Gus Maimis, LEED® AP BD+C

PROJECT DIRECTOR

Mr. Maimis, a project executive and vice president of STV Construction, Inc., has more than 30 years of experience in the construction industry successfully executing and completing projects for commercial office buildings, transportation centers, higher education campuses, hospitals, and multi-tenant housing. As principal of his own construction management firm for 10-plus years, he provided business development, coordinated client relations, and provided executive direction for multiple projects throughout the New York metropolitan area. Mr. Maimis' extensive knowledge of the industry makes him an invaluable resource to project teams and clients. Mr. Maimis also played an instrumental oversight role for the National September 11 Memorial & Museum, a significant part of the redevelopment of the World Trade Center (WTC) site.

PANYNJ National September 11 Memorial & Museum - Project Executive

Directing the construction of the National September 11 Memorial & Museum in Lower Manhattan as part of STV's services as program manager and owner's representative on behalf of the PANYNJ. The 8-acre memorial park features two recessed square pools in the footprints of the Twin Towers, which are surrounded by a stone wall listing the names of the nearly 3,000 people who died in the September 11th attacks in New York City, Washington, D.C., and Pennsylvania, as well as the victims of the February 1993 bombing at the WTC. When completed, a 3-story pavilion will provide access to an underground museum that will offer visitors an opportunity to view artifacts from the WTC site while descending toward bedrock, where they can view the slurry wall and exposed footings that supported the original towers. Mr. Maimis is responsible for the oversight and management of all construction activities for this prestigious project, including the preconstruction phase, bid and procurement process, scheduling, and project finance. Active construction projects on the site include One World Trade Center, the WTC Central Chiller Plant, the WTC Transportation Hub (which is directly underneath a substantial area of the Museum), and the WTC Vehicle Security Center. Each of these projects employs separate design teams and contractors, which requires immense effort by Mr. Maimis and his team to ensure that each stakeholder's design details and construction logistics are analyzed and coordinated to meet scheduled milestones, such as the opening of the Memorial on September 11, 2011. Challenges include thousands of steel and concrete connections (as well as loads imposed on structures) between stakeholders; steam, power, water, sewer, fire standpipe, chilled water, and sprinkler connections from outside agencies as well as connections of shared systems between stakeholders; and waterproofing connections and expansion joint details at project interfaces. Coordination issues also include shared use of cranes and construction equipment among stakeholder to optimize the tight logistical demands; shared use between stakeholders of the limited access and delivery points for construction materials; design and construction of multiple mechanical intake and exhaust ducts among stakeholders; and design and installation of sleeves, conduits, duct opening, anchor bolts, and fireproofing/fire stopping in adjacent stakeholders' work for use by the memorial and museum. Both the memorial and museum are seeking LEED Gold certification.

Columbia University Term Consultant for Cost Estimating and Change Order Review - Senior Associate

Leading STV's efforts in providing preconstruction consulting services to Columbia University for various project start-ups, as well as assisting in providing estimates used for change order review and negotiations with the subcontractors. Projects involve mechanical upgrades,

renovations to numerous laboratories as well as classroom and meeting areas. Mr. Maimis is responsible for managing the STV staff and associated resources for the delivery of the project requirements to the client's expectations.

NYIT NYCOM Renovations - Project Executive
Responsible for the renovation and upgrades to various classroom, lecture hall, and laboratory renovations for the New York College of Osteopathic Medicine (NYCOM) at the New York Institute of Technology (NYIT) in Old Westbury, NY. Mr. Maimis was responsible for staffing, cost control, client coordination, quality assurance/quality control, and scheduling.

New York University Renovations - Project Executive
Guided several renovations for New York University in Manhattan. Mr. Maimis was responsible for the multimillion-dollar conversion of a building to a state-of-the-art data center and office space. He managed renovations for laboratories, theater and lecture hall spaces, student and faculty areas, two libraries, and lobby areas. He was responsible for staffing, cost control, client coordination, QA/QC, and scheduling.

CUCF Requirements Contract - Project Executive
Overseeing a 3-year requirements contract to provide architectural and engineering design, as well as construction and construction management services, for the City University Construction Fund (CUCF). The first task is the $4.25 million design-build conversion of nearly 5,000 sf of physics and astronomy laboratories into five biology laboratories with new casework and fume hoods for Queens College in Queens, NY, one of the City University of New York (CUNY)'s largest senior colleges. Mr. Maimis is overseeing the architectural and engineering design and leading the bidding process. He is guiding the coordination with contractors to develop a baseline schedule and workable phasing plans, and will supervise the construction management services.

NYU Langone Medical Center Hurricane Sandy Recovery - Project Executive
Overseeing a team of six project managers and superintendents to provide the necessary staffing and resources for recovery efforts to bring the New York University (NYU) Langone Medical Center in Manhattan back to full operations, after being crippled by flooding from Hurricane Sandy. Mr. Maimis is supervising cost control and estimation for restoration of the 705-bed Tisch Hospital and numerous repairs and capital improvements to the Smilow, Public Health, and Skirball buildings, as well as various outpatient sites. He is guiding the project management of several related projects in different stages of design and construction and coordinating multiple stakeholders, consultants, and contracts. The firm's overall responsibilities encompass program reporting and quality, cost, and document control.

Columbia University Medical Center Change Order Review - Senior Associate
Supervising a review of the change orders and scheduling for the relocation of the Columbia Doctors Midtown office for Columbia University Medical Center in Manhattan. The $23 million project scope encompasses the fit-out of a 30,000-sf administrative and examination space. STV is assisting in the change order negotiation process, by delivering independent estimates to assist in the close-out settlement with the construction manager and the subcontractors. Mr. Maimis is ensuring that the Medical Center's interests are represented by overseeing a thorough review of the numerous proposed change orders so as to confirm their anticipated value.

Robert F. Barbera, P.E.

PRINCIPAL-IN-CHARGE

Mr. Barbera has 30 years of experience in the construction industry, providing a strong institutional background, along with a focus on project controls, estimating, and preconstruction services, including design review, constructability review, and risk management. He has ultimate responsibility for the direction of business development teams, oversight of construction staff in the execution of work, and management of everyday risk issues associated with operations. Specifically, Mr. Barbera has monitored the 10-person program management team facilitating the rehabilitation of NYCHA facilities to aid the recovery from damage caused by Hurricane Sandy, under a capital improvement program that could exceed $1 billion. He has held executive-level positions at major construction entities in the tri-state region, including leading an interiors "at-risk" division, and operating as general manager. In the past decade, many of Mr. Barbera's efforts have focused on directing territories and divisions throughout the various disciplines within the construction industry in the New York/ New Jersey metropolitan area.

Project Experience

NYCHA Hurricane Sandy Program Management - Principal-in-Charge

Monitoring a 10-person program management team performing as an extension to NYCHA's Capital Projects Division (CPD), for the recovery of NYCHA facilities that sustained flooding, sand and saltwater infiltration, and wind damage due to Hurricane Sandy. The firm's work for the capital improvement program that could exceed $1 billion is focused on the 35 developments and maintenance facility in Brooklyn, Queens, and Manhattan that suffered moderate to severe damage, predominantly to their mechanical and electrical systems. An additional 180 developments are slated for roofing, façade, and other site restoration work. Mr. Barbera is holding overall responsibility for the team, which is working within HUD's public housing procurement regulations to oversee design, secure and manage construction managers and contractors, and perform a methodical, coordinated recovery effort.

NYCHA CM/Build Requirements Contracts - Principal-in-Charge

Overseeing the management of two construction management (CM)/build requirements contracts, totaling $230 million, with NYCHA for a variety of task-orders at public housing developments citywide. Mr. Barbera is responsible for projects that include structural repairs, masonry and brick work, asbestos abatement, and roof repairs for numerous housing complexes .

NYSOGS South Beach Psychiatric Center New Central Services Building Emergency Response & Delivery - Principal-in-Charge

Responsible for the construction management of a new 35,000-sf Central Services Building at the South Beach Psychiatric Center in Staten Island, NY, for NYSOGS. The $24 million facility will replace core functions that were in the basement of the existing Building 8/9 — including the kitchen, maintenance and warehouse facilities, the central generator, boilers, air handling systems, chillers, and main loading dock — that were affected by floodwaters from Hurricane Sandy. With an eye toward future storm events, the buildings will be raised some 20 feet above mean sea level and will be on piles.

NYCSCA Mentor Program Contract 3 CM Services - Principal-in-Charge

Providing executive-level oversight of the coordination of a $30 million program to increase minority, women-owned, and locally based enterprise participation in NYCSCA projects. Mr.

Barbera is overseeing the mentoring services the joint venture team is providing under a 3-year CM contract, including lessons to identify and meet business development needs; advice on acquiring small business loans and surety bonding; seminars on taxation; recommendations for procuring construction; and information technology training. Contractors are involved in renovations to existing NYCSCA buildings, including façade restorations and upgrades required for code compliance. The scope of projects included the installation of HVAC, plumbing, and electrical systems; equipment for boiler plants and science laboratories; window replacements; roofing; roof drains; and parapet walls.

CUCF Requirements Contract - Principal-in-Charge
Monitoring a 3-year requirements contract to provide architectural and engineering design, as well as construction and construction management services, for CUCF. The first task is the $4.25 million design-build conversion of nearly 5,000 sf of physics and astronomy laboratories into five biology laboratories with new casework and fume hoods for Queens College in Queens, NY, one of CUNY's largest senior colleges.

DASNY City Tech CM Task Order - Principal-in-Charge
Facilitating an extended task-order contract with DASNY to perform CM services for tasks to upgrade portions of New York City College of Technology (City Tech) campus buildings. Projects include exterior and interior renovations to Namm Hall, specifically the replacement of the exterior stone veneer of the building and installation of a state-of-the-art kitchen to serve the culinary arts program.

Rutgers University Livingston Dormitories Owner's Representative Assignment - Principal-in-Charge
Oversaw the construction team on behalf of Rutgers University in the construction of its new Livingston Campus Student Housing project. This $150 million project consisted of a 650,000-sf, 7-building complex to house 1,500 additional undergraduate students. Serving as an extension of staff, Mr. Barbera was responsible for monitoring all facets of construction activity of the general contractor, and reporting to the university's project management.

NJIT Warren Street Village - Principal-in-Charge
Oversaw the construction of a $65 million student housing facility for the New Jersey Institute of Technology (NJIT) in Newark, NJ. Mr. Barbera directed construction services for six buildings, five of which are 16,000-sf Greek fraternity and sorority residences. The sixth building is a 140,000-sf, 5-story structure to house the Honor's College on the second floor, and student dorms on floors three through six. The project is categorized as Phase I of the Newark Gateway Master Redevelopment.

Brookdale Hospital Center Major Modernization - Preconstruction Manager
Led planning efforts for this $40 million modernization of various programs and infrastructure upgrades for the Brookdale Hospital Center in Brooklyn, NY. Mr. Barbera started preconstruction with a comprehensive due-diligence prioritization of hospital needs and corresponding operational impacts. He defined the project scope which included new electrical service, power load-shedding and synchronization components, various mechanical infrastructure improvements, new hospital fire alarm system, new clinical laboratory overbuild atop the existing emergency department, various medical and surgery unit renovations, and other miscellaneous upgrades to the hospital's everyday functions.

David A. Cooksley, CQA

QA/QC MANAGER

Mr. Cooksley has more than 25 years of experience in the science and engineering communities as a project director, project manager, project engineer, construction manager, inspector, and quality assurance/quality control (QA/QC) implementor. As the QA/QC Manager for STV Incorporated's Construction Management (CM) Division, Mr. Cooksley develops, maintains and implements QA/QC policies and procedures, and provides guidance to project teams in the development of project-specific quality management tools. Mr. Cooksley has led all phases of projects, from initial proposal development and budgeting/scheduling, through implementation, project controls, quality audits, commissioning, and closeout. He is experienced in regulatory research and interpretation, both domestic and international. Mr. Cooksley also has a significant background in teaming with all levels of management and staff in industrial, commercial, institutional, and academic programs.

NYCHA Johnson Houses Phase IIA and IIB Renovation CM - Quality Manager

Leading quality assurance and quality control (QA/QC) services for Phase II of NYCHA's renovations at the Johnson Houses complex in New York City. Mr. Cooksley is conducting quality audits and attending quality-related meetings with the project manager and owner. As part of this $60 million phase of the project, STV is managing a fast-track, 22-month schedule to complete masonry work, structural upgrades, asbestos abatement, kitchen and bathroom renovations in 662 occupied apartments, and modernization of 107 vacant apartments.

NYCHA Johnson Houses Renovation CM - QA/QC Manager

Oversaw quality assurance and quality control (QA/QC) services for preconstruction, construction, and post-construction services to mitigate long-term water damage at the Johnson Houses in Manhattan, under STV's construction management (CM)/build task-order contract with NYCHA. The scope of work for this $45.8 million project included major structural repairs to four of the buildings within the complex, as well as interior bathroom and kitchen renovations of 488 occupied apartments; renovations to 136 vacant apartments; hallway and stairwell upgrades; exterior brick repairs; and full roof replacement and asbestos abatement of four high-rise buildings, two off-set roofs, and two low-rise buildings totaling more than 40,000 sf. Mr. Cooksley attended quality-related meetings with the owner and project manager. He also performed a systematic quality audit that evaluated quality management, project implementation, QA/QC project coordination, document control, and project performance.

NYCSCA Mentor Program CM - QA/QC

Served on the NYCSCA Mentor Program Quality Assurance (QA) Committee and participated in monthly meetings to satisfy and augment the quality goals of the project. The mission of the program is to foster growth and increase the participation of minority and women-owned business enterprise (MBE/WBE) contractors and locally based enterprise (LBE) firms in New York City's construction community, by providing hands-on training during various school construction projects. The program will mentor, train, and graduate contractors so they will be able to successfully transition to the larger competitive construction environment and obtain financial resources and bonding while strategically planning for unionization.

Clayton BOE Additions and Renovations to the Clayton MS/HS and Herma Simmons ES - QA/QC
Assisted with the finalization and completion of the project manual and project quality control plan for the design, bidding, construction, and post-construction of public schools in Clayton, NJ. The $20 million project, for the Clayton Board of Education (BOE) included a 27,000-sf high school addition, a parking plaza with driveways and connector road; new dedicated entrances; baseball and softball fields; upgraded utilities; and a new storm water management basin. At the Simmons Elementary School, the project comprised the reconstruction of the bus loop driveway and parking areas; installation of new playground equipment and drainage improvements; the construction of an emergency generator and chiller; the installation of 80,000 sf of roofing; repairs to the exterior insulated finishing system; and building HVAC controls.

Westchester Community College Gateway Center CM - QA/QC Manager
Led quality assurance/quality control (QA/QC) services during the construction of the new 70,000-sf Gateway Center at Westchester Community College in Westchester, NY. The 3-story, V-shaped building includes classrooms, lecture halls, and an auditorium to further the integration of English as a Second Language (ESL) students into the fabric of the campus. The project has received LEED Gold certification.

