concrete and asphalt placement, concrete and steel barrier. Client: New York City Dept. of Transportation

Dawn Garcia, E.I.T.
Inspector

Professional Profile
Ms. Garcia is an inspector with the following experience.

Project Experience
Brooklyn Bridge Rehabilitation of the Approach Spans and Ramps and Painting of the Entire Bridge, Contract 6, New York, NY; 9/12-Present. Inspector. This project involves construction management and inspection services for the $500-million rehabilitation of this iconic national landmark. The scope of work for the project includes replacement of approach roadway in Manhattan and Brooklyn over the arch blocks; rehabilitation of the Manhattan side ramp structures with widening and deck and bearing replacements; rehabilitation of the approach steel structures with full superstructure replacement of the York and Main Street structures and orthotropic deck installation at Franklin Square; seismic retrofitting of the main bridge, Franklin Square and ramp structures; painting of the ramp structures and suspended spans in their entirety; restoration of historic features. Ms. Garcia is responsible for reviewing and understanding drawings and specifications; creating daily inspection reports to document progress of work completed; taking field measurements to ensure that contractor work is done as per the drawings and specifications; and using field measurements to make payments for work completed. Ms. Garcia's responsibilities include ensuring the verification of compliance with shop and contract drawings as well as Engineering Clarification Memo's (ECM's) for construction activities of the rehabilitation and reconstruction of the Brooklyn Approach Spans, including: demolition of existing decks and the installation of new grid deck panels at Main, York, Washington and Prospect Streets as well as the Maintenance Shop; concrete placement of Brooklyn Approach Spans including the verification of concrete compliance to ACI and NYSDOT standard specifications with ACI concrete testing methods; installation of reinforcement to concrete sections at the Maintenance Shop, Washington and Prospect Streets; and superslab installation at the Brooklyn Approach Arch Blocks. Ms. Garcia had special focus on the reconstruction of York and Main Streets in which her responsibilities included: installation of temporary shoring; demolition and reconstruction of the cap beams and backwalls; demolition of existing concrete decking; removal of existing steel framing including proper disposal techniques for environmental concerns; installation of new steel framing including checking bolted connections for steel connections; installation of new grid deck panels with proper additional reinforcement for concrete placement; and concrete placement and conformance to ACI and NYSDOT standard specifications. Client: New York City Dept. of Transportation

New York City Dept. of Transportation, Department of Bridges: When and Where Unit, New York, NY; 6/12-9/12. As an intern, Ms. Garcia was able to participate in site visits to assess possible safety hazards and structural deficiencies; she created flags on the internal system to request authorization for work on safety hazards and structural deficiencies; reviewed contractor's labor-material-equipment sheets against backup materials to ensure payments are accurate; processed payments within the internal system and monitored budget with work progress.

Proposed Project Assignment
Civil/Structural Inspector

Registration/Certifications
2012/Engineer In Training/NJ
2013/ACI Concrete Field Testing Technician Grade 1
2014/FHWA Safety Inspection of In-Service Bridges

Education
BE/2012/Engineering

Course Work
2014 - Safety Inspection of In-Service Bridges NHI Certificate of Training
2012 - 10-Hour OSHA Construction Safety & Health
Relevant Coursework: Bridge Design Structures Engineering; Coastal Engineering; Engineering Design; Fluid Mechanics; Geotechnical Engineering; Introduction to Environmental Engineering; Labor Relations; Mechanics of Solids; Modeling and Simulation; Multi-Hazard Engineering; Reinforced Concrete Design; Structural Analysis; Structural Steel Design; Transportation Engineering Design; Water Resources Engineering

Total Years Experience 2

Dawn Garcia, E.I.T.
Inspector

Senior Design Project Sponsored by LAN Associates, Hoboken, NJ; 9/11-5/12. This project involved the Mission Church Expansion. Ms. Garcia was responsible for meeting with engineers of LAN Associates at least once a month to discuss proposed layout possibilities for church parking lot; designing stormwater system; and presenting designs to LAN Associates and advisor. She had to consider the environment (wetlands), aesthetic integrity, zoning codes and geotechnical concerns while working on this project.

Stevens Institute of Technology, Hoboken, NJ; 1/11-5/11. Intern. Ms. Garcia was involved and design of an office building. She was responsible for selecting necessary beams, columns, and other structural components using the AISC and ASCE Manuals; and creating models of and analyzing the building using Autodesk software.

Stevens Institute of Technology, Hoboken, NJ; 8/08-5/12. As part of the event management staff, Ms. Garcia was responsible for setting up fields to ensure games started on time; broadcasting and taping sporting events for the online community and coaches; and recording game statistics for the coaches and administration.

Stevens Institute of Technology, Hoboken, NJ; 8/11-11/11. As a facilities department intern, Ms. Garcia organized New Jersey Dept. of Environmental Protection reimbursements for campus projects.

Education
BS/2012/Civil Engineering Technology; AAS/Civil Engineering Technology

Course Work
2010/OSHA 10 Hour Construction Industry
2008/OSHA 30 Hour Training
NYC & NYS Asbestos Handling Certification
G35 FONY Air Compressor Certification

Total Years Experience 15

Project Experience
NJDOT Region North Multiple Bridge Cleaning and Painting Projects, Interstate Bridge Painting Contract Route I-280, Contracts 1 ($8M) and 3 ($6M) , and Route I-80, Contract 2 ($7M), Essex County, NJ; 7/09-Present. Resident Engineer. The bridge painting projects involve the removal of existing old lead based paint and repainting with a Northeast Protective Coating Committee (NEPCOAT) approved paint system. The projects incorporate traffic control on a high speed highway, staging, and environmental (Lead Abatement) constrains unique to repainting on major urban bridges. The construction services contract involves the managing of four separate painting contracts with three independent painting contractors. Extensive coordination is done on a daily basis with each paint contractor including coordination with other trades working on the highways. Communication and coordination with local municipalities are addressed for structures that span local streets. The contractors are Allied Painting and ANKA Painting. Client: NJDOT.

Roosevelt Island Bridge, New York, NY; 6/08-7/09. Chief Inspector. Mr. Garcia is responsible for managing field inspection staff and performing quality control/assurance painting inspection tasks, lead paint and environmental issues. During non-painting activities responsibilities include oversight of structural steel removal and replacement including placement of new roadway concrete pre-cast panels. Assisted with material testing of concrete during concrete placement.

Multiple NYCDOT Painting Projects, NY; 5/03-5/08. Chief Inspector. Mr. Garcia was responsible for managing field inspection staff and scheduling for auditing multiple NYCDOT painting projects. Example projects include the Williamsburg Bridge, Manhattan Bridge, Queensboro Bridge, Brooklyn Bridge, Riker's Island Bridge, and multiple smaller bridges throughout the city. This project incorporates traffic control, staging, and environmental constrains unique to repainting on major urban bridges.

PANYNJ, Newark Liberty International Airport, Newark, NJ; 5/03-7/03. NACE Coating Inspector. Mr. Garcia provided part-time inspection for the internal lining of multiple fuel tanks at Newark Liberty International Airport. Mr. Garcia was responsible for all QA inspection tasks, communications with the Port Authority's consulting firm, and oversight of contractor holiday testing and coating repairs. He reported directly to the PANYNJ Materials Engineer.

Nelson Garcia
Resident Engineer

TBTA, Marine Parkway Gil Hodges Memorial Bridge, New York, NY; 4/02-2/03. NACE Coating Inspector/Chief Painting Inspector for the rehabilitation of the Marine Parkway Gil Hodges Memorial Bridge. Mr. Garcia was responsible for all QA inspection tasks, lead paint, and environmental issues. He reported directly to the Resident Engineer. He coordinated daily inspection tasks with the environmental oversight inspector(s) and was responsible for the inspection of multiple crews at the facility.

TBTA, Marine Parkway Gil Hodges Memorial Bridge, New York, NY; 3/00-3/02. Structural Steel/NACE Coating Inspector/Field Inspector for the rehabilitation of the Marine Parkway Gil Hodges Memorial Bridge. Duties included oversight of structural steel removal and replacement, and placement of new roadway including concrete overlay. Also, inspected the installation of new roadway drainage systems that included roadway scuppers, and new down spouts and storm drains. Other responsibilities included monthly progress payments, processing change orders and submittals of daily inspection reports.

Fuel Oil Storage Tank Projects; Onaco, Venezuela; 12/99-2/00. NACE Coating Inspector. Mr. Garcia was the SFD representative for the recoating and structural improvement of fuel oil storage tanks. He was responsible for surveying all tanks and inspecting all work in accordance with the specifications.

TBTA, Marine Parkway Gil Hodges Memorial Bridge, New York, NY; 7/99-12/99. NACE Coating Inspector/Field Inspector for the deck replacement and rehabilitation of the Marine Parkway Gil Hodges Memorial Bridge. This project incorporated multiple work trades in a congested construction site. All work was performed from barges on Jamaica Bay.

NYSTA, Multiple Bridge Cleaning and Painting Projects, Central Valley, NY; 5/99-6/99. NACE Coating Inspector. Inspected the cleaning and painting of 16 bridges in the New York Division. This project incorporated high volume/speed MPT work and frequent night work.

Massachusetts Highway Department, Colrian-Franklin Hill Road Bridge, Springfield, MA; 8/98-4/99. NACE Coating Inspector for the repainting of the Colrian-Franklin Hill Road Bridge. This project incorporated coordination with the Mass Highway Engineering Staff for the bridge rehabilitation.

City of Ossining, Water Storage Tank Projects, Ossining, NY; 5/98-7/98. Coating Inspector for the City of Ossining. Lead paint abatement and re-coating of water storage tank interior lining and exterior coatings.

William Godfrey
Senior Inspector

Professional Profile

Mr. Godfrey is a highly-competent construction inspector/office engineer with in-depth experience in bridge and highway construction and rehabilitation, drainage improvements, paving, utility relocation, and site development. He has in-depth knowledge of various drainage features and their construction. During various field assignments, he has obtained significant experience in the locating and collection of various data of drainage and other infrastructure appurtenances in the field.

Proposed Project Assignment
Civil/Structural Inspector

Registration/Certifications
2010/NICET IV

Education
BS/1975/Biology

Course Work
2014 - NYSDOT Field Inspection of Portland Cement Concrete
2014 - ACI Concrete Field Testing Refresher Course
2014 - NYCDOT Concrete Inpsetion, Testing and Acceptance Protocol
2008 - 10-Hour OSHA Training Course
2008 - 1-Hour Lead Awareness Training
2006 - ACI Concrete Field Testing Technician Grade Level I Trained
2000 - SSPC C-3
2000 - Traffic Work Zone Safety Training Course – GPI

Total Years Experience 36

Project Experience

Belt Parkway Bridges REI Services - Gerritsen Inlet Bridge, Brooklyn, NY; 4/14-Present. Senior Inspector. This $104.5-million project involves total replacement of Gerritsen Inlet Bridge on the Belt Parkway in the Borough of Brooklyn. The major work includes removal and disposal of main spans including concrete deck, steel girders, floor beams and stringers, approaches, concrete superstructure, closure walls, timber piles, concrete piers, pier caps, columns, abutments, wingwalls, street lighting, transformer room, transit ducks, steel conduits, navigation lights, and trees and vegetation. Mr. Godfrey's responsibilities include inspection of field operations – outfall construction: trenching, cofferdam dewatering, testing and driving timber piles, laying 42"DIP pipe for rain storm sewer, pipe encasement per DEP standard between drainage structures; bridge abutment reinforcement installation and computation of pay quantity, concrete testing, recording and computing pay quantity; emergency pothole repairs on the Belt Parkway; and inspecting building of approaches as per plan and specifications of the contract. Client: New York City Dept. of Transportation

Belt Parkway Bridges REI Services - Rockaway Parkway Bridge, Contract #HBK1091, Brooklyn, NY; 5/11-4/14. Senior Inspector. The project involved the demolition of the entire existing, four-span, multi-stringer bridge superstructure with existing steel cap beams, and superstructures, including the abutments, wingwalls, and pier columns and footings; installation of a new single-span replacement bridge consisting of a multi-stringer superstructure with reinforced concrete deck and superstructure, including reinforced concrete abutments and wing walls on new piled footings, and mechanically stabilized earth retaining walls; reconstruction of approach roadway and four entrance and exit ramps within the project limits; and installation of new concrete barrier, new bridge and guide railing, new lighting standards, new drainage systems including catch basins and drainage pipes, new overhead sign structures, and new swale BMP grading, drainage, and planting. Mr. Godfrey was responsible for the inspection of the demolition of the existing structure and installation of temporary supports; installation of precast drainage structures and connecting piping; structural excavation and backfill; installation of cast-in-place concrete piles; erection of form work for abutment structures; installation of reinforcing steel and placement of structural concrete and concrete pavement; electrical work for underdeck lighting; installation of timber guiderail; installation and removal of steel sheeting; excavation and grading for the Best Management Practices Area (part of the drainage work); and placement of structural steel (bridge girders) and bearings. Client: New York City Dept. of Transportation

Belt Parkway Bridges REI Services - Paerdegat Bridge, Contract#HBK1024, New York, NY; 5/10-5/11. Senior Inspector. This project involved the demolition of the entire 13-span, multi-stringer bridge superstructure and substructure including abutments, wingwalls, and the piers consisting of concrete pile columns to a minimum of 600 mm below the mud line. The replacement structures were new three-span and five-span bridges consisting of a Class HP reinforced concrete superstructure slab supported by high performance steel box girders and substructures including reinforced concrete abutments, wingwalls, and multi column piers on new pile foundation: Mr. Godfrey was responsible for inspection of sewer force main installation, drainage installation, embankment-in-place installation and removal, structure evacuation and rebar placement. He also inspected the preparation for and placement of structural concrete for the east and west abutments of the eastbound Belt Parkway, and inspected back filling operations. Client: New York City Dept. of Transportation

William Godfrey
Senior Inspector

Rehabilitation of the Brooklyn-Queens Expressway (I-278), Park Avenue Viaduct, D259766, Kings County, NY; 9/05-9/09. Mr. Godfrey served as senior inspector for this $138-million project that involved construction engineering and inspection for the widening, redecking and repainting of this viaduct with complex MPT on and below this heavily traveled structure. Rehabilitation of this high-volume major interstate urban highway/bridge included replacement of more than 400 bearings and 1,500 meters of bridge expansion joints. The project also included extensive coordination with agencies and local communities. Mr. Godfrey's responsibilities included inspection of demolition of reinforced concrete bridge decks and structural steel; installation of temporary deck supports; and installation of a temporary highway lighting system including poles, supports and wiring. Mr. Godfrey inspected steel work including removal and replacement of fascia girders, removal and replacement of expansion bearings, structural lifting operations, seismic retrofitting repairs and installation of the downspout system. Client: New York State Dept. of Transportation

Long Island Expressway - Grand Central Parkway to Van Dam Street Reconstruction Management, Contract #D257842, Queens County, NY; 10/01-11/02. Mr. Godfrey served as an inspector for this $221-million project which involved construction engineering and inspection services for the rehabilitation of the Long Island Expressway, from the Grand Central Parkway to the Queens-Midtown Viaduct, involving approximately seven miles of highway and 25 bridges. The project consisted of the removal and replacement of the asphalt roadway, installation of an Intelligent Transportation System, installation of retaining walls, noise barriers, reconstruction of bridge decking, painting of the ramps and bridge structures, landscaping, and MPT. Mr. Godfrey's responsibilities included inspection of: asphalt paving; demolition and construction of bridge abutments; bridge deck installation (rebar and concrete placement); new steel for bridges; installation of pre-cast and cast-in-place median barrier; bridge deck joint repairs; sign structure footings; concrete pavement repairs; installation of downspouts for scuppers; retaining wall construction; and concrete pavement placement on grade and on structure. Client: New York State Dept. of Transportation

Robert F. Kennedy (Triborough) Bridge Rehabilitation of Suspension Cables - TB-17, Queens, NY; 3/99-12/99. Mr. Godfrey served as an inspector for this $9.5-million rehabilitation of the main suspension cables. The project included installation of temporary suspended footwalks, removal of existing wire wrapping, cleaning, wedging, applying corrosion inhibitor, wire repair splicing and compaction of main cables, coating main cables with red lead paste, cable rewrapping and paint application along with cable band bolt tightening and replacement. Client: Triborough Bridge and Tunnel Authority

Roslyn Viaduct, Route 25A, Underdeck Netting, Contract #D257571, Roslyn, NY; 6/98-11/98. Mr. Godfrey served as senior inspector on this $1.4-million project that involved the removal of timber shield, removal of loose and delaminated concrete and the installation of underdeck safety netting over heavily traveled West Shore Road, Bryant Avenue and Hempstead Harbor. The project entailed the removal of an existing timber shield on the side spans of the 700-meter viaduct. The full length of the underside of the deck, including the main span over Hempstead Harbor, was sounded and structural repairs made as required. After completion of repairs, 14 bridge joints were blast cleaned and painted using moisture cured polyurethane paint. Upon completion of the painting operation, a safety netting system of approximately 13,000 m2 was installed. Mr. Godfrey's responsibilities included inspection of timber shield removal, and sounding of removal of delaminated concrete from the underside of the deck. Client: New York State Dept. of Transportation

Queens-Midtown Viaduct Inspection, Contract #D253037, Queens, NY; 1993-1995. Mr. Godfrey served as construction inspector on this $115-million project, an elevated section of the Long Island Expressway (I-495), which involved inspection of new steel work and the rehabilitation and repair of existing steel. The project involved construction inspection of structural steel and concrete deck replacements, removal of existing rocker expansion, sliding steel bearings, seismic pot bearings, bridge painting, steel bent repairs, drainage and environmental considerations. His responsibilities included inspection of ironworkers for removal and replacement of steel members, relocation of working platforms, installation of new steel members, repairs of existing steel, preparation of quantities for monthly estimates, and removal and replacement of bearings and replacement of tie-downs. Client: New York State Dept. of Transportation

Washner Guerrier
Inspector

Professional Profile
Mr. Guerrier has seven years of experience in construction inspection on various NYSDOT projects including bridge, highway, and MPT work.

Proposed Project Assignment
Civil/Structural Inspector

Education

2014 - NYC DOB 4-Hour Supported Scaffold (2018)
2014 - NYC DOB Confined Space Awareness

Total Years Experience 9

Project Experience

Bayonne Bridge Navigational Clearance Program (BBNCP) Construction Management, NY/NJ; 9/13-Present. Inspector. This project involves construction management services for the $743-million Bayonne Bridge Navigational Clearance Program (BBNCP). This extraordinarily complex, once-in-a-lifetime project will replace more than 5,000 feet of viaduct and re-frame the existing steel arch structure to accommodate a new roadway 65 feet above the existing roadway. Mr. Guerrier is part of the segmental approach span team and is responsible for inspection of pre-cast segmental pier and roadway installation. This work requires that specific systematic sequences are followed when installing segments, pulling tendons, post tensioning and performing epoxy and grouting operations. In addition, Mr. Guerrier is also responsible for inspection of installation of drainage structures for water, sanitary and storm water systems, installation of pre-cast MSE walls and cast-in-place concrete retaining walls. Client: Port Authority of NY & NJ

Belt Parkway Bridges REI Services - Rockaway Parkway Bridge, Contract #HBK1091, Brooklyn, NY; 8/12-9/13. Inspector. The project involved the demolition of the entire existing, four-span, multi-stringer bridge superstructure with existing steel cap beams, and superstructures, including the abutments, wingwalls, and pier columns and footings; installation of a new single-span replacement bridge consisting of a multi-stringer superstructure with reinforced concrete deck and superstructure, including reinforced concrete abutments and wing walls on new piled footings, and mechanically stabilized earth retaining walls; reconstruction of approach roadway and four entrance and exit ramps within the project limits; and installation of new concrete barrier, new bridge and guide railing, new lighting standards, new drainage systems including catch basins and drainage pipes, new overhead sign structures, and new swale BMP grading, drainage, and planting. Mr. Guerrier was responsible for overseeing all activity performed by the contractor to make sure that all work performed was in compliance with contract drawings and standard specifications. Client: New York City Dept. of Transportation

Belt Parkway Bridges REI Services - Paerdegat Bridge, Contract#HBK1024, New York, NY; 8/12-9/13. Inspector. This project involved the demolition of the entire 13-span, multi-stringer bridge superstructure and substructure including abutments, wingwalls, and the piers consisting of concrete pile columns to a minimum of 600 mm below the mud line. The replacement structures were new three-span and five-span bridges consisting of a Class HP reinforced concrete superstructure slab supported by high performance steel box girders and substructures including reinforced concrete abutments, wingwalls, and multi-column piers on new pile foundation. Mr. Guerrier was responsible for monitoring the contractor's activity to ensure that all work performed was in compliance with standard specifications and contract drawings. Client: New York City Dept. of Transportation

Maintenance Bridge Repair, D260401, Pin XM06.51, Various New York City Counties, NY; 1/08–11/10. Inspector. Mr. Guerrier inspected several activities including replacement of an existing armored deck joint with an armorless bridge joint system, repair and replacement of bearings and diaphragms of several bridge structures, repair of corroded steel bridge members, erection of steel structure to ensure correct placement, surface preparation, and the steel painting. Work also included inspection of concrete for pavement and for bridge deck. Mr. Guerrier inspected milling of existing asphalt pavement on approach slab and bridge deck and asphalt placement, repair of spalls and cracks at abutment backwall, parapet wall, pier column and sidewalks, and application of waterproof membrane to bridge deck and application of protective sealing to different bridge components such as pier columns, abutment backwall, and concrete barriers. He was also responsible for estimating quantities, review of payment requests, updating daily work assignment sheets and monthly book reports, as well as calculating actual construction quantities for payment purposes. Client: New York State Dept. of Transportation

Washner Guerrier
Inspector

Route 9A, When and Where II/Emergency Repair, Maintenance, D259986, Pin X759.82.323, NY; 4/07–12/07. Inspector. Mr. Guerrier was part of the team inspecting all repairs along Route 9A relating to damages caused by the attacks of September 11, 2001. This included inspection of partial and full depth pavement repair and recording of time and materials used by contractor for lamp posts/light pole retrofit. He was also responsible for estimating quantities, review of payment requests, updating daily work assignment sheets and monthly book reports, as well as calculating actual construction quantities for payment purposes. Client: New York State Dept. of Transportation

Route 9A, Bikeway/Walkway Improvements, D259652, Pin X024.43.321, NY; 4/06–12/06. Inspector. Mr. Guerrier was responsible for inspection of catch basin installation and drainage, as well as erection of low profile concrete barriers, asphalt paving, traffic light pole foundations, relocation of traffic light poles, installation of pipe rail fence, landscaping, and pavement striping. He was also responsible for estimating quantities, review of payment requests, updating daily work assignment sheets and monthly book reports, as well as calculating actual construction quantities for payment purposes. Client: New York State Dept. of Transportation

Route 9A, Intelligent Transportation System (ITS), D258617, Pin X024.39.321, NY; 4/05-12/05. Inspector. Mr. Guerrier assisted with the inspection of the installation of different ITS equipment, which included Video Message Sign (VMS), CCTV camera, Variable Image Detection System (VIDS) cable splicing and pull boxes, equipment installed at different HUB cabinets, erection of multiple sign structures, single and double cantilever signs, as well as inspection of torque test performed on bolts used for sign structures. He also inspected basic MPT to ensure that the work zone was safe and traffic lane closure was done properly. He was also responsible for estimating quantities, review of payment requests, updating daily work assignment sheets and monthly book reports, as well as calculating actual construction quantities for payment purposes. Client: New York State Dept. of Transportation

Project Experience
Brooklyn Bridge Rehabilitation of the Approach Spans and Ramps and Painting of the Entire Bridge, Contract 6, New York, NY; 2/14-Present. Inspector. This project involves construction management and inspection services for the $509-million rehabilitation of this Iconic National Landmark. The scope of work for the project includes replacement of approach roadway in Manhattan and Brooklyn over the arch blocks; rehabilitation of the Manhattan side ramp structures with widening and deck and bearing replacements; rehabilitation of the approach steel structures with full superstructure replacement of the York and Main Street structures and orthotropic deck installation at Franklin Square; seismic retrofitting of the main bridge, Franklin Square and ramp structures; painting of the ramp structures and suspended spans in their entirety; restoration of historic features. Mr. Haran is responsible for the inspection of the laboreres and irownworkers who are preparing for the girder removal at the main street bring along with the MURK paperwork that goes with the various operations. Client: New York City Dept. of Transportation

NYC Rapid Repairs, Breezy Point, NY; 1/13-2/14. Data Analyst. Mr. Haran analyzed and recorded data on various New York City rapid repair projects.

El Sol Contracting, Maspeth, NY; 6/11-9/11. Assistant Equipment Manager. Mr. Haran assisted the equipment manager in providing construction materials and resources to several multi-million dollar projects in New York City; scheduled and tracked equipment repairs, purchased and distributed construction materials; and organized the equipment yard.

HAKS Engineering, New York, NY; 6/10-8/10 and 7/09-9/09. Assistant Lab Technician. Mr. Haran assisted the lab technicians in the testing of concrete and soil for various New York State construction projects. He also maintained lab equipment, the testing area, and clients' paperwork.

Skills
Microsoft Office Programs

ALEEF HASSAN

Field Engineer

Mr. Hassan is an experienced construction and safety inspector who has provided construction inspection and field engineering duties on projects that have included facilities and infrastructure. He excels at managing contractor staff, supervising construction workers and inspecting site construction and materials for compliance with design specs, construction codes, and health and safety programs.

Key Qualifications

✓ Previous Site Inspection Experience

Education

- MS, Construction Management, University of Cincinnati
- BS, Civil Engineering, National Institute of Technology, India

Registrations

- OSHA 10 Hour
- American Concrete Institute (ACI) – Level I Technician

Memberships

- American Society of Civil Engineers
- American Concrete Institute

Software

- Primavera P5
- AutoCAD
- STAAD Pro
- MS Project
- MS Office

Publications

- *Reuse of Petroleum Contaminated Soil in Construction, Environmental Protection Agency Journal*

New York City Department of Design and Construction (NYCDDC) – Various Projects – New York, NY
Construction Inspector

Mr. Hassan coordinated the inspection of catch basins, water mains, sanitary and storm sewers, sidewalks and curbs, ramps, utility poles, and pavement restoration and construction projects in the boroughs of Manhattan and the Bronx. He supervised and inspected contractors to ensure work was in compliance with contract documents and specifications and issued deficiency reports on work not performed to specifications. Additionally, he enforced all safety guidelines outlined by OSHA and ensured that all workers had proper safety equipment and training.

Mr. Hassan supervised utility placement including Con Edison electric cables and boxes, gas main, transformers and telephone cables and surveyed various locations to identify the scope of work and prepared drawings for various agency approval.

In addition, Mr. Hassan prepared progress reports of construction performed and measured quantities of each item employed by various contractors for partial and full payment. He ensured on site quality control by performing tests on soils, concrete and other construction materials. He provided Maintenance and Protection of Traffic (MPT) plans for contractors and coordinated to ensure work zone traffic control and site safety.

Department of Civil Engineering, University of Cincinnati – United States Environmental Protection Agency (EPA) – Cincinnati, OH
Research Assistant

Performed research focused on analysis and design of pavements using contaminated soils, and collaborated with EPA scientists to analyze physical and chemical properties of contaminated soil and its possible reuse in pavement construction.

Research concluded that contaminated soil can replace a specific percentage of fine aggregates in asphalt concrete mix, satisfying various agency requirements. Study report submitted to Ohio Department of Transportation (ODOT), for further study and environmental impact assessment, and co-authored two journal papers which were submitted for publication.

Unitech, Ltd. – Various Projects – Bangalore, India
Civil Engineer

Responsible for managing laborers, equipment and materials ensuring that all resources were properly deployed to complete the work; he supervised and trained a crew of 50 workers and provided them project targets and benchmarks. He performed inspections of civil work including earthwork, reinforced concrete foundation, piling for foundations, concrete trenches, underground pipes and utilities. Prepared inspection reports and reported non-conformance to the senior management. Prepared and edited construction drawings using AutoCAD. Performed resource management and quantity estimation and assisted in project planning and scheduling.

MOHAMMAD IMRAN

Inspector

Mr. Imran is experienced at working as an inspector overseeing contractors that are performing concrete, earth works, demolition, abatement, and other general construction work. He is a certified ACI Level I Concrete Tester, Soil and Asbestos Inspector.

J. C. Broderick & Associates, Inc. – Nassau & Suffolk Counties, NY
Building Inspector

He has numerous years of experience leading teams in building inspections and construction site supervision. Four years of managerial experience in supervising team of inspectors and handling contract deadlines, budget limits, state and federal requirements. He conducted building inspections for Public School Districts throughout Nassau and Suffolk Counties for AHERA and Asbestos protocol. Worked extensively in almost every school district in Nassau and Suffolk counties and is experienced in concrete and soil testing.

Indus Construction Services, Inc. – New York, NY
Construction Project Manager

Lead Project manager for $200,000+ construction projects and Project Manager for numerous projects awarded by NYC OGS (Bayview Correctional Facility, NYU surgical center, Staten Island Psychiatric Ward). Vast experience in Bidding processes. Responsible for field and office supervision.

Over three year of full-time professional experience in procurement of goods, services and construction. Three years of administrative experience in contract negotiation and management.

Experience with city agencies such as SCA, DCAS, and DASNY.

John P. Ferrantello, Land Surveying Co. Garden City Park, NY
Draftsman/ Field Technician

Learned the details of drafting numerous types of surveys such as stake out surveys, surveys for the conveyance of title, building department surveys, cell sites, etc. Oversaw entire surveying and field work teams.

Project Experience

Replacement of the Queens Approach at the Bronx-Whitestone Bridge, BW-89C, Queens/Bronx, NY; 10/11-Present. Chief Inspector. The $110-million project involved construction management and inspection services required to support the construction work of Project BW-89C, Replacement of the Queens Approach at the Bronx-Whitestone Bridge. The replacement work included installation of mini-pile foundations, temporary support structures, temporary and permanent traffic barrier systems, fire stand pipe system, new lighting and communications; maintenance and protection of traffic; incidental lead abatement; and coordination with the community and other public agencies in this densely populated traffic corridor. Mr. Jones' responsibilities included the relocation of the children's play area within Francis Lewis Park. Both the client and the community were extremely pleased with the play area relocation. Client: Triborough Bridge and Tunnel Authority

Belt Parkway Tidal Wetlands Mitigation, Borough of Brooklyn, NY; 4/11-10/11. Office Engineer/Inspector. This was a tidal wetland mitigation project. The designated wetland mitigation area consisted mostly of unvegetated intertidal wetland that was littered with construction and demolition debris and other fill material which included, but was not limited to, concrete blocks, deteriorated bulkheads, a boat, and a concrete bunker. Patches of existing vegetated intertidal wetland consisting of Spartina Alterniflora were also found within the project site. Mr. Jones was responsible for all of the field work including daily inspection and reports; establishing filing system; logging and filing all correspondence; preparing quantities; review of contractor's quantities; preparation of monthly estimates; and preparation of meeting minutes. Client: New York City Dept. of Transportation

Verrazano-Narrows Bridge Rehabilitation of Structural Steel Repairs, VN-32, New York, NY; 1/09-4/11. Assistant Resident/Office Engineer. This project involved construction administration, on-site inspection, and testing and support services. The project included repair of deteriorated subfloorbeams, stringers, stiffener/connection plates, cracked/broken missing welded connection plates, reinforce deteriorated stringer top flange and remove and replace deteriorated bolts, rivets, and drainage piping. Mr. Jones was responsible for all of the field work including daily inspection and reports; establishing filing system; logging and filing all correspondence; preparing quantities; review of contractor's quantities; preparation of monthly estimates; and preparation of meeting minutes. Client: Triborough Bridge and Tunnel Authority

Replacement of Brooklyn Bridge Travelers, Contract #BRC270TA, Boroughs of Manhattan and Brooklyn, NY; 9/07-1/09. Chief Inspector. This project included the replacement of four movable maintenance platforms (travelers) with a state-of-the-art mechanical driven traveler system, the replacement of the traveler rails, hangers and connections, localized lead paint removal, and the replacement of the electrical system. Mr. Jones was responsible for the daily coordination of the contractor's activities on the bridge with NYCDOT and the coordination of personnel inspecting work to install temporary access platform, demolish and remove the existing travelers, install new traveler guide rail, conductor rail and four new travelers. Client: New York City Dept. of Transportation

Rehabilitation of the 2nd Avenue and 36th Street Overpass Bridges at the Queens Midtown Tunnel, QM-82, New York, NY; 7/06-9/07. Chief Inspector/Office Engineer. This project involved providing professional construction management services for the rehabilitation of the 2nd Avenue and 36th Street Overpasses. Work included a variety of different tasks including concrete repairs, cleaning and painting of structural steel, installing new underdeck lighting, new netting, and asbestos abatement. Mr. Jones' responsibilities included coordinating all field activities and assigning inspection staff responsibilities, reviewing contractor submittals and shop drawings, participating in

progress meetings, monitoring work progress and estimating contract quantities, and assisting with office documentation - including preparing Meeting Minutes, developing and updating correspondence and submittal logs, and reviewing Inspector Daily Reports (IDRS). In addition, he coordinated all field activities and provided inspection oversight for Contract GFM-435 Work Order 41 - Vertical Access at the Queens Midtown Tunnel from D Post to C Post - including relocation of the TBTA Police booth and associated electrical services, and installation of a new access staircase. Client: Triborough Bridge and Tunnel Authority

Bronx-Whitestone Bridge Deck Replacement - BW-82, Bronx, NY; 1/05-7/06. Senior Inspector. This $150-million project involved the reconstruction of the suspended spans deck with an orthotropic steel deck. The project also involved the installation of new maintenance travelers, electrical and communications systems, fire protection system and inspection platforms. A temporary movable barrier was also utilized to provide for efficient traffic flow during the eight reconstruction stages scheduled for this project. Mr. Jones' responsibilities included the inspection of Maintenance and protection of traffic (MPT); demolition of bridge deck and existing steel truss; welding for the installation of a new orthotropic deck; installation of new bridge drainage system; surface preparation and painting of structural steel; erection of overhead sign gantries; installation of finger dam expansion joints; removal and installation of new steel divider barriers; replacement of girder pins at the anchorages; and erection of steel framing at the towers. Client: Triborough Bridge and Tunnel Authority

Long Island Expressway/Cross Island Parkway, Exits 29-32, Queens, NY; 8/00-12/04. Team Leader. This project involved construction inspection services for the $147-million rehabilitation of the Long Island Expressway/Cross Island Parkway (LIE/CIP) interchange. Mr. Jones' responsibilities included the direct oversight of the reconstruction of two local bridges over the LIE (Marathon and Douglaston Parkway Bridges), and one LIE mainline bridge over Little Neck Parkway. He was responsible for the inspection of all foundation piling, substructure forming and concreting operations, superstructure steel erection, deck construction and all other ancillary tasks such as parapet construction, fencing, etc. Mr. Jones also served as the team leader for all night work operations including extensive oversight of all nighttime MPT operations. He was also the lead inspector for the night work asphalt paving on the LIE and Cross Island Parkway. This included the inspection oversight of the milling and removal of the existing asphalt overlays, concrete pavement repairs, and placement of SuperPave asphalt paving. Mr. Jones was responsible for the work associated with the dredging of Alley Pond and the landscaping work for the pond. This included the installation of all aquatic and wetland plant material, and ensuring compliance with the NYSDEC water quality requirements during these construction efforts. Client: New York State Dept. of Transportation

Robert F. Kennedy (Triborough) Bridge Deck Replacement of the Randall's Island Junction Structure, Phase I - TB-63, New York, NY; 4/99-8/00. Senior Inspector. This $138-million project was actually comprised of two major reconstruction efforts: the complete replacement of the Randall's Island Junction Structure, and the redecking of the Bronx Approach. Mr. Jones' responsibilities included establishing and maintaining office files including shop drawings and correspondence logs; demolition of existing structures: curtain walls, grade beams, and pilasters; placement of concrete for column encasements, grade beams, cap beams, abutment walls and pilasters; MPT; and bridge lane closing and complete stoppage of traffic on and off bound. Additional duties included placement of asphalt overlay, removal of existing deck, placement of precast units - deck and pedestals, placement of bearings, and removal and replacement of bridge deck lighting. Client: Triborough Bridge and Tunnel Authority

Robert F. Kennedy (Triborough) Bridge Queens Approach Concrete Structure Deck Replacement - TB-13, Queens, NY; 1996-4/99. Senior Inspector. This project involved construction inspection and support services for the Queens approach concrete structure deck replacement at the Robert F. Kennedy (Triborough) Bridge. Mr. Jones' responsibilities included establishing and maintaining office files including shop drawings and correspondence logs; demolition of existing structures: curtain walls, grade beams, and pilasters; placement of concrete for column encasements, grade beams, cap beams, abutment walls and pilasters; MPT; and bridge lane closing and complete stoppage of traffic on and off bound. Further duties included placement of asphalt overlay, removal of existing deck, placement of precast units - deck and pedestals, placement of bearings, and removal and replacement of bridge deck lighting. Client: Triborough Bridge and Tunnel Authority

Darryl Kemp
Senior Inspector

Professional Profile
Mr. Kemp is a construction inspector with many years of experience inspecting major bridge and highway rehabilitation projects throughout the Long Island/New York metropolitan area involving concrete and asphalt placement and testing, as well as structural steel erection.

Project Experience

Bayonne Bridge Navigational Clearance Program (BBNCP) Construction Management, NY/NJ; 10/13-Present. Senior Inspector. This project involves construction management services for the $743-million Bayonne Bridge Navigational Clearance Program (BBNCP). This extraordinarily complex, once-in-a-lifetime project will replace more than 5,000 feet of viaduct and re-frame the existing steel arch structure to accommodate a new roadway 65 feet above the existing roadway. Mr. Kemp is responsible for inspection of existing structural steel fascia girder and redundancy girder removals, inspection of new structural steel arch strenghtening plate and tower steel installations as well as assisting with night time full closures of Bayonne Bridge. Client: Port Authority of NY & NJ

Manhattan Bridge Rehabilitation of Cables and Suspenders, Contract 14, #BRC156R, New York, NY; 6/10-10/13. Mr. Kemp served s senior inspector on this $149-million project which involved the unwrapping and rewrapping of cables; replacement of suspenders; replacement of necklace lighting messenger cables and cable hand ropes; installation of new access platforms to existing tower platforms; reversal of lower roadway and operation of HOV lane and replacement of multi-rotational bearings at the Towers; replacement of light poles and luminaries on South upper roadway; replacement of lane control radar on South upper roadway; and retrofit of track stringers and diaphragm connections and other miscellaneous work. Mr. Kemp's responsibilities on this project consisted of inspection of unwrapping and rewrapping of main cables, replacement of suspenders, replacement and retensioning of cable band bolts and replacement of existing handrope system. He was also responsible for performing inspection on installation of temporary work platforms, truss vertical repairs and other miscellaneous work. Client: New York City Dept. of Transportation

Alexander Hamilton Bridge and Highbridge Interchange Ramp Rehabilitation, Contract D260888, New York, NY; 6/09-6/10. Senior Inspector. This $ 475-million project consisted of replacement of bridges; replacement and widening of deck slab; elimination and replacement of deck joints; rehabilitation of steel superstructure; rehabilitation and resurfacing on-grade roadways; replacement of lighting system; rehabilitation of drainage systems and overhead sign structures; replacement and installation of new ITS system and steel superstructure painting. Mr. Kemp's specific duties included inspection of existing superstructure demolition, existing steel removal, structural steel erection, installation of temporary structures, driving of cast in place concrete piles, placement of structural concrete, drainage installation, asphalt placement and structural steel painting. Client: New York State Dept. of Transportation

Queensboro Bridge Lead Paint Removal and Protective Coating, Contract BRC231P, New York, NY; 4/05-5/09. Lead Structural Inspector. This $170-million project involved the erection of containment structures, abrasive blasting and lead paint removal for the entire East River Bridge and the application of a three-coat painting system. Mr. Kemp's specific responsibilities included inspection of steel repairs to replace existing struts, gusset plates, batten plates and lacing bars, installation of platforms, scaffolding and outriggers for various containment systems, cataloging of shop drawings for various containment systems and monthly inspections of temporary structures installed. His responsibilities also included maintenance and protection of traffic and electrical repairs. Client: New York City Dept. of Transportation

Barclay Street Reconstruction, Contract HWMWTCA1E, New York, NY; 10/04-4/05. Senior Inspector. Mr. Kemp's specific responsibilities included inspection of concrete roadbase placements, inspection of asphalt paving, concrete field testing and sampling, coordination of existing utility relocation with Con Ed, DEP, ECS and other agencies as well as assisting the office engineer with processing change orders. Client: New York City Dept. of Design and Construction

Darryl Kemp
Senior Inspector

Long Island Expressway Capacity Improvements, Exits 37-40, Contract D258873, NY; 2/03-10/04. Senior Inspector. This $122-million project consisted of replacement and rehabilitation of five I-495 bridges, widening and resurfacing of EB and WB mainline roadway, construction of retaining walls and noise barrier walls. Mr. Kemp's specific responsibilities included supervision of nighttime MPT operations for five-mile daily mainline closures, inspection of bridge demolition and reconstruction, concrete placements and testing, concrete pavement repairs, asphalt paving, drainage removals and installations, sign structure installation and noise barrier wall construction. Client: New York State Dept. of Transportation

Long Island Expressway Rehabilitation, Contract #D257842, Queens County, NY; 5/00-11/02. Senior Inspector. This $221-million project consisted of rehabilitation of 27 bridges including repair or replacement of deck, superstructure, and footings, resurfacing or replacement of asphalt and concrete pavement, upgrade drainage and lighting system, clean and paint existing steel superstructures, installation of new (ITS) Intelligent Transportation System and landscaping. Mr. Kemp's specific responsibilities included inspection of structural steel removal and erection of new structural steel, demolition and reconstruction of bridge decks, cast in place concrete and H-pile driving, anchor tieback system installation and testing for temporary steel sheet piling, inspection of structural steel painting, monitoring abrasive blasting using a type "A" containment, slip form concrete placement and testing, placement of superpave asphalt, construction of retaining walls and noise walls, overhead sign structure installations and maintenance and protection of traffic. Client: New York State Dept. of Transportation

Robert F. Kennedy (Triborough) Bridge Rehabilitation of Suspension Cables - TB-17, Queens, NY; 1/99-12/99. Mr. Kemp served as senior inspector for this $8.9-million rehabilitation of the main suspension cables. The project included installation of temporary suspended footwalk, removal and replacement of main cable wire wrapping, repairing and splicing of individual main cable wires and application of three-coat paint system. His specific responsibilities included inspection of installation and removal of temporary suspended footwalks beneath main cables, removal and replacement of existing main cable wire wrapping, wedging open of main cables for application of corrosion inhibitor oil, splicing and repairing damaged individual main cable wires, compaction of main cables before rewrapping, tensioning of cable band bolts and application of three-coat painting system to main cables. Duties also included inspection of concrete and structural steel flag repairs. Client: Triborough Bridge and Tunnel Authority

Brooklyn-Queens Expressway, I-278, Painting and Cleaning of Park Avenue Viaduct, Contract #D, Kings County, NY; 6/98-1/99. Senior Inspector. This $2.5-million project involved Class B containment setup for power washing, power tool cleaning and overcoating of structural steel members. His specific responsibilities included inspections on installation of various containment and air monitoring systems; power washing existing structure, power tool cleaning and overcoating structural steel and coordination of maintenance and protection of traffic. Client: New York State Dept. of Transportation

Williamsburg Bridge South Roadways Reconstruction, Contract 5, #BRC253BAA, New York NY; 7/95-7/98. Senior Inspector. Mr. Kemp's responsibilities included inspection of installation of galvanized steel inspection platforms, removal of existing structural steel, drilling of bored in piles with seismic casings, demolition of existing DOS buildings beneath approach, removal and resetting of stonework around anchorage enclosures, concrete placement and testing and asphalt paving. Client: New York City Dept. of Transportation

Williamsburg Bridge Main Cable Rehabilitation, Contract 4, #BRC253A, New York, NY; 11/91-7/95. Inspector. Mr. Kemp's responsibilities included inspection of main cable wedging, oiling and compacting, removal and replacement of existing cable bands, removal and replacement of wire rope suspender, removal of existing wire wrapping, installation of new wire wrapping and neoprene wrapping systems, demolition and replacement of internal cable enclosures, stonework removal and replacement, concrete placement and testing, asphalt paving, and MPT. Client: New York City Dept. of Transportation

Jackie Robinson/Interborough Parkway Inspection, Contract #D252310, Queens, NY; 6/90-11/91. Inspector. Mr. Kemp's responsibilities included inspection of all electrical operations, concrete placement and testing, drainage removals and installations, compaction and sieve analyses testing, asphalt paving and maintenance and protection of traffic coordination. Client: New York State Dept. of Transportation

Replacement of the Queens Approach at the Bronx-Whitestone Bridge, BW-89C, Queens/Bronx, NY; 11/12-Present. Chief Inspector. The $110-million project involves construction management and inspection services required to support the construction work of Project BW-89C, Replacement of the Queens Approach at the Bronx-Whitestone Bridge. The replacement work includes installation of mini-pile foundations, temporary support structures, temporary and permanent traffic barrier systems, fire stand pipe system, new lighting and communications; maintenance and protection of traffic; incidental lead abatement; and coordination with the community and other public agencies in this densely populated traffic corridor. Mr. Lageyre's responsibilities on the project include inspection of Queens Approach steel girders and Queens Approach emergency steel repairs which includes erection, installation and welding of new structural steel. His responsibilities include, but are not limited to, visual inspection of new welding productions, bolting connections and testing of field-installed high strength bolts, reading and interpretation of blue prints and specifications, payment calculations and interaction with contractor's and consulting engineers in finding solutions to the new field condition changes during the mentioned operations. He also observes the on-site safety and submits the daily inspection report and maintains direct contact with the resident engineer and staff. Client: Triborough Bridge and Tunnel Authority

Bronx-Whitestone Bridge Bronx/Queens Approach, BW-89/WBM-342, Bronx, NY; 6/09-11/12. Senior Inspector. This $192-million project involved the staged removal and replacement of the Bronx Approach superstructure and substructure from the Bronx Toll Plaza to the Bronx Anchorage. Work included the installation of excavation support systems, mini-pile foundations and temporary steel support systems to support the existing structure during the staged construction. During the construction of the substructure, there were massive concrete placements for concrete footings and piers. For the duration of the project, traffic on the bridge was maintained with five lanes open to traffic. During the staged construction, work was staged demolition of the existing roadway, installation of multiple continuous steel girders, placement of a staged composite concrete deck, installation of permanent concrete barrier and installation of permanent street lighting. Other work items on the project included new utility systems at the Bronx Toll Plaza, installation of new salt storage dome building and miscellaneous steel and concrete deck repair on the Queens Approach structure. Mr. Lageyre's responsibilities on the project included inspection of Bronx Approach steel girders and Queens Approach emergency steel repairs which included erection, installation and welding of new structural steel. His responsibilities included, but were not limited to, visual inspection of new welding productions, bolting connections and testing of field-installed High Strength Bolts, reading and interpretation of blue prints and specifications, payment calculations and interaction with contractor's and consulting engineers in finding solutions to the new field condition changes during the mentioned operations. He also observed the on-site safety and submitted the daily inspection report and maintained direct contact with the resident engineer and staff. Client: Triborough Bridge and Tunnel Authority

Replacement of Brooklyn Bridge Travelers, Contract #BRC270TA, Boroughs of Manhattan and Brooklyn, NY; 8/07-6/09. Senior Inspector. This project included the replacement of four movable maintenance platforms (travelers) with a state-of-the-art mechanical driven traveler system, the replacement of the traveler rails, hangers and connections, localized lead paint removal, and the replacement of the electrical system. Mr. Lageyre's responsibilities included inspection of temporary platform installation, maintenance and protection of traffic (MPT), lead paint removal, structural steel removal, painting inspection, high strength fastener tensioning tests, and new structural steel erection and installation. He was also involved with reading and understanding blue prints and specifications and their application and payment computation of contract work. Client: New York City Dept. of Transportation

Gabriel Lageyre
Chief Inspector

Williamsburg Bridge Reconstruction of Miscellaneous Rehabilitation of the Main Bridge, Contract 8, #BRC253CCA, New York, NY; 2003-8/07. Senior Inspector. This $280-million project involved the construction engineering and inspection for the rehabilitation of the main bridge. The scope of work for the project included abrasive blasting and painting of main bridge stiffening trusses, rehabilitation and strengthening of the main towers, rehabilitation of the intermediate towers and installation of seismic shear keys, main cable saddle repair and restraint, rehabilitation of wind tongue and wind chord, main tower and intermediate tower bearing installation, main tower leg removal and replacement, stiffening truss top and bottom chord rehabilitation, traveling maintenance platform installation, re-profiling of main span vertical curve by incrementally adjusting suspender cables, modification of orthotropic footwalk deck expansion joints, waterproofing and surfacing of orthotropic roadway deck, installation of ornamental balconies and electroliers, integration of intelligent transportation operating system, seismic retrofit of the intermediate towers, installation of contraflow barrier and erection of barrier transfer machine facility, including augured concrete piles. Mr. Lageyre's responsibilities included the overview of the total coating replacement which included lead paint removal by abrasive blasting, application of a four-coat paint system, and erection of a class 1A containment system; the overview of the stiffening of the intermediate towers which support the end span of the bridge; main and intermediate tower steel replacement which includes bracing, stiffeners and new reinforcing steel erection; bottom chord rehabilitation at end span of main bridge, including the removal of the existing bottom flange of chord steel and replacing with new reinforcement; field testing as well as interpretation and application to the field drawing resolution; rehabilitation of stiffening truss top chord; demolition of existing traveler rail system; tensioning of main cable band bolts; wire rope suspenders replacement and adjustment; removal and replacement of main cable neoprene wrapping system; and structural concrete of column fifth pedestal of Manhattan Main Tower. Mr. Lageyre was also responsible for supporting and supervising the MPT on the Bridge and local areas during the construction works for the rehabilitation of the main span bridge. Client: New York City Dept. of Transportation

Williamsburg Bridge North Roadways Reconstruction, Contract 7, #BRC253CA, New York, NY; 2003. Senior Inspector. This $248-million project involved the construction engineering and inspection for the reconstruction of the north inner and outer roadways. Client: New York City Dept. of Transportation

Reconstruction of Williamsburg Bridge, Contract 7, North Outer and Inner Roadways, New York, NY; 2001-2003. Mr. Lageyre served as a construction inspector on this project that included structural steel and orthotropic deck remodelation including asphalt, sandblasting, painting, welding inspection, field testing as well as interpretation and application to the field of drawings resolution. Client: New York City Dept. of Transportation

Continental Airline Global Gateway Project at Newark International Airport, Terminal C, Newark, NJ; 1998-2001. Mr. Lageyre served as a construction inspector responsible for extension of landing area; monorail; four new buildings; airside corridor; and roadway to parking lot. Client: Port Authority of NY & NJ

While with another firm, Mr. Lageyre was responsible for visual inspection of weld and stability of structural steel specifying the appropriate non-destructive examination N.D.E. methods; 1998-2001.

Other experience includes:

- Fabrication shop for welding restoration of components in power plants (Havana, Cuba).
- Welding engineer - design and operation of welding lines for manufacturing of welded products and repairing of welded parts of power plant.
- Welding material control and assurance responsibility according to applicable standards.
- Nuclear Power Plant (Cienfuegos, Cuba).
- Design of welded construction of power generation.
- Facilities and application of welding facilities that fabricate welded products. This includes ferrous and non-ferrous materials, carbon steel, alloy and stainless steel.

Ken Leo
Inspector

Professional Profile
Mr. Leo is an inspector with experience on New York City roadways and bridge rehabilitation projects.

Project Experience
2011-2014 Port Authority On-Call Construction Management Services – Lincoln/Holland Tunnel, New York, NY; 9/11-Present. Inspector. This project involves the rehabilitation of the concrete catwalk at the Holland Tunnel and maintenance pavement repairs and bus ramps deck replacement at the Lincoln Tunnel. Mr. Leo's responsibilities include emergency concrete repairs on vent shafts in vent buildings, under deck of roadways, beams, and columns; placement of concrete on roadway and column/beam encasements; retexturing of roadways; striping roadways; hydrostatic testing of domestic water and fire stand pipe back flow preventers; and overseeing environmental contractors and inspectors for asbestos and lead abatement. Mr. Leo has also sealed ring joints with lead to prevent water intrusion in the Lincoln Tunnel. The lead was then encased with concrete. Client: Port Authority of NY & NJ

Proposed Project Assignment
Civil/Structural Inspector

Registration/Certifications
2013/ACI Concrete Construction Special Inspector
2013/NICET III
2001/ACI Concrete Field Technician Grade 1

Course Work
2012 - MTA/Long Island Rail Road Track Safety
2007 - 10-Hour OSHA Training Course
2003 - American Welding Society - Fundamentals of Welding Quality Management
2012 - Amtrak Track Safety
Scaffold Safety Training

Total Years Experience 16

2006-2010 Port Authority On-Call Construction Management Services - Lincoln/Holland Tunnel, New York, NY; 6/11-1/12. Inspector. This project involved the rehabilitation of the concrete catwalk at the Holland Tunnel and maintenance pavement repairs and bus ramps deck replacement at the Lincoln Tunnel. Mr. Leo was involved with maintenance and protection of traffic, installation of CCTV and video analytics system, demo of existing car railing, sounding and repairing spalled concrete for rehabilitation of concrete catwalk. Client: Port Authority of NY & NJ

2006-2010 Port Authority On-Call Construction Management Services - Port Authority Bus Terminal - Structural Modifications, New York, NY; 3/09-3/11. Inspector. This $50-million project involved providing the required strengthening to maintain structural integrity of the Port Authority Bus Terminal in New York City during a seismic event. Mr. Leo was responsible for removal/relocation of domestic water, fire protection, steam and drain systems; air/hydrostatic testing of domestic water, fire protection, steam and drain systems; installation of bolsters, transfer connections, cross braces, fir truss, chevron braces for seismic retrofit; removal/relocation of electrical conduits; hydrofreezing existing sprinkler piping and fire stand pipe prior to relocation in preparation of steel modifications; application of shotcrete; placement of terrazzo floor; installation of expansion joints; application of waterproofing membrane; installation of barrier gates; and sounding concrete. Client: Port Authority of NY & NJ

2002-2006 Port Authority On-Call Construction Management Services - Port Authority Bus Terminal Ramps Reconstruction, New York, NY; 6/02-3/09. Inspector. This $50-million project focused on the rebuilding and rehabilitation of the ramps connecting the Lincoln Tunnel with the Port Authority Bus Terminal. Mr. Leo's responsibilities included quality assurance inspection of all construction activities including demolition of existing structures, replacement of sub- and superstructure elements. His responsibilities also included removal of roadway deck; installation of pre-cast roadway deck; placement of latex-modified concrete; installation of shear studs; installation of parapet walls and guide rails; replacement and rehabilitation of roadway deck heating system; installation of debris/vertical shielding; installation of concrete masonry unit; application of shotcrete; application of fire proofing membrane; demolition of concrete masonry unit facade; checking alignment and

installation of multi rotational bearings; directing x-ray technician to check T.I.G. (Tungsten Inner Gas) weld on stainless steel pipe connection at various locations and submitting results to A.R.E. and directing contractor to repair deficiencies; maintenance of traffic; and installation of conduit and conductors. He also inspected installation of granite facade and titanium/stainless steel hybrid facade; removal/installation of underdeck lighting; removal/relocation of domestic water, fire protection, steam and drain systems; air and hydrostatic testing of domestic water, fire protection, steam and drain systems; installation of bolsters, transfer connections and cross braces for seismic retrofit. Client: Port Authority of NY & NJ

Williamsburg Bridge North Roadways Reconstruction, Contract 7, #BRC253CA, New York, NY; 1/01-6/02. Inspector. This $248-million project involved the construction engineering and inspection for the reconstruction of the north inner and outer roadways. Mr. Leo's responsibilities included orthotropic deck fit-up and installation forsaw; maintaining temporary protective shielding system; removal of floorbeam, deck, railing, stringers; installation of vertical protective netting, installation of barriers, also made steel payments; floorbeam, stringer, and concrete grid deck removal on main span; N.O.R. orthotropic deck shot blasting, Stirling Lloyd waterproofing membrane application, Trinidad asphalt placement, monitoring shrinkage and warpage at orthotropic deck submerged arc welded joints; paint application of new steel connections; existing floorbeam web and lateral brace connections; north truss bottom chord repairs; testing concrete with slump and air tests; and torque wrench calibration and torquing. Client: New York City Dept. of Transportation

Mr. Leo worked with another firm where he performed quantity takeoffs for bids; prepared invoices and purchase orders; estimated and provided materials daily; had hands-on experience with plumbing, painting and sheetrock. Also has the ability to read/interpret blueprints. 3/98-1/01.

William Leong
Inspector

Professional Profile
Mr. Leong is an inspector with the following experience.

Proposed Project Assignment
Civil/Structural Inspector

Registration/Certifications
2009/NICET III

Education
AAS/1998/Business Management

Course Work
2008 - 10-Hour OSHA Training Course, #001872366
2007 - MTA-NYCT, Track Safety

Total Years Experience 12

Project Experience
REI for the Rehabilitation of High Bridge, Boroughs of Manhattan and Bronx, NY; 3/13-Present. Inspector. This project involves rehabilitation of the masonry arch spans, steel arch span (including deleading and painting), brick arch deck, and brick walkway; stabilization and conservation of the aqueduct pipe; providing barrier-free access and safety for pedestrian and wheeled users; rehabilitation of historic railings and walkway lighting posts; providing architectural lighting (as funding allows); and providing a visitor information system consisting of way finding signage and aqueduct interpretative signage. Mr. Leong's responsibilities include clearing, grubbing, and tree protection; the erection of scaffolding, shielding deck and mast climber system; historic brick removal; stone masonry cleaning and removal and bridge brick repairs; removal of historic railing; waterproofing applications; concrete testing, placement and curing measures; and excavation and backfilling. Client: New York City Dept. of Design & Construction

Brooklyn Bridge Rehabilitation of the Approach Spans and Ramps and Painting of the Entire Bridge, Contract 6, New York, NY; 2/12-3/13. Inspector. This project involved construction management and inspection services for the $500-million rehabilitation of this Iconic National Landmark. The scope of work for the project included replacement of approach roadway in Manhattan and Brooklyn over the arch blocks; rehabilitation of the Manhattan side ramp structures with widening and deck and bearing replacements; rehabilitation of the approach steel structures with full superstructure replacement of the York and Main Street structures and orthotropic deck installation at Franklin Square; seismic retrofitting of the main bridge, Franklin Square and ramp structures; painting of the ramp structures and suspended spans in their entirety; restoration of historic features. Mr. Leong's responsibilities included overseeing operations consisting of demolition and removal of concrete slabs, installation of fascia beams, steel beam preparation and flange repairs, and installation of concrete panels and super slabs. He was also involved with the removal, marking, and storage of stones to be restored. Mr. Leong also coordinated roadway reversals and sign installation for lane closures and reversals; ensured concrete curing measures were implemented properly and that asphalt overlay was placed within specifications; and ensured pavement markings were applied properly. Client: New York City Dept. of Transportation

Williamsburg Bridge Reconstruction of Miscellaneous Rehabilitation of the Main Bridge, Contract 8, #BRC253CCA, New York, NY; 8/07-2/12. Inspector. This $280-million project involved the construction engineering and inspection for the rehabilitation of the main bridge. The scope of work for the project included abrasive blasting and painting of main bridge stiffening trusses, rehabilitation and strengthening of the main towers, rehabilitation of the intermediate towers and installation of seismic shear keys, main cable saddle repair and restraint, rehabilitation of wind tongue and wind chord, main tower and intermediate tower bearing installation, main tower leg removal and replacement, stiffening truss top and bottom chord rehabilitation, traveling maintenance platform installation, re-profiling of main span vertical curve by incrementally adjusting suspender cables, modification of orthotropic footwalk deck expansion joints, waterproofing and surfacing of orthotropic roadway deck, installation of ornamental balconies and electroliers, integration of intelligent transportation operating system, seismic retrofit of the intermediate towers, installation of contraflow barrier and erection of barrier transfer machine facility, including augured concrete piles. Mr. Leong's responsibilities included calibration

of torque wrench; torque tested miscellaneous steel connections; surface preparation and painting of miscellaneous steel connections; checking for proper humidity, dew point, surface temperatures and ambient conditions prior to painting; assisting with seismic retrofit concrete testing such as slump tests and casting of test cylinders; checking for proper consolidation of seismic pier walls and caps; checking rebar layout for seismic pier walls/caps; and repointing of comfort station granite joints.

He also ensured all construction signs and traffic control devices were in place per plans; coordinated lane closures with traffic agents; ensured pavement markings were applied properly; ensured damaged attenuators and sand drums were replaced properly; steel inspection of floorbeam web repairs truss diagonal repairs, wind chord lateral brace repairs and intermediate tower plate repairs; ensured that all eight bearings at the intermediate towers were replaced per plans and specifications; checked alignment of all bearings; ensured that jacking forces were not exceeded; ensured all lifting procedures were followed, inspected the replacement of main tower wind tongues; and ensured that Brooklyn and Manhattan anchorage maintenance platforms were installed per plans and specifications. Client: New York City Dept. of Transportation

Commercial and Residential Renovation Projects, Various Locations; NY; 1/03-8/07. As office/field assistant, Mr. Leong assisted with estimating commercial and residential renovation projects; determined and provided daily material/equipment needs; scheduled manpower on a daily basis; ensured projects were completed as scheduled; provided hands-on construction experience.

As an information technology intern, Mr. Leong managed and monitored networking essentials NT Server, NT Workstations, Microsoft Windows 95/98/2000/ME/XP MS DOS; software and hardware configuration, maintenance, troubleshooting and support; 5/02-10/02

Computer Skills

Project Experience
Office Engineer Positions for Various Superstorm Sandy Reconstruction Projects, New York, NY; 5/13-Present. Office Engineer. The project involves efficiently managing the records of the emergency contracts to repair the damage caused by Superstorm Sandy. Mr. MacKenzie is responsible for keeping minutes of progress meetings between the agency and the contractor (assuming meetings will be held in-house); filing approved materials for use on contracts; logging proposed daily work locations submitted by the contractor; keeping all correspondence between all interested parties; keeping field engineering force summary (inspectors attendance); keeping diary of their own work; logging inspectors' IR into summary diary; maintaining inspectors' field sheets and daily reports; filing all necessary paperwork in job files; producing all reports to related contract management and operations; and performing all other paperwork functions as is found to be necessary. Client: New York City Dept. of Transportation

Bryant Drive-Harvard Lane Area Construction Inspection, Phase I, Hempstead, NY; 7/12-1/13. Resident Engineer. This project involved construction inspection and support services for this $1-million construction project. The project involved storm water drainage and road improvements of approximately 4,000 lin ft of multiple residential roadways in Seaford, the Town of Hempstead. Mr. Mackenzie provided full-time inspection and was responsible for assuring the contractor's substantial compliance with all contract document requirements. Mr. Mackenzie was responsible for preparation of daily inspection reports which included recording all items of work performed by the contractor, and their respective quantities of work. He was also responsible for preparation of monthly payment requisitions and acted as liaison between the contractor, residents, and town. Client: Town of Hempstead

Nassau County Traffic Signal Inspections, Nassau County, NY; 8/09-5/12. Senior Inspector. These projects involved installation of traffic signals at new locations and replacement of span wire traffic signals and dated controllers at existing locations. Installation of these new mast arm traffic signals included pouring concrete pole foundations; setting poles for mast arms, push buttons and pedestrian signal heads; installing pull boxes; running underground conduit interconnecting pull boxes and pole foundations; replacing curb, sidewalk and asphalt roadway; installing vehicle detector traffic loops; installing traffic signal heads, push buttons and pedestrian signal heads; pulling conductor cables thru-out intersection into new controller cabinet; replacement of vehicle detector traffic loops at NCDPW asphalt re-surfacing projects. He was responsible for mark-out of traffic signal conduit on location prior to various utilities working in area, and installation of wireless vehicle detection sensors for the Red Light Camera project. Routine inspection of operation and condition of existing traffic signals performed to monitor condition and performance of equipment and roadway. Along with the physical inspection routines, reporting and documentation, daily logs, inspection reports, measurement of item quantities, coordination of task and quality assurance are also maintained. Client: Nassau County Dept. of Public Works

Nassau County On-Call Improvement of Lido Boulevard, Lido Beach, NY; 9/08-12/08. Senior Inspector. The project involved construction inspection services to construct a raised median along Lido Boulevard, for a total length of 1.13 miles. This $3.6-million project involved saw cut excavation of the existing center turn lane and installing mountable concrete curbs for the new raised median; full depth asphalt repair around new medians; installation of colored and imprinted sidewalk in median islands; installation of new traffic signal conduit under roadway; and replacing existing handicap ramps inclusive of detectable warning surface. Mr. MacKenzie was also responsible for documentation of daily work performed, processing detailed payment quantities, and training junior staff assigned to the project. Client: Nassau County Dept. of Public Works

Ian MacKenzie, E.I.T.
Senior Inspector

County Road 16/Horseblock Road Improvements, Medford, NY; 3/08-9/08. Chief Inspector. The project involved construction inspection for this $4.1-million project which involved pavement reconstruction, pavement overlay, and new drainage systems including new trunk lines, leaching basins, and recharge basin modifications. He was responsible for field inspection, measurements and submission of daily reports, review and reporting daily maintenance and protection of traffic, training junior staff assigned to the project and coordination with the SCDPW technicians conducting the field quality control tests. Mr. MacKenzie also assisted the resident engineer with office engineering and recordkeeping as required by the NYSDOT Manual of Uniform Record Keeping guidelines. Client: Suffolk County Dept. of Public Works

Wellington-Heathcote Area Roads CI, Elmont, NY; 5/07-11/07. Resident Engineer/Chief Inspector. This project involved construction inspection services for this $1.6-million project involving the reconstruction of approximately 8,000 lin ft of roadway utilizing the Town's mixed-in-place method of reconstruction. Mr. MacKenzie's responsibilities included inspection for the removal of existing curb and driveway aprons and replacement with concrete curb and gutter and aprons; removal of existing drainage facilities on street corners for installation of handicap ramps and new drainage facilities, tying into existing area drainage system; milling asphalt overlay off streets with concrete pavement, replacing sections of deteriorated concrete, and excavation/replacement of existing shoulder asphalt between concrete pavement and curb; and mix-in-place existing asphalt and sub base material adding bituminous emulsion on streets without concrete pavement creating base course for placement of new asphalt. Mr. MacKenzie coordinated with the local Water Authority, Keyspan Gas, Town of Hempstead Street Lighting and Nassau County Sanitary Sewage as to adjustments, relocation and protection of their facilities. He was responsible for overseeing lane closures, shoulder closures and general maintenance and protection of traffic; interfacing with homeowners over concerns, problems and upcoming contractor operations; training junior engineer in construction inspection, including documentation of daily work performed; and processing detailed quantities for monthly progress payments. Client: Town of Hempstead Dept. of Engineering

Northern State Parkway INFORM/ITS, Nassau/Suffolk Counties, NY; 6/05-4/07. Senior Inspector. This project involved construction inspection services for the INFORM System upgrade on the Northern State Parkway from the NYC line to Route 454 in Nassau and Suffolk Counties. Work on this $13.6-million project included installation of 72 fiber optic cables, controllers and equipment, and other ITS elements for the Northern State INFORM System and integration to the State INFORM Facilities in Hauppauge, NY. His responsibilities included processing inspector reports and maintaining a record set of plans while generating biweekly payments to contractors. He also recorded minutes for project progress meetings and organized project correspondence. Mr. MacKenzie was responsible for supervising installation of conduit, inner duct, fiber-optic cable, pullboxes, and foundations/bases for cabinets, signs and acoustic detectors. Client: New York State Dept. of Transportation

Bridge Replacement and Construction of HOV Lane on Long Island Expressway (LIE), Exits 61-64, Suffolk County, NY; 10/97-1/01. As assistant office engineer, his responsibilities included managing Quality Assurance inspection of two-span composite and single span pre-stressed bridges; documenting daily operational procedures covering a team of 20 field engineers in maintaining Engineer's Diary; processing 15 inspector reports daily for payment calculations, material acceptance, location and quality of work and safety. He generated biweekly payments to contractors; interfacing with project designers, D.O.T. materials, inspection sub-consultants and general contractor; organizing and coordinating concrete cylinder testing and soils testing; and acquiring chief inspector duties for night work while maintaining high priority office engineer duties. Client: New York State Dept. of Transportation

Bascule Span Bridge Replacement, Westhampton Beach, NY; 1994-1996. Senior Field Engineer. Mr. Mackenzie supervised earthquake proof pile driving; 168 piles for each pier and 55 piles for each abutment; directed rebar placement and concrete pours, beginning at depth of 22 feet below sea level; and trained and guided junior field engineers. Client: New York State Dept. of Transportation

Re-Route Inform Trunk Lines, Retrofit Inform Signs, NY; 2/94-9/94. Senior Field Engineer. Mr. Mackenzie installed conduits under existing roadways in high traffic volume areas; oversaw fiber-optic improvements to variable message boards on LIE and Northern State Parkway; and guided and enforced the maintenance and protection of traffic on both projects. Client: New York State Dept. of Transportation

Keith Major
Inspector

Professional Profile
Mr. Major is an inspector with the following experience.

Proposed Project Assignment
Civil/Structural Inspector

Registration/Certifications
2008/NACE Coating Inspector Level 1 - Certified
2011/ICC Structural Steel and Bolting Special Inspector
2008/NICET III

Project Experience

Brooklyn Bridge Rehabilitation of the Approach Spans and Ramps and Painting of the Entire Bridge, Contract 6, New York, NY; 8/10-Present. Inspector. This project involves construction management and inspection services for the $509-million rehabilitation of this Iconic National Landmark. The scope of work for the project includes replacement of approach roadway in Manhattan and Brooklyn over the arch blocks; rehabilitation of the Manhattan side ramp structures with widening and deck and bearing replacements; rehabilitation of the approach steel structures with full superstructure replacement of the York and Main Street structures and orthotropic deck installation at Franklin Square; seismic retrofitting of the main bridge, Franklin Square and ramp structures; painting of the ramp structures and suspended spans in their entirety; restoration of historic features. Mr. Major's responsibilities include providing on-site oversight of work being performed to ensure compliance with contract drawings and specifications and estimation of quantities of work performed for use in payment as per project specifications. Operations covered include oversight of installation of protective shields for re-decking, steel replacement and painting activities; inspection of abrasive blasted/painted structural steel; testing of fresh concrete; monitoring of placement for foundations and closure pours for approach ramp roadways; removal of existing approach ramp pavement and replacement with concrete filled grid deck panels, approach ramp paving and temporary striping operations; demolition and removal of approach roadway pavement, spray applied waterproofing and installation of pre-cast concrete slabs; and installation and field welding of orthotropic deck. Client: New York City Dept. of Transportation

Rehabilitation of the Brooklyn-Queens Expressway (I-278), Park Avenue Viaduct, D259766, Kings County, NY; 6/07-8/10. Inspector. This $138-million project involved construction engineering and inspection for the widening, re-decking and repainting of this viaduct with complex MPT on and below this heavily traveled structure. Rehabilitation of this high-volume major interstate urban highway/bridge included replacement of more than 400 bearings and 1,500 meters of bridge expansion joints. Also included was extensive coordination with agencies and local communities. Mr. Major's responsibilities included providing on-site oversight of work being performed to ensure compliance with contract drawings and specifications and estimation of quantities of work performed for use in payment as per project specifications. Operations covered included installation of masonry (brickwork), steel reinforcing bars (rebar), structural concrete slabs, sub-grade drainage facilities and painting of structural steel. Client: New York State Dept. of Transportation

Computer Skills
Microsoft Word, Microsoft Excel, Microsoft PowerPoint, AutoCAD and the Internet

Andrea Malenich
Senior Inspector

Professional Profile
Ms. Malenich possesses over 20 years of experience in the construction industry.

Project Experience
Bayonne Bridge Navigational Clearance Program (BBNCP) Construction Management, NY/NJ; 11/13-Present. Senior Inspector. This project involves construction management services for the $743-million Bayonne Bridge Navigational Clearance Program (BBNCP). This extraordinarily complex, once-in-a-lifetime project will replace more than 5,000 feet of viaduct and re-frame the existing steel arch structure to accommodate a new roadway 65 feet above the existing roadway. Ms. Malenich is the lead safety coordinator for the team. She is responsible for ensuring that the contractor remains compliant with their submitted Health and Safety Program and OSHA requirements during all construction operations. She meets with, on a daily basis, the contractor's Health and Safety representative to discuss new and ongoing operations and how best workers, inspectors and the traveling public can best be protected from hazards associated with the work. Client: Port Authority of NY & NJ

Proposed Project Assignment
Senior Inspector

Course Work
2013 - OSHA #502 Update for Construction Industry Outreach Trainers
2009 - OSHA #500 Trainer Course in Occupational Safety & Health Standards for the Construction Industry
2013 - Basic Bridge and Construction Inspection Safety Course Completion
1999 - Traffic Control Coordinator Program Completion
1999 - NJHA Job Safety Training Sessions I & II Certificate
2004 - OSHA Scaffolding Training
2003 - OSHA 30-Hour Occupational Safety & Health Training
2003 - OSHA 40-Hour Hazardous Waste Operations and Emergency Response Training
2004 - OSHA Trenching / Excavating Training
2004 - OSHA Confined Space Entry Training
1997 - Traffic Control Coordinator Training
1997 - Uniform Traffic Control Training (SET Safety, Education & Training Trust Fund)

Total Years Experience 21

New Jersey Turnpike, 6 to 9 Widening Program, Burlington, Mercer, and Middlesex Counties NJ; 2009-2013. Site Safety OSHA Compliant Inspector. This project involved the addition of some 170 new lane miles of roadway to this chronically congested stretch of the turnpike. Three additional lanes were added in each direction between Interchanges 6 and 8A, and one additional lane was added in each direction between Interchanges 8A and 9. A new toll plaza was built at Interchange 8. She was responsible for ensuring that the inspection management teams (approximately 226-311 professionals) were working within standards and regulations according to OSHA along with the respective NJTA regulations; conducting and maintaining records of the NJ Turnpike safety orientation for the joint venture staff and their subcontractors; uploading and maintaining all training documentation to the software platform iPIMS and maintaining hard copies of all documents; conducting safety trainings such as confined space and fall protection; ensuring that all personnel were OSHA 10 Hour trained and scheduling the training for those who were not; ordering safety supplies as well as maintaining the stock within the three main field offices; managing most of the joint venture's safety needs regarding various aspects of the project; generating and implementing an Emergency Preparedness and Response Plan.; and performing joint venture safety program review and making site-specific recommendations. Client: New Jersey Turnpike Authority

PSE&G Hudson Generating Station, Jersey City, NJ; 2007-2009. Site Safety OSHA Compliant Officer. This $750-million project consisted of the installation of mercury control, flue gas desulphurization, and selective catalytic reduction systems on Unit 2. The purpose of the reconstruction on these air emissions control systems was in an effort to become, by law, a greener facility. Ms. Malenich ensured that the crews were working within standards and regulations according to OSHA (trenching and excavating, caisson drilling, ladders, scaffolds, hand/power tools, P.P.E., electrical/GFCI, temporary lighting); and wrote and submitted daily safety inspection reports, wrote and posted daily job safety analysis reports for each crew. Ms. Malenich worked with multiple contractors and managed the safety coordinating for 180 employees; and she also managed the safety coordination for a crew of 15 employees working for Case Foundation. Other responsibilities included running the electrical wiring for the Back End Technology (BET) within the plant; drilling four caissons, 82-ft in depth by 7-1/2 ft in dia. for the foundation of the new section of the plant that was to be constructed.

Andrea Malenich
Senior Inspector

Route 21 Viaduct, Contract B, Section 2N, Newark, NJ; 200-2003. Traffic Control Coordinator/Site Safety Officer. This project involved the replacement of the Route 21 Viaduct in Newark and tying in the surrounding highways by building overpasses to aid in easier access to Newark Airport. Her responsibilities included submitting traffic interference reports/ state police requests to Traffic Operation- North; supervising the application, maintenance and removal of road closures and detours within the City of Newark; and supervising the application, maintenance and removal of lane closures on Routes 21 north/south, 1 and 9 north/south, 78 east/ west, 22 east/ west and the NJ Turnpike entrance ramps to 1 and 9. She worked closely with the NJDOT, NJ State Police, Newark Police, and the contractor to ensure that these major highways were shut down safely and the traffic devices were installed properly; and wrote and submitted daily traffic safety inspection reports to the DOT and the contractor. As the site safety officer, she performed inspections of the entire site (trenching/excavating confined space entry, fall protection, etc.); wrote and submitted DC-29 reports on select items (concrete pours, retaining walls, rebar, line grinding and striping, jersey barrier, reflectors, creek restoration, storm sewer cleaning, hazard waste storage and removal, steel erection, etc.); and she ensured proper placement of and measured the line stripping on the above mentioned highways.

BP/ Castrol Oil Corp., Wayne, NJ; 2006. Site Safety OSHA Compliant Inspector. This project involved reconstruction of the entire office building. Three floors were remodeled from ceiling to carpet, rooms were gutted, walls were added and removed in several locations. As the site safety officer, she ensured that the crews were working within standards and regulations according to OSHA. (ladders, scaffolds, hand/power tools, P.P.E., electrical/GFCI, temporary lighting); , wrote and submitted daily safety inspection memos/reports to the contractor as well as the safety coordinator for BP/ Castrol Oil; and performed a surprise OSHA compliant inspection once per week and submitted the report to the contractor.

Seton Hall University, South Orange, NJ; 2005. Site Safety OSHA Compliant Inspector. This project involved repainting the dormitories and classrooms in Fahy and Aquinas Halls. Ms. Malenich ensured that the crews were working within standards and regulations according to OSHA.

Traffic Control Experience

- Rt. 46, Parsippany, NJ - Responsible for setting up lane closures (signs, barricades, cones and drums). Miscellaneous job tasks regarding flagging, jack hammer, grading and asphalt operations.
- Rt. 46, Rockaway, NJ – Lane closures, flagging, jack hammer, grading, asphalt worked the back of the paver (the screed)
- Rt. 94 & Rt. 181, Newton/ Sparta - Set up detour, flagging, alternate traffic, installed storm sewer and inlets; backfill and grating responsibilities; operated a sheep's foot roller, jumping jack and tamper plate.
- Rt. 519, Bellevidere - Alternating traffic for mobile operation, flagging.
- Rt. 604, Flanders - Alternate traffic.

Certified Traffic Control Coordinator

- Rt. 46, Parsippany, NJ - Responsible for setting up lane closures (signs, barricades, cones and drums). Miscellaneous job tasks regarding flagging, jack hammer, grading and asphalt operations.
- Rt. 9 & Rt. 34, Old Bridge - Placed barrier wall, lane closures, shoulder widening, grading, operated excavator loading trucks.

Safety Supervisor, Certified Traffic Control Coordinator

- Garden State Parkway, MP 129.7 to 138.1, Safety Supervisor - Directed a five (to eight) man crew, supervised lane closures, communicated with the designated state troopers for the Garden State Parkway, ordered safety supplies (signs, cones, drums etc.)
  Safety/Traffic Control on various city and town roads.

As a general laborer with a construction firm, she rebuilt weight station Rt. 80, which included digging, grading, concrete work, site work; rebuilt weight station Rt. 287, which included digging, grading, concrete work, site work; and created a drainage basin for mini-mall and performed site work for Rt. 9 located in Manalapan; 1994-1995

Igor Malkovskiy, P.E.
Senior Inspector

Professional Profile
Mr. Malkovskiy is a professional engineer with diversified experience in the construction and engineering industries. He provides supervision/inspection of construction and quality control activities for demolition of existing bridges and adjacent roadways, structural steel installation and modifications, pile driving operations, reinforcement steel, new high performance concrete bridge decks and bridge deck joints, parapets, median barrier, drainage, roadway lighting systems, sign structures and control systems, roadway reconstruction, asphalt paving, baseline control and monument installation, staged construction, including construction of mainline detour ramps, and extensive maintenance and protection of traffic. Mr. Malkovskiy's experience also includes erection of concrete foundations, utilities and utility relocation.

Proposed Project Assignment
Civil/Structural Inspector

Project Experience
Construction Inspection Services for the Proposed Interchange at U.S. Route 22 and Chimney Rock Road, Township of Bridgewater; 2/13-Present, $57M. Bridge Inspector. This is a federally funded multidiscipline project to improve safety and achieve the current and future mobility goals of a highly congested area of Somerset County. The project will provide a full service interchange at U.S. Route 22 and Chimney Rock Road via Local U.S. Route 22 eastbound with the Mainline U.S. Route 22 depressed 18 ft. under Chimney Rock Road. The project also provides for improvements to the U.S. Route 22 corridor, generally between Interstate 287 on the western end and Thompson Avenue on the eastern as well as the widening of Chimney Rock Road between Thompson Avenue and Route 28, and the realigning and extending of Frontier Road to Chimney Rock Road. Bridge work includes the construction of a new vehicular bridge and railroad bridge over U.S. Route 22 along Chimney Rock Road as well as improvements to the existing bridge on U.S. Route 22 over the Middle Brook and the existing bridge over Interstate 287 on Chimney Rock Road. Some of the major items of work include: clearing, demolition, earthwork, ITS utility relocations aerial and underground, water, sanitary sewer, gas, electric, nightwork, concrete curb, sidewalk, drainage, milling, hmac paving, concrete decks, steel, precast structures, retaining walls, lighting, landscaping, construction in stages complex traffic control. Duties include the on-site inspection of the contractor's means and methods for clearing, demolition, extensive utility work, structure rehab foundation excavation, steel piles, and sub and superstructure reinforced concrete bridge items, night work. Client: Somerset County

NJDOT 2010 Region Central Resurfacing, Route 71 Sea Girt Avenue to Route 35, Monmouth County, NJ; 10/12-1/13, $9.2M. Inspector. GPI provided construction inspection services for this federally funded maintenance resurfacing project on Route 71. Project includes inspection of concrete curb, sidewalk, handicap ramps, bridge joints, milling, paving, striping, traffic control and night work. Client: NJDOT

NJDOT Route 17 Terrace Avenue Resurfacing, Bergen County, NJ; 8/12-10/12, $13M. Inspector. Construction inspection services for NJDOT Region North Route 17 Resurfacing from South of Terrace Avenue to South of West Saddle River Road in Bergen County. Duties included the on-site inspection of the contractor's means and methods for milling, reset heads, concrete curbs, surface preparation, and superpave items, temporary and permanent traffic stripes, maintenance and protection and traffic and nightwork. Client: NJDOT

New Jersey Turnpike Interchange 6 to 9 Widening Program; 12/10-8/12, $2.7B. Inspector for Contract No. T869.120.701 (approximately $52M) for NSO/NSI/SNI/SNO Roadway Grading, Drainage, Paving, Structures, and Lighting Milepost 69.3 to 70.6 in the Township of Cranbury, Middlesex County, NJ. Inspector for this Road and Bridge Project the grading, drainage, paving, structures, and lighting for NSO/NSI/SNI/SNO roadways project from MP 69.3 to 70.6 in the Township of Cranbury, Middlesex County. Duties included the on-site inspection of the contractor's means and methods for all items of construction including but not limited to: the reconstruction of the existing northbound and southbound mainline roadways, including the replacement of Structure No. 69.85, and construction of the proposed NSO and SNO roadways, including Structure Nos. 69.85SO and 69.85NO, the replacement of

Cranbury Station Road over the mainline; roadway improvements at Hightstown-Cranbury Station Road and a short length of Conrail track realignment, culvert extension, six retaining walls, and installation of three overhead sign support structures. Responsibilities include inspection of contractor bridge work including structural concrete, structural steel, deck joints and parapets and roadway work including for milling, reset heads, concrete curbs, surface preparation, superpave items, and maintenance and protection and traffic and nightwork. Client: NJTA

PANY&NJ Bayway Avenue Bridge Modifications as part of Howland Hook Marine Terminal – Staten Island Railroad North Connection to Chemical Coast Line Project (Contract NO.HH334.007); 2004-2005. Senior Construction Inspector. Performed daily construction monitoring services to ensure general compliance with Contract Plans and Specifications for demolition of existing bridge, construction of new bridge including piles, footings, piers, abutment, steel stringers, bridge concrete deck, precast concrete beams, approach slab, concrete waterproofing , bridge deck joints and reinforcement steel, sidewalk, headblock. Responsibilities also include monitoring of field testing of construction materials. Client: PANYNJ

Sussex County Term Agreement for Construction Administration and Inspection, Various Roadway and Bridge Improvements Projects; 7/10-12/10, $2.7M. Senior Bridge Inspector. Inspector for the replacement of Sussex County Bridge Q-11 carrying CR 620 (Glen Road) over Sparta Glen Brook, Township of Sparta. Duties included the on-site inspection of the contractor's means and methods for all items of construction including but not limited to: foundation excavation, footings, sheeting with anchors, and sub and superstructure reinforced concrete bridge items; installation of stream diversion and soil erosion and sediment control measures; MPT; assembly of Acrow bridge and construction of temporary single-lane-by-pass road; disassembly and removal of existing Glen Road bridge superstructure; installation of temporary support sheeting and tie-back system; demolition of existing concrete abutment and footings; construction of new concrete footings, abutments and wingwalls; installation of prestressed concrete beams and placement of concrete bridge deck; replacement and modifications of inlets and storm drains; roadway paving and striping; installation of new beam guide rail to connect to existing; remove temporary traffic signals an shift traffic to new bridge; remove temporary by-pass roadway and disassemble (Acrow panel) bridge. Client: County of Sussex

NJTA OPS P3323 Construction Management for Contract P100.108, GSP Bridge Deck Repairs & Resurfacing, MP 126-172, Middlesex, Union, Essex, Passaic and Bergen Counties, NJ; 5/10-7/10, $7.5M. Senior Inspector. Responsible for the supervision of the replacement of deteriorated concrete bridge deck slabs; repairing deck spalls; repairing and reconstruction of deck joints; repairing headers; removing asphalt surfacing; placing new membrane waterproofing; resurfacing approach roadways and bridge decks; pavement striping and other incidental work on various bridge structures along the Garden State Parkway from MP 126 to MP 172. Client: NJTA/GSP

NJDOT Bridge Deck Replacement Route 46 and Route 17, Clifton NJ; 6/09-5/10, $10M. Senior Construction Inspector for NJDOT's Bridge Deck Replacement Route 46 and Route 17, Clifton, NJ. Duties included the on-site inspection and quality control for the contractor's means and methods for the major items of work including: superstructure replacement, reinforced concrete bridge items, new beams, deck parapet, abutment and piers, demolition of existing bridge and adjacent roadways, clearing site bridge , structural steel removal and installation, headblock reconstruction, repairing and reconstructing deck joints, repairing headers, bridge deck joints and reinforcement steel, replacing deteriorated concrete bridge deck slabs with new high performance concrete bridge decks, parapets, replacement of median barrier, drainage, roadway lighting systems, sign structures and control systems, roadway reconstruction, HMA paving, baseline control, staged construction including extensive maintenance and protection of traffic with full RT 46 closure, day and nighttime operations; elastomeric bearing replacement, field welding and bolting of structural steel members, membrane waterproofing, substructure repairs, repairing deck spalls, milling and removing asphalt surfacing, placing new membrane, water main and gas main installation under the bridge. Responsibilities also include field testing of construction materials. Client: NJDOT

NJTA-GSP Contract No. P300.043, Interchange 67 Ramp Improvements, NJ; 9/08-6/09. Senior Construction Inspector. Responsibilities included supervision/inspection of construction and quality control activities for demolition of existing bridges and adjacent roadways, construction of two new bridges and ramps. Responsibilities also included field testing of construction materials. Client: NJTA

Jeffrey Mando
Senior Inspector

Professional Profile
Mr. Mando possesses the following experience.

Project Experience
2011-2014 Port Authority On-Call Construction Management Services – Port Authority Bus Terminal, Various Contracts, New York, NY; 9/11-Present. Senior Inspector. These projects involve construction management and inspection services on an on-call basis. The Port Authority of NY & NJ supplemented their own staff with consultant-provided personnel to manage and administer construction contracts at their owned and operated facilities. Under this on-call contract, Mr. Mando has been involved on the following projects:

- **Lincoln Tunnel Bus Ramps Deck Replacement, Phase II, Contract #LT-234-174, New York, NY**; 2010-Present. Inspector. This project involves the rebuilding and rehabilitation of the ramps connecting the Lincoln Tunnel with the Port Authority Bus Terminal. Mr. Mando's responsibilities include quality assurance inspection of all construction activities including demolition of existing structures, replacement of sub- and superstructure elements. The project includes inspection of removal and installation of the savaloid system; demolition of existing roadway bus ramp and installation of pre-cast panels; installation of mechanical snow melting system and roadway insulation; shear stud installation; demolition and replacement of sign gantry's and structure; installation of temporary roadway lighting; guardrail installation; installation of steel column protection; cast-in-place concrete for deck replacement; spall repair for roadway and parapet walls; replacement of parapet walls along roadways; placement and curing of latex modified concrete; coordination of work between contractors and Bus Terminal and Lincoln Tunnel facilities; and MPT on the bus ramps and surrounding streets. He is also involved with the review of inspector's daily narratives; generation and review of extra work estimates; review of payment applications; and preparation of meeting minutes and notifications.
- **Lincoln Tunnel Rehabilitation of Dyer Plaza Sump Ceiling Slab, Contract # LT 234.054, New York, NY**; 2009-9/11. Inspector. This project involved deck/ceiling slab replacement of the Lincoln Tunnel sump room on the New York side of the Lincoln Tunnel , center tube. Mr. Mando's responsibilities included quality assurance inspection of all construction activities including demolition of existing structures, replacement of sub- and superstructure elements. The project also involved demolition of existing roadway/sump room ceiling slab and installation of pre-cast panels, cast-in-place concrete for deck replacement, installation of duct tensioning rods, coordination of work between contractors and facility; and MPT on the bus ramps and surrounding streets.
- **Port Authority Bus Terminal - Structural Modifications, Contract # BT 254.220, New York, NY**; 8/05-9/11. Mr. Mando served as an inspector for this $50-million project that provided the required strengthening to maintain structural integrity of the Port Authority Bus Terminal in New York City during a seismic event. Structural modifications (seismic retrofit) strengthened the bus terminal building structures with shear walls, bracing, and truss members to resist moderate seismic loads in the north south and the east west directions for the south wing and expansion joint bracing for the north wing of the Port Authority Bus Terminal. It also required relocation of the existing electrical, electronic communication, HVAC, plumbing and fire protection system in order to perform the work. Mr. Mando's responsibilities included quality assurance inspection of all construction activities including demolition of existing structures, installation of structural steel bracing, and fin trusses; surveys, removal, relocation, and installation of mechanical and electrical utilities; architectural finishes to interior, exterior shear walls, bus gates, concourse areas, and tenant spaces; coordination and scheduling of work between contractor, facility (Port Authority Bus Terminal), and tenant spaces; Maintenance and Protection of Traffic (MPT) on the bus ramps, inside the facility roadways, bus gates, and surrounding streets;

performing job site safety inspections for work sites and personal protective equipment; generating estimates for extra work being performed by contractor and daily narratives; and administrative work at field office filing, shop drawings, and maintaining all aspects of maintaining an efficient office.
Client: Port Authority of NY & NJ

2006-2010 Port Authority On-Call Construction Management Services – Port Authority Bus Terminal, Various Contracts, New York, NY; 8/05-9/11. Inspector. These projects involved construction management and inspection services on an on-call basis. The Port Authority of NY & NJ supplemented their own staff with consultant-provided personnel to manage and administer construction contracts at their owned and operated facilities. Under this on-call contract, Mr. Mando was involved on the following projects:

- **Port Authority Bus Terminal - Structural Modifications, NY Priority Repairs, Contract # LT 521, New York, NY**; 9/09-5/10. Mr. Mando served as an inspector for this $1-million project which consisted of providing for rehabilitation of concrete and steel elements at the LT Bus Ramps (including replacement of unsound concrete at columns, beams, deck slabs and bearing pedestals), replacement of deteriorated anchor bolts and nuts, installation of steel plates, angles and bolts to reinforce steel bearing pedestals and girders and installation of wire mesh safety netting. Mr. Mando's responsibilities included quality assurance inspection of all construction activities including demolition of existing structures; installation of steel; installation of mechanical utilities; coordination and scheduling of work between contractors and the facilities (PABT/LT); MPT on the bus ramps and city streets; performing job safety inspections and personal protective equipment; generating estimates for extra work being performed by contractor; daily narratives including administrative work filing, shop drawings and maintaining all aspects of an efficient office.
- **Port Authority Bus Terminal Ramps Reconstruction, New York, NY**; 6/02-8/05. Inspector. This $50-million project focused on the rebuilding and rehabilitation of the ramps connecting the Lincoln Tunnel with the Port Authority Bus Terminal. Mr. Mando's responsibilities included quality assurance inspection of all construction activities including demolition of existing structures, replacement of sub- and superstructure elements. The project also included inspection of removal and installation of the savaloid system; demolition of existing roadway bus ramp and installation of pre-cast panels; installation of mechanical snow melting system and roadway insulation; shear stud installation; demolition and replacement of sign gantry's and structure; installation of temporary roadway lighting; guardrail installation; installation of steel column protection; cast-in-place concrete for deck replacement; spall repair for roadway and parapet walls; replacement of parapet walls along roadways; placement and curing of latex modified concrete; installation of structural steel for seismic retrofit bracing inside the bus terminal; coordination of work between contractors and facility; and MPT on the bus ramps and surrounding streets.

Client: Port Authority of NY & NJ

Williamsburg Bridge North Roadways Reconstruction, Contract 7, #BRC253CA, New York, NY; 5/01-12/02. Inspector. This $248-million project involved the construction engineering and inspection for the reconstruction of the north inner and outer roadways. Mr. Mando's responsibilities included removal and installation of structural steel cantilever floorbeams, lateral bracing, orthotropic steel deck panels, concrete filled steel grid deck, inspection of shielded metal arc welding and submerged arc welding, inspection of neoprene cable wrap maintenance, inspection of Stirling Lloyd waterproofing membrane system, punch list surveys, condition surveys of under deck flexible shield system. Work tasks also included writing inspector's daily reports and measurement and/or calculation of contract item quantities. Client: New York City Dept. of Transportation

Manhattan Bridge Painting and Interim Rehabilitation, Contract 8C, BRC1568C, New York, NY; 10/97-2/01. As an inspector, Mr. Mando was responsible for maintaining engineer's daily diary and shop drawing file. He was also responsible for assisting the office engineer in all aspects of maintaining accurate office records. In addition, on this $124-million project, he performed inspection of the truss bearing replacement operation, including truss jacking, removal and replacement of structural steel bearing assemblies and concrete pedestals as well as various other structural steel installation operations. Client: New York City Dept. of Transportation

John Marcel
Senior Inspector

Professional Profile
Mr. Marcel's many years of experience encompasses all general components of bridge and highway construction. He has acquired the experience from construction inspection assignments with New York State Dept. of Transportation, New York City Dept. of Transportation, New Jersey Dept. of Transportation and various other municipalities and utility companies.

Total Years Experience 25

Project Experience
Bayonne Bridge Navigational Clearance Program (BBNCP) Construction Management, NY/NJ; 2/14-Present. Senior Inspector. This project involves construction management services for the $743-million Bayonne Bridge Navigational Clearance Program (BBNCP). This extraordinarily complex, once-in-a-lifetime project will replace more than 5,000 feet of viaduct and re-frame the existing steel arch structure to accommodate a new roadway 65 feet above the existing roadway. Mr. Marcel is responsible for overseeing all aspects of preparation for the new bridge pier footing. This includes verifying survey; installation of 24 x 131 steel sheeting sections for pits at proposed pier locations; h-beam and 18-in. dia. pipe pile as required for temporary bridge support towers and/or new pier foundation construction; and verifying actual embedment depths of all materials noted above. Client: Port Authority of NY & NJ

Manhattan Bridge Rehabilitation of Cables and Suspenders, Contract 14, #BRC156R, New York, NY; 7/13-2/14. Senior Inspector. This $149-million project involved the unwrapping and rewrapping of cables; replacement of suspenders; replacement of necklace lighting messenger cables and cable hand ropes; installation of new access platforms to existing tower platforms; reversal of lower roadway and operation of HOV lane and replacement of multi-rotational bearings at the Towers; replacement of light poles and luminaries on South upper roadway; replacement of lane control radar on South upper roadway; and retrofit of track stringers and diaphragm connections and other miscellaneous work. Mr. Marcel was responsible for overseeing the current bridge painting; noting and recording additional areas requiring attention through daily visual inspections of contract locations such as the main cable bands, upper/lower chord areas of four trusses, new gusset/continuity plating-bolting, all new steel and stringer repair locations, etc.; inspecting and monitoring both mixing and application of the four-part coatings systems approved for project, "Carboline" and "Sherwin Williams", to be sure they were performed in accordance with respective manufacturer data sheet criteria to ensure acceptable final coating conditions were attained. Client: New York City Dept. of Transportation

REI for the Rehabilitation of High Bridge, Boroughs of Manhattan and Bronx, NY; 11/12-7/13. Senior Inspector. This project involved rehabilitation of the masonry arch spans, steel arch span (including deleading and painting), brick arch deck, and brick walkway; stabilization and conservation of the aqueduct pipe; providing barrier-free access and safety for pedestrian and wheeled users; rehabilitation of historic railings and walkway lighting posts; providing architectural lighting (as funding allows); and providing a visitor information system consisting of way finding signage and aqueduct interpretative signage. Mr. Marcel was responsible for overseeing all aspects of contractor mobilization activities in preparation for full-scale production work operations and providing daily inspection of all ongoing work operations for conformance to approved shop drawings and contract specifications, specifically for: construction of dual work platforms (typically 22 gage metal decking) which were suspended under the steel and concrete arch bridge structures and were utilized for existing steel member repairs, class 1A containment installation, and abrasive blast cleaning w/application of a three-coat zinc based coating system. Client: New York City Dept. of Design & Construction

Belt Parkway Bridges REI Services - Paerdegat Bridge, Contract#HBK1024, New York, NY; 9/12-10/12. Senior Inspector. This project involved the demolition of the entire 13-span, multi-stringer bridge superstructure and substructure including abutments, wingwalls, and the piers consisting of concrete pile columns to a minimum of 600 mm below the mud line. The replacement structures were new three-span and five-span bridges consisting of a Class HP reinforced concrete superstructure slab supported by high performance steel box girders and substructures including reinforced concrete abutments, wingwalls, and multi column piers on new pile foundation. Mr. Marcel provided inspection for the cleaning/painting portion of the project. This included covering inspection of the painting

subcontractor who prepared/cleaned all new tub girder splice plates/related bolting along with all cross bracing connection plates/related bolting to an acceptable SSPC guideline. This was followed with the inspection of a three-coat paint system application on same. The method of cleaning was by hand/power tool to remove any rusting, etc. This was followed with approved solvent cleaning. Application of primer/intermediate and finish coats was accomplished mainly by brush/roller method, but airless type spray system was also utilized at times (mostly on finish coat). All phases of details noted above were visually inspected from manlift upon completion, and consent was given to foreman for proceeding to next phase if acceptable. Client: New York City Dept. of Transportation

Williamsburg Bridge Reconstruction of Miscellaneous Rehabilitation of the Main Bridge, Contract 8, #BRC253CCA, New York, NY; 2/12-7/12. Senior Inspector. This $280-million project involved the construction engineering and inspection for the rehabilitation of the main bridge. Mr. Marcel's responsibilities included overseeing the completion of NYCDOT Kent Avenue maintenance yard restoration. Work included placement of P.C.C. and waterproofing/joint sealing of same; asphalt restoration utilizing 12.5 mm superpave type mix; installation of perimeter 6-ft chain link fencing with barb wire/razor tape; and overseeing project line striping item work on Manhattan and Brooklyn approach areas consisting of thermoplastic and epoxy type material placements for edge lines, skips, symbols, etc. per contract plan sheets. Client: New York City Dept. of Transportation

Brooklyn Bridge Rehabilitation of the Approach Spans and Ramps and Painting of the Entire Bridge, Contract 6, New York, NY; 4/10-2/12. Senior Inspector. This project involved construction management and inspection services for the $509-million rehabilitation of this Iconic National Landmark. Mr. Marcel's responsibilities included inspection of platform and containment erection, surface preparation (sp10, sp2, sp3), and application of a four-coat paint system including surface profile measurements, chloride testing, and dry film thickness measurements. He was also responsible for overall compliance to contract documents during all activity conducted by subcontractors during overnight shift including noise mitigation compliance. Activity in progress included main bridge approach roadway replacement with superslab system; bridge ramps fascia stringer replacements; ramp deck/roadway demolition and replacement with partially filled grid deck sections which receive concrete closure pour and 2-in. asphalt overlay; and roadway demolition preparation for installation of temporary plating system over Franklin Square structure in preparation of eventual orthotropic deck replacement. Mr. Marcel was also responsible for the performance of an eight-person team of inspectors and also acted as the contact person for the New York City Dept. of Transportation. He attended meetings and resolved issues that arose on the project. He was responsible for the preparation of nightly I.D.R., payment entries when required; emailed early a.m. summary of all previous night's activities including any incidents/MPT issues to resident and chief resident engineers. Client: New York City Dept. of Transportation

Rehabilitation of the Brooklyn-Queens Expressway (I-278), Park Avenue Viaduct, D259766, Kings County, NY; 1/08-4/10. Mr. Marcel served as an inspector for this $138-million project that involved construction engineering and inspection for the widening, redecking and repainting of this 850,000 sq ft viaduct with complex MPT on and below this heavily traveled structure. Rehabilitation of this high-volume, major interstate urban highway/bridge included replacement of more than 400 bearings and 1,500 meters of bridge expansion joints. The structure had seismic reinforcement installed which included retainers and plates at the top of columns and additional stiffeners and plates at the base. Also included was extensive coordination with agencies and local communities. Mr. Marcel was responsible for the installation of SSPC Class 1A containment systems for lead content paint removal operation via abrasive blasting method along with ensuring application of three-coat moisture cured paint system. His responsibilities also included daily monitoring/documentation of this operation including contractor's compliance to any related OSHA/EPA regulations. Client: New York State Dept. of Transportation

Manhattan Bridge Rehabilitation of Lower Roadways, Contract 11, #BRC156A, New York, NY; 11/06-8/07. Mr. Marcel served as inspector on this $150-million project that involved the reconstruction of lower roadway; removal and replacement of floorbeams, stringers, bearings and deck in main span and side spans; rehabilitation of anchorage chambers; installation of new lighting and traffic signs on lower roadway; rehabilitation of travelers in suspended spans; replacement of maintenance platforms at towers; painting of bridge in suspended and approach spans; and repair of flagged conditions. His responsibilities included installation of lower roadway grid deck and placement of concrete in grid deck and approaches of the lower roadway. Client: New York City Dept. of Transportation

ASSIGNMENT

Senior Construction Inspector

EDUCATION

BA, University of Pittsburgh, May 1997

REGISTRATION

ACI Level 1 Certified and ACI Level 2 Concrete Construction Special Inspector (CCSI) Certified
ICC Structural Masonry Special Inspector; ICC Structural Steel and Bolting Inspector, ICC Sprayed Applied Fireproofing Special Inspector
NICET Level 2 in soils, asphalt, and concrete
10 Hour OSHA Certified; QC Resource Training, OSHA Confined Space, NYCDOB 4 hour Scaffold
PATH Employee in Charge Trained (EIC)

REPRESENTATIVE AND PERTINENT EXPERIENCE

Mr. McBride has 17 years experience in construction inspection for infrastructure, transportation, and government facilities. He has an extensive background in heavy civil, concrete, rebar, masonry, structural steel, welding, and asphalt, electrical ductbanks and inspection for compliance with plans and specifications. In addition, Mr. McBride is certified to perform concrete testing, soil density testing, structural steel and bolting, asphalt density testing, and structural masonry and grout inspections. He is familiar with Port Authority systems, and contract requirements; including lump sum, unit price, and net cost contracts and procedures.

- **Senior Construction Inspector, Port Authority of NY & NJ, New York Marine Terminals and PATH: NYMT** - Duties include estimating lump sum, unit price, and net cost contracts within for NYMT projects. Oversee specific construction activities such as new flood zone protections barriers/foundations, constructing new Power Substations, Backflow Prevention, Water Meter, and HVAC upgrades; underwater steel sheeting, concrete girders, and pile repairs- to ensure conformance with approved designs/plans are followed. Also scheduling the required inspections per NYC Building- Concrete, Welding, Masonry & Soils. **PATH** - as an EIC/Inspector, manage the site activities within the PATH Tunnel systems and coordinate with Trainmaster while Contractors work on the Interior Strengthening of tunnels and upgrading the communication systems with 800 MHz Integration. Also involved with the CMD Inspection Team that oversees the Harrison, NJ, McMillian C-Yard, Jersey City, NJ restoration projects with Backflow Prevention System upgrades Cathodic Protection connections, and immediate repair work around each facility. (5/12 – Present)

- **Field Inspector, Various Clients** – Performed controlled special inspections for NYCSCA at various schools and structural stability repairs at NYC Housing Authority. Performed inspection of structural reinforcement and formwork at WTC – Vehicle Security Center. (6/10 – 5/12)

- **Senior Construction Inspector, Port Authority of NY & NJ, WTC Reconstruction** - Duties included inspection of Tower 1, Freedom Tower. Specific assignments include foundation footings, concrete and rebar for footings, formwork, conduits in slabs, storm drain hardware, and fuel oil piping

in lower basements. Oversee that steel, concrete, bolting, waterproofing and welding is in accordance with plans and specifications. (6/09 – 6/10)

- **Field Inspector, NYCSCA, Various Projects** – Performed concrete, rebar, fireproofing and masonry controlled inspections for various SCA projects in Queens, NY. Concrete: monitored placement, ran slump, air, unit weight, and temperature tests to ensure mix design requirements are met; Rebar: inspect size, spacing, clearance and details according to approved shop/contract drawings; fireproofing and monitoring the thickness and correct specifications of SFRM is applied to structural steel members and correct extensive patchwork punchlist due to MEP trades removal of pre-existing SFRM. Masonry: monitored reinforced mortar / grout mix and application to constructed walls as per approved design contract documents. (5/09 – 6/09)

- **Project Inspector, Port Authority of NY and NJ, John F. Kennedy Airport; Aug 2002 – Dec 2008**
  - > ***Jetblue Airways, Terminal*** - Performed inspection of construction activities to ensure conformance with approved designs/plans including soils, concrete, and rebar. Facilitated communication between CM, architects and Engineers. Monitored project cost and schedule performance against Jetblue's Accepted Program. Worked with site staff to maintain a safe environment for the project employees and site visitors. (4/06 – 12/08)
  - > ***A380 Redevelopment, Terminal 1*** - Hired by Av Air Pros Services to oversee the project with CM. Responsible for all controlled inspections from foundation, core and shell of each Gate constructed, asphalt and concrete for outside aprons in area of the gate. (1/06 – 11/08)
  - > ***Southwest Airline, Long Island MacArthur Airport, Ronkonkoma, NY*** - Duties included managing and inspecting the demolition and reconstruction of the airside pavement. Inspect the soil / RCA sampling and compaction, asphalt placement for runway aprons, rebar and correct placement.
  - > ***Multi-tenant Cargo Facility Tract 8 & 9A*** - Responsible for inspection of masonry, rebar, concrete, hydrostatic testing, hydrant flow testing, gas leak testing, duct leak testing, and curtain wall. (8/02 – 6/03)

- **Project Inspector, Borgata Casino North Expansion Project, Atlantic City, NJ** - Monitored field staff and daily activities. Inspected asphalt for parking lots and entrance way. Ensured that all inspections were done according to specs and building code. (11/04 – 7/06)

- **Project Inspector, United Nations Federal Credit Union, Long Island City, NY** - Scheduled daily activities in consultation with CM. Monitored controlled inspections for concrete, masonry, welding, bolting, fireproofing, firestopping, curtain wall, soil compaction and waterproofing. (10/04 – 5/06)

- **Project Inspector, Bank One Data Center, Brandywine, Delaware** - Monitored control inspections including soil/subgrade, asphalt, rebar, concrete, masonry, curtain wall, welding, bolting, fireproofing, and firestopping. Hired and trained additional workers to staff the team when project was behind schedule due to the weather. (6/03 – 9/04)

- **Project Inspector, Newark International Airport, Newark, NJ, (Terminal C Parking Garage)** - Provided oversight and inspection for load tests, pile driving, concrete, rebar, masonry, electric ductbank installation and curtain wall. (5/00 – 9/01)

ASSIGNMENT

Senior Construction Inspector

EDUCATION

BSCE Civil Engineering, Howard University, 2003

REGISTRATION

ACI Concrete Level I, OSHA 10 hour Training, NJ Transit Railroad Safety Training, American Society of Civil Engineers, Structural Masonry Inspection, Structural Steel & Bolting Special Inspection

REPRESENTATIVE AND PERTINENT EXPERIENCE

Mr. McLean has over thirteen years of experience in the construction inspection of bridges, highways, and infrastructure projects. His experience includes inspection of bridge substructure, superstructure, deck, cast-in-place concrete, rebar, bearings, painting, electrical, and maintenance and protection of traffic during both day time and night time operations.

- **Senior Construction Inspector, Bayonne Bridge Navigational Clearance Program (BBNCP), Port Authority of NY & NJ** - Senior Construction Inspector for this $743 million Bayonne Bridge Navigational Clearance Program (BBNCP). This multi-stage project will replace over 5,000 feet of Bayonne approach and Staten Island approach viaduct with cast-in-place and precast structural elements and re-frame the existing steel arch structure to accommodate a new roadway 65 feet above the existing roadway. Duties include construction inspection of approach viaduct substructure and superstructure for compliance with plans and specs. Work involves concrete demolition construction, steel, rebar, and falsework. (11/13 – Present)

- **Senior Construction Inspector, TBTA, Henry Hudson Bridge, Upper Level Rehab, HH-10** – Served as Construction Inspector for this $33 million rehabilitation contract, involving removal and installation of the upper level curb stringers, deck replacement, and replacement of roadway lighting and electrical at the Henry Hudson Bridge. Inspected new asphalt pavement, new construction signs, new silt fence and the removal and installation of new 6", 4" ductile iron pipe for new scuppers on bridge. Also, monitored clearing and grubbing on bridge and planting of new trees. Prepared monthly erosion and sediment control report on bridge. Oversaw the inspection of the installation of new dry standpipe for FDNY on bridge. Also, inspected new line stripping and installation of bridge sidewalk concrete. In addition, inspected the installation of overhead sign on bridge. The scope of work includes: steel and concrete demolition; structural steel repairs/replacement; concrete-filled grid deck; concrete parapet construction; lead paint removal and repainting; electrical distribution; and maintenance & protection of traffic. This project also involves staged construction, 24-hour multi-shift operations and work over active railroad lines. (6/11– 10/13)

- **Senior Construction Inspector, MTA-TBTA, Anchorage and Tower Protection at the Throgs Neck Bridge, NY (TN-87B), ($12M)** - Performed inspection on structural steel and timber members on the fender system of bridge tower for repairs and prepared reports of inspection findings. Reviewed contract plans, specification for the inspection of structural steel members and installation of new navigation lights and electrical wiring on bridge. Inspected the placement of concrete in steel post for fender system on bridge. (3/11- 6/11)

- **Construction Inspector, NYS Thruway Authority, Safety Upgrades MP46.0-MP60.5, Newburgh, NY, ($2M)** - Performed inspection of the removal and installation of new guide rail system, Pier protection, Delineators, Mile markers and shoulder backup for safety upgrades between MP46.0-MP60.5 in accordance with contract plans and specification. Also, responsible for payments to contractor for the installation of contract quantity items. (12/10 – 2/11)

- **Construction Inspector, MTA-TBTA, Henry Hudson Lower Level Bridge Rehabilitation Project, Bronx, NY, ($90M)** - Assigned to work on the Henry Hudson Bridge rehabilitation project over the Harlem River. This bridge is a riveted steel arch structure consisting of a lower and upper roadway deck with 143 feet navigation clearance. Responsible for ensuring that the contractor installed new structural steel members such as floor beams, stringer, diaphragms, tower bracket plates, columns, Inspection platforms, new seismic retrofit repair plates and angles on bridge according to contract plans and specification. Observed the torque testing of structural steel bolts using a calibrated torque wrench by field technicians and reviewing their reports. Also, made monthly payments to contractor for the installation and removal of structural steel items. Observed the jacking of bridge and replacing existing bearings with new seismic isolation bearings. Inspected the installation of new roadway lighting system and new branch feeder wires for lighting system. Ensured that contractor installed new 5KV cables, communication cables and pull boxes on bridge according to contract plans. Observed the pulling, splicing and terminations of new cables and wires on bridge. Observed contractor installing new navigational lights on bridge and Hi-Pot and insulation resistance testing on the 5KV cables. Observed the placement of concrete for new bridge deck, barriers, retaining wall and the testing of concrete by technicians. Inspected the painting of structural steel members on bridge, the payment of these painting quantities and reviewing painting reports. Created punch list items for various contract items. Reviewed RFI'S, DCN, shop drawings and performed project calculations. (4/09 – 9/09)

- **Structural Engineer, DRPA, TBTA, New Jersey Transit Railroad Project, New Jersey Garden State Parkway, Hamilton, NJ ($15M)** - Performed biennial inspections of Ben Franklin and Verrazano Suspension Bridges, New Jersey Garden State Parkway Bridge and New Jersey Transit railroad bridges and submit report of inspection findings. Created construction staging, check load rating, develop schedules, cost estimates and calculate engineering quantities for bridge rehabilitation project on the Garden State Parkway. (5/07 – 9/08)

- **Transportation Engineer, FHWA, MSHA, DCDOT, VDOT, Woodrow Wilson Bridge Project, Alexandria, VA ($2.4B)** This project is seven and half mile long consisting of twelve lanes on the main span of the bridge. Responsible for reviewing contract plans and specifications to ensure permanent materials used in bridge meet contract requirements. These tasks included checking to make certain material delivered were from an approved source of supplier, material certifications had approved MSHA stamps and mill test report. Assisted with monthly materials clearance report, sending materials clearance report to MSHA materials engineer for review and conducting material certifications. Observed the placement of concrete for V shaped piers, lightweight concrete deck and concrete for the operator tower house. Observed the testing of concrete by technicians to ensure that testing was done according to specifications. Responsible for ensuring that the contractor stressed post tension tendons to the correct pressure and obtaining the desired elongation for the cast in place segments of the V shape piers. Observed the stressing of post tension bars and the grouting of the bars and strands. Inspected reinforcing steel for cast in place segments of the V shaped piers and deck. Observed the installation of lead balance blocks and lead balance plates in the counterweight box of bridge. Inspected concrete block wall for electrical room and pulling of control submarine cables for the electrical system of bridge. (4/04 – 4/07)

ASSIGNMENT

Senior Construction Inspector

REPRESENTATIVE AND PERTINENT EXPERIENCE

Mr. McMahon has over 40 years of construction inspection experience in marine terminal, railroad, highway, bridge and transit projects. He is proficient at keeping daily records and reports. Mr. McMahon is familiar with Port Authority, New York City DEP, and New Jersey Turnpike systems and procedures.

- **Senior Inspector, Port Authority of NY & NJ, Term Agreement –**
  - > ***Contract EWR 154.172, Rehabilitation of Runway 4L-22R and Delay Reduction Initiatives*** – Duties include removing and replacing existing concrete and asphalt along runways and taxiways; Remove and replace runway and taxiway lighting; Install new drainage and waterlines; Remove and replace existing sign foundations and signs; and Complete grooving of runway.
  - > ***Contract EWR 154.119, Rehabilitation of Taxiway "P" and Implementation of Delay Reduction*** – Duties include removing and replacing concrete and asphalt along taxiways; Install new handholes and conduit; and Install new centerline lighting and runway edge lights. (10/13 – Present)

- **Senior Inspector, Port Authority of NY & NJ, Term Agreement –**
  - > ***Contract PN 654.527 - Port St. / Brewster Rd. Connector*** – Widening & realignment of Port St. & north entrance to EWR. The work for this $30 million project includes full depth pavement removal / Replacement, traffic signal relocation, overhead sign structures and utility work.
  - > ***Contract MFP 957. 101 – Removal / Disposal of Hazardous & Contaminated Materials Via Work Order*** – Removal of Unsuitable / Contaminated Boulders & soil from various Port Jersey & Port Newark sites ($10 million).
  - > ***Contract PN 354.042A - Berth 8 & 10 Wharf Rehab*** - Demolished existing berth, installed approximately 400 new 18" steel pipe piles, precast & cast in place concrete panels. Installed new concrete deck, new 12" water line ($30 million).
  - > ***Contract PN 800.219 - Berth 36/63 Reconstruction*** - Demolished existing berth, remove unsuitable material, dredge area, installed new 12" steel pipe piles. Installed cast in place concrete panels & deck, new 12" water line.
  - > ***Contract EP 384.063 - Construction of Expressrail Tracks 9 thru 18*** - Installed (11) new rail tracks, concrete runways, high mast lighting & UG utilities.

- > *Contract EP 384.045 - Design / Construction of Tracks 1 Thru 9* - Installed (8) new rail tracks, Concrete runways, high mast lighting & UG utilities.
- > *Contract MFP 654. 041 - Disposal of Hazard / Contaminated Material Via Work Order* - Removal of Unsuitable / Contaminated material from various work sites. (11/08 – 9/13)

- **Senior Inspector, Port Authority of NY and NJ, Marine Terminal Facility- Port Newark/Elizabeth, New Jersey** - Responsible for field inspection, including maintaining records of contract quantities, time and material records, coordinating with utilities and tenant requirements, negotiating invoices and change orders. Projects included new lead track for Expressrail Intermodal Facility, Tracks 9 and 10 to Maher Terminal, installation of security cameras and fencing, Bridge reconstruction involving abutment structures, asphalt pavement and relocating existing water main on bridge over Conrail; Installation of overhead flashing lights, signs and pavement markings at Port Street Railroad crossing; Installation of new 136# rail to service Sealand and Maher Terminal including new concrete crossings and railroad signals; Installation of new fire and domestic water pumping station with 2 new 1 million gallon water storage tanks and metering stations; and Repair of existing 136# railroad siding and installation of new concrete crossing; Berth 36/63 Wharf repair, Berth 8/10 Wharf repair, North Avenue/McLester Street curve realignment, disposal of hazardous materials, and pavement/utility rehabilitation work. (1/01 – 10/08)

- **Resident Engineer/Project Manager, New Jersey Turnpike, Utility Installation** - Performed Resident Engineering, including construction inspection of contractor's means and methods for this project including jacking and boring of 300 LY, of 72" dia. Pipe casting under N.J. Turnpike. Owner's direct representative on-site, oversaw quality of work, maintained record of contract quantities, material certifications and coordinated all as-built drawings with client. (4/95 – 12/00)

- **Project Manager, Metro Link, Light Rail Project** - Responsible for installation of approximately 12 miles of new railroad track between Lancaster and Palmdale, California. Managed and coordinated all construction and field inspection, coordinated construction work schedules with contractors, negotiated change orders and invoices. (1/93 – 9/93)

- **Resident Engineer/Deputy Construction Manager, NYCDEP, Rehabilitation of Fresh Kills Landfill** - Responsible for the rehabilitation of the Fresh Kills Landfill site improvements (Final Cover and Closure) and related consent order work. (7/91 – 12/92)

- **Resident Engineer, New Jersey Highway Authority, Resurfacing MP 38 to MP52, Garden State Parkway** - Duties included on-site owner's representative and oversaw quality of work and schedule. Performed construction inspection for $10 million median barrier, guide rail and resurfacing project for Garden State Parkway between M.P. 38 to M.P. 52, including night time operations and strict MPT guidelines. Inspected milling, paving, drainage, guide rails, and striping. (6/89 – 6/91)

- **Resident Engineer, NYCDEP, Clay Capping of 40 Acres** - Maintained records for clay cap certification, storm, water management including sedimentation basins and associated structures, wetland remediation and passive gas venting systems. All work conformed to NYSDEC regulation part 360. (7/88 – 5/89)

Amit Mukheja
Coatings Inspector

Professional Profile
Mr. Mukheja is a coatings inspector with the following experience.

Proposed Project Assignment
NACE Inspector

Registration/Certifications
2014/NACE Coating Inspector Level 2 - Certified
2010/SSPC - C3 Supervisor/Competent Person-Deleading

Education
AAS/2010/Applied Science

Course Work
2011 - 30-Hour OSHA Training Course
2010 - Method 9, 40 CFR 60 Appendix A Certified Visible Emission Reader

Total Years Experience 4

Project Experience

REI for the Rehabilitation of High Bridge, Boroughs of Manhattan and Bronx, NY; 3/14-Present. Coatings Inspector. This project involves rehabilitation of the masonry arch spans, steel arch span (including deleading and painting), brick arch deck, and brick walkway; stabilization and conservation of the aqueduct pipe; providing barrier-free access and safety for pedestrian and wheeled users; rehabilitation of historic railings and walkway lighting posts; providing architectural lighting (as funding allows); and providing a visitor information system consisting of way finding signage and aqueduct interpretative signage. Mr. Mukheja's responsibilities include observation and documentation of work operations via daily reports and pictures; ensuring worker's compliance with PPE and fall protection; observation and documentation of scaffolding and platform erection according to project specifications; and ensuring that MPT is according to project specification to ensure public safety. Client: New York City Dept. of Design & Construction

Brooklyn Bridge Rehabilitation of the Approach Spans and Ramps and Painting of the Entire Bridge, Contract 6, New York, NY; 5/13-3/14. Coatings Inspector. This project involved construction management and inspection services for the $509-million rehabilitation of this Iconic National Landmark. The scope of work for the project included replacement of approach roadway in Manhattan and Brooklyn over the arch blocks; rehabilitation of the Manhattan side ramp structures with widening and deck and bearing replacements; rehabilitation of the approach steel structures with full superstructure replacement of the York and Main Street structures and orthotropic deck installation at Franklin Square; seismic retrofitting of the main bridge, Franklin Square and ramp structures; painting of the ramp structures and suspended spans in their entirety; restoration of historic features. Mr. Mukheja's responsibilities included observing installation and removal of containment and rigging; observing and documenting mobilization of equipment; observing and documenting of contractor's activities via daily reports; documenting the batch numbers of the paint used and observing mixing of the paint prior to coating application; inspection of surface preparation of steel and coatings as per project specification; performing DFT testing, chloride testing, and abrasive blast inspection to ensure blasting and painting operations were in compliance with project specification; and performing ambient temperature monitoring to ensure that the manufacturer's specifications were followed and all coatings were applied in acceptable conditions. Client: New York City Dept. of Transportation

Rehabilitation of Kew Gardens Interchange/Van Wyck Expressway, Queens, NY; 8/13-9/13. Coatings Inspector. The project involved construction inspection services for the reconstruction of the Van Wyck Expressway (I-678), between 86th Avenue and the Grand Central Parkway in Queens County. This $150-million project involved the complete replacement of five bridges, the reconstruction of one bridge along the reconstruction of a pedestrian tunnel and the widening of the Van Wyck Expressway. His responsibilities included observation and documentation of removal of lead paint from concrete beams in pedestrian tunnel via daily reports and pictures. He ensured crew used proper PPE during lead removal operations, and also ensured public safety during lead removal operations. Client: New York State Dept. of Transportation

Amit Mukheja
Coatings Inspector

Protective Coating of Staten Island Railroad Bridges, Staten Island, NY; 5/12-5/13. Coatings Inspector. Mr. Mukheja's responsibilities included monitoring maintenance and protection of traffic and project safety; taking field measurements, compiling data, and calculating pay item quantities; inspection of Class 1A containments which involved installation of cables and scaffolding equipment and corrugated steel platform to access the work; inspection of abrasive blasted steel to an SP10 and power-tooled steel to an SP15; inspection of cured coatings and dry film thickness to ensure proper coverage; inspection of the work area and contractor's yard to ensure materials were secured, and that the public was not affected by the contractor's equipment or material; conducting testing on cleaned steel to verify cleanliness which included profile readings and chloride testing; creating tracking logs for blasting, power tool cleaning, painting, touch-up, and punch list items; ambient temperature monitoring to ensure manufacturer's specifications were followed and coatings were applied in acceptable conditions; monitoring of mixing and thinning of a five-part coat system which included a zinc coat, a zinc stripe coat, a rust sealer, a mid-coat, and a finish coat; and monitoring of worker's safety which included ensuring workers wore the proper PPE such s half face respirators when working with lead and harnesses when working above six ft. Client: New York City Dept. of Transportation

Protective Coating BSHP Bridges, NY; 4/11-8/11. Environmental Inspector. Mr. Mukheja's responsibilities included conducting inspection of Class 1A containment to ensure proper construction and operation of the containment, ensuring proper clean up of spent waste in the containment; inspection of work area for spills and ensuring contractors' clean up and storage of waste and debris on site; assessment of Class 1A ventilation system as well as visible emission monitoring; inspection of Class 3P containment and ensuring use of HEPA vacuum and shroud on the operating tools; setting up and collecting high-volume TSP filters and personal air monitors; ensuring employee's compliance with the respirator protection, PPEs, fall protection, and personal hygiene practices in the field; inspection of hazardous waste storage, packaging, and labeling; and observing contractors' safe operation on the roadway and near public. Client: New York City Dept. of Transportation

Protective Coating of the Brooklyn-Queens Expressway, Bronx, NY; 11/10-3/11. Environmental Inspector. Mr. Mukheja's responsibilities included conducting inspection and audit of Class 1A containment to ensure proper construction and operation of the containment, ensuring proper clean up of spent waste in the containment; inspection of work area for spills and ensuring contractors' clean up and storage of waste and debris on site; assessment of Class 1A ventilation system as well as visible emission monitoring; inspection of Class 3P containment and ensuring use of HEPA vacuum and shroud on the operating tools; setting up and collecting high-volume TSP filters and personal air monitors; ensuring employee's compliance with the respiratory protection, PPEs, fall protection, and personal hygiene practices in the field; assisting with establishing regulated area monitoring; inspection of hazardous waste storage, packaging, labeling, and transportation; and observing contractors' safe operation on the roadway and near public. Client: New York City Dept. of Transportation

OMNIK Environmental Management, Inc., Norfolk, CT; Summer 2004. Intern. Mr. Mukheja was responsible for preparation and shipment of TSP and Personal Exposure Samples to the Analytical Laboratory; he also participated in TSP-lead and personal exposure monitoring activities and conducted equipment maintenance and calibration; and he provided office administrative support.

Nico Napoleoni
Inspector

Professional Profile
Mr. Napoleoni is an inspector with the following experience.

Project Experience
Brooklyn Bridge Rehabilitation of the Approach Spans and Ramps and Painting of the Entire Bridge, Contract 6, New York, NY; 8/13-Present. Inspector. This project involves construction management and inspection services for the $509-million rehabilitation of this Iconic National Landmark. The scope of work for the project includes replacement of approach roadway in Manhattan and Brooklyn over the arch blocks; rehabilitation of the Manhattan side ramp structures with widening and deck and bearing replacements; rehabilitation of the approach steel structures with full superstructure replacement of the York and Main Street structures and orthotropic deck installation at Franklin Square; seismic retrofitting of the main bridge, Franklin Square and ramp structures; painting of the ramp structures and suspended spans in their entirety; restoration of historic features. Mr. Napoleoni is responsible for performing daily quality assurance inspections during road deck and structural steel demolition and construction/installation activities. Client: New York City Dept. of Transportation

Proposed Project Assignment
Civil/Structural Inspector

Course Work
2013 - 10-Hour OSHA Training Course

Total Years Experience 1

P.C. Richards & Sons, Brooklyn, NY; 6/12-8/13. ACE/Sales. Mr. Napoleoni provided assistance to customers and maintained good and courteous customer service including providing information about the quality of the merchandise, products and brands carried in the store; processed point-of-sale cash, credit and debit card payments using a computerized terminal; manually moved or used a hand truck to move heavy merchandise from the stock area to the pick-up location; assisted in transporting and unloading curbside deliveries to stock area; and assisted in transporting merchandise to selling floor for shelving.

Armani Exchange, New York, NY; 10/11-6/12. Sales Associate/Stock. Mr. Napoleoni provided assistance to customers and maintained good and courteous customer service including assisting customers with store merchandise; keeping work area intact at all times; ensuring that the inventory was always stocked properly; and assisting in transporting and unloading curbside deliveries to stock area.

Century 21 Department Store, Brooklyn, NY; 11/10-1/11. Cashier. He was responsible for providing checkout services including processing point-of-sale cash, credit, and debit card payments using a computerized terminal; assisting customers by providing information and resolving their concerns; maintaining a clean and orderly checkout area at all times; and establishing or identifying prices of goods, services, and tabulating bills using calculators, cash registers, or optical price scanners.

Maimonides Medical Center, Brooklyn, NY; 4/10-6/10. Nephrology Department Intern. He provided office assistance to the medical team including calling to remind patients about appointments; assisting the office manager with word processing and PowerPoint projects; filing and maintaining confidential medical records; answering multi-line telephone, direct calls, and taking messages; and processing and routing incoming mail, answering correspondence, and preparing outgoing mail.

Skills
Microsoft Word, Microsoft PowerPoint, Microsoft Excel

Luis A. Nina
Construction Inspector

Professional Profile
Mr. Nina has about 10 years of experience in construction inspection and material testing. Most recently he has worked on a number of milling and resurfacing projects and is familiar with NJDOT and ARRA inspection reporting and procedures, having experience with federally funded projects.

Project Experience
NJDOT Route 206 from South of Bridge Point Road to Doctors Way; 1/14-Present. $4M. Construction Inspector. This was a State funded project, three years term agreement involving various projects in Region Central. Work was located in Hillsborough and Montgomery, Somerset County. Construction consisted in the improvement of roadway resurface of 5.35 total miles in length, of the project. Scope of Work: consisted in the repairing of roadway surface – to restore it to a level which will improve ride-ability, and includes milling of the roadway surface, removal of any unsound or locally deteriorated pavement, and placement of approved bituminous asphalt material on the following Route: U.S. 206 from M.P. 60.46 – 62.29 & M.P 62.90 – 66.42, in both directions. Inspector was responsible for inspection of the following construction: milling and paving for top surfacing: concrete work: curb, sidewalks and handicap ramps and installation of Traffic Signal Implementation. And for the addressing of punch list and all office work, which included: As-Built, reports, estimates and traffic control coordination. Client: NJDOT

Construction Inspection Services for the Proposed Interchange at U.S. Route 22 and Chimney Rock Road, Township of Bridgewater; 11/13-1/14, $57M. Inspector. This is a federally funded multidiscipline project to improve safety and achieve the current and future mobility goals of a highly congested area of Somerset County. The project will provide a full service interchange at U.S. Route 22 and Chimney Rock Road via Local U.S. Route 22 eastbound with the Mainline U.S. Route 22 depressed 18 ft. under Chimney Rock Road. The project also provides for improvements to the U.S. Route 22 corridor, generally between Interstate 287 on the western end and Thompson Avenue on the eastern as well as the widening of Chimney Rock Road between Thompson Avenue and Route 28, and the realigning and extending of Frontier Road to Chimney Rock Road. Bridge work includes the construction of a new vehicular bridge and railroad bridge over U.S. Route 22 along Chimney Rock Road as well as improvements to the existing bridge on U.S. Route 22 over the Middle Brook and the existing bridge over Interstate 287 on Chimney Rock Road. Some of the major items of work include: clearing, demolition, earthwork, ITS utility relocations aerial and underground, water, sanitary sewer, gas, electric, nightwork, concrete curb, sidewalk, drainage, milling, HMAC paving, concrete decks, steel, precast structures, retaining walls, lighting, landscaping, construction in stages complex traffic control. Duties include the on-site inspection of the contractor's means and methods for clearing, demolition, extensive utility work, structure rehab foundation excavation, steel piles, and sub and superstructure reinforced concrete bridge items, night work. Client: Somerset County

NJDOT MRRC N308 Federal Resurfacing Route 1&9 and Route 24; 10/13-11/13. $5M. Construction Inspector. This is a NJDOT funded project to improve the resurface of ~7 miles of road. Project location was between Elizabeth and Linden, at Jersey City and Mahwah, Job consisted in the reconstruction of three lanes both ways and shoulders and side streets. Inspector was responsible for the supervision of all ADA regulations at handicap ramps; striping, inlets and manhole cleaning. Also, responsible for the installation of traffic control, revision of Punch List items: cleaning, repairing, constructing. Reports and pictures documentations. Client: NJDOT

Proposed Project Assignment
Civil/Structural Inspector

Registration/Certifications

Total Years Experience 10

Luis A. Nina
Construction Inspector

NJDOT Federal Resurfacing North of Evergreen Street to the Elizabeth River; 8/13-10/13. $14M. Construction Inspector. This is a NJDOT funded project to improve the resurface of 11 miles of road. Project location was between Elizabeth to Woodbridge (NJ Parkway entrance), at Union County. Job consisted in the reconstruction of two lanes both ways and shoulders and side streets. Inspector was responsible for milling 4-6 inches, paving both intermediate and top surfacing; striping both temporary and permanent, inlets and manhole reconstruction and resetting. Also, inspector was responsible for the traffic control and extraction of asphalt cores and As-Builts. Client: NJDOT

NJTA OPS A3319 Contracts P600.102B Supervision of Construction Services for Installation of Variable Message Signs – Turnpike; 9/12-8/13. $13M. Construction Inspector. Installation of state-of-the-art technology VMS/VSL signs at new and existing locations in replacement of the Turnpike's existing emergency speed warning and speed limit signs between MP 84.8 and 120.0. Project involved the installation of 27 "site-specific" VMS?VSL sign structures at all direction of traffic: SNI, SNO, NSO, NSI, SN95L/X, NS95L/X, SNE, NSE, SNW and NSW. This contract work includes foundation construction, sign structure erection, electrical and ITS work, along with the removal of existing sign structures, foundations, electronic signs and associated control systems. Inspector was responsible for the supervision of all items of work, including reports, pictures, estimates, payments, temporary and daily traffic control (at all day and night). Client: NJTA

NJTA OPS A3319 Contract P600.102E Supervision of Construction Services for Installation of Variable Message Signs – Parkway North; 2/12-09/12. $12M. Construction Inspector. Installed state-of-the-art technology VMS/VSL and support structures at new and existing locations to replace the Parkway's existing VMS/VSL signs between MP 104.55 and 171.9. Project involved the installation of 28 "site-specific" VMS/VSL sign structures at all direction of traffic: North and South. This contract work includes foundation construction, sign structure erection, electrical and ITS work, along with the removal of existing sign structures, foundations, electronic signs and associated control systems. Inspector was responsible for the supervision of all items of work, including reports, pictures, estimates, payments, temporary and daily traffic control (at all day and night). Client: NJTA

NJDOT Region North Maintenance Engineering & Operations CM/CI 2011 Term Agreement- Drainage Contracts; 10/11-02/12. $3M. Construction Inspector/Assistance RE. This is a NJDOT funded project to clean drainage system along various locations: Route 27, 28, 202 & 206. Scope of the project consisted in the supervision for two contracts – the Storm Sewer Cleaning/Video Inspection Contract and the Storm Sewer Repair Contract. Duties included the on-site inspection of the contractor's means and methods for cleaning and hauling as well as process of filming video of the construction and payment applications, TIR reports and pictures. Client: NJDOT

NJDOT Southern Term Agreement 2009 – TO 5, Maintenance Roadway Repair Contract No. S-304, DP 10443; 5/11-10/11. $6M. Construction Inspector. This was a State funded project, three years term agreement involving various projects in Region South. The majority of the work was located Warren, Sussex, Morris, Passaic, Bergen, Essex, Union, and Hudson Counties. For agreement A, B, and C; and Atlantic, Burlington, Camden, Cape May, Cumberland, Gloucester and Salem Counties for Agreement D, E and F. Construction consisted in the improvement of roadway resurface of 7.59 total length of the project. Scope of Work: consisted in the repairing of roadway surface – to restore it to a level which will improve ride-ability, and includes milling of the roadway surface, removal of any unsound or locally deteriorated pavement, and placement of approved bituminous asphalt material on the following Route: U.S. 40 from M.P. 28.58 – 29.5; M.P 32.65 – 36.24; M.P. 51.5 – 52.13 and M.P. 63.55 -64.14 (all in both directions). And Route: 322 from M.P. 49.99 – 50.20 in both directions. Inspector was responsible for the supervision of the following construction: milling and paving both intermediate and top surfacing: concrete work: curb, sidewalks and handicap ramps. Also, construction of drainage systems, loop detectors, signs installations, core extraction, striping and punch list. Office work included: reports, pictures, As-Built, estimates and traffic control coordination. Client: NJDOT

IDO NISSANI

Inspector

Mr. Nissani is experienced working as a Field Inspector reviewing contractor work that has included concrete placement and quality, rebar, asphalt and earthworks. He is also experienced in performing construction material testing for soil, concrete & asphalt. He is a certified ACI Special Inspector Level 1 and also NICET 1 & 2 certified for Construction Material Testing and his project experience has included Runways at JFK Airport, Roadway/Bridge work in Queens and NYC Transit work on the A/7/F/6 Lines.

Twin Peaks Inc., New York, NY
Field Inspector

Prepared Zoning and Building Code analysis, site inspections, estimations, construction drawings and expediting for various projects. He was responsible for conducted QA/QC for CCRL and AMRL accreditation and for also conducting concrete mix designs.

As a Field Inspector he worked on a broad spectrum of projects that included airports, transit, transportation and bridges. While assigned at JFK Airport he was responsible for field inspection of concrete work for the Bay Runway and used a profilograph to measure pavement surface roughness on various Runways at the JFK Airport. Other work included:

- Concrete Inspections work for the Broad Channel Water Way Bridge
- Rebar Inspections for the New Transportation Hub at the WTC
- Rebar and concrete inspections for the No. Seven Train Line Extension and other subway stations and facility renovations such as on the F Line in lower Manhattan, the A line in Far Rockaway and the Six Line in the Bronx.
- Rebar and concrete inspections for the Verrazano Bridge booth removal
- Windsor probe for the Henry Hudson Bridge
- Concrete work inspections for the Houston Street Renovation

Bahari Architecture PC, Great Neck, NY
Intern

While working on the Kollel Ohr Haemet Community Ceneter project he prepared client presentations, 3D architectural models, 3D computer models and renderings, construction drawings, Zoning and Building Code analysis.

The Cooper Union, New York, NY

Developed a new system of deployable structures in different scales and built three full scale models. The system is currently in the patenting and publishing process

Otranto Foundation, Otranto, Puglia, Italy

Studied juxtaposed dynamics of hieroglyphs of the ancient cave "Grotta Dei Cervi", historical urban elements and stray animals from anthropological, archeological and architectural aspects.

Education
- MS, Structural Engineering, Manhattan College (In Progress)
- BA, Architecture, The Cooper Union

Software
- AutoCAD
- Adobe Photoshop
- Adobe Illustrator
- MS Office

Certifications
- ACI - Special Inspector, Field Technician & Aggregate Technician - Level 1
- NICET Level 1 & Level 2 - Construction Material Testing in Soils, Concrete & Asphalt
- NYC DDC - Concrete and Soil Field Qualifications & Asphalt and Concrete Plant Qualifications
- NDT - Windsor Probe Test System Accredited Operator
- OSHA - 10 Hour Training in Construction Safety

Awards
- The Cooper Union, 2004 – 2008 - 5 year Scholarship
- SHAI, Sephardic Heritage Alliance Inc., Annual Scholarship
- UMJCA, Mashadi Cultural & Educational Committee, Annual scholarship
- New York Institute of Technology - Presidential Honor List

ASSIGNMENT

Senior Construction Inspector

EDUCATION

Diploma in Construction Standards & Procedures – City & Guilds of London Institute, 1983
Diploma in Construction – Advanced City and Guilds of London Institute, 1984
Associates Degree in Engineering Science – Westchester Community College, 1991

REGISTRATION

10-Hour OSHA Construction Safety, including fall protection
SWAC Background Check, MTA Track Trained, PATH EIC, Track Trained.

REPRESENTATIVE AND PERTINENT EXPERIENCE

Mr. Njie has over 20 years' experience in construction management including MPT, environmental, electrical and plumbing pipelines, structural steel, heavy duty excavation, concrete work, and roadway paving. He has managed all phases of projects from under $500k to multimillion dollar construction projects. Coordinated with Architects, Engineers and city/state/local officials in performing inspections of sites and code enforcement. Mr. Njie has excellent communication skills. His experience with the Port Authority of New York and New Jersey involved work at the World Trade Center HUB, 911 Memorial, VSC (Vehicle Security Center), Freedom Tower, Towers 2,3,&4, where he corresponded regularly with the Resident Engineers to keep them apprised of any issues on project's progress. Reviewed plans and contractor payment requests, wrote daily reports, supervised superintendents and Contractor's staff and kept equipment & material records.

- **QA/Inspector, FEMA/Hurricane Sandy NYC Rapid Repairs Program Far Rockaway - Coney Island, Brooklyn, New York** – Served as QA/Inspector for repair work. Inspected and monitored all civil, electrical, plumbing, hot water heaters and heating systems, from inception assessment to completion close out, for quality and conformance with contract compliance set by The NYC Rapid Repairs. Documented inspection results by completing reports and logs; inputting data onto main server database. Maintained daily logs and supplement inspection records with photographs measure and verify actual quantities at close out to ensure compliance with the NYC Rapid Repairs Program. (12/2012 – 3/13)
- **Senior Construction Inspector, (EIC), PATH, Port Authority of New York and New Jersey.** Responsible for Supervision of Contractor's Superintendents and Crew inside Path Train system, Tunnel Wall Reinforcement for Explosive resistance. Worked with Iron workers to install Blast plates on Tunnel Walls. As EIC, called Train Master before entering Work Train with Train Engineer, Conductor and Crew, and after all activities on Train Tracks, Platforms or Stations were completed. Also Held safety meetings before boarding Work Trains. Supervision of Contractors and Crew inside Path Train system, working on Flood gates between the world Trade Center and Exchange Place. Supervision of Mechanical Contractor for installation and Modifying 12", 10" etc. Water mains in PA Facilities. Supervision of Mechanical Contractors in erecting New A/C, HVAC and installing New Escalators and Steel Stair Cases, in Path Journal Square and PA Facilities. Supervision of Electrical

Contractors in the installation of power lines in Substations, Tracks Tunnels and Facilities. Supervise the installation of New Warehouses, Foundation structure siding to Roofing. Supervision of Contractors involved with Security projects throughout Path System. Preparation of Daily reports, Signing of T&M tickets, monitoring and controlling projects progress & Project Budget. (2012)

- **Senior Construction Inspector, TBTA , RFK Bridge Utility Relocation Project** – Senior Construction Inspector responsible for Relocation of substation and duct banks, relocation of utilities and electrical from under East River into Randall's Island facility and buildings. Heavy duty excavations, Trenching and shoring for Duct banks and buildings. Supervision of Electricians working with high Voltage13.2 kV and 5 kV etc., and installation of new Switchgear to Bridge and Randall's Island Facilities. Supervised placing rebar on duct banks, foundation, footings, columns and beams. Supervised nuclear density test for compaction of soil & apshalt; control concrete tests pours and quantifications. Installation of concrete walls, footings and beams & bridge Decks according to plans. Supervised laying of asphalt to roadways, ramps and bridge. (2011 – 2012)
- **Senior Construction Inspector, Port Authority of New York and New Jersey, World Trade Center PATH Transportation HUB** - Responsibilities included opening and closing of general orders in coordination with MTA Transit on the #1 Subway line and the R&W Subway lines. Other responsibilities include **WTC Transportation HUB**, In charge of top to bottom construction (200 feet deep from street level). Responsible for approving and rejecting of concrete delivered to site - according to specifications. Heavy duty excavation and under pinning, sign soil and rock manifest Installation of reinforced shear walls, concrete columns, floors and footing, Foundation footings, rebar, & form work Installation of rock anchors, Installation of structural steel, I-Beams, and columns according to structural plans. Structural bolting and welding of I-Beams & columns, installation of super columns, girders, and structural members for PATH Station/Hub. Short Crete of reinforced foundation walls of all thicknesses, drilling of piles and mini piles to support foundations and I Line subway line, Structural steel bracing and support of the MTA number one subway line 200ft below street level. Installation of tie-backs, strands and grouting on Vesey Street, Church Street and Liberty Street slurry walls. Installation of masonry work where applicable. (2006 – 2011)
- **Construction Manager, A & B Construction, Various Projects** - Managed construction company for residential and commercial projects. Supervised Structural steel work, brick masonry facade construction of commercial buildings. Prepared all construction documents in compliance to local codes (electrical, mechanical, site, plumbing, and HVAC construction). Maintained effective relationship and problem solving, with all trades on site including contractor owners, engineers, architects and the public. Supervised contractors and inspected all work done by all trades for city inspections. (1995 – 2006)
- **Construction Inspector, Port Authority of NY&NJ** – Worked with resident engineer and team of engineers to manage, inspect and supervise multi-million dollar projects in the Lincoln Tunnel and the Lincoln Tunnel helix. Inspected electrical, mechanical and construction contractors working on wide array of projects in the bus terminals and the Lincoln Tunnel. Inspected projects to comply with local codes and specification. Involved with quality control, problem solving, scheduling and attended meetings with Contractors teams, Foremen and Engineers. (1992 – 1993)
- **Construction Manager, High-Rise Development** - Responsibilities included inspection for all phases of construction to be in accordance with plans, engineering and local and government codes. Coordinate and supervise all trades on site. Supervised masonry, brick, and concrete for high rise buildings. (1987 – 1989)

Christopher O'Donnell
Assistant Resident Engineer

Professional Profile
Mr. O'Donnell has gained extensive experience in the field of construction in a variety of specialty areas involving transportation construction. This experience includes bridge reconstruction and repairs, pile layout and pile driving inspection, construction of footings, abutments and stem walls, testing of concrete during its placement, maintenance of traffic, and utility relocations and installations.