School District of Philadelphia CIP Construction Management - QA/QC Manager
Developed the project manual and project quality control plan as part of STV's construction management services for 13 schools in the School District of Philadelphia's $1.5 billion, 5-year capital improvement plan (CIP). The firm's portion of the CIP included $235 million of construction value for five renovations, five renovations with additions, and three new buildings. Scheduling, a challenge for existing schools, required extensive phasing so that construction did not interrupt school operations while school was in session. Mr. Cooksley also performed an internal QA/QC audit of the project.

DASNY Namm Building Construction Management Services - QA/QC Manager
Oversaw quality assurance/quality control (QA/QC) for $13.3 million in renovations to the New York City College of Technology Namm Building in downtown Brooklyn, NY. The DASNY project entailed the total replacement of the exterior stone veneer and windows of the 11-story building, which required the erection of an extensive scaffolding system. Other project elements included replacing the roof slab of a bulkhead, electrical system upgrades, and installation of new computer labs totaling over 200 workstations. Construction occurred while the building was fully occupied, making the development and implementation of the construction staging plan critical, and the work was completed ahead of schedule.

Kenneth M. Champion

AIRPORTS PRACTICE LEADER

FIRM
STV CONSTRUCTION, INC.

YEARS OF EXPERIENCE
36

EDUCATION
BACHELOR OF SCIENCE, CONSTRUCTION MANAGEMENT; CENTRAL CONNECTICUT STATE UNIVERSITY

Mr. Champion is a project executive with more than 35 years of experience planning, designing, budgeting, and overseeing construction activities at some of the nation's most iconic sites. His experience includes serving in the roles of owner-builder, general contractor, and as a design-build expert responsible for successfully delivering projects that required complex logistics and phasing to maintain ongoing operations. Having worked successfully with nearly 40% of Engineering News-Record's Top 100 A/E design firms during his career, Mr. Champion recently served as part of the United Nations (UN)'s Headquarters Crisis Operations Group and Senior Emergency Policy Team, as well as Deputy to the UN Assistant Secretary-General Department of Management. He was also the UN's project representative to the New York City Mayor's Office and numerous local and federal agencies. Mr. Champion has proven experience leading high-profile projects that require extensive planning, permitting, budgeting/estimating, and bid approvals. This includes his work directing the UN Capital Master Plan Modernization, as well as major restoration efforts at Ellis Island and the Statue of Liberty, along with other national landmarks.

Project Experience

Delta Air Lines JFK Terminal Redevelopment Program - Senior Project Manager

Furnishing construction management services, including overseeing multiple trade subcontractors completing Phase 2 landside and airside improvements for Delta Air Lines' international operations at JFK International Airport, in Queens, NY. Mr. Champion's activities encompass the $1.4 billion terminal expansion and redevelopment project, to relocate international operations to Terminal 4, and provide for the demolition of Terminal 3 and reallocation of the space to provide aircraft parking. The firm's scope of work entails a 540,000-sf, 9-gate extension at the end of the current Concourse B and expansions to the east and west sides of the 110,000-sf head house; extensive bag-handling system modifications and expansion of the 131,000-sf security area; construction of new escalators, stairs, elevator piles, concrete foundations, and a security screening platform; removal of the monumental stairways between the third and fourth levels; and other renovations for a total building construction of 781,000 sf.

UN Headquarters Capital Master Plan Project - Program Director

Managed the phased design and construction for the $2.2 billion renovation and modernization of the 60-year-old, 2-million-sf UN Headquarters facilities in the Turtle Bay neighborhood of Midtown Manhattan. The purpose of the project is to bring the facilities into compliance with current local building and fire safety codes, replace deteriorating components and systems, and preserve the architectural integrity and original design intent. Tasks included construction of a temporary building on the North Lawn to provide space during the renovation of the Conference Building, and the subsequent reconfiguration of the North Lawn Building for use during the renovation of the General Assembly Building, as well as the complete renovation of the Secretariat Building. Basement space was also reconfigured to provide temporary space for offices and other functions. In total, more than 10,000 staff moves had to be organized in two rounds of relocations. As Deputy to the Assistant Secretary-General of the Department of Management, Mr. Champion's responsibilities included serving as the project representative to the New York City Mayor's Office and stakeholder agencies, such as the U.S. Secret Service and U.S. Government Accountability Office, as well as ambassadors and delegates. Work performed under Mr. Champion's management was completed 2% under the

approved construction budget. He also served as a member of the UN Headquarters Crisis Operations Group and the UN Headquarters Senior Emergency Policy Team in New York.

Statue of Liberty-Ellis Island Foundation Ellis Island National Monument Restoration - Senior Project Manager

Managed on-site activities for the restoration of facilities on Ellis Island, NY, after decades of neglect and exposure to the elements and the creation of the National Immigration Museum. The $200-million project has the distinction of being the largest restoration undertaken in the U.S. The scope of work included historic restoration of sections of the 1900 Main Building and conversion of other spaces to new uses. The Main Building now houses New York's third largest museum and, in addition to numerous exhibit rooms, features two theaters, an oral history archive, libraries, and exhibits depicting the immigrant experience and the human aspect of the great migration to the United States of America. Preservation, restoration, replication, interpretation, and adaptation were among the many techniques employed during design and construction. The end result is that a present-day visitor can now share some of the experiences of immigrants from more than a century ago. The project included complete infrastructure modernization; construction of a temporary 1,000-foot bridge connecting Ellis Island to Liberty State Park; preservation work for the Kitchen Building and Laundry Building; restoration of the railroad ticket office; construction of new piers, hardscape, dredging, docking facilities, and fender system for the Circle Line Ferry; and grouting and stabilization of the island's granite seawall perimeter by grout injection. Mr. Champion's scope and responsibilities encompassed full preconstruction services, complex overwater/waterfront logistics, and agency coordination for environmental impact work. The project earned more than a dozen state, regional, and national awards.

Huber Group Residential LLC Horizon West Lakeside Village Site Development - Owner's/Builder's Representative

Managed all state and county agency planning and permitting services, design, and subcontractors for all site development for the $200 million Lakeside Village development project in Windermere, FL. Entitlement include 200 acres approved for commercial, retail, restaurants, and 14 mid-rise luxury condominiums just north of Walt Disney World.

Harris, Hooker & Huber LLC Waterstone Site Development - Owner's/Builder's Representative

Directed all state and county agency planning and permitting, design, and subcontractors for $40 million in site development, infrastructure, roads, landscaping, and amenities for 200 acres approved for residential homes on Lake Butler in Windermere, FL.

The Opus Group of Tampa Laguna at Riviera Dunes - Principal-in-Charge

Provided executive oversight, including financial management, for a $200 million luxury waterfront development in Palmetto, FL, featuring four 7-story condominium buildings and an 18-foot deep, 90-acre manmade harbor and full-service marina. Mr. Champion's responsibilities included baseline budgeting, scheduling, permitting and agency approvals, and CM.

Dream Harbors of Naples Nautico Yacht Club - Project Manager

Managed design and construction for this $200 million mixed-use development project in St. Petersburg, FL. Phase I included construction of 143 new boat slips, an 80,000-sf boat storage building, more than 1 mile of new seawall around an existing harbor, a club house, retail space, and amenities on a 30-acre site. For Phase II, Mr. Champion obtained permitting and oversaw construction of pads for three planned 16-story luxury condominiums.

Samuel Scozzari, P.E.

BRIDGES & TUNNELS PRACTICE LEADER

FIRM
STV CONSTRUCTION, INC.

YEARS OF EXPERIENCE
29

EDUCATION
BACHELOR OF TECHNOLOGY, CIVIL ENGINEERING TECHNOLOGY - CONSTRUCTION; ROCHESTER INSTITUTE OF TECHNOLOGY

PROFESSIONAL REGISTRATIONS
PROFESSIONAL ENGINEER: NEW YORK

CERTIFICATION
OSHA 10-HOUR CONSTRUCTION SAFETY AND HEALTH TRAINING

Mr. Scozzari has more than 29 years of experience overseeing the construction of high-profile, multidisciplinary projects in the New York metropolitan area that have included highways, fixed and movable bridges, buildings, marine and waterfront structures, and parks and public spaces. During his career, Mr. Scozzari has developed a strong ability to successfully join together the goals of diverse public agencies and the expertise of multiple contractors to deliver projects and programs of unique and varied character. In addition to his technical experience with all facets of vertical and horizontal construction, he brings a high level of sensitivity to the traveling public and communities impacted by construction. Mr. Scozzari has coordinated the construction of multiple adjacent projects being undertaken by different owners and stakeholders, which has required knowledge of various city and state agency procedures, as well as regulatory compliance and permitting. He is well-versed in the construction management (CM) procedures of the MTA, the TBTA, NYCDOT, and the Federal Highway Administration (FHWA). Mr. Scozzari also played an integral role in the development of electronic document control for the resident engineering services of the Third Avenue Bridge for NYCDOT.

Project Experience

PANYNJ WTC Transportation Hub - Design Certification Manager, Mezzanine and West Bathtub

Provided design review of PANYNJ's World Trade Center (WTC) Transportation Hub in Lower Manhattan. As part of a joint venture working with renowned Spanish architect Santiago Calatrava, STV has provided final civil, structural, mechanical, electrical, and plumbing engineering and architectural design services, as well as transportation and traffic engineering, pedestrian-flow analysis and modeling, and security consulting. Additionally, the firm has provided owner's representative services for the associated One World Trade Center tower and the National September 11 Memorial & Museum, and a variety of other services on this highly complex site. The firm is architect-of- record for the 2-million-sf, $3.2 billion Hub, which will link 11 subway lines, as well as PATH trains and ferry service, to locations on and around the WTC site. Mr. Scozzari provided design certification services for the mezzanine and west bathtub structures, from the street level to below the PATH station, for a depth of approximately 100 feet. He affirmed that the QA process was being implemented, resulting in a recommendation to the designer-of-record for the New York City Department of Buildings to sign off on the project. Subsequently, the site's twin reflecting pools opened to the public on the tenth anniversary of the September 11 terrorist attacks.

The Trust for Governors Island Redevelopment of Governors Island Resident Engineering and Design Review - Chief Resident Engineer/Project Manager

Leading resident engineering and inspection (REI) services for a $250 million program of capital improvements that will transform the 150-acre Governors Island into a prime recreation destination and development zones with new topography and amenities. The first phase of the program has transformed 64 acres of the island and 15 interrelated projects to establish a new park and public space. In addition, the program involves rehabilitation of multiple ferry landings and approach platforms; reconstruction of the seawall, its promenade, and drainage systems; restoration of potable water via horizontal direct drilling of a new water main from the Red Hook section of Brooklyn, NY; electrical distribution systems; and stabilization of historic building envelopes. In 2014, The Trust will implement construction of four hills, with the tallest two hills having their summits between 80 and 90 feet above existing ground level. Mr.

Scozzari is the client's direct point-of-contact for QA oversight of the construction manager and its subcontractors. He is also providing staff leadership for REI, Construction Administration, and design review services. This challenging role requires Mr. Scozzari to manage 25 on-site personnel as well as as-needed design review staff.

TBTA RFK/Triborough Viaduct Deck Reconstruction - Resident Engineer

Managed the inspection of this $271 million deck panel replacement of the 75-span viaduct over Randall's and Ward's islands in New York City. Mr. Scozzari oversaw a construction inspection staff of up to 35 employees. In addition to the deck panel replacement, the project entailed upgrades to the structural steel and cables of the suspension span, replacement of more than 400 bridge bearings, viaduct superstructure repairs and girder replacement, construction of new ramps from the viaduct to Ward's Island, reconstruction of the Ward's Island surface roadway, bridge and site drainage improvements, and repainting of the viaduct structure and roadway-level truss of the suspension span. Mr. Scozzari was also responsible for overseeing maintenance of traffic, coordinating meetings with the TBTA project engineer and other involved parties, creating and preserving document control, scheduling, change-order management, quality assurance, contractor invoicing, and construction inspection staffing. This project was one of several TBTA projects taking place concurrently with projects on Randall's and Ward's islands (within the footprint of the TBTA projects for the NYCDPR, NYCDEP, NYCDEC, and the NYCEDC. The majority of overlapping work zones occurred between TBTA's Robert F. Kennedy (RFK) Capital Programs, having up to four projects taking place simultaneously, and the NYCEDC's programs to revitalize Randall's Island Park. Mr. Scozzari arranged 24 months of bi-weekly coordination meetings of all construction projects taking place with all agencies, as well as abutting property owners, such as the Fire Department of New York (FDNY) Fire Academy and the Manhattan Psychiatric Center, of which the latter was also conducting projects through the New York State Office of General Services (NYSOGS) and DASNY. This effort was successful in avoiding claims due to lack of construction access as they pertained to Mr. Scozzari's client, TBTA.

NYCDOT Third Avenue Bridge Replacement - Project Manager/ Resident Engineer

Provided on-site staffing management for the $125 million replacement of the Third Avenue Bridge over the Harlem River, Harlem River Drive, and CSX Railroad. The Third Avenue Bridge connects the Bronx, NY, to Manhattan and was one of the structures included in the NYCDOT's program to rehabilitate or replace all 11 movable bridges over the Harlem River. This complex project involved six stages of work to replace the land approaches and interchanges with the Harlem River Drive. site in Alabama and shipped via ocean-barge to the New York City site.

ConnDOT I-91 and Founders Bridge Rehabilitation - CPM Analyst

Provided critical path method (CPM) analysis and senior inspection duties for this $105 million partnering project in Hartford, CT, that included the rehabilitation of 10 bridges and four cut-and-cover tunnels (two railroad, two for new ramps). The project also involved the rehabilitation of 15 roadway parapet walls and underwater concrete, and the installation of 100 caissons along the existing U.S. Army Corps of Engineers (USACE) flood dike along the Connecticut River in downtown Hartford. Additionally, it involved installation of an 84-inch-diameter storm sewer and the relocation of a 48-inch storm sewer. One challenge was addressing two waste stockpile treatment areas — one for contaminated soils and the other hazardous soils. Another challenge was the relocation of I-91 and construction of a temporary detour while working under live traffic conditions.

Anthony G. Cracchiolo, P.E.

RAIL TRANSIT PRACTICE LEADER

FIRM
STV CONSTRUCTION, INC.

YEARS OF EXPERIENCE
48

EDUCATION
MASTER OF SCIENCE, TRANSPORTATION PLANNING AND ENGINEERING; POLYTECHNIC INSTITUTE OF NEW YORK UNIVERSITY

BACHELOR OF ENGINEERING, CIVIL ENGINEERING; MANHATTAN COLLEGE

PROFESSIONAL REGISTRATIONS
PROFESSIONAL ENGINEER: NEW YORK AND NEW JERSEY

Mr. Cracchiolo, a senior vice president, brings more than 45 years of design, design management, and project, program, and construction management experience to his role as STV's Director of Special Projects. In this role, he is spearheading the firm's participation in specific public-private partnership, design-build, and other major project pursuits. In addition, Mr. Cracchiolo is currently serving as project director of the Joint Venture construction management team for Phase I of the Moynihan Station Development Project, the initial phase of converting the historic James Farley Post Office Building into the new Amtrak Train Hall at New York's Penn Station. Mr. Cracchiolo's experience encompasses managing major infrastructure, transportation and building capital programs and projects throughout the New York/New Jersey metropolitan region and nationwide. Prior to joining STV, he led the planning and initial design and construction for the $11.4 billion World Trade Center (WTC) Site Redevelopment Program following the terrorist attacks of September 11, 2001, as Director of Priority Capital Programs for PANYNJ. This included the development of the site master plans and planning and preliminary design of the Calatrava WTC Transit Hub and other site infrastructure, the fast-track restoration of PATH commuter rail service to Exchange Place in Jersey City and Lower Manhattan, and the planning for other Lower Manhattan transportation improvements. During his tenure with PANYNJ, he managed a variety of capital projects for the agency's facilities, including the $1.9 billion AirTrain JFK light rail system; the $415 million Newark Liberty International Airport AirTrain Extension and major terminal, airside and landside improvements at JFK, Newark, and LaGuardia airports; and the restoration and redevelopment of the WTC following the 1993 terrorist attack, as well as improvements to interstate tunnels and bridges, bus terminals and PATH.

Project Experience

Moynihan Station Development Corporation/PANYNJ Moynihan Station Phase I CM - Project Director

Directing and managing comprehensive CM services for the $325 million Phase I of the development of a new train hall in the James Farley Post Office Building in Midtown Manhattan, with connections to New York's Pennsylvania Station and Amtrak, NJ TRANSIT, Long Island Rail Road, and New York City Transit service. Mr. Cracchiolo is managing the expansion of the 33rd Street Connector between Penn Station and the West End Concourse, the widening and extension of the West End Concourse to serve nine platforms, the construction of two new street entrances on the west side of Eighth Avenue at 31st and 33rd streets, the restoration of the historic James Farley grand staircase and entrance on Eight Avenue, improvements in ventilation of the train shed on the west side of the station, and new ADA-compliant vertical circulation, all while coordinating with rail operations and force account to assure continued operations. He is overseeing and facilitating contract design review, budgeting, cost control, estimating, construction supervision and inspection, quality assurance, and commissioning, as well as assisting in coordinating the complex staging among the three railroads.

PANYNJ AirTrain JFK DBOM - Program Director

Planned and secured all environmental, land use, and funding approvals, and procured and implemented the $1.9 billion AirTrain JFK light rail system connecting travelers from the LIRR Jamaica Station and NYCT Howard Beach Station to JFK International Airport in Queens, NY. The project included the $400 million reconstruction of the LIRR Jamaica Station, the Howard Beach NYCT subway station, and a 3-mile section of the Van Wyck Expressway for the New York State Department of Transportation, including corridor beautification. Under Mr. Cracchi-

olo's direction, AirTrain JFK, one of the largest DBOM transit projects undertaken in the United States, was constructed in record time and within budget. It won numerous awards, including ones from the American Council of Engineering Companies, the American Institute of Architects, the American Railway Engineering and Maintenance-of-Way Association, McGraw-Hill Construction News, the Municipal Art Society of New York, the New York Association of Consulting Engineers, the Portland Cement Association, and the Prestressed Concrete Institute. It was also a finalist for the American Society of Civil Engineers Outstanding Civil Engineering Achievement Award.

PANYNJ George Washington Bridge Bus Station Redevelopment - Principal-in-Charge
Oversaw the design effort for the proposed $152 million redevelopment of the George Washington Bridge Bus Station in Upper Manhattan. The extensive, multidisciplinary rehabilitation project will enhance the physical presence of this significant historic structure, which serves more than 7.4 million bus passengers annually, and will consolidate and improve interstate bus operations. It will also benefit the neighborhood by providing a significant transit-oriented retail development. Mr. Cracchiolo led efforts to provide the concept designs and feasibility analyses, leasing and tenant marketing exhibits, and advice and support to enable the developer of the public-private partnership with the PANYNJ to advance lease negotiations with the agency. Upon successful signing of an Interim Lease Agreement, STV became the engineer-of-record and architect-of-record for the design of both the bus terminal and the retail portion of the project.

Amtrak ARRA Preliminary Design and CM Services - Project Manager
Led and managed the preliminary design of 58 design-build contract bridging packages and CM/resident engineering (RE) services for two major design-build contracts on a fast-track basis to meet American Recovery and Reinvestment Act (ARRA) funding deadlines. Projects that Mr. Cracchiolo oversaw included projects to upgrade Amtrak utilities, structures, and other Northeast Corridor right-of-way improvements; nationwide station restoration and security improvement projects; and facility safety, security, and other physical improvements, including new drop tables and car washers. He also guided the design-build contract procurement support and CM/RE services for the $130 million Chicago Shop and Yard Rehabilitation and Improvements contract and the $22 million Boston Southampton Shop and Yard Improvements contract, which included the installation of a new locomotive drop table and car washer, among other shop and yard safety, rehabilitation, and security improvements. The total value of projects under this contract was $561 million.

NJ TRANSIT Access to the Region's Core Project - Manager of Peer Review Group/Project Advisor
Managed the independent peer review teams responsible for reviewing the preliminary engineering effort for the proposed $8.7 billion Access to the Region's Core project, including a deep underground station in Manhattan at 34th Street and Broadway. Mr. Cracchiolo served as advisor on the security analysis and design as well as other aspects of the project, including constructability, construction market analysis, and third-party coordination. The project would have provided a second Hudson River rail tunnel, augmenting the capacity of the existing 100-year-old tunnels to New York's Pennsylvania Station. It was to consist of two tubes under the Hudson River from New Jersey, with additional tracks along the existing Northeast Corridor line through the Secaucus Transfer Station. The project was canceled in final design.

Thomas Colombo

SENIOR PROJECT MANAGER

FIRM
STV CONSTRUCTION, INC.

YEARS OF EXPERIENCE
36

EDUCATION
BACHELOR OF SCIENCE, ELECTRICAL ENGINEERING; COLLEGE OF STATEN ISLAND

Mr. Colombo has more than 35 years of experience in engineering, construction management, and program management for numerous projects in New York and New Jersey. He has served in senior management roles for the NYCSCA and as a private consultant overseeing building projects throughout the New York metropolitan area and abroad. Mr. Colombo is skilled in all elements of construction, including project planning, property acquisition, environmental assessments, preparation and solicitation and contract documents, scheduling, budgeting, management of design services, constructability assessments, and value engineering. Additionally, Mr. Colombo specializes in energy conservation and has assisted in the design and development of solar energy systems for the U.S. government and various school districts. He is an advocate of fast-track design and construction processes and has provided seminars on construction methodologies requiring design-build and project partnering.

Project Experience

NYCDDC New Police Academy CM - Construction Manager

Supervising the construction management (CM) of this $1.5 billion, state-of-the-art NYPD training academy in the College Point area of Queens, NY, for the NYCDDC. The new academy is being constructed in two phases on the 33-acre site of a former NYPD impound yard, and will consolidate training facilities presently located in each of the five boroughs of the City. The facility design incorporates many sustainable features and has a goal of LEED® certification at the Silver level. Mr. Colombo is also overseeing and providing quality review for the project's field engineering services.

NJSDA Trenton, Burlington City, and Pemberton Township School Building Construction and Renovation - Program Manager

Managed a $450 million, five-year capital program for school construction and renovation in Trenton, Burlington City, and Pemberton Township, NJ, for the New Jersey Schools Development Authority (NJSDA). Mr. Colombo supervised more than 50 project managers and support personnel at 17 project sites and provided management oversight of design consultants, contractors, vendors, and subconsultants. He also made presentations to the various school districts and state government representatives, established conceptual and working budgets and schedules, and developed fee structures for consultants. Additionally, he assisted with land and property acquisitions, environmental assessments, and claims analyses, and represented the NJSDA on local regulatory matters.

New York City School Construction Authority - Former Deputy Chief Project Officer

Responsible for the execution of a $250 million annual capital program for the construction, renovation, and modernization of educational facilities for the New York City Department of Education. Mr. Colombo supervised 68 project managers and construction management support personnel that provided program planning, including the selection of consultants, property acquisition, environmental assessments, development of solicitation and contract documents, scheduling, budgeting, management of design services, and contract awards. Mr. Colombo provided supervision and project overview for construction progress, contractor requisitions, and claims analyses. He also assisted in the development of contract procedures for public-sector design-build methodologies, institutionalized project partnering and team building, and hosted design-build seminars for other public agencies.

NYCT Fresh Pond Bus Depot - Project Executive
Supervised the construction of this $35 million maintenance facility in Ridgewood, NY, for NYCT. Representing the general contractor, Mr. Colombo was the direct liaison with NYCT and the MTA. He reviewed construction progress, established progress schedules, developed milestones for turnover of various facilities and systems, developed and negotiated change orders, attended periodic progress meetings with the client, established requirements for continuity of facility operations with ongoing construction, and participated in the development of project closeout and turnover.

Upper Freehold Regional School District Stone Bridge Middle School - Program Manager/Solar Design Consultant
Supervised the construction management for this new $40 million middle school in Allentown, NJ. Mr. Colombo reviewed progress schedules, prepared and reviewed change orders, coordinated with the local building department and state agencies, and reviewed contractor and consultant requisitions. He also assisted the school district in their successful application for a grant that enabled the district to install photovoltaic (PV) solar energy panels. Mr. Colombo managed the design of the PV panels and also provided consultation for the selection of the contractor for the installation.

Middletown Township Board of Education School Renovations - Project Executive/Solar Energy Consultant
Oversaw a $100 million reconstruction program at two high schools and three middle schools in Middletown Township, NJ. Mr. Colombo supervised eight project managers serving at the five project sites. His team provided pre-construction services and total construction management of multiple prime contracts at each site. All of the work was performed in fully occupied school facilities, requiring the development of site-specific phasing and logistic plans and the development of appropriate swing space facilities. Mr. Colombo reviewed progress schedules, established contractor staffing requirements, prepared and reviewed change orders, and reviewed contractor and consultant requisitions. He also interfaced with the local building department and state agencies, and assisted the school district in their successful application for grants that enabled the district to install photovoltaic panels to generate energy.

Bruce Fox, P.E.

SENIOR PROJECT MANAGER

FIRM
STV CONSTRUCTION, INC.

YEARS OF EXPERIENCE
38

EDUCATION
BACHELOR OF SCIENCE, CIVIL ENGINEERING; NORTH CAROLINA STATE UNIVERSITY

PROFESSIONAL REGISTRATIONS
PROFESSIONAL ENGINEER: NEW YORK

Mr. Fox is a project executive with STV, possessing more than 35 years of experience in the construction industry. In this capacity, he has been directing the preconstruction and construction phases of complex, high-profile projects throughout the New York metropolitan area. Mr. Fox has been responsible for completing multiphase services, including overseeing design and construction schedules, cost controls, and purchasing. Currently, he is supervising program management services and coordinating closely with multiple stakeholders to facilitate the completion of One World Trade Center on a logistically challenging site in Lower Manhattan. The building, the tallest in the United States, is the centerpiece for the redeveloped World Trade Center complex, and encompasses 3.5 million sf of interior space. Mr. Fox is guiding the extensive coordination of work across multiple active projects and among numerous stakeholders on the site. As a former vice president of a major construction company for 16 years, Mr. Fox established and led the company's high-tech hospital, research facility, and design-build construction sector, where he was responsible for providing preconstruction and construction management services for several multiphase medical center renovations, including at world-renowned facilities such as Memorial Sloan-Kettering and NYU Medical Center.

Project Experience

PANYNJ One World Trade Center - Deputy Project Executive

Providing executive oversight for the program management of the construction of One World Trade Center, the centerpiece of the redevelopment of the 16-acre World Trade Center (WTC) site in Lower Manhattan. One World Trade Center is the tallest building in the United States, and will encompass more than 3.6 million sf, including retail, office space, restaurants, an observation deck, and broadcast facilities. The project is a combination of modern, innovative architecture, sustainable design, and safety, with a goal of LEED® Gold certification. Mr. Fox is guiding the extensive coordination of work across multiple active projects and among numerous stakeholders on the site, including the WTC Transportation Hub, WTC Vehicle Security Center, and WTC Central Chiller Plant. He participates in detailed meetings with dozens of contractors and construction managers to address and resolve any impediments to on-schedule and on-budget completion. Coordination issues among contractors and stakeholders include the shared use of construction equipment to optimize the tight logistical conditions; joint use of the limited access and delivery points; and design and construction of the multiple utility points of entry.

MSKCC New Main Operating Room Facility - Project Executive

Oversaw construction management services for this $100 million new infill structure and renovation project encompassing 172,000 sf at Memorial Sloan-Kettering Cancer Center (MSKCC) in Manhattan. Mr. Fox was responsible for the construction of a state-of-the-art surgical suite consisting of 23 operating rooms and associated recovery areas, a pediatric day hospital, and a pediatric in-patient unit and pathology laboratory. He also monitored the installation of four new "super-columns" threaded through seven floors of existing operating hospital areas to erect a new structure above existing hospital buildings.

MSKCC Kimmel Center for Prostate and Urological Cancers - Project Executive

Supervised construction management services for a new 7-story, 67,000-sf standalone clinical center in Manhattan for the treatment of prostate and urological cancers. The space featured

a flexible interior framework that limited the core to one wall of the building. Mr. Fox was responsible for overall project completion, with a focus on schedule management, purchasing, and cost controls.

NYU Medical Center Major Renovation Program - Project Executive
Oversaw more than 15 major renovation projects totaling $150 million in construction costs as part of a major renovation program for this hospital in Manhattan. Projects included the relocation of day surgery and construction of 10 new operating rooms; the expansion of cardiac catheterization, same day admit, neo-natal ICU, epilepsy treatment unit, and minimally invasive urology spaces; and the modernization of central services, pediatric ICU, neurosurgical ICU, and executive offices. Mr. Fox was responsible for coordinating and monitoring the completion of all tasks, and guided overall schedule management and purchasing.

MKSCC Major Renovation Projects - Project Executive
Oversaw more than a dozen major renovation projects, including new research laboratories, a gene transfer facility, nuclear magnetic resonance machine installation, and medical physics offices. Mr. Fox supervised the completion of all projects, and monitored schedule management, cost controls, and purchasing.

NYSOMH New York State Psychiatric Institute - Project Executive
Managed construction management services for this new 372,000-sf flagship research and patient care facility for the New York State Office of Mental Health (NYSOMH), which combines state-of-the-art laboratories with in-patient psychiatric care and includes clinical service, educational, and administrative support spaces. The project was named by the American Institute of Architects (AIA) as one of the three best healthcare projects in the United States for 1999.

Trump Organization Trump International Hotel and Tower - Construction Manager
Provided preconstruction consulting and served as the on-site construction representative for the Trump Organization for this 94-story, 2.6 million-sf luxury hotel and condominium project in Chicago. The facility is the tallest reinforced-concrete structure in the United States and includes 339 hotel condominium units, 486 residential condominium units, a health club, amenities, retail space, and parking. The project also includes the reconstruction of a major portion of a downtown elevated roadway structure. Mr. Fox supervised project managers and superintendents, and was responsible for project completion.