BS/1990/Civil Engineering; AS/1987/Civil Engineering

Total Years Experience 26

Project Experience
Delaware River & Bay Authority – Task Order Inspection Services; 2/05-6/11; 6/14-Present, $75M. Resident Engineer/ Senior Inspector. GPI provided construction inspection/management services on a task order basis, for various projects on the DRBA facilities. ($3M Consultant Fee) Mr. O'Donnell was responsible for all aspects of the construction inspection for more than ten task orders, including an electrical service upgrade contract to the Delaware Memorial Bridge; Miscellaneous Structural Work on the DMB including joint repairs, deck repairs and structural steel repairs; and a major interchange project on Routes 295/Route 13. He was responsible to schedule, coordinate, attend and document all progress meetings, meetings with outside agencies or officials/ community representatives; process shop drawings and RFIs; request and approve material certifications, review and approve catalog cuts and methods of work and equipment; assure compliance with the contract plans and specifications; document daily inspection reports; evaluate and approve the quality and workmanship of all contract work; maintain as-builts; maintain orderly records of project progress, quantities and costs; process contractor Pay Certificates; review Contractor's claims/requests for change orders and make recommendations to the DRBA. Client: DRBA

Representative projects include:

- DMB 04-01 – NB I-295 Realignment. DelDOT Coordination. ($27.5M, 2010-3/11)
- DMB 05-01R – Elevator Replacement/Miscellaneous Steel Work. Work includes: exterior freight and catwalk repairs miscellaneous repair items. ($12M, 8/10-6/11)
- CMLF 08-02 – Freeman Highway Bridge Rehabilitation, Lewes, DE. Punch-list items remain, contract item #100, FRP, weather sensitive. ($2.5M, 3/10 -12/10)
- DMB 09-02 – Deck Resurfacing & Overpasses. ($1.5M, 3/10 -1/11)
- DMB 10-01 – Repainting West Girders, 1st Structure – Spot Coat. ($1M+/-, 11/10-4/11)
- DMB 10-02 – Repainting West Girders, 2nd Structure – Full Coat. ($2M+/-, 11/10-4/11)
- DMB 08-01 Repainting East Truss – Structure 2. Full coat system, lower splice plate bolt replacement, slip critical connections. ($3M+/-, 3/09-8/10)
- DMB 08-02 – Repainting Suspended Back Spans, Structure 1. Spot coat throughout with North fascia, full coat. ($1M+/-, 3/09-8/10)
- DMB 08-03 – Deck Repairs & Resurfacing. Majority of work concentrated on SB approach road bridges 4, 5, 6, 7 & 8. Traffic shifts & temporary stripping, etc. ($2M+/-, 3/09-8/10)

NJTA OPS P3448 Garden State Parkway Widening MP 90.5 to 93.5 (Contract P200.200, $75M) & MP 93.5 to 99.5 (Contract No. P200.201, $101M); 1/13-6/14. Assistant Resident Engineer. These contracts involved the restoration of shoulders and other safety improvements by widening the GSP mainline to provide for 12-foot-wide left and right shoulders and 12-foot-wide travel lanes and incorporating current NJTA standards for pavement super-elevation and transitions, roadside treatments, and roadside clear zones. Contract P200.200 included the replacement of seven bridges, the widening and redecking of two existing bridges, the water management basins, signing, lighting, and other miscellaneous work necessary and incidental to the completion of the project. Contract P200.201 included the replacement of three bridges, the widening and redecking of seven existing bridges, the extension of existing culverts, construction of 13 new permanent sign structures, drainage improvements, 14 storm

water management basins, signing, lighting, and other miscellaneous work necessary and incidental to the completion of the project. Client: NJTA

Commodore Barry Bridge Miscellaneous Structural Repairs (CB-18-2010), Camden, NJ; 6/11-12/12, $20M. Assistant Resident Engineer. GPI performed construction management services for the Commodore Barry Bridge Miscellaneous Structural Repairs project. The work included the rehabilitation and/or replacement of bearings, gusset planes, steel barrier, below deck walkway modifications plus miscellaneous concrete and spall repairs to the Commodore Barry Bridge and one approach bridge at US Route 322 over US Route 130. Duties included being the Owner's direct on-site representative to the contractor, direct supervision of a Construction Project's Field Inspection/Engineering staff, performing quality assurance oversight of major items of work in progress and/or ensuring that the project is constructed in accordance with the plans and specifications for the owner, checking accuracy of inspection reports, monitoring progress schedule and progress, resolving conflicts between inspection staff and contractor, preparing change orders, preparing monthly pay estimates and project close-out. Client: DRPA

NJTA Contract R-1464 Pile Repairs Maintenance District No. 1, Stream Crossings Mile 0 to Mile 19, Salem and Gloucester Counties, NJ; 6/03–2/05, $2.5M. Resident Engineer. Construction supervision of concrete pile repairs and pile encapsulation with fiber wraps and prefabricated shells, substructure spall repairs and waterproofing, and replacement of existing bearings with elastomeric bearings on five bridges. Responsible for all aspects of the Resident Engineering and construction inspection activities on the project including but not limited to: the daily assignment and supervision of the inspection staff; the review of all inspector daily reports and project source documents; conducting regular progress meetings; review of contractor schedules; coordination with NJTA Traffic Operations; the preparation and review of Payment Certificates and change orders; in addition to functioning as a construction inspector on all of the various work items on the project. Also performed extensive concrete testing of existing piles and developed an alternatives analysis report for a future pile rehabilitation contract (Contract R-1489). Client: NJTA

NJTA Contract R-1418 ($2.1M) and Contract R-1438 ($5.8M) Miscellaneous Structural Repairs, Mile 0 to Mile 122 and the PHMTE and the NBHCE, NJ; 2/02-5/03. Assistant Resident Engineer for structural repairs on 15 bridges throughout the NJ Turnpike. Repairs included structural steel repairs to bridge girders, structural steel repairs on fracture critical box beams, structural repair and rehabilitation to steel bearings, replacement of steel rocker bearing with elastomeric bearings, pier and abutment spall repairs, removal and replacement of pier bent column encapsulation to investigate column conditions, and substructure waterproofing. Contract R-1438 involved construction supervision for repairs to piers including partial depth pier reconstruction, spall repairs, waterproofing, and repair of granite block pier bases. Project responsibilities also included preparation of Payment Certificates, review of change orders, review of lane closing requests, review of contractor's material and procedural submissions, processing of shop drawings, review and monitoring of project progress schedules, review of additional work cost estimates, and assignment of additional work areas. This contract also involved coordination with the NJDOT for traffic control; and coordination with railroads. Client: NJTA

NJTA, Miscellaneous Structural Repairs Mile 0 to Mile 122 and the PHMTE and the NBHCE Contract R-1380, NJ; 2/01-1/02, $3.5M. Assistant Resident Engineer. Project involved construction supervision for structural steel repairs, substructure spall repairs, pier cap reconstruction on Str. No. 105.18, overhead sign structure foundation repairs and foundation reconstruction, bridge jacking and bearing replacement and repairs. Responsibilities included layout of work areas, daily inspection of work, calculating quantities for payment, assisting with preparation of Payment Certificates and change orders, and as-built drawings. Client: NJTA

DRPA, Benjamin Franklin Bridge Main Suspension Span Rehabilitation, Camden, NJ and Philadelphia, PA; 2/00-1/01, $18M. Assistant Resident Engineer. Project included the inspection of structural repairs including rehabilitation of the concrete anchorage, concrete parapets, dehumidifying structures, and mechanical equipment; containment of lead waste; repair of wires, and compaction and re-wrapping of wires. Responsible for daily inspection, preparation of reports and pay estimates, reporting directly to the Resident Engineer and coordinating the work with two other inspectors. Client: DRPA

John O'Har
Inspector

Professional Profile
Mr. O'Har has over 40 years of construction experience completing numerous successful projects in the New York and New Jersey metropolitan area ranging from developments, gut rehabilitation, retrofitting, tenant construction and site work. He also has experience in heavy construction including foundations, utilities, drainage and road construction.

Proposed Project Assignment
Civil/Structural Inspector

Registration/Certifications
ACI Concrete Field Testing Technician Grade 1

Course Work
2007 - 10-Hour OSHA Training Course

Total Years Experience 46

Project Experience

2011-2014 Port Authority On-Call Construction Management Services - Staten Island Bridges Rehabilitation, Staten Island, NY; 9/11-Present. Inspector. The project involves construction inspection for structural, civil, mechanical, electrical, and bridge painting services for the three Staten Island Bridges operated by the Port Authority of New York & New Jersey. Mr. O'Har is involved on the following assignments:

- **Contract AK-192 Maintenance Pavement Repairs at the Goethals Bridge and Outerbridge Crossing.** This project involves identifying sections of roadway surface to be repaired. Mr. O'Har is responsible for the layout and supervision of same repairs.
- **Contract AK-189 Structural Steel Rehabilitation.** This project involves location and layout of priority repairs. He is responsible for overseeing lead abatement at repair areas and installation of structural steel as per contract drawings.

Client: Port Authority of NY & NJ

2006-2010 Port Authority On-Call Construction Management Services - Staten Island Bridges Rehabilitation, Staten Island, NY; 2/07-9/11. Inspector. The project involved construction inspection for structural, civil, mechanical, electrical, and bridge painting services for the three Staten Island Bridges operated by the Port Authority of New York & New Jersey. Mr. O'Har's responsibilities at the Bayonne Bridge included structural steel repair on the underside of the roadway at the New York and New Jersey viaducts and approaches; miscellaneous repairs at suspender cables; arch chord protection at roadway lower arch interface; steel plating (hardening) of chord box; and replacement of air handler and associated piping and ductwork at toll house. Client: Port Authority of NY & NJ

George Washington Bridge Rehabilitation, Fort Lee, NJ; 10/02-2/07. Inspector. This $100-million contract involved Class 1A containment of both towers of this structure over the Hudson River involving the removal of existing lead paint and the application of a new three-coat system to approximately 2.1 million sq ft of steel. Projects Mr. O'Har has been involved on include New York and New Jersey anchorage dehumidification; installation of structural steel, catwalks and stairs, wire rope enclosure profile, and tension membrane fabric. The project also included installation of dehumidifiers, controls, and power supply including 4160 KV switchgear, and facility priority improvements involving the rehabilitation at the George Washington Bridge Bus Station. Various contracts included installation of new elevator and escalators, main entry doors, bus shelters, ventilation fans and controls, and tenant space rehabilitation. Mr. O'Har was involved with paving of bridge span and departure roadways; and installation of drainage and catch basins. Mr. O'Har acted as liaison between the Port Authority, contractor representatives, and subcontractors and was involved with the inspection and testing of work installed and ensured contracts were fulfilled. A portion of this project involved the seismic retrofit of New York approach structures involving shoring and jacking of columns for removing and replacing bearings; installation of restrainer brackets and cables; and jacketing of concrete columns supporting approach ramps. Mr. O'Har worked on the rehabilitation of Hudson Terrace and Ramps TR2/TR3 which included installation of structural cantilever parapet over eastbound lower level lanes; paving; milling and application of waterproofing; bridge deck membrane over lower level approach lanes to bridge span. The project also included site work, installation of steel faced curbs and sidewalks. Client: Port Authority of NY & NJ

John O'Har
Inspector

While with other firms, 1977-1993, Mr. O'Har obtained the following experience:

He provided construction inspection services for the Port Authority of NY & NJ at PATH, their commuter rail system, The Journal Square Transportation Center and at the George Washington Bridge.

He provided construction inspection services for the rehabilitation of The Journal Square Transportation Center's parking facility and rigging the removal and installation of new cooling towers on the facility's roof.

Mr. O'Har acted as lead night-time inspector for over six years at the George Washington Bridge, coordinating roadway closures and overseeing various contracts including, but not limited to, paving of the bridge span and its approaches, installation of sign foundations and new sign structures, new electrical feeds to expressway lighting, structural steel repair, rebuilding of the Lemoine Avenue overpass and various rehabilitation projects at the George Washington Bridge Bus Station.

Mr. O'Har was involved with the installation of up to 30-in. diameter steam and dual temperature water lines from a self-supporting generating plant at Roachdale Village, a 32-building cooperative complex in Queens.

Mr. O'Har was involved with the rehabilitation of DEP pump stations in Queens and Manhattan. The scope of work consisted of major excavation and shoring, dewatering, installing pipes, manholes, valves, and wiring a leak detection system.

He was involved on various rehabilitation projects for NYCDOT, TBTA and the PA NY & NJ. He worked at various bridges, tunnels, ports and airports in the New York City metropolitan area. He is experienced in environmental projects involving specialty products (geotechnical materials, erosion control liners) and coordination with state and federal environmental agencies.

Mr. O'Har was involved in the construction of three warehouse buildings in Queens.

Mr. O'Har was involved with the layout and construction of a field house and two baseball fields on Gun Hill Road for the New York City MTA, built to Parks Dept. Specifications.

He was involved with the rehabilitation of a Rutgers University parking deck including major structural slab shoring, bracing, removal and replacement.

He was involved with concrete repair and waterproofing.

Mr. O'Har worked on Public Works projects for the City of New York, Dept. of Environmental Protection and Dept. of General Services.

Hew was involved with tenant construction of commercial office space in Manhattan.

He was involved with the supervision of projects from demolition to completion, including layout, coordination of all trades, interacting with sub-contractors, management and clients.

He was involved with general contracting: underpinning, foundations and concrete construction.

Mr. O'Har was involved with the rehabilitation of two New York brownstones into luxury co-operative apartments.

Marcus Olivo
Inspector

Professional Profile
Mr. Olivo is an inspector with experience on major bridge and viaduct reconstruction and rehabilitation projects in the New York metropolitan area. These projects include work associated with the complete replacement of entire bridge systems including, but not limited to, structural steel; bearings; expansion joints; decks; and coatings.

Total Years Experience 8

Project Experience
2011-2014 Port Authority On-Call Construction Management Services - George Washington Bridge, Fort Lee, NJ; 4/13-Present. Inspector. This project involves joint replacement of the upper level deck. The project also involves the replacement of orthotropic deck, scupper and pipe run replacement, expansion finger joint repairs, main/secondary floorbeam repairs, stringer and stringer bearing repairs, deck rib connections, barrier repairs, paving, and coordination of maintenance of traffic. Mr. Olivo is responsible for coordinating lane closures between the contractor and the GWB facility, daily inspection and oversight of contract work which includes rivet removals, removal of existing steel members, high-strength bolt installation for contract flag and routine repairs. He has also monitored protective coating operations from paint removal, to surface preparation, and application of new protective coatings and has also kept track of time and material/net-cost claims for verification of work performed against claims being submitted. Client: Port Authority of NY & NJ

Reconstruction of Willis Avenue Bridge, New York, NY; 1/10-4/13. Inspector. This project involved replacement of the existing movable bridge and approaches with a new structure, built offline from the existing structure. Mr. Olivo's responsibilities included monitoring and inspection of Fiberglass Reinforced Plastic (FRP) Piles being driven into the Harlem River for the fender system around the new bridge piers; monitoring the installation of the false work required to set up the pre-cast concrete template needed to drive FRP Piles and pour concrete beams of the fender system; performing concrete test of many different classes of concrete used in the construction of the Willis Avenue Bridge's River piers in the Harlem River; providing welding inspection for the welding of shear stud connectors onto Caissons which formed ring beams around the caissons; monitoring iron workers who were performing field splices of tub girders using high strength bolts following the NYS Steel Construction Manual's specification; and monitoring and inspecting the installation of epoxy coated reinforcing bar used in the construction of the new bridge's retaining walls, columns, piers, and pier caps. Mr. Olivo also performed inspections on the coating application of the field bolted connections and splice plates. These inspections consisted of monitoring mixing of paint kits; checking weather conditions prior to painting; and checking surface preparation and actual coating application. He performed Dry Film Testing (DFT) on all coats being applied as per the SSPC-PA2 standards. During night shift operations, he monitored the demolition of the existing structural steel bridge piers, stringers, and concrete deck. Mr. Olivo also monitored the demolition of temporary structures which included demolition of concrete decks barrier and steel columns; the demolition of the existing bridge's river piers in the Harlem River; inspection of the driving of sheet piles for construction of a cofferdam around the existing bridge piers for future demolition; conducted field soundings to verify tip elevations of all sheet piles driven; and inspected field welds for temporary brackets installed for installation of the interior wale beam. Mr. Olivo also acted as the lead inspector for the entire Willis Avenue Bridge paint touch-up operation. He conducted field inspections to ensure proper surface preparation and feathering was performed as per the NYCDOT specification; monitored and inspected form work erection, rebar installation, and concrete placement for the river pier fender system; monitored rub and patch operations for various concrete structures; and inspected

installation of stainless steel and fiber glass hand rails, including anchor bolts, drilling and grouting, and alignment of hand rails. He also performed MPT inspections for single and double lane closures on the Major Deegan Expressway as well as on the FDR Drive, ensuring all MPT devices were in place at their proper locations; ensured all stipulations of the permit allowing lane closures were enforced as required; kept track of temporary construction signs during installation and removal, including releasing payment quantities; acted as MPT inspector for full bridge closures of the swing span for mechanical testing purposes which included phoning Traffic Enforcement Agents and ensuring they were at their required posts for the duration of full bridge closure; and notified all required agencies prior to full bridge closures or lane closures and notified them when the work was complete and the all lanes were open to traffic. Client: New York City Dept. of Transportation

Rehabilitation of the Brooklyn-Queens Expressway (I-278), Park Avenue Viaduct, Kings County, NY; 11/07-12/09. Inspector. This $138-million project involved construction engineering and inspection for the widening, redecking and repainting of this 850,000 sq ft viaduct with complex MPT on and below this heavily traveled structure. His responsibilities included the monitoring and inspection of welders and welds to make sure that they complied with welding procedure specifications (WPS); performing concrete testing of the structural concrete which included slump tests and air tests; casting the cylinders which were sent out for destructive testing; and overseeing the removal of paint on the steel structures, the placement of concrete barrier, installation of pedestrian safety fencing, and monitoring installation of light pole foundations, light poles, electrical conduit and electrical conductors. He also monitored iron workers during prep work of column base plate retrofit to see that the steel was cleaned properly and was able to be welded. He assisted senior inspectors during night shift to inspect that the proper MPT layout was followed; assisted with blast inspection of existing steel to be painted and inspection of field applied paint systems; monitored paint to ensure intensity of the paint was as specified; monitored containment for visible emissions of lead dust; and performed dry film thickness (DFT) test to make sure paint applied thickness was as specified. Client: New York State Dept. of Transportation

Manhattan Bridge Rehabilitation of Lower Roadways, Contract 11, New York, NY; 11/06-11/07. Mr. Olivo served as an inspector on this $150-million project that involved the reconstruction of lower roadway; removal and replacement of floorbeams, stringers, bearings and deck in main span and side spans; rehabilitation of anchorage chambers; installation of new lighting and traffic signs on lower roadway; rehabilitation of travelers in suspended spans; replacement of maintenance platforms at towers; painting of bridge in suspended and approach spans; and repair of flagged conditions. He was responsible for the overview of the removal of the old floorbeams, stringers, diaphragms, cross beams, steel barriers and deck panels and overseeing the installation of the new structural steel members, which included the floorbeams, stringers, diaphragms, and grid deck panels; he made sure ironworkers torque bolts were correct and replaced them if they were not; approving cleanliness of connection prior to priming before the new floor beam was installed; overseeing the excavation of asphalt, sub-base concrete and miscellaneous excavated material; checking to make sure all grades were correct and no utilities were damaged in the process of excavating; overseeing the process of backfilling and assuring the material was rolled properly to pass compaction test; and inspecting formwork to assure its integrity before placing concrete. Client: New York City Dept. of Transportation

Macombs Dam Bridge over the Harlem River Rehabilitation, Contract #BRX287R, New York, NY; 6/06-11/06. Inspector. This $145-million rehabilitation project included structural steel replacement and reinforcement for ±3,000 ft total length of viaducts, a camelback, a swing span, ramps over Metro-North Railroad, structures over Harlem River Drive and Major Deegan Expressway. Mr. Olivo's responsibilities included filing inspectors' daily reports; completing engineers' daily diaries; inspection during night work; filing and processing all documents related to project; completing items pertaining to project closeout; assisting in the review and preparation of monthly progress and extra work payments to the contractor; inspection during night work in assisting senior inspectors for the mechanical operations of the swing span as well as inspecting the set up of the MPT for full bridge closures; inspection of subbase material placement and grading; testing of concrete and inspection of concrete placement for the sidewalks below the viaduct (+/- 4,000 lin ft long, 40 ft. wide); inspection of steel faced concrete curb installation (+/- 4,000 lin ft) including 20 ea handicap ramps; inspection of asphalt placement; miscellaneous punch list work items such as painting of structural steel, minor structural steel repairs. Client: New York City Dept. of Transportation

ASSIGNMENT

Senior Construction Inspector

EDUCATION

Queensboro Community College, Manhattan College, SUNY Purchase

REGISTRATION

OSHA 10 Hour Certified, ACI Level 1 Certified, ACI Level 2 Concrete Constructions Special Inspector Certified, ICC Structural Steel Bolting Certified

REPRESENTATIVE AND PERTINENT EXPERIENCE

Mr. Petekiewicz has over 30 years of diversified engineering, estimating and construction experience with transit, high-rise buildings, tunnels, transportation, and power plant facilities. His experience covers inspection of civil, structural, mechanical, track, and electrical, including lighting, fire alarms, and public address systems. He has performed constructability review, inspected contractor's work and records to insure work complies with plans and specifications, coordinated with Port Authority operations, interfaced and coordinated with government agencies, managed change orders, generated and maintained punch lists and RFI's, and administered contract close out. He has training in Port Authority systems and procedures, Track Safety Awareness, Hazardous Materials Management, and Confined Space Entry.

- **Resident Engineer, WTC East Tub Architectural Contracts - $4,000,000 to $16,000,000 range:** Multiple architectural contracts. Responsible for preparation and negotiation of all contract change orders. Oversight of consultant staff performing daily inspection of construction for contract compliance. Responsible for verification and approval of monthly payment requisitions. Responsible for oversight of bi-weekly construction progress meetings. (2011 – Present)

- **Resident Engineer, WTC, Harrison West Transfer Yard - $5,175,258** – Responsibilities included overall supervision of construction of approximately four acres of undeveloped land for the new WTC transfer yard. Project included total supervision of installation of under drain/storm water system, rough and final grading for the construction of a concrete retaining wall, asphalt access road and installation of six railroad tracks with required switches. The position required supervision of contractor's submittals for review/approval of materials, construction procedures and adherence to local and state environmental requirements. Daily inspection of contractor's progress to verify conformance to plans and specifications including documentation and estimating for all change order work related to project. Oversaw all efforts to obtain Permit to Occupy and final contract closeout. (2010 – 2011)

- **Assistant Resident Engineer, WTC Transportation Hub Project and Other World Trade Center Site Projects, New York, NY $2,200,000,000** – Primary responsibilities include General Conditions which is Contractor self-performed work at the construction site including but not limited to the furnishing, installation, operation and maintenance of all temporary structures, facilities, utilities and services considered necessary or incidental for site safety, security, access, maintenance and protection of pedestrians, patrons and traffic, power and light, potable and construction water and

sanitary, coordination with other contractors and tenant work within the WTC site, the performance of all surveys and testing including that necessary for quality assurance and control, the performance of site maintenance including but not limited to dust control, snow removal, continuous and final clean-up, janitorial services, garbage and debris removal and the implementation and enforcement of the Authority's Environmental Performance commitments (EPCs) including mitigation and monitoring documentation and processing of daily narratives, supervise recording of GC activities to our data base system in Microsoft Access material, equipment and labor (MEL), monitoring submittal and desk audit of contractors GC invoicing, verification and recording of delivered GC consumable materials (PPE, cleaning and maintenance materials, etc.) estimate and negotiate change order work associated with GC and monitoring of contractor's field office engineering, administrative and clerical staffing. (6/2006 - 2010)

- **Senior Construction Inspector/Construction Coordinator, Port Authority, PATH Projects** - Supervision of construction projects during off peak hours including daily site visits and inspection and prepared daily narratives. Coordinated contractors and PATH Personnel for the following projects:
  - > ***Rail replacement at Dock Bridget***, Newark, NJ: Coordinated with trainmaster to remove tracks from service Oversaw removal of existing track rail and installation of new rail.
  - > ***Renovation of Journal Square Station***, Jersey City, NJ: Inspected erection of structural steel for support of new station ceiling. Supervised installation of new station lighting and sound system. Inspected replacement of new granite flooring for Eastbound and Westbound platforms Monitored installation of stainless steel cladding on station escalators, stairwells and columns as well as installation of lighting, fire alarm, and public address systems.
  - > ***Removal of existing turnstile system and installation of new Passenger Turnstile System***: Supervised installation of new turnstile and Fare collection systems at all Path station locations.
  - > ***Installation of New Handicap Elevator at Pavonia/Newport Station***, Jersey City, NJ: Performed inspection of excavation and installation of new handicap elevator.
  - > ***Removal of Existing Boilers at One Path Plaza***, Jersey City, NJ: Inspected removal of existing building boiler units and installation of new boilers.
  - > ***Rock Excavation and Installation of Precast Concrete Storm Drain Trenching at track section H-5***: Oversaw rock excavation and installation of storm drain trenching. Monitored installation of required concrete retaining walls. (1998 – 5/2006)

- **Senior Construction Inspector/Construction Coordinator, Port Authority, Reconstruction of World Trade Center Station, Exchange Place Station, and Tunnels "E" and "F"** Work on this $360 million project consisted of PATH, tunnel systems, tunnel structures, and rail and road access to equipment. Inspected various phases of reconstruction post 9/11 of World Trade Center Temporary Station and rehabilitation of Exchange Place station and tunnels E and F. (4/2002 – 11/2003)

- **Senior Construction Inspector, Port Authority of NY and NJ, Major Holland Tunnel Facility Projects** Performed construction inspection of various Holland Tunnel projects including daily site visits, preparation of daily narratives, coordination of contractors, management of change orders, and generation and maintenance of punch lists and RFI's. (1996-1998)
  - > ***Renovation of Ventilation Buildings***: River and land, NY side.
  - > ***Removal of Existing and Installation of New Slab on Grade at Holland Tunnel Maintenance Building***: Construction of slabs at both the NY and NJ maintenance garages.
  - > ***Installation of New Storm Drainage System in Holland Tunnel***

Nzinga Porter
Inspector

Professional Profile
Ms. Porter is an assistant office engineer with strong communication, organizational and technical skills within the construction engineering field. She possesses the following experience.

Project Experience
Brooklyn Bridge Rehabilitation of the Approach Spans and Ramps and Painting of the Entire Bridge, Contract 6, New York, NY; 2/10-Present. Inspector. This project involves construction management and inspection services for the $509-million rehabilitation of this iconic national landmark. The scope of work for the project includes replacement of approach roadway in Manhattan and Brooklyn over the arch blocks; rehabilitation of the Manhattan side ramp structures with widening and deck and bearing replacements; rehabilitation of the approach steel structures with full superstructure replacement of the York and Main Street structures and orthotropic deck installation at Franklin Square; seismic retrofitting of the main bridge, Franklin Square and ramp structures; painting of the ramp structures and suspended spans in their entirety; restoration of historic features. Ms. Porter's responsibilities include verifying and ensuring that the contractor does work that complies with the NYCDOT specifications; recording daily field logs and making payments; and covered inspection of micropile installations for the widening of Ramp A at the Brooklyn Bridge Contract No. 6. Client: New York City Dept. of Transportation

Williamsburg Bridge Reconstruction of Miscellaneous Rehabilitation of the Main Bridge, Contract 8, #BRC253CCA, New York, NY; 9/07-Present. Assistant Office Engineer. This $280-million project involved the construction engineering and inspection for the rehabilitation of the main bridge. The scope of work for the project included abrasive blasting and painting of main bridge stiffening trusses, rehabilitation and strengthening of the main towers, rehabilitation of the intermediate towers and installation of seismic shear keys, main cable saddle repair and restraint, rehabilitation of wind tongue and wind chord, main tower and intermediate tower bearing installation, main tower leg removal and replacement, stiffening truss top and bottom chord rehabilitation, traveling maintenance platform installation, re-profiling of main span vertical curve by incrementally adjusting suspender cables, modification of orthotropic footwalk deck expansion joints, waterproofing and surfacing of orthotropic roadway deck, installation of ornamental balconies and electroliers, integration of intelligent transportation operating system, seismic retrofit of the intermediate towers, installation of contraflow barrier and erection of barrier transfer machine facility, including augured concrete piles. Ms. Porter's responsibilities included preparing monthly contract and change order payments for the project (CEES), reviewing item specifications, material certifications and payment quantities, and maintaining database of construction correspondence. Client: New York City Dept. of Transportation

As a structural engineer with another firm, 4/07-8/07, Ms. Porter performed structural analyses of superstructures and substructures, designed simple beams, columns, sheeting and various substructures, and determined cause of structural failures, damages and defects through detailed reports.

Proposed Project Assignment
Civil/Structural Inspector

Registration/Certifications
2009/ACI Concrete Field Testing Technician Grade 1

Education
BS/2006/Civil Engineering

Course Work
2011 - Confined Space Training Program
2007 - 10-Hour OSHA Training Course, #2753
2007 - 12-Hour Confined Space Entry
2007 - Underground Tunnel Safety Course

Total Years Experience 9

Nzinga Porter
Inspector

As a construction office engineer, 7/06-3/07, she assisted the resident engineer in management of construction contracts, submittals, and transmittals; maintained database of construction correspondence for suitability and completeness; read and interpreted schematic design and construction drawings (AutoCAD); worked to ensure construction progresses as scheduled and contract specifications are adhered to; revised and edited addenda and specifications to provide quality assurance and accurate estimations; performed various inspections on construction site; and estimated and quoted prices for design and construction costs (Cost Works/ RS Means & Excel).

As a bridge/structural design intern, 5/05-11/05, she assisted in preparing final contract documents (Microstation); read and interpreted schematic design and construction drawings; and enhanced teamwork, time management, CAD skills, and problem solving proficiencies.

As a student assistant at L.C. Smith College of Engineering & Computer Science, Syracuse University, NY, 8/04,5/05, Ms. Porter managed a community outreach program for the development and implementation of students K-12; visited area schools to educate and mentor students about various fields of engineering; recruited and organized student volunteers for annual 2004 Build Em' & Bust Em' Bridge Building Competition; and served as a judge for the annual Syracuse 2005 Mouse Trap Race Car Competition.

Software
Windows 98/2000/Me/ XP, Microsoft Excel, Access, PowerPoint, Word, MathCAD, AutoCAD, MicroStation

Richard Procaccio
Senior Coatings Inspector

Professional Profile
Mr. Procaccio is an experienced coatings inspector for bridge reconstruction and painting projects.

Project Experience
REI Services in Connection with the Protective Coating of Various Bridges in the Bronx, Bronx, NY; 11/13-Present. Chief Inspector/Office Engineer. This project involves resident engineering and coatings inspection during repainting of various bridges in Bronx, NY. Mr. Procaccio is responsible for reviewing the contractor's submittals which include the schedule, painting plan, and certifications; coordination with the contractor and community for the incorporation of MPT permits, plans and layouts with OCMC-Highways; organization and filing of all project documentation; maintenance of all project documents per NYCDOT MURK, including Inspector's Daily Reports, payment Items, and Monthly Payment Requisitions; creating bridge schematics with accurate field calculations for blasting and painting tracking purposes; maintenance of computerized engineer's estimate system; maintenance of computerized contractor's payment and quantity record system using Microsoft Access database and Microsoft Excel spread sheets; verification of MPT on the roadways surrounding and including the work zone; inspection of Class IA Containment Systems which were used from both rapid deployment, and tarp-to-grade abrasive blast preparation operations, installation of cables and scaffolding equipment; inspection of abrasive blasted steel to an SP-10 and power tooled steel, cleaned to an SP-6 or SP-15; conducting testing on cleaned steel to verify level of cleanliness which included profile readings and salt testing; Ambient Temperature monitoring to ensure that the manufacturer's specifications and MSDS' were followed and all coatings were applied in the acceptable conditions; monitoring the mixing and thinning of a five-part coating system which included a zinc coat, a zinc stripe coat, a rust sealer, an intermediate coat and a finish coat; inspection of cured coatings and taking Dry Film Thicknesses (DFT) to ensure proper coverage was applied. Client: New York City Dept. of Transportation

Staten Island Railroad Bridges, Staten Island, NY; 5/11-11/13. Office Engineer/Sr. Coatings Inspector. This project involved resident engineering and inspection services in connection with protective coating of Staten Island Railroad (SIRR) Bridges. Mr. Procaccio's responsibilities included reviewing the contractor's schedule; requesting and/or implementing necessary adjustments during the project duration; reviewing and approving the contractor's submittals; coordinating between the MTA, SIRTOA, contractor and community; maintenance of all project documents per NYCDOT MURK, including Inspector's Daily Reports, Payment Items, and Monthly Payment Requisitions; keeping all office and project documentation; maintenance of computerized engineer's estimate system; maintenance of computerized contractor's payment and quantity record system using Microsoft Access database and Microsoft Excel spread sheets; verification of MPT on the roadways surrounding and including the work zone; inspection of class 1A containments which included drilling into retaining walls, installation of cables and scaffolding equipment and corrugated steel elevated platform that were used to access the work; inspection of abrasive blasted steel to an SP-10 and power tooled steel, cleaned to an SP-6 or SP-15; conducting testing on cleaned steel to verify level of cleanliness which included profile readings and salt testing; Ambient Temperature monitoring to ensure that the manufacturer's specifications were followed and all coatings were applied in the acceptable conditions; monitoring the mixing and thinning of a five-part coating system which included a zinc coat, a zinc stripe coat, a rust sealer, a mid-coat and a finish coat; inspection of cured coatings and taking Dry Film Thicknesses (DFT) to ensure proper coverage was applied. Client: New York City Dept. of Transportation

Proposed Project Assignment
NACE Inspector

Registration/Certifications
2013/NICET IV
2003/NACE Certified Coating Inspector Level 3
2009/ACI Concrete Field Testing Technician Grade 1
2011/NYCT Track Safety Certified/NY

Education
Diploma/2002/Paint Theory and Practicum, Structural Coatings

Course Work
2012-SIRR Roadway Worker Basic
2008 - NYCDOT Lead Supervisor Course, #NYCDOT-08-497
2006 - 30-Hour OSHA Construction Safety & Health Training Course

Total Years Experience 14

Richard Procaccio
Senior Coatings Inspector

Williamsburg Bridge Reconstruction of Miscellaneous Rehabilitation of the Main Bridge, Contract 8, #BRC253CCA, New York, NY; 9/09-5/11. Coatings Inspector. This $280-million project involved the construction engineering and inspection for the rehabilitation of the main bridge. Mr. Procaccio's responsibilities included ensuring that all structural steel work followed approved drawings and specifications; north/south truss diagonal repairs, floor beam web repairs, bottom chord lacing bar/batten plate replacement and lateral brace repairs; calibrating the torque wrench and checking all new connections for proper torque; monitoring all painting activities that took place; ensuring ambient conditions were within an acceptable range for coating the steel; inspecting coated surfaces including checking that the coating was free of any defects, and taking wet film thicknesses and dry film thicknesses; monitoring the mixing and thinning of two and three part coating system; performing numerous steel inspections ranging from SP-1, SP-2, SP-3 and SP-5 levels of cleanliness; and he was also responsible for all destructive and non-destructive inspections on the coating system. Client: New York City Dept. of Transportation

Protective Coating of Grand Central Parkway over BQE Bridges, Queens, NY; 7/08-9/09. Coatings Inspector. This project involved resident engineering inspection, environmental monitoring/hazardous waste management and construction support services for the protective coating of five Grand Central Parkway/BQE bridges. Mr. Procaccio's responsibilities included daily monitoring of ambient conditions for coatings applications; inspection of sand blasted steel to an SP-10 finish and inspection of power tool cleaned steel, to an SP-6 or SP-15 finish to ensure the level of cleanliness as required in the job specifications; inspection of a four part coating system that includes a primer, a rust sealer, an intermediate, and a top coat. Inspections were done to verify proper coating thickness and coverage as well as to determine if the coating is cured for the following paint application. He also prepared a daily work report noting the day's work activities which included start and stop times, man power, equipment, locations, paint batch numbers and dates and general notes. Client: New York City Dept. of Transportation

Queensboro Bridge Lead Paint Removal and Protective Coating, Contract BRC231P, New York, NY; 5/04-11/06. Coatings Inspector. This $170-million project involved the erection of containment structures, abrasive blasting and lead paint removal for the entire East River Bridge, and the application of a three-coat painting system. Mr. Procaccio's responsibilities included daily monitoring of ambient conditions for coatings applications; inspection of sand blasted steel to ensure the level of cleanliness as required in the job specifications; and inspection of a three-part coating system which includes primer, intermediate coat, and top coat. Inspections were done to verify proper coating thickness and coverage as well as to determine if the coating is cured for the following coat. He also filed daily reports that detailed the day's work and progress. Client: New York City Dept. of Transportation

Robert F. Kennedy (Triborough) Bridge Deck Replacement on Suspended Spans and Queens Viaduct - TB-64A, Queens, NY; 11/03-5/04. Coatings Inspector. Mr. Procaccio's responsibilities included daily monitoring of ambient conditions for coatings applications; inspection of hand/power tool cleaned steel to ensure the level of cleanliness as required in the job specifications; inspection of three-part coating system which includes primer, intermediate coat, and top coat. Inspections were done to verify proper coating thickness and coverage as well as determining if the coating is cured for the following coat. He also filed daily reports that detailed the day's work and progress. Client: Triborough Bridge and Tunnel Authority

Manhattan Bridge Rehabilitation of North Spans over East River, Contract 10, #BRC156C, New York, NY; 8/02-10/03. Inspector for this $175-million project which involved rehabilitation of the north upper roadway approach and suspended spans. His responsibilities included daily monitoring of ambient conditions for coatings applications; inspection of hand/power tool cleaned steel to ensure the level of cleanliness as required in the job specifications; inspection of three-part coating system including primer, intermediate coat, and top coat. Inspections were done to verify proper coating thickness and coverage as well as determining if the coating is cured for the following coat. He also filed daily reports which detailed the day's work and progress. Client: New York City Dept. of Transportation

Manhattan Bridge Reconstruction, Painting and Interim Rehabilitation, Contract #BRC1568C, New York, NY; 4/99-10/01. Inspector. This $124-million project involved the rehabilitation of the Manhattan plaza area, Manhattan Arch and Colonnade; replacement of the structural steel stringer and floorbeam support system for the west side subway tracks; replacement of truss bearings on top of the piers of both approach spans; rehabilitation of eyebars anchoring one of the main suspension cables; and removal of existing paint from the entire west side, both towers and two main cables, and replacing with new coating. Client: New York City Dept. of Transportation

ASSIGNMENT

Senior Construction Inspector

EDUCATION

BA, Architecture, University of Catania, Italy, BS, Building Technologies
Pratt Institute, Brooklyn, N.Y., Courses on Methods, Construction and Techniques
OSHA 10 hour, NYCDOB Support and Scaffolding Certificate

REPRESENTATIVE AND PERTINENT EXPERIENCE

Mr. Pulvirenti has 30 years of experience in architecture, project management, and construction management of public and private facilities. His experience includes on-site management of multiple discipline trade work for new construction and renovation of school, transportation, industrial, institutional, retail, office, and entertainment facilities. Mr. Pulvirenti has hands-on responsibility for cost, schedule, and quality of construction projects through various delivery systems, including lump sum, unit cost, and time and material. He is familiar with New York Building Codes and applicable computer software such as MS Word, Excel spreadsheets, and Primavera Expedition.

- **Construction Inspector, PANYNJ, EWR AirTrain Base System Running Surface Major Rehab** – Served as Construction Inspector on a major rehab of sections of the EWR AirTrain base system guideway running surface. Monitored and documented contractor's on-site resources. Visual inspection work in-progress from catwalks of the heating system. Witnessed various tests. Provided daily progress reports. (5/1/2014 – 5/31/2014)
- **QA/Inspector, FEMA/Hurricane Sandy NYC Rapid Repairs Program Far Rockaway-Rockaway-Mill Basin-Bergen Beach-Brooklyn, New York** – Served as QA/Inspector for repair work. Inspected and monitored all civil, electrical, plumbing, hot water heaters and heating systems, from inception assessment to completion close out, for quality and conformance with contract compliance set by The NYC Rapid Repairs. Documented inspection results by completing reports and logs. Maintained daily logs and supplement inspection records with photographs measure and verify actual quantities at close out to ensure compliance with the NYC Rapid Repairs Program. (12/2012 – 2/2014)
- **Project Construction Manager, Cathcon Construction Co., Wall, New Jersey** – Managed all Construction Disciplines from inception of residential and commercial projects. Monitored and reported project progress by frequent site visits and progress meetings. (2009 – 2012)
- **Construction Manager/Project Officer, New York City School Construction Authority, PS 861, Staten Island** – Served as Project Officer for new four story new school building for the City of New York School Construction Authority. It is located in the Borough of Staten Island, will provide facilities for students in grades P-K through grade 8. The building has Administrative offices, Auditorium, Cafeteria/Kitchen and Library located on the first floor and all classrooms located on floors 1-4 totaling 109.000 square feet costing $ 52,000,000.00. Responsibilities include: Staging, Correspondence, Field Instructions, Project Progress Meetings, Schedule and Phasing, Permit Requirements, Insurance/Subcontractors Approvals, Safety, Product Substitution, Shop drawings, RFI Quality Control, Change Order Procedures, Dispute Resolution Process, Payments Requisitions and Performance Evaluation. (4/2008 – 11/2009)

- **Project Officer, New York City School Construction Authority, Midwood High School Annex, Brooklyn** – Served as Project Officer for this $43 million, 3-story, 24,000 SF building addition. The scope of work includes a 2-story connecting pedestrian bridge over Bedford Avenue. The facility consists of classrooms, science lab, and library. Managed multi discipline trades including civil, mechanical, electrical, plumbing, masonry, and curtain wall. Monitored cost, schedule, and quality on a weekly basis. Issued comprehensive status and progress reports. (4/2007 – 3/2008)
- **Construction Manager, US Army Corps of Engineers, Ft. Monmouth, New Jersey** - Managed multi-discipline construction trades from inception to completion for Building 603 at Ft. Monmouth, NJ. Building 603 consisted of a prefabricated secure metal building warehouse for the R&D organization. The office portion is 101' x 26'-6". The building's offices are heated and cooled using geothermal well while the warehouse uses two IR gas heaters. (2006 – 2007)
- **Project Manager, The Port Authority of New York & New Jersey, Newark Liberty International Airport** - Managed multi-discipline projects from inception to completion, including tenant fit-out, retail, kiosks, restaurants, control tower, and security installation in terminal connectors for passenger screening. Inspected installation of high resolution CCTV security cameras. Developed and updated project plans, including scheduling and budgeting. Monitored and reported progress by frequent site visits and progress meeting. Implemented appropriate recovery actions when project plans were deviated. (2002-2006)
- **Site Representative, The Port Authority of New York & New Jersey, WTC Disaster Forensic Recovery, Fresh Kills, Staten Island, New York** - Established relations with the numerous Agencies such as FEMA, USACE (United States Army Corps of Engineers), Contractors and unions. Kept precise records following the hours of work force and equipment. Managed efficient Safety Operation by coordinating with Environmental and Geosciences specialty contractors monitoring air quality, safety, traffic and engineering support. (2001-2002)
- **Project Manager, The Port Authority of New York & New Jersey, World Trade Department, Construction of Tenant Facilities** - Identified sequence of projects to meet budget targets. Performed overall management of construction related activities. Analyzed drawings submissions before being reviewed by the Code Compliance Office, and other Base Building Departments. Established Client-Architect-Contractor relations. Responsible for all renovation for Morgan Stanley facilities in Tower No. 2 (30 floors) including installation of HVAC, lighting, power, wiring, and panels. (2000-2001)
- **Senior Construction Manager, I.C.I., America, Inc.** – Field supervision for construction of 2 warehouses, offices, and science lab including HVAC, electrical, communications and fire protection. (1997-2000)
- **Project Architect, Paul W. Reilly & Associates Architects, Various Projects** - Designed and produced working drawings for numerous Churches, Hospitals, Office Buildings, and Industrial Facilities. (1991-1997)
- **Senior Construction Manager, NBC STUDIOS, New York City** - Managed and directed various projects in New York City and Brooklyn with budgets ranging from $100,000 to $10 million. Oversaw installation by all trades and special materials of construction, including lighting, power, HVAC, and architectural features. Prepared project progress reports including budget, earned value, accomplishments, and issues. (1978-1991)
- **Project Manager, The Port Authority of New York & New Jersey, World Trade Department** – Managed multi-disciplines projects from inception to completion for Port Authority offices, conference rooms, and various work areas in Tower No. 1. (1976-1978)

Maria Reiher
Coatings Inspector

Professional Profile
Ms. Reiher has ten years of experience in the coatings industry. She has experience as a health and safety supervisor for commercial buildings and superstructures. She also has additional experience as a lead abatement supervisor and a quality control supervisor.

Proposed Project Assignment
NACE Inspector

Registration/Certifications
2013/NACE CIP Level I
2013/SSPC C3/C5
2012/Rutgers TCC Designation
2012/Work Zone Safety Awareness
2011/OSHA 30 Hour Construction Industry

Course Work
2012/NJ Lead Abatement Supervisor Refresher
Commercial Buildings and Structures
2011/SSPC Quality Control Supervisor (QCS)

Total Years Experience 10

Project Experience
DRJTBC Easton Phillipsburg Bridge CM-437A; 6/13-Present, $29.6M. Coatings Inspector. This project is a multi-faceted rehabilitation of the Easton-Phillipsburg (Route 22) Toll Bridge and related facilities. Rehabilitation project elements include bridge painting, pavement repairs, deck replacement and repair, substructure repairs, bearing replacement, electrical upgrades and toll plaza upgrades. Project includes multiple bridge structures: Main River Bridge, Broad Street Viaduct, Route 22 over SR 611, Route 22 over Bank Street, Route 22 over 3rd Street and the pedestrian tunnel at Bushkill Street. The rehabilitation project elements include: pavement repairs and reconstruction throughout the facility; Main River Bridge and Broad Street Viaduct (deck removal and replacement, cleaning and painting of all structural steel, rehabilitation/replacement of deck drainage system, structural steel and substructure repairs as defined per inspection, and rehabilitate pedestrian railing); remove and replace superstructure of the Route 22 Bridge over SR 611; construct an ADA compliant ramp to the existing pedestrian tunnel under Route 22 at Bushkill Street; replace roadway and bridge lighting throughout the facility – lighting on Snyder Street to match Easton streetscape lighting; Bank Street and 3rd Street bridges (replace bridge bearings, mill and resurface bridge deck, clean and paint stringer ends and fascia beam, miscellaneous repairs); electrical upgrades to toll facility load center in Administration Building; and minor repairs and painting to toll booth facilities. Duties include field inspection of containment, abrasive blasting, paint application, environmental conditions; office engineer tasks include monthly payments to contractor, quantity management, document control and as-built drawings.. Client: DRJTBC

NJDOT Region North 2011-2012 Maintenance Bridge Painting, Contract 2012-2 - Route 80 Bridges; 7/12-10/12, $6M. Coatings Inspector. This bridge painting contract involves the painting of six bridges along Route 80 in Passaic County. This project involves the removal of existing old lead based paint and repainting with a Northeast Protective Coating Committee (NEPCOAT) approved coatings system. The projects incorporate traffic control on a high speed highway, MPT, nightwork, staging, and environmental (Lead Abatement) constrains unique to repainting on major urban bridges. The construction services contract involves the managing of four separate painting contracts with three independent painting contractors. Extensive coordination is done on a daily basis with each paint contractor including coordination with other trades working on the highways. Communication and coordination with local municipalities are addressed for structures that span local streets. Client: NJDOT

NJTA Hackensack River Bridge, Repainting Structural Steel Inspection, Contract T100.137; 3/12-7/12, $144M. Coatings Inspector. Project involved inspection of a 1,396,000 SF area of steel for the complete structural steel repainting for previously painted and weathering steel superstructures. As a subconsultant to the Conti Group, Ms. Reiher was responsible for quality assurance/quality control of this inspection work. Client: NJTA/The Conti Group

Previous Work Experience
Allied Painting, Inc. (2004-2005)
M Painting Co, Inc. (2005-2007)
JPI Painting (2009-2010)
Manda Corporation (2011)

Kenneth Reese
Inspector

Professional Profile

Mr. Reese is a highly-qualified construction inspector/ engineer, with experience on many major bridge construction projects. Currently, he is assistant resident engineer for a $170M contract to widen over 3 miles of roadway on the New Jersey Turnpike 6-9 Widening Program. He is experienced in all aspects of bridge construction including foundations, concrete decks, and structural steel work including; demolition, erection, and bolted and welded connections (Certified Associate Welding Inspector). Mr. Reese is widely respected with all of his clients (NJTA, NJDOT, DRJTBC, DRPA, etc.) as a highly qualified bridge inspector. Finally, Mr. Reese is also a NACE certified coatings inspector with applicable field coatings inspection experience.

Proposed Project Assignment
Civil/Structural Inspector

Registration/Certifications
2008/NICET IV; 2001/NICET III
2013/NJSAT
2012/ACI Concrete Field Testing Techn–Grade I
2012/ACI CCTC *(Lifetime Certification)*
2013/Rutgers TCC Refresher

Course Work
2009/10-Hour Occupational Safety and Health Training Course
2006/8 Hour HAZWOPER Refresher
2004/40 Hour HAZWOPER

Total Years Experience 34

Project Experience

New Jersey Turnpike Interchange 6 to 9 Widening Program; 11/10-Present, $2.7B. Assistant Resident Engineer for Contract No. T869.120.302 (approximately $144M) Grading, Drainage, Paving, Structures & Lighting of Service Areas 6S and 6N and NSO and SNO Roadways from Milepost 56.5 to 59.7 in the Townships of Chesterfield, Hamilton & Robbinsville, Burlington & Mercer Counties, NJ. This project consists of adding new lanes for north and south bound outer roadway and also includes reconstruction of local road bridges at Merrick Road, Yardville-Allentown Road, and South Broad Street, four new service area flyover ramps, several other bridges along the Turnpike roadway, 17 new sign structures, and improvements to drainage, lighting and utilities. As resident engineer, Mr. Reese is the Owner's direct on-site representative to the contractor and is responsible for the direct supervision of a construction project's field inspection/engineering staff, performing quality assurance oversight of major items of work in progress and/or ensuring that the project is constructed in accordance with the plans and specifications for the owner. Client: NJTA

New Jersey Turnpike Interchange 6 to 9 Widening Program; 7/09-Present, $2.7B. Resident Engineer for Contract No. T869.120.501 (approximately $15M) NSO/SNO Roadways Grading, Drainage, Paving, Structures & Signing Milepost 65.6 to 66.7, East Windsor Township. This project involved the construction of two new outer roadways, each consisting of three 12-foot lanes and a 12-foot right shoulder as well as the construction of two culvert extensions, retaining walls, sign structures, drainage and stormwater management facilities, and signing. As Resident Engineer, Mr. Reese was the Owner's direct on-site representative to the contractor and is responsible for the direct supervision of a construction project's field inspection/engineering staff, performing quality assurance oversight of major items of work in progress and/or ensuring that the project is constructed in accordance with the plans and specifications for the owner. Client: NJTA

New Jersey Turnpike Interchange 6 to 9 Widening Program; 6/12, $2.7B. Resident Engineer for Contract No. T869.120.301 (approximately $4.2M) Local Roadways Grading, Drainage, Paving and Utilities at Milepost 57.1 to 58.4 in the Township of Hamilton, Mercer County. This contract provides for the lowering of Crosswicks-Hamilton Square Road under the Turnpike, the realignment of Uncle Pete's Road, utility relocations and the jacking of utility sleeves under the Turnpike in the vicinity of South Broad Street. As resident engineer, Mr. Reese's is the Owner's direct on-site representative to the contractor and is responsible for the direct supervision of a construction project's field inspection/engineering staff, performing quality assurance oversight of major items of work in progress and/or ensuring that the project is constructed in accordance with the plans and specifications for the owner. Client: NJTA

NJDOT Region South Term Agreement, Maple Avenue/Chapel Avenue Contract CAM983410; 7/08-7/09, $10M. Senior Inspector. This project consisted of the complete removal and reconstruction of two NJ Transit bridges to increase the track clearance to facilitate double decker passenger train traffic. The project included long term road closures and detours while maintaining access to business and residents. The construction included temporary sheeting CIP piles, abutments, steel stringers, HPC deck, architectural parapets, ornamental railings, MSE walls, fiber optics, gas mains and water mains. The reconstruction included replacement of the bridge approaches with related drainage, curbs, sidewalks, asphalt, striping, roadway lighting, signage and grading to the new profiles. Client: NJDOT

Kenneth Reese
Inspector

NJDOT Region South Term Agreement, Route 295 Roadway Rehabilitation; 8/07-1/08, $8.7M. Inspector. This project involved repairs to roadway pavement and bridge decks for approximately 10 miles of this two and three lane expressway. The project included temporary traffic control for main line lane closures, ramp closures and detours to facilitate the repairs. The repairs included full depth/partial depth concrete replacement/ repairs, slab stabilization, milling and paving, crack stitching, diamond grinding and traffic striping. The full depths repairs were replaced with precast slabs doweled and grouted in place, the partials depth repairs were repaired with a hot applied polymer resin and reopened to traffic within hours after placement. The bridge approach slabs were stabilized, ramps milled and paved the roadway surface diamond ground and re-striped. Client: NJDOT

NJTA Contract R-1489, Construction Supervision of Pile Repairs; 10/05-12/07, $12M. Inspector. This project involved construction of supplemental pier caps with micropiles, fender systems, slope protection improvements, environmental inspections, cofferdams substructure waterproofing/watersealing and other related miscellaneous work items. GPI supervised construction of R-1489 which involved installation pier cap construction with driven micropiles in a marine environment, substructure waterproofing/watersealing and other related miscellaneous items of work, to Structure Nos. 0.42L and 7.85. The majority of work was performed over waterways during daytime hours using long-term shoulder closings. Client: NJTA

Route 41 and 42 Construction Inspection, Deptford Township, NJ; 8/04-10/05, $12M. Inspector. This project involved improvements to the Route 42 Freeway interchanges at Route 41 and Clements Bridge Road, intersection improvements, and extensive improvements to Route 41, in Deptford Township. The intent of the project was to improve traffic circulation through this very busy commercial shopping area. The project included the construction of five new ramps, the elimination of four ramps, the reconfiguration of four ramps (to improve geometry and traffic flow) the rehabilitation of one bridge structure, and the construction/reconstruction of four intersections, as well as extensive roadway construction with utilities and all associated MPT. The project included simple span bridge construction (including all substructure and superstructure elements), roadway reconstruction, paving, drainage, utilities, traffic signals, and all related MPT. Client: NJDOT

Route I-80 Section 5AW and 10L, Bergen County, NJ; 12/01-6/03, $86M. Inspector. This project included more than $50M worth of bridge widening and replacement work on seven bridges over existing highways, streams and railroad tracks. The bridge work included deep drilled shaft foundation (between 30-60 inches in diameter and at least 30 inches deep), reinforced concrete abutments and piers, steel H-piles, reinforced concrete footings, steel girder and beam superstructures, stringer catcher systems, and cofferdams. The project included the widening and construction of eastbound and westbound auxiliary lanes; 3 miles of full depth roadway reconstruction for 10 lanes of Interstate highway including the demolition of existing roadway; new asphalt and concrete paving; the construction of two concrete retaining walls; the construction of 2 miles of noise barrier, the construction of numerous overhead sign structures; and the upgrading of all associated highway lighting and signage. The project also involved extensive utility relocations, including the relocation of the I-80 MAGIC fiber optic communication system. All work was completed under a staged construction plan, requiring very complex MPT under heavy traffic conditions. Client: NJDOT

NJTA Contract R-1380, Miscellaneous Structural Repairs Mile 0 to Mile 122 and the Newark Bay-Hudson County Extension and Pearl Harbor Memorial Turnpike Extension, NJ; 6/01-12/01, $3.5M. Inspector. Project involved construction supervision for structural steel repairs, substructure spall repairs, pier cap reconstruction on Str. No. 105.18, overhead sign structure foundation repairs and foundation reconstruction, bridge jacking and bearing replacement and repairs. Responsibilities included layout of work areas, daily inspection of all work items, and calculating quantities for payment. Project required significant coordination with CONRAIL and PANYNJ. Client: NJTA

DRPA Contract BF-23-97, Benjamin Franklin Main Suspension Cable Rehabilitation, Camden, NJ/Philadelphia, PA; 5/99-6/01, $18M. Inspector/Office Engineer. This construction inspection project involved protecting the cables from future deterioration by unwrapping the cables, removal of the hazardous red-lead coating, and wedging the cable open for the purpose of inspection, oiling and repair at multiple locations around the perimeter of the cable. The cables were then rewrapped and repainted with a special three-coat flexible coating system. Responsibilities included inspecting all of the bridge rehab and painting items, as well as review of schedule, attending progress meetings, progress payments, shop inspection, traffic management, change orders, shop drawings and submittals. Client: DRPA

Jonathan Reynolds, E.I.T.
Inspector

Professional Profile
Mr. Reynolds is an inspector with the following experience.

Project Experience
Bayonne Bridge Navigational Clearance Program (BBNCP) Construction Management, NY/NJ; 4/14-Present. Inspector. This project involves construction management services for the $743-million Bayonne Bridge Navigational Clearance Program (BBNCP). This extraordinarily complex, once-in-a-lifetime project will replace more than 5,000 feet of viaduct and re-frame the existing steel arch structure to accommodate a new roadway 65 feet above the existing roadway. Mr. Reynolds is responsible for the inspection of drilled shafts and foundations including drilling into bedrock, sheet pile installation, rebar installation, and concrete placement, segmental pier and roadway installation including post tensioning and grouting, existing bridge demolition, drainage structure installation, and approach roadway grating and MSE wall installation. Client: Port Authority of NY & NJ

Proposed Project Assignment
Civil/Structural Inspector

Registration/Certifications
2013/ACI Concrete Construction Special Inspector/NC
2011/ICC Structural Steel and Bolting Special Inspector
2010/Engineer In Training/NY
2013/ICC Reinforced Concrete Special Inspector
2013/AWS Certified Welding Inspector
2014/ASBI Grouting Certification

Education
BS/2010/Civil Engineering

Total Years Experience 5

Brooklyn Bridge Rehabilitation of the Approach Spans and Ramps and Painting of the Entire Bridge, Contract 6, New York, NY; 6/10-4/14. Inspector. This project involved construction management and inspection services for the $509-million rehabilitation of this Iconic National Landmark. The scope of work for the project included replacement of approach roadway in Manhattan and Brooklyn over the arch blocks; rehabilitation of the Manhattan side ramp structures with widening and deck and bearing replacements; rehabilitation of the approach steel structures with full superstructure replacement of the York and Main Street structures and orthotropic deck installation at Franklin Square; seismic retrofitting of the main bridge, Franklin Square and ramp structures; painting of the ramp structures and suspended spans in their entirety; restoration of historic features. Mr. Reynolds' responsibilities included inspection of procedures that dealt with civil or structural aspects the project; preparation of daily report; assisting office engineers with change orders and quantity take offs, as needed; and processing safety, yellow, and red flags as they were received. Client: New York City Dept. of Transportation

Professional Engineering Balance Lab, LLC, San Antonio, TX. In the summer of 2009, Mr. Reynolds worked as an intern for PEBL, a professional HVAC consulting firm. PEBL services included thoroughly assessing and correcting the performance characteristics of a HVAC system. Mr. Reynolds performed testing and inspection of small to large scale commercial HVAC systems.

Omaha Public Power District (OPPD), NE. During the summers of 2007 and 2008, Mr. Reynolds worked as an intern for a power distribution company. OPPD is publicly-owned, business-managed electric utility that serves more customers than any other electric utility in Nebraska. Mr. Reynolds assisted in the planning, research and design of several structural and mechanical projects for the Fort Calhoun Nuclear Power Plant.

Computer Skills
Microsoft Office Suite, Matlab, MASTAN2 and AutoCAD

Sylvain Rodrigue
Chief Coatings Inspector

Professional Profile
Mr. Rodrigue has several years of experience on various large bridge contracts involving coatings application, structural steel and concrete installation, as well as environmental and safety compliance.

Proposed Project Assignment
NACE Inspector

Registration/Certifications
2002/NACE Certified Coating Inspector Level 3

Project Experience

Brooklyn Bridge Rehabilitation of the Approach Spans and Ramps and Painting of the Entire Bridge, Contract 6, New York, NY; 3/10-Present. Chief Coatings Inspector. This project involves construction management and inspection services for the $509-million rehabilitation of this Iconic National Landmark. The scope of work for the project includes replacement of approach roadway in Manhattan and Brooklyn over the arch blocks; rehabilitation of the Manhattan side ramp structures with widening and deck and bearing replacements; rehabilitation of the approach steel structures with full superstructure replacement of the York and Main Street structures and orthotropic deck installation at Franklin Square; seismic retrofitting of the main bridge, Franklin Square and ramp structures; painting of the ramp structures and suspended spans in their entirety; restoration of historic features. Mr. Rodrigue's responsibilities include fabrication and implementation of site specific coatings inspection forms and coordination of field inspectors for various assignments. His responsibilities also include inspection of platform and containment erection; surface preparation (sp10, sp3, sp2); and application of a four-coat paint system including surface profile measurements, chloride testing, and dry film thickness measurements. Client: New York City Dept. of Transportation

George Washington Bridge Coatings Services, Fort Lee, NJ; 4/05-8/06. Coatings Inspector. This $100-million contract involved Class 1A containment of both towers of this structure over the Hudson River involving the removal of existing lead paint and the application of a new three-coat system to approximately 2.1 million sq ft of steel. Mr. Rodrigue was responsible for monitoring containment operations, quality of paint material and proper storage and mixing. They inspected surface preparation, paint application and test for compliance with contract specifications. Client: Port Authority of NY & NJ

Bronx-Whitestone Bridge Replacement of the Bronx Approach and Miscellaneous Repairs to the Queens Approach, BW-89, Bronx, NY; 10/09-3/10. Chief Coatings Inspector. This $192-million project involved the staged removal and replacement of the Bronx Approach superstructure and substructure from the Bronx Toll Plaza to the Bronx Anchorage. Work included the installation of excavation support systems, mini-pile foundations and temporary steel support systems to support the existing structure during the staged construction. During the construction of the substructure, there were massive concrete placements for concrete footings and piers. Traffic on the bridge was maintained with five lanes open to traffic. During the staged construction, work was staged demolition of the existing roadway, installation of multiple continuous steel girders, placement of a staged composite concrete deck, installation of permanent concrete barrier and installation of permanent street lighting. Other work items on the project included new utility systems at the Bronx Toll Plaza, installation of new salt storage dome building and miscellaneous steel and concrete deck repair on the Queens Approach structure. Mr. Rodrigue's responsibilities included fabrication shop inspection visits for the fabrication/coating of new bridge girders and bearings to ensure compliance with the specification. His responsibilities also included daily inspection of the installation and grouting of stay-in-place forms for partial depth deck repairs along the Bronx Approach Span. Client: Triborough Bridge and Tunnel Authority

Bronx-Whitestone Bridge Cable/Suspender Rope Rehabilitation, BW-85/86/WBM-339, Bronx, NY; 1/08-3/10. Chief Coatings Inspector. This project involved construction management and inspection services for coating removal and application and cable/suspender rehabilitation for Project BW-85/86/WBM-339, Select Cable Panel Opening/ Suspender Rope Removal and Replacement and Painting at the Bronx-Whitestone Bridge. Mr. Rodrigue was

responsible for the creation of paint inspection forms, overseeing and assisting other coatings inspectors during daily activities which include surface preparation inspection for SSPC-SP 2, 3, 10, 11, and 15 prepared surfaces, dry film/wet film thickness readings, and surveying of tower interiors for needed work. He also worked on the bridge painting of the suspension system and towers. Client: Triborough Bridge and Tunnel Authority

Manhattan Bridge Rehabilitation of Lower Roadways, Contract 11, #BRC156A, New York; NY; 1/07-1/08. Mr. Rodrigue served as a coatings inspector on this $150-million project that involved the reconstruction of the lower roadway; removal and replacement of floor beams, stringers, bearings and deck in main span and side spans; rehabilitation of anchorage chambers; installation of new lighting and traffic signs on lower roadway; rehabilitation of travelers in suspended spans; replacement of maintenance platforms at towers; painting of bridge in suspended and approach spans; and repair of flagged conditions. His responsibilities included inspection of traveler rail track beams, tower balconies and additional miscellaneous areas abrasive blasted to near white metal. Surface profiles were measured on prepared substrate along with dry film thickness measurements on the subsequent four-coat paint system. Additional responsibilities required inspection of surface preparation and coatings application to faying surfaces as new steel is installed for the lower level deck replacement. Client: New York City Dept. of Transportation

Queensboro Bridge Lead Paint Removal and Protective Coating, Contract BRC231P, New York, NY; 8/06-1/07. Coatings Inspector. This $170-million project involved the erection of containment structures, abrasive blasting and lead paint removal for the entire East River Bridge and the application of a three-coat painting system. Mr. Rodrigue's responsibilities included surface preparation verification along with dry film thickness measurements to verify subsequent coatings meet the specified thicknesses. Client: New York City Dept. of Transportation

Tappan Zee Bridge Painting, TANY 01-86BP, New York, NY. 6/02-4/05. Chief Inspector. This work involved SSPC Class 1A containment system, SSPC-SP10 Near-White Blast Cleaning to remove existing lead based coating and replacement of a four coat system consisting of a zinc rich epoxy primer, penetrating sealer, epoxy intermediate and polyurethane top coat. Client: Weidlinger Associates/ New York State Thruway Authority

Bronx-Whitestone Bridge, Projects WBM 319X and BW 87A & C, Miscellaneous Painting and Suspended Rope Collar Replacement & Flag Repairs and Pin Replacement, New York, NY; 3/01-6/02. Chief Inspector. The two concurrent projects totaling $4 million involved the cleaning and painting of several thousand feet of bridge median barrier, several thousand sq ft of tower interior and critical sections of the bridge suspender cables, and the installation of specialized elastomeric collars at the suspender penetrations through the main fascia girders. Also, over 1,000 critical structural steel flag repairs were completed by the contractor. Mr. Rodrigue was responsible for the oversight of the contractor's operations with respect to the coatings portion of the project. Client: Triborough Bridge and Tunnel Authority

Main Channel Pier Protection and Steel Tower Painting of the Tappan Zee Bridge , TANY 97-65B, Westchester County, NY; 1999-2000. As a construction inspector, Mr. Rodrigue's responsibilities included being in charge of the concrete testing and sampling operation for all cast in place concrete used on site. As construction inspector, duties included monitoring contractors' quantities and progress in accordance with approved plans and specifications. The project involved the installation of 48 in. diameter steel pipe piles to support post tensioned concrete tee beam panels to form the fender system for the main channel piers. Client: New York State Thruway Authority

Replacement of the Existing Pier Protection System on Six Piers and Steel Tower Painting on Two Towers of the Tappan Zee Bridge, TANY 97-46BP, Westchester County, NY; 1998-1999. NACE Intermediate Coatings Inspector. Mr. Rodrigue was accountable for quality assurance of the painting project, which consisted of abrasive blasting, the application of a four-coat paint system and the proper removal of hazardous waste. As part of the inspection team, his responsibilities included monitoring the quality of the contractors work activities, making payments for the finished contract items and enforcing the applicable specifications for all the contract work items. The work consisted of driving steel HP and pipe piles, and installing and securing structural steel members to the piles to support the fender system and performing ice breaker repairs. Client: New York State Thruway Authority

ASSIGNMENT

Senior Construction Inspector

EDUCATION

B.S Civil Engineering pending, The City College of New York, (2004 to Present)

REGISTRATION

ACI Level 1 Certified, ACI Level 2 Concrete Construction Special Inspector Certified
OSHA 10 Hour Certified, PATH-Employee in Charge Certified

REPRESENTATIVE AND PERTINENT EXPERIENCE

Mr. Rodriquez has over 11 years of experience in construction, including multi-trade work and electrical. He has performed inspection of various contractor operations, including foundations, concrete work, pile driving, steel erection, paving, and electrical components for compliance with plans and specifications. On a regular basis, Mr. Rodriguez compiles and distributes written contract administration documents such as daily reports, controlled inspection reports and daily time and material records. He documents unit price work and when extra work is identified he prepares notifications and estimates for change orders, which ensure that all construction activity is performed in compliance with contract specifications and industry standards. He is proficient with computer software and is familiar with Port Authority systems and procedures. Mr. Rodriguez excels in planning, phasing, coordinating amongst various and diverse facilities, print reading, contract administration, schedule management, cost control and. has the essential tools to be an effective communicator.

- **Senior Construction Inspector, Port Authority of NY & NJ, PATH** – Inspected various PATH projects including:
  - > **Immediate Repairs** - Supervised a wide range of work from water mitigation in stations and tunnels to spall removal from parking structures and underpinnings of overpasses and bridges
  - > **Post- Super Storm Sandy Tunnel Cleaning and Service Restoration** - Supervised power washing and wet abrasive blasting of iron ring sections in Tunnels. Supervised installation of flood barriers and restorations of substations.
  - > **PATH Hoboken Corridor Modernization** - Supervised/Inspected installation of drainage, construction of stairwell, installation of a pre-fabricated steel ceiling.
  - > **Harrison Station Staircase** - Inspector for foundation, rebar placement for multiple phase erection of staircase.
  - > **Digital CCTV Installation Project for Multiple PATH Stations & Facilities** - Electrical inspector for contractor conduit and camera installations for various PATH Stations. Supervised restoration of penetrations to structures containing asbestos. Managed scheduling manpower and access for secured area installations.
  - > **Interior Strengthening Project for PATH Tunnels** - Inspected installation and grouting of re-enforcement plates inside the tunnel. Inspected welding and alignment fascia plates. Inspected and coordinated excavation and compaction for foundations and concrete beams and columns. Inspected rebar installation and pre-tensioning. Inspected shotcrete installation. Inspected installation of piping for tunnel standpipe. Electrical inspector for removal and relocation/installation of new conduit and cable for tunnel lighting, power and communications.

- > **Platform Communication Upgrade** - Electrical inspector for contractor conduit and camera installations for various PATH Stations. Supervised restoration of penetrations to structures containing asbestos. Assisted in scheduling manpower and access for secured area installations.
- > **Signage Upgrade for PATH Stations & Facilities** - System wide upgrade of all Static and Variable Message Signs (VMS). Supervised contractors installations of conduit and bracket supports while coordinating removal of asbestos before penetrations into structures containing asbestos. Assisted in scheduling manpower and access for secured area installations.
- > **Vent Doors** - Supervised contractors daily operations, which included rock drilling, rebar installation, surveying, performing pull test, installing shortcrete.
- > **Perimeter Strengthening for PATH Tracks** - Managed installing of security fencing along exposed PATH Tracks. Inspected Concrete for all post and assured that job was completed and built as per contract drawings and specifications. Documented field measurements and sketched work for field reports and payments.
- > **PATH Dock Bridge Deck and Rail Replacement** - Supervised and inspected installation of timber ties and running rail. Assisted with manpower, scheduling and providing access to secure work area.
- > **Two Way Radio Communication Expansion Project for PATH Tunnels** - Electrical Inspector for contractors construction activities including manpower, materials, and equipment. Monitored layout installation plan for fiber optic and radiating cable win addition to coordinating testing and Inspection for project installations. (2/09 – Present)

- **Construction Inspector, Port Authority of NY & NJ, PATH and Port Newark/Elizabeth, Various Projects** – Inspected pile driving for North Street Bridge, driving timber piles for Berth 10, and removal of asbestos in Seaman's Church at Port Newark. At PATH, inspected TEDS (Temporary Evacuation Detection System) in tunnels "E" and "F", flood gates at WTC tunnel portals and conduits and support brackets for 800 MHZ radio communication system. Also assigned to demolition of concrete in Journal Square Parking lot. Verified construction was according to plans. Prepared daily reports. (06/08 – 09/08)

- **Construction Inspector, Port Authority of NY & NJ, WTC Reconstruction** – Working as an Intern in the West Bathtub, inspected contractors' means and methods including slurry wall tie backs, foundation concrete pours, pile driving including counting blows, and ductbank installation. Also assigned to temporary PATH Station entrance/exit. Maintained daily log and issued daily report. (06/07 – 09/07)

- **Overnight Manager, Abercrombie & Fitch, New York, NY** – Managed and directed a crew of 10-20 employees. Maintained a daily log of duties performed and inventory supply. Conducted daily meeting with management staff. (09/07 – 2/08)

- **Electrical Mechanic, AA Electric, Ozone Park, NY** – Responsible for customer service issues. Managed and directed a crew of 6 men. Authorized electrical wiring of houses and buildings. Installed new electrical services underground and overhead. Repaired and replaced old construction wiring. (05/05 - 06/07)

- **Customer Service Representative, Allstate Insurance Company, Brooklyn, New York** –Managed customer service issues. Maintained a cash flow, received payments and prepared deposits for the bank. Advised clients on insurance policies through telemarketing. (6/04 - 1/05)

William Rossiter
Inspector

Professional Profile
Mr. Rossiter is a highly-skilled and safety-conscious material testing technician with experience managing and prioritizing large volumes of work orders for commercial projects. His experience includes:

Service and Repair: Adept in all aspects of materials testing. Able to troubleshoot, repair and maintain testing equipment and all related components.

Materials Testing Skills: Grout and soil testing, pull tests, coring, boring, concrete encasement/removal, concrete field, asphalt, fire proofing, windsor pins and probes, and rebar testing.

Customer Service: Committed to quality performance and service. Offer excellent customer service skills, and a consistently high level of productivity on project sites. Able to work effectively with co-workers in order to complete projects within established timeframes.

Proposed Project Assignment
Civil/Structural Inspector

Registration/Certifications
2013/ICC Structural Steel and Bolting Special Inspector
2010/ACI Aggregate Testing Technician Level 1
2010/ACI Concrete Lab Testing Technician Level 1
2010/ACI Concrete Field Technician Grade 1
2011/NICET I
2011/NICET II

Course Work
2014 - NYC DOB 4-Hour Supported Scaffold (2018)
2014 - NYC DOB Confined Space Awareness
2009 - 10-Hour OSHA Training Course

Total Years Experience 9

Administration: Excellent organizational skills with the ability to manage multiple time-sensitive tasks. Accurately document all completed jobs to ensure proper billing. Continuously maintain compliance with all safety rules, policies and procedures.

Project Experience
Bayonne Bridge Navigational Clearance Program (BBNCP) Construction Management, NY/NJ; 6/13-Present. Inspector. This project involves construction management services for the $743-million Bayonne Bridge Navigational Clearance Program (BBNCP). This extraordinarily complex, once-in-a-lifetime project will replace more than 5,000 feet of viaduct and re-frame the existing steel arch structure to accommodate a new roadway 65 feet above the existing roadway. Mr. Rossiter is responsible for maintenance and protection of traffic, clearing and grubbing operations, and erosion protection procedures. Client: Port Authority of NY & NJ

Manhattan Bridge Rehabilitation of Cables and Suspenders, Contract 14, #BRC156R, New York, NY; 5/11-6/13. Inspector. This $149-million project involved the unwrapping and rewrapping of cables; replacement of suspenders; replacement of necklace lighting messenger cables and cable hand ropes; installation of new access platforms to existing tower platforms; reversal of lower roadway and operation of HOV lane and replacement of multi-rotational bearings at the Towers; replacement of light poles and luminaries on South upper roadway; replacement of lane control radar on South upper roadway; and retrofit of track stringers and diaphragm connections and other miscellaneous work. Mr. Rossiter was responsible for removal/replacement of suspenders; replacement of cable band bolts; daily maintenance and protection of traffic; painting of structural steel; preventative maintenance of the bridge; replacement of handropes; structural flags; and coordination with New York City transit flagmen. Client: New York City Dept. of Transportation

Trio Testing, Farmingdale, NY; 2008-2011. Mr. Rossiter has performed general material testing on large commercial projects including asphalt quality control inspections; core drilling for both asphalt and concrete; masonry; soil; concrete; and rebar. His laboratory experience includes protectors; gradation; compression tests on cylinders, cubes and cores. He also has experience as a dispatch assistant responsible for repair and maintenance of company adherence. Mr. Rossiter adhered to code requirements.

William Rossiter
Inspector

Quincy Industrial, Quincy, IL; 2006-2008. As a full-time employee, Mr. Rossiter performed all aspects of commercial and residential painting. He developed expertise in multiple painting techniques including air assisted, air less, gravity and siphon feed. He intermittently worked on projects utilizing experience with welding, auto body painting and sand blasting.

Materials Testing Lab, Farmingdale, NY; 2003-2006. Mr. Rossiter performed general material testing related to all aspects of concrete including coring, boring, encasement/removal, asphalt, fire proofing, fire stopping, roof inspections, rebar and pull tests.

Reza Saba
Senior Inspector

Professional Profile
Mr. Saba has 30 years of experience in inspection. He has general knowledge of construction management and inspection of highway and bridge construction. He also has experience in engineering calculation and is familiar with the Port Authority of New York & New Jersey, New Jersey Dept. of Transportation and New Jersey Turnpike specifications.

Project Experience
2011-2014 Port Authority On-Call Construction Management Services - George Washington Bridge, Fort Lee, NJ; 9/11-Present. Senior Inspector. This project involves joint replacement of the upper level deck. The project also involves the replacement of orthotropic deck, scupper and pipe run replacement, expansion finger joint repairs, main/secondary floorbeam repairs, stringer and stringer bearing repairs, deck rib connections, barrier repairs, paving, and coordination of maintenance of traffic. Mr. Saba is responsible for coordination and inspection of all related work. Client: Port Authority of NY & NJ

2006-2010 Port Authority On-Call Construction Management Services - George Washington Bridge Coatings Services, Fort Lee, NJ; 2000-9/11. Senior Inspector. This $100-million contract involved Class 1A containment of both towers of this structure over the Hudson River involving the removal of existing lead paint and the application of a new three-coat system to approximately 2.1 million sq ft of steel. Mr. Saba was responsible for all night construction operations including contractor oversight; controlled inspections; and coordination with facility and PA police for implementation of required maintenance of traffic for contract work on various roadways. He was also involved with the supervision and coordination for on-going George Washington Bridge contracts including GWB244.006, Painting underside of upper level; GWB 244.005, Rehabilitation of PIP/Upper level interchange; GWB 477, Trans Manhattan Expressway lighting; GWB 450, Upper level lighting; GWB 244.110, Fixed sign renovation; GWB 244.108, Painting NY and NJ towers; GWB 244.085, ITS; GWB 244.020, Henry Hudson ramp rehabilitation; GWB 244.022 joint replacements of the upper level deck; and various multi-facility contracts. Client: Port Authority of NY & NJ

Lincoln Tunnel, New York, NY; 1997-2000. Mr. Saba was responsible for the center tube rehabilitation, toll plaza improvement, and rehabilitation of Helix. Client: Port Authority of NY & NJ

Township of Pohatcong; 1994-1997. Mr. Saba served as resident engineer on this capital improvement project. His responsibilities included the coordination of the construction activities for overlaying and repair of various roads within the municipality.

Pohatcong Plaza Shopping Center; 1994-1997. Mr. Saba served as resident engineer where his responsibilities included inspection of site improvements for the Township of Pohatcong. The project also included drainage, sanitary and watermain installation as well as curb and paving. Project cost: $6 million.

Route 46 Bridge and Road Rehabilitation; 1994-1997. Office Engineer/Senior Inspector. Mr. Saba's responsibilities on this project included maintenance and protection of traffic for multiple stages of roadway and bridge construction. Bridgework consisted of phase demolition of existing structure and the construction of P/S box beam girders. He also performed daily inspection of all construction activities including excavation, concreting pile driving and paving. Project cost: $2.8 million. Client: New Jersey Dept. of Transportation and County of Morris Road & Bridge Dept.

Proposed Project Assignment
Civil/Structural Inspector

Registration/Certifications
2009/ACI Concrete Construction Special Inspector
2010/ICC Structural Steel and Bolting Special Inspector
2003/NICET IV

Education
AAS/1983/Civil Engineering

Course Work
2011 - ASCE Earth Retaining Structures: Selection, Design, Construction & Inspection
2010 - 4 Hour NYC DOB Scaffold Training Under Local Law 52 (2014)
2009 - 10-Hour OSHA Training Course
Hazardous Material Certified, Rutgers University
Maintenance and Protection of Traffic Certified
Health and Safety
Asphalt Institute, Super Pave Design Certified
SAT - Society of Asphalt Technologist

Total Years Experience 30

Reza Saba
Senior Inspector

Mr. Saba worked as a clerk of works where he performed inspection, coordinated daily construction activities for three bridges, and submitted daily reports and monthly pay estimates.

New Jersey Turnpike, Exit 14 Toll Plaza Widening; 1992-1994. Resident Manager. This $13-million project included six miles of roadway, widening, night milling, boring, piezometer monitoring, pile driving, sheeting, tunneling and toll plaza construction. The project also included removal and disposal of 16,000 plus cy of contaminated (ID27) and hazardous soil. Mr. Saba's responsibilities included the coordinating of daily lane closings, documentation of daily records, initiating and processing items in dispute.

Mr. Saba worked on the following projects from 1986-1991.

Route 24, Madison, NJ. Chief Inspector. This $7.5-million project involved road construction, sound barrier walls and various utility work. Mr. Saba's responsibilities included supervision of six inspectors and preparing daily reports and quantities.

Church Lane and Dutch Road. This $5.5-million project involved bridge and road construction, water and gas main construction. Mr. Saba's responsibilities included managing all aspects of construction on both structures. Prepared daily quantity estimates for items in progress.

Davidson Mill and Deans Road. This $7.7-million project involved the inspection of the placement of structural steel, concrete deck placement of the bridges overpassing the New Jersey Turnpike. Mr. Saba's responsibilities also included enforcing safety regulations.

Hardenburg Bridge. Mr. Saba served as chief construction inspector in charge of structural steel placement and concrete structures. He prepared item summary sheets and monthly quantity report.

North Branch and Ireland Brook Bridges on Mainline Turnpike over Wetlands. Inspector. This $7-million project involved the inspection of the precast concrete beam, piling driving operation and all other aspects of bridge construction.

Finderne Avenue. Senior Inspector. This $4.3-million project involved overseeing the demolition and construction of the bridge over NJ Transit Railway, construction across temporary bridge. Mr. Saba prepared quantity reports and completed as-built books.

Earl Weapon Station, Turnkey Operation, 250 Units, Condominiums. This $13-million project involved a 50-unit condominium rehabilitation, turnkey operation. Mr. Saba's responsibilities included supervising and coordinating construction activities among different trades; and supervising and coordinating between trades, the interior demolition and reconstruction of these units.

Driscoll Bridge, Garden State Parkway, NJ. This project involved substructure rehabilitation of the bridge. Mr. Saba's responsibilities included sounding and demolition of spalled concrete, inspecting gunite application and rebar placement. He also prepared quantity estimates and as-built drawings.

Garden State Art Center, NJ. This project involved the rehabilitation and construction of atrium buildings and concrete hall, supervised work in progress, coordinated and managed changes between architect, contractor and the client.

Mr. Saba worked with another firm, surveying, estimating, plan review and field inspection of residential single-family units and commercial buildings under construction. 1983-1986 Name of Firm: Township of Old Bridge, Engineering Dept.

Thomas Shepherd
Chief Inspector

Professional Profile
Mr. Shepherd has been involved on several of GPI's major urban construction inspection projects for many years. He has become one of the firm's top concrete testing and placement inspectors. He also has extensive structural steel installation and repair experience, and has provided maintenance and protection of traffic coordination, utility relocation, and office engineering.

Proposed Project Assignment
Civil/Structural Inspector

Registration/Certifications
2011/ICC Reinforced Concrete Special Inspector
1995/NACE Coating Inspector Level 1 - Certified
2008/ACI Concrete Field Technician Grade 1
2008/AWS Certified Associate Welding Inspector
2011/ICC Structural Steel and Bolting Special Inspector
2013/ICC Structural Welding Special Inspector
1991/NICET IV

Course Work
2011 - Confined Space Training
2010 - ASME Rigger Trainer Development & Block Clinic
2008 - OSHA 1-Hour Lead Awareness Training
2005 - 10-Hour OSHA Training Course
2004 - Traffic Work Zone Safety Training Course - GPI
2000 - Traffic Work Zone Safety Training Course - GPI
2000 - OSHA Best Safety Scaffolding Task Training
SSPC C-3 & C-5 Supervisor/Competent Person for Deleading/NY

Project Experience
Brooklyn Bridge Rehabilitation of the Approach Spans and Ramps and Painting of the Entire Bridge, Contract 6, New York, NY; 5/10-Present. Chief Inspector. This project involves construction management and inspection services for the $509-million rehabilitation of this Iconic National Landmark. The scope of work for the project includes replacement of approach roadway in Manhattan and Brooklyn over the arch blocks; rehabilitation of the Manhattan side ramp structures with widening and deck and bearing replacements; rehabilitation of the approach steel structures with full superstructure replacement of the York and Main Street structures and orthotropic deck installation at Franklin Square; seismic retrofitting of the main bridge, Franklin Square and ramp structures; painting of the ramp structures and suspended spans in their entirety; restoration of historic features. Mr. Shepherd's responsibilities include daily review of the contractor's proposed work schedule and MPT operations in order to assign the proper inspection staff; scheduling and coordinating daily lane closures with other city agencies; overseeing field operations including training and supervising the inspectors in testing of structural concrete, asphalt placement and steel erection; review of inspector's daily reports for accuracy and conformance with MURK and field verification of the proper placement of steel and wood forms, rebars and structural deck concrete, seismic retainers and reinforcement plates at top of columns and column base, retrofit for seismic design. Also includes drilling of Micro piles and column base plate retrofit then encasement in reinforced concrete, seismic retrofitting of the main bridge and ramps. Client: New York City Dept. of Transportation

Rehabilitation of the Brooklyn-Queens Expressway (I-278), Park Avenue Viaduct, D259766, Kings County, NY; 9/05-5/10. Chief Inspector. This $138-million project involved construction engineering and inspection for the widening, redecking and repainting of this viaduct with complex MPT on and below this heavily traveled structure. Rehabilitation of this high-volume major interstate urban highway/bridge included replacement of more than 400 bearings and 1500 meters of bridge expansion joints. Also included in this project is extensive coordination with agencies and local communities. Mr. Shepherd's responsibilities included daily review of the contractor's proposed work schedule and MPT operations in order to assign the proper inspection staff; overseeing field operations including training and supervising the inspectors in testing of structural concrete, asphalt placement and steel erection. He reviewed inspector's daily reports for accuracy and conformance with MURK and he did field verification of the proper placement of steel forms, rebars and structural deck concrete, seismic retainers and reinforcement plates at top of columns and column base, retrofit for seismic design. The project also includes drilling of column base plate retrofit then encasement in reinforced concrete. Client: New York State Dept. of Transportation

Williamsburg Bridge Reconstruction of Miscellaneous Rehabilitation of the Main Bridge, Contract 8, #BRC253CCA, New York, NY; 8/04-9/05. Senior Inspector. This $280-million project involved the construction engineering and inspection for the rehabilitation of the main bridge. The scope of work for the project included abrasive blasting and painting of main bridge stiffening trusses, rehabilitation and strengthening of the main towers, rehabilitation of the intermediate towers and installation of seismic shear keys, main cable saddle repair and restraint,

rehabilitation of wind tongue and wind chord, main tower and intermediate tower bearing installation, main tower leg removal and replacement, stiffening truss top and bottom chord rehabilitation, traveling maintenance platform installation, re-profiling of main span vertical curve by incrementally adjusting suspender cables, modification of orthotropic footwalk deck expansion joints, waterproofing and surfacing of orthotropic roadway deck, installation of ornamental balconies and electroliers, integration of intelligent transportation operating system, seismic retrofit of the intermediate towers, installation of contraflow barrier and erection of barrier transfer machine facility, including augured concrete piles. Mr. Shepherd was responsible for structural steel inspection for the strengthening of the main tower framing and the installation of the new "5th Leg". He was also involved with the inspection for the installation of new multi-directional rotation bearing. Client: New York City Dept. of Transportation

Long Island Expressway/Cross Island Parkway, Exits 29-32, Queens, NY; 3/01-8/04. As senior inspector, Mr. Shepherd provided construction inspection services for the $147-million rehabilitation of the Long Island Expressway/Cross Island Parkway (LIE/CIP) interchange. Mr. Shepherd's responsibilities included the direct oversight of the reconstruction of a local bridge over the LIE (East Hampton Blvd. Bridge), a pedestrian bridge over the LIE (Cloverdale Blvd. Bridge), a local bridge over the Cross Island Parkway (West Alley Road Bridge), and two permanent H-Pile Retaining Walls at West Alley Road. He was responsible for the inspection of all supportive excavation H-Pile wall installations, substructure forming and concreting operations, superstructure steel and pre-cast box girder erection, deck construction and all other ancillary tasks such as parapet construction, fencing, etc. Mr. Shepherd also served as the Team Leader for the majority of all concrete placement operations throughout the project, providing Quality Control measures for these operations and assistance to the inspection staff. He also performed inspection duties for drainage and utility relocation operations, as well as the construction of temporary and permanent geo-reinforced earth system (GRES) walls. He was responsible for work associated with landscaping operations for the interchange areas and NYC Parks Dept. land throughout the project limits. This included installation of all trees, shrubs, ground cover and turf in conformance with both the NYSDOT and NYC Parks Dept. specifications. Client: New York State Dept. of Transportation

Williamsburg Bridge BMT Structure Rehabilitation, Contract 6, #BRC253BBA, New York, NY; 6/00-3/01. Senior Inspector. The $176-million project consisted of the demolition and reconstruction of the entire BMT transit structure on the Williamsburg Bridge. Mr. Shepherd's responsibilities included the inspection of the installation end span, inspection of platform and demolition of existing structure, and truss bearing replacement at panel point 20. Client: New York City Dept. of Transportation

Long Island Expressway - Grand Central Parkway to Van Dam Street Reconstruction, Contract #D257842, Queens County, NY; 6/99-6/00. Senior Inspector. This $221-million project began at the Queens Midtown Viaduct and continued east approximately six miles to College Point Boulevard. Mr. Shepherd's responsibilities included setting up inspectors for contractor's field operations, milling, deck partial-depth repair and full-depth repair, widening of Queens Boulevard Bridges, preparing contractor payments, inspector's reports, photo logs, and minutes of meetings. A computer filing system was maintained according to MURK. Client: New York State Dept. of Transportation

Manhattan Bridge Painting and Interim Rehabilitation, Contract 8C, #BRC1568C, New York, NY; 9/97-6/99. Chief Inspector. This $124-million project included construction of lower level subway floor beams, stringer panels, bridge bearings, under deck work platform, lateral bracing; removal of existing rail tracks and reinstallation of the same; construction of subway tunnel roof slab and steel beam; repairing cable wires at anchorage saddles and housing; rehabilitation of colonnade structure and Manhattan Plaza, and miscellaneous structural steel repair for the bottom chord and truss. Mr. Shepherd was responsible for demolition/rehabilitation of the NYCTA tunnel roof, Brooklyn 210 ft x 40 ft and Manhattan 178 ft x 40 ft. He was also responsible for the restoration of the Manhattan colonnade/arch and plaza area. Client: New York City Dept. of Transportation

Manhattan Bridge West Side Approach and Suspended Spans Rehabilitation, Contract #BRC156E, New York, NY; 8/92-9/97. Senior Inspector. As team leader for new construction, Mr. Shepherd's responsibilities included setting up the field office which the inspectors used for record keeping and daily report writing, paving, drainage, landscaping, guide rails, placement of concrete footing for walls, deck slabs, etc. Client: New York City Dept. of Transportation

Omar Soriano, E.I.T.
Inspector

Professional Profile
Mr. Soriano is an inspector with the following experience.

Project Experience
Brooklyn Bridge Rehabilitation of the Approach Spans and Ramps and Painting of the Entire Bridge, Contract 6, New York, NY; 5/10-Present. Inspector. This project involves construction management and inspection services for the $509-million rehabilitation of this Iconic National Landmark. The scope of work for the project includes replacement of approach roadway in Manhattan and Brooklyn over the arch blocks; rehabilitation of the Manhattan side ramp structures with widening and deck and bearing replacements; rehabilitation of the approach steel structures with full superstructure replacement of the York and Main Street structures and orthotropic deck installation at Franklin Square; seismic retrofitting of the main bridge, Franklin Square and ramp structures; painting of the ramp structures and suspended spans in their entirety; restoration of historic features. Mr. Soriano is responsible for the erection of Safespan Platform system in accordance with the proposed shop drawings for the ramp structures, main span and approach steel structures. He is also responsible for inspecting sandblasting and painting operation including Class A containment set up; metal deck platform installation; assuring that the steel is blasted to near white metal as per SP 10 requirements or as specified in the plans for each structure; enforcing the standards specified in the material data sheets for the proposed corrosion protection coating system applied including the primer, intermediate, stripe and finish; approving and paying for each applied coat after the appropriate curing time is reached.

Proposed Project Assignment
Civil/Structural Inspector

Registration/Certifications
2013/ICC Structural Steel and Bolting Special Inspector
2009/NACE Coating Inspector Level 1 - Certified
2008/Engineer In Training/NY
2014/FHWA Safety Inspection of In-Service Bridges

2013 - Hazard Communication - Your Right to Know
2012 - Business Ethics - What Employees Need to Know
2008 - 10-Hour OSHA Training Course
2008 - 1-Hour Lead Awareness Training
2008 - Practicing Institute of Engineering, Inc.- PS[redacted]
Value Engineering at the Brooklyn Bridge Traveler Replacement Contract Certification

Total Years Experience 11

Other responsibilities include:

- Inspecting and verifying compliance with the shop and contract drawings for the reconstruction of the approach ramps for the Manhattan and the Brooklyn side of the bridge including the demolition of the existing concrete deck, steel railing and fascia removal, grid deck installation, diaphragms and bearings replacement as well as new steel railings and steel curb installation.
- Leading other inspectors during the reconstruction of the overpasses on the Brooklyn side of the bridge. Reconstruction includes the temporary steel shoring of the Main Street and York Street structure; demolition and replacement of the concrete deck and back wall; and the removal and replacement of the entire steel structures.
- Supervising the welding of spliced steel sections or repairs of the different steel structures on the ramps including floor beams, grid deck panels and bearings following the standards set aside by the American Welding Society Standards (AWS), the NYSSCM and as specified on the Engineer Clarification Memo (ECM).
- Placement of the High Early Strength structural concrete for the approach ramps' closure pour on the Manhattan side of the bridge. He was in charge of the quality assurance of the concrete mixture and placement. Quality assurance included: air monitor testing, slump, strength maturity and temperature as well as relative humidity, all in reference to the ACI and NYSDOT standard specifications.
- Overseeing the placement of HMA super pave over the new concrete deck ramps.
- Checking the quality assurance of the material, the elevation of the HMA pavement as well as its % compaction as specified in the NYCDOT Standards Specifications.
- Overseeing the contractor during the main span retrofitting including the installation of temporary columns and bearing beams at the Brooklyn Anchorage; the jacking of the existing floor beam and trusses for bearings and column replacement; the installation of new bearings replacement or reinforcement of existing trusses; installation of new floor beams diagonal support cables etc .
- Checking bolted connection splices for the seismic reinforcement repairs on the suspended bridge structure.
- Review of the submitted shop drawings and calculations for all the structural repairs mentioned above and verifying compliance with the contract plans and shop drawings as well as the specified standards.

Omar Soriano, E.I.T.
Inspector

- Quality control of the removal and installation of elastomeric bearings for the Manhattan approach ramps.
- Review of the submitted shop drawings and calculations for all the structural repairs mentioned above and verifying compliance with the contract plans and shop drawings as well as the specified standards.

Client: New York City Dept. of Transportation

Rehabilitation of the Brooklyn-Queens Expressway (I-278), Park Avenue Viaduct, D259766, Kings County, NY; 3/08-5/10. Mr. Soriano served as an inspector for this $138-million project that involved construction engineering and inspection for the widening, redecking and repainting of this 850,000 sq ft viaduct with complex MPT on and below this heavily traveled structure. The structure had seismic reinforcement installed which included retainers and plates at the top of columns and additional stiffeners and plates at the base. Also included was extensive coordination with agencies and local communities. Mr. Soriano's responsibilities involved the inspection of the proposed seismic reinforcement of the Park Avenue Viaduct steel columns including the core drilling of holes and the installation and grouting of the 1100mm long anchor bolts. He was also responsible for the steel reinforcement and the concrete deck placement for the two lanes 1485 meters in length, state IVA/IVB of reconstruction; inspection of the saw grooving, concrete deck protective sealing installation and elastomeric concrete armorless joints placement for the before mentioned stage of reconstruction. His duties included examination of shop drawings; quality assurance of the concrete and reinforcement placement as specified in the contract plans and the NYSDOT Standard Specifications; reporting daily progress of the work being performed and making payments as per the specified item description; inspection of the Park Avenue Viaduct sandblasting and painting operation including class A containment set up; fence and metal deck platform installation; assuring that the steel was blasted to near white metal as per SP 10 requirements; enforcing the standards specified in the material data sheets for the primer, intermediate, stripe and finish coat applied; approving and paying for each applied coat after the appropriate curing time was reached. Mr. Soriano supervised the Nassau Concord Viaduct East Abutment pedestals repairs and bearing reset, including the jacking of nine floor beams and placement of temporary steel columns; and creating Excel spreadsheets to finalize quantities for the closing of the project. Client: New York State Dept. of Transportation

Exterior Street Ramp Bridge over Metro-North Rail Road, Bronx County, NY; 4/07-3/07. Senior Engineering Technician. This project involved inspection of excavation and demolition of an existing bridge including lead paint removal from the bridge girders, stringers and diaphragms; examination of shop drawings for the construction of a temporary bridge to rebuild the existing Exterior Street Bridge ramp, abutments and columns; inspection of sheet piles and mini piles installation; and also involved computing volume calculation and payment for the asphalt placement on the temporary bridge.

Installation of Intelligent Transportation System (ITS) Improvement along the Cross Bronx Expressway Corridor, Routes I-95, I-295, I-695), NY; 9/06-12/06. Transportation Construction Inspector III. This project involved inspection of installation and removal of electrical conduit for ITS optic fiber, camera, street lighting and VMS board; inspection of adequate trench and conduit excavation, and backfill; responsible for safety MPT application in accordance with the contract plans and specification based on the Manual for Uniform Control Devices (MUTCD); inspection of foundation reinforcement and concrete pouring; responsible for conducting slump, air and cylinder tests of the concrete in accordance with the NYSDOT Standard and Specification Manual; responsible for writing daily inspector's report to pay the contractor for the work he achieved. The reports included computations of quantities of the item(s), description of work performed, etc.

Safety Improvement of the Major Deegan Expressway Acceleration Lane and Fordham Landing Playground, NY; 6/06-9/06 and 6/05-12/05. Transportation Construction Inspector III. This project involved inspection of excavation of 30-ft-deep holes on earth with auger machinery for soldier piles installation; checking that excavated holes were in accordance with the depth and diameter specified on the contract plans to avoid soil erosion and failure in the foundation; installation of soldier piles and pre-cast wall panels for a retaining wall of approximately 300m long; computed an immense quantity of structural excavation, including the removal of an existing retaining wall, concrete and asphalt pavement excavation; inspection of the pouring of structural concrete and asphalt pavement of two 300m-long acceleration and shoulder lanes; conducted various slump, air and cylinder tests for the sections poured.

Rehabilitation of Arthur Sheridan Expressway, Bronx County, NY; 6/04-12/04 and 6/03-12/03. Transportation Construction Inspector. Mr. Soriano assisted the office engineering with quantity check calculations including cost estimate; assisted the resident engineer with calculations and design of the vertical alignment for the 2.5-mile weaving lane; reviewed contract's shop drawings and staging plans; participated in the placement of sub-grade sub-base and European pavement of the three lanes and ramps of the three-mile-long expressway.

Evan Steele
Coatings Inspector

Professional Profile
Mr. Steele provides comprehensive coatings removal and application inspection for bridge, roadway, and treatment plant facility rehabilitation/reconstruction projects. In addition, he has significant experience working within the specific recordkeeping requirements of public agencies and municipalities.

Proposed Project Assignment
NACE Inspector

Registration/Certifications
2010/NYCT Track Safety Certified/NY
2008/NACE Certified Coating Inspector Level 3

2014 - NYC DOB Confined Space Awareness
2010 - 10-Hour OSHA Training Course

Total Years Experience 12

Project Experience

Bayonne Bridge Navigational Clearance Program (BBNCP) Construction Management, NY/NJ; 10/13-Present. Lead Coatings Inspector. This project involves construction management services for the $743-million Bayonne Bridge Navigational Clearance Program (BBNCP). The project also involves the total coatings removal, painting, and rehabilitation of the existing arch. All new steel on this project will be shop-primed and over coated in the field while existing steel members will be cleaned to a SSPC SP-10 and coated with a three-coat system (zinc/epoxy/urethane). Lead abatement will also be performed on many small localized areas including cutlines and connection points in preparation for demo and removal. Mr. Steele is responsible for oversight of the quality assurance program, providing inspection of all surface preparation and coatings operations along with overseeing other inspectors throughout the project. Mr. Steele's responsibilities include inspection of work being performed for compliance with project specifications and industry standards with written and photographic documentation provided to the client. Mr. Steele also records and documents ambient conditions; records batch numbers used and verifies proper mixing of coatings; coordinates MPT and provides written and visual documentation of all phases of productive work; reviews contract submittals and contract drawings and develops controls and checklists/inspection forms for lead paint removal, surface preparation and new coatings application in accordance with SSPC and Port Authority standards; maintains all quality assurance painting logs and meets frequently with safety, quality control, quality assurance and supplier personnel to discuss issues and to resolve problems; serves as a liaison between the Port Authority construction management and facility managers to resolve any issues safety, security or otherwise on site; and he also writes daily narratives/reports and assists the assistant resident engineers with monthly estimates for progress payments. Client: Port Authority of NY & NJ

Manhattan Bridge Rehabilitation of Cables and Suspenders, Contract 14, #BRC156R, New York, NY; 8/10-10/13. Coatings Inspector. Mr. Steele was responsible for the proper removal of existing coatings and the placement of a new three-coat paint system for all structural connections; and overseeing other coatings inspector(s) throughout the project. He maintained all quality assurance painting logs and met frequently with safety, quality control, quality assurance and supplier personnel to discuss issues and to resolve problems. Mr. Steele also wrote daily reports and created estimates for progress payments. Client: New York City Dept. of Transportation

Staten Island Railroad Bridges, Staten Island, NY; 8/11-10/13. Chief Inspector. This project involved REI services in connection with protective coating of Staten Island Railroad (SIRR) Bridges. During 54-hour weekend outages, Mr. Steele was responsible for the coordination of track outages with the contractors and SIRR construction managers and flaggers. He also performed quality assurance inspections on 14 bridges along the SIRR; recorded and documented ambient conditions; recorded batch numbers used and verified proper mixing of coatings; recorded visual documentations of all phases of productive work; and coordinated inspections with the environmental inspector. Client: New York City Dept. of Transportation

Throgs Neck Bridge (TN-85), Queens, NY; 9/07. Coatings Inspector. This project included structural steel paint removal and new coatings application for the Main Span underdeck painting at the Throgs Neck Bridge. Mr. Steele's responsibilities for this major abrasive blasting project included coordination and oversight of contractor operations during implementation of paint removal, surface preparation and new coatings application activities; conducting non-destructive testing of newly coated surfaces and recording quality assurance and site safety documentation for applied materials and equipment and related work operations; review of contract submittals and containment drawings and development of controls and checklists/inspection forms for lead paint removal, surface preparation

and new coatings application in accordance with SSPC and Triborough Bridge and Tunnel Authority reporting and quality assurance/quality control protocols. In addition, he was involved with coordination of work activities and contractor schedules with the TBTA Engineering and Operations Department.

Fly over Ramp LaGuardia Airport, Queens, NY; 4/07-8/07. Chief Inspector. This project included structural steel paint removal and new coatings application for a fly over ramp at LaGuardia Airport. Mr. Steele's responsibilities for this project included coordination and oversight of contractor operations during implementation of paint removal, surface preparation and new coatings application activities; conducting non-destructive testing of newly coated surfaces and recording quality assurance documentation for applied materials and equipment; review of contract submittals and containment drawings and development of controls and checklists/inspection forms for lead paint removal, surface preparation and new coatings application in accordance with SSPC and Port Authority of NY & NJ reporting and quality assurance/quality control protocols.

Henry Hudson Bridge, New York, NY; 8/06-12/06. Chief Inspector. This project involved structural steel paint removal and new coatings application for this large steel arch bridge over Spuyten Duyvil Creek between Bronx/Manhattan. Mr. Steele's responsibilities for this project included coordination and oversight of Inspection staff during contractor operations for all paint removal, surface preparation and new coatings application activities; providing quality assurance inspection/testing and documentation for applied materials and equipment; review of contract submittals and containment drawings and development of controls and checklists/inspection forms for lead paint removal, surface preparation and new coatings application in accordance with SSPC and Triborough Bridge and Tunnel Authority reporting and quality assurance/quality control protocols.

102nd Street Bridge LaGuardia Airport, Queens, NY; 9/05-2/06. Chief Inspector. This project included structural steel paint removal and new coatings application for a steel and concrete bridge structure at LaGuardia Airport. Mr. Steele's responsibilities included coordination and oversight of contractor operations during implementation of paint removal, surface preparation and new coatings application activities; conducting non-destructive testing of newly coated surfaces and recording quality assurance documentation for applied materials and equipment; coordination of schedule with Contractor Superintendent; review of contract submittals and containment drawings and development of controls and checklists/inspection forms for lead paint removal, surface preparation and new coatings application in accordance with SSPC and Port Authority of NY & NJ reporting and quality assurance/quality control protocols. He also provided quality assurance/quality control inspection for all fabricated and painted piping.

Throgs Neck Bridge, Queens, NY; 12/04-2/05. Chief Inspector. This project included structural steel paint removal and new coatings application for the Main Span outer chord and fascia painting at the Throgs Neck Bridge. Mr. Steele's responsibilities for this project included coordination and oversight of contractor operations during implementation of paint removal, surface preparation and new coatings application activities; review of contract submittals and containment drawings and development of controls and checklists/inspection forms for lead paint removal, surface preparation and new coatings application in accordance with SSPC and Triborough Bridge and Tunnel Authority reporting and quality assurance/quality control protocols.

George Washington Bridge, New York, NY; 6/02-9/05. Coatings Inspector. Mr. Steele's responsibilities for this major abrasive blasting and repainting project included coordination and oversight of contractor operations during implementation of paint removal, surface preparation and new coatings application activities; conducting non-destructive testing of newly coated surfaces and recording quality assurance and site safety documentation for applied materials and equipment and related work operations; review of contract submittals and containment drawings and development of controls and checklists/inspection forms for lead paint removal, surface preparation and new coatings application in accordance with SSPC and Port Authority of NY & NJ reporting and quality assurance/quality control protocols. In addition, Mr. Steele assisted in performing coatings assessment surveys as requested during the work. Service Employees International Union/ Local 1199; 3/01 to 5/02. Customer Service Representative. Mr. Steele performed various clerical duties including database maintenance, member inquiries, and served as a telephone operator. Duties also included the operation of phone lines for various political campaigns.

Elliot Strika
Coatings Inspector

Professional Profile
Mr. Strika has 20 years of diversified construction experience in bridge rehabilitation and painting processes.

Project Experience
Bayonne Bridge Navigational Clearance Program (BBNCP) Construction Management, NY/NJ; 11/13-Present. Lead Coatings Inspector. This project involves construction management services for the $743-million Bayonne Bridge Navigational Clearance Program (BBNCP). This extraordinarily complex, once-in-a-lifetime project will replace more than 5,000 feet of viaduct and re-frame the existing steel arch structure to accommodate a new roadway 65 feet above the existing roadway. Mr. Strika is responsible for the inspection of foundations, electric, demolition, maintenance of traffic, temporary shoring towers, lead abatement for steel removal, and painting. Client: Port Authority of NY & NJ

2006-2010 Port Authority On-Call Construction Management Services - Staten Island Bridges Rehabilitation, Staten Island, NY; 10/08-2/10. Coatings Inspector. The project involved construction inspection for structural, civil, mechanical, electrical, and bridge painting services for the three Staten Island Bridges operated by the Port Authority of New York & New Jersey. Mr. Strika's responsibilities at the Bayonne Bridge included inspection of abrasive blasting and painting operation and quality control for the Port Authority. Client: Port Authority of NY & NJ

2006-2010 Port Authority On-Call Construction Management Services - George Washington Bridge Painting, New York, NY; 7/09-10/09. Coatings Inspector. This $100-million contract involved Class 1A containment of both towers of this structure over the Hudson River involving the removal of existing lead paint and the application of a new three-coat system to approximately 2.1 million sq ft of steel. Mr. Strika was responsible for inspecting power tool cleaning of bridge and three-coat paint system application for the cable socket closures. Client: Port Authority of NY & NJ

Replacement of the Upper Level Deck of the Suspended Span of the Verrazano-Narrows Bridge, VN-80B, Staten Island, NY; 5/13-11/13. Chief Coatings Inspector. This $236-million project involved reconstruction to replace the upper level roadway superstructure of the Verrazano-Narrows Bridge. The work included removal of existing upper level roadway deck and barrier, installation of new upper level orthotropic deck, overlay, drainage systems, sign structures, lighting, barrier, painting and miscellaneous utility work. His responsibilities included performing inspection for protective shielding installation per approved shop drawings, SSPC Class 1A containment systems, surface preparation of dry abrasive blasting to SSPC SP10 standard, monitoring ambient conditions, observing material mixing and thinning procedures and ensuring coatings application of a three-coat and two-stripe coat paint system is in compliance with project specifications. Client: Triborough Bridge and Tunnel Authority

Brooklyn Bridge Rehabilitation of the Approach Spans and Ramps and Painting of the Entire Bridge, Contract 6, New York, NY; 2/10-5/13. Chief Coatings Inspector. This project involved construction management and inspection services for the $509-million rehabilitation of this Iconic National Landmark. The scope of work for the project included replacement of approach roadway in Manhattan and Brooklyn over the arch blocks; rehabilitation of the Manhattan side ramp structures with widening and deck and bearing replacements; rehabilitation of the approach steel structures with full superstructure replacement of the York and Main Street structures and orthotropic deck installation at Franklin Square; seismic retrofitting of the main bridge, Franklin Square and ramp structures; painting of the ramp structures and suspended spans in their entirety; restoration of

historic features. Mr. Strika's responsibilities included NYCDOT quality assurance including inspection of all phases of surface preparation and paint systems application. He was also involved with civil quality assurance which included all aspects of inspection during installation of primary protective shielding, temporary concrete barriers (pinned), concrete/asphalt sawcut core drilling operations for removal of existing approach ramps curbs, handrails and roadway deck. He was also involved with application of spray applied waterproofing membrane, installation of precast concrete grid deck, prefabricated slab on grade (super slab) and steel facing curbs on Brooklyn Bridge approach ramps. Mr. Strika was also involved in QA/QC during hot mix asphalt paving operation on the Manhattan approach ramps which included temperature checks and yield and depth checks. The rolling patterns were based on nuclear density tests. Client: New York City Dept. of Transportation

Belt Parkway Bridges REI Services - Paerdegat Bridge, Contract#HBK1024, New York, NY; 9/11-10/11. Coatings Inspector. This project involved the demolition of the entire 13-span, multi-stringer bridge superstructure and substructure including abutments, wingwalls, and the piers consisting of concrete pile columns to a minimum of 600 mm below the mud line. The replacement structures were new three-span and five-span bridges consisting of a Class HP reinforced concrete superstructure slab supported by high performance steel box girders and substructures including reinforced concrete abutments, wingwalls, and multi column piers on new pile foundation. Mr. Strika was responsible for QA inspection of power tool cleaning and application of three-coat paint system on all fasteners for newly installed field splice plates, cross bracing and stiffener connections located at interior and exterior of three new box girder. This included surface preparation, paint mixing procedure, coatings application and ambient conditions monitoring. He was also involved with lead abatement on existing bridge locations designated as red/yellow flag repairs. Client: New York City Dept. of Transportation

Rehabilitation of Robert Moses Causeway, NY; 5/07-12/07. Mr. Strika was responsible for installation and removal of cable and chain link fence platform systems including stretching 5/8 in. steel cable, down riggers and out riggers, laying down chain link fence, building and removal of containment, stripe painting of nuts, bolts, corners and edges, airless spray application of the second and finish coats. Most of the work was accomplished utilizing suspended scaffold and spider baskets.

Rehabilitation of Manhattan Bridge, NY; 6/06-11/06. Mr. Strika was responsible for installation and removal of the cable SafeSpan platform system, as well as pipe scaffolding installation. The project involved sandblasting with steel grit and airless spray application of primer coat.

Rehabilitation of Rikers Island Bridge, Astoria, NY; 9/05-2/06. Mr. Strika was responsible for installation and removal of cables and SafeSpan platform systems including stretching of 5/8 in. steel cable, installing out riggers, cable tie-ups; ¾ in. safety cables, handrails and toe boards installation.

Astoria Power Plant, Astoria, NY; 6/05-8/05.Mr. Strika was responsible for Union Shop Steward, paper work and on-site responsibilities for five painters performing brush and roller painting of large AC units with the use of spider baskets.

Broadway Junction Subway Station Rehabilitation, New York, NY; 10/04-5/05.Mr. Strika served as foreman on this project and was responsible for 15 painters and three apprentice painters. He worked with MTA inspector and MTA flagmen establishing work procedures, time and locations for the station rehabilitation project. The rehabilitation included offices, storage rooms, on and above tracks in tunnels and elevated structures. He was also responsible for temporary traffic control for work in man lifts above the roadways. Also negotiated work locations on a multi-trade job site.

American Bridge, Macombs Dam Bridge, NY; 5/03–9/04. Mr. Strika was responsible for sandblasting with black beauty to achieve SP10 "near white" surface profile for two span truss structure; running of the WiWa airless spray pump, including maintenance of spray equipment and instruments; working with six painters and one apprentice. He also instructed painters in procedures and assigned locations to work.

Ronald Takla
Assistant Resident Engineer

Professional Profile

Mr. Takla is a highly qualified construction engineer, with over 50 years of experience on major bridge construction projects. He has held various positions at GPI including resident engineer for the Port Authority of New York & New Jersey for over ten years, where he directed and lead all construction projects for the George Washington Bridge, the Holland Tunnel redevelopment, and the Staten Island Bridges. He has over 20 years of experience with the Port Authority alone. He is highly experienced in all aspects of bridge construction including foundations, concrete decks, and structural steel work including; demolition, erection, and bolted and welded connections.

Project Experience

Bayonne Bridge Navigational Clearance Program (BBNCP) Construction Management, NY/NJ; 2/14-Present. Assistant Resident Engineer. This project involves construction management services for the $743-million Bayonne Bridge Navigational Clearance Program (BBNCP). This extraordinarily complex, once-in-a-lifetime project will replace more than 5,000 feet of viaduct and re-frame the existing steel arch structure to accommodate a new roadway 65 feet above the existing roadway. Mr. Takla is responsible for post-award contract changes, net cost work, and change orders. Client: Port Authority of NY & NJ

2006-2010 Port Authority On-Call Construction Management Services - George Washington Bridge Coatings Services, Fort Lee, NJ; 10/02-12/09. Senior Inspector. This contract involved Class 1A containment of both towers of this structure over the Hudson River involving the removal of existing lead paint and the application of a new three-coat system to approximately 2.1 million sq ft of steel. Mr. Takla was involved on contract numbers GWB 244.220 ($13M) and GWB 244.113 ($11M). His responsibilities included coordination and inspection of field construction activities on various contracts. He also managed construction contractors' payments, contract changes, schedules, fieldwork, and subcontractors. He was also responsible for installation of fender system around the New Jersey tower base at a cost of $9 million. Client: Port Authority of NY & NJ

George Washington Bridge, New York, NY; 10/98-10/03. Lead Engineer. Mr. Takla worked on contract numbers GWB-244.005 ($7M), GWB-983.902 ($7M), and GWB-244.020 ($26M). His responsibilities included directing and leading all construction work, change orders, and schedules for these contracts. Client: Port Authority of NY & NJ

NJDOT Region North, Multiple Bridge Cleaning and Painting Projects, Interstate Bridge Painting Contract, Route I-80, Contract 3, Bergen County, NJ; 2/10-12/12. Resident Engineer. This $8-million bridge painting contract involved the painting of six bridges in Hackensack, Saddle Brook Township, and Elmwood Park. This project involved the removal of existing old lead based paint and repainting with a Northeast Protective Coating Committee (NEPCOAT) approved coatings system. The projects incorporated traffic control on a high-speed highway, MPT, nightwork, staging, and environmental (lead abatement) constraints unique to repainting on major urban bridges. The construction services contract involved managing four separate painting contracts with three independent painting contractors. Extensive coordination was done on a daily basis with each paint contractor including coordination with other trades working on the highways. He acted as the owner's direct on-site representative to the contractor by providing direct supervision of the field inspection/engineering staff, performing quality assurance oversight of major items of work in progress, and/or ensuring that the project was constructed in accordance with the plans and specifications for the owner. Mr. Takla's responsibilities included attendance at the pre-construction meeting held prior to the start of construction which included procedures for paint removal, application of coating materials, handling hazardous materials, and traffic control and safety; review and approval of the pollution control system prior

to paint removal; review of equipment storage plan; ensuring that material was tested and sampled as per the contract specifications; and ensuring proper traffic control and safety including all submittals and notices as required. Client: New Jersey Dept. of Transportation

NJDOT Region North Bridge Painting-Rt. 280, Contract 2010-4 (Fr. C-2), NJ; 1/12-12/12. Senior Inspector. Mr. Takla performed inspection duties and assisted the resident engineer. Client: New Jersey Dept. of Transportation

NJTA Interchange 6 to 9 Widening Program, NJ; 1/10-2/10. Senior Inspector. This major contract with the New Jersey Turnpike Authority involved construction management services for the Interchange 6 to 9 Widening Program (The Program). The Program was the Turnpike's most significant construction project in the 58-year history of the Authority, and was estimated at $3-billion. The project included activities such as new bridge construction, earthwork, drainage, recharge basins, traffic control, utilities and agency coordination as well as electrical, lighting, fiber, ITS, overhead signs, sound barrier, and major paving work. Mr. Takla reviewed contract drawings for constructibility prior to bid. Client: New Jersey Turnpike Authority

NJDOT Region North, Multiple Bridge Cleaning and Painting Projects, Interstate Bridge Painting Contract, Route I-80, Contract 2, Essex County, NJ; 1/10-12/11. Resident Engineer. This $7-million bridge painting project involved the removal of existing old lead based paint and repainting with a Northeast Protective Coating Committee (NEPCOAT) approved coatings system. The projects incorporated traffic control on a high-speed highway, MPT, staging, and environmental (lead abatement) constraints unique to repainting on major urban bridges. The construction services contract involved managing four separate painting contracts with three independent painting contractors. Extensive coordination was done on a daily basis with each paint contractor including coordination with other trades working on the highways. Communication and coordination with local municipalities was addressed for structures that span local streets. He acted as the owner's direct on-site representative to the contractor by providing direct supervision of the project's field inspection/engineering staff, performing quality assurance oversight of major items of work in progress, and/or ensuring that the project was constructed in accordance with the plans and specifications for the owner. Mr. Takla's responsibilities included attendance at the pre-construction meeting held prior to the start of construction which included procedures for paint removal, application of coating materials, handling hazardous materials including traffic control and safety; review and approval of the pollution control system prior to paint removal; review of equipment storage plan; ensuring that material was tested and sampled as per the contract specifications; and ensuring proper traffic control and safety including all submittals and notices as required. Client: New Jersey Dept. of Transportation

Port Morris Yard, NJ; 5/98-10/98. Construction Inspector. Mr. Takla's responsibilities included the inspection of construction work for compliance to contract requirements. Inspections were in the civil and electrical disciplines. Client: New Jersey Transit

Port Authority of New York & New Jersey; 1977-1996. As resident engineer, Mr. Takla worked on the following projects: He directed and led all construction contracts at the George Washington Bridge (1992-1996), the Holland Tunnel Toll Plaza redevelopment project (1989-1992), and the Holland Tunnel and Staten Island Bridges (1985-1989). Mr. Takla managed all aspects of construction projects, including staffing, construction schedules, contract submittals, monitoring and approval of progress payments, ordering and negotiation of field changes, monitoring field inspections, evaluating construction claims, updating monthly contract reports, monitoring affirmative action programs. He also provided schedules and construction staging during design development and contract preparation.

As assistant resident engineer, Mr. Takla directed and led the field inspection forces for all work required for the construction to remove the concrete ceiling of the north and south tubes of the Holland Tunnel; 1983-1985.

As construction inspector, Mr. Takla worked on the following projects:

- Replacement of the main toll plaza at the George Washington Bridge; 1981-1983
- The widening of the upper level westbound roadway of the George Washington Bridge; 1979-1981
- The removal and replacement of the upper level roadway of the George Washing Bridge Orthotropic Deck. His responsibilities included the inspection of all aspects of construction work for compliance to contract requirements - inspections were in the structural, mechanical, civil and electrical disciplines; 1977-1979

Anthony Tiliakos
Construction Inspector

Professional Profile
Mr. Tiliakos has over 23 years of experience on various bridge contracts involving surface preparation, coatings application, lead removal and hazardous waste disposal. He started as a contractor foreman, supervisor and project manager. Mr. Tiliakos has spent the last 11 years as a coatings inspector, chief coatings inspector and consultant on various other projects.

Project Experience
Region South Term Agreement, MBP South Contract 2012-1; 10/13-Present, $5M. Coatings Inspector. This project is for Maintenance Bridge Painting Contract 2012-1, which includes Twelve (12) Bridges, Routes I-676, US 130 & I- 295; Camden City, Pennsville, Logan & Delran Twps. and Bellmawr, Collingswood & Paulsboro Boroughs, Camden, Salem, Gloucester & Burlington Counties. These bridge painting projects involve the removal of existing old lead based paint and repainting with a Northeast Protective Coating Committee (NEPCOAT) approved paint system. The projects incorporate traffic control on a high speed highway, MPT, nightwork, staging, and environmental (Lead Abatement) constraints unique to repainting on major urban bridges. Responsible for monitoring 100% containment operations, MPT, quality of coating materials, proper storage, mixing, application, inspect coating application for compliance with contract specification, surface preparation (SSPC-SP10), environmental compliance, also managing and training the inspection force. Client: NJDOT

NJDOT Central Maintenance Bridge Painting 2013-3 Routes 18, 34 & 7, Monmouth and Ocean Counties; 7/13-10/13, $3.23M. Coatings Inspector. Construction Inspection Services for 12 Bridges on Routes 18, 34 and 7; Wall, Neptune, Colts Neck & Stafford Townships & Sea Girt, Belmar & Ship Bottom Boroughs; Monmouth & Ocean Counties. Responsible for monitoring 100% containment operations, MPT, quality of coating materials, proper storage, mixing, application, inspect coating application for compliance with contract specification, surface preparation (SSPC-SP10), environmental compliance, also managing and training the inspection force. Client: NJDOT

NJDOT Region North Term Agreement Maintenance Bridge Painting (MBP) 2013-3 Start Up Task Order; 6/13-7/13, $8M. Coatings Inspector. GPI provided construction inspection services on various NJDOT projects as a subconsultant to JMT on their NJDOT Region North Term Agreement. Responsible for monitoring 100% containment operations, MPT, quality of coating materials, proper storage, mixing, application, inspect coating application for compliance with contract specification, surface preparation (SSPC-SP10), environmental compliance, also managing and training the inspection force. Client: NJDOT/JMT

NJDOT Region North 2011-2012 Maintenance Bridge Painting - 2011-2 Route 80 and Route 19 Bridges ($7.5M) and Contract 2012-2 Route 80 Bridges ($6M); 1/13-6/13. Coatings Inspector. This project involved the removal of existing old lead based paint and repainting with a Northeast Protective Coating Committee (NEPCOAT) approved coatings system. The projects incorporated traffic control on a high speed highway, MPT, nightwork, staging, and environmental (Lead Abatement) constrains unique to repainting on major urban bridges. The construction services contract involved the managing of four separate painting contracts with three independent painting contractors. Extensive coordination was done on a daily basis with each paint contractor including coordination with other trades working on the highways. Communication and coordination with local municipalities were addressed for structures that span local streets. Responsible for monitoring 100% containment operations, MPT, quality of coating materials, proper storage, mixing, application, inspect coating application for compliance with contract specification, surface preparation (SSPC-SP10), environmental compliance, also managing and training the inspection force. Client: NJDOT

Anthony Tiliakos
Construction Inspector

NJDOT Region North Bridge Painting - Route 280, Contract 2010-4 (Fr. C-2); 7/12-6/13, $10M. Coatings Inspector. $10M. These bridge painting projects involves the removal of existing old lead based paint and repainting with a Northeast Protective Coating Committee (NEPCOAT) approved paint system. The projects incorporate traffic control on a high speed highway, MPT, nightwork, staging, and environmental (Lead Abatement) constraints unique to repainting on major urban bridges. The construction services contract involves the managing of four separate painting contracts with three independent painting contractors. Extensive coordination is done on a daily basis with each paint contractor including coordination with other trades working on the highways. Communication and coordination with local municipalities are addressed for structures that span local streets. Responsible for monitoring containment operations (Hazardous Material/ Environmental), paint removal, surface preparation (SSPC-SP10), Maintenance and Protection of Traffic, quality of coating materials, proper storage, mixing, application, inspect coatings for compliance with contract specifications, monitor implementation of approved Health and Safety Plan surface preparation, also managing and training the inspection force. Inspect as needed on any one of multiple projects, must follow-through with RE to assure schedule (day/night) and proper reporting and lane closures. Client: NJDOT

NJDOT Region South 2009 Term Agreement, Maintenance Bridge Painting Contract 2011-1; 7/11-7/12, $2.5M. Inspector. Contract included eight bridges, Route NJ 45, 55 and US 322 in Deptford, Logan and Mantua Townships, NJ. Responsible for monitoring containment operations, M&PT, quality of coating materials, proper storage, mixing, application, inspect coatings for compliance with contract specifications, monitor implementation of approved Health and Safety Plan surface preparation, also managing and training the inspection force. Inspect as needed on any one of multiple projects, must follow-through with RE to assure schedule (day/night) and proper reporting and lane closures. Client: NJDOT

NJDOT Region South 2009 Term Agreement, Contract 2010-1 Route 55 Maintenance Bridge Painting (Multiple Projects); 6/10-8/11, $3.8M. Coatings Inspector. Construction inspection services for this Federally funded contract. Contract 2010-1 involved the maintenance bridge painting of 11 bridges along Route 55 in Deptford, Mantua and Washington Townships, Gloucester County. Projects involved the removal of Hazardous Material (existing old lead based paint) and repainting with a Northeast Protective Coating Committee (NEPCOAT) approved paint system. The projects incorporated traffic control on a high speed highway, staging, and environmental (Lead Abatement) constraints Responsible for monitoring the following: containment operations, (Hazardous Material/Environmental), monitor implementation of approved Health and Safety Plan, MPT, quality of coating materials, proper storage, mixing, application of coating materials, inspect coating for compliance with contract specification, surface preparation, paint removal, also managing and training the inspection force. Inspect as needed on any one of multiple projects, must follow-through with RE to assure schedule (day/night) and proper reporting. Inspect as needed on any one of multiple projects, must follow-through with RE to assure schedule (day/night) and proper reporting and lane closures. Client: NJDOT

NJDOT Region North Bridge Painting - Route 80 Contract 2 ($7M) & Route 280 Contract 3 ($6M); 2/10-3/10. Coatings Inspector. The bridge painting projects involved the removal of existing old lead based paint and repainting with a Northeast Protective Coating Committee (NEPCOAT) approved paint system. The projects incorporated traffic control on a high speed highway, staging, and environmental (Lead Abatement) constrains unique to repainting on major urban bridges. The construction services contract involved the managing of four separate painting contracts with three independent painting contractors. Extensive coordination was done on a daily basis with each paint contractor including coordination with other trades working on the highways. Communication and coordination with local municipalities were addressed for structures that span local streets. The contractors were Allied Painting and ANKA Painting. Client: NJDOT

NJDOT Region South Maintenance Bridge Painting Contract 2009-1; 4/09-1/10, $3M. Coatings Inspector. Bridge painting inspection project involved removal of lead based paint and repainting the structures including the concrete abutments for various bridges in Camden County, NJ. Responsible for monitoring containment operations, M&PT, quality of coating materials, proper storage, mixing, application, inspect coatings for compliance with contract specifications, monitor implementation of approved Health and Safety Plan Surface preparation, also managing and training the inspection force. Client: NJDOT

Guy Toussaint
Senior Inspector

Professional Profile
Mr. Toussaint has over 25 years of highway/roadway bridge construction inspection and office engineer experience in urban infrastructure construction projects involving structural, civil and utility work on, over and adjacent to operating rail lines, rivers and roadways. He is highly knowledgeable in bridge reconstruction/rehabilitation work, electrical inspection, roadway and sidewalk reconstruction, water main and sewer installation work. He is also knowledgeable in construction documentation filing and processing by maintaining project documents in accordance to QA requirements, MURK and project procedures. In addition, he has assisted in the close out of various projects by submitting all required documentation in accordance with the direction of authorized representatives.

Project Experience
REI for the Rehabilitation of High Bridge, Boroughs of Manhattan and Bronx, NY; 4/14-Present. Senior Inspector. This project involves rehabilitation of the masonry arch spans, steel arch span (including deleading and painting), brick arch deck, and brick walkway; stabilization and conservation of the aqueduct pipe; providing barrier-free access and safety for pedestrian and wheeled users; rehabilitation of historic railings and walkway lighting posts; providing architectural lighting (as funding allows); and providing a visitor information system consisting of way finding signage and aqueduct interpretative signage. Mr. Toussaint's responsibilities include the supervision of daily inspection of all electrical work on the project, which consists of the installation of new NYC-DOT, NYC-DPR control cabinets, supervision of the rehabilitation of deck and attic, removal of existing light poles from bridge for salvage and shop restoration, removal of all existing conduit and electrical wires and attic light fixtures from bridge top and attic and disposed of them in accordance with specifications, supervision of the installation of conduits and lighting in the attic, supervision of the installation of new light poles and electrical conduit and wiring, the installation of electrical conduit and wiring and new navigation lighting system, inspection of architectural lighting for the soffits of the masonry arches and the arch steel span, and installation of electrical conduits and hardware for led floodlights underneath masonry arch span and induction button lighting at the arch ribs of the steel span. Client: New York City Dept. of Design & Construction

Brooklyn Bridge Rehabilitation of the Approach Spans and Ramps and Painting of the Entire Bridge, Contract 6, New York, NY; 7/12-3/14. Senior Inspector. This project involved construction management and inspection services for the $509-million rehabilitation of this Iconic National Landmark. The scope of work for the project included replacement of approach roadway in Manhattan and Brooklyn over the arch blocks; rehabilitation of the Manhattan side ramp structures with widening and deck and bearing replacements; rehabilitation of the approach steel structures with full superstructure replacement of the York and Main Street structures and orthotropic deck installation at Franklin Square; seismic retrofitting of the main bridge, Franklin Square and ramp structures; painting of the ramp structures and suspended spans in their entirety; restoration of historic features. Mr. Toussaint was responsible for the daily inspection supervision of all electrical work which consisted of conduit installation, junction box, and pull box; installation of new under deck lighting system and the installation of new roadway luminaires; and the demolition of existing main switch board and the installation of new main service disconnect and new automatic transfer switch (ATS) at the Brooklyn maintenance shop. Client: New York City Dept. of Transportation

Williamsburg Bridge Reconstruction of Miscellaneous Rehabilitation of the Main Bridge, Contract 8, #BRC253CCA, New York, NY; 2004-7/12. Senior Inspector. This $280-million project involved the construction engineering and Inspection for the rehabilitation of the main bridge. The scope of work for the project included abrasive blasting and painting of main bridge stiffening trusses, rehabilitation and strengthening of the main towers, rehabilitation of the intermediate towers and installation of seismic shear keys, main cable saddle repair and restraint, rehabilitation of wind tongue and wind chord, main tower and intermediate tower bearing installation, main tower leg

removal and replacement, stiffening truss top and bottom chord rehabilitation, traveling maintenance platform installation, re-profiling of main span vertical curve by incrementally adjusting suspender cables, modification of orthotropic footwalk deck expansion joints, waterproofing and surfacing of orthotropic roadway deck, installation of ornamental balconies and electroliers, integration of intelligent transportation operating system, seismic retrofit of the intermediate towers, installation of contraflow barrier and erection of barrier transfer machine facility, including augured concrete piles. Mr. Toussaint was responsible for daily inspection supervision of all electrical work, which consists of new electrical system for traveler; new 480-volt electrical service for anchorage loads; additional lighting and power source in anchorages; removal and relocation of bridge necklace lighting; traffic signal modification work on Delancy Street; the removal of existing and installation of closed circuit television; video vehicle detection; aviation navigation obstruction lights; lane control signal; variable message signs, all with optical fiber cable connections on the Williamsburg Bridge and multiplex transfer of data to ports at the Traffic Management Center (TMC); the installation of electrical conduits feed including conductor rails for the traveling maintenance platforms; water main installation work on Delancy Street; and structural steel work on main bridge truss bottom and top chord repair, main span diagonal repairs. Mr. Toussaint assisted on the as-built drawing requirements for submittal of acceptance. Client: New York City Dept. of Transportation

Reconstruction of Williamsburg Bridge Northern Roadways, Contract 7, New York, NY; 2002-2004. Senior Inspector. This $230-million project consisted of the demolition and reconstruction of four northern roadway lanes on the bridge approaches and main span. Mr. Toussaint was responsible for supervision of inspection for reconstruction of the Brooklyn approach bikeway/footwall (along active rail lines), including sidewalk excavation, and local street work in Brooklyn and Manhattan involving sidewalk and curb installation, asphalt and concrete pavement work. Mr. Toussaint also assisted on contract work close out finalizing item quantities, as-built drawing requirements for submittal of acceptance. Client: New York City Dept. of Transportation

Greaves Avenue Bridge over Staten Island Railway, NY; 1999-2001. Office Engineer/Senior Inspector. This project involved complete removal of the existing three-span superstructure and substructures including the concrete deck slab, stringers, utilities, abutments, and piers which span over two active Staten Island Railroad tracts. The new structure was constructed with new reinforced concrete abutments and wingwalls. The project also involved the installation of a new one-span superstructure using steel stringers and a jointless reinforced concrete deck slab and approach slabs; the replacement of the existing eight-inch diameter water main and telephone conduits; the removal of an abandoned sewer forcemain (asbestos type); replacement of existing approach pavements and sidewalks within the project reconstruction limits; and installation of new street lighting and modification of existing traffic signals. Mr. Toussaint's responsibilities included field inspection supervision of all work listed above. Office work included processing change orders; contractor's payments; monthly progress status; materials acceptance log with all QA requirements; monthly estimate log book and filing system. Client: New York City Dept. of Transportation

Rehabilitation of the Melrose Avenue Bridge over Conrail and the 165th Street Bridge over Metro-North Railroad, Bronx, NY; 9-95-2/97. Office Engineer/Inspector. This project involved the near total demolition, removal, and replacement of the Melrose Avenue Bridge. The new bridge is approximately 600 ft long with seven spans, passes over private land and a Conrail spur. The north approach abuts the East 165th Street Bridge, which spans Metro North Railroad. The south approach slopes down on grade to East 163rd Street. New structure consists of portions of the existing abutments and Pier #1, six new concrete piers with 40 piles each. Close to one million lbs of structural steel were erected on top of 132 elastomeric bearings. The deck concrete was placed in stages to accommodate two, two-span continuous and one, three-span continuous steel stringer spans. Mr. Toussaint's responsibilities included field inspection for the demolition and removal of the existing bridges, pile driving, the erection of structural steel, bearings, installation, the placement of traffic signals, signs, conduits and street lights. Office work included maintaining project documents in accordance with project procedures, material acceptance record, review of inspector's daily report and entering quantities in item quantity book and computer. Mr. Toussaint was also responsible for monitoring all materials for certification and specifications under each item delivered to job site for acceptance requirements, and review contractor's invoices and processed invoices for payments. Client: New York City Dept. of Transportation

Robert Trapani
Chief Inspector

Professional Profile
Mr. Trapani is an experienced construction inspector who has worked on construction projects for many years for both public transportation agencies and private consulting firms. He has been involved on large complicated bridge projects as well as on major highway rehabilitation, and airport construction projects.

Project Experience
Ocean Avenue Bridge over LIRR, Brooklyn, NY; 8/13-Present. Inspector. This project involves REI services for the component rehabilitation of the Ocean Avenue Bridge over the LIRR in the Borough of Brooklyn, NY. Mr. Trapani is responsible for providing daily inspection of all contractor work operations for compliance with contract drawings and specifications, reviewing daily and look-ahead work schedules with contractor, preparing written work operation documentation reports, calculating and tracking work item quantities in preparation for progress payments. Client: New York City Dept. of Transportation

CI Services for the Rehabilitation of Three Bridges, Contract 6052-B1-11 Release 'A', Contract No. 6052-B1-11, Hampton Bays, NY; 1/12-7/13. Inspector. This project involved inspection services for construction activities at North Road Bridge, Shinnecock Canal Bridge, and Montauk Highway Bridge, all on the Montauk Branch in Hampton Bays. Mr. Trapani worked directly with, and as a supplement to, the CM staff of the LIRR. Client: Long Island Rail Road

Belt Parkway Bridges REI Services - Paerdegat Bridge, Contract#HBK1024, New York, NY; 2/10-1/12. Chief Inspector. This project involved the demolition of the entire 13-span, multi-stringer bridge superstructure and substructure including abutments, wingwalls, and the piers consisting of concrete pile columns to a minimum of 600 mm below the mud line. The replacement structures were new three-span and five-span bridges consisting of a Class HP reinforced concrete superstructure slab supported by high performance steel box girders and substructures including reinforced concrete abutments, wingwalls, and multi column piers on new pile foundation. Mr. Trapani was responsible for installation of temporary roadway lighting. Client: New York City Dept. of Transportation

Replacement of Belt Parkway Bridge over Rockaway Parkway, Contract #HBK1091, Brooklyn, NY; 2/10-1/12. Chief Inspector. The project involved the demolition of the entire existing, four-span, multi-stringer bridge superstructure with existing steel cap beams, and superstructures, including abutments, wingwalls, and pier columns and footings; installation of a new single-span replacement bridge consisting of a multi-stringer superstructure with reinforced concrete deck and superstructure, including reinforced concrete abutments and wing walls on new piled footings, and mechanically stabilized earth retaining walls; reconstruction of approach roadway and four entrance and exit ramps within the project limits; and installation of new concrete barrier, new bridge and guide railing, new lighting standards, new drainage systems including catch basins and drainage pipes, new overhead sign structures, and new swale BMP grading, drainage, and planting. Mr. Trapani's responsibilities included inspection of installation of piles; inspection of rebar installation for footings, columns, pier caps, etc.; inspection of placement of mass concrete; and inspection of installation of new drainage systems. Client: New York City Dept. of Transportation

Reconstruction of Willis Avenue Bridge, New York, NY; 2/09-12/09. Senior Inspector. This project involved replacement of the existing movable bridge and approaches with a new structure, built offline from the existing structure. Mr. Trapani's responsibilities included inspection of installation of drilled and driven piles, drainage and earthwork, and structural concrete work. Client: New York City Dept. of Transportation

Queensboro Bridge Lead Paint Removal and Protective Coating, Contract BRC231P, New York, NY; 3/06-2/09. Structural Inspector. This $170-million project involved the erection of containment structures, abrasive blasting and lead paint removal for the entire East River Bridge and the application of a three-coat painting system. Mr. Trapani's responsibilities included cataloging of shop drawings for scaffold and containment erection, field inspection and documentation of erection of scaffolding and containment structures. Mr. Trapani verified that all materials, including pipes, clamps, beams, cables and decking, were in accordance with approved structural drawings. Client: New York City Dept. of Transportation

Robert Trapani
Chief Inspector

Throgs Neck Bridge, Orthotropic Deck Rehabilitation, TN-82 Phase A, New York, NY; 1/04-9/05. Chief Inspector/Assistant Resident Engineer. From 1983-1986, 6,487 ft of Queens and Bronx viaduct was retrofitted with closed rib orthotropic deck to replace the original non-composite concrete deck. The retrofit project successfully completed installation of approximately 440,000 sq ft of orthotropic deck during night shift construction. However, within three years of service, due to redistribution of stresses, several supporting elements in the main girder to floor beam connection area began showing signs of overstress. The $5-million TN-82, Phase A, project involved the testing of the constructibility, serviceability and performance of the design consultant's solution to the chronic structural problems that have plagued the retrofitted spans since 1989. Mr. Trapani was responsible for inspectors covering contract specific items of field work including shear connector installation, steel reinforcement, end sub-floor beam replacement, asphalt wearing surfaces, epoxy bonding compound application, and deck stringer shimming operations. Client: Triborough Bridge and Tunnel Authority

Long Island Expressway/Cross Island Parkway, Exits 29-32, Queens, NY; 8/00-12/03. Assistant Resident Engineer. The project involved construction inspection services for the multiple award winning $147-million rehabilitation of the Long Island Expressway/Cross Island Parkway (LIE/CIP) interchange. The major elements of the project include widening of the Long Island Expressway (LIE) between Cloverdale Boulevard and the NYC/Nassau County line. Also involved interchange improvement, modernization of semi-direct connection ramps and other associated ramp connections to the Cross Island Parkway. Maintenance and protection of traffic included staged construction on the bridges over the LIE and required a major temporary bridge for the reconstruction of the LIE/CIP Bridge. Mr. Trapani supervised an inspection staff of 18 comprised of senior inspectors, inspectors, specialists, and trainees. The scope of work included coordination and supervision of inspection of 14 new structures, including four pre-cast structures, one pre-cast post-tensioned structure, four "tub girder" structures; reconstruction and widening of a rigid frame structure, and four steel frame bridges. Provided supervision and coordination of numerous detours and traffic shifts and staged construction, shift construction, etc. Client: New York State Dept. of Transportation

Marine Parkway Bridge, #MP-01, Resident Engineering and Inspection, New York, NY; 7/98-4/03. Assistant Resident Engineer. This $90-million project involved the reconstruction of the largest vertical lift span bridge in New York. Mr. Trapani's responsibilities included supervision of a large inspection staff, including trainees, and specialist inspectors. He also coordinated staged construction for removal of the existing deck, replacement with lightweight pre-cast and open steel deck systems, truss reinforcement, and flag repairs and supervised inspection of de-leading and painting the entire structure. The project also included post-tensioning trunnions, seismic bearing retrofit, and final balancing of the lift span. Client: Triborough Bridge and Tunnel Authority

Williamsburg Bridge South Roadways Reconstruction, Contract 5, #BRC253BAA, New York NY; 1996-1998. Team Leader. This $310-million project involved the construction engineering and inspection for the reconstruction of the south inner and outer roadways. Mr. Trapani inspected and supervised inspection of orthotropic deck, floorbeam and flag repairs on the main span, and micropile footing systems on the approaches. He also supervised inspection and installation of grid deck, armored, and modular joints, and bridge bearings. As team leader, Mr. Trapani oversaw the installation of approximately 50,000 sq ft of steel grating, including welding of the panels, welded shear stud installation, erection of structural steel, armored joints and bridge bearing installations. He was involved with all aspects of the removal of structural steel and concrete deck removal. Client: New York City Dept. of Transportation

Williamsburg Bridge Main Cable Rehabilitation, Contract 4, #BRC253A, New York, NY; 1991-1996. Senior Inspector. This $88-million construction and resident engineering inspection project involved the rehabilitation of the suspension system for the Williamsburg Bridge. Mr. Trapani's specific responsibilities included inspection of structural steel for anchorages, approaches, and back spans, and the installation of modular and armored joints, open steel floor, curbs, barriers, transitions and impact attenuators. He was also responsible for ensuring the safety of construction personnel and has attended the NYSDOT Traffic Safety Seminar and NYCTA Track Safety Course. Mr. Trapani has knowledge of contents and application of NYS Steel Construction Manual. Other duties included hazardous material management and proper training of the construction forces. Client: New York City Dept. of Transportation

Natanael Vasquez
Inspector

Professional Profile
Mr. Vasquez is an inspector with ten years of experience working on large and complex bridge and viaduct rehabilitation projects. During this time, Mr. Vasquez has performed quality assurance inspection of structural steel erection, concrete placement, asphalt and epoxy wearing surface placement, and various other bridge system rehabilitation.