Detroit Renaissance Center - Assistant Superintendent and Tenant Project Manager
Served as assistant superintendent and tenant project manager for the construction of this 70-story, 1,200-room luxury hotel surrounded by four 39-story office towers on the Detroit River, which was the largest private building project in the United States in the late 1970s. The complex was set on a multi-level hotel amenity, retail, and parking base. Major office tenants included Ford Motor Company and General Motors.

Julie Valerio, LEED®AP

SENIOR PROJECT MANAGER

Ms. Valerio has more than 30 years of experience in facilities management and the construction industry. She has managed a wide variety of new construction and renovations for transportation, commercial, educational, retail, and institutional facilities. Ms. Valerio has been responsible for all phases of design, construction, close-out, and occupancy. As a facilities manager, she has experience establishing and implementing capital programs, developing scopes of work, securing of design and construction services, overseeing the bid process for consultant and contractor services, participating in furniture selection and procurement, and managing the move-in and closeout.

PANYNJ One World Trade Center and National September 11th Memorial & Museum CM - Manager of Design

Managing the transition of 19 individual PANYNJ Design Consultant contracts totaling approximately $105 million in design services from a private developer to the PANYNJ ownership during the design development stage. Ms. Valerio's responsibilities include working with PANYNJ World Trade Center Construction senior administration, and legal and procurement departments in conjunction with the STV One World Trade Center team in the creation, negotiation, and execution of PANYNJ design contracts. She is monitoring design consultant executed contracts making sure contract compliance is being met and requests for monthly payments accurately represent percentage and/or scope completed for requisition approval. Ms. Valerio is instituting change orders beginning from the request for proposal stage through contract amendment to the original contract. In addition, she is monitoring total contract costs against authorized budget, and reviewing and approving design consultant invoicing and overseeing the approval routing process for submission to accounts payable and payment to the consultant.

Whitney Museum of American Art - Executive Director of Facilities

Reported to the Chief Financial Officer of the Whitney Museum of American Art in New York City. The museum harbors some of the most important collections of 20th century American art, containing more than 18,000 works in a wide variety of media. Ms. Valerio provided leadership for plant operations, events coordination, custodial services, and shipping and receiving for this landmark New York City Museum, including main complex, office annex, art storage facility, and rental properties. She improved client confidence in facilities staff by establishing clear lines of communication with senior leadership and operational groups to promote effective processes, higher efficiency of resources, and clear expectations of the level of service. Ms. Valerio established protocols and controls for work orders, event setups, custodial services, cycle maintenance, and safety and employee presentation. She collaborated with Whitney events planners to implement major donor, educational, and cultural events in limited museum space.

Drew University Hall of Science Renovations - Former Director of Facilities

Responsible for the $12 million phased renovation of the 1968 science building at Drew University in Madison, NJ, as part of an $80 million capital program at the university. The renovation included asbestos abatement, upgrade of the building's exhaust/ventilation to meet the

current building code, gut renovation of lecture halls and laboratories, and exterior building restoration.

Drew University/Aramark Facility Services - Former Director of Facilities
Oversaw a $9.9 million annual operating/recurring capital budget for the 100-person Plant Operations and Maintenance and Capital Program Management Departments at Drew University in Madison, NJ. Ms. Valerio was responsible for providing management, operations, and strategic planning for the university's 187-acre campus, including 63 buildings totaling 1.2 million sf. Working in conjunction with university trustees, senior administration, deans, department heads, and university committees, Ms. Valerio successfully delivered an $80 million capital program, which involved interfacing directly with the Borough of Madison Planning Board, Building Department, and fire officials. She prepared and presented annual operating and capital budgets for leadership and trustee approval; oversaw facilities needs assessments, space utilization studies, and library space study; and provided for the strategic annual procurement of natural gas commodity, including financial analysis of purchase options. Ms. Valerio was instrumental in securing a $20 million NJEFA bond to fund campus-wide deferred maintenance improvements, and she established a cumulative savings of $1 million through management and operational efficiencies and energy management. In addition, she implemented a "mini-plant" concept which involved grouping two to three buildings at one centralized mechanical plant, along with the addition of buildings to the university's Central Heating Plant, thereby addressing deferred maintenance and reducing energy consumption and operational maintenance.

Drew University Seminary Hall Addition - Former Director of Facilities
Provided overall administration for a $6.2 million, 8,000-gsf addition to this 1898 historic building at Drew University in Madison, NJ, for ADA compliance, as part of an $80 million capital program at the university. The addition featured smart classrooms, seminar space, and a student lounge.

Sassan M. Manii

PROJECT MANAGER

FIRM
STV CONSTRUCTION, INC.

YEARS OF EXPERIENCE
29

EDUCATION
BACHELOR OF ARCHITECTURE; CUNY CITY COLLEGE

CERTIFICATIONS
OSHA 30-HOUR CONSTRUCTION SAFETY AND HEALTH TRAINING

Mr. Manii is a project manager with more than 29 years of experience in the design and construction management of new and renovated government, educational, and healthcare facilities. Prior to joining STV, he was a Lead Construction Project Manager at the NYCSCA and gained expertise in developing project scopes, budgets, and construction schedules, as well as producing and reviewing construction documents. Mr. Manii has experience developing and implementing management strategies to provide documentation and keep clients well informed and projects on track. He is proficient at guiding and supporting construction managers, developing and maintaining contractor performance records, managing claims, and supervising project closeouts.

Project Experience

PANYNJ One World Trade Center and National September 11 Memorial & Museum - Project Manager

Directed project controls activities for the design and construction of One World Trade Center, a major project in the redevelopment of the 16-acre World Trade Center (WTC) site in Lower Manhattan. The tower will be the centerpiece of the new WTC complex and will encompass more than 3.6 million sf, including office space, restaurants, an observation deck, and broadcast facilities. The building will also house below-grade shopping and access to the PATH transit system and the World Financial Center. One World Trade Center encompasses a sophisticated array of sustainable design elements, a unique curtainwall system, and advanced building control systems. STV's team is providing construction support services to PANYNJ to help realize the agency's mission to construct the building in a quality manner, on time, and within budget. Mr. Manii oversaw budget and cost controls; financial management report development: vendor and contractor activities; and processes and workflow. He was responsible for reviewing and negotiating payment requests and change orders with the construction management team and subcontractors. Mr. Manii also attended meetings with prospective subcontractors and reviewing the project scope. He coordinated with PANYNJ for approval of monthly project payments and advised them on general conditions, buyouts, and mobilization accounts.

NYCDDC New York City Police Training Academy CM - Project Manager for Building Envelope

Managing the construction of roofing and the façade for this new academy in the College Point section of Queens, NY. This joint-venture design-bid-build project consists of two phases. The $656 million Phase I comprises a new academic building, a physical training facility, and a central utility plant. Phase II comprises firing ranges, a tactical village for urban training, and other elements. The LEED -registered project is seeking certification to the Silver level. Mr. Manii is overseeing planning and coordinating the construction of roofing and façades with architects, engineers, and trade subcontractors. He regularly reviews work scopes and verifies compliance with the respective subcontractors' contract requirements. He also verifies the timely submission of submittals and approvals; reviews, processes, and approves subcontractor's schedules; authorizes contractors' payments; reviews contractors' change orders and their general financial status; and facilitates, organizes, plans, and chairs progress meetings with subcontractors, the design team, and owner.

NYCSCA High School of Telecommunications Arts and Technology Expansion - Construction Project Manager
Oversaw the $38.5 complete interior modernization of and 20,000-sf addition to this 5-story, 135,000-sf specialized high school in Brooklyn, NY. The project included mechanical upgrades to the boiler plant, a new air conditioning system, and updated computer facilities.

NYCSCA ADA Compliance Federal Aid Grants - Construction Project Manager
Responsible for $4 million in federally funded renovations to various parochial, Yeshiva, and Muslim schools run by private community groups in the Williamsburg and Crown Heights sections of Brooklyn, NY. The renovations were undertaken to address accessibility through compliance with the ADA criteria and the abatement of asbestos-containing material.

NYCSCA P.S. 69 - Construction Project Manager
Oversaw the construction of this new $41 million, 4-story primary school in Brooklyn, NY. The 98,000-sf steel-framed brick and curtain wall building with built-up roofing includes classrooms, a gymnasium, an auditorium, space for administrative counseling, a kitchen/ cafeteria complex, and support spaces, all completely air conditioned.

NYCSCA I.S. 254 - Construction Project Manager
Supervised the fast-track construction of a new $21 million, 3-story intermediate school in the Bronx, NY The 68,000-sf building includes classrooms, a gymnasium, space for administrative counseling, a kitchen/cafeteria, and support spaces. The steel stud-framed brick building with a built-up roof is completely air conditioned and included special exhaust and ventilation systems for the science and art classrooms.

NYCSCA I.S. 151 and P.S. 11 Exterior Modernization - Construction Project Manager
Supervised the $2.5 million exterior modernization and renovation of this school facility in the Bronx, NY. The work included the replacement of the roof and repair of the exterior envelope.

NYCSCA I.S. 120 Leased Facility - Construction Project Manager
Oversaw the $5 million conversion of a leased facility into a new school to support 450 students and staff in Manhattan. The single-story, 45,000-sf facility contains classrooms, a gymnasium, administrative counseling space, and support service spaces. The project involved constructing new heating and ventilating systems.

Thales Savas

PROJECT MANAGER

Mr. Savas has more than 30 years of experience in construction management. He is particularly adept at addressing environmental challenges, such as soil, groundwater, and subsurface piping issues. As a former facilities manager for a utility company, Mr. Savas is sensitive to the issues involved with projects in occupied facilities and has a firsthand understanding of the concerns of building operators regarding construction activities and long-term maintenance issues.

BACHELOR OF SCIENCE, MATHEMATICS; YORK COLLEGE, CITY UNIVERSITY OF NEW YORK

Project Experience

PANYNJ One World Trade Center and National September 11 Memorial & Museum - Contract Administrator/Project Manager

Providing contract administration to the PANYNJ for the One World Trade Center commercial building in Lower Manhattan. Mr. Savas is managing the 20 consultant contracts on the project, which entails reviewing and processing their monthly requisitions, reviewing proposals, issuing task orders for additional work, tracking all consultant-related costs, and making cost projections. In addition, he is responsible for allocating costs between the various entities at the site, such as the Port Authority Trans-Hudson (PATH) hub, the memorial and museum, the building core and shell, and PANYNJ retail development. Mr. Savas is also responsible for overseeing eight construction trade contracts, which includes a curtain wall, podium wall, cable net/storefront, facade maintenance, waterproofing and roofing, and additional funding authorizations for approval.

NYCHA On-Call Construction Management Services - Project Engineer

Performed contractor evaluations, pre-bid qualifications, and construction management (CM) services as part of a $100 million CM/build task-order contract for exterior restoration, emergency façade repair, and roofing work at various locations for the NYCHA. Mr. Savas served as project manager for a roof replacement project at the Women's Initiative for Self Employment (WISE) facility in Manhattan. He was also responsible for verifying scope, size of projects, and performance of references submitted by each contractor; reviewing contractor safety ratings, financial strength and stability, bonding capacity, and local law/integrity compliance; and confirming participation in state-approved apprenticeship programs and Women's Business Enterprise (WBE)/Minority Business Enterprise (MBE) certifications.

NYCDCAS Bronx Criminal and Family Court Garage Structural Repairs - Senior Project Manager

Provided construction management and owner's representative services for the New York City Department of Citywide Administrative Services (NYCDCAS) for structural repairs, electrical and storm drain system replacement, and exhaust system upgrades for an 80,000-sf parking garage facility in the Bronx, NY, as part of a construction management /build requirements contract with the New York City Department of Citywide Administration Services (NYCDCAS). Mr. Savas coordinated the activities of contractors and subcontractors and made sure that client-approved budget, safety, and scheduling requirements were met. He managed a design staff of 85 people in 6 offices and 2 major subconsultants.

NJDPM&C New Jersey State House Annex Renovation - Construction Manager

Oversaw construction activities for the New Jersey Department of Property Management and Construction (NJDM&C) fast-track renovation of the roof, historic committee rooms, and limestone façade of the New Jersey State House Annex in Trenton, NJ.

Amtrak East and North River Tunnels Fire Standpipe Installation CM - Office Engineer
Provided CM and owner's representative services for the installation of approximately 76,500 feet of 6-inch dry fire standpipe in Amtrak's four East River tunnels and two North (Hudson) River tunnels. Mr. Savas coordinated the schedules for the installation work, which was conducted over weekends during 55-hour intervals. He planned and coordinated various activities, including the removal of obstructions by Amtrak's in-house force account labor, so that the installation could proceed without interruption. Mr. Savas was also responsible for all deliveries of materials, with particular attention to the tight security requirements demanded by the client.

DASNY Hunter College Roosevelt House Renovation CM - Project Manager
Guided design review and provided CM services for the $23.4 million rehabilitation of the Sara Delano Roosevelt Memorial House for use as a modern conference center by the City University of New York's Hunter College in Manhattan. The project consisted of the complete rehabilitation of the twin 6-story brownstone landmark building, at one time the residence of the Franklin Delano Roosevelt family. A new steel "skeleton" within the core and at the rear of the existing building had to be installed with minimal impacts to the historic fabric of the building. Underpinning operations of the adjacent structures were required as well.

NYCHA WISE Rehabilitation - Project Manager
Performed construction management services for the replacement of the roof at the New York City Housing Authority (NYCHA) Women's Initiative for Self Employment (WISE) facility in Lower Manhattan. The $650,000 project consisted of an 8,000-sf roof replacement, asbestos abatement, and masonry repairs to parapet walls and bulkheads. Mr. Savas gave special attention to the safety of the residents of this public housing facility.

NYCDCAS Bronx Criminal and Family Court Garage Structural Repairs - Senior Project Manager
Provided CM and owner's representative services for structural repairs, electrical and storm drain system replacement, and exhaust system upgrades for an 80,000-sf parking garage facility in the Bronx, NY, as part of a CM/build requirements agreement. Mr. Savas coordinated the activities of contractors and subcontractors and made sure that all client-approved budget, safety, and scheduling requirements were met or exceeded. He was responsible for overseeing the completion of this scheduled 10-month project in 8 months and with half of the allocated CM staffing in order to meet revised budget constraints.

NYCDCAS Bronx Criminal and Family Court ADA Modifications - Senior Project Manager
Delivered CM and owner's representative services and coordinated the activities of contractors and subcontractors for the $5.5 million rehabilitation of the 1.5 million-sf, 9-story landmark Bronx Criminal and Family Court building for compliance with the ADA as part of a CM/build requirements agreement. Mr. Savas oversaw the complete renovation of 14 public restrooms and replacement of 23 public phone booths, 25 electric water coolers/fountains, and 68 doors. . In addition, he supervised the installation of assisted listening devices in two court rooms and improvements to make seven New York Police Department Central Booking Area and New York City Department of Corrections holding cells ADA-compliant. Construction was performed during regular business hours and off hours with limited swing space available.

William King

PROJECT MANAGER

Mr. King brings more than 30 years of experience in program and project management for transportation initiatives and facility construction and rehabilitation projects. He spent 18 years with the Metropolitan Transportation Authority of the State of New York (MTA) Office of Construction Oversight, with increasing levels of responsibility leading to his position as Acting Director for more than two years. Mr. King has a comprehensive understanding of compliance issues, particularly with federal requirements. While at the MTA, he was involved with making sure that projects followed strict FTA policies and procedures.

Project Experience

FTA Management Assistance Contract - Project Manager

Reviewed and recommended improvements to reports produced by 15 national Project Management Oversight Consultants (PMOCs) for the Federal Transit Administration (FTA). These PMOCs monitored approximately 100 projects worth $70 billion in 30 metropolitan areas nationwide. Mr. King submitted findings and recommendations for improvements to individual PMOC reports and the overall format. He also reviewed and summarized the FTA's evaluations of its consultants and recommended improvements to the FTA's PMOC evaluation system, including tying evaluation scores more closely to quality of work product. For all 15 PMOCs, Mr. King reviewed overall consultant costs per hour and levels of effort, as well as by task, and made recommendations to the FTA regarding areas where costs could be reduced. He assisted in reviews of PMOC one-time risk assessments for several projects, which involved detailed cost estimate and schedule reviews. Mr. worked closely with most of the consultants and the 10 FTA regions, as well as FTA headquarters staff in Washington, D.C. Mr. King served as the key speaker at joint FTA/PMOC annual conferences in Washington, D.C., in 2006 and 2007, where he presented summaries of findings and recommendations on both PMOC reports and FTA consultant evaluations.

NYCEDC Lincoln Center Projects Program Management - Project Manager

Oversaw the exterior restoration of the Lincoln Center for the Performing Arts complex in Manhattan. Mr. King reviewed schedules, budgets, change orders, payment requisitions, quality control and safety reports, Buy America and Disadvantaged Business Enterprise documents, and project management plans, and he verified reporting by monitoring actual progress in the field. He also helped expedite city and federal funding of the public/private project and the completion of construction within budget while maintaining high quality and safety levels.

Metropolitan Transportation Authority of the State of New York Office of Construction Oversight - Former Acting Director/Deputy Director

Directed the Office of Construction Oversight at the MTA. Mr. King supervised a 5-person office and managed a 20-person consultant oversight team responsible for preparing detailed monthly and quarterly monitoring reports on all major MTA projects and programs for the monthly meetings of the MTA Board Capital Program Oversight Committee (CPOC), which is in charge of reviewing the major capital projects at NYCT, the LIRR, Metro-North Railroad, TBTA and MTA Capital Construction. Projects included civil/structural/architectural work – line structures, car shops, bus depots, stations - advanced signaling, communications systems, automated fare collection systems and control centers, and the procurement of subway and commuter train cars.

NYCHA Washington Heights Exterior Restoration - Project Manager
Coordinated the exterior restoration of the Washington Heights housing development in northern Manhattan as part of a construction management/builder requirements contract with the NYCHA. Mr. King was responsible for managing the construction contractor, reviewing all work in place, reviewing and submitting change-order proposals, reviewing and recommending payment requisitions, reviewing time extension requests, monitoring the safety and quality of the project, and working to expedite the completion of construction.

ESDC Atlantic Yards Relocation and Barclays Center Arena Owner's Representative Services - Project Manager
Working closely with the developer, construction managers, and contractors, and overseeing STV's owner's representative services on behalf of the Empire State Development Corporation (ESDC), during this multifaceted project. Work has involved the construction of the $1 billion, 670,000-sf Barclays Center Arena; the construction of a new subway hub connection; the lowering of an LIRR commuter rail vehicle storage and maintenance yard in Brooklyn, NY; and residential high-rise construction around the arena and over the yard that will be the tallest modular buildings in the world at 32 to 45 stories in height. STV has monitored, reported, and recommended actions for all areas of the $5 billion Atlantic Yards project, which includes the arena, with a focus on safety, schedule and quality. Mr. King's chief responsibilities have included reviewing the schedules and designs and working with the developer and the state to help assure that work is completed safely, on time, and in a quality manner. The underground subway hub connection now links an existing New York City Metropolitan Transportation Authority subway station complex to the arena plaza. Features include a new transit hub entry; a new below-grade control area with back-of-house support facilities; new connections to the NYCT 2, 3, 4, 5, B, D, N, Q and R subway lines with stairs, ramps and escalator and elevator to and from the new fare control area; and the relocation and restructuring of existing subway fresh air vents. In addition, Mr. King has been responsible for in-depth reviews of the design and construction of the lowering of the LIRR Vanderbilt Train Storage Yard to provide adequate clearance for the platform deck. He has also monitored the tight schedule for a new highway-style bridge and associated yard lowering work which had to be completed for the arena to open on schedule. The overall scope also includes site work, such as utility relocations and feeds, sidewalks, and security bollards surrounding the arena. Among the numerous challenges is performing this work in a densely populated urban locale with high-volume pedestrian/bicycle and vehicular activity. Mr. King along with field staff monitor the safety of maintenance and protection of traffic measures set up at the site, including flagging and construction walls/sound buffers.

Annette Bombarger

ASSISTANT PROJECT MANAGER

Ms. Bombarger has 15 years of experience managing projects throughout New York City. She is a skilled project manager who makes sure that projects meet client objectives, schedules, and budgets. Ms. Bombarger is skilled at coordinating multidisciplinary teams to smoothly progress projects from the bidding documents stage to final construction close-out for the construction of educational, commercial, retail, and institutional facilities. She has also prepared construction cost estimates and quantity surveys, led team meetings, reviewed change orders and submittals, and written purchase orders.

United Nations Building Capital Improvement Projects - Project Manager

Oversaw the completion of capital improvement projects at the United Nations Building in Midtown Manhattan. Work involved renovating various areas of the aging facility while they remained in use, including rearranging the mail center and providing cosmetic upgrades; renovating the locker room; upgrading the electrical power to the uninterruptable power supply/main server room; and installing a raised flooring system and dry fire suppression system. Ms. Bombarger led weekly subconsultant meetings, attended client meetings, reviewed change orders and submittals, prepared purchase orders, and coordinated the subconsultants' work.

NYCSCA Mentor Program - Cost Estimator

Preparing construction cost estimates and quantity surveys for public school renovation projects ranging in cost from $450,000 - $750,000 for the New York City School Construction Authority (NYCSCA)'s Mentor Program, which trains M/W/LBE emerging contractors for success in the field. The firm is providing comprehensive instruction on subjects such as financial resources procurement and union transition, while helping mentor contractors deliver their projects on schedule and within budget. Ms. Bombarger is evaluating change order proposals, overseeing the submittal process by reviewing all submittals for quality and data accuracy, providing guidance to the general contractors in respect to submittal review, and organizing tracking systems to aid the project officer's access to information throughout the review stages.

NYCDDC New York City Police Training Academy CM - Project Manager

Managed approximately 15 subcontracts and coordinated work with multiple contractors during the first phase of the $656 million, 720,000-sf construction of two campus buildings within a 35-acre site in College Point, NY, for the New York City Department of Design and Construction (NYCDDC). The buildings, which were designed to LEED Silver specifications, featured the physical plant for the entire site, classrooms, lecture halls, a library, a gym, a pool, locker rooms, commercial food service facilities, pantries, mock training environments which resemble a city street with stores, parks, restaurants, apartment buildings, and a mock police precinct, as well as administrative offices. Ms. Bombarger oversaw the interior construction of the food service area, the mock environments, all interior glass partitions and ornamental metals, permanent staircases/railing systems, and miscellaneous steel. She also managed the submittal process, supervised on-site subcontractor installations, and attended weekly progress meetings.

Columbia University Dormitory Renovations - Project Manager
Managed the renovation of existing dormitory structures to upgrade student apartments for Columbia University on Manhattan's Upper West Side. Ms. Bombarger attended client meetings, facilitated weekly subcontractor meetings, coordinated subcontractor work, reviewed submittals and change orders, and prepared purchase orders.

Goldman Sachs Office Tower Interior Build-Out - Assistant Project Manager/Estimator
Provided estimates and managed subcontractors during the $19 million interior build-out of 160,000 sf of corporate office space in a newly constructed office tower in Jersey City, NJ. The LEED®-certified project involved constructing office space, open plan work stations, conference rooms, pantries, and server and mechanical rooms. Ms. Bombarger led sub-contractor weekly meetings, attended client meetings, reviewed submittals and change orders, assisted with field office management, coordinated the subcontractor's work, and prepared purchase orders.

MetLife Metropolitan Life Tower Exterior Renovations - Site Estimator
Provided site estimates during the three-year exterior restoration of the architecturally significant Metropolitan Life Tower in Manhattan. Due to the nature of the project, much of the building was covered in scaffolding to facilitate the restoration of windows as well as masonry façade work. The cupola at the very top of the building was re-gilded and received a computerized, multicolored fiber optic lighting system to allow the colors to change to denote particular holidays or important events. Restoration work was performed on the clock face and hands, which were also illuminated. Concurrently, a major stone restoration was occurring within the lobby of the building and an atrium was constructed in the 23rd Street lobby. The building is a landmarked structure, resulting in Ms. Bombarger becoming familiar with New York City's rigorous landmark preservation laws.

Eugene B. McCrohan

ASSISTANT PROJECT MANAGER

Mr. McCrohan is a project manager with nearly 15 years of experience providing engineering services for renovation and new construction projects for rail, municipal, and educational building projects. Possessing varied experience during all project phases, he is adept at preparing presentations, managing contractors, negotiating and tracking change orders, maintaining project logs and reports, and processing the closeout of contract phases. Mr. McCrohan has supervised work ranging from the restoration of historic and prestigious public buildings and museums to new education facilities. In addition, he served as an adjunct instructor at Jersey City University for more than three years where he taught technology courses. Mr. McCrohan is also skilled in using e-builder project management software to manage project elements, including submittals, requests for information, reporting, and documentation.

MTA Capital Construction/NYCT No. 7 Subway Line Extension - Office Engineer

Prepared monthly progress presentations for new construction on the No. 7 subway in New York City, extending two tracks from 42nd Street to 26th Street. Mr. McCrohan tracked change orders and potential change orders, as well as contractor submittals throughout the approval process using the Metropolitan Transportation Authority (MTA)'s Constructware program. He also tracked and processed the closeouts of multiple contract phases.

NYSOGS South Beach Psychiatric Center Emergency Response and New Central Services Building - Assistant Project Manager

Performing field inspection of site work for a new 47,000-sf central services building at the South Beach Psychiatric Center on Staten Island, NY. The new facility will include kitchen, maintenance, and warehouse facilities. In addition, it will consolidate multiple systems into one centralized location, including an emergency generator, boilers, and air-handling systems, following the destruction of the previous systems from Hurricane Sandy in 2012. Mr. McCrohan is tracking project documentation, as well as managing financial tracking, including payments and potential change orders. In addition, he is providing coordination and serving as liaison to the New York State Office of General Services (NYSOGS) and the New York State Office of Mental Health.

NYCDDC El Museo del Barrio - Superintendent

Supervised renovations to the interior of the El Museo del Barrio museum in New York City on behalf of the New York City Department of Design and Construction (NYCDDC). Mr. McCrohan also oversaw renovations of the multiple building systems, including electrical, fire protection, audio-video, and HVAC. He performed field inspections to verify the quality of work, negotiated contracts, and processed change orders and closeout documentation.

NYCDDC City Hall Renovations - Field Inspector

Oversaw the historic preservation of the New York City Hall building in Manhattan, NY, during a $90 million renovation for the New York City Department of Design and Construction (NYCDDC). The renovations included interior, exterior, and roofing improvements; refinishing of the iconic steps; installation of new electrical, fire, audio-video, heating, ventilation, and air conditioning systems; modernization of the elevators; and the complete renovation of all interior spaces. Mr. McCrohan was responsible for maintaining the historic presence of the build-

ing's ornate city council chamber ceiling, situation room, the mayor's bullpen, and ceremonial office spaces. He also served as liaison to the New York City Police Department and Mayor's Office. In addition, Mr. McCrohan also monitored the underpinning of the eastern portion of the 200-year-old building.

Essex County Courthouse Renovation - Assistant to the Project Manager
Managed project logs and reports for a $20 million courthouse renovation project in Essex County, NJ. Mr. McCrohan created, updated, and maintained the project change order log, as well as processed the daily and monthly progress reports. His other duties included managing the contractors' monthly financial reports, and producing correspondence for open project issues. Mr. McCrohan processed contract documentation closeout for multiple construction contracts.

NJSDA North Ward Park Elementary School - Assistant Construction Manager
Assisted with construction management for a new $34 million, 3-story school in Newark, NJ, which encompassed classroom and administrative space, a media center, an auditorium, and a gymnasium. Using the New Jersey Schools Development Authority (NJSDA)'s Primavera Expedition program, Mr. McCrohan was responsible for tracking and maintaining project data and information, preparing meeting minutes, and creating change order packages for NJSDA's review. He also performed field inspections to confirm the quality of work, the contract report data, and construction progress and schedules. In addition, Mr. McCrohan participated in New Jersey Department of Codes and Standards code inspections.

Woodbridge Township Board of Education Township Schools Renovation Program - Field Engineer
Maintained reports and data for 13 bid packages associated with the $86.1 million program to renovate and expand 25 existing schools in Woodbridge Township, NJ. Mr. McCrohan processed and maintained daily and monthly reports, biweekly progress meeting minutes, change order tracking reports, and contractor financial reports. He also performed field inspections and coordinated township code officials' inspections to verify quality and construction progress.

Middletown Township Board of Education Township Schools Renovation - Office Engineer
Created, collected, and maintained reports and data for a $110 million referendum to renovate and expand three middle schools and two high schools in Middletown Township, NJ. Mr. McCrohan processed and maintained daily and monthly progress reports, created contract change order tracking reports for four of the renovated schools, and created and tracked monthly contractor financial reports. He also managed the contractors' monthly financial reports and process change order packets.

Y. Jake Kofman

ASSISTANT PROJECT MANAGER

Mr. Kofman has more than 15 years of experience managing and controlling all day-to-day activities of new construction and renovation projects. He has a strong background in multiple construction trades, including demolition, excavation, asbestos and lead abatement, masonry construction, concrete work, waterproofing, carpentry, glazing, commercial/industrial painting and finishing, structural steel, and metal fabrication. Mr. Kofman is skilled at mentoring subconsultants, reviewing and tracking schedules and budgets, facilitating staff project meetings, monitoring safety, and managing preconstruction issues, logistics plans, bidding, and negotiations with contractors. He has applied his skills and experience on residential and commercial projects throughout New York City, including the ongoing cleanup resulting from Hurricane Sandy.