Proposed Project Assignment
Civil/Structural Inspector

Registration/Certifications
2009/NICET I
2008/ACI Concrete Field Testing Technician Grade 1

Education
AAS/2007/Construction Management

Course Work
2008 - 10-Hour OSHA Training Course, #001872360
Construction Drawing

Total Years Experience 10

Project Experience
Bayonne Bridge Navigational Clearance Program (BBNCP) Construction Management, NY/NJ; 2/14-Present. Civil Structural Inspector. This project involves construction management services for the $743-million Bayonne Bridge Navigational Clearance Program (BBNCP). This extraordinarily complex, once-in-a-lifetime project will replace more than 5,000 feet of viaduct and re-frame the existing steel arch structure to accommodate a new roadway 65 feet above the existing roadway. Mr. Vasquez is responsible for the following: drilled shaft, also known as caissons in which are high capacity cast in place deep foundation constructed using an auger, full length reinforcing bars and concrete placement; waler system installation of the footings, which involves excavation and i-beam installation around perimeter in order to properly install mud slab; reinforcing bars installation for concrete placement of pier caps; pre-cast segmental installation using high pressure grouting; main bridge, approach roadway demo using cranes, crab muncher Caterpillar and saw cut machines; steel removal and installation of new members using high strength bolts; and temporary flexible shield installation under main bridge. Client: Port Authority of NY & NJ

Brooklyn Bridge Rehabilitation of the Approach Spans and Ramps and Painting of the Entire Bridge, Contract 6, New York, NY; 3/12-2/14. Inspector. This project involved construction management and inspection services for this $500-million rehabilitation of this historic landmark. The scope of the project improved safety and reduced congestion along both the Brooklyn-side and Manhattan-side approaches, particularly from the FDR Drive. In addition, the entire bridge was repainted to prevent steel corrosion. Mr. Vasquez performed inspection/survey of structural members for the purpose of providing rehabilitation, repair and re-striping of the ramps and approaches to the bridge ramps; created two lanes of free-flowing traffic at the Cadman Plaza exit; created additional overhead clearance at the York Street arch over the BQE by replacing existing steel members with newer efficient steel; replaced the road surface on all approach roadways on the Manhattan side by installing high-strength concrete super slabs grouted with 2-in. dia. epoxy coated rebars; performed seismic retrofitting on the Franklin Square arch over Pearl Street; replaced rusted railings and safety barriers; created two lanes of free-flowing traffic from the southbound FDR Drive onto the Brooklyn Bridge; installed new scupper drainage along with steel reinforcement with concrete deviators; and installed new bearing pads for newly-blasted steel beams. He was also involved with the replacement and installation of new reinforcement steel for red and yellow flag repairs; installed new steel structure for Maintenance Shop, Washington, Prospect, Main Street and York; replaced approach roadway in Manhattan and Brooklyn over the arch blocks; rehabilitation of the Manhattan side ramp structures with widening and deck and bearing replacements; rehabilitation of the approach steel structures with full superstructure replacement of the York and Main Street structures and orthotropic deck installation at Franklin Square; seismic retrofitting of the main bridge, Franklin Square and ramp structures; painting of the ramp structures and suspended spans in their entirety; restoration of historic features; reviewing contract drawings and specifications; performing inspection of procedures that deal with civil or structural aspects the project; and observing work done in the field by the contractor, and consulting with the contractor to verify that the work is being completed as designed. Client: New York City Dept. of Transportation

Natanael Vasquez
Inspector

Williamsburg Bridge Reconstruction of Miscellaneous Rehabilitation of the Main Bridge, Contract 8, #BRC253CCA, New York, NY; 2/10-3/12. Inspector. This $280-million project involved the construction engineering and inspection for the rehabilitation of the main bridge. The scope of work for the project included abrasive blasting and painting of main bridge stiffening trusses, rehabilitation and strengthening of the main towers, rehabilitation of the intermediate towers and installation of seismic shear keys, main cable saddle repair and restraint, rehabilitation of wind tongue and wind chord, main tower and intermediate tower bearing installation, main tower leg removal and replacement, stiffening truss top and bottom chord rehabilitation, traveling maintenance platform installation, re-profiling of main span vertical curve by incrementally adjusting suspender cables, modification of orthotropic footwalk deck expansion joints, waterproofing and surfacing of orthotropic roadway deck, installation of ornamental balconies and electroliers, integration of intelligent transportation operating system, seismic retrofit of the intermediate towers, installation of contraflow barrier and erection of barrier transfer machine facility, including augured concrete piles. He was responsible for the inspection of rehabilitation and strengthening of the Brooklyn and Manhattan intermediate main towers; wind tongue and wind chord repairs; the intermediate tower bearing installation, and torquing according to specs all newly-installed connection; the re-installation of the lower level inspection platform; the lateral brace installations; truss top and bottom chord stiffeners and new perma-grout placement on the Brooklyn and Manhattan tower leg bases. Client: New York City Dept. of Transportation

Cross Bay Boulevard Bridge, Contract CB-08/09, Howard Beach, NY; 3/09-2/10. Inspector. This project involved providing construction management and inspection services for this $60-million project, which completely replaced the existing concrete deck using a staged demolition and reconstruction approach. Mr. Vasquez' responsibilities included the supervision and inspection of Stages 3 and 4 by affirming that the demolition of the closure pour and concrete removal on the bridge main deck was performed correctly; inspecting for the proper placement of the galvanized steel strips for the web strengthening on the main bridge girder web repair at span 3-4 and 6-7; assuring that the laborer's provided the correct demolition for the partial depth repairs on Ramps B, C, D, E, and the main bridge below the deck surface; assisting with class A, HP, lightweight, rapid set concrete placement for the closure pour, main barrier and diaphragms; assisting with the patching using speed Crete mortar for the partial depth repairs assuring that all the girders were completed according to specs. He also assisted with painting of the sign structure going southbound on ramp d; inspecting the trench excavation by which electrical conduits were installed for new light and camera fixtures; assured that the carpenters provided the correct form work for the closure pour and diaphragms concrete placement; made the necessary field measurements and payments for the trench excavation, closure pour, diaphragm repairs, partial depth repairs and concrete materials; surveyed the downspout and scupper system for their replacement for the next contract; assisted with the water proofing placement in preparation for the tack coat and asphalt placement; supervised and measured the final pavement markings for the completion of ramp D, after the asphalt was placed. Client: Triborough Bridge and Tunnel Authority

Williamsburg Bridge Reconstruction of Miscellaneous Rehabilitation of the Main Bridge, Contract 8, #BRC253CCA, New York, NY; 5/06-2/09. Inspector. This $267-million project involved the construction engineering and inspection for the rehabilitation of the Williamsburg Bridge. Mr. Vasquez' responsibilities included inspection of removal and replacement of existing asphalt overlay system and water proofing membrane system on orthotropic bridge deck. Work consisted of removal by roto-milling, water blasting and mechanical tools, shot blasting steel substrate, application of coatings, tack coat and paving with polyester modified asphalt mix. Removal of existing work platforms and bridge shield system following site-specific safety procedures.

Other responsibilities included:

- Concrete Testing: Mr. Vasquez performed concrete test on column bearing, sidewalk and street roads. Testing involved performing air, slump, test cylinders and temperature test to satisfy the required standards for class a, c and d concrete. When trucks arrived, he reviewed and checked tickets.
- Miscellaneous Steel Inspection: Mr. Vasquez ensured that steel members were installed as per contract plans and specification for inspection platforms, diagonal/lateral bracing, column/beam connection, struts, batten plate, splice plate, and lacing bars. He also torqued tested all connections per NYSSCM and calibrated the torque wrench on a daily basis.

Client: New York City Dept. of Transportation

Charles Viveiros
Coatings Inspector

Professional Profile
Mr. Viveiros is a coatings inspector with the following experience.

Project Experience
Brooklyn Bridge Rehabilitation of the Approach Spans and Ramps and Painting of the Entire Bridge, Contract 6, New York, NY; 5/13-Present. Coatings Inspector. This project involves construction management and inspection services for the $509-million rehabilitation of this Iconic National Landmark. The scope of work for the project includes replacement of approach roadway in Manhattan and Brooklyn over the arch blocks; rehabilitation of the Manhattan side ramp structures with widening and deck and bearing replacements; rehabilitation of the approach steel structures with full superstructure replacement of the York and Main Street structures and orthotropic deck installation at Franklin Square; seismic retrofitting of the main bridge, Franklin Square and ramp structures; painting of the ramp structures and suspended spans in their entirety; restoration of historic features. Mr. Viveiros' responsibilities include performing coatings inspections and verifying all job tasks are meeting NYCDOT specifications. He is also responsible for performing inspections to ensure surface preparation meets SSPC SP10 / SP11; inspecting all paint materials as they're applied and being mixed, performing daily inspections of all paint storage areas, batches, and expirations; and taking ambient conditions to ensure temperatures were sufficient to paint (ie. dew, humidity, surface, wet, dry bulb). Client: New York City Dept. of Transportation

Proposed Project Assignment
NACE Inspector

Registration/Certifications
2011/NACE Coating Inspector Level 1 - Certified
2012/NYCT Track Safety Certified

Course Work
2013 – NJ Transit Roadway Worker/On Track Protection Trained
2012 – Rutgers Traffic Control Coordinator Refresher Course
2011 - OSHA #36-600791313 30-Hour Occupational Safety & Health Training Course
2014 - NJDODSS CEOHS, Indoor Environments Program Lead ID Permit #[redacted]
2012 - SSPC C-3 Supervisor/Competent Person Training for Deleading of Industrial Structures
Work Zone Safety Awareness
TCC-Traffic Control Coordination
NJ (Lead) Supervisor Commercial Buildings & Superstructures

Total Years Experience 6

J Line, Brooklyn, NY; 3/12-5/13. Quality Engineer. Mr. Viveiros was responsible for performing inspections to ensure surface preparation met SSPC SP2 / SP3; inspecting all paint materials as they were delivered and being mixed; requesting all paint to be used on the job site; performing daily inspections of all paint storage areas, batches, and expirations; and taking ambient conditions to ensure temperatures were sufficient to paint (dew, humidity, surface, wet, dry bulb). Client: MTA

Allied Painting, Inc. NJ; 9/09-5/13. Inspector/Health and Safety Officer/Quality Control. Mr. Viveiros enforced health and safety regulations as per OSHA requirements; ensured quality control on job sites to meet any SSPC requirements; performed inspections on all SSPC surface profiles; took measurements of wet film and dry film to ensure paint met contract specifications; performed all inspections of paints being mixed/boxed; inspected storage areas for adequate conditions; took ambient conditions to ensure temperatures were sufficient to paint; performed duties as a traffic control coordinator during lane closures and openings; he was responsible for lane closures and openings; maintained all records of job sites (i.e. conditions, requirements, safety regulations, employees responsibilities, employee time sheets); ensured job materials were made available for employees at the work area (i.e. respirators, coveralls, blast hoods, eyewear); coordinated daily safety meetings at the beginning of each workday to ensure all employees understood the duties and all safety measures they must take; checked specifications after blasting was completed; evaluated work performed by employees to make sure all paint and rust was removed; used DFT machine to measure paint thickness; set up the decontamination facility, hazard waste area, and maintained work yard. Clients: Various

Charles Viveiros
Coatings Inspector

Route 19, Paterson, NJ; 2/12–1/13. Health and Safety Officer. Mr. Viveiros was responsible for performing inspections to ensure surface preparation met SSPC SP2 / SP3; inspecting all paint materials as they were delivered and being mixed; requesting all paint to be used on the job site; performing daily inspections of all paint storage areas, batches, and expirations; and taking ambient conditions to ensure temperatures were sufficient to paint (dew, humidity, surface, wet, dry bulb).Client: New Jersey Dept. of Transportation

Raritan Bridge, NJ; 9/11–1/12. Foreman, Traffic Coordinator, Quality Control and Health and Safety Officer. Mr. Viveiros performed blast inspections on a three-coat painting system and reviewed requirements for SSPC SP 10 surface preparation; observed and inspected all painting materials being mixed; performed WFT measurements when paint was being applied and reviewed paint thickness to assure that it met contract specifications; took DFTs of all three coats after paint was fully cured; and ensured dry film met specifications. Client: New Jersey Turnpike

Delaware Water Gap, PA, 2011. Foreman, Traffic Coordinator, Quality Control and Health and Safety Officer. Mr. Viveiros performed blast inspections on a three-coat painting system to ensure they met the SSPC SP 10 surface preparation requirements; he observed and inspected all painting materials being mixed; performed WFT measurements when paint was being applied to ensure paint thickness met contract specifications and also when paint was fully cured to perform DFT's of all three coats; and he also ensured dry film met specifications and took ambient conditions to make sure temperatures were sufficient for painting (dew, humidity, surface, wet, dry bulb). Client: Delaware Joint Bridge Commission

Route 280, Newark, NJ; 3/11-12/11. Foreman, Traffic Coordinator, Quality Control and Health and Safety Officer. Mr. Viveiros performed blast inspections on a three-coat painting system requiring SSPC SP 10 surface preparation; observed and inspected all painting materials being mixed; performed WFT measurements when paint was being applied to ensure paint thickness met contract specs; and when paint was fully cured, he took DFT's of all three coats to ensure dry film meet specs. Client: New Jersey Dept. of Transportation

Atlantic City Expressway Overpasses, Hammonton, NJ; 11/10–3/11. Traffic Control Coordinator/Health and Safety Officer. Mr. Viveiros enforced all safety on the job site from equipment to employees. He also closed/opened lanes and set up MPT for work to be performed at specific locations. Client: Atlantic City Toll Bridge Commission

Atlantic Avenue Viaduct, NY; 9/09–11/10. Foreman/Quality Control. Mr. Viveiros instructed all employees where work was to be performed; inspected all work and surface preparation to make sure it met SSPC SP11 surface profile; measured steel using Testex Tape to make sure it met contract specifications; inspected all paint materials being mixed and applied including three-coat system Zinc, Epoxy, Urethane; he took DFT measurements to ensure dry film met contract specifications; took ambient conditions to ensure that temperatures were sufficient to paint (dew, humidity, surface, wet, dry bulb). Client: Long Island Rail Road

Kiewit, NY; 10/09. Quality Control Coordinator. Mr. Viveiros worked as a subcontractor and performed all duties as a quality control coordinator. Client: Various

Dover Water Tank, DE. Quality Control. Mr. Viveiros performed all Inspections on the structure. He assured that surface preparation and blast surface preparation inside the tank met SSPC SP10 requirements; he assured that outside tank met SSPC SP6 for commercial blasting; inspected all surface areas before any paint was applied; observed and inspected all paint being mixed and boxed and inspected application by using a WFT gauge after paint fully cured; inspected dry film thickness by using a positest DFT gauge; and ensured there were no holidays and runs on the structure and if so, instructed workers where touch ups needed to be applied.

Gregory Yuzuk
Chief Inspector

Professional Profile
Mr. Yuzuk has 14 years of experience working at extreme heights on numerous bridges throughout the New York Metropolitan area. He has proven technical skills, is quick to learn, has a professional demeanor, and is a team worker and an effective communicator.

Proposed Project Assignment
NACE Inspector

Registration/Certifications
2008/NACE Certified Coating Inspector Level 3

Course Work
2010 - 10-Hour OSHA Training Course

Total Years Experience 14

Project Experience
Brooklyn Bridge Rehabilitation of the Approach Spans and Ramps and Painting of the Entire Bridge, Contract 6, New York, NY; 10/10-Present. Chief Inspector. This project involves construction management and inspection services for the $509-million rehabilitation of this Iconic National Landmark. The scope of work for the project includes replacement of approach roadway in Manhattan and Brooklyn over the arch blocks; rehabilitation of the Manhattan side ramp structures with widening and deck and bearing replacements; rehabilitation of the approach steel structures with full superstructure replacement of the York and Main Street structures and orthotropic deck installation at Franklin Square; seismic retrofitting of the main bridge, Franklin Square and ramp structures; painting of the ramp structures and suspended spans in their entirety; restoration of historic features. Mr. Yuzuk's responsibilities include inspection of platform and containment erection, surface preparation (SP 1, SP 2, SP 10), and application of a four-coat paint system including surface profile measurements, chloride testing and dry film measurements. Client: New York City Dept. of Transportation

Throgs Neck Bridge, New York, NY; 3/09-10/10. As a coatings inspector, Mr. Yuzuk was responsible for painting on/off ramps on the Queens abutment to the Queens anchorage; performing visual inspection of surface preparation; application of three-coat paint system; visual inspection of stripe coat; and performing chloride testing, measuring dry film thickness in accordance with PA-2.

Whitestone Bridge, Bronx, NY; 3/08-12/08. As a coatings inspector, Mr. Yuzuk was responsible for painting suspension system and towers; visual inspection of surface preparation, SP-1, SP-2; application of three-coat paint system; visual inspection of surface preparation of interior/exterior towers; performing chloride testing, measuring dry film thickness in accordance with PA-2; and visual inspection of stripe coat.

Local Union 806, Various Bridges, NY; 6/98-12/07. Bridge Painter. Mr. Yuzuk worked at extreme heights on the Tappan Zee, Manhattan, and Newburgh-Beacon Bridges and was responsible for abrasive blasting with steel grit and black beauty to achieve SP-5, SP-10; using hand and power tools to achieve SP-2, SP-3 and SP-11; managing paint pump; installing and removing platform systems; maintaining, troubleshooting, and repairing faulty or broken power tools; and implementing all safety devices to ensure safe working conditions.

LPE

Robert Zayas

SUMMARY

Mr. Zayas is a Construction Manager/Inspector with a 35 year record of success overseeing all phases of multimillion-dollar construction, infrastructure, superfund and environmental projects for government and private-sector clients. His experience includes managing crews of up to 150 overseeing Airport improvements, asbestos abatements, HAZWOPER initiatives and a variety of other construction/demolition projects. Backed by strong credentials and a proven history of on-time, on-budget and high-quality project completions.

Mr. Zayas' experience includes: Construction/Demolition Projects, Infrastructure Improvement Projects, Environmental Remediation Projects, Site Safety/OSHA Compliance, QA/QC Field Engineering, Change Order Management, Budgeting & Cost Controls, Bidding/Estimating/Proposals, Subcontractor/Crew Supervision

RELEVANT EXPERIENCE

Construction Manager/Construction Inspector, Resident Engineer's Office, LaGuardia Airport, NY,

LPE Enterprises/Port Authority of NY & NJ **1990-Present**

- Responsible for installations involving structural steel erection, plumbing, HVAC, underground utilities, fire and sprinkler protection, sanitary and sewer systems.
- Conduct civil, electrical and architectural inspection duties.
- Schedule and conduct Pre- Construction meetings, verify appropriate insurance and contractor's licenses are valid.
- Provide oversight of construction activities, coordinating life safety system tie-in /shutdowns.
- Gather and review documents, certification from Airlines, tenants, Architects, Engineer's Of Record. Requests and Final Inspections.
- Responsible for inspections involving structural steel erection, plumbing, HVAC, underground utilities, fire and sprinkler protection, sanitary and sewer systems.
- Conduct civil, electrical and architectural inspection duties.

Project Highlights at La Guardia Airport include:

- Overseeing construction of expansion of Central Terminal Building, Heating and Refrigeration Plant, Electrical Substations, a $425M project
- Managed construction of various building rehabilitations to bring into compliance with new NYC Building code, including Life Safety, Fire Protection, Sprinkler Systems, Fire Alarm upgrades, Plumbing and HVAC, a $500M project
- Currently monitoring and oversight of Tenants/Airlines construction upgrades of their facilities/buildings, a $700 M project

Construction Supervisor, Dynaire Corporation **1989 - 1990**

- Responsible for planning and supervision of heating, ventilation and air conditioning installations in commercial, industrial and residential construction.

Supervising Mechanic, Pilgrim Psychiatric Center **1977 - 1989**

- Supervised maintenance employees and outside contractors in service, operation and repair of refrigeration and air conditioning equipment.
- Scheduled work assignments, prepared cost estimates, inspection and emergency repair of equipment.

LPE

Maintenance Electrician, Pilgrim Psychiatric Center 1975 - 1977

- Performed work assignment trouble shooting of electrical devices.
- Performed installation and maintenance of power, distribution of electrical and lighting equipment.

Electrician, United States Navy, USS Ticonderoga 1970 - 1973

AFFILIATIONS/TRAINING:

- Member in the National Fire Protection Association
- OSHA 10 – hr training in Construction Safety and Health
- NYC Department of Buildings 4-hr Supported Scaffold Training-Local Law 52

RESUMES

CONSTRUCTION ADMINISTRATORS

Resumes are presented in alphabetical order

Jerry Amoah, E.I.T.
Office Engineer

Professional Profile
Mr. Amoah is an office engineer with the following experience.

Project Experience
Belt Parkway Bridges REI Services - Gerritsen Inlet Bridge, Brooklyn, NY; 10/13-Present. Office Engineer. This $104.5-million project involves total replacement of Gerritsen Inlet Bridge on the Belt Parkway in the Borough of Brooklyn. The major work includes removal and disposal of main spans including concrete deck, steel girders, floor beams and stringers, approaches, concrete superstructure, closure walls, timber piles, concrete piers, pier caps, columns, abutments, wingwalls, street lighting, transformer room, transit ducks, steel conduits, navigation lights, and trees and vegetation. Mr. Amoah is responsible for preparing change orders; reviewing inspector's reports; maintaining resident engineer's diary; generating weekly reports; preparation of minutes of meetings and the agenda; maintaining all project documents; monitoring project costs; maintaining document correspondence logs; reviewing specifications for compliance; performing field inspection under the various contract disciplines (piles, concrete, steel, rebar, soil etc.); review of specifications for compliance; monitoring material certification with project progress; and processing contractor payments. Client: New York City Dept. of Transportation

Proposed Project Assignment
Construction Administrator

Registration/Certifications
2009/ACI Concrete Construction Special Inspector
2011/Engineer In Training/NJ
2009/NJ Society of Asphalt Technology Certificate
2011/NICET III
2011/NICET II
2011/ACI Concrete Field Testing Technician Grade 1

Education
MS/2011/Engineering Management
BS/2011/Civil Engineering

Course Work
2011 - NJIT Project Management Training Course
2010 - ACI Reinforced Concrete Design Seminar
2010 - OSHA 10-Hour Construction Course
2010 - Work Zone Safety Awareness Course
2010 - Construction Certification of Completion Course
2009 - OSHA 40-Hour Hazardous Waste Operations and Emergency Response
2008 - Hazmat for Transportation and Basic Radiation Safety for the use of Nuclear Moisture/Density Gauge Testing Equipment

Total Years Experience 8

Public Service Electric & Gas (PSEG); 2/13-9/13. Project Controls Engineer. Mr. Amoah was responsible for monitoring and managing all aspects of multiple underground and OPGW projects.

Route 52 Causeway Bridge Replacement, Contract B; 3/10-2/13. Office Engineer. Mr. Amoah's responsibilities on this $257-million project included processing, maintaining, and monitoring all contract documents, control under runs, overruns, potential claims, work orders and subletting agreements, performing QA checks for compliance, managing/arranging pre-con/progress meetings, processing monthly estimates, documenting and processing change orders and managing DBE/SBE/Trainee programs according to EEO contract requirements, and reviewing and performing quantity calculations.

Willis Avenue Bridge Replacement; 8/09-2/10. Mr. Amoah served as senior construction inspector on this $300-million project.

As a boring inspector for the Port Authority of NY & NJ, Mr. Amoah provided subsurface exploration for the World Trade Center and the Corbin Street Flyover Projects ($97M). His responsibilities included soil sampling, environmental sampling, packer testing, rock coring, undisturbed soil sampling, and field permeability test; 5/09-8/09.

As an engineering technician, Mr. Amoah was responsible for laboratory testing: soil, aggregates, concrete, proctor, masonry and fireproofing material; field construction-phase observation and testing: earthwork, utility backfill, retaining walls, sub grade for roads and buildings, HMA pavements, concrete, structural steel, soil/ground improvement, pile inspection and retention/detention ponds; and geotechnical exploration including site recon, test pits, borings and rock coring; 4/05-5/09.

Edward Arrabito
Office Engineer

Professional Profile
Mr. Arrabito possesses the following experience.

Proposed Project Assignment
Construction Administrator

Total Years Experience 9

Project Experience
2011-2014 Port Authority On-Call Construction Management Services – Stewart Airport, Newburgh, NY; 12/13-Present. Civil Structural Inspector. This project involves construction management and inspection services on an on-call basis. The Port Authority of NY & NJ supplements their own staff with consultant-provided personnel to manage and administer construction contracts at their owned and operated facilities. Under this on-call contract, Mr. Arrabito's responsibilities include ensuring contractors' compliance with contract documents, approved submittals, shop drawings, and catalog cuts. As part of the Resident Engineer's Office (REO), he is responsible for communicating between the REO and the contractors and subcontractors on the status of a project while providing clarification on questions on how to proceed; acting as the point person between multiple stakeholders involved in construction projects at Stewart Airport; maintaining daily narrative logs to track the progress of projects, tasks within projects, controlled inspections, contractor approvals, insurance requirements, and timesheet documentation; and providing for timely arrangements for inspections from PA NY & NJ Materials Division for off-site fabrications or on-site for concrete, asphalt and fireproofing. Client: Port Authority of NY & NJ

While working as a construction manager, Mr. Arrabito prepared and negotiated cost estimates, budgets, and work timetables; used payment applications; prepared change orders; selected appropriate construction methods and strategies; inspected finished projects, including concrete work and conduit installation; interpreted and explained contracts and technical information to workers and other professionals; reported on work progress and budget matters to clients; collaborated with architects, engineers, and other construction and building specialists; instructed and supervised construction personnel and activities onsite; responded to work delays and other problems and emergencies; selected, hired, and instructed laborers and subcontractors; and complied with legal requirements, building and safety codes, and other regulations; 1/11-12/13

While working as a project coordinator, Mr. Arrabito assisted in framing, carpentry, masonry, drywall, millwork, etc.; provided project consultations with client; prepared cost estimations and proposals; assembled appropriate team from both within company and outside (subcontractors); managed construction site, crew, and laborers; oversaw worksites and scheduling; liased with subcontractors, clients, and owner with regard to change orders, etc.; ensured all facets of project were addressed efficiently with optimal craftsmanship; created project portfolios including clear, full-color photographs; and expanded partnerships and built coalitions with city agencies, contractors, and building managers; 7/09-1/11

As a construction assistant, Mr. Arrabito assisted in all phases of commercial and residential construction and renovation projects: carrying material or tools, setting up and taking down equipment, cleaning up; measured and marked cutting lines on materials, using ruler, pencil, chalk, and marking gauge; followed established safety rules and regulations, maintained a safe and clean environment; verified trueness of structures, using plumb bob and level; shaped or cut materials to specified measurements, using hand tools, machines, or power saw; and studied specifications in blueprints, sketches or building plans to prepare project layout and determine dimensions and materials required; 9/03-11/07

Other Skills
Extensive professional experience in Word, Excel, PowerPoint, and Access; experienced in both PC and Macintosh platforms

Gina Caceres
Assistant Office Administrator

Professional Profile
Ms. Caceres is an assistant office administrator with the following experience.

Proposed Project Assignment
Construction Administrator

Registration/Certifications
2009/NICET III

Course Work
2009 - ASCE Crane Safety Training for Engineering and Supervisors
2008 - 10-Hour OSHA Training Course, #001872368
2007 - MTA - NYCT Track Safety Course

Total Years Experience 11

Project Experience
Brooklyn Bridge Rehabilitation of the Approach Spans and Ramps and Painting of the Entire Bridge, Contract 6, New York, NY; 2/10-Present. Assistant Office Administrator. This project involves construction management and inspection services for the $509-million rehabilitation of this iconic national landmark. The scope of work for the project includes replacement of approach roadway in Manhattan and Brooklyn over the arch blocks; rehabilitation of the Manhattan side ramp structures with widening and deck and bearing replacements; rehabilitation of the approach steel structures with full superstructure replacement of the York and Main Street structures and orthotropic deck installation at Franklin Square; seismic retrofitting of the main bridge, Franklin Square and ramp structures; painting of the ramp structures and suspended spans in their entirety; restoration of historic features. Ms. Caceres' responsibilities include assisting the resident engineers with document research; creating and maintaining office filing and sub-filing system; reviewing, logging and coordinating the distribution of all correspondence and contractor's submittals (catalog cuts, Engineering Clarification Memos, construction procedures) utilizing the current office database and Excel; organizing the inspectors daily reports and engineer's diary; recording, preparing and distributing progress meeting minutes; procurement of office supplies; forwarding of monthly office invoices for payment; basic human resource work within the field office and all secretarial work for the office engineers; coordination of employee background checks for all East River Bridge employees; and processing of consultant and subconsultant yearly salary rate adjustments. Client: New York City Dept. of Transportation

Williamsburg Bridge Reconstruction of Miscellaneous Rehabilitation of the Main Bridge, Contract 8, #BRC253CCA, New York, NY; 5/03-2/10. Administrative Assistant. This $280-million project involved the construction engineering and inspection for the rehabilitation of the main bridge. The scope of work for the project included abrasive blasting and painting of main bridge stiffening trusses, rehabilitation and strengthening of the main towers, rehabilitation of the intermediate towers and installation of seismic shear keys, main cable saddle repair and restraint, rehabilitation of wind tongue and wind chord, main tower bearing installation, main tower leg removal and replacement, stiffening truss top and bottom rehabilitation, traveling maintenance platform installation, re-profiling of main span vertical curve by incrementally adjusting suspender cables, modification of orthotropic footwalk deck expansion joints,,waterproofing and surfacing of orthotropic roadway deck, installation of ornamental balconies and electroliers, integration of intelligent transportation operating system.

Ms. Caceres' responsibilities included the review, logging and distribution of all correspondence and contractor's submittals; procurement of office supplies; organizing and tracking of shop drawings and computerizing for quick access; maintenance and recording of all Inspectors Daily Reports and Engineer's Diaries; review of subcontractors monthly invoices before forwarding for payment; basic human resource work within the field office; and secretarial work for all office engineers. Client: New York City Dept. of Transportation

Henry Chiang
Office Engineer

Professional Profile
Mr. Chiang has experience in sign inspection, development of signal timings, and safety studies. Mr. Chiang has most recently been involved in the design of sign replacement plans, cost estimation, and inspection. He is currently working on-site as an office engineer at the New York City Dept. of Transportation and also as a public relations representative for the New York State Dept. of Transportation at the Kew Gardens Interchange project.

Project Experience
Office Engineer Positions for Various Superstorm Sandy Reconstruction Projects, New York, NY; 3/14-Present. Office Engineer. The City of New York retained GPI to supply office engineers to efficiently manage the records of the emergency contracts to repair the damage caused by Superstorm Sandy. Mr. Chiang is responsible for monitoring inspector's compliance with MURK forms. He is also responsible for tracking contractor progress and scheduling, quantity tracking and database management. Client: New York City Dept. of Transportation

Proposed Project Assignment
Construction Administrator

Education
MS/2009/Transportation Planning and Engineering
BS/2006/Business and Technology Management

Course Work
2014 - 10-Hour OSHA Hazard Recognition Training Course
2007 -Traffic Engineering I & II, ITS I & II, Planning, Transportation Management
2008 - Urban Transportation, Forecasting Urban Travel Demand, Fundamentals Concepts in Transportation, Transit Maintenance and Operations

Professional Affiliation
Institute of Transportation Engineers (Young Members Committee)

Total Years Experience 7

Rehabilitation of Kew Gardens Interchange/Van Wyck Expressway, Queens, NY; 6/13-Present. Public Relations Liaison. The project involves construction inspection services for the reconstruction of the Van Wyck Expressway (I-678), between 86th Avenue and the Grand Central Parkway in Queens County. This $150-million project involves the complete replacement of five bridges, the reconstruction of one bridge along with the reconstruction of a pedestrian tunnel and the widening of the Van Wyck Expressway. Mr. Chiang is responsible for communicating with the Briarwood community and NYSDOT for both projects currently under construction to resolve any concerns or issues in a timely manner. He is also responsible for the dissemination of information regarding schedule, traffic pattern changes, or upcoming night work that may impact the community. Client: New York State Dept. of Transportation

John F. Kennedy International Airport Non-CTA Standard Lane Closures, Queens, NY; 3/12-6/12. Junior Engineer. The Port Authority was interested in developing routine lane closure guidelines for locations considered outside the Central Terminal Area (CTA) at John F. Kennedy (JFK) International Airport. This effort included, but was not limited to, the Van Wyck Expressway, JFK Expressway, service roads, and all roadways within the cargo areas. Mr. Chiang was responsible for design and drafting of Maintenance and Protection of Traffic plans. Client: Port Authority of NY & NJ

George Washington Bridge Trans-Manhattan Expressway Barrier Replacement, New York, NY; 6/09-7/09. Junior Engineer. This project included a condition assessment of existing concrete traffic barrier on the Manhattan approach to the George Washington Bridge, an engineering analysis to determine barrier replacement options, and preliminary design for recommended barrier replacement methods. An electrical engineering analysis was also conducted to determine whether existing lighting levels within a tunnel section of the roadway meet current standards. Mr. Chiang was part of the field team responsible for obtaining light meter measurements during night time closures. Client: Port Authority of New York & New Jersey

Traffic Sign Upgrading and Replacement, Brookhaven, NY; 3/12-4/14. Junior Engineer. The project involved performing contract administration, construction inspection and miscellaneous support tasks related to this Federal Aid project to upgrade and replace traffic signs. Included in this effort was an electronic inventory of signs along Federal Aid Urban System roadways, development of a database with sign locations, coordination with Town GIS staff and final delivery of the database. Mr. Chiang's responsibilities included management of data collection team on FAUS roads. Client: Town of Brookhaven

Henry Chiang
Office Engineer

Town of Brookhaven Traffic Sign Inventory, Brookhaven, NY; 5/11-4/14. Junior Engineer. This project involved developing an inventory program and performing the field data collection for all town owned signs. Sign data was utilized to develop a comprehensive database of sign locations and properties for implementation of a management program to track compliance with current standards for minimum sign retroreflectivity. Mr. Chiang was responsible for database management of collected signs; quality assurance; hardware and software support; and managing four technicians and two subconsultants on a daily basis. Client: Town of Brookhaven Dept. of Traffic/Safety

Westchester County Sign Inventory, White Plains, NY; 10/07-1/14. Junior Engineer. This project involved conducting the field inventory of all County-owned traffic signs, developing a Sign Management System, and preparing design documents to replace signs as required. The project also involves assisting in the bid process, providing design support during construction, inspecting the work and providing all necessary construction administration to complete the sign replacements. Mr. Chiang's responsibilities included field review of all signs and posts installed by the contractor; inventory of all signs on project roadways; management of sign database; preparation of estimate of quantities; and preparation of field sketches. Client: Westchester County Dept. of Public Works

Sign Information Management Systems (SIMS) Primary Contract, Phase 1, Various Locations, NY; 10/11-3/12. Junior Engineer. This project involved data collection for signs along limited access highways within the city and developing an associated database for the sign data and included performing a data conversion test to determine the viability of a full scale conversion of legacy sign data. This project also included the completion of a technical system design and requirements document to be used for future procurement of a systems integrator to implement a sign management system at the DOT. Mr. Chiang's responsibilities included quality control of the vendor's collected signs based on a sampling of the overall data. Client: New York City Dept. of Transportation

Sign Information Management System (SIMS) Early Action Contract, New York, NY; 11/11-12/11. Junior Engineer. This multi-phase project included data collection for approximately 20,000 highway sign assets along 200 centerline miles of limited access highways, over 200 miles of associated ramps and interchanges, and various bridges within the City of New York and integration of inventory data into a prototype database as a proof of concept for the entire SIMS program. Mr. Chiang's responsibilities included quality control of vendor's collected signs based on a sampling of the overall data. Client: New York City Dept. of Transportation

School Safety Project, New York, NY; 10/09-11/11. Junior Engineer. The New York City Dept. of Transportation (NYCDOT) has developed a school safety program for 75 "priority" schools that are located throughout New York City. The schools included in this program were primarily elementary and intermediate schools with an enrollment of at least 250 students. These schools were located in the vicinity where pedestrian and vehicular crashes were noted to be high. School safety reports and pedestrian safety improvement plans for 29 schools were developed. Mr. Chiang was responsible for preparing school safety reports; communicating with school officials and addressing concerns; data collection and analysis; mitigation measure design; quality control; field surveys; and managing team members to support in vital tasks. Client: New York City Dept. of Transportation

Citywide Congested Corridor Program Church Avenue and White Plains Road, Various Locations, NY; 6/08-11/09. Junior Engineer. The project involved conducting capacity analysis at 14 key intersections utilizing Synchro software for the existing, no-build and the future short-term and long-term scenarios. Pedestrian analysis and air quality assessments were also a part of this project. Mr. Chiang's responsibilities included drafting the existing conditions, and the design and drafting of mitigation measures. Client: New York City Dept. of Transportation

Computer Skills
Word, Excel, PowerPoint, Project, Arc Pad, HSA, MicroStation, AutoCad, HCS+, Synchro, Vissim Aimsun

Jason Chuc
Assistant Office Engineer

Professional Profile
Mr. Chuc has diversified experience as an office administrator on construction engineering and inspection projects.

Proposed Project Assignment
Construction Administrator

Project Experience

Belt Parkway Bridges REI Services - Gerritsen Inlet Bridge, Brooklyn, NY; 3/13-Present. Assistant Office Engineer. This $104.5-million project involves total replacement of Gerritsen Inlet Bridge on the Belt Parkway in the Borough of Brooklyn. The major work includes removal and disposal of main spans including concrete deck, steel girders, floor beams and stringers, approaches, concrete superstructure, closure walls, timber piles, concrete piers, pier caps, columns, abutments, wingwalls, street lighting, transformer room, transit ducks, steel conduits, navigation lights, and trees and vegetation. Mr. Chuc is responsible for assisting the resident engineer with document research, control and recall; utilizing database and spreadsheet to maintain and track all submittals (shop drawings, catalog cuts, RFIs, etc.); organizing inspector's daily reports and checking quantities; compiling and finalizing monthly quantities for contractor's monthly payments; compiling and entering daily progress, manpower and equipment information from inspector's daily reports for engineer's diary; tracking and logging all material acceptance submittals; preparing documentation and estimates for change orders; researching overrun quantities; organizing revised contract drawings, as-built and punch list information; providing submittal information to inspectors and processing contract payments, FPLS and change order payments per NYCDOT requirements. Client: New York City Dept. of Transportation

Williamsburg Bridge Reconstruction of Miscellaneous Rehabilitation of the Main Bridge, Contract 8, #BRC253CCA, New York, NY; 8/03-3/13. Office Administrator. This $280-million project involved the construction engineering and inspection for the rehabilitation of the main bridge. The scope of work for the project includes abrasive blasting and painting of main bridge stiffening trusses, rehabilitation and strengthening of the main towers, rehabilitation of the intermediate towers and installation of seismic shear keys, main cable saddle repair and restraint, rehabilitation of wind tongue and wind chord, main tower and intermediate tower bearing installation, main tower leg removal and replacement, stiffening truss top and bottom chord rehabilitation, traveling maintenance platform installation, re-profiling of main span vertical curve by incrementally adjusting suspender cables, modification of orthotropic footwalk deck expansion joints, waterproofing and surfacing of orthotropic roadway deck, installation of ornamental balconies and electroliers, integration of intelligent transportation operating system, seismic retrofit of the intermediate towers, installation of contraflow barrier and erection of barrier transfer machine facility, including augured concrete piles. Mr. Chuc's responsibilities included preparing change orders for new work added to the contract, existing quantity overruns, time and material, time extension, and claims; processing fpls and change order payments per NYCDOT requirements, and checking and approving that contractor laborer rates conform to Union prevailing wage rates. In addition to administrative work, Mr. Chuc also maintained and supported networks, servers and workstations. He also worked one-on-one with users at their workstations to answer PC, software, and procedure-related questions and also assisted with the network and provided general desktop application and hardware support. Client: New York City Dept. of Transportation

Jason Chuc
Assistant Office Engineer

Williamsburg Bridge North Roadways Reconstruction, Contract 7, #BRC253CA, New York, NY; 2/00-8/03. Administrative Assistant. This $247-million project involved the construction engineering and inspection for the reconstruction of the north inner and outer roadways. Mr. Chuc's responsibilities included processing change order payments, verifying that laborers' rates conform with Union wage rates, checking payment arithmetic in accordance with agreement, checking invoices and processing for payment of all contractors and maintenance of office computers and network system for 30 computers. Client: New York City Dept. of Transportation

Williamsburg Bridge BMT Structure Rehabilitation, Contract 6, #BRC253BBA, New York, NY; 7/98-2/00. Administrative Assistant/CADD. Mr. Chuc's responsibilities on this $171-million project included maintenance of office computers network system (10-15 computers); organizing shop drawings and computerizing for quick access; checking invoices and processing for payments of all contractors; keeping track of all laborer rates and titles for billing purposes; and preparing and creating spreadsheets to duplicate NYCDOT/NYSDOT formats or forms. Client: New York City Dept. of Transportation

Williamsburg Bridge South Roadways Reconstruction, Contract 5, #BRC253BAA, New York NY; 9/96-7/98. Administrative Assistant. Mr. Chuc's responsibilities on this $310-million project included maintenance of office computers network system (10-15 computers); organizing shop drawings and computerizing for quick access; checking invoices and processing for payments of all contractors; keeping track of all laborer rates and titles for billing purposes; and preparing and creating spreadsheets to duplicate NYCDOT/NYSDOT formats or forms. Client: New York City Dept. of Transportation

Greenman-Pedersen, Inc., Babylon, NY; 6/95-8/96. As an administrative assistant, Mr. Chuc's diversified duties included creating spreadsheets for billing, tracking payments and critical typing; reviewing contractor's invoices for error and processing for payment; maintaining and organizing filing system; computerized invoicing of all projects in the amount of $10-million including Long Island Expressway HOV lane project, Bronx Whitestone Bridge rehabilitation project, Verrazano Narrows Bridge, Williamsburg Bridge Suspension Cable rehabilitation and many smaller budgeted projects; and bookkeeping including heavy record tracking and adjustment to invoices.

Mr. Chuc worked for another consultant as an accounting clerk. His responsibilities included recording cash and checking receipts; processing and recording purchase orders; verifying and counting arriving merchandise for quantity and cost; preparing monthly statement of inventories to determine order amount; and performing various computations such as calculation time sheets and inventory costs; 12/91-6/95

Computer Skills
Knowledgeable in Windows NT Networking and Network Hardware

Project Experience
Replacement of the Upper Level Deck of the Suspended Span of the Verrazano-Narrows Bridge, VN-80B, Staten Island, NY; 10/12-Present. Senior Office Engineer. This $236-million project involves reconstruction to replace the upper level roadway superstructure of the Verrazano-Narrows Bridge. The work includes removal of existing upper level roadway deck and barrier, installation of new upper level orthotropic deck, overlay, drainage systems, sign structures, lighting, barrier, painting and miscellaneous utility work. Ms. Dean is responsible for managing all office engineering responsibilities and overseeing the work of office staff; preparation and assisting in negotiations of the contract change orders remaining on this project; working closely with the project manager and resident engineer on many project issues; providing conformance with TBTA requirements for maintaining job files which included all incoming and outgoing correspondence; utilizing Microsoft Access and Excel to maintain and track all submittals (shop drawings, catalog cuts, requests for information, etc.); organizing inspector's daily reports and checking quantities; compiling and finalizing monthly quantities for contractor's monthly payments; preparing monthly progress reports; compiling and entering daily progress, manpower and equipment information from inspector's daily reports for engineer's diary; tracking and logging all material acceptance submittals; recording, preparing and distributing progress meeting minutes; researching overrun quantities; organizing revised contract drawings, as-built and punch list information; and providing submittal information to inspectors; and preparation and distribution of progress and technical meeting minutes. Client: Triborough Bridge and Tunnel Authority

Williamsburg Bridge Reconstruction of Miscellaneous Rehabilitation of the Main Bridge, Contract 8, #BRC253CCA, New York, NY; 1/10-10/12. Office Engineer. This $280-million project involved the construction engineering and inspection for the rehabilitation of the main bridge. The scope of work for the project included abrasive blasting and painting of main bridge stiffening trusses, rehabilitation and strengthening of the main towers, rehabilitation of the intermediate towers and installation of seismic shear keys, main cable saddle repair and restraint, rehabilitation of wind tongue and wind chord, main tower and intermediate tower bearing installation, main tower leg removal and replacement, stiffening truss top and bottom chord rehabilitation, traveling maintenance platform installation, re-profiling of main span vertical curve by incrementally adjusting suspender cables, modification of orthotropic footwalk deck expansion joints, waterproofing and surfacing of orthotropic roadway deck, installation of ornamental balconies and electroliers, integration of intelligent transportation operating system, seismic retrofit of the intermediate towers, installation of contraflow barrier and erection of barrier transfer machine facility, including augured concrete piles. Ms. Dean's responsibilities included managing all office engineering responsibilities and overseeing the work of office staff; preparation and assisting in negotiations of the contract change orders remaining on this project; working closely with the resident engineer on many project issues; preparation of correspondence which required action, maintaining all information databases in use on this project to track all project submittals; and preparation and distribution of progress and technical meeting minutes. Client: New York City Dept. of Transportation

Verrazano-Narrows Bridge Rehabilitation of the Lower Level Approaches, VN-17A, New York, NY; 1/07-12/09. Office Engineer. This $63-million project involved the administration and quality assurance inspection of all work associated with the rehabilitation of the lower level approaches of the Verrazano-Narrows Bridge. Ms. Dean's responsibilities included assisting the resident engineer with document research, control and recall; providing conformance with TBTA requirements for maintaining job files which included all incoming and outgoing correspondence; utilizing Microsoft Access and Excel to maintain and track all submittals (shop drawings, catalog cuts, requests for information, etc.); organizing inspector's daily reports and checking quantities; compiling and

finalizing monthly quantities for contractor's monthly payments; preparing monthly progress reports; compiling and entering daily progress, manpower and equipment information from inspector's daily reports for engineer's diary; tracking and logging all material acceptance submittals; recording, preparing and distributing progress meeting minutes; researching overrun quantities; organizing revised contract drawings, as-built and punch list information; and providing submittal information to inspectors. Client: Triborough Bridge and Tunnel Authority

Bronx-Whitestone Bridge Deck Replacement - BW-82, Bronx, NY; 2/04-1/07. Assistant Office Engineer. This $150-million project involved the reconstruction of the suspended spans deck with an orthotropic steel deck. The project also involved the installation of new maintenance travelers, electrical and communications systems, fire protection system and inspection platforms. As an office engineer, Ms. Dean's responsibilities included assisting the resident engineer with document research, control and recall; providing conformance with TBTA requirements for maintaining job files which included all incoming and outgoing correspondence; utilizing Expedition to maintain and track all submittals (shop drawings, catalog cuts, requests for information, etc.); preparing weekly and monthly progress reports; compiling and entering information from inspector's daily report for engineer's diary; recording, preparing and distributing progress meeting minutes; assisting in researching overrun quantities; organizing revised contract drawings, as-built and punch list information; and providing submittal information to inspectors. Client: Triborough Bridge and Tunnel Authority

Robert F. Kennedy (Triborough) Bridge Deck Replacement of the Randall's Island Junction Structure, Phase I - TB-63, New York, NY; 7/98-2/04. Assistant Office Engineer. This $140-million project for the TBTA involved demolition of existing substructure and superstructure of the junction structure, Bronx kills truss spans and Bronx approach; placement of new footings, columns and pier caps for the mainline, four mainline ramps and Bronx approach; placement of inverset deck and cast-in-place concrete deck for the junction structure; placement of precast deck units for the Bronx approach; and deck replacement on the Bronx kills truss span included demolition of reinforced concrete deck and steel battledeck and installation of new precast deck units and steel orthotropic deck panels. Ms. Dean's responsibilities included maintaining office files including incoming/outgoing correspondence; organizing, developing and maintaining database for correspondence, shop drawings, catalog cuts, samples and requests for information, organizing and logging job progress photos, reviewing inspector's reports and compiling quantities for contractor's monthly payment, performing take-offs of material and researching overruns of items, preparing weekly progress report, providing data to main office for preparation of monthly progress report, distributing shop drawings and construction procedures to inspectors, recording and preparing progress meeting minutes and distributing to all attendees, assisting resident engineer with document research, control and recall, preparing responses to routine correspondence, organizing and keeping track of as-built information and changes to contract drawings, organizing and tracking punch list work. Client: Triborough Bridge and Tunnel Authority

Williamsburg Bridge South Roadways Reconstruction, Contract 5, #BRC253BAA, New York NY; 6/97-7/98. Assistant Office Engineer. This project involved the complete replacement of the south roadways for the Brooklyn and Manhattan approach viaducts in the existing bridge footprint, bracing of remaining portions of the approaches, installation of VMS system and interim New York City Transit signals. Ms. Dean's responsibilities included handling various construction documents, transmitting, tracking, logging, and filing of shop drawing submittals for approval, organizing and logging job progress photos. She also handled the recording of concrete material certification and delivery tickets and coordinated processing of contractor's payment quantities, reviewing and compiling pile, bearing, bolt and rebar certification reports, updating cylinder break results spreadsheet. Client: New York City Dept. of Transportation

Brooklyn Bridge Rehabilitation of the Approach Spans and Ramps and Painting of the Entire Bridge, Contract 6, New York, NY; 10/10-Present. Assistant Office Administrator. This project involves construction management and inspection services for the $509-million rehabilitation of this Iconic National Landmark. The scope of work for the project includes replacement of approach roadway in Manhattan and Brooklyn over the arch blocks; rehabilitation of the Manhattan side ramp structures with widening and deck and bearing replacements; rehabilitation of the approach steel structures with full superstructure replacement of the York and Main Street structures and orthotropic deck installation at Franklin Square; seismic retrofitting of the main bridge, Franklin Square and ramp structures; painting of the ramp structures and suspended spans in their entirety; restoration of historic features. Mr. DiFinizio is responsible for preparation of MURK forms and processing of contractor payments. Client: New York City Dept. of Transportation

Williamsburg Bridge Reconstruction of Miscellaneous Rehabilitation of the Main Bridge, Contract 8, #BRC253CCA, New York, NY; 9/03-10/12. Assistant Office Administrator. This $280-million project involved the construction engineering and inspection for the rehabilitation of the main bridge. The scope of work for the project included abrasive blasting and painting of main bridge stiffening trusses, rehabilitation and strengthening of the main towers, rehabilitation of the intermediate towers and installation of seismic shear keys, main cable saddle repair and restraint, rehabilitation of wind tongue and wind chord, main tower and intermediate tower bearing installation, main tower leg removal and replacement, stiffening truss top and bottom chord rehabilitation, traveling maintenance platform installation, re-profiling of main span vertical curve by incrementally adjusting suspender cables, modification of orthotropic footwalk deck expansion joints, waterproofing and surfacing of orthotropic roadway deck, installation of ornamental balconies and electroliers, integration of intelligent transportation operating system, seismic retrofit of the intermediate towers, installation of contraflow barrier and erection of barrier transfer machine facility, including augured concrete piles. Mr. DiFinizio's responsibilities included making sure all contractor's drawings were delivered to consultant and NYCDOT on time; retrieving all drawings from consultant and returning them to our office; mail delivery to and from field office to and from contractors, consultants and NYCDOT; making sure all city payments were immediately delivered to city offices; data entry for NYCT daily flagging reports and concrete cylinder reports; review of MURK and T & M forms for accuracy and making copies and distributing to contractors; and filing all contract drawings in proper numerical order and sequence. He was also responsible for updating FPLS for IDR books; filing of Material Status Reports, office maintenance, close-out of Contract #7, Williamsburg e-mail printing for correspondence log; updating inspector's and office contract drawings sets; updating file cabinets, plan room updating as needed; scanning of correspondence and files; inputting TEA hours for parking enforcement district administration; updating Force Account Detail Sheets daily, checking for accuracy of hours, equipment and material; incorporating ECM details into as-built documents; tracking installation and removal of construction signs; and reviewing contract item history for accuracy. He has also worked as an inspector covering painters and ironworkers; writing daily IDR's and force account details. Client: New York City Dept. of Transportation

Victor DiFinizio
Assistant Office Administrator

Williamsburg Bridge North Roadways Reconstruction, Contract 7, #BRC253CA, New York, NY; 9/00-9/03. Junior Technician. This $248-million project involved the construction engineering and inspection for the reconstruction of the north inner and outer roadways. Mr. DiFinizio's responsibilities included making sure all contractor's drawings were delivered to consultant and NYCDOT on time; retrieving all drawings from consultant and returning them to our office; mail delivery to and from field office to and from contractors, consultants and NYCDOT; making sure all city payments are immediately delivered to city offices; data entry for NYCT daily flagging reports and concrete cylinder reports; review of MURK forms for accuracy and making copies and distributing to contractors; and filling all contract drawings in proper numerical order and sequence. Client: New York City Dept. of Transportation

Mr. DiFinizio worked with another firm performing tornado demolition/rubbish removal of building interiors; 5/00-9/00.

Mr. DiFinizio worked with another firm as a salesman for a variety of Asian materials; 8/99-4/00.

Mr. DiFinizio worked with another firm on the installation of air conditioning ductwork; 6/98-5/99.

Mr. DiFinizio worked with another firm as a part owner/manager for payroll. His responsibilities included ordering all merchandise, accounts payable/receivable, customer service, and in charge of all commercial accounts; 10/94-5/98.

Laith Faouri
Inspector

Professional Profile
Mr. Faouri has worked as a civil engineering inspector and assistant office engineer for more than five years. He has provided inspection and office services to the New York City Dept. of Transportation for two large-scale bridge projects.

Proposed Project Assignment
Construction Administrator

Course Work
2014 - 10-Hour OSHA Hazard Recognition Training Course, #UCSD-8651500
2014 - NYC DOB 4-Hour Supported Scaffold (2018)
2014 - NYC DOB Confined Space Awareness

Total Years Experience 5

Project Experience
Bayonne Bridge Navigational Clearance Program (BBNCP) Construction Management, NY/NJ; 9/13-Present. Assistant Office Engineer/Inspector. This project involves construction management services for the $743-million Bayonne Bridge Navigational Clearance Program (BBNCP). This extraordinarily complex, once-in-a-lifetime project will replace more than 5,000 feet of viaduct and re-frame the existing steel arch structure to accommodate a new roadway 65 feet above the existing roadway. Field duties include the inspection of pile driving, drill shafts, drainage structure installation, contaminated material load out and removal, under deck shielding installation, maintenance of project-wide stock piles, MPT, facia and redundancy girder demolition, temporary shoring tower installation, tower abutment crack repairs, noise control, and tree removal and preservation. He is also responsible for checking for approved diesel powered equipment and parts, and setting up and maintaining field offices. Office duties include maintaining a log of approved diesel powered equipment for the entire project, Port Authority vehicles and rentals, mileage forms, the weight of material load out forms, contractor daily schedule, and also calculating the approximate cost for T&M tickets. Client: Port Authority of NY & NJ

Willis Avenue Bridge Replacement REI, New York, NY; 1/10-8/13. Assistant Office Engineer/Inspector. This $612-million project involved the replacement of the Willis Avenue Bridge linking Manhattan and the Bronx over the Harlem River. The project involved replacing a 110-year-old bridge with an 11-span swing bridge and constructing new ramps and interchanges. Mr. Faouri inspected and supervised placement of concrete for structural elements such as abutment seats, decks, permanent traffic barriers, parapets, footings, pier caps, drilled shafts and concrete roadway base; checked adherence to contract drawings and compliance with shop drawings; checked the contractor's layout and concrete form work for correctness prior to placement including dimensions, line, and grade; supervised rebar installation, size, bend shapes, cover and quantities; checked concrete truck deliveries and carried out concrete tests such as slump, air, temperature, and cast cylinders; supervised placement and method, vibration, concrete finish, setting of sprinkler hoses, plastic and blankets covers; monitored curing temperatures and external heating for winter concrete; measured volume prior to placement and checked against truck quantities; prepared daily reports and report quantities; reviewed concrete and asphalt mix design for compliance with NYSDOT Standard and Specifications to ensure that design criteria was met; and measured quantities of materials and evaluation of quality to determine acceptability according to contract plans, standards, and specifications. Other inspection criteria included bridge piers, spans, decks, roadways, backfilling, fencing, guardrails, sampling and field testing of concrete, OSHA safety requirements, traffic controls, topsoil removal, demolition and cleaning, steel and concrete structures, paving, concrete barriers, drainage structure, installation of deck rebar, placement of various types of deck concrete including light weight concrete, MPT, installation of conduits and pavement markings, supervised the installation of deck joints, drainage, railings and screens, signs, barriers, cleaned all stone masonry and concrete surfaces with high-pressure water blasting. He was also responsible for maintaining a punch list for the maintenance and protection of traffic plans, which were critical to the bridge's location for the arterial highways of the FDR Drive and the Harlem River Drive, north-south bound parkways in Manhattan and the Major Deegan Expressway in the Bronx. Client: New York City Dept. of Transportation

Laith Faouri
Inspector

Willis Avenue Bridge Replacement, New York, NY; 2/08-11/08. Field Office Coordinator. Mr. Faouri worked with the office engineer providing office engineering services for the $612-million replacement of the Willis Avenue Bridge linking Manhattan and the Bronx over the Harlem River. He assisted in maintaining records of all correspondence, RFI's, shop drawings, concrete cylinders, rebar, estimate book, and material acceptance record in accordance with the requirements of NYSDOT "Manual for Uniform Record Keeping" (MURK); assisted in processing of progress payments; assisted in monitoring of D/M/WBE utilization to ensure that all minority contract goals were met; reviewed inspector's reports and quantities that were submitted by the inspectors and checked the reports for compliance with the NYSDOT Specifications, MURK, plans and contract agreement as needed; coordinated with various agencies such as police, fire department, bus company, and the community for daily closures on the traveled roads. In addition, he was responsible for coordination with various inspection agencies for on- and off-site inspection such as concrete, compaction, asphalt, and sampling of materials; maintaining the database for all safety and emergency flagged repairs; ensured that the paperwork for all flagged repairs was completed as per the specifications and filed properly with the City and the State; and he coordinated meetings and created electronic records of correspondence. Client: New York City Dept. of Transportation

145th Street Bridge Reconstruction, New York, NY; 10/06-2/08. Field Office Coordinator. Mr. Faouri worked with the office engineer providing office engineering services for the $70-million reconstruction of the 145th Street Bridge connecting Manhattan and the Bronx over the Harlem River. He assisted in maintaining records of all correspondence, RFI's, shop drawings, concrete cylinders, rebar, estimate book, and material acceptance record in accordance with the requirements of NYSDOT "Manual for Uniform Record Keeping" (MURK); assisted in processing of progress payments; monitored D/M/WBE utilization by ensuring that all minority contract goals were met; reviewed inspector's reports and quantities that were submitted by the inspectors and checked the reports for compliance with the NYSDOT Specifications, MURK, plans and contract agreement as needed; and coordinated with various agencies such as police, fire department, bus company and the community for daily closures on the traveled roads. In addition, he coordinated with various inspection agencies for on- and off-site inspection such as concrete, compaction, asphalt, and sampling of materials; maintained the database for all safety and emergency flagged repairs; ensured that the paperwork for all flagged repairs was completed as per the specifications and filed properly with the City and the State; and coordinated meetings and created electronic records of correspondence. Client: New York City Dept. of Transportation

Computer Skills
AutoCad, Civil 3D, Rivits, Risa, StruCalc, WaterCAD, Windows XP/Vista, Microsoft Office Suite

Anthony Fusaro
Office Engineer

Professional Profile
Mr. Fusaro is an office engineer who has successfully set up and enforced controls, reduced risk, and improved productivity. He is continually involved in the daily operations of the field and office activity. Tasks include implementing new procedures, troubleshooting and resolving client disputes, and making decisions to maintain a safe working environment for all staff.

Project Experience
Bayonne Bridge Navigational Clearance Program (BBNCP) Construction Management, NY/NJ; 11/13-Present. Office Engineer. This project involves construction management services for the $743-million Bayonne Bridge Navigational Clearance Program (BBNCP). This extraordinarily complex, once-in-a-lifetime project will replace more than 5,000 feet of viaduct and re-frame the existing steel arch structure to accommodate a new roadway 65 feet above the existing roadway. Mr. Fusaro is responsible for for tracking submittals and RFIs on a monthly basis; monitoring, adjusting, and approving additional work; conducting meetings with PA officials on all approvals; signing off and approval of JV monthly payment applications; investigating and reference checking of subcontractors; bi-weekly progress meetings, minutes, and progress agendas; maintaining JV matrix for new and closed entries; and maintaining FOIA matrix for follow-up of claims on contract. Client: Port Authority of NY & NJ

Staten Island Ferry Rehabilitation of Ramp Structures Design-Build, NY; 7/09-11/13. Senior Office Engineer. For this FTA Stimulus Funded $175-million project, he was responsible for submittals, RFI logs, MURK filing systems, tracking contract costs, and contractor and subcontractor payments. He also reviewed submissions on monthly and quarterly FTA and DOT reporting; prepared for bi-weekly progress meetings including minutes and progress agendas; prepared field inspections and narratives; reviewed contractor's change orders, prepared engineer's estimates; ordered supplies for inspectors; coordinated daily schedules; reviewed and processed contractor's billable quantities for accurateness; tracked subcontractor profiles and Vendex for DOT (ACCO) offices; kept records and tracked all contract files including electronic version; conducted bi-weekly safety and security meetings; and he maintained non-conformance contractor matrix. He was also responsible for the placement of concrete and filled orders and followed-up on compliance to specification. Client: New York City Dept. of Transportation

As senior office engineer, 8/05-5/09, he was responsible for contractor accounts in **Howland Hook/ Brooklyn Piers, PA Teleport** and selective contracts at Airport locations. He processed contractor requisitions and verified that labor equipment materials met with the PA and the union guidelines; responsible for RFI logs, submittal logs, and other communication; tracked contract costs; conducted pre-construction meetings; followed up on new bid awards; reference checked subcontractor approval requests; tracked the work in place vs. billing; wrote, posted and followed up on all post award contract changes, change orders, and MOA'S; monitored daily activities; made field visits on project closeouts; reviewed field inspector's narratives based on lump sum and T&M tickets; and provided backup field coverage support to inspectors. Client: Port Authority of NY and NJ

Kings County Medical Center Renovations, Buildings A, B & C, NY; 5/08-8/08. Senior Office Engineer. This $25-million contract involved masonry and roofing restoration. His duties included maintaining RFI logs; submittal logs; recording daily reports on GC, contractors, and subcontractors; maintaining MSDS data; processing GC change orders and payment applications; conducting weekly tool box talks; backing up field and office support for project manager and supers; processing and determining supply and material orders; job cost tracking, subcontractor Vendex recordkeeping and insurance tracking; building permit, asbestos abatement logs; and look-ahead meetings.

Anthony Fusaro
Office Engineer

As senior project administrator/office engineer, 9/06-3/08, he was responsible for project administration at three locations which included NY Law School ($38M); Pavarini McGovern (CM) Tribecca Hotel ($8M); and 123 Washington Street For Tishman (CM) Underpinning ($10M). His duties included purchasing materials for construction pricing job activities for crew and follow-up of all subcontractors; processed invoices, vendor billing, spec packages; reviewed subcontractor's AIA documents and processed payments; costed project to meet bid estimations; payroll tracking and hiring union trades as needed; pricing and ordering of equipment used as needed on three sites; assisted the project manager in total coordination of project; tracked job cost as related to labor, equipment and materials; acted as backup and assisted supers and project managers in the field and in the office; and coordinated with the safety director regarding field inspections making sure they complied with OSHA regulations. He received on-site CPR, First Aid and AED training and conducted weekly safety tool box talks with the field staff.

As senior project administrator, 1/06-9/06, he was responsible for bi-weekly payment applications and follow-up with the PA on this $50-million contract (MF.100.506). He was responsible for review of the contractor's AIA and certified payrolls; preparation reviews for PA officials on percentages of completion; processing invoices, vendor bills, spec packages; prepared correspondence and acted as back-up to field personal; processed payments to contractors by reviewing and preparing purchase requisitions to home office; maintained accounts payable/accounts receivable logs; reviewed super's daily activities and work order tickets for accuracy; tracked and priced job-required materials, screened and recruited contractors for bids on work orders for specific trades; reviewed proposed contractors credentials based on work in place; and followed up on and collected receivables. Under the direction of the project manager, he was responsible for field coordination with contractor responding to field issues; assisting in the analysis and recommendation of field issues with the Project manager; and coordination with the surveying, testing and inspection staff.

As senior project administrator, 7/03-1/06, he was responsible for monthly payment applications and follow up with the PA on the $10-million contract (#154.332) and other contracts. He was responsible for daily correspondence with vendors, subcontractors, supers, foreman and PA; preparation of payment control sheets, credit sheets and invoices; the accounting to the home office, audits from the PA, monthly reports on cash receipts, contract totals, and chargeback to subcontractors; accountable as the Notary for company paperwork, submittal and spec packages, telephones, back-up field work for the super, and administrative support for field personnel; and all administrative necessities, home-office support, accounts payable and receivable, daily work order bookings, verifications and processing, invoices and incoming correspondence. Other responsibilities included verification of supplier and sub invoices, Newark supplier account establishment, bid openings, and administrative support; buying, tracking and pricing of materials and for I.D. badges; multiple projects to ensure efficient production of company resources; and consistent project development to meet deadlines.

As senior office engineer, 2/01-7/03, he was responsible for preparing and processing applications for payment on Port Authority contracts in excess of $30 million. He also prepared proposals for conversion from net cost to lump sum; prepared daily invoices and work tickets; attended pre-qualification meetings on new projects; purchased materials, rented and purchased equipment for daily work on existing work orders; hired subcontractors in specialized fields to perform daily work related projects; prepared progress payments for all subcontractors; prepared bid packages; provided administrative support for field personnel, supers, and foreman; reported cash receipts, contract totals and labor utilization on a monthly basis; he was responsible for daily correspondence with Port Authority officials and administrative staff; closed out contracts; and he performed and possessed ID clearance for all locations which included Newark Airport, and the Lincoln and Holland Tunnels.

As an office manager, 9/98-2/01, he was responsible for accounts receivable of city, state, and federal contracts; evaluation of bid requests; overseeing the purchase of bid bonds; supervising an office staff of ten; field progress and evaluation of current projects; daily reporting to VP; follow-up regarding insurance claims and filing; ordering and pricing materials for projects; and hiring of subcontractors to fulfill MBE and WBE state requirements. Projects Mr. Fusaro was involved on included NYSDOT, NYCDDC, NYC Dept. of Parks, and NYCDEP.

Software: Software Solutions Unix Based; Wintrac (PA Software); SAP (PA Software); Microsoft Office; Excel; Microsoft Word; Primavera; WordPerfect Corel; Internet Explorer, Netscape Navigator, America Online e-Builder

Thomas Henderson, P.E.
Assistant Office Engineer

Professional Profile
Mr. Henderson is experienced in the design, inspection and supervision of the construction of various components of bridges. He also has inspected various buildings for structural deficiencies, and has surveyed building foundation elevations. Mr. Henderson has also enforced quality assurance standards for both contractors and consultants, and has been involved in job progress meetings between contractors and New York City.

Project Experience

Brooklyn Bridge Rehabilitation of the Approach Spans and Ramps and Painting of the Entire Bridge, Contract 6, New York, NY; 2/12-Present. Assistant Office Engineer. This project involves construction management and inspection services for the $509-million rehabilitation of this Iconic National Landmark. The scope of work for the project includes replacement of approach roadway in Manhattan and Brooklyn over the arch blocks; rehabilitation of the Manhattan side ramp structures with widening and deck and bearing replacements; rehabilitation of the approach steel structures with full superstructure replacement of the York and Main Street structures and orthotropic deck installation at Franklin Square; seismic retrofitting of the main bridge, Franklin Square and ramp structures; painting of the ramp structures and suspended spans in their entirety; restoration of historic features. Mr. Henderson's responsibilities include inspection of demolition of ramps on Manhattan Approaches; inspection of jacking inside the Manhattan Arch Blocks; inspection of containment of debris from the construction activities of the contractor; ensuring OSHA standards for debris protection of motorists and pedestrians; ensuring the means and methods procedures for construction activities such as crane setup and use are followed, arrive at item quantities for the contractor's monthly payments; processing submittals, Engineer Change Memos, means and methods, shop drawings, and contract drawings; substantiating item quantities by verifying inspector quantities by checking inspector reports and contract drawings; preparation of weekly tech issues meeting; and processing change orders. Client: New York City Dept. of Transportation

Manhattan Bridge Painting and Interim Rehabilitation, Contract 8C, New York, NY; 1/02-10/02. Office Engineer. This project involved CEI for structural rehabilitation of the west side of the bridge and suspension system, plaza areas on the approaches and anchorages and rehabilitation of anchorages. Work also involved the 100% removal of existing paint and recoating of the west side of the bridge, both towers, and two of four cables. Mr. Henderson was responsible for processing of multi-million-dollar monthly payments; negotiating and preparing change orders for additional work; identifying material acceptance criteria and collecting all required documentation for over 700 contract items; and maintaining an integrated computerized database system for a myriad of project documents. In addition, he acted as a liaison between contractor, engineer-in-charge and resident engineer. Client: New York City Dept. of Transportation

Williamsburg Bridge North Roadways Reconstruction, Contract 7, New York, NY; 01/01-1/02. Assistant Office Engineer. This project involved REI services to replace the entire approach structure and the framing/deck areas on the main bridge. This involved the reconstruction of the north inner and outer roadways. As a member of the fabrication support group (F.S.G.), Mr. Henderson received all shop drawings, fabrication procedures and proposed repairs for structural steel; he tracked and computerized all documents pertaining to structural steel and worked directly with the New York City Dept. of Transportation Quality Assurance/Quality Control (QA/QC), F.M.S. group; he tracked all accidents via a database; prepared a monthly look ahead for upcoming construction activities based on the contractor's schedule; and performed field work which included inspection of steel demolition. Client: New York City Dept. of Transportation

Thomas Henderson, P.E.
Assistant Office Engineer

Williamsburg Bridge BMT Structure Rehabilitation, Contract 6, New York, NY; 11/99-7/01. Assistant Office Engineer. This project involved CEI for the replacement of the entire mid-section of the bridge that supports New York City Transit tracks (BMT line). As a member of F.S.G., Mr. Henderson received all shop drawings and stamped them and logged them into a computer database. He prepared monthly reports showing the status of all fabricated material; and logged in and forwarded all track welding procedure specifications (WPS), welding procedure qualification records (WPQR), track repair procedures and correspondence concerning F.S.G. Worked directly with New York City Dept. of Transportation F.S.G. This project required an unprecedented effort between the New York City Dept of Transportation (NYCDOT) and New York City Transit (NYCT) coupled with a major transit shutdown of five months, coordination and timely response are the absolute essence of the project. Mr. Henderson also aided in the review and logging of all correspondence and contractor's submittals; and coordination and resolution of certain project technical issues in concert with the resident engineer. As this project was funded and administered by the NYCDOT, Mr. Henderson was able to draw significantly from his considerable experiences working for NYCDOT in preparing and administering contracts. He also assisted the resident engineer in the management of several administrative duties; and coordinated and prepared an extensive and complete set of contract as-built plans and specifications in cooperation with the design consultant. Mr. Henderson ensured that the as-built drawings, numbering approximately 550, were maintained and that all changes were incorporated through any addenda, and reviewed the accuracy of the Contractor's schedule to ensure that the project stayed on target by meeting all goals and objectives. Client: New York City Dept. of Transportation

New York City Dept. of Transportation, Bridge Design, Bridge Component Rehabilitation Division, New York, NY; 1994-1998. As project engineer, Mr. Henderson was responsible for the design, inspection and supervision of the construction of various components of NYC bridges including the Williamsburg Bridge, Henry Hudson Parkway at 96th Street Bridge and the 103rd Street at F.D.R. He was also involved with the retrofitting of the 49th Street Bridge for seismic loading. Other responsibilities included providing construction monitoring and engineering support in response to unanticipated field conditions, and enforcing quality assurance standards on contractor and consultant with respect to MURK requirements and NYSDOT specifications.

Mr. Henderson worked with another engineering firm as an office engineer/inspector/design engineer. His responsibilities included inspecting bridge demolition and reconstruction of Grand Concourse over 204th Street and Grand Concourse over Bedford Park Boulevard; measuring and recording unit quantities on a monthly basis and estimated the contractor's work completed; participating in job progress meetings between the contractor and NYC and prepared minutes for these meetings; and he worked on the preliminary design of the Staten Island Ferry Terminal; 1992-1994.

New York City Fire Department, New York, NY; 1990. Mr. Henderson acted as an engineering intern for the buildings and maintenance division. In this position, he inspected NYC Fire Houses for structural deficiencies and prepared reports for the Fire Department based on structural priority.

Mr. Henderson worked with another firm as a construction engineer assisting in the supervision of building construction. He also ordered materials and hired the subcontractors and surveyed the building foundation elevations.

Bayonne Bridge Navigational Clearance Program (BBNCP) Construction Management, NY/NJ; 5/13-Present. Assistant Office Engineer. This project involves construction management services for the $743-million Bayonne Bridge Navigational Clearance Program (BBNCP). This extraordinarily complex, once-in-a-lifetime project will replace more than 5,000 feet of viaduct and re-frame the existing steel arch structure to accommodate a new roadway 65 feet above the existing roadway. Ms. Johnson-Davis is responsible for processing and managing contract submittals and requests for information using e-Builder Document Management System; tracking overdue documents and working closely with the project team to expedite the review process; tracking responses to submittals and RFI's and alerting team members to issues; organizing and filing contract documents; providing overall support to the project team on a daily basis; and attending progress meetings and providing updates on submittals and RFI's. As e-Builder Administrator; Ms. Johnson-Davis creates accounts for new users; creates standard and custom reports and templates; assists new users with e-Builder as needed; and works closely with e-Builder support to resolve system problems and suggest system enhancements. Client: Port Authority of NY & NJ

Xerox Corporation, Inc., Jersey City, NJ; 2/13-5/13. Project Information Coordinator/Document Control. Ms. Johnson-Davis has been responsible for project information coordination/document control. Her responsibilities have included:

- Management of real-estate documentation for a leading fortune 100 investment firm using Asite Document Management System
- Training design and construction teams in document standards and requirements; acted as primary point of contact for the project team
- Ensuring project deliverables were timely and met established protocols; escalated missed deliverables and non-compliances
- Acted as liaison with Asite technical staff and coordinated feedback and support from users
- Attended progress meetings to identify areas for performance and process improvement
- Created new workspaces and managed user roles and memberships; set user access rights in Asite
- Supported drawing management in coordinating, receipt, review and approval of maintained drawings during the project cycle

MCSS, Inc., The Port Authority of New York & New Jersey, Newark, NJ; 2007-2013. Contract Management Specialist. Projects Ms. Johnson-Davis was involved on include LaGuardia Airport Aircraft Rescue and Firefighting Facility; Lincoln Tunnel Bus Ramps Deck Replacement; and Port Newark Expressrail project. Her responsibilities included:

Anita Johnson-Davis
Assistant Office Engineer

- Providing support and overall management of Port Authority construction submittals
- Interacting with project managers, design engineers, task leaders, resident engineers, and contractors
- from project inception to completion to maintain smooth document workflow
- Processing submittals and Post Award Contract Change drawings using Oracle Primavera Contract Management (Expedition) construction database and Livelink Electronic Document Management System on time and using established procedures
- Attending pre-construction meetings to present submittal requirements and instructions; attending progress meetings as needed
- Follow-up with design engineers to expedite the review process and closeout overdue items; worked closely with the project team to resolve problems; link issues in Contract Manager
- Monitored and tracked documentation for all contracts from project award date until project closeout
- Coordinated with Project Control Specialists to get the latest updates of the Present and Planned Workload schedule in order to plan for future awards.
- Maintained project files in a well organized and easily retrievable format; archival of project documents
- Participated in staff meetings and offered input and assistance to create new practices and measures that improved tracking, recording and archival process of construction contracts

MTA/LIRR East Side Access Project, New York, NY; 2002-2007. As a document control administrator, Ms. Johnson-Davis was responsible for:

- Providing support to the engineering/construction team and troubleshooting day-to-day activities within the document control group
- Training *project personnel to use the electronic document/database management system (EDMS)*
- Administering EDMS; creating new user accounts and assigning passwords
- Communicating with all staff levels in a professional and effective manner
- Data entry, processing, and scanning of all project document types using a high-volume scanner and importing digital media with Adobe Capture program
- Performing quality check for data entered into the system
- Tracking responses to open action correspondence; creating daily and monthly reports in Microsoft Excel and Access
- Supervising and working closely with staff to achieve department and company goals
- Assisting department manager with administrative tasks and special projects

Skills
Working knowledge Microsoft Office Applications; Internet; e-Builder Document Management System; Asite Document Management System, Livelink Electronic Document Management System; Oracle Primavera Contract Management (Expedition) Version 13.1; Wintrak (Port Authority in-house Construction Tracking System); Adobe Professional, and Adobe Capture programs

Vitaliy Khinchin
Office Engineer

Professional Profile

Mr. Khinchin has many years of extensive experience in construction of residential, commercial and industrial buildings, highways and bridges. His experience includes organization of site activities, safety survey and supervision of construction teams. He was also responsible for construction supervision and inspection of welding, laboratory testing and sampling, air monitoring and soil remediation, money saving strategies for overall cost of construction, scheduling and cost estimate, field modifications of proposed construction methods and details.

Project Experience

Belt Parkway Bridges REI Services - Paerdegat Bridge, Contract#HBK1024, New York, NY; 9/09-Present. Office Engineer. This project involves the demolition of the entire 13-span, multi-stringer bridge superstructure and substructure including abutments, wingwalls, and the piers consisting of concrete pile columns to a minimum of 600 mm below the mud line. The replacement structures are new three-span and five-span bridges consisting of a Class HP reinforced concrete superstructure slab supported by high performance steel box girders and substructures including reinforced concrete abutments, wingwalls, and multi column piers on new pile foundation. Mr. Khinchin is responsible for maintaining all project required logs (shop drawings, permits, RFI's, change orders), filing all correspondence, transmittals and submittals; preparing agendas and minutes of the meetings; review and preparation of all contractors' partial and change order payments; verifying all estimates for payments, computations, as well as field measurements and sketches necessary for payment purposes; and reviewing all requested change order proposals and prepare packages for approval. Client: New York City Dept. of Transportation

Reconstruction of East and West Houston Street, #HWM738, New York, NY; 9/05-9/09. Office Engineer. This project involved resident engineering and inspection services for the installation of sewer, watermain, street lighting, curb and sidewalk, tree pruning and planting, and traffic work. Mr. Khinchin's duties included processing of partial payments, change order payments, preparing change orders and overruns, material acceptance and estimate books, filing all correspondence, contract and shop drawings, preparing submittals, project forms and logs, review Inspector's reports and quantities computation. He was also responsible for preparing agendas and minutes of the meetings, as-built drawings, field cards, in-service sheets and closeout package for the final payment. Client: New York City Dept. of Design and Construction

Cleaning and Surveying of Existing 48-in. Water Main, Madison Avenue between East 39th and East 78th Street, #MED-584A, New York, NY; 1/03-9/05. Office Engineer. This project involved "trenchless technology" to rehabilitate the existing 48-in. trunk water main included excavation of insertion pits for installation of new 48-in. steel pipe with Baker coupling system, installation of four new 36-in. and 48-in. Butterfly Valves, cleaning and surveying the existing water main utilizing robots to determine both the advisability of lining the pipe, as well as the proper lining to employ. Work included construction of new water distribution mains, sewer, new chambers and manholes, relocation of Con Edison and Empire City subway utilities, and restoration of roadway and sidewalk. Mr. Khinchin's duties included processing of partial payments, change order payments, change orders and overruns, material acceptance and estimate books, filing all correspondence, contract and shop drawings, preparing submittals, project forms and logs, and record keeping. He also prepared agendas and minutes of the meetings, as-built drawings, field cards, in-service sheets and closeout package for the Final Payment. Client: New York City Dept. of Design and Construction

Manhattan Bridge Rehabilitation of North Spans over East River, Contract 10, New York, NY; 2001-1/03. Inspector. This project involved REI services for the reconstruction on the north side of the structure on the approach and suspended spans over East River and maintenance painting inspection. Mr. Khinchin's responsibilities included inspection of contractor's work, control of the contaminated waste removal, field measurements and quantity computations, preparation of inspector's reports. Client: New York City Dept. of Transportation

Vitaliy Khinchin
Office Engineer

Rehabilitation of Shore Road (Pelham Parkway) Bridge over the Hutchinson River, Contract HBX 1148R, Bronx, NY; 6/01-1/03. Office Engineer/Sr. Inspector. This project involved rehabilitation of a bascule span movable bridge including grid deck replacement, structural steel repair and replacement, lead paint abatement, bridge drive motors replacement, bridge machinery rehabilitation, repair of existing piers, abutments and control houses including underwater repair, bridge balancing tests, electrical work and MPT. Mr. Khinchin's duties included inspection of contractor's work, field measurement and quantity computation, preparation of inspector's reports, concrete and asphalt testing preparation and processing of partial payments, change orders, and material acceptance and estimate books. Client: New York City Dept. of Transportation

Northern Boulevard/Cross Island Parkway Interchange, Queens, NY; 2/01-6/01. As office engineer, Mr. Khinchin's duties included the preparation and processing of partial, substantial and final payments, change orders, material acceptance and estimate books, as well as the preparation of closeout packages for all three bridges. Client: New York City Dept. of Transportation

Bridge Component Rehabilitation, #HBCREPL95D, New York, NY; 8/00-2/01. Mr. Khinchin served as a senior inspector on the following projects:

- **Willis Avenue Bridge over Harlem River, New York, NY**. This project involved maintenance and protection of traffic in nine stages at Manhattan, the Bronx sides and bridge itself. The project included partial replacement of existing deck joint at West abutment using armored joint system with compression seal; replacing existing deck joint at Pier 14 and East abutment with Steelflex Strip Seal Expansion Joint System; replacing existing deck joint at Bent 1 with Silicoflex Joint Sealing System; replacing existing deck joint at Pier 17 and South abutment with Transflex 200 Joint System; replacing existing concrete headers at all joints and repair concrete recesses at Piers 11, 12, 13, 15, 16 and Bent 23 using Polymer Concrete (Watson-Bowmen); repairing spalls in deck slab; and removal and disposal of asbestos contaminated materials.
- **Walton Avenue over Metro North, New York, NY**; 8/00-2/01. Senior Inspector. This project involved the replacement of existing approach slab at East and West sides with new reinforcing concrete slabs and asphalt pavement; the replacement of 1 1/2 in. of worn sidewalk with 1 1/2 in. Microsilca concrete overlay; replacement of existing concrete pedestals and bearing using jacking procedure (jacking towers); and sealing joints between steel girders and concrete deck.
- **Boston Road Bridge over Hutchinson River; New York, NY**; 8/00-2/01. Senior Inspector. This project involved epoxy coating wingwalls (S-E, N-E, S-W, N-W), also filling the deck joint with sealant at Pier 7. Mr. Khinchin's responsibilities included the inspection of MPT every night before shift began; inspection of all types of construction operations; coordination with contractor; inspection of welding during installation of armored joint system and steel beam fabrication for jacking towers; coordination with Metro North track outages; performing field measurement and calculations for quantity of work; performing asphalt and concrete field tests; and preparing daily inspectors concrete and asphalt reports.

Client: New York City Dept. of Transportation

Reconstruction of the 11th Avenue Bridge over LIRR and the NYCTA, Contract #HBK537R; 4/00-8/00. Inspector. This project involved construction of three-span concrete bridge, steel girders and reinforced concrete deck, new abutments, concrete and steel piers and cap beams, crash walls, sidewalks, parapets, reconstruction of roadway approaches, construction of new water main, gas mains and sewers. Mr. Khinchin's responsibilities included inspection of contractor's work, preparation of field measurement and quantity computation, preparation of inspectors' reports, concrete and asphalt testing. Client: New York City Dept. of Transportation

Reconstruction of Northern Blvd. Bridge over Cross Island Parkway, Contract # HBQ1075, New York, NY; 12/99-4/00. Inspector. This project involved removal of existing two span concrete bridge, steel stringers and monolithic reinforced concrete deck, and construction of a new concrete bridge with steel girders within three stages. His responsibilities included inspection of replacing a watermain, a Brooklyn Union gas main, and Bell Atlantic and Con Edison conduits and ducts. Client: New York City Dept. of Transportation

Richard Khoury
Senior Office Engineer

Professional Profile
Mr. Khoury is a field engineer with many years of diversified experience in the area of construction engineering. He is responsible for supervision and assignment of the various inspection tasks to the field staff. His responsibilities also include processing monthly estimates, change orders, force accounts, overseeing all project logs, and processing the final estimate.

Project Experience
Replacement of the Queens Approach at the Bronx-Whitestone Bridge, BW-89C, Queens/Bronx, NY; 10/11-Present. Senior Office Engineer. The $110-million project involves construction management and inspection services required to support the construction work of Project BW-89C, Replacement of the Queens Approach at the Bronx-Whitestone Bridge. The replacement work includes installation of mini-pile foundations, temporary support structures, temporary and permanent traffic barrier systems, fire stand pipe system, new lighting and communications; maintenance and protection of traffic; incidental lead abatement; and coordination with the community and other public agencies in this densely populated traffic corridor. Mr. Khoury's responsibilities include working up quantities and processing monthly estimates; tracking and logging of all documentation utilizing Expedition as a project-control system; overseeing assignments of office engineering staff; routing of all shop drawings, submittals, correspondence, daily reports; maintaining as-built drawings; processing of material acceptance records and certificates, change orders; and preparation of the necessary documents for substantial completion and the final estimate. Client: Triborough Bridge and Tunnel Authority

Bronx-Whitestone Bridge Bronx/Queens Approach, BW-89/WBM-342, Bronx, NY; 1/09-10/11. Senior Office Engineer. This $192-million project involved the staged removal and replacement of the Bronx Approach superstructure and substructure from the Bronx Toll Plaza to the Bronx Anchorage. Work included the installation of excavation support systems, mini-pile foundations and temporary steel support systems to support the existing structure during the staged construction. During the construction of the substructure, there were massive concrete placements for concrete footings and piers. Traffic on the project was maintained with five lanes open to traffic. During the staged construction, work was staged demolition of the existing roadway, installation of multiple continuous steel girders, placement of a staged composite concrete deck, installation of permanent concrete barrier and installation of permanent street lighting. Other work items on the project include new utility systems at the Bronx Toll Plaza, installation of new salt storage dome building and miscellaneous steel and concrete deck repair on the Queens Approach structure. Mr. Khoury's responsibilities included working up quantities and processing monthly estimates; tracking and logging of all documentation utilizing Expedition as a project-control system; overseeing the routing of all shop drawings, submittals, correspondence, daily reports; maintaining as-built drawings; and processing of material acceptance records and certificates, change orders and preparation of the necessary documents for the final estimate. Client: Triborough Bridge and Tunnel Authority

Bronx-Whitestone Bridge Deck Replacement - BW-82, Bronx, NY; 11/03-9/07. Office Engineer. This $150-million project involved the removal of existing roadway deck and installation of an orthotropic deck with bonded aggregate wearing surface at anchorages and suspended spans removal of existing stiffening truss and modification of anchorage chambers, installation of new expansion finger joints, work platforms at towers maintenance platforms at anchorages, floorbeams, light poles, decorative lighting, and fire protection system. The project also included replacement of existing laterals, girder pins at anchorages, electrical facilities in the suspended span, and existing barriers with new steel barriers, providing and installing track beams for the maintenance traveler, maintenance traveler and access platforms to the maintenance traveler; and utilizing temporary moveable barriers to

accommodate traffic during rush hours. Mr. Khoury's responsibilities included working up quantities and processing monthly estimates, tracking and logging of all documentation utilizing Expedition as a project-control system. He oversaw the routing of all shop drawings, submittals, correspondence, daily reports, maintained as-built drawings, processed material acceptance records and certificates, change orders and prepared the necessary documents for the final estimate. Client: Triborough Bridge and Tunnel Authority

Cross Bay Boulevard Bridge, Contract CB-08/09, Howard Beach, NY; 9/07-5/08. Office Engineer. This project involved construction management and inspection services for this $60-million project, which completely replaced the existing concrete deck using a staged demolition and reconstruction approach. Mr. Khoury's responsibilities included working up quantities and processing monthly estimates, tracking and logging of all documentation utilizing Expedition as a project-control system, overseeing the routing of all shop drawings, submittals, correspondence, daily reports, maintaining as-built drawings, processing of material acceptance records and certificates, change orders and preparation of the necessary documents for the final estimate. Client: Triborough Bridge and Tunnel Authority

Robert F. Kennedy (Triborough) Bridge Deck Replacement of the Randall's Island Junction Structure, Phase I - TB-63, New York, NY; 7/98-11/03. Office Engineer. This $138-million project was comprised of two major reconstruction efforts: the complete replacement of the Randall's Island Junction Structure and the redecking of the Bronx Approach. Work included upgrading bridge electrical systems, a new de-icing/salt storage facility and reconstruction work at various shops within the Junction Structure. Mr. Khoury's responsibilities included working up quantities for monthly estimates, and preparing order on contracts, force accounts, EEO and training special provisions reports. He was also responsible for overseeing the routing of all shop drawings, correspondence and daily inspection reports, maintaining as-built drawings, identifying and maintaining required material acceptance reports and certifications, and processing the necessary documents for the final estimate. Client: Triborough Bridge and Tunnel Authority

Robert F. Kennedy (Triborough) Bridge Queens Approach Concrete Structure Deck Replacement - TB-13, Queens, NY; 1996-4/99. Assistant Resident Engineer/Office Engineer. This project involved construction inspection and support services for the Queens approach concrete structure deck replacement at the Robert F. Kennedy (Triborough) Bridge. Mr. Khoury's responsibilities included supervising the field staff, assisting in resolution of field problems, documenting and implementing our quality assurance/quality control (QA/QC) plan, reviewing and routing shop drawings, maintaining field records, checking daily inspection reports and processing monthly estimates. Client: Triborough Bridge and Tunnel Authority

CR3 Wellwood Avenue Final Design, Babylon, NY; 6/08-1/09. Resident Engineer. This project involved providing resident engineering, construction inspection and construction support services for bridge construction and interchange widening of Wellwood Avenue Bridge over Southern State Parkway. Project features included steel sheeting, structural excavation, structural concrete placement (footings, wingwalls and parapets), installation of pre-cast, post-tensioned concrete arches, PCC and asphalt, concrete pavement, major MPT required to shut down Southern State Parkway, and installation of NYSDOT INFORM fiber optic communication cable. Mr. Khoury oversaw inspection staff and conducted quality assurance reviews of work associated with this project. Client: Suffolk County Dept. of Public Works

Queens-Midtown Viaduct Inspection, Contract #D253037, Queens, NY; 1990-1996. Office Engineer. This $115-million project involved the reconstruction of the six-lane Long Island Expressway viaduct entrance to the Midtown Tunnel. The reconstruction of this heavily traveled viaduct (100,000 vehicles per day), which spans navigable waterways at an exceptional height, involved structural steel and concrete deck replacement, removal of existing rocker expansion and sliding steel bearings and replacement with multi-rotational seismic bearings. The construction was accomplished in five work stages, which provided for the uninterrupted use of a dedicated bus lane and four traffic lanes. Mr. Khoury's responsibilities included working up quantities for monthly estimates, and preparing order on contracts, force accounts, EEO and training special provisions reports. He also was responsible for overseeing the routing of all shop drawings, correspondence and daily inspection reports, maintaining as-built drawings, identifying and maintaining required material acceptance reports and certifications, and processing the necessary documents for the final estimate. Client: New York State Dept. of Transportation

Kenny Loh, LEED AP BD+C
Office Engineer

Professional Profile
Mr. Loh has experience as office engineer, construction inspector and designer. His excellent computer skills and exceptional organizational capabilities, combined with his construction experience, enable him to provide the unique combination required to produce all required project reports and documentation, as well as providing on-site inspection services. Additional duties have included cost analysis and client interaction, which will prove to be helpful during any claim analysis.

Project Experience
Replacement of the Queens Approach at the Bronx-Whitestone Bridge, BW-89C, Queens/Bronx, NY; 12/11-Present. Office Engineer. The $110-million project involves construction management and inspection services required to support the construction work of Project BW-89C, Replacement of the Queens Approach at the Bronx-Whitestone Bridge. The replacement work includes installation of mini-pile foundations, temporary support structures, temporary and permanent traffic barrier systems, fire stand pipe system, new lighting and communications; maintenance and protection of traffic; incidental lead abatement; and coordination with the community and other public agencies in this densely populated traffic corridor. Mr. Loh's responsibilities include working up quantities and processing monthly estimates, tracking and logging of all documentation utilizing Expedition as a project-control system. He also oversees the routing of all shop drawings, submittals, correspondence, daily reports; maintains as-built drawings; processes material acceptance records and certificates, change orders; and prepares the necessary documents for the final estimate. Client: Triborough Bridge and Tunnel Authority

CR3 Wellwood Avenue Final Design, Babylon, NY; 4/08-10/08. Office Engineer/Inspector. This project involved providing resident engineering, construction inspection and construction support services for bridge construction and interchange widening of Wellwood Avenue Bridge over Southern State Parkway. Project features included steel sheeting, structural excavation, structural concrete placement (footings, wingwalls and parapets), installation of pre-cast, post-tensioned concrete arches, PCC and asphalt, concrete pavement, major MPT required for closure of Southern State Parkway, and installation of NYSDOT INFORM fiber optic communication cable. Mr. Loh was responsible for daily work reports, concrete material testing on the job site, measurements for monthly progress payments, checking and updating CEES (Computerized Engineers Estimate System) for pay quantities, tracking and logging project records and assisting the resident engineer with daily tasks. Client: Suffolk County Dept. of Public Works

Replacement of County Road 67, Motor Parkway Bridge at the LIE, Exit 55, Town of Islip, NY; 4/11. Construction Inspector. This project was a four-stage replacement of the existing 50+ year-old, four-span bridge with the new structure. The new bridge consists of two span steel frame composite with the concrete slab with integral wearing surface. Mr. Loh was responsible for daily work reports and measurements for monthly progress payments. Client: Suffolk County Dept. of Public Works

Stony Brook University North Entrance and Toll Road, Stony Brook, NY; 9/10-12/11. Design Engineer. This project involved the final design of two separate locations, North Entrance Road and John S. Toll Drive. The work along John S. Toll Drive consisted of the design of a pedestrian mall area between the existing library and Student Union building with complete roadway reconstruction whereas work near and along North Entrance Road consisted of a realignment of Circle Road with complete roadway reconstruction with minimal curb, drainage, lighting and walkway work for those areas beyond the limits of the realignment of Circle Road and North Entrance Road profile and intersection changes. Mr. Loh was responsible for establishing horizontal and vertical alignments, generating profiles, design closed drainage system, developing contract plans, specifications and estimates for both locations. Client: Stony Brook University

Kenny Loh, LEED AP BD+C
Office Engineer

Ring Road Reconstruction, Old Westbury, NY; 6/11. Design Engineer. This project involves final design, construction documents, and construction support for drainage improvements, safety improvements, and reconstruction of the main loop road and the entrance roads. The State University of New York at Old Westbury proposes to rehabilitate approximately four miles of the campus main access Ring Road, along with other entry drives that permit access to the campus. Additionally, several site safety issues related to internal intersection geometry, lane drops, site distance, traffic volumes and pedestrian access will be investigated and evaluated for proposed improvements. Localized flooding and roadway freezing will be investigated in several problem areas and drainage improvements evaluated and proposed. Mr. Loh was responsible for evaluating the existing pavement condition, locating possible problem areas and providing a cost effective remediation plan. Client: State University of New York at Old Westbury

Northern State Parkway and Long Island Expressway Interchange Improvements at NY 110, Town of Huntington, NY; 8/09-10/10 and 6/12-10/12. Drainage Engineer. This project included an Environmental Assessment, preliminary and final design, construction documents and construction support for the replacement and widening of the existing NSP Bridge over NY Route 110 and its interchange along with the widening of NY Route 110 from four to six lanes between the LIE and NSP. The project was advanced under three construction contracts: PINs 0112.53, 0516.41 and 0112.56. Mr. Loh was responsible for developing the drainage design plans, specifications and estimates for a closed drainage system for this project as per NYSDOT guidelines. The drainage design was developed using "InRoads Storm & Sanitary" software and the development of new recharge basins in accordance with NYSDOT GDP-8. Client: New York State Dept. of Transportation

Stony Brook University North Roadways, Stony Brook, NY; 2/09-4/10. Design Engineer. This project involved the design study of two separate locations: North Entrance Road and John S. Toll Drive. Mr. Loh's responsibilities included a study of current conditions for both locations, analyzing existing topography and utility locations, and preparing schematic designs and preliminary report outlining the various alternatives. Client: Stony Brook University

Athletic Track Conceptual Planning, Stony Brook, NY; 10/08-1/09. Design Engineer. This project involved conceptual planning of the complete reconstruction of the existing track. Mr. Loh's responsibilities included research and preparation of several schematic design alternatives, a preliminary report outlining the specifics of each alternative and a cost estimate. Client: Stony Brook University

Stony Brook University Kelly Quad Parking Lot, Stony Brook, NY; 9/08-10/08. Design Engineer. This project involved the expansion of existing parking lot by approximately 110 parking spaces. Design included parking lot layout, pavement, drainage and lighting design. Due to existing topography, retaining walls ranging between 4 to 12 feet were required. The project required detailed design, specifications and cost estimates. Mr. Loh's responsibilities included the preparation of several schematic designs, a preliminary report outlining the specifics of each alternative and a cost estimate. Client: Stony Brook University

Project Experience

Bayonne Bridge Navigational Clearance Program (BBNCP) Construction Management, NY/NJ; 3/13-Present. Office Engineer. This project involves construction management services for the $743-million Bayonne Bridge Navigational Clearance Program (BBNCP). This extraordinarily complex, once-in-a-lifetime project will replace more than 5,000 feet of viaduct and re-frame the existing steel arch structure to accommodate a new roadway 65 feet above the existing roadway. Ms. Martinez is the lead office engineer responsible for directing the efforts of six construction administration professionals. The group consists of assistant office engineers and project controls specialists who manage and direct all project records. This includes the processing of payments to the contractor by using the WinTrak Program; preparation of Post Award Contract Changes (PACC) and processing of Change Orders (Order on Contract), Time and Material records, desk audits (review and approval of contractor's T&M packages), contract monthly reports, request for information and response to submittals by using e-Builder, correspondence, attending Facility Impact and Progress meetings, minutes of meeting, as-builts, etc. Client: Port Authority of NY & NJ

2011-2014 Port Authority On-Call Construction Management Services – Port Authority Bus Terminal, Various Contracts, New York, NY; 9/10-5/13. Office Engineer. These projects involved construction management and inspection services on an on-call basis. The Port Authority of NY & NJ supplemented their own staff with consultant-provided personnel to manage and administer construction contracts at their owned and operated facilities. Under this on-call contract, Ms. Martinez was involved on the following projects:

Bus Ramps Deck Replacement Phase II, Contract #LT-234-174; 9/10-5/13. Office Engineer. This $36-million project consisted of the replacement of the existing deteriorated concrete roadway deck and embedded snow melting system at the Lincoln Tunnel (LT) bus ramps in order to maintain a state of good repair, preserve the structural integrity of the bus ramps and provide a safe riding surface during the winter months. The project involved the replacement of the bridge decking on the ramps to the Lincoln Tunnel by demolishing and removing the existing roadway decks in the designated areas of the bus ramps and replacing them with new precast concrete panels and cast-in-place concrete, including stainless steel piping for the snow melting system, demolition and installation of sign structures and removal of lead paint and repainting. Ms. Martinez was responsible for all office records, including processing payments to the contractor by using the WinTrak Program; preparation of Post Award Contract Changes (PACC) and processing of Change Orders (Order on Contract), Time and Material records, desk audits (review and approval of contractor's T&M packages), contract monthly reports, request for information and response to submittals by using e-Builder, correspondence, attending Facility Impact and Progress meetings, minutes of meeting, as-builts, etc.

In addition, Ms. Martinez performed construction inspection on weekend work that included inspection of demolition of existing concrete road deck and installation of temporary timer decking and precast concrete panels, cast-in-place concrete for roadway deck, installation and pressure testing of coils for the Savaloid System, supervision of construction personnel, coordination of construction operations with the Facility and the police, scheduling of Port Authority Materials Division for testing of materials onsite and generating inspector's narratives.

Nancy Martinez
Office Engineer

Contract #LT-234.054, New York, NY; 10/09-5/13. Office Engineer. This project consisted of replacement of the existing concrete sump ceiling slab with pre-cast concrete panels, replacement of adjacent pavement, catch basin and man hole structures and patching in the adjacent pump room at the Lincoln Tunnel Center Tube. Ms. Martinez served as office engineer responsible for all office records. This included processing payments to the contractor by using the WinTrak Program; preparation of Post Award Contract Changes (PACC) and processing of Change Orders (Order on Contract), Time and Material records, desk audits (review and approval of contractor's T&M packages), contract monthly reports, request for information and response to submittals by using e-Builder, correspondence, attending Facility Impact and Progress meetings, minutes of meeting, as-builts, etc.

Contract #BT-254.220, New York, NY; 12/05-1/13. Office Engineer. This $50-million project consisted of providing the required strengthening to maintain structural integrity of the Port Authority Bus Terminal (PABT) in New York City during a seismic event. Ms. Martinez served as office engineer responsible for all office records. This included processing payments to the contractor by using the WinTrak Program; preparation of Post Award Contract Changes (PACC) and processing of Change Orders (Order on Contract), Time and Material records, desk audits (review and approval of contractor's T&M packages), contract monthly reports, request for information and response to submittals by using e-Builder, correspondence, attending Facility Impact and Progress meetings, minutes of meeting, as-builts, etc.

Contract #LT-525, New York, NY; 4/10-9/12. Office Engineer. This project consisted of installing pavement markings, signage, drop-in-delineators and Dura-curb at the New York Galvin Plaza Entrance, New Jersey Toll Plaza Approach and Departure Roadway and New Jersey Westbound Helix and Exit ramps. Ms. Martinez served as office engineer responsible for all office records. These responsibilities included processing payments to the contractor by using the WinTrak Program; preparation of Post Award Contract Changes (PACC) and processing of Change Orders (Order on Contract), Time and Material records, desk audits (review and approval of contractor's T&M packages), contract monthly reports, request for information and response to submittals by using e-Builder, correspondence, attending Facility Impact and Progress meetings, minutes of meeting, as-builts, etc.

2006-2010 Port Authority On-Call Construction Management Services – Port Authority Bus Terminal, Various Contracts, New York, NY; 11/03-9/11. Office Engineer. These projects involved construction management and inspection services on an on-call basis. The Port Authority of NY & NJ supplemented their own staff with consultant-provided personnel to manage and administer construction contracts at their owned and operated facilities. Under this on-call contract, Ms. Martinez was involved on the following projects:

Contract #LT-521, New York, NY; 6/09-2/11. Office Engineer. This project consisted of providing for rehabilitation of concrete and steel elements at the LT Bus Ramps (including replacement of unsound concrete at columns, beams, deck slabs and bearing pedestals), replacement of deteriorated anchor bolts and nuts, installation of steel plates, angles and bolts to reinforce steel bearing pedestals and girders and installation of wire mesh safety netting. Ms. Martinez served as office engineer responsible for all office records. This included processing payments to the contractor by using the WinTrak Program; preparation of Post Award Contract Changes (PACC) and processing Change Orders (Order on Contract), Time and Material records, desk audits (review and approval of contractor's T&M packages), contract monthly reports, request for information and response to submittals by using e-Builder, correspondence, attending Facility Impact and Progress meetings, minutes of meeting, as-builts, etc.

Bus Terminal Ramps Reconstruction, Contract #LT-234-080, New York, NY; 11/03-3/09. Office Engineer. This $60-million project focused on the rebuilding and rehabilitation of the ramps connecting the Lincoln Tunnel with the Port Authority Bus Terminal. Ms. Martinez worked on the Lincoln Tunnel Bus Ramp and Triple Bridges Rehabilitation. Ms. Martinez served as office engineer responsible for all office records; processing payments to the contractor by using the WinTrak Program; prepared Post Award Contract Changes (PACC) and processing Change Orders (Order on Contract), Time and Material records, desk audits (review and approval of contractor's T&M packages), contract monthly reports, request for information and response to submittals by using e-Builder, correspondence, attended Facility Impact and Progress meetings, minutes of meeting, as-builts, etc.

Project Experience

Brooklyn Bridge Rehabilitation of the Approach Spans and Ramps and Painting of the Entire Bridge, Contract 6, New York, NY; 2/10-Present. Office Engineer. This project involves construction management and inspection services for the $509-million rehabilitation of this Iconic National Landmark. The scope of work for the project includes replacement of approach roadway in Manhattan and Brooklyn over the arch blocks; rehabilitation of the Manhattan side ramp structures with widening and deck and bearing replacements; rehabilitation of the approach steel structures with full superstructure replacement of the York and Main Street structures and orthotropic deck installation at Franklin Square; seismic retrofitting of the main bridge, Franklin Square and ramp structures; painting of the ramp structures and suspended spans in their entirety; restoration of historic features. Mr. Pan's responsibilities include the establishment and implementation of the office procedures to the administration of construction contract. His duties will also include implementing project controls for distribution and record keeping of construction drawings, construction contract correspondence, technical records, and other projects documents. Additionally, he will review and process the contractor's pay applications, review the project schedule, process RFI's, prepare change orders, and manage claim and change order records. Mr. Pan will also assist the resident engineer on different tasks throughout the project. Client: New York City Dept. of Transportation

Williamsburg Bridge Reconstruction of Miscellaneous Rehabilitation of the Main Bridge, Contract 8, #BRC253CCA, New York, NY; 9/09-2/10. Assistant Office Engineer. This $280-million project involved the construction engineering and inspection for the rehabilitation of the main bridge. The scope of work for the project included abrasive blasting and painting of main bridge stiffening trusses, rehabilitation and strengthening of the main towers, rehabilitation of the intermediate towers and installation of seismic shear keys, main cable saddle repair and restraint, rehabilitation of wind tongue and wind chord, main tower and intermediate tower bearing installation, main tower leg removal and replacement, stiffening truss top and bottom chord rehabilitation, traveling maintenance platform installation, re-profiling of main span vertical curve by incrementally adjusting suspender cables, modification of orthotropic footwalk deck expansion joints, waterproofing and surfacing of orthotropic roadway deck, installation of ornamental balconies and electroliers, integration of intelligent transportation operating system, seismic retrofit of the intermediate towers, installation of contraflow barrier and erection of barrier transfer machine facility, including augured concrete piles. Mr. Pan's responsibilities included assisting resident engineer on different tasks of the project including handling project documents, contractor payment, RFIs, shop drawings, change order and schedule review and drawings. Also provided coordination of inspection team and contractors. Client: New York City Dept. of Transportation

SIM Building Systems, LLC, New York, NY; 6/08-9/09. Structural Engineer. Mr. Pan has assisted project managers in the production of engineering design for mid-rise residential buildings; participated in structural components design (light gauge panelized walls, Vescom joists, Vescom composite floor system, shear wall, and other structural members); performed load calculations such as wind and seismic analysis; prepared design and engineering plans as well as shop drawings; developed structural models (developed in RISA 3D) and evaluated the designs to meet the current building code requirement; provided construction coordination to the construction team and fabrication shop; and prepared engineering and construction estimates for a variety of projects.

Zhong Wen Pan, E.I.T.
Office Engineer

Westchester County Sign Inventory, Westchester County, NY; 8/06-5/08. Junior Engineer. This project involved field inventory of all county owned traffic signs, developing a Sign Management System, and preparing design documents to replace signs as required. In addition, assisted in the bid process, provided design support during construction, inspected the work and provided all necessary construction administration to complete the sign replacements. Mr. Pan's responsibilities included reviewing signs for conformance to State and Federal requirements and developing construction drawings to replace signs that do not meet minimum requirements. Client: Westchester County Dept. of Public Works

Nassau County Pavement Marking Plans, Westbury, NY; 1/07-5/08. Junior Engineer. This project involved inventory of all existing pavement markings along 11 segments of roadway deemed as priorities by NCDPW. Mr. Pan was responsible for field data collection and developing construction drawings for new pavement markings. Client: Nassau County Dept. of Public Works

Nassau County Traffic Calming - Post Avenue, Westbury, NY; 12/06-5/08. Junior Engineer. This project involved performing a traffic calming study along Post Avenue in the Village of Westbury to identify appropriate traffic calming measures and safety measures that can be applied along the corridor. Mr. Pan was responsible for field data collection and developing drawings using AutoCAD. Client: Nassau County Dept. of Public Works

Shinnecock Tribe Traffic and Environmental Analysis, Southampton, NY; 12/06-5/08. Junior Engineer. This project involved professional engineering services to develop and prepare EIS-type documents that were used in the Attorney General Office's litigation of the Shinnecock Indian Tribe's application to build a casino and gaming resort in the Town of Southampton on Long Island. Mr. Pan's responsibilities included field data collection and assisting engineers with the project. Client: New York State Office of General Services

Weaver Street Reconstruction, New Rochelle, NY; 6/06-8/06. Junior Engineer. Under this locally administered federal aid project, preliminary design services were provided including development of the Design Approval Document (Phases I through IV) for the rehabilitation of Weaver Street within the project limits and improvements at the Griffin Avenue and Quaker Ridge Road intersections. Mr. Pan's responsibilities included performing accident analysis by using the HAS software using the traffic counts to establish balanced traffic volumes, no build, and project volume for the ETC and ETC+10. He also used the HSC and Synchro software to conduct capacity analyses for the existing and future conditions and providing investigation measures. Client: Westchester County Dept. of Public Works

New York City Dept. of Transportation, Division of Bridges, New York, NY; 6/05-9/05. College Intern. Mr. Pan assisted the director with the weekly update of the projects; generated some AutoCAD drawings for engineers; and assisted engineers with daily office work.

Traffic Study, New York, NY; 3/05-5/05. Traffic Surveyor. Mr. Pan worked as a traffic surveyor where he conducted interviews with drivers in lower Manhattan for a traffic study.

Project Experience
Replacement of the Upper Level Deck of the Suspended Span of the Verrazano-Narrows Bridge, VN-80B, Staten Island, NY; 2/13-Present. Office Engineer. This $236-million project involves reconstruction to replace the upper level roadway superstructure of the Verrazano-Narrows Bridge. The work includes: removal of existing upper level roadway deck and barrier, installation of new upper level orthotropic deck, overlay, drainage systems, sign structures, lighting, barrier, painting and miscellaneous utility work. Mr. Pandya is responsible for working closely with the project manager and resident engineer on many project issues; providing conformance with TBTA requirements for maintaining job files which include all incoming and outgoing correspondence; utilizing Microsoft Access and Excel to maintain and track all submittals (shop drawings, catalog cuts, requests for information, etc.); organizing inspector's daily reports and checking quantities; compiling and finalizing monthly quantities for contractor's monthly payments; compiling and entering daily progress, manpower and equipment information from inspector's daily reports for engineer's diary; tracking and logging all material acceptance submittals; researching overrun quantities; organizing revised contract drawings, as-built and punch list information; and providing submittal information to inspectors; and preparation and distribution of progress and technical meeting minutes. Client: Triborough Bridge and Tunnel Authority

Bronx-Whitestone Bridge Bronx/Queens Approach, BW-89/WBM-342, Bronx, NY; 2/09-2/13. Office Engineer. This $192-million project involved the staged removal and replacement of the Bronx Approach superstructure and substructure from the Bronx Toll Plaza to the Bronx Anchorage. Work included the installation of excavation support systems, mini-pile foundations and temporary steel support systems to support the existing structure during the staged construction. During the construction of the substructure, there was massive concrete placements for concrete footings and piers. For the duration of the project, traffic on the bridge was maintained with five lanes open to traffic. During the staged construction, work was staged demolition of the existing roadway, installation of multiple continuous steel girders, placement of a staged composite concrete deck, installation of permanent concrete barrier and installation of permanent street lighting. Other work items on the project included new utility systems at the Bronx Toll Plaza, installation of new salt storage dome building and miscellaneous steel and concrete deck repair on the Queens Approach structure. Mr. Pandya's responsibilities included assisting the resident engineer with document research, control and recall; providing conformance with TBTA requirements for maintaining job files which include utilizing Expedition to maintain and track all submittals (shop drawings, catalog cuts, requests for information, etc.); preparing weekly progress reports; compiling and entering information from inspector's daily report for engineer's diary; assisting in researching overrun quantities; organizing revised contract drawings, as-built and punch list information; providing submittal information to inspectors; collecting and numbering check and routing all Inspector's Daily Reports (IDRs); checking quantities listed on IDRs and processing monthly estimate; processing of material acceptance and certificates; and posting IDR quantities to monthly estimate book. Client: Triborough Bridge and Tunnel Authority

Brooklyn-Queens Expressway (I-278), From Flushing Avenue to Sand Street, NY; 7/07-2/09. As an assistant office engineer, Mr. Pandya participated extensively in activities such as reviewing and approving inspector's reports as per plan, proposal and specification using ShareChive system; estimated closing using NYSDOT CEES system; co-coordinated with inspectors for IDR issues and contractor/NYSDOT and ShareChive personals for estimate issues, material certification reviews, contractor and subcontractor's payrolls and work history; and wage rate table, submittals, asphalt/fuel/steel price adjustments work. Client: New York State Dept. of Transportation

Gopesh Pandya
Office Engineer

Bronx-Whitestone Bridge, Replacement of Roadway Deck on Suspended Span, BW-82, NY; 8/05-7/07. As construction inspection engineer, Mr. Pandya participated in different construction activities such as removal and replacement of existing deck; replacement of bridge joint system; bonded aggregate surfacing placement; and painting and miscellaneous structural repair on Bronx-Whitestone Bridge. He also participated in office engineering work which included material certifications, review, and estimation of quantity and project close-out work. Client: Triborough Bridge and Tunnel Authority

Throgs Neck Bridge Deck Rehabilitation, TN-82A, New York, NY; 11/04-8/05. Construction Inspection Engineer. Mr. Pandya participated in different construction activities such as replacement of sub-floor beams; retrofitting existing orthotropic deck; dye penetrant testing for crack evaluation on structural steel; and structural steel repair work and miscellaneous structural repair. Client: Triborough Bridge and Tunnel Authority

Robert F. Kennedy (Triborough) Bridge Deck Replacement on Suspended Spans and Queens Viaduct - TB-64A, Queens, NY; 10/01-10/04. Construction Inspection Engineer. Mr. Pandya participated in different construction activities such as replacement of suspender rope; replacement of bridge joint system; removal and replacement of existing deck; bonded aggregate surfacing; and miscellaneous structural repair. Client: Triborough Bridge and Tunnel Authority

Williamsburg Bridge Reconstruction, Contract #7, New York, NY; 1/01-10/01. Construction Inspection Engineer. Mr. Pandya participated in different construction activities such as removal and replacement of existing roadway; concrete retaining wall and abutment construction; drainage line installation; backfilling; and saw cutting on Manhattan Approach North Roadways. Client: New York City Dept. of Transportation

Manhattan Boro Biennial Bridge Inspection, NY; 6/00-1/01. Assistant Team Leader. Mr. Pandya participated in several bridge inspections and prepared BRPR. Client: New York City Dept. of Transportation

George Washington Bridge, NY; 6/00. This project involved biennial inspection of the George Washington Bridge Sign Structures and flag hoisting system. Client: Port Authority of NY & NJ

East 3rd Street and 52nd Street Bridge, NY; 3/00-6/00. Mr. Pandya designed utility relocations for the two bridges. This work included coordination with utility companies. Client: New York City Dept. of Transportation

Metropolitan Avenue Bridge, NY; 2/00-3/00. As structural engineer, Mr. Pandya participated in the preparation of final plans for the rehabilitation of approach retaining walls, new wing walls and fendering system. Client: New York City Dept. of Transportation

Arthur Kill Road Bridge Project, NY; 1/00-3/00. As structural engineer, Mr. Pandya prepared preliminary plans for the replacement bridge.

Hudson Bergen Light Rail Transit System, NJ; 9/97-12/99. Quality Assurance and Construction Inspection Engineer. Mr. Pandya worked as quality assurance and construction inspection engineer for this DBOM project. He inspected excavation, formwork, reinforcement and concrete operation and architectural finishes to ensure adherence to drawing and specifications; inspected cement concrete and asphalt concrete at plant site; certified mix design; checked thickness of asphalt pavement for street work; and inspected excavation and embankments for specified, line level and compaction.

Mr. Pandya worked on the following station and station plazas: 34th Street, Jersey Avenue, Newport, 45th Street, Liberty Harbor North, West Side Avenue, Richard Street, Exchange Place, Garfield Avenue, Danforth Avenue, Harbourside, MLK Drive, Harsimus Cove, Liberty State Park. Client: New Jersey Transit

Project Consultant; 1/90-8/97. Mr. Pandya assisted in planning and designing of building construction project; provided estimating and costing data of project; implemented and finished construction activity within time frame and cost effectively; provided quality control for all construction activity including utility and services and finishing project; and coordinated with project architect and structural engineer.

Computer Skills: Word, Excel, PowerPoint, AutoCad, Microstation, NYSDOT CEES, ShareChive

Louis Perry, E.I.T.
Office Engineer

Professional Profile
Mr. Perry is an inspector with the following experience.

Proposed Project Assignment
Construction Administrator

Registration/Certifications
2011/Engineer In Training
2012/ACI Concrete Field Testing Technician Grade 1

Education
BS/2011/Civil Engineering

Course Work
2014 - OSHA Lockout/Tagout - Control of Hazardous Energy (2017)
2014 - NYC DOB 4-Hour Supported Scaffold (2018)
2014 - NYC DOB Confined Space Awareness
2012 - 10-Hour OSHA Training Course

Professional Affiliations
American Society of Civil Engineers, Member
Corresponding Secretary, American Society of Civil Engineers, Student Chapter

Total Years Experience 3

Project Experience

2011-2014 Port Authority On-Call Construction Management Services - George Washington Bridge, Fort Lee, NJ; 1/14-Present. Office Engineer. This project involves inspection of the joint replacement of the upper level deck. The project also involves the replacement of orthotropic deck, scupper and pipe run replacement, expansion finger joint repairs, main/secondary floorbeam repairs, stringer and stringer bearing repairs, deck rib connections, barrier repairs, paving, and coordination of maintenance of traffic. Contracts Mr. Perry is involved on include:

- **Joint Replacement of the Upper Deck**. He is responsible for the coordination of maintenance and protection of traffic.
- **Fire Standpipe Replacement**. He is responsible for the coordination of maintenance and protection of traffic; verification of daily labor records and progress of work; and coordination of charging and shut down of the fire standpipe system between the contractor and the facility supervisors on different areas of the bridge so that work can be performed.
- **New Jersey Administration Building Passenger Elevator Replacement**. He is responsible for verification of daily labor records and progress of work, and scheduling inspections during the installation process (waterproofing inspection, fireproofing inspection, etc.) with different departments within the Port Authority.
- **Concrete Repairs in Main Tolls Basement and Column Repairs at the Palisades Interstate Parkway Toll House**. He is responsible for the verification of daily labor records and progress of work, and scheduling site visits to have contract work approved during certain stages by Port Authority architects and engineers.

Client: Port Authority of NY & NJ

Manhattan Bridge Rehabilitation of Cables and Suspenders, Contract 14, #BRC156R, New York, NY; 5/11-1/14. Office Engineer. This $149-million project involved the unwrapping and rewrapping of cables; replacement of suspenders; replacement of necklace lighting messenger cables and cable hand ropes; installation of new access platforms to existing tower platforms; reversal of lower roadway and operation of HOV lane and replacement of multi-rotational bearings at the towers; replacement of light poles and luminaries on South upper roadway; replacement of lane control radar on South upper roadway; and retrofit of track stringers and diaphragm connections and other miscellaneous work. Mr. Perry generated monthly estimates, tracked monthly quantities, maintained material acceptance records, took the minutes at monthly progress meetings, and generated monthly progress reports. He also ordered and tracked any sort of material that was needed in the field office or for the inspection staff. In his previous position as an inspector, his responsibilities included inspection of the tensioning of suspenders, the removal and installation of continuity plates, and the installation of suspender boxes. He was also involved with the inspection of the removal and rewrapping of cables with new wires; installation of cable guard-elastomeric cable wrapping; main cable wedging for inspection; and the replacement and retention of cable band bolts. Client: New York City Dept. of Transportation

Louis Perry, E.I.T.
Office Engineer

Mr. Perry worked as a field office intern where he assisted the office engineer with field measurements; created excel documents used to organize field measurements; and organized delivery and progress records; 5/10-6/10.

Computer Skills
Microsoft (Word, Excel, and PowerPoint)
Maple Programming
Knowledge of Modern Surveying Methods

Edgar Rafol
Assistant Office Engineer

Professional Profile
Mr. Rafol is an office engineer/construction inspector with several years of experience working with major bridge and highway reconstruction projects throughout the New York metropolitan area.

Project Experience

Brooklyn Bridge Rehabilitation of the Approach Spans and Ramps and Painting of the Entire Bridge, Contract 6, New York, NY; 12/13-Present. Assistant Office Engineer. This project involves construction management and inspection services for the $509-million rehabilitation of this Iconic National Landmark. The scope of work for the project includes replacement of approach roadway in Manhattan and Brooklyn over the arch blocks; rehabilitation of the Manhattan side ramp structures with widening and deck and bearing replacements; rehabilitation of the approach steel structures with full superstructure replacement of the York and Main Street structures and orthotropic deck installation at Franklin Square; seismic retrofitting of the main bridge, Franklin Square and ramp structures; painting of the ramp structures and suspended spans in their entirety; restoration of historic features. Mr. Rafol's responsibilities include checking MURK II and data entry of same; checking subcontractor invoices; and creation of NYCDOT follow-up approval of change orders forms and time extension applications under the direction of a supervisor. Client: New York City Dept. of Transportation

Belt Parkway Bridges REI Services - Rockaway Parkway Bridge, New York, NY; 9/09-12/13. Assistant Office Engineer. The project involved the demolition of the entire existing, four-span, multi-stringer bridge superstructure with existing steel cap beams, and substructures, including the abutments, wingwalls, and pier columns and footings; installation of a new single span replacement bridge consisting of a steel multi-stringer superstructure with reinforced concrete deck and substructures, including reinforced concrete abutments and wingwalls on new piled footings, and mechanically stabilized earth retaining walls; reconstruction of approach roadways and four entrance and exit ramps within the project limits; and installation of new concrete barrier, new bridge and guide railing, new lighting standards, new drainage systems including catch basins and drainage pipes, new overhead sign structures, and new swale BMP grading, drainage and planting. Mr. Rafol was responsible for maintaining a consistent project record system; preparing monthly contract estimate; learning and implementing City endorsed "FACS" computer system; submitting and keeping track of project submittals such as catalog cuts, rfi, product samples; preparing construction reports as required; and attending meetings called for by the contract. Client: New York City Dept. of Transportation

Replacement of Brooklyn Bridge Travelers, Contract #BRC270TA, Boroughs of Manhattan and Brooklyn, NY; 3/07-9/09. Office Engineer. This project included the replacement of four movable maintenance platforms (travelers) with a state-of-the-art mechanical driven traveler system, the replacement of the traveler rails, hangers and connections, localized lead paint removal, and the replacement of the electrical system. Mr. Rafol's responsibilities included preparation of monthly contractor's construction progress payment, idr quantity checking which included contract/shop drawings requirement checking, specification checking as to standards, certificates, tests and approvals; daily administration of project office communication including preparation of both incoming and outgoing project transmittals which included shop drawings, contract drawings, safety manuals, catalog cuts, cpm and other similar items, telephone and radio communication; responding to the monthly project progress meeting issues trying to resolve issues discussed during the monthly progress meeting thru the supervision of the resident engineer and the engineer-in-charge. As the project progressed, he was responsible to an office of two to three inspectors where he maintained computer logs of all project documents, keeping updated information about all project documents for current use and the final turn over to the city at project closeout. Client: New York City Dept. of Transportation

Edgar Rafol
Assistant Office Engineer

Williamsburg Bridge Reconstruction of Miscellaneous Rehabilitation of the Main Bridge, Contract 8, #BRC253CCA, New York, NY; 4/04-3/07. Office Engineer. This $280-million project involved the construction engineering and inspection for the rehabilitation of the main bridge. The scope of work for the project included abrasive blasting and painting of main bridge stiffening trusses, rehabilitation and strengthening of the main towers, rehabilitation of the intermediate towers and installation of seismic shear keys, main cable saddle repair and restraint, rehabilitation of wind tongue and wind chord, main tower and intermediate tower bearing installation, main tower leg removal and replacement, stiffening truss top and bottom chord rehabilitation, traveling maintenance platform installation, re-profiling of main span vertical curve by incrementally adjusting suspender cables, modification of orthotropic footwalk deck expansion joints, waterproofing and surfacing of orthotropic roadway deck, installation of ornamental balconies and electroliers, integration of intelligent transportation operating system, seismic retrofit of the intermediate towers, installation of contraflow barrier and erection of barrier transfer machine facility, including augured concrete piles. Mr. Rafol's responsibilities included the maintenance of project contract drawing database. The work specifically included receiving the shop drawings from the contractor, transmitting it to concerned agencies for approval, returning it back to contractor and concerned agencies until it was approved for construction use, change order approval follow up, and project forms preparation. He was also responsible for preparing contractor's monthly payment. Client: New York City Dept. of Transportation

Williamsburg Bridge North Roadways Reconstruction, Contract 7, #BRC253CA, New York, NY; 3/01-4/04. Office Engineer. This $248-million project involved the construction engineering and inspection for the reconstruction of the north inner and outer roadways. Mr. Rafol's responsibilities included flag repair closure letters; projected communication management; change order approval follow up; project forms preparation; field supply control works; bolts certification record keeping; and office maintenance works. Client: New York City Dept. of Transportation

Williamsburg Bridge BMT Structure Rehabilitation, Contract 6, #BRC253BBA, New York, NY; 8/99-3/01. Mr. Rafol served as assistant office engineer on this $176-million project that involved the reconstruction of the track structure on the bridge. His responsibilities included office engineering and management of project change order; maintaining and operating a working file for the project's flag repair work; assisting the senior office engineer in the supervision of a three-person office in maintaining a reliable change order record system; and tracking and coordinating approval of all project change orders. Client: New York City Dept. of Transportation

Williamsburg Bridge South Roadways Reconstruction, Contract 5, #BRC253BAA, New York NY; 9/95-7/99. Mr. Rafol served as office engineer on this $310-million project that involved the reconstruction of the south roadway and removal of the maintenance travelers. His responsibilities included office engineering/management of project change order; maintaining a workable and reliable change order record keeping system; assisting the senior office engineer in the supervision of five office personnel in running and keeping the project change order record system; checking MURK-11 for accuracy and correctness for labor, materials, and equipment on a daily basis; checking labor, materials and equipment quantities for payment purposes; and tracking and following up on all project change orders for approval. Client: New York City Dept. of Transportation

Williamsburg Bridge Main Cable Rehabilitation, Contract 4, #BRC253A, New York, NY; 2/92-8/95. Mr. Rafol served as assistant office engineer on this $88-million construction and resident engineering inspection project that involved the rehabilitation of the suspension system. Mr. Rafol's specific responsibilities on this project included maintaining files and monitoring a $14-million force account flag repair including other contract force accounts, processing of payments for Transit Authority accommodation services. He also performed labor wage check as needed; monthly progress photographs; monthly cable rehabilitation progress pictorial; daily weather board; weekly traffic reversal schedule; mid and end of month flag repair accomplishment report; assistance in construction material sampling and laboratory submission; control inspectors field supply; assisted in engineer-in-charge record keeping; maintained ready supply of project forms and other office supplies; prepared miscellaneous project sketches as required; delivered vital project documents to key personnel and agencies; and assisted in contractor's payment. Mr. Rafol closed-out the project according to NYCDOT procedure. Client: New York City Dept. of Transportation

LPE

Elaine Reid

EXPERIENCE

Contract Specialist, Resident Engineer's Office, JFK Int'l Airport — *2001 – Present*
LPE Enterprises/Port Authority of NY & NJ

- Support Management
- Establish Cutting and Welding Permits for approval
- Establish and maintain weekly progress reports on all Contract Jobs
- Prepare Close-out Contracts for Archives
- Perform document controls of all assigned contracts
- Update monthly expenditure report
- Type general correspondence, meeting minutes, proposals, etc.
- Maintain daily calendar, Schedule meetings and inspections via Outlook
- Answer phones and interface with internal and external clients
- Distribution of correspondence & Contract Filing
- Back up administrative support

Administrative Assistant, Global Service Provider — *1996 – 2001*
Lucent Technologies, New York, NY

- Supported Managing Director, four general managers & back-up Vice President's Executive Assistant
- Served as liaison representing organization in contacts with internal and external clients
- Maintained and managed director's calendar
- Maintained payroll via PeopleSoft, attendance and personnel records
- Handled overall facilities management for New York office
- Prepared schedules, agendas and PowerPoint presentations
- Handled event planning and worked on special projects
- Initiated routine correspondence, established travel arrangements, conferences and lodging
- Prepared expense vouchers and processed invoices via SAP
- Coordinated internal and external meetings and training
- Researched and retrieved information off the internet

Administrative Assistant, Public Relations — *1993 – 1996*
AT&T, New York, NY

- Supported district manager, administrator and backed up Vice President's Executive Assistant
- Worked on special projects (events and internet work site)
- Served as liaison representing organization in contacts with internal and external clients
- Managed time reporting and attendance
- Initiated routine correspondence, arranged conferences, established travel arrangements, processed invoices and expense vouchers

EDUCATION:

York College, City University of New York, Jamaica, NY
B.S., Business Administration, 1998

SKILLS:

- Proficient in Microsoft Word, Access, PowerPoint, Excel, Outlook and Internet

Lesly Remy
Assistant Office Engineer

Professional Profile
Mr. Remy is a junior technician with two years of experience providing inspection and data collection services.

Proposed Project Assignment
Construction Administrator

Course Work
2012 - 10-Hour OSHA Training Course

Total Years Experience 7

Project Experience

Rehabilitation of Kew Gardens Interchange/Van Wyck Expressway, New York, NY; 9/10-Present. Assistant Office Engineer. The project involves construction inspection services for the reconstruction of the Van Wyck Expressway (I-678), between 86th Avenue and the Grand Central Parkway in Queens County. This $150-million project involves the complete replacement of five bridges, the reconstruction of one bridge along with the reconstruction of a pedestrian tunnel and the widening of the Van Wyck Expressway. Mr. Remy's responsibilities include assisting with document research; creating and maintaining office filing and sub-filing system; reviewing, logging and coordinating the distribution of all correspondence and contractor's submittals utilizing the current office database and excel; submitting and tracking of material testing; organizing the inspectors daily reports and engineer's diary; recording, preparing and distributing progress meeting minutes; procurement of office supplies; and all secretarial work for the office engineers. Client: New York State Dept. of Transportation

Manhattan Bridge Rehabilitation of North Spans over East River, Contract 10, New York, NY; 1/09-2/09. Junior Technician. This project involved REI services for the reconstruction on the north side of the structure on the approach and suspended spans over East River and maintenance painting inspection. Mr. Remy's responsibilities involved performing as-built revisions to contract documents based on data provided by the field office which included reviewing Engineering Clarification Memos, sketches and consultant issued changes. Client: New York City Dept. of Transportation

Nassau County On-Call Improvements Lido Boulevard, Lido Beach, NY; 10/08-12/08. Inspector. This $3.6-million project involved providing construction inspection services to construct a raised median along Lido Boulevard, a total length of 1.13 miles. The project included rehabilitation of pavement defects and resurfacing entire roadway with a 1 in. thick polymer modified asphalt overlay. The project also involved rebuilding existing traffic signals and installing new signals at three additional intersections. Mr. Remy was responsible for inspection of asphalt placement and concrete pouring along center-median turn lane for the placement of mountable curb, full-depth asphalt repair adjacent to new curb, replacement of existing handicap ramps including installation of detectable warning surface, placement of colored and imprinted concrete sidewalk in new center median, as well as inspection of excavation and payment calculations for all the above mentioned items. Client: Nassau County Dept. of Public Works

Nassau County On-Call Contract for CEI Services to Resurface County Roads, Nassau County, NY; 9/08-10/08. Inspector. This project involved construction inspection services for both night-time and day-time resurfacing of Nassau County roads. Work included milling and asphalt paving of roadways and necessary adjustment of drainage castings for this $3.2-million project. County roads included Franklin Avenue, Hempstead; Denton Avenue, New Hyde Park; Corona Avenue, North Valley Stream; Milburn Avenue, Baldwin. Mr. Remy was responsible for inspection of asphalt placement for road repaving, adjustment of storm drains, replacement of sewer manhole covers and drainage manholes. Client: Nassau County Dept. of Public Works

Lesly Remy
Assistant Office Engineer

Northern State Parkway and Long Island Expressway Interchange Improvements at NY 110, Town of Huntington, NY; 9/07-9/10. Junior Technician. This project included an Environmental Assessment, preliminary and final design, construction documents and construction support for the replacement and widening of the existing NSP Bridge over NY Route 110 and its interchange along with the widening of NY Route 110 from four to six lanes between the LIE and NSP. The project was advanced under three construction contracts: PINs 0112.53, 0516.41 and 0112.56. Mr. Remy's responsibilities included creating general, drainage, landscape, right-of-way, stripping, and environmental plan sheets as well as generating pavement and shoulder estimates on MicroStation. Client: New York State Dept. of Transportation

Traffic Signal Timing and Arterial Optimization, Suffolk County, NY; 11/07-9/10. Junior Technician. This project involved developing timing plans along various corridors using Synchro software to improve control of 500+ signalized intersections. This project improved service to the traveling public along these corridors by improving safety, maximizing signal timing efficiency, coordinating signal timing, and reducing the overall delay on these arterials. Mr. Remy was responsible for data collection used for the optimization/synchronization of traffic signals. Client: New York State Dept. of Transportation

Phase 2 ITS Pedestrian Signal Survey, New York, NY; 1/10-2/10. Junior Technician. NYCDOT installed pedestrian countdown signals at 24 select intersections (one intersection in each borough) as a pilot program. Studies were conducted at all five intersections, both before and after the countdown signals are installed to determine the effects of the countdown pedestrian signal on pedestrian and motorist behavior. Mr. Remy was responsible for pedestrian and vehicle counts to determine the effects of the countdown pedestrian signal on pedestrian and motorist behavior before and after the installation of countdown signals. Client: New York City Dept. of Transportation

West Hudson Reservoirs Speed Study, New York, NY; 6/09-7/09. Junior Technician. The project involved the study of speed limits on New York City owned roadways circumnavigating six mid-state reservoirs west of the Hudson River. Mr. Remy was responsible for the study of roadway to determine the appropriate posted speed limits, inventory of physical and operational conditions including lane widths, sight distances and sign inventory, as well as calculating advisory speed for horizontal and vertical curves in accordance with AASHTO. Client: New York City Dept. of Transportation

Reconstruction of NY 347 from NY 454 to NY 25, Town of Smithtown, NY; 5/08-8/08. Junior Technician. This project involved final design, construction documents and construction support for the reconstruction and widening of NY 347 from four to six lanes between Brooksite Drive and the Smith Haven Mall. The project will be advanced under separate construction contracts including PINs 0054.08, 0054.18 and 0054.20. Mr. Remy was responsible for data collection (measurements, field edits related to basemapping). Client: New York State Dept. of Transportation

Bethpage State Park Bikeway Extension, Nassau County, NY; 5/08-8/08. Junior Technician. This project involved topographic survey, preliminary and final design, and construction documents for this shared use path connecting the existing Bethpage State Park trail and the Syosset Railroad Station. The project has received the 2013 Quality of Life Award from the Long Island ASCE Chapter. Mr. Remy provided concept through final design plans and documents, conducted field surveys to augment existing data and assisted the client in coordination with related agencies, municipalities, and special activity/interest groups. He was responsible for drafting, estimates of pavement/striping/landscape removal and data collection of measurements. Client: New York State Dept. of Transportation

Nassau County Traffic Signal Expansion, Phase 7, Nassau County, NY; 1/08-5/08. Junior Technician. The project involved developing plans, specifications and estimates for the reconstruction of 44 County-owned traffic signals and for the installation of 16.5 miles of fiber optic interconnect cable and conduit. He was responsible for pull box inspection. Client: Nassau County Dept. of Public Works

LPE

Cynthia Ronald

SUMMARY

Oversee 30-40 construction and utility projects' documentation files and procedures to establish and implement contractual protocols successfully with efficiency and within a quality timeframe. Assist Project Managers and Assistant Resident Engineers execute appropriate document procedures, contract background checks, construction workers security access, closeout procedures, and archival of case sensitive documents for timely close out on following projects at LaGuardia Airport such as: Aircraft Rescue Fire Fighting Facility – Building & Technology ($40.6M); High Pressure Water Storage and Pump Station ($15.8M); Removal of Low To High Pressure Crossover connections & installations of backflow ($70.0M)

PROFESSIONAL EXPERIENCE:

Construction Project Services Specialist, PANYNJ Tech Center - Construction Management Division *2011-Present*
LPE Enterprises / Port Authority of NY & NJ
Support the Assistant Chief Engineer of Construction in executing projects from inception to completion.

- Effectively teamed up the with the Engineer of Construction, Contract Administration and the Senior Construction Management Specialist in implementing and updating standards and procedures in the Construction Administration training manual for the Office Engineers within the Port Authority Engineer Department.
- Monitor and prepared an extensive reports on all final audit summary reports of payments made to contractors; analyzing each reports; meeting with Auditors and notifying the Assistant Chief Engineer of all concluded findings.
- Research and interviewed Engineering agency candidates for the opportunity to conduct seminars and training for the Port Authority Field Engineering Inspectors.
- Negotiated a contract with Marzzo Engineering for $2850 for 30 engineers with an offering of 8PDU's. Accredited by both New York and New Jersey, Marzzo Engineering initial price for 30 attendees was $6700.00. Hiring Marzzo Engineering to conduct a seminar with the negotiated rate, I was able to help saved the Port Authority financially and a structured time for all P.A employees to attend and acquire 8PDU's.
- Partnered with the Executive Program Manager for Secure Worker Access Consortium
- (SWAC) to address and resolve default issues with the effectiveness of security background checks, budget cost, and time period of date of contractors agreement with the Port Authority Agency.
- Coordinate and programmed a Contractors/Audit meeting between the Associated General Contractors of America of New York and New Jersey, the General Contractors Association of New York, and the Assistant Chief Engineer to establish a committee in regards to communication barriers, ineffective procedures currently practice, and miscellaneous issues.
- Collaborate with the Assistant Chief Engineer to modify and execute the final publication of the Construction Standards Manual for the Construction Management Division.
- Currently working on a design to re modify the Protégé Mentor Program web page on the Port Authority Enet website with protégés training art gallery, testimonies, and award page; Convinced the Web page department to accelerated the Protégé Mentor web links to the Diversity suppliers link which provides quick access to the Protégé page for mentors, protégés, and potential candidates with interest to the program.

Contracts Administration Specialist, Resident Engineer Office LaGuardia Airport, NY *2006 - 2011*
LPE Enterprises / Port Authority of NY & N.J
Supported the Engineer of Construction, Resident Engineers, Assistant Engineers, and Project Managers in the construction/engineer Division with managing contract procedures to maximize project productivity in a timely manner under government owned agency guide lines.

- Implemented new standard procedure relating to Subcontractor Approval Request form to be adhered by all General Contractor and Subcontractors upon completion of contract award.
- Developed an effective technological system for authorizing Security Construction Identification Badge for over 200 contractors.
- Participated in safety committee meetings, progress meetings, SWAC safety procedures meetings, and closeout meetings; identifying key roles and responsibilities of all parties while keeping Resident Engineer department informed.
- Interfaced continuously with Aviation, Treasury Department, and Contract vendors to address and resolve contract document discrepancies, missing certifications, and insufficient references when conducting background check.

LPE

- Generated, update and tracked all RFIs, NCRs, Submittals and Procurement items with Architects, Engineers and subcontractor to ensure project schedule is met.
- Coordinated and assist project managers of the Aviation department with approval of all project change orders; project closeout, and punch list review with key facilities.
- Tackled and resolve security issues with SWAC managers in response to contract construction employees.
- Created and maintained archival library for 300 contract specification books, Occupational & Maintenance Manuals, conformed and as-built blueprints for aviation and engineer department accessibility.
- Researched and compile accurate data for engineer law department for complex projects under investigation.
- Extensively Assist Project managers and Architects on the ARFF project in executing punch list items, submittal packages, change orders and expediting sensitive documents to finalize project in timely manner.

Office Manager, Dr. Adam Stanger D.C., P.C., *2000- 2006*
New York, NY
Managed overall operations in medical office providing services for up to 120 patients

- Supervised and train office staff, responsible for all accounts payable/ receivable.
- Identified areas of cost savings and / or revenue generation consistent with the business goals. Ensure that revenue flows are in accordance with budgets.
- Recognized for solid technical support capabilities, achieving optimal resolution to clients' problems.
- Implemented numerous practice management techniques and processes, as well as computerized billing, administration, and insurance management systems.
- Increased gross revenue 20% with smaller patient volume through improved bookkeeping and billing practices, oversaw billing and insurance matters.
- Created innovative solutions to receiving denied insurance payments resulting from inaccurate billing procedures that helped resolve outstanding account receivables.
- Designed and applied new forms relating to certification of medical necessity findings in order to increased approvals of medical insurance procedures and ultimately additional revenue.

EDUCATION:

- Metropolitan College of New York, NY, Bachelor of Business Administration - *2007*
- ASA Advance Technology & Medical Institute, NY, Associates Degree of Science - *2002*
  (Major Medical Assistant)

CERTIFICATIONS/TRAINING:

- Electric Power Sales, September 2011 - Medium Voltage Power Cable, Splices & Terminations
- Marzzo Engineering, October 2011 - Analysis of Engineering Disasters, 8PDU's
- Regional Alliances/ PACE University, N.Y. 2010
- Construction Management Certificate
- Cost Estimation Certificate
- Catalyst Business Development/ Project Management, N.Y, N.Y 2009
- Certified Primavera P6 Project Management.
- Trained in Confirm Net/Ebic BPO
- OSHA Certified, 2008

SKILLS:

- Primavera P6 Project Management, Expedition, Live link, Win Trak, MS Office, MS Project, SAP
- Effective contract negotiator; confident self-starter with ambition, initiative & determination to complete projects timely; possess management and leadership ability and is efficient at planning and coordination of activities.
- Basic knowledge of reading and understanding construction drawings

LPE

Adelaida Sanabria

PROFESSIONAL EXPERIENCE

Construction Administrative Specialist, JFK Resident Engineer's Department — *2004 - Present*
LPE Enterprises/Port Authority of NY and NJ

- Assist in Daily Correspondence between Engineer of Construction, Construction Manager, Engineers and Contractors.
- Process Subcontractor's Approval Request ensuring compliance with Port Authority (PA) requirements.
- Compile maintain and distribute PA vehicle Maintenance Logs and Daily Work Schedules to assist in administrative control.
- Maintain Contract Documents and Staff Records for multiple construction contracts.
- Provide data entry and tracking of Time and Material documentation (Wintrak) to assist in maintaining current Contract costs.
- Interact with Contractors and Subcontractor's for Security Construction Cards (C-cards) & maintaining logs, interfacing daily with Contract representative and PA Security representatives to establish and control access to active construction sites.
- Process and ensure regulatory compliance permits for Construction projects that require mandatory permits for site specification construction activities
- Screen and direct telephone calls as required.
- Perform diversified duties to maintain office functionality.

Construction Administrative Specialist — *2001 - 2004*
JFK Redevelopment Program, Airport Access Program, JFK AirTrain
Bechtel Corporation/LPE Enterprises/Port Authority of NY and NJ

- Executive Administrative Assistant for Engineer of Construction
- Screen and direct telephone call
- Maintain EOC's Chrono letter file and Email
- Prepare invoices and Port Authority Procard Citi Statements
- Responsible for setting up phone bill allocation, and administration of phones/listing updates
- Schedules daily appointments, meetings and tours for the Engineer of Construction
- Process approvals of Post Award Contract Changes, Estimates and Invoices
- Conduct and prepare Payment Request and Purchase Orders
- Maintain and Coordinate PA petty cash vouchers
- Conduct reference check and maintain Subcontractor Approval Request Log
- Maintain Documents and Staff Records
- Provide computer inputting of Bills and Documentation (SAP and PeopleSoft)
- Process staff Payroll and weekly report
- Procurement of Office Supplies, Business Cards, Safety Equipment, Printing/Copying services

Construction Administrative Assistant, JFK Redevelopment Program, Airport Access Program — *1999 – 2001*
Bechtel Corporation/LPE Enterprises/Port Authority of NY and NJ

- Processed Post Award Contract Changes, Estimates and Invoices
- Maintained inventory, requisitions and disbursements of all office supplies and equipment.
- Scheduled and maintained vehicle maintenance, records and inventory
- Administration of Vehicles keys
- Provide general Office Administration functions and document control

Office Manager, A.A. Automobile Club of Long Island – Driving School — *1990- 1999*

- Managed Office Operations including financial systems consisting of cash receivable, invoicing and financial reporting.
- Maintained data retrieval systems
- Provide customer interface and educational class roster
- Coordinated instructors schedules

EDUCATION

- LaGuardia Community College, Internship, MTA Dept of Subways, Document Control, 1995-1996
- LaGuardia Community College, Associate Degree in Applied Science, Microcomputer Applications, 1996

SKILLS

- Proficient in MS Word, Excel, SAP, People Soft-Timekeeping, and Wintrak

AMANJOT SINGH

Office/Field Engineer

Dedicated, performance driven and versatile Civil Engineer with experience in the management and supervision in the construction of the heavy civil projects. Experience includes supervising the construction of concrete bridges, trestle foundations for conveyors, asbestos abatement and a variety of building rehabilitation projects. Backed up by strategic planning and proven history of on-time and high quality project completions.

The Port Authority of New York & New Jersey (PANY&NJ) – Construction Management Department – NY & NJ
Office Engineer

He provides consulting services in Construction Management Department at the Port Authority of New York & New Jersey. His duties include assisting Resident Engineers in preparing reports, RFI's, change orders and tracking down submittals, works closely with Post Award Contract Changes, attends inter-department monthly progress meetings, manages MEP subcontractors to ensure timely completion as per the baseline schedule and is responsible for preparing the two week "lookaheads". Projects have included:

• George Washington Bridge Bus Station Redevelopment - Assisted in implementing the document workflow for the smooth flow of the project and provided hands-on training to the construction and design division to familiarize them with Oracle Primavera Contract Management, which resulted in reducing the turn-around time for submittal review.

• Newark International Airport - Rehabilitation of Runway 4L-22R and Delay Reduction Initiatives. He prepared the preconstruction documents and provided instructions and training to the contractor and was responsible for supervising the submittal coordinators and tracking down the RFI's and Non-Compliance Notices.

• Bayonne Bridge - Navigational Clearance Program. He was responsible for tracking down the Post Award Contract Changes in addition to other documentation and for maintaining the user access for Oracle Primavera Contract Management.

• LaGuardia Airport - East End Parking Garage – Design and Build. He issued project assignment codes and prepared the monthly assignment report. He also assisted in generating the custom-specific reports as required by Construction and Design departments.

• Port Authority Trans-Hudson - Harrison Station Replacement. He maintained the submittals and RFI's log, assisted the Resident Engineer in expediting the submittal review by ensuring on-time delivery and regular follow ups.

ARK Systems Corporation
Site Engineer

Served as a liaison between the design and planning teams. Handled cost-of-materials estimations, report and document tracking, project documentation, on-site project visits, invoice/agreement verification and building permit applications. Completed design calculations for temporary structures such as scaffolds. Performed quantity calculations for site-grading. Assisted in preparing cost estimates by performing quantity takeoffs. Addressed and tracked RFI's, submittals, change orders and

construction schedules for running projects. Assisted in preparing construction schedule after the award of contract. Tracked daily progress reports of everyday operations to achieve all project objectives.

Reliance Infrastructure Limited
Field Engineer

Responsible for keeping the project on schedule. Ensured compliance of the actual construction with the contract drawings. Maintained daily work logs and related documentation. Prepared material and purchase order requisitions. Addressed RFI's to the Resident Engineer. Assisted in resolving design related issues during the construction phase. Attended progress meetings with the consultants and contractors.

Supervised the construction of 0.7 mile long cast-in-place box girder concrete road bridge. Responsible for monitoring the construction as per the contractual and technical specifications

Gammon India Limited
Field Engineer (Intern)

Assisted the field engineers in performing their day to day activities. Developed a clear understanding with the construction processes and procedures. Prepared the monthly material reconciliation reports for cement and steel reinforcement. Logged daily field reports in the company's reporting system.