City of New York Various Transportation and Municipal Projects - Project Manager

Managed medium-to-large construction projects involving various New York City roadways, bridges, and facilities, including the Verrazano-Narrows Bridge, the Marine Parkway Bridge, the Henry Hudson Parkway, the Mohawk Correctional Facility, the Queensboro Correctional Facility, the Throggs Neck Bridge, the Queens Midtown Tunnel, and Metropolitan Transportation Authority Headquarters. Mr. Kofman worked on all aspects of project management, including quotations, contracts, planning, purchasing, scheduling, and submittals. He supervised all activities with an emphasis on quality assurance, personal safety, and local ordinance compliance. Mr. Kofman coordinated with all parties, including engineering, production, subcontractors, agency representatives, and clients.

NYCSCA PS-41/PS-115 Renovations - Project Manager

Oversaw this $2.6 million restoration project that included asbestos abatement, masonry restoration, and a complete roof replacement for a school in Queens, NY, and another in Manhattan, for the New York City School Construction Authority (NYCSCA). Mr. Kofman's work not only helped to remove hazardous materials but it also repaired leaking roofs and walls at the two schools.

Stamford Hospital Remote Power Plant - Superintendent

Managed and controlled the construction of a remote power plant for this hospital in Stamford, CT. Mr. Kofman oversaw the placement of precast concrete panels for the facility, as well as surveying and tunnel excavation for heat and electrical utility lines running in and out of the plant.

Long Island Jewish Medical Center Radiation Room - Superintendent

Facilitated and directed the construction of five radiation rooms for this hospital in New Hyde Park, NY. Mr. Kofman oversaw the construction and installation of all major components for the $5 million project, including brand new imaging equipment, lead walls, and special doors to block radiation.

New York-Presbyterian Hospital Radiation Room - Project Manager

Facilitated and directed the construction of a new $13 million radiation room in the basement of New York-Presbyterian Hospital in Manhattan. Mr. Kofman oversaw the construction and installation of all major components of the vault, including new imaging equipment, lead walls, and special doors to block radiation.

Live Nation Entertainment Nikon at Jones Beach Theater Restoration - Superintendent
Managed the restoration of this outdoor venue that was significantly damaged by Hurricane Sandy. The facility and its concessions stand sustained 14 feet of flooding, seating was covered in mounds of seaweed, and the VIP section was ruined. Mr. Kofman oversaw several months of work to clean and repair the facility, which reopened to audiences in May 2013.

NYCHA Hurricane Sandy Program Management - Assistant Project Manager
Overseeing day-to-day activities for the restoration of 15 NYCHA developments in New York City that sustained damage during Hurricane Sandy. Approximately 800,000 residents in over 400 NYCHA buildings throughout New York City were affected both by short- and long-term damage as a result of the storm. The program, which could exceed $1 billion, is being performed under an indefinite delivery/indefinite quantity (IDIQ) contract. The team is focused on the recovery of the 35 developments and a maintenance facility in Brooklyn, Queens, and Manhattan that suffered moderate to severe damage, predominantly to their mechanical and electrical systems, as a result of flooding and sand and saltwater infiltration. Mr. Kofman is managing and controlling daily activities to lead a methodical, coordinated recovery effort. He is facilitating weekly project meetings with owners, consultants, subcontractors, and staff, and reviewing and tracking schedules to make sure they are on time or ahead of schedule. Mr. Kofman is also tracking and controlling all costs. The team is working within HUD's public housing procurement regulations.

NYCHA IDIQ Construction Management Services - Superintendent
Overseeing the restoration of 15 of the 32 NYCHA developments in New York City's five boroughs that sustained damage during Hurricane Sandy, as part of an indefinite delivery/indefinite quantity (IDIQ) contract with the New York City Housing Authority (NYCHA). Mr. Kofman is responsible for improvements in Brooklyn and Queens, NY. The scope involves repairing exteriors damaged by the high winds, as well as various interior repairs, such as the replacement of mechanical equipment that was damaged or destroyed by floodwaters. Mr. Kofman manages and controls all day-to-day activities; facilitates weekly project meetings with owners, consultants, subcontractors, and staff; and tracks and controls all costs. He also reviews and tracks schedules to make sure they are on time or ahead of schedule.

NYCHA Throggs Neck Houses and Additions and Breukelen Houses - Project Manager
Managed all project activities for 19 buildings in the Bronx and Brooklyn, NY. Mr. Kofman coordinated union subcontractors and was responsible for progress of prospect, site safety, site logistics, and quality control during the $13.6 million project, The overall effort involved widespread asbestos abatement, masonry restoration, and additions.

Deborah L. Addison

ASSISTANT PROJECT MANAGER

Ms. Addison is a construction project manager and owner's representative with more than 10 years of experience managing construction projects in New York City. She has experience leading project teams from design development to construction closeout for educational, commercial, residential, and hospital facilities. Ms. Addison has managed both new construction and renovations in occupied facilities, as well as green construction projects. Her experience includes reviewing contract documents, creating bid documents, monitoring budgets and schedules, managing requests for information (RFIs) and change orders, and coordinating inspections. Ms. Addison also has monitored contract site safety, provided quality control for installations, and managed compliance with city and state requirements.

EDUCATION
BACHELOR OF ARTS, ARCHITECTURE; COLUMBIA UNIVERSITY

TRAINING
OSHA 10-HOUR
OSHA 7-HOUR SITE SAFETY
OSHA 4-HOUR SCAFFOLD SAFETY

Project Experience

NYCDDC Midtown Community Center - Project Manager

Provided construction management for a 12,000-sf, 6-story expansion and mechanical, electrical, and plumbing (MEP) upgrade for a 40,000-sf community center in Midtown Manhattan, for the New York City Department of Design and Construction (NYCDDC). The new addition consists of lobbies, common areas, and offices. Ms. Addison reviewed contract documents, monitored the budget and schedule, and approved contractor requisitions and change orders. She also managed submittals, RFIs, and project documentation.

NYU Langone Medical Center Hurricane Sandy Recovery - Project Manager

Managing the renovation of various administrative spaces and remediation work to mitigate flood damage from Hurricane Sandy at the New York University (NYU) Langone Medical Center in Manhattan. Ms. Addison is guiding the renovation of the admissions office, physical therapy academic spaces, and the information technology department. She is coordinating with multiple stakeholders, consultants, and contracts to manage the build-out and closeout of each task.

Lincoln Medical Center Emergency Department Renovation - Project Manager

Managed the construction phase of the $10 million, 32,000-sf renovation of the Emergency Department at Lincoln Medical Center in the Bronx, NY. Ms. Addison facilitated meetings, monitored the schedule and budget, negotiated change orders, paid requisitions, interpreted contracts, and managed RFIs and submittals. She supervised the shutdowns of oxygen, nitrogen, and nitrous oxide gas for the switchover to new service, and the switchover to a new sprinkler system in the occupied building. Ms. Addison managed design changes to accommodate unforeseen conditions, including numerous undocumented conduits and piping embedded in the floor slabs. She oversaw significant HVAC changes to accommodate the new Mental Health Area of the Emergency Room. In addition, since the site was located close to a Metro-North Railroad train line and the No. 2 subway line, Ms. Addison acquired Metropolitan Transportation Authority (MTA) permitting and incorporated MTA requirements for the drilling of the foundation piles.

OWN Charter School Expansion - Project Manager

Managed design development and funding requests for the $15 million, 28,000-sf expansion of the Our World Neighborhood (OWN) charter school, a landmark building located at the historic Kaufman Astoria Studios in Queens, NY. The expansion provided a new gym, cafeteria spaces, classrooms, and library upgrades. Ms. Addison participated in the consultant research, bidding, and selection, and provided recommendations to the client. She also directly managed the upgrades to the façade, roof, and infrastructure, which was required by the New York

City Economic Development Corporation (NYCEDC). Ms. Addison created bid documents for contractors, reviewed contract drawings, and monitored the budget and schedule.

Safe Horizon Child Advocacy Center Bronx Site - Project Manager
Conducted space programming and site selection during design development for a safe house for child victims of abuse in the Bronx, NY. The $1 million, 14,000-sf facility was designed to house medical examination rooms, a police precinct with cells for the accused, and family counseling rooms. Ms. Addison created bid documents for contractors and conducted bid leveling. She approved contract requirements and change orders, monitored contractor safety, and maintained the budget and schedule.

NYCSCA P.S. 276M Battery Park - Project Officer
Managed construction from excavation and foundation to masonry for the 8-story, 125,000-sf public school in the Battery Park neighborhood of Manhattan, for the New York City School Construction Authority. This was the first school developed according to NYCSCA's Green Schools Guide, and featured sustainable design elements, including one of the city's largest photovoltaic panel arrays and an extensive energy and weather monitoring system. Ms. Addison oversaw the general contractor, and monitored contractor safety and quality control. She reviewed contract documents, prepared project documentation, approved contractor requisitions and change orders, and managed submittals and RFIs. Ms. Addison managed all inspections, including soil, steel, masonry, electrical and plumbing, and sitework. She also coordinated with Con Edison for inspections and incoming service relocation.

NYCSCA Seward Park High School Closeout - Project Manager
Managed closeout activities for multiple renovations at this high school on the Lower East Side of Manhattan, for the New York City School Construction Authority (NYCSCA). The renovations included exterior modifications, roof replacements, waterproofing the basement, and interior upgrade of mechanical, electrical, and plumbing (MEP) systems for the 5-story building, which remained occupied throughout the construction. Ms. Addison worked closely with the bonding company, superintendent, contractors, and client to manage the construction activities for compliance with New York City Department of Buildings requirements. She reviewed contract documents, monitored budget and schedule, and approved contractor requisitions and change orders.

NYCSCA P.S. 110M Closeout - Project Manager
Oversaw closeout activities for renovations at a 5-story middle school in Manhattan, for the New York City School Construction Authority (NYCSCA). The multiple renovations were completed while the building was occupied, and consisted of mechanical, electrical, and plumbing (MEP) system upgrades, exterior modifications, roof replacements, and waterproofing the basement. Ms. Addison managed the site and construction closeout for compliance with New York City Department of Buildings requirements, working closely with the bonding company, superintendent, contractors, and client.

NYCSCA Science Labs - Project Manager
Managed construction for the installation of science laboratories at two junior high schools in Manhattan for the New York City School Construction Authority (NYCSCA). The labs were approximately 600 sf each, and consisted of students' desks and a teacher's demonstration area. Ms. Addison guided the installation of new lines for gas, plumbing, and electrical services, and also coordinated the gas service with Con Edison. She reviewed contract documents, monitored the budget and schedule, and approved contractor requisitions and change orders.

Salvatore J. Coladonato

SENIOR SUPERINTENDENT

Over the course of a 36-year career, Mr. Coladonato has led dozens of construction projects. He is knowledgeable in all of the construction trades and communicates effectively among them, as well as with architects, engineers, city officials, office personnel, contractors and subcontractors, inspectors, project managers, and field safety staff. Mr. Coladonato has provided construction oversight for numerous education facilities, including some signature projects for the New York City School Construction Authority (NYCSCA), and worked on many LEED® certified projects. He is adept at coordinating the sequence of day-to-day operations with subcontractors and has experience maintaining project schedules, enforcing safety standards, and conforming work to shop drawings and job specifications.

NYCDDC New York City Police Training Academy CM - Senior Superintendent

Coordinating the sequence of day-to-day operations for the $656 million construction of Phase I of this new 3-million-sf training facility for the New York City Department of Design and Construction (NYCDDC) in College Point, New York. An 8-floor, 350,000-sf academic building acts as the main training facility for this two-campus, 35-acre site and houses classrooms and lecture halls; laboratories; courtrooms; and other training areas, including a muster court and replicas of a city street and police cars. Phase I construction also includes at-grade parking area for the entire campus and a 240,000-sf physical training facility featuring a field house; a swimming pool; a running track; gyms; and chemical, ordnance, biological, and radiological attack (COBRA) training areas. Additionally, a 130,000-sf central utility plant (CUP) is being built—containing all boilers for heating; chillers for cooling; incoming permanent power from Con Edison; emergency generators for emergency power; and support equipment such as cooling towers, and fuel oil tanks and pumps. Mr. Coladonato is working closely with project managers, architects, engineers, inspectors, foremen, and field personnel to strictly enforce project safety and maintain project schedules. He has participated in preconstruction budgeting, scheduling, and design; reviewed and produced project schedules; and prioritized daily and long-lead tasks. Mr. Coladonato is coordinating submittals and approvals related to project data and shop drawings, scheduling weekly meetings with trades, and leading meetings with field foremen. He is also reviewing all architects' supplemental instructions, and managing plans and specifications with design engineers to clarify discrepancies. Mr. Coladonato is developing the site utilization plan and establishing crew size; coordinating, planning, and supervising assistant superintendents; and monitoring subcontractor activities to efficiently manage site work and logistics. He is coordinating with other functions to make sure all required materials, equipment, and inspections support the project schedule. Mr. Coladonato has also led the development of the safety culture on the project site, and organized meetings with the safety directors as trades prepare to work on high-risk tasks. The building is being designed to achieve LEED Silver certification.

NYCSCA P.S. 276 - Senior Superintendent

Managed construction trades and field foremen for the construction of this LEED-certified public school in the Battery Park neighborhood of Manhattan. This sustainable 470,000-sf, 8-floor school featured roof-mounted solar panels, exterior curtain walls, low-energy windows, and SMART board-equipped classrooms. Mr. Coladonato coordinated as many as 10 subcontractor foremen and trades, including drywall and ceilings, millwork, doors and hardware, electrical and HVAC, during this ground-up construction. He also created, coordinated, and maintained a crew flow schedule for interiors. Mr. Coladonato worked closely with subcontractors to meet project

milestones and scheduled daily LEED meetings while overseeing the sequence of day-to-day operations. He also coordinated with engineers for interior finish submittal packages.

NYCSCA IS/HS 43 School Construction - Senior Superintendent
Oversaw day-to-day operations during the construction of this 675,000-sf, 6-floor public school complex in the Heartland Village section of Staten Island, NY. Composed of two high schools, each of these facilities included 13 regular and special education classrooms, two science labs with separate prep and demonstration rooms, an art studio, and a technology lab. The two schools also shared a 9,000-sf gymnasium, two 2,000-sf exercise rooms, a 500-seat auditorium, and an 8,321-sf student cafeteria, as well as a media center, a medical suite, and a special education activity room. Other resources included guidance rooms, activity rooms, and community rooms for parent conferences. Mr. Coladonato created, coordinated, and maintained a crew flow schedule. He coordinated daily work flow for all subcontractors, and led regular project meetings with field personnel and trade foremen.

NYCSCA Frank Sinatra School of the Arts - Senior Superintendent
Oversaw coordination of building trades for the construction of this specialized arts high school founded by Tony Bennett and Nancy Sinatra in Queens, NY. This 6-floor, 625,000-sf school hosts a wide variety of performance spaces, including large dance studios, music rooms, and art facilities that face the street, a rooftop theatre overlooking the Manhattan skyline with adjoining lawn and garden, and a Broadway-style theatre auditorium. The school also features state-of-the-art science labs, park facilities for the Kaufman film studios, and a 3-story glass curtain wall front with laser engravings of hundreds of actors and musicians. Mr. Coladonato coordinated the sequence of day-to-day operations for all sub-contractors on the project, scheduled job and lead meetings with field and trade foremen, and enforced project safety. He also confirmed that work performed matched job specifications, and coordinated submittals and approvals according to product data and shop drawings.