LPE

Ewa Szulc

SUMMARY OF QUALIFICATIONS

- Project documentation, financial spreadsheets, data entry, payroll, accounts payable, and accounts receivable
- Experienced in contractor, subcontractor, and vendor billing issues and correspondence
- Coordinated and organized office personnel, and responsible for group productivity
- Skilled with Microsoft Office Excel and Word and familiar with Windows 95, 98, 2000

PROFESSIONAL EXPERIENCE

Office Engineer, Resident Engineer's Office, LaGuardia Airport, NY *2003 – Present*
LPE Enterprises / Port Authority of NY & NJ

- Process all Contractors Payment Applications for Resident Engineer's Office
- Verify all Contractors Payments vs. Memorandum of Justification and of Authorization
- Confirm all PANYNJ Charge Codes vs. Contractors Payments
- Maintain financial database and entry in SAP R/3 Business Enterprise software and PANYNJ Wintrak, a proprietary, cost-monitoring database
- Compile Monthly LGA Construction Division Summary Report in PANYNJ Wintrak
- Update Classified Items entries in PANYNJ Wintrak
- Perform Desk Audit Assessment on time & material billings for work orders, extra work, net cost work, and emergency delays
- Verify all contractors' payments vs. MJ authorization and charge codes and record all contractors payment data in SAP R/3 and PANYNJ Wintrak
- Compose all documentation regarding increases and decreases of monetary funds for extra work, net cost, classified items, and unclassified items
- Handle all documentation regarding contract changes against Memorandum of Justification and against original contract drawings – letter agreements
- Organize all documentation and required forms for contract closeout process
- Prepare and process Pending Item Notifications (PINs), Post Award Contract Change (PACCs) and Contract Change Orders (COs) within PANYNJ Wintrak
- In addition to her Office Engineer responsibilities on 15 other in house contracts, Ms. Szulc currently oversees the Office Engineering tasks associated with:
  - LGA 124.223 – LGA CM General Contracting Services for LGA Capital Infrastructure Program – $174,657,400.
  - LGA 124.201 – Design and Construction of East Parking Garage – $54,176,593.
  - LGA 124.191 –East End Substation – Foundation and Site Utilities $7,700,000
  - LGA 841.101 – Vaughn Collage – $23,973,620.00 (base contract) + $ 2,069,895.00 (value of the extra work)
- Process all school soundproofing payments and process all documentation for closing of school soundproofing contracts.
- Prepare all documentation for direct payments associated with payment applications
- Maintain monthly LGA Construction Report –PA Wintrak Program for all LGA Redevelopment Program Contracts
- Maintain classified items date in PA Wintrak Program
- Perform Desk Audit on T&M Billings (work orders, extra work, net cost work, emergency delays)
- Enter all contractors Payments in SAP program and Wintrak Program
- Prepare and submit all documentation regarding: money increases (decreases) in extra work, net cost, classified items, and unclassified items; net cost conversions and reduction in retainage; letter agreements; contract closeout and electronic closeouts.
- Schedule preconstruction meetings
- Prepare Letter to Proceed for specific Work Orders for Work Orders Contracts

LPE

Bookkeeper, Newtown Creek Water Pollution Control Plant, NY — *2003 – 2003*
LPE Enterprises

Bookkeeper, AP Gas Station Developers, Inc — *1998 – 2002*
50 Division Place, Brooklyn, NY 11222

Office Administrator, Project Development Group, Inc — *1992 – 1998*
759 Hicks Street, Brooklyn, NY 11231

EDUCATION

Bachelors of Science Degree in Textile and Polymer Engineering, evaluated diploma 1993
Textile Engineer-Polytechnic of Lodz, Poland
The Faculty of Textile Engineering and Marketing
Politechnika Lódzka – Technical University of Lodz, Poland

ADDITIONAL SKILLS

- Bilingual – Read, Write, and Speak Polish fluently and English
- Detail oriented, Highly Motivated, Creative, Energetic, Problem Solver
- Teamwork, Quality and Goal-oriented, Attentive, Strong Interpersonal Skills
- Punctual, Responsible, Productive, Quick Learner
- Clean Driver License, Very Dependable and Flexible working hours

Scott Templeton
Office Engineer

Professional Profile
Mr. Templeton has over 11 years of experience on civil design, transportation, and construction engineering projects. He has been involved with assignments ranging from local roadway improvements, airport grading and drainage design, track alignment and layout design for rail yards to construction oversight including office engineering and inspection services for multiple structural improvement projects for the Port Authority of NY & NJ, New York City Economic Development Corporation, MTA Bridges and Tunnels, and the New York City Dept. of Design and Construction.

Proposed Project Assignment
Construction Administrator

Course Work
2014 - NYC DOB 4-Hour Supported Scaffold (2018)
2014 - NYC DOB Confined Space Awareness

Total Years Experience 11

Project Experience
Bayonne Bridge Navigational Clearance Program (BBNCP) Construction Management, NY/NJ; 7/13-Present. Office Engineer. This project involves construction management services for the $743-million Bayonne Bridge Navigational Clearance Program (BBNCP). This extraordinarily complex, once-in-a-lifetime project will replace more than 5,000 feet of viaduct and re-frame the existing steel arch structure to accommodate a new roadway 65 feet above the existing roadway. Mr. Templeton is working with Port Authority project staff and GPI project management staff to provide critical project progress and cost reporting. This reporting provides upper level Port Authority management with a concise written summary of work completed to date, schedule analysis, cost analysis and visual tracking of work using CADD drawings and digital photos. Also, Mr. Templeton assists with monthly updates of the project's BIM 4D modeling using Synchro and Primavera software. The model is another tool used to communicate project progress to the owner and project stakeholders. Client: Port Authority of NY & NJ

Storm Sewer and Water Main Installation in 58th Avenue, New York, NY; 12/11-7/13. Office Engineer. Mr. Templeton's responsibilities included the review and submittal of contract payments, change orders, account payments, reviewing inspector's daily reports, recording and tracking daily quantities, and preparation of monthly analyses of contractor's manpower reports. Additional responsibilities included reviewing the project baseline schedule and ensuring conformance with contract specifications and maintaining records in strict compliance with contract requirements. Client: New York City Dept. of Design & Construction

Miscellaneous Structural Improvements on the RFK-Triborough Bridge, New York, NY; 5/09-11/11. Office Engineer. Mr. Templeton's responsibilities included review and submittal of contract payments, change orders, RFI's, reviewing inspector's daily reports, recording and tracking daily quantities, and preparation of monthly analyses of contractor's manpower reports. Additional responsibilities included reviewing the project baseline schedule and ensuring conformance with contract specifications and maintaining records using Primavera Contract Manager (web based computerized document control system) in strict compliance with prevailing contract requirements. Client: MTA Bridge and Tunnel Authority

Rehabilitation of Lily Pond Avenue, New York, NY; 12/06-5/09. Office Engineer. Mr. Templeton's responsibilities included review and submittal of contract payments, change orders, RFI's, reviewing inspector's daily reports, recording and tracking daily quantities, and preparation of monthly analyses of contractor's manpower reports. Additional responsibilities included reviewing the project baseline schedule and ensuring conformance with contract specifications and maintaining records using a computerized document control system in strict compliance with prevailing contract requirements. Client: MTA Bridge and Tunnel Authority

Perimeter Security Fence for JFK, LaGuardia and Newark Airports, Various Locations; 10/06-12/06. Construction Cost Estimator. Mr. Templeton's responsibilities included developing cost estimates for client, and reviewing the progress of existing projects to ensure their completion within the parameters of the established project budget. He also conducted initial analysis of drawings and specifications to ensure that required information was provided and also provided narratives for selected portions of a project cost estimate to adequately describe scope and level of quality within an estimate. Mr. Templeton also researched selected products from a cost and constructability perspective and reviewed progress and construction documents for constructability. Client: Port Authority of NY & NJ

Scott Templeton
Office Engineer

Rehabilitation of the Arthur Kill Lift Bridge, NY/NJ; 5/05-3/06. Office Engineer. Mr. Templeton's responsibilities included review and submittal of contract payments, change orders, RFI's, reviewing inspector's daily reports, recording and tracking daily quantities, and preparation of monthly analyses of contractor's manpower reports. Additional responsibilities included review of the project baseline schedule and ensuring conformance with contract specifications and maintaining records using a computerized document control system in strict compliance with prevailing contract requirements. New York City Economic Development Corporation

Rehabilitation of the Safety Areas for Runways 4L-22R, 13L-31R, and 13R-31L at John F. Kennedy International Airport, New York, NY; 12/02-5/05. Civil Engineer. The area investigated extended 500 ft from the runway centerline to a point 1,000 ft beyond the end of the runways. The project involved development of a grading plan compliant with FAA requirements, utility and investigation and design, navigational aid relocation and drainage were the major components of this project. Project work included performing grading and drainage design, preparing requests for topographic and utility surveys, coordinating electrical and landscaping subconsultants and preparing construction cost estimates and specifications. Also included were participation in a value engineering study and a presentation to the FAA. His responsibilities included grading and drainage design and preparation of cost estimates. Client: Port Authority of NY & NJ

Airside Improvements associated with the Construction of Terminal 5 at John F. Kennedy International Airport for JetBlue Airways, New York, NY; 12/02-5/05. Civil Engineer. Mr.Templeton was involved as the airfield subconsultant for the overall construction of a new terminal building and aircraft operations. The project involved performing a visual condition inspection and pavement-coring program of the Terminal 5 aeronautical pavements (PCC and AC pavements) including the design of all airfield earthwork/grading, drainage and paving for this 40+acre apron. An airfield pavement evaluation report was prepared that documented the existing pavement conditions utilizing pavement condition indices (PCI), rehabilitation recommendations and conceptual pavement sections. Mr. Templeton's responsibilities included apron inspection and preparation of airfield pavement evaluation report. Client: Port Authority of NY & NJ

Design Services for Apron Paving of Taxiway DD and Drainage Improvements at LaGuardia Airport, New York, NY; 12/02-5/05. Civil Engineer.Project work included preparing contract drawings for paving an apron area between Taxiway DD and the perimeter dike for use by emergency vehicles to access an aircraft parking area. Design was performed in accordance with current FAA standards for taxiway safety areas and OFA. Responsibilities included grading and drainage design. Mr. Templeton's responsibilities included grading and drainage design of apron area. Client: Port Authority of NY & NJ

Design Services for the Perimeter Intrusion Detection Rapid Deployment Program (PIDS) at John F. Kennedy International Airport, New York, NY; 12/02-5/05. Civil Engineer. This project involved providing investigation and design work for the perimeter intrusion detection and the review of the perimeter security route. The project involved a field inspection to determine perimeter routing conditions and unanticipated problems and review of airport operations, FAA and tenant requirements. Mr. Templeton's responsibilities included field inspection to determine perimeter routing conditions, developing modified airport base mapping with perimeter security line and security equipment installation locations, and preparation of contract documents for the installation of perimeter fence. Client: Port Authority of NY & NJ

Rehabilitation of CTB Ground Level Parking Garage (Lot No. 2) at LaGuardia Airport, New York, NY; 12/02-5/05. Civil Engineer. Project work involved a pavement condition analysis and preparation of rehabilitation alternatives and cost estimates. The rehabilitation alternatives and subsequent construction documents incorporated review of the construction restrictions associated with working in the ground level of the parking garage. An interim repair alternative was progressed to civil design for final construction documents, including plans, specifications and cost estimates. This interim repair incorporated a multi-staged mill and overlay of the entire Level 1. The civil design was coordinated with traffic layout adjustments that were incorporated to improve the parking layout configuration. This project involved extensive coordination with subconsultants, and LGA-OPS, and involved extensive construction staging and maintenance and protection of traffic in a high-volume passenger area. Mr. Templeton's responsibilities included pavement analysis and restoration, construction staging layout and maintenance and protection of traffic plans. Client: Port Authority of NY & NJ

James F. Weber
Chief Office Engineer

Professional Profile
Mr. Weber possesses many years of construction inspection experience relating to the rehabilitation of major bridge and highway structures in the metropolitan area, with a progression towards more complex assignments and challenging responsibilities.

Project Experience
Belt Parkway Bridges Program Management Services, Brooklyn, NY; 5/06-Present. Chief Office Engineer. This project involves program management and resident engineering and inspection services for the rehabilitation/replacement of seven bridges along a 7.5-mile section of the Belt Parkway. Mr. Weber's responsibilities include management of all office engineering functions for the entire Belt Parkway Program. He will draw on his extensive experience from the Williamsburg Bridge Program, which had a construction program value exceeding $1 billion. Mr. Weber manages all office engineers on each of the individual six Belt Parkway Bridges and ensures a cohesive methodology for all office engineering standards, all in accordance with NYSDOT MURK. Mr. Weber works closely with and advises both the program manager and assistant program managers on many technical issues on this project and prepares the majority of correspondences which require action. Mr. Weber also maintains all information databases and scheduling programs in use on this project to track all project submittals including the use a web based field information management system. Client: New York City Dept. of Transportation

Proposed Project Assignment
Construction Administrator

Total Years Experience 32

Williamsburg Bridge Reconstruction of Miscellaneous Rehabilitation of the Main Bridge, Contract 8, #BRC253CCA, New York, NY; 8/03-9/07. Office Administrator. This $280-million project involved the construction engineering and inspection for the rehabilitation of the main bridge. Mr. Weber's responsibilities included overseeing an engineering staff of seven people, managing all office engineering responsibilities and directly negotiating all contract change orders on this project. Mr. Weber worked closely with and advised the resident engineer on many technical issues on this project and prepared the majority of correspondences which required action. Mr. Weber also maintained all information databases in use on this project to track all project submittals. Because Mr. Weber has worked on the Williamsburg Bridge rehabilitation program since its inception, his experience and technical expertise were a valuable resource to NYCDOT and his methodology in organizing and managing a complex construction engineers' field office has become the model for which other NYCDOT projects have emulated. Client: New York City Dept. of Transportation

Williamsburg Bridge North Roadways Reconstruction, Contract 7, #BRC253CA, New York, NY; 12/00-8/03. Office Administrator. This $248-million project involved the construction engineering and inspection for the reconstruction of the north inner and outer roadways. His responsibilities included overseeing an engineering staff of ten people, managing all office engineering responsibilities and directly negotiating all contract change orders on this complex project. Mr. Weber also advised the resident engineer on many technical issues and draws from his experiences from Contracts 4, 5 and 6 to solve many of the project's issues. His responsibilities also included the establishment and maintenance of an extensive computer database system for the tracking and coordination of all project correspondence, submittals and payments. Client: New York City Dept. of Transportation

James F. Weber
Chief Office Engineer

Williamsburg Bridge BMT Structure Rehabilitation, Contract 6, #BRC253BBA, New York, NY; 7/98-12/00.As office administrator, Mr. Weber was directly responsible for the office administration of this $176-million reconstruction program of the Williamsburg Bridge. Mr. Weber oversaw an office staff of ten people. Due to the critical scheduling of this project and the extreme importance of project communications, Mr. Weber spent the majority of his time coordinating the resolution of project technical issues and overall schedule management for the project. This involved daily contact with the numerous subconsultants who were involved in specific areas of this project, and reviewing all issues prior to communicating a formal response back to the contractor, reviewing and approving contractor submitted schedules and analysis of contractor claims. Client: New York City Dept. of Transportation

Williamsburg Bridge South Roadways Reconstruction, Contract 5, #BRC253BAA, New York NY; 1994-7/98.As office administrator, Mr. Weber was directly responsible for the office administration of this $310-million reconstruction program of the Williamsburg Bridge. Mr. Weber oversaw an office staff of 14 people. Due to the critical scheduling of this project and the extreme importance of project communications, Mr. Weber spent the majority of his time coordinating the resolution of project technical issues and overall schedule management for the project. This involved daily contact with the numerous subconsultants who were involved in specific areas of this project, and reviewing all issues prior to communicating a formal response back to the contractor, reviewing and approving contractor submitted schedules and analysis of contractor claims. Mr. Weber also worked directly with the NYCDOT Bureau of Bridges to assist in the establishment of a uniform construction field office administration policy. This included being the Bureau of Bridge's representative in the development of a state-of-the-art computerized construction payment system. Client: New York City Dept. of Transportation

Williamsburg Bridge Main Cable Rehabilitation, Contract 4, #BRC253A, New York, NY; 1991-1994. As office engineer for this $88-million cable rehabilitation project, Mr. Weber's specific responsibilities involved the supervision of all field office operations in accordance with NYSDOT MURK and NYCDOT. At the request of NYCDOT, Mr. Weber lectured at training sessions for EEO Utilization and Disadvantaged Business Enterprises on federally funded construction projects. In addition, Mr. Weber prepared and negotiated all contract change orders and to date has prepared over $17.1-million in extra work. Mr. Weber has also written procedures and guidelines for the Bureau of Bridges/Bridge Construction Group on the following topics: Preparation of Construction Change Orders, Contractor Progress payment requirements, Record Keeping on a Time and Material Basis, High Strength Bolt Sampling, Testing and Inspection, Construction EEO Goal Requirements and Monitoring, and Field Office Record Keeping Procedures. Client: New York City Dept. of Transportation

Interborough Parkway Inspection, #D252310, Glendale, NY; 1988-1991. As office engineer on this $48-million highway and bridge reconstruction project, Mr. Weber was in charge of all field office operations, in accordance with NYSDOT MURK requirements. He used state-of-the-art computerized project management software to monitor the construction schedule. He also utilized microcomputers in the field office to track submittals, correspondence, and shop drawings utilizing one master database. He processed the contractor's estimates using the NYSDOT CEES program (Computerized Engineers Estimate System), and wrote status reports for the owner, tracking progress, work performed, and the forecasting of all potential problems. Client: New York State Dept. of Transportation

Manhattan Bridge New Maintenance - Main Cable and Cable Anchorage Rehabilitation, Chamber C, New York, NY; 1985-1988. As office engineer for this rehabilitation project, Mr. Weber's responsibilities included processing contractor monthly estimates including partial payment requests, reviewing quantities on Inspector's Daily Reports, establishing a filing system utilizing microcomputers, the review logging and distribution of all correspondence and contractor's submittals, procurement of office and safety supplies for inspectors, creation and maintenance of the computerized shop drawing log, process of Orders-on-Contract, and review contractor and subcontractor's payroll and EEO submittals. Mr. Weber served as liaison between the contractor and the engineer-in-charge and assisted the resident engineer with all administrative duties. As an inspector, Mr. Weber was involved in the installation of structural steel components including the erection of steel grid decking, shear stud connectors, bridge drainage systems and structural steel framing members. Client: New York State Dept. of Transportation

RESUMES

SCHEDULERS / COST ESTIMATORS

Resumes are presented in alphabetical order

YULEE ARONSON, PE

Project Manager

Yulee Aronson has more than 30 years of Construction Management and Project Controls experience in the construction industry. As a licensed professional engineer, he has worked as a chief operating officer, chief estimator, scheduler, and project controls manager. Yulee's experience includes construction management, operations management, hard-bid and budget estimating; project planning, scheduling, and controls; managing airports, rail and transit, waste water, transportation; bridges, tunnels, heavy construction, and highways and industrial, commercial, residential, institutional, and educational facilities.

Education
- BS, Engineering Administration, Worcester Polytechnic Institute

Registrations
- Professional Engineer (NY, PA & CT)

Memberships
- Association for the Advancement of Cost Engineering
- Society of Value Engineers

The Port Authority of New York & New Jersey – LGA Airport Delta Terminals C&D Renovations – New York, NY
Estimator/Assistant Program Manager

Construction of connectors and new baggage systems. Code and agency directed updates. Working remotely Yulee is responsible for preparing and negotiating change orders while managing contractors' project delivery pace.

State of Hawaii – Honolulu International Airport Terminal Modernization – Honolulu, Hawaii
Chief Estimator

The State of Hawaii's Department of Transportation, Airports Division $1.7 billion Honolulu International Airport's Terminal Modernization Program involves expanding and renovating the passenger concourses to improve passenger service and increasing security and operation efficiencies. Parsons has been contracted to provide program management services, which entails program coordination and oversight of all planning, architecture, and engineering and construction activities. The project scope includes, but is not limited to, project and program controls, contract administration, progress payment validation, claims avoidance, project safety assessments, quality assurance, financial and progress reporting, cost validation and estimating, change order control and negotiations, financial quantities and contract amounts determination, planning support and design management, and contract closeout and warranty support.

Yulee Aronson prepared the detailed structural budget estimate at various stages of design.

Denver International Airport Authority –Denver International Airport – Denver, CO
Chief Estimator

The project involves Terminal Expansion, Hotel Construction, Rail Link Extension, and Signature Bridges. Yulee Aronson prepared the detailed budget estimate and life cycle analysis for Signature Bridges at concept.

World Airports – Tom Bradley International Terminal, Construction Management – California
Chief Estimator

The $723.5 million renovation, considered the largest individual project in the city of Los Angeles' history, includes major interior renovations; the installation of an in-line, checked-baggage security system; and the construction of boarding gates for new large aircraft while keeping the one million sq. ft. terminal fully operational. Construction management services for the project include design review; cost, budget, and schedule control; value engineering; quality assurance; operational planning; constructability reviews; safety and security management; contract administration; claims assessments; contract close-out and warranty support; and facility start-up and turnover. Yulee Aronson was responsible for preparing detailed estimates for various change orders, bulletins, and ROMs valued at more than $100 million.

Parsons – New York, NY

Yulee Aronson provides construction management, estimating and scheduling support to all Parsons' global business units in all geographic areas on as-needed basis. Construction types include bridges, airports, waste water treatment facilities and rails. Management includes establishing budgets and hard-bid proposals, negotiations with clients and subs, preparation of contracts, establishing and managing schedules, estimating and negotiating change order.

CalTrain – CalTrain PTC – San Francisco, CA
Operations Manager

Design Build of Positive Train Control System for Caltrain. While on short term assignment Yulee is responsible for buying out, negotiating, procuring and managing subcontractors, coordinating with design and construction leads to make sure the work progresses in the most efficient manner. Solves problems and resolves issues to facilitate project delivery.

New York City Department of Environmental Protection – Sandy Recovery Work for 30 Pumping Stations – New York, NY
Project Controls Manager

The work included recovery of 30 and repair of 6 pumping stations damaged by the storm. Acting as the Assistant to the Construction Manager managed day-to-day construction operations as well as maintained project schedules, documentation and reporting for the Client. Assisted in document preparation for FEMA reimbursement.

Triboro Bridge and Tunnel Authority – TN-49 Seismic Study and Suspended Span Deck Replacement, Feasibility Study for the Throgs Neck Bridge – New York, New York
Chief Estimator

The project involves a seismic investigation of the entire Throgs Neck Bridge, which includes a deck replacement study, conceptual design, and required utility relocation for the suspended spans. Yulee Aronson prepared the detailed budget estimate at final design.

New York City Department of Transportation – Williamsburg Bridge, Reconstruction – New York, New York
Chief Estimator & Scheduler

The project involves construction support services, which entail strengthening and reinforcing structural members of main tower columns and main stiffening truss members; seismic retrofit of intermediate tower bases; new maintenance travelers, platforms, hoisting systems, and adjustment of suspender lengths; installation and integration of the Intelligent Transportation System (ITS) at the Traffic Management Center; intelligent traffic operation signals and lane control signals; and the study and design of contraflow scheme using a movable barrier and barrier transfer machine, including a new storage and maintenance facility. A bearing replacement at intermediate towers (PP 10 and 15) was added to the contract. Yulee Aronson prepared detailed estimates and schedules for various change orders.

Miami-Dade Transit Authority – Miami Rail Yard – Miami, Florida
Chief Estimator

The project involves final design and design services during construction for the North Corridor Metrorail Extension of the Miami Heavy Rail System. The 9.5-mile elevated, double track rail extension includes seven stations serving the NW 27th Avenue corridor, northern Miami-Dade County, Opa-Locka, Miami Garden communities, Miami-Dade College North, the Calder Race Track, and Dolphin Stadium. Yulee Aronson prepared the quantity take-offs and pricing required for developing the design development cost estimate of work for new maintenance and storage tracks.

Robert Baranowski, P.E.
Senior Design Engineer

Professional Profile
Mr. Baranowski is a senior design engineer who has diverse experience in all aspects of civil engineering. He has engineered various civil and site improvement projects ranging from large drainage infrastructure, utilities, and local streets to large urban highways. Mr. Baranowski also has extensive experience in the development of highly accurate electronic topographic mapping and the development of digital terrain models. Mr. Baranowski has evaluated project site hydrologic and hydraulic conditions, analyzed and designed complex drainage systems, and has prepared contract documents and technical specifications for a wide variety of civil construction projects. He has evaluated and designed many utility installations including public water, sanitary sewer, electric, telephone, and natural gas relocations. Mr. Baranowski is capable of using current computer-aided design technology in the development of contract design documents.

Proposed Project Assignment
Cost Estimating

Registration/Certifications
1991/Professional Engineer/NY
2014/Professional Engineer/IN

Education
BS/1986/Civil Engineering

Total Years Experience 28

Project Experience

Port Authority On-Call Construction Management, George Washington Bridge Lighting and Electrical Facilities Upgrade; Work Order 2TO; Contract No. MF-202.901; 9/03. Senior Engineer. Mr. Baranowski developed a comprehensive lighting and electrical improvements construction cost estimate to support the Client's review of an estimate submitted by an on-site construction contractor. Client: Port Authority of NY and NJ

Manhattan Bridge Rehabilitation of North Spans over East River, Contract 10, New York, NY; 11/03-11/08, 3/09-6/09. Senior Engineer. This project involved REI services for the reconstruction on the north side of the structure on the approach and suspended spans over the East River and maintenance painting inspection. Mr. Baranowski was responsible for the complete development of the as-built record plans. As-built information recorded on paper prints by field personnel was incorporated into the project's electronic drawing files. The project's electronic drawings were modified to accurately reflect the extensive and complex structural rehabilitation work performed on the Manhattan Bridge's North Spans. Mr. Baranowski developed all necessary proposal materials and solicited bids from various contractors for the digital archiving of the project's voluminous record plans. Mr. Baranowski also developed an independent cost estimate to support NYCDOT's review of the bids received and its selection of the appropriate contractor to perform this vital task. Client: New York City Dept. of Transportation

Manhattan Bridge Painting and Interim Rehabilitation, Contract 8C, New York, NY; 10/02-12/03. Senior Engineer. This project involved CEI for structural rehabilitation of the west side of the bridge and suspension system, plaza areas on the approaches and anchorages and rehabilitation of anchorages. Work also involved the 100% removal of existing paint and recoating of the west side of the bridge, both towers, and two of four cables. Mr. Baranowski was responsible for the complete development of the As-Built Record plans. The As-Built information recorded on paper prints was incorporated into the project's electronic drawing files. The project's electronic drawings were modified to accurately reflect the major structural rehabilitation work performed on the Manhattan Bridge. In the development of the Record Plans, extensive modifications were made to the utility-related drawings to indicate the actual location and magnitude of the utility installations executed on the Manhattan Bridge. Mr. Baranowski developed all necessary proposal materials and solicited bids from various contractors for the digital archiving of the project's voluminous record plans. Mr. Baranowski also developed an independent cost estimate to support the client's review of the bids received and its selection of the appropriate contractor to perform this vital task. Client: New York City Dept. of Transportation

Long Island Expressway Noisewall Design - RDSA #5, Roslyn Heights, NY; 11/06-6/08. Project Manager. The project involved highway design Phases V and VI for the installation of a noise barrier on the Long Island Expressway corridor in Roslyn Heights. Mr. Baranowski was responsible for the establishment of noise barrier alignments, development of work zone traffic control, coordination with team subconsultants, and preparation of the project plans and specifications. Mr. Baranowski developed and supervised the development of the detailed construction cost estimate. He developed the comprehensive work zone traffic control cost estimate. Mr. Baranowski compiled, reviewed and transmitted construction cost estimate data to support the client's procurement of the appropriate project construction funding. Client: New York State Dept. of Transportation

Robert Baranowski, P.E.
Senior Design Engineer

Long Island Truck-Rail Intermodal Facility, Brentwood, NY; 4/04-8/07. Senior Engineer. This project involved preliminary design, environmental analyses, and the Environmental Impact Statement (EIS) for a proposed intermodal transportation facility and its highway connections with the LIE, Sagtikos Parkway and Crooked Hill Road. Mr. Baranowski was responsible for the preliminary design of arterial access and intermodal yard circulation roadways for this proposed 120-acre intermodal freight transportation center. Alternatives involved reconstruction of the Sagtikos State Parkway and its interchange with the Long Island Expressway (I-495). Mr. Baranowski also designed a comprehensive preliminary drainage system. Mr. Baranowski developed comprehensive construction cost estimates for all of the various arterial access alternatives investigated. Client: New York State Dept. of Transportation

Roadway Reconstruction in the Wellington-Heathcote Roads Area, Elmont, NY; 9/06-10/06. Design Engineer. This project involved a topographic survey, final design, construction documents and construction inspection for the reconstruction of six residential roadways located in Elmont, NY. Mr. Baranowski was responsible for the development of the contract drainage and utility plans with the goal of minimizing/avoiding potential utility conflicts. Mr. Baranowski was also responsible for the development of the construction cost estimate for this municipal project. Client: Town of Hempstead Engineering

Expanded Project Proposal (EPP) for CR 3 Pinelawn Road, Melville, NY; 1/02-2/02. Design Engineer. This project involved an Expanded Project Proposal and preliminary design for the widening and rehabilitation of CR 3 between Ruland Road and the Long Island Expressway. The project included evaluation of at-grade and grade-separated alternatives at the intersection with Ruland Road. Mr. Baranowski was responsible for developing several CR-3 alignment alternatives for presentation in the Expanded Project Proposal (EPP). Additionally, Mr. Baranowski was responsible for preparing preliminary construction cost estimates for the various EPP alternatives and developing the associated right-of-way acquisition/easement costs for each alternative. Mr. Baranowski also compiled and prepared responses to NYSDOT comments on the draft EPP. Client: Suffolk County Dept. of Public Works

Bayville Road Study, Bayville, NY;2/96-7/97. Design Engineer. This project involved horizontal and vertical alignment study of Bayville Road to eliminate tidal flooding. The project also involved the study of alternate methods of erosion control and shore protection of existing roadway. The project also involved conducting studies and preparing a report to describe improvements to be made to Bayville Avenue which would raise it above the flood plain. Mr. Baranowski was responsible for the generation of several roadway AASHTO-compliant horizontal and vertical realignments to mitigate flooding conditions along this coastal evacuation route. He was also the chief author of the "Report for the Supplemental Study of Bayville Road/Bayville Avenue". He worked on all components of the report including roadway geometrics, drainage, and ROW impacts. Mr. Baranowski also developed detailed construction cost estimates for each of the alternatives investigated and presented in the project reports. Client: Nassau County of Dept. of Public Works

Mill and Fill, I-495 NYC Line to Exit 37 (Willis Avenue), Assignment #2, Queens/Nassau County, NY; 5/13-9/13. Senior Design Engineer. The proposed work included a 2-in. pavement milling of the existing asphalt riding surface, some isolated full-depth composite pavement or full-depth asphalt repairs, new top course asphalt resurfacing and new pavement markings. The asphalt resurfacing was a 2-in. overlay hot mix asphalt. Drainage work was limited to frame and grate adjustments for frames that were broken, or grates that were low prior to resurfacing, as necessary. This mill and fill project did not change the profile grades so drainage flows and grate elevations are not affected. The centerline length of the project was 4.3 miles or 42.9 lane miles, with an additional four miles of ramps. Mr. Baranowski conducted a comprehensive pavement inspection/evaluation of the LIE corridor and identified the types of pavement repairs warranted. He was also responsible for the development of multi-staged site-specific Work Zone Traffic Control strategies. Mr. Baranowski was responsible for all coordination with the NYPD pertaining to the need for NYPD Traffic Enforcement Agents during the project's construction. Mr. Baranowski was also responsible for coordinating and developing cost estimates for administering the use of NYPD Traffic Enforcement Agents during the project's complex nighttime work zone traffic control stages. Mr. Baranowski also developed detailed nighttime work zone traffic control cost estimates for each of the project's multi-staged nighttime operations. Client: New York State Dept. of Transportation

Thomas English, P.E.
Structural Engineer

Professional Profile
Mr. English is a structural engineer with eight years of bridge rehabilitation and design experience including in-depth inspection and construction inspection performed on highway, street, movable, and suspension bridges across New York City, Long Island, New Jersey, and Connecticut.

Project Experience
Belt Parkway Bridges REI Services - Gerritsen Inlet Bridge, Brooklyn, NY; 3/14. Structural Engineer. This project involved total replacement of Gerritsen Inlet Bridge on the Belt Parkway in the Borough of Brooklyn. The major work included removal and disposal of main spans including concrete deck, steel girders, floor beams and stringers, approaches, concrete superstructure, closure walls, timber piles, concrete piers, pier caps, columns, abutments, wingwalls, street lighting, transformer room, transit ducts, steel conduits, navigation lights, and trees and vegetation. Mr. English was responsible for quality assurance concrete field testing of structural concrete during placement of the new abutments, wingwalls and center pier. His duties included preparing written reports to document the test results in accordance with NYCDOT and ACI reporting requirements. Client: New York City Dept. of Transportation

Project 102-300 - Painting and Rehabilitation of Bridge No. 02295, Route 136 over the Norwalk River, Route 136 Norwalk, CT; 11/08-4/09. Inspector. This project involved the rehabilitation of a lift bridge crossing the Norwalk River. Rehabilitation included abrasive blast cleaning, surface preparation and application of new paint coatings for entire bridge structure, structural steel repairs, relocation of bridge weights and interim/final balancing of bridge, removal and replacement of lock bars and live load shoes, removal of existing bridge drainage system, concrete surface variable depth patch repair, masonry repointing and repair of slope paving (embankment) grade, upgrade of bridge electrical and control system, removal and replacement of traffic signals, refurbishment of electric drive motors (prime and auxiliary), miscellaneous control house renovations and maintenance and protection of traffic implementation. Mr. English's responsibilities during this project included coordination of field inspection efforts to meet the contractor daily schedule of work operations (including review of daily and two-week look-ahead construction schedules); performing quality assurance oversight of the contractor's daily work activities for compliance with ConnDOT Standard Specification Form 816, Special Provisions, and all applicable standards; review of shop drawings and submittals; development and calculation of independent cost estimates for change order work activities; inspection of materials for conformance with ConnDOT and applicable specifications and plans; and collection of samples of materials for quality assurance testing. In addition, he was responsible for providing daily quality assurance inspections during all contractor work activities, including: existing Dolphin pile rehabilitation involving timber pile driving with point reinforcement; timber walkway removal and replacement; galvanized steel cable wraps and fastener installation; retractable platform modifications; removal of existing safety railing and installation of OSHA approved steel pipe railing; repair of cracked welds on existing aluminum bridge rail posts; cantilever slab reinforcement and installation of protective anchorage covers; and the removal of existing machine air breathers and replacement with new hygroscopic breathers. Mr. English also inspected multiple work items using time and material protocol, reviewed certified payroll sheets, and prepared manpower, material and equipment (Con-9) tracking sheets; and utilized the Site Manager recordkeeping database for preparation of Daily Work Reports (DWRs) and monitoring of work in progress. Client: Connecticut Dept. of Transportation

Thomas English, P.E.
Structural Engineer

Bronx-Whitestone Bridge Cable/Suspender Rope Rehabilitation, BW-85/86/WBM-339, Bronx, NY; 6/08-11/08. Inspector. This project involved construction management and inspection services for protective coating removal and re-application, and cable/suspender rehabilitation at the Bronx-Whitestone Bridge. Mr. English's responsibilities included performing daily quality assurance inspections during the installation of temporary tower scaffolding and all structural supporting members; conducting a quality-based condition survey of the tower interior cells existing coatings and inspection during the cleaning, preparing and painting of these corroded areas in accordance with SSPC standards and Occupational Safety and Health Administration (OSHA) guidelines, and the monitoring of main cable wire replacement at select locations per TBTA contract specifications and guidelines. He was also responsible for coordinating and providing daily inspection of set-up and removal of MPT schemes per approved MPT plans and NYSDOT guidelines. Additionally, Mr. English attended progress and technical meetings with contractor and client representatives, and developed and maintained daily progress quality assurance reports and progress payment records, and ensured that all work as performed in accordance with TBTA and NYSDOT applicable specifications and standards, and performed equipment calibration inspection (per NYSDOT Steel Construction Manual) and technical review of material product data sheets and material safety data sheets (MSDS). Client: Triborough Bridge and Tunnel Authority

Manhattan Bridge Rehabilitation of Lower Roadways, Contract 11, #BRC156A, New York, NY; 5/06-6/08. Mr. English served as an inspector on this $150-million construction project, including; removal and replacement of floorbeams, stringers, bearings and deck in main span and side spans; rehabilitation of anchorage chambers; installation of new lighting and traffic signs on lower roadway; rehabilitation of travelers in suspended spans; replacement of maintenance platforms at towers; painting of bridge in suspended and approach spans; and repair of flagged conditions. Mr. English's responsibilities included performing daily quality assurance inspection for the rehabilitation of the Traffic Signalization System; replacement of communication cable and integration with existing ITS; and installation of electrical conduit, wiring and boxes for new lower roadway lighting system; all in accordance with the National Electric Code and NYSDOT code specifications. In addition, he was responsible for performing quality assurance inspections for structural steel replacement including floorbeams, stringers, stringer bearings, lateral bracings, and maintenance platform hangers - in accordance with the requirements of the NYS Steel Construction Manual. His duties also included providing quality assurance inspections during the installation and monitoring of new elastomeric bearings in accordance with NYSDOT Standard Specifications tolerances; performing steel surface preparation inspection per the Society for Protective Coatings (SSPC) guidelines; performing torque testing inspection in accordance with NYS Steel Construction Manual requirements; and providing written recordkeeping of daily work progress including installed material quantities per Manual of Uniform Recordkeeping (MURK) standards. Client: New York City Dept. of Transportation

Replacement of County Road 67, Motor Parkway Bridge at the LIE, Exit 55, Town of Islip, NY; 11/10-1/11. Junior Structural Engineer. This project involved a two-stage replacement of the existing 50+ year-old, four-span bridge with the new structure. The new bridge consisted of a two-span steel frame composite with the concrete slab with integral wearing surface. As a certified level 1 ACI Concrete Field Technician, Mr. English was responsible for quality assurance concrete field testing of structural concrete during placement of the new abutments, wingwalls and center pier. His duties included preparing written reports to document the test results in accordance with NYSDOT and ACI reporting requirements. Client: Suffolk County Dept. of Public Works

Eight Bridges Component Rehabilitation, HBCR02B, Various Locations, NY; 6/11-Present. Structural Engineer. This is a total design and construction support services contract, which includes the in-depth inspection of eight bridges, preparation of a Bridge Rehabilitation Report (BRPR), preparation of preliminary and final design plans, specifications, and Engineer's estimate, bidding assistance to the city, and Construction Support Services. During the preliminary design phase, Mr. English assisted in performing the in-depth field inspections, and identifying substandard conditions and defects of the existing bridge components in accordance with the NYSDOT Bridge Inspection Manual. He also prepared Bridge Reconstruction Project Reports (BRPRs) to document the deficiencies and provide cost effective design solutions. His responsibilities also included developing the schedule and coordination of MPT (in accordance with NYSDOT guidelines) with suppliers and clients required to perform in-depth bridge inspections. Client: New York City Dept. of Transportation

Leonard Holland
Estimator/Inspector

Professional Profile
Mr. Holland is an electrical engineer experienced in all phases of new and renovated construction for commercial and residential projects. He has provided estimating services on many projects for the Port Authority.

Proposed Project Assignment
Estimator/Inspector

Education
BS/1986/Electrical Engineering

Course Work
2013 - 4-Hour MTA/LIRR Roadway Worker Protection Training Course
2011 - 4-Hour Supported Scaffold User
2010 - 10-Hour OSHA Training Course

Total Years Experience 31

Project Experience
2011-2014 Port Authority On-Call Construction Management Services - John F. Kennedy International Airport, Queens, NY; 9/11-Present. Estimator/Inspector. As part of this on-call construction management services project, Mr. Holland is assigned to projects at JFK Airport. This project involves inspecting installation of new electrical equipment for compliance with contract, Port Authority standards and NYC codes; documenting and maintaining daily narratives on contract projects; reviewing plans, specifications and shop drawings, processing and reviewing contractor submittals, change orders and estimates; interacting with architects, engineers, contractors and Port Authority officials; and coordinating scheduled electrical shutdowns with Port Authority Electrical Shop and various departments. His responsibilities include review of contractor's change order proposals; review of design and specification documents on projects; generating MEP estimates for projects and change orders; performing job site inspection to ensure that construction complies with the design drawings and specifications; performing final inspection of construction work at job site for completion; and providing general field/office support as required.

Specific assignments and responsibilities include:

- **Delta Air Lines – Terminal 4 International Air Terminal Headhouse Expansion at JFK, Jamaica, NY**; 2011-Present. Project Inspector. This $185-million project is part of a $1.2-billion expansion to accommodate Delta's international operations and provide a state-of-the-art facility at Terminal 4. The project extends the headhouse on the east and west side of Terminal 4 with additional baggage handling areas, new stair towers at both end of the terminal, and a new curbside enclosure. Interior scope includes the modifications of the baggage handling system, new vertical circulation including escalators, stairs and elevators, new security screening platform over third floor retail area, modifications and renovations of building areas. Mr. Holland is responsible for daily inspections to evaluate the project completion and compliance with Port Authority standards.

Client: Port Authority of NY & NJ

2006-2010 Port Authority On-Call Construction Management Services - John F. Kennedy International Airport, Queens, NY; 10/09-9/11. Estimator/Inspector. As part of this on-call construction management services project, Mr. Holland was assigned to projects at JFK Airport. The Port Authority supplemented their own staff with consultant-provided personnel to manage and administer construction contracts at their owned and operated facilities. His responsibilities included review of contractor's change order proposals; review of design and specification documents on projects; generating MEP estimates for projects and change orders; performing job site inspection to ensure that construction complies with the design drawings and specifications; performing final inspection of construction work at job site for completion; and providing general field/office support as required.

Leonard Holland
Estimator/Inspector

Specific assignments and responsibilities included:

- **AirTrain Terminal at Jamaica Station, Jamaica, NY**; 2004-2009. MEP Cost Estimator. This was a $350-million project that involved a seven-story terminal building, mezzanine bridge, enclosure roof, westerly bridge and new street concourse along Sutphin Boulevard. He was responsible for generating MEP estimates, change order review and providing job site inspections.

Client: Port Authority of NY & NJ

Various New York City Board of Education Projects, New York, NY; 1999-2003. Assistant Project Manager. This $3-million renewable, term contract involved providing construction management services on Board of Education maintenance work at all schools in New York City. He surveyed work sites for detail description of work; composed unit price estimates based on field surveys; wrote proceed orders for contractors; processed contractor requisitions and change orders; supervised and assigned workloads to site managers; had daily interface with contractors for updated progress reports; and maintained all tracking logs and files. Client: New York City Board of Education

Mr. Holland served as an independent electrical consultant/contractor, providing electrical estimates for home improvement; 1995-1999.

Mr. Holland served as an assistant project manager responsible for managing electrical installations in new construction and alteration projects; coordinating with field personnel to evaluate and resolve problems in the field; supervising draftsmen in the design of shop drawings and directed the take-off of drawings; preparing material and labor estimates, change order estimates and monthly client billing requisitions; filing and obtaining permits for all electrical installations with various New York City agencies; and attending weekly coordination meetings with senior-level management. Projects included Worldwide Plaza, a commercial, residential and recreational complex and Carter Wallace; 1988-1995.

Mr. Holland served as an assistant project manager where he generated project shop drawings; prepared equipment takeoffs and estimates; initiated progress payment requisitions; recommended materials procurement and managed vendors; and attended weekly job site and project coordination meetings. In addition, he compiled project cost data for entry into client billing database; and identified system default, which resulted in system reprogramming and subsequent recovery of potentially lost revenue. Projects included Long Island Jewish Hospital Cancer Care Center; Brooklyn Botanical Gardens; and Rikers Island; 1986-1988.

Skills
Valid NYC Site Safety Manager License
Proficient in Microsoft Word, Microsoft Excel and Internet applications
Solid understanding of contracts, plans, and specifications

DAVID KIRK, AIA CCC CCS CVS-LIFE LEED AP BD+C

Senior Estimator

Mr. Kirk has extensive, in-depth professional construction industry experience, having served in the following positions: Senior Project Manager, Architect, Planner, Urban Designer, Manager of NY Region Aviation Projects, Chief of Construction Contract Procurement, Chief Estimator, Value/Risk Manager/Analyst, Senior Estimator, Senior Scheduler, Assistant Construction Manager, FTA Project Management Oversight Consultant, Value Engineering/Constructability/Risk Manager, Project Controls Manager and Senior Naval Officer (Retired).

Mr. Kirk has served in the above positions for capital program construction of major transportation facilities and urban designs including but not limited to: airport terminal/airside/landside facilities, rail/light-rail/automated transit systems, waterfront development, port facilities, bridge/tunnel facilities, bus terminals, high-speed rail systems, water/waste water facilities, high rise office towers, parking structures, bridge/tunnel operations, and educational, justice, and municipal facilities.

The Port Authority of New York & New Jersey (PANY&NJ) George Washington Bridge Toll Plaza Rehabilitation – Fort Lee, NJ
Chief Scheduler & Estimator

Provided the cost estimate, engineer's estimate, and schedule for the rehabilitation of the toll plaza and conversion to an EZ Pass toll operation at the George Washington Bridge in Fort Lee, NJ. The project included complex phasing and staging of construction to maintain ongoing toll facility operations.

Metropolitan Transportation Authority (MTA) Bridges & Tunnels (B&T) – Brooklyn Battery Tunnel Facilities Building Restoration – New York, NY
Chief Estimator

Prepared the cost estimates and schedules for the $20 million rehabilitation of the operations facility for the Brooklyn Battery Tunnel between the Island of Manhattan and Brooklyn, NY. The project involved extensive interior and exterior rehabilitation of the 50-year-old landmark structure and a complex staging plan to maintain ongoing operations.

Metropolitan Transportation Authority (MTA) Bridges & Tunnels (B&T) – Matrix Sign Replacement – New York, NY
Chief Estimator

Developed the cost estimates and schedules for the $30 million replacement of the matrix signs at all 12 Bridge & Tunnel maintained facilities. The project involved extensive modifications to the toll facility structures and a complex staging plan to maintain ongoing operations.

The Port Authority of New York & New Jersey (PANY&NJ) – John F. Kennedy International Airport (JFK) Capital Construction Program – New York, NY
Manager of Projects

Supervised engineering project managers involved in all capital construction for landside, airside, and terminal projects. Projects managed by Mr. Kirk included the design and construction of the Crash-Fire-Rescue Police Facility, the conversion of the 500,000 square foot Building 14 hanger/airline operations facility for adaptive reuse, a new general aviation facility, runways/taxiways, parking facilities, and upgrade of the Federal Aviation Administration (FAA) Building.

Key Qualifications
- ✓ Expert in Cost Estimating & Management
- ✓ Certified Value Specialist

Education
- MA, Architecture, Columbia University
- BA, Math & Physics, Columbia College
- Fellowship Studies in Urban Design, University of Urbino, Italy

The Port Authority of New York & New Jersey
Value Manager

Supervised, administrated, and facilitated the PANYNJ's Value Management Program for many urban development, WTC, aviation, bridge and tunnel, and transit facilities in the New York and New Jersey region. Mr. Kirk played a major role in creating the Value Management program to conduct value planning (VP), VE, and risk assessment reviews of capital projects using multidisciplinary teams of outside experts, certified value specialist (CVS) facilitators, and risk analysts. He was a leader, participant, or manager at numerous value analysis workshops for the PANYNJ's Office of the Deputy Executive Director for Capital Programs. Mr. Kirk pioneered the concept of integrating Value Management and Risk Management whereby risk mitigation is assessed in a VE workshop environment.

Chief Cost Estimator

Served as the head of the Cost Estimating/Value Engineering Unit for the PANYNJ. Mr. Kirk managed the preparation of all conceptual, preliminary, final, and post-award construction cost estimates. He supervised all cost estimators and the properties classification process, including post-award change order estimating and contractor negotiations. Mr. Kirk managed a program to create and implement a standardized, automated cost estimating system using the Success Estimating & Cost Management System. He managed the development of over $5 billion in project estimates, and prepared a standards manual and conducted seminars for the PANYNJ on estimating and project cost control.

Chief Contract Engineer

Served as senior construction contract procurement manager for PANYNJ. Mr. Kirk managed the preparation of all construction contracts and the bidding and pre-award contract administration process, which included managing the PANYNJ Contract desk, supervising an MBE/WBE outreach program, monitoring and issuing all bid packages and addenda, and conducting contractor pre-award qualification and bid negotiations. He supervised the preparation of a design-build-operate-maintain contract in close coordination with the PANYNJ Law Department Contracts Division. Mr. Kirk oversaw all specification writers, contract engineers, and specifications/contract unit support staff. He prepared a standard manual and managed a program to overhaul, create, and implement the entire library of PANYNJ standard technical specifications in the Construction Specification Institute format. He also conducted seminars for PANYNJ staff on specification preparation and contract administration.

The Port Authority of New York & New Jersey (PANY&NJ) – Newark Liberty International Airport (EWR) Redevelopment Program – Newark, NJ
Manager of Projects

Oversaw several engineering project managers involved in all capital construction projects, including the monorail systems, landside access, and parking facilities as part of the multibillion-dollar redevelopment program.

The Port Authority of New York & New Jersey (PANY&NJ) – Newark Liberty International Airport (EWR) Structural Parking Facility – Newark, NJ
Project Manager

Served as both the project manager and lead architect from the conceptual design phase to the preparation of contract documents for the $50 million structural parking facility adjacent to Terminal C.

The Port Authority of New York & New Jersey (PANY&NJ) – Port Authority Bus Terminal (PABT) Rehabilitation –New York, NY
Project Manager

Mr. Kirk oversaw engineering and architectural work for a police station, an operations and maintenance facility, exterior renovations, construction of bus platform enclosures, rehabilitation of the lower bus level (40 gates) and upper bus level (16 gates), concourse redevelopment, and a signage program and sculpture/art program.

DAWN LOPEZ

Contract Administrator

Education
- BS, New York University

Registrations
- OSHA Certified
- CPR & First Aid Training

Memberships
- AIIM

Software
- Primavera Contract Manager
- MS Office
- Timberline
- Peachtree

Accomplished in document control procedures and management of civil, environmental and transit projects from pre-award to closeout. Knowledgeable in accounting procedures and management of project site offices. Demonstrated ability to maintain strong working relationships with owners, engineers, subcontractors, vendors and government representatives.

New Jersey Transit (NJT) – Portal Bridge Project – Newark, NJ (2008-2014)
Configuration Management Specialist

Implemented and performed all document control procedures utilizing ccsNET and Contract Manager for the Portal Bridge Project. Maintained documentation for five contracts from set up of WBS structure to beginning process of closeout. Handled payment requisitions for NJ Transit for contract invoices. Created procedure manual for workflow and basic work processes. Assisted with Quality Control on major submissions.

Conti Enterprises, Inc. – South Plainfield, NJ (2004-2008)
Document Control and Contract Administrator

Responsible for the organizing, processing and routing of project contracts, drawings, specifications, baseline and CPM schedules, subcontracts, submittals, RFI's, change orders, transmittals and meeting minutes utilizing Contract Manager software. Developed and implemented a document control system which coordinated two geographically distant project sites for Siemens project. Trained fellow team members in Contract Manager Software. Responsible for payroll, accounts payable, cost control, equipment utilization, document control, purchasing and subcontractor management.

Technical Construction Services – Teterboro, NJ (2001-2004)
Full Charge Bookkeeper

Responsible for all phases of bookkeeping - A/P, A/R, payroll, bank reconciliations, job costing and general ledger maintenance utilizing Timberline and Peachtree. Handled issues regarding work hours, insurance and union discrepancies.

Alexander Macaroff, P.E.
Structural Engineer

Professional Profile
Mr. Macaroff has many years of experience in bridge design and architectural participation on various bridge condition inspection, load rating, seismic evaluation and design, vulnerability assessments, design and construction support. He also has experience working with the Port Authority of New York & New Jersey, New York State Dept. of Transportation, New York City Dept. of Transportation, Nassau County Dept. of Public Works, and New York State Parks Department design procedures and practices.

Project Experience

Sunken Meadow Golf Course - Final Design Irrigation, Smithtown, NY; 6/13-Present. Structural Engineer. This project involves the reconstruction of irrigation system for three, nine hole golf courses at this state park. The project includes transfer pump and distribution pump and pump house and a new irrigation supply pond. Mr. Macaroff was responsible for the architectural and structural design of pump house building, prepared specifications and cost estimate. Client: New York State Office of Parks, Recreation & Historic Preservation

Sunken Meadow Main Bath House, Smithtown, NY; 11/11-6/12. Structural Engineer. This project involved rehabilitation of the bath house/administrative building at Sunken Meadow State Park. The bath house is an historic structure within the state park system. The bath house provides administrative, shower and rest room facilities, first aid, security, and some rental/retail functions for beach goers and other park visitors. Mr. Macaroff's responsibilities included inspection, coordination with project architect, structural design of foundation system, floor slab, new building envelope, roof framing, and miscellaneous structural components, prepared specifications and cost estimate. Client: New York State Office of Parks, Recreation & Historic Preservation

Bayard Cutting Arboretum Final Design Contract Documents, Great River, NY; 1/13-5/13. Structural Engineer. This project involved the Final Design Phase for reconstruction of the automatic irrigation system at Bayard Cutting Arboretum State Park. Mr. Macaroff was responsible for the architectural and structural design of pump house building, preparing specifications and cost estimate. Client: New York State Office of Parks, Recreation & Historic Preservation

Whaleneck Creek Culvert, Merrick, NY; 8/10-Present. Project Manager. This project includes an in-depth inspection of a twin barrel concrete box culvert to determine the current condition. As a result of the inspection findings, both repair and replacement alternatives will be developed. Mr. Macaroff is responsible for in-depth inspection, condition report, load rating, developing plans, prepared specifications and cost estimate for the rehabilitated structure. Client: Nassau County Dept. of Public Works

Bayonne Bridge Navigational Clearance Program (BBNCP), NY/NJ; 8/12-Present. Structural Engineer. This project involves construction management services for the $743-million Bayonne Bridge Navigational Clearance Program. This extraordinarily complex, once-in-a-lifetime project will replace more than 5,000 feet of viaduct and re-frame the existing steel arch structure to accommodate a new roadway 65 feet above the existing roadway. Mr. Macaroff has been involved with design and constructability review for the main arch span of the 90% plans. Client: Port Authority of NY & NJ

Belt Parkway Bridges Program Management Services, Brooklyn, NY; 1/13-7/13. Structural Engineer. This project involved providing program management and resident engineering and inspection services for the Paerdegat Basin Bridge and Rockaway Parkway Bridge. Mr. Macaroff's responsibilities included review of demolition, erection, and other temporary construction procedures. Client: New York City Dept. of Transportation

Roosevelt Avenue Bridge, Queens, NY; 5/05-Present. Senior Structural Engineer. This project consists of the rehabilitation of Roosevelt Avenue Bridge to include replacing the bridge deck, replacing the bridge railing and rehabilitating the electrical and mechanical systems for the lift span. Mr. Macaroff's responsibilities include detailing the new grid deck, designing and detailing the expansion joints, detailing the pedestrian fence, cost estimate, specification writing, and construction support to include shop drawing review, excavation and demolition calculation review, and answering RFI's. Client: New York City Dept. of Transportation

Alexander Macaroff, P.E.
Structural Engineer

Northern State Parkway and Long Island Expressway Interchange Improvements at NY 110, Town of Huntington, NY; 1/09-2/10. Senior Structural Engineer. This project included an Environmental Assessment, preliminary and final design, construction documents and construction support for the replacement and widening of the existing NSP Bridge over NY Route 110 and its interchange along with the widening of NY Route 110 from four to six lanes between the LIE and NSP. The project was advanced under three construction contracts: PINs 0112.53, 0516.41 and 0112.56. He was responsible for seismic analysis and design of bridge, analysis and design of retaining walls, preparation of contract drawings, and specifications and cost estimate. Client: New York State Dept. of Transportation

Reconstruction of NY 347 from NY 454 to NY 25, Town of Smithtown, NY; 3/09-11/09. Senior Structural Engineer. This project involved final design, construction documents and construction support for the reconstruction and widening of NY 347 from four to six lanes between Brooksite Drive and the Smith Haven Mall. The project will be advanced under separate construction contracts including PINs 0054.08, 0054.18 and 0054.20. Mr. Macaroff was responsible for analysis and structural design of soldier pile and lagging retaining wall, and preparation of contract drawings and specifications and cost estimate. Client: New York State Dept. of Transportation

Hamilton Avenue Bridge, Brooklyn, NY; 5/05-7/09. Senior Structural Engineer. This project consisted of the rehabilitation of Hamilton Avenue Bridge to include replacing the bascule spans, replacing the bridge railing and rehabilitating the electrical and mechanical systems for the lift span. Mr. Macaroff's responsibilities included detailing the new grid deck, designing and detailing the expansion joints, detailing the pedestrian fence, cost estimate, specification writing, and construction support to include shop drawing review, excavation and demolition calculation review, and answering RFI's. Client: New York City Dept. of Transportation

Bronx River Parkway Culverts, Westchester County, NY; 10/04-10/05. Senior Structural Design Engineer. This project included improvements to two culverts in Westchester County. One is located in Harrison, NY, and required structural improvements including removal and replacement of deteriorated concrete parapets, crack repair and replacement of spalling concrete on the sidewalls and top slab. The other culvert is located in Yonkers, NY, and runs beneath the Bronx River Parkway. Work at this location included adding end sections to both sides of the culvert, improving the channel bottom in the vicinity of the end sections by dredging and adding riprap to improve stream flow. Mr. Macaroff's responsibilities included field inspection, structural aspects of analysis and design, stage construction sequencing and coordination with utilities. He was also involved with the preparation of details to include culvert repairs, culvert end sections, parapet walls, dredging and erosion control measures; supervising drafting for structural and civil contract drawings; and preparation of specifications and cost estimate. Client: Westchester County Dept. of Public Works

Variable Message Signs (VMS), and Variable Speed Limit Signs (VSLS), at Various Facilities, New York, NY; 2002-2003. As senior engineer, he was responsible for the inspection and design for the installation of both VMS and VSLS signs at nine facilities throughout New York City. He designed connection details for signs mounted on existing bridge structures and on new sign gantries. He also prepared specifications and cost estimates. Client Metro North/ Triborough Bridge and Tunnel Authority

Eight Bridges Component Rehabilitation, HBCR02B, Various Locations, NY; 8/11-Present. Senior Structural Engineer. This is a total design and construction support services contract, which includes the in-depth inspection of eight bridges, preparation of a Bridge Rehabilitation Report (BRPR), preparation of preliminary and final design plans, specifications, and Engineer's estimate, bidding assistance to the city, and Construction Support Services. Mr. Macaroff's responsibilities include inspection of steel superstructures in response to Safety Flags issued by the NYSDOT; load ratings for all bridges; and preparation of inspection findings report and design of repair details. Client: New York City Dept. of Transportation

Nine Bridges Component Rehabilitation, HBCR01C, Various Locations, NY; 2/09-Present. Senior Structural Engineer. This is a total design and construction support services contract for the rehabilitation of nine bridges in the boroughs of Manhattan, Queens and Staten Island. Mr. Macaroff's responsibilities include inspection of steel superstructures in response to Safety Flags issued by the NYSDOT, load ratings for all bridges and design of repair details. Client: New York City Dept. of Transportation

Section F – Experience of the Firm
Expert Professional Construction Management and Inspection Services as Requested on a "Call-In" Basis During 2015 through 2018, RFP Number 39247

INTRODUCTION

Greenman-Pedersen, Inc. (GPI) has formed an outstanding team that has the experience and depth of resources for the Performance of Expert Professional Construction Management and Inspection Services as Requested on a "Call-In" Basis During 2015 through 2018. GPI will serve as the prime consultant and the main point of contact for this contract. In addition to GPI, the team is comprised of the following firms:

- Maitra Associates, P.C.
- PACO Group, Inc.
- LPE Enterprises, Ltd.

GPI is a transportation engineering firm with more than 1,100 personnel headquartered in New York and with branch offices throughout the eastern United States. Providing its services for nearly 50 years, GPI is recognized as a ***leading firm*** for comprehensive construction management and inspection services. GPI has provided on-call services to many of the transportation agencies and has earned an excellent reputation for being responsive to the client's needs and producing quality consulting engineering services.

GPI offers a unique combination of expertise as well as knowledge of applicable state and federal guidelines in all disciplines required by Port Authority of New York & New Jersey (Authority). Our technical engineering expertise has provided opportunities for the firm to participate on a vast array of projects, from high-profile projects to smaller, yet important, contracts. GPI's clients continue to extend existing on-call contracts and select the firm for new call-in work. For example, GPI has been providing on-call construction management services for the Authority's 2002-2006, 2006-2010 and 2011-2014 Programs. Also, for more than 25 years, the Authority has selected GPI to provide call-in traffic engineering services. The Authority has credited GPI's responsiveness and its ability to provide the right staff for the job.

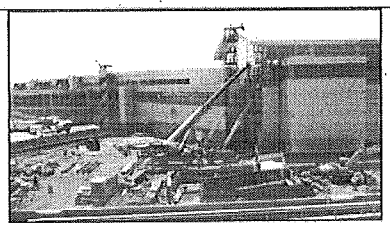
Maitra Associates MAITRA ASSOCIATES, P.C., a certified MBE with the Port Authority, is a multi-disciplined engineering firm consisting of 44 professionals, and they have been continuously involved in construction management work on major metropolitan agency projects since its inception in 1982. Maitra is able to present a highly qualified group of construction professionals including construction managers, resident engineers, office engineers, schedulers, inspectors, technicians and surveyors who possess the requisite certifications and specialty training which the Port Authority justifiably expects from construction management personnel assigned to its projects. Over seventy percent of their staff are graduate engineers. Their inspectors hold certificates for OSHA Training, ACI Concrete Inspection, and ICC Structural Steel and Bolting Inspection Certification.

PACO Group, Inc. (PACO), a certified MBE, is a national consulting firm that provides program, project and construction management services including: engineering support, cost estimating, value engineering, claims management, change management, quality assurance, design/ constructability review, construction inspection, scheduling, document management, configuration management, and staff augmentation services to clients involved in major construction projects. PACO has successfully worked on major capital improvement programs for some of the largest aviation and transportation agencies across the country.

LPE Enterprises, Ltd., is a certified WBE construction management support services firm, serves the needs of construction management and engineering companies for skilled and experienced project-based personnel. The firm's staff members, all of whom are actively engaged on projects, are full-time employees of LPE. LPE's staff have extensive expertise in such areas as construction inspection, estimating, document controls, and technical and contract administrative services. For all assignments, LPE's professionals are fully integrated into the project team, and are committed to meeting the highest standards of performance. They are dedicated to the success of each assignment and the Port Authority.

The following are projects for which the GPI team has provided construction management services within the last five years that are comparable to the services that will be required under this contract

2011-2014 Port Authority On-Call Construction Management Services			GPI
Owner / Contact:	Port Authority of New York & New Jersey, 241 Erie Street, Jersey City, NJ 07310 **Contact:** Paul Salvatore, Engineer of Construction, 201-216-2070, psalvato@panynj.gov		
Contract Duration:	4 Years	**Date(s) of Services:**	2011 – Present
Contract Amount:	$7,240,649	**Was Project Completed on Schedule and Within Budget?**	Project is on schedule & within budget



Location of Work: Various Locations, NY & NJ. Construction management and inspection services on an on-call basis. PA NY & NJ supplements their own staff with consultant-provided personnel to manage and administer construction contracts at their owned and operated facilities. Assignments include:

Port Authority Tenant Supervision, Jersey City, NJ – Assisting the Port Authority's manager with supervising and coordinating the development and delivery of the Real Estate Services Department's program, which includes renovations and construction enhancements; expansions of the Port Authority leased properties and facilities; supervising the development of construction and operational requirement for projects; and supervising the project manager and contractor staff in the implementation of Port Authority and tenant construction program.

Staten Island Bridges, Newark, NJ – Construction inspection for structural, civil, mechanical, electrical, and bridge painting services for three Staten Island Bridges operated by the Port Authority of New York & New Jersey. Also includes maintenance and protection of traffic.

George Washington Bridge, Fort Lee, NJ – Joint replacement of the upper level deck. The project also involves the replacement of orthotropic deck, scupper and pipe run replacement, expansion finger joint repairs, main/secondary floorbeam repairs, stringer and stringer bearing repairs, deck rib connections, barrier repairs, paving, and coordination of maintenance of traffic.

Port Authority Bus Terminal, Various Contracts, New York, NY –

- ***Bus Ramps Deck Replacement Phase II, Contract #LT-234-174.*** Replacement of the existing deteriorated concrete roadway deck and embedded snow melting system at the Lincoln Tunnel bus ramps in order to maintain a state of good repair, preserve the structural integrity of the bus ramps and provide a safe riding surface during the winter months.
- ***Contract #LT-234.054, New York, NY.*** Consists of replacement of the existing concrete sump ceiling slab with pre-cast concrete panels, replacement of adjacent pavement, catch basin and man hole structures and patching in the adjacent pump room at the Lincoln Tunnel Center Tube.
- ***Contract #BT-254.220, New York, NY.*** Providing the required strengthening to maintain structural integrity of the Port Authority Bus Terminal (PABT) in New York City during a seismic event. The structural modifications (seismic retrofit) consist of shear walls, bracing and truss members to resist seismic loads and expansion joint bracing. It also requires relocation of existing electrical, electronic communication, HVAC, plumbing and fire protection systems.
- ***Contract #LT-525, New York, NY.*** This project consisted of installing pavement markings, signage, drop-in-delineators and Dura-curb at the New York Galvin Plaza Entrance, New Jersey Toll Plaza Approach and Departure Roadway and New Jersey Westbound Helix and Exit ramps.

Lincoln/Holland Tunnel, New York, NY – Rehabilitation of the concrete catwalk at the Holland Tunnel and maintenance pavement repairs and bus ramps deck replacement at the Lincoln Tunnel. The project involves inspection of maintenance and protection of traffic, installation of CCTV and video analytics system in Lincoln Tunnel, demolition of existing car railing, sounding and repairing spalled concrete for rehabilitation of concrete catwalk at the Holland Tunnel, emergency concrete repairs in Holland Tunnel vent buildings, sounding and repairing spalled concrete on under deck roadways in Lincoln Tunnel.

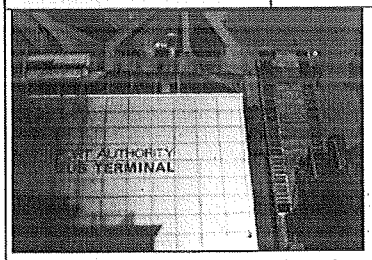
John F. Kennedy International Airport, Queens, NY – Inspection services at John F. Kennedy International Airport including inspecting installation of new electrical equipment for compliance with contract, Port Authority standards and NYC codes.

Replacement and Upgrade of the Christopher Street Substation for PATH, New York, NY – Replace and upgrade electrical traction power substation equipment at the Christopher Street Substation.
Journal Square Transportation Center, Various Locations, NY and NJ. Work under this project included direct inspection and monitoring of multiple contractors performing wide ranging rehabilitation and renovation work at the Police Command Center at Journal Square. Once this work was completed, construction management services moved to the inspection of work to rehabilitate PATH stations, track, maintenance yards, and support buildings.
Holland Tunnel, New York/New Jersey. Rehabilitation of the existing ventilation fan system.

2006-2010 Port Authority On-Call Construction Management Services

GPI

Owner / Contact:	Port Authority of New York & New Jersey, 241 Erie Street, Jersey City, NJ 07310 **Contact:** Paul Salvatore, Engineer of Construction, 201-216-2070, psalvato@panynj.gov		
Contract Duration:	6 Years	**Date(s) of Services:**	2006 – 2012
Contract Amount:	$4,992,200	**Was Project Completed on Schedule and Within Budget?**	(Yes) No

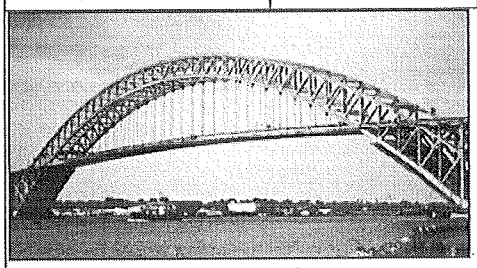


Location of Work: Various Locations, NY. Construction management and inspection services on an on-call basis. PA NY & NJ supplemented their staff with consultant-provided personnel to manage and administer construction contracts at their owned and operated facilities. Projects included:
John F. Kennedy International Airport – Project involved inspection services at John F. Kennedy International Airport. The Port Authority supplemented their own staff with consultant-provided personnel to manage and administer construction contracts at their owned and operated facilities. GPI's responsibilities at these facilities included inspecting installation of new electrical equipment for compliance with contract, Port Authority standards and NYC codes; documenting and maintaining daily narratives on contract projects; reviewing plans, specifications and shop drawings, processing and reviewing contractor submittals, change orders and estimates; interacting with architects, engineers, contractors and Port Authority officials; and coordinating scheduled electrical shutdowns with Port Authority Electrical Shop and various departments.
Jamaica Station – Inspection of a new, five-story pre-cast concrete on structural steel frame parking structure.
Staten Island Bridges – Construction inspection for structural, civil, mechanical, electrical, and bridge painting services for the three Staten Island Bridges operated by the PANYNJ.
George Washington Bridge Painting – Involved Class 1A containment of both towers of this structure involving the removal of existing lead paint and the application of a new three-coat system to approximately 2.1 million sq ft of steel. Project included the coordination and inspection of field contractors' activities on various contracts and managing construction contract payments, contract changes, schedules, fieldwork and subcontractors.
Port Authority Bus Terminal Structural Modifications – This $50-million project provided the required strengthening to maintain structural integrity of the Port Authority Bus Terminal in NYC during a seismic event. Structural modifications (seismic retrofit) strengthened the bus terminal building with shear walls, bracing, and truss members to resist moderate seismic loads in the north south and the east west directions for the south wing and expansion joint bracing for the north wing of the Port Authority Bus Terminal. It also required relocation of the existing electrical, electronic communication, HVAC, plumbing and fire protection system in order to perform the work.
Port Authority Technical Center – Work at each building included the construction management of various trades which included demolition, general construction, HVAC, plumbing, electrical, furniture, telecommunications, and relocation of personnel upon completion.
EWR Newark Airport – Field inspection and construction supervision, coordination with materials division of Port Authority operations and contract and shop drawings review for different projects.
John F. Kennedy International Airport Jet Blue Parking Structure – Inspection services of the new, five-story parking structure at John F. Kennedy International Airport's Jet Blue Terminal. This structure is pre-cast concrete on a structural steel frame.

Battery Park City Ferry Terminal at the 39th Street Pier – Construction of a barge as a support to canopy structure of this terry terminal. The barge was placed between two anchor towers and a steel canopy structure and windscreen framing was connected on top of this barge.
PATH Station–Installation and integration of the 27KV, 15KV, 480V, DC traction power, SCADA and multiple communication systems at the temporary PATH station at the WTC. Provided system startup on electrical/ communication sub-systems, contractor compliance with federal and state construction safety requirements.

Bayonne Bridge Navigational Clearance Program (BBNCP)
Construction Management GPI

Owner / Contact:	Port Authority of New York & New Jersey, 241 Erie Street, Jersey City, NJ 07310 **Contact:** Ronald Gumann, Engineer of Construction, 201-595-4887, rgumann@panynj.gov		
Contract Duration:	5 Years	**Date(s) of Services:**	2012 – Present
Contract Amount:	$760,000	**Was Project Completed on Schedule and Within Budget?**	Project is on schedule & within budget



Location of Work: NY/NJ. GPI is providing construction management services for the $743-million Bayonne Bridge Navigational Clearance Program (BBNCP). This extraordinarily complex project will replace over 5,000 feet of viaduct with cast-in-place and precast structural elements and re-frame the existing steel arch structure to accommodate a new roadway 65 feet above the existing roadway. The project is being implemented to accommodate a new breed of Panamax ships passing through the widened Panama Canal which, due to their size, cannot physically pass beneath the existing 151-ft-high main span roadway. The Kill Van Kull is the only waterway into and out of the Ports of Newark, Howland Hook, and Elizabeth, and the current restrictive clearance of the bridge will stagnate continued economic growth and could possibly threaten the very existence of the Ports. Not raising the bridge roadway could cripple the local New York and New Jersey economies during a time of strained economic growth. The BBNCP will allow the Ports to remain a viable commerce and cargo destination well into the 21st century. All work will be completed while maintaining one lane of traffic in the northbound and southbound direction by utilizing staged demolition and construction sequencing. The new Staten Island and Bayonne approaches will be supported by drilled shaft foundations; CIP and pre-cast/post-tensioned piers; pre-cast post-tensioned segmental box girders. Major ancillary work will include the installation of new bridge power, ITS and fire standpipe systems.

Williamsburg Bridge Reconstruction of Miscellaneous Rehabilitation of the Main Bridge
Contract 8 GPI

Owner / Contact:	New York City Dept. of Transportation, 55 Water Street, New York, NY 10041 **Contact:** Robert Collyer, Deputy Chief Engineer, Capital Design/Construction, [redacted]		
Contract Duration:	9 Years	**Date(s) of Services:**	2003 – 2014
Contract Amount:	$7,499,239	**Was Project Completed on Schedule and Within Budget?**	(Yes) / No

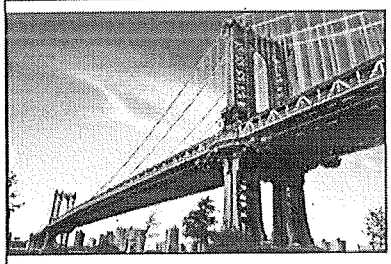
Location of Work: New York, NY. REI for the $280-million reconstruction of miscellaneous rehabilitation of the main bridge. This project is touted as the final major construction contract to rehabilitate this iconic NYC structure. Several major items of work that went unresolved in Contracts 4 -7 were addressed during Contract 8, including: strengthening

of the main towers (replacement of deteriorated lacing bars, splice, gusset and batten plates and diagonal braces; bearing and support replacement at PP 30; lead paint abatement by abrasive blasting and new coatings application for the north and south truss and top chord; and suspender replacement and adjustment. Additional tasks include seismic retrofit of the

intermediate towers, tower saddle repairs; wind tongue replacement at PP 30; intermediate tower rehabilitation; bearing replacement at PP 0, 10, 15, and 31; north and south top and bottom chord rehabilitation; installation of end span inspection platforms; rehabilitation (surface cleaning, repointing and epoxy injection for crack repair) and structural reinforcement of the anchorage rooms; installation of the traveling maintenance platforms; restoration of electrolier light fixtures and installation of new period lighting at the Manhattan portal and promenade areas and inside both bridge anchorage structures; and completion of the installation of ITS equipment with computer-based control of south inner roadway contraflow.

Manhattan Bridge Rehabilitation of Cables and Suspenders, Contract 14 GPI

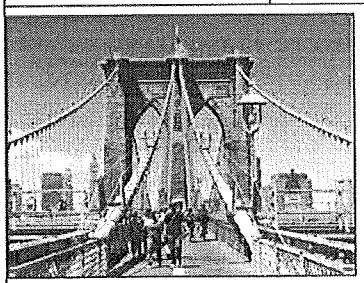
Owner / Contact:	New York City Dept. of Transportation, 55 Water Street, New York City, NY 10041 **Contact:** Brian Gill, Engineer-in-Charge [redacted]		
Contract Duration:	4 Years	**Date(s) of Services:**	2010 - 2014
Contract Amount:	$8,424,048	**Was Project Completed on Schedule and Within Budget?**	(Yes) / No



Location of Work: New York, NY. This $149-million project involved unwrapping and rewrapping of cables; replacement of suspenders; replacement of necklace lighting messenger cables and cable hand ropes; installation of new access platforms to existing tower platforms; reversal of lower roadway and operation of HOV lane and replacement of multi-rotational bearings at the Towers; replacement of light poles and luminaries on South upper roadway; replacement of lane control radar on South upper roadway; and retrofit of track stringers and diaphragm connections and other miscellaneous work. The unwrapping and rewrapping of cables was performed in the following sequence: 1) Remove existing cable wrapping wires; 2) Clean existing main cable wires and remove all red lead paste; 3) Apply grease to existing main cable wires: "SYNCAN" grease manufactured by Grignard Co.; 4) Rewrap main cable wires with new galvanized wrapping wire; 5) Install Cableguard Elastomeric Wrap system manufactured by D.S. Brown. After the wrap is applied it is heated with an electric blanket which fuses the overlapped seams and shrinks the wrap to the underlying wrapping wire. The existing cable bands were not replaced but were cleaned and painted with a three-coat moisture cured urethane system by Sherwin-Williams. The new galvanized suspenders were not overcoated. Existing truss steel at the anchor points for the suspenders, miscellaneous steel and all new steel elements were painted.

Brooklyn Bridge Rehabilitation of the Approach Spans and Ramps and Painting of the Entire Bridge, Contract 6 GPI

Owner / Contact:	New York City Dept. of Transportation, 55 Water Street, New York City, NY 10041 **Contact/Reference:** Ohene Duodu, Engineer In Charge, [redacted]		
Contract Duration:	5 Years	**Date(s) of Services:**	2010 - Present
Contract Amount:	$20,605,926	**Was Project Completed on Schedule and Within Budget?**	Project is on schedule & within budget



Location of Work: New York, NY. GPI is providing construction management and inspection services for this $509-million rehabilitation project. GPI, acting in support of NYCDOT, will be responsible for coordination of all project activities, quality assurance inspection of all rehabilitation work, and cost control and payment distribution. Activities involve several distinct areas of work including: rehabilitation of the approach roadway pavement above the masonry structures; rehabilitation of the Manhattan side ramp structures; painting of the ramp structures and main span; rehabilitation of the approach steel structures; and full replacement of the York and Main Street Structures. GPI will provide on-site construction administration and inspection of the following tasks:CPM schedule review, coordination, and monitoring Evaluation of MPT activities for the project Evaluation of contractor's

Health and Safety Plans Public outreach and communication efforts Monitoring of environmental protection Coordinate with other contracts in the area Other agency coordination services Tracking of the contractor's EEO efforts Monitoring of MPT activities Evaluation of changed conditions and contractual disputes Preparation of change orders Preparation of partial payment documentation in support of the contractor's monthly requests Quality control of construction materials (on site and off site)Tracking of project documents Inspection of all contractor field activities. This project also involves designing a CCTV system on bridge and in the area surrounding with communications to NYCDOT's Traffic Management Center. This system will assist with the monitoring of detour routes caused by the closures due to the bridge construction. This includes 11 new camera sites located throughout lower Manhattan and Brooklyn, wireless communications from the cameras to one of five fiber optic hub located in the area, a 10/100/1000 base Ethernet fiber optic network to the TMC and a IP based CCTV Central System. The system shall include all equipment, hardware, mountings software and design necessary to install, integrate, operate and maintain the operation and use of the System.

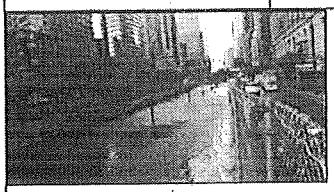
Reconstruction of Willis Avenue Bridge GPI

Owner / Contact:	New York City Dept. of Transportation, 55 Water Street, New York City, NY 10041 **Contact:** Hani Faouri, Deputy Director - Movable Bridges [redacted]		
Contract Duration:	7 Years	**Date(s) of Services:**	2007 - Present
Contract Amount:	$3,024,663	**Was Project Completed on Schedule and Within Budget?**	Project is on schedule & within budget

Location of Work: New York, NY. As a subconsultant, provided REI for complete replacement of this river crossing with a new swing span and flanking girder spans on each side, on a new alignment immediately south of and slightly skewed to the existing bridge alignment. The new swing span opens to allow tall ships to pass. The new bridge provides four traffic lanes on the bridge mainline as with the existing bridge. All new steel approaches and ramps were transitioned back to the existing connections with the street and arterial highway networks. The First Avenue approach and FDR Drive ramp were replaced on new alignments with standard radius curves. The Willis Avenue approach was replaced on an alignment similar to its existing alignment, providing a standard radius curve, which eliminated all columns in Willis Avenue and Bruckner Boulevard below the approach. The Bruckner Boulevard ramp was replaced on a new alignment and brought up to standard. The bridge also passes over the Harlem River Yard (HRY) in the Bronx. New construction is being coordinated with ongoing operations in the railyard including the waste transfer station. Traffic was maintained on the bridge using staged off-line construction where most of the new bridge was built before demolishing the exiting one.

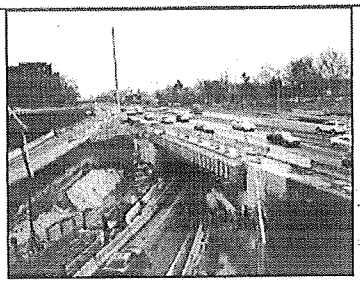
Battery Park Underpass/West Street Emergency Contract GPI

Owner / Contact:	New York City Dept. of Transportation, 55 Water Street, New York City, NY 10041 **Contact:** Bhaskar Gusani, Project Manager [redacted]		
Contract Duration:	3 Years	**Date(s) of Services:**	2014 – Est. 2016
Contract Amount:	$1,099,826	**Was Project Completed on Schedule and Within Budget?**	Project is on schedule & within budget



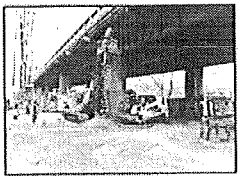
Location of Work: New York, NY. REI for this $20-million rehabilitation project. On 10/29/2012, the Battery Park and West Street underpasses were inundated with salt water from the storm surge associated with Superstorm Sandy. The salt water caused significant damage to mechanical, electrical, ventilation, and lighting systems. NYCDOT will engage the services of a responsible low bid contractor to rehabilitate the underpass systems per their design specifications and drawings.

Rehabilitation of Kew Gardens Interchange/Van Wyck Expressway			GPI
Owner / Contact:	New York State Dept. of Transportation, 50 Wolf Road, Albany, NY 14843 **Contact:** Craig Ruyle, Construction Manager, CE4 [redacted]		
Contract Duration:	5 Years	**Date(s) of Services:**	2010 – Est. 2015
Contract Amount:	$3,871,153	**Was Project Completed on Schedule and Within Budget?**	Project is on schedule & within budget



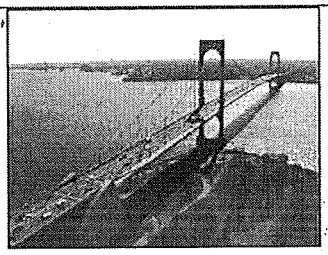
Location of Work: Queens, NY. Construction inspection for the reconstruction of the Van Wyck Expressway (I-678), between 86th Ave. and the Grand Central Parkway. Work includes complete removal and replacement of the 82nd Ave. pedestrian bridge, the Hoover Ave. Bridge over the Van Wyck Expressway, the ramp from the Van Wyck Expressway NB to Queens Blvd. WB, and the Queens Blvd. Bridge over the Van Wyck Expressway; removal/replacement of superstructure, repair wing walls and abutments at the Van Wyck Expressway over Main St. SB and Queens Blvd. over Main St.; reconstruction of the MTA subway pedestrian tunnel under the Van Wyck Expressway in the vicinity of Main St.; widening the at-grade Van Wyck Expressway by constructing a new concrete pavement lane in both directions; repair and new paving of road surfaces; and reconstruction of the median barrier, drainage system, and retaining walls, roadside landscaping and other environmental enhancement work are included within the project limits. A major initial component of the reconstruction work is the relocation of existing water mains over the Queens Boulevard over Van Wyck Expressway, Queens Boulevard over Main Street and Hoover Avenue over the Van Wyck Expressway bridges. This work includes removal of approximately 1,000 lin ft of 12 in. existing water main, associated valves, valve box and hydrant. In addition, 82 drainage structures, and more than 4,200 lin ft of reinforced concrete pipe (ranging from 12 in.–36 in.) and 1,200 lin ft of 12 in. and 18 in. ductile iron pipe will be installed below grade on a bed of crushed stone.

Replacement of the Queens Approach at the Bronx-Whitestone Bridge, BW-89C			GPI
Owner / Contact:	Triborough Bridge & Tunnel Authority, Bronx Whitestone Bridge, Bronx, NY 10465 **Contact:** Andie Yee, Project Manager, [redacted]		
Contract Duration:	4 Years	**Date(s) of Services:**	2011 – Est. 2016
Contract Amount:	$4,949,107	**Was Project Completed on Schedule and Within Budget?**	Project is on schedule & within budget



Location of Work: Queens/Bronx, NY. The $110-million project involves construction inspection services required to support the construction work of Project BW-89C, Replacement of the Queens Approach at the Bronx-Whitestone Bridge. The replacement work includes installation of mini-pile foundations, temporary support structures, temporary and permanent traffic barrier systems, fire stand pipe system, new lighting and communications; maintenance and protection of traffic; incidental lead abatement; and coordination with the community and other public agencies in this densely populated traffic corridor. The project also included the relocation of the children's play area within Francis Lewis Park. Both the client and the community were extremely pleased with the play area relocation.

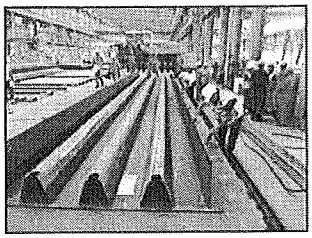
Bronx-Whitestone Bridge Replacement of the Bronx Approach and Miscellaneous Repairs to the Queens Approach, BW-89			GPI
Owner / Contact:	Triborough Bridge & Tunnel Authority, Bronx Whitestone Bridge, Bronx, NY 10465 **Contact:** Christopher Saladino, Facility Enginee [redacted]		
Contract Duration:	5 Years 6 Mos.	**Date(s) of Services:**	2007 - 2013
Contract Amount:	$5,272,285	**Was Project Completed on Schedule and Within Budget?**	(Yes) / No



Location of Work: Bronx, NY. This $204-million project involved the staged removal and replacement of the Bronx Approach superstructure and substructure from the Bronx Toll Plaza to the Bronx Anchorage. Work included the installation of excavation support systems, mini-pile foundations and temporary steel support systems to support the existing structure during the staged construction. During the construction of the substructure, massive concrete placements were used for concrete footings and piers. Traffic on the bridge was maintained with five lanes open to traffic for the duration of the project. During the staged construction, work included staged demolition of the existing roadway, installation of multiple continuous steel girders, placement of a staged composite concrete deck, installation of permanent concrete barrier and installation of permanent street lighting. Other work items on the project included new utility systems at the Bronx Toll Plaza, installation of new salt storage dome building and miscellaneous steel and concrete deck repair on the Queens Approach structure.

Replacement of the Upper Level Deck of the Suspended Span of the Verrazano-Narrows Bridge, VN-80B, Staten Island, NY GPI

Owner / Contact:	Triborough Bridge & Tunnel Authority, Bronx Whitestone Bridge, Bronx, NY 10465 **Contact:** David Riggs, Facility Engineer, 718-390-8631, [redacted]		
Contract Duration:	4 Years 6 Mos.	**Date(s) of Services:**	2012 – Est. 2018
Contract Amount:	$7,419,891	**Was Project Completed on Schedule and Within Budget?**	Project is on schedule & within budget



Location of Work: Staten Island, NY. Comprehensive reconstruction project to replace the upper level roadway superstructure of the bridge during Project VN-80B – Upper Level Deck Replacement of the Verrazano-Narrows (VN) Bridge. The work on this $236-million project will include the following major work elements to be performed: staged demolition; maintenance and protection of traffic (MPT); removal of existing concrete and steel upper level road deck and supporting elements; retrofit and/or repairs to select steel components; fabrication, erection and fit-up of new steel orthotropic deck panels; structural steel welding; waterproofing system application and asphalt overlay placement; lighting installation, paint removal and new coatings application; and lead abatement. This comprehensive re-decking project will take place over a 60-month construction schedule starting in 2012 and ending in 2017. Due to the immense size of the VN structure and the underlying complexity of the work, Project VN-80B will require tremendous expertise and substantial relevant experience in all areas of the rehabilitation processes for the work to be performed successfully. The GPI team has provided CMI services for previous and current contracts at the VN facility and at other bridges and tunnels within the TBTA system - utilizing TBTA protocols, specifications, quality assurance requirements, health and safety and recordkeeping guidelines to successfully complete several projects of similar scope and complexity.

Construction Administration and Inspection for Project QM-40S, Super Storm Sandy Restoration and Mitigation and Project QM-40/QM-18, Rehabilitation of the Tunnel Walls, Roadway and Manhattan Exit Plaza at the Queens Midtown Tunnel GPI

Owner / Contact:	Triborough Bridge & Tunnel Authority, Bronx Whitestone Bridge, Bronx, NY 10465 **Contact:** Andie Yee, Project Manager, [redacted]		
Contract Duration:	5 Years 4 Mos.	**Date(s) of Services:**	2014 – Est. 2019
Contract Amount:	$5,420,233	**Was Project Completed on Schedule and Within Budget?**	Project is on schedule & within budget

Location of Work: Queens/Manhattan, NY. GPI will perform facility-wide repair, replacement, modification and/or upgrade of all tunnel major operating systems. The projects are comprehensive in scope and complexity, including concurrent work tasks to be performed in the main tunnel tubes, pump rooms, ventilation and service buildings, and at the entrance plazas. For the purposes of this assignment, all these work elements have been combined into one major rehabilitation effort, whereby the contractor will be tasked with completing the following major work tasks: ventilation

system reconstruction; mechanical equipment and structural elements repairs and replacement; replacement of electrical systems; concrete base slab and expansion joint replacement; maintenance and protection of traffic controls; and lead and asbestos abatement.

NJDOT Route 35 Sandy Restoration, MP 0 to 4 GPI

Owner / Contact:	New Jersey Dept. of Transportation, 1035 Parkway Ave., Trenton, NJ 08625 **Contact:** George Carroll, Central Region Construction Consultant Coordinator [redacted]		
Contract Duration:	2 Years	**Date(s) of Services:**	2013 – Est. 2015
Contract Amount:	$4.78 million	**Was Project Completed on Schedule and Within Budget?**	Project is on schedule & within budget

Location of Work: Berkeley Township to Toms River Township, Ocean County, NJ. GPI is providing construction management and inspection services for this $81M restoration project. Route 35, a coastal emergency evacuation route, serving the barrier peninsula between Barnegat Bay and the Atlantic Ocean, was severely damaged during Superstorm Sandy, entire sections of the highway were carried away and the drainage system was completely destroyed. This major multidiscipline project provides for the complete reconstruction of 4 miles of this roadway.

NJ Transit Contract #13-1010E, CM Services for Task Order GPI

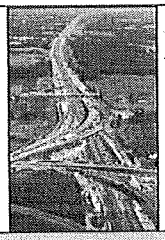
Owner / Contact:	NJ Transit, One Penn Plaza East, Newark, NJ. **Point of Contact/Reference:** Kerry Donovan, Sr. Program Manager [redacted]		
Contract Duration:	3 Years	**Date(s) of Services:**	2013 - Present
Contract Amount:	$176,903 (GPI portion)	**Was Project Completed on Schedule and Within Budget?**	Project is on schedule & within budget

Location of Work: Newark, Essex County, NJ. GPI was selected by NJ TRANSIT to provide CM services on a task order basis. This contract has a maximum value of $3.5M and duration of 3 years. Task assignments are on track to be completed on-time and within budget.

Interchange 6 to 9 Widening Program GPI

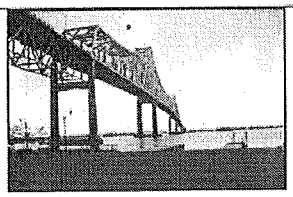
Owner / Contact:	New Jersey Turnpike Authority, 581 W Main St., Woodbridge, NJ 07095 **Contact:** Frank Corso / Sr. Project Engineer, [redacted]		
Contract Duration:	5 Years	**Date(s) of Services:**	2009 - Present
Contract Amount:	$40 million	**Was Project Completed on Schedule and Within Budget?**	Project is on schedule & within budget

Location of Work: Burlington to Middlesex Counties, NJ. Construction Management services for the NJTA's Interchange 6 to 9 Widening Program (The Program). The Program is the Turnpike's most significant construction project in the 58-year history of the Authority, and is currently estimated at $3B. In Joint Venture with AECOM and PB Americas, The GPI Team's $164M contract requires us to provide construction management, scheduling, change order management, cost control, resident engineering, inspection and material testing services.



Commodore Barry Bridge Miscellaneous Structural Repairs, CM Services GPI

Contracting Party:	Delaware River Port Authority, One Port Ctr., 2 Riverside Dr., Camden, NJ 08101 **Contact:** A. Timothy Salvatore / Project Manager, [redacted]		
Contract Duration:	2.5 Years	**Date(s) of Services:**	2011 - 2013
Contract Amount:	$1.5 million	**Was Project Completed on Schedule and Within Budget?**	(Yes) / No



Location of Work: Bridgeport, NJ/Chester, PA. GPI performed construction management services for the Commodore Barry Bridge Miscellaneous Structural Repairs project. The work included the rehabilitation and/or replacement of bearings, gusset planes, steel barrier, below deck walkway modifications plus miscellaneous concrete and steel repairs for the Commodore Barry Bridge and one approach bridge at US Route 322 over US Route 130. Duties included being the Owner's direct on-site representative to the contractor, direct supervision of a Construction Project's Field Inspection/Engineering staff, performing quality assurance oversight of major items of work in progress and/or ensuring that the project is constructed in accordance with the plans and specifications for the owner, checking accuracy of inspection reports, monitoring progress schedule and progress, resolving conflicts between inspection staff and contractor, preparing change orders, preparing monthly pay estimates and project close-out.

Region North Maintenance Construction Inspection Term Agreement, NJ GPI

Contracting Party:	New Jersey Department of Transportation, 1035 Parkway Avenue, Trenton, NJ 08625 **Contact:** George Carroll / Consultant Coordinator, Region Central, [redacted]		
Contract Duration:	3 Years	**Date(s) of Services:**	2011 - Present
Contract Amount:	$513,000 ($2.4M allocated ceiling)	**Was Project Completed on Schedule and Within Budget?**	Project is on schedule & within budget

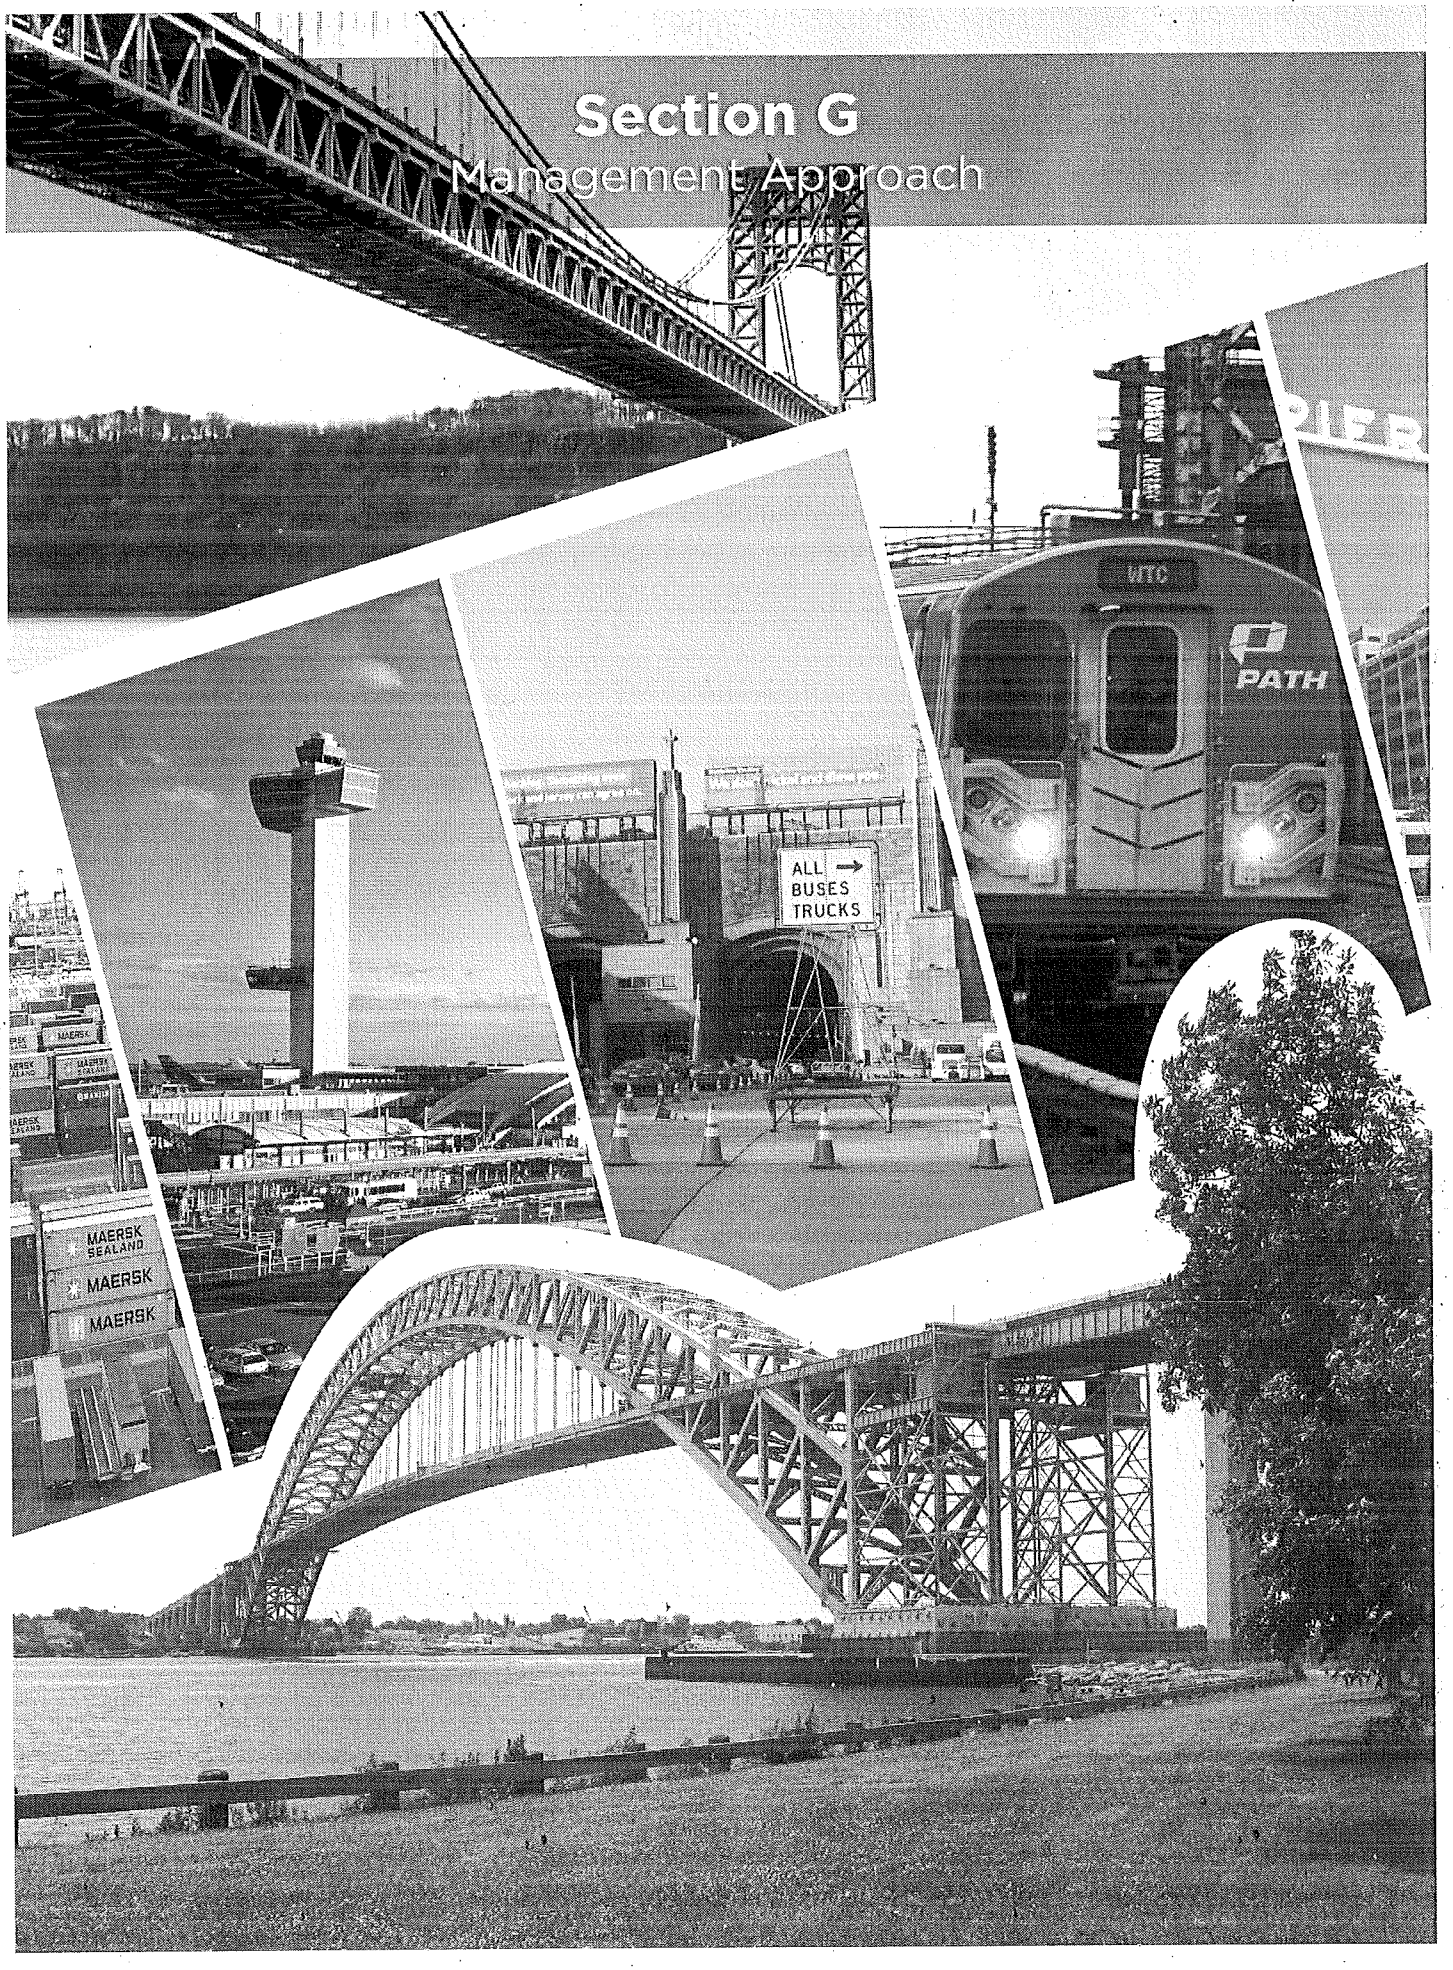
Location of Work: Bergen, Essex, Hudson, Morris, Passaic, Sussex, Union, and Warren Counties, NJ. GPI is providing Maintenance Construction Inspection Services for a 3-yr Term Agreement for various 100% State Funded Contracts and Permit Projects in Region North. The majority of the maintenance work is located in the counties of Bergen, Essex, Hudson, Morris, Passaic, Sussex, Union, and Warren. Various task orders for work that includes construction inspection for maintenance drainage, paving, bridge concrete repair and moveable bridge repair contracts. Includes both roadway and bridge work, both day and nighttime operations, MPT.

Construction Management and Construction Inspection Services, Easton-Phillipsburg Bridge Rehabilitation, Contract CM-437A GPI

Contracting Party:	Delaware River Joint Toll Bridge Commission, 110 Wood and Groves St., Morrisville, PA 19067 **Contact:** Christopher Harney / Project Manager, [redacted]		
Contract Duration:	2 Years	**Date(s) of Services:**	2013 - Present
Contract Amount:	$2.7 million	**Annual Staff Hours Expended:**	2013–4,824; 2014–4,099

Location of Work: Easton, PA/Phillipsburg, NJ. Multi-faceted rehabilitation of the Easton-Phillipsburg (Route 22) Toll Bridge and related facilities. Project elements include bridge painting, pavement repairs, deck replacement and repair, sub structure repairs, bearing replacement, electrical upgrades and toll plaza upgrades. Project includes multiple bridge structures: Main River Bridge, Broad Street Viaduct, Route 22 over SR 611, Route 22 over Bank Street, Route 22 over 3rd Street and the pedestrian tunnel at Bushkill Street. The rehabilitation elements include: pavement repairs and reconstruction throughout the facility; Main River Bridge and Broad Street Viaduct (deck removal and replacement, cleaning and painting of all structural steel, rehabilitation/replacement of deck drainage system, structural steel and substructure repairs as defined per inspection, and rehabilitate pedestrian railing); remove and replace superstructure of the Route 22 Bridge over SR 611; construct an ADA compliant ramp to the existing pedestrian tunnel under Route 22 at Bushkill Street; replace roadway and bridge lighting throughout the facility – lighting on Snyder Street to match Easton streetscape lighting; Bank Street and 3rd Street bridges (replace bridge bearings, mill and resurface bridge deck, clean and paint stringer ends and fascia beam, miscellaneous repairs); electrical upgrades to toll facility load center in Administration Building; and minor repairs and painting to toll booth facilities.

Section G
Management Approach



Section G – Management Approach
Performance of Expert Professional Construction Management and Inspection Services for as Requested on a "Call-In" Basis During 2015 through 2018, RFP Number 39247

INTRODUCTION

The Port Authority of NY & NJ's Construction Management Program is successful because it was originally created and has been implemented over time based on the dual concepts of flexibility and diversification. Flexibility of task organization and staff management is a key component in fulfilling the need for rapid placement of skilled staff during multiple and varied work assignments and the necessity to hit the ground running during those assignments.

Diversification of technical abilities is equally important, allowing for staff to be placed on a variety of facility projects without interruption of service or loss of quality. This criteria works well within The Port Authority of NY & NJ's (Port Authority or Authority) unique hands-on management system, in which Authority personnel are placed in direct charge of and work side by side with consultant construction management and inspection staff. This approach to construction projects differs conceptually from most other clients in the New York City/New Jersey metropolitan area. Within this system, the leadership staff is comprised of Port Authority facility resident engineers and sometimes multiple assistant resident engineers. Based on the amount and diversity of work to be performed, the Authority's focus becomes more facility-oriented rather than project specific-oriented.

The Port Authority's distinctive construction management services approach requires that the consultants providing professional services possess and maintain the necessary breadth and depth of capable resources to respond to various task needs within relatively quick response times. In addition, qualification enhancements for existing staff to be considered for new assignments requires that a minimum of: 10 New York or New Jersey licensed engineers/architects, 10 ACI Concrete Construction Special Inspectors, 3 ICC Certified Structural Steel and Bolting Inspectors, and 1 NACE Level I Certified Coatings Inspector be included on each of the chosen construction management teams. The Greenman-Pedersen, Inc. (GPI) team has the required staff to address every one of these requirements, ***and more***. GPI team individuals assigned to Port Authority assignments are self-motivated, capable of working independently, and have the proper disposition to work productively alongside Authority representatives and contractors. It is these precise qualities that the GPI team offers the Port Authority for this important Professional Construction Management and Inspection Services contract. We have successfully demonstrated and continue to prove our ability to provide these services on a long-term basis during our previous 2002-2006 and 2006-2010 and present 2010-2014 "call-in" basis assignments and our current Bayonne Bridge Navigational Clearance Program (BBNCP) construction management and inspection efforts.

Currently, GPI and its consultant team have nearly 40 full time staff assigned to construction inspection on a variety of Port Authority projects under on-call assignments. Facilities at which these staff members are working include the Bayonne, George Washington and Goethals Bridges and Outerbridge Crossing, JFK and Stewart Airports, Holland and Lincoln Tunnels, PATH Stations, the Port Authority Bus Terminal, and Port Authority office facilities. By capitalizing on the GPI team's proven, talented staff and providing the opportunity for these experienced individuals to transition from their current assignments onto future program projects, the Port Authority will benefit immensely. Over the course of the last dozen years, GPI has expended significant time and energy honing this group's skill set in agency protocols and procedures, making these individuals ***the perfect candidates*** for future Port Authority projects. Also, the timing for transition of GPI staff is ideal. The current construction management contract will be winding down, allowing for a seamless transfer of qualified resources onto this next as-needed services contract. With more than 1,100 employees in offices throughout the eastern United States and bolstered by primary branch offices located in Long Island, New York City and metropolitan New Jersey, the GPI team stands ready to implement assignments at any of the Port Authority-owned and operated facilities whenever requested. **The GPI team is the right team for this project.**

PROJECT MANAGEMENT

The GPI management plan is put in play in advance of the first task order contract and will carry through for the life of this contract according to the following protocols:

- Upon notification of each assignment, GPI will review the scope of work, and identify key potential personnel from our organization chart who best fit the project scope requirements;
- GPI will develop the construction management and inspection team for the identified project requirements. Of key interest will be the assignment of staff who are:
  - ✓ Best qualified (PE, NICET, AWS, ACI, ICC, NACE, OSHA)
  - ✓ Relevantly experienced (PANYNJ, NYCDOT, NYSDOT, TBTA)
  - ✓ Cross-trained, capable of covering multiple operations
  - ✓ Background screened, or those with security clearance, if required
- GPI will respond quickly with the required information/proposal to the Port Authority, and will be ready to meet to discuss the team, scope of work, required hours, etc.

The GPI management plan will address key project components on a project-specific basis as applicable, such as:

Pre-construction Phase
- Review of project submittals
- Development of QA plan, H&S plan, inspection program
- Development of project controls

Construction Phase
- QA audits and reviews
- Safety audits and reviews
- Information dissemination
- Monitoring of schedule and costs

Post-construction Phase
- Close-out

The project manager will provide key management support in the form of administrative, staffing and technical advisory services. The project manager will work hand-in-hand with the construction manager and the Authority facility engineering staff to ensure that all necessary resources are available to the assigned project, and will be thoroughly familiar with all aspects of the work – whether they are design, construction or finance related. More importantly, the project manager will continuously review the ongoing field inspection and construction operations to ensure that product quality, worker and public safety and cost efficiency for the project is incorporated.

For this 'Call-In' contract, the GPI team is offering our top construction management staff and inspection team.

Gregory Zenk, P.E., GPI's Director of Construction Inspection Services, will serve as project manager. Mr. Zenk has served as project manager on a wide variety of construction projects throughout the New York City area. He is acutely aware of the expectations of the Port Authority–those of a first-rate, responsive consultant in step with a quality, on schedule, on budget and safely executed project. For the last 11+ years, during three consecutive indefinite quantity, on-call agreements, Mr. Zenk has been performing in this very capacity; first under our 2002 – 2006 TB&T services agreement and then under the general 2006–2010 and our current 2011-2014 agreements. He has been instrumental in working with the Authority on addressing technical issues and directing resources to Authority needs, and he clearly understands the delicate balance and unique relationship that must be maintained between facility operations and engineering and construction rehabilitation projects to keep things running smoothly. Most importantly, Mr. Zenk has been working closely with the Authority's Engineer of Construction for more than a decade, assisting with staffing and providing other critical resources needed for construction management of rehabilitation work totaling more than $350 million. His considerable knowledge and expertise in all facets of the Port Authority Construction Management and Inspection Services Program work tasks will be infused into the project team from day one.

TECHNICAL APPROACH

To provide the Port Authority with the best construction management and inspection services possible, GPI has developed over the course of three consecutive "On-Call" contracts and additional assignments a management/technical approach what we feel is key to the successful delivery of projects "The Port Authority Way". This approach is being continually tweaked in order to maximize effectiveness and improve efficiency across a wide array of assignment tasks and responsibilities, including constructability/biddability; construction staging; schedule development and monitoring; quality assurance inspection; contract administration; cost engineering/ estimating services; and resources.

The GPI approach incorporates an organized management plan designed to track deliverables, control costs, manage meetings, keep the Port Authority informed (issues and progress) and ensure quality control/quality assurance (QA/QC) using a variety of leading edge tools and practices to facilitate communication, support accountability and elevate quality. The following

discussion provides a categorized overview of the GPI management approach based on Attachment A of the RFP, outlining the scope of work and the list of consultant's tasks.

Task A. Constructability/Biddability and General Engineering Review

In concert with our involvement on major rehabilitation projects and programs for several of our New York City-area clients including the Port Authority, GPI regularly performs comprehensive constructability and biddability reviews. As identified in our organizational chart, GPI has a tremendous complement of technical experts having hundreds of years of collective construction experience on large urban transportation rehabilitation projects. Through these efforts, our contingent of experts have amassed a unique understanding of the special issues that can arise in an urban, highly congested environment like the New York/New Jersey corridor, particularly when working on large, historically significant structures.

The main objectives of a constructability/biddability review are: to ensure that the contract documents clearly communicate the owner's intent regarding the proposed work; to promote a competitive bidding environment; and to uncover any discrepancies or vulnerabilities in the plans and specifications which could prevent efficient, effective implementation of the work. In other words, the process is undertaken to provide answers for the following questions: *Can the documents be understood? Can they be administered and enforced? Will the Port Authority get a knowledgeable contractor to do the work at a fair price?*

The GPI team recently completed a comprehensive constructability/biddability review for the Port Authority's largest ongoing construction project at the Bayonne Bridge (BBNCP), a one-of-a-kind $700+ million fast-track undertaking to retrofit the existing bridge by raising the roadway 65ft within the Arch to allow for larger cargo vessels to pass safely underneath. The third party review focused on the 90% plans and specifications, with the following scope:

1. Assess the risk of identified methods and assumed constraints and suggest possible options for reducing the final bid price;
2. Review the adequacy of areas provided to the contractor for laydown/storage, mobilization & work;
3. Review the plans for potential use of alternate materials and construction sequencing;
4. Review the plans for any fatal flaws;
5. Review the plans for formatting and spelling errors;
6. Review the rationality of the schedule and timeline provided for completion of major milestones and overall construction.

The review team needed to take into consideration a wide range of existing and potential future conditions, applicable codes and regulations to assess such issues as: unknowns to be discovered during subsurface foundation work; actual as-built condition deviations from the design plans; utility interferences; extent of soil contamination beyond currently identified limits, etc. To accomplish this, the GPI team painstakingly categorized the plans and specifications into disciplines and major work elements such as arch span modifications; subsurface and foundation work; environmental compliance; civil construction; precast pier and segmental construction; maintenance and protection of traffic; electrical rehabilitation; and schedule development/review and use of incentives.

GPI's review yielded numerous insightful comments and productive suggestions on how to improve efficiency and/or reduce less than effective processes. The results were tabulated on a specially designed Port Authority spreadsheet and provided to the Authority for review and inclusion in the 100% design plans and specifications.

When tasked with constructability/biddability responsibilities during this "Call-In" contract, the GPI project manager will mobilize a task review team comprised of relevantly experienced individuals with demonstrated expertise in design and construction of similar type projects. The project manager will establish - in accordance with input and direction from the Engineer of Construction - the time-table for submission of draft reviews, put forth roundtable discussions with the GPI-led review team to discuss draft findings, and will oversee the preparation and submission of final review comments.

As was done during the BBNCP assignment, a database will be developed to inventory, organize, and track all relevant comments. Included comments will range from minor concerns to major potential deal breakers. By consensus, comments will be assigned priority status of low, medium or high. Our review team will review and openly discuss all comments with the Port Authority and the designer and provide appropriate direction/insight with regard to the clarification and/or expansion of any ideas/comments as necessary.

Our ultimate goal is to provide a perspective as close to the contractor's as possible during the constructability/biddability process to minimize the

potential for conflict during the construction and administrative processes by incorporating beneficial changes to the specifications and drawings during the final stages of design.

Task B. Construction Staging

Construction staging in essence is the building of a real-life jigsaw puzzle. By placing all the right pieces in the right places in the right order, a project comes together to form a clear picture of a successfully completed construction effort. The GPI team has incorporated construction staging into several of our recent reconstruction/rehabilitation projects, and we are well aware of the great rewards and the potential shortfalls of regimented construction processes. We have adopted from these experiences a proactive "what if" thought process approach, which projects forward a big picture vision of the work to be performed and evaluates the consequences of individually staged multiple construction scenarios. The process focuses on innovative approaches to staging and sequencing of projects and construction tasks to minimize inconveniences to the traveling public, unnecessary expenditures for the client and ways to reduce safety concerns throughout the work.

GPI is well aware of and sensitive to the critical need to keep traffic flowing with minimal inconvenience, particularly at toll generating facilities. As a primary example of GPI's capabilities in providing these crucial services, at the Bayonne Bridge, during the constructability/biddability phase of the BBNCP, our review team realized that due to design-imposed lifting restrictions over live traffic, required traffic shifts could be reduced significantly in length on both approach roadways, resulting in significant reduction in time, manpower and materials needed for construction of the west side lane extension. This proactive evaluation of construction allowed the Port Authority to reduce the contract length before the project even started, ***saving $7 million***. GPI's collective experiences with staged construction at the Triborough (RFK), Williamsburg, Manhattan, Bronx-Whitestone and Bayonne Bridges over the past several years have reinforced the importance of minimizing delays and other impacts. NYC area clients continue to look to GPI for recommendations on how to improve all types of staged construction.

During development or review of staging plans, the vast experience of the GPI team will be supplemented and additionally enhanced by the capabilities of our outstanding traffic engineering department. The GPI traffic engineering department has developed MPT and layout plans for work at virtually every major Port Authority facility. This experience will be invaluable in optimizing construction staging for the variety of projects initiated at the many Port Authority facilities during this "As-Needed" Contract.

Task C. Schedule Development and Monitoring

The key to schedule control during construction is the development and proper utilization of a computerized critical path method (CPM) construction schedule. The CPM combines all activities related to approval, delivery, inspection, installation, and testing which could possibly affect the project timeline. Additionally, supplementary factors including cost, labor hours, and equipment resources needed to conduct the work are directly linked to these primary indicators. The master CPM network identifies all major project milestones and tracks them through the life of every project. This important tool will be used as the basis for the detailed construction schedule that all parties rely on to establish accountability for the project duration for each project assignment implemented during this contract.

On an individual assignment basis, the GPI schedule review team will evaluate the contractor baseline and monthly update schedules (as applicable) in accordance with the contract requirements, project plans and specifications, project resource and access constraints, and all other factors that are important to the project schedule to verify that contract requirements are adhered to, identified activities are logical, activity durations are realistic, and ancillary or minor work activities are not included on the critical path. We will also meet with the entire project team to discuss the project and its initial concerns and objectives relative to the scheduling process. The following is a list of the key elements that will be taken into consideration:

Compliance with the contract and industry standards - GPI will ensure that the schedule includes all significant work activities, including submittals and submittal approvals, off-site fabrication, and delivery. We will check to ensure that less obvious activities, such as permitting, reviews, inspections, and testing, are included and the schedule's logic is both complete and appropriate.

Compliance with other contract requirements and technical schedule characteristics – We will consider the schedule's compliance with the technical contract requirements. These include contract milestones, project phasing, traffic control requirements, contract final completion dates, and similar contract requirements that affect the project schedule. GPI will evaluate each

schedule based on its resource projections and review other submissions including: network diagram, responsibility codes, manpower and equipment analysis, materials reports, and related bar charts, tabulated reports, and diagrams.

Minimize the use of constraints – GPI will check to ensure that the contractor's schedule makes minimal use of unnecessary constraints, calendars, and other software features which can affect the critical path, consuming float, and causing non-critical work to appear to be on the critical path.

Constructability and reasonableness - The schedule review must be based on an understanding of the contract scope, phasing, and traffic staging requirements, and our knowledge of similar reconstruction projects. During the review, GPI will highlight construction sequences and logic that do not appear valid or reasonable, and will work with the Port Authority and the project team to correct these shortcomings.

Cost - As presented on the contractor's cost-loaded schedules, we will check that the contractor has not unreasonably and unjustly loaded the front part of the schedule, and also that costs and labor man-hours are reasonably represented in relation to the specific activity duration and work scope. We consistently recommend that the baseline schedule be back-end loaded, in order to adequately accommodate required project closeout activities such as performance testing, training, and preparation and delivery of operations and maintenance manuals and as-built drawings.

In addition to the initial schedule review, the schedule must be updated and revised regularly to address real world changes, modification and adjustments to the theoretical baseline projections. Our procedure for reviewing schedule updates includes many of the same checks as are included in the review of the initial (baseline) schedule. The monthly reviews begin by performing a side-by-side comparison of the new and most previous recent schedules to determine what has changed from the previous update. Monthly reviews include evaluating progress reported; evaluating changes to schedule logic and potential implications to work sequencing; reviewing the critical path; reviewing milestones; and progression of the work from the previous schedule update.

The monitoring assignments will include updating the CPM master schedule, verifying as-built information, analyzing and implementing schedule workarounds to recover from changes and delays, and ensuring that all project participants identified on the critical path are aware of their pending responsibilities. After a review of each new schedule update, GPI will prepare a summary evaluation report describing all deficiencies discovered during the review, including: the management report and project reports (which will include cost-loaded and resource-loaded, if desired), CPM schedule reports, summary bar charts, CPM networks and logic diagrams, as well as summary narratives that highlight current or anticipated problems. The results will be discussed during the monthly CPM review meeting with the Port Authority and the contractor.

GPI will conduct special studies that will become the basis for recommending workarounds and other schedule improvements. Special studies will be invoked as needed to identify and mitigate potential delays caused by any of the following circumstances: differing site conditions, operational restrictions, project planning alternatives, effects from other projects and uncategorized or unexpected occurrences such as decisions by the client and other technical considerations. We will supplement these studies with "what if" examinations of the schedule, which are intended to analyze potential schedule problems to anticipate the need for time recoveries.

Task D. Quality Assurance Inspection

Quality assurance is another key area where GPI excels. Our philosophy with regard to quality assurance inspection is simple – by paying attention to detail, small issues can be resolved as they are discovered – preventing them from growing into large issues that can affect construction processes, budgets and schedules. The GPI team is comprised of more than 250 New York/New Jersey area construction quality assurance inspection personnel. Unlike many of our local competitors, GPI does not adopt a "job shop" mentality for construction inspection assignments. Top-notch inspection starts with the quality of the individuals—their experience, training and ability to communicate with the Port Authority, contractor and each other. We are loyal to our home-grown inspection talent and technical professionals and, in spite of the nomadic nature of the construction inspection industry, we maintain a majority of staff who are long-tenured (>10 years). The result is an in-house inspection environment consisting of equal parts competence and consistency.

Another benefit is the 'comfortability' factor – our inspectors know one other and know the management staff as well. They are not just numbers; they are completely aware of each other's strengths and unique

capabilities, and therefore they can rely on each other for assistance in their particular areas of expertise. This provides for a dynamic inspection environment where the individual units come together in concert to create a highly qualified, all-encompassing, formidable team.

Another critical facet of successful inspection is having staff rich in project-relatable experience. GPI, having completed many of the largest, most complex rehabilitation projects in the NY/NJ metropolitan area, is largely made up of field inspection staff members who have been exposed to just about every aspect of facility (bridge, tunnel, highway, interchange) rehabilitation. Major, long-term reconstruction programs at the Manhattan and Williamsburg Bridges have served as comprehensive training grounds for our maturing construction management and inspection staff. Since 1982 and 1991, respectively, these projects have literally replaced or completely rehabilitated all bridge, roadway, pedestrian and rail systems with traditional or state-of-the-art components – in some cases leaping 100 years of technological improvements during single rehabilitation events. In addition, GPI has served the Port Authority system-wide continuously since 2002 during multiple "on-call" assignments, which have created a tremendous familiarity with and understanding of Port Authority practices and protocols. During this time, our staff has worked directly with numerous Port Authority management and supervisory personnel at several facilities, inspecting a wide array of work tasks under differing site conditions, addressing multiple jurisdictional codes, specifications and guidelines to successfully complete large-scale, complex project assignments. The length of service provided at these facilities and others is a testament to the quality of the inspection teams provided by GPI to New York City area facility owners.

What also contributes to making GPI so successful is that since the early 1990s, GPI has been ahead of the curve in providing our inspection staff with the necessary training and certifications from nationally recognized engineering and inspection societies and association programs to meet the needs of a tremendous variety of rehabilitation projects. From complex welding processes and lead abatement operations and coatings application, to special inspection for reinforced concrete placement and steel bolting, GPI has sponsored engineers/inspectors to achieve the following training/certifications:

P.E./E.I.T.	State of NY/NJ
NICET	Levels I-IV Training Elements
ACI	Concrete Construction Special Inspector; Concrete Field Testing Technician Grade I; Aggregate Testing Technician Level I; Concrete Lab Testing Technician Level I
ICC	Structural Steel and Bolting Inspector; Reinforced Concrete Special Inspector; Structural Welding Inspector
AWS	Certified Welding/Associate Welding Inspector (CWI/CAWI)
NACE	Certified Coatings Inspector (Level I, II, III)
OSHA	10 and 30-hour Construction Industry Safety Training; Scaffold Competent Person; Confined Space Safety Training
NETTCP	Soils and Aggregate Inspector
ATSSA	Traffic Control Supervisor
FHWA	Safety Inspection of In-Service Bridges
NYCT	Track Safety Training
NJSAT	Asphalt Paving Technologist
NYSDOT	Maintenance and Protection of Traffic Certification
SSPC	Competent Person/Supervisor (C3/C5) - Deleading
LEED	Accredited Professional

In step with the Port Authority's continually expanding quality assurance program, GPI has emphasized the importance of providing our inspection staff with ACI/ICC Special Inspector training for concrete and structural steel and bolting disciplines, and have proactively trained our personnel to become certified in these areas. This cross-training approach lends a great deal of maneuverability when assigning staff to multi-disciplined projects such as this "As-Needed" services agreement. Our flexible approach reinforces the concept of attention to detail during inspection because it provides any inspector - regardless of assignment - with the ability to recognize site conditions with confidence, which might otherwise go unnoticed and possibly uncorrected. Ultimately, the major benefits of our attention to detail philosophy are cost savings for GPI's clients combined with superior quality of finished product.

Safety

GPI field inspectors inherently understand that their responsibilities extend beyond those of documenting and tracking generic construction work progress. A quality finished product is important but of equal value is how the

work is executed. The importance of safety for any project can never be emphasized enough; and it is GPI's number one priority—bar none. Given the continuous news stories of scaffolding collapses, workers falling from heights, etc., we are constantly reminded of the dangerous environments that engineers, inspectors and tradespersons face on a daily basis when executing construction projects. GPI recognizes that you cannot become complacent when working in temporary lane closures along busy highways, or working on elevated scaffolds and platforms and when working in close proximity to heavy equipment and machinery. We are cognizant of the potential ripple effect a serious or fatal injury can have on a project schedule and cost if outside agencies become involved (i.e. OSHA). To maximize the implementation of safety protocols and practices, GPI takes a three-pronged approach to ensuring that all personnel remain safe when working on projects that we manage: 1) Inspector Safety Training; 2) Monitoring of Contractor's Safety Training; and 3) Enforcement of the Contractor's Health and Safety Plan.

Our safety program applies to construction inspection staff and indirectly to contractor personnel, and is currently being implemented and enforced on our active Port Authority assignments.

To start, a preconstruction safety training session will be held with the GPI team staff. All employees assigned to the project after the preconstruction training session will be given an individual training session by the resident engineer or assistant resident engineer at the start of their assignment. As a supplement and to reinforce safety-first thinking, weekly safety meetings will be conducted by the resident engineer at which time specific topics will be discussed that involve requirements for fall protection, scaffolding erection, MOT protocol, etc. Inspectors will receive specific safety training prior to the start of special field work operations such as lead abatement, confined space entry, etc. Special technical seminars pertinent to the work will also be conducted at the site to discuss new advances and applicable changes to current OSHA regulations.

Prior to the beginning of construction, members of the GPI team will meet with the contractor and the facility's resident engineer to discuss and emphasize safety procedures. GPI will ensure that the contractor's approved *Safety Plan and Procedures* are strictly adhered to throughout the life of the project - including the OSHA requirement for them to implement weekly safety toolbox meetings. GPI team field inspectors will attend these meetings to monitor conformance with the OSHA requirements.

By continually focusing on and incorporating safety education, the objective to keep safety at the forefront of all participants' minds will be realized. If individuals do not follow required safety rules and regulations, the GPI team management stands ready to implement a zero tolerance approach to those who violate MOT, fall protection and other safety considerations.

In the event of an emergency, the GPI team will also enforce the following secondary requirements at the site:

- In the field office, a key telephone list of emergency, Port Authority and other important representative contacts will be maintained and posted.
- Two-way radios and mobile telephones will be used to maintain communication between the field office, inspectors, and the contractor.
- The GPI team will be fully cognizant of the location of all area emergency centers and hospitals.
- GPI will submit correspondence to area emergency agencies (i.e., fire, police, ambulance), identifying the work locations and best routes for emergency response.
- No obstructions will be permitted along emergency routes.
- A procedure to document incidents will be implemented, including photographs of the incident site and all pertinent accounting.

Maintenance and Protection of Traffic Operations

Experience and training are also GPI hallmarks when providing quality assurance inspection in the specialty arena of maintenance and protection of traffic (MOT) operations. GPI routinely provides training seminars, which are focused on federal, state and facility requirements for traffic maintenance, and worker and user safety. Many of our larger, long-term projects include implementation of staged construction, which exposes our inspection staff to multiple traffic detour, closure and alignment schemes and work zone pass-through manipulations at the same facility. This critical training/experience combination not only ensures that our field level and supervisory staff are kept current with federal and state standards and facility protocols, but provides them with the tools and motivation to implement them under a wide array of circumstances and conditions in an all-around more efficient, effective way.

GPI is aware of the importance of maintaining balanced traffic flow at all toll-generating facilities owned and operated by the Port Authority. Our quality assurance

inspection program is tailored to closely monitor the contractor's compliance with maintenance and protection of traffic contract requirements to ensure that adequate protection is in place at all times in accordance with the Port Authority's directives. As noted earlier, GPI inspection personnel will be completely familiar with these requirements before entering into the various project assignments. They will record any deficiencies in their daily reports and will report them to the resident engineer to take corrective action without delay. GPI team inspectors will continually inspect all work zones to ensure that adequate protection is in place at all times and the proper placement of temporary barriers, pavement markings, signs, and flashers are maintained by the contractor. The GPI team will take appropriate action in the field with the contractor to minimize or overcome traffic delays due to the contractor's operations, such as not adhering to lane closure allowable time restrictions and failing to maintain proper set-up of MOT materials and safety devices. Our inspection staff will serve as the liaison between the respective contractors and the Port Authority's resident engineer(s) for the coordination of work requiring maintenance and protection of traffic operations in conjunction with notification and approval of the facility operation managers.

During the construction periods when traffic schemes are in effect, members of the GPI team will monitor the contractor's compliance with the maintenance of traffic contract requirements on a daily basis. Placement and conditions of temporary construction signage will be continuously monitored to assure maximum effectiveness. The individual designated for MOT-related inspection assignments will be completely familiar with these requirements, as well as the NYSDOT Manual of Uniform Traffic Control Devices (MUTCD). The inspector(s) will constantly observe that all proper MOT protocols and approved plans are being adhered to.

During the progress of the work, which affects or may be affected by vehicular traffic, adequate safeguards and protective equipment to protect life, health and safety of the public and workers will be provided by the contractor. GPI will ensure that the contractor provides such measures in conformance with a detailed MOT plan. The referenced plan, to be provided by the contractor and reviewed and coordinated by GPI, will include:

- Written text defining the proposed schedules of lane closures and the work scheduled to be completed during each task affecting vehicular traffic.
- A detailed description defining the duration of any proposed lane closure. Lane closures, when required for the progress of work or dictated by safety requirements, will be limited to the hours of operations as defined in the contract documents.
- A detailed listing of equipment and manpower proposed to implement the traffic control plan and methods for installing and removing traffic control devices.
- Full size traffic control plan drawings of the proposed equipment layout and location of safety and traffic control devices such as truck-mounted impact attenuators, flashing arrow boards, regulatory and warning signs, and traffic cones. Plan drawings will also identify specific construction vehicular access points.
- Procedures to be followed in the event of an accident. At a minimum, this would include identification of designated and responsible GPI personnel, designated contractor personnel in the field, and representatives of the Port Authority.

As part of the overall traffic control plan, GPI will coordinate field meetings with the contractor to confirm that his labor force is fully informed of the plan specifics and their individual responsibilities. These meetings will also serve to instruct and remind field personnel of potential hazards within the work zone. The extensive relevant experience of our team will be an invaluable asset as the various phases of construction are implemented, so that the traveling public can safely pass through the construction zones at all times, without discomfort or inconvenience, and the contractor and construction inspection workforce are properly protected from passing traffic.

In addition to MOT operations, coordination of work activities and locations for all construction work tasks will be necessary to sustain a conflict- and delay-free work environment. This is of critical importance, considering that there may be several simultaneous contracts underway at multiple facilities, plus scheduled routine maintenance being performed by the Port Authority's own forces. Although contractors are clearly notified and kept apprised of the possibility of interference with other active contracts and facility maintenance forces, the GPI team will take a proactive role in the coordination of these work operations to minimize potential conflict. GPI, under the direction of facility engineering, will hold monthly coordination meetings with all stakeholders to discuss short- and long-term schedules so each participant has a clear understanding of what the others are doing. Additionally, weekly look-ahead work schedules will be available and

distributed to all stakeholders. The project manager and staff will maintain contact lists containing office phone and cell phone numbers and respective emails addresses for the key people involved with each project so that in the event that changes occur in schedules or emergencies arise, we can quickly and effectively coordinate response actions and alternative planning. These proactive coordination measures are currently being implemented at the Bayonne Bridge (BBNCP), where substantial detour/rerouting and realignment of main span, approach ramp and feeder roads has been coordinated and implemented without concern in advance of major work activities being performed during the bridge reconstruction process.

Inspection Documentation

As part of our quality assurance inspection program, inspectors will prepare daily reports for each calendar day of work in the contractor's contract. Entries will be based on his/her inspections of the relevant daily activities performed by the contractor and subcontractors. Acceptability of the work will be based on conformance with the contract documents and referenced standards. The inspectors' daily report (IDR) includes sections for general information and also for specific site conditions and events, including: weather, location and description of work performed; payment information; deviations and non-conformances; safety violations; and identification of the contractor and subcontractor's personnel and equipment utilized during the daily work operations. When completed, the IDR's are incorporated into EBuilder, the Port Authority's newly adopted document management system database, where they can be reviewed by the resident engineer and other Authority management personnel, as applicable. In addition to standard reporting attachments utilized by the Port Authority, GPI has developed activity-specific checklist attachments to the IDR designed to provide individual task details and intended to enhance data presentation and ease of use. The following are examples of IDR possible attachments the Port Authority and/or GPI may incorporate: Non-Conformance Report; Accident Report; Item/Activity Specific Checklist; Equipment Calibration Sheet; Material Delivery Sheet; Deviation/Punchlist Sheet; Concrete and Asphalt Placement Checklist(s); and Field Paint Application Checklist(s)

Our programs are based on ISO 9001 standards for quality assurance and will be structured to meet or exceed the Port Authority's expectations.

Deficiency/Punchlist Tracking

Throughout the life of each assignment, the assistant resident engineer and office engineer will assist the resident engineer in the development and maintenance of deficiency punchlists, through the use of our relational databases, which indicate descriptions of any discrepancies or deficiencies in the work performed by the contractor, and, if required, an associated cost to correct each item. The punchlist process will start with the GPI field inspectors who, when noting a deficiency, will fill out and attach to their daily report a deficiency punchlist form. When it is received in the office, the office engineer will input all pertinent information into the EBuilder project database. Monthly report updates will be generated and distributed to both the Port Authority and contractor. The EBuilder database will automatically keep a running total of the costs and give the contractor a clear and thorough understanding of the scope and cost of each item. By doing this, the contractor will take care of these issues during the course of the project instead of waiting until the end and having deductions taken from their substantial completion invoice. Completion of all established punchlist items will be verified and documented prior to final acceptance of the work. The punchlist will also include any outstanding documentation.

Non-Conformance Control

GPI intends to minimize the need for action in this regard by achieving, in advance, a full and thorough understanding with the contractor of what is expected and required from all parties. In order to secure this, the resident engineer/assistant resident engineer will schedule pre-work meetings with the contractor to review each new type of operation before work on that operation begins. Appropriate members of the inspection staff will attend and participate. The contractor will be expected to bring responsible supervisors and subcontractors when indicated as appropriate by the resident engineer. Pertinent safety provisions, materials testing and certification requirements, approved shop and erection drawing availability, maintenance of traffic requirements, lay down areas, access to the work, means and methods and other technical aspects of the work operations will all be reviewed. Depending on circumstances, the resident engineer/assistant resident engineer will prepare special minutes of the pre-work meeting, add a section to the regular job meeting minutes, or write a memo confirming understandings reached at the meeting.

In the event that any unacceptable or substandard work is discovered, or installation of material or equipment has not been properly approved, the inspector will immediately

verbally inform the contractor's supervisor of the affected operation, and direct immediate correction of the situation. If this secures satisfactory correction and subsequent compliance, the inspector will note the incident in his Daily Report. If, however, the contractor does not immediately make a satisfactory correction or comply, and the inspector is ignored or the contractor's representative disputes that the work is deficient, then the inspector will inform the resident engineer of the situation. Upon immediately reviewing the inspector's action, and if he concurs with the inspector's finding, the resident engineer will inform the contractor in writing, in the form of a non-conformance report, of the offending work's rejection. The incident will be recorded by the inspector in his/her IDR. There will be no payment authorized for the rejected work until it is satisfactorily corrected, accepted as is by the Port Authority, or removed and satisfactorily replaced. Neither will there be any payment for subsequent work which, though otherwise acceptable, would have to be removed or disturbed to uncover or provide access to the rejected work. If this fails to secure compliance, the resident engineer will recommend to the Port Authority's project manager that work be suspended until satisfactory corrections are made. The situation will be tracked in project Meeting Minutes and in a non-conformance status log as detailed by the Port Authority's recordkeeping protocols.

Security

Unfortunately, the world has changed since September 11, 2001. New York City has changed also. As the financial capital of the world and the nerve center of the United States, NYC in particular is a vulnerable target for terrorist organizations looking to make another statement on the world stage and destroy our accustomed way of life. Recent attempted attacks aimed at the heart of Manhattan and our iconic bridges and tunnels remind us that protecting our most valuable assets has become of paramount importance.

Based on the events of 9/11, security has been elevated to the forefront of facility needs and infrastructure protection throughout the Port Authority facility network. The Port Authority has responded with new security and safety zone provisions that are now in place and are currently being implemented by teams of GPI inspectors at multiple bridge and tunnel facilities.

Secure Worker Access Consortium (S.W.A.C.)

The Secure Worker Access Consortium (S.W.A.C.) was originally developed in cooperation with the Port Authority to assure the highest levels of identity and criminal background screening for workers who access our nation's critical infrastructures such as the World Trade Center complex, NY/NJ airports, rail and bus terminals, bridges and other sensitive transportation facilities. The S.W.A.C. program promotes safe and threat-free work sites by ensuring that all contract personnel and subcontracted labor successfully complete background screening and credentialing in accordance with the criteria for any assignment they participate in. S.W.A.C. officially began operations on February 1, 2007 in the NY/NJ region at Port Authority airports in both states, and has continually expanded to cover all Authority facilities.

S.W.A.C.'s unique strength is its ability to effectively facilitate a cooperative effort among public and private agencies, facility owner/operators, contractors, and their labor partners. Real-Time Verification™ (RTV3) technology utilized by S.W.A.C. enables the secure online sharing of personal information so that security managers can easily verify that workers are known and have a demonstrated threat-free history in accordance with unique, site-specific screening standards. Most importantly, information sharing eliminates redundant identity and background checks that translate into significant efficiencies and cost, and improves regional security. S.W.A.C. has been proven to be truly multi-functional and effectively interoperable in real-world use by the NY/NJ regional transportation sector. GPI is completely familiar with and has participated in the S.W.A.C. secure identification system on multiple Port Authority projects and is fully committed to using this technology to minimize potential threats during any assignments under this 'call-in' contract.

The GPI team will continue to implement the current plan and any changes that Port Authority Police and security may require as the program continues to evolve. The current plan includes the following:

- Project Contact List – Copy of current project emergency telephone numbers.
- Mustering Method for Crews – Outline of how personnel will be received, identified and released from project work areas.
- Personal Identification – Each and every project participant shall wear photo identification, clearly displayed, that is issued by the Port Authority through the Secure Worker Access Consortium (S.W.A.C.) or Airport specific security ID offices.
- Deliveries – Outline of how equipment/goods will be received, tagged and removed from project areas.

- Flammable Items – Type, size and location of flammable inspection items.
- Vehicle List – Type, location and operator.
- Personnel List – List of workers for active projects.
- Needs/Solutions – Project unique security items and proposed means to address them.

Public transportation facilities are truly business enterprises on a grand scale. In the days since 9/11, for a large public transportation agency it is a necessary but exceedingly difficult task to completely protect multiple facility venues when confronted with a very real and ever-increasing potential threat. To complicate matters, implementing simultaneous construction contracts at multiple facilities means allowing and tracking scores of tradespersons as they move regularly through and around security-sensitive areas within individual facilities. It is precisely within this range of security parameters that the GPI quality assurance inspectors are most effective as pro-active members of the Port Authority's front line security effort.

Our long-term exposure to/and implementation of daily security protocols at high-profile Port Authority facilities - Bayonne, George Washington, Goethals and Outerbridge Crossing; Lincoln and Holland Tunnels; and JFK , La Guardia and Stewart Airports - will be invaluable tools in the Port Authority's continued vigilance against security threats throughout their transportation system. By serving as additional eyes and ears during ongoing construction activities, GPI will be actively and acutely aware of all changing conditions regarding materials, equipment and personnel at each jobsite. As such, the GPI team will take the lead in notifying Port Authority security forces of any instances of suspicious and unattended packages, unauthorized personnel and vehicles, and potential threatening conditions. With direct communication links to Port Authority security and local police and emergency providers for real-time response, the GPI team will be an integral and major link in the Port Authority site security program chain.

Task E. Contract Administration

The core component of the overall quality assurance process for any construction rehabilitation project is the administration program. The administration program consists of procedures and protocols developed and implemented by the administrative staff to track and document all correspondence and project records from start to finish to/from all participants. The success of the administration program is invariably linked to the organizational skills, relevant experience and qualifications of the administrative staff.

Since 2002, the GPI team has developed, completed, and is currently implementing administration programs for several Port Authority projects very similar in scope and complexity to those anticipated under this 'call-in' contract. As such, the GPI team members include assistant resident engineers and office engineers who have held leadership positions in quality assurance (QA) administration and have implemented quality assurance processes at Port Authority facilities system-wide. From GPI's extensive experience and our thorough understanding of the Port Authority's contract administration process, we have outlined the following criteria which we strongly feel must be considered during project start-up to yield a successful contract administration program at the end of each assignment.

Post Award Contract Changes and Change Orders

Post Construction Award Contract Changes (PACCs) are an important part of the administrative process. PACCs are prepared and initiated on an individual basis, and can be issued by multiple departments within the Port Authority realm (Construction Management Division, Project Management Division, Tunnels Bridges & Terminals, etc.), depending on particular circumstances. The department that initiates a PACC prepares all required documentation backup, including:

- Contract data, description and reason for the change;
- Engineer's estimate and drawings, sketches and photos detailing the scope of work;
- Required forms and supplemental information.

During the review process, the GPI team will assist the resident engineer in researching and preparing independent, task-specific PACC estimated costs (Engineer's Estimate), utilizing various available resources, including: the "Construction Trade Labor Rates for Estimating Construction Projects", Blue Book rates for equipment, on-line estimating resources, construction experience, and discussions with the chief estimator's office. The completed PACC package, including signed drawings or field sketches, is forwarded, in order, to the resident engineer, the engineer of construction, and the line department for review and approval. When the estimate for the PACC exceeds $50,000, the assistant chief engineer joins the review and approval process. The resident engineer simultaneously solicits a request for quote (RFQ) from the project contractor. Upon receipt of both the contractor's proposal and the approved PACC by the resident engineer, the contractor's proposal is

compared against the engineer's estimate. The contractor's proposal is deemed acceptable if it falls within the following guidelines:

Engineer's Estimate	Deviation in Contractor's Estimate
<$10,000	25%
$10,000-$25,000	15%
$25,000	10%

In cases of deviation of the contractor's cost proposal outside these ranges, the PACC is re-issued by the resident engineer and the review process is repeated using the contractor's cost for comparison. The Port Authority can either accept the contractor's price or exercise the option to proceed with the PACC work on a time and material (T&M) basis. In either case, once the work is authorized to be performed and funding has been allocated, the PACC becomes a change order and the contractor can begin work. GPI has extensive experience in reviewing and processing PACC requests using Port Authority guidelines and has, on previous occasions, provided key input within this process that has been beneficial in providing time and monetary savings to the Port Authority.

Time and Material Procedures

Change orders are included in the contractor's monthly requests for payment. For change orders in conjunction with an agreed price, payment is made based on the percentage of the work complete. For T&M change orders, contractor-submitted records for all labor, materials and equipment are reviewed and accepted by the office engineer via Desk Audit.

Time and material work falls into three categories - net cost work, extra work, and disputed work. Net cost work is work that may occur but uncertainty exists as to the necessity or the actual quantity of work to be performed (for example underground utility relocation). Extra work and disputed work occurs when the contractor is ordered by the Port Authority to perform work not originally anticipated, or due to changed or unforeseen field conditions/requirements, while an agreement on the value of the extra work is negotiated. Extra work can be paid either as a lump sum payment, or based on T&M records compiled during the performance of the work.

During work that is considered to be paid on a T&M basis, the resident engineer will issue a Letter of Direction to the contractor to proceed with the extra work. GPI inspectors will track and record all aspects of the work being performed, including man-hours spent, use of materials and equipment, and any conditions or circumstances that may be relevant to establishing validity of payment for the work. The tracking tickets will be corrected (if applicable), signed and stamped by the inspector, and then will be forwarded to the office engineer for review and to verify or reject the legitimacy of the contractor's request for payment. If the resident engineer and the contractor can agree to a lump sum before 50% of the scope of the extra work is complete, a revised PACC for the agreed upon amount will be processed in accordance with standard construction PACC guidelines. In the event that the work is completed prior to final agreement of a PACC, the T&M tracking data will be utilized during the negotiation process to establish a fair and agreed upon lump sum price. The GPI office engineer will provide the resident engineer with all pertinent information and back-up available in order to make an informed final decision for the approval or disapproval of the contractor's T&M request.

Classified Items

At the start of each assignment that utilizes unit price items, the field engineer will prepare a summary log of classified items for his/her use. As part of daily inspection quality assurance protocol, the classified item work in progress will be recorded in the daily narrative. The recorded item/completed quantities are provided to the office engineer for entry into Wintrak for subsequent tracking of contract work completed progress. This method of tracking/recording completed item progress will be a useful tool in evaluating whether the assignment is proceeding on time, by comparing in real-time the work completed percentage (in $) versus the time completed percentage (in CCD) to determine whether the project is ahead of or behind schedule.