NYCSCA In-Tech Academy (MS/HS 368) - General Carpenter Foreman
Coordinated building trades, including steel, concrete, and roofers, to complete construction of this technology-centered school in the Bronx, NY. This 168,000-sf, 3-story building houses four state-of-the-art computer labs, an auditorium, art and music rooms, and an interior courtyard that lets natural light enter all of the school's major halls. Outdoor amenities include basketball courts, tennis courts, and an athletic track. Mr. Coladonato led safety meetings, coordinated the delivery of materials, and kept the $72 million project on schedule. He also managed and supervised the day-to-day activities for carpentry trades and scheduled material deliveries while coordinating with the general and MEP contractors.

DASNY CUNY Manhattan Community College Modernization - General Carpenter Foreman
Led the coordination of all building trades to keep the construction on track for this Dormitory Authority of the State of New York (DASNY) project in Manhattan for the City University of New York (CUNY). The project entailed the upgrade of the college's main auditorium with the installation of new acoustical four-step flowing ceilings, new walls with acoustical panels, new seating, and new floors for the main and telescopic stages. The project also saw the upgrade of all offices and classrooms with acoustical ceilings and the installation of a new fire protection system. Mr. Coladonato ordered construction materials, coordinated safety meetings for the project, and oversaw weekly and daily meetings with trades and field foremen respectively. He also maintained project schedules and worked closely with the architecture, engineering, inspection, and field safety teams to address and resolve all problems.

Richard St. Cyr

SUPERINTENDENT

FIRM
STV CONSTRUCTION, INC.

YEARS OF EXPERIENCE
25

EDUCATION
ASSOCIATE IN MATHEMATICS; MIDDLESEX COMMUNITY COLLEGE

Mr. St. Cyr has more than 25 years of experience in supervising mechanical, electrical, and plumbing (MEP) projects and has extensive knowledge in the structural, architectural, and civil engineering areas. He has led multimillion dollar projects for airport terminals, power plants, correctional facilities, hospitals, and high-rise condominiums. Mr. St. Cyr is an adept construction manager and inspector skilled at leading complex teams of technicians and laborers from multiple contractors. He is also experienced with resolving requests for information (RFIs).

Project Experience

Delta Air Lines JFK Terminal Redevelopment Program Phase I - MEP Superintendent

Managing the MEP construction for the redevelopment of Terminal 4 at JFK International Airport, in Queens, NY, for Delta Air Lines. Mr. St. Cyr is overseeing the general contractor MEP teams for 125,000-sf gate extensions, multiple head-house expansions, taxi-lane and apron paving, and utility infrastructure improvements. Site work includes utility relocations and the installation of new fueling lines and hydrants. In addition, he is contributing to the new baggage handling conveyor system, including shutdowns and relocation of MEP utilities in coordination with JFK to avoid terminal operation disruptions. Mr. St. Cyr is helping with commissioning a new ground service fueling station and hydrant fuel system for the new concourse B expansion. The new commission includes an emergency fuel shut-off system, cathodic protection of the underground fuel piping, and flushing of the entire fuel system. He is also overseeing the new routing of the fiber optic communication line between Terminals 2 and 4.

PANYNJ JFK International Airport Expansion - Electrical Superintendent

Scheduled reviews, wrote progress reports, coordinated contracts with related contractors, and negotiated payment of work change orders for an expansion at JFK International Airport in Queens, NY, for the Port Authority of New York and New Jersey (PANYNJ). Mr. St. Cyr coordinated with engineers to solve design discrepancies. He oversaw the testing of the fire alarm, communications, and high-voltage distribution systems along with electrical and security operations. Mr. St. Cyr wrote RFIs, field reviews, and deficiency reports. He coordinated schedule impact work with the owner and facility management, and resolved inspection and code issues with PANYNJ. Mr. St. Cyr supervised 160 electricians under 3 contractors, and 25 technicians for the building management and fire alarm and security systems.

NYSE Generators - Senior Superintendent

Directed field operations in a $70 million retrofit design consisting of four standby generators on top of the New York Stock Exchange (NYSE) in Manhattan. Mr. St. Cyr coordinated the steel construction that supports the generators and its apparatus. The installation had to be performed without interrupting NYSE operations. He was responsible for supervision of iron workers, carpenters, roofers, sheet metal mechanics, plumbers, pipe fitters, electricians, and a general labor force. The total labor averaged 60 persons per week. Mr. St. Cyr attended weekly meetings with the owners, design team, and contractors.

George Bush Intercontinental Airport Terminal E - MEP Superintendent

Managed the installation, testing, and commissioning of life safety, security, and electrical distribution and fire alarm systems for the $210 million new concourse at George Bush International

Airport in Houston. Mr. St. Cyr supervised 150 electricians, 20 technicians, and 25 laborers representing four contractors during the expedited, 2-phase construction.

Continental Airlines Global Gateway - MEP Superintendent
Managed the completion of the punch list and commissioned electrical and security systems to open the new $180 million customs and immigration facility at Newark Liberty International Airport in Newark, NJ, for Continental Airlines. The project provided 24 passenger jet-ways along with Federal Investigative Services and Immigration and Naturalization Service facilities, which included conveyors; escalators; power and lighting; and systems for fire protection, fire alarm, and building security interface. Mr. St. Cyr supervised 87 electricians, 15 plumbers, and 6 building management systems technicians under 2 contractors. He coordinated with the Port Authority of New York and New Jersey on critical design and code issues. Mr. St. Cyr also directed contractors in an emergency situation when the fire sprinkler piping burst and flooded the baggage handling area. The damaged pipe was isolated and the area secured. All of the work was performed while the airport was in operation and without interference to airport functions.

Seminole County Jail Expansion - MEP Coordinator
Managed the MEP coordination for four buildings as part of a $30 million expansion of the county jail in Sanford, FL, for Seminole County. Mr. St. Cyr directed all MEP work performed in a 3-story housing unit, intake/release building, central energy plant, and active kitchen/laundry building. He coordinated with security personnel to schedule work in the active facility and reconciled contract design issues with the design team.

Colonial High School Ninth Grade Center - Superintendent/MEP
Managed the MEP installation and start up of two new academic and science centers at a $31 million educational facility in Orlando, designed to ease crowding at the main high school. The scope included a state-of-the-art athletic center and central utility plant, along with the renovation of the art center medical lab, administration building, and cafeteria. Mr. St. Cyr created the punch list and assisted with the project close-out for this LEED® certified project.

San Francisco County Replacement Jail No. 3 - MEP Superintendent
Completed a late contract with numerous coordination, damages, and design issues for a $150 million jail replacement in San Francisco. Mr. St. Cyr identified damages, the reasons for them, and implemented repairs. He managed the writing of field work directives, RFIs, and back charge notices. Mr. St. Cyr also coordinated work schedules, supervised 100 electricians and technicians, and scheduled electrical inspections.

NYSDCS Upstate Correctional Facility - Electrical Superintendent
Oversaw the electrical, life safety, and security systems for inmate housing, medical, and support facilities at a $150 million maximum security prison in Malone, NY, for the New York State Department of Correctional Services (NYSDCS). Mr. St. Cyr scheduled labor and material, verified that the work was performed on schedule, and managed pay requisitions. He performed electrical inspections and supervised 155 electricians under two different contractors and 25 security and communication technicians

Peter J. Eubank

SUPERINTENDENT

Mr. Eubank has more than 27 years of experience in construction management, general contracting, planning, architecture, and interiors. He has managed complex multimillion-dollar institutional and commercial projects, including educational, residential, and judicial facilities, for various municipal and private clients including the New York City School Construction Authority (NYCSCA), New York City Department of Citywide Administrative Services (NYCDCAS), New York City Department of Design and Construction (NYCDDC), and the Dormitory Authority of the State of New York (DASNY). Mr. Eubank is thoroughly familiar with all stages of the construction process, from pre-design through commissioning. He has been involved in pre-design site investigations; constructability reviews of design documents; and all aspects of construction management, contract administration, and project supervision.

Project Experience

NYCDDC New York City Police Training Academy CM - Superintendent

Supervising and coordinating all subcontractors related to roofing and exterior work for East Campus structures of the new police academy, a 35-acre training facility for the New York City Police Department in the College Point section of Queens, NY. The $656 million design-bid-build project consists of two phases, and is being completed as a joint-venture for the New York City Department of Design and Construction (NYCDDC). The East Campus structures consist of the 349,000-sf academic building, a gate house for public entry screening and security, and a covered pedestrian bridge connecting to the West Campus. Mr. Eubank is overseeing trades for roofing and waterproofing, curtain wall and wall panel systems, exterior louvers, and ornamental metals. The LEED®-registered project is seeking certification to the Silver level.

NYCSCA Construction Management Mentor Program - Associate Project Manager/SCA Project Officer

Mentored and managed multiple contractors on various school capital improvement projects throughout New York City as part of the NYCSCA Mentor Program. The mission of the program is to foster growth and increase the participation of minority and women-owned business enterprise contractors and locally based enterprise firms in the city's construction community, by providing hands-on training during various school construction projects. Mr. Eubank assisted and instructed contractors in all aspects of the construction process, from scheduling, permitting, and project startup, through project closeout. As the SCA Project Officer, Mr. Eubank also served as the direct contact with school administration and community groups. Projects varied in scope from electrical upgrades and structural repairs to playground renovations and bathroom upgrades, and all work was deadline-driven and performed in fully occupied schools.

NYCSCA Emergency On-Call Construction Management Services - Superintendent

Supervised the work of several contractors on NYCSCA projects performed on an emergency basis for public schools throughout New York City. Mr. Eubank's responsibilities included on-site supervision and inspection, community and school relations, and reporting of work progress and manpower. He also performed investigatory work to determine sources or causes of ongoing problems in school structures. Most notably, Mr. Eubank oversaw the investigation and testing work at P.S. 69 in Brooklyn, NY, which successfully located the sources of water infiltration into the lobby of the building and repaired the water damage that had plagued this new building for three years since its completion.

DASNY Hunter College ADA Modifications - Construction Manager
Managed and supervised all prime contractors and subcontractors for Phase II of the DASNY upgrade of restrooms at Hunter College in Manhattan, to meet Americans with Disabilities Act (ADA) requirements. The upgrades took place in the North, East, and West buildings at the Main Campus at 68th Street. Mr. Eubank maintained relations with the client and the college, including continual monitoring of construction work to protect the health and safety of building occupants. He reviewed contractor requisitions and change orders, conducted progress meetings, coordinated with design consultants, and maintained the project schedule, project logs, and records. Mr. Eubank was also responsible for overall construction and project closeout.

NYCDDC Richmond Hill Group Home Addition and Renovation - Project Manager/Resident Engineer
Oversaw a $4 million addition and renovation project for the NYCDDC at the Richmond Hill Group Home, a foster care housing facility owned and operated by the NYC Administration for Children's Services in Queens, NY. Mr. Eubank performed prebid site investigations and constructability reviews of design documents, minimizing construction cost overruns for this construction management (CM)/Build requirements contract. He selected prospective contractors for bidders list, prepared bid documents, and conducted prebid conferences and the bid opening. Mr. Eubank conducted scope reviews, made award recommendations, and prepared and issued contracts. He acted as the sole on-site resident engineer for the construction phase of the project, during which he conducted client and progress meetings, reviewed the contractor's preliminary schedules, and maintained the combined construction schedule. Mr. Eubank processed submittals, requests for information, contractor and corporate payment requisitions, contractor change orders, CM services supplemental funding requests, and project acceptance and closeout. He also supervised daily demolition and construction activities, monitored site safety, and performed community relations and contractor oversight. Mr. Eubank prepared quality control reports, coordinated trades, and prepared punch lists with related inspection and sign-off.

NYCDCAS 60 Centre Street Restoration - Resident Engineer
Supervised and inspected all construction operations, including verification of contract quantities of work, for the façade and interior courtyard restoration of the Manhattan Supreme Court at 60 Centre Street in New York City for NYCDCAS. The scope of work involved the repair and replacement of the granite, terra cotta, masonry and steel members, and spandrel beams throughout the perimeter of the 9-story landmark building as a result of the findings of Local Law 11/98 inspections. Mr. Eubank maintained and updated project logs and schedule. The work was staged so that the courts could continue to serve 4,000 people on a daily basis during construction.

NYCDCAS Bronx Criminal and Family Courthouse ADA Modifications - Resident Engineer
Oversaw and inspected all construction operations for NYCDCAS modifications to the public areas, facilities, and holding cells at the Bronx Criminal and Family Courthouse in the Bronx, NY, to comply with Americans with Disabilities Act (ADA) requirements. Mr. Eubank maintained and updated the project schedule and logs and was responsible for project closeout.

NYCDCAS Bronx Criminal and Family Courthouse Garage Structural Repairs - Resident Engineer
Managed and inspected all construction operations, maintained and updated the project schedule and logs, and managed project closeout for NYCDCAS repairs to the courthouse garage in the Bronx, NY. Mr. Eubank oversaw the replacement of all structural slabs, electrical conduits and lights, and drains and drain lines.

Robert Dries

SENIOR MEP MANAGER

Mr. Dries has more than 35 years of experience in mechanical engineering, and has progressed from engineering design to field management of complex projects. He has extensive experience in both the public and private sectors overseeing mechanical, electrical, and plumbing (MEP) contractors, as well as security, building management system, and information technology (IT) trades. Mr. Dries has supervised field staff and managed inspections for projects ranging from $29 million to $3.1 billion, including transportation facilities, medical centers, commercial buildings, and industrial and production plants. He is skilled at supervising field work for HVAC, plumbing, fire protection, control system integration, and process controls piping. Mr. Dries has managed testing and commissioning of all process systems, and also provides experience with air and water side balancing for all service water systems.

Project Experience

PANYNJ One World Trade Center - Deputy Resident Engineer/Chief Mechanical Inspector

Managed daily site inspections covering 13 trades, including civil, architectural, and MEP, for the construction of One World Trade Center, a major project included in the redevelopment of the 16-acre World Trade Center (WTC) site in Lower Manhattan. The tower will include 3 million sf of office space on 71 office floors; shopping and parking; an observation deck on the 100th and 101st floors; a skyline restaurant; and broadcast facilities. One World Trade Center will be New York City's tallest skyscraper and the centerpiece of the new WTC complex for the Port Authority of New York and New Jersey (PANYNJ). The project has a goal of LEED® certification to the Gold level. Mr. Dries witnessed all inspections on the site, as well as equipment startup, and filed daily engineering, status, and safety reports. The field inspections included escalators, 90 elevator cars, and all vertical shafts for mechanical risers and elevators for 104 floors.