Partial Payment Processing

Payment applications are submitted by the contractor on a monthly basis. Port Authority contracts can be paid as lump sum or individual item contracts; therefore progress payments are based either on the percentage of work completed or direct measured quantities. The GPI administrative staff has significant experience within the Port Authority system with these payment-tracking scenarios. The process for the monthly payment application will be as follows: Upon submittal of a payment request by the contractor, the GPI assistant resident engineer will review and verify the submitted percentages and/or measured quantities. Percentages and measured quantities (as applicable) will be confirmed through a calculation verification process to ensure that reported quantities are accurately represented (all time and material

charges will have been previously "desk audited" by the office engineer). The office engineer will compile and review all required back-up forms (in an Authority-approved format) prepared by the contractor. The assistant resident engineer will then submit the reviewed payment (with comments as necessary) to the resident engineer for approval and subsequent processing.

Document Control Systems

For the past three-plus decades, GPI has been actively involved in construction management and inspection endeavors for major bridge rehabilitation and retrofit projects in NYC for key clients such as the Port Authority, NYCDOT, NYSDOT and the TBTA. During this time, GPI has been involved every step of the way with developing and implementing a multitude of improved computerized documentation control systems (CDCS) using wide-ranging and cutting edge CDCS methods and programs.

The GPI team is thoroughly knowledgeable and fully capable of incorporating the latest technology and automation tools available into the contract administration process to manage project information and data. For ongoing Port Authority projects, GPI is currently using Wintrak (similar to Contrak) to administer and maintain all payment information (progress payments, classified items, net cost, Pending Item Notifications (PIN's), PACCs).

Additionally, GPI office engineers and administrators have maintained document control systems including relational databases for the tracking of all project information such as Correspondence Tracking Systems; Shop Drawing Tracking System; Field Data Measurements; Submittal Tracking System; Progress Meeting Action Item Tickler; Deficiency Punchlist Tracking; and Material Control and Quality Control Program.

The preferred computer document control database is EBuilder, which was introduced to the Port Authority by GPI on the Bayonne Bridge Navigational Clearance Program (BBNCP). GPI is currently utilizing this progressive database on BBNCP for easy storage, manipulation, tracking and retrieval of large amounts of information, including: project submittals, requests for information (RFI's), non-conformances, shop drawings, correspondence, photographs and meeting minutes. EBuilder allows for quick sharing and dissemination of critical project information, creating a powerful and efficient management tool intended to elevate quality controls and assurances beyond the life of the project. The organization of the BBNCP project has been greatly enhanced by the use of EBuilder by increasing the accountability of all contract responsible participants. Our staff is completely familiar with and trained in the use of EBuilder, as well as Expedition, Lotus Approach and Microsoft Access.

Prepare List of Contractor Submittals and Deliverables

Before the start of construction, GPI will review the contract documents and develop a list of all documents (i.e., permits, affidavits, releases, bonds, waivers, manuals, shop drawings, procedures) required to be submitted by the contractor/subcontractors prior to beginning work or specific tasks. The list will be used by the GPI team and the Port Authority to ensure that all required documents are submitted by the contractor in a timely manner. The submittal list will be set up in the CDCS to track the status of any submittal at the touch of a keystroke. Reports will be set up to reflect key information such as the associated item number, responsibility, description of submittal, expected due date for submission, etc.

Set Up Project Filing System

Upon award, GPI will set up files for the administration of each construction contract in accordance with Port Authority standards, which will include the following as a minimum:

- The contract between the Port Authority and the selected contractor;
- Requests for information (RFI) that would contain all design- and construction-related questions generated by the contractor/CM and associated responses from the Port Authority/REI or Design Engineer;
- Field transmittal memoranda (FTM) which would contain all written correspondence to the contractor;
- Progress payments for storage of records for all contract payments;
- Material certifications;
- Minutes of meetings;
- PACCs, change orders, including all change order data;
- Bid documents, including contract drawings, proposal and all addenda;
- Field changes and as-built conditions;
- MSDS;
- Suppliers;
- Subcontractors;
- Permits;
- CPM schedule;
- Security program;
- Field inspection program;
- Notice of proposed change order and amendment tracking;
- Emergency demobilization plan;
- Safety plan;
- Quality Management plan

As previously noted, GPI will maintain a computerized document control system as stipulated by the Port Authority for the digital storage and transfer of the project files.

Project Meetings

Project meetings are another key element for a successful rehabilitation project, for they present an open forum for all parties to review and discuss scheduled and anticipated events, construction and administrative progress, and ongoing issues of concern.

It is the intention at GPI for the assistant resident (Lead) engineer and the office engineer to attend and contribute valid input during all project meetings, which can be numerous. For instance, during our current Bayonne Bridge (BBNCP) project, the following meeting schedule is adhered to:

- Weekly contractor/MOT/ security meeting
- Weekly technical meeting
- Weekly project coordination meeting
- Bi-weekly progress meeting
- Bi-weekly schedule meeting
- Monthly facility coordination meeting

For any assignments designated to GPI under this 'Call-In' contract, we will attend and participate in these meetings to address construction issues and the performance of work during the life of each assignment, and to keep Port Authority management informed of issues and progress for the life of the assignment.

Regularly scheduled project meetings will also serve as prime opportunities to embrace effective coordination and communication amongst all project participants. GPI team members, the contractor's representatives, and subcontractors will attend the meetings with Port Authority representatives, design team members and others, as appropriate. This is considered absolutely essential for promoting the close coordination of all work activities and parties involved. At these meetings, all issues associated with the projects will be discussed, documented and resolved so as not to potentially delay construction. Schedule, submittals, manpower, facility access, project progress, impact by/on other construction projects, and coordination with outside agencies (such as utilities) are just some of the issues that will be addressed on every meeting agenda.

Task F. Cost Engineering/Estimating Services

In order to enhance our construction management services, GPI has included PACO Group, Inc. on our team to provide cost engineering/estimating services. Under the direct supervision of GPI, PACO will provide the Port Authority with a full range of estimating services for all construction disciplines and all types of estimates. These include conceptual estimates, preliminary estimates, schematic design estimates, design development estimates, and estimates of all necessary working drawing phases up to and including final estimates. Additionally, our team is experienced in value engineering, owner's representation, feasibility studies, comparative cost analysis, bid analysis, change order negotiations, product studies, and review of contractor bid items. **PACO has successfully provided these quality services to the Port Authority in the past.**

Cost estimating constitutes the foundation of project cost and schedule control, and gives owners control over their projects. The GPI team recognizes the need for owners to minimize costs, and utilizes seasoned professionals who understand the complex variables which determine cost: materials, equipment, labor rates, productivity, profit, benefits, taxes, insurance, schedules, etc. We combine this understanding with unmatched estimating and cost management skills, accurate data and a thorough knowledge of client objectives to create the information needed to make sound functional and economic decisions during design, and to effectively control costs during construction.

Estimating is typically a four-stage process that, throughout the design phase, develops increasingly accurate cost information for the client. Cost reduction decisions made during design, and before major monetary commitments, save clients time and money, and encourage responsive construction bidding. With our system, we can adjust the method of take-off to varying levels of detail, depending on the available plan and specification data. This feature enables GPI to produce reasonable estimates from very preliminary information.

1. The first project estimate, the budget/conceptual estimate, compares the initial budget with historical cost data for a similar project. The historical cost data is continuously updated by our knowledge of current market conditions. This estimate also takes into account specific project and site constraints as well as financial limits. We then work with the design team to achieve these goals. Construction costs are compared with our own and industry databases to identify high cost elements and suggest ways to reduce them.
2. The second estimate defines major building components, such as site work, foundations, and specialty items, for which we can develop preliminary

costs. A more detailed review of the A/E's cost estimate is performed at the design development phase as specific project components are better defined. GPI estimators review the design to identify information and systems. All estimates are reconciled using applicable unit rates based on current cost information. Should the situation occur in which information is unavailable on a particular component or portion of the estimate, GPI will factor those costs based on historical data.

3. The third estimate evaluates and defines the cost of major elements and sub-elements, including long-lead items and other major requirements. From these three estimating procedures, problem areas with respect to cost will be identified for review and reevaluation.
4. Finally, our estimators use bid documents, complete working drawings and specifications to establish the fourth and most detailed estimate - the takeoff construction estimate. This final estimate serves as the basis for the computerized cost control model that is used to monitor project status throughout construction. It should be understood that estimates are performed before and in support of value engineering studies.

Each estimate takes into account specific project characteristics: operational constraints, environmental considerations, utility relocation and upgrading, design requirements, construction phasing limitations, and any temporary operational measures required. It also reflects logistical problems the contractor may have when actually organizing and constructing a proposed project. For each estimate, a realistic allowance is made for cost escalation and contingency. This allowance is identified and included in the total cost.

Task G. Resources

The depth of resources provided by the GPI team and the breadth of experience in the discipline areas required (civil, structural, electrical, mechanical) will be the key to the successful execution of the Port Authority's assignments under this contract. GPI is prepared to fully commit our team's vast resources to this project. With a combined resource pool in the NY/NJ area of more than 400 multi-disciplined engineers and quality assurance inspectors, the GPI team is ***perfectly*** positioned to respond to the needs of any project assignment. Please see the organization chart and the experience matrix in Section E1 of this proposal which gives the credentials of the staff that meet the requirements outlined in the RFP, and also included below:

-10 NY/NJ Licensed Engineers/Architects – **41**
-10 ACI Concrete Construction Special Inspectors – **13**
-3 ICC Certified Structural Steel & Bolting Inspectors – **17**
-1 NACE Level 1 (or more) Coatings Inspectors – **35**

With regard to other resources needed to complete construction management assignments, we have at our disposal both in-house and outside support services for providing surveying, material subconsultants, testing services, leasing of project vehicles, and industry specialist relationships. GPI routinely enters into subcontractor, testing and leasing agreements on many of our assignments.

Subconsultants and M/WBE Participation

GPI is thoroughly committed to using qualified and experienced M/WBE firms that are in compliance with the Port Authority's guidelines As such, we have joined forces with the same firms with which we have successfully teamed for the past two Port Authority 'Call-In' contracts. This is a supremely qualified and dedicated construction management and inspection team, capable of delivering the necessary comprehensive quality assurance services for this 'Call-In' contract. We will meet the goals specified in the RFP. The firms we have selected bring outstanding capabilities in the field of construction management and inspection. Our team's MBEs are **Maitra Associates, P.C.** and **PACO Group, Inc.**, and our WBE is **LPE Enterprises, Ltd.**

Summary

The GPI team is absolutely capable of addressing all assignments presented to us by The Port Authority of NY & NJ. For the duration of all or any of these potential assignments, the Port Authority will have at their disposal a team of particularly qualified, multi-discipline professionals ready to tackle a wide range of assignments at any of the facilities owned and operated by the Port Authority. In keeping with our long history of providing comprehensive, dedicated, successful construction management and inspection services, the GPI team is eager to continue working with the Port Authority's Construction Management Division.

CERTIFICATION REGARDING CONFLICTS OF INTEREST

For purposes of Contractor performing services for the Port Authority of New York and New Jersey, "conflict of interest" means that, because of activities or relationships with other persons or entities, (1) Contractor is unable to render impartial assistance or advice to the Port Authority, (2) Contractor's objectivity in performing the services under this contract is or might be otherwise impaired, or (3) Contractor has, or attempts to create, an unfair competitive advantage.

The undersigned certifies, to the best of his or her knowledge and belief, that:

1. It does not and will not have a conflict of interest in performing the services for the Port Authority pursuant to this contract.
2. It will not: (a) engage in activities, or (b) initiate or maintain relationships with persons or entities, where such activities or relationships create a conflict of interest.
3. It will use its best efforts to identify and prevent potential subcontractor conflicts of interest. Contractor will inform the Port Authority of any activity or relationship that Contractor has reason to believe may create a conflict of interest.
4. It is not a party to any existing agreement which would prevent Contractor from entering into and performing this contract.

REQUEST FOR PROPOSALS FOR THE PERFORMANCE OF EXPERT PROFESSIONAL CONSTRUCTION MANAGEMENT AND INSPECTION SERVICES AS REQUESTED ON A "CALL-IN" BASIS DURING 2015 THROUGH 2018 (RFP #39247)

AGREEMENT ON TERMS OF DISCUSSION

The Port Authority's receipt or discussion of any information (including information contained in any proposal, vendor qualification, ideas, models, drawings, or other material communicated or exhibited by us or on our behalf) shall not impose any obligations whatsoever on the Port Authority or entitle us to any compensation therefor (except to the extent specifically provided in such written agreement, if any, as may be entered into between the Port Authority and us). Any such information given to the Port Authority before, with or after this Agreement on Terms of Discussion ("Agreement"), either orally or in writing, is not given in confidence. Such information may be used, or disclosed to others, for any purpose at any time without obligation or compensation and without liability of any kind whatsoever. Any statement which is inconsistent with this Agreement, whether made as part of or in connection with this Agreement, shall be void and of no effect. This Agreement is not intended, however, to grant to the Port Authority rights to any matter, which is the subject of valid existing or potential letters patent. The foregoing applies to any information, whether or not given at the invitation of the Authority.

Notwithstanding the above, and without assuming any legal obligation, the Port Authority will employ reasonable efforts, subject to the provisions of the Port Authority Freedom of Information Code and Procedure adopted by the Port Authority's Board of Commissioners on March 29, 2012, which may be found on the Port Authority website at: http://www.panynj.gov/corporate-information/pdf/foi-code.pdf, not to disclose to any competitor of the undersigned, information submitted which are trade secrets or is maintained for the regulation or supervision of commercial enterprise which, if disclosed, would cause injury to the competitive position of the enterprise, and which information is identified by the Proposer as proprietary, as more fully set forth in the FOI Code, which may be disclosed by the undersigned to the Port Authority as part of or in connection with the submission of a proposal.

ATTN: Bid/Proposal Custodian
Two Montgomery Street, 3rd Floor
Jersey City, New Jersey 07302

Subject: Request For Proposals for the Performance of Expert Professional Construction Management and Inspection Services as Requested on a "Call-In" Basis During 2015 Through 2018 | RFP Number 39247

Dear Bid/Proposal Custodian:

It is with great pleasure that Hill International, Inc. (Hill) submits its proposal to the Port Authority of New York and New Jersey (Authority) for for the Performance of Expert Professional Construction Management and Inspection Services as Requested on a "Call-In" Basis During 2015 Through 2018.

The Hill team also includes AG Consulting (AG), a certified-MBE, Envision Consultants, Ltd. an Authority certified-WBE, Distinct Engineering Solutions, Inc. (DESI) a certified-MBE and licensed special inspection firm, and Municipal Testing Laboratories, Inc. (MTL). The rationale for bringing our firms together to form a team is based upon our respective complementary qualifications and corporate culture and values. Hill is one of the region's pre-eminent providers of Construction Management services and also has an extensive portfolio of projects with the Authority; AG, DESI and MTL are also currently performing multiple assignments for the Authority.

For many firms "as-needed" or "call-in" contracts represent side work, however, at Hill, they are a perfect complement to our full range of services and have become a core component of our business. In fact, "as-needed" or "call-in" assignments such as this one represent close to 25% of Hill's workload. Hill has extensive experience in providing personnel for many different kinds of "as-needed" or "call-in" agreements such as our on-call estimating, Superstorm Sandy relief and construction management work with New York City Transit Authority (NYCT), MTA Bridges and Tunnels and the Authority and the New York Power Authority (NYPA).

Hill holds term requirements contracts with the New York City Department of Design and Construction for cultural facilities and related buildings, term requirements contracts with the Dormitory Authority of the State of New York, and City of New York Department of Parks and Recreation. We also provide independent engineer's certification for MTA's New York City Transit, Metro-North Railroad, Long Island Railroad and MTA Bus. Hill also provides on-call support for NYCTA and Long Island Railroad.

Management Team

Hill's management team was handpicked to achieve the Authority's goals for this assignment. As excellent problem solvers for complex assignments, this staff is adept at anticipating the unusual and adverse. Their combined skills will allow the Hill team to anticipate technical, project coordination and agency-related problems, develop and assess alternatives to mitigate possible challenges, and to assist the Authority in selecting solutions that will avoid or minimize negative consequences.

Providing overall support for this assignment will be our **Project Executive, John Milano, PE.** He offers a wealth of experience gleaned from years of providing senior management oversight of major construction efforts and on-call assignments. The Hill team will be led by our **Project Director George Keeber, PE**; he has more than 35 years of professional experience and was responsible for Hill's post-Sandy assessment work on the Holland Tunnel and he also manages Hill's Authority task order staff at Kennedy International Airport. George will serve as the Authority's single point of contact throughout this assignment.

Our designated discipline leaders are designated on our organization chart in Section E. Each leader has more than 20 years of experience in all phases of engineering planning, design, scheduling, construction, and financial controls. Their experience encompasses directing construction management teams, design professionals, and support personnel toward the successful completion of projects.

Our staffing plan includes multiple inspectors, constructability review personnel, schedulers, estimators and contract managers. Within each of these categories we have engineers, architects and associated subject matter experts who will specialize in their areas of expertise such as tunnels, signals and communications, stations, shops, yards and maintenance facilities as well as power.

The Value of Our Services

The Hill team's comprehensive and aggressive approach to understanding the interrelationships inherent on a construction project; our assertive approach to managing call-in assignments and our highly professional staff, trained to focus on the individual needs of our clients, are the critical items that make projects a success. We will focus our energy and attention from day one on the critical elements of this project and we are ready to start now.

The Hill team clearly understands the requirements of this project and offers:

- Strong transit experience;
- The right Program Director, George Keeber, PE;
- Strong experience managing single prime as well as multiple prime projects;

- The ability to develop accurate budgets and complete the work on-time;
- The strict priority the team places upon safety.

We look forward to working with the Authority to successfully complete this project. If you have any questions or require additional information you can contact me at 212-244-3700 or johnmilano@hillintl.com. We acknolwedge Addendum #1, dated 9/12/2014 and Addendum #2, dated 9/15/2014.

Very truly yours,

John Milano, PE
Senior Vice President and Deputy Regional Manager
Hill International, Inc.

Requirement	Satisfaction
An office in the Greater New York, New Jersey Metropolitan Area with atleast 50 individuals on staff who have experience prforming applicable services in the NY/NJ area	Hill International, Inc. has an office that will principally manage this call-in contract located at One Penn Plaza, Suite 3415, New York, NY 10119. We have more than 160 professionals at this location alone who have demonstrated experience providing CM and Inspection services in the greater New York and New Jersey area as well as for the Port Authority of New York and New Jersey. Resumes for our proposed staff are in section E1.
Certificate of Authorization	Hill International, Inc and Distinct Engineering Solutions are authorized to provide professional engineering services in New Jersey. Please see the attached certificates.
Required Staff	As demonstrated in section E1 by our organization chart and accompanying resumes, we are able to provide the required 10 licensed architects or professional engineers in the states of New York or New Jersey, 10 Licensed ACI Concrete Construction Special Inspectors, 3 ICC Certified Structual Steel and Boltings inspectors and 1 NACE Level 1 Coatings inspector.

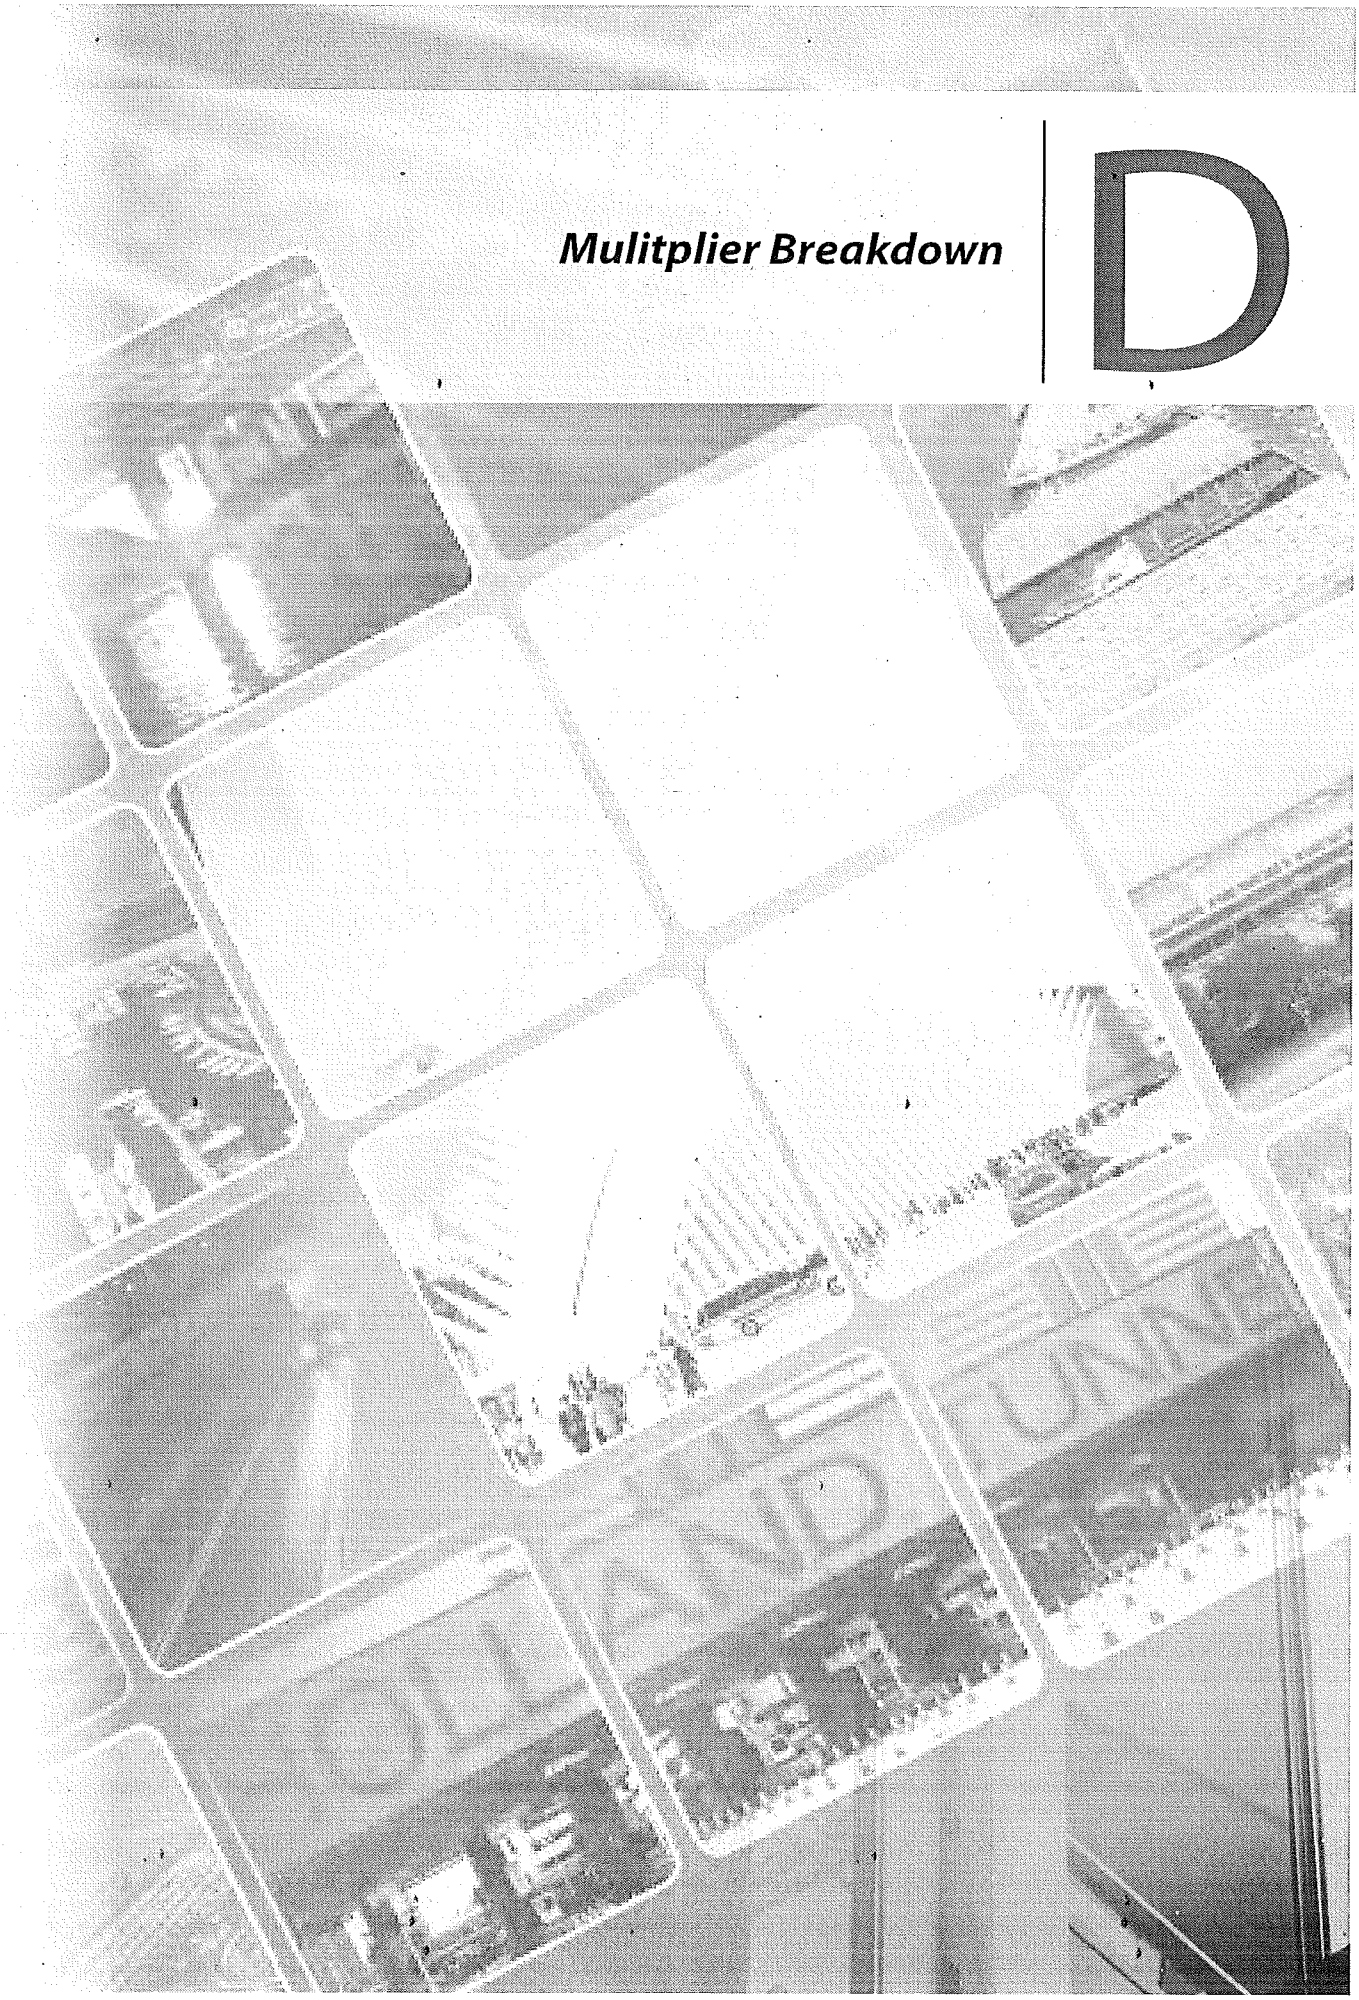
Mulitplier Breakdown

D



Multiplier Breakdown

Hill International, Inc's multiplier is broken down to include the categories listed below from our overhead rates. Please see attached documents for further information.

Project Labor- The Company charges labor to all projects based on actual hourly rates.

Paid Time Off- Paid vacation, sick leave and camp. time are part of the employee's salary and charged to overhead.

Paid Overtime- Non-exempt employees are paid time and a half for hours in excess of 40 per week as determined by contract and by state law. This payment is charged to the job/project.

Uncompensated Overtime- Salaried employees are not paid for time worked in excess of 40 hours per week (uncompensated overtime). Salaried employees overtime hours are charged to the job/project at their straight time pay rate. This same amount is then credited to overhead.

Highly Compensated Employees/Officers/Owners - The Company paid compensation to senior executives in excess of the FAR 31.205-6(p) limit of $664,782 for certain executives. The Company used the National Compensation Matrix (NCM) Table for a company with $170,000,000 of revenues and $2,369,718 was deducted from executive compensation for the year in excess of salary guidelines in the NCM.

401(k) Plan-The Company maintains a 401(k) Retirement Savings Plan for qualified employees meeting the requirements of FAR 31.205-6(j). The Company match was discontinued as of April 30, 2012.

ESPP-The Company operates an Employee Stock Purchase Plan (ESPP) covering 2,000,000 shares of the Company's common stock meeting the requirements of FAR 31.205-6(q). Eligible employees may purchase shares at 85% of the fair market value on the date of purchase. During 2013 employees purchased 51,000 common shares for an aggregate price of $162,000. The Company recognized compensation expense amounting to $24,000.

See accompanying notes and accountant's report.

Hill International, Inc.
Notes to Overhead Schedule
December 31, 2013

Note 1 – Description of the Company

Hill International, Inc. ("Hill" or "the Company") is a construction consulting firm headquartered in Marlton, New Jersey that provides both fee-based project management and construction claims consulting services to clients worldwide. Hill's clients include the U.S. federal government, U.S. state and local governments, foreign governments and the private sector. The Company is organized into two key operating divisions: the Project Management Group and the Construction Claims Group.

Note 2 – Basis of Accounting

The Company's overhead schedule was prepared on the basis of accounting practices prescribed in Part 31 of the Federal Acquisition Regulation (FAR.) Accordingly, the overhead schedule is not intended to present the results of operations of the Company in conformity with accounting principles generally accepted in the United States of America.

Note 3 – Description of Accounting Policies

The Company uses an accrual based accounting system. All employees enter their weekly time with Project numbers and Segments via time sheets in the Vision Accounting system. This will post all hours and labor costs for the hours worked on the project. This is a fully integrated accounting system, all accounts payable entries related to the project, i.e. and sub consultants are also charge to the project. Current monthly costs, Detail Job Costs, Jobs to Date (JTD), and Year to Date (YTD) Reports can be run from the system. The Company's method of estimating costs for pricing purposes during the proposal process is consistent with the accumulation and reporting of costs under its job-order cost accounting system.

Note 4 – Facilities Capital Cost of Money (FCCM)

The cost-of-money rate has been calculated in accordance with FAR 31.205-10 Cost of Money, using average net book values of equipment and facilities multiplied by the average treasury rate for the applicable period. Equipment and facilities include furniture and fixtures, computer equipment, vehicles, and leasehold improvements. The calculation was made as follows:

Beginning net capital assets, 1/1/13,	$ 4,697,000
Net capital assets, 12/31/13	3,837,000
Total	$ 8,534,000
	/2
Average Net Capital Assets	$ 4,267,000
Average Treasury Rate	1.563%
Facilities Capital Cost of Money	$ 66,693
Direct Labor Base	$50,864,809
FCCM Rate ($66,693/$50,864,809)	.13%

Staffing Plan

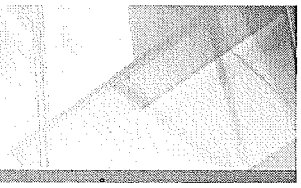
The Hill team has the "know-how" to smoothly provide staffing to the Authority for this assignment. We have the necessary specialists defined in the RFP i.e. Construction Inspection staff with experience with the Civil, Structural, Electrical and Mechanical trades; engineers/architects licensed in the states of New York and/or New Jersey; ACI Concrete Construction Special Inspectors; ICC Certified Structural Steel and/or Bolting Inspectors, NACE Level 1 coatings certified personnel and estimators and schedulers as well. Because of the strength of the resource base within the Hill team, we can adjust quickly and flexibly to PANYNJ's requirements.

Our organization chart is a representation of the Hill team's resources, but it does not limit our ability to provide the Authority with additional professional staff as needs arise. The Hill team has access to additional technical and professional resources as well as the financial capacity to staff up as the assignments require. The Hill team's staff provides flexibility, versatility, and technical knowledge of construction issues and represents all disciplines relevant to the performance of this requirements contract.

The Hill team will assemble the staff that will be needed to execute all the tasks described in each task order scope of work. The individuals who will fill the key positions on our team have been selected because of their many years of similar experience and their proven record of performance. The Hill team has developed an organization and staffing plan to account for the different requirements of managing the overall project and managing the individual projects within it. The Hill team will supply a pool of skilled technical personnel including Construction Inspection staff with experience with the Civil, Structural, Electrical and Mechanical trades; engineers/ architects licensed in the states of New York and/or New Jersey; ACI Concrete Construction Special Inspectors; ICC Certified Structural Steel and/or Bolting Inspectors,' NACE Level 1 coatings certified personnel and estimators and schedulers who will supply their services at the Authority's discretion, providing the additional skills and expertise that may be needed to address specific aspects of any. The Hill team will designate the appropriate staff to be assigned on this contract. Personnel will be experienced in the Authority's criteria and standards.

The Hill team will be led by **George Keeber, PE**; he is a highly qualified construction professional, capable of interfacing with the Authority and providing executive oversight as a result of his decades of experience. It should be noted that George is leading several "Call-in" assignments including Hill's efforts under its current PANYNJ contract. George will serve as the Authority's single point of contact throughout the duration of this assignment. His guiding hand will keep the professional staff focused on performing their duties as well as provide the consistent day-to-day interface for the Authority. By anticipating project issues from the beginning, he manages outcomes through preparedness, consensus, and accountability.

Key Staff members of the Hill team also include **Raymond Tom, AIA, LEED GA**, Cost Estimating Lead; he has more than 20 years of diverse experience in construction management. Raymond manages Hill's Project Controls Group. He oversees all estimating in the Northeast region that requires task order management. He facilitates communication between the project team and



clients and brings targeted experience managing and coordinating workloads and services for local projects that involve construction cost estimates, value engineering services, cost reduction alternatives and constructability reviews for projects. Raymond brings strong leadership skills in managing the project team through all phases of design and construction.

Based upon the above structure Hill's methodology for managing task order based assignments is described below. The project activities will commence with notification by the Authority that it is requesting a Task Order Proposal for a project. The Project Manager will prepare the Task Order Proposal, inclusive of project-specific staffing, costs and a project-specific schedule based upon the project's plans and specifications developed by the Authority's selected design team. This will allow the Project Manager to develop a management strategy to guide the individual Task Order from inception to a successful conclusion. To aid in the preparation of the Task Order Proposal, the management team will visit the site to become familiar with all site-specific conditions, inclusive of swing space needs, worksite access including after-hours work, mechanical systems, location(s) of any hazardous materials and the like. We would then submit the Task Order Proposal to the Authority. Upon notice to proceed, the Hill team will immediately commence its preconstruction phase activities inclusive of constructability review, estimating, scheduling, photograph documentation, value engineering, and building department and/or other expediting for the project. We will immediately mobilize project personnel and prepare project-specific work plans and procedures to guide all team members. We will conduct a project-specific orientation to make certain all personnel are conversant with the project scope and contract documents for the project. We believe in an up-front approach and will recommend the involvement of all affected entities at the beginning of the project to pave the way for smooth communication during construction and start-up.

John Milano, PE

Project Executive

John Milano, a Professional Engineer and Hill Senior Vice President, has nearly 30 years of experience in construction management, business development and general contracting for high-rise office buildings, community centers, distribution centers, courthouses, correctional facilities, government buildings, educational facilities, museums, financial, hospitality and transportation facilities. John specializes in work for New York City and State departments, agencies and authorities, including the Department of Design and Construction,the Dormitory Authority of the State of New York and the Metropolitan Transportation Authority. John's familiarity with the policies, procedures and management structures of these and other clients is invaluable in helping to deliver New York metropolitan area projects on-time and within budget.

John serves as Operations Manager for Hill's New York office, and is responsible for responsible for overall client satisfaction. John's presence on the project will enhance the entire team's performance by demonstrating and improving relations with the Hill team and the client and serving as an added expert resource for the Project Manager. John will also be responsible for evaluating team performance and strengthening our staff, as needed. In addition, as a Hill Senior Vice President, John represents the corporate leadership of Hill and has the authority to make binding decisions to augment our services.

Education:
MS, Public Administration, Bernard M. Baruch College, 1992

American Society of Civil Engineers

 # Years Technical Experience: 30

Port Authority of New York and New Jersey (PANYNJ), Holland Tunnel Visual Assessment, New York, NY, Principal-in-Charge

John serves as Principal-in-Charge on this assignment to evaluate the extent of Superstorm Sandy related damages throughout the Holland Tunnel. Hill provided a visual assessment of the Holland Tunnel for damage related to Superstorm Sandy. The assessment addressed 19 tunnel infrastructure elements ranging from the roadways, tiles, ceilings, medium and low voltage electric systems, pump rooms, exhaust and fresh air ducts, fire suppression and detection, elevators and the stone balustrade wall. These inspections required confined space certification. This project required close coordination with the Holland Tunnel staff to schedule inspections within existing lane closures and to work closely with tunnel staff regarding inspection of those elements not dependent on lane closures.

New York MTA, No. 7 Subway Line Extension, New York, Principal-in-Charge

The Hill/LiRo/HDR (HLH) Joint Venture is responsible for providing construction management services for the extension of the Number 7 Subway Line westward from Times Square under West 41st Street and

southward along 11th Avenue to the southerly terminus at West 25th Street; and the new 34th Street Station for this $2.4 billion project. Other elements include platforms and station entrances. The team will provide management and project control services for the tunneling work and during construction of the facilities and infrastructure transforming the Hudson Yards into vibrant 24-hour neighborhood containing a mix of commercial, residential, retail, and recreational uses. As Principal-in-Charge, John has the day-to-day client interface to ensure proper execution of the Joint Venture's construction management services to the MTA. He deals with major project issues needing executive level input and coordinates with the other Joint Venture leaders to provide seamless construction management services.

MTA Independent Engineer's Certification Program, Metropolitan Transportation Authority, New York, New York

Hill International was awarded a three-year contract with two one-year options to serve as the MTA's Independent Engineer for the certification process. It is the responsibility of the Independent Engineer to conduct surveys or inspections of the systems and of the inspection, maintenance and repair (IM&R) programs certifying that the programs are: reasonable and appropriate; sufficient reasonably to assure the continued operation of the system; and within operating budget. John provided review of the inspection, maintenance and repair of line structures for this multibillion dollar transit operation. Independent review consisted of review of IM&R policies and procedures, in-field repair operations and adequacy of funding to maintain the system in a state of good repair.

Various Projects, Major Construction Management and General Contracting Firm, New York, NY

John was Senior Vice President and New York Territory Manager for this firm. His responsibilities included all operations and the profit and loss of over $200 million annual gross revenues for the office of over 200 employees. Key projects included:

- Museum of Modern Art - renovation and expansion, $240 million
- 5 Times Square Office Tower, $160 million
- The Rockefeller University - renovation, $40 million
- Roosevelt Island Operating Corporation Program Management, $200 million
- Jewish Community Center, $63 million
- Murray Feiss Distribution Center, $15 million
- New York Times Office Tower Pre-construction
- 11 Times Square Pre-construction
- Construction Claims for a Confidential Owner
- Various Tenant Fit-Out Projects for Financial and Hospitality Clients

Freight Line, Harlem River, NY

As Project Executive, John was responsible for the construction of a $60 million, 1.8 mile freight line in the Harlem River.

Bus Garage, New York City Department of Transportation, New York, NY

As Project Executive, John was responsible for the construction of a $62 million bus garage.

George H. Keeber, PE

Project Director

George H. Keeber has more than 35 years of experience managing a wide variety of multidisciplinary engineering projects in the transit, facilities and infrastructure fields. His transit experience includes heavy rail, commuter rail, and light rail projects. The majority of George's transit work has been in the Northeastern United States with a concentration in the New York Metropolitan and New Jersey region, including work with the Metropolitan Transportation Authority (MTA), NJ Transit, Port Authority of New York and New Jersey (PANYNJ), Federal Transit Administration (FTA) and Amtrak.

George's rail assignments have included bridges, new stations, tunnels and platform reconfigurations, railcar maintenance facilities, fire life safety assessments, heavy rail expansion, commuter rail and light rail projects, condition assessments and planning studies. His background in rail shop design, maintenance facilities and infrastructure rehabilitation allows him to contribute to numerous types of rail project needs. He is experienced with both above-ground and underground rail projects, with work in tunnel rehabilitation and with tunnel ventilation projects. George's transit experience also includes providing project management oversight (PMO) for major transit infrastructure and rolling stock projects These projects have included new systems, system expansions and infrastructure improvements.

The Port Authority of New York and New Jersey (PANYNJ), Holland Tunnel Assessment, New York and New Jersey, Project Manager

George was the project manager on this assignment to evaluate the extent of Superstorm Sandy related damages throughout the Holland Tunnel. Hill provided a visual assessment of the Holland Tunnel for damage related to Superstorm Sandy. The assessment addressed 19 tunnel infrastructure elements ranging from the roadways, tiles, ceilings, medium and low voltage electric systems, pump rooms, exhaust and fresh air ducts, fire suppression and detection, elevators and the stone balustrade wall. These inspections required confined space certification. This project required close coordination with the Holland Tunnel staff to schedule inspections within existing lane closures and to work closely with tunnel staff regarding inspection of those elements not dependent on lane closures.

New York MTA, No. 7 Subway Line Extension, New York, NY, QA/QC Review

Hill, in joint venture, is providing construction management services for the $2.4 billion construction extension of the No. 7 Line for the New York City Metropolitan Transportation Authority Capital Construction

Education:
MSc., Civil Engineering, Polytechnic Institute of NY, Brooklyn, NY, 1984

Bachelor, Civil Engineering, The Cooper Union for the Advancement of Science and Art, NY, 1976

 # Years Technical Experience: 35

Program and the Hudson Yards Development Corporation. The project includes two bored tunnels with each diameter approximately 22.5 feet, 34th Street Station, and two interlocking structures which will be connected to the 34th Street Station. George is currently providing a QA/QC review for the project.

Prior Experience

Federal Transit Administration (FTA), Various Locations, Project Management Oversight (PMO) Contractor 2005-2013

George was Project Manager for FTA PMO at NJ Transit, including the $9-billion Trans-Hudson Tunnel project (ARC). He was responsible for directing a staff of five full time engineers and part time discipline specialists monitoring this multi-billion dollar transit capital program, the largest in the nation. In addition to the ARC project, oversight was provided on NJ Transit's rolling stock program and other capital improvement projects including station upgrades, yard and shop expansions, and expansion of light rail systems. George also managed the PMO assignment at MTA Maryland for FTA. The assignment included the Red Line and Purple Line light rail projects and approximately 15 other transit-related projects including station rehabilitations, rolling stock procurements and rehabilitations, rail yards, a new multi-model transit center, station and tunnel repairs. The combined value of these projects was approximately $4.6 billion.

Port Authority Trans-Hudson Corporation (PATH) Main Repair Facility, Harrison, NJ, Deputy Project Manager and Project Engineer Deputy 1987-1991

George served as Deputy Project Manager and Project Engineer responsible for managing the design efforts and its sub consultants. He worked directly with PATH management during the design stage of this $110- million project for state- of- the- art rail maintenance facility to provide a full range of maintenance, repair, and overhaul services. The design effort included architectural, structural, industrial, HVAC, plumbing, fire protection and electrical design, and preparation of specifications for specialized rail shop equipment. George also led the engineering effort during construction and preparation of as- built drawings.

The Port Authority of New York and New Jersey (PANYNJ) Condition Assessments, New York, NY, Project Executive 2000-2003

George served as Project Executive for condition assessments of buildings and facilities including one- and two-story buildings of timber, steel, and concrete construction. In addition, underground stations for the Port Authority Trans-Hudson Corporation (PATH) system were also inspected. Impact reports for each facility were prepared including recommendations for priority and routine repairs. Safety items to be addressed were also identified. When it was determined that immediate action was required to address a deficiency, final design drawings and construction cost estimates were prepared.

Inspection Resumes

Matthew Barboni, PE, RLA, LEED AP

Resident Engineer - Structural

Matthew Barboni, Professional Engineer and Registered Landscape Architect, has more than nine years of experience in site development projects. He has performed a variety of tasks, including grading, drainage, planting and lighting design, developing construction details, cost estimating and construction administration services for implementation. Matthew has been involved in a variety of site rehabilitation and urban transportation projects in both the public and private sectors for clients such as the City of New York Parks & Recreation (NYC Parks). His specialized computer software skills include AutoCAD 2008, Photoshop, Visual and Microstation.

New York City Department of Parks & Recreation, PlaNYC Asphalt to Turf Unit of Capital Projects Division, New York, NY

Matthew manages all site construction activities associated with the transformation of multi-purpose asphalt fields into synthetic turf. The project includes a new synthetic multipurpose turf field, curb and pavement improvements along with newly added fencing, benches, a water fountain and plantings. Matthew provides the day-to-day communication link between NYC Department of Parks and Recreation and the general contractor on all design, safety and construction related issues. His other responsibilities include site inspection, technical design review, daily and weekly site progress reporting, and budget estimating as well as the tracking and processing of payments.

New York City Department of Parks & Recreation, Street Tree Division, New York, NY

Matthew manages all aspects of planting new street trees and replacement trees within the five boroughs of New York City. The project includes removal of dead trees and stumps, saw cutting concrete for new planting sites, excavation and preparation of the sites, planting, and installation of concrete or granite block pavers. Matthew acts as the primary interface between the community and the construction team. His other responsibilities include daily and weekly reporting, tracking and processing payments, conducting final and guarantee inspections, and project completion procedures.

Prior Experience:

Biennial Inspection of Steel-framed Bridges, Long Island, NY

As assistant team leader, Matthew performed in-depth structural inspection of three vehicular bridges.

Education:
Masters, Landscape Architecture, Cornell University, 2000

BE, Civil Engineering, The Cooper Union for the Advancement of Science and Art, 1997

Registrations:
Landscape Architecture, New York

Professional Engineer, New York

LEED Accredited Professional

"Langan Green Team" Morristown, New Jersey, (2007)

 # Years Technical Experience:9

Inspection of the Brooklyn Battery Tunnel, Brooklyn, NY

Matthew inspected the fresh air duct, roadway and exhaust air duct of the tunnel. Tasks included sounding, photographing deficiencies, and determining deficiency severity.

Biennial Inspection of the Lincoln Tunnel, New York Approach Roadways, New York, NY

Matthew inspected the concrete underdeck and steel superstructure of viaducts, including sounding, observing and photographing deficiencies, and rating deficiencies.

Inspection of Metro-North Railroad Culverts, Orange County, NY

Matthew provided in-depth inspection of 15, 100-year old culverts on the Port Jervis Line. He noted and quantified deficiencies and photographed existing conditions. He also compiled reports documenting recommended repairs.

Various Projects, B. Thayer Associates, New York, NY

As Civil Engineer/Landscape Designer/Inspector, Matthew was involved in the following projects.

Reconstruction of the Flushing River Bridge and Whitestone Expressway, Queens, NY

Matthew managed and designed roadside tree removal and the tree protection and planting plan along high-volume highways. He developed project planting notes, tree planting and soil excavation, and installation details. He also estimated quantities for all phases of landscape design.

North Avenue Bridge Replacement, Westchester County, NY

As co-team leader, Matthew was responsible for logistical coordination and in-depth inspection of 11 concrete retaining walls along the highway, documenting deficiencies, and developing repair details.

Study and Analysis of Waterways in New York City

Matthew prepared building structural inventory forms and coordination with the New York State Office of Parks, Recreation, and Historic Preservation for eligibility determination of 24 movable bridges in New York City. He performed field reconnaissance to collect information for inventory forms.

Jose A. Diaz, PE

Senior Project Manager

Jose A. Diaz brings more than 30 years of engineering and project management experience to the team. Jose is an expert in construction and project management, geotechnical and environmental engineering and construction claims analysis. He is also adept at cost engineering, including the development of complex cost models relating to commercial interactions between stakeholders, including private developers and public agencies. His experience encompasses a wide variety of projects, including educational, retail and commercial buildings; transportation facilities such as highways and rail yards; major industrial facilities, such as pharmaceutical processing plants, fossil and nuclear power plants; sanitary and industrial waste landfills; superfund remediation sites; and chemical handling and recycling facilities.

For the project, Jose will create and coordinate plans for project implementation; monitor the work of subcontractors, consultants, architects, engineers and vendors; oversee project budgets, schedules, bid negotiations, bid packages, change orders and site logistics; and manage requests for proposals and potential change orders. Jose will supervise the delivery of our construction management services, including scheduling, requirements validation, blocking and stacking plans, budget validation, procurement support, design reviews, constructability reviews, cost management, quality management, lease modifications, commissioning management and post-construction phase services.

Port Authority of New York & New Jersey (PANYNJ), World Trade Center (WTC) Downtown Restoration Program, New York, NY

Hill is providing program management services in connection with the planning, design, and construction of the new facilities at the World Trade Center, including the new permanent PATH Terminal (Transportation Hub). On assignment at the WTC site as Project Director, Jose headed up a Hill team responsible for providing program management services to PANYNJ related to the redevelopment of the project site. Services include scheduling, cost modeling, budgeting, and cost controls for all the capital programs planned for the WTC site valued in excess of $12 billion. Redevelopment programs include the WTC Transportation Hub, the WTC Memorial, site infrastructure, and retail and commercial facilities.

Port Authority of New York and New Jersey (PANYNJ), Insurance & FEMA Claims – World Trade Center & PATH, New York, NY

Jose served as project manager, on an assignment with the PANYNJ and working for the Assistant Chief Engineer, for the 9/11-related

Education:
MS, Civil Engineering, Rensselaer Polytechnic Institute, 1979

BS, Civil Engineering, Rensselaer Polytechnic Institute, 1976

Registrations:
Professional Engineer, New York

Professional Engineer, New Jersey

Professional Engineer, Pennsylvania

Professional Memberships:
American Society of Civil Engineers

Chi Epsilon - Civil Engineering Honor Society

Awards/Honors:
James G. Hellmuth Unit Citation, PANY&NJ, 9/11 World Trade Center Loss Recovery Project

 # Years Technical Experience: 30

World Trade Center loss recovery effort. He was a member of the Loss Recovery Team and was responsible for managing the estimating efforts for the capital losses sustained by the PANYNJ and for presenting the estimated loss claims to the insurers and FEMA. The project involved over $1 billion in losses related to the World Trade Center buildings and the PATH system. Losses to the PATH system include the World Trade Center Station, the tunnels under the Hudson River, and Exchange Place Station in New Jersey.

Metro-North Commuter Railroad, Harmon Yard Remediation, New York, NY

Jose completed an assignment as Project Manager for a $20 million environmental clean-up project for Metro-North Railroad involving remediation of a PCB and organic compound laced lagoon. He was responsible for overall project management and organization, overseeing the site remediation and removal of the contaminated materials.

Metro-North Commuter Railroad, Harmon Yard Seepage Control Project, New York, NY

As Project Director, Jose oversaw the design and installation of a seepage control cut-off wall, containment boom, and free-product (NAPL) recovery system at the Harmon Yard for Metro-North Railroad.

New Jersey Turnpike Authority On-Call Claims Management

On an assignment for the New Jersey Turnpike Authority, Jose evaluated major issues associated with differing site conditions claims. The work involved major contaminated soil excavations and the construction of roadway embankments. On a second assignment, Jose consulted on a differing conditions claim related to the installation of sonotubes, which caused cost overruns and delays.

New York Metropolitan Transportation Authority (MTA), MTA Independent Engineer's Certification Program, New York, NY

Jose was responsible for evaluating the adequacy of the maintenance programs for the Line Structures managed and executed by the MTA's operating agencies (New York City Transit, Long Island Rail Road, and Metro North Railroad). The reviews included the evaluation of the structural maintenance and repair programs for a vast infrastructure of bridges, retaining walls, viaducts, culverts and tunnels.

Union Station, Washington, DC, Del Studio Architects. As Project Director, Jose managed the development of cost estimates for a number of conceptual alternatives for possible intermodal transportation improvements slated for Union Station. Estimated costs ranged on the order of $150 million.

Luis G. Cortes

Resident Engineer - Civil

Education:
BS, Civil Engineering, Polytechnic University, 2001

AAS, Civil Engineering, New York City Technical College, 1998

Certificate, 4 Hour User/ Erector Supported Frame Scaffold Safety Training, Total Safety Consulting, New York, 2006

 # Years Technical Experience: 14

Luis G. Cortes has more than 14 years of experience in civil/architectural inspections, design, construction and construction management. Luis' experience includes pre-construction scope development, new building construction, landmark building restoration, construction management, scheduling, quality control, cost estimating, safety management, change order administration, contract negotiation, RFI tracking and response and claims avoidance and resolution. His project experience includes water treatment plants, zoos, libraries, museums, schools, parks, transportation facilities, government buildings and courthouses. Luis has contributed to notable projects through various roles such as Superintendent and Construction Manager for clients, including the Dormitory Authority for the State of New York (DASNY) and the New York City Department of Design and Construction (NYCDDC). He is also fluent in Spanish.

New York Metropolitan Transportation Authority (MTA), Grand Central Terminal, New York, NY, Resident Engineer

This project consisted of $23 million in renovations to provide Metro North personnel additional environmentally friendly facilities. The work included areas for train and engine crews, building services and customer service representatives and fire brigade personnel. Two floors were added to the existing space and an electrical substation built for Metro North use. Other project elements included restoring existing elevators to their original architectural features and operational upgrades. Existing architectural window bays throughout the floors were also restored to allow for greater natural light. Hill provided construction management, architectural and construction inspections, estimating, scheduling, delay analysis and project close-out. Luis served as Assistant Resident Engineer on the project, responsible for architectural and construction inspection; coordinating with the contractor, Metro North and other stakeholders; managing Hill estimators and schedulers; and reviewing submittals.

New York City Economic Development Corporation, East River Esplanade South Water Front Project, New York, NY, Resident Engineer

This project consists of civil/structural, architectural and landscaping construction, including improving access and enhancing pedestrian connectivity and public amenities along the water front, from the Battery Maritime Building to Pier 35. The project also entails pier redevelopment for recreational use and reconstructing Marginal Street

to feature a continuous bikeway, new seating and a planting drainage system and water main. The project is divided into several phases valued at $165 million.

Luis successfully and continuously coordinated project activities amongst EDC, DEP, DOT and the contractor. This project involved the lowering of the water table to install a cast in sewer line to an existing retaining wall. Luis worked on the temporary H piles necessary to hold the earth back and then backfilled the area once the sewer was cast. Luis managed pedestrian safety during the project because the operations were taking place in a high volume foot traffic area. He also supervised the contractor's work, resolved construction issues, monitored work schedules and promptly followed up on construction and safety issues.

New York City Department of Design and Construction (NYCDDC), City Hall Renovations, New York, NY, Superintendent

Hill is providing construction management services for the $100 million renovation of New York City Hall in Lower Manhattan. Renovations will include exterior and roofing improvements; installation of the new electrical service; complete replacement of heating, ventilation and air conditioning, fire suppressing, fire alarm, and audio-video; modernization of its elevators; and the complete renovation of all historical interior spaces. This is the first major renovation to this National register building in over 120 years. This project is designed and constructed to meet LEED Gold Accreditation.

Luis supervised the civil/structural renovation of the existing building and exterior work. Exterior civil work consisted of installing of a new concrete electrical vault and manholes to house new switchgear that would power a portion of the newly renovated building. Exterior work also consisted of installation of concrete ramps, excavation and backfill and grading for acceptance and security inspection of trucks arriving to the site. Interior civil work consisted of installation of new steel members and concrete slabs as indicated by the design team; new floor joist and sub flooring in certain rooms; and injection grouting, scaffolding system and shoring throughout the building. Luis coordinated with DDC personnel, Mayor office personnel, the design team, police officers/security, Hill team members and contractors.

Prior Experience

New Jersey Transit Light Rail/Tracks, Jersey City, NJ, Field Engineer

Luis served as Field Engineer for the $300 million project with a previous firm. He provided services for design-build projects and supervised the subcontractor placement of reinforcing steel, plinths, electrical conduit, railings, lime cement columns, welding and sewer pipe as indicated on the contract documents. Luis' main responsibilities included heavy civil engineering and earthwork. He performed pile driving operations and worked closely with contractors and surveyors to determine when and how much they could move the H piles. Luis also worked with concrete sheet piles and pre-drilling with the use of augers. He assisted the Project Manager in supervision and coordination of subcontractors, updated and corrected as-built drawings submitted by subcontractors, and submitted the as-built drawings to the Drafting Department for final issue to the client.

George E. Duda, PE

Senior Project Manager

George E. Duda has more than 30 years experience in the construction industry, specializing in project and construction management, engineering analysis and design, construction, resolution of construction claims and litigation support. George's projects include bridges, highways, airports, railroad facilities, rail transit car procurement, educational facilities, electrical generating stations, high rise commercial buildings, landfills and various smaller projects.

New Jersey Transit, General Engineering Consultant, Newark, NJ, Construction Manager

George served as Project Construction/Construction Manager for various projects under the New Jersey Transit's General Engineering Consultant (GEC) Task Order Contract. His responsibilities included contract administration, design reviews, project and construction management, coordination support, and coordination with Operations. Specific projects include:

- **Newark City Subway, (NCS) Light Rail Extension to Broad Street.** Extension of NJ TRANSIT'S project management staff for the multi-contract, $100 million, new one-mile subway extension from Penn Station to Broad Street Station. George provided design reviews for the Tunnel Ventilation System and for the Signal, Catenary, Communication, and Station Contracts. He provided resolution of construction issues related to signals, trackwork, street lighting, station communication system, change order assessments, and temporary support of existing structures.
- **Newark City Subway (NCS) Improvements.** Projects included replacement of the existing rail signal systems with a new Cab Signal System; track rehabilitation and drainage improvements at the NCS Penn Station Loop and along the Mainline to Branch Brook Park; Catenary Conversion at Orange Street and Central Avenue; and Penn Station Negative Return and Disconnect Switches. It also included oversight responsibility for the development of an integrated construction and testing schedule for all NCS Mainline projects, including the construction of new catenary, track work, stations, a one-mile subway extension to Grove Street, and a new maintenance facility at Grove Street.
- **Patterson Station Improvements.** Design and constructibility review.
- **Avenel Rail Station Reconstruction.** Design review of the contractor construction documents for a Design-Build form of contract.

Education:
MS, Civil Engineering, Drexel University, 1977

MS, Engineering Geology, Drexel University, 1997

BS, Civil Engineering, Drexel University, 1975

Registrations:
Professional Engineer, Pennsylvania

Professional Engineer, New Jersey

Professional Memberships:

American Society of Civil Engineers (ASCE)

The Metropolitan Railway Club of New York

 # Years Technical Experience: 30

New Jersey Turnpike Authority (NJTA), Holmdel Motor Vehicle Maintenance Facility/PNC Arts Center, Holmdel, NJ, Project Manager

George serves as the Project Manager for both of these projects. The Holmdel Motor Vehicle Facility involves demolition of an existing building and construction of a new motor vehicle facility at Mile 116.0 on the Garden State Parkway in Holmdel Township, Monmouth County, New Jersey. The project consists of demolition and removal of the existing New Jersey State Police Barracks and construction of a 4,500 SF motor vehicle facility and associated site work and utility connections. The building is a one-story building, slab on grade, consisting of three vehicle repair bays, an office, restroom/locker room facilities, breakroom and a parts storage room. The PNC Bank Arts Center Amphitheater Improvements - Phase II involves relocating various electrical panels, conduit and wiring serving the amphitheater facility, from a room below the stage to a storage room behind the stage.

New Jersey Turnpike Authority (NJTA) Statewide Traffic Management Center (STMC), Woodbridge, NJ, Project Executive

George served as the Project Executive for construction of management of the new $24 million, three-story, NJTA STMC project. The project was a steel frame and concrete structure adjacent to the existing Administrative Building. The site was very constrained and the adjacent Administrative Building with State Police functions had to be kept operational 24/7. His responsibilities included Project Administration functions, as well as technical responsibility for design reviews for structural steel, concrete and site utilities; resolution of design related construction issues; and claims avoidance.

New Jersey Transit, Southern New Jersey Light Rail Transit System (SNJLRTS), Southern, NJ, Senior Consultant

The project was an independent study of the sequencing and constructibility of the existing Bordentown Trenton Secondary Track for the SNJLRTS to reaffirm a 3-year construction period. George determined the scope of work and the construction duration for various construction activities for the project.

South Jersey Transportation Authority (SJTA), Atlantic City International Airport, Atlantic City, NJ, Project Manager

George served as Hill's Project Manager for the SJTA $77 million Capital Improvement Program at the Atlantic City International Airport. Hill provided project management and construction management services for 31 projects which included airfield improvements, extension of the existing terminal and parking areas, roadway improvements and additional signage. Services include conceptual engineering to implement projects contained in the Airport Master Plan, design consultant monitoring, grant preparation and construction management.

Brian Baldeo, PE

Resident Engineer - Mechanical

Brian Baldeo has more than nine years of experience as a project management engineer. His areas of expertise include mechanical engineering, project management, construction inspection, planning and scheduling and QA/QC. His skills include managing and executing an extensive range of deliverables for numerous projects from inception to finalization; concurrently managing budgets, proposals, contracts and project documentation while establishing strong client relationships. Brian's specialized computer skills include Microsoft Office, AutoCAD, CostWorks, Deltek Vision, Newforma, Primavera, Prolog, Vela, Webenizer, Skire and Adobe Photoshop.

Port Authority of New York & New Jersey, On Call services for PANYNJ Facilities, Jamaica, NY, Mechanical Construction Engineer

For projects at JFK International Airport, Brian's duties in the Construction Management Division, Resident Engineer's office include overseeing the general contractor and providing direction within the construction process as well as managing contract progress, schedules, costs, budgets and labor for Port Authority contracts and work orders. He is also the Port Authority engineering representative on Tenant Alteration Application (TAA) jobs that verifying that contracts are built to design specifications, conducting pre-inspections when general contractors have completed a specific portion of the project and acting as liaison between Port Authority Quality Assurance division and Fire Protection unit that provides final project close out. Specifically, his projects include:

- Bulk Fuel Farm Geo Composite Liners ($4.7 million): Containment area composite geoliner installation for 50 aircraft fuel storage areas. The geoliner prevents soil contamination in the event a tank (approx. 185 K gallons) is compromised.
- Jamaica Airtrain Station, Elevator Machine Room HVAC Upgrade ($700 K): Installation of three new heating, ventilation and air conditioning (HVAC) units to provide sufficient cooling for the once undersized elevator machine room air conditioning units. This project also includes steel re-enforcement work and controls integration.

"Under-Floor Air Distribution System"- New York, NY

 # Years Technical Experience: 9

Olulade Ademokun, PE

Senior Inspector - Structural

Fire Protection System and Fire Resistant Construction Inspector (Sprayed Fire-Resistant Materials, Smoke Control Systems, Standpipe and Sprinkler Systems, Firestop, Draftstop and Fireblock Systems)/ Welding Inspector (Structural Steel, Erection & Bolting, Cold-Form Steel, High Pressure Steam Piping, Fuel-Gas Piping and Aluminum)/Bolting Inspector/Shop Welding Inspector (High Pressure Steam Piping, Fuel-Gas Piping, Aluminum)/ Concrete-Cast In Place, Precast, Prestressed Concrete and Masonry Inspector/ Concrete Field Technician, ACI1/ Soil Inspector (Site Preparation, Fill Placement, In-Place Density and Investigations Borings/Test Pits)

Newtown Creek Water Pollution Plant, Brooklyn NY

Coordination and project management of daily inspection of several facets of the construction works.

Water retention facility SWPPP

Residency Technical inspection of all activities from geotechnical (inception soil exploration) soil laboratory analysis, foundation and soil backfilling inspection, Concrete mix design, field testing and laboratory test analysis, steel shop fabrication and field erection inspection.

Memorial and Tower 1 buildings of the World Trade Center, NY

Concrete, Formwork, Masonry and Reinforcement supervision at the Reconstruction of Memorial and Tower 1 buildings of the World Trade Center.

New York City Housing Authority Properties (Polo-grounds, Laguardia, Johnson), NY

Re-Testing and Structural analysis of NYCHA Properties (Polo-grounds, Laguardia, Johnson etc.)- New York City Housing Authority.

Numerous private owned reconstruction of Apartment buildings and private projects, NY

Special inspection performed for various apartment buildings in NY. Special Inspection included Concrete, Masonry, Soil and Field Erection.

 # Years Technical Experience: 19

Edmund C. Williams

Resident Engineer - Electrical

Edmund C. Williams has more than 30 years of experience in the management, inspection and engineering of complex construction and renovation projects. Ed's project experience includes providing energy surveys for commercial buildings as well as rail systems and terminals, airports, hospitals and healthcare facilities, roadways and bridges, schools, libraries, theaters and cultural centers. His background and experience in electrical engineering have been integral in each of the projects to which he has been assigned. He also is highly adept at managing construction work and project teams, and in training end-users and owners. In addition, Ed was Vice President of Operations and a director of instructors at the Industrial Management and Training Institute of New York, a New York State-licensed and nationally accredited school for apprenticeship training in electrical, plumbing and HVAC programs.

As Project Manager, Ed will create and coordinate plans for project implementation; monitor the work of subcontractors, consultants, architects, engineers and vendors; oversee project budgets, schedules, bid negotiations, bid packages, change orders and site logistics; and manage requests for proposals and potential change orders. Ed will supervise the delivery of our construction management services, including scheduling, requirements validation, blocking and stacking plans, budget validation, procurement support, design reviews, constructability reviews, cost management, quality management, lease modifications, commissioning management and post-construction phase services. His specialized computer software skills include Microsoft Project, Primavera P6 and Primavera Enterprise Project Portfolio Management.

New York Power Authority (NYPA), White Plains, NY, Senior Construction Engineer

As a project consultant for NYPA, Ed oversaw project installation of an ice chiller and 13.8KV switchgear for The State University of NY (SUNY)-Purchase campus ($14 million). He also provided oversight for project installation of 138KV and 27 KV substation construction for Metro North Railroad which included new catenary, switchgear, SCADA and control buildings ($46 million). In addition, Ed was assigned as technical support for NYPA's "Build Smart NY" Executive Order 88 which requires all state agencies and buildings to reduce energy use by 20% per square foot by 2020.

Education:
B.S., Electrical Engineering, New Jersey Institute of Technology, 1978

M.B.A., Business Administration, Keller Graduate School of Management, 2013

Professional Memberships:
Project Management Institute

Construction Management Association of America

International Association of Electrical Inspectors

Association of Energy Engineers

 # Years Technical Experience: 30

New York City School Construction Authority (NYCSCA), New York, NY, Project Consultant Contingent Staff

Employed by Hill as a Project Consultant Contingent staff member to senior management with the NYC School Construction Authority, Ed provided management support from project scope, design, and construction to closeout. His major projects included:

- New $62 million, 1,200-student, 107,000 SF High School Renovation
- Two $15 million Existing High School Science Lab Renovations
- A $15 million, 4,000-student High School Restructuring, Structural Stabilization and Waterproofing
- High School Pool Installation

New York City School Construction Authority (NYCSCA), New York, NY, Project Officer

On behalf of the NYSCA, which builds new public schools and manages the repair and renovation of capital projects for the New York City Board of Education encompassing 1,200 public schools and one million students, Ed functioned under the direction of a NYCSCA Senior Project Officer, providing administration and coordination of activities for the design and construction of both new schools and major modernization of existing school projects. Ed helps to ensure the quality and high standards of performance and compliance in both design and construction by all consultants and vendors. He makes decisions and takes action in a timely manner to expedite the timely completion of the construction process. He is also responsible for correction of mistakes and errors in design and construction before they can be extensively incorporated into the project or as early in the construction process as possible.

Prior Experience

The Port Authority of NY and NJ (PATH), Jamaica Air Train Project, Jamaica, Queens, NY, Senior Electrical Engineer Inspector

Ed provided design review and inspections of substations, main vertical circulation building and portal canopy power distribution. He also supervised and reviewed equipment commissioning, start-up test and preventive maintenance training.

Engineering, Construction and Project Management, New York, NY, Senior Project Scheduler and Engineer

Ed provided contract management and project scheduling; analyzed schedule for railroad outage conflicts, staging and phasing of construction activities; produced sub schedules and logic diagrams to schedule the interfacing between project work and train schedules. He also established an earned value management system to tie resource planning to project technical cost and schedule requirements for senior management reports. In addition, Ed linked cost and schedule activities between Primavera P3 and Expedition 7.0 to develop monthly reports; provided cost loading and end-of-month project control; and provided cost estimates for civil mechanical and electrical contract changes. Specifically, his projects included:

- JFK International Airport Air Train Terminal, Jamaica Station, Queens, NY
- Port Authority and Long Island Railroad, Seven-Story Air Terminal and Railroad Operations Building New Construction ($560 million, five-year project)

Luis Nina

Inspector - Civil

Luis is a young energetic construction inspector with cross functional experience in high way construction industry. He is self driven, result oriented motivated professional with exceptional oral communication skills. He is excellent in daily report writing in detail. He is dependable, conscientious and an outstanding team player.

McMill and Reservoir Dam, NJ

Inspector for the construction of upper and lower outfall structures, grouting of stones face, cofferdams, abutments and bridge hanger extension, valve, siphon installation. All inspections in accordance/ with reference to required standards: Planning & Zoning Board - Municipality Regulations, RSIS, IBC, Escrow, and Contracts Laws (NJSA 40.1), ACI, ASTM, APA, DOT.

Overpeck Park Landfill, NJ

Utilities Work sanitary, leachate, and storm, pump stations, grinder pump, flared end structures and scour holes. Responsibilities included generating daily construction records including reports, quantities, budgets, punch list. Communicating with contractors and project engineers, and handling day-to-day construction operations and client interaction.

Municipal Programs, NJ

Inspector for various Highways/Roads, Bridge, Pool, Tennis Court, Park, Building, Parking Lot, Landfill, Equestrian Center, Horse Stable, Running Track, Fire Station, Retaining Walls, Traffic Light, Substation, Storage Oil Tanks.

Tabor Road, Morris Plains, NJ

Responsible for the testing of Sub-grade HMA compaction density and air void percentage Proctor density by nuclear gauge. Reported to resident engineer.

Giralda Farms, Madison, NJ

Underground Parking Garage (Concrete). Senior Inspector Responsible For All Phases Of Building Construction.

Education:
BS, Civil Engineering Technology

AAS, Civil/Construction Engineering Technology

 # Years Technical Experience: 10

Licenses and Certifications:
NICET: Construction Material Testing – Concrete I, II, Construction Material Testing – Soil I, Transportation

ACI - Concrete Field Testing Technician

Municipal Engineering Construction Inspection Part I (Rutgers CAIT)

Municipal Engineering Construction Inspection Part II (Rutgers CAIT)

40 Hours Hazwoper Training Certification

Quality Control Certification for Concrete Inspection (ACI Committee)

Asish Sengupta, PE

Resident Engineer - Civil

Education:
Bachelor of Engineering, Civil, First Class, University of Calcutta, India

Completed 24 credits towards Master of Civil Engineering at NJIT, Newark

 # Years Technical Experience: 40

Asish has more than 40 years of structural design experience in this country. He is competent in both steel and concrete structure of multistoried high rise office and residential apartment buildings, petrochemical, pharmaceutical, chemical, textile, steel mill and chemical industrial and airport facilities. He is highly qualified versatile structural engineer and completed as a Project Manager multimillion dollars complex projects for diverse private enterprises and public agencies. He is team player with outstanding communication and presentation skill.

Nycha Development at Lower East Side of Manhattan

He supervised and inspected the brick veneer replacement of various buildings located at Allen & Eldridge Street; at Avenue C between 3rd St and 7th St. He was responsible for special inspection of mortar, masonry, fenestration and thermal valves, rating of air leakage etc.

Sip Ave Housing, Jesery City, NJ

A new multistoried concrete framed parking building was constructed next to the Fire Houses. The foundation of the parking building was below the fire houses existing foundation. He was responsible for inspection and supervision of special inspection of foundation of new structure and underpinning of existing structure.

LaGuardia Aiport, Strengthening and Upgrading of Taxiway

He was the engineering project manager for this $850 million dollar project from inception to completion of the project. The entire taxiway is on water. Columns are supported by 150 ft long piles. The taxiway slabs were supported on the beams and these beams were spacing between columns. The new aircrafts which have more concentrated load from landing gear, the strengthening of taxiway was required. The pre stressed precast beams were fabricated at site and installed to strengthen the taxiway slab. He was responsible for inspection of pretention and poof testing of tendons and casting of concrete.

Lefferts Blvd and 975 Essex Street, Brooklyn, NY

He was the project manager for installation of various equipment including deep foundation, excavation, sheeting, storing and bracing, backfill, under piping of hear by existing equipment foundation. He also performed calculation of structural safety and stability of these installations.

Excelsior Packaging, Yonkers

New additional equipments were installed inside the existing one story building. He was responsible for controlled inspection of mini bite concrete driving, pile cap, equipment foundation, concrete slab on grade on unsuitable soil, concrete design mix, site-soil preparation, fill placement, in place density test etc.

Jamie Agpalo

Inspector - Mechanical

Education:
Bachelor of Science in Mechanical Engineering (B.S.M.E), Mapua Institute of Technology, Manila, Philippines, 1978

 # Years Technical Experience: 25

Townhouse Center for Rehabilitation and Nursing, Uniondale, NY

Responsibilities included inspection, testing, operation, and maintenance of Fire Protection system, Emergency Generator and Lighting system, Refrigeration and air-conditioning system, Boilers, Domestic Water Heaters, Oxygen and Suction system, Medical Devices and Kitchen Equipment.

Rockville Residence Manor, Rockville Center, NY

Responsible for the planning and implementation of Corrective, Preventive and Predictive Maintenance/Operation/Safety of Health Related Facility building and equipment, direct supervision of Contractors and maintain the physical appearance of the 66-bed Nursing Facility. Also responsible for quality improvements of the building and equipment necessary for the safe and economical operation of the facility and played a vital role in the attainment of Safety and Health Standards required by the Department of Health of the State of New York.

New Yorker Hotel, New York, NY

Responsibilities included inspections of plumbing fixtures, Fire Protection system, Emergency Generator and Lighting system.

Various Commercial Buildings in NY

Performs inspections for the testing of Heating, Ventilation, Air-Conditioning and Refrigeration (HVACR), Boilers, water-heaters and emergency electric-generators and flue liners for new construction or renovation of commercial buildings within the five boroughs of New York. Ensures that contractors install Heating, Ventilation, Air-Conditioning and Refrigeration (HVACR), Boilers, Water-Heaters and Emergency Generators, DDC Controls, equipment and accessories in accordance to the codes of the New York City Department of Buildings (NYCDOB), International Code Council (ICC), American Society of Mechanical Engineers (ASME), National Fire Protection Association (NFPA), United Laboratories (UL), Sheet Metal and Air-Conditioning Contractors' National Association. Inc. (SMACNA), Manufacturers' Instructions, approved contract drawings, plans, shop drawings, submittals and specifications. Analyses findings and non-conformance issues, generates documented computerized reports and electronically-transmits to the Company Headquarters for final approval. Communicates with the owners' Project Officers and Contractors to ensure that non-

conformance issues are corrected in a timely fashion. Conducts follow-up inspections to ensure that corrections were completed before closing the items and signed-off. This will ensure that the management of inspected projects is completed according to schedule.

Various Commercial Buildings in Long Island

Performs inspections for the testing of Heating, Ventilation, Air-Conditioning and Refrigeration (HVACR), Boilers, water-heaters and emergency electric-generators and flue liners for new construction or renovation of commercial buildings in Long Island.

Ed Bonventre

Inspector - Electrical

Ed is a knowledgeable construction professional with twenty years hands on experience in electrical trade. He managed, coordinated and inspected from start to finish thru all phases of construction. He maintained all project related documents, correspondences, contract documents, estimates, reports, RFI's, change orders, shop drawings and submittals. He is an effective communicator and highly skilled in report writing and excellent in computer. He is a team player, friendly, cooperative and easy to work with.

DASNY - Staten Island Supreme Courthouse, Staten Island, NY

Ed is the Electrical Superintendent for a new five story 154,000 gross square feet Staten Island Supreme Courthouse, which will house the Surrogate, Supreme Criminal and Supreme Civil Courthouse. Space includes 14 Courtrooms and related parking. The courthouse will be constructed at St. George, Staten Island.

NY Psychiatric Institute, New Fire Alarm Installation, NY

Project Cost: $2.5 Million. Ed oversaw installation of new fire alarm system while maintaining existing system until hot cutover during off hours in occupied mental health facility. Oversaw installation of new conduit, wiring, devices, testing and fire stopping. General duties included customer relations, layout work to field personnel, coordination of customer's needs and scheduling.

NY Psychiatric Institute, Mechanical Refit., NY

Project Cost: $60 Million. Ed Oversaw high voltage power for major mechanical refit. Modification to building service, oversaw low voltage interconnect wiring and point to point terminations and testing.

Steiner Studio, Brooklyn Navy Yard, NY

Project Cost: $8.5 Million. Ed supervised new 8000 amp service. Installed all riser and distribution panels, installed all riser to mechanical equipment. Supervised installation of new security system, all conduit, wires, devices, terminations and testing. Oversaw installation of Lighting Protection System and all layouts.

Installation of power, light and low voltage systems in commercial and residential buildings in NY

Project Cost: $3 Million. Supervised installation of power and lighting for cosmetic area, lower lobby. Installation of risers, panels and branch power.

Education:
Course work at St. John's University, Staten Island, NY

Course work at Nova Southeastern University, Davie, Florida

Licenses and Certifications:
OSHA 10 Certification

7 Hour Site Safety Certificate

 # Years Technical Experience: 15

Phil Tropea

Civil Inspector

Education:
Business Management,
Pace University, 1982

 # Years Technical Experience: 25

Phil Tropea has more than twenty five years hands-on experience implementing and leading high-visibility construction for municipal, institutional, residential, municipal and industrial programs from Notices to Proceed to Certificates of Occupancy and close-outs. Provided supervision, inspection of civil and structural work in order to complete the project successfully, safe and on schedule and within budget. Lead contractors and vendors in coordination and interpretation of the contract documents for structurally sound and aesthetic facilities in preparation for end-user and/or Owner acceptance. Anticipate plan and address issues prior to them becoming problematic, by taking timely action to achieve resolution. Deliver tangible results; negotiate contractual changes and settlements; preparation of requests for payment to the Owner and authorization of progress payments to the subcontractors, consultants and vendors. Maintaining the highest level of integrity in managing the support staff and field operations, in conjunction with the overall responsibility for the projects while demonstrating himself as a major player. He is well versed with the construction procedure, method, rules and regulations of New York City Department of Building.

NYCT, Montague Tube Rehabilitation, New York

Duties included inspection of the extent of demolition, appropriate disposal of debris and inspection of new construction.

New York City Housing Authority multi-dwelling building renovation program, NY

Responsibilities include major asbestos abatement, new electrical service, a 750 unit apartment mod and a 61 unit elevator mod.

NYCSCA, PS 21, New York

Responsible for a mechanical / rest room upgrade at Stuyvesant Vocational and exterior / interior gymnasium modernization and investigation / coordination of an asbestos abatement program.

NYCSCA, PS 21, PS 52 and PS 14, New York

Responsible for the coordination and implementation of foundation work for two school six classroom additions in Staten Island, NY for the New York School Construction Authority. PS 52 and PS 14 located at 450 Buel and 100 Tompkins Avenues, Staten Island, NY, respectively, both valued at $16M, Contract No. C-4654. Each set of prefabricated units were in set in place prior to his departure.

Upgrades at Sikorsky Memorial Airport , CT

Responsible for general estimates, appropriation of funds, selection of engineering firms and implementation of a Structural Reinforcement Program, a major abatement program, new equipment installations, new w/s roof top units and various process and manufacturing system upgrades and improvements; inclusive, a perimeter site security program.

Raja Anupindi, Ph D, PE, CEM, LEED AP

Inspector - Mechanical

Raja is a Mechanical engineer experienced in both design and the field. He visited the field, performed the existing field condition survey, preparing report with photos. He recommended for the rectification of the defects. He is a detail oriented meticulous designer and field inspector conforming to the proper installation of mechanical equipment. He has proven expertise in field inspection, progress reporting, progress photos, supervising and guiding subcontractors. He also performed special mechanical inspection of the project.

La Guardia Central Terminal Building, Queens, New York

Raja is providing professional engineering services for electrical design including Air Traffic Control Tower (ATCT) including demolition of existing tower below the roof, line of the concourse, line of site, shadow, reflection studies, hydrant fueling system, airside layout and technical evaluations, utility assessments, roadway layouts and traffic analysis, program development, design criteria summary(ies), sustainable design analysis, project phasing and construction staging, preliminary design of airport roadways, bridge structures, aircraft pavement, structural, rail alignment right-of-way, and site and landscape development criteria and analysis.

Rehabilitation of 12 Stations on the West End Line, Brooklyn, NY

The West End Line, Subway line in Brooklyn, NY is a branch line from the Broadway (Manhattan)-Fourth Avenue (Brooklyn) subway. Mr. Anupindi is providing HVAC design services for the upgrade and rehabilitation of these 12 stations, both, underground and above ground stations. He was also the Project Manager of this project during design phase.

LIRR Morris Park Locomotive Repair & Overhaul Shop, New York, NY

Mechanical Engineer responsible for design and construction administration of the new Morris Park Locomotive Repair and Overhaul Shop to replace the aged LIRR Morris Park Facility. The Morris Park facility was placed in service in 1889 and is in need of replacement. Due to the deteriorated condition of the Morris Park Facility, there are no LIRR facilities available to efficiently conduct heavy repairs of locomotives. The new Heavy Equipment Shop facility's main function will be component change-out, heavy repairs, life cycle maintenance, and overhauls of locomotives used in revenue service and those used as work trains.

Education:
PhD, Mechanical Engineering, University of Missouri, 2011

MS, Mechanical Engineering, University of Missouri, 2005

BS, Mechanical Engineering, Jawaharlal Nehru Technological University (JNTU), 2003

Licenses and Certifications
Mechanical Engineer: California

ICC Certified – Commercial Mechanical Inspector

 # Years Technical Experience: 7

Baisley Park Bus Depot, Queens, NY

Under an MTA Bus Company Task Order, A.G. Consulting Engineering, PC is preparing a facility condition survey report and a complete set of construction documents including plans, specifications, and Engineer's estimate for the design of complete mechanical, plumbing and electrical systems of the entire facility. AG is also providing support during pre-construction and construction phases.

Bleecker Street Station Lexington Avenue, Number 6 Line, New York, NY

Design of mechanical systems for the Bleecker Street (IRT) and Broadway-Lafayette Street (IND) Stations Transfer Connection, Rehabilitation, and ADA Key Stations Project Expansion. The IRT station currently provides only southbound transfer to the IND line. The uptown platform is being extended 300 feet, and a stairwell and elevators added to link the extension to the IND platforms below. New ADA-approved elevators will provide street access to both lines at Crosby and Houston Streets, and four internal elevators will provide transfer between the lines.

Melvin Douglas

Inspector - Electrical

Education:
Electrical Engineering Training Program, International Brotherhood of Electrical Workers

A.S., Mechanical Engineering, Guilford Technical College, Greensboro, NC

A.S. Business Management, Monroe College, NY Bach of Law, Specialization in Law of Contracts-1974

Years Technical Experience: 30

Melvin has over 30 years experience in Construction Management. This includes planning, reviewing for QA/QC, constructability, electrical trade and cost estimation, and construction of new and existing building projects. He is highly skilled in the oversight and execution of all aspects of electrical construction installation and management responsibilities on major NYC projects.

Brooklyn Battery Tunnel Ventilation Building, Manhattan, NY

Melvin is currently working as Electrical Inspector on Brooklyn Battery Tunnel Ventilation Building at Manhattan, Brooklyn and Governor's Island. Total upgrading of electrical system including replacement 2-5,000 AMP switch gear, 100HP motors, ATS for generator, rewiring of transformer feeder cable, installation of new wires and conduits.

Staten Island Supreme Courthouse, Staten Island, NY

Melvin was the Sr. Electrical Superintendent for a new five story 154,000 gross square feet Staten Island Supreme Courthouse, which will house the Surrogate, Supreme Criminal and Supreme Civil Courthouse. Space includes 14 Courtrooms and related parking.

Long Island University Wellness Center Building, Long Island, NY

New medical and recreational facility building with a new NCAA competition swimming pool and basketball court, hospitality suites, a wellness and fitness center and a rooftop running track and tennis court. Worked as electrical superintendent for the installation of all equipment, switchgear, transformer, generator, motors, cable installation, and conduit layout.

Fashion Institute of Technology (FIT) Dormitory Building, NYC, NY

Major renovation for the conversion of an existing warehouse building into the primary dormitory facility for FIT. Electrical superintendent for electrical upgrading of electrical system to fit dorms requirements. Most of the dorm rooms were converted to efficiency apartments. Recreational room, lounge, cafeteria etc were built with electrical lighting and power system.

Queens Hospital New Emergency Service Building, Queens, NY

New three story emergency service medical building. Worked as electrical superintendent to close out the project. Checked the project was constructed as per drawing, punch list items were addressed adequately, change orders were resolved properly, all close out documents were submitted as per specification and final payment to the construction contractor.

Ardash Meguerdichian, CIPE

Senior Inspector - Mechanical

Education:
New York University, New York, New York, 1986

New York Institute of Technology, B.S., New York, 1976

Licenses:
NY Certified in Plumbing Engineering

 # Years Technical Experience: 32

Ardash has over 34 years of experience in the design and engineering of cold water, hot water, sanitary, medical gases, site utility, sprinkler, dry stand pipe, and pre-action systems gas lines. Ardash is experienced in planning and design of integrated fire protection systems for various buildings, including healthcare facilities, educational facilities, landmark buildings, research and medical laboratories, corporate facilities, and hotels. Responsibilities include preparation of reports, design, existing condition surveys, budget estimating, coordinating, specification writing, approving shop drawings, troubleshooting and field inspection. He reviewed extensively plumbing design projects from the constructability point of view and improved the final design and specification accordingly. Ardash was a member of the Technical Committee for NYC Building Code 2008.

TBTA, BBT Project BB-15A Control & Monitoring Enhancements/ Control Room Modernization, Brooklyn Battery Tunnel, New York

Scope included Administrative Procedures, Investigations and Feasibility of Design; Advanced Design with Constructability Review; Final Design, Pre-Construction and Design Support during Construction; and System Programming and Maintenance Requirements. Due to the critical nature of the tunnel, a complete temporary control room was designed. The electrical design included the control room power, communication systems and lighting, development of the temporary control room design package including power, UPS and communication wiring.

LIRR New Morris Park Locomotive Repair & Overhaul Shop, Jamaica, NY

Appreciating the competency of AG, LIRR awarded the team with the design and construction administration of the New Morris Park Locomotive Repair and Overhaul Shop to replace the aged LIRR Morris Park Facility. The new facility's main function will be component change-out, heavy repairs, life cycle maintenance, and overhauls of locomotives. Scope involved HVAC, plumbing, fire protection systems design and construction administration services including office areas, conference room/lunch room, restrooms and locker facilities.

NYCT Rehabilitation of 12 Stations on the West End Line, Brooklyn, NY

The West End Subway Line in Brooklyn, NY is a branch line from the Broadway (Manhattan) – Fourth Avenue (Brooklyn) subway. AG is

providing HVAC, Plumbing and Fire Protection engineering design services for the upgrade and rehabilitation of these 12 stations, both underground and above ground stations.

MTA Bus Baisley Park Bus Depot, Jamaica, NY

Under an MTA Bus Company Task Order, AGCE is preparing a facility condition survey report and a complete set of construction documents including plans, specifications, and Engineer's estimate for the design of complete mechanical, plumbing and electrical systems of the entire facility. AG is also providing support during pre-construction and construction phases.

NYCT Fulton Street Center Station Complex, New York, NY

The FSTC is a new above ground structure to be located on Broadway, between Fulton and John Streets. The FSTC complex will link NYC Transit facilities with PATH service and provide for a new underground corridor that will be extended in the future into the redeveloped World Trade Center area. The contract services include the development of electrical, HVAC and plumbing, fire protection design concepts, including the performance of studies, and preparation of Preliminary Engineering documents (plans, specifications, cost estimates and schedules designated as Phases I), Final Design (Phase II) and Construction Support Services (Phase III).

John Bowman

Inspector - Mechanical

Education:
A.S., Applied Science, State University of New York at Farmingdale A&T

Alexander Hamilton Vocational Technology High School

 # Years Technical Experience: 35

John has more than thirty five years in MEP Construction trade. He is fully conversant with MEP system and subsystem design, installation, commissioning, start up and hand over to the end users. He can analyze and trouble shoot all the MEP and Building Management Systems. He is a self starter and leader with a knack for fixing and improving the entire system. He is meticulous, decisive and completes the assignment within time without compromising the quality of workmanship. He is liked by his supervisors, client, the government agencies having jurisdiction, peers and subordinates for his positive attitude to get the job done.

Staten Island Supreme Courthouse, New York, NY

John is the Sr. Mechanical Superintendent for a new five story 154,000 gross square feet Staten Island Supreme Courthouse, which will house the Surrogate, Supreme Criminal and Supreme Civil Courthouse. Space includes 14 Courtrooms and related parking. The courthouse is under construction in St. George, Staten Island. Project cost $120M. He is responsible for preparation of coordination drawing which is acceptable to all related trades. He reviewed the entire HVAC system considering ventilation and exhaust system. He was involved in coordinating with City for connection of water, sanitary and storm sewer system.

Brooklyn Museum, Brooklyn, NY

Sr. Superintendent for various projects for the museum including: Projects Phase 4a, Phase 4b And Phase 5.

Kings County Hospital Center Building "S", New York, NY

Project was a New Hospital with new operating rooms, New Emergency (Adult And Children) Delivery Room, and New Electrical Substation and Generator, HVAC System.

Kings County Hospital Center Building "E"

Kings Count Hospital Center Building "E". This Project is Part New and Renovation, adding complete change of floors and added New Electrical Systems and Hvac, Plumbing, Fire Protection and Fire Alarm System.

Kings County Hospital Center Building "R"

Project Description: This is a New Behavioral Health Center In Brooklyn, NY.

Ali Miah, PE

Resident Engineer - Electrical

Education:
MS, Electrical Engineering, New Jersey Institute of Technology

BS, Electrical Engineering, Bangladesh University of Engineering, and Technology, Dhaka, Bangladesh

 # Years Technical Experience: 36

Electrical Engineer with a Professional Engineers License and an MSEE in Power Systems with 36 years experience with large Electric Utilities and Consulting Engineering Companies. Demonstrated accomplishments in the project engineering and design engineering of airports, waste water treatment plants, facilities and infrastructure projects, emergency power system projects at New York City Hospitals, including Data Center. Worked as Project Engineer and Design Engineer of High Voltage and Medium Voltage substations including protective relaying and controls. Designed fossil power plants, co-generation plants and nuclear power plants. Design included power plant electrical systems, interface with utility substations, control and instrumentation system. Performed short circuit studies, relay coordination studies and relay setting calculations using EDSA Paladin Design Base 2 Software and SKM Power Tools. Worked as Project Engineer and Design Engineer of fire alarm system projects for high-rise buildings, industrial facilities, hospitals and public schools. Worked on projects with various Agencies including Port Authority (JFK), NYC DEP, NYC TA, DASNY, NYC & NJ Public School projects.

TBTA, Electronic Security Design and Design Support Services for Project 26 for Throgs Neck Bridge, New York

The Throgs Neck Bridge, built as a key link in the interstate highway system, is turning 50 years old on Jan. 11th. The bridge towers are 360-feet above mean high water. Scope of services include, but is not limited to the design, construction support services, testing and inspection during installation of security-related systems at the bridge anchorages and towers' perimeter doors/hatches, underside of the suspended spans, fenders and tower pedestals.

NYCT 68th Street/Lexington Avenue Line Installation of ADA Elevators

68th Street Station is designated as a "Key Station" with an average daily usage of 29,000 passengers. The purpose of this project is to provide vertical accessibility for 68th Street Station and to meet all the guidelines set forth in the Americans with Disability Act Accessibility Guidelines. He was responsible for installation, inspection and commissioning of maintaining uninterrupted electrical power for station lighting and power, signal services, AFC equipment, control booths, communications equipment, employee facilities, and tunnel lighting.

Jacobi Medical Center, Bronx, NY

Construction supervision, commissioning and inspection services for emergency power system upgrade of Jacobi Medical Center and North Central Bronx Hospital, Bronx, NY. The scope of work included the emergency power distribution system throughout the hospitals at Jacobi Medical Center, installation of emergency generators, transfer switches, paralleling switchgear, distribution panels, power and control circuits for HVAC equipment as well security system Reviewed shop drawings to ascertain compliance with the Contract Documents, National and Local Electrical Codes and other applicable codes.

NYCSCA, Various NYC Public Schools, NY

Construction supervision and inspection services for the electrical system upgrade, low voltage electrical system upgrade and fire alarm system upgrade of various Public Schools at New York City. Participated in meetings with clients, city agencies, state agencies, utility service representatives, project teams and contractors. Prepared contract drawings and specifications. Provided response to Contractor's RFI's. Performed field acceptance tests of electrical equipment. Performed site surveys and engineering estimates for planning purposes and construction purposes. Reviewed shop drawings to ascertain compliance with the Contract Documents, National and Local Electrical Codes and other applicable codes.

Arthur Kill Correctional Facility, Staten Island, NY

Supervised the demolition and construction of replacement of 5 KV underground distribution feeders and existing Fire Alarm System. Involved in commissioning, inspection and testing of related electrical equipment. Participated in meetings with clients, city agencies, state agencies, utility service representatives, project teams and contractors. Prepared Change Orders. Provided response to Contractor's RFI's. Performed field acceptance tests of electrical equipment. Reviewed shop drawings to ascertain compliance with the Contract Documents, National and Local Electrical Codes and other applicable codes.

Raymond C. Kallberg, PE

Resident Engineer - Mechanical

Education:
BS, Mechanical Engineering, New York Univeristy

Licenses and Certifications
Mechanical Engineering – New York, New Jersey

 # Years Technical Experience: 40

An experienced Mechanical Engineer and Project Manager, Mr. Kallberg is responsible for design, specifications, load calculations, reports, supervision of designers, coordination of disciplines, cost estimates, field work, shop drawing review, client liaison and construction administration for a variety of projects. His over 40 years of experience spans institutional, correctional, commercial, industrial facilities, residential buildings and includes both new construction and renovation. He designed geothermal and traditional HVAC system with an emphasis on energy management and control system.

TBTA, BBT Project BB-15A Control & Monitoring Enhancements/ Control Room Modernization, Brooklyn Battery Tunnel, New York Project Manager/Sr. Mechanical Engineer

Scope included Administrative Procedures, Investigations and Feasibility of Design; Advanced Design with Constructability Review; Final Design, Inspection and Design and Construction Support Services. Due to the critical nature of the tunnel, a complete temporary control room was designed. The electrical design included the control room power, communication systems and lighting, development of the temporary control room design package including power, UPS and communication wiring. This was a LEED project.

PANY&NJ, Goethal's Bridge Renovation of Main Telecommunication Room, Staten Island, NY, Sr. Mechanical Engineer

He was responsible for condition inspection and HVAC design services for complete modification of the Telecommunication Room at the Goethal's Bridge Building Facility including inspection and construction support services. All equipment in the Telecommunication Room was relocated to a temporary trailer to avoid interruption to the electrical power service. Upon completion of the renovations all equipment was reinstalled. The phasing of this project was critical.

New York City Administration for Children's Services New Situation

Room/Command Center, New York, NY, Sr. Mechanical Engineer

Inspection and construction administration for the 2,000 sq.ft. 13th floor Situation Room/ Command Center. The renovation/conversion of this room is a priority project for ACS. The room is a special-use room that will be used for weekly meetings by 50 people and for executive management meetings. More importantly, this room will be used for agency press conferences and as the ACS command center during emergency situations. The situation room will incorporate a large room

with seating for 50, specialized A/V conferencing equipment, sound system equipment, security and CCTV, emergency backup systems for electrical and HVAC, an A/V control room, an IT server room, an electrical/mechanical room, storage, kitchenette and a small office. All the equipment was selected based on energy efficiency.

NYC DDC, Schomburg Center for Research in Black Culture, New York, NY, Sr. Mechanical Engineer

He was responsible for selecting the most energy efficient equipment for renovation of building involving complete electrical and mechanical services, HVAC, replacing old units and providing new units to accommodate stack rooms, archives and special collection rooms by controlling temperature and relative humidity, library including new chiller, 130 ton cooling tower, lighting, power, security, plumbing, and fire protection design. Fire protection services including reactive system for stack room and provide wet system in gallery.

GSA, Thurgood Marshall US Courthouse, New York, NY ,Sr. Mechanical Engineer

He was responsible for selecting the most energy efficient equipment of HVAC system replacement & upgrade, electrical power distribution/grounding system/lighting systems replacement and upgrade, emergency power system replacement and upgrade, telephone/data systems replacement and upgrade, building management system upgrade and expansion, domestic water/sanitary/storm water systems replacement, fire protection system upgrade and expansion, security screening and security system upgrades, and public restrooms modernization. This has a LEED Goal of Silver Certification.

Brandi Louise Napier

Inspector - Structural

Brandi L. Napier has over 13 years of experience in the geotechnical industry as well as ten years of experience in the coating industry. She is skilled in construction inspection, geology and soil engineering. Brandi's previous projects consist of new and replacement roadways, buildings, bridges and paint. As Inspector, She has provided services for clients such as the Ohio Department of Transportation (ODOT) and Tuscarawas County. Brandi speaks some Spanish, and her specialized computer software skills include GINT, HTML and SQL.

Ohio Department of Transportation (ODOT) Districts 4 and 12 Coatings Inspection, Stark, Summit, Portage, Mahoning, Cuyahoga, & Lake Counties, OH, Coatings Inspector

In 2013, Brandi performed paint inspection and general inspection on over $75 million of projects in Districts 4 and 12 including

- STA/SUM-BH-FY2013 in the Cities of Akron, Canton, & Massillon, Stark & Summit Counties, OH, Brandi performed paint inspection for the following bridges: US-30 over SR-21, IR-77 over NB IR-77 Ramp, IR-77 over SR-303, and SR-764 over IR-77.
- MAH-SR165-(17.29(19.24) in Beaver Township, Mahoning County, OH, Brandi performed paint inspection for the following bridges: SR-165 over SR-11 and SR-165 over Mill Creek.
- MAH-680-4.29 in the City of Youngstown, Mahoning County, OH, Brandi performed paint inspection for six structures which included IR-680 mailine structures and structures over IR-680.
- ATB-90-22.06 in the City of Conneaut, Ashtabula County, OH, Brandi performed paint inspection for the following bridges: IR-90 over South Ridge Rd., Furnace Rd., and Canadian-National RR, & Kefus Rd., Dorman Rd., SR-7, and Middle Rd. over IR-90.
- STA-30-16.46 in the City of Canton, Stark County, OH, Brandi performed paint inspection for the the improvements to various structures on US-30.
- D12-BH-FY2013 in Cuyahoga & Lake Counties, OH, Brandi performed paint inspection for the the improvements to various structures throughout District 12.

Education

MBA, Business Administration: Finance, Kent State University, 2008

BS, Geology, Kent State University, 2001

Certificate, Level 1 Coatings Inspection, KTA-Tator, Inc., 2001

Certificate, Radiation Safety and Use of Nuclear Gauges, Clines Technical Services, Inc., 2001

Certificate, Work Type 26, Structural Steel Painting Course, Ohio Department of Transportation, 2013

Certificate, Work Type 57, Sealing of Concrete Surfaces, Ohio Department of Transportation, 2013

Certificate, Confined Spaces, National Safety Compliance - OSHA Confined Spaces 1910.146 S, 2014

Registrations

NACE Coating Inspector Level I

ACI Concrete Field Testing Technician Grade I

Ohio Level 1 Aggregate Technician Certification

 # Years Technical Experience: 13

Ohio Department of Transportation (ODOT), District 11, Tuscarawas County Coating Projects, Coatings Inspector

Brandi worked on several segments of this project:

- **Fourth Street Bridge, Sharrodsville and Dover**, Brandi was the inspector for Fourth Street Bridge, a project that required removal of all lead-based paint in accordance with lead abatement requirements for ODOT and Occupational Safety and Health Administration (OSHA). She then inspected the preparation of the steel and application of the three-step ODOT OZEU paint system.
- **Country Road 82, Zoar,** Brandi was the inspector for Country Road (CR) 82 which required removal of all lead-based paint in accordance with lead abatement requirements for ODOT and Occupational Safety and Health Administration (OSHA). She then inspected the preparation of the steel and application of the three-step ODOT OZEU paint system.
- **County Road 1-1, Newcomerstown.** Brandi was the inspector for County Road (CR) 1-1, a project that required removal of all lead-based paint in accordance with lead abatement requirements for ODOT and Occupational Safety and Health Administration (OSHA). She then inspected the preparation of the steel and application of the three-step ODOT OZEU paint system.
- **Bolivar, OH**, Brandi inspected the full blast removal of the existing OZEU coating and replacement with the new ODOT OZEU three-coat paint system in accordance with ODOT specifications.

Kulbinder Singh, LEED AP

Inspector - Mechanical

Education:
MS Engineering, Computer Integrated Manufacturing, India, 1998

BS Mechanical, Electronics and Telecommunications, India, 1995

Technical College Diploma, Electronics and Communications, 1992

 # Years Technical Experience: 20

Kulbinder has over 20 years experience in the design and construction inspection of electrical and telecommunication systems. He specializes in the design of electrical lighting, security systems including CCTV, card access system, communications, public address system, LAN/WAN system and power distribution. He is also experienced in preparing cost estimates from schematic to 100% construction documents. Through constant vendor contacts, he is able to maintain current material pricing. He acts as a liaison with architects and engineers to obtain all necessary information to provide accurate cost estimates.

Construction Management Services, New Staten Island Courthouse, Staten Island, NY

Kulbinder is provided construction management and inspection services for a new 154,000 gross square feet Staten Island courthouse, which will house the surrogate, supreme criminal and supreme civil courthouse. Space includes 14 courtrooms and related parking. The courthouse will be constructed at St. George, Staten Island.

Thomas A. Edison Rehabilitation at Glenmont/Cottage and Barn, West Orange, NJ

Construction Management of the complete renovation of this Historical Landmark Building undertaken by Federal Government (National Parks Department). The work of this contract consisted of construction for the rehabilitation and repair of the Edison National Historic Site, Glenmont Unit, historic greenhouse, gardening and barn facilities. Major items include rehabilitation of the Greenhouse, installation of a new roof, parapet at the Gardener's Cottage, reinforcement of the Greenhouse walls, new doors and new mechanical/electrical systems. Additional works at Building 14 and Building 16 are ventilation, lighting, power, plumbing, sanitary and misc. electrical systems, general windows, and doors.

Thomas A. Edison Preservation of Historic Buildings & Collections Glenmont – HVAC & Fire Protection, West Orange, NJ

Construction management and complete supervision of General Contractor/Sub-contractor work. The work consists of HVAC systems and electrical system upgrade at the Glenmont Estate at Edison NHS. The scope of the work included the replacement of natural gas fired hot water boiler, the installation of a new vertical borehole type geothermal heat exchanger, water-to-water type geothermal heat pumps, new

modular air handling units with both chilled and hot water coils, a new direct digital automatic temperature control system, cleaning of existing low pressure ductwork, installation of external duct insulation on existing supply/return ductworks, new electrical service, and the installation of new branch circuit panels as required for the new HVAC system. In addition to the HVAC systems upgrade, the scope of work included a new automatic fire detection, alarm and dry pipe sprinkler system. Electrical work included new indoor/roadway lighting, power distribution, fire alarm system, security system and telecommunication system. Architectural/Civil components include removal, salvage and storage of historical items, excavation, exterior ground repairs, masonry repairs, rough and finish carpentry, repair of various architectural finishes including lath, plaster, ceramic tile and decorative painted finishes.

Ellis Island – Southside Stabilization and Infrastructure – Phase 3, Ellis Island, NY

Construction management services for the work of this contract consisting of general building stabilization, environmental clean-up and utility work at Ellis Island, a unit of Statue of Liberty Monument and Ellis Island. Ellis Island is a ca. 28-acre U-shaped island in New York Harbor comprised by what are referred to as Islands 1,2 and 3 with Islands 2 and 3 collectively referred to as Southside, the area in which the majority of this project occur.

Inspection Services for MTA Bus Company - New Roof and Ventilation System at La Guardia Bus Depot, NY

Kulbinder provided Construction Management & Inspection Services for the La Guardia Bus Depot, Jackson Heights, NY. The depot will remain operational while this work is performed. This project will replace an approximate 112,000 sq ft roof and a new ventilation system in the Main Building. The scope of the work includes removal of the existing roof to the concrete deck, disposal of all removed material, and installation of a new 112,000 sq ft roof with a minimum warranty of 20 years. A new bulkhead and staircase will be installed to allow safe access to the roof. Windows on the roof level will be replaced where applicable.

Ron Dasgupta, PE, LEED AP

Resident Engineer - Mechanical

Education:
MS, Nuclear Engineering, NYU Polytechinc

BME, Mechanical Engineering, Jadavpur University, Calcutta, India

Licenses and Certifications
NY State Professional Engineer, P.E. License #[redacted]

LEED Accredited Professional

 # Years Technical Experience: 40

Ron has over 40 years of experience in HVAC System Design, Engineering and Construction Support Services. He is experienced in Project Management of Steam & Hot Water Boilers, HVAC units, Chillers, exhaust fans and all other HVAC systems including climate controls and BMS. Ron has done various projects including projects for SCA, MTA and NYPA.

MTA- Corona Railway Maintenance Shop, NYC Subway Communication Rooms Air Conditioning

Worked as Task Manager for Mechanical systems in the Corona Maintenance shop. This new maintenance shop for the #7 subway cars was a design-build project and worked from proposal stage all the way to commissioning of the shop. He was responsible for all Mechanical, Plumbing/Fire Protection systems, BMS and fuel oil system design, engineering inspection and construction support. Mechanical, Plumbing/Fire Protection systems also included of dual fuel hot water boilers, VAV packaged air conditioning units, roof top HV units, exhaust fans, pumps, air curtains, unit heaters, above ground double wall fuel oil tanks, BMS etc. The shop was LEED certified. Also worked on communication rooms air conditioning located in different subway stations.

Columbia University, New York, NY

Worked as Lead Engineer for a 5000 ton chilled water plant in the basement of a new 14 story building comprising of electric centrifugal and heat recovery chillers with roof mounted cooling towers and also HV systems. Was responsible for design, engineering inspections and construction support services of the entire project.

NYC School Construction Authority , New York, NY

Worked as Project Manager (PM) & Deputy Project Manager (DPM) on different MEP/FP projects under SCA Capital Improvement Program. Projects included Plumbing, Sprinklers, Fire Standpipe systems. Also included were steam boilers replacement with all accessories, hot water boilers and chillers replacement with pumps and accessories, VAV and constant volume air handling units replacement, climate control system replacement, BMS etc. Provided scope report, design, engineering and construction support services along with NYC DOB approval.

US Corp of Engineers- Vehicle Maintenance Shops at Fort Drum, NY

Worked as Task Manager for two (2) new Vehicle Maintenance Shops with Mechanical, Plumbing/ Fire Protection systems and BMS. He was responsible for all Mechanical systems design engineering inspection and construction support. Mechanical systems also included gas fired high efficiency condensing hot water boilers, VAV packaged air conditioning units, roof top HV units, exhaust fans, pumps, air curtains, unit heaters, above ground double wall fuel oil tanks, under slab radiant heating system, BMS etc.

Richard S. Kruter, AIA

Resident Engineer - Mechanical

Education:
BS, Architecture, City College of New York, 1972

BS Arch, Architecture, City College, New York, 1973

Licenses:
Registered Architect:
NY #[redacted]

 # Years Technical Experience: 40

Richard is a professional architect (AIA – 1977) with forty years practical experience in the area of planning, designing with value and oversight of construction activities. He is involved in conceptual design to preparation of construction documents including coordination of various disciplines, constructability review, code compliance, land use, zoning and historic preservation as well as supervision of the Architectural Department. He has developed a means of handling simultaneous activities through careful organization, open communication with the team and the Authority, and by assembling crews of capable professionals to whom he can delegate ask order responsibility. Mr. Kruter is well known in the architectural and engineering industry in the tri-state area and is a member of various professional societies, and networks constantly with his professional associates. This keeps him up to date about the present and potential future condition of the industry. In the past, he interviewed and selected architects and CAD operators for his project group. He is resourceful, efficient, well organized with strong negotiation skills. He has excellent, written, verbal communication ability.

US Army Corps of Engineers, Military Academy at West Point, NY

Cost: $160 Million: Renovation of 260,000 sf Science Building in Bartlett Hall. As a senior project manager, he was responsible for coordinating with construction contractors of this wicks law project. He was responsible for the project is being built as per design drawings shown photo luminescent exit path, fire stop, draft stop and fire block system.

New York City School Construction Authority, PS 277, Brooklyn, NY

Cost: $6 Million. Renovation of this 34,000 sft project included construction of new kitchen and upgrading of mechanical, electrical, plumbing and fire protection systems. He was responsible for the architectural controlled inspection of alternative materials, fire rated construction, emergency lighting and final inspection.

New York City School Construction Authority, IS 2R

Cost: $4 Million. Structural concrete façade and frame repair and the exterior widow's replacement. Construction and inspection work was primarily focused on repair work of concrete caused by spalling. He was responsible for alternative materials fenestration rating for leakage, insulation placement of R valves etc.

Maintanence Facility, Battery Park City Authority Maintenance Facility

This is a four storied 45,000 square foot with 3 storied high storage area. The scope of work was removal and painting of the entire area, installation of vehicle repair equipment with lifts, wood shop and electric shop. He supervised the controlled inspection of removal of paints and new painting work. Also inspected fire stops, draft stops and fire block system for plumbing and electrical conduits.

NYS Dormitory Authority, College of Staten Island, NY

Worked on various renovation and repair work for this facility including, façade, classrooms, boys and girls comfort facilities, cafeteria, gymnasium etc. He was involved in controlled inspection of exit signs and paths, alternate materials, R valves, Emergency lighting and final inspection.

Andrew C. Belding

Assistant Project Manager

Andrew C. Belding has over 11 years of experience in the construction industry. His areas of expertise include project design, construction and management, analytical planning of urban and regional environments, emergency response and recovery, landscape architecture, estimating protocols, CADD operations and process efficiency. He is proficient at generating and managing design and construction concepts, managing project records and technical documentation, site analysis and master planning, and has the ability to present these practices verbally and graphically. Andrew is an expert in AutoCAD, Adobe Photoshop, Adobe Illustrator and Adobe InDesign, Revit Architecture, GIS, Sketchup.

New York City Department of Parks & Recreation, Street Tree Division Manhattan, NY,Resident Engineer

For a $2 Million Capital Project, Andrew managed a complex, urban streetscape restoration within the Manhattan borough. He ensured that contractors adhered to plans and specifications during all construction procedures. Andrew identified and resolved opportunities and constraints while in the field. He negotiated client and contractor change orders, interpreted construction documents; and identified architectural and engineering related issues. He generated daily and weekly construction project reports, and maintained accurate calculation books to prepare cost projections. Andrew reviewed, negotiated, and approved contractor's payment requisitions within the allocated time frame. In addition, he maintained accurate records for the client which served as guiding documents for disputes. Andrew also advised the Borough Directors regarding contractor's claims.

Port Authority of New York and New Jersey (PANYNJ) Call-In Estimating 2012-2015, Jersey City, NJ, Project Engineer

Andrew guided site analysis and planning efforts, modified and managed operations of various transit facilities. He collaborated on project execution in a multi-disciplinary atmosphere. His projects included:

- **Port Authority Trans-Hudson (PATH) Harrison Intermodal Transportation Hub, Harrison, NJ.** With an estimated Total Project Cost (TPC) of $250 million, and as part of the engineering team, Andrew organized the space to move pedestrians toward vertical circulation locations and provided a critical connection for PATH Rail service.

Education:
Master of Landscape Architecture, City College of New York, New York, NY, 2011

BS, Ornamental Horticulture, Environmental Design, Delaware Valley College, Doylestown, PA, 2007

Professional Memberships:
American Society of Landscape Architects (ASLA)

American Institute of Architects (AIA) Peconic

Awards/Honors:
Award of Honorary Study, Council of Educators in Landscape Architecture (CELA), 2011

Gold: Commercial Design Award, Long Island Nursery and Landscape Association, (LINLA), 2013

Publications:

"Site Information management", Urban Nature, CECA (2011)

"HOUSE", Design Showcase, House, (2012)

"HOUSE", Commercial Design, House, (2013)

 # Years Technical Experience: 11

- **John F. Kennedy International Airport (JFK), Queens, NY.** Andrew participated on the "Million Trees Initiative" and established appropriate tree locations within the landside and airside operations areas.
- **LaGuardia International Airport (LGA), Queens, NY.** Andrew worked with the New York City Parks Department and New York City Department of Transportation (NYCDOT) to establish a tree removal and replacement protocol. He was responsible for quantifying the tree basal area of existing trees within the landside and airside areas to determine their replacement value.

Edward J. Fox

Senior Project Manager

Edward J. Fox has more than 35 years of progressive experience in planning, engineering, construction and management of multiple capital improvement programs. His assignments have included land development, educational buildings, housing and commercial projects. Ed has contributed to a number of notable projects for the New York Metropolitan Transportation Authority as Project Manager and the Port Authority of New York and New Jersey (PANYNJ) as a Planner and Scheduler.

Port Authority of New York and New Jersey, World Trade Center Station Reconstruction, New York, NY

Hill is providing program management services in connection with the planning, design and construction of the new World Trade Center Transportation Hub, including the temporary PATH Terminal, the new permanent PATH Terminal, and four major interrelated office towers. Ed is responsible for management procedures and manuals, monthly progress reports, scheduling, and financial planning.

New York Metropolitan Transportation Authority (MTA), Project Management Oversight, New York, NY

Ed was a member of the Hill independent consultant oversight team for the MTA, which has reviewed and prepared reports on the progress of bus depots and maintenance facilities, including several design-build facilities. He was responsible for oversight of design and construction of three bus maintenance and garage facilities and a major subway terminal. In addition, he oversaw various structural projects for the New York City Transit Authority subway system, including the design of a new multi-modal facility at Coney Island, New York. In this capacity, Ed also performed a number of continuing reviews of contractor developed Primavera CPM schedules.

Prior Experience:

Dallas Area Rapid Transit System, (DART),Light Rail System, Dallas, TX

Ed compiled and prepared the project closeout documentation packages for DART's Light Rail System, including the Fare Collection, Signals and the Communications and Central Control contracts.

Education:
MS, City and Regional Planning, Rutgers University, 1970

BS, Civil Engineering, New Jersey Institute of Technology, 1964

Professional Memberships:
Chi Epsilon - Civil Engineering Honor Society

Awards/Honors:
James G. Hellmuth Unit Citation, PANYNJ 9/11 World Trade Center Loss Recovery Project

Publications:

Seminars:
"Project Management & CPM Seminars"

 # Years Technical Experience: 35

U.S. General Services Administration, United States Federal Courthouse, Brooklyn, NY

Ed was the Document Controls Engineer for this $200+ million project. The project included the separation of an existing courthouse and the asbestos abatement and demolition of a Federal Office Building on the site of the new construction. Also completed were a new, temporary entrance, a total change over to new electrical transformers, and construction of temporary parking in a city park to ensure the uninterrupted operation of the existing Brooklyn Federal Courthouse. He participated in the review of the project through the design and bidding phase. Ed also prepared the field office facilities and procedures for the start of the construction phase.

U.S. General Services Administration, Region 2, Indefinite Quantity Contract

Ed assisted with Contract Executive duties for the conclusion of the ongoing three year indefinite quantity contract. This work included contract administration during the construction phase of the latter task orders.

Confidential Surety Client, Multiple Individual Building Projects, NY, NJ, PA

Ed was the Project Manager for 42 individual building projects which included schools, hospitals and office buildings, spanned a three-year period; and had an aggregate construction value of $60 million. This work involved the analysis, evaluation and completion of projects in various stages of construction after the default of a contractor. Ed's responsibilities included preparation of necessary construction documents to re-let 12 projects, completion and close-out of another 30 projects, full contract administration of ongoing contracts to enable final completion, and periodic client reporting.

Matthew G. Honeywell, LEED GA

Office Engineer

Matthew G. Honeywell has more than three years of experience in the construction industry. His areas of expertise include construction management, quality assurance and quality control and administration. Matthew's projects have consisted of religious facilities, civil and judicial buildings, recreation and entertainment facilities and museums. He has contributed to a number of projects for the Dormitory Authority for the State of New York (DASNY) and the City University of New York (CUNY). Matthew speaks Spanish and specializes in On-Screen Takeoff, Microsoft Project, Prolog, Primavera Expedition, AutoCAD and Prolog computer software.

Metropolitan Transportation Authority (MTA), No. 7 Subway Line Extension, New York, NY

The Hill/LiRo/HDR Joint Venture is responsible for providing construction management services for the extension of the Number 7 Subway Line westward from Times Square under West 41st Street and southward along 11th Avenue to the southerly terminus at West 25th Street. The team will provide management and project control services for the tunneling work and during construction of the facilities and infrastructure transforming the Hudson Yards into vibrant 24-hour neighborhood containing a mix of commercial, residential, retail, and recreational uses.

The Dormitory Authority of the State of New York, Bronx County Hall of Justice, Bronx, New York, Intern

Hill was engaged to provide construction and program change management, change order processing and negotiation, construction inspection, project reporting, scheduling and delay analysis, claims analysis and support, and project closeout for an 11-story, 775,000-SF complex located on a 2.5-block site near the Grand Concourse. Matthew was brought on to conduct HVAC research and review, generate bid packages for sally port garage doors and monumental glass windows, and prepare meeting minutes and daily logs.

The City University of New York, Brooklyn College Performing Arts Center, Brooklyn, New York, Intern

Hill provided construction management services for a project involving the extension of a performing arts center. Serving the Music and Theater departments, the center consisted of a 64,000-SF addition to Whitman Hall, with a 200-seat flexible stage performance space having variable acoustics; rehearsal rooms for orchestra, choral, and theater; a state-of-

the-art recording studio; the Pima Center for Computer Music; music studios and practice rooms; and a scene shop. On behalf of Hill, Matthew conducted a constructability review and quantity takeoffs.

New York City Department of Design and Construction, Weeksville Heritage Center, Brooklyn, New York, Intern

Hill provided construction management services for a 23,000-SF facility dedicated to the preservation of African American history. Works included a multipurpose room/"black box" theater, exhibition and educational workshop space, a gift shop, a resource center/library, administrative offices, a conference room, and facility support system areas. On behalf of Hill, Matthew produced material and quantity takeoffs; participated in mechanical, electrical, and plumbing (MEP) coordination meetings; and prepared meeting minutes and daily logs. He was also responsible for performing quality control tasks and overseeing on-site inspectors.

New York City Department of Parks and Recreation, Union Square Pavilion and Playground, New York, New York, Intern

Hill managed $15 million of renovation work for a historic 1932 pavilion and playground at Union Square Park in Manhattan, one of the city's most well-known and widely used parks. Hill's management of the project was part of a larger indefinite quantity management contract with the Department of Parks and Recreation. Matthew was brought on to perform quantity takeoffs to verify in-place construction and process submittals and requests for information (RFIs).

Anthony M. Rinaldi

Office Engineer

Education:
BS, Landscape Architecture, Pennsylvania State University, State College, PA, 2008

Coursework, Landscape Architecture, Pennsylvania University in Rome, Lombardia, Italy, 2007

Years Technical Experience: 5

Anthony M. Rinaldi has five years of landscape design experience including residential, commercial, mixed-site and recreational projects. Providing design and budgeting services for his own firm as well as design-build firms, he has been responsible for hard and softscape projects, drafting and rendering, site planning, stormwater management, land conversion, and surveying.

Anthony's outdoor maintenance skills include grass, paving and light masonry. His background also includes golf course maintenance, septic tank design, onsite soil testing, and soil permeability responsibilities. Anthony's specialized computer software skills include AutoCAD, Adobe Photoshop, Illustrator, InDesign, Google SketchUp, ArcGIS, and Dynascape. He speaks working Italian.

Port Authority of New York and New Jersey (PANYNJ), Superstorm Sandy Long Term Recovery Operation and Call-In Estimating, New York and New Jersey, Inspector

In an emergency recovery effort of over $250 million, Greg coordinated with the Federal Emergency Management Agency (FEMA), and PANYNJ Office of Emergency Management (OEM). Hill provided site assessments and estimating services for civil, architectural, mechanical, plumbing, sanitary and electrical systems damaged by Superstorm Sandy for all New York and New Jersey Port Authority facilities. Anthony is providing inspection services for site assessments and of the damages to more than 10 Port Authority sites.

Metropolitan Transportation Authority (MTA), No. 7 Subway Line Extension, New York, NY, Inspector

The Hill/LiRo/HDR Joint Venture is responsible for providing construction management services for the extension of the Number 7 Subway Line westward from Times Square under West 41st Street and southward along 11th Avenue to the southerly terminus at West 25th Street. The team will provide management and project control services for the tunneling work and during construction of the facilities and infrastructure transforming the Hudson Yards into vibrant 24-hour neighborhood containing a mix of commercial, residential, retail, and recreational uses.

Prior Experience

Jacobsen Landscape Design, Midland Park, NJ, Designer and Sales
Anthony provided design and sales services for a design-build firm.

Landscape Design Projects, Self-employed Freelancer
Anthony provided design and budgeting services for residential hard and softscape projects.

Landscape Design Projects, Ridgewood, NJ, Project Manager
Anthony was responsible for design of residential and commercial landscape enhancements. He also provided oversight for construction of final project design onsite.

Landscape Design Projects, Huntington, NJ, Designer and Draftsman
Anthony designed and rendered residential and commercial landscapes. He also provided oversight for construction of final project design onsite and contributed to field work on project construction.

Landscape Design Projects, Gladstone, NJ, Design Intern
In addition to playing a significant role in drafting and rendering, Anthony worked hand-in-hand on projects including residential, commercial and mixed-use site planning, stormwater management, land conversion, and surveying.

North Jersey Country Club, Wayne, NJ, Greens and Groundskeeper
Anthony assisted in the maintenance of course landscape, contributed to daily golf course events and provided caddy services.

Engineering Projects, Totowa, NJ, Engineering Intern
Anthony honed his CAD skills on projects including residential and commercial site planning, septic tank design, onsite soil testing, soil permeability, and other drafting and rendering responsibilities.

Kurt Buettler

Office Engineer

Kurt Buettler is a Document Control Technician with extensive experience in all phases of the Systems Development Life Cycle in an IBM mainframe environment. He has also played an integral role in large scale development projects involving hundreds of programmers and analysts.

NJ Transit, Positive Train Control, Various Locations, New Jersey. New Jersey Transit (NJ Transit), Document Control Technician

Kurt is responsible for document control within SharePoint, Oracle® Primavera Contract Manager and ECMS. This project involves the installation of a positive train control system for all trains and tracks in New Jersey. This new system will control trains' speed across the entire rail system.

SEPTA Silverliner Railcar Procurement Contract, Philadelphia, PA. Southeastern Pennsylvania Transportation Authority (SEPTA), Document Control Technician

Kurt was responsible for creating custom reports in Oracle® Primavera Contract Management 14 using Oracle®'s BI Publisher so that SEPTA could migrate from Oracle® Primavera CM12 (InfoMaker) to Oracle® Primavera CM14. SEPTA procured 120 new railcars to begin replacing older models in their fleet.

CONRAIL Interline Settlements, Philadelphia, Pennsylvania. Consolidated Rail Corporation (CONRAIL), Document Control Technician

Kurt was involved in the installation, testing and implementation of a purchased software system to handle Interline Settlements. He was responsible for establishing change control procedures and problem management/reporting process and led the effort to set up four separate environments for unit testing, user acceptance/system testing, training, and production. Kurt resolved technical issues resulting from the conversion of IMS DB-DC code into Command Level CICS/DB2 and Cobol II/DB2 batch and participated in Functional and Technical Design of a large-scale project to replace the Waybill/ Revenue Management Systems that utilized a GUI front end to a CICS/DB2 back end. He designed a real-time CICS system to facilitate the exchange of scheduled trip plans for railcars with the Union Pacific Railroad. Kurt used the Arthur Anderson Foundation Method1/Design1 analysis and design tool for this project along with Gentran RTE for the EDI transactions. He was lead designer and programmer for a CICS based Material Management

System and all nightly and weekend batch processes and managed a 70+ file TOTAL Database and a 10 file VSAM Database. This included file design, creation of the DBGEN and installation for the TOTAL files, and design, definition and installation for the VSAM database.

Marketing Communication Systems (MCS), Ivyland, PA, Project Manager

Kurt managed four analysts that supported the legacy (VSAM) fulfillment systems and supervised three analysts who developed and maintained a web-based leads generation system and a customer reporting system. He developed a COBOL2/CICS/DB2 system for maintaining the leads database. Kurt met with internal clients to gather functional specs for enhancements to each system under his control. He worked with the team to develop time and cost estimates based on the functional specs, tracked the projects for reporting to upper management and clients, and hosted weekly status meetings with the team.

Giorgi Khardzeishvilli, PE

Project Manager

Giorgi Khardzeishvilli has more than 18 years of special inspections, geotechnical engineering, construction management, and project management experience. His areas of expertise include concrete and rebar inspections, laboratory testing of construction materials, steel bolting and welding inspections, masonry inspections, fireproofing and firestopping inspections, deep and shallow foundation inspections, soil subgrade and fill placement inspections, foundation testing, non-destructive testing, fabrication facilities and plant inspections. He has extensive field, office supervision, and project management experience.

Subway 7 Line Construction – Site K Ventilation Building, MTA C-26511, Manhattan, NY, Special Inspector of the record

Giorgi oversaw construction inspection operations and personnel of the subway 7 line, Site K ventilation building construction on Manhattan, New York. The work included subgrade and fill placement inspections, collecting concrete and grout samples, laboratory testing of the collected materials, anchor/dowel installation observation and testing, rebar inspections, welding inspection, coordination with MTA and contractor, and reporting. Work also included Installation of noise, air, settlement, and vibration monitoring instruments, and subsequent monitoring and reporting.

Subway 7 Line Construction – Site L Access Shaft and Ventilation Building, MTA C-26504, Manhattan, NY, Special Inspector of the record

Giorgi oversaw construction inspection operations and personnel of the subway 7 line, Site L access shaft and ventilation building construction on Manhattan, New York. The work included collecting concrete and grout samples, laboratory testing of the collected materials, tie-back and toe-pin anchor installation observation and testing, welding inspection, coordination with MTA and contractor, and reporting.

55th Street ventilation facility – LIRR East Side Access Site, Manhattan, NY, Special Inspector of the record

Giorgi oversaw construction inspection operations and personnel of the subway LIRR East Side Access, 55th Street ventilation facility construction on Manhattan, New York. The work included concrete and rebar inspections, collecting concrete and grout samples, laboratory testing of the collected materials, tie-back anchor installation observation and

testing, welding inspection, bolting inspections, soil compaction inspections, coordination with MTA and contractor, and reporting.

Pelham Line Stations – MTA NYCT, Bronx, NY, Special Inspector of the record

Giorgi oversaw construction inspection operations and personnel. The work included concrete and rebar inspections, collecting concrete and grout samples, laboratory testing of the collected materials, welding inspection, and bolting inspections.

East Side Access, Manhattan, NY, Construction Engineer

Giorgi was responsible for construction of slurry wall for tunnel boring machine launching pit in Sunnyside rail yards, Queens. Work included coring through the slurry wall and rock, conducting packer tests, and rock and interface pressure grouting. Responsibilities included development of subsurface profiles, creation and maintenance of master data spreadsheet, review of daily reports, interpreting the test packer results, providing geotechnical recommendations, and reporting to MTA.

Manish Patel

Inspector - Civil

Manish Patel has more than 22 years professional experience in the Civil & Structural construction field. During the career he worked with different clients, EPC Contractors, Proprietor in manufacturing, construction works, and with Consultants. Manish has a vast experience for the Project Management, Execution, Construction, Planning, Establishment and set out of the Project with key skill of the Project Coordination with heading Construction Operations in Civil & Structural steel works from pre engineering to handing over. Manish has proven skills in managing team to work in synchronization with corporate set parameters & motivating them for achieving business & individual goals. He has developed QA / QC standards as per contract document at project sites.

NYCEDC, Green Infrastructure, Newton Creek, NY, Engineer

Manish is responsible for performing engineering inspections, testing and evaluations for construction activities and implementing quality assurance plan requirements. Conducted inspections of various stage of soil boring test, Permeability test at Brooklyn, NY.

Replacement of bridge EH-1, Atlantic City, NJ, Engineer

Manish is responsible for performing engineering inspections, testing and evaluations for construction activities and implementing quality assurance plan requirements. Conducted inspections of various stage of soil boring test, soil sampling, soil classification, Installation of observation well at Atlantic city, NJ.

55, Street Ventilation Facility, New York, NY, Engineer

Manish is responsible for performing engineering inspections, testing and evaluations for construction activities and implementing quality assurance plan requirements. Conducted inspections of various stage of tunnel for Concrete, shot Crete and Rebar, 55 street, Park, Avenue, NY.

MTA Pelham Line, Bronx, NY, Project Engineer.

Manish is responsible for performing engineering inspections, testing and evaluations for construction activities and implementing quality assurance plan requirements. Conducted inspections of various stage of Concrete and Rebar, 55 street, Park, Avenue, NY.

Rockaway Boardwalks, Queens, NY, Engineer

Manish was responsible for performing engineering inspections, testing and evaluations for construction activities and implementing quality assurance plan requirements. Conducted inspections of various stage of Pile driving analysis, Pile integrate test, Rockaway Board walks, NY

Massapequa Park Track Replacement, NY, Engineer

Manish was responsible for performing engineering inspections, testing and evaluations for construction activities and implementing quality assurance plan requirements. Conducted inspections of various stage of concrete & rebar inspection, anchor installation, testing anchor for pull test and torque test, for Massapequa park station, NY.

66th- 73rd Concrete/ Rebar Inspection, New York, NY, Engineer

Manish was responsible for performing engineering inspections, testing and evaluations for construction activities and implementing quality assurance plan requirements. Conducted inspections of various stage of buildings being constructed to include concrete, rebar, soil, etc. for different projects at New York & New Jersey.

Maulik Patel, E.I.T.

Inspector - Civil

Maulik Patel has more than four years of inspection experience working as a civil engineer for various consultants in The United States and abroad. His civil engineering experience includes concrete inspection, masonry inspection, soil compaction inspection, and rebar inspections.

MTA - 86th Street, New York, NY, ACI Concrete Special Inspector

Maulik inspected placement of concrete; performed slump, air content tests in the field; inspected concrete mixed at site verifying meets project specifications including fine and coarse aggregate. Collected concrete sample for compressive strength testing. Prepared the daily field inspection reports.

DSNY – New Sound Wall Construction, Brooklyn, NY, Inspector

Maulik was the soil fill placement inspector, responsible for verifying soil density and moisture content using nuclear density meter. ACI Concrete Special Inspector, inspected placement of concrete; performed slump, air content tests in the field; inspected concrete mixed at site verifying meets project specifications including fine and coarse aggregate. Collected concrete sample for compressive strength testing. Prepared the daily field inspection reports.

Chatham High School, Chatham, NJ, ACI Concrete Construction Inspector

Maulik inspected placement of concrete and rebar; performed slump, air content tests in the field; inspected concrete mixed at batch plant verifying meets project specifications including fine and coarse aggregate. Performed soil subgrade and fill inspections and tests using sand cone and electrical density gage. Performed fire stopping, masonry, and structural steel inspections. Collected mortar/grout/ concrete sample for compressive strength testing. Prepared the daily and monthly field inspection reports.

Piscataway Township, Piscataway, NJ, Engineer

Maulik was responsible for performing engineering inspections, testing and evaluations for construction activities and implementing quality assurance plan requirements. Conducted inspections of concrete for Fire Safety Building in township building in Piscataway, NJ.

Terminal Building, Port Authority, NY-NJ, Engineer

Maulik was responsible for performing engineering inspections, testing and evaluations for construction activities and implementing quality

NYCDOB 4-hour Scaffold Training

 # Years Technical Experience
5

Nancy Oliver has several years of demonstrated experience working as an Environmental Engineer performing acoustical, geotechnical, and environmental instrumentation, slope stability analysis, and CADD services.

MTA 2nd Avenue Subway, 72nd Street Station Cavern Project, New York, NY, Environmental Coordinator

This project included the extension of shafts to previously bored tunnels, construction of caverns for the station, and relocation and temporary support of utilities. Nancy assisted in environmental monitoring and inspection of special equipment. She performed environmental site inspections and consulted the client with recommendations or suggestions. She performed data collection for air and noise baseline monitoring, performed community air and noise monitoring during construction, downloaded data directly from equipment as well as remotely through computer software, reviewed data, developed weekly and monthly reports, identified potential sources/causes of exceedances and suggested corrective actions, calibrated equipment on a regular basis, and provided troubleshooting as needed. Nancy assisted in the preparation and distribution of environmental awareness training refreshers for on-site personnel. She received vector specialist recommendations and informed vector specialist of requests from contractor, noted frequency of site inspections and brought deficiencies in vector inspection to the attention of the contractor for correction. She conducted regular water sampling for laboratory testing to determine compliance with site specific groundwater discharge permits requirements, assisted in analysis of results, and prepared summary reports. Nancy assisted in the execution of the Soil and Groundwater Sampling and Analysis Plan (SAGSAP), collected on-site soil samples, and provided laboratory data to the contractor to determine the appropriate method of disposal for the material. She assisted in the preparation of the Community Air Monitoring Plan (CAMP), Noise Control Monitoring and Mitigation Plan (NCMMP), Pollution Prevention Plan (PPP), Material Handling Pan (MHP), and Waste Management Plan (WMP) and provided CADD related services.

Belt Parkway over Fresh Creek Basin and Rockaway Bridge, Brooklyn, NY, Geotechnical Engineer

Under supervision of the Project Manager, Nancy worked as a Geotechnical Engineer for the Belt Parkway project, which included

replacing a cloverleaf interchange with a diamond interchange and widening the roadway. She downloaded vibration data remotely via computer software and prepared daily and weekly monitoring reports, collected soil samples from borings, prepared boring logs, and classified soil according to Burmeister Soil Classification System. Geotechnical work included slope stability analysis and CADD.

MTA Subway 7-line Extension, Site "K", New York, NY, Environmental Engineer

Nancy supported the Project Manager with environmental monitoring and inspection of special equipment. She performed data collection for air and noise baseline monitoring and assisted in preparation of Baseline Monitoring Reports, assisted in preparation of Community Air Monitoring Plan (CAMP), Pollution Prevention Plan (PPP), Dust Control Plan (DCP), Soil and Groundwater Sampling and Analysis Plan (SAGSAP), and Spoils Management and Disposal Plan (SMDP). She also provided CADD services in preparation of Air, Noise, and Vibration Monitoring Location Plans, and assisted in execution of the Soil and Groundwater Sampling and Analysis Plan through on-site soil sampling and the analysis of laboratory data. She performed batch plant inspection to determine that concrete load mix complied with specification requirements prior to dispatching to the project site.

Rati Mandzulashvili, EIT

Inspector - Civil

Education:
BS, Civil Engineering,
Rutgers University, 2012

Licenses and Certifications:
Engineer-In-Training

OSHA 10-hr
Construction Safety

MTA-LIRR Track Training

MTA-NYCT Track Training

AMTRAK Track Training

ICC Soils Special Inspector

Portable Nuclear Gauge
Safety Certification

 # Years Technical Experience
4

Rati Mandzulashvili has more than four years of experience working on several projects providing construction inspection and subsurface investigation that includes oversee of borings, borehole permeability tests, conducted slump test, air entrainment, and collection of concrete cylinders and mortar cubes. Installation of geotechnical instruments and installation of monitoring wells. Rati has performed variety of duties in site engineering department in addition to AutoCAD drafting, percolation tests, verify site conditions, drainage. In addition, he has some experience with subcontractor supervision, utility surveys, report preparation, and project administration. Rati has prepared boring logs in gINT and prepared templates and subsurface profiles.

Massapequa Park Viaduct, Massapequa Park, NY, Inspector

Rati was responsible for overseeing installation and testing of permanent anchor inserts for direct fix rail fasteners. Work includes epoxy installation inspection, anchor pull-out testing with hydraulic jack, anchor torque testing, and rail fastener torque verification. Conducted slump test, air entrainment, collected concrete cylinders. Other responsibilities include quality assurance for inspection team members.

MTA/ESA/LIRR Harold Structure, Queens, NY, Inspector

Rati inspected placement of concrete; performed slump, air content tests in the field; inspected concrete mixed at site verifying meets project specifications including fine and coarse aggregate. Performed soil subgrade and fill inspections and tests using nuclear density gauge. Collected concrete sample for compressive strength testing. Prepared the daily and monthly field inspection reports.

MTA - five stations renewal, Bronx, NY, Special Inspector

Rati performed construction special inspections to check rebar, form work, and concrete placement (including slump, air content, and temperature and prepared cylinders). Conducted steel inspection to verify their compliance with project specification. Prepared the daily and monthly field inspection reports.

New York City Economic Development Corporation - Newtown Creek Green Infrastructure Bioswales – Yellow Area, Field Investigator

Rati was responsible for onsite field investigation for this project that involved drilling approximately 600 borings for construction of Right of Way Bioswales (ROWB), Stormwater Green Streets (SGS), and other

stormwater management practices throughout combined sewer areas citywide. Additional responsibilities include assisting in generation of data tables, reviewing of data, review sanborn maps, and report preparation. Geotechnical work includes performing subsurface investigations; inspecting subsurface soil investigation; oversee drilling and soil sampling, and permeability tests. Samples were analyzed in both USCS and modified Burmister system.

New Jersey Turnpike Authority, Interchange 14A Improvements, NJ, Geotechnical Engineer

Rati was involved in oversight of the field exploration program which included trial pits, drilling, and logging the borings. Approximately 100 borings were completed. Performed subsurface investigation to characterize subsurface soil and rock for geotechnical and environmental evaluations; collected soil samples and rock cores; classified soils according to the Burmister soil classification system; prepared field boring log; created subsurface profile using gINT software for foundation design; and assisted the project supervisor in preliminary design of retaining wall structure.

Sarjit Shah

Office Engineer

Sarjit Shah has two years of engineering experience working as a civil engineer for other consultants. His civil engineering experience includes concrete, rebar, masonry, steel field inspections, estimating and designing. He has excellent skills in AutoCAD.

MTA - 86th Street, New York, NY, ACI Concrete Special Inspector

Sarjit inspected placement of concrete; performed concrete in-situ tests during concrete placement at site, collected concrete sample for laboratory compressive strength testing. Prepared the daily field inspection reports.

MTA/ESA/LIRR - Ventilation Shaft Building at East 55street, New York, NY, ACI Concrete Construction Special Inspector

Sarjit inspected placement of concrete and rebar; inspected concrete mixed at site verifying meets project specifications including fine and coarse aggregate. Prepared the daily and monthly field inspection reports.

Temple University, Philadelphia, PA, Undergraduate Research

As an undergraduate, Sarjit conducted estimating and costing lectures, seminars and laboratory experiments. Performed different laboratory experiments on soil including determining water content, specific gravity, grain size analysis, compaction, settlement, and shear strength.

M. V. Shah & Co. Anand, India, Civil Engineer

As Civil Engineer, Sarjit monitored construction site activities and managed with distributor and supplier for cost and quality of construction material. Assembled, edited design on 2-D AutoCAD 2009, and submitted the daily project activities report to clients.

Education:
BS, Civil Engineering, Temple University, 2012

Diploma in Civil Engineering MIT College, Pune, India 2009

Licenses and Certifications:
ACI Concrete Field Testing Technician Grade I

OSHA 10 Hour Construction Safety and Health Training

2

Terence Hampton, EIT

Inspector - Civil

Education:
BS, Civil Engineering,
Rutgers University

Licenses and Certifications:
Engineer In Training:
New Jersey

ACI Concrete Field Testing Technician Grade I

ACI Concrete Construction Special Inspector

OSHA 10-hr
Construction Safety

 # Years Technical Experience
5

Terence Hampton is a Senior Staff Engineer with 5 years of experience in Civil Engineering projects. His experience includes concrete and rebar, soil and ground water sampling, analyses and evaluation, subsurface investigation, as well as bidding and estimating. He has provided Quality Assurance oversight in both public and private projects and has experience with environmental compliance in the construction/demolition industry. While a laboratory technician for Rutgers University, he worked on several high profile projects including asphalt recipe testing for JFK Airport and The White House; foundation masonry tests for 1 World Trade Center; and on-site concrete testing for a new water filtration facility at Bronx, New York.

MTA/ESA/LIRR Harold Structure, Queens, NY

Terence performed construction special inspections to check rebar, form work, and concrete placement (including slump, air content, and temperature and prepared cylinders. Prepared the daily and monthly field inspection reports.

MTA 86th Street and 2nd Ave. Subway project, New York, NY, NY, ACI Concrete Construction Special Inspector

Terence inspected placement of concrete and rebar; performed slump, air content tests in the field; inspected concrete mixed at site verifying meets project specifications including fine and coarse aggregate. Collected concrete sample for compressive strength testing. Prepared the daily field inspection reports.

MTA Pelham Line – Five Stations, Field Inspector

Terence was a field inspector for MTA Pelham line five stations project. His responsibilities include concrete field concrete testing; rebar inspection, and preparation of reports for Castle Hill and Middle Town station.

MTA 55th Street Ventilation Facility, New York, NY, Concrete Field Tester

Terence has performed concrete field tests, where he checked concrete air content, density, temperature, and slump. He prepared daily field reports, under direct supervision of project professional engineer and ACI level II certified.

New York City Department of Design and Construction - Newtown Creek Green Infrastructure Bioswales – Yellow Area, Field Investigator

Terence was responsible for onsite field investigation for the geotechnical project work to develop subsurface information for construction of Right of Way Bioswales (ROWB) and Stormwater Greenstreets (SGS) in Brooklyn, New York. Geotechnical work included performing subsurface investigation for soil characterization and permeability tests.

Long Island Railroad - Massapequa Park Viaduct ,Inspector

Terence was an inspector overseeing installation and testing of permanent anchor inserts for direct fix rail fasteners, which involves epoxy installation inspection, anchor pull-out testing with hydraulic jack, anchor torque testing, and rail fastener torque verification. Also conducted Quality Assurance for inspection team.

Vikas Patel, EIT

Inspector - Structural

Vikas Patel has over four years of engineering experience working as a civil engineer for Distinct Engineering Solutions, Inc., and with other consultants. His civil engineering experience includes concrete, rebar, masonry, firestop, soil compaction, asphalt and steel field inspections, and geotechnical instrumentation as well as bidding, estimating and designing. He has excellent skills in AutoCAD 2009, STAAD Pro 2007, ArcGIS and SAP 2000.

MTA/ESA/LIRR Harold Structure, Queens, NY, ACI Concrete Construction Special Inspector

Vikas inspected placement of concrete and rebar; performed slump, air content tests in the field; inspected concrete mixed at site verifying meets project specifications including fine and coarse aggregate. Performed soil subgrade and fill inspections and tests using sand cone/ electrical density gage/nuclear density gauge. Collected concrete sample for compressive strength testing. Prepared the daily and monthly field inspection reports.

MTA - Five Stations Renewal, Bronx, NY

Performed construction special inspections to check rebar, form work, and concrete placement (including slump, air content, and temperature and prepared cylinders). Conducted steel inspection to verify their compliance with project specification. Prepared the daily and monthly field inspection reports.

MTA - 86th Street, New York, NY, ACI Concrete Construction Special Inspector

Vikas inspected placement of concrete and rebar; performed slump, air content tests in the field; inspected concrete mixed at site verifying meets project specifications including fine and coarse aggregate. Collected mortar/grout/concrete sample for compressive strength testing. Prepared the daily and monthly field inspection reports.

MTA/ESA/LIRR - Ventilation Shaft Building at East 55street, New York, NY, ACI Concrete Construction Special Inspector

Vikas inspected placement of concrete and rebar; performed slump, air content tests in the field; inspected concrete mixed at site verifying meets project specifications including fine and coarse aggregate. Performed soil subgrade and fill inspections and tests using sand cone and electrical density gage. Performed firestopping, masonry, and structural steel (High Strength Bolts and Welding) inspections. Collected

Education:
MS, Structural and Geotechnical Engineering, Cleveland State University, 2010
BS, Civil Engineering, Gujarat University, 2007

Licenses and Certifications:
ACI Concrete Construction Special Inspector
ACI Concrete Field Testing Technician Grade I
ACI Concrete Construction Technology certificate

5

mortar/grout/concrete sample for compressive strength testing. Prepared the daily and monthly field inspection reports.

MTACC, # 7 Line Extension Site K, New York, NY, ACI Concrete Construction Special Inspector

As an ACI Concrete Construction Special Inspector, inspected placement of concrete and rebar; performed slump, air content tests in the field; inspected concrete mixed at batch plant verifying meets project specifications including fine and coarse aggregate. Performed soil subgrade and fill inspections and tests using sand cone and electrical density gage. Performed firestopping, masonry, and structural steel inspections. Collected mortar/grout/concrete sample for compressive strength testing. Prepared the daily and monthly field inspection reports.

MTACC, # 7 Line Extension Site L, New York, NY, ACI Concrete Construction Special Inspector

As an ACI Concrete Field Inspector, performed slump, air content, unit weight and temperature tests to ensure the concrete were adequate, reliable and within required contract specification. Performed rebar and concrete placement inspection to verify their compliance with project specification. Collected mortar/grout/concrete sample for compressive strength testing. Prepared daily and monthly field inspection reports.

Yazan Yanes

Inspector - Structural

Education:
BS, Civil Engineering,
Damacus University, 2011

Licenses and Certifications:
ACI – Concrete Field testing Technician – Grade 1

ICC – Structural Steel and Bolting Special Inspector

OSHA 10 Hour Construction Safety and Health Training

 # Years Technical Experience:
3

Yazan Yanes has over three years of engineering experience working as a civil engineer for Distinct Engineering Solutions, Inc., and with other consultants. His civil engineering experience includes reinforced concrete designing and constructing, estimating, quality assurance and quality control. He has excellent skills in AutoCAD, ETABS and SAP 2000.

Diafat Al Hussein Hotel, Karbala, Iraq

Yazan performs structural design and analysis calculations using governing codes and standards, engineering formulas, skills, and experience. Provide drawing for own designs and produce sketches. Research design options and document findings for project lead engineer. Develop probable construction cost estimates. Coordinate work with other disciplines such as architectural, mechanical, and electrical.

Diafat Al Mahdi Hotel, Karbala, Iraq

Yazan performed structural design and analysis calculations using governing codes and standards, engineering formulas, skills, and experience. Provide drawing for own designs and produce sketches. Research design options and document findings for project lead engineer.

Residential Villa, Yaafour, Damascus countryside, Syria

Yazan was responsible for the supervision of day to day operations of the site work. Follow up with site engineers of Contractor and/or subcontractor to ensure that work is being carried out as per design drawings, specifications and meeting planned dates in schedule. Ensure construction QA/QC processes are being implemented by the contractor and sub-Contractors. Conducting regular job site inspections. Actively monitor the work environment for hazards. Assist in necessary project documentation.

Residential Villa, Droshah, Damascus countryside, Syria

Yazan was responsible for the supervision of day to day operations of the site work. Follow up with site engineers of Contractor and/or subcontractor to ensure that work is being carried out as per design drawings, specifications and meeting planned dates in schedule. Ensure construction QA/QC processes are being implemented by the contractor and sub-Contractors. Conducting regular job site inspections. Actively monitor the work environment for hazards. Assist in necessary project documentation.

William Castaneda

Inspector - Structural

William Castaneda has more than nine years of experience providing special inspection services on a variety of projects in New York. He is trained and certified as a Concrete Construction Special Inspector by the American Concrete Institute.

Daniel Ridulfo

Inspector - Structural

Daniel Ridulfo has more than eight years of experience providing special inspection services on a variety of projects in New York. He is trained and certified as a Concrete Construction Special Inspector by the American Concrete Institute. His projects have included soil and concrete field inspections at the World Trade Center Transportation Hub, soil field inspections for the Croton Waste Water Treatment Plant, soil and concrete field inspections for the Gunhill Road Bus Depot and Soil and Concrete Field Inspections for the New York City School Construction Authority in five boroughs.

The attached table highlights Daniel's experience with General Building Construction, Fire Protection Systems and Fire-Resistant Construction, Plumbing and Mechanical Systems as well as Structural Materals and Construction Operations.

Education/Training/ Certifications:

Constructability Review Resumes

James R. Grundhoffer, PE, CPC, CCM

Lead Engineer - Civil

James R. Grundhoffer, PE, CPC, CCM, has more than 33 years of experience in project and construction management for wastewater treatment plants, educational and cultural facilities, courthouses, post offices, transits, highways and highway management systems, jet engine test facilities and nuclear facilities and materials. Jim has served in capacities ranging from project executive to inspector on projects ranging from $10 million to $15 billion directly managing construction projects and activities, inspecting work during placement, overseeing materials testing and coordinating with owners, designers, tenants and public agencies. Jim has effectively managed programs in continuously high-profile and high-pressure environments.

Port Authority of New York and New Jersey (PANYNJ), Cost Assessment of Holland Tunnel Visual Assessment, Various, NY

Hill is providing the Port Authority with estimating services to evaluate the reconstruction and replace "in-kind" costs for specific areas of the tunnel damaged by Hurricane Sandy. The estimates are used to secure FEMA funding for all the facilities. The damages, valued at more than $100 Million include office buildings, pump rooms, site utilities, and support facilities. For this infrastructure assessment project, Jim led a team of engineers to inspect the ventilation and exhaust ducts. The purpose of the condition assessment was to determine the extent of damage caused by saltwater inundation from Superstorm Sandy. Locations and the extent of cracks and spalling of concrete were identified and documented. The condition of the exhaust duct brackets was also evaluated. Repair recommendations were developed and described in the assessment report. Latent damages were also identified. Jim worked closely with the cost estimating team to develop an order of magnitude estimate for the repairs.

State of Connecticut, Department of Construction Services (DCS), Western Connecticut State University (WCSU) Visual and Performing Arts Center, Danbury, CT

Hill is currently serving as the Owner's Representative for all on-site activity representing the DCS and the WCSU to manage the project and assure contract compliance by the Construction Manager-at-Risk. The 134,000 SF Center has an estimated cost of $75 million under a CM-at-Risk contract. Jim performs or oversees all on-site records management, schedule review and comment and coordination between all project team members. Hill also provides materials testing/inspections, third party'structural inspections and sign-offs and commissioning/LEED monitoring and follow-up for the owner utilizing consultants under contract to Hill. Jim also reviews all change order

Education:
BS, Civil Engineering, University of New Haven, CT, 1995

Certificate, 4 Hour User/ Erector Supported Frame Scaffold Safety Training, Total Safety Consulting, New York, 2006

Certificate, OSHA 510, Construction Industry, UMDNJ, School of Public Health, 2009

Registrations:
Superintendent of Construction, New York City

Professional Engineer, New York

Professional Engineer, Connecticut

Certified Construction Manager

Certified Professional Constructor

Professional Memberships:
American Society of Civil Engineers

Construction Management Association of America

 # Years Technical Experience: 33

documents and participates in final lump sum negotiations with the CM-at-Risk and the architect.

City University of New York (CUNY), Brooklyn College Performing Arts Center, Brooklyn, NY

Jim served as Program Manager for CUNY for the CM-Build Brooklyn College Performing Arts Center Project estimated to cost $69 million. He directed field forces under contract to Hill for the construction of college-used swing spaces; oversaw all aspects of CM contract performance; developed all schedules/ milestones, budgets and cost control/forecasting reports; coordinated with all project interested parties to ensure compliance with construction contract requirements; and prepared all contract front-end documents and site logistics plans

Prior Experience

Wethersfield Cove Combined Sewer Overflow Project

Jim served as Project Manager/Resident Engineer with overall responsibility for all field activity on a multi-site project for a municipal utility on combined sewer separation projects. He coordinated all construction and contractor, safety and public relations activities. He supervised and administered all aspects of construction management, including design review, overall project scheduling, budgeting and forecasting, shop drawing review, coordination with local and state government officials and utilities and contractor compliance with contract specifications.

Oak Point Link Rail Trestle, On/Above the Harlem River, New York, NY

As Senior Inspector/Project Engineer, Jim inspected and documented all aspects of the construction of 1.8 miles of railroad trestle with 344 caissons, pre-cast and pre-stressed concrete spans and track in the Harlem River. He also supervised subconsultant inspection forces.

Highway Management System, I-95, Southwest CT

Jim provided inspection for the installation of fiber optic cables for a highway management system on I-95. He inspected and documented all aspects of project work.

Paving of I-95 and Widening of I-84, CT

As Senior Inspector/Office Engineer, Jim assisted the Resident Engineer with all aspects of project inspection, documentation and management. He supervised inspection and testing personnel. He also performed project surveys. Projects included paving, drainage structures and piping installation and bridge construction.

United States Air Force, Bio-dynamics Laboratory Modification and Jet Engine Test Facility Renovations, Dayton, OH

Jim served as Project Manager/Engineer/Superintendent responsible for all on-site activity. He directed craft forces, managed contracts and materials purchases, reviewed shop drawings, negotiated change orders and provided oversight of contract and safety compliance. He was also responsible for all project budget and cost control.

Zachary Stern

Engineer - Structural

Education:
BS, Civil Engineering, George Washington University, 2008

 # Years Technical Experience: 8

Zach Stern specializes in New York City metropolitan area transit projects, including work on bridges and repair and resiliency projects. His skills include development of Master Schedules, maintenance of cost and resource loaded baseline schedules, timelines capturing project milestones and key events, CPM-based construction schedules, time impact analysis, document review for delay evaluation, project delay and cost overrun analysis and cost and damage quantification. His specialized computer software skills include Oracle Primavera P3.

As Project Scheduler, Zach's duties will include site monitoring, contractor's payment requisition review, owner-client meetings, project status reviews and change order reviews. He will also be responsible for review of the contractor's monthly schedule update. In addition, as needed, Zach will create an As-Built and master schedule, evaluate fragnets for time impact analysis (TIA) purposes and conduct detailed delay analyses for any claims.

Metropolitan Transportation Authority (MTA), No. 7 Subway Line Extension, New York, NY, Assistant Project Engineer

Hill, in joint venture, is providing construction management services for the $2.4 billion construction extension of the No. 7 Line for the New York City Metropolitan Transportation Authority Capital Construction Program and the Hudson Yards Development Corporation. The project includes two bored tunnels with each diameter approximately 22.5 feet, 34th Street Station, and two interlocking structures which will be connected to the 34th Street Station. As Assistant Project Engineer, Zach is responsible for tracking, analyzing and processing change orders. This includes reviewing letters from the contractor claiming extra work and seeing if there is any validity to the claim.

Prior Experience

Port Authority of New York and New Jersey, Sandy Storm Relief, New York, New York

In support of the PANYNJ's Superstorm Sandy Relief efforts, Zach helped to develop a database of all damaged Port Authority inventory along with possible funding options to repair/replace each project.

Port Authority of New York and New Jersey, Goethals Bridge Replacement Project, Newark, NJ

Zach, in a Project Controls role, assisted in developing project specific

specifications for the PANYNJ during the RFP phase. This project is Public-Private-Partnership (P3) design-build, finance-maintain (DBFM); so each relevant Port Authority specification needed to be altered to reflect this type of work. Zach was also responsible for maintaining a Contract Deliverables Requirements List (CDRL) to track all potential deliverables throughout the life of the project.

New York City Transit Authority Bridges and Tunnels, Marine Parkway Bridge Scour Monitoring, New York, New York

As an engineer for the Marine Parkway Bridge Scouring project, Zach inspected each foundation of the Marine Parkway Bridge above the waterline to determine extent of concrete repairs needed. After inspection, Zach created drawings, calculated quantities and provided preliminary estimate of potential work to be done on each foundation.

New York City Department of Transportation, Willis Avenue Bridge Replacement Project, New York, NY, Field Representative

Employed by an architecture, engineering, planning, and construction services firm, Zachary was part of the Resident Engineering and Inspection Team assigned to a $630 million bridge project. Works included the demolition and replacement of a 109-year-old bridge crossing the Harlem River and construction of new approach spans and ramps crossing FDR Drive in Manhattan and the Major Deegan Expressway in the Bronx. His duties comprised reviewing design submittals and requests for information (RFIs) prior to operations, performing quantity take-offs and change orders, managing the work of construction crews, and liaising with the contractor to obtain the best product of the client. Zachary also inspected construction works such as rebar, caisson, and structural concrete placement to New York State Construction Specifications and produced punch lists for inspection procedures. During this project, he gained experience with substructure, footing, and superstructure construction.

John H. Lehman, PE

Senior Mechanical Engineer

John H. Lehman, PE, has 41 years of experience in the transportation sector. Highlights of John's work include the $1.6 billion Transbay Transit Center, which will be the northern terminus for the California High Speed Rail system, the analysis of the New Haven Rail Maintenance Facility in Connecticut and oversight on major regional rail assignments across the U.S. for the Federal Transit Administration. John has directed multi-disciplinary, multi-national engineering design teams on rail car manufacturing and large construction projects, and specializes in heavy equipment design, maintenance and operation, construction and operations analysis for rail car procurement, rail car manufacturing facilities and car repair and locomotive servicing facilities. John has also prepared engineering and economic studies on equipment selection and maintenance, transportation operations and plant location.

Education:
Master of Management, Transportation, JL Kellogg School of Mgmt, Northwestern University, 1980

BS, Mechanical Engineering, University of Illinois, Urbana-Champaign, 1972

Registrations:
Professional Engineer, Illinois

Professional Engineer, New Jersey

 # Years Technical Experience: 41

Northern Illinois Regional Transportation Authority, RTA PMO, Chicago, IL

Hill is contracted to provide project management oversight for selected CTA (heavy rail and bus), Metra (commuter rail) and Pace (suburban bus) projects funded by the State of Illinois Bonds and administered by RTA for Illinois DOT. Hill's current assignments include bridges, substations, rail vehicle procurement, rail vehicle overhaul, stations, and track renewal. Hill has also been tasked by RTA to assist in improving value engineering and project oversight scope for RTA funded projects. John serves as Project Manager for the overall contract and is also the lead for stations, track renewal, and rail vehicle projects.

State of Connecticut, Office of Policy and Management, New Haven Rail Maintenance Facility Expansion, Hartford, CT

Hill International was retained to provide a review and analysis of the New Haven Rail Maintenance Facility Expansion Project. As part of the review of the Connecticut Department of Transportation's proposed expansion and modernization of the facilities, John was asked to review the scope of the proposed storage yard and rail vehicle maintenance facilities with respect to the maintenance needs of the new technology M-8 Series cars and the existing New Haven Line fleet operated by Metro-North Railroad.

New York State Metropolitan Transportation Authority (MTA), MTA Independent Engineer's Certification Program, New York, NY

John is responsible for evaluating the adequacy of the maintenance budgets and the efficacy of the maintenance programs for the rolling stock and track departments of MTA's operating agencies. The reviews

include: New York City Transit - Car Equipment and Track and Right-of-Way; Long Island Rail Road - Maintenance of Equipment and Maintenance of Way-Track; Metro North Railroad - Engineering Department-Track.

Federal Transit Administration (FTA), Various Projects, Washington, DC

John provides a variety of Project Management Oversight services to the Federal Transit Administration. Projects include:

- **Washington Metropolitan Area Transit Authority (WMATA), Washington, DC.** John is providing Project Management Oversight (PMOC) for the Federal Transit Administration (FTA) for the WMATA rail car procurement. Oversight includes evaluation of budgeting, rail fleet acquisition and maintenance planning, and issues related to manufacturing, testing and acceptance. His projects include: 5000 Series new cars, 192 cars, $383 million; BREDA Rehabilitation Project (2000/3000 Series), 364 cars, $400 million; and the 6000 Series new cars, 184 cars, including options, $378 million. John also provided PMO services for the FTA for the Shops/Yards Expansion projects under the WMATA Metro Matters program. Oversight includes monitoring of program management, including budgets and schedules, monitoring construction progress for three projects, Greenbelt Shop, Shady Grove Shop and Brentwood Shop, with a construction cost of $142 million.
- **Metropolitan Washington Airports Authority, Dulles Corridor Metrorail Extension, Vienna, VA.** John is providing Project Management Oversight for the FTA for the Dulles Corridor Metrorail Extension project that was begun by the Virginia Department of Rail and Public Transit. Services include monitoring; risk analysis; and evaluation of scope, cost, and schedule. The project cost is in excess of $2 billion.

New York State Metropolitan Transportation Authority (MTA), Independent Engineering Consultant, New York, NY

John served as an independent engineering consultant to the MTA with oversight responsibility for $5 billion of vehicle procurement and new construction. His projects included: New York City Transit Authority (NYCTA) new subway cars program, 1,762 cars, $2.7 billion; Long Island Rail Road (LIRR) electric cars, 326 cars, $785 million; and the LIRR Jamaica Station Improvements. He also contributed to a special study on proposed shop layout revisions to NYCTA's 207th Street Overhaul Shop.

Port Authority of New York and New Jersey, World Trade Center Transportation Hub, New York, NY

John is providing support to Port Authority Engineering in the areas of train operations, project phasing, and program cost estimation for the restoration of PATH train service and the rebuilding of the World Trade Center.

John D. Swartzwelder

Senior Engineer - Mechanical

Education:
BS, Mechanical Engineering, New Jersey Institute of Technology, 1980

Certificate, 4 Hour User/ Erector Supported Frame Scaffold Safety Training, Total Safety Consulting, New York, 2006

 # Years Technical Experience: 33

John D. Swartzwelder has more than 33 years of experience in management and construction supervision for courthouses, national memorials, educational, residential, religious, laboratories and research facilities and clean rooms. John has provided project management services from planning, through construction, start-up and occupancy on technically complex, major infrastructure and building renovation projects with aggressive schedules. He has performed facility assessments and has helped formulate facilities management plans. He has also designed high-purity and conventional piping and chemical waste systems for state-of-the art semiconductor fabrication research facilities.

Brooklyn Performing Arts Center, City University of New York (CUNY), Brooklyn New York, Project Superintendent

Hill is providing construction management services for the construction of a new state of the art $65 million Performing Arts Center at Brooklyn College. The project consists of multiple phases to provide swing space, perform abatement and demolition of Gershwin Hall while adjoining areas are fully occupied, separate the fire alarm systems and bring the remaining system up to code, perform early construction projects to relocate site utilities while the design was completed for the Performing Arts Center. This project is located on top of NYC DEP storm drain tunnels, requiring an extensive vibration monitoring program, all in a densely populated urban setting requiring limited noise and disruption to the surrounding areas. The new PAC building is 75,000 SF and consists of a 250 seat recital hall/theater and ancillary spaces.

Museum of the City of New York, New York City Department of Design & Construction (DDC), New York, New York

The DDC Cultural Facilities and Libraries Unit has retained Hill International as its consultant for a City-wide CM-Build Requirements Contract for The Museum of the City of New York. John provided project management services for the slate roofing replacement, mechanical and electrical upgrades, and the construction of a 20,000 square foot addition. A new electrical service and switchgear were installed. A new fire pump, exhaust systems, and renovated bathrooms were completed prior to the addition of the new gallery and support facilities. New chillers and cooling towers, emergency generator, and environmentally controlled collections storage areas were also provided. The new mechanical equipment installed will provide the infrastructure for the renovation phases for the existing building. The new addition contains

curatorial support facilities, staffing work and office areas, environmentally controlled collections storage areas, and new gallery spaces.

OGS Department of Labor State Office Building, Brooklyn, New York, State of New York

Hill is providing construction management services for the complete architectural and MEP renovation of the Department of Labor State Office Building in Brooklyn, New York. This project is a gut renovation of a 72,000 square foot, 5-story office building housing the State Department of Labor. Designed as a Gold LEED certified building, usable office space was gained back by removing perimeter fined tube radiation covers, two mechanical rooms per floor, and relocating boilers, packaged air handlers, and other equipment to the roof penthouse. Asbestos and lead paint abatement will be completed before starting the renovation. As Project Manager, John is involved in all phases of the construction from pre-construction and construction services, to acceptance and close out. During the pre-construction phase, John provided constructibility and document reviews, cost estimates, and scheduling. He also provided technical assistance to the design team to help expedite the design package and deal with the New York City related code items. The projected cost for the project is $17.5 million with a construction duration of 24 months.

Peter B. Turton, PE

Senior Project Manager

Peter B. Turton is a Professional Engineer with more than 40 years of experience in the construction industry. Peter is a seasoned construction executive specializing in the delivery of complex, multibillion dollar transit projects nationally and internationally. He is particularly adept at constructing major new works in an active rail environment; working on major transit and parking structure projects; knowledgeable of design-build and EPC; providing QA/QC management on major projects and working within an integrated client organization for major project delivery.

Peter has been involved with projects at every stage, from conceptual design to operation and maintenance, and is very familiar with alternative delivery methods, including design-build. His areas of expertise include program management, project and construction management, engineering, contract formation, constructability, planning and scheduling, staging and procurement support. Peter has also played an instrumental role in partnering sessions and dispute review board meetings. His projects consist of rail and transit, tunnels and subways, airports, commercial buildings, theme parks, power generation and transmission facilities and nuclear generating stations. He also served on a panel of experts chosen to evaluate and recommend strategy for rebuilding the World Trade Center site, including the PATH rail terminal, and led the design for a confidential security project concerning two major transportation hubs in New York City.

Metropolitan Transportation Authority (MTA), No. 7 Line Subway Extension, New York, NY, Vice President and Project Director

Peter was responsible for construction management during the building of this complex $2.1 billion rail tunnel. He directed the day-to-day activities of the construction management team; directed contract formation and procurement strategy, schedule development, and contract changes for multiple contracts; interfaced with the client organization and other agencies and made internal and external high-level presentations. The Twin Tunnels shafts and Large Caverns Station were delivered ahead of schedule and under budget. He was instrumental in working with the contractor to procure TBMs and other major tunneling equipment as well as monitoring the commissioning and decommissioning of the TBMs. He directed operations to closely monitor GBR conditions and made preparations for the three monthly dispute resolution board reviews. He was also instrumental in devising and managing ground freezing to permit TBM work to proceed through mixed face conditions.

Education:
MS, Civil Engineering, University of Birmingham, United Kingdom, 1967

BS, Civil Engineering, University of Birmingham, United Kingdom, 1964

Certificate, Project Management, Washington Group International, 2005

Certificate, Confined Space Awareness Training, The Liro Group, 2010

Certificate, OSHA 10 Hour, Liro Engineers, Inc., 2011

Certificate, Underground Blasting Technology and Risk Management, Society for Mining, Metallurgy, and Exploration, 2008

Certificate, Tunnel Waterproofing and Shortcrete Symposium, Society for Mining, Metallurgy, and Exploration, 2008

Certificate, Tunneling, Colorado School of Mines, Golden, Colorado, 2008

Registrations:
Civil Engineer, California

Professional Memberships:
Project Management Institute

American Society of Civil Engineers (ASCE)

Awards/Honors:
"James G. Hellmuth Unit Citation Award," for AirTrain JFK project, presented by The Port Authority of NY & NJ, (2004)

 # Years Technical Experience: 40

Prior Experience

Port Authority of New York and New Jersey, Transportation Study Projects, NY and NJ

Working for an engineering, construction, and project management group, Peter participated in studies for work at La Guardia Airport, the George Washington Bridge, Battery Park City Ferry Terminal, and a rail terminal in New Jersey.

Port Authority of New York and New Jersey, Facilities Modification Projects, New York, NY, Project Manager

On behalf of a company specializing in engineering, construction and management services, Peter provided project oversight during the modification of several Port Authority facilities. Specifically, his projects included: John F. Kennedy International Airport, Queens; La Guardia Airport, Long Island and Port Authority Trans Hudson (PATH) Rail Tunnels.

Lower Manhattan Construction Command Center (LMCCC), World Trade Center Reconstruction Projects, New York, NY, Team Member

Peter was part of a select group of world-renowned experts tasked with evaluating and recommending construction strategy and scheduling for the rebuilding of the World Trade Center.

World Trade Center Vehicular Security Center and Tour Bus Parking Facility, New York, NY, Construction Manager

Employed by an engineering, construction and management services company, Peter was involved in the preliminary design of the vehicular security center and parking facility.

Port Authority of New York and New Jersey, World Trade Center Port Authority Trans-Hudson (PATH) Terminal Project, New York, NY, Construction Manager

Working for an engineering, construction and management services firm, Peter played a lead role in the value planning exercise for design, construction and utilization of a permanent PATH Terminal at the World Trade Center. He was involved in coordinating the common interests of stakeholders and resolving differences to arrive at a series of project improvement alternatives. In an effort to determine alternative ways for achieving the equal function of various elements within the terminal, Peter drafted sketches, calculated cost and estimates, prepared schedule narratives, substantiated test data and developed life cycle costs. He also conducted a weighted matrix analysis to determine which alternative offered the best combination of performance, cost and schedule.

Manuel De La Hoz

Engineer - Mechanical

Education:
B.E., Technical Drawing, Institution of Industrial Technology of Atlantico, Columbia, 1974

Diploma, Technical Drawing, Institution of Industrial Technology of Atlantico, Columbia, 1971

 # Years Technical Experience: 26

Manuel E. De La Hoz has over 26 years of experience in construction and engineering, estimating and project management for HVAC, plumbing and piping, fire protection, elevators and electrical projects. He has been involved with bids and the management of some of the largest mechanical projects in the New York and Philadelphia metropolitan area, including educational, airport and pharmaceutical projects. Manuel has served as Senior, Lead and Mechanical Estimator and Construction Consultant for many notable projects; clients include the Atlantic City Board of Education, U.S. General Services Administration (GSA) and Och-Ziff Capital Investments, LLC. In addition, he is a certified QuickPen user, certified Itron AMR installer and is fluent in English and Spanish.

Metropolitan Transportation Authority (MTA), No. 7 Subway Line Extension, New York, NY, Estimator

The Hill/LiRo/HDR Joint Venture is responsible for providing construction management services for the extension of the Number 7 Subway Line westward from Times Square under West 41st Street and southward along 11th Avenue to the southerly terminus at West 25th Street. The team will provide management and project control services for the tunneling work and during construction of the facilities and infrastructure transforming the Hudson Yards into vibrant 24-hour neighborhood containing a mix of commercial, residential, retail, and recreational uses.

Port Authority of New York and New Jersey, World Trade Center (WTC) Transportation Hub, New York, NY, Senior Mechanical Estimator

Hill is providing program management services in connection with the planning, design and construction of the new World Trade Center Transportation Hub, including the new permanent PATH Terminal, which is expected to cost $2.5 billion. Hill provided similar services in connection with the $566M temporary PATH Station. Manny was involved with the estimating effort for the Port Authority's 3.5M SF of reconstruction below street level with initial budget estimates, design estimates and final estimates, including FTA grantee funding scope. In addition to the new PATH terminal, the site includes security, tenant and bus parking; core and tower podiums; central power and mechanical plants; memorials; as well as cultural and performing arts centers.

Port Authority of New York and New Jersey, Retail Redevelopment at World Trade Center (WTC) Site Estimate, New York, NY, Senior Estimator

Hill provided the Stage I Design Construction cost estimate for the World Trade Center Retail Redevelopment. Manny was involved with the estimating effort for the Port Authority's 3.5M SF of reconstruction below street level with initial budget estimates, design estimates and final estimates, including FTA grantee funding scope. He also coordinated the estimate of all of the construction divisions for several phases. The site includes security, tenant and bus parking; core and tower podiums; new PATH terminal, new center power and mechanical plants; memorials; retail space; cultural and performing arts centers.

State of Connecticut Office of Policy and Management, New Haven Rail Maintenance Facility Expansion, Phases 1, 2, and 3, New Haven, CT, Senior Estimator

Hill reviewed and analyzed the scope, cost and budget established by the Connecticut Department of Transportation for the New Haven Rail Maintenance Facility Expansion Project. Prior to Hill's engagement, the estimated costs for the execution of the proposed project greatly exceeded the original budgetary estimates. Hill critically evaluated the adequacy of the original work scope and estimate, determined the factors driving the increases in estimated costs, performed an independent cost estimate, reviewed the scope to recommend ways to reduce project costs (Cost Containment Analysis), provided budgeting options, reviewed DOT capital project budgeting and cost estimating procedures and protocols, conducted a project risk assessment and assessed the reliability of the out-year estimates, proposed yard expansions and configuration control. In addition to estimating the HVAC, plumbing and fire protection, Manny provided the estimating effort with schematic design, design development, 75% CD and budget reconciliation.

New York City Department of Design and Construction, City Hall Renovation, Pre-Construction Services, New York, NY, Senior Estimator

Hill is providing construction management services for the $150 million renovation of New York City Hall in Lower Manhattan. Renovations will include exterior and roofing improvements; refinishing of the iconic steps; installation of new electrical, fire, audio-video, heating, ventilation, and air conditioning systems; modernization of its elevators; and the complete renovation of all interior spaces. Involved with preconstruction, budgeting and estimating, as Senior Estimator, Manny led the estimating effort for the schematic design, design development, 50% CD, 9.5% CD and 100% CD estimates for the construction program. His detailed estimates include all civil, architectural and structural, mechanical and electrical divisions; as well as Pack 1 and 2. Manny is also assisting the project management team to validate contractor's bid and to review scope of work, in addition to other specialized project management tasks.

Bethoven C. Torio

Engineer - Electrical

Education:
BS, Electrical Engineering, Ortanez University, Philippines, 1980

Professional Memberships:
American Society of Professional Engineers

Bethoven C. Torio has more than 30 years of experience in electrical construction project management, inspection and estimating. His projects include residential, commercial and industrial assignments, with small, medium and large power distribution and auxiliary system layouts. Bethoven's specialized computer software skills include AutoCAD and computer generated estimating software. Highlights of his project experience include numerous electrical estimating and inspection projects across the New York Metropolitan area, including many assignments for City agencies and authorities. He is fluent in English and Tagalog.

Port Authority of New York and New Jersey (PANYNJ), Superstorm Sandy Long Term Recovery Operation and Call-In Estimating, New York and New Jersey, Electrical Estimator/Electrical Inspector

In an emergency recovery effort of over $250 million, Bethoven coordinated with the Federal Emergency Management Agency (FEMA), and PANYNJ Office of Emergency Management (OEM). Hill provided site assessments and estimating services for civil, architectural, mechanical, plumbing, sanitary and electrical systems damaged by Superstorm Sandy for all New York and New Jersey Port Authority facilities. Bethoven provided the site assessments and estimates of the damages to the electrical systems at more than 10 Port Authority sites. Bethoven visited each, site confirmed and generated scoping items in a comprehensive report for mitigation, developed detailed cost estimates for scope of damages and negotiated final costing of damages against FEMA and other related insurance agencies for payment.

Metropolitan Transportation Authority (MTA), No. 7 Subway Line Extension, New York, NY, Senior Estimator

Hill is providing estimating services for various Additional Work Orders (AWO's) for civil, architectural, mechanical, plumbing and electrical works for the 7-Line Extension Project. Bethoven is providing review and estimating services for the high and low voltage electrical installations for lighting, power, fire alarm, security, communications (System Wide & Site Specifics), instrumentation and Controls Equipment Cabling and Traction Power. Bethoven is instrumental in providing clarification and guidance to MTACC estimators. He also works closely with the MTACC Audit and Procurements Departments and provides support to the MTACC during negotiations with contractors.

Dormitory Authority of the State of New York (DASNY), Bronx County Hall of Justice, New York, NY

Hill International represents DASNY in dealing with DASNY's subcontractors and other matters as required. Hill's services include change orders, punch list inspection, allowances, schedule delay analysis, parking garage and pre-cast inspection, and claims support. Bethoven serves as Electrical Estimator responsible for the estimating and processing of electrical change orders.

New York City Housing Authority, Low Income Housing Renovations, New York, NY

Hill International is providing services for a CM-Build contract with the New York City Housing Authority for renovations to Albany Houses totaling nine buildings and 1,229 apartments. Bethoven coordinates with the building tenants for the electrical work upgrades to be done to their apartments and coordinates this with the electrical contractor. He inspects and checks the electrical materials being used onsite in order to ensure that they meet specifications; inspects the electrical upgrade and the basement electrical room power upgrade for each building as they are finished; and provides daily inspections reports for day-to-day work, work accomplished, and manpower.

Contract Specialist Resumes

Marc S. Zaretsky

Lead Contracts Manager

Education:
JD, Hofstra University School of Law, New York, 1991

MBA, Law/Business, Hofstra University, New York, 1991

BBA, Banking & Finance, Hofstra University, New York, 1986

Registrations:
Admitted to Practice Law in the State of New York

 # Years Technical Experience: 20

Marc S. Zaretsky has nearly 20 years of legal and business experience in construction industry. Marc is adept in project finance, project management, claims consulting and contractor and subcontractor disputes management. His project experience includes courthouses, transportation, hotels, petrochemical and power projects. He has served as general operations manager, senior counsel and general counsel and secretary providing legal and business support. Principal in his own law firm, Marc's practice included general law with concentrations in construction, energy, corporate, estate planning, and real estate matters involving commercial and residential transactions. He has also served as Professor in the Continuing Education Program for Paralegal Studies at Hofstra University.

As project Contracts Manager, Marc will be responsible for the relationships and contracts between the owner and the contractors and other project vendors. Marc will help to establish and maintain strong, positive working relationships among the project stakeholders, and verify contract compliance and adherence to quality, cost and schedule parameters. Marc can also assist in procurement by helping the owner develop approved bidder qualifications, supporting contract negotiations, developing contract language to protect the project and providing financial control. In the event of a contractual dispute, Marc will work to resolve the issue before it can affect the project, with an emphasis on finding a "win-win" solution for all involved parties.

West Point Association of Graduates, West Point Visitors Center Renovation and Reconstruction, West Point, NY, Senior Project Manager

The project includes a new Visitors Center with modern exhibition space will be the gateway to the United States Military Academy. Hill has managed the design and approvals of the new 12,000 SF facility and will manage the planned construction in 2014. The project includes an open space reception lobby, information center, gift shop, administration suite, and central plaza as a public gathering space. After razing much of the adjacent existing visitors center, a portion will be preserved and renovated to house an 8,000 SF state-of-the –art exhibit space. The renovated portion will have a new building façade that will give the appearance of the military gothic architecture of the nearby Museum.

As Contracts Manager, Marc supported the owner in contract negotiations with the architect and other consultants, developing contract language to protect the project as well as assisting the owner with bidder qualifications and the vetting process. Marc also assisted the owner with specification, general conditions language as well as monitoring the parties' compliance with the insurance requirements of the project.

Dormitory Authority of the State of New York, Bronx County Hall of Justice, Bronx, NY

The new Bronx County Hall of Justice is an 11-story, 775,000 SF complex that is located on East 161st Street near Grand Concourse. Hill is the Construction Manager for the completion of the project. Marc serves as the Senior Project Manager responsible for providing Hill's services, including construction inspection, change order management, punch list inspection, and overall coordination of testing and training of building systems. He also provides claims avoidance and management and participates in the documentation, negotiation and settlement of claims. He schedules, coordinates and monitors all project-related activities between DASNY, clients, consultants, contractors, and other agencies and coordinates project closeout procedures with clients, Architects and Engineers, and contractors.

New York City Department of Design and Construction, Various Projects, New York, NY

As Senior Contracts Administrator, Marc drafts, negotiates, and finalizes contracts for clients and subcontractors. He classifies and categorizes all client and subcontract contract documents and reviews subcontractor insurance and bonding requirements for proper coverage. He reviews bid information and assists and analyzes concerns in connection with non-responsive bids; assists project managers in connection with responding to subcontractors and clients for various matters; and also coordinates strategy with and between project managers and senior management. Projects include:

- Brooklyn Public Library.
- Staten Island Zoo.
- Lion House at the Bronx Zoo.
- Museum of the City of New York.
- Queens Theater in the Park.
- Schomburg Center for Research in Black Culture.
- Fifth Avenue Renovation at the Pierre Hotel.
- Putnam County Courthouse.
- Thurgood Marshall U.S. Courthouse.

Calvin A. Lee

Senior Contracts Manager

Calvin A. Lee has more than 20 years of experience in construction management, contracts management, procurement and claims avoidance for correctional, educational, housing and sports stadium projects. He also has experience with VENDEX and New York City Procurement Policy Board Rules. Calvin has drafted and negotiated prime contracts, handled legal claims and insurance matters, handled procurement of goods and services and revised and drafted standard forms of subcontract and general conditions for at-risk construction projects. Calvin is also licensed to practice law in New York and New Jersey.

Port Authority of New York and New Jersey (PANYNJ), World Trade Center PATH Station Reconstruction, New York, NY

Hill, in joint venture, is providing construction management services for the $2.1 billion construction extension of the No. 7 Line for the New York City Metropolitan Transportation Authority Capital Construction Program and the Hudson Yards Development Corporation. The project includes two bored tunnels with each diameter approximately 22.5 feet, 34th Street Station, and two interlocking structures which will be connected to the 34th Street Station. The 7,200 feet tunnel can accommodate a two-track railroad with two lay-up tracks for the storage of six trains. Calvin provides change management services and is responsible for reviewing and preparing written responses to incoming correspondence related to potential contract work changes; processing of applicable contract work changes as additional work orders; reviewing, investigating and responding to all potential contract claims and disputes; and addressing and handling issues related to maintenance of construction milestones and schedule.

Port Authority of New York and New Jersey(PANYNJ), World Trade Center PATH Station Reconstruction, New York, NY

Hill provided program management services in connection with the planning, design and construction of the new World Trade Center Transportation Hub, including the new permanent PATH Terminal and the temporary PATH Station. As Senior Contracts Manager for Hill, Calvin collaborated extensively with the Port Authority project managers, staff and its consultants relative to addressing contract issues and obligations and offers solutions to mitigate contractual and program risks. He handled, processed and administered construction issues and potential claims issues, contract interpretation, delays and disruptions in the contract work and the responsibility for delays.

Education:

New York City Department of Design and Construction, Dormitory Authority of the State of New York, and Metropolitan Transportation Authority, Various Projects, New York, NY

As Contract Administrator for Hill International, Calvin prepares bids and reviews statements of work and specifications to identify risks; informs management of contractual risks and obligations; and offers solutions to mitigate contractual and program risks. He handles insurance issues; compiles and analyzes data; and maintains historical information. Calvin provides analysis and reports on contract documents and negotiates revised conditions of contracts and subcontracts. Projects include:

- El Museo del Barrio
- Lion House at the Bronx Zoo
- Museum of the City of New York
- Queens Theatre in the Park
- Staten Island Zoo
- Schomburg Center for Research in Black Culture
- Brooklyn Public Library
- Kingsbridge Library
- DASNY Bronx Criminal Courthouse Complex
- MTA Independent Engineer's Certification Program

Suzanne B. Schwartz

Contracts Manager

Suzanne B. Schwartz is an experienced Contract Administrator with familiarity in the design and reconstruction of construction projects. Suzanne also has experience in the negotiation of contracts. She has participated in all facets of litigation, including the preparation of contracts and insurance documents, document review and control, and management of general conditions contacts.

Port Authority of New York and New Jersey (PANYNJ), Superstorm Sandy Support Services, New York, NY

In an emergency recovery effort of over $250 million, Greg coordinated with the Federal Emergency Management Agency (FEMA), and PANYNJ Office of Emergency Management (OEM). Hill provided site assessments and estimating services for civil, architectural, mechanical, plumbing, sanitary and electrical systems damaged by Superstorm Sandy for all New York and New Jersey Port Authority facilities.

The Dormitory Authority of the State of New York (DASNY), Bronx County Hall of Justice, Bronx, NY

Hill International provided change order, punch list inspection, allowance reconciliation, schedule delay analysis, parking garage/ pre-cast inspection, project closeout, and claims support services as part of DASNY's team. Hill also represents DASNY in dealing with prime contractors, subcontractors, and other matters as required. Suzanne serves as Assistant Contract Administrator and is responsible for the preparation and review of contract documents and invoices, maintaining document logs, managing the contractor's claims log and general conditions, and interfacing with the client and contractors, as necessary, regarding change orders, cost control, and other project matters.

New York City Department of Design and Construction, Various Projects, New York, NY

As Contract Administrator for Hill International, Suzanne prepared bids and reviews statements of work and specifications to identify risks; informs management of contractual risks and obligations; and offers solutions to mitigate contractual and program risks. She handles insurance issues, compiles and analyzes data, and maintains historical information. Suzanne provides analysis and reports on contract documents and negotiates revised conditions of contracts and subcontracts. Projects include:

- Queens Public Library Renovation

New York City Housing Authority (NYCHA),Various Projects, New York, NY

Hill is providing construction management (CM/Build) services to the New York City Housing Authority for various capital housing projects throughout the five boroughs of New York City. As Contract Administrator for Hill International, Suzanne prepared contract documents and bid packages to be issued to contractors; reviews contractor qualifications; and collaborates with NYCHA personnel, as necessary, for successful completion of the project.

Prior Experience

Law Firm, Various Projects, Hicksville, NY

Suzanne assisted attorneys in all facets of litigation, including landlord and tenant disputes and the sale of real property. She drafted contracts of sales, wills, and Certificates of Incorporation. She also researched various legal issues, such as registration and licensing of compositions with the American Society of Composers, Authors and Publishers.

Law Firm, Various Projects, Rockville Centre, NY

As Legal Assistant, Suzanne assisted in workers' compensation cases from intake to close. She interfaced with doctors, insurance companies, and opposing counsel. She also communicated with and prepared clients for court appearances; organized client files and medical records; and attended hearings, depositions, and conferences.

Cost Estimates Resumes

Raymond Tom, AIA, LEED GA

Estimator

Education:
BArch, Architecture, Pratt Institute, 1993

AAS, Architectural Technology, New York City Technical College, 1990

Registrations:
Registered Architect: NY

LEED Green Associate

 # Years Technical Experience: 20

Raymond Tom has nearly 20 years of design experience, serving as a Senior Project Architect for healthcare, hospitality, education, stadiums, corporate offices, banking, mixed-use, entertainment, retail and shopping malls and entertainment projects. Ray is also a skilled team leader, drawing upon both his professional and military experience. Ray specializes in leading the design phase of complex projects, verifying constructability and coordinating with architects, engineers and owners to help ensure final plans and drawings reflect the client's intent accurately and can be constructed as designed. Raymond's specialized computer software skills include AutoCAD R13 through 2008 and Revit, 2009. He is fluent in English and Cantonese.

Port Authority of New York and New Jersey (PANYNJ), Superstorm Sandy Long Term Recovery Operation and Call-In Estimating, New York and New Jersey

Hill provided site evaluations and estimating services for Civil, Structural, Architectural, Mechanical, Plumbing, Fire Protection, Sanitary and Electrical Systems damaged by Hurricane Sandy. PANYNJ facilities included Airports, Ports, Rails, Tunnels & Bridges and Storage Buildings and Infrastructures. Ray closely managed and coordinated a diverse team of estimators that confirmed and generated scoping items in a comprehensive detailed report for mitigation, developed detailed cost estimates for scope of damages promptly enabling PANYNJ and their insurance agency in negotiating final costing of damages against FEMA and other related insurance agencies for payment. The Hurricane Sandy estimated damages were in excess of $250 Million.

Port Authority of New York and New Jersey (PANYNJ), Holland Tunnel Visual Assessment, New York, NY

Hill provided the Port Authority with comprehensive detailed inspection reports and detailed estimating services to evaluate a budget for the reconstruction and replace in kind costs for various scopes for areas within the tunnel. Damages were identified as Superstorm Sandy vs. Non-Sandy storm related damages providing the PANYNJ a critical overview and assessment of their level of priority for capital improvements needed. Ray managed and coordinated the estimating team estimating efforts resulting in budgets ranging between $100 Million to $150 Million. These budgets were used to secure FEMA funding for the related damages within the Holland Tunnel facility.

State of Connecticut Department of Public Works, Western Connecticut State University Fine and Performing Arts Center, Danbury, CT, Design Phase Manager

Hill was selected by the State of Connecticut Department of Public Works to provide Construction Administration Services for the Western Connecticut State University, Fine and Performing Arts Center located in Danbury, CT. Hill provided the full spectrum of services necessary to guide this project through its design, procurement, and construction phases. As Design Phase Manager, Raymond provided services in all phases of design from pre-design to construction documentation. He prepared Document Review Reports describing the results of his review of project plans. He generates Constructibility Reviews and Reporting of the drawings and specifications; existing site conditions; and proposed mechanical, electrical, and plumbing systems, as well as soil conditions review. Raymond coordinates and oversees the Master Schedule, provides a construction cost estimate, and conducts and provides value engineering and cost reduction alternatives.

City University of New York, Brooklyn College Performing Arts Center, NY, Design Phase Manager

Raymond served as Hill's Design Phase Manager and provides services in all phases of design from pre-design to construction documentation. He prepared document review reports describing the results of his review of project plans. He generated constructability reviews and reporting of the drawings and specifications; existing site conditions; and proposed mechanical, electrical, and plumbing systems, as well as soil conditions review. The addition not only includes performance and rehearsal spaces for the music and theater departments, it also creates a new front door and image for the entire campus. The new center includes a 64,000 SF addition to the existing Whitman Hall and features a 200-seat flexible stage performance space with variable acoustics; rehearsal rooms for orchestra, choral and theater; a state-of-the-art recording studio; the Pima Center for Computer Music; music studios and practice rooms; and a scene shop. A gracious lobby, serves as a venue not only for pre- and post-performance gatherings but also for campus-wide receptions and special events, welcomes visitors, students and staff alike. This project was designed and constructed to meet LEED Silver Accreditation.

New York City Department of Design and Construction (NYCDDC), City Hall Renovations, New York, NY, Cost Estimating Manager

Raymond serves as Cost Estimating Manager for the historic landmark building's renovations. Supporting management through various phases of the project, Raymond provides support and manages the cost estimates and budgeting process. Hill is providing construction management services for the $150 million renovation of New York City Hall in Lower Manhattan. Renovations include exterior and roofing improvements; refinishing of the iconic steps; installation of new electrical, fire, audio-video, heating, ventilation, and air conditioning systems; modernization of its elevators; and the complete renovation of all interior spaces.

Gregory D. Burgess

Estimator

Education:
Coursework, Accounting,
Medgar Evers College, 1980

 # Years Technical Experience: 30

Gregory D. Burgess has more than 30 years of experience providing detailed takeoffs and pricing of electrical construction. His expertise also includes management consulting and project management. He has served as on-site estimator for various sectors of the construction industry including aviation, healthcare, casinos, office buildings and historic landmarks. He has also been responsible for change order review of drawings, and contract documents during negotiated settlements between owners and subcontractors.

Metropolitan Transportation Authority (MTA), No. 7 Subway Line Extension, New York, NY, Electrical Estimator

The Hill/LiRo/HDR Joint Venture is responsible for providing construction management services for the extension of the Number 7 Subway Line westward from Times Square under West 41st Street and southward along 11th Avenue to the southerly terminus at West 25th Street. The team will provide management and project control services for the tunneling work and during construction of the facilities and infrastructure transforming the Hudson Yards into vibrant 24-hour neighborhood containing a mix of commercial, residential, retail, and recreational uses. Gregory is responsible for electrical change order reviews including fire alarm, security, intrusion detection and telecommunications.

Port Authority of New York and New Jersey (PANYNJ), Superstorm Sandy Long Term Recovery Operation and Call-In Estimating, New York and New Jersey, Electrical Estimator

In an emergency recovery effort of over $250 million, Greg coordinated with the Federal Emergency Management Agency (FEMA), and PANYNJ Office of Emergency Management (OEM). Hill provided site assessments and estimating services for civil, architectural, mechanical, plumbing, sanitary and electrical systems damaged by Superstorm Sandy for all New York and New Jersey Port Authority facilities. Greg provided the site assessments and estimates of the damages to the electrical systems at more than 10 Port Authority sites. He visited each, site confirmed and generated scoping items in a comprehensive report for mitigation, developed detailed cost estimates for scope of damages and negotiated final costing of damages against FEMA and other related insurance agencies for payment.

New York City Department of Design and Construction (NYCDDC), City Hall Renovations, New York, NY, Estimator

Gregory provided electrical cost estimates for renovations at New York City Hall. Hill was selected by the New York City Department of Design and Construction to provide quality construction management services for the 70,000 SF renovation and rehabilitation of New York City Hall. Built in 1812, the building houses the operations of many of New York's most prominent political figures including the Mayor and New York City Council. The building is also home to an invaluable collection of historic furnishings, ornate architecture and fine arts.

Prior Experience

George Bush Intercontinental Airport, Continental Airlines Terminal E, Houston, TX, Estimator

Gregory provided on-site electrical estimating services for a new state-of-the-art airline terminal encompassing 24 gates in a three-story, 600,00 SF facility which included a large private air travelers club and retail restaurant facilities. The project was constructed while airport operations were ongoing.(2004)

Newark Liberty International Airport, Continental Airlines Global Gateway, Newark, NJ, Estimator

Gregory provided on-site electrical estimating services that included estimates and contractor change order reviews. The electrical construction was valued at more than $40 million. (2003)

Gregory provided cost estimating services for the electrical systems of the permanent Kuwaiti mission to the UN.

Port Liberte, Jersey City, NJ, Estimator

Gregory provided all electrical cost estimates for Phase I of this residential complex built on the eastern shore of the Hudson River.

Fides J. Gardiner

Estimator

Education:
BS, Architecture,
University of Santo Tomas,
Philippines, 1985

Professional Memberships:
United Architects of the Philippines

 # Years Technical Experience: 25

Fides J. Gardiner has more than 25 years of diversified experience in design, and construction project management, budget/cost management, constructability review, value engineering. Fides has a broad range of construction management achievements, including, large-scale infrastructure (Civil and Building), corporate, educational, cultural venue, healthcare, recreational facility and municipal parks in New York and Asia. Fides has an extensive background in the art and science of preservation of buildings that involve all components of building envelope construction including facades, roofs, windows, plazas; Preservation and replication of historic interior ornamental décor; and the full range of materials – from landmark plaster, terra cotta, brick, and limestone to curtain wall systems; Her specialized computer software skills include AutoCAD, Expedition, Microsoft Project and Aconex, and she is fluent in English and Filipino and knows some Spanish.

Jet Blue Terminal 5, JFK International Airport, OTG at JFK T5 Venture, LLC, New York

Owner's Representative services for the interior fit-out of 22 individual food concession spaces located inside Jet Blue Terminal 5 at JFK International Airport. The development consists of various concessions located throughout the 635,000 SF terminal. Fides was in charge of the overall budget preparation for its entire scope work, constructability review of the design drawings and specification.

City of New York Department of Parks and Recreation, McCarren Pool & Bathhouse, New York, NY

A Centerpiece of Mayor Bloomberg's PlaNYC 2030 program, This 50 million dollar restoration project for the NYC Landmark McCarren Pool is a LEED silver certified project consisting of the 55,440 SF of restored pool with a smaller footprint to accommodate a terrace beach area, including 75,000 SF of concrete flat work and paving. Other highlights include the restoration of the recreation centers with a gym facility, multi-purpose community rooms, office for staff and the restoration of the lifeguard house and filter and control room, involving preservation of its historic features and ornaments and replication of the kiosk. As the Project Manager, Fides is responsible for overseeing multiple prime contractors, quality assurance and quality control, cost control and change order management and LEED submission. She managed all four Contracts from construction phase through completion commissioning,

final occupancy and project close-out.

City of New York Department of Parks and Recreation, Union Square Pavilion and Playground, New York, NY

The $20 million Rehabilitation Program includes the historic 1932 Pavilion, Playground and Plaza and maximizing its accessibility and usability and conversion of a large part of the Pavilion into a restaurant. The project comprised selective demolition including classified waste abatement and the pavilion reconstruction including the structural underpinning of the existing building, restoration of landmark features such as limestone façade, columns, spandrel, and replication of bronze doors and replacement of terra cotta, built-up roofing system. New construction includes the comfort station, commercial kitchen and state of the art playground and streetscape. As the Resident Project Manager, Fides performed an advisory role and has a direct line of authority from the client, providing information and presenting alternatives. She managed all four Contracts from construction phase through completion, final occupancy and project close-out.

The Dormitory Authority of the State of New York, Bronx County Hall of Justice, Bronx, NY

Fides served as Project Manager for the Bronx County Hall of Justice new construction project. She was responsible for contractor management, quality and cost controls, and review and processing of change orders and payment applications of 15 prime contractors to ensure the project's successful completion. Hill provided construction management, program change management, change order processing and negotiation, construction inspection, project reporting, scheduling and delay analysis, claims analysis and support, and project close-out for the new 11-story, 775,000 SF complex located on a two-and-a-half-block site near the Grand Concourse in the Bronx.

New York City Department of Design and Construction (DDC), City Hall Renovations, New York, NY

Hill is providing project and construction management services for the DDC in the rehabilitation and renovation of New York City's renowned City Hall. The federal-style landmarked building is undergoing structural repairs and upgrade of life safety and mechanical components. The $180 million project involves a series of building-wide infrastructure upgrades and enhancements throughout 70,000 GSF of the 200 year old building. Fides managed the change order process.

Francis M. Murphy

Estimator

Education:
MS, Construction Management University of West of England, 1992

Registrations:
Royal Institution of Chartered Surveyors

 # Years Technical Experience: 16

Francis Murphy has 16 years of estimating experience. His new-build, design-build and renovation projects valued at more than $250 million have encompassed a wide variety of sectors including healthcare, institutional, pharmaceutical, K-12 and higher education, museums, commercial buildings, laboratories, gymnasiums, convention centers and courthouses. Frank's background includes providing site, architectural and structural packages; hard-bid government estimates; schematic and conceptual estimates. In addition, his estimates have been used for development and verification of budgets and as a check against the construction manager's estimates.

Port Authority of New York & New Jersey (PANYNJ), Superstorm Sandy Project, New York and New Jersey, Estimator

Hill provided site evaluations and estimating services for civil, structural, architectural, mechanical, plumbing, fire protection, sanitary and Electrical Systems damaged by Superstorm Sandy. PANYNJ facilities included airports, ports, rails, tunnels and bridges and storage buildings and infrastructures. Frank developed detailed cost estimates for scope of damages promptly enabling PANYNJ and their insurance agency in negotiating final costing of damages against FEMA and other related insurance agencies for payment. The Superstorm Sandy estimated damages were in excess of $250 million.

City University of New York, Brooklyn College Performing Arts Center, New York, Estimator

Frank is part of the estimating team that prepares document review reports describing the results of his review of project plans. He generates constructability reviews and reporting of the drawings and specifications; existing site conditions; and proposed mechanical, electrical, and plumbing systems, as well as soil conditions review. The addition not only includes performance and rehearsal spaces for the music and theater departments, it also creates a new front door and image for the entire campus. The new center includes a 64,000 SF addition to the existing Whitman Hall and features a 200-seat flexible stage performance space with variable acoustics; rehearsal rooms for orchestra, choral and theater; a state-of-the-art recording studio; the Pima Center for Computer Music; music studios and practice rooms; and a scene shop. A gracious lobby, envisioned as a venue not only for pre- and post-performance gatherings but also for campus-wide

receptions and special events, welcomes visitors, students and staff alike. This project is being designed and constructed to meet LEED Silver Accreditation.

Prior Experience

Estimating Firm, Manchester, CT, Chief Estimator

Frank served as Chief Estimator for small construction cost consultancy. His projects included multiple hospital and institutional projects throughout the U.S.

- **University of Michigan, Ann Arbor, MI - multiple renovation projects of former Pfizer Campus for reuse by University ranging from $6 million to $25 million.**
- **Museum and Academic Building Renovations - values from $10 million to $30 million.**
- **Louisiana State University, Shreveport, LA - new academic project.**
- **Tidewater Community College, Newport News, VA - new academic project.**
- **Grove City College, Grove City, PA - new academic project.**
- **Hospital Renovations - projects ranging from $10 million to $25 million.**

Building Firm, Glastonbury, CT, Senior Estimator/Estimating Executive

Frank's projects included hospital renovations, academic remodeling and new-build projects, public sector project, educational and mixed-use.

- **St. Vincent's, Bridgeport, CT**
- **Norwalk Hospital, Norwalk, CT**
- **Gateway Community College, New Haven, CT**
- **Wesleyan University, Science Building, Middletown, CT**
- **Hartford Public Safety Building, Hartford, CT - $100 million public safety building**
- **Washington Gateway Development, Washington, DC - A $200 million mixed-use development.**
- **Waterbury Public Schools, Waterbury, CT**
- **Killingly Public Schools, Killingly High School, Dayville, CT**

Glenn Selover, CPE

Senior Estimator

Glenn Selover, CPE, has strong cost estimating experience. His areas of expertise include: takeoff; obtaining material and subcontractor quotations; pricing of labor, material, equipment; etc. He is also familiar with NJDOT, NJ Turnpike, Garden State Parkway, and various other county/town procedures. Glenn has worked on projects in both the public and private sectors.

The Port Authority of New York & New Jersey, World Trade Center Liberty Park, New York, NY, Senior Cost Estimator

Glenn was responsible for competitively bidding on and being low bidder for this project. He worked with the CM on defining the scope of work and the complete estimating of the project's cost. Once the project was awarded, Glenn worked with the project management team to help them better understand the project, sharing any information obtained pre-bid with them (bid documents, addenda, quotations, answered RFI's, etc.).

The Port Authority of New York & New Jersey, JetBlue Terminal 5i, John F. Kennedy International Airport, Jamaica, NY, Senior Cost Estimator

Glenn was responsible for competitively bidding on and being low bidder for this project. He worked with the CM on defining the scope of work and the complete estimating of the project's cost. This project was part of an expansion of JetBlue's facilities, involving the furnish and install 815 high capacity Monotube foundation piles to support new structures.

New York City Economic Development Corporation, Reactivation of the Staten Island Railroad, Staten Island, NY, Purchasing Agent/ Project Engineer

Glenn's duties included development of value engineering proposals, pricing and coordinating change order work, and cost accounting and profitability analysis. He maintained quantities for work performed, cost coding time sheets, purchase orders and delivery tickets, generating cost reports, shop drawing submittals, requests for information, purchasing construction materials and coordinating their deliveries with foremen and the superintendent as to minimize delays and minimize costs, reviewing and approving invoices for subcontractors and suppliers,

Education
AAS, Civil Construction Engineering Technology, Middlesex County College, 1996

Licenses and Certifications
Certified Professional Estimator (ASPE)

Certified Construction Manager, Middlesex County College

OSHA Competent Person Training: Confined Space, Trenching, Scaffolding

NJSAT Certification in Asphalt Paving Construction & Laboratory

ASPE: Estimating and Bidding 1 & 2

Construction Estimating Institute: Estimating Underground Utilities

Professional Memberships
American Society of Professional Estimators (ASPE)

preparing time and material billings, and attending progress meetings.

Public Service Electric & Gas (PSE&G), Hudson Power Generating Station, Jersey City, NJ, Senior Cost Estimator

Glenn responsible for bidding on and managing various portions of an upgrade of PSE&G's Hudson Generating Station. Several projects were performed on a T&M basis so tracking of material usage, labor and equipment and submittal to the construction manager was crucial. Performed not-to-exceed estimates for the owner to assist them in budgeting. His duties also included solicitation, selection, and negotiation of subcontracts and larger material items such as concrete, reinforcing steel and anchor bolts. Once the project was awarded, Glenn's efforts were concentrated on getting it up and running by setting up purchase orders, subcontractor agreements, submittals, RFI's, etc. He scheduled rebar installer's activities, coordinated deliveries, stayed ahead of his operation by resolving engineering conflicts prior to work being performed. Coordinated electrician's and surveyor's activities. Performed QA/QC and document control duties. Processed applications for payment along with several other miscellaneous tasks with attention paid to the owner's strict safety requirements along with proper project documentation. The scope of work included demolition, utility relocation, excavation, backfilling, general services, etc.

Construction Schedules Resumes

Bassem Sinot Hanna

Senior Scheduler

Bassem S. Hanna has more than 25 years of experience in CPM scheduling, project controls, earned value management, project contracts and contract negotiations. Bassem oversees the development of schedule, budget and cost to complete data for assigned tasks, assembles and compiles schedule and cost data and inputs it into the project control database. He also supports the project management team in maintaining timely and effective change management processes, procedures and systems. He develops and maintains status reports, including labor productivity, schedule status and financial analysis during the bidding process. Bassem has supported multi-billion-dollar rail tunnel projects, including the $2.1 billion No. 7 Subway Line Extension. For this high-profile and complex project, Bassem manages the project controls team. He is responsible for developing and executing all phases of the project controls effort, including planning, scheduling and cost analysis. He analyzes, evaluates and forecasts project costs, as well as performance against an established baseline schedule with critical milestones.

Education:
BS, Civil Engineering, Alexandria University, Alexandria, Egypt, 1987

Egyptian Society of Engineers

 # Years Technical Experience: 26

Metropolitan Transportation Authority, No. 7 Subway Line Extension, New York, NY, Project Controls Manager

Hill, in joint venture, is providing construction management services for the $2.1 billion construction extension of the No. 7 Line for the New York City Metropolitan Transportation Authority Capital Construction Program and the Hudson Yards Development Corporation. The project includes two bored tunnels with each diameter approximately 22.5 feet, 34th Street Station, and two interlocking structures which will be connected to the 34th Street Station. As Project Controls Manager, Bassem manages the project controls team. He is responsible for developing and executing all phases of the project controls effort, including planning, scheduling, and cost analysis. He analyzes, evaluates, and forecasts project costs, as well as performance against an established baseline schedule with critical milestones. He interfaces with clients, attends regular meetings, and provides statistical reports. He assesses the impacts of design and construction changes and schedule slippage and keeps project management fully informed of any issues that may affect the critical path.

Prior Experience

Construction Company, Various Projects, New York, NY

Bassem was responsible for the preparation and progress of all company

project schedules. He evaluated the project status using Earned-Value techniques and made recommendations to senior management to accelerate schedules and mitigate problems and delays. He prepared resource-loading schedules, cost, and budget controls for all major company projects. He also assisted senior management with contract negotiations and project claims.

MWH, Various Projects, Chicago, IL

Bassem was a member of MWH's Construction Management Tiger Team of Experts. The team is a group of select, season experts, in their designated field, that are highly trained to identify and mitigate construction problems and delays. He was also a member of MWH's committee to establish a standard, world-class project controls management system, which is completed and ready for testing on a pilot project. Representative projects follow.

Major Vietnamese Construction Corporation, Transmission Line Construction Project, Vietnam

Bassem performed scheduling and project controls advisory services for a $160 million civil and transmission line construction project, on behalf of a major Vietnamese construction corporation. He instituted cost control measures that resulted in cost savings of over $8 million.

Denver International Airport, CO

As Senior Project Controls Manager, Bassem prepared a master program schedule for a $1.2 billion aviation project at Denver International Airport. He also developed a plan to manage, expedite, and complete all activities in accordance with government-established project milestones.
vately developed hydroelectric project in India.

Public Works Rehabilitation Project, CA

Bassem evaluated the status and made recommendations for a rehabilitation program for a major California public works project. The adopted plan enabled the project to be completed on time and within budget.

Chicago North Branch Tunnel Project, Illinois, Senior Project Controls Manager.

As part of the massive Tunnel and Reservoir Plan (TARP) of Northern Illinois, Bassem performed quality control for the $167 million Chicago North Branch Tunnel Project. TARP was named by the USEPA as one of the nation's top Clean Water Act success stories, and is serving as a model urban water management tool worldwide.

Ebtesam "Sam" Afify

Scheduler

Ebtessam "Sam" Afify has more than 16 years of project control management experience working on both national and international projects. Her expertise includes accounting and cost engineering, planning and scheduling, claims analysis, project management and contract administration.

Sam's background also includes work plans, work breakdown structure (WBS) and all levels of schedules (project, control and detailed) for design and construction. She has also been responsible for schedule updates and maintenance including preparation of crushing and recovery schedules with extensive reporting to client and management on a weekly or monthly basis, preparation of progress payments, variations, cost estimates and bidding studies.

In addition, Sam's contractual experience includes preparation and administration applying international contracts such as FIDIC; as well as preparation of claims and responses to claims and counter claims. Her core competencies also include budgeting, forecasting, cost management and cost control management; time control management; process streamlining; key performance indicators (KPIs); earned value management (EVM); vendor relations; procurement administration; bidding study and evaluation: commercial management; spreadsheets and reporting; negotiation, team leadership; vision and goal setting; relationship building and collaboration. Her specialized computer skills include Primavera P3 and P6, Microsoft Project, SAP and AutoCAD. She is fluent in Arabic and English.

Metropolitan Transportation Authority (MTA) New York City Transit, MTA Scheduling Contract, New York, NY, Project Controls Engineer

Hill is providing on-call construction scheduling services for the New York Metropolitan Transportation Authority. Under the task order contract, Hill provides program and project schedule control support services and staff augmentation services for all phases of project design and construction. The MTA agencies that are expected to be supported under the contract include MTA New York City Transit, Metro-North Railroad and the MTA Bus Company. Sam provides scheduling services for this contract.

Education:
BS, Architectural Engineering, Banha University, Shoubra Faculty of Engineering, Cairo, Egypt, 1997

Coursework, Planning and Controlling - Primavera P6, Promastar PMI Provider, 2008

Coursework, Earned Value Managment, Project Management Institute, 2010

Coursework, Project Management Professional Training Course, Project Management Institute, 2010

 # Years Technical Experience: 16

Ronald J. Backman

Senior Scheduler

 # Years Technical Experience: 40

Ronald J. Backman has more than 40 years of experience in project controls, planning, scheduling and cost controls for a wide variety of projects. He has also provided claims and delay analysis and accounting services. His specialized computer software skills include Primavera P3 and P6 and SAP 2010.

MTA New York City Transit, MTA Scheduling Contract, New York, NY, Scheduler

Hill is providing on-call oversight, monitoring and evaluations of all projects controls programs, construction scheduling services for the MTA. Under the task order contract, Hill provides program and project schedule control support services and staff augmentation services for all phases of project design and construction. The MTA agencies that are expected to be supported under the contract include MTA New York City Transit, Metro-North Railroad and the MTA Bus Company. Hill's responsibilities include schedule review and tracking for projects; assistance for the ACFO on project controls policies and procedures and monitor and evaluate all project controls programs and scheduling; maintain communication and support the interchange of information between the project and other involved agencies; act as liaison for scheduling group and project office to provide feedback and summary information regarding the projects and program schedules and manage internal controls.

Prior Experience:

Ronald served as Chief Planning/Scheduling Engineer, Project Controls Manager, Project Scheduling Supervisor, Senior Scheduling Representative, Scheduling Manager, Scheduling Supervisor, and Scheduler for the following projects.

Power

- Simple Cycle Power Plant-Devon, Milford and Middletown, Connecticut, NRG Energy, Houston, Texas, Senior Scheduling Representative.
- Indian Point U2/3, Entergy, White Plains, New York, Senior Scheduling Representative.
- AEP-Cardinal FDG Project, Black & Veatch, Kansas City, Kansas, Senior Scheduling Representative.
- Bridgeport Harbor Power Station Unit 3 Outage, PSE&G, Newark, New Jersey, Senior Scheduling Representative.
- Waterford Energy Facility - 850 MW IPP, PSE&G, Newark, New Jersey, Senior Scheduling Representative.
- Lawrenceburg Energy Facility -- 1100 MW IPP, PSE&G, Newark, New Jersey, Senior Scheduling Representative.
- Bergen Unit 2, 500 MW IPP Outage, PSE&G, Newark, New Jersey, Senior Scheduling Representative.
- Council Bluffs Unit #4 Super Critical Coal Fired - 800 MW, Hitachi America, Tarrytown,

New York, Project Controls Manager.

- Astoria Energy Project - 550 MW IPP, Astoria, New York, Plaza Construction, New York City, New York, Project Controls Manager.
- East River Repowering Project, New York City, New York, Durr Mechanical, New York, New York, Scheduling Manager.
- UCH Power Project, 586 MW Combined Cycle Cogeneration Project, China and Pakistan, Raytheon Constructors/Washington Group.
- KIAC Partners Cogeneration Plant, JFK International Airport, New York, New York, Crow Construction, New York, New York, Project Scheduling Supervisor.
- Waterford Unit #3, 1165 MW, Taft, Louisiana, EBASCO Constructors/Washington Group, New Jersey, Scheduling Supervisor.
- South Texas Projects Units 1 and 2, 1250 MW, Bay City, Texas, EBASCO Constructors/ Washington Group, New Jersey, Scheduling Supervisor.
- Big Hill Strategic Petroleum Reserve, Winnie, Texas, EBASCO Constructors/ Washington Group, New Jersey, Scheduling Supervisor.

Hudson-Bergen Light Rail Transit System, Lyndhurst, New Jersey, Raytheon Constructors/ Washington Group, New York, New York

For a $1.3 billion Design-Build-Operate-Maintain (DBOM) light rail system between Bayonne and Hoboken, Ronald responsibilities included:

- Bayonne Light Rail System. Ronald developed, with field supervision, the construction schedule for the rail system and platform installation from Bayonne to Hoboken.
- Newark Airport Light Rail System. Ronald developed, with field supervision, the construction schedule sequencing rail and platform installations at terminals, parking garages, and the tie-in to the existing New Jersey Transit System to New York City.

Metro North Station Upgrades, Crow Construction, New York, New York, Project Scheduling Supervisor

Ronald created and managed detailed engineering and construction schedules for station upgrades. He also reviewed weekly progress with the MTA.

Subway Communication Upgrade, Crow Construction, New York, New York

Ronald created a schedule showing the proposed integration of communication between the transit police, fire department and MTA.

Dereck C. Baker

Senior Scheduler

Education:
BS, Physics, Lincoln University, 2013

BS, Mechanical Engineering, Temple University, Philadelphia, Pennsylvania, 1991

 # Years Technical Experience: 22

Dereck C. Baker brings more than 22 years of experience and is an accomplished mechanical engineer, project manager, construction manager, project engineer and scheduler. Dereck has expertise in all aspects of engineering, construction, business management, project /construction management, general contracting, project controls, procurement, startup and commissioning. The value of the projects Dereck has provided services on range from $100,000 to $13.5 billion in Total Installed Costs. Dereck's responsibilities have included developing business plans, securing funding for business ventures and implementation of business plan goals. He also has proven record of accomplishment with setting up and implementing a structured field operation of project offices for the duration of project life cycles and managing and overseeing the work of general and trade contractors.

As an owner's representative on a number of high-profile projects, Dereck has established and maintained the metrics necessary for progressing and tracking the financial and productivity health of the engineering and construction work. He has also overseen the preparation and development of capital cost estimates related to the full scope of engineering, procurement, construction and construction management. In addition, Dereck's responsibilities include developing estimate budgets for engineering and construction projects; preparing and maintaining detailed engineering and construction schedules; developing and implementing Work Breakdown Structures; and developing project contracting plans; establishing cost control programs to document and report real and potential cost overruns to various levels of the clients and internal upper management teams. His specialized computer software skills include Primavera Project Planner, Primavera Expedition, AutoCAD, MicroStation and 3D Plant Design System.

Port Authority of New York & New Jersey (PANYNJ), World Trade Center (WTC) Downtown Restoration Program, New York, NY, Senior Planner/Scheduler

Dereck is responsible for developing and overseeing all aspects of the planning, sequencing and coordination support efforts for the critical MEP, building automation, low voltage and life safety systems. To accomplish this task, he works closely with the consortium of project and construction managers, construction trades, equipment and material vendors/suppliers, startup and commissioning members that

make up the WTC Construction Team. Due to his experience, he has been able to help make the WTCC Program a success and meet the complex and rigorous demands of this high-profile construction program. Dereck's expertise, leadership and guidance on the WTCC Program has been beneficial with the development of construction workarounds that have saved time and minimized impacts to the WTCC Program commitments.

Dereck also serves as a key liaison between the WTCC program management, construction management and contractors, and the MEP, low voltage and life safety systems construction trades. Dereck has developed a detailed activity coding and work breakdown structure flow diagram that categorized the WTCC Program into manageable segments for the program, construction management, construction trade teams to use, manage, track, monitor and report on construction efforts. This tool was critical to the development of the Master Program Schedule and fully integrating the many sub-schedules provided by the various subconsultants, contractors and stakeholders that make up the WTCC Program Team. Through his understanding and analysis of the key base system design documents such as the single-line, flow diagram and schematic basis-of-design drawings for the major mechanical (HVAC, piping and instrumentation), electrical (normal and emergency), automation, security, telecomm, radio and life safety systems, Dereck is able to assist and provide the necessary guidance in implementing the phased roll-out of the key systems.

Connecticut Department of Public Works (CDPW), Western Connecticut State University New Center for Visual and Performing Arts, Danbury, CT, Senior Scheduler

Hill is providing comprehensive project administration services during the design, procurement and construction phase. The $70 million, 134,000 SF facility is located on the University's West Side Campus and houses the University's music, art, theatre and performing arts departments. The facility includes a 300-seat concert hall, a 376-seat proscenium theatre and a 100-seat recital hall, as well as multiple technical production facilities, rehearsal spaces and dressing rooms required to support these venues.

New York City Department of Design and Construction (NYC DDC), New York City Hall Renovation Project, New York, NY, Senior Scheduler

Hill's services for this project include construction management, master schedule development and upkeep, contract document development, contract bidding and negotiation, quality and safety management and budget management and control.

The initial scope of work for the renovation entailed a series of independent building upgrades and enhancements designed to meet the new and evolving needs of the building's diverse occupants, as well as to comply with new fire and life safety codes. Preliminary design surveys conducted during the early developmental phases of the project, however, yielded that considerably poor building conditions, coupled with widespread structural deficiencies, demanded further additions to the scope of work, unexpectedly catapulting the project into a comprehensive rehabilitation program. The estimated construction cost is $104 million.

Artan Bytyci

Senior Scheduler

Education:
Associates, Computer Science, Polytechnic University of Tirana, Albania, 1994

BS, Engineering/Geology & Mining, Polytechnic University of Tirana, Albania, 1995

 # Years Technical Experience: 12

Artan Bytyci, a certified Quality Controller, has more than 12 years of experience in scheduling, project management and contract management for industrial, commercial and residential projects. He has served a variety of roles such as Chief Estimator, Bid Package Preparer and Coordinator and Project Scheduler. Artan is skilled in preparing buyouts with subcontractors and suppliers, preparing submittal packages and coordinating with architects for any discrepancies and possible change orders. He has contributed to notable projects as Scheduler for clients such as the New York City Department of Design and Construction (NYDDC). Artan is fluent in Greek and Albanian and has a working knowledge of Italian. He also specializes in Primavera P3, Suretrak, Expedition, AutoCAD, Quickbooks and Infopath computer software.

New York Metropolitan Transportation Authority (MTA), No. 7 Subway Line Extension, New York, NY, Project Scheduler

Hill, in joint venture, is providing construction management services for the $2.1 billion construction extension of the No. 7 Line for the New York City Metropolitan Transportation Authority Capital Construction Program and the Hudson Yards Development Corporation. The project includes two bored tunnels with each diameter approximately 22.5 feet, 34th Street Station, and two interlocking structures which will be connected to the 34th Street Station. The project also includes a future station at 10th Avenue, and required careful scheduling to accommodate a variety of stakeholders. Notably, this complex undertaking is currently ahead of schedule. As the Project Scheduler, Artan monitors progress, reports issues, and advises the project team accordingly.

Port Authority of New York and New Jersey, World Trade Center Downtown Restoration Program, New York, NY, Scheduler

Hill is providing program management services for the program, including the permanent WTC PATH Terminal and the WTC Site Public Infrastructure and Site Redevelopment. Artan provided scheduling services including creating new CPM schedules based on the program's requirements.

Dormitory Authority of the State of New York, Bronx County Hall of Justice, New York, NY

The new Bronx County Hall of Justice is an 11-story, 775,000 SF complex

that is located on a 2½-block site on East 161st Street near Grand Concourse. The first two floors above grade contain public services, including the jury assembly building, and the third through sixth floors contain 47 courtrooms of the Bronx County Supreme Court, which is New York's trial court. The seventh floor contains seven grand jury hearing rooms, and the eighth and ninth floors house district attorney offices and judges' chambers. The civic plaza covers a new underground parking structure for 240 cars. Artan was responsible for change order review.

New York Department of Design and Construction, City Hall Renovation, New York, NY, Scheduler

This project was an $150 million renovation of New York City Hall in Lower Manhattan. The renovations were throughout the structure, including exterior and roofing renovations, refinishing of its iconic steps, the installation of new electrical, fire, audio-video and heating, ventilation and air conditioning systems, modernization of its elevators, and the complete renovation of all interior spaces. Artan workscheduler during the preconstruction phase.

New York City Department of Design and Construction, Bronx Zoo Lion House, New York, NY, Scheduler

Hill provided construction management services for the reconstruction of the historic Lion House at the Bronx Zoo. The Lion House had not been used since the mid-1970s, and required major infrastructure work before it could safely be returned to service. The historic character of the building, including the many lion figures made from terra cotta, is being preserved. Artan provided scheduling services to the project.

New York City Department of Design and Construction, el Museo del Barrio, New York, NY, Scheduler

This was a museum renovation project, including the removal, reconfiguration and interior renovation of the existing museum public and gallery spaces, addition of a café and the interior renovation of the galleries, gift shops and renovation of the existing courtyard. As Scheduler, Artan monitored the progress, reports issues, and advises the project team accordingly.

New York City Department of Design and Construction, Queens Public Library Renovation, New York, NY, Scheduler

For this library renovation Hill is providing full pre-construction services including constructability review, final estimate, scheduling and bidding; construction period services and close-out, all in accordance with our CM-Build contract. As Scheduler Artan monitored the progress, reports issues, and advises the project team accordingly.

Christopher L. Carson

Senior Scheduler

Education:
BS, Electrical Engineering, Louisiana State University, 1968

Professional Memberships:
Association for the Advancement of Cost Engineering International (AACEI)

 # Years Technical Experience: 38

Christopher L. Carson has more than 38 years of project management and project controls experience including planning and scheduling, management oversight, claims and delay analysis, cost engineering, estimating and field engineering. His background includes projects in the government, healthcare, pharmaceutical, manufacturing, commercial, higher education, housing, power transmission, transit, water treatment, library, environmental and nuclear sectors.

Christopher co-authored a remote-hosted electronic mail and data transfer system for MS-DOS machines which was marketed worldwide. He also has more than 30 years of experience with PC programming and applications including project management software (Primavera P3, P6 and Expedition), Computer Guidance Corporation CMS, Finest Hour, Sure Trak, Microsoft Project, Artemis 7000, Project/2 and Open Plan.

MTA New York City Transit, MTA Scheduling Contract, New York, NY, Scheduler

Hill is providing on-call oversight, monitoring and evaluations of all projects controls programs, construction scheduling services for the MTA. Under the task order contract, Hill provides program and project schedule control support services and staff augmentation services for all phases of project design and construction. The MTA agencies that are expected to be supported under the contract include MTA New York City Transit, Metro-North Railroad and the MTA Bus Company. Hill's responsibilities include schedule review and tracking for projects; assistance for the ACFO on project controls policies and procedures and monitor and evaluate all project controls programs and scheduling; maintain communication and support the interchange of information between the project and other involved agencies; act as liaison for scheduling group and project office to provide feedback and summary information regarding the projects and program schedules and manage internal controls.

For Task Order #3, Christopher is providing scheduling services to the NYCT Division of Buses utilizing Primavera P3 and Oracle Primavera P6 r8.2. He monitors contractor schedule performance, evaluates additional work order extension of time requests; supports the construction manager and the NYCT construction management team. In addition, Christopher provides general planning and scheduling including construction duration estimates for NYCT

Capital Program master plans. His projects include:

- Mother Clara Hale Bus Depot, 148th Street and Lennox Avenue, Manhattan: design and construction
- Maintenance Shops, 207th Street, Manhattan: DC system renovation and replacement
- Pelham and Westchester Yards, The Bronx: yard lighting

Prior Experience

Public Service Electric and Gas (PSE&G) Project Integration Office, South Plainfield, NJ, Cost Controller

Responsible for providing project controls and cost engineering services for an engineering contract, Christopher prepared and maintained budgets, cost records, and financial performance data for Time and Material/ Not to Exceed projects under the Master Service Agreement. He also provided cost data to support the accounting department's preparation of monthly billings. In addition, Christopher monitored progress and tracked work performed on the individual projects under the Master Services Agreement.

New York City Rapid Repairs Project, New York, NY, Senior Scheduler

Christopher provided CPM scheduling services for emergency repairs to homes damaged in Hurricane Sandy. He also assisted the construction contractor to prepare CPM schedules utilizing Primavera P6 software. In addition, Christopher provided program schedule updates to the project management office.

New York City Department of Environmental Protection (DEP), Major Water Treatment Project, New York NY, Senior Scheduling Engineer

On the construction management team for a major water treatment project, Christopher provided scheduling support for three of the project's component contracts totaling $632.5 million. He also reviewed schedule submittals by contractors and provided analysis and comments concerning the quality and accuracy of the schedule to NYC DEP. In addition, Christopher prepared regular analysis reports to track contractor performance and prepared presentations for management.

New York Metropolitan Transportation Authority (MTA) Metro North Car Maintenance Facility, NY

Denver Rapid Transit Division (RTD) Light Rail System. Christopher directed, reviewed and participated in development of baseline CPM schedule using Primavera P3. He also monitored and provided oversight to project scheduling personnel to help ensure schedule updates were performed in accordance with company procedures. In addition, Christopher tracked project cash flow to help ensure that a positive cash flow position was maintained.

Danuta Gryszko, PSP, EVP

Scheduler

Danuta Gryszko has more than 16 years of scheduling experience in the construction industry. Her areas of expertise include delay and claims analysis; estimating; engineering; planning; and project and construction management. She has contributed to projects including power plants, schools, housing facilities, hospitals, highways and roads, bridges, tunnels and parks. As Scheduler, Danuta has worked with clients such as the New Jersey Schools Development Authority (NJSDA), the Pennsylvania Department of Transportation (PennDOT) and the New York City Department of Housing, Preservation & Development. She also specializes in Primavera 3, SureTrak, Claim Digger and Microsoft Project software in addition to speaking fluent Polish and working Russian and Ukrainian.

New York City Department of Design and Construction (NYCDDC) PLA Study, Renovation and Rehabilitation Projects for City-Owned Buildings and Structures, New York, NY

Hill was retained to provide a PLA study for NYCDDC. As Senior Scheduler/ Analyst, Danuta completed the economic analysis to determine the cost benefit analysis of implementing a PLA for eight DDC renovation and rehabilitation projects.

State University of New York at Buffalo, Education Opportunity Center PLA, Buffalo, NY

Hill was retained by the CM firm working on the Educational Opportunity School Building to provide a PLA cost analysis on the million dollar building. As Senior Scheduler/Analyst, Danuta completed the economic analysis for the Feasibility Study Report to determine the cost benefit of implementing a PLA.

Office of General Services (OGS), New York State Department of Labor, Schermerhorn Street State Office Building, Brooklyn, NY

For an office building rehabilitation designed to provide modern and efficient office environment for the DOL employees, special consideration was required for architectural and engineering concepts that would promote maximum usable floor space, energy efficiency and incorporate durable, easy-to-maintain systems and finishes. As Senior Scheduler/Analyst, Danuta completed the economic analysis for the Feasibility Study to determine the cost benefit of implementing a PLA for the renovation of the existing building.

Education:
MS, Mechanical Engineering, New Jersey Institute of Technology, 2008

Coursework, Physics, M. Copernican University, Torun, Poland, 1983-1989

Coursework, Mechanical Engineering, New Jersey Institute of Technology, 2004

Registrations:
Planning and Scheduling Professional

Earned Value Professional

Professional Memberships:
AACE

 # Years Technical Experience: 16

New York State Department of Transportation NY17/I-81 Interchange Reconstruction Project, Binghamton, NY

Danuta is the Senior Scheduler and Analyst for the Feasibility Study and Report to determine the cost benefit analysis and the appropriateness of implementing a PLA for the interchange reconstruction project. Danuta developed the project schedule and manpower loading for analysis and performed the economic analysis to determine the cost benefit of implementing a PLA for the interchange reconstruction analysis.

Jacob K. Javits Convention Center PLA, New York, NY

Danuta is part of the team to prepare a supplemental Feasibility Study for the 2009 General Project Plan. She is evaluating the collective bargaining agreements and preparing portions of the economic evaluation.

New York City Department of Housing Preservation and Development (HPD), New York, NY

Danuta completed the economic analysis to determine the cost benefit analysis of implementing a PLA for two HPD renovation and rehabilitation projects.

New Jersey Turnpike Authority, Statewide Traffic Management Center, Woodbridge, NJ

Hill provided construction management and inspection services for construction of the $25 million, three-level 26,350 SF facility. Danuta prepared a CPM schedule; coordinated work packages, created master schedule combining multi-contractor submittals, prepared monthly updates of the master schedule, prepared delay analysis and justified time extensions.

Prior Experience

Various Projects

As Project Scheduler, Danuta developed and maintained logic drawings and computerized CPM schedules, and updated and analyzed progress and potential critical areas. She developed the project schedule from conception through completion. She also prepared, administered and monitored project budgets and maintained them within specific CPM parameters. She controlled and reported costs and prepared impact analysis. Projects included:

- **Triborough Bridge Deck Replacement**
- **Jamaica Bay Bridge**
- **63rd Street Tunnel**
- **Various schools, hospitals, highways and parks**

Li-Ying (Jenny) Huang

Scheduler

Education:
BS, Construction Management, Polytechnic University, New York, 2006

Professional Memberships:
Construction Management Association of America

 # Years Technical Experience: 8

Li-Ying (Jenny) Huang has more than eight years of experience in project controls, cost estimating, change order review/negotiation, contract procurement, bid leveling, payment requisition processing and scheduling. Jenny is skilled in basic CAD drafting, building information modeling (BIM) and CPM scheduling. Her specialized computer software skills include AutoCAD, Aperture, ArcGIS, Bentley Microstation, Primavera Project Planner, MS Project and Sage Timberline Office. She also has experience in project management systems including Primavera Contract Management (formerly Expedition) and Aconex. She is also fluent in English and Chinese and speaks working Japanese. Prior to joining Hill, Jenny served as a field office intern for the New York City Department of Environmental Protection, Bureau of Environmental Engineering.

Jet Blue Terminal 5, JFK International Airport, OTG at JFK T5 Venture, LLC, New York, NY, Project Engineer

Hill provided owner's representative services for the interior fit-out of 22 individual food concession spaces located inside Jet Blue Terminal 5 at JFK International Airport. The development consists of various concessions located throughout the 635,000 SF terminal. Hill was responsible for contract administration, project controls, coordination of design issues with the design team and liaison between the owner and contractor. Jenny performed budget construction cost estimates and constructability reviews during the pre-construction phase of the project and coordinated the procurement of contractor bids and participated in contract negotiations. During the construction phase of the project, she worked alongside the client and architect on site to manage document control, change order review and approval, payment requisition review and generation of punch list items.

Hill International, Various Projects, Assistant Project Controls Manager/Scheduling

Serving as Assistant Project Controls Manager for Hill, Jenny prepares, reviews and approves project schedules and updates; performs schedule impact analysis of potential delays events; and prepares detailed reports based on the updated project schedule. In addition, she prepares quantity takeoffs for cost estimates, as well as review of contractor change orders. Projects include:

Bloom Energy Corporation, City Hall Fuel Cell Installation, New York, NY

Hill was contracted to provide construction management services to

Bloom Energy for the installation of a natural gas-powered fuel cell at New York City Hall. Hill's services included contract administration, supervising on-site construction and coordinating field activities, change order review and negotiation and development and updating of the project schedule. Jenny was responsible for document control, schedule updating, procurement of contractor bids for construction and the review and negotiation of contractor change orders. She also provided the client with periodic budget updates on the project costs, and processed monthly payment requisitions on behalf of the client to the City of New York.

New York City Department of Design and Construction (DDC), Renovation of City Hall, New York, NY

Hill is providing project and construction management services for the DDC in the rehabilitation and renovation of New York City's renowned City Hall. The federal-style landmarked building is undergoing structural repairs and upgrade of life safety and mechanical components. The $150 million project involves a series of building-wide infrastructure upgrades and enhancements throughout 70,000 GSF of the 200-year-old building. Work includes a new fire alarm and sprinkler system, new electrical service, replacement of existing elevator and restoration of the historic City Council Chamber and associated areas. The pre-construction services provided by Hill included design document constructability reviews, budget estimating, site logistics planning and procurement of 12 separate prime contracts for the project. During construction of the multiple-phase project within a partially occupied building, Hill was in charge of overall site supervision, field coordination, budget management, change order review and negotiation, CPM schedule review and updating and monitoring of subcontractor compliance with MWBE requirements as well as the Project Labor Agreement. Jenny was responsible for managing all aspects of document control for the project including set up of the project's web based project management system. She also coordinated the procurement of contractor bids, conducted bid leveling reviews, participated in the development of the site logistics plan, performed change order review and negotiations, reviewed and processed monthly payment requisitions and provided the client with periodic budget updates for the project.

Baron S. Marshall

Senior Scheduler

Education:
BS, Architecture Technology, State University of New York at Buffalo, 1992

 # Years Technical Experience: 30

Baron S. Marshall has more than 30 years of scheduling and cost control working projects valued from $14 million to $1 billion. Baron's expertise includes CPM scheduling, delay and claims analysis, project management and communications engineering. His background also includes application of project cost, earned value management and resource loading for scheduling; analysis of CPM Float Paths to report results and implement solutions; and identification of problems and delays in order to recommend viable scheduling solutions.

Baron's projects include expansion of major thoroughfares in Kingston and Montego Bay including bridges and drainage works, expansion and modernization of a cement plant, inner city housing, public school construction, road improvement programs, airport and transit station rehabilitation and an indoor arena. He is skilled in the application of specialized CPM software, specifically Primavera Project Management 6.2. Baron's specialized computer skills also include Primavera Contract Manager (Expedition). Baron speaks fluent English, working Spanish and limited French.

MTA New York City Transit, MTA Scheduling Contract, New York, NY, Scheduler

Hill is providing on-call oversight, monitoring and evaluations of all projects controls programs, construction scheduling services for the MTA. Under the task order contract, Hill provides program and project schedule control support services and staff augmentation services for all phases of project design and construction. The MTA agencies that are expected to be supported under the contract include MTA New York City Transit, Metro-North Railroad and the MTA Bus Company. Hill's responsibilities include schedule review and tracking for projects; assistance for the ACFO on project controls policies and procedures and monitor and evaluate all project controls programs and scheduling; maintain communication and support the interchange of information between the project and other involved agencies; act as liaison for scheduling group and project office to provide feedback and summary information regarding the projects and program schedules and manage internal controls.

Prior Experience

Construction Consulting, New York, NY, Scheduling Consultant
Baron provided scheduling consultancy to construction companies and trained personnel in basic scheduling principles and techniques.

JFK Airport, Terminal 1, New York, NY, Scheduler
For this $1-billion project, Baron updated monthly project schedules and was responsible for logic and schedule performance at the Airside East Concourse and Alterations. He also updated the owner with monthly schedules, narrative reports and manpower charts.

New York City Transit, Atlantic Avenue Station Rehabilitation Project, Scheduling Consultant
For this $120-million project, Baron developed official project schedules.

Thomas H. Wilson, Jr., PSP

Senior Scheduler

Education:
BS, Construction Engineering Technology, Spring Garden College, 1980

Registrations:
Planning and Scheduling Professional

 # Years Technical Experience: 31

Thomas H. Wilson Jr. has over 31 years of scheduling and cost control experience. He is skilled in construction management, engineering, claims analysis, estimating, inspecting, management consultation, planning and scheduling. Serving as Senior Scheduler and Assistant Estimator, Tom has contributed to many educational, justice and medical facility; transportation; railway; vehicular bridge; wastewater; and structural building projects. His clients include the New Jersey Turnpike Authority (NJTA) and the Pennsylvania Department of General Services (PA DGS). Tom also specializes in Project Management System, Primavera Project Planner and Oracle/P6 software.

New Jersey Turnpike Authority, Facilities Improvement Program, NJ, Scheduler

Tom serves as scheduler and project controls lead for the NJTA Facilities Improvement Program. Hill is providing program management services for the New Jersey Turnpike Authority's five-year, $350 million Facilities Improvement Program. Under our contract, Hill will manage all phases of final design and construction and will assist the NJTA in the management, oversight, coordination and reporting of activities. A focus of our work is evaluating the Authority's processes and recommending improvements to the NJTA's facilities construction procedures.

Federal Railroad Administration (FRA), Transbay Terminal, Scheduler

The purpose of this workshop was to perform an in-depth review of the project to ensure that the bid documents for Phase 1, including the train box and the transit center building, were adequately developed, that the cost estimate and schedule reflect the bid documents and were within budget and that the Grantee organization and procedures were in place to successfully complete construction and bring the project into operation. Tom's responsibility on this assignment was to review the project master schedule and ascertain whether the summary schedule risk model was an acceptable model to be used for the risk survey.

Federal Transit Administration (FTA), Blue Line Extension (BLE), Scheduler

Tom's responsibilities on this assignment were to review the project master schedule and assess utilization of the entire project schedule as the basis for the risk model and analysis. From that he was tasked with the following and prepared sections of the report based on FTA OP-34 and OP-40 guidelines.

- Discussion of specific "reasonable" and technical aspects of schedule build
- Identification of Potential Schedule Risks
- Schedule Risk Model
- Review of Schedule Structure and Activities

The analysis and risk model was executed utilizing Oracle/Primavera P6 and Pertmaster Risk assessment software.

Prior Experience

Metropolitan Transportation Authority (MTA) Long Island Railroad (LIRR), Woodside Station Rehabilitation, NY, Project Controls

Providing Project Controls, Tom managed the project cost loaded distributed control system (DCS) schedule supplied by the contractor. The project included demolition of platforms and installation of new ones, installation of five new elevators, expansion of the mezzanine level, replacement of the existing escalator, platform relighting and new electrical services, installation of tactile warning strips, relocation and construction of four stairs, removal of concrete, bridge widening, new pedestrian ramps and signage, and removal of lead paint and minor amounts of asbestos. His duties also included preparation of in-depth monthly reports for the construction manager, along with direct reporting to the LIRR of the numerous changes made by the contractor during the updating process.

Hudson-Bergen Light Rail Transit System (LRTS), NJ, Scheduling Engineer

As Scheduling Engineer utilizing *Primavera P3*, Tom was the scheduling engineer for this multi-discipline design effort, working with team engineers to develop the design schedule. His duties involved meeting with various team engineers, assimilating the information, transforming it into scheduling data, processing it, and then reviewing it with team leaders for correctness and conciseness. Upon finalization, the completed computerized baseline schedule was submitted to the client for additional input or comment. All team engineers and the externally concerned parties updated the project design schedule monthly. This information was also provided to the team in the form of a monthly status report, with a 3 1/2" diskette provided to the client for their review. This provided the team with areas of concern and actions required to maintain or accelerate in order to meet the mandatory completion date.

Southeastern Pennsylvania Transportation Authority (SEPTA), Manayunk Bridge, Philadelphia, PA

Tom provided value engineering, cost estimating, CPM scheduling, and other design support services for the remedial A/E design for this historic preservation project.

Southeastern Pennsylvania Transportation Authority (SEPTA), Manayunk Bridge, Philadelphia, PA

Tom provided supplemental inspection and conformance services for this historic preservation project.

Anthony L. Duca, PMP

Senior Scheduler

As a Senior Scheduler, Anthony L. Duca, PMP, provides expert training, project controls and CPM scheduling services. He has over 20 years of specialized experience in the design, development, and delivery of advanced Primavera Project Management Software. Tony previously served as a Training Consultant for Primavera Systems, Inc., the developer of the project management software. His proficiencies in training, information technology, technical support, customer service, and project management, allow him the ability to install, implement, teach, and develop CPM schedules for complex design and construction projects utilizing both the web and client applications.

Education
B.S., Education, West Chester University, 1994; New Jersey Institute of Technology, Construction Management Certificate, 2009

Licenses and Certifications
Project Management Professional (PMP); Certified Primavera Trainer (CPT)

Professional Memberships
Project Management Institute

 # Years Technical Experience

The Port Authority of New York and New Jersey, Port Street and Brewster Road Widening and Realignment Project, Newark, NJ, Senior Scheduler

Tony was responsible for the development of the baseline schedule and maintenance of updates. This project included the realignment and widening of Port Street, the realignment of the north entrance/exit to Newark Liberty International Airport and the installation of a retaining wall along Brewster Road to accommodate the widening of Port Street. In addition, the project included the relocation of traffic signals, signs, lighting, and the installation of a new bus stop convenient to Port Street and Brewster Road.

Port Authority of New York and New Jersey, Elizabeth Port Authority Marine Terminal, Newark, NJ, Senior Scheduler

Tony is responsible for CPM Scheduling services, including the development of the baseline schedule with follow-up monthly progress updates to the baseline schedule. Consistent with the goals of the North Avenue/McLester Street curve realignment, the proposed widening of McLester Street would add a traffic lane in both the northbound and southbound directions, replace a temporary signal installed under the North Avenue East/McLester Street curve with a permanent signal, improve timing on four traffic signals to coordinate the new traffic patterns on the roadway, and add jug-handle turns to control u-turn and left-turn movements.

Port Authority of New York and New Jersey, North Avenue East Improvement Project, Newark, NJ, Senior Scheduler

Tony was responsible for CPM scheduling services. This task included the development of the baseline schedule. In addition, Tony provided follow-up monthly progress updates to the baseline schedule. This project represented the third and final phase of the North Avenue East

Improvement Project. It consisted of the widening and realignment of the intersection of North Avenue East and McLester Street at the Elizabeth Port Authority Marine Terminal to enhance vehicle safety, improve traffic flow, and accommodate the expected growth in port activity. This final widening project completed all currently planned roadwork by PANYNJ on McLester Street.

NJ Transit, Portal Bridge Capacity Enhancement Construction Management, Secaucus, NJ, Senior Scheduler

The Portal Bridge Capacity Enhancement Construction Management Project was undertaken by Amtrak and NJ Transit and aims to improve and increase the capacity of this vital rail crossing. Tony provided consulting services to train and implement Oracle® Primavera P6 and Primavera P6 Web for the Portal Bridge Project. Tony's responsibilities included defining and documenting schedule review procedures using Primavera P6 Web customized training for Primavera P6. As a certified Oracle® Primavera Trainer, Tony also assisted NJ Transit in writing "standard" contract specifications for the use of Contract Management and Primavera P6 on all construction contracts associated with the Portal Bridge Project.

Company Compensation Plan and Policy

Workweek

For purposes of timesheets we operate on a workweek that begins at 12:01 a.m. on Sunday and continues for one hundred sixty-eight (168) hours until 12:00 Midnight Saturday. The usual work schedule is a standard forty (40) hour Monday through Friday schedule. Offices are normally closed on Saturdays, Sundays, and designated holidays. International offices will observe the accepted local work schedule, unless Hill's corporate office requires otherwise.

Each location, however, may modify its regular schedule to accommodate its client's needs and hours of operation. The workday for employees in the field is usually dictated by the requirement of the project where the employee is assigned, and is subject to change as the location or client changes.

Payments of Wages

Paydays are on the 15th and last day of each month. If a regular payday falls on a weekend or company-recognized holiday, employees will be paid on the preceding workday. Pay for full-time salaried employees are always current. Pay for part-time employees, overtime, and any leave without pay are a pay period behind due to the need to collect and process timesheet information to determine actual pay.

If the Company receives a request or an order to garnish an employee's wages, the employee will automatically be sent a copy of the request or order. Employees whose paychecks are regularly mailed to their homes and whose paycheck fails to arrive in a timely manner, or employees who lose or misplace their paychecks must notify the Payroll Department in writing, and wait five (5) working days from the date of the issue before a stop payment will be issued by the Payroll Department, and a new paycheck will be issued. The employee must notify the Payroll Department in writing by completing a Replacement Check Affidavit Form (available from Employee Self-Service).

An employee may access their paystubs by using the link to access those documents: https://sourceselfservice2.ceridian.com/hill. The Username is your five digit employee number (numbers

only, no letters). Your password, if logging in the first time, will be the last four digits of your social security number. If you have accessed the site previously, you should use that password to access the site. If you have difficulties logging in, please contact Hill's Payroll Helpdesk at payrollhelpdesk@hillintl.com.

Exempt Employees Pay

It is Hill's policy to comply with the provisions of the Fair Labor Standards Act and state wage and hour laws. In accordance with these laws, and except as permitted by these laws, exempt employees are paid on a salaried basis, regardless of the number of hours they work in a given workweek. However, exempt employees need not be paid for any workweek in which they perform no services for the Company. It is Company policy to make deductions from the weekly salary of an exempt employee absent from work only as described below:

- When an exempt employee is absent from work for a full day for personal reasons, personal sickness, or disability and has no paid time off (PTO) or vacation available for the absence, the employee's salary may be reduced for each full day of absence.
- During an exempt employee's first and last weeks of employment, the employee will be paid only for the days he or she actually works.
- When an exempt employee is suspended for a full day or more for violation of one or more workplace conduct rules, the employee's salary will be reduced for each full day of suspension.
- When an Exempt employee is suspended for any period of time for infractions of safety rules of major significance, the employee's salary will be reduced in accordance with the period of suspension.

Overtime

Depending on the Company's work needs, employees may berequired to work overtime. For purposes of determining which hours constitute overtime, only actual hours worked in a given workday or workweek will be counted. Vacation time, PTO and Company holidays will be counted as hours worked; however, Leave Without Pay ("LWP") will not be counted as hours worked. All overtime work must be previously authorized by a supervisor. However, the Company provides compensation for all overtime hours worked by non-exempt employees in accordance with state and federal laws. Exempt employees may often have to work hours beyond their normal schedules as work demands require. No overtime compensation will be paid to exempt employees. The only exception to this is where the payment of overtime to employees is required by a specific client contract and the client approves the actual payment. In these situations only exempt employees working on the specific contract may be compensated for their overtime as required in the applicable client contract. If during the week of a client holiday which is not a Hill holiday, an exempt employee will be paid for all billable hours worked. Refer to Section 504 Holidays.

In these situations there are specific forms that must be completed and approved by the Senior Vice President responsible for the project and then sent to Payroll to provide notification and authorization.

Holidays

All active full-time employees are entitled to certain holidays with pay each year. The following holidays are observed at all United States Hill locations:

- New Year's Day
- Memorial Day
- Independence Day
- Labor Day
- Thanksgiving Day
- Thanksgiving Friday
- Christmas Day

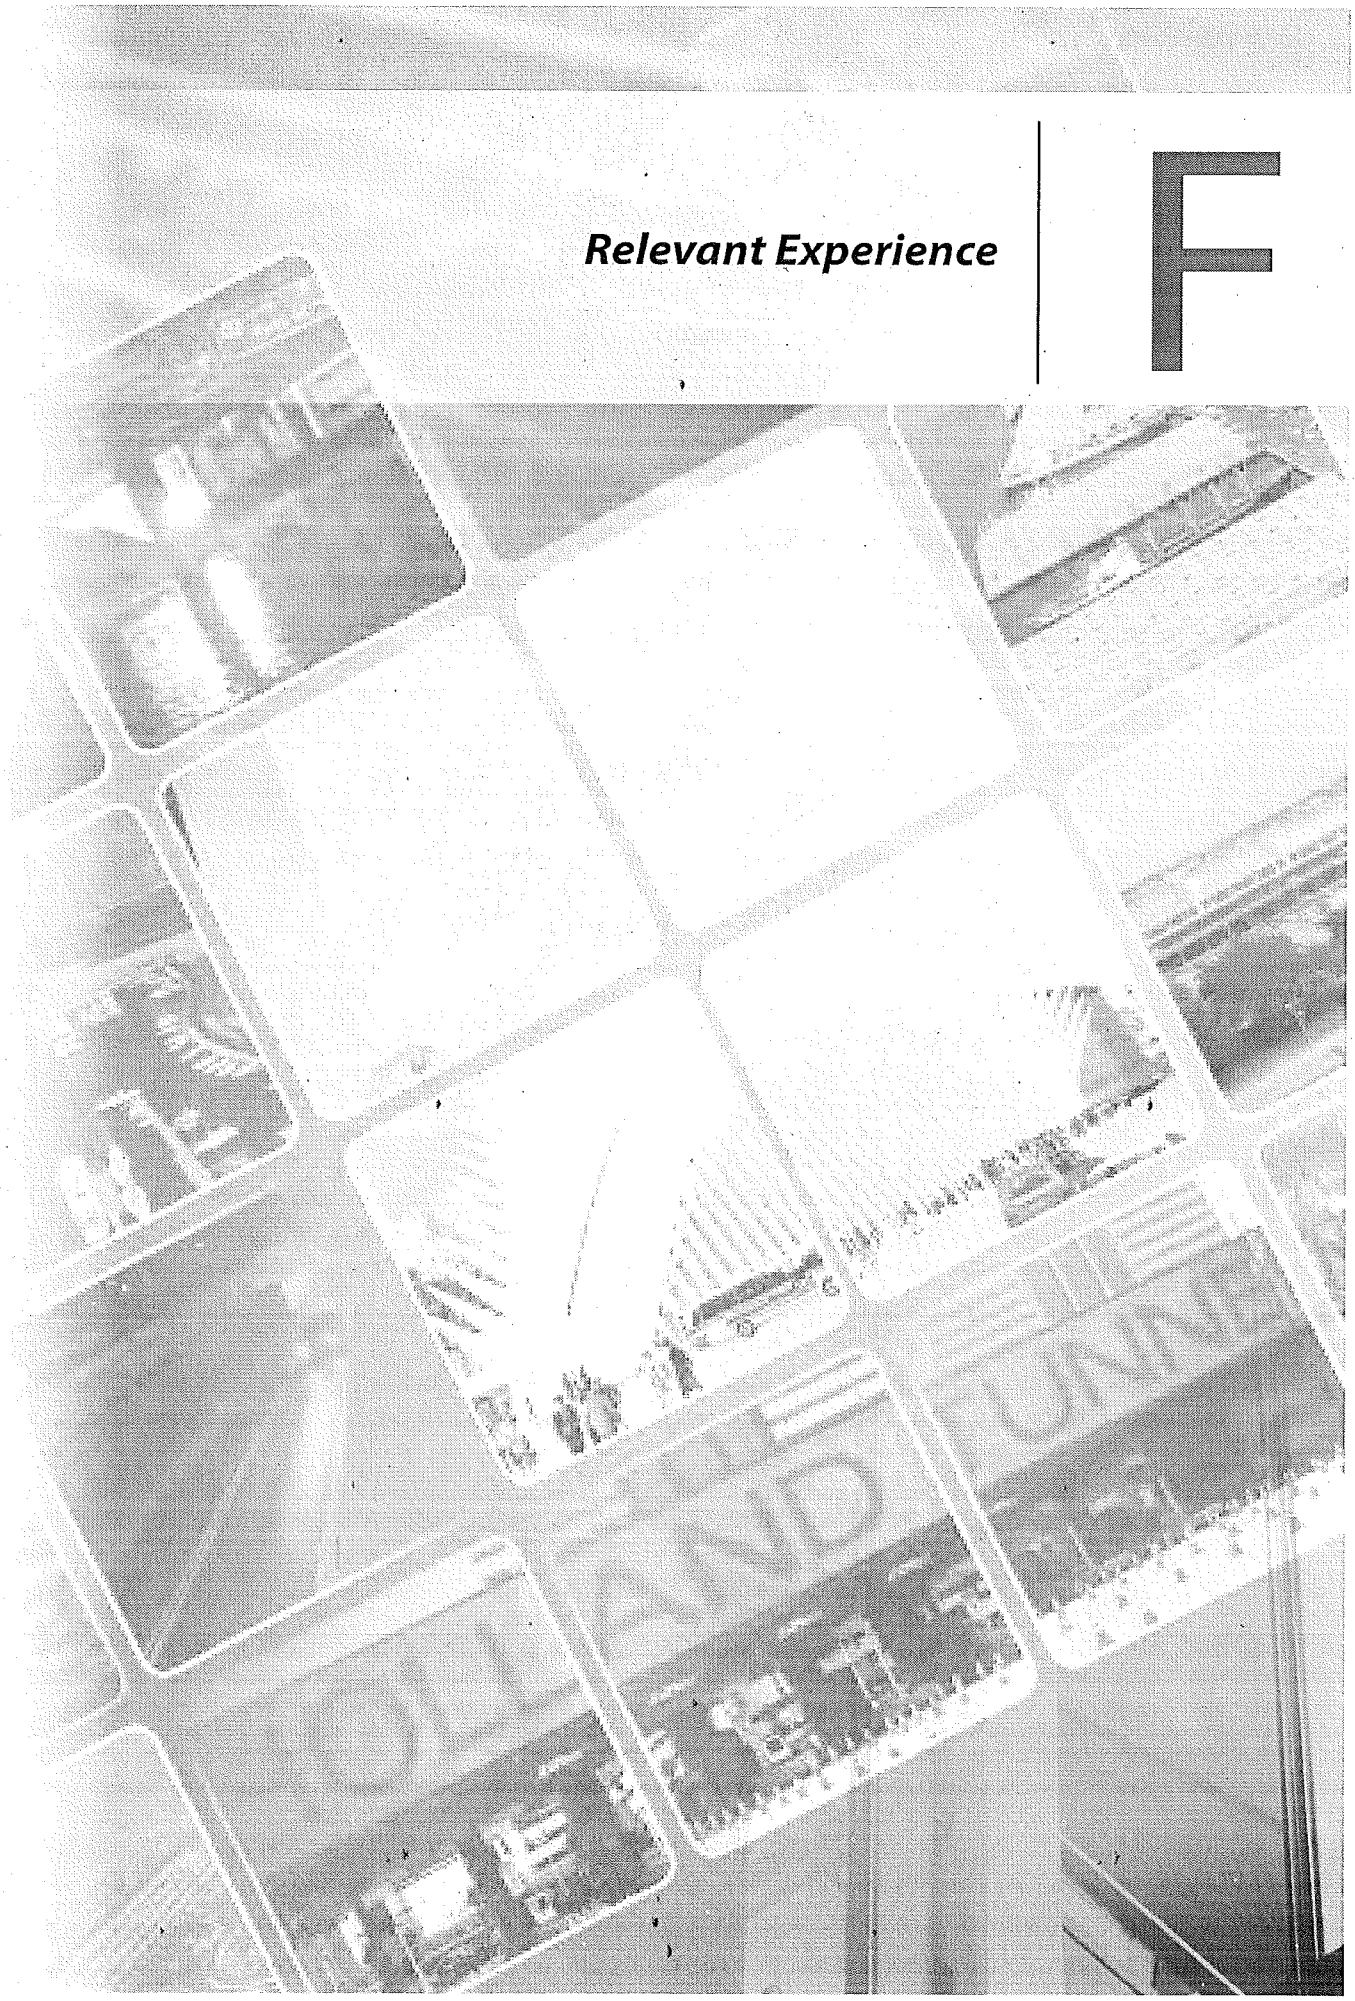
If any of these holidays fall on a Saturday, the holiday will be observed on the preceding Friday; if any of the holidays fall on a Sunday, the holiday will be observed on the following Monday. Employees working outside of the United States may have a different holiday schedule, which will be published at each local office. Employees assigned to work at a client's office or at a project job site may have a holiday policy different from the above as dictated by the client. In these situations the established client holiday will apply.

In the event that a client has a holiday on a normal work day for Hill, the employee must go to the closest Hill International office or work from home as it is not a holiday, but a work day for that employee. In the event a non-exempt and/or prevailing wage employee is scheduled to work on a Hill holiday, they will be paid for the holiday and any hours worked.

To be paid for a designated holiday an employee must have been scheduled for, and worked on the workday immediately preceding and immediately following the holiday unless either, or both, of those days is a vacation or Paid Time Off (PTO) day. Employees unable to satisfy this requirement due to illness must present a doctor's note when they return to work to receive holiday pay. Employees on vacation when a holiday occurs will receive the holiday pay, and the holiday will not be charged as vacation. Employees on short term disability, long term disability, or workers compensation will not receive pay for a holiday. The last day actually worked is the effective termination date for employees terminating service with the Company. Those individuals will not be permitted to use either vacation or PTO days after that date in order to receive holiday pay.

Relevant Experience

F



Relevant Experience

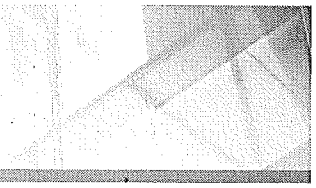
We know the unique requirements of specialized construction and the sound principles and practices that apply to all program and construction management projects. We bring the right experience, proper approach and level of effort, and appropriate staff to successfully complete any project. The following pages contain projects that we have worked on or are currently completing that we believe reflect our expertise,for many unique requirements.

Hill's comprehensive team can manage multiple parks projects from planning through construction and can become cost-effective extensions of your staff. Construction on today's parks requires highly experienced multidisciplinary teams with a broad range of construction expertise to effectively manage capital programs. We have provided similar services for numerous clients throughout the nation.

Hill has an abundance of direct relevant experience and these projects demonstrate our ability to coordinate multiple prime contractors, manage site logistics and implement QA/QC and safety programs. Hill has managed an abundance of on-call or term contract projects. Hill's range of resources has been instrumental in our ability to staff these assignments. For many firms, term contracts represent "side" work, they are a perfect complement to the full range of services Hill offers and have therefore have become a core component of our business. In fact, Hill has extensive experience in providing personnel for many different kinds of term contract assignments.

Some of our task order based contracts are outlined in the table below.

Project	Description
New York Power Authority Energy Service Projects	Hill provided services to NYPA on an as-needed basis for selected energy services and distributed generation projects.
NYPA Estimating Scheduling	On-Call estimating and scheduling services for NYPA. Second consecutive on-call contract set to run through 2019.
NYPA Staff Augmentation	Hill provides construction management staff to NYPA on an as-needed basis. These staff members augment NYPA's staff.
PANYNJ On-Call Superstorm Sandy Support	Estimating services for various Superstorm Sandy related support services.
NYCDDC Term Requirements Contract (On-Call)	Construction management and consulting services on a requirements, or task order, basis for projects citywide.
State University of New York Southern Region On-Call	Hill provides on-call construction management services to multiple facilities through SUNY's on-call contract. Projects have included the Sojourner Truth Library and the Nold Locker Rooms.
MTA Long Island Rail Road GEC On-Call	Hill is providing estimating services as an extension of LIRR staff in support of the 20 Year Needs/Development of 2010-2014 LIRR Engineering Projects. Projects have included station rehabilitations, substations, positive train control system, track, signals, bridges, tunnels, high tension, third rails and shops and yards modifications.
PATH On-Call Services	Expert professional planning, project management and related services as requested on a call-in basis.
PANYNJ On-Call for Various Facilities	Provide Construction Management and Inspection Staff as required for the performance of various PANYNJ facilities.
DASNY Construction Management Services -Term	Our term requirements contract with DASNY includes projects for the City University of New York and the Office of Mental Health. We provide construction management on an as-needed basis.

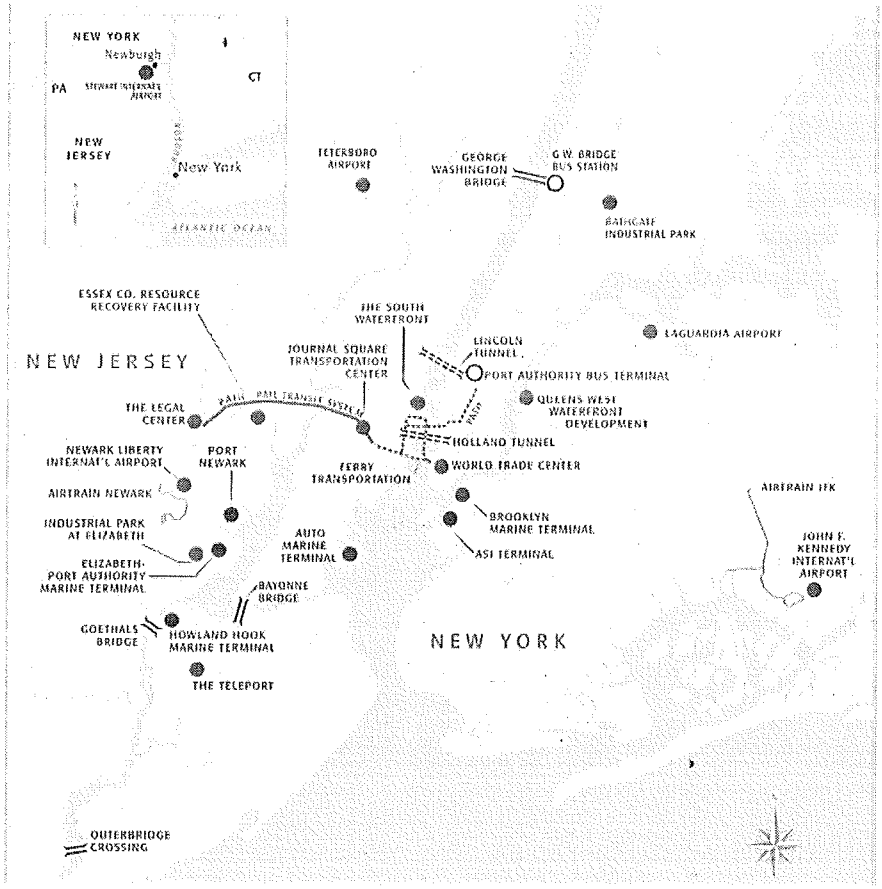


City of New York Department of Parks and Recreation	Through a term requirements contract, Hill provides construction management services for the City of New York Department of Parks and Recreation (DPR) to manage the construction or renovation of Parks projects within the five boroughs of New York City. Hill has provided continuous staffing on numerous construction improvements totaling $350 million.
NYCSCA	NYCSCA hired Hill to provide supplemental professional staffing services to their project management group under successive contracts. The types of projects included building of 200 new schools as well as renovations, upgrades and additions to existing schools

Project profiles for selected experience within the past three years are included in this section.

Superstorm Sandy Support Services

New York and New Jersey



Client:
Port Authority of New York and New Jersey

Services:
Construction Management
Estimating

Total Project Value:
$300+ Million (on budget/ task order basis)

Project Completion Date:
Ongoing (term contract/ on schedule)

Owner Contact:
Christopher Spillman
Project Manager
PANYNJ
212-435-5526
cspillman@panynj.gov

As part of the ongoing program management services being provided to the Port Authority of New York and New Jersey (PANYNJ), is a diverse organization responsible for managing a wide array of transportation facilities in the states of New York and New Jersey. Hill has provided numerous support services to the PANY&NJ under this estimating on-call contract. These services include:

Cost Estimating Services

Hill provided estimating services to identify the costs related to replacement "in kind" and/or "codes and standards replacement," as directed by PANYNJ. Hill inspected storm-damaged facilities; recorded observed damage; prepared field reports to document damaged conditions, provided approximated quantities of damaged materials,

and reviewed and evaluated third-party assessments. Hill utilized the existing conditions information and created scope templates that were used for estimating damage costs for FEMA negotiations.

Resident Engineer/Inspection Field Documentation Services

Hill inspected storm-damaged facilities; recorded observed damage, prepared field reports to document damaged conditions, provided approximated quantities of damaged materials, and reviewed and evaluated third-party assessments. Hill utilized the existing conditions information and created scope templates that were used for estimating damage costs for FEMA negotiations.

Claim/Insurance/FEMA Management Services

Hill coordinated and interfaced with the insuring entities and FEMA to establish proper protocols to make certain that consistent and uniform procedures were established and maintained for processing official claim submissions.

Airport Facility Value Engineering (VE) Assignment

Hill provided an in-depth VE working session with the Port Authority's aviation team to identify potential cost savings on a billion dollar aviation project. The goals of the study were to identify airside, landside, terminal building, infrastructure, and construction planning and design alternatives that may offer first-cost or life cycle cost benefits and/or improve project quality. The VE study identified the three large planning issues (construction phasing, roadside circulation, and terminal configuration relative to landside access) that can have substantial impacts on the project budget, schedule, and functionality. The VE study evaluated ways to relax or provide alternative ways for continuity of operation during construction and thereby reduce phasing complexity and duration.

Holland Tunnel Assessment

New York, NY

Client:
Port Authority of New York and New Jersey

Service:
Inspection
Cost Estimating

Total Project Value:
Accepted Fee: $567,000
Actual Fee: $560,000

Completion Date:
2014 (on-schedule)

Owner Contact:
Kevin Chang
Chief Mechanical Engineer
Engineering Department, PANYNJ
212-435-5526
kchang@panynj.gov

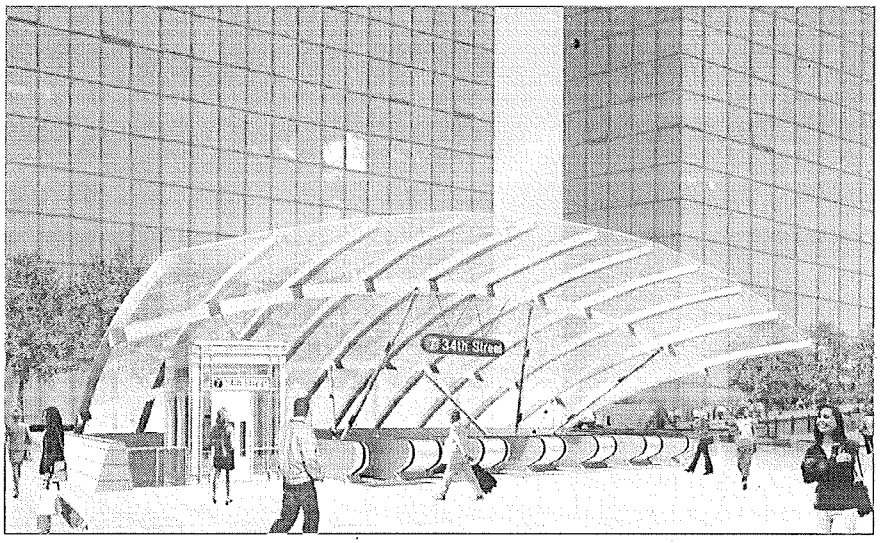
As part of the ongoing program management services being provided to the Port Authority of New York and New Jersey (PANYNJ), Hill performed a visual assessment of the Holland Tunnel for damages related to Superstorm Sandy. The tunnel was inundated by a seven- to nine-foot storm surge that impacted a wide range of structure and systems. Hill assessed the condition of 19 systems including structural elements, electrical systems, pump rooms, wall tiles, roadway elements, catwalks and ventilation ducts. Order of magnitude cost estimates were prepared for the 19 impacted systems. Each cost estimate developed by Hill was based on site inspection and development of a scope describing the recommended repairs for each of the 19 systems assessed.

Repair costs related to Superstorm Sandy were differentiated from non-Sandy related costs. In addition, latent damages from Superstorm Sandy were identified. Worksite access impacted the order of magnitude cost estimate. Hill worked closely with the PANYNJ to develop a worksite access schedule that minimized impacts to tunnel operations during construction. Flood mitigation measures were also recommended. Mitigation measures included relocation of critical control systems, backup power and strategically placed flood barriers.

The assessment is being used by the PANYNJ to secure funding from FEMA for Superstorm Sandy related repairs to the tunnel. We are presently supporting the PANYNJ in its FEMA coordination effort.

No.7 Subway Line Extension

New York, NY



Client:
Metropolitan Transportation Authority (MTA)

Service:
Construction Management

Total Project Value:
$2.4 Billion (on budget)
Phase 1: Under Budget

Completion Date:
2016 (on-schedule)
The Project overall is on schedule, and 11-month ahead of schedule for the first Contract

Operational Service day
Estimated: 12/31/2013
Actual: 12/13/2013

Owner Contact:
Ronald Pezik
Program Manager
MTA
[redacted]

The $2.4 billion No. 7 Subway Line Extension project will provide transit access to the West Side of Manhattan, including the Jacob Javits Convention Center, by extending the No. 7 Line westward from Times Square under West 41st Street and southward along 11th Avenue to the southerly terminus at West 25th Street. The planned extension provides 9,432 feet of tunnel to accommodate a two-track railroad with two lay-up tracks for storage of three trains each. The extension also provides a two-track terminal station on 11th Avenue at West 34th Street. The No.7 Subway Line Extension will transform the Hudson Yards into vibrant 24-hour neighborhood containing a mix of commercial, residential, retail, and recreational uses while enhancing the vitality of New York City as a whole.

The scope of work includes two 22.5-foot-diameter bored tunnels and a station structure (34th Street Station) approximately 66 feet by 960 feet, extending about 110 feet below ground level. Two interlocking structures, constructed in rock-by-mining method, will be connected to the 34th Street Station structure. The new extension includes six cross passages to connect the two running tunnels, and underpinning and structural modifications of the existing 8th Avenue subway structure will be performed. The project also involved approximately 215,000 cubic yards of cast-in-place concrete for underground concrete structures, along with associated logistics, waterproofing and quality assurance/ control required for their placement.

The Hill/LiRo/HDR Joint Venture is responsible for providing construction management services during all tunneling work and during construction of all facilities and infrastructure including track, and rail systems and stations. We are also providing project controls services throughout the project duration using an earned value management system (EVMS) integrated with Primavera resource/cost-loaded schedule software, to closely monitor the program schedule and budget, and Constructware document controls software, to organize the program documents. Revenue is expected to be generated by the end of 2013, and all construction work is anticipated to be complete by mid-2015.

In the 50-year history of billion projects for the MTA, this project is the first to be both under-budget and ahead of schedule. In addition, the project received the 2013 Construction Project of the Year award from the New York State Society of Professional Engineers (NYSSPE) for outstanding professional engineering efforts in developing creative solutions and innovative technologies in construction of an infrastructure project.

On-Call CM/GEC Services

Newark, NJ

Client:
New Jersey Transit

Services:
Construction Management
Estimating

Total Project Value:
$260 Million (projects completed on-budget)

Completion Date:
Ongoing: Currently working under 6th contract. (Ongoing, projects completed on schedule)

Owner Contact:
Kerry Donovan
Senior Construction Program Manager
NJ TRANSIT
[redacted]

Hill provided on-call Construction Management/General Engineering Consultant (GEC) Services on a task order basis for various New Jersey Transit (NJT) projects. Currently working under our sixth contract, Hill successfully completed five task order contracts on a variety of NJT projects, including renovation of existing and the construction of new passenger stations and systems.

As NJT's CM/GEC, Hill's services were provided on an on-call basis. The range of assignments included construction management, design and constructibility reviews, scheduling, cost estimating, construction administration, site inspection, shop drawing review, change order and claims assistance. Representative assignments included:

- Frank R. Lautenberg Intermodal Facility Soil Improvement
- Newark City Subway Broad Street Extension MOS-1
- Newark City Subway Track Rehabilitation
- Claims Avoidance Support Services for the Hudson Bergen Light Rail Transit System (HBLRTS)
- Newark City Subway (NCS) Signal Modernization
- Newark City Subway (NCS) Overhead Contact System (OCS)
- Branchbrook Park Station
- Newark City Subway (NCS) Penn Station Traction Power Negative Return
- Assessment of Potential Construction Claims (Southern New Jersey Light Rail Transit System (SNJLRTS)
- Bergen Tunnel Reconstruction
- Hackensack River Bridge Fender Repair
- Newark Penn Station Modernization
- NJCL Woodbridge Train Station Rehabilitation
- Rehabilitation of the NJCL Avenel Station

Estimating and Scheduling Services

New York, NY

New York Power Authority (NYPA) is the country's largest state public power organization, producing some of the cheapest electricity in North America. Their 17 generating facilities and over 1,400 circuit-miles of transmission lines produce the power to help sustain more than 380,000 in the state of New York. More than 80 percent of NYPA's electricity is produced from clean, renewable hyrdropower. In addition, NYPA operates and maintains a large number of local service yards and facilities to support customer needs.

Hill was recently awarded an On-call contract to continue to provide estimating and scheduling services. For this contract, Hill serves as a point of contact with NYPA. We interact directly with NYPA's project manager to; determine the scope of each assignment, prepare Hill's proposal for the work, supervise the work effort and make certain that the work is completed within the agreed to budget and schedule. Assignments completed under this agreement include review of the master schedule for a new chilled water plant at the Rikers Island Correctional Facility in Queens, NY and the preparation of an independent engineers estimate for mechanical work at CCNY in Manhattan. Hill's schedule review resulted in identification of critical path and near critical path activities that had a high probability of slipping. We also determined that the percentage of critical path activities was high potentially resulting in a delay. Our preparation of the engineers estimate for the CCNY project identified areas where the contractors costs appeared to be high. In both cases, NYPA used Hill's comments to negotiate with the contractor resulting in a more realistic schedule and cost. Our past contracts have included:

Hunts Point Facility, Bronx Borough, NYC. Hill assisted the NYPA Engineering Department by developing and providing construction cost and estimating services for the replacement of existing fuel cell units, gas processing units and cooling modules with larger capacity units. The estimates also included new electrical switch-gear, underground piping for the fuel cells, conductor for the switch-gear and other required site work at the Bronx facility yard.

Centre Street Facility, Manhattan Borough, NYC. Hill was requested to provide fair and reasonable costs for a new high pressure boilers and other related equipment for two design scenarios at the plant expansion. The scope of Hill's services also included estimating of underground steam lines, supply piping and condensate return piping underground to and from the centre street facility in Manhattan.

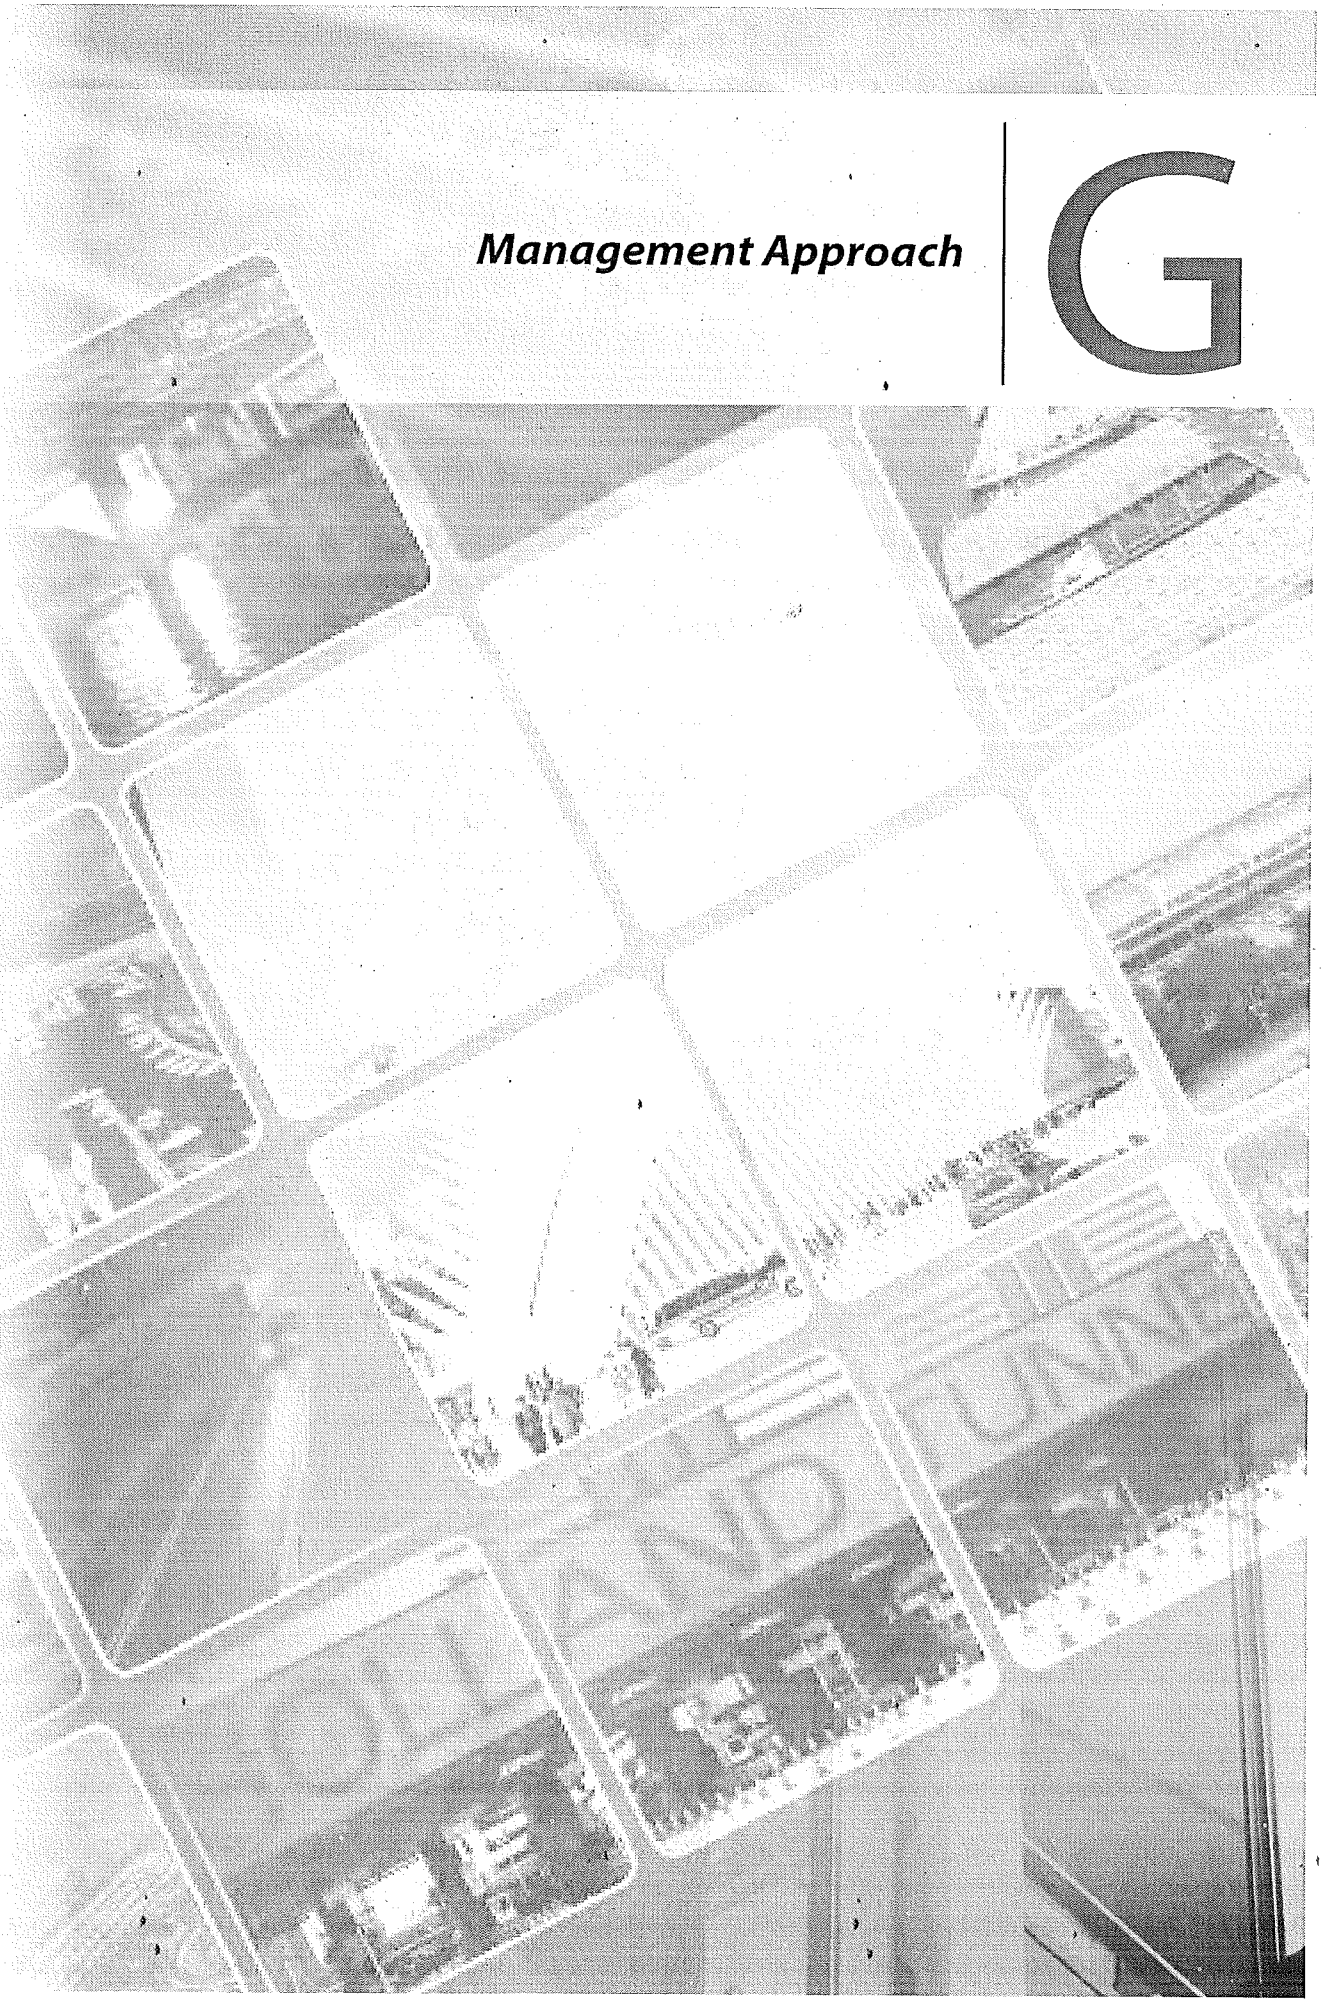
Management Approach

G



Proposed Management Approach

The Port Authority of New York and New Jersey (Authority) is seeking experienced firms/consultants that can provide expert professional construction management and inspection services, on a "call-in basis" for projects at various Authority facilities. Competitive Task Orders will be issued and the expected services include inspection services, constructability reviews, contract administration, and estimating and scheduling.

Approach to Performing the Required Services

Task A. Constructability/Biddability and General Engineering Review

The Hill International, Inc. team (Hill) will perform constructability reviews, operational analyses, value engineering reviews and design reviews geared toward minimizing costs and ultimately leading to the development of construction documents that minimize adverse impacts to the Authority. Constraints to the construction process must be clearly identified within contract documents and designs must be developed to permit construction operations to proceed within those constraints.

We will mobilize immediately upon receipt of NTP and focus on a thorough review of the project documents prepared to-date for constructability, maintainability and claims avoidance. The Construction Industry Institute (CII) defines constructability as "the optimum use of construction knowledge and experience in planning, design, and procurement and field operations to achieve the overall project objectives." This concept emphasizes that experienced construction personnel need to be involved with the project from the earliest stages to make certain that the construction focus and their experience can properly influence the owners, planners, and designer, as well as material suppliers. Constructability input is intended to supplement and enhance the design effort to make certain that the final design is complete, cost-effective and constructible.

Our goal is to work with the designers to produce high-quality, cost-effective design documents that can be constructed in the field without unnecessary cost or project delays, and without sacrificing quality. We will partner with the design team, the Authority, and other stakeholders involved in the project. Communication is the key to this effort. Through this partnership we will work with the design team to develop clearly defined constructible documents. Reviews will be performed by a team of individuals with extensive field experience, as well as a clear understanding of the project's goals, the constraints of the project site and the concerns of the operating facilities such as railroads, airports, ports and terminals, tunnels, surrounding communities, and the various regulatory agencies involved in the project. We would focus on early issue resolution, enabling constructability issues to be identified regardless of the status of the design documents. This proactive approach can save the Authority and the design teams significant time and cost by avoiding unnecessary design revisions later in the process. Bid documents that provide the contractor a comfort level produce less change orders and lower, more competitive bids.

The Hill team will advise the Authority on a variety of issues, such as construction feasibility and practicality, selection and availability of materials, availability of required labor, time requirements for procurement and construction activities, construction procedures, selection of systems and components, site use and claims avoidance. These reviews will include an assessment of drawings, specifications and engineering calculations that will allow us to provide advice on construction methods, materials and equipment requirements and availability, subcontractor availability, cost schedule, claims avoidance and safety. Constructability reviews will assess how each project can be built economically within given site constraints and market conditions in addition to ensuring efficient contract sequencing and the preparation of biddable construction packages. This will be particularly important when complicated staging and phasing of construction is required. Since most construction claims emerge from incomplete, ambiguous or unworkable contract documents, early constructability reviews and technical coordination help clarify ambiguities and help protect the Authority's interests.

Task B. Construction Staging

Construction staging is the art and science of defining and managing the transportation of material, equipment, and personnel—management in support of the construction activities.

Staging, phasing and logistics start at the onset of the project and assist with the planning and design of the project. The Hill team will develop plans addressing the project's requirements for control of material, traffic, site security, utility services, facilities, safety, and construction staging. This planning will coordinate the work in and around construction zones to mitigate impact on the surrounding communities and allow for optimum construction progress.

The construction staging methodology and sequence will be developed to confirm constructability of the proposed design. Once a construction contract is awarded, the contractor may sequence the construction in a way that may not conform exactly to the conceptual methodology and sequence described in its staging plan, but which best utilizes the materials, equipment, and personnel available to perform the work. While the contractor will be allowed some flexibility, any changes to construction sequencing or schedule will need to minimize impacts to each facility's operational requirements during construction.

The Hill team is uniquely qualified to manage development of the construction staging plan for the project. Our unique combination of relevant experience, public and private sector exposure, previous and current participation in large, highly visible projects and dedication to excellence, will provide the Authority with the correct tools to complete this project, safely, on time, and within budget.

Port Authority of New York and New Jersey (PANYNJ), Superstorm Sandy Support Services. As part of the ongoing program management services being provided to PANYNJ, Hill is currently providing support services for Superstorm Sandy storm damage for Aviation, Bridges and Tunnels, PATH, Port Commerce and Ferries for the Port Authority Engineering Department. Services include senior management claim recovery services, resident engineering and inspection field documentation, cost estimating services and claims, insurance and FEMA management services.

Task C. Schedule Development and Monitoring

Our team will provide project schedules that integrate design efforts with construction requirements. The schedule will reflect all regulatory interfaces and critical path interdependencies. We will provide regular schedule updates including construction activities and durations, processing of shop drawings and submittals, and long lead procurement items.

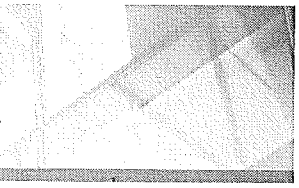
Hill's scheduling services effort starts with the review of the scheduling specifications in the contract documents. Our cost-loaded CPM schedule would include all significant activities, relationships, dependencies, critical submittals, and events involved in the construction of the project along with a written schedule narrative. The Hill team believes that the development of the CPM schedule should start at the time of award and that the preliminary cost schedule be approved prior to the start of construction. The team will review the project schedule and monthly updates to confirm that activities comply with their respective milestone dates.

The Hill team has hands-on Authority experience preparing detailed construction and a tailored Integrated Master Schedule (IMS) for each of the various projects at the World Trade Center site.

We will continually review, monitor actual progress, and resource usage, and record it against planned logic, sequencing and quantities installed to identify deviations from the approved schedule. At regular intervals we will review the progress updates from each contractor and contract package. After validating progress during this period, we will perform more intensive CPM analysis techniques to fully analyze the progress update to evaluate the project status, manage schedule risk, evaluate changes to the baseline, and offer expert response to the data provided. We will work with the Authority to drive the project to a successful conclusion through focus, communication and action. The Hill team has hands-on Authority experience preparing detailed construction and a tailored Integrated Master Schedule (IMS) for each of the various projects at the World Trade Center site. These projects include the Authority's World Trade Center Transportation Hub, the new Freedom Tower, the Memorial Museum, the Vehicular Security Center and Tour Bus Parking Facility, the chiller plant, streets/utilities, parking facilities and tenant retail.

Task D. Quality Assurance Inspection

Our team will maintain a competent full-time staff at each project site for the purpose of coordinating and providing general direction for the work and progress of the contractors. They will observe that the materials and equipment being incorporated into the work are handled, stored, and installed properly and adequately, and are in compliance with the contract documents for this assignment. We will help guard against defects and deficiencies and advise the Authority of any deviations, defects or deficiencies the team observes in the work.



Our observation/inspection duties include duediligence to discover work that is not in compliance with the contract documents. Our team will review the contractor's recommendations for corrective action on observed nonconforming work. The Hill team will make recommendations to the Authority in instances where we observe work that, we believe is defective or not in conformance with the contract documents. The team will observe the contractor's work to verify that all authorized changes are properly incorporated in the project and we will report to the Authority regarding the status of such activity and provide a written record of the same. Our Quality Assurance Inspectors will keep a daily log containing a record of weather, the contractors working on the site, number of workers, work accomplished, problems encountered, and other relevant data or such additional data as the Authority may require.

Task E. Contract Administration

Contract administration is a service that construction managers provide within its scope of services. The services grouped under "Contract Administration Services" include a mixture of tasks such as general administration, submittals, site visitation, administration of testing and inspection, supplemental documentation, administration of changes in the work, interpretations and decisions, and some of which are more in the realm of construction on-site project representation, payment certification and project closeout. Contract changes that occur during construction are inevitable. These changes may be caused by a variety of factors such as design changes, additional work elements, or unforeseen site conditions, encountering previously unidentified utility conflicts and/ or hazardous materials. Our approach to managing the schedule and the changes and avoiding impacts to the project budget involves close cooperation with the Authority and application of the following elements:

- **Early notification and communication.** Continuous communication between the Authority and our team enables pending changes and unforeseen conditions to be known immediately by all parties allowing for the resolution and mitigation process to begin expeditiously.
- **Cooperative planning.** Contract changes must be addressed in the spirit of partnering. The Authority and our team will work cohesively to determine the best method of implementing contract changes to minimize project costs.
- **Review for potential design changes to minimize project impacts.** Often, changes associated with encountering unforeseen site conditions can be mitigated or eliminated through design modifications. We will examine potential change situations for this opportunity.
- **Schedule accommodation.** Each change will be assessed for schedule impact and provisions will be made to accommodate the change within the original project schedule, if at all possible.
- **Fair and open negotiations.** A successful partnering relationship will enable the Authority to negotiate contract changes fairly and openly. We are committed to providing the Authority with all documentation required to evaluate change order pricing.

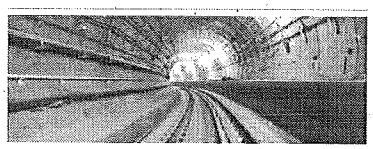
Additionally, if the Authority uses a change control database to manage the paperwork and the approval process of contract changes, we would expect to adopt this same system. If not, we will propose a system that utilizes a database application for data management, process control and reporting. We also strongly recommend the use of a Change Control Board (CCB) in the event that the number and magnitude of contract changes becomes significant. A by-product of the change control process is documentation of any changes to scope, time or cost. We will implement a process designed to communicate these changes to all affected parties and to trigger the modification of current configuration data (drawings, specifications, data systems) in a controlled manner such that the most current information is available to all parties at all times.

Task F. Cost Engineering / Estimating Services

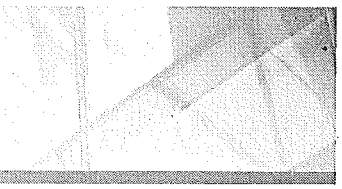
The Hill team will provide the Authority with estimating, bid evaluation, special cost reports, cost-benefit analyses, value engineering and claims analysis services. During the preconstruction phase of a project the team will prepare estimates through design development. For the Bidding Phase we will review/confirm or recommend revisions to the existing project documentation including conceptual design documents and completed cost estimates, if any; provide cost estimates organized into separate trade contracts, as approved by the Authority; review cost estimates submitted by any specialist consultants and Construction Manager. For Peer Reviews we will advise the Authority on the accuracy of content, scope of work and the pricing of the cost estimates submitted by specialist consultants and Construction Managers when design development documents have reached completion. The team will also perform Life-Cycle analyses and reconcile the Authority's estimate with the estimate prepared by the Construction Manager.

During construction, the team will review contract documents including shop drawings and shop drawing modifications to verify that materials are correctly estimated in change orders and verify that the designer or Engineer of Record (EOR) has approved them to be in accordance with the specifications; review MEP and structural engineering shop drawings that may be affected by change order work for coordination and verify that the EOR has approved any modifications; direct photographers taking photos of the site so that photographic evidence of site conditions and the progress of the work are available to support change order negotiations and claims; prepare estimates for change orders; support change order negotiations; bundle all supporting data for a change order into a file which includes contract drawing(s) and specifications, shop drawings, site photos and contractor time and material tickets; and prepare estimates as needed during closeout.

The Hill team provides detailed estimates from the schematic design phase through 100% construction documents. Each



MTA, No. 7 Line Subway Extension. Hill, as part of a Joint Venture, is providing construction management and project controls services for this $2.4 billion project. To date, we have estimated more than 200 change orders worth over $13 million for the project. We are also providing project controls using an earned value management system and Constructware document controls software. In the 50-year history of billion dollar projects for the MTA, Phase 1 of the project was the first to be both under-budget and ahead of schedule.



estimate developed follows stringent industry standards and meets applicable federal, state and local jurisdictional requirements and guidelines. Our goal is to provide estimates with the greatest accuracy possible. At any level of estimate Hill always takes the detailed approach. The team will use On-Screen Takeoff (OST) to produce its quantity surveys. By using OST we can provide detailed quantities for each drawing to create an ease of quantity comparison (if requested) and pin-point accuracy of the takeoffs. Any discrepancies can be specifically determined immediately. Each item that is surveyed is taken off to its smallest element. Our approach does not group items to create a larger quantity i.e. concrete footing – we will take off the excavation, formwork, concrete purchase, reinforcing bar and finally the concrete pour. This allows the estimate to have its greatest accuracy rather than combine the takeoff into one concrete footing and pricing the item as such. The Hill team has used this approach successfully when preparing Superstorm Sandy related cost estimates for many of the Authority's facilities including the Holland Tunnel, NY and NJ Marine Terminals, JFK, La Guardia, and Teteboro Airports, and the Staten Island Bridges. Hill also developed a comprehensive cost model that incorporates all of the capital costs for the World Trade Center site programs, valued at more than $12 billion. The model uses a WBS system that allows queries of multiple elements to generate task-specific reports, allowing management to make informed decisions as the programs have developed from conceptual design through the construction phases.

Once all items are quantified we will price them separately; we use many sources—RS Means, up to date quotes, Blue-book and most importantly the Hill Database—to provide the Authority with the most accurate prices. The Hill team Estimating Database is a compilation of over 60,000 items for many different types of projects and locations. Hill dedicates a specific individual employee to constantly update the database and add new items as each project is being estimated. Throughout each year we enter in thousands of new items, update thousands more, and remove from the historical database many items that are obsolete. This constant database massage allows the Hill team to have real time data that is unlike any other construction firm's data.

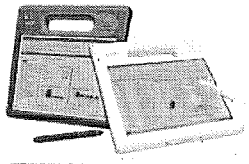
In the beginning of a project, we will work with the Authority to create a Work Breakdown Structure (WBS) specific to the project. We will also work with the scheduling team so that the schedule matches the WBS. This will also provide a cost of this work item directly from the estimate. Using this method the estimator can allocate labor hours to specific construction activities within the schedule. Therefore the construction management team can determine, given the crew size, whether the duration for each activity shown in the schedule is accurate compared to the estimate.

Task G. Resources

Staff Augmentation- Not all of today's organizations have the internal resources to handle every type of assignment. The Hill team's experienced project managers, construction managers, engineers, architects, designers, schedulers, financial analysts, contract administrators and other professionals are readily available to staff virtually any type of project at any phase. The specific teams are developed based upon the unique needs of each individual assignment and are available for durations that range from days to years. Our professionals take a results-driven yet cooperative approach to meeting our clients' goals; this two-pronged methodology effectively complements existing permanent staff throughout the globe.

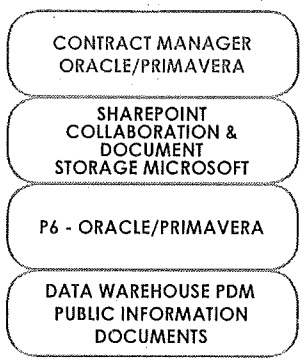
Approach to Being Responsive to the Client's Needs

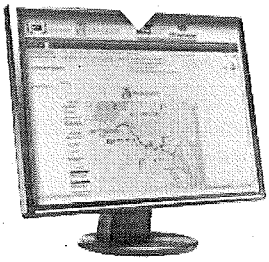
In order to fulfill the Authority's goals and objectives for this assignment, the understanding and methodology for task order based assignments is described below. The project activities will commence with notification by the Authority that it is requesting a Task Order Proposal for a project. Hill's Project Director will prepare the Task Order Proposal, inclusive of project-specific staffing, (CM) costs and a project-specific schedule based upon the project's plans and specifications developed by the Authority's selected design team. This will allow the Program Director to develop a management strategy to guide the project from inception to a successful conclusion. To aid in the preparation of the Task Order Proposal, the management team will visit the site to become familiar with all site-specific conditions, inclusive of swing space needs, worksite access including after-hours work, mechanical systems and location(s) of any hazardous materials. We would then submit the Task Order Proposal to the Authority. Following the review and approval of the Task Order Proposal, we will commence its project-specific activities. Upon notice to proceed, the team will immediately commence its preconstruction phase activities inclusive of constructability review, estimating, scheduling, photograph documentation, value engineering, and building department and/or other expediting for the project. We will immediately mobilize project personnel and prepare project-specific work plans and procedures to guide all team members. We will conduct a project-specific orientation to make certain all personnel are conversant with the project scope and contract documents for the project. We believe in an up-front approach and will recommend the involvement of all affected entities at the beginning of the project to pave the way for smooth communication during construction and start-up.



Deliverables Tracking System

Hill uses Primavera's Contract Manager as its primary tool to track and log project deliverables. Primavera Contract Management (PCM) provides accurate and up-to-date information which is always accessible. It provides dashboards with key performance indicators (KPIs) and powerful reports to prevent minor issues from becoming major problems. With a personal dashboard, owners can review the latest project status, see new issues, and identify potential problems. With two clicks, one can access the project details necessary to make decisions and keep projects on schedule. PCM is a document management, project cost management and project controls solution that provides visibility into contractor performance, enables timely payments, facilitates collaboration, and streamlines contract and document administration. By using PCM Hill will provide its project team with a consistent approach to paperwork which allows access to important information. This minimizes project delays, project risks and cost exposure and accelerates completion time.





Approach to Keeping the Client Appraised of the Project Status

Close coordination will be maintained through good communication and problem-solving skills. We will bring all the diverse parties together to resolve open issues. Specific tools such as user coordination workshops, design/constructability reviews, "issue/action" tracking, and follow-up are examples of the resources Hill employs to resolve technical problems. Problem-solving during design is handled to produce predictable and positive results. Our Project Manager, George will be the Authority's primary point of contact throughout the life of the IQC.

Approach to Help Ensure the Quality of the Work

Quality is never an accident it is always the result of intelligent effort. In recognizing this, we place great emphasis on QC planning, program development and personnel to run the program,all focused on providing the client with the best possible service. Both inspection and testing are essential to assuring the quality of a contractor's work. Inspection involves examining or measuring a work item to verify that it conforms to the plans and specifications. Testing is an element of verification that establishes acceptability based on physical, environmental or other measures. We have in place and maintain documented procedures for inspection and testing activities to verify that each project's specific requirements are met. These procedures define the records to be established for each project and we have developed checklists for assuring/controlling the quality of various field and construction operations. All inspection and testing requirements must be met throughout all phases of the project, with records maintained in accordance with QA/QC Plan requirements. Final inspections and tests are also covered by documented procedures, with all applicable data and documentation being tracked, reviewed in accordance with the QA/QC Plan. These records provide detailed documentation of the testing, inspection or other control procedures, of their results, of conformance with specified requirements, and of satisfactory or unsatisfactory performance.

Summary

The Hill team's comprehensive and proactive approach to understanding the interrelationships inherent on a construction project; our assertive approach to managing call-in assignments and our highly professional staff, trained to focus on the individual needs of our clients, are the critical items that make projects a success. Our team understands the critical elements of this contract, we are ready to engage and manage these projects.

Attention: RFP Custodian

RE: Technical Response for the Performance of Expert Professional Construction Management and Inspections Services as Requested on a "Call-In" Basis During 2014 through 2018
RFP Number # 39247

Attention RFP Custodian:

Jacobs is pleased to submit our Technical Proposal to provide Construction Management and Inspections Services to the Port Authority of New York and New Jersey (PANYNJ) for RFP #39247.We offer the PANYNJ the depth of services and resources to make this Call-In construction and inspection contract an unparalleled success. Jacobs is well qualified to deliver the level of Construction Management services necessary to complete any assignment while delivering value.

Jacobs has an extensive amount of experience working with the Port Authority on similar assignments, and we are familiar with the Port Authority's policies and procedures. This experience, coupled with the strengths of the Jacobs team, will support your projects to:

- **Achieve Functional and Performance Goals:** Through our extensive relevant PANYNJ experience, we have routinely captured lessons learned and best practices, which we will carry forward to drive a unique level of quality and efficiency into each assignment.
- **Complete On Schedule:** We will continue to aggressively manage project schedules from predesign phase through occupancy. Our staff of PANYNJ experienced professionals understands the importance of staying on schedule.
- **Complete Within Budget:** We will continue to work collaboratively with the designers to design to budget and contractors to minimize the impact of changes. You will always know where the project budget stands. If the budget is threatened, we will lead the effort to mitigate the threat.
- **Minimize Disruptions:** We will work with the contractor to develop a mitigation plan to address any noise, dust or specific construction issues that might be disruptive. We will also develop a communication plan to keep the Port Authority apprised of all pertinent project information.
- **Maintain Safety of the Occupants and the Construction Team:** We will work to develop a project specific safety plan of action for every task and will maintain safe access and egress to and from the work site at all times. We will continuously communicate with the tenants and the Port Authority to keep them informed to ensure safety awareness.

Jacobs offers an extremely qualified team and an approach based on relevant experience and Application of Best Practices, and we are excited about the opportunity to once again support the Port Authority of New York and New Jersey.

Thank you in advance for your consideration. Should you require additional information, please feel free to contact me at vinny.mangiere@jacobs.com or my Cell at 212.946.2230.

Sincerely,

Vincent A. Mangiere, PE

REQUEST FOR PROPOSALS FOR THE PERFORMANCE OF EXPERT PROFESSIONAL CONSTRUCTION MANAGEMENT AND INSPECTION SERVICES AS REQUESTED ON A "CALL-IN" BASIS DURING 2015 THROUGH 2018 (RFP #39247)

AGREEMENT ON TERMS OF DISCUSSION

The Port Authority's receipt or discussion of any information (including information contained in any proposal, vendor qualification, ideas, models, drawings, or other material communicated or exhibited by us or on our behalf) shall not impose any obligations whatsoever on the Port Authority or entitle us to any compensation therefor (except to the extent specifically provided in such written agreement, if any, as may be entered into between the Port Authority and us). Any such information given to the Port Authority before, with or after this Agreement on Terms of Discussion ("Agreement"), either orally or in writing, is not given in confidence. Such information may be used, or disclosed to others, for any purpose at any time without obligation or compensation and without liability of any kind whatsoever. Any statement which is inconsistent with this Agreement, whether made as part of or in connection with this Agreement, shall be void and of no effect. This Agreement is not intended, however, to grant to the Port Authority rights to any matter, which is the subject of valid existing or potential letters patent. The foregoing applies to any information, whether or not given at the invitation of the Authority.

Notwithstanding the above, and without assuming any legal obligation, the Port Authority will employ reasonable efforts, subject to the provisions of the Port Authority Freedom of Information Code and Procedure adopted by the Port Authority's Board of Commissioners on March 29, 2012, which may be found on the Port Authority website at: http://www.panynj.gov/corporate-information/pdf/foi-code.pdf, not to disclose to any competitor of the undersigned, information submitted which are trade secrets or is maintained for the regulation or supervision of commercial enterprise which, if disclosed, would cause injury to the competitive position of the enterprise, and which information is identified by the Proposer as proprietary, as more fully set forth in the FOI Code, which may be disclosed by the undersigned to the Port Authority as part of or in connection with the submission of a proposal.

Re: Section C - Compliance Transmittal Letter

Jacobs is in compliance with the Proposer's Requirements. Currently Jacobs maintains an office in the heart of Midtown Manhattan, combined they include over 300 professionals providing Construction Management and Inspection Services to our local clients. Services in connection with this Construction Management and Inspection Services "Call-In" Contract will be delivered through our 2 Penn Plaza office. Our New York Office brings an exceptional combination of relevant local experience and IDIQ experience. In recent years, the New York office has managed approximately $4B in construction value for clients such as Port Authority of New York and New Jersey, GSA Region 2, the State of New York Office of General Services, DASNY, New York City Department of Design & Construction, Nassau County, and MTA. Below we highlight how we meet or exceed PANYNJ requirements.

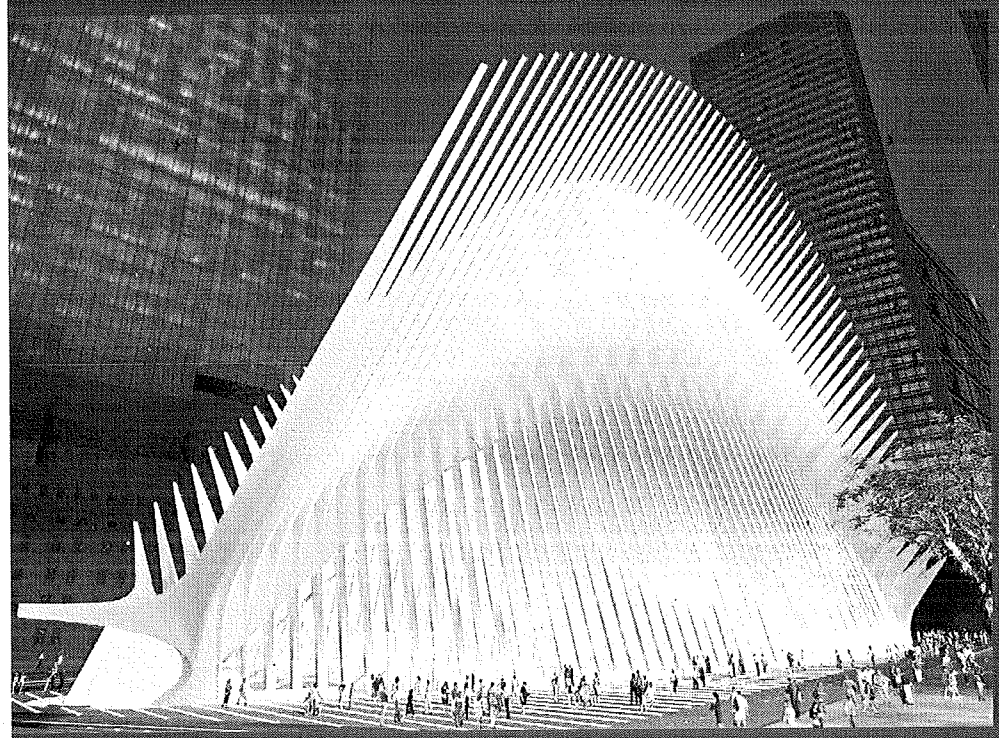
	Prequalification Category	Team Meets or Exceeds Criteria	Actual Team Number
A.	Office in New York/New Jersey Metropolitan Area with at least 50 individuals on staff experienced in performing construction management and/or construction inspection services in NY/NJ	✓	86
B.	Firms must have a Certificate of Authorization to practice Professional Engineering in the states of New York and/or New Jersey	✓	Yes
C.	Construction Inspection staff shall be experienced in performing construction inspection services in at least one of the following disciplines: Civil, Structural, Electrical and Mechanical Engineering and include the following:	✓	Yes
	1. At least ten (10) engineers/architects licensed in the states of New York and/or New Jersey	✓	13
	2. At least ten (10) must be ACI Concrete Construction Special Inspectors	✓	10
	3. At least three (3) must be ICC Certified as Structural Steel and Bolting Inspectors	✓	3
	4. At least one (1) must be NACE Level 1 coatings certified	✓	1

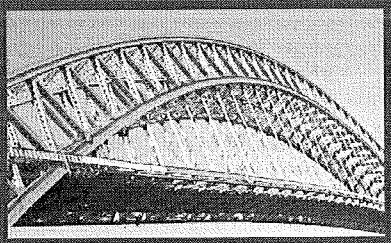
Sincerely,

Vincent A. Mangiere
Chief Executive Officer

Section D

Multipliers





JACOBS®

D. JACOBS MULTIPLIER BREAKDOWN

The "multiplier" referred to in the second and fifth lines of subparagraph 9.A of the accompanying Agreement, including a breakdown of said multipliers, indicating all of its components (e.g., vacation, holiday, sick pay, workers' compensation, office rent, insurance, profit).

Jacobs Multiplier at Port Authority Offices

Location	D/L	Fringe	Sub Total	G&A	Sub Total	Profit	Total
							Multiplier
At Site	1	26.5%	1.265	32.7%	1.68	15%	1.93

Multiplier at Jacobs Offices

Location	D/L	Fringe	Sub Total	G&A	Sub Total	Profit	Total
							Multiplier
Home Office	1	26.5%	1.265	37.4%	1.74	15%	2.00

The Fringe Rate is applied to Direct Labor
The Fringe Rate is inclusive of Vacation, Holiday, Sick Leave, Workers compensation and Insurance
The General and Administrative (G&A) Rate is applied to the sum of the Direct Labor and Fringe
The General and Administrative (G&A) Rate At Site and Home Office is inclusive of General and Administrative
The Profit Rate is applied to the sum of Direct Labor, Fringe and G&A
The Multiplier is applied to the hourly Direct Labor Rate for each labor category dependent upon work location

JACOBS®

KEY PERSONNEL INTRODUCTION

Jacobs' primary business is serving public and private sector clients under term contracts. We have structured our offices and our management systems to be able to staff projects in multiple locations to serve key clients. Jacobs has provided services on numerous Indefinite Delivery/ Indefinite Quantity contracts for various clients both in New York/New Jersey and elsewhere in the US. This experience has provided us with a keen understanding of what our clients expect when buying services on an as needed basis. From an organizational standpoint we recognize that we must be quick to respond. That our staff must truly serve as an extension of the Port Authority's staff, that we must offer the Authority and its management team access to all the resources that would ordinarily be available internally to support your needs and that our services must be of high quality.

We are committed to provide Port Authority with qualified CM personnel who are capable of delivering term assignments in any location served by the Port Authority within New York and New Jersey. **Jacobs maintains a staff of over 300 Construction Management Professionals, Architects and Engineers and in New York and New Jersey.** In addition to the personnel located in New York and New Jersey, Jacobs can tap into a resource base of over **500 employees in the Northeast and New England** including Connecticut and Massachusetts and over 1200 PM/CM personnel nationwide.

On the following pages, we have provided you with 85+ individuals who make up the Jacobs Team to demonstrate the caliber and quality of the personnel we have available and who are familiar with PANYNJ projects. Attached with this proposal is an organization chart followed by the personnel matrix summarizing the personnel qualifications for the selected team. Full resumes are also provided in the following section. In the Management Approach section, we describe how our team will work together and will tap into these resources. The organization chart below demonstrates the breadth of our capabilities and the resources available to our proposed Construction Managers. In keeping with the location and project size, we will work with the Port Authority to assign the right resources from our pool of qualified Jacobs' team members.

Bill Gove will serve as the Project Executive for facilities related tasks. He was the Project Executive on our "Call-In 2011-2014 Contract" and has great expertise in working with the Port Authority identifying the right staff to work on the requested assignments. Bill brings 43 years of experience working with Owners, Architects, Consultants and Contractors providing construction management, program management, claims management, trade supervision, scheduling, estimating, cost control, value engineering, construction engineering and contracts management services. Bill has completed hundreds of projects for multiple NYC and NYS agencies and has extensive experience in problem resolution and providing goals to lead projects to recovery while building a consensus among stakeholders.

All Project Managers will work with our Project Executive, and the team to ***meet or exceed PANYNJ's project expectations at all times*** and facilitate successful project delivery.

Subconsultants

We are committed to providing meaningful opportunities for small and disadvantages businesses so that these firms gain valuable experience and enhance their technical and business management capabilities. Our track record shows that we always meet or exceed subcontracting goals established by our clients. For quality and consistency of outcomes, we make sure that all W/MBE's follow our Internal Quality Assurance and Quality Control processes.

Works-In-Progress Associates

For the past two years, under an on-call contract with The Port Authority, WPA has provided a full time Portfolio and Program Manager under Professional Construction Management Services on an as requested basis. WPA manager's responsibilities have been to report to the Engineer of Projects, assist Lead Engineer/Architect with project tracking, budget, and schedule, for more than 100 projects in various stages from concept to construction. Projects are divided into Line Departments: Aviation; PATH; Ports/Commerce; and Tunnels, Bridges and Terminals with disciplines as the lead on various projects. Responsibilities included conducting monthly meetings with the Lead Engineer/Architect to provide accurate reports for the Chief Engineer regarding status, schedule and budget and participate in quarterly meetings with Engineering and Line Department to status projects for scope, schedule and budget. Also manage small projects which involve directly overseeing the design of consultants.

SAVIN Engineers, P.C.

Founded in 1988, SAVIN started serving clients in the New York Tri-state area providing environmental engineering and construction management services. Building upon a solid foundation of successful water, wastewater, and landfill projects, SAVIN has a proven team of leaders that have expanded our reach into new markets throughout the Northeast Region and continues to push throughout the States and internationally. Our team of professionals strives to meet the needs of ever changing regulatory requirements and ensure the quality of life for the public we serve. The services in the environmental field soon expanded into the needs of transportation. Inspection and construction management services began to be provided for roads, bridges, tunnels, railways, harbors and airports. This now services local, regional, State and Federal needs.

Techno Consultant, Inc. (Techno Consult) (DBE)

A certified Minority Business Enterprise (MBE) and Disadvantaged Business Enterprise (DBE) founded in 1998, provides engineering, construction management (CM) and resident engineering inspection (REI) services for clients that include the New York City Department of Environmental Protection (NYCDEP), the New York City Department of Design and Construction (NYCDDC), the Port Authority of New York and New Jersey (PANYNJ), and the City of Newark, NJ, among numerous others. Our principal and associates have proven accomplishments in water/wastewater treatment, mass transit, transportation, infrastructure, heavy civil construction, facilities, and municipal projects for both public agencies and private clients.

JBC Associates, Inc. (JBC)

JBC Associates, Inc. (JBC) is a Port Authority of NY and NJ certified Women-owned Business Enterprise. Founded in 1988, JBC specializes in providing professional Construction Management services with primary emphasis on CPM Scheduling, Project Controls, Contract Administration, Construction Inspection and Disputes Resolution. JBC has provided these services on numerous types of projects including: roads and bridges/ tunnels, transit, airports, educational and institutional facilities, government office buildings, sports and entertainment complexes, research/ pharmaceutical facilities, hospitals, industrial and maintenance facilities, wastewater treatment plants and hazardous waste clean-up sites. Currently JBC has a staff of over sixty-five (65) professionals well versed in all areas of construction.

JACOBS®

Rich LaRuffa, PE
Value Engineer
Jacobs

Education:,
Bachelor of Science
Master of Science

Registrations:
Professional Engineer: NY and NJ
CVS - Certified Value Specialist - Life

Years of Experience:
40 Years

Professional Engineer NY/NJ
[redacted]

Richard LaRuffa, PE has served as Project Director, or Project Manager, overseeing project teams with up to 40 staff members. Assignments included P/CM, construction claims analysis and prudency audits, Value Engineering, Constructability Reviews, CPM scheduling, and cost estimating on projects ranging from $0.5 million to $3.2 billion. Projects include high-rise buildings, hospitals, sewage treatment plants, highways, bridges, airport, rail and bus systems, transportation facilities, prisons and courthouses, educational facilities, golf clubs, auditoriums and banquet halls, refineries, and industrial and power generation plants.

A Life-Certified Value Specialist, Richard has been actively involved in Value Engineering for more than 25 years. He has participated in over 175 VE workshops, as team member or team leader. Richard has presented seminars on project management and value engineering, and teaches the one-week SAVE certified Module I VE Training course and maintains a SAVE certified curriculum.

RELEVANT EXPERIENCE

General Services Administration On-Call VE Services. *Project Manager and lead CVS Team Leader* on VE studies for new federal courthouse projects in Gulfport, MS and Los Angeles, CA, renovations to two historic courthouses in New York City, and the Border Station at Champlain, New York. Historic renovations concentrated on constructability issues including manpower and material flow through operating court facilities under post-9/11 homeland security measures.

MTA New York City Transit, Value Engineering Consultant Services. *Project Manager and primary CVS Team Leader* on 4 successive on-call contracts. To date more than 125 studies have been conducted on station upgrades, power, signal and communications systems, bus depots, TA facilities and NYCT Design Guidelines, on projects totaling more than $4 billion in construction. Reviews include concept designs, preliminary engineering, constructability/construction document designs and contractor submitted value engineering change proposals during construction.

Port Authority of NY & NJ (PANYNJ). *Project Manager/Value Engineer-Team Leader* responsible for conducting a VE workshop on bid documents for a new 800-passenger Ferry Terminal at Battery Park City. Also lead VE Team studies on a new restricted service road at JFK airport, and Homeland Security projects involving perimeter intrusion and protection system concepts at PA airport and rail facilities.

MTA Bridges and Tunnels, Task Order Value Engineering Services, NY, NY. *Project Manager/Team Leader* responsible for conducting fifteen Value Engineering Workshops on Preliminary Design documents.

Robert Bauco, PE, CCM
Project Manager
Jacobs

Education:
Bachelor of Architectural Engineering

Registrations:
Professional Engineer: NY
Certified Construction Manager, CMAA

Years of Experience:
17 Years

Professional Engineer NY/NJ #[redacted]

Robert Bauco, PE, CCM brings over 17 years of experience in construction management of new construction and renovation projects in New York. From his work on the OGS HVTMC and NYS Thruway Authority Interchange 17Contract 2 Campus, Rob brings directly relevant experience to the team and will serve as a key resource for providing lessons learned gained during the reconstruction and conversion of the OMH Recreations Facility Building 104 for Authority Offices and NYPD facility.

RELEVANT EXPERIENCE

Reconstruction of Interchange 17, Contract 2 – TANY 04-37A Newburgh, NY. *Project Manager.* Provided overall management responsibility for the Jacobs team for this $50M, 90,000 SF+ project. The project includes construction management and inspection services for the construction of a 38.000 SF Maintenance/Vehicle Garage Building; a 13,000 SF State Police Zone Headquarters Building; Toll Collection Facilities (including a Toll Utility Building, two new Toll Plazas and a E-Z Pass only Toll Plaza); and Storage Buildings (vehicle, salt storage, and cold storage).

Hudson Valley Transportation Management Center (HVTMC) Hawthorne, NY. *Project Manager.* Rob has overall management responsibility for the Jacobs team for this $45M, 92,000 SF project involving construction management services. The HVTMC incorporates incident management plans developed by participating agencies and various ITS elements to manage and maintain the transportation system. The project also included construction of a new State Police Headquarters.

International Business Machines, T.J. Watson Research Facility Yorktown Heights, NY. *Project Manager.* Jacobs provides Preconstruction and Construction management services for communication wiring upgrade of an $18M, 750,000 SF research and laboratory facility. The work brought CAT5 copper and fiber optic cable to 3,500 workstations throughout the occupied campus. Requirements included construction of 23 communications rooms linked to the main computer and telephone room.

New Jersey Department of Building and Construction, South Woods State Prison Project, Bridgeton, NJ. *Assistant Project Manager/Project Engineer.* Construction management services for a self-contained, $203M, 1.3 million SF, 3,100 bed medium security correctional institution with support facilities, including medical, education, food service, administration, visiting facilities, and an Industries Compound. The 25-building complex is located on an 85 acre site.

International Business Machines (IBM), TJ Watson Research Facility, New York, NY. *Project Manager.* Jacobs provided Construction Management services for infrastructure wiring upgrades to the $18M, 750,000 SF IBM research and laboratory facility. This work brought CAT6 copper and fiber optic cable to 3,500 workstations throughout the occupied campuses. It also required the construction of 30 communications rooms linked to the main computer and telephone rooms. Rob was responsible for oversight of the design and construction subcontractors in order to achieve owner objectives of quality, budget, schedule, and minimal occupant disturbance.

David Leymeister, PE
Project Manager
Jacobs

Education:
MS, Civil Engineering
BS, Civil Engineering

Registrations:
Professional Engineer: New York, 1994, (#[redacted])
Pennsylvania, 1996, ([redacted])
New Jersey, 2003, ([redacted])

Years of Experience:
21 Years

Professional Engineer NY/NJ #[redacted]

David Leymeister, PE has extensive experience in the management and control of transportation projects involving studies, design, design-build, and resident engineering. He is experienced in transit station, private freight service, bridge, roadway, building, bicycle/pedestrian, and tunnel construction. Specific tasks have included coordinating permitting/design/construction, implementing cost controls for design and construction, claims analysis, CPM scheduling, and construction inspection. Dave has demonstrated the ability to successfully manage, achieve a win-win scenario for stakeholders, and improve quality performance by formulating and implementing comprehensive plans for quality assurance. As Quality Manager for our New York, New Jersey, and Philadelphia offices, he ensures that the company policies and procedures are followed as outlined in each project-specific quality plan.

RELEVANT EXPERIENCE

NJ Turnpike Authority (NJTA), Mile 83 and Pearl Harbor Memorial Turnpike Extension. *Project Manager.* This project included multi-span bridges and multiple bridge contracts. Inspection services consisted of the MPT, inspection of the removal/scarification of deteriorated bridge deck slabs, and replacement with new reinforcing steel and concrete; replacement of deck panels; partial depth concrete spall repairs; sidewalk, parapet, and curb surface repairs; removal and replacement of asphalt surfacing; resurfacing bridge approaches; latex modified concrete overlay; pile driving; post-tensioned concrete; HPC concrete placement; placement of waterproofing membrane; armor joint modifications and installations; joint seal replacements; defective bearings repair; substructure waterproofing; placement and removal of temporary and permanent roadway line striping; electrical component replacements; grading, drainage, and other varied elements.

NJ Turnpike Authority (NJTA), Supervision of Construction Services Contract P100.028, GSP Miscellaneous Structural Repairs (OPS P3139). *Project Manager* responsible for overseeing the work to rehabilitate land and water spanning bridges. The work involved construction of concrete repairs on substructure members (abutments, piers, columns, caps) using concrete epoxy concrete compounds; structural steel repairs (on damaged girders, haunches, bearings, diaphragms); steel beam repairs; utilization of temporary shoring/jacking towers to support deck stringers; applied epoxy waterproofing; localized SSPC SPC6 cleaning of lead based paint systems for steel repairs with Level 4 – Class 4 containment, then recoating with an epoxy mastic paint; completing emergency steel repairs on an on-call status; maintenance and protection of traffic (MPT) for lane closings on GSP and NJDOT roadways; and work area protection. Work also included jacking of beams to perform bearing repairs and for the welding/bolting of new repair plates. Some of the repairs were performed over water, working from a barge. Emergency steel bridge beam repairs required MPT, beam jacking support, drilling, bolting, torqueing, and painting for repair plates.

Craig Lewis, PE
Principal Structural Engineer
Jacobs

Education:
B.S., Civil Engineering

Registrations:
Professional Engineer – New York

Years of Experience:
32 Years

Craig Lewis, PE has over 32 years of structural engineering experience. He has served as Project Manager, Project Engineer and Inspection Leader for various bridge inspection, design and construction support projects for several tri-state area agencies including NYSDOT and NYCDOT. These assignments involved coordination with client project managers and site Engineer-in-Charge as well as construction contractors and subconsultants. He also served as Project Engineer on various bridge and building projects for The Port Authority of NY and NJ, MTA Bridges and Tunnels, NYNEX and Independent Contractor Clients.

RELEVANT EXPERIENCE

NYC Economic Development Corporation, 28th Avenue Reconstruction, Queens, NY. *Resident Engineer* for the reconstruction of 28th Avenue that included removal/'replacement of roadways sidewalks, and curbs. Responsibilities included coordination with city agencies, MTA Bus Company and the Community Board; inspection of construction work and materials for conformance to plans and specifications; review of shop drawings; conducting progress meetings; resolving RFI's and unanticipated field conditions, review of contractor invoices, maintenance of records of field change details for inclusion on as-built drawings and providing administrative management.

NYCDOT, Rehabilitation of 6 New York City Bridges New York, NY. *Team Leader and field coordinator* for the in-depth inspection on the following structures:

- Metropolitan Ave Bridge
- Crooke Ave Bridge
- Newkirk Ave Bridge
- BQE Cadman Plaza Viaduct

NYSDOT, Rehabilitation of 16 Bridges on Cross Bronx Expressway Corridor, New York, NY. *Assistant Team Leader* for the in-depth inspection of the eastbound and westbound roadway cantilever brackets on the main arch, east approach and west approach spans.

NYSDOT, Steel Detail Vulnerability Assessment of 517 New York City Bridges in Region 11, NY. *Field Inspection* of the steel detail vulnerability assessment of 517 New York City Bridges in Region 11 (3,820 Spans). Photos of the existing conditions were taken and if repairs were performed, then sketches were drawn of member types and sizes used. Work included the evaluation of fatigue prone details. A 3-D model of the Gowanus Expressway behavior was developed for this effort.

MTA-Bridges and Tunnels, 1999 Biennial Inspection of the Henry Hudson Bridge and Queens Midtown Tunnel Approach Bridges, NY. *Team Leader and Field Coordinator* for the biennial inspection of the main bridge and Manhattan and Bronx approach spans of the Henry Hudson Bridge; and the main spans of the QMT approach bridges. Responsibilities also included development of reports summarizing inspection findings.

Professional Engineer NY/NJ #[redacted]

William C. Moser, PE
Sr. Resident Engineer
Jacobs

Education:
B. S., Civil Engineering
A. A. S., Civil Engineering

Registrations:
Professional Engineer in New York (#[redacted]),
Pennsylvania (#[redacted],
Virginia (#[redacted])

Years of Experience:
31 Years

Professional Engineer NY/NJ #[redacted]

Bill Moser, PE has 31 years of experience in all phases of construction inspection, supervision, management, design coordination and scheduling. Experience includes construction inspection of highway, bridge, building, railroad and marine projects with emphasis in project set-ups, management, record keeping, quality control, material testing, closeouts, problem solving, constructibility reviews and estimating. Project experience includes the following:

RELEVANT EXPERIENCE

Various Company Construction Projects for NewJersey Turnpike Authority and New York State Department of Transportation, Region 11. *Deputy Project Manager/QA/QC Officer* for various company projects most noteably for NYSDOT Region 11 ITS City-wide project. Performed QA/QC analysis of project inspection forces with respect to job knowledge, reviewed office proceedures of the consultant Office Engineer, made positvive recommendations with respect to policies and proceedures and issued a written report to the State EIC Nick Lorincz and consultant Project Manager. Assured that all proceedures were implimented correctly and Clients (NYSDOT, NJTA) were satisfied.

NYC Department of Design and Construction, Flushing Avenue Reconstruction Project, Brooklyn, NY. As *Resident Engineer* managed the installation of trunk and distribution water mains along 4 miles of Flushing Avenue. This project included the relcation of major utilities, watermain installation, complete reconstruction of curbs, sidewalks, roadway, street lighting, traffic signal installation signage and delineation of the new roadway. Coordination with the many businesses, schools, churches and four Community Boards was a key element of this project. Cost $ 47 million.

NYS Department of Transportation, Reconstruction of the Major Deegan Expressway over Exterior Street, New York, NY. As *Resident Engineer* managed the subsurface investigation for the future reconstruction of the Major Deegan Expressway Viaduct. This included the complete set up and closure of the project as well as managing the inspection staff, coordination with the NYSDOT Geotech Department, sample recovery and delivery to the Albany, NY Lab. Special handling of samples was an important part of this project. Due to ongoing projects in the area, coordinated with the these projects for access to and scheduling of the bore hole driling. Cost $ 150,000

NYC Department of Transportation, Protective Coating of the Queensboro Bridge, New York, NY. As the *Resident Engineer* for the 5-year, $170 million Queensboro Bridge Protective Coating Project. This included the installation of temporary platforms which hold the 1A containment systems for the removal of the existing lead paint by blasting to a near white condition, coating the structure with a 4 part paint system, and maintenance and protection of vehicular and pedestrian traffic. He was responsible for all aspects of the construction and management of the inspection staff which includes coordination with other contractors working on the bridge, as well as the maintenance crews and inspection crews.

Reza Noorishad, PE
Resident Engineer
Jacobs

Education:
Master of Civil Engineering
Bachelor of Science in Engineering

Registrations:
Licensed Professional Engineer, NJ, [redacted] Expires 04/30/2010
Professional Engineer CT

Years of Experience:
26 Years

Professional Engineer NY/NJ #[redacted]

Reza Noorishad, PE brings over 26 years diversified experience serving as resident engineer or chief inspector for bridge and highway construction projects. His areas of expertise include reconstruction of movable bridges, structural steel rehabilitation, and highways. Reza has extensive experience supervising field staff, as well as preparing daily reports and coordinating with various agencies, utilities, and businesses.

RELEVANT EXPERIENCE

Tri-Borough Bridge and Tunnel Authority (TBTA), Throgs Neck Bridge, Replacement of Concrete Deck and Rehabilitation of the Abutment and Retaining Walls. *Senior Inspector* responsible for rehabilitation of Throgs Neck bridge, Queens Approach, abutment and retaining wall repair, jacking existing girders, replacing all the bearings and some of the existing girders, deck replacement at Queens approach. Responsible for supervising all phases of the work, which included supervising construction inspection, MPT, staged construction, superstructure, shielding, bridge deck demolition, stay-in-place forms, reinforcement steel, concrete placement and testing, substructure spall repairs, expansion joint installation, bearing replacement, HMA paving, and line striping.

Burlington County Bridge Commission (BCBC), Abutment Reconstruction of Bristol Bridge, Burlington, NJ. *Resident Engineer* for reconstruction of west abutment (New Jersey side) of Bristol Bridge, jacking west abutment existing girders, replace of concrete-encased end diaphragms, installation of new armor joint, deck and approach slab replacement over the west abutment. Responsible for supervising all phases of the work, which included supervising construction inspection, MPT, staged construction, superstructure, shielding, drainage and electrical facilities, approach slab demolition, reinforcement steel, concrete placement and testing, concrete barrier placement, cast-in-place parapet construction, waterproofing membrane, substructure spall repairs, bearing replacements, HMA paving, and line striping.

NJ Department of Transportation (NJDOT), Reconstruction of the Route 1&9 Bridge Over Route 35, Woodbridge, NJ. *Senior Inspector* for construction of new bridges and new ramps over Route 35, which included new abutment, reinforced concrete deck, structural steel girders, approach roadway, drainage and electrical facilities installation, full depth roadway and reconstruction and paving at Route 35. Responsible for supervising all phases of the work, which included MPT, staged construction, superstructures, shieldings, bridge deck demolition, stay-in-place forms, reinforcement steel, concrete placement and testing, concrete barrier placement, cast-in-place parapet construction, waterproofing membrane, new bearing installation, expansion joint installation, SuperPave asphalt, and line striping.

NYS Department of Transportation (NYSDOT), Taconic State Parkway Route 202/35 to Route 6, Westchester County, NY. *Chief Inspector* for a $29 million project that involved realignment of a four-lane highway, exit modifications, drainage improvement, replacement of four existing overpass bridges with new arch concrete bridges, extensive maintenance and protection of traffic, and coordination of various activities during all stages of construction.

Mark Platz, PE
Construction Manager
Jacobs

Education:
BS, Civil Engineering

Registrations:
Professional Engineer and Land Surveyor, NJ, [redacted] Expires 4/30/2012

Professional Planner, NJ, [redacted] Expires 05/31/2012
Professional Land Surveyor, PA, # [redacted] Expires 09/30/2011

Years of Experience:
36 Years

Professional Engineer NY/NJ # [redacted]

Mark Platz, PE has three decades of experience with a proven track record of business aptitude and profitability in Construction Management, Construction, and Engineering. Mark has worked extensively throughout the State of New York and New Jersey, primarily for the Metropolitan Transportation Authority and the Southern Pennsylvania Transit Authority in Philadelphia, PA. With his background as a Program Manager/Construction Manager, Mark possesses solid management techniques that translate to profitable project performance.

RELEVANT EXPERIENCE

Bridges Rehabilitation Design, Long Island, New York, MTA - Long Island Railroad. *Project Manager* for Design and Bid Phase Services for the rehabilitation of four elevated bridge structures in need of critical repair. Situated in heavily urbanized areas, one bridge carries 5 tracks of the LIRR's key Jamaica interlocking including crossover and switch installations. Emphasis was placed on cost effective rehabilitation with careful consideration of Railroad operations and outage restrictions together with railroad force account support.

Metropolitan Transportation Authority - Capital Construction, Methods and Procedures, New York City, NY. *Task Manager.* Drawing on his extensive experience covering many areas of planning, design, construction and management, Mr. Platz served as Task Manager for the MTACC's effort to develop uniform system-wide Methods and Procedures for their nearly $20B New York City construction efforts.

East Side Access, Long Island Railroad to Grand Central Terminal, NYC and Queens, New York. *Task Manager and Team Leader.* Part of Jacobs Construction Management Team for this $8B project providing first-ever LIRR access to Grand Central Terminal, Mr. Platz Served as Task Manager and Team Leader for a number of on-call efforts, including: constructability reviews for tunnel work, underground station and access construction, temporary trestle construction, interlocking reconfiguration and track and electrical systems work; Analysis of Materials and Warehouse management for just-in-time and long term procurement; Program Risk Assessment including design, construction, cost and scheduling; and Alternate Operations Route Planning/Development.

Atlantic Traffic and Design Engineers, Watchung, NJ. *Principal-in-Charge.* Transportation Design and Planning. As Principal-in-Charge, managed planning and design for road, highway and transit systems including I-95 interchange improvements, highway design, transportation hubs, signal design, and transit corridor optimizations. Work areas in NJ, PA, NY, CT. Responsibilities included client/ project interface, public agency and community development activities (presentations and public hearings), proposal development and scheduling/ coordination efforts. Worked with municipal, county and state governments and with Departments of Environmental Protection and Transportation. Managed project efforts from concept through construction completion and acceptance.

Department of Transportation, I-95/ I-287 Interchange Improvements, NY, NJ, PA, CT. *Principal-in-Charge.* Transportation planning and design for highway system. Responsible for client interface, public agency coordination and community development activities.

Dipak Shah, PE
Resident Engineer
Jacobs

Education:
M.E, Civil Engineering
B.E., Civil Engineering

Registrations:
Professional Engineer, NJ (1986)
Professional Engineer, NY (1972)

Years of Experience:
31 Years

Professional Engineer NY/NJ #[redacted]

Dipak Shah, PE brings more than 30 years of experience in leading, managing, and directing construction inspection personnel on heavy construction projects, including client liaison, construction contract administration, subconsultant contract administration, manpower scheduling, budgeting, invoicing to clients, processing of contractor and subconsultant payments, cost estimates, claims evaluation and negotiations, pursuit of work, and preparation of technical proposals.

RELEVANT EXPERIENCE

Amtrak/ARRA Project, Rehab at Pelham Bay Bridges and Approaches, Bronx, NY. *Resident Engineer* on a bridge substructure rehabilitation project entailing reinforced concrete pile jacketing of existing deficient piles, rehabilitation of heavy scalling/spalling on existing transmission tower footings, and rebuilding, repointing and grouting concrete core of existing granite stone masonry piers. Responsible for providing construction management and contract administration and supervising integrated field staff of Amtrak/Jacobs personnel and coordinating construction work with various Amtrak Departments and ongoing other contracts nearby.

Bayonne Local Redevelopment Agency (BLRA) Route 440 Infrastructure Improvements Project in Bayonne, NJ. *Resident Engineer* on a roadway project entailing new intersection, modification to existing intersection, relocation of existing overhead utilities, new traffic signals and drainage improvements. Responsible for providing resident engineering construction inspection services, including on-site construction supervision, office engineering and contract administration entailing processing of partial and final payments, change orders, change order negotiations, interfacing with state and local agencies, utilities and private businesses.

New York City Department of Environmental Protection, Oakwood Beach Water Pollution Control Project, Contracts 6B-2 and 6B-3, Staten Island, New York. *Project Manager/Resident Engineer.* Headed a team led by Jacobs including subconsultants to provide construction phase services for this $64 million tunneling project which entailed inspection of shaft construction, soft ground tunneling, direct pipe jacking of a 60-inch fiberglass pipe by utilizing a remotely controlled microtunneling mole, chemical and cement grouting, dewatering installation, monitoring of ground settlement. Responsibilities included supervision of field inspection personnel, critical document control, progress payment approvals, monthly progress reports, estimating, change order negotiations, schedule projections, and subconsultant contract administration. Evaluated and analyzed claims and change orders worth $40 millions.

New York City Department of Environmental Protection, East 233 Street and Webster Avenue, Combined Sewer Project, Bronx, NY. *Resident Engineer.* Provided resident engineering inspection services for the construction of a 10-foot diameter combined sewer tunnel underneath the existing commuter railroad and major highway. Responsibilities included inspection of inlet shaft in compressed air and open cut box sewer construction, processing of monthly payments, change orders, progress reports and coordination of work.

Nejat Hedvat, PE
Resident Engineer
Jacobs

Education:
MS, Civil Engineering
BS, Civil Engineering

Registrations:
Professional Engineer: New York, 1979 (#[redacted]

Years of Experience:
38 Years

Professional Engineer NY/NJ #[redacted]

Nejat Hedvat, PE brings over 38 years of experience in both design and construction management. His project management experience includes performing design and constructability reviews, supervision of construction engineers, inspectors and project controls staff, oversight of contractor activities, payment approvals and change order negotiations, contracts' compliance and municipal and utility interfaces.

RELEVANT EXPERIENCE

Brooklyn Battery Tunnel Ventilation Building Repairs - ($30 Million) MTA Bridges & Tunnels. *Resident Engineer,* responsible for administering all facets of the Project (4 Ventilation Buildings and 3 separate Contracts) including, supervision of Construction Engineers, Inspectors and Project Control Staff, Contract Compliance, utility interfaces, payment approvals and change order negotiations. Directed project environmental resolution efforts including hazardous material abatement. Responsible for maintaining complete operational status of this round the clock facility.

Brooklyn Battery Tunnel Roadway Rehabilitation Project - ($65 Million) MTA Bridges & Tunnels. *Resident Engineer,* responsible for administering all facets of this project including, supervision of construction engineers, inspectors and project controls staff, payment approvals and change order negotiations, contracts' compliance and municipal and utility interfaces. Directed project environmental restoration efforts including hazardous materials abatement and landscape restoration. Responsible for maintaining complete operational status of this round the clock facility.

Queens Midtown Tunnel Roof Replacement and Tunnel Rehabilitation - ($97 Million) MTA Bridges & Tunnels. *Resident Engineer,* responsible for administering all facets of this project including design and constructability review, supervision of construction engineers, inspectors and project controls staff, oversight of contractor specifications compliance, payment approvals and change order negotiations, contracts' compliance and municipal and utility interfaces. Directed project environmental restoration efforts including hazardous materials abatement and landscape restoration, implementation of complex maintenance and protection of traffic. Responsible for maintaining complete operational status of this round the clock facility.

Brooklyn Battery Tunnel Roof Replacement and Tunnel Rehabilitation - $60 Million MTA Bridges and Tunnels. *Resident Engineer,* provided management and direction for the performance of the contractors and corresponding activities of the construction management staff. Other duties included resolution of design problems, resolving drawing conflicts, monitoring and facilitating the processing of contractor submittals, work authorizations, and negotiating change orders. Other responsibilities include monitoring contract compliance with respect to safety, quality assurance, cost, scheduling and payment requisitions.

Rick Wenger, PE
Project Manager
Jacobs

Education:
B.E. Mechanical Engineering

Registrations:
Professional Engineer: CA

Years of Experience:
19 Years

Professional Engineer NY/NJ
[redacted]

Rick Wenger is a licensed professional engineer with over 19 years of construction management/ inspection experience. Mr. Wenger is an experienced Resident Engineer with attentiveness to details and options. Past and present experience has primarily focused on constructing and renovating NY City and NY State owned vehicular repair, parking, and administrative facilities with diversified and specialized equipment including fuel storage and dispensing, pneumatically and electrically operated vehicle repair, lifting and frame straightening, and machine/ blacksmith shop. Pre-construction duties have entailed scope development through the understanding of user needs, preliminary and final design documents constructability reviews, preparation of pre-bid Addendums, conducting pre-bid walkthroughs, and bid evaluation/ award.

RELEVANT EXPERIENCE

Rehabilitation of Garage Floor at Central Repair Shop, New York City Department of Sanitation, Queens, NY. *Project Manager.* $10 million demolition and reconstruction of elevated concrete slabs and supporting structural steel for three 20,000 SF garages in an existing, operational facility including installation of a high pressure steam bypass system to de-energize steam piping below, temporary support and protection of ductwork and plumbing assemblages, replacement of electrical busway, lighting, public address and power distribution equipment and enhancement of an oil/water separator system.

NYC Department of Environmental Protection Hillview Reservoir, Yonkers, NY. *Resident Engineer.* Jacobs is providing construction management services for this $500M project which involves improvements to the 90-acre, 900-M-gallon reservoir located in Yonkers. Chlorination of 85 to 90 percent of city water takes place at the reservoir, also pH balance monitoring and corrosion control. Improvements include chamber reconstruction and a chloride addition facility.

MTAB&T's Battery Parking Garage, New York, NY. *Resident Engineer.* $30 million Structural Repairs and Lighting System Improvement; and Mechanical, Plumbing, Fire Protection and Electrical Rehabilitation and Upgrade of the Battery Parking Garage.

New Service Building at Bronx Whitestone Bridge, The Bronx, NY. *Resident Engineer.* Jacobs provided construction inspection and support services to the MTA Bridges and Tunnels for the $15M, 33,000 SF New Service Building at the Bronx Whitestone Bridge. The New Service Building provides space for operations, maintenance and engineering units attendant to the operation of the Bronx Whitestone Bridge Facility. Specifically, it includes locker rooms, muster rooms, administrative offices and repair garages. Security systems coincident with toll collection operations were integral to the facility.

Anthony Markopoulos, PE
Field Engineer
Jacobs

Education:
B.S. Mechanical Engineering

Registrations:
N/A

Years of Experience:
8 Years

Professional Engineer NY/NJ
[redacted]

Anthony Markopoulos, PE is experienced in construction administration procedures including: construction inspections; preparation of construction estimates and CPM schedule reviews; and constructability reviews. Although, a recent Graduate, with a BS in Mechanical Engineering, he is very experienced in various areas of the construction industry.

RELEVANT EXPERIENCE

General Services Administration, Region 2 U.S. Mission to the United Nations, New York, NY. *Project Engineer.* Jacobs is providing on-call construction management services to GSA, Region 2. The new facility will be a heavily reinforced 26-story 150,000SF high-rise constructed of reinforced concrete. Responsibilities include tracking submittal statuses, maintaining a submittal log, ensuring timely submission and return of submittals by the General Contractor and Architect/Engineer, coordinating shop drawings and managing meetings between the contractors involved with the project's multiple contracts, and providing construction activity, labor count and photographs to the client with daily and weekly reports. Also responsible as the on-site representative of Company's Commissioning Agency and for providing technological and logistical support to upper management.

Pfizer World Headquarters, New York, NY. *HVAC Design Engineer.* Performed load calculations, routed and sized ductwork and piping, and selected air handling and ventilation equipment as per the project specifications. Approved contractor shop drawings and equipment selection and punch list construction.

Transportation Security Administration, Queens, NY. *HVAC Design Engineer.* Performed load calculations, routed and sized ductwork and piping, and selected air handling and ventilation equipment as per the project specifications.

GE Financial Services, Stamford, CT. *HVAC Design Engineer.* Performed load calculations, routed and sized ductwork and piping, and selected air handling and ventilation equipment as per the project specifications. Coordinated with Architect and Client on design changes and issues. Approved contractor shop drawings and equipment selection and punch list HVAC work when completed.

Port Authority of New York and New Jersey, New York, NY. *Construction Management Intern.* Supervised projects involving heating, ventilation, and air condition applications, civil engineering and general construction; provided solutions to project related issues on-site in conjunction with contractors and design engineers from unexpected field conditions to design problems; coordinated with airport security to maintain site security; and submitted daily reports detailing progress on all projects.

Michael Moskowitz, PE
Structural Engineer / Department Manager
Jacobs

Education:
Master of Civil Engineering
Bachelor of Civil Engineering

Registrations:
Licensed Professional Engineer, NY and NJ

Years of Experience:
27 Years

Professional Engineer NY/NJ #[redacted]

Michael Moskowitz, PE, is the Structural Department Manager at Jacobs in charge of bridge design, inspection, and geotechnical engineering. He is a Project Manager with many years of commuter railroad and bridge and geotechnical design and inspection experience.

RELEVANT EXPERIENCE

NJTA Southern Deck 2008 Rehabilitation – Project Manager for the annual, capitalized maintenance of selected bridge structures along the southern half of the New Jersey Turnpike. This program provides construction for approximately $5 Million of construction annually. As part of the design program, also supervised coring and ground penetrating radar (GPR) efforts to support findings.

NJDOT US RT 9 over NJ RT 70 – Bridge Deck Structural Design Report: Project Manager responsible for developing a conceptual design report/ engineering study to replace the superstructure for the subject bridge, located in the Township of Dover, N.J. Also developed seismic retrofits, and substructure repair conceptual details. The report has been delivered and accepted, resulting in a final design contract to effect the recommendations of the report and incorporate the conceptual design.

Design-Build Documents – Metro North New Haven Line (NYS) Stations: Project Manager for the conceptual level design for the improvements of eight (8) Metro North stations. Provided inspections, plan developments, force account coordination, and structural engineering expertise to provide solutions to bring these stations to a state of good repair as well as in conformance with Metro North Station Standards. Utilize multiple offices to provide direct support, and specific expertise towards the specific, final solutions to ensure quality of the product, which is the production of design-build documents.

Metro-North Undergrade Bridge Inspections and Load Rating Program, and Emergency Repairs, New York, NY: Project Manager for the inspection, load rating and prioritization of two major capital improvement programs for both the East, and West of Hudson lines. He has managed and been involved with the inspection, rating, and prioritization of a total of over 360 undergrade bridges in New York State for Metro-North. He also managed the design efforts for repairs to multiple bridges utilizing both third party contractors, and Force Account forces. Both of these structures are approximately 100 year old historic structures.

Metro-North Railroad Park Avenue Tunnel, Fire, Survivability, Ventilation and Emergency Egress Study, New York, NY: Project Manager for investigation/reporting for comprehensive fire, survivability, ventilation and emergency egress study of the Park Avenue Tunnel between Grand Central Terminal and 97th Street in Manhattan. The tunnel has no provision for mechanical ventilation and has only three emergency exits in its entire 2.5 mile length.

John Mason Howell, AIA, RCDD
IT Design Review
Jacobs

Education:
B.A. School of Architecture and Urban Planning Architecture (minor in Acoustics and computer graphic studies)
B.S. Electrical Engineering

Registrations:
Registered Architect: NY
RCDD, Building Industry Consulting Services International (BICSI)

Years of Experience:
25 Years

Registered Architect New York #[redacted]

John Howell, AIA, RCDD possesses a comprehensive background in all phases of management and technology and is particularly adept at integrating this in the fields of architecture and construction. Serving as Jacobs' Technology Manager, John has attained diversified expertise in technology infrastructure design services, technology project and construction management, architectural programming services, design, cost accounting and manpower allocation systems, project scheduling, long range facility planning, migration planning, Furniture, Fixtures & Equipment (FF&E) inventory and procurement services, and computer systems consulting.

John is currently providing technology design and technology construction management oversight to the AIA (American Institute of Architects) NY Chapter in the development of their new facility, the Center For Architecture, due to open in October 2003. John's aggressive RFQs for voice, video, data equipment and services will deliver top-tier technology at prices this not-for-profit member organization can afford.

RELEVANT EXPERIENCE

Eisenhower Executive Office Building Modernization, Washington, DC Technology and Physical Security. *Program Manager.* Jacobs provided construction management services for the modernization and security upgrades for the historic Eisenhower Executive Office Building (EEOB), on the grounds of the White House Complex and houses various agencies that comprise the Executive Office of the President. The project includes phased construction of an occupied facility. The first two of the three total phases have achieved final completion and substantial completion.

John's role is Program Manager coordinating and overseeing integration of end-user Agencies' unclassified and classified voice and data technology implementation and integration with overall building technology fit-out, including major systems upgrade. John is also coordinating overall Physical Security (access control, intrusion/alarm, video surveillance, and emergency notification) Systems for EOP.

Dumbarton Oaks Research Library & Collection, Washington, DC (an affiliate institution of Harvard University) *Technology Infrastructure Program Manager — Capital Construction & Renewal Program.* Acting as Owner's Representative for voice, data, and security infrastructure and services for this landmark institution and museum, John had the following responsibilities: reports to Directors of Finance; Facilities; Security Ops; Information Technology and interfaces with Architect, Engineers, Construction Manager, and specialists; works with client to determine long-term client technology needs and priorities; Develops and manages budgets and funding requests; specifies IT (wired and wireless) campus infrastructure and products; manages technology and security implementation schedule; successfully managed temporary voice/data/security infrastructure during temporary 'swing-space' relocations of staff necessary for proper construction sequencing; and is Project Manager for installation of devices and "head-end" equipment for security alarm, CCTV, access control

Michael C. Stevens
Structural Engineer
Jacobs

Education:
M.S., Construction Management
B.S., Civil Engineering

Registrations:
ACI Concrete Special Inspector Certified

Years of Experience:
4 Years

ACI Concrete Special Inspector Expires 5-26-2015

Michael Stevens has experience in structural analysis and design of bridges and stations. In addition, he is experienced in schedule making. He has gained working knowledge of AISC Manual of Steel Construction, and utilized various structural software (STAAD, SAP) and CADD software (MicroStation-J, MicroStation-V8, and AutoCAD), and Primavera P3 Scheduler.

Michael is a Resident Assistant at Stevens Institute of Technology and has experience in conflict mediation, administration, programming, and community building within the college environment.

RELEVANT EXPERIENCE

NJ TRANSIT, Penn Station New York-31st Street Entrance Design for 7th Avenue Concourse, New York, NY. *Technician* responsible for creating structural and architectural details in MicroStation, responding to RFIs and shop drawings, and conducting field visits to review site conditions and take measurements.. Project involves providing a street-level entrance building to the 7th Avenue Concourse below street level. Jacobs provided structural, architectural, electrical, and mechanical engineering services for the design of the entrance building.

NJ Department of Transportation, Route 36 Highlands Bridge over the Shrewsbury River, Highlands. *Technician* responsible for assisting in the coordination and development of the Final Design submittals, which involved developing cost estimates using NJDOT spreadsheets and standard programs; developing list of pay items both standard and non-standard; coordinating efforts of drawings for various disciplines; creating several different construction schedules; and responding to comments from the residents of Highlands and Sea Bright. Developed Coast Guard Permit drawings. Developed PowerPoint presentations for Community Outreach programs and Historic Sites Council meetings. Currently working on shop drawing and RFI responses. Project involves the final design of a fixed bridge to replace on-line a 1,240-foot long, low-level double leaf bascule bridge. The new bridge features twin precast segmental concrete box girder structures (mainline and curved exit and entrance ramps) designed to be built by the balanced cantilever method. During final design, involved in the development various drawings including traffic control and staging plans, ITS plans, overhead and cantilever sign structures, quantities and rebar list development for various elements.

NJ Department of Transportation, Route 7 Wittpenn Bridge over the Hackensack River, Kearny, NJ. *Technician* responsible for developing various drawings for the vertical lift span and approach spans; analyzing the existing vertical lift towers using STAAD; creating PowerPoint presentations for ASCE and SHPO; and creating permit drawing for the U.S. Coast Guard during the Final Design and Interim Repair Stages include: Project involves the preliminary design of a 9,500-foot long, mid-level bridge carrying Route 7 across the Hackensack River between the Town of Kearny and the City of Jersey City, NJ to replace the existing Wittpenn Vertical Lift Bridge (one of the "Tri-Hack"

Robert Morris
Senior Inspector
Jacobs

Education:
B.S., Civil Engineering

Registrations:
NICET - Level IV, Transportation Engineering Technology, Highway Construction, #[redacted]
Expires 02/01/13
Rutgers, Traffic Control Coordinator (TCCP), Course #662, Earned 2005, Refresher 2010
ACI, Concrete Field Testing Technician, Grade I, Expires 04/14/15
ACI, Concrete Construction Technology Course (CCTC), Expires 04/2015
NJSAT, Asphalt Technology Certificate, Asphalt Paving Construction Technologist, Expires 07/01/11

Years of Experience:
24 Years

ACI Concrete Special Inspector Expires 4-13-2016

Robert Morris has extensive experience having served as Senior Inspector on a number of large, complex highway and bridge construction and rehabilitation projects. His experience includes but is not limited to the replacement structural components in conjunction with the construction and rehabilitation of bridges, construction of new roadways, paving and resurfacing, blasting, drainage structures, drill shafts, retaining walls, toll plaza reconstruction, utilities, and tides gates. In addition, Robert has designed water treatment systems, drainage and sewer systems, and pump stations.

RELEVANT EXPERIENCE

County of Somerset, Construction Inspection Services for the Rehabilitation of Main Street Bridge Over Raritan River and Improvements to South Middlebush Road, Somerville, NJ. *Senior Inspector* responsible for inspection services to Somerset County for the Rehabilitation of County Bridge No. H0706 (Queens Bridge) Main Street Over Raritan River & Improvements to South Middlebush Road (County Route 615), at Blackwells Mills Road. The scope of work included the replacement of two culverts and retaining wall on South Middlebush Road (existing culverts and retaining wall were replaced with precast units); installation of a traffic signal at the intersection of Blackwells Mills Road and South Middlebush Road; widening of South Middlebush Road for approximately six feet on each side between the intersection of Blackwells Mills Road and Skillmans Lane; widening of Blackwells Mills Road of approximately 10 feet x 220 feet to the south; and widening (and realignment) of Skillmans Lane of approximately 12 feet x 240 feet.

NYS Dept. of Transportation, Gowanus Expressway, Brooklyn, NY. *Senior Inspector* for the rehabilitation of the viaduct from 6th Avenue to the Brooklyn Battery Tunnel. Inspection assignments included concrete deck repair and replacement, lead paint removal using Class A containments, structural steel evaluations and repairs and joint replacements. The entire project was constructed in a high volume high-density area that included active inspection of MPT detours and schemes.

NYS Dept. of Transportation, Henry Hudson Parkway, New York, NY. *Senior Inspector* for the rehabilitation of seven bridges between 120th and 181st Streets in Manhattan. Inspection assignments included replacement of all bridge-armored joints, replacement of bridge bearings and deteriorated steel members – all in a high volume environment with extensive MPT.

NYS Thruway, I-287 / I-87 Interchange 8 Projects, Westchester, NY. *Senior Inspector* for the widening of NYS Thruway from the Saw Mill River Parkway to Tappan Zee Bridge. Inspection assignments included replacement or rehabilitation of eleven bridges, building of new roadways using "superpave," blasting of rock, new drainage structures, drill shafts, retaining walls and the construction of a new toll plaza. Estimated Construction Cost $168 million.

Dean Lerescu
Senior Inspector
Jacobs

Education:
B.S., Civil Engineering/
Structural Engineering

Registrations:
ACI Concrete Construction
Special Inspector – Expires
04-07-2016

Years of Experience:
30 Years

ACI Concrete Special Inspector Expires 4-7-2016

Dean Lerescu has over 30 years experience in design and construction inspection of industrial buildings housing various utilities and transportation facilities, including ITS. Representative clients include the MTA Bridges and Tunnels, the New York State Thruway Authority, New York State Department of Transportation, Con Edison and others. Dean also has extensive experience with computer programs for structural analysis (Staad, Strudl, Ansys), and is familiar with the computer-aided design software.

RELEVANT EXPERIENCE

Amtrak-Pelham Bay Bridge Infrastructure Rehabilitation. *Field Engineer.* Duties includ construction inspection and quality assurance at the start-up of the restoration process, to insure compliance to the contract specifications. The scope of work included primarily the demolition and restoration of the deteriorated concrete piles which are partially submerged in the water and exposed to weather conditions. The restoration consisted of a tightly fitted reinforcing steel cage over the length of the pile and a permanent fiberglass, cylinder shaped, jacket installed over the cage, also working as a form for pouring of the repair grout designed to fill it.

MTA Bridges and Tunnels, Contract BB-80, Repairs to the Ventilation Buildings at the Brooklyn Battery Tunnel *Senior Inspector* providing construction inspection services for the repairs of the Ventilation Buildings at the Brooklyn Battery Tunnel. The scope of work included the demolition and restoration of the deteriorated sections of the brick and/or concrete covered structural elements (beams, columns, floor slabs, etc.).Following the demo, the exposed structural steel was first abated wherever covered by lead base paint. Subsequently the exposed areas were treated with corrosion resistant coating and finally, the masonry/concrete encasement was restored. Another contract item was the joint pointing on the bricks, granite panels and coping stones, as well as the brick/concrete crack and spall repairs.

MTA Tunnels and Bridges, Contract AW-36 – CCTV and Fiber Optic Upgrade Authority-Wide *Assistant Resident Engineer* on the $13 million MTA – Bridges and Tunnel Authority-wide contract (AW36) involving the installation of CCTV cameras and the optical fiber upgrading at five TBTA facilities throughout New York City. The contract called for new CCTV cameras to be added at certain locations along the roadways at each of the four bridges (Marine Pkwy, Verrazano Narrows, Throgs Neck and Henry Hudson) and at Manhattan Midtown Tunnel.

New York State Thruway Authority, Variable Message Signs, Transmit and CCTV Cameras, Westchester County, NY *Senior Inspector* on this $4 million ITS contract. The work included the installation of 17 CCTV camera sites, 18 TRANSMIT sites, and 2 VMS locations, along 30 miles of the New York State Thruway starting at the NYC line. The CCTV cameras were installed along with the Field Cabinets on poles erected on reinforced concrete foundations.

Paul DeCasas
Inspecor
Jacobs

Education:
B.S., Construction Engineering Technology, A.A.S., Civil and Construction Engineering

Registrations:
ACI Concrete Certified
NICET - Associate Engineering Technician #[redacted], Expires 03/01/11
NICET - Level IV, Transportation Engineering Technology, Highway Construction, #[redacted] Expires 03/01/11

Years of Experience:
26 Years

ACI Concrete Special Inspector Expires 5-26-2015

ICC Structural Steel & Bolting Expires 2-5-2017

Paul DeCasas has extensive construction inspection and observation experience having served as a Construction Manager, Resident Engineer, Assistant Resident Engineer, or Construction Inspector on numerous transportation and communications projects throughout New Jersey and Delaware. Paul has provided construction inspection services for highways, bridges, local and state roads, and railroads for clients including NJ Department of Transportation (NJDOT), NJ Turnpike Authority (NJTA), MTA-Long Island Rail Road (LIRR), MTA-Metro North Railroad (MNR), the Port Authority of New York and New Jersey (PANYNJ), and Somerset, Essex, Middlesex, and Ocean Counties.

RELEVANT EXPERIENCE

NJ Turnpike Authority (NJTA), Supervision of Construction Services. *Resident Engineer* responsible for day and night work cycles to rehabilitate land and water spanning bridges. Mr. DeCasas oversaw construction of concrete repairs on substructure members (abutments, piers, columns, caps), structural steel repairs (on damaged girders, haunches, bearings, diaphragms), utilization of temporary shoring/jacking towers to support deck stringers, applied epoxy waterproofing, localized SSPC SPC6 cleaning of lead based paint systems for steel repairs with Level 4 – Class 4 containment then recoating with an epoxy mastic paint, completing emergency steel repairs under on-call status, MPT for lane closings on GSP and NJDOT roadways.

County of Somerset, Somerset County - Duer Street Bridge, Somerset, NJ. *Resident Engineer/Inspector* responsible for overseeing and inspecting the reconstruction of the single span bridge including existing superstructure demolition and cast-in-place concrete construction for rebuilt abutment wall caps and new deck assembly, re-pointed mortar joints and replacement of natural stone sections of the remaining abutments and wingwalls, construct concrete deck with stay-in-place pans atop new galvanized stringers, construction of cast-in-place pylon walls with ornamental precast baluster for fascia parapet, reconstruction of approach roadways to new bridge profile, drainage improvements, and new curbing and sidewalk. He coordinated primary electric and telephone utility relocations, monitored MPT and long-term detour scheme, public relations with local residents, and milling and HMA paving. He also completed all associated office work (shop drawing review, monthly estimates, change orders, general correspondence, progress schedule review.

County of Somerset, Construction Inspection Services for the Rehabilitation of Main Street Bridge Over Raritan River and Improvements to South Middlebush Road, Somerville, NJ. Resident Engineer/Inspector responsible for day, evening, and weekend work cycles for the improvements to South Middlebush Road (County Rte 615) at Blackwells Mills Road. Oversaw reconstructed and new roadway construction to realign vertical and horizontal geometry and left-turn lane additions, replacement of two storm sewer culverts with three-sided precast arch bridges and wingwalls, construction of +/-450 linear feet of a precast T-wall style retaining wall, cast-in-place footings for all precast elements, signalization of one intersection, and drainage improvements.

Apares Biswas
Inspector
Jacobs

Education:
B.S., Civil Engineering

Registrations:
NICET, Level IV
ACI Concrete Special Inspector

Years of Experience:
38 Years

Apares Biswas brings over thirty-eight years of valuable experience in the construction supervision and project management for bridges, highways, site development, buildings, and utility lines. Very specialized and extensive experience during last twenty one years in USA on major cable suspension bridges & highways construction supervision, construction management and contract administration.

RELEVANT EXPERIENCE

New Jersey Turnpike, Garden State Parkway and NJ DOT. *Resident Engineer.* Resident engineering and construction management work for Jacobs on various rehabilitation work for New Jersey Turnpike,Garden State Parkway and NJ Department of Transportation.

Port Authority of NY/NJ, *Assistant Resident Engineer.*
Resident engineering and construction management work on major rehabilitation of Goethals Bridge, Staten Island, New York. Handled independently the reconstruction project work of **68 million dollar** which included concrete deck replacement, replacement of structural steel & bridge joint system, top & under deck repairs, installation of new asphalt concrete layer with waterproofing and replacement of entire sidewalks & fire standpipes of the entire bridge

Port Authority of New York & New Jersey. *Chief Inspector and Assistant Resident Engineer.* Resident engineering inspection and construction management work for Jacobs on rehabilitation of Outerbridge Crossing, Staten Island, New York. A $87M dollar reconstruction project include major deck repairs (full depth/partial depth), replacement of all expansion & deflection joints, replacement of supporting structural brackets & steel girders, installation of new fire line, reconstruction of truss span steel and concrete side walk, installation of new scuppers, water proofing membrane & asphalt paving for the deck, reconstruction of new drainage troughs, piping and miscellaneous electrical work.

New York City Department of Transportation, East River Bridges. *Assistant Resident Engineer.* Brooklyn Bridge Emergency Design-Build Suspended Span Deck Replacement and Structural Repair, $50M Project. Work responsibilities include finalization of contract drawings, reviewing shop drawings, shop inspection, construction supervision & project management for the entire assignment, quality control, record keeping, lead handling, work safety, maintenance and protection of traffic, field office management, progress review & monitoring, coordination with clients & contractors, payments to contractors and monthly estimate for the project.

ACI Concrete Special Inspector Expires 6-26-2017

Leonardo Nunez (Techno) Inspector

Education:
Business Management

Registrations:
ICC Structural Steel and Bolting Special Inspector
ACI Concrete Construction Special Inspector
ACI Concrete Filed Testing Technician – Grade I Certification
MTA NYCT Track Safety Path Roadway Worker Protection Certification (Employee in Charge)

Years of Experience:
15 Years

ACI Concrete Special Inspector Expires 12-10-2014

ICC Structural Steel & Bolting Expires 3/31/2015

Leonardo Nunez has 15 years of experience as a Civil Construction Inspector. This knowledge has given him the expertise in inspecting for different projects in which he supervised 400 guest room renovations, inspected the construction for the phase of the MTA 1/9 subway lines and performed construction inspection for transit center police renovation.

RELEVANT EXPERIENCE

New Jersey Journal Square Transit Center Police Command Renovation & Christopher Street Substation Upgrade/Renovation, The Port Authority of NY & NJ
Leonardo's responsibilities working at Journal Square Transit Center Police renovation & Christopher Street Substation upgrade consists of performing construction inspection for conformance with the plans and specifications, and report any deviations to the Resident Engineer. Preparing and maintaining daily construction inspection reports, which shall indicate the Contractor's work activities, progress of the work, crew size and composition, weather, equipment utilization, and all other information relative to the execution of the work. Maintain payment records, including the verification of the contractor's time and material sheets, and assist in the review of the contractor's partial payment requests. Identify potential extra work issues and keep Resident Engineer advised of issues. Prepare estimates of extra work, Maintain as-built drawings of the work, including any deviations from the contract drawings or approved shop drawings. Review plans for constructability and prepare comments. Assist in the preparation and negotiation of construction change orders. Coordinate with the contractor towards the preparation of the CPM schedule.

PB-URS-World Trade Center Transportation HUB/SITE, The Port Authority of NY & NJ
Leonardo's responsibilities included inspection of construction during underpinning (preloading/loading) phase of the MTA 1/9 Subway line, demolition, excavation and clean-up for Towers Two, Three, Four & Path Hub building areas. Assisting as requested by Resident Engineers, on both the East and West Bathtubs work packaged by conducting inspection services during construction of WTC East/West connector. Ensuring arch erection, concrete/steel reinforcement installation and fire proofing application was performed in accordance with the approved contract documents. Assuring project site specific rules and regulations and applicable plans for operations management, site safety and quality management are followed.

NY Hilton & Towers, New York, NY
Mr. Nunez's responsibilities included management and coordination of staff members; assigned tasks to various trades as an engineering and maintenance dispatcher.

Iqbal Feroz (Techno) Inspector

Education:
B.S., Civil Engineering

Registrations:
ACI Concrete Construction Special Inspector
Cert#[redacted]
ACI Concrete Field Testing Technician Grade I
Cert#[redacted]
ICC Special Inspector - Structural Steel and Bolting Inspection

Years of Experience:
20 Years

ACI Concrete Special Inspector Expires 3-11-2015

ICC Structural Steel & Bolting Expires 9-21-2016

Iqbal Feroz has 20 years of experience working on diversified projects. He is a skilled Inspector having performed work very successfully on the different projects, Construction, Water Supply and Water Treatment. He is familiar with the various day-to-day reporting requirements for Civil Engineering Projects.

RELEVANT EXPERIENCE

Storm and Sanitary Sewers in South Railroad Street, Borough of Staten Island for NYCDDC, NY Iqbal's responsibilities include inspection and preparation of reports for the installation of DI Pipe Water Mains at various streets, inspection and preparation of reports for the installation of Storm Water Sewer at various streets and inspection and preparation of reports for the installation of Sanitary Sewer at various streets.

QED 992, Water Main Work in Various Locations (Grand Ave., 188 Str., ETC.) for NYCDDC, NY
Iqbal was responsible for performing construction inspection; coordinate with the field and the design team to resolve conflicts in the drawings; coordinate with contractor and the Maintain as-built drawings of the work; Perform all other inspection and field duties as required by the Resident Engineer. Resident Engineering Inspection Services for NYCDDC Capital Water Main Project limits in very highly traveled areas in Queens (QED 992): Grand Central Parkway, Union Turnpike and Queen Blvd along with numerous side streets. The area has numerous commercial businesses and MTA bus route, NYC Transit Subway system along Queens Blvd. The project comprises of replacing of old unlined cast iron water mains with new 8-in, 12-in, and 20-in water distribution and fire protection systems in the busiest area of Queens.

East Windsor Twp. Water Mains Improvement Project, NY
Iqbal was responsible for the preparation of daily construction inspection reports, which indicated the contractor's work activities, progress of the work, crew size and composition, weather, equipment utilization, and all other information relative to the execution of the work. Maintain payment records, including the verification of the contractor's time and material sheets, and assist in the review of the contractor's partial payment requests. Monitor contractor's work progress based upon his approved construction schedule and report any deviation. Perform all field duties as required by the Resident Engineer. The Township of East Windsor, New Jersey is embarked a project for the Improvement of their Water Main, which includes laying of 5,645 feet of pipes in three different segments.

CSO Abatement Project for the City of Newark, NJ
As a Civil Inspector, Mr. Feroz was responsible for performing construction inspection for conformance with the plans and specifications, and report any deviations to the Resident Engineer; prepare and maintain daily construction inspection reports, maintain and update shop-drawing log; coordinate with the field and the design team to resolve conflicts in the drawings; review contractor's monthly requisition; coordinate with contractor and the maintain as-built drawings of the work, including any deviations from the contract drawings or approved shop drawings; perform all other inspection and field duties as required by the Resident Engineer.

Wahaj Warsi
(Techno)
Inspector

Education:
B.S., Civil Engineering

Registrations:
ACI Special Concrete Inspector
ASCE Grade PIV
OSHA 10Hr.Construction Safety & Health Course

Years of Experience:
26 Years

ACI Concrete Special Inspector Expires 12-10-2018

Wahaj Warsi has extensive experience working on large projects in different parts of the world. He is a very skilled inspector having performed work very successfully on projects for CSO Abatement, Bridge Rehabilitation, Building Construction, and Water Supply. Wahaj is also very familiar with the various day-to-day reporting requirements for Civil Engineering Projects.

RELEVANT EXPERIENCE

REI Services for Resurfacing, Pavement Improvements and General Repairs at Various Locations within Brooklyn, the Bronx & Queens
Wahaj is responsible for the construction inspection for conformance with the plans and specifications; prepare and maintain daily construction inspection reports; maintain payment. The Project includes milling & resurfacing, concrete work (curbs, sidewalks and pedestrian ramps) and tree work.

Newtown Creek Wastewater Treatment Plant for NYCDEP, NY
Wahaj is responsible for the construction inspection for conformance with the plans and specifications; prepare and maintain daily construction inspection reports; maintain payment records, including the verification of the contractor's time and material sheets, and assist in the review of the contractor's partial payment requests. Maintain as-built drawings of the work, including any deviations from the contract drawings or approved shop drawings and monitor contractor's work progress based upon his approved construction schedule and report any deviation.The project involves the completion of significant upgrades to the structures and systems that treat wastewater from a combined sewage treatment system. Some of the project elements include improvements to the plant bar screens, electrical, plumbing, HVAC, and controls and instrumentation upgrades, new screening and control buildings, new barge facilities and site work. The plant is undergoing a major capital improvement and upgrade program to expand its intended capacity from 1.2 to 1.8 cubic meters per day – a 50% increase. Process improvements will result in dramatic reductions of biochemical oxygen demand (BOD), and will help bring NYC into compliance with the secondary treatment standards required under the Clean Water Act.

Delaware Aqueduct Rehabilitation of Shafts 9, 10 & 18 for NYCDEP, Carmel/Kent, NY As a Cost Engineer, Wahaj was responsible for checking and reviewing certified payroll, prevailing wages and daily report with the inspector's reports; checking quantities and the percentage of work done; verify pencil copy of the invoices with the site representative and notify the contractor of any deviation; send out request for insurance verification for the contractor and their sub-contractors to NYCDEP; review final copy from the pencil copy and start processing payment and update payment log and make power point presentation for NYCDEP auditors. As a Civil Inspector, Mr. Warsi was responsible for supervision and inspection of structural steel, placing and splicing of rebar, quality and quantities of reinforced concrete in compliance of project specification; supervision of storm water and sewer water pipes (gravity and force main) inverts and elevations of distribution network containing of pump stations man holes and cleanouts.

Kurshid Anwar (Techno) Inspector

Education:
B.S., Civil Engineering

Registrations:
ACI Concrete Construction Special Inspector
ACI Concrete Field Testing Technician Grade 1
Cert#[redacted]
OSHA Confined Space Safety
Asphalt Paving Construction Technologist (SAT)

Years of Experience:
26 Years

ACI Concrete Special Inspector Expires 7-23-2018

Kurshid Anwar has extensive experience in heavy industrial projects, power plants, bridges, highways, drainage, earthwork projects etc. Anwar worked with Cansult Inc. in Riyadh Saudi Arabia in their Riyadh Sewerage and Storm Project & Supervised the construction of laying of RCC, AC, PVC, GRP pipes ranging from 8" to 72" in diameter and testing, manholes, catch basins, house connections etc. Construction supervision of pre-cast and cast in-situ concrete box channel with cell, retaining walls, level control for rock excavation and concrete pours. Construction of deep manholes, invert checking, catch basins, checking. Responsible for land development project which include planning, designing and specifications preparation for a sub-division of Toronto, Canada, including roads, water mains, storm water, sanitary and lot grading.

RELEVANT EXPERIENCE

REI Services for Resurfacing, Pavement Improvements and General Repairs at Various Locations within Brooklyn, the Bronx & Queens
Kurshid is responsible for the construction inspection for conformance with the plans and specifications; prepare and maintain daily construction inspection reports; maintain payment The Project includes milling & resurfacing, concrete work (curbs, sidewalks and pedestrian ramps) and Tree work.

REI Services for NYCDDC Annadale Road Sanitary & Storm Sewer Project, Borough of Staten Island, NY
As a Civil Inspector, Kurshid is responsible for the preparation of daily construction inspection reports; maintain payment records, including the verification of the contractor's time and material sheets, and assist in the review of the contractor's partial payment requests; Monitor contractor's work progress based upon his approved construction schedule and report any deviation; Perform all field duties as required by the Resident Engineer. He's also performing inspection of Micro-Tunneling for the 12" Sanitary Pipe about 2000 linear feet long. The $14M project includes laying of Sanitary and Storm Sewer in Annandale Road between Arden Avenue & Walcott Avenue; Detroit Avenue between Arden Avenue & Grantwood Avenue; Edgegrove Avenue between Carlton Blvd & Grantwood Avenue; Arden Avenue between Carlton Blvd & Ionia Avenue; Carlton Blvd between Drumgoole Road & Edgegrove Avenue; Grantwood Avenue between Ionia Avenue & Detroit Avenue. Installation of sanitary sewer in Carlton Blvd between Arden and Detroit Avenue; Arden Avenue between Ionia Avenue & Detroit Avenue; Ionia Avenue between Arden Avenue & Grantwood Avenue; Construction of Chamber on existing storm sewer at the intersection of Genesee Avenue and Richmond Avenue.

Downstate Misc. CM-Chemical & Petroleum Bulk Storage Facilities Upgrade - Wards Island WPCP
The project mainly consists of constructing a number of concrete containment pads to prevent spillage or contamination from chemical or fuel oil loading trucks. It includes modification of existing ferric chlorite and hypochlorite tanks. It also includes installing two new ferric chlorite tanks along with related pumps, dyke, piping and associated filling containment pad. The contract also includes work at Boiler Building where the existing temporary fuel tank has to be removed cleaned and replaced with a new 4,000 liter tank along with associated new piping, new transfer pumps and new 275 liter day tank.

Francisco Capito (Techno) Inspector

Education:
B.S., Civil Engineering

Registrations:
ACI Concrete Special Inspector
ACI Concrete Laboratory Testing Technician
ACI Concrete Field Technician Level 1

Years of Experience:
30 Years

Francisco Capito has 30 years of experience experience in conducting engineering inspections and testing, preparing reports, monitoring field activities, reviewing and approving plans and specifications, overseeing rebar and concrete placement, soil compaction, asphalt pavement inspection, masonry, fire stopping, fireproofing and trouble-shooting.

RELEVANT EXPERIENCE

Goethals Bridge Maintenance Building and Administration building Roof Replacement, The Port Authority of NY & NJ
Francisco Capito's responsibilities monitor contractor's daily work by installing roofing and flashing system; inspecting completed work in conformance with plans and specification; preparing daily inspection reports which indicates and includes work performed by the contractor, manpower and equipment used; assisting in other project field inspections; attending constructors progress meetings. The project is to remove and replace Goethals bridge maintenance and administration building roof (entire roof).

Downstate Misc. CM-Hunts Point WPCP Phase III Upgrade, NY
Francisco's responsibilities include reviewing submittals for the project, monitoring day to day construction activities; conducts review and approval of contractor's payment requisitions; conducts progress meetings, and prepares reports. The work includes emptying and cleaning the tanks, then replacing the seals between the roof slab and walls (upper corner - visualize the wall-ceiling interface in a room) and the seal between the wall and floor; replacing various mechanical components on the roof, sight glasses, sample ports, cavity drains, the roofing membrane and the various valves and pumps associated with the digester tanks.

CDM, NY: Catskill/Delaware Water Treatment Ultraviolet Light Disinfection Facility, NY
For the City of New York Department of Environmental Protection, Francisco was serving as the on-site resident inspector for the demolition of Catskill and Delaware aerators, the backfilling operations with +/- 200,000 cubic yards of fill materials, the construction of two dewatering system which includes the installation of 100+ ejector wells, the removal of contaminated and non-contaminated water and soil inside the supply and aerators pipelines and the daily activities performed by the contractor and sub-contractors.

Soil Vapor Extraction System Project, NY
Francisco Capito was serving as the resident project representative for the New York State Department of Environmental Conservation's (NYSDEC's) soil vapor extraction interim remedial measure project. Francisco's responsibilities have included reviewing submittals for the project, monitoring day to day construction activities, specifically the removal and disposal of excavated and augered contaminated material (soil) on the jobsite. He conducts review and approval of contractor's payment requisitions; monitors the start-up period on the new system; conducts progress meetings, and prepares reports.

ACI Concrete Special Inspector Expires 5-19-2017

Jonathan Pfingst
Senior Inspector
Jacobs

Education:
Construction Technology

Registrations:
ICC Structural Steel and Bolting Special Inspector, Exp. 10/2014

ACI Concrete Construction Special Inspector, Expires 04/2016

Years of Experience:
8 Years

ICC Structural Steel & Bolting Expires 10-2014

ACI Concrete Special Inspector Expires 4-07-2016

Jonathan Pfingst has been responsible for providing construction inspection services related to bridge deck repairs, resurfacing of bridges, and substructure repairs. Jon has inspected miscellaneous fender system repairs; bridge deck demolition; concrete decks/rebar; deck joints; spall repairs on the bridge deck and substructure piers; removal and installation of overhead structure sign panel; erection of temporary lighting systems and removal of existing bridge deck lighting; and construction of temporary work platforms. He has also inspected median and roadway barrier demolition; construction of temporary access road; roadway excavation; placement of temporary concrete barriers; application of temporary line striping; paving; and installation of new drainage systems and resetting inlet of frames and grates..

Jon is experienced with installation of lane shifts for stage construction and general maintenance and protection of traffic as well as daytime and nighttime lane closures on the NJ Turnpike, requiring coordination for slow-downs and ramp closures with the field supervisor for NJTA traffic operations. He is also familiar with working in environmentally sensitive areas including wetlands.

RELEVANT EXPERIENCE

NJ Turnpike Authority (NJTA), Construction Inspection for Contract T100.137-Easterly Hackensack River Bridge Reconstruction, Essex and Hudson Counties, NJ *Construction Inspector.* Construction Inspector responsible for inspecting the reconstruction of the Easterly Hackensack River Bridge, Structure No. EI09.83 from Milepost EI07.27 to Milepost E112.00 of the NJ Turnpike. Work inspected includes concrete deck removal and reconstruction; removal and reconstruction of deck joints; replacement of median barrier; wingwall modifications; substructure repairs; lighting improvements; structural steel repair and replacement; bearing replacement; access walkway rehabilitation; and timber fender repairs. Jon also inspected shoulder reconstruction; resurfacing; pavement striping; emergency and routine repairs; maintenance and protection of traffic (MPT) measures; and other incidental work. Additional items include membrane waterproofing; asphalt resurfacing; various types of spall repairs on the bridge deck; various types of joint reconstruction and replacement.

NJ Turnpike Authority, (NJTA), Bridge Deck Repairs and Parapet Improvements, GSP MP 0.0 to MP 150.0 and GSP Substructure Repairs, GSP MP 28.0 to MP 158.2 (12/2009-8/2011), E6X70800. *Inspector.* Inspector for both Contracts (P100.117 and P100.118), responsible for providing construction inspection services related to bridge deck repairs, resurfacing of bridges and substructure repairs. Inspection services consisted of installation of lane shifts for stage construction and general MPT lay-out, replacement of interior and fascia bay deck panels; reconstruction of fascia parapet curb, Types 4, 5, and 6 concrete deck spall repairs; Types 1 and 2 concrete substructure repairs (land and water piers), replacement of elastomeric bearings; and removal/replacement of HMA overlays on bridge decks and approaches.

Steve J. Goss
Special Inspector
Jacobs

ICC Structural Steel & Bolting Expires 2015

Steve Goss has more than 21 years of office and field inspection experience working on Wastewater Treatment Plants, Hospitals, Schools, Colleges, Police Facilities, Courthouses, Airports, Amtrak Maintenance Facility, Metro Light Rail, Convention Centers, Libraries, Office Buildings, Commercial Buildings, and Parking Structures. His projects total more than $1.5 Billion. Mr. Goss' experience includes inspection, quality assurance and control, scheduling, field and office supervision, as well as training of new inspectors and engineers.

RELEVANT EXPERIENCE

Amtrak – Los Angeles Maintenance Facility. *Quality Assurance Manger* for the construction of a $25 million 900' long concrete and structural steel building, site improvements, and the relocation of existing rail lines. Duties include Oversight of the Contractor Field Activities; Scheduling, Supervision, and Training of all Field Inspectors; Acting as the On-site Building Official/Fire Marshal – Enforcement of Local Building, Fire and Federal Railway Codes, as well as Insuring Contractor's Adherence to the Contract Documents; Document the Contractor's Weekly Progress; Review RFI's and Submittals; and Attend weekly Contractor/Owner's Meetings.

City of Bakersfield, CA Wastewater Treatment Plant #3 – 2007 Expansion. *Senior Building/Civil Inspector* for the construction of a $211 million expansion and upgrade of the City's existing Wastewater Treatment Plant. Duties include field inspection, (Architectural, ADA, Mechanical, Electrical, Plumbing; Structural and Civil); Scheduling, Coordination, Supervision and Training Junior Inspectors; Training Engineers work as inspectors; Enforcement of the California Building Codes, and Contract Documents; Review RFI's and Submittals; and Interact with the on-site Design Engineer.

The project includes 55 new structures: Administration/Laboratory Building; Operation and Maintenance Buildings, Headworks, Aeration Basins, Blower Building; Secondary Clarifiers; Dafts; Digesters and Control Building; Biofilter, Septage, and Tertiary Facilities; Cogeneration Building; Dewatering Building; RAS/WAS Facility; Pump Stations; Reclaimed Water Tanks; MCC Electrical Buildings, and Percolation Basins.

Kaiser Permanente Hospital – Downey, CA. *Inspector of Record* for the construction of a $650 million new six story acute care hospital, two story surgery center, and parking structure. Duties include field inspection, (Architectural, Seismic for M.E.P and Medical Gases, and Fireproofing); Daily documentation and monitoring of contractor's progress to insure that work is in compliance with the State Building Codes and Contract Documents; Interact with the on-site Architects and Engineers, as well as visiting State Engineers and Fire Marshals.

John Wayne Airport's Parking Structure Expansion Project. *Special Inspector* for the construction and expansion of the existing airport's $20 million 4 story parking structure. Duties include field inspections for the reinforced concrete and post-tension concrete; daily documentation and monitoring of the contractor's progress to insure that work is in compliance with the County Building Codes and interact with the Engineers/County Building Inspectors

Michael Caraway
Field Engineer
Jacobs

Education:
BS, Civil Engineering

Registration:

ICC Structural Steel & Bolting Expires 2017

Michael Caraway has experience as a project engineer and quality inspector. He reviews and negotiates change orders and makes recommendations to the client. Michael's experience includes oversight of submittals, RFIs, logs, punchlist items and handling day-to-day issues to keep the flow of information in the office running smoothly and efficiently.

RELEVANT EXPERIENCE

Wastewater Treatment Plant #3, 2007 Expansion, City of Bakersfield, CA. *Project Engineer/Quality Inspector* on the $211 million Expansion of Wastewater Treatment Plant #3. Responsibilities included field inspection, (Architectural, ADA, Structural, Civil, Mechanical, Landscaping and Plumbing), scheduling, coordination, supervision, submittals, RFIs, logs, punchlist items and handling day-to-day issues keeping the flow of information in the office running smoothly and efficiently. The project included 55 new structures and over 388,000 square feet of landscaped area. Some of the structures included a new Operation Building, Administration/Laboratory Building, Maintenance Building, MCC Electrical Buildings, Headworks Building, Blower Building, Tertiary Facilities, RAS/WAS Facility, Cogeneration Building, Dewatering Building, Digester Control Building, Digester, Aeration Basins, Secondary Clarifiers, Dafts, Biofilters, Septage/Grease Receiving Station, Pump Stations; Reclaimed Water Tanks, and Percolation Basins. The project was completed within 30 months–with less than 4% change orders, and saving the client over $11 million with no claims from the contractor.

Project Engineer responsibilities included: Coordinating field testing and surveying activities; performed quality assurance and quality control inspections per jobsite specifications and California Building Code; issued non-compliance and deficiency reports to General Contractor and follow-up for timely resolution.

Michael also prepared detailed punch lists in conjunction with the City and Design Engineer.

Madera County Government Center and Parking Garage, Construction: $35M. The Madera County Government Center included a 130,300-sf, four story office building a 136,000-sf multi-level parking structure with all associated on and off-site improvements. Field Engineering responsibilities included: executed concrete quantities, trend log monitoring and project daily logs; assisted with field purchasing, equipment maintenance logs, weekly progress photos and safety programs and interpreted plans and specifications as needed.

Michael's Office Engineering responsibilities included: processed: shop drawings, submittals, RFIs, sub. pay applications, material deliveries; established a punch list numbering system for foreman to locate needed improvements per architect; and assisted with owner and subcontractor: change orders, as-built documentation, drawing reviews.

Sung Hun Cho
Inspector
WPA

Education:
Civil Engineering Coursework

Registration:
NACE Level 1
NICET III Highway Construction
NICET IV (Pending)
NICET Bridge Inspection I

Years of Experience:
9 Years

NACE LEVEL 1 CERTIFIED

Sung Hun Cho has studied Civil Engineering and has certifications as an ACI, NICET Level II as well as NACE CIP Certification. He has nine years of experience in the field inspecting a wide range of structures including existing condition surveys at seven buldings at JFK Airport as well as over 100 bridges, overpasses, on and off ramps and roads for agencies including New York and New Jersey State agencies as well as MTA. He worked on the MTA Bronx Whitestone Bridge, providing daily inspections on the bridge itself and the tower structures.

RELEVANT EXPERIENCE

Structural Rehabilitation and Maintenance of 12 Bridges on Routes 4, 1&9, 208, and NJ Turnpike in Bergen & Passaic Counties - Assistant Resident Engineer/ Lead Inspector performing management on other inspectors and assisting resident engineer. $9M project requires thorough inspection of bridge lead removal, repainting, and structural deficiencies. The contractors are required to remove all lead and hazardous material and re-do any concrete work, deck joints, and steel work. All work progress and inspections sheets were reported daily and documented. Structural rehabilitation and maintenance of 18 Bridges on Route 21 in Newark, Passaic, and Bellville Counties Lead Inspector - Performed routine structural inspection of state bridges in New Jersey. Prepared reports, AutoCAD and Micro station drawings, and equipment requirements on daily basis prior to each bridge inspection. Performed routine structural inspection of state bridges in New Jersey. Prepares reports, AutoCAD and Micro station drawings, and equipment requirements on daily basis prior to each bridge inspection. Coordinated with team leader on site and inspects bridges with most efficient and safe performance.

Bronx-Whitestone Bridge Field Inspector/Structural Inspector
Provided inspection services of the bridge and tower structures.
Main focus of this $40.0 M project was structural rehabilitation such as: Suspender Rope Shielding, Main Cable Shielding, Tower Structural, Bronx and Queens Anchorage Shielding Panels, Pedestal Fence Installation, Bronx Anchorage Gate Installation, Cable Acoustic Monitoring System, Final Punch List, and etc. Daily made direct contact with resident engineer and project manager from MTA and wrote report as per construction progresses. Responsibilities included monitoring the contractor's activities to ensure they were executed according to the contract plans, specs, shop drawings, etc., monitoring operations such as installation of steel plates, diaphragms, angles, beams etc. using bolted connections. Project involved inspecting Suspender Rope Shielding (Types 1 & 2), Main Cable Shielding, Splayed Main Cable Strand Shielding, Shielding Panels at Underside of Desk.

Inspection of 24 On and 13 Off-System Middlesex County Bridges, Group 12C7 and Inspection of 26 On and 23 Off-System Cumberland County Bridges, Group 06A8 Assistant Inspector
Cumberland County Bridges - Performed routine inspection. Prepared field reports, drawings, and equipment requirements on daily basis prior to each bridge inspection. Coordinated with team leader on site and inspected bridges with most efficient and safe performance.

William (Bill) Gove
Project Executive - Jacobs

Education:
B.S., Business Administration

Registrations:
N/A

Years of Experience:
43 Years

Bill Gove brings 43 years of experience in the construction industry working with Owners, Architects, Consultants and Contractors. His extensive and diverse experience includes senior management roles on both public and private sector work in the New York/New Jersey metropolitan region. Specifically, he has worked for many New York City agencies including the Department of Design and Construction, Department of Corrections, Department of Sanitation and Health and Hospitals Corporation. Bill is Manager of Projects in the New York office, overseeing the operations of all projects in the New York metropolitan, tri-state area.

RELEVANT EXPERIENCE

Port Authority of NY & NJ "Call-In" Contract 2011-2014 *Project Executive.* Responsible for executive oversight, management of staffing resources, and corporate-level support for this "Call-In" Contract for the Port Authority of New York & New Jersey.

New York State Office of General Services, Camp Smith Readiness Center. *Project Executive.* Responsible for executive oversight, corporate level support and the management of staffing resources for the Pre-construction and Construction Phases of a $30M, 112,000 SF new Readiness Center on the active Camp Smith Military Base in Cortland Manor, NY.

New York State Office of General Services, RMHU Program-Various DCS Facilities. *Project Executive.* Responsible for executive oversight, corporate level support and the management of staffing resources for the Pre-construction and Construction Phases of the existing facilities buildings expansions to provide treatment services for the New York State Department of Corrections mental health inmate population at Coxsackie, NY and Romulus, NY. Each of the buildings is 70,000 SF costing $30 million each.

Bronx Mental Health Campus Redevelopment, Dormitory Authority State of New York, Bronx, NY. *Project Executive.* Responsible for executive oversight, management of staffing resources, and corporate-level support for this $300M, 500,000 SF project. Master CM for the entire campus redevelopment project consisting of the construction of six new buildings, along with supporting infrastructure improvements on an operational campus.

Rockland Children's Psychiatric Center, Dormitory Authority State of New York, Orangeburg, NY. *Project Executive.* Responsible for executive oversight, management of staffing resources, and corporate-level support for this $40M, 104,000 SF project. Construction Management services to DASNY for the design and construction of a state of the art adolescent care facility for NYS Office of Mental Health at the Rockland campus in Orangeburg, New York.

Queens College, Remsen Hall Expansion, Dormitory Authority State of New York, Queens, NY. *Project Executive.* Responsible for executive oversight, management of staffing resources, and corporate-level support for the $30M project. CM Services include Pre-Construction, Construction and General Conditions Administration. The project consists of the construction and connection of a new 3-story, 29,000 SF addition to the existing facility.

Rick Fennema, CCM
Sr. Project Manager
Jacobs

Education:
B.S. Structural Design and Construction Engineering

Registrations:
Certified Construction Manager

Years of Experience:
33 Years

Rick Fennema, CCM has more than 33 years of experience in construction management, program management, claims management, trade supervision, scheduling, estimating, cost control, value engineering, construction engineering, and contracts management. His project experience includes delivery systems such as design-build, engineer-procure-construct, multi prime, general construction, development, and turnkey. Rick has completed hundreds of projects for a wide variety of industries including municipal, industrial, commercial, military, institutional, judicial, public safety, healthcare, power generation, transportation, and housing facilities. He has extensive experience in problem resolution and project rescue; and providing goals to lead projects to recovery while building a consensus among stakeholders. He has also led several construction investigation teams that have resulted in large savings for clients.

RELEVANT EXPERIENCE

Manhattan Supreme Court, Manhattan, NY. *Project Manager.* This project included a $38-million restoration and renovation of this landmark courthouse originally built in 1927. Scope of work for system replacements included provision of new: central HVAC system, power distribution system, fire alarm system, and lighting. Restoration scope of work included: finishes in landmark areas, bronze windows, central rotunda conservation painting, decorative painting in radiating corridors, exterior stone and fascia, skylights, interior and exterior bronze lighting fixtures. Renovation scope of work included: roof repairs, waterproofing, plumbing, security systems, and painting. The project was executed via multi-prime delivery method.

Battery Park City Utility Installation, NY. *Project Manager.* Scope of work included extending various utilities approximately 1,000 feet from the BPCA property line to vaults on the New York Mercantile Exchange site. They included medium pressure steam 16" and 22" diameter mains, high voltage feeders, telecommunications feeders, sanitary lines, fire water mains, city water mains, and gas mains. Asphalt roadway was removed and replaced, concrete structures were supported by piles, and utilities were routed around extensive existing utilities.

Fire Safety Systems Upgrade, NY. *Project Manager.* This project involved design-build services to upgrade and renovate 10 New York City owned buildings to bring them into compliance with city, state, and federal regulatory requirements applicable to fire safety systems and ADA requirements. The program spanned 4.5 million square feet of occupied building space. The buildings included: 7 operating civil court, criminal court, and family court buildings; and 3 various municipal office buildings.

NYCHHC Relocation of Corporate Offices, New York, NY. *Project Manager.* This project included New York City Health and Hospitals Corporation (HHC) consisting of 11 acute care hospitals, including Jacobi Medical Center in the Bronx and Bellevue Hospital in Manhattan; six diagnostic and treatment centers; four long-term care facilities; a certified home health care agency; and over 100 community health clinics. Extensive coordination issues were addressed to meet the needs of 750 employees who were relocating.

Andrew Kerr
Sr. Project Manager
Jacobs

Education:
B.S. Chemical Engineering

Registrations:
N/A

Years of Experience:
35 Years

Andrew Kerr has over 35 years of program and project management, engineering, and administrative experience in the design, construction, and operation of campuses, refineries, natural gas processing plants, chemical plants, advanced technology facilities, pharmaceutical facilities, semiconductor fabrication facilities, and remediation projects. As a Program and Project Manager, his responsibilities have included overall management of engineering, design, procurement, and construction activities. Additional responsibilities have included the administration and direction of all phases of contract execution, including assurance of technical quality, adherence to budget and schedule, commercial administration, and conformance with contractual requirements.

RELEVANT EXPERIENCE

Bronx Mental Health Redevelopment Projects, Bronx, NY. *Senior Program Manager.* Responsible for the design and construction of a new 500,000 SF six building campus on the grounds of and to replace the existing campus, constructed while maintaining all existing operations. Responsible for planning, budgeting, estimating, cost and schedule management, design and constructability reviews, coordination of BIM and LEED Silver certification with three separate architectural firms performing the designs, and construction management services.

Harvard Allston Development Group, Cambridge, MA, *Program Manager.* Responsible for the conceptual phase of this $1B LEED Gold scientific research and education center for Harvard University including three buildings with underground parking and central utilities system. Responsibilities included planning, budgeting, estimating, design and constructability reviews, and cost and schedule management.

Johns Hopkins University Applied Physics Laboratory, Laurel, MD. *Program Manager.* Responsible for the overall direction of the over $300MM campus wide development program including 6 new laboratory/office and technical support buildings and site wide infrastructure expansions. Responsible for planning, budgeting, cost and schedule management, and management of APL staff, Jacobs staff, architects and engineers, and general contractors while maintaining design and construction quality focus throughout design and construction.

Lawrence Livermore National Laboratory, Livermore, CA. *Deputy Project Director.* Responsible for the installation of the Beampath Infrastructure System for the National Ignition Facility. Responsible for coordination of engineering, fabrication, and installation of support structures and the integration of same with clean beampath construction.

Twp Pharmaceutical Projects, Madrid, Spain. *Manager of Projects.* Executed two pharmaceutical facility constructions involving offsite fabrication of high purity piping spools and on-site installation of same using various clean connection protocols; development of surface preparation techniques to turn 30 year old walls into pharmaceutical grade clean rooms; grass roots construction adjacent to operating facilities and revamp construction with-in those facilities.

Gus Xenakis, CCM
Sr. Project Manager
Jacobs

Education:
B.S. Architectural Technology

Registrations:
Certified Construction Manager, CMAA

Years of Experience:
25 Years

Gus Xenakis, CCM is a highly skilled project executive who is adept at building and maintaining long-term relationships with clients, designers and contractors. His experience in design and program management includes Wicks Law coordination, contract review and administration, phasing and logistics, construction management and all construction administration duties. Mr. Xenakis has managed and directed project planning, funding and design, constructability reviews, value engineering and cost estimating. He has managed bid documents preparation, and he is accomplished at developing bidder interest, evaluating bids, negotiating contracts and engaging consultants.

RELEVANT EXPERIENCE

Nassau County Building Consolidation Program, Mineola, NY. *Project Manager.* Provided program management for this four-year, $220 million program for Nassau County to reduce its ongoing cost of facilities and increase both productivity of employees and service to county residents. Managing design contracts, construction contracts and systems contracts. Also assisting the county in preparation of grant applications, compliance with the state's green building initiative, and the creation of a real estate database.

Brentwood UFSD Additions and Renovations, Brentwood, NY. *Project Executive.* Provided services for renovation and new construction projects at 18 sites within the Brentwood school district. Project included installation of new EDPM Firestone roofing systems, asbestos abatement of roof flashing and existing boiler rooms, installation of new boilers and control systems, removal of existing underground oil tanks and installation of new fiberglass tanks, replacement of existing asphalt parking areas as well as the installation of new learning technologies including computer stations, cable TV and security systems. Included the construction of six new building additions, which consisted of six new classrooms each.

Cold Spring Harbor CSD, Cold Spring Harbor, NY. *Project Executive.* Project was a four-phase, district-wide capital improvement program. Team members performed comprehensive condition assessments to determine the scope of renovation work to be completed and prepared cost estimates and construction schedules for the overall project.

Dormitory Authority State of New York, Lehman College, Bronx, NY. *Project Executive.* Performed retrofit of an existing building to include a new interstitial floor, multi-media center, computer center and chiller room into the sub-cellars of a 75-year old Educational building. The project has very specialized logistics and access constraints for both structural modifications and new chiller plant installation. The project was executed via the multi-prime delivery method.

New York City Department of Design and Construction, New York City, NY. *Project Executive.* Consisted of a two-year rehabilitation program for 11 schools. Services included building assessment, design management, and construction, followed by a three-year program to renovate 25 schools. The program first assessed the actual conditions and requirements that drive the

Curtis Casey
Project Manager

30 Years

Curtis Casey has 30 years of experience in management, construction, and engineering, having worked for both design and contracting firms. He is a specialist in planning and delivery of large, complex projects; education, institutional health, heavy commercial, and corrections industries for City, State and Federal clients; research and manufacturing for industrial clients; HVAC systems design, particularly gas/oil-fired, hydronic, and steam heating; chilled water and water source heat pump systems; centralized HVAC and refrigeration; plants and distribution, for residential and multi-story commercial, industrial, and institutional facilities.

RELEVANT EXPERIENCE

Rockland Children's Psychiatric Center, Dormitory Authority of the State of New York, Orangeburg, NY. *Project Manager.* Providing full construction management services for DASNY, for the $47 million new 56 bed inpatient facility for children ages 11 to 18. The new inpatient spaces are four - 14 bed wards of approximately 10,000 square feet each and have an extensive range of outpatient and local school services.

District 1 & 4 Garages and offices for the New York City Department of Sanitation, New York, NY. *Project Manager.* This project involved the $80 million new construction for DOS on this multi-prime project. The project consists of 2 acres of site development to construct two new truck depots with associated district offices, and a third level borough office that bridges these two buildings all supported by an extensive grid of pipe piles for independent reinforced concrete and steel superstructures.

Polytechnic University, Brooklyn, NY. *Project Manager.* This project involved the $140 million expansion and development program which consisted of three primary construction projects for a New Academic Building/Athletic Facility, a New 20 story Dormitory and existing academic building Renovation. Facility infrastructure projects includes Elevators Modernization, Bathrooms Reno, Windows Replacement, and demolition and renovations to existing labs.

Brooklyn Juvenile Detention Center for the New York City Department of General Services, Brooklyn, NY. *Project Manager.* Responsible for construction phase management of a new $58.8 million, 120-bed medium security facility. Supervised field and office support staff (administration, scheduling, inspection and reporting) for this multi-prime project. Liaison to design consultants, contractors, user and client.

Manhattan Psychiatric Center for the New York State Facilities Development Corporation, New York, NY. *Assistant Project Manager.* Responsible for financial, contractual, administrative and personnel issues on this $110 million construction management/multiple prime/multiple project renovation and modernization program.

New Construction of Service Garages and Offices for the New York City Department of Sanitation. *Project Manager, Construction Manager.* $75M multi-prime project consisted of 2 acres of site development to construct 2 new truck depots with associated district offices, and a third level borough office that bridges these two buildings

John DeMase
Project Manager
Jacobs

Education:
BS Architecture/Construction Management

Registrations:
N/A

Years of Experience:
27 Years

John DeMase has over 27 years of construction and project management experience for multiple contracts program. As a Project Manager, his responsibilities have included overall management of design, procurement and construction activities. Additional responsibilities have included the administration and direction of all phases of contract execution, including assurance of technical quality, adherence to budget schedule and with contractual requirements.

RELEVANT EXPERIENCE

Smithsonian Institution, Cooper-Hewitt National Design Museum, New York, NY. *Project Manager.* Jacobs is providing construction management services for the Office of Engineering Design and Construction, as well as commissioning services. This includes review, manage and monitor general contractor, subcontractor and consultants construction activities. Provide contract administration services. Review and manage project schedule and identify potential delays as well as other related services. Ensure that contract specifications and plans are implemented accurately and efficiently. Provide contract administration services such as logging, distribution and review of submittals; respond to RFI's, value engineering proposals; correspondence preparation; and evaluate cost impacts due to document changes.

Lincoln Center Re-Development Projects. *Project Manager.* Responsible for multiple contracts for the redevelopment of the Lincoln Center Campus. Projects included infrastructure, reprogramming of public space and updates for student music and theatre classrooms while campus remained active. Directed daily activities of general superintendents, assistant project managers, project engineer and support staff. Established on-site field office and implemented new standard operating procedures for project documents including Change Orders, RFI's, RFP's, PS's and Bulletins. Responsible for reviewing and preparing detailed construction cost estimating, take offs and change orders for negotiation. Set priorities of trade labor and allocated resources based on client/owner and project requirements. Developed logistics plan for all project phasing through CPM scheduling.

Dormitory Authority State of New York Project Management, Bronx Criminal Court Complex, Bronx, NY. *Project Manager.* Responsible as the project manager for the $420M construction of a new 10-story, 740,000 SF facility. Directed the CM, Design Team, and on-site field staff in daily job site activities. Responsible for overseeing job construction for compliance per contract documents. Implemented workflow efficiencies by creating standard procedures and documents for change order estimating. Provided recommendations to owners and design team to minimize change order costs.

Dormitory Authority State of New York Project Management, Bronx County Family/Criminal Courthouse, Bronx, NY. *Project Manager.* Responsible as the project manager for the $58M renovation project of courthouse facility for the reprogramming of space while courts and Bronx Central Booking remain in full operation. Directed the CM, Design Team, and on-site field staff in daily job site activities. Chaired meetings to evaluate and negotiate settlement of change orders and claims.

Joseph J. Greene
Project Manager
Jacobs

Education:
St. John's University

Registrations:
N/A

Years of Experience:
37 Years

Joseph Greene has more than 37 years experience in providing project management and construction management services. Throughout his career, Mr. Greene has been responsible for managing all phases of project delivery from preliminary design to design to construction. During the design phase he has been responsible for managing the coordination of architectural and engineering disciplines and their interface with client and/or owner. He has led constructibility reviews, schedule development and budget estimate preparation. His experience in managing the construction of varied buildings and infrastructure projects throughout the New York Metropolitan area provides him with a unique perspective when formulating scopes of work and bid packaging.

RELEVANT EXPERIENCE

Yonkers Waterfront Redevelopment for the City of Yonkers, NY. *Senior Project Manager.* Responsible for providing project management services for the design and construction of streets, plazas, utilities, bulkhead repairs and esplanade for Phase I Development through design, bidding and construction. He manages the overall administration and coordination of the Design Architect and Engineering Consultant, and provides liaison between the Developer of the Waterfront Properties, his Design Team and The City of Yonkers.

Juvenile Detention Facilities, Brooklyn and The Bronx, New York, for New York City Department of General Services. *Project Manager.* Responsible for administration and coordination of prime contractor's (Wicks Law) during the construction phase of two new facilities, totaling approximately $58M in construction value. Program elements of each included 125 beds, full kitchen and dining, gymnasium, outdoor recreation, and medical facilities.

Metro-North Commuter Railroad Substation Improvement Project, The Bronx and Westchester County, NY. *Resident Engineer.* Responsibilities included all phases of construction engineering including structural, architectural, electrical and site work performed in conjunction with the construction of 10 new or rehabilitated substations on this $16 million project.

Rehabilitation of Five Bus Repair Shops, Brooklyn, Queens and The Bronx, NY, New York City Transit Authority. *Project Manager.* Responsible for construction management/engineering of all phases of construction, including site work, excavations, foundations, building construction, HVAC, electrical and plumbing work.

Permanent Housing for Homeless Families Program, New York, New York, for New York State Housing Finance Agency. *Senior Project Manager.* Responsible for structural, architectural, mechanical, electrical and sitework on this $12.5 million, design/build, gut rehabilitation housing project which includes two sites and 89 multi-bedroom units.

Construction Inspection and Support Services on an As-Needed Basis, New York, New York, for Triborough Bridge and Tunnel Authority. *Resident Engineer.* As Resident Engineer for Contract BBM-309, Glycol Piping Replacement at Brooklyn Battery Tunnel, he was responsible for ensuring contractor compliance with contract documents, and schedule control.

William F. Smith, Jr., PE
Project Manager
Jacobs

Education:
M.S. Civil Engineering (CM)
M.A. National Security and Strategic Studies Naval War College
B.S. Civil Engineering

Registrations:
Professional Engineer: CA

Years of Experience:
28 Years

William F. Smith, Jr., PE has over 28 years of experience in the full life cycle of facilities planning, design, construction, and maintenance. He is an experienced manager and communicator with strong technical, administrative, and people skills. He managed a $4.3 billion program for reconstruction of water, wastewater, irrigation, and land reclamation in Iraq, developing projects, forming team of government and support contractors, coordinating with Iraqi and Coalition Provisional Authority leadership.

RELEVANT EXPERIENCE

New US Mission to the United Nations, New York City, NY. *Project Manager* Jacobs provides construction management and commissioning services for the $100 Million, 26 story, structural concrete office building for the US Department of State's team representing the US at the United Nations. The project site is just 100 ft by 150 ft, in a high visibility urban setting directly across from the United Nations. The design of the project has many unique features, including the first use in New York City of self-consolidating concrete (SCC), selected for advantages in achieving the desired color of the architectural concrete, and to ensure coverage of the dense reinforcing steel system. Jacobs' role includes full construction management services, commissioning of building systems, including the low voltage cable plant, and supervision of several follow-on contracts, including the ultimate contract for relocation of the Ambassador and her staff into the new building. As Project Manager, directed effort of a 12-person staff doing quality assurance, change management, schedule reviews, safety oversight and coordination with the owner (GSA), the end-user (the Department of State), the A/E team and the construction contractors, and with numerous NYC agencies.

New Jersey Schools Construction Corporation / NJEDA Schools Construction Program, Paterson, NJ. *Project Manager.* Jacobs is providing program management for the New Jersey Schools program for the Paterson School District, including health and safety projects, new construction and repair and renovations. The contract includes managing design and construction for $150 million in health and safety projects at 36 schools and in the first year of the program, with subsequent assignment of design and construction management for 35 major construction projects, including 12 new schools. As Project Manager, directed effort of a 30-person staff, completing health and safety projects, the construction of two new schools, and the designs of four new schools; progressing the design of 12 additional schools; and coordinating with the client, the school district, local officials, design consultants and construction contractors.

Head of Facilities Management Branch, Headquarters, US Marine Corps, Washington, DC. Directed a 30-person staff of engineers and analysts setting policy and resourcing 17 major installations for facilities maintenance and recapitalization for a plant value of $32 billion. Planned, programmed and managed execution of construction and maintenance for 25,000 homes. Allocated an annual budget of $800 million.

Clinton L. Jackson
Project Manager
Jacobs

Education:
B.S. Architectural Engineering Construction Technology

RELEVANT EXPERIENCE

New York State Office of General Services Camp Smith Armory / Training Site, Cortlandt Manor, NY. *Project Manager.* Jacobs is providing construction management services to construct the 112,000 SF Readiness Center on the property of Camp Smith. The Armory will be a 3-story structure, constructed of brick and concrete block units with concrete floors, elevator, site work, mechanical, plumbing, fire protection and electrical systems. There will also be a 40,600 SF Army Aviation Support Facility for unheated aircraft storage space, rigid and flexible paving, ground support equipment, hover lanes, fuel storage / dispensing system, aircraft wash facility, exterior lighting, fire protection and fencing.

Rye City School District $10M Capital Improvements Program, Rye, NY. *Project Executive.* Served as Project Executive during infrastructure and capital improvements at the high school/middle school and three elementary schools. The project involved updating the 50-year old buildings to achieve more efficient and reliable systems. Scope of work included several boiler and HVAC replacements, fire alarm system replacements, electrical service upgrades, and the installation of new emergency generators.

Rye City School $1.5M Milton Elementary School Gymnasium, Rye, NY. *Project Executive* for a small gymnasium addition that was originally managed by another CM firm. Responsibilities for this project rescue included review of previous estimates and recommendation for value engineering and scope reduction to meet project budget and procurement.

West Harlem Environmental Action, Inc. $4M Environmental Justice Center, Harlem, NY. *Project Executive* for the adaptive reuse of an existing residential building into community center and office facility. Within the historic district of Hamilton Heights, the Center was a total gut rehabilitation and extension of a four-story row house, into a 7,100 SF LEED gold-certified green building to include meeting areas, exhibition space, offices, a fully catalogued library of hard-to-find environmental publications, a roof garden and courtyard out back.

Cold Spring Harbor Central School District $41M CSD Bond-Related Capital Improvement Program, Cold Spring, NY. *Project Manager* Performed comprehensive condition assessments to determine the scope of renovation work to be completed, and prepared cost estimates and construction schedules for the overall project. Managed the integration of four separate new LANs as well as the construction of state-of-the-art library facilities, a new 10,000 SF school gymnasium, and a new 8,000 SF performing arts complex. Responsible for the construction management of 44 projects requiring 28 Wick's Law.

Christine Oates, CCM, LEED AP
Project Manager
Jacobs

Education:
MBA Financial Management
B.S. Civil Engineering

Registrations:
Certified Construction Manager, CMAA
Engineer-in-Training: NY
LEED AP, 2008

Years of Experience:
19 Years

Christine Oates, CCM, LEED AP is a Program Manager in Jacobs. She has 19 years of experience in providing construction management and program management services on private and public projects including waterfront developement, parks, civil programs, transportation, corporate head quarters, firehouses, and prisons. Her expertise includes design management, pre-construction CM services scheduling, construction trade coordination (Wicks Law projects), and management of difficult and diverse programs and construction projects. Christine is a proponent of excellent project communications, planning ahead to ensure quality, proactive problem solving and resolution.

RELEVANT EXPERIENCE

New York City Economic Development Corporation, Various Projects, NY
Ms. Oates serves as Project Executive on several siteworks projects for the New York City Economic Development Corporation. Projects include the reconstruction of South Street in New York from Old Slip to Fulton Street, Randall's Island Connector Project in the Bronx and the Bronx Shores Pathway Project on Randall's Island.

NYCEDC East River Waterfront Esplanade and Piers Project, NY, NY
Ms. Oates is the Program Manager for this $165M East River Waterfront Project which plans to transform the East River Waterfront from the Battery Maritime Building through to Pier 35. Scope of work includes the redevelopment of two piers, Pier 15 and Pier 35, and redevelopment of the esplanade including new railings, pavers, lighting, landscaping, dog run, basketball courts, other park amenities, service buildings and commercial pavilions. Scope also includes the complete reconstruction of South Street, replacement of combined sewer outfalls, relocation and replacement of several watermains and other DEP related drainage work. As Program Manager she is responsible for development of the programs policies and procedures, managing the programs overall budget and schedule, developing procurement strategies, coordination of the subprojects with adjacent projects, estimating, constructability and coordination with various agencies.

NYCDDC Construction Management (CM Build Contract for Various Facilities). This program, valued at over $65M, included the construction and renovation of various public facilities throughout the City of New York. Projects included the renovation of Shea Stadium, rehabilitation of school facilities, offices, firehouses and an automotive inspection facility and the construction of a new recreational facility. As Project Manager Christine was involved in the design, preconstruction, construction and post construction for this program, she assisted in the procurement phase of all the projects by developing an in depth procurement plan including prequalification of contractors, development of the standard CM Build Contracts and development of the overall program's Construction Management Plan. In addition Christine played an essential role in three of the projects as the Project Manager. In this role Christine was directly responsible for the successful delivery of three projects.

Marc S. Riendeau
Project Manager
Jacobs

Education:
B.S. Construction Management

Registrations:
N/A

Years of Experience:
15 Years

Marc Riendeau has over 15 years of experience in management and administration of construction and engineering for the healthcare, foods / consumer products, pharmaceuticals, and microelectronics / semiconductor industries. He is experienced in execution of single source contracts for design, procurement and construction facilities level projects. He has key experience starting from bid and award of contracts through facility startup and commissioning. He possesses strong field experience in merit shop and union construction projects.

RELEVANT EXPERIENCE

New Jersey Schools Construction Corporation / NJEDA Schools Construction Program, Paterson, NJ. *Project Manager.* Jacobs is providing program management for New Jersey Schools program including health and safety projects, new construction and repair and renovations. The contract include managing $71 million in health and safety projects in the first year of the program, with subsequent assignment of major construction projects, including 11 new schools. The total program value is $830 million (estimated construction cost). Jacobs is currently contracted for the first $400 million of this program, which started in 2001 with estimated completion in 2006.

Material Operations Support Facility (MOSF) & Multiple Scale Organic (MSO), Merck & Co, Inc., Linden, NJ. *Construction Manager.* Managed construction services on an 80K SF, 5-level, $50MM facility for Merck & Co., Inc. Assumed responsibility from the 75% completion milestone through to owner occupancy. Responsible for the coordination of subcontractor activities, forecasting total project costs and scheduling completion milestones in support of substantial completion and commissioning / qualification of cGMP process areas. This included monthly presentation to senior management, strategic planning, cost management, and claim negotiation.

Pilot Plant Renovation, Unilever Bestfoods, Englewood Cliffs, NJ. *Construction Manager.* Responsible for procurement and construction of an EPC, turnkey project;$6.4MM, 25K SF pilot plant renovation for Unilever Bestfoods. Responsible for all facets of procurement and construction including scope development, bid/award of contracts, site safety program implementation, contract management, and daily coordination of the multiple subcontractors/vendors and client personnel.

University of California/Davis, Medical Center Tower II Addition, Sacramento, CA. *Field Manager.* Coordinated inspection activities on a new 13 level Hospital Tower accommodating Nursing Units, Radiology Department, Patient Care Support space, and Life Flight Helideck for UC Davis Medical Center in Sacramento, CA. Interfaced with the Inspectors of Record, Architect, General Contractor, Fire Marshal, and Owner to assure compliance to the Office of Statewide Health Planning and Development (OSHPD) agency. Key focus area related to the testing and commissioning of the Fire Life Safety System. Managed construction activities including seismic bracing and anchorage of Owner Furnished/Owner installed equipment. Managed various documents utilized by the Inspectors of Record during the inspection process and initiated procedures used to document the continuous inspections.

Gayle Benjamin
Construction Manager
Jacobs

Gayle Benjamin has been responsible for administering and managing numerous construction projects throughout the greater New York metropolitan area. Additional responsibilities have included reviewing contractor's estimates and preparing lump sum contracts.

RELEVANT EXPERIENCE

Dormitory Authority State of New York, Queens College Remsen Hall Expansion, Flushing, NY. *Project Manager.* Jacobs is providing construction management services for this circa 1950 hall which houses the Chemistry and Biochemistry and Family, Nutrition and Exercise Sciences Department offices, laboratories, lecture halls, testing rooms, classrooms and demonstration facilities. During the Remsen Hall Expansion Project, the college will expand its current sciences program with new state-of-the-art laboratories and workspaces in a three phase construction process. Jacobs is providing construction management services during Pre-Construction, and Construction, and will also provide General Conditions Administration.

Polytechnic University, Brooklyn, NY. *Civil/Architectural Inspector.* Jacobs provided program management services for $100 million Polytechnic University. The project was a three-phased construction of a New Academic Building/athletic Facility, a New Dormitory and the Rogers Hall Renovation.

New Jersey Schools Construction Corporation / NJ EDA Schools Construction Program, Paterson, NJ. *Project Manager.* Jacobs provided program management and construction management for New Jersey Schools program including Health and Safety projects, new construction and repair and renovations. The New Panther Science Academy included the gut renovation of an existing Auto Parts Facility and conversion into a classroom and computer labs. It also included the addition of a new state-of-the-art planetarium with funding from NASA.

Metropolitan Detention Center, FBOP, Brooklyn, NY. *Project Manager.* Responsibilities included architectural, structural and civil inspection at the $110 million Metropolitan Detention Center. Provided technical guidance to the project engineer. Interpreted drawings and specifications and recommended technical solutions to the A/E. Implemented inspection processes such as daily reports, punch list, document clarification request, submittals, CPM schedule and requisition review. Monitored job-site safety, identified construction quality and processed deficiencies in a timely and constructive manner.

Port Authority of New York & New Jersey's PATH, Jersey City, NJ. *Civil/Architectural Inspector.* Assisted Resident Engineer with construction administration of 56 contracts. Reviewed bids and contracts for conformance and prepared letters of Agreement. Prepared documents for Contract Termination. Reviewed Contracts for completion, prepared Completion of contract Reports and Certificates for Final Compensation. Reviewed monthly application for payment.

James T. Buckley
Construction Manager
Jacobs

Education:
AAS, Architectural Technology and Construction

Registrations:
N/A

Years of Experience:
37 Years

Jim Buckley brings 37 years of experience in the construction industry. He has an extensive background in facilities engineering and construction management, with a proven track record in estimating, budgeting, cost accounting and contract administration. He is knowledgeable of codes, design and construction practices, and safety and environmental issues. He is also experienced in contract documentation and CAD design.

RELEVANT EXPERIENCE

NYS Thruway Authority Interchange 17 Contract 2 Campus, Newburgh, NY. *Senior Superintendent.* The Project involves the demolition of existing facilities and the construction of a new State Police Headquarters, Maintenance building, Repair shop, Cold storage building, two Salt Sheds, new Toll Booths and Revenue Collection Facility. Responsibilities for this project include supervision of staff and subconsultant inspectors, documentation of daily inspectors reporting and Storm Water Pollution Prevention Plan, coordination with NYSTA maintenance groups, daily interface with the General Contractor for quality control and specification requirements, and monitoring of construction safety.

Fishkill Correctional Facility, New York State Office of General Services, Fishkill, NY. *Superintendent/Project Manager,* Responsible for management of mechanical, electrical and construction contracts for this 100 cell special housing unit and regional medical facility. Also responsible for coordination of mechanical, electrical, and utility company inspections. Prepared construction documentation for RFI's, field orders, bid specifications, submittals and closeout. Also supervised medical gas, mechanical, electrical, signal, communications, controls, high voltage and underground utilities.

Adelphi University Fine Arts Building, Cranford, NJ. *Project Superintendent.* Onsite supervision and safety for commercial construction, field documentation, administration, closeout of 5-15 subcontracts, coordination of third party, municipal and environmental inspections.

IBM E. Fishkill 300mm Program Tool Hookup, Fishkill, NY. *Project Manager.* As the project manager, Jim's responsibilities included daily coordination and CM reports to the client; supervision of 65-man crew and subcontracts; testing and inspection reporting; and on-time installation and startup of 350 clean tools in 18 months.

IBM E. Fishkill 300mm Program Base Build, Baltimore, MD. *Project Manager.* As the project manager, Jim's responsibilities included: the coordination of 35-trade subcontracts, coordination with the A/E; formulating and implementing the A/E field design clarification program; maintaining and posting field documents, RFI's, submittals, work orders, 3rd party inspections; subcontractor conflict resolution; and space management.

Anthony Delgado

Eric Monsonis has over 16 years of construction management experience as a Project Manager, Project Controls Engineer and Estimator. He is experienced in the overall management of planning process, design and construction from lease negotiations to occupancy.

RELEVANT EXPERIENCE

General Services Administration, Region 2 On-Call Services, New York, NY. *Project Manager.* Jacobs is providing construction management services to GSA for the Alexander Hamilton U.S. Custom House multi-million dollar upgrade and partial replacement of the fire alarm systems throughout this historic building. The building is currently occupied by the Smithsonian National Museum of the American Indian, the Federal Bankruptcy Court for the Southern District of New York, and various Federal Agencies.

The Neenan Company, Fort Collins, CO. *Senior Project Manager* on multiple projects with overall management of planning process, design, and construction from lease negotiation to occupancy; project management responsibilities included conceptual and detailed estimating, design input and scheduling, constructibility review, material and subcontractor selection, contract administration, subcontractor negotiations and buyout, cost control, project scheduling, change management and project closeout; and onsite and direct supervision of the construction of major projects, coordinating a staff of superintendents and junior project managers. Projects included: Slocum Center – 82,000SF ground up Orthopedic Center; San Luis Valley Regional Medical Center – 45,000 SF addition and renovation; Avista Hospital – 80,000SF medical office building; and Longmont United Hospital – 50,000 SF renovation and expansion of surgery department

Fransen Pittman Construction Co., Denver, CO. *Estimator* on multiple projects including office buildings ranging from 3,000 to 200,000 SF; institutional, light industrial and religious. Methods included pre-cast, tilt-up, structural steel, cast in place, structural masonry and wood construction. Managed and administered all company computer resources. Developed detailed cost estimates from conceptual, schematic, design development and construction stage drawings. Estimated all aspects of construction including sitework, core and shell, and interior phases. Developed and recommended design alternatives to meet budget and program requirements.

Trigon-Sheehan, LLC, Denver, CO. *Project Controls Engineer* on multiple projects responsible for team preparing preliminary and definitive estimates and schedules and cost/schedule reporting. Coordinated projects from schedule requirements, provided cost/schedule analysis and oversaw preparation of project status reports. Managed resource use tracking, and managed personnel on field assignments. Projects included a $46M 24" gas pipeline; $8M products terminal; and a $45M triple 36" gas pipeline.

David Rivera
Construction Manager
Jacobs

Education:
Master of Architecture
Master of Urban Planning
Bachelor of Architecture

Registrations:
N/A

Years of Experience:
16 Years

David Rivera has nearly 16 years of professional experience in Architecture and Construction. His experience includes healthcare, education, commercial and corporate interiors. His responsibilities have included building and interiors design, project management, procurement, contract administration, CPM scheduling, construction change orders, project documentation controls and the use of computer-based project management systems. David has also had significant on-site interaction with contractors and consultants. His expertise and talent are evident in his attention to details from pre-design through construction administration.

David smoothly integrates architectural and construction expertise with the most current technological solutions and products. His diverse experience includes instrumental roles in both public and private sector work in the New York metropolitan region. Specifically, he has provided services to a select client list that include: NYC Department of Design and Construction, NYC School Construction Authority, Health and Hospitals Corporation, and New Jersey Economic Development Authority.

RELEVANT EXPERIENCE

Rockland Children's Psychiatric Center, Dormitory Authority of the State of New York, Orangeburg, NY. *Construction Manager.* Providing full construction management services for DASNY, for the $47 million new 56 bed inpatient facility for children ages 11 to 18. The new center will be approximately 104,000 square feet. The facility includes designated areas for functions including residence, education, administration, admissions, medical support, gymnasium, auditorium, food service, and operational support. Principal responsibilities included pre-construction design and constructability reviews, coordinating construction activity among the various prime contractors, review, track and prepare field directives and construction change orders. He reviews and processes requests for information and product data submittals for the Architect's reply or approval respectively and prepares daily reports of construction activities and adherence to safety procedures.

Liberty Science Center, New Jersey Economic Development Authority, Jersey City, NJ. *Senior Project Engineer.* Provided full construction management services for the New Jersey Economic Development Authority, the principal developer, for the $65 million Liberty Science Center Revitalization and Expansion Project. The project consists of two (2) distinct elements; the 85,000 SF West Wing expansion and the 196,000 SF existing building revitalization. Principal responsibilities included review, track and prepare field directives and construction change orders. Review and process requests for information and product data submittals for the Architect's reply or approval respectively. Assist with oversight of document controls, general office administration and personnel development. Specific responsibility for the following Subcontractors: Selective and General Demolition, Testing and Inspection, Site/Earthwork, Structural Steel, Poured-in-place Concrete, and Landscape. This responsibility included limited discretionary authority for managing, coordinating and tracking construction project id/procurement/award, construction administration and closeout for these Subcontractors.

David Fox, PE
Field Engineer
Jacobs

Education:
B.S. Mechanical Engineering

Registrations:

Jacobs

Education:
B.S. Civil Engineering

Registrations:
Engineer-in-Training

Years of Experience:
12 Years

Faheem Khan's experience encompasses many aspects of civil engineering, including environmental impact statements, preliminary/feasibility studies, and final design to contract plans and specifications, construction management, drainage, cost estimating to bid analysis and construction inspection.

RELEVANT EXPERIENCE

East River Waterfront Esplanade and Piers Project, New York, NY. *Project Coordinator.* Responsible for the improvement and redevelopment of approximately two-mile portion of the East River waterfront that extends from Peter Minuit Plaza at the southern tip of Manhattan to East River Park on the Lower East Side. The Phase 1 project components include the following; The Esplanade, Pier 15, Pier 35 and South Street Improvements. Responsibilities include and not limited to; review of all estimates, drawings and specifications, coordination between all team members and city agencies, constructability reviews, and construction phasing plans.

Yankee Stadium, Bronx, NY. *Construction Inspector.* Responsible for the sewer replacement in E 161st Street. Responsible for overseeing construction of the new 24" DIP on concrete cradle and piles, new drop manhole and tie-in into existing manhole structure per DEP standards and specifications. The new 24" DIP replaced an existing 12" DIP combined sewer necessary to handle flow from the new Yankee Stadium. Additional responsibilities included the overseeing of pile installation according to the specifications and preparing Inspection reports for the work completed on a day to day basis.

East River Science Park, New York, NY. *Project Engineer.* Responsible for schematic and final design of drainage for the East River Science Park Bio-Tech Campus, located between 28th & 30th Streets and the FDR Drive, adjacent to Bellevue Hospital. The campus includes three 16 story research laboratory towers and a 470 car parking structure at service level. Work includes both survey and civil / site engineering design for the 3.5 acre site and includes the relocation of a NYCDEP 48 inch combined sewer, the reconfiguration of a major NYCDEP diversion chamber, new smaller sized storm and sanitary sewers.

Route 9A Project – Lower Manhattan Redevelopment, New York, NY. *Civil Engineer.* Responsible for all cost estimating for the project; West Thames Street to Chambers Street.

Brooklyn Arena and Atlantic Yards, Brooklyn, NY. *Engineer.* Responsible for Maintenance and Protection of Traffic associated with the Brooklyn Arena. These include the replacement of two existing bridges, a temporary bridge, a new LIRR tunnel extension and new subway connections/entrances to the adjacent BMT/IRT and LIRR lines.

Federal Jeans, Queens, NY. *Project Engineer.* Responsible for the preparation of documents as part of the Uniform Land Use Review Procedure (ULURP) application. This effort included the preparation of the Amended Drainage Plan and documentation relating to a site connection proposal for sewer and water systems associated with the 8-acre site. The work involves close coordination with the New York City Department of EPA.

Timothy G. Yan
Field Engineer
Jacobs

Education:
B.S. Construction Management

Registrations:
N/A

Years of Experience:
5 Years

Timothy Yan has five years of experience and is currently the Project Engineer for Dormitory Authority State of New York Bronx Mental Health Psychiatric Redevelopment $350M Campus Redesign and Renovation Project. He is providing field supervision and contractor assistance including quality assurance, quality control and safety. He is also participating in the reviewing of all documents pertaining to this project.

RELEVANT EXPERIENCE

Dormitory Authority State of New York Office of Mental Health, Bronx Mental Health Psychiatric Redevelopment, Bronx, NY. *Project Engineer.* Jacobs is providing construction management services for this multi-building facility, LEED Silver, BIM Coordinated Design and Construction project. Responsibilities on this project include: providing field supervision and contractor assistance for day to day activities and tasks including quality assurance, quality control and safety; managing design review comments and participating in design review discussions and other meetings regarding design procedures; assisting in reviewing all documents submitted by Architects and Engineers, including buildings design/narratives, utilities package, security options, etc; gathering and researching building materials, methods and different HVAC systems for the client for best choices in materials, methods and systems, developing the Residential Village Buildings schedule; and providing recent BIM experience and knowledge to assist redevelopment project.

New York City School Construction Authority, Long Island City, NY. *Project Manager Assistant, College Internship program.* Responsibilities included creating field and daily reports, dealing with change orders and written NCRs / NODs, estimating and confirming General Contractor's estimations for the Senior Project Officer and confirming and estimating costs of labor for the Senior Project Manager.

Robert Raspanti
Electrical Inspector
Jacobs

Education:
Joint Apprenticeship Trade School of IBEW Local 363 (Industrial Electronics Course Electrical Estimators Course 1971)
Cornell University (Labor Studies Program) Rockland Community College Campus

Registrations:
Certified for High Voltage Splicing /1975
Certified for electric-arc welding/1975
New York State Riggers License/1986
Certified fiber-optic installations/1990

Years of Experience:
36 Years

Bob Raspanti is a seasoned Project Manager and a Jacobs MEP Specialist. His 36 years experience in the construction industry includes 10 years providing oversight of the installation of telecommunications cabling and equipment. His construction background, combined with his technical knowledge, provides him a well-rounded skill set for managing and overseeing multi-faceted type projects. His hands-on roles have included Electrical Systems Commissioning, Project Manager, Electrical Specialist, Superintendent, and Electrical Foreman. Bob was the on-site Field Superintendent for the recently-completed Hudson Valley Transportation Management Center in Hawthorne, NY, a project involving complex, state-of-the-art technology systems.

RELEVANT EXPERIENCE

Hudson Valley Transportation Management Center, NYSOGS, Hawthorne, NY. *Field Inspector.* Jacobs provided Construction Management services to the Office of General Services for the $45 million Hudson Valley Transportation Center (TMC). The TMC helps detect and verify incidents, provides information to the public, responds to and clears incident sites, and helps restore traffic flow.

Robs responsibilities included review of drawings and specifications; site development; (soil-nail wall construction, underground utilities, retention ponds, and storm sewer work); Construction Field Coordination / Controls of 6 Prime Contracts; Chairmen of Daily Superintendent/Foreman coordination meetings. He provided oversight of Electrical Work from Pre-construction to Occupancy; Inspection of Electrical Work including security systems(CCTV, Access Controls, Vehicle Crash Barriers, etc); UPS; 2000KW Generator; CATV; lighting; power; GPS Master Clock. In addition Rob oversaw start-up, testing, commissioning and acceptance of all of the above systems.

J.P. Morgan Chase, New York, NY. *Project Manager.* Rob managed and coordinated various trade contractors involved in day-to-day relocation of business units within J.P. Morgan facilities. In carrying out responsibilities, reported to J.P. Morgan Facilities Department Manager. Work assignments included coordination of tenant fit-out work with client users including fixtures, furnishings and equipment as well as requisite utility installations.

MTA Bridges and Tunnels' Henry Hudson Bridge. *Electrical Specialist.* Rob managed the fiber optic installation on the Northbound Gantry for the new traffic surveillance cameras. This $1.5 million project included cabling and installation of traffic observation cameras for the MTA police.

Federal Bureau of Prisons, 1000 Cell Federal Detention Center, Brooklyn, NY. *Electrical Specialist.* Rob performed total inspection responsibilities for all of the electrical systems for a $105 million, 500,000 SF, 1000 Cell Federal Detention Center. Managed installation of fiber optic backbone to support the Data Center, including LAN installation and horizontal cabling installation. Responsible for integrating the UPS and lightening protection system. Prepared electrical change orders, estimates and technical representation to the Contracting Officer during negotiations.

Victor Kee
Senior Inspector
Jacobs

Education:
AA, Fine Arts, County College of Morris

Registrations:
N/A

Years of Experience:
37 Years

Victor Kee is a Construction Inspector with more than 37 years of experience as a Construction Inspector, Superintendent, and Foreman. His experience includes inspections as well as all phases of carpentry.

RELEVANT EXPERIENCE

New Readiness Center at Camp Smith, Cortlandt Manor, NY. *Project Superintendent/Construction Inspector.* Jacobs is providing Construction Management services for the construction of a new $26M state of the art "Readiness Center" (armory). This new building houses the 42nd ID Army Band two infantry units, Command group, and a communications group. This facility includes an Assembly Hall, Lecture Hall, SIPNET room, classroom and conference rooms, general and executive office space, storage space, five (5) gun vaults, band practice rooms, recording studio, music and instrument storage.

New Jersey Schools Construction Corporation / NJEDA $830M Schools Construction Program, Paterson, NJ. *Project Superintendent.* Jacobs is providing program management for New Jersey Schools program including health and safety projects, new construction and repair and renovations. The contract include managing $71 million in health and safety projects in the first year of the program, with subsequent assignment of major construction projects, including 11 new schools. The total program value is $830 million (estimated construction cost). Jacobs is currently contracted for the first $400 million of this program, which started in 2001 with estimated completion in 2006.

Project Management Firm, *Project Superintendent.* Responsible for 115,000 SF, $27 million project monitoring work in progress for a Project Management firm. Scheduled and supervised all DCA and testing agency required inspections, filled out daily reports, attended job meetings, and worked with the general contractor and subcontractors coordinating work activities and material deliveries.

American Concrete and Masonry. *Carpenter/Foreman.* Read plans, layout work, ordered materials, setup inspections, and managed workforce to complete projects on time.

Local 124 Carpenters. *Journeyman/Foreman Carpenter.* Attained experience in all phases of carpentry including concrete formwork, wood and metal stud framing, suspended ceilings, doors and hardware, scaffold erection, trim-work, drywall installation, casework fabrication and installation, and learned to read plans and use layout instruments.

W. Ross Wear
Senior Inspector
Jacobs

Education:
History and Economics

Registrations:
ICC Certified

Years of Experience:
31 Years

Ross Wear has more than 31 years experience in the construction and engineering fields. He has been responsible for start-up training, project management and supervision. He also has experience providing technical guidance; meeting and completing schedules within budget; and monitoring contractors to ensure compliance with all contractual obligations, scheduling, and productivity levels. His construction engineering experience consists of addressing civil, structural, mechanical, piping, administrative, engineering, scheduling, and material problems for the field; interpreting specifications, codes, and drawings; amending designs; and coordinating inspections.

RELEVANT EXPERIENCE

Plant Expansion Project, US Borax, Boron, California. *QA/QC Manager.* Scope included civil, reinforced concrete, structural, mechanical, and piping; was the Kern County Deputy Inspector onsite; completed on time and under budget.

Facility Upgrade, GSA Tucson Federal Courthouse, Tucson, Arizona. *Subcontract Coordinator.* GSA supervision of tenant improvements including demolition in a multi-story federal courthouse to facilitate new elevator installation, holding cells, security walls, and utilities; 100% client satisfaction ratings.

405/55 Interchange, Cal Trans, Irvine, California. *QC Inspector.* Scope included Cal Trans Field inspections, traffic closures, and change order processing.

NIF Project, Lawrence Livermore National Laboratory, Livermore, California. *QC Manager.* Supervision of an inspection staff of 9 to assure compliance to contract requirements for lab; set up Installation Verification Checklists, Non-conformance Reporting, tracking, and closure; Welding Program, Calibrated Measuring and Testing Equipment Program and Daily Reporting; supervision of Receipt & Source Inspection Programs, subcontracted QA, inspections, and their contracts.

MTA Universal City Restoration Contracts, Burbank, California. *QC Supervisor.* Supervised an inspection staff in charge of ensuring contractor and subcontractors comply with all City of Los Angeles and Cal Trans requirements for the Lankershim bridge widening, 101 Freeway Over Crossing, Ramps, Red Line Bus Plaza, and parking lots; letter of commendation from JMA / Hatch, Mott, McDonald Corporation.

MTA Redline Subway, Los Angeles, California. *QC Supervisor.* Supervised an inspection staff of 10 in charge of ensuring the contractor and subcontractors complied with all specification, drawing, code, and contract obligations for architectural, civil, structural, electrical and mechanical disciplines. Construction of the Hollywood / Highland Station multi-story underground structure and associated tunnels included supervision of excavation, shoring, backfill, HDPE waterproof membrane, forming, rebar, concrete placement, structural steel, and architectural finishes.

Dan Wardrope
Senior Inspector
Jacobs

Education:
Coursework, Construction, University of Washington

Registrations:
N/A

Years of Experience:
29 Years

Dan Wardrope has over 29 years of experience and has worked on a variety of commercial and public facilities projects, including secondary and university facilities, retail facilities, fire house, churches, and residential facilities. His duties have included acting as the Owner's representative, overseeing scheduling, budgeting, contract negotiations, and coordination of inspection and engineering services for major construction projects.

RELEVANT EXPERIENCE

Staten Island Supreme Courthouse, Dormitory Authority State of New York, Staten Island, NY. *Construction Manager.* Jacobs is providing Construction Management services during Design, Pre-Construction and Construction, and will also provide General Conditions Administration. Once built, the new Staten Island Supreme Courthouse will be a state-of-the-art courthouse containing 14 Courtrooms in a 154,000 GSF facility with associated parking for the needs of Supreme Civil Court, Supreme Criminal Court, the Surrogate Court and related Agencies. The new courthouse will also contain secure holding facilities with a capacity to accommodate approximately 100 prisoners. Each detention pen will contain toilet facilities and be constructed to hold separate genders and age groups. The project involves all principal construction management disciplines including architectural, civil, structural, HVAC, plumbing, electrical, fire alarm, telecommunications and security.

International High School, Paterson, NJ. *Superintendent.* This $37.5M project entails the complete new construction, building and site work, for the full program - new International High School. The 115,000+/- square foot facility has been planned as a main four-story structure running east to west with two flanking wings along Grand Street. Responsibilities and tasks included use and maintenance of Prolog Project Management system including customizing reports and forms to document and track contractor activity; review and observation of contractor field labor, material and project activity; assist and track projects' percent of completion to assist in evaluation of contractor requisitions; maintain photographic log; collect and review contractor daily reports; conduct pre-installation conferences; assist with RFI review and resolution; coordinates NJDCA and all other agency construction inspections; and monitors and documents daily compliance with client safety program.

Marshall Street School, Paterson, NJ. *Superintendent.* The $32.4M Marshall Street School is a new K-8 grade school that will house 641 students within one facility with the goal of providing continuity and stability in their critical early years. The contract is divided into three phase (1) demolition and site clearing (2) major site improvements (3) new school construction. Tasks included use and maintenance of Prolog Project Management system including customizing reports and forms to document and track contractor activity; review and observation of contractor field labor, material and project activity; assist and track projects' percent of completion to assist in evaluation of contractor requisitions; maintain photographic log; collect and review contractor daily reports; conduct pre-installation conferences; assist with RFI review and resolution; coordinates NJDCA and all other agency construction inspections; and monitorsand documents daily compliance with client safety program.

Hatoum Hatoum
Senior Inspector
Jacobs

Education:
MS, Civil Engineering, Polytechnic Institute, 1982
BS, Civil Engineering, Polytechnic Institute, 1981

Registrations:
N/A

Years of Experience:
29 Years

Hatoum Hatoum is one of Jacobs' most experienced Construction Inspectors for New York area infrastructure projects, having served in these capacities for many New York agencies, including the Port Authority of New York and New Jersey, MTA Bridges and Tunnels, NYCDOT, and NYSDOT. Previously, Mr. Hatoum was an estimator for new construction and renovation projects in the United States and Project Engineer for building and infrastructure projects in Saudi Arabia

RELEVANT EXPERIENCE

MTAB&T Henry Hudson Bridge Lower Level Deck Replacement. *Senior Construction Inspector.* $85 Million renovation of the Lower Level of the Henry Hudson Bridge in New York City. Construction management, inspection testing, emergency response and other services required for administering and managing the project to ensure it meets the cost, schedule, quality, safety and other criteria of this contract. Project HH-80 will involve concurrent work at multiple work locations with days, nights and weekend shift work and close coordination on a daily basis with Bridge Operations, Maintenance, and Engineering staff, and with New York City agencies, utility companies, and other entities engaged in work at the Henry Hudson Bridge.

MTAB&T's Brooklyn Battery Tunnel, New York, NY. *Assistant Resident Engineer.* $80 million Construction Administration and Inspection services for the rehabilitation of roadway and fresh air ducts at the Brooklyn Battery Tunnel. $30 million Structural Repairs and Lighting System Improvement; and Mechanical, Plumbing, Fire Protection and Electrical Rehabilitation and Upgrade of the Battery Parking Garage. Responsibilities include maintaining computerized document control system.

Performance of Expert Professional Program and Construction Management Services on an "As-Needed" Basis, Port Authority of New York & New Jersey. *Construction Inspector.* Responsible for providing construction management and inspection services on project related to PATH. Provided management and oversight for interior renovations at One Journal Square.

Queens Midtown Tunnel Roadway Slab and Fresh Air Duct Sidewalls, Contract QM-12 RFP No. PSC-93-2273, $19 million Construction Inspection and Support Services. *Senior Inspector.* Replacing virtually all of the steel-reinforced concrete that supports the asphalt roadway seen by motorists. Sealing the reinforced concrete with a waterproofing membrane to prevent moisture seepage that weakens the roadway. Resurfacing the roadway with waterproof Trinidad asphalt and grooving the asphalt to prevent vehicle skidding. Thorough lead and asbestos removal in the ducts running along both sides of each tube and upgrading the fresh-air flues.

MTA Bridges and Tunnels, Henry Hudson Bridge, PSC-91-2175, New York, NY. *Senior Inspector.* Project included construction engineering and inspection of repairs and included repairs of abutment, anchor bolt repairs to bridge skewbacks, concrete repairs to piers, underwater concrete repairs, replacement of rip-rap, structural steel repairs at main towers and concrete repairs.

Hector Chiong
Senior Inspector
Jacobs

Education:
AAS, Drafting and Design Technology – In progress

Registrations:
NICET Highway Construction – Level IV, 2002
ACI Field Testing Technician – Grade I, 2000

Years of Experience:
10 Years

Hector Chiong has 10 years of extensive construction inspection and observation experience on transit and bridge projects in the New York Metropolitan area for such clients as MTA, NYSDOT, NYCDDC, NYSDOT and NYCEDC on a "Call-In" basis.

RELEVANT EXPERIENCE

MTA NYC Transit, Charleston Bus Annex, Staten Island, New York. *Civil Senior Inspector.* Safety and Quality Inspection monitoring Design/Build "Green"construction including job site safety which included removal of 10 acre vegetation for major fill/excavation work modifying contour to plan requirements. Installation of sheet piling retaining walls to support bus parking area. Various reinforced concrete construction which includes: building foundation footings, piers, walls, overhead and on-grade slab floors; pile caping, approach ramps, pedestrian bridge deck, barrier walls, sidewalks and steel faced curb construction. Also monitored steel erection work: interior building columns and support steel and exterior bridge steel. Additional exterior work includes: guide railing, bollards, and ornamental railing installations, storm drainage sewer, manholes and catch basins, asphalt concrete placement, line stripping and also exterior architectural block work for building. Supply daily inspection reports.

NYSDOT, Gowanus Expressway Emergency Repair Of Route I-278 Viaduct. *Civil Chief Inspector / HOV Inspector (Level IV).* Management and supervision of field inspection staff performing Safety and Quality inspection work: Elevated bridge deck demolition and fall protection setup, reinforced bridge deck reconstruction, scupper installations, major upgrade to bridge fascia railing. Bridge steel panting and containment setup. Supervised High Occupancy Vehicle (HOV) daily transportation setup, removal and maintenance operation. Inspection of daily MPT lane closure operations. Supply daily inspection reports.

NYCDDC, Pedestrian Ramps at Designated Locations in the Borough of Bronx. *Chief Inspector / Office Engineer (Level IV).* Field supervision and assistance to inspection staff monitoring construction activities: Field survey designated street locations, inspecting existing sidewalk conditions and authorize type of pedestrian sidewalk to reconstruct. Record data on spreadsheets for final review, review Inspector Daily reports, contractor payments and log Engineer's Daily Diary.

NYSDOT, Long Island Expressway / Clearview Expressway, Interchange Improvements Project. *Chief Inspector / Civil Senior Inspector (Level IV).* Job site safety and supervision of field inspection staff supervising the following activities: Construct temporary approach ramps for the installation of a temporary steel bridge for staging work. Excavation and backfilling work, bridge deck demolition and reconstruction, including abutment walls and footing/pier construction. Roadway demolition and reconstruction, under drain and storm drainage installations, asphalt concrete placement, solider pile retaining wall and noise barrier wall construction, MPT safety enforcement.

NYSDOT, Reconstruction of Martin Luther King Expressway NB & SB *Civil Senior Inspector (Level III).* Safety, quality inspection and daily reporting.

Jacob L. Dallas
Special Inspector
Jacobs

Education:
M.E, Civil Engineering
B.E., Civil Engineering

Years of Experience:
13 Years

Jacob Dallas has over ten years of experience in the construction field and has held numerous progressively responsible positions in construction management. His area of expertise includes Guideway decks, structural concrete and steel, highway box construction, utility relocation and heavy demolition. He has extensive experience in field inspections, office engineering and document control specialties.

RELEVANT EXPERIENCE

Bayonne Local Redevelopment Authority (BLRA), Route 440 Grading, Paving and Traffic Signal Improvements. *Construction Inspector/Office Engineering.* Responsibilities included: Inspection of Maintenance and Protection of Traffic (MPT); Inspection of Installation of new drainage structures and RCP; Inspections of earthwork, paving, concrete work, reinforcement steel placement; responsible for safety coordination and Utility relocation work.

Inspection of roadway boxing for reconstruction; inspection for installation of electrical conduit, modified foundations and traffic signals; HMAC paving of widening roadway, milling and resurfacing and responsible for Safety operations of heavy demolition work.

Conrail National Docks Clearance Project (CSX), Bergen Tunnel Clearance Project, Jersey City. *Part Time Chief Inspector.* Responsible for overseeing construction Inspections for a 4,000 linear foot long tunnel including overseeing heavy demolition of tunnel crown, drilling for anchoring rock bolts and flowable fill placement; mucking and clearing of track bed; and compliance with contract plans and specifications.

Southeastern Pennsylvania Transportation Authority (SEPTA), Market Street Elevated Program Management, Philadelphia, PA. *Civil Construction Management QA/QC Inspection/Office Engineering.* Responsiblities included: document control including shop drawings, transmittals, correspondence, RFIs, distribution and tracking of contract drawing and specification revisions; preparation of PCOs, CICs and Change Orders; maintenance and protection of traffic; inspection of pre-cast Guideway decks, structural concrete and steel; inspection of Bolt up, match marking and Skidmore testing; inspection of post tensioning anchor bolts for pedestals; Safety observations of demolition and removal; inspection of roadway milling and resurfacing; inspection of track construction; inspection of backfilling and compaction and inspection of guardrails.

Vincent Palacio
Senior Inspector
Jacobs

Education:
Computer Technology

Registrations:
NICET, Level IV, 2006
ACI Certified, 2006

Years of Experience:
30 Years

Vincent Palacio has provided construction inspection services on numerous bridge and roadway projects in the New York City area.

RELEVANT EXPERIENCE

MTA Bridges and Tunnels/TBTA, Brooklyn Battery Tunnel. *Chief Inspector* for rehabilitation of the Manhattan Blower Building and Manhattan Underground Exhaust Building. Work includes steel and concrete repairs, removal of lead paint and asbestos, maintenance of traffic during tube closures, and coordination of work with TBTA operations and maintenance staff.

NYS Department of Transportation, Gowanus Expressway Viaduct Emergency Repair Contract, Brooklyn, NY. *Senior Inspector* responsible for construction inspection services of full-depth and partial-depth concrete deck repairs, structural steel repairs, retaining wall repairs, and maintenance and protection of traffic. The Gowanus Expressway is a three-mile-long elevated viaduct reaching a height of 120 feet over the Gowanus Canal. D007423

NYC Department of Transportation, Manhattan Bridge Reconstruction, New York, NY. *Construction Inspector.* Responsibilities on this $124-million project involved replacement of truss bearings in both approach spans; rehabilitation of south side tunnels; replacement of lower roadway double floorbeams in both approach spans; rehabilitation of the eyebars in anchorage B chambers; rehabilitation of the Brooklyn Plaza Park; replacement of subway floorbeams and stringers on the south side in both approach spans and suspended spans; rehabilitation of the center arch and colonnades at the Manhattan Plaza; and installation of temporary street lighting.

New York City Department of Transportation, Manhattan Bridge Rehabilitation, New York, NY. *Construction Inspector.* Responsibilities on this $97-million project involved the replacement of reinforced concrete-filled grid deck; structural steel stringers and diaphragms; installation of new steel expansion joints and replacement of downspout drainage system for the two west side approach spans; installation of a truss stiffening system for both west side spans and completion of the stiffening system for the east side spans; completion of rehabilitation of pedestrian west walkway including new extension ramp in Manhattan; placement of micro-surfacing overlay on concrete gridwork; chemical stripping of paint; installation of temporary and permanent concrete barriers; installation of shear studs for deck; and placement and field testing of concrete and asphalt.

Reconstruction of Chatham Square, New York, NY for the New York City Department of Design and Construction. *Construction Inspector.* Responsibilities on this $7-million reconstruction project involved the installation of 36", 20", and 12" water mains; rebuilding roadway and sidewalk; installation of new drainage; installation of new traffic signals; street lighting and revised traffic pattern; and establishing park areas within the square and refurbishing statues.

Ornamental Railing Projects, Jamaica, NY. *Project Superintendent.* Supervised multiple projects. Duties involved project layout, scheduling, and direct contact with workforce and clients.

Gerald J. Petroski
Senior Inspector

Education:
A.S., Building Construction / Engineering Technology

Registrations:
ACI Certified

Years of Experience:
32 Years

Gerald Petroski is experienced in various aspects of construction management with over thirty years of extensive construction engineering experience managing a diverse range of rail projects. He regularly monitors construction and design progress, coordination with third parties in regards to clients needs, scheduling client flagmen services for contractor's work operations and invoicing concerns of third parties as they relate to client services. Gerald is also thoroughly experienced in the various aspects of maintenance and protection of traffic, construction staging, and construction administration for major rail reconstruction projects in complex urban environments, particularly in the Metro New York/New Jersey area.

RELEVANT EXPERIENCE

CONRAIL, On-Call Engineering and Construction Management Service Contract, NJ. As an extension of Conrail's staff, we have been responsible for the design, bid assistance, and construction management for on-call assignments. Gerald's assignments have included:

Meeker Ave. Bridge, Newark, NJ. *Project Engineer/Inspector* responsible for Construction Management services for the Meeker Ave. Bridge, Newark, NJ assignment. He was responsible for emergency structural repairs and bridge change out. Work included new steel girders and new grillages; Double track - one freight (Conrail), one passenger (NJ TRANSIT); and two bridges at two spans each. Work had to be accomplished in two weekend shutdowns fir change out

Chemical Coast Bridge Replacement Project - Pyles Creek, Linden, NJ. *Project Engineer* for construction management for the replacement of a four-span, double track, ballast deck railroad bridge over Pyles Creek, Linden, NJ. Work included tidal influenced scheduling, steel pile driving, track relocation, and staging. Mr. Petroski scheduled and coordinated all work with railroad operations by initiating Bulletin Orders for track outages, cut-overs, and track protection. He also managed contract work and coordinated same with railroad trades including Communications and Signals; Track and Building & Bridge Departments.

AboveNet Fiber Optic Cable Relocation for Waldo and Bergen Tunnel Enlargement Project. *Project Engineer* for coordination and construction oversight of the AboveNet FOC relocation through the Waldo and Bergen Tunnels on the National Docks Branch, Jersey City, NJ. Work is for Conrail in advance of the proposed tunnel clearance project. Developed plan for wall-mounted relocation in Waldo Tunnel and coordinated track usage, flagman scheduling, and inspection of physical work. Worked directly with AboveNet consultants to locate existing lines and develop plans for relocation in conjunction with Conrail Specifications and Standards.

Bergen Tunnel Clearance Project, National Docks Branch. *Project Engineer* responsible for coordinating survey and tunnel mapping, rock coring, assist in pre-engineering, development of plans, specifications, proposal, and bid quantity sheets for the proposed project in Jersey City, NJ.

Jeff Rudenjak
Resident Engineer
Jacobs

Education:
B.S., Civil Engineering Technology
A.A.S., Engineering

Registrations:
NICET Level IV, [redacted]
ACI, Concrete Construction Technology Course
ACI, Concrete Field Testing Technician – Grade 1
NJSAT, Asphalt Paving Technologist

Years of Experience:
26 Years

Jeff Rudenjak is an accomplished Field/Construction Engineer. He has been the Resident Engineer for the last 18 Southern Bridge Deck and Resurfacing contracts for the NJTA. Jeff was also the Office Engineer for the $33.4 million dualization of two miles of mainline roadway of the New Jersey Turnpike. His duties include issuing task assignments to inspection forces; verifying inspectors' reports; managing various project records; monitoring the shop drawing progress; preparing as-built drawings and progress reports; project scheduling; and reviewing design contract drawings.

Jeff served as inspector for the Howland Hook Marine Terminal construction inspection project in Staten Island, New York. This work involved rehabilitation of yard fire hydrant system and cargo crane wharf rail system; installation of an earth retaining sheet pile wall and redesign of yard drainage network. His duties included site supervision and inspection, and preparation of daily progress reports and as-built drawings. He also performed inspection for a Gulfport Terminal construction project in Staten Island, New York.

RELEVANT EXPERIENCE

NJ Turnpike Authority (NJTA), Bridge Deck Repairs and Resurfacing Mile 0 To Mile 83 and Pearl Harbor Memorial Turnpike Extension, Contracts. *Resident Engineer* responsible for providing construction inspection services related to bridge deck repairs and resurfacing of bridges. This project included multi-span bridges and multiple bridge contracts. Mr. Rudenjak was responsible for coordination and assignment of the inspection team, and tracking and approving payment of all budget related items for the inspection and construction of this project.

NJ Turnpike Authority (NJTA), Design Services for the Lengthening of Six New Jersey Turnpike Bridges, Southern, NJ. *Construction Engineer* responsible for providing construction consultant services consisting of constructability issues, review of MPT schemes, construction schedules, and shop drawing review.

NJ Turnpike Authority (NJTA), New Jersey Turnpike Interchange 9 Toll Plaza Expansion and Construction, New Brunswick, NJ. *Chief Inspector and Office Engineer* on this $7.1-million construction project to expand the toll plaza with widening and additional ramps.

NJ Turnpike Authority (NJTA), 1988-91 Widening, NJ, Completion Date 1991, East Brunswick, NJ, 860001042-2. *Office Engineer* for this $27million project involving the construction of 16 retaining walls and 5 bridges. The project also included grading, drainage, paving, structures, and the relocation of utilities. This $27 million widening project included two miles of four-lane widening.

NJ Turnpike Authority (NJTA), 1989-90 Main Street Overpass, Milltown, NJ. *Office Engineer* for this $5.5-million project involving drainage, paving, relocation of utilities, construction of temporary structure, removal of previous structure, and erection of a new bridge structure over the New Jersey Turnpike, with installation of posts for noise barriers and other related work.

Arthur B. Salisbury
Senior Inspector
Jacobs

Education:
Civil Engineering Technology

Registrations:
NICET - Level IV#[redacted]/US/1987/ 2011
ACI - Level I - American Concrete Institute#[redacted]/1998/ 2013
ACI - Level II - American Concrete Institute#[redacted]1998/ 2011
NJ SAT - Asphalt Technology Certificate/2012
TCP - Traffic Control Coordinator, Course #446, Feb. 14, 2003 / Rutgers Center for Advanced Infrastructure and Transportation/Local Technical Assistance Program

Years of Experience:
40 Years

Arthur Salisbury has served extensively on construction inspection and observation projects for the construction and widening of roads, bridges, and toll plazas. His experience covers all phases of highway and bridge construction, including inspection of materials at asphalt and concrete batch plants, as well as engineering and construction survey duties. He has also inspected sandblasting and painting on several bridge rehabilitation projects.

RELEVANT EXPERIENCE

NJ Turnpike Authority (NJTA), Supervision of Construction Services. *Assistant Resident Engineer* responsible for day and night work cycles to rehabilitate land and water spanning bridges. Oversaw construction of concrete repairs on substructure members (abutments, piers, columns, caps), structural steel repairs (on damaged girders, haunches, bearings, diaphragms), utilization of temporary shoring/jacking towers to support deck stringers, applied epoxy waterproofing, localized SSPC SPC6 cleaning of lead based paint systems for steel repairs with Level 4 – Class 4 containment then recoating with an epoxy mastic paint, completing emergency steel repairs under on-call status, MPT for lane closings on GSP and NJDOT roadways.

NJ Department of Transportation (NJDOT), Construction Inspection Services for Shark River Bridge, Belmar, NJ. *Chief Inspector* responsible for construction inspection services including pile installation, inspection of substructure and superstructure concrete, as well as inspection of reinforced and structural steel placement. Mr. Salisbury was also responsible for daily reporting including quantities and as-builts.

NJ Turnpike Authority (NJTA), Bridge Deck Repairs, OPS #1823, NJ. *Chief Inspector* responsible for assisting the Resident Engineer with providing construction inspection services including bridge deck replacement, parapet replacement, armor joint repair and replacement, latex modified concrete placement, and asphalt resurfacing. This project entailed bridge deck repairs and resurfacing on about 15 bridges between Mileposts 0 and 83 and the Pearl Harbor Memorial Turnpike Extension. One of the bridges (the Delaware River Turnpike Bridge) is considered a major structure. This project entails continual (from project inception through February 2000) inspection services and upgrades to 15–20 NJ Turnpike bridges between Mile 0 and Mile 83 (Interchange 9). Additionally, bridge deck repairs are completed on various State and Local Roads during the construction cycle.

NJ Turnpike Authority (NJTA), Southern Bridge Deck Repairs Construction Inspection Services R-1309, Southern New Jersey. *Chief Inspector* responsible for assisting the Resident Engineer with providing construction inspection services including bridge deck replacement, parapet replacement, armor joint repair and replacement, latex modified concrete placement, and asphalt resurfacing. This project entailed bridge deck repairs and resurfacing on about 15 bridges between Mileposts 0 and 83 and the Pearl Harbor Memorial Turnpike Extension. One of the bridges (the Delaware River Turnpike Bridge) is considered a major structure.

Raymond C. Klein, PE
Mechanical Inspector
Jacobs

Education:
B.S. Mechanical Engineering

Registrations:
Professioanl Engineer: FL, CT, SC and MA

Years of Experience:
24 Years

Raymond Klein, PE is a highly experienced mechanical engineer with over 24 years of experience in the design of civil mechanical projects for both public and private clients. His expertise covers all aspects of transportation and facility mechanical design including HVAC, plumbing, and safety systems. Mr. Klein is knowledgeable in the most technologically advanced processes and programs associated with mechanical engineering including: indoor air quality maintenance, ACAD, CADvent, and Carrier HAP.

RELEVANT EXPERIENCE

General Services Administration, Region 2 U.S. Mission to the United Nations, New York, NY. *Mechanical Engineer.* Jacobs is providing on-call construction management services to GSA, Region 2. The new facility will be a heavily reinforced 26-story 150,000SF high-rise constructed of reinforced concrete.

New Jersey Schools Construction Corporation / NJ EDA Schools Construction Program, Paterson, NJ. *Mechanical Engineer.* Jacobs provided program management and construction management for New Jersey Schools program including Health and Safety projects, new construction and repair and renovations. The New Panther Science Academy included the gut renovation of an existing Auto Parts Facility and conversion into a classroom and computer labs. It also included the addition of a new state-of-the-art planetarium with funding from NASA.

Tren Urbano-Rio Piedras, Puerto Rico Department of Transportation, San Juan, PR. *Mechanical Engineer* responsible for design of mechanical systems for construction phases of HVAC and plumbing at the University and Rio Piedras stations. The project consists of a new, two-track transit system with approximately one mile of tunnel and two major stations. The 17 km, $1.5 billion design build project will bring transit service to San Juan. Worked on from 2000 to 2001

Blue Line Extension to Largo Design-Build, Washington Metropolitan Area Transit Authority, Addison Route, Washington DC. *Mechanical Engineer* responsible for the design of HVAC and plumbing systems for the Summerfield and Largo stations and Maintenance & Operations building. The project involves a 3.1-mile extension of the Metro Blue Line transit rail system from the existing Addison Road Station to Largo Town Center. The line extension includes two new stations; 1,700 route feet of at-grade double track; 10,500 route feet of underground structure and; 3 aerial structures with a combined length of 2,000 route feet. Worked on this project from 2002 to 2003.

Maverick Station, Massachusetts Bay Transportation Authority, Boston, MA. *Mechanical Engineer* for design of new HVAC and plumbing systems. This project involved rehabilitation an existing subway station. The platform had to be lengthened to account for new/longer trains and the fire protection system and electrical systems had to be brought up to current code requirements. The authority also added a second means of entry and several ancillary spaces. The track drains are located at this station as well and where not in working condition. Part of the project has been to bring the pumps back on line.

Craig Timko, PM
Resident Engineer
Jacobs

Education:
B.S., Civil Engineering Technology
A.A.S., Civil Engineering Technology

Registrations:
NICET, Level IV, Civil Engineering Technology/Associate Engineering Technician/Transportation Engineering Technology/Highway Construction, US, [redacted]
Date First Achieved/Earned: 02/25/1987
American Concrete Institute, ACI Concrete Field Testing Technician, Grade I, Expires 03/29/13
American Concrete Institute, NJ Chapter, Concrete Construction Technology Course, Expires 02/13

Years of Experience:
36 Years

Craig Timko,PM has three decades of experience with a proven track record of business aptitude and profitability in Construction Management, Construction, and Engineering. Craig has demonstrated the ability to create positive work environments and enthusiastic teams; possesses solid management techniques that translate to profitable project and office performance; strong communications skills; and experience speaking at company meetings, town meetings, and training events. He has worked extensively throughout the State of New Jersey, primarily for NJDOT, the New Jersey Turnpike Authority, and various counties including Essex County and Ocean County.

RELEVANT EXPERIENCE

County of Ocean, Design and Construction Administration Services for the Bay Avenue Improvements, Toms River, NJ. *Resident Engineer /Project Manager* responsible for inspection of roadway construction, installation of drainage asphalt, sidewalk, curbs, installation of electrical and traffic signals, test pits, as well as collection of field measurements, as-built drawings, monthly estimates, and progress reports.

County of Ocean, County Line Road Reconstruction, Lakewood/Jackson Township, NJ. *Resident Engineer* responsible for providing construction inspection services involving drainage, milling, paving, curbs, sidewalks, driveways, and construction of detention basins and new traffic signals at three intersections including all electrical installations. Mr. Timko was also responsible for extensive utility relocations and community involvement with residents along this highly residential area.

County of Ocean, NJ, Construction Inspection Services for the Reconstruction of Lacey Road, Ocean County, NJ, *Project Manager and On-Site Resident Engineer* responsible for the day-to-day inspection of the roadway reconstruction project. Elements of work include construction of a detention basin and new storm drainage system, new concrete curbs, sidewalks, and driveway aprons throughout the project, roadway widening, new signalized intersection, base and final HMA placement. Mr. Timko's duties include daily inspection of all construction operations, daily inspection reports including quantity tracking, monthly progress estimates, change order preparations, coordination between the County, the contractor, and the Township and final project closeout. Mr. Timko also assists local business owners and residents with problems related to the project.

County of Ocean, Construction Administration Services for the Reconstruction of Brick Boulevard, Brick Township, NJ. *Project Manager* responsible for scheduling inspection staff, monthly progress estimates and reports, shop drawings, and utilities coordination. As Resident Engineer his duties included providing construction administration services involving drainage, paving, curbs, sidewalks, inspection of bridge construction, and piles. Major work items include the total removal of roadway to subbase and the construction of new Aggregate Base Course and HMA paving, the installation of new drainage system, construction of two box culverts, and the construction of a new bridge over Kettle Creek.Vertical Lift Bridges built on the Hackensack River in 1930) and approach viaducts on a north alignment.

Richard S. Treloar
Resident Engineer
Jacobs

Education:
Associate in Arts; Civil Engineering

Registrations:
ACI Field Testing Certified

Years of Experience:
43 Years

Richard Treloar recently joined Jacobs after a long career with the New Jersey Department of Transportation.

RELEVANT EXPERIENCE

NJDOT Supervising Engineer Construction. *Field Manager.* Under the direction of the Regional Construction Engineer, supervised Resident Engineers/Field Staff during the administration of NJDOT Construction Projects.

NJDOT Project Engineer Construction. *Resident Engineer.* Direct, on site representative of the New Jersey Department of Transportation on highway contracts executed to contractors. Responsible for the administration of the contract including inspection of the work; preparing changes to the contract and correspondence; management of staff; resolution of construction issues; review of progress schedules; inspection, evaluation, and report on the general condition of the contractor's operations, the rate of progress, general and specific compliance with applicable local, state, and federal laws, codes, ordinances; utilized computer applications to complete assigned tasks; utilizing project site visits, evaluated the progress of work and inspection activities twice a day; coordinated all types of utility work. See list of projects.

NJDOT Principal Engineer Construction. *Resident Engineer.* See definition above; October 1997 to August 1998: Regional Safety Engineer responsible for evaluating the safety practices of Central Region construction activities, and participating in the creation of the Department's Office of Capital Project Safety

NJDOT Senior Engineer Transportation. *Asst. Resident Engineer.* Acted as Resident Engineer in his/her absence, supervised field staff, and inspected the contractor's construction activities.

NJDOT Assistant Engineer Transportation. Worked in the Department's Maintenance Engineering Regional Office designing solutions to maintenance issues.

RE - Route 9 Section 23E: Replace the Route 9 Bridge over Conrail and CR 522. Project consisted of structural concrete, pre-cast pre-stressed beams, HPC deck construction, utility relocations, roadway widening. Cost $15M.

RE - Route 9 Section 1M: Replace the one-mile long Route 9 Bridge over the Raritan River. Project consisted of structural concrete, structural steel, HPC deck construction, US Coast Guard coordination. Cost $35M.

RE - Route 35 Shark River Bridge: Replace the Route 35 bascule bridge over the north and south channel of the Shark River. Project consisted of directional drill utilities, H-piles, structural concrete, deep water cofferdams, HPC deck construction, large pre-stressed, pre-cast concrete beams, traffic signals, utility relocations, roadway widening, timber fenders, steel fenders, and extensive traffic control. Cost $45M.

RE - Beaver Dam Bridge: Replace the existing bascule bridge with the State's first hydraulic lift span bridge. Cost $8M.

Dennis Marchetti, PE
Lead Electrical Engineer
Jacobs

Education:
B.S. Electrical Engineering

Registrations:
PE Vermont License #[redacted]

Years of Experience:
38 Years

Dennis Marchetti, PE has 38 years of experience in industrial control system. This includes design, fabrication, inspection, testing, code compliance review, peer review, construction supervision, start-up, troubleshooting, manual writing, equipment failure emergency response and training. He is thoroughly familiar with all types of control systems used on movable bridges, from antiquated manual Ward-Leonard and saturable core reactor starters and full magnetic control to power synchrotie, state-of-the-art programmable logic and touch screen controllers, servo, motion control, primary thyristor, vector and DC drives and event recording and data acquisition systems. Mr. Marchetti has a thorough understanding of hydraulic bridge operation systems.

Dennis' experience includes the inspection of over 75 movable bridge control systems, design of over 25 movable bridge control systems and 3 canal lock control systems, support services for 10 movable bridges, fabrication of 7 movable bridge control systems, systems coordinator/integrator for 4 movable bridges, study for expert witness for 2 accident investigations in addition to the design of control systems for numerous heavy movable structures including theme park attraction, theater stages, etc.

RELEVANT EXPERIENCE

Shrewsbury Bridge, Shrewsbury, NJ; New Jersey NJDOT. *Lead Electrical Engineer.* Performed biennial inspections; wrote reports and repair recommendations according to NBIS and NJDOT standards.

Roosevelt Island Bridge NYCDOT, Queens, NY. *Lead Electrical Engineer.* Contractor's Electrical Coordinator.

Greenbank Bridge, Greenbank, NJ; NJDOT. *Lead Electrical Engineer.* Performed biennial inspections; wrote reports and repair recommendations according to NBIS and NJDOT standards.

Pelham Bay Bridge – Amtrak, Pelham, NY. *Lead Electrical Engineer.* Safety Upgrade of the Control System

Arthur Kill Bridge, Staten Island, NY. *Lead Electrical Engineer.* Troubleshooting

Harlem River Lift Bridge,New York, New York, Triboro Bridge & Tunnel Auth. *Lead Electrical Engineer.* In-depth Inspection and Report

Arthur Kill Lift Bridge, Staten Island, NY. *Lead Electrical Engineer.* Troubleshooting

Pelham Bay Bridge, New York, Amtrak. Lead Electrical Engineer. Control System Integration, Startup and Training

Madison Avenue Bridge, New York City, Madison Ave. Bridge. Lead Electrical Engineer. O & M Manual review

Wittpenn Bridge, Jersey City, NJ, New Jersey Department of Transportation. *Lead Electrical Engineer.* Lift Span Control System Design

Staten Island Ferry Slips, New York City Department of Transportation. *Lead Electrical Engineer.* In-depth Inspection/Production of Testing Procedures

Bradford R. Hollingsworth, PE
Bridge Mechanical Engineer
Jacobs

Education:
BS, Mechanical Engineering

Registrations:
Professional Engineer: PA

Years of Experience:
12 Years

Brad Hollingsworth's experience includes the design of 30 movable bridge machinery systems (hydraulic and gear driven), inspection of over 50 movable bridges, construction inspection or supervision of almost 50 movable bridge projects, strain gage balance testing of 10 movable bridges, and involvement in the manufacture of machinery for over 100 movable bridges of all types throughout the United States. Brad was the author of two technical papers entitled "AGMA Requirements for Movable Bridge Speed Reducers", presented at the HMS First Biennial Movable Bridge Symposium, November, 1985; and the author of "Standardizing Mechanical Inspections of Movable Bridges", presented at the HMS Third Biennial Movable Bridge Symposium, 1990.

RELEVANT EXPERIENCE

Movable Bridge Design Experience – Bascule Bridges, Cape May Canal project, New Jersey Transit, Cape May, NJ. Design-build contract to activate the single track swing span after many years of abandonment. Inspected the machinery systems and designed repairs to make the swing span operational. Brad worked closely with the Operating Railroad, Contractor and Electrical Designer to complete cost effective rehabilitation of the machinery systems. He also provided hands on assistance during the construction phase of the project.

Harlem River Lift Bridge Project, NYC DOT, New York City, NY. Project consisted of an in-depth inspection and rehabilitation design for Metro-North's twin, two track vertical lift bridges over the Harlem River in New York City. He performed the in-depth inspection and designed a simplified span lock replacement system along with general repairs to the tower drive machinery.

Middle Thoroughfare Bridge, Cape May County, Cape May, NJ. *Project Engineer* for rehabilitation of this single-leaf trunnion bascule bridge.

Beach Lane Bridge, Suffolk County, Southampton, Long Island, NY. *Project Engineer* for design of new mechanical and electrical systems for new double-leaf trunnion bascule bridge. New mechanical system utilizes a fully enclosed gear drive. New control system utilizes PLC control

Lock Street Bascule Bridge, NYSDOT, Phoenix, NY. *Project Engineer* for machinery for this new trunnion bascule bridge.

Union Avenue Swing Bridge, NJDOT, East Rutherford, NJ. *Project Engineer* for interim mechanical and electrical rehabilitation of this swing bridge.

Madison Avenue Swing Bridge, NYCDOT, New York, NY. *Project Engineer* for machinery inspection for replacement for this rim roller swing bridge.

Movable Bridge Design Experience – Lift Bridges, Holley Lift Bridge, NYSDOT, Holley, NY. *Project Manager* for mechanical and electrical replacement and structural rehabilitation of this lift bridge over the New York State Barge Canal.

Main Street Lift Bridge, NYSDOT, Brockport, NY. *Project Manager* for mechanical and electrical replacement and structural rehabilitation of this lift bridge over the New York State Barge Canal.

J. Leo McGlynn, PE
Railroad Engineer
Jacobs

Education:
B.S., Civil Engineering, Penn State University,
Conrail Executive Management Program, Penn State University
Conrail Financial Management, University of Pennsylvania – Wharton School

Registrations:
Professional Engineer
Pennsylvania

Years of Experience:
32 Years

Mr. McGlynn is a results-oriented, responsible, engineering professional with extensive experience in railroad engineering, construction management, and design. He is a strong leader with excellent organization, financial management, and team building skills.

RELEVANT EXPERIENCE

CONRAIL, On-Call Engineering and Construction Management Service Contract, NJ. *Project Manager* for Conrail's National Docks Line Clearance Project. This $25 Million dollar project includes enlargement of the 4,100 foot long Bergen tunnel and the 400 foot long Waldo tunnel located in Jersey City, NJ. Tunnel project is progressed 24 hours a day seven days a week. Work will be completed by September 2010. As an extension of Conrail's staff, Jacobs has been responsible for the design, bid assistance, and construction management for on-call assignments. We have completed several fast-track designs that include existing ground survey, identification and coordination for relocation of existing utilities, assessment of track structure, design of track alignments for sidings and yard tracks, staging and sequencing of proposed work, design to cost and bid assistance. The proposed track alignments are optimized to minimize impacts to existing utilities.

North Jersey Terminal Capacity Improvement Infrastructure Project, Newark, NJ for Consolidated Railroad (CONRAIL), Northern, NJ. While still working for Conrail, Mr. McGlynn was the Client Project Manager with overall responsibility for this $68 M+ program. The Program included seven projects: Valley to Stock, Valley to Pike, Pike to PN, Bay Line Yard, Chemical Coast, Double Tracking of the Lehigh Valley Line (Potter to Bound Brook 10.5 miles), and Port Reading Junction, Manville, NJ. Mr. McGlynn worked closely with the Jacobs staff who were providing design, bid assistance, construction support, and construction management as an extension of the Conrail staff.

Consolidated Rail Corporation, Philadelphia, PA. Mr. McGlynn has over 32 years experience with Conrail, where he served in various capacities including:

Director Design and Construction. Mr. McGlynn managed a team that was responsible for the design and construction of all capital and state participation projects and construction agreement negotiation with government and transit agencies. Responsibilities included safety, customer satisfaction, employee development, on-time performance, budget, design, estimating, and construction integration with rail operations. Staff Size 7 to12

Directed a team that completed $168,000,000 in rail infrastructure projects:

- North Jersey Infrastructure Project, 10 Miles of double track from Bound Brook to Clark NJ , 8.5 miles of secondary and yard tracks and 8 new remote controlled interlockings.
- Reviewed and approved the track design for 75,000 feet of new on dock loading and support tracks at Port Elizabeth.
- Led a team that managed the Conrail- NJDOT Joint Participation National Docks clearance and CP Port Reading Junction upgrade and expansion.
- Worked with NJDOT Rail freight section managing the design/construction

Scott Paul Longazel
Contract Administration
Jacobs

Education:
Masters of Business Administration
AB, Engineering, Environmental Science & Engineering

Registrations:
N/A

Years of Experience:
10 Years

Scott Paul Longazel began his career as an Assistant for GE Lighting in 2000. Over the years he has gained experience in project planning and management in both superintendent and project management roles. Scott's experience is in supervision and management of commercial, industrial and residential construction where he has been instrumental in land use coordination, construction, and real-estate development. He has strong experience in scheduling, value engineering, budget review, specification reading, general contracting, design-build practices, construction and owner insurance policies, and requirements for construction/development. Scott understands and brings experience in the U.S. Green Building Council LEED rating system, specifically in how to implement LEED into a development/construction project.

RELEVANT EXPERIENCE

Time Equities, Inc., New York, NY. *Project Manager/Owner's Representative.* Scott was responsible for the construction management of several demolition and construction projects. He managed the development and construction of a 65-story, $500M, multi-use hotel luxury condo high-rise with a planned LEED Gold certification and managed the demolition of three buildings in lower Manhattan to include a 14-story masonry steel building, an 8-story masonry wood building and a 3-story tenement building. With extensive project experience in New York, Scott gained a strong understanding of Lower Manhattan's political system and working relationships with community members such as the New York State Dept. of Transportation, New York City Dept. of Transportation, Lower Manhattan Construction Command Center, Community Board 1, Fire Department of New York, New York Police Department, Verizon and Con Edison.

M. Gordon Construction Co., Linden, NJ. *Project Manager.* Scott simultaneously managed 3 - 4 development and construction projects averaging in size of 40,000 SF. He worked predominantly with high-end Magnetic resonance imaging (MRI) facilities in addition to industrial, religious, Educational and residential facilities. For these projects Scott worked closely with the development team, property management, and construction personnel to deliver turn-key services on the projects. He also managed quality control and insurance programs, implemented and trained staff on Timberline Project Management, coordinated design with design professionals and obtained permits from various city and state agencies.

Irwin & Leighton, Inc., Philadelphia, PA. *Assistant Superintendent.* Scott provided on-site assistance during the construction of Phase I of the renovation of the Acopian Engineering Building at Lafayette College. His responsibilities included completing daily logs, monitoring subcontractor safety, addressing problems associated with demolition and construction, updating plans based on RFI responses and architectural bulletins, and addressing A/E conflicts.

Cutler Associates, Allentown, PA. *Assistant Project Manager.* Scott worked with project managers on multiple projects and gained extensive experience on tilt-up concrete industrial warehouse construction, Educational facilities and commercial office buildings. He was also assigned as the Quality Control Manager for a $12M warehouse facility for General Motors.

Loren Roller Schnitzer
Contract Administrator
Jacobs

Education:
BA Communications

Registrations:
N/A

Years of Experience:
23 Years

Loren Roller Schnitzer has over 23 years of experience in project management, procurement, and move coordination. With her knowledge of base building infrastructure and facilities management, Ms. Roller Schnitzer provides support for the planning of furniture installations and the coordination of activities leading to occupation of a site. Her experience also includes contract administration, site management, corporate facilities management, planning, estimating and scheduling.

RELEVANT EXPERIENCE

GSA Region 2 US Mission to the UN, New York, NY *Relocation Specialist.* This $103 million project involves a safe, secure, and state-of-the-art diplomatic facility for the U.S. delegation to the United Nations. The scope of work for the new building includes construction of a 27-story, 150,000 square foot, steel reinforced, cast-in-place concrete building that will accommodate nearly twice the amount of staff than its predecessor. The most prominent feature of the structure is the facility's blast-proof, architectural concrete exterior. The building includes specialized HVAC, security, and telecommunication systems. Jacobs also serves as commissioning agent for all critical systems of the program.

Polytechnic University, Brooklyn, NY. *Project Manager.* Responsible for the entire FF&E procurement program for the Othmer Dormitory, the Jacobs Academic and Athletic Facility, the Rogers Dining Hall, and the Regna Lounge. Developed program requirements with the end users and architects to create specifications for furniture and equipment. Created and managed the RFP process for all FF&E purchases, including installation services and storage requirements. Managed the furniture purchase process, and delivery and installation of the four projects.

J.P. Morgan, New York, NY. *Project Manager* Acted in a Facilities Management Department staff augmentation role to perform all functions that are required of a J.P. Morgan Project Manager in accordance with their procedures, including execution and completion of construction, renovation and remodeling projects. Supported the JPM Vice President of Facilities Management in space management and real estate strategy. Managed the relocation of the Private Client Group to the new facility. This scope of services included the RFP process; selection and management of the relocation consultant, and mover; and creating internal communications for the purpose of coordinating with the business groups.

SUNY Health Science Center at Brooklyn. Brooklyn, NY. *Project Manager* Managed and assisted the Director of Facilities Project Management in the development and execution of the FF&E budget for the Health Science Education Building. Achieved $1.5 million cost savings through renegotiations of existing New York State and group purchasing contracts. Developed and managed RFP activities for all consultants, contractors and vendors. Directed architects, trades, vendors and consultants in various modification projects. Verified contract deliverables for recommendation of payment. Supervised activities of project staff, relocation consultants and support staff.

Niurka Ozuna
Contract Administrator
Jacobs

Education:
B.S. Business Administration

Registrations:
N/A

Years of Experience:
9 Years

Niurka Ozuna has nine years of experience in the architecture/engineering industry, most recently working as a Project Engineer. As a Project Engineer, her responsibilities include performing a variety of routine assignments involved in the coordination of various engineering, construction, scheduling, purchasing and start up aspects of a project ensuring technical excellence across all disciplines.

RELEVANT EXPERIENCE

Dormitory Authority of the State New York, Bronx Mental Health Redevelopment, Bronx, NY. *Project Engineer.* As the Project Engineer, supporting the Senior Program Manager on this $300M project, she reviews designs and coordinates the distribution of client QA/QC submissions and architect responses. Reviews submittals and RFI's and enters them in to Contract Manager. Researches and presents project specific topics such as Noise Mitigation. Attends design and construction project meetings and assists with meeting minutes. Assists with estimate reconciliations and P6 schedule updates.

NYC Economic Development, East River Water Front, New York, NY. *Project Coordinator.* The East River Waterfront Esplanade and Piers Project, Phase 1 includes improvement and redevelopment of an approximate two-mile portion of the East River Waterfront extending from Peter Minuit Plaza at the southern tip of Manhattan to the East River Park on the Lower East Side. The scope of services includes preconstruction master scheduling, cost estimating, risk management, constructability review, packaging alternatives, staging & phasing and contract procurement. As a Project Coordinator, Niurka assisted with processing contract documents, client and sub invoices, supply and service report and other project requests as needed.

New York Metropolitan Transportation Authority (MTA), Engineering Construction Monitoring, New York, NY. *Project Coordinator.* On this project, we provided Independent Engineering Consulting (IEC) services to The New York Metropolitan Transportation Authority's (MTA) overall capital improvements program, which involved project and program monitoring, design reviews and programmatic reviews throughout the Authority's operating agencies which include: New York City Transit; Long Island Rail Road; Metro-North Railroads; Bridges and Tunnels; Second Avenue Subway and the East Side Access Project. As a Project Coordinator, Niurka assisted with certificates of insurance, pre-bills, client and sub invoicing, personnel utilization reporting and file management.

Nassau County Department of Public Works, Nassau County Building Consolidation Program, Westbury, NY. *Administrative Manager.* Nassau County Building Consolidation Program, Westbury provides program management services to help Nassau County to reduce its ongoing cost of facilities and increase both productivity of employees and service to county residents. Niurka's role provided support in staffing the project and contract administration.

Sheryl Seid Ng
Contract Administrator
Jacobs

Education:
N/A

Registrations:
N/A

Years of Experience:
25 Years

Sheryl Seid Ng has 25 years of experience in construction management in both private and public sector work. She has performed document control for several large design and construction programs and also assisted and supported the effort to organize complex billing cycle and to maintain detailed records.

RELEVANT EXPERIENCE

Nassau County Building Consolidation Program, Westbury, NY. *Project Engineer.* Global program management services for the Building Consolidation Program, a $300 million plan, in Nassau County to reduce its ongoing cost of facilities and increase both productivity of employees and service to County residents. Review the monthly requisition from the contractors to ensure that they are compliant with the requirements of the County. Provide assistance to the project managers in all pre-construction activities. Assist in the reconciliation of the Profit Sharing between CB and the subcontractor on the Nassau County project.

University of Connecticut, Summer Work Program, Hilltop Apartments, Storrs, CT. *Project Engineer.* Currently supporting the University of Connecticut Architecture and Engineering Services Department as Program Manager for a series of projects related to the remediation of code discrepancies, facility upgrades, and quality improvements related to existing facilities.

NYCSCA Construction Management Emergency Services New York, NY. *Project Engineer.* Construction management services on an emergency on-call basis for the NYCSCA for schools in all five boroughs of New York City. Responsible for the accounting/document administration. Compiled all the associated reimbursable and labor cost to be invoiced on a monthly basis. Entered into the Client's database the necessary accounting information to issue payment for the various task orders assigned. The volume of billing entailed $8M of which $7M is paid out to contractors.

DASNY, Hunter College - Brookdale Campus Rehabilitation New York, NY. *Project Engineer.* A $17 million project involved in the rehabilitation of the 10-story West Building, the 13-story North Building, and the 6-story East Building. Responsible for organizing and implementing the setup of the Primavera Expedition project management software to maintain all related construction submissions and correspondences.

NYCSCA Construction Management of NYC School Boiler Conversions, New York, NY. *Project Engineer.* Responsible for document control for the renovation and installation of new boiler systems at public schools throughout the New York City boroughs of Manhattan, Queens and Staten Island.

Joan Roof
Safety Engineer

Education:
BS, Psychology

Registration:
N/A

Years of Experience:
19 Years

Joan Roof brings 19 years of experience in the safety industry. She has extensive experience in safety inspection and the development of management plans for projects involving hazardous materials. Her work has involved lead based paint, asbestos, mercury, dioxins and PCBs. Joan's primary responsibility with Jacobs is implementing and overseeing the Safety Program policies and guidelines at all Jacobs project sites.

RELEVANT EXPERIENCE

Paterson Public Schools, Paterson, NJ. *Safety Manager.* Jacobs was hired to perform program management services for the Paterson Public Schools, School Construction Program. The contract included managing $71 million in health and safety projects in the first year of the program, with subsequent assignment of major construction projects for a total program value of $400 million in estimated construction cost. The initial health and safety projects include 35 campuses to review various upgrades such as HVAC, roof and window replacements, asbestos abatement, electrical upgrades, and exterior and interior wall repairs. Provided construction safety oversight on multiple campuses and project sites, safety training to Jacobs, client and partner personnel; performed asbestos, mold and lead-based paint abatement project management.

US Mission to the United Nations, New York, NY. *Regional Safety Manager.* Jacobs was contracted by the General Services Administration (GSA) Region 2 to provide oversight during the demolition of this 17-story high rise building in mid-town Manhattan. Work of the project included asbestos and lead-based paint abatement and general demolition. Joan provided safety oversight, training and assisted the contractors with procedural development for all phases of the project.

South Eastern Pennsylvania Transportation Authority (SEPTA), Philadelphia, PA. *Safety Manager.* Market Street Elevated Rail Replacement Project. Provide ongoing safety support, training and leadership resources to project team at this $800 million light rail replacement project in center city, Philadelphia, Pennsylvania.

Hillview Reservoir, Yonkers, NY. *Regional Safety Manager.* Jacobs contracted with the City of New York Department of Environmental Protection (DEP) to perform Construction Management and Resident Engineering inspection services for multi-prime contractor construction of a chlorine facility, permanent concrete cover, and reconstruction of the treatment chambers at the Hillview Reservoir in Yorkers, New York. The value of the current work is $22 million. Joan is responsible for corporate sponsorship of Jacobs' safety program; safety process development and safety training.

Keystone Building Project, Harrisburg, PA. *Project Health and Safety Officer.* Provided safety management and training for hazardous materials abatement and demolition project of an asbestos, PCB and dioxin-contaminated high-rise office building.

Luigi Cheichi
Safety Engineer

Education:
BS, Political Science and Ecomomics

Registration:
NYC DOB, 7-Hour Site Safety Manager Certification
4-hr Supported Scaffold Certification
40-hour Site Safety Manager's Certification
32-Hour Erector Dismantled license
OSHA 30 Hour Construction; Safety & Health Certification
NYC DOB MTA Transit Track Safety Certification
NYS Department of Labor Asbestos Class D Inspectors License
OSHA 2 hour Subpart; R-Steel Erection Certificate
CESCO CertificationN/A

Years of Experience:
39 Years

As Jacobs' Regional Area HSE manager, Luigi provides safety oversight for all our projects in New York. He has extensive knowledge of New York City code and safety requirements.

RELEVANT EXPERIENCE

NYCHA Hurricane Sandy Restoration Projects, Brooklyn and Queens, NY. *Safety Manager.* Jacobs provides Construction Management services for the multi-task and multi-site remediation and restoration of building areas and systems damaged by Hurricane Sandy. Project includes apartment renovation, abatement, cleaning, restoration of basements and crawl spaces, and replacement of boilers with new temporary gas-fired boilers and related gas service for 257 first floor apartments at multiple developments in Manhattan, Brooklyn and Queens. As the Safety Manager, Luigi advises the Project Manager in safety codes that apply to operations and ensures necessary safety procedures are established for compliance with codes.

Nassau County Department of Public Works-Multiple Projects, Long Island, NY. *Safety Manager.* Jacobs supports this $280M program where our team oversees programming, design, and construction of five centralized campuses including: Health and Human Services, Government Operations and Legislative Center, Public Safety Center, Courts Complex. As the Safety manager, Luigi maintains the construction safety programs in accordance with the client's and Jacob's policies and procedures. He conducts job hazards analysis, develops site specific Health and Safety Plans (HASP's), develops site specifi c safety orientations, reviews and approves subcontractor's HAPS's and provides written comment and work specific changes.

DASNY, Bronx Mental Health Campus Redevelopment, Bronx, NY. *Safety Manager.* Jacobs is providing CM services for this $300M development, which includes the construction of six new buildings, and supporting infrastructure improvements, on an operational campus. Luigi is responsible for maintaining construction safety programs in accordance with DASNY and Jacobs policies and procedures.

NYSOGS New York State Police Troop F Headquarters, Middletown, NY *Safety Manager.* We provide Construction Management as Agent and Inspection Services for the new Headquarters Building Addition, Headquarters Renovations and Field Investigations Unit Building. As the Safety Manager, Luigi, advised the Project Manager in safety codes that apply to operations and ensured necessary safety procedures are established for compliance with the codes.

NYSOGS Fishkill Correctional Facilities, Fishkill, NY. *Safety Inspector.* As the CMa, we manage the installation of Electrical Distribution Upgrades and New Firing Ranges. Throughout the project Luigi was responsible for maintaining construction safety programs in accordance with the client's and Jacob's policies and procedures. He performed safety audits of contractor activity, provided technical assistance to client's Design Process Review involving contractor work, and took authority to intervene and suspend operations when unsafe conditions could not be quickly resolved or if immediate danger to life, property, or environment was observed.

Seppo Siimes, RA
Architect Design Reviewer
Jacobs

Education:
B.A. Architecture

Registrations:
Registered Architect: NY

Years of Experience:
26 Years

Seppo Siimes, RA has more than 26 years of experience on federal, medical, institutional, correctional, residential, and commercial facilities. As a Jacobs Preconstruction Design Manager, Seppo is currently dedicated to design review management, pre-construction and A/E coordination of design-build and construction management projects. His project types include Courthouses, Justice Facilities, State Police Facilities, and various federal projects

RELEVANT EXPERIENCE

Clement Ruiz Courthouse and Federico Degetau Federal Office Building, Carlos E. Chardon Avenue, Hato Rey, PR. *Project Manager.* Responsible for managing the replacement of 1,362 window units for the 450,000-SF, seven-story building which includes a courthouse annex. All of the windows are blast resistant. In addition some of the windows shall have ballistic ratings and some will have infrared and radio frequency protection. The windows shall receive shades and there is some associated work for trim and finishes. This work will be completed while the building is occupied. Seppo attended meeting with each of the 19 agencies to determine their specific needs in terms of the window product; the construction phasing for each department and their operating procedures. Seppo attended progress meetings and provided input on the site logistics and the project schedule. He led a team of design reviewers who provided design and constructability reviews at the conclusion of each phase.

DASNY, Staten Island Supreme Courthouse, Staten Island, NY. *Design and Constructability Review Manager.* Responsible for Design and Constructability reviews for this 154,000-SF courthouse and associated 600-car parking structure. The courthouse will service the needs of Supreme Civil Court, Supreme Criminal Court, the Surrogate Court and related agencies. The court sets shall be comprised of seven Supreme Civil Courts, six Supreme Criminal Courts and a Surrogate Court.

Office of General Services, Hudson Valley Transportation Management Center, Hawthorne, NY. *Preconstruction Manager - Design and Constructability Review.* Jacobs provided CM services for the new construction of the $40-million Hudson Valley Transportation Management Center (TMC). The scope of work included the demolition of the existing State Police Headquarters, providing and maintaining temporary operations facilities during construction. The TMC helps in detection and verification of incidents, provides information to the public, responds to and clears incident sites and restores traffic flow in a safe and efficient manner. As Project Manager, responsibilities included management of CM staff, 6 prime contracts, multiple procurement contracts/vendors, and coordination of utility/ ITS infrastructure installations. Project was delivered under Wick's Law. This project won CMAA's National "Project of the Year" Award in 2005.

New Castle County Courthouse, Wilmington, DE. *Preconstruction Manager/ Project Management.* A $130-million new courthouse. Construction management services in joint venture. The new 15 story facility will consist of 558,000 SF, encompassing 53 courtrooms, to serve the State of Delaware's needs through year 2020 and will provide for horizontal expansion to accommodate growth thereafter.

John Hitsos, PE
Commissioning
Jacobs

Education:
BE, Electrical Engineering

Registrations:
Professional Engineer: TX
Level II Test and Startup Engineer Certification

Years of Experience:
36 Years

John Hitsos, PE has 36 years of technical experience in design, installation, commissioning, and retrofit of special projects, commercial / institutional buildings, power plants, DOE science research projects, pharmaceutical / biotech facilities, and healthcare installations. He has more than 16 years of supervisory experience involving the fast-track completion of engineering, construction, commissioning, and start-up assignments, achieving high quality technical solutions while adhering to aggressive project milestones and budgets. John is adept at developing and administering commissioning (Cx) programs, ensuring compliance of systems and equipment to design requirements and functional criteria.

RELEVANT EXPERIENCE

World Trade Center Transportation Center, New York, NY. *Commissioning Manager.* John is initiating and managing the commissioning program for a new world class transportation facility and its supporting systems, equipment, utilities, and infrastructure. John has created the Project's Commissioning (Cx) Plan and Cx document templates. He supervises/reviews the generation and execution of Cx checklist and test protocols for several hundred MEP and control systems and their components, including the spot network electrical systems, central fan plant, and emergency power plant. John has developed a phased commissioning approach for conditional test execution and system verification to facilitate system turnover and interim operation. Additionally, John conducts extensive site evaluations, establishes punchlists/corrective issue analyses, and coordinates interdisciplinary reviews.

Nazario U.S. Courthouse and Degetau Federal Office Building, San Juan, PR. *Commissioning Manager.* John is developing/supervising the Commissioning Process throughout the life cycle of this Bridging-Design-Build Project, upgrading the aging mechanical, electrical and plumbing systems of this 40-year Facility (approx. 420,000 SF), to achieve energy savings/efficiencies and obtain silver LEED certification. John's Cx role has extended from the Conceptual Bridging Design and Final Design Phases, through the Construction/Commissioning Phase, ending with the Occupancy Phase turnovers. He has generated Commissioning Specifications, a Commissioning Plan, and an Owner's Project Requirements document. He supervises and completes the development/execution of Construction Checklists and Functional Performance Test protocols, integrating the project's complex phasing and interim operation strategies

National Institute of Standards & Technology Chiller/Boiler Plant Upgrade/Addition, Gaithersburg, MD. *Commissioning Manager.* John managed the site's commissioning program for a Chiller (20,000 Tons) and Boiler Plant (420 MBTU/hr) Controls Replacement Project and a Chiller Expansion (3,500 tons) Project. Performed design and submittal reviews. Generated, completed, and directed checklists and functional performance test protocols. Prepared Cx summary reports and corrective issue analyses. Developed system commissioning test binders.

Pamela Godsoe, PE
Commissioning
Jacobs

Education:
BSc, Electrical Engineering

Registrations:
Professional Engineer: NJ

Years of Experience:
20 Years

Pamela Godsoe, PE has key management experience in all project phases - from inception to completion; including project initiation, RFP response, fee letters, project plan, project schedule, financial management. Specific areas of work include budget preparation, assessment reports, and client relationships. She has served as project engineer experienced in areas of project management and site investigations, reports, design briefs, tender documents, construction cost estimates, and construction supervision. Her experience includes electrical design for office, residential and telecom buildings, nuclear and military facilities, and wastewater treatment plants.

RELEVANT EXPERIENCE

World Trade Center Transportation Hub, New York, NY. *Commissioning Engineer.* The World Trade Center Transportation Hub is a project of unprecedented size and complexity. This includes construction of the third-largest transportation hub in New York City, which alone has an overall program value of $3.6 billion. We are providing sustainability and system commissioning services. This program encompasses nearly 1 million square feet of passenger terminal, infrastructure, retail and command and control facilities. The project is designed to connect multiple rail lines, the 9/11 Memorial and Museum and the four large office towers on the site.

Vancouver 2010 Winter Olympics, Vancouver, BC. *Commissioning Engineer.* Pamela coordinated contractors and field personal, to ensure the work was within the Threat Assessment Report criteria and the Heritage Buildings Guide Lines. The Federal Government buildings were retrofitted with concealed cameras, access system so that the buildings were fail safe.

British Columbia Institute of Technology, Greater Vancouver, BC. *Senior Design Engineer.* Pamela's responsibilities included, design meetings with client, site investigations, reports, tender documents, construction cost estimates for the Security System, Gateway Building, including: access control, card access, panic buttons and cameras.

Point Lepreau Generating Station, Lepreau NB. *Lead Electrical Design Engineer.* Pamela's responsibilities included, design meetings with client, site investigations, reports, tender documents, construction cost estimates and construction supervision, for security and fire alarm systems, for a 680 MWatt CANDU reactor renovation job, the facility was a fail secure building.

Rothesay Police Station, Rothesay NB. *Lead Electrical Design Engineer.* Pamela's responsibilities included, design meetings with client, site investigations, reports, tender documents, construction cost estimates and construction supervision for a full service newly construction police station, with holding cells and vehicular secure area.

National Research Center – Information Technology Center, Fredericton NB. *Lead Electrical Design Engineer.* Pam's responsibilities included, design meetings with client, site investigations, reports, tender documents, construction cost estimates and construction supervision for an Information Technology Center.

Remon Yussif, PE
Commissioning
Jacobs

Education:
BS, Mechanical Engineering

Registrations:
Professional Engineer: NY, NJ and PA

Years of Experience:
14 Years

Remon Yussif, PE has extensive experience in project management, commissioning, designing and special inspection of Heating Ventilation and Air-Conditioning (HVAC), Fire Protection (FP) and Plumbing (P) systems for critical facilities, commercial and residential buildings. He is responsible for reviewing design criteria, specifications, drawings, equipment submittals, and other documentation pertinent to commissioning. He develops equipment pre-startup and startup procedures, equipment checklists, and other tools to track commissioning projects. Remon conducts and documents functional performance and integrated system tests. He issues commissioning logs, corrective issue reports, and helps identify solutions for technical errors that occur..

Previous work experience includes commissioning HVAC, fire alarm and Fire Protection for high rise office buildings, commercial, institutional buildings, and data centers. Remon performed due diligence study and site assessment for various commercial building. He also performed energy efficiency and design consulting which included calculating energy savings for several buildings.

RELEVANT EXPERIENCE

Port Authority of New York and New Jersey, WTC Transportation Hub, New York, NY. *Commissioning Manager.* Transportation center that will service over 200,000 daily commuters. Eleven MTA subway lines and the PATH trains will be accessible when it is completed in 2015. Size: 800,000 SF; Remon's responsibilities: Commissioning of Life Safety and Egress Systems including fire alarm, fire protection including AFFF fire suppression, Building Automation and Temperature Control System, Stair Pressurization Systems, Exhaust Air System, Smoke Purge Systems, 750 GPM automatic standpipe fire pump with associated 45,000 gallon fire water tanks, N+1 standby distribution system comprised of 2,000 KW diesel engine-generators, and 200,000 CFM vaneaxial reversible flow tunnel ventilation fans. Making improvements to and offering advice about operational procedures. Scheduling and coordinating work to tight deadlines. Investigating problems, diagnosing/ repairing faults; troubleshooting. Supervising engineering and technical staff.

Port Authority of New York and New Jersey, Vehicular Security Center and Tour Bus Parking Facility, New York, NY. *Commissioning Manager.* The VSC will screen all incoming vehicles enter the WTC site and underground parking facilities. Responsibilities: Writing reports and documentation, develop commissioning functional performance test scripts, providing technical support, creating and carrying out test procedures

Nomura, Critical Data Center, Piscataway, NJ. *Mechanical Engineer.* Critical data center and commercial space. Size: 100,000 SF; Responsibilities: Lead mechanical commissioning Engineer. Commissioned mechanical systems for a commercial and a data center. Developed pre startup procedures, conducted testing, and submitted final commissioning reports and corrective issue reports. Provided technical support. Supervised engineering and technical staff.

Harry Tom, PE, QCxP
Commissioning
Jacobs

Education:
BE, Electrical Engineering

Registrations:
Professional Engineer: NY
Qualified Commissioning Provider (QCxP)

Years of Experience:
41 Years

Harry Tom, PE, QCxP has a long-term career as engineer, manager and executive for the nation's largest transit agency, Harry has worked on multiple, major high-visibility transportation projects. He has served multiple positions in commissioning, construction and project manager and in design over the entire range of technical specialties required to run a transportation operation. He embraces the challenge of ensuring that systems work the way they need to. In his prior assignment, he was the Chief Commissioning Officer (Facilities) for MTA New York City Transit, where he functioned as the Commissioning Authority for the agency's Capital building construction program. As the first person to occupy this newly created position, in 2005, he organized the facility commissioning program, including staffing, development of requirements and specifications and implementation of test and acceptance procedures.

RELEVANT EXPERIENCE

World Trade Center Transportation Hub, New York, NY. *Commissioning Manager.* The World Trade Center Transportation Hub includes construction of the third-largest transportation hub in New York City, which alone has an overall program value of $3.6 billion. Jacobs is providing sustainability and system commissioning services. Size: 800,000 SF; Cost: $3.6 billion; Responsibilities: As a commissioning manager and the Commissioning Authority, Harry is a lead on the commissioning, during the construction phase, of multiple systems being constructed for this combination transportation hub, retail center and commercial building program. The systems include medium and low voltage electrical distribution, fire protection, communications, security, vertical transportation and HVAC.

Sandy Recovery for New York City Housing Authority, New York, NY. *Field Project Manager.* Jacobs was assigned the task of coordinating outside recovery efforts immediately following Superstorm Sandy. As field project manager Harry was responsible for coordinating and monitoring efforts for damage assessments, scope development for follow-on contracts and to inform various stakeholders of the status of systems. Met with NYCHA, Henry Street, electrical contractor and other consultant personnel to gather information in rather uncertain circumstances. Tracked and coordinated activities by contractors performing activities immediate recovery work to restore services at Lavanburg and Wald Houses. Monitored and track activities by the industrial hygienists (Emteque) and cleaning/ decontamination contractor (Belfor).

***63rd Street Line (1982-1989) and Tunnel Connection (1995-1998), Long Island City, NY.** *Project/Construction Manager.* Work encompassed two major, but distinctly different programs included the construction and systems installation for new subway tunnels, the first a program to expand the system and the second, a tunnel construction program to link two existing subway lines. They both required major excavation and structural work, utility relocations and included various systems such as train control (block signals), lighting, and power, mechanical including tunnel ventilation, plumbing and communications. Size: four route miles; Cost: $900B (1980 costs for the first program); $450M (for second program); Responsibilities: Owner's project and construction manager for these in-house managed programs.

Dana Jensen
Estimator
Jacobs

Education:
BS, Business Administration, University of Northern Colorado, Greeley, 1980

Registrations:
N/A

Years of Experience:
33 Years

Dana Jensen is a Mechanical Estimator with 33 years of professional experience, with particular emphasis on estimating, value engineering, change order negotiation, and claims. He has worked with healthcare, institutional, pharmaceutical, microelectronics, manufacturing, and process facilities. Dana has also managed estimators, subcontractors, and technicians; and trained project managers, purchasing agents, estimators, and sheet metal technicians.

RELEVANT EXPERIENCE

General Services Administration (GSA), Environmental Protection Administration/Region 8 Headquarters Building, Denver, CO. *Estimator.* This $75 million project involves design and construction review services for this 418,300-square-foot office building in lower-downtown Denver to house all EPA personnel. The project included high-end construction finishes, signature architecture, Lower Downtown historic district issues. The project also involved LEED Silver objectives.

General Services Administration (GSA), U.S. Federal Building and Courthouse, General Services Administration/Region 4, Jackson, MS. *Estimator.* This 425,000-square-foot facility houses the Fifth Circuit Court of Appeals, U. S. District Court, U.S. Magistrate Court, U.S. Bankruptcy Court, U.S. District Court Clerk, U.S. Probation, U. S. Marshal Service, U. S. Attorney, GSA, and Senate office space.

James A. Walsh U. S. Courthouse, General Services Administration/Region 9, Tucson, AZ. *Estimator.* This project involved $3.5 million in tenant improvements and life safety modifications to a 72,000-square-foot historic federal courthouse -- primary tenant is U. S. Bankruptcy Courts.

U. S. Federal Building and Courthouse, General Services Administration/ Region 9, Los Angeles, CA. *Estimator.* This $300-million project involved 1-million-square-foot, 17-story courthouse in downtown Los Angeles. The facility houses 26 District and 15 Magistrate courtrooms; and includes 150 enclosed parking spaces delivered through design-build-bridging method.

General Services Administration(GSA), U.S. Federal Courthouse, Region 6, Cape Girardeau, MO. *Estimator.* This $44-million project includes a five-level, 155,000-square-foot federal courthouse on a 2.5-acre site. The facility houses four courtrooms, five judges chambers, the court library, USDC/USBC clerks, Alternative Dispute Resolution. Suite, Jury Assembly, U.S. Trustee, Grand Jury, U.S. Attorney, U.S. Marshals, U.S. Probation Offices, Court Security, pretrial services, public defender, judiciary-related, joint-use, administrative law, and ancillary support services.

General Services Administration (GSA), Region 7, U. S. Federal Building and Courthouse, Brownsville, TX. *Estimator.* This $26 million, new 200,000-square-foot U.S. Federal Building houses the Southern District of the Federal 5th Circuit Court, four District and two Magistrate courtrooms; office space for the District Clerk, U.S. Probation, U.S. Marshal, U.S. Attorney, and other court-related agencies; law library; holding cells; and sallyport. Dana provided pre-construction estimating services.

Frank Jenkins
Estimator
Jacobs

Education:
Certificate, Engineering, Maryland Drafting Institute, 1977

Registrations:
N/A

Years of Experience:
28 Years

Frank Jenkins has more than 28 years of experience working for both electrical contractors and construction management firms. He has extensive estimating experience, providing quantity, pricing, and labor take-offs; bid package estimating; and change order estimating for a wide range of facilities. He brings to this project an in-depth knowledge of the area contracting, subcontracting, and labor markets. He is particularly skilled in accurately forecasting and controlling costs on technically intensive projects.

RELEVANT EXPERIENCE

Polytechnic University, Campus Expansion and Renovations, Brooklyn, NY. *Estimator.* A new Dormitory, Student Center, Gymnasium, Central Plant, and Academic Hall renovations totaling 492,393 square feet. A multiple phased construction program on an existing urban campus site.

Manhattan Psychiatric Center, New York, NY. *Estimator.* A $150 million high rise psychiatric center renovation.

PSE&G Warehouse, Artificial Island, NJ. *Estimator.* A $25 million warehouse for materials and office space.

Dept of Transportation HQ, Washington, DC. *Estimator.* Jacobs provided Agency Construction Quality Management Services for the new 1.35 million SF US Department of Transportation (DOT) Headquarters project, which bears the distinction of being the first cabinet level headquarters facility transition in the US Capitol in over three decades, in addition to the largest Developer (Lease-Construct) project to date for the GSA-NCR.

NIH Building 50, Bethesda, MD. *Estimator.* Building 50 is a $96-million 295,000-SF biomedical research laboratory and offices facility. It includes a 30,000 sf vivarium, BSL-3 laboratories, an electron microscope suite housing the world's foremost collection of medical research electron microscopes, and a nuclear magnetic resonance (NMR) suite housing some of the world's largest NMR machines. It houses researchers from 11 different institutes. Building 50 includes a large public lobby, a veranda with public seating, and conference facilities.

NIH Building 49, Bethesda, MD. *Estimator* Building 49 is a $93.8-million, 265,000 SF laboratory and office building that includes BSL-3 laboratories, an 80,000 SF vivarium, conference space, and a public lobby. The project was designed and constructed on a fast-track, multi-bid package basis to meet funding and schedule requirements.

New Castle County Courthouse, Wilmington, DE. *Estimator* Jacobs, in joint venture with EdiS Company, provided Construction Management services to the State of Delaware for this $134-million, 572,000-SF, 14-story steel framed building consisting of 44 courtrooms. The facility is designed to serve the State of Delaware's needs through year 2020, with capability to expand thereafter. The facility accommodates the State Supreme Court, Chancery, Superior, Common Pleas, Family, and Justice of the Peace Courts, and provides space for the Capitol Police and several other state departments, and provides above-ground parking.

Zack Pennington
Estimator
Jacobs

Education:
BS, Electrical Electronics Technology (Power Distribution), University of Houston, Texas, 1978

Registrations:
N/A

Years of Experience:
28 Years

Zack Pennington has 28 years of estimating experience on major domestic and international construction projects. He is experienced in the estimating of health care, correctional, Educational, high tech, commercial, and infrastructure facilities projects. Zack has performed cost estimating functions in the areas of quantity surveys, material pricing, installation pricing, computer-based estimate production, computer-based cost file maintenance, value engineering, procurement variables determination, and change order evaluation and estimating. He has played an important role in the development of computer-based estimating systems, and has maintained unit price databases for U.S. and foreign operations.

RELEVANT EXPERIENCE

Juvenile Detention Center for the New York City Department of General Services, Brooklyn and the Bronx, NY. *Electrical Estimating.* Jacobs provided construction phase management of a new $58.8 million, 120-bed medium security facility. Supervised field and office support staff (administration, scheduling, inspection and reporting), and served as liaison to design consultants, contractors, user and client.

Hudson Valley Transportation Management Center, Hawthorne, NY. *Electrical Estimating.* Jacobs provided Construction Management services to the Office of General Services for the $45 million Hudson Valley Transportation Center (TMC). The facility consists of two buildings connected by an atrium. This high-tech traffic management center included state police barracks and a 911 center.

George R. Vierno Center Rikers Island, NY. *Electrical Estimating.* Jacobs provided Construction Management and Design-Build services on this $80.5-million, 500-bed addition, fast-track prison. Zack was responsible for reviewing and coordinating work of bid packages with A/E; assisting in preparing bid packages and resolution of design and contract conflicts; review RFIs with A/E and resolving; reviewing shop drawings and submittals and assuring prompt turnaround.

Federal Bureau of Prisons, Metropolitan Detention Center, Brooklyn, NY. *Electrical Estimating.* This $85-million project involved a 1,000-bed maximum-security detention facility located on-site of old Brooklyn Navy warehouse. The project included the demolition of an existing facility renovation of an existing facility to create an interim facility and hazardous waste removal.

Consolidated Forensic Laboratory (CFL), Washington, DC. *Electrical Estimator.* This facility will be a 351,000 gross square-foot building where the District of Columbia will consolidate the functions of public safety and health into a single state-of-the-art facility. The CFL is expected to realize significant District operational and space efficiencies, while enhancing the ability of the District to respond to future public safety and health challenges.

Jacobs performs design and constructability reviews, estimating and cost control, administering the construction phase, maintaining project records, performing construction quality control inspections and will act as the commissioning agent for the project.

Steven Eichinger
Value Engineer
Jacobs

Education:
B.S. Civil Engineering Technology
AAS Architectural Technology

Registrations:
N/A

Years of Experience:
28 Years

Steven Eichinger has more than 28 years of management, engineering, contracting and construction management experience. He has extensive electrical engineering and contracting experience in the design and construction of electrical power distribution systems, emergency/stand-by power systems, uninterrupted power systems, grounding, lightning protection, fire alarm and detection systems, security systems, control systems, fiber optic cabling systems and data centers, SCADA and multi-media network cabling systems, lighting systems, and energy/building management systems. He has a diverse background and proven experience in the maintenance, operation and installation of mechanical and electrical systems and equipment.

In addition to his engineering and contracting experience he has provided construction management services on a wide variety of projects. He has developed and presented numerous training seminars on electrical safety, mechanical and electrical equipment maintenance, and operation of building mechanical, electrical and life safety systems. He has performed forensic analysis for electrical accidents.

RELEVANT EXPERIENCE

VE – New Battery Park City Ferry Terminal, Port Authority of NY/NJ. *Electrical Engineer* team member on a value engineering study for design of a new Manhattan ferry terminal on the Hudson River. The terminal design incorporates a floating barge capable of accommodating both front-loading and side-loading ferries. The terminal capacity is approximately 800 passengers, and includes ticketing, restroom facilities, and a concession and waiting area. The terminal is designed to meet ADA standards for handicap accessibility.

VE – New York City Transit, NY. *Electrical Engineer* team member on several VE studies for station upgrades, a new bus garage and maintenance facilities.

VE – Renovation of the Emanuel Celler Federal Courthouse -US GSA, Brooklyn, NY. *Electrical Team Member* on two VE studies (concept design and design development) for the design of major renovations to the Emanuel Celler Federal Courthouse. Constructed in 1961, the EC is adjacent to the new Federal Courthouse currently under construction. The current project addresses structural reinforcement for seismic and blast resistance, enlarging spaces to address updated court requirements, hazardous material abatement, and compliance with ADA criteria. It also includes major upgrades to building MEP systems and equipment (elevators, etc.).

VE – Renovation of the historic Thurgood Marshall Federal Courthouse – US GSA, NY, NY. *Electrical Team Member* on two VE studies (concept design and design development) for the design of major renovations to the Thurgood Marshall Federal Courthouse. The current project addresses major upgrades to building MEP systems and equipment (elevators, etc.), space plan reallocation, and façade repairs to mitigate water infiltration problems.

Mehul Gandhi, PE, PMP, PSP
Scheduler/Project Controls
Jacobs

Education:
MS, Civil Engineering, Construction Engineering and Management

BE, Construction Engineering

Registrations:
Professional Engineer: VA

Years of Experience:
10 Years

Mehul Gandhi, PE, PMP, PSP is a scheduler and project controls specialist who has more than 10 years of experience. He will be responsible for confirming progress is consistent with the master schedule, reviewing and analyzing look-ahead reports, preparing written reports to present findings and recommendations, and developing potential mitigation plans to save time and costs.

RELEVANT EXPERIENCE

NYCDDC, Sandy Beaches Reconstruction and Restoration, New York, NY. *Project Controls Lead.* Reconstruction and restoration of NYC owned beach fronts in Queens, Brooklyn, and Staten Island damaged by Hurricane Sandy. Project included restoration, renovation and/or replacement of existing building structures, comfort and lifeguard stations, boardwalk, and beach access points. The $174M project was completed in 84 days and required the management of over 50 Jacobs's team members, 4 general contractors with 400+ daily workers working 24/7. The project utilized LEAN construction concepts to optimize the very limited schedule. Mehul was responsible for the project management control system and provided scheduling support.

Columbia University, Manhattanville Development Group, New York, NY. *Project Manager / Scheduler.* This 17-acre site will develop into 6.8M SF of space for teaching, research, underground parking, and support services. The program is multi- phased, with Phase 1 under construction and Phase 2 in the design phase. Jacobs is providing technical services focused on schedule management, BIM integration and risk assessment. Mehul reviewed and analyzed the CMs master construction schedule as well as individual contractor schedules for constructability, CPM logic, and errors. He also developed the master program schedule to track all pre-design, design, pre-construction, permitting, and closeout activities, as well as integrates the CM construction schedule.

General Services Administration, Armed Forces Retirement Home, Gulfport, MS. *Project Controls Specialist.* Jacobs serves as CM for the design and construction of this$220M, 660,000 SF replacement facility for the home that was damaged by Hurricane Katrina. We developed the Program of Requirements and the D-B RFP, assisted in Procurement, and currently providing design and construction phase services. Mehul performed the mobilization, implementation of technology, and the project management control system and provided scheduling support to the project on an ongoing basis.

Sirini Srinivas, PMP
Scheduler
Jacobs

Education:
MS, Engineering Management
BS, Mechanical Engineering

Registrations:
Project Management Professional, Project Management Institute

Years of Experience:
19 Years

Srini Srinivas will conduct risk analysis and mitigation. He will provide scheduling support throughout all phases of the project and develop and maintain schedules and provide regular reporting, including critical path scheduling. He will also assist with estimating and negotiating change orders with associated cost, duration, logic for stakeholder approval.

RELEVANT EXPERIENCE

NYCHA, Capital Development Pilot Program, New York, NY. *Scheduler*
Jacobs assisted NYCHA in developing a new Capital Project Planning Procedures Manual to manage roughly $200M in annual construction, including incorporating use of web based collaborative Project Management software for contractors and consultants. Part of this program included assisting in the management of 12 projects at various NYCHA developments in the five boroughs. The projects were selected to help test new procedures on projects in all stages of the project life-cycle: planning, procurement, construction and project close-out. The construction value of the 12 projects totals $120M. Srini had the responsibility of managing portfolio schedule with an outlook of on-time and within budget program delivery. Srini was responsible for continuously tracking multiple projects for implementation of tested processes and procedures to facilitate timely decision making and ensure success of the program. He worked to proactively manage budget to maximize NYCHA's fund utilization.

Nassau County Department of Public Works (NC DPW), Shared Facilities Efficiency Program, Nassau County, NY. *Scheduler.*
Jacobs is providing PM/CM services and extension of staff to the $326M program that aims at reducing the county's ongoing cost of facilities to improve both employee productivity and service to county residents. As the Scheduler, Srini is working on schedule development for Nassau County Fire arms training facility center project. This multi prime contract calls for cost loading to control contractor payments.

MTA, Multiple Projects, New York, NY. *Scheduler.*
Srini worked on multibillion dollar MTA programs, design projects, and various other projects including bid and procurement. Work involved managing a team of personnel reviewing technical submittals, invoices, contractor schedule, change orders, internal cost estimates, negotiations, and time analysis with meetings, presentations, and job site walkthroughs. He was involved in resolving claims ascertaining equitable adjustments between the parties concerned. Other responsibilities included managing and continuous tracking of costs, RFPs, RFIs, CWPs, daily, weekly and monthly reports, calculating contractor production levels to be utilized in comparison with contractor plans, weekly and monthly cost curve, and forecast of future cost and schedule trends.

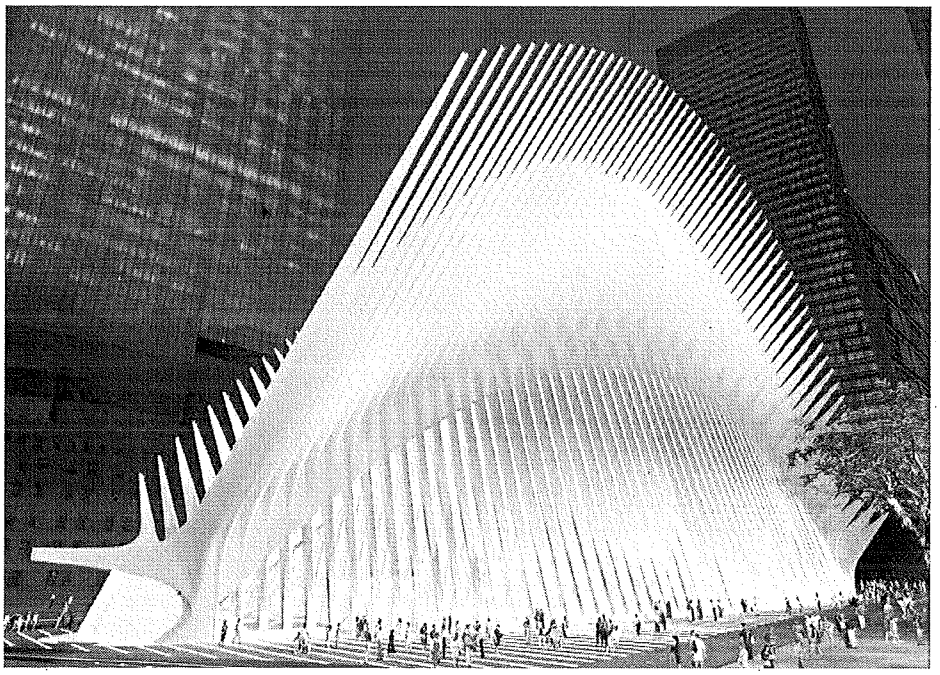
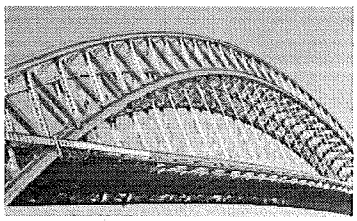
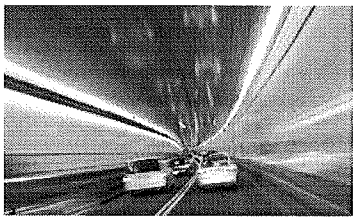
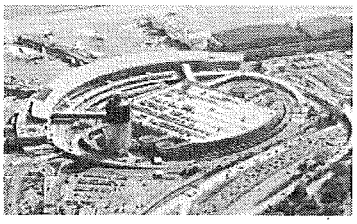
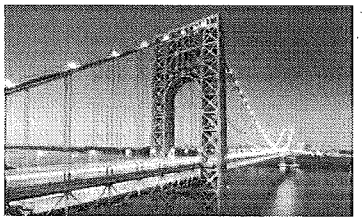
Company Compensation Plan











JACOBS

COMPANY COMPENSATION PLAN

The Company policy on pay practices and overtime pay eligibility compliance is established to appropriately pay employees in accordance with their classification as defined by the Fair Labor Standards Act, 29 C.F.R. § 541.602 (FLSA).

Pursuant to FLSA regulations, all Company employees are classified as either exempt from overtime pay (exempt employee) or not exempt from overtime pay (non-exempt employee). In certain circumstances, exempt employees may receive additional compensation for work in excess of their regular schedules.

If eligible non-exempt employees work on a recognized holiday, they will receive holiday pay plus wages at their straight-time rate for the hours worked on the holiday.

Paid time off for holidays will not be counted as hours worked for the purpose of determining overtime.

RELEVANT TERM CONTRACT EXPERIENCE

Jacobs is a relationship based company with over 93% of our business coming from repeat clients. Our relationship with the Port Authority of NY & NJ is one such example of our core business value at work. We value our clients and our mission is to learn their processes, understand their mission and help them deliver quality projects on time and within budget to their clients (the ultimate end user).

Over the years, Jacobs has completed multiple projects for the PANYNJ and we were able to **develop an understanding of PANYNJ requirements and standards and your way of doing business.** We believe that this is the cornerstone in providing successful Term Contract delivery for the PANYNJ. Our client satisfaction surveys for PANYNJ projects averages at 90%, which demonstrates the satisfaction of PANYNJ with our personnel and their ability to delivery CM services. Another key factor to successful term contract delivery is the ability to manage and staff Term Contracts. Jacobs, as a company, is specifically structured to provide full-service support to term contracts. In New York and New Jersey, we have offices in several locations that will facilitate staffing term assignments. While we recognize that most assignments will require onsite staff, Jacobs does maintain operating offices in New York City and Morristown, New Jersey.

We have provided snapshot descriptions of several "Call-In" contracts over the past three years and profiles for two projects of some of our New York/New Jersey Term Contracts where Jacobs provided similar services to those required in this solicitation.

Expert Professional Construction Management Services on an "As-Needed" Basis 2011-2014

Over the past three years under our current On-Call contract Jacobs provided **Construction Management and Inspection Services** to the Port Authority of New York & New Jersey at various Authority facilities as determined by the Engineer. The services included, but were not limited to, performing inspection services, constructability reviews, contract administration, and preparation of construction estimates and schedules. Jacobs provided construction management and inspection services on the PATH Restoration Program between Exchange Place and World Trade Center; PATH Train Operations Building Construction and Harrison Station Demolition of Existing Buildings to name a few.

Downtown PATH Restoration Program between Exchange Place and World Trade Center

Scope of work includes modification to PATH Tunnels "E" and "F" between World Trade Center Station and Exchange Place Station. Construction included the removal of existing construction, asbestos removal, the construction of track including track support structure, the construction of duct bank, cables including high voltage traction power, communication and signals, the construction of lighting, drainage, fire protection operation 2010 to Present.

Washington Street Substation #2 Emergency Diesel Generator Replacement

Scope of work includes installation of an emergency generator, including low voltage switchboard and controls at the Washington Street substation to replace the existing emergency generator, low voltage switchboard and controls.

Signal Relay Room Rehabilitation
Scope of work includes replacement of existing air conditioning and fire protection systems, which have reached the end of their useful life in 15 Path signal relay and power rooms at various locations in New York and New Jersey.

PATH-CCTV Installation
Scope of work includes the installation of equipment such as cameras, digital video recorders, cables, multiplexers, network servers, monitors, and video equipment, and in some cases control room. It also required software's such as monitoring system, a response or reaction system, video footage storage system, record system, and an evidence control system

Hoban To MacMillan Bloedel Fiber Cable Installation
The major work under this Work Order was to furnish and install approximately one mile of 144 fiber optic cable link between the Journal Square Hoban Control Center and the MacMillan Bloedel property.

PATH Train Operations Building Construction
Scope of work includes the construction of a 22,000 square feet building to house a primary Security and Control functions required for operations of the PATH rail system. Scope of work included related site improvements, mechanical/plumbing, electrical, architectural, HVAC systems, etc.

PATH – Journal Square Transportation Center – Heating, Ventilation and Air Conditioning System Upgrade
The contract provides for upgrade of the Heating, Ventilation and Air Conditioning (HVAC) system that serves the Journal Square Transportation Center (JSTC) office tower, as well as a portion of the Concourse Level.

PATH –Harrison Station Demolition of Existing Buildings
This contract provides for demolition of existing three single story industrial manufacturing buildings for the redevelopment of the PATH Harrison Station. All abatement and disposal of materials was performed in accordance with all applicable standard and environmental requirements.

PATH – Bus Terminal Escalator Replacement
Replacement of eight escalators at JSTC, from the Concourse Level to the Bus Terminal, with new heavy-duty escalators, including associated components and controllers.

Design: 1994-2009
Construction: 2008-2014
(On Schedule)

NYS DOT Cross-Bronx Expressway, I-95 Alexander Hamilton Bridge
The NYSDOT designated Jacobs as the prime consultant for the rehabilitation of the Alexander Hamilton Bridge, encompassing 16 bridges on the CBE between Amsterdam Avenue, as well as to be the Coordinating Consultant for the entire CBE corridor rehabilitation projects. The project required extensive construction sequence development to enable the structure to be rehabilitated while maintaining traffic lane capacity. It also required extensive coordination with community boards, NYC Department of Transportation, MTA Metro-North Railroad, NYC Parks Department, Office of Construction Mitigation and Coordination, and Port Authority of NY & NJ.

Jacobs provided in-depth, detailed inspection, load rating, alternatives development, and final design and preparation of construction documentation for the rehabilitation of the main 505 ft span arch bridge over the Harlem River, the replacement of the complete concrete deck of the 1,530 ft long main bridge, the replacement of the tightly curved Ramp TE over the west approaches of the main bridge, and the rehabilitation of the connecting ramps

between the Cross Bronx Expressway (I-95) and the Major Deegan Expressway (I-87).

Under the Construction Support phase Jacobs is providing services to the client for structural steel and reinforced concrete shop drawing review, structural bearing shop drawing review, and is reviewing Contractor submittals for temporary works such as structural jacking, temporary supports, and off-line detour structures. Contractor material submittals are also being reviewed for approval. Further, Jacobs is providing engineering services for investigating site conditions that lead to field changes, and modifying the design to reflect such changes.

Metropolitan Transportation Authority

MTA Capital Construction East Side Access Project, New York, NY

Client Agency
Metropolitan Transportation Authority

Client Reference
Bill Goodrich,
Senior Project Executive
[redacted]

Construction Cost
$7.2 Billion (On Budget)

Project Duration
2009 – 2014 (On Schedule)

The Long Island Railroad (LIRR), the world's busiest commuter railroad, has only one stop on the West Side of Manhattan – Penn Station – that is operating at capacity. In addition, nearly one half of the commuters who ride into Penn Station are actually destined for offices on the East Side. The purpose of the project is to provide direct LIRR rail access to Grand Central Terminal and relieve some of the congestion at Penn Station; it will also provide a shorter travel time for Long Island commuters headed for Manhattan's East Side.

Jacobs, as the lead of a Joint Venture, was retained by the Metropolitan Transportation Authority Capital Construction Company to provide construction management and inspection services for more than 20 construction contracts and railroad force account agreements. Services include providing staff to monitor and perform quality inspections for various building, railroad and tunneling contracts. Additionally, the scope of services include: performing constructability reviews, safety audits, processing all construction documentation and contract close out.

Elements of the $7.2 billion project include: a 1.6 km of hard-rock, dual-bored Tunnel Boring Machine (TBM) tunnels under Manhattan's Park Avenue; four soft-ground TBM tunnels in the Queens Sunnyside Yards; a new concourse to be carved with "drill and blast" methods under Grand Central Terminal in Manhattan; A new station at Sunnyside Yards in Queens and considerable surface work amid active rail activity

CONRAIL

CONRAIL On-Call Engineering Design and Construction Management Service Contract 2005, New Jersey

Client Agency
CONRAIL

Client Reference
William Kaeser, P.E.
Phone [redacted]

Construction Cost
$40 Million (On Budget)

Project Duration
2005-Ongoing (On Schedule)

As an extension of Conrail's staff, we have been responsible for the design, bid assistance and construction management for on-call assignments. Jacobs has completed under this agreement several fast-track designs for bid that include existing ground survey, identification of existing utilities, coordination for the relocation of utilities within the existing ROW, assessment of track structure, design of track alignments for sidings and yard tracks, staging and sequencing of proposed work, design to cost and bid assistance. The proposed track alignments are optimized to minimize impacts to existing utilities. Several of these Task Orders are:

Port Reading WYE Track– Adding a new Wye track that required reconfiguration of existing yard ladders (adding and removing existing turnouts), coordination with existing utility lines, ROW and constructing staging to minimize yard traffic.

Port Authority of New York and New Jersey, Corbin Street Yard Construction Phase 1A– Jacobs is acting as Conrail's representative for construction oversight to the construction of yard track, drainage, and earthwork on its property.

Winslow Junction – Adding approximately 1,000 feet of track for a siding track adjacent to the through track. Realignment of existing intersecting tracks that tied into the existing track with new turnouts.

Port Reading Yard Tracks – Realignment of existing yard tracks within the yard to accommodate two additional yard tracks (2,000 feet in length), relocation of existing yard air and provide new yard air.

New Brunswick Siding Track – Realignment of the existing service track to add a runaround track (700 feet) for service to a customer within Conrail's ROW.

Oak Island Storage Tracks – Adding two 2,000 storage tracks within a fixed ROW that required coordination with utility companies to optimize the design and minimize utility relocation costs. Proposed Track alignment required clearances from fixed objects such as bridge piers, existing track turnouts and catenary poles.

Pavonia Yard - Conceptual designs were completed for conversions of a hump yard into a shifting yard and a conceptual full build out design for increased freight storage for a port.

AT&T, Sprint, Abovenet, Colonial Pipeline, PSEG Overhead Transmission, PSEG Electric Underground Division for the Identification of Existing Utilities Project – Jacobs acted as Conrail's representative for oversight, coordination of work on Conrail's property.

Little Ferry Intermodal Car Facility –Design for extending six tracks 120 feet to accommodate additional Automotive cars for unloading at the facility. Work included adding additional electrical lighting, drainage improvements and parking lot repairs. The work was staged to minimize impacts to the operations.

Chemical Coast Siding Track – Design for adding a 6,000 foot siding track while eliminating any utility relocations. Work consisted of adding gabion walls to eliminate the need for a utility pipeline company to relocate its pipeline in already confined corridor. The excess material was placed further down on the siding to allow for future extension of the siding tracks if and when required.

Meeker Ave. Bridge, Newark, NJ - Jacobs was responsible for Construction Management services for the Meeker Ave. Bridge, Newark, NJ project. Project was for emergency structural repairs and bridge change out. Work included new steel girders and new grillages; Double track — one freight (CONRAIL), one passenger (NJ TRANSIT); and two bridges at two spans each. Work had to be accomplished in two weekend shutdowns for change out.

Chemical Coast Bridge Replacement Project (Tremley Point) over Pyles Creek, Linden, NJ –Jacobs provided construction management for the replacement of a four-span, double track freight line, ballast deck railroad bridge over Pyles Creek, Linden, NJ. Work included tidal influenced scheduling, driven steel pile and cap piers and abutments, track relocation, and staging. Mr. Petroski scheduled and coordinated all work with railroad operations by initiating Bulletin Orders for track outages, cut-overs, and track protection. The project involved work under traffic on adjacent bridge. He also managed contract work and coordinated same with railroad trades including Communications and Signals; Track and Building & Bridge Departments.

New Jersey Department of Transportation

Construction Inspection for Intelligent Transportation Systems (ITS) Term Agreement, New Jersey

Client Agency
New Jersey Department of Transportation

Client Reference
Susan Catlett
[redacted]

Construction Cost
$870,000 (On Budget)

Project Duration
2008-2012 (On Schedule)

Jacobs performed construction inspection support services on an ITS Term Agreement for New Jersey Department of Transportation (NJDOT). This agreement is a statewide assignment providing necessary field inspection and system testing of the various ITS systems for the Bureau of ITS and the three Regional Construction Offices for the Department.

The inspection services cover the installation of all the underground and aboveground facilities, which include the various types of conduit (open cut and directional boring), junction boxes, and various different foundations. We have provided inspection services for the installation of the following types of systems: CCTV cameras and controllers; Travel Time System; and VMS and DMS signs. Other inspection work includes modifications to overhead sign structure walkways and ladders, guiderail, concrete curb, installing multiple lighting wire, and traffic signal standards.

We inspected ten miles of fiber installation with splicing along Route 80; CCTV cameras on Route 280, Route 130, and Route 47 and replaced the existing DMS signs on Route 9, Route 37, Route 1, and I-95 with new boards.

Our inspection covered the work on Route 20 between the Garden State Parkway and Route 80 installing conduit, fiber, junction boxes, and various types of foundations to complete a missing connection of various ITS systems for both NJTA and NJDOT being connected directly into the statewide Traffic Operations Center. We performed compliance system testing for several projects located in the North Region of NJDOT. These compliance tests, with multiple testing levels, were performed on the other project sites utilizing NJDOT's standard testing checklist.

We administered the Meadowlands Area Traffic Surveillance System, which included the installation of CCTV cameras at various locations around the Meadowlands for the Super Bowl and future traffic monitoring. This is a dual system at 14 different sites that included a wireless and cable connection to NJDOT's control center. We provided both the Resident Engineer and field inspectors for this project.

Port Authority of New York and New Jersey

World Trade Center Engineering and Design Services for Streets, Utilities, and Related Infrastructure, New York, NY

Client Agency
Port Authority of New York and New Jersey

Client Reference
Vito Ranieri
[redacted]

Construction Cost
$180 million (On Budget)

Project Duration
Ongoing (2015)

Jacobs, part of the Downtown Streetscape Partners joint venture, is performing engineering and design services for the Port of New York and New Jersey for the new World Trade Center (WTC) in lower Manhattan. The project consists of the creation of Greenwich Street between Vesey and Liberty Streets, and Fulton Street between Route 9A (West Street) and Church Street, including the installation of street utilities (water, storm and sanitary sewers, gas, and steam mains) to service the World Trade Center Site.

At the World Trade Center Transportation HUB, we supported our WTC team providing commissioning and technical services, including Change Management and estimating for this $3.6B project. Jacobs dedicated our best

resources and leadership to support Port Authority for the Sustainability and System Commissioning of The World Trade Center (WTC) Transportation Hub. Our team worked seamlessly with all project stakeholders, to deliver a successfully commissioned Transportation Hub that is free from all deficiencies, will function as intended in the design, meet the goals of the Sustainability Design Guidelines, and achieve the intended mission critical levels of reliability, redundancy, flexibility and capacity.

In addition to the new streets and utilities, we are responsible for the creation of Liberty Park, a new park adjacent to the WTC Memorial on Liberty Street, all roadway surfaces, sidewalks, street lighting, traffic control measures, appropriate street furnishings, way finding, landscaping and perimeter security measures.
We are also responsible for the design coordination of the streets and related infrastructure designs with all participating stakeholders, including Silverstein Properties, Inc. (SPI), Metropolitan Transit Authority (MTA), Lower Manhattan Development Corporation (LMDC), New York City Department of Transportation (NYCDOT), New York City Department of Environmental Protection (NYCDEP). This effort involves responding to stakeholder requests for design treatments that enhance the design quality and aesthetics of the site.

New Jersey Turnpike Authority

Construction Inspection for Contract T100.137 – Easterly Hackensack River Bridge Reconstruction, Essex and Hudson Counties, NJ

Client Agency
New Jersey Turnpike Authority

Client Reference
Joseph Sheedy
[redacted]

Construction Cost
$148 Million (On Budget)

Project Duration
07/2011 - (Start)
06/2015 - (Estimated Completion)

Jacobs is providing supervision of construction services of bridge deck reconstruction; miscellaneous structural repairs; roadway improvements; and repainting of structural steel on the Hackensack River Lewandowski Memorial Bridge, Structure No. E109.83, on the Easterly Roadway of the New Jersey Turnpike in Essex and Hudson Counties.

The contract involves deck removal and reconstruction, removal and reconstruction of deck joints, replacement of median barrier, wingwall modifications, substructure repairs, lighting improvements, structural steel repair and replacement, bearing replacement, access walkway rehabilitation, timber fender repairs, shoulder reconstruction, resurfacing, pavement striping, emergency and routine repairs under cost plus compensation, MPT measures; and other incidental work on Structure No. EI09.83 from MP EI07.27 to MP E112.00. The work includes the necessary traffic control, railroad coordination, utility coordination, and all other work required in the successful prosecution of the work – concrete deck replacement; membrane waterproofing; asphalt resurfacing; various types of spall repairs; various types of joint reconstruction and replacement; pavement striping; sign structure, substructure, structural steel, and spall repairs; and electrical and navigational lighting repairs. In addition, the project requires Class A containment system for lead abatement of structural steel and three-coat painting system.

New York State Department of Transportation

Construction Inspection for Alexander Hamilton Bridge and Highbridge Interchange Ramps Rehabilitation I-95 Corridor Between Amsterdam Avenue in New York County and Undercliff Avenue in Bronx County, Bronx, NY

Client Agency
New York State DOT
47-40 21st Street
Long Island City, NY
11101

Client Reference
Michael McCotter-
Construction
(718) 402-9001
[redacted]Cell

Construction Cost
$3.6 million (Fee)
$410 million (Est.
Construction)

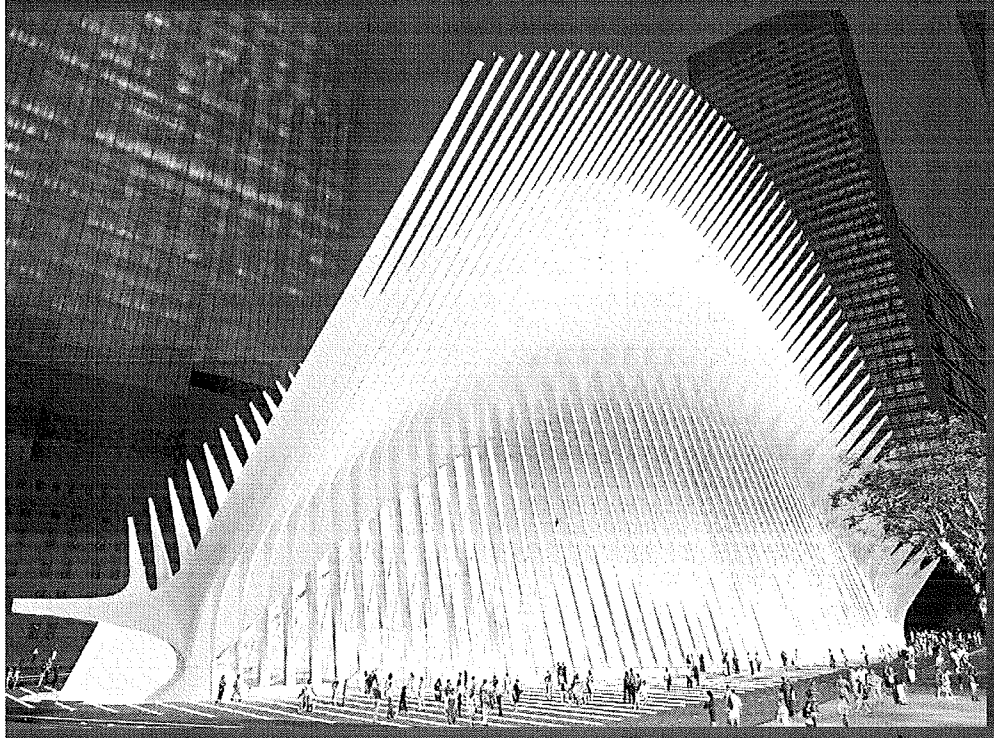
Project Duration
07/2011 - (Start)
06/2015 - (Estimated
Completion)

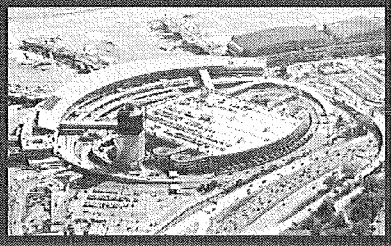
Jacobs, as a subconsultant, provided a Chief Inspector, Office Engineer, and construction inspectors on this $410-million project that involved supervision of twenty-five field inspectors. Work operations involved Class A containment, three coat epoxy system, major structural steel replacement, construction of temporary ramps, structural lifting, bridge demolition, bridge deck replacement (HPC and precast panels/gantry cranes),concrete repair, bridge painting, ITS System, roadway pavement, work zone traffic control, utility lines upgrade, drainage system upgrade, rehabilitation of two NYC parks, construction of new skate park.

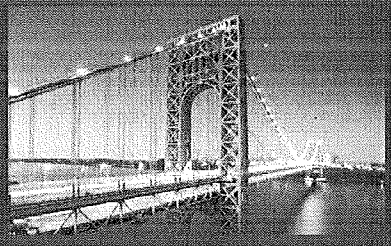
The Alexander Hamilton Bridge is the vital link in the CBE connecting Manhattan and the Bronx. The existing bridge is a 10-span structure carrying 3 lanes of CBE mainline traffic and 1 feeder-lane on each side of the roadways. There are 7 multi-steel-beam approach spans at the eastern end of the structure and 2 multi-steel-beam approach spans at the western end of the structure. Between the approach spans is a multi-steel-arch center span that spans across the Harlem River. The bridge spans across Metro-North's Hudson Line and the Major Deegan Expressway. At the on-set of this project in 2009, this is the largest single-contract construction project in the history of the NY State Dept. of Transportation.

Section G

Management Approach







JACOBS®

G. MANAGEMENT APPROACH

ORGANIZATIONAL STRUCTURE

We have structured our organizational chart to address the Port Authority's needs for a "Call In" contract. The organization chart provides an overview of our team categorized by group and by functional role. Each of these individuals is dedicated solely to the design and construction management of office facilities, bridges, tunnels, airports and terminals, both port and land based in both the public and private sector. Our Project Executive, **Bill Gove,** will report directly to the Port Authority of New York and New Jersey's (PANYNJ), and be responsible for managing and coordinating the overall effort to ensure the PANYNJ expectations are met with every task. Bill will immediately notify the PANYNJ's EOC of any issues and provide potential solutions for any issues that warrant immediate resolution.

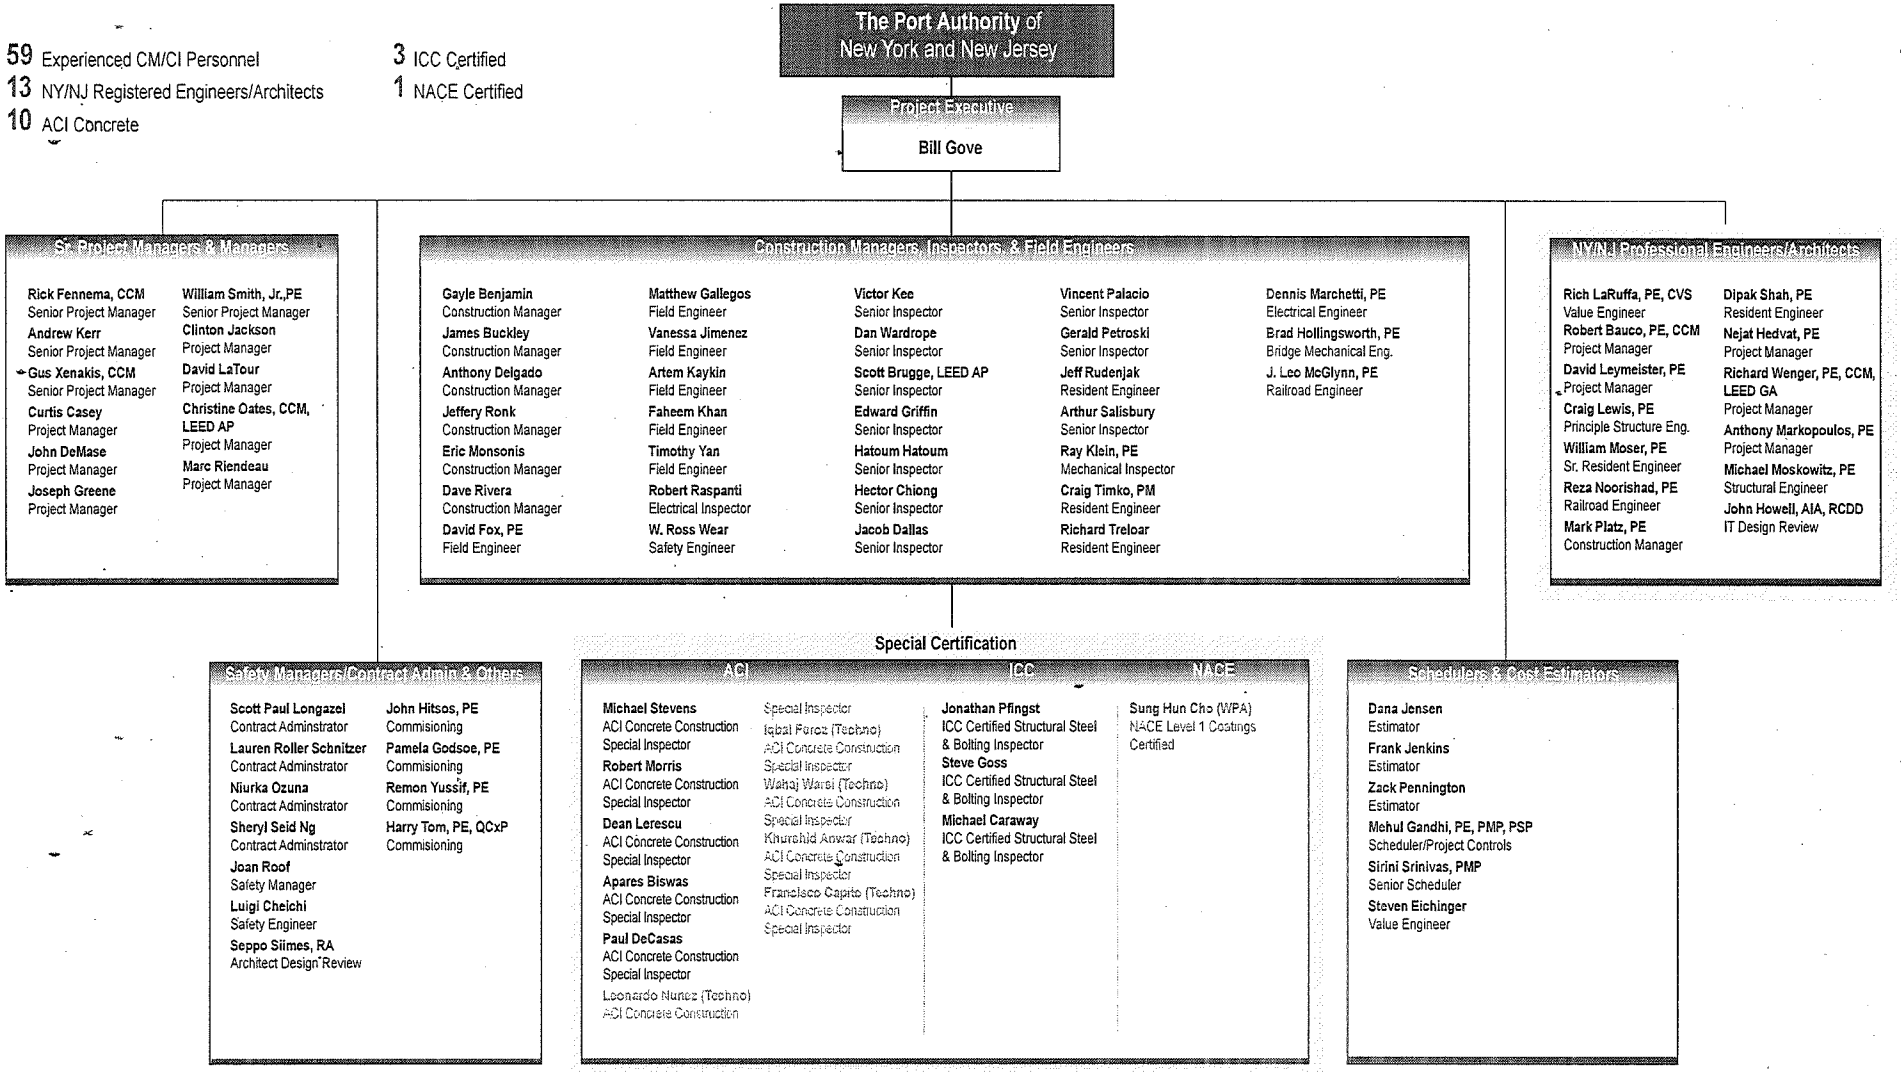
In an effort to be responsive to your requirements, we identified a total of 85+ individuals who bring knowledge and background as Project Managers, Construction Managers, Pre-Construction Managers, Contract Administrators, Inspectors and Project Controls specialist and bring the experience and capabilities to manage capital projects and project teams from conceptual design through construction. These team members are experienced in utilizing project controls systems to manage document control, submittals, RFI's, change orders etc. Our Inspectors, Field Engineers, and Contract Administrators are comprised of experienced Site Quality Control specialists of all disciplines.

Jacobs is specifically organized to provide services on "Call-In" type contracts. Nearly 45% of our work is performed under "Call–In" or Indefinite Quantity type Agreements for public sector clients including the Port Authority. The Flow Chart which follows depicts the process that we use to identify, select and submit candidate staff to the Authority for review and approval. The process starts with a request for staff from the Authority. We will then select the candidate(s) that are best fit for the assignment from our staff and present their resume(s) to the Authority for review. If the resume(s) is accepted we will arrange an interview for the candidate(s). If the submitted candidate is not accepted by the Authority, we will provide resumes for different candidates for the Authority to review.

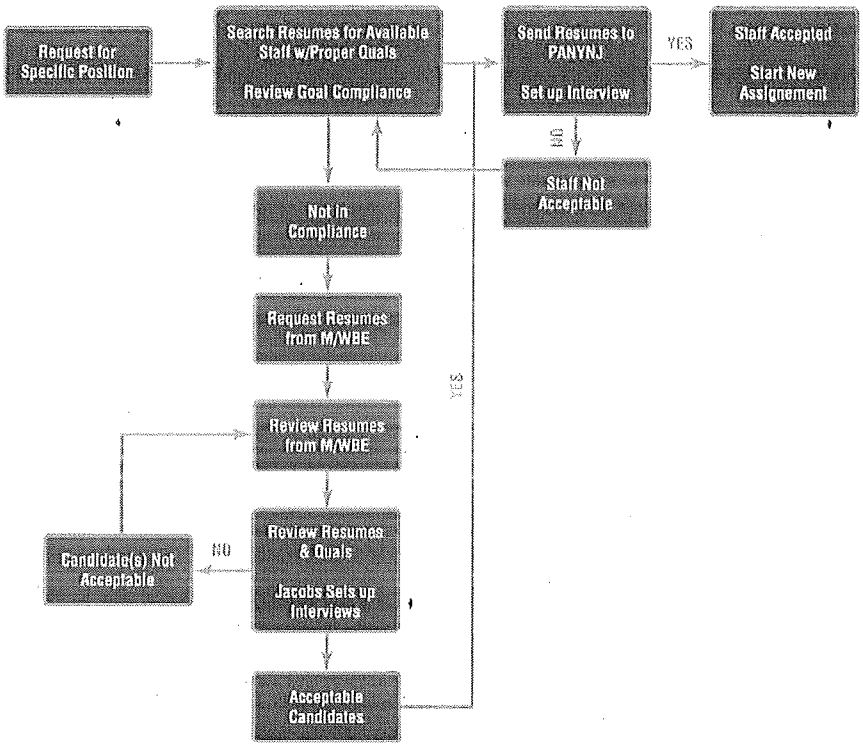
In order to meet and or exceed the goals of the program for minority and women participation we intend to solicit support from a number of firms that we have successfully worked with in the past, firms such as Techno Consultants (MBE), WPA (WBE), Savin Engineers (MBE) and JBC Associates (WBE). We are confident in their ability to provide quality services to our team.

A copy of the Organization Chart appears on the following page.

59 Experienced CM/CI Personnel
13 NY/NJ Registered Engineers/Architects
10 ACI Concrete
3 ICC Certified
1 NACE Certified



Task Initiation Flow Chart



MANAGEMENT APPROACH TO PERFORM REQUIRED SERVICES

We have structured our management approach to address all the tasks listed under the Scope of Work for this Call-In Contract. Through this approach we discuss how we intend to keep the Port Authority apprised of the project status and how we will ensure the quality of the work product and deliver projects on time and on budget. We have tailored our approach to be able to deliver the following benefits to all tasks performed under this contract:

- ✓ **Minimize disruption to occupied areas in phased construction** – we recognize that tenants and end-users must be capable of functioning at their normal efficiency during business hours. We will mitigate construction impact of worker productivity. We will work with the contractor to develop a mitigation plan to address any noise, dust or specific construction issues that might be disruptive. We will also develop a communication plan similar to what we have done on numerous projects where items of concern can be quickly surfaced and addresses.
- ✓ **Safety of the occupants and the construction team** – safety is our priority for every task or project. We will enforce all existing safety guide lines at each Facility- George Washington Bridge, NY, Journal Square (PATH), Hoboken, NJ, Port Newark, NJ Stewart Airport, NY Teterboro Airport, NJ and Howland Marine Terminal, NY. We Work to develop specific safety plans of action for every task and will maintain safe access and egress to and from the worksites at all times. We will also communicate with the Tenants and the Port Authority to keep them informed and ensure safety awareness.
- ✓ **Positive Relationship among All Stakeholders:** We are familiar with your policies and procedures through our current work with you. It has allowed us to develop an understanding of your requirements and way of doing business, enabling us to work closely with you and the project team to ensure that all stakeholders are in alignment, the project is moving in the right direction and end user requirements are

met. Below we have highlighted how we will perform each task listed in the scope of work while achieving the above listed benefits.

A. CONSTRUCTABILITY/BIDABILITY

We have performed an extensive number of constructability reviews for airports, office facilities, bridges, tunnels and terminals and will bring our "lessons learned" from both our design and construction experience in these facilities to all projects executed under this contract.

Our approach toward constructability focuses on bringing genuine "hands-on" construction input into the entire project delivery process, with a particular focus on the design phases of the process. The primary objective is to realize significant construction safety, cost and schedule benefits. We will review the design documents for quality and completeness of detail, with special attention to any ambiguities, conflicts or inaccuracies. We will also review for contractibility within cost parameters and the availability of materials within schedule parameters. We will look for possibilities to improve quality, expedite schedule, and reduce costs. An added objective is to turn the facility over in a sequence that matches the intended start-up / facility activation process.

We will also review the documents for ***operability***. On all our design reviews, we will consider long-term life cycle cost issues, and suggest that these reviews also include representatives from our client's operations and maintenance staff to ensure a cost effective and functional design. Our team will take the lead in collating all comments from all reviewers including the various Port Authority user groups and others as appropriate. We will use Contract Manager (Expedition) specially designed for this purpose as our database tool. At each review milestone we will collect and publish the comments in a report that will be distributed to all parties.

B. CONSTRUCTION STAGING

Jacobs performs CM services for numerous airports, office facilities, bridges, tunnels and terminals, both for Government and State entities including many projects for the Port Authority of New York, and we will bring best practices to this contract. The majority of this work is typically done while the facilities are occupied, which requires extensive coordination as well as special staging and phasing. ***The focus of our staging will be to maintain facility operations, minimize tenant/occupants inconvenience, expedite construction and ensure the safety of the tenants, occupants and contractors.***

For every task, we will develop the site logistics plan, construction packaging and phasing plan. Our site logistics plan will focus on providing access for equipment, staging areas for materials, lifting plans, location of temporary facilities, location of tool (sharps) storage outside the secure perimeter along with daily logistics of equipment movements through loading docks and address environmental, safety and site security concerns. In addition, we will address staging areas for contractors and subcontractors for each phase of construction. We will include logistics requirements as part of every bid package so that the contractors bid to the Authority will include the specific conditions and restrictions in the logistics plan. Our approach to packaging and phasing will be tailored to address the physical constraints of the site, contract completion milestones and the appropriate division of work.

C. SCHEDULE DEVELOPMENT AND MONITORING

Where the Authority requests, we will prepare a Summary Level Master Schedule for a particular task, identifying the critical path and identifying issues, constraints and other requirements that could have an impact on the schedule. We will continue to maintain and refine this schedule during the design and bidding process, developing and recommending alternate solutions to eliminate or mitigate issues which may have a negative impact.
The construction contractor, at the time of award, will be required to submit his detailed construction schedule. Utilizing our own independently developed schedule, we will review the contractor's schedule for reasonableness and compliance with contract requirements (staging, weather sensitive work items, coordination with operational

requirements of the facility, etc.) If such issues are not adequately addressed, we will work with the contractor to resolve these schedule deficiencies.

We have found it beneficial to hold an initial scheduling meeting, as soon as possible after the award and prior to the contractor's initial submittal of its CPM schedule. This would allow the Authority to outline the content and logic of the schedule requirements so that the contractor can better address its schedule to our requirements. Once the contractor's initial schedule submittal is received, a second meeting is advisable to review any discrepancies, discuss the logic of the contractor's CPM and comment where necessary. We will treat the approval of the initial schedule as a priority item of the highest order. The resultant schedule will provide an effective tool to monitor and control performance of the contractor.

Upon the Authority's acceptance of the schedule, we will continually monitor progress and prepare and submit a complete review of the contractor's CPM update on a monthly basis. We will verify the accuracy of work complete, and provide comments and recommendations to the Authority should the look ahead schedules be in non-compliance with the baseline schedule or other ongoing facility projects.

Jacobs provided inspection services for the PATH Journal Square Modernization of 5 Escalators. Due to delays relocating the control rooms schedule was critical in order to accommodate the commuter flow from the Bus Platforms to PATH Trains. PATH Facility & Maintenance, CMD and Jacobs personnel all successfully worked as a team to bring the new escalators into service in a timely manner to the satisfaction of the Port Authority.

D. QUALITY ASSURANCE INSPECTION

Jacobs is a firm believer in using quality control and quality assurance programs to deliver high caliber projects that exceed client expectations.

Our team will begin the quality control process upon award. We will review all submitted documents for general conformance with the specifications and we will also review the Contractor's quality control plan to confirm that they have a feasible and effective plan. Our team will then monitor the Contractor's compliance with the plan. We will enforce standards for construction quality and workmanship that are defined in the contract documents and make sure that the contractor performs required testing and/or provides the necessary controls. For all work, we will inspect continually to confirm that the established level of quality is delivered throughout the project. Our field inspectors will be responsible for ensuring that installation is carried out in accordance with the required level of quality. Materials will be examined prior to being covered up. Inspections will be coordinated with the Materials Division, PA QAD and PA Design Architect and inspector sign-off sheets issued, countersigned by agency Inspectors where appropriate. Defective or unacceptable installations will be rejected and removed or corrected. All quality control documentation from the contractor will be immediately forwarded to the appropriate Port Authority staff.

We will promptly inform the contractor in writing of any poor quality work and items of non-conformance. We will also work proactively with the contractor to resolve any quality control issues. Resolutions will be approved only with Port Authority concurrence and approval. A status report for all improper work and non-conformance items will be prepared, including dates of satisfactory resolution of such items. Should a poor quality or non-conformance item remain uncorrected, a Non-Conformance Report will be issued promptly to document the matter and it will include a recommended corrective action and correction date.

The Port Authority received a Silver Medal for Construction Excellence on the Hoboken Corridor Modernization. On this project Jacobs provided inspection services working with the PATH, New Jersey Transit and the contractor to successfully complete this project ahead of schedule.

E. CONTRACT ADMINISTRATION

We understand the PANYNJ policies and procedures from our numerous years working on PANYNJ On-Calls. The knowledge and diverse experience of our staff personnel will facilitate a well run and organized office. We will administer construction contracts, including developing and processing of post award contract changes (PACC) and change orders; processing time and material records (T & M); payment applications; updating of computer databases, such as WINTRAK; status reporting; document control; and attending contractor status meetings. We will address these functions based upon our knowledge of the PANYNJ's procedures and our experience in providing these services to the PANYNJ from our current and past assignments.

Processing Time & Material Records

When a contractor has been issued a PACC/C.O. or directive to proceed with work on a Time & Material basis, he proceeds with the work and prepares a "Contractors Daily Record Ticket". This is a daily record of manpower, equipment and material used to perform the work. This is given to the Field Engineer. The Field Engineer will stamp, sign and edit accordingly to verify work performed. The signed ticket is given to the Office Engineer (OE). The OE maintains all T&M records and daily reports and tracks them against the established budget. The OE produces a monthly status report and it is entered in WINTRAK. The contractor submits a monthly invoice to the OE for T&M work. The OE reviews the invoice and audits it against the T&M tickets. The OE uses reference manuals, i.e. Blue Book for equipment and checks the invoice against certified payroll and prevailing wage rates. At completion of the OE's audit, the invoice is stamped, signed and given to the Resident Engineer (with audit backup) for approval. The Resident Engineer initials the invoice and a copy is faxed to the contractor. The contractor includes copy of the faxed approval with his payment application to PANYNJ. The payment application includes a change order log as backup for payment. The log includes the Office Engineer's faxed approved desk audit.

Jacobs provided office engineering services on the PATH Facility Resilience Improvements project. On this project the contract value was $11M. Jacobs' personnel completed all desks audits of time and material which greatly minimized any overpayments to the contractor.

Payment Applications

When a contractor submits a payment application to the Resident Engineer, the Resident Engineer transmits the application to the Field Engineer assigned to that work for review. The Field Engineer reviews his findings with the Resident Engineer. Appropriate changes are then made to the pay application. The Resident Engineer signs the payment application and enters it in WINTRAK and SAP. The Resident Engineer will then send the Payment application to the EOC for review and signature. Once reviewed by the EOC, he then forwards to CMD (Construction Management Division) for processing. The CMD reviews for accuracy, assures entry into WINTRAK and SAP. Then the CMD sends the approved payment application to Disbursements, where check is prepared and payment is sent to contractor.

Updating Computer Databases Such as WINTRAK

WINTRAK is updated based on actual changes as well as forecasted changes. This update usually occurs monthly. WINTRAK includes status for schedules, work in place, payment of invoices, PINs track changes (PACC's) and or time and material and "Clause Work". An Important function of WINTRAK is to compare actual and forecasts to budget. This is important to check against funding and schedule. Results could be an increase in funding authorization and/or extension of time. WINTRAK is updated by the Resident Engineer's Team (Office Engineer,

Field Engineer and Resident Engineer) and given to an Administrator to enter the information into the database. Remarks and comments are also entered into the WINTRAK database.

Status Reporting

Jacobs will provide status updates through reporting on project schedule, payments, PINs PACC's, time & material work and clause work which can be downloaded and reported through WINTRAK. A number of different reports can be generated by this database to provide the Authority and Consultant staff up to date information as to the status of the project. Status reporting is also generated through progress meetings, contractor schedule updates, daily narratives, submittal and RFI logs, minute meetings and progress reports.

Document Control

Entries for all work must be maintained in WINTRAK to log and track all information. All correspondence is addressed to the Resident Engineer. Shop drawings and submittals are logged and tracked for status. Record drawings are maintained by the Field Engineer and updated accordingly. All files are kept in accordance with project number PANYNJ filing system.

Attending Contracting Status Meeting

Contractor status meeting are usually attended by the Resident Engineer, Field Engineer, Office Engineer, Inspectors, Project Manager and Contractors. Items discussed include safety, outstanding issues, RFIs, PACCs, change orders, submittals, permits, schedule status, long-lead items, progress status, closures, lane closure requests, escorts and security requirements. Records of meeting events are noted on Meeting Minutes including ball-in-court, status and dates required to resolve issues.

F. COST ENGINEERING / ESTIMATING SERVICES

Our Estimating Team has an excellent track record of accuracy in estimates. Our services include providing full estimates, take-offs, estimate review and reconciliation, cost and market analysis, pro-active participation in constructability and value engineering reviews, planning, bid package assistance, and change order estimating and negotiation. Jacobs cost engineering and estimating team features a full in-house compliment of architectural, structural, civil, mechanical and electrical estimating specialists with directly relevant experience in estimating costs of specific type projects attendant to all of PANYNJ facilities and structures including airports, office facilities, bridges, tunnels or terminals, both port and land based. Detailed cost estimates are based on quantities of specific construction materials and are refined through schematic design, design development and contract document stages to reflect new input from the design and construction team. Local subcontractors and suppliers are consulted to fine tune pricing. Early, accurate and continuous estimating feedback will help keep designs on track and within budget. At the same time, Jacobs frequently reviews architect/engineers estimates. Our seasoned estimating team works proactively to reconcile and validate A/E's estimates to help assure cost predictability and control. We are familiar with the Authority's "Construction Estimating Guide" and maintain a copy in our estimating department. This familiarity allows us to be pro-active in a project's early design stages, which is when we can be of greatest service to the Authority by making participants think about their needs and getting team buy-in on issues at an early stage. We will bring the Authority, AE/s and Engineers together and lead a Q&A session that looks at what is "behind the walls," analyzes special considerations, and examines all assumptions and qualifications for the project, from owner expectations to funding & market conditions. This enables our estimators to capture the real substance of what the facility will require and the challenges the team will be facing as design and construction proceed. At this point we will establish budgets and contingencies develop elements of critical path and evaluate possibilities of outside influence – market conditions, inflation, labor shortages, or design uncertainties.

G. RESOURCES

The primary contact with the Authority will be Bill Gove, our proposed Project Executive. Bill has performed similar services for the Authority on previous "call-in" assignments, including our recent similar assignment providing Call-In Expert Construction Management services from 2011 to 2014. Through this experience and other experience working with the Authority, he has gained a thorough knowledge of the Authority's procedures, policies and personnel, and will be able to respond immediately to your needs; providing the proper staffing and expertise for your assignments. At the same time as we are identifying in house candidates we also will make sure that we are meeting the M/WBE goals established for the project. With an emphasis on exceeding the contractually established goals, we will also look at each request for staff an opportunity for M/WBE support. This process is also depicted in the flow chart and includes the addition of interviews of M/WBE candidates prior to the submission of their resumes to the Authority for review and interview. Once an M/WBE candidate is selected their participation on the project will be seamless to the Authority.

REQUEST FOR PROPOSALS FOR THE PERFORMANCE OF EXPERT PROFESSIONAL CONSTRUCTION MANAGEMENT AND INSPECTION SERVICES AS REQUESTED ON A "CALL-IN" BASIS DURING 2015 THROUGH 2018 (RFP #39247)

AGREEMENT ON TERMS OF DISCUSSION

The Port Authority's receipt or discussion of any information (including information contained in any proposal, vendor qualification, ideas, models, drawings, or other material communicated or exhibited by us or on our behalf) shall not impose any obligations whatsoever on the Port Authority or entitle us to any compensation therefor (except to the extent specifically provided in such written agreement, if any, as may be entered into between the Port Authority and us). Any such information given to the Port Authority before, with or after this Agreement on Terms of Discussion ("Agreement"), either orally or in writing, is not given in confidence. Such information may be used, or disclosed to others, for any purpose at any time without obligation or compensation and without liability of any kind whatsoever. Any statement which is inconsistent with this Agreement, whether made as part of or in connection with this Agreement, shall be void and of no effect. This Agreement is not intended, however, to grant to the Port Authority rights to any matter, which is the subject of valid existing or potential letters patent. The foregoing applies to any information, whether or not given at the invitation of the Authority.

Notwithstanding the above, and without assuming any legal obligation, the Port Authority will employ reasonable efforts, subject to the provisions of the Port Authority Freedom of Information Code and Procedure adopted by the Port Authority's Board of Commissioners on March 29, 2012, which may be found on the Port Authority website at: http://www.panynj.gov/corporate-information/pdf/foi-code.pdf, not to disclose to any competitor of the undersigned, information submitted which are trade secrets or is maintained for the regulation or supervision of commercial enterprise which, if disclosed, would cause injury to the competitive position of the enterprise, and which information is identified by the Proposer as proprietary, as more fully set forth in the FOI Code, which may be disclosed by the undersigned to the Port Authority as part of or in connection with the submission of a proposal.

COMPANY PROFILE

REQUEST FOR PROPOSALS FOR THE PERFORMANCE OF EXPERT PROFESSIONAL CONSTRUCTION MANAGEMENT AND INSPECTION SERVICES AS REQUESTED ON A "CALL-IN" BASIS DURING 2015 THROUGH 2018 (RFP #39247)

1. Company Name (print or type):

   STV Construction, Inc.

2. Business Address (to receive mail for this RFP):

   225 Park Avenue South, New York, NY 10003-1604

3. Business Telephone Number: 212-777-4400

4. Business Fax Number: 212-673-5533

5. Firm website: stvinc.com

6. Federal Employer Identification Number (EIN): _____

7. Date (MM/DD/YYYY) Firm was Established: 01 / 31 / 1996

8. Name, Address and EIN of Affiliates or Subsidiaries (use a separate sheet if necessary):

   Please see section G of this proposal for a list of our firm's affiliates.

9. Officer or Principal of Firm and Title:

   Robert Barbera, P.E., Senior Vice President

10. Name, telephone number, and email address of contact for questions:

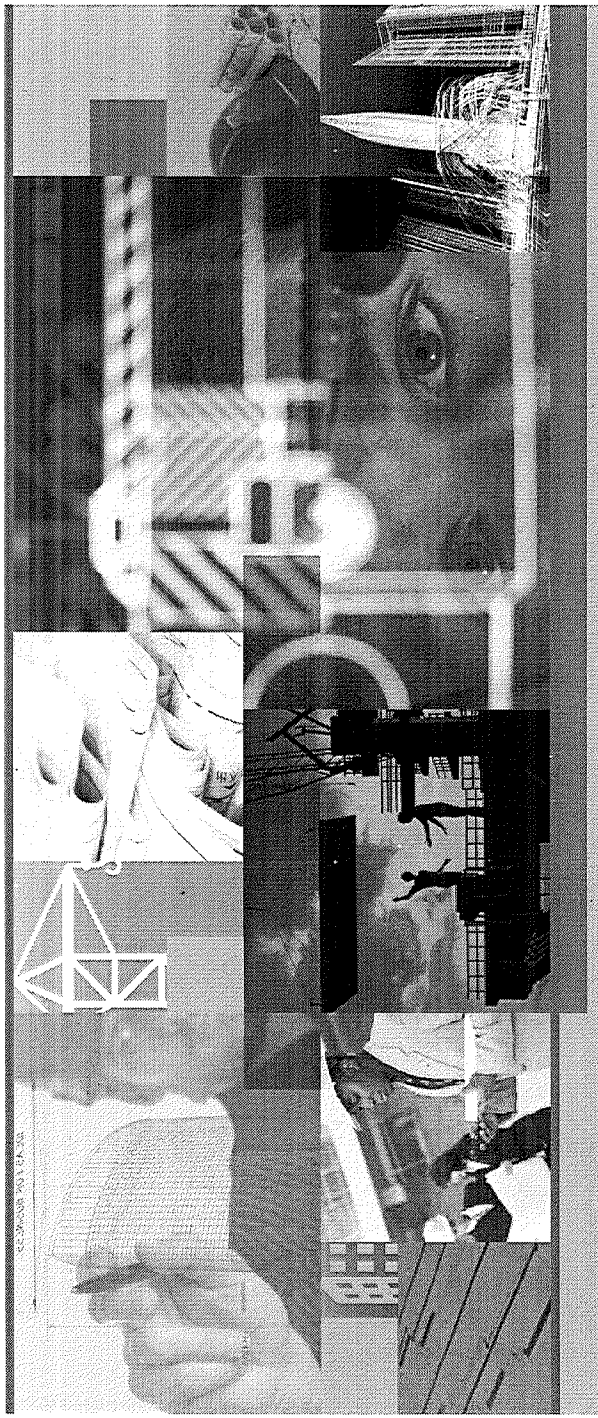
    Robert Barbera, P.E., Senior Vice President

    Tel: 212-777-4400; E-mail: robert.barbera@stvinc.com

11. Is your firm certified by the Authority as a Minority-owned, Woman-owned or Small Business Enterprise (M/W/SBE)? ☐ Yes ☒ No

If yes, please attach a copy of your **Port Authority** certification as a part of this profile.

If your firm is an M/WBE not currently certified by the Authority, see the Authority's web site – http://www.panynj.gov/business-opportunities/supplier-diversity.html, to receive information and apply for certification.



C. TRANSMITTAL LETTER

September 18, 2014

The Port Authority of New York and New Jersey
Two Montgomery Street, 3rd Floor
Jersey City, NJ 07302
Attention: RFP Custodian

Reference: **Performance of Expert Professional Construction Management and Inspection Services as Requested on a "Call-In" Basis During 2015 Through 2018, RFP #39247**

Dear RFP Custodian:

STV Construction, Inc. (STV), a subsidiary of STV Incorporated, stands ready to quickly and efficiently respond to the needs of our clients. We understand the importance to the Port Authority of New York and New Jersey (PANYNJ) of meeting the transportation needs of the bi-state region to provide safe and efficient service to its patrons at all times. As an industry leader based in New York City, STV can successfully provide the PANYNJ with construction management (CM) and inspection services on a call-in basis.

The STV Team

STV is a leader in the provision of CM services in the New York Metropolitan area and is proud to have served PANYNJ on major projects. For this contract, STV will serve as prime consultant and will provide overall contract management, QA/QC, CM, construction inspections, constructability reviews, contract administration, construction cost estimates, and construction scheduling. To supplement our in-house services, we have teamed with KS Engineers, P.C. (MBE), The Hirani Group (MBE), JPCL Engineering (DBE), and ELLANA Construction Consultants, Inc. (WBE). This resource pool will allow our team to be able to respond within short notice of an assignment and to manage multiple concurrent tasks.

Prerequisite Compliance

STV has met, if not exceeded, PANYNJ's proposed prerequisites listed in the RFP as demonstrated on the following page.

AN EMPLOYEE-OWNED COMPANY PROVIDING QUALITY SERVICE SINCE 1912 | 225 PARK AVENUE SOUTH
NEW YORK, NEW YORK 10003-1604
(212) 777-4400 FAX: (212) 529-5237

A. Firm Experience:

1. an office in the Greater New York, New Jersey Metropolitan Area and must have at least 50 individuals on staff who have demonstrated experience performing construction management and/or construction inspection services in the Greater New York/New Jersey Metropolitan Area.

STV has two main office locations in New York and New Jersey including over 600 construction management and inspection staff, they are as follows:

New York Headquarters Office
225 Park Avenue South
New York, NY 10003-1604
T: (212) 777-4400 F: (212) 529-5237

New Jersey Headquarters Office
1037 Raymond Boulevard, Suite 200
Newark, NJ 07102-5425
T: (973) 642-2201 F: (973) 642-3245

2. a Certificate of Authorization to practice Professional Engineering or Architecture in the states of New York and/or New Jersey.

Please see certificates to the right.

Certificates of Authorization to practice professional engineering in New York and New Jersey are that of the proposer's parent company, STV Incorporated.

Regarding the State of New Jersey Certificate of Authorization, please note we filed renewal documentation on July 10, 2014 but have not yet received an updated Certificate from the State's Board of Professional Engineers and Land Surveyors.

B. Staff Experience:

Construction Inspection staff shall be experienced in performance of one or more of the following: Civil, Structural, Electrical and Mechanical Engineering; and shall include:

1. at least ten (10) of which must be engineers/architects licensed in the states of New York and/or New Jersey.
2. at least ten (10) of which must be ACI Concrete Construction Special Inspector
3. at least three (3) of which must be ICC Certified as a Structural Steel and Bolting Inspector
4. at least one (1) of which must be NACE Level 1 coatings certified.

Please see the charts on the following page.

"Call-In" Experience

STV has provided CM and inspection services for a multitude of call-in, task-order, and open-ended contracts. The firm's history of successful task-order contract performance is highlighted by prompt and cost-effective service recognized by the dozens of local, state, and federal agencies that have chosen STV as their "stand-ready" firm for such contracts. These clients include PANYNJ as well as NYCSCA, NYSOGS, NYCHA, CUNY, and NYSDOT.

Task-order contracts have unique needs with regards to staffing, consistency of performance, communication methodologies, and the ability to mobilize in a time efficient manner. However, STV is accustomed to providing services under this contract arrangement and, therefore, is well versed in responding quickly to our clients' requests. That is why over 80% of our work is for repeat clients. Our organizational structure, service mentality, and long history of performance under task-order contracts, will enable us to be more cost-efficient and responsive as we strive to meet your needs.

Project Leadership You Can Count On

Gus Maimis, LEED® AP BD+C will lead our team and serve as Project Director. Mr. Maimis is known to PANYNJ through his work on the National September 11 Memorial & Museum, a significant part of the redevelopment of the World Trade Center (WTC) site. He is responsible for the oversight and management of all construction activities for this prestigious project, including the preconstruction phase, bid and procurement process, scheduling, and project finance. Mr. Maimis has more than 30 years of experience in the construction industry and will be the single point-of-contact for interface with PANYNJ and to direct the activities of the STV team. He will oversee a pool of 150 personnel and will be supported by myself, Robert Barbera, P.E., as Principal-in-Charge, and the following practice leaders:

- Ken Champion — Airports (36 years of experience/Senior Project Manager for Delta JFK Terminal 4 Redevelopment)
- Samuel Scozzari, P.E. — Bridges & Tunnels (29 years of experience/Design Certification Manager for the PANYNJ WTC Transportation Hub)
- Anthony Cracchiolo, P.E. — Rail Transit (48 years of experience/Project Director for the PANYNJ Moynihan Station Phase I CM)

M/WBE Participation

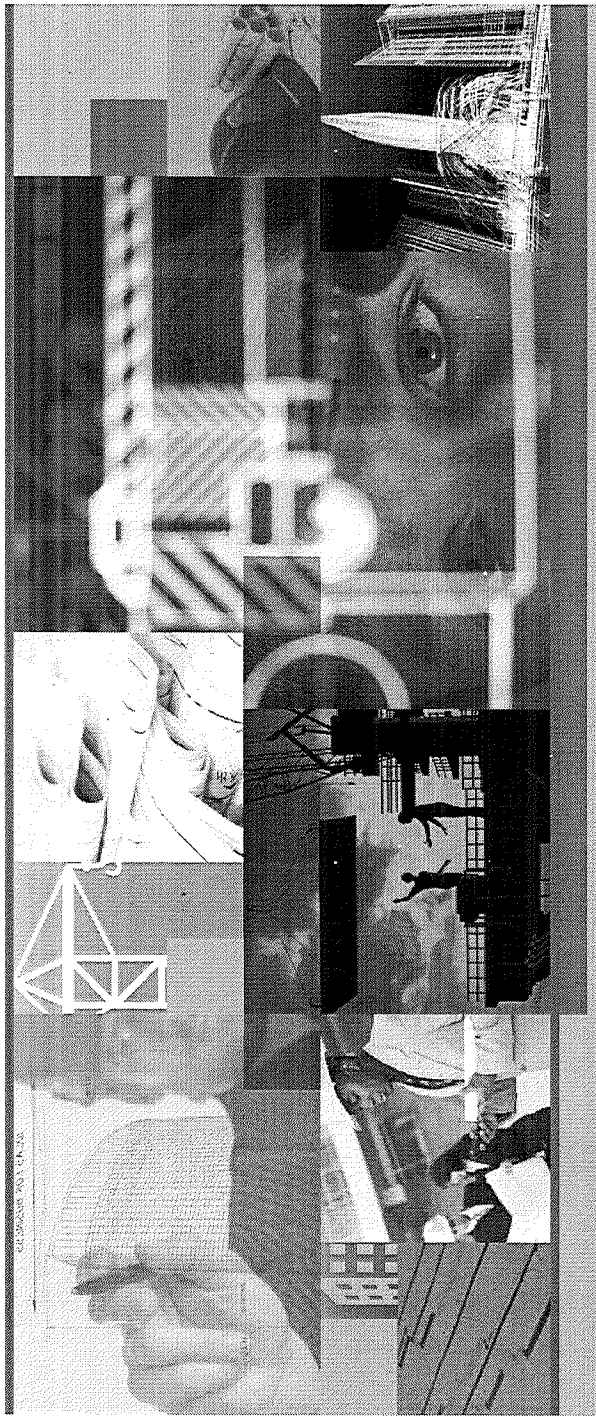
Recognizing the importance of M/WBE participation in the professional design industry, STV and all of our team members are firmly committed to maximizing M/WBE participation on this contract. We will commit to providing at least 12% MBE and 5% WBE participation for this contract through the utilization of our certified subconsultants. On a task-by-task basis, we will proactively address M/WBE participation as a primary focus.

Conclusion

STV is committed to supplying PANYNJ with the experienced and qualified personnel and consultants required for this contract. We have extensive relevant experience, an understanding of your operations and procedures, and a strong commitment to providing superior consulting services. We look forward to the opportunity to continue our long-standing relationship with PANYNJ. Should there be any questions or request for further information, I can be reached by phone at (212) 505-4932 or email at robert.barbera@stvinc.com. Thank you for your consideration.

Sincerely,

Robert F. Barbera, P.E.
Senior Vice President



D. MULTIPLIERS

THE PORT AUTHORITY OF NY & NJ

STV Construction, Inc. has reviewed the Standard Agreement in the **RFP Number 39247**.

Below is our team's multiplier breakdown.

STV's multipliers are as follows:	
Office:	2.41
Field:	2.13
Subconsultants' multipliers as follows:	
JPCL Engineering (DBE)	Office/Field 2.5
KS Engineers, PC (MBE)	Office 2.4/Field 2.10
ELLANA Construction Consultants Inc. (WBE)	Office/Field 2.36
The Hirani Group (MBE)	Office 2.7/Field 2.0

COMMISSIONER

ANDREW M. CUOMO
GOVERNOR

June 19, 2014

Mr./Ms. Jittendra Hirani
HIRANI ENGINEERING & LAND SURVEYING, PC
30 Jericho Executive Plaza
Suite 200C
Jericho, New York 11753

Dear Mr./Ms. Hirani,

Re: Overhead Billing Rate - FYE - 12/31/2012

We recently received current overhead information based on a review of the CONR 385 submitted for FYE - 12/31/2012.

Based on that information, provisional overhead rates have been approved. The Office overhead rate is 170% and the Field overhead rate is 110%. If these rates are lower than or equal to the "NOT TO EXCEED" overhead rates established in a contract with New York State Department of Transportation, you may use these provisional rates for billing purposes, for the referenced period, and for future periods, until superseded by rates established by preaward audit, post audit or until CONR 385 billing rates are issued for a subsequent period. Please review the overhead rates indicated in the Consultant Selection System (CSS) for the current applicable overhead rates for price forwarding.

These submitted rates have not been audited and no audit assurances are provided. This letter is intended for your use, the use of the department and the prime consultants you may be working with in connection with department agreements.

The provisional overhead billing rates are subject to the post audit prior to final payment for completed work.

Sincerely,

for William A. Howe
Director, Office of Contract Management

WH: SMB

E. PERSONNEL

THE PORT AUTHORITY OF NY & NJ

Team Organization

To respond to the specific needs of this on-call contract, STV has carefully selected a team based on their technical expertise and exceptional performance on past similar projects. The team we have assembled has significant relevant experience, an in-depth understanding of PANYNJ, the proven project leadership to successfully complete multiple concurrent assignments, and a long history of working together on task-order assignments. The chart on the following page depicts the organization of our team.

Team Qualifications

Following the organization chart, is a chart listing the experience of our key personnel by years, certificates, and facility type.

Resumes

Detailed resumes of key personnel on the STV team are provided following this section. Additional resumes can be provided upon request.