Delta Air Lines JFK Terminal Redevelopment Program - Field Inspector/Lead Field Engineer

Managing field work and providing field inspections to facilitate the commissioning of new construction and renovations at Delta Air Lines' Terminal 4 at JFK International Airport in Queens, NY. The renovations aim to ease congestion at airline baggage claim and security checkpoint areas. The scope of work includes a 110,000-sf headhouse expansion, gate extensions, taxi-lane and apron paving, utility infrastructure improvements, new emergency fuel shut off system, and tank farm refueling lines. Mr. Dries is conducting daily field inspections, overseeing subcontractors, reviewing punch lists, and providing arbitration with subcontractors, as part of the construction management (CM) process.

NYCT Consolidated Revenue Facility - Resident Engineer

Coordinated all of the MEP trades for the $279 million renovation of the New York City Transit (NYCT) revenue collection facility in Ridgewood, NY. Mr. Dries supervised a staff of three for the installation of four major Federal Reserve-class vaults, a 200,000-sf addition with more than 5,000 CCTV cameras, a No. 2 diesel fuel farm, 4 generator sets, 2 money counting rooms for paper currency, and 12 secure money processing rooms. The electrical upgrades included an uninterruptible power supply (UPS) supported power system and redundant power distribution. He also reviewed and rewrote project controls, generated punch lists, and managed construction commissioning.

Radio City Music Hall Renovation - MEP Superintendent

Supervised the daily operations of MEP trades for the overhaul of all major MEP infrastructure systems, part of a $600 million renovation of the landmark Radio City Music Hall in Midtown

Manhattan. Mr. Dries managed the replacement of the aging fire alarm system, redesigned and refined the environmental controls, and modified and tested the units to make certain that they delivered the proper environmental conditions for the facility. His team also provided individual lighting and environmental controls for the new dressing rooms for guest performers. The work was performed under a tight schedule to ensure the timely opening of the Christmas show and accommodate various other show schedules. The entire auditorium had scaffolding from floor to ceiling to allow mechanical and electrical trades to install new air side distribution air flow monitoring stations, new lighting, security and fire alarm devices, and a new acoustical ceiling system. Among the challenges that Mr. Dries encountered was adjusting the environmental controllers, which had been incorrectly configured and weren't providing the correct environmental space sequencing for the zones in the facility. He performed punch list generation, change order negotiation, and MEP coordination, as well as commissioning of mechanical and electrical systems and water/air balancing. Mr. Dries acted as the owner's resident engineer and was authorized to make engineering changes to the design on behalf of the owner, working closely with the design engineer to provide an operable system with enhancements.

Stony Brook University Medical Center Renovation - Field Superintendent
Inspected work by mechanical trades during the $80 million renovation of Stony Brook University Medical Center in Stony Brook, NY. The approximately 150,000-sf renovation included the hospital's emergency room departments, patient acute recovery center, and triage unit. Also included in the scope of work was the addition of a blood bank. Mr. Dries monitored the mechanical trades to make certain that work complied with drawings, specifications, and building codes.

Memorial Sloan-Kettering Cancer Center Renovation - MEP Superintendent and Project Manager
Oversaw the daily operations of MEP trades and redesigned the MEP system for the $500 million renovation of the premier cancer care facility in New York City. The major renovation and infill project placed a 6-story building on top of an existing building, framed and tied into three surrounding buildings, and included five medical units; as well as the pathology building. Mr. Dries guided field work for the erection of super columns and beams over hospital working clinics. He supervised the addition of a new mechanical equipment room to service a new Pathology Department, Pediatric Outpatient Department, Pediatric Intensive Care, Breast Cancer Surgical Suites, and 26 new operating suites with robotic radioactive isotope implant capability. Mr. Dries coordinated site work for the construction of four suites containing two linear accelerators and magnetic resonance imaging (MRI) machines. He also managed upgrades to supporting water systems, led survey work, provided design sketches, and redesigned the plumbing system at the facility. Mr. Dries performed MEP coordination, re-designs, field sketching, change order negotiation, air/water side balancing, and commissioning. In addition, he was selected by the client's Facilities Engineering Department to undertake special assignments related to existing hospital mechanical systems, including surveying, investigating, and recommending new design, as well as supervising the installation of new design enhancements.

Memorial Sloan-Kettering Hospital Outpatient Cancer Center - Mechanical Project Manager
Managed mechanical site work for the construction of a new outpatient cancer care center for Memorial Sloan-Kettering in Commack, NY. The $35 million project included two linear accelerators with supporting laboratories, radiology suites with magnets, outpatient care rooms, minor non-invasive surgical operating rooms and suites for magnetic resonance imaging (MRI), CAT scans, and mammography. Mr. Dries also guided the installation of equipment for nitrogen and methane recovery from gray water discharge.

John Bert

SENIOR MEP INSPECTOR

Mr. Bert has more than 45 years experience in the design and construction for various types of industrial and commercial projects. He has worked on projects in the public, government and private sectors as a design engineer, construction manager, resident engineer, and mechanical/electrical coordinator.

OSHA CERTIFICATION (CONSTRUCTION SAFETY AND HEALTH)

Project Experience

Nassau Community College Life Science Building - MEP Inspector

Providing construction management services relating to the inspection of the mechanical and electrical systems. Deliverables include daily reports and project correspondence to verify that all mechanical and electrical systems and components were incorporated as required.

DASNY Queens College NY New Life Science Building - Project Manager MEP

Responsible for construction of all mechanical, electrical, and plumbing installations. Manager for New York Dormitory Authority (DASNY), overseeing MEP contractors regarding design, installation, progress payments, change orders, testing, and acceptance.

Manhasset School District - Construction Manager/Project Manager

The latest project for the Manhasset School District was a $23,000,000 Capital and Bond project throughout the district during the summers of 2007/2008 and during 2007/2008 school year. The project scope included roof replacement, window replacement, masonry and stucco repairs, security upgrades, boiler replacement, new HVAC installations, new emergency generators and electric service installations along with interior building upgrades, ADA acceptability compliance, bathrooms, ceilings, flooring plumbing, etc.

Various Projects - Construction Manager/Project Manager

Projects worked on included:

- Cold Spring Harbor CSD Bond-Related Capital Improvement Program
- SUNY Purchase New Student Center, Purchase NY
- Lehman College Computer Center (Phase 11) Abatement and Renovation
- Kings County Medical Center, NY
- Teaneck Public Schools, NJ
- New York Power Authority Projects, Five Boroughs

Nassau County Department of Public Works Manager Bay Park Water Treatment Facilities - Construction Manager/Resident Engineer/On Site Electrical Construction

Responsible for all electrical construction projects including a new generating building, pumping stations, sludge dewatering building, and numerous process and support facilities. Mr. Bert managed projects from design specifications through scheduling, equipment purchasing, installation, testing, and closeout. He supervised field personnel, engineers, designers, and inspectors in coordinating with contractors and interpreting and fulfilling contract specifications and requirements, and had complete authority to make all decisions regarding all aspects of electrical projects.

Patricia Zander, P.E., PMP, LEED®AP BD+C

ENVIRONMENTAL SENIOR PROJECT MANAGER

Ms. Zander is a civil and environmental engineer with more than 15 years of experience working on educational and healthcare facilities, waste transfer centers, and parks and athletic fields. She is experienced in all phases of site development, including feasibility studies, facilities condition analyses, stormwater permitting, cost estimating, contract documents, and construction management. Ms. Zander has provided designs and technical support to achieve LEED certifications and is adept at procuring New York City Department of Environmental Protection (NYCDEP) approval and permitting. Her project management experience includes budget preparation, cost management, scheduling, and staff coordination.

PROFESSIONAL ENGINEER: NEW YORK AND CONNECTICUT

Project Experience

NYCDDC New York City Police Academy - Environmental Project Manager/LEED Compliance Officer

Managing LEED requirements and documentation from preconstruction through construction closeout for the New York City Academy, which is designed for a LEED Silver rating and being built in two phases on a 33-acre municipal site in the College Point area of Queens, NY, for the New York City Department of Design and Construction (NYCDDC). The site is located on a former landfill later used as a New York City Police Department impound yard. Ms. Zander is also monitoring environmental strategies and identified a critical environmental issue missing from the design scope of work. She took a lead role in the bidding and procurement process for an environmental consultant subcontract. Ms. Zander is managing the preparation of the soil, air, noise, soil, stormwater, and groundwater plans for the construction phase. She successfully revised the remedial action plan (RAP) to allow soil reuse on site and procured the NYCDEP approval. Ms. Zander demonstrated that on-site soil reuse would eliminate the need for costly off-site hauling and disposal of low-level contaminated soil and would lower fossil fuel consumption. The RAP revision has led to a minimum project cost savings of $4 million.

NYCEDC New Stapleton Waterfront Project - Lead Civil Engineer

Prepared designs for new infrastructure, including buildings, municipal and state sewers, and stormwater drainage plans, for $52 million of upgrades on 36 acres of pending mixed development of the Stapleton Naval Homeport in Staten Island, NY, for the New York City Economic Development Corporation (NYCEDC). Ms. Zander procured the related permitting from the NYCDEP and New York State Department of Environmental Conservation. She also provided technical support to assist the successful effort to achieve a LEED Silver rating.

NYSDOT Route 9A Bikeway/Walkway Traffic Calming Structures- Senior Engineer

Designed grading and layout of proposed traffic-calming structures planned at 12 key vehicle crossings along the southbound Route 9A bikeway/walkway in Manhattan for the New York State Department of Transportation (NYSDOT). The structures, called table-tops, were an essential modification that simultaneously eliminate grade changes for bike riders at traffic crossings while slowing vehicular traffic proceeding across the table-top. Ms. Zander provided a design that incorporated existing grading, drainage, and utility structures and minimized impact to the bikeway/walkway infrastructure.

NYCEDC Whitehall Ferry Terminal - Project Engineer

Provided construction phase services for the construction of the new $176 million intermodal terminal in Lower Manhattan that serves the Staten Island Ferry and provides connections with

a new South Ferry subway station and access to four other subway lines, three bus lines, and taxis. Ms. Zander performed shop drawing review, prepared project data, modified drawings, and prepared responses to requests for information during construction of this project for the New York City Economic Development Corporation (NYCEDC).

NYCSCA High School for Architecture and Urban Planning - Lead Civil Engineer
Led the civil design and permitting process for a $47.5 million, 925-student, 160,000-sf high school in Queens, NY, for the New York City School Construction Authority (NYCSCA). Ms. Zander obtained approvals for a New York City Department of Buildings Builders Pavement Plan with special revocable consent considerations. She provided a workable strategy for obtaining recertification of the New York City Department of Environmental Protection Site Connection Permit as additional property was acquired during construction. Ms. Zander also crafted an alternate pressure test for high-density polyethylene underground detention piping.

Brooklyn Botanic Garden Visitor Center - Lead Civil Engineer/LEED Coordinator
Led the civil design and construction of a new Visitors' Center at the Brooklyn Botanic Garden in Brooklyn, NY. The project included new retail and exhibition space, a lobby, small café, offices, two outdoor plazas, landscaping, and restrooms. Ms. Zander established vertical and horizontal dimensional controls for the proposed building and reworked existing grades for new paths that would blur the distinction between indoor and outdoor spaces. In coordination with the structural engineer, she designed retaining walls, provided grading to integrate overlooks on the hill behind the new building with the upper floor, blending new plazas and paths in with existing travel ways. Ms. Zander also directed relocation of significant underground utilities, including a newly installed fiber optic duct and obtained New York City Department of Environmental Protection approval for the unconventional drainage system design. In addition, she modeled the hydrologic/ hydraulic response of the existing system under select storm events, and issued an analytical report to the Brooklyn Botanic Garden in support of its Master Plan initiative. The project won the 2008 Award for Design Excellence from the Art Commission of the City of New York.

Steven Prest, P.E.

RESIDENT ENGINEER

FIRM
STV CONSTRUCTION, INC.

YEARS OF EXPERIENCE
35

EDUCATION
BACHELOR OF SCIENCE, CIVIL ENGINEERING; UNIVERSITY OF RHODE ISLAND

PROFESSIONAL REGISTRATIONS
PROFESSIONAL ENGINEER: NEW YORK AND NEW JERSEY

Mr. Prest has more than 35 years of experience providing design and resident engineering services for federal, state, local, and international transportation projects, including roadways, railroads, bridges, and tunnels. Recently, he has performed resident engineering functions for Amtrak railroad tunnel and New York City Department of Transportation bridge projects. He is knowledgeable and experienced in transportation planning and design and has managed complex bridge and roadway rehabilitations. Mr. Prest has served as a lead designer on interstate, toll facility, and land-service highway projects for the New Jersey Department of Transportation and the New Jersey Turnpike Authority. In addition, he has provided support for many other projects, including construction cost estimating, specifications development, shop drawing review, project scheduling, constructability review, value engineering, and QA functions. Mr. Prest has the proven ability to coordinate multidisciplinary teams to bring engineering documents from the planning and permitting stages to final design and through construction.

Project Experience

Moynihan Station Development Corporation Moynihan Station Phase I CM - Senior Inspector

Inspecting structural, electrical and mechanical installations for Phase 1 of the expansion of Pennsylvania Station into the adjacent historic James A. Farley Post Office in Midtown Manhattan. The $325 million first phase of the project includes the expansion and enhancement of the 33rd Street Connector between Penn Station and the West End Concourse, which lies under the grand staircase of the Farley building. The firm is managing the extension and widening of the West End Concourse that will serve nine of Penn Station's 11 platforms. The firm is also managing the construction of new vertical access points and passenger circulation space; new stairs, escalators, and elevators from the platforms up to the station to meet ADA requirements; and entrances into the West End Concourse through the 31st and 33rd streets corners of the Farley building. This work will help to alleviate the congestion that exists in the current station footprint and at the platform levels. It also constitutes a critical first step toward the larger goal of building a new train hall in the Farley Building for Amtrak as part of its Vision for the Northeast Corridor under the Gateway initiative. In addition, the project will meet the goal of establishing a grand entrance at Penn Station for rail access.

PANYNJ Newark Liberty International Airport CTA Bridge, At-Grade Frontage Road, and Southern Access Roadway - Project Engineer

Performed an independent review of 90% design plans for the Port Authority of New York and New Jersey (PANYNJ) Newark Liberty International Airport (EWR) Redevelopment/Program Management group. Mr. Prest's review included the identification of major problems, conflicts in the design, insufficient details, and recommendations for improvements of technical or presentation aspects of the designs for a central terminal area (CTA) bridge, frontage road, and access roadway at the Newark, NJ, facility. He also participated in cost estimating for proposed new access roads and parking facilities during the early stages of the EWR 2000 program in 1988.

NYCDOT Queensboro Bridge Reconstruction - Assistant Resident Engineer

Provided resident engineering services through project closeout for the rehabilitation of miscellaneous components of the Queensboro Bridge in Queens, NY. The project included deck repairs and microsurfacing, drainage and lighting improvements, and installation of concrete barriers and traveler access platforms, as well as cleaning and repairs of the bridge tower and

anchor piers. Mr. Prest performed a condition assessment of eyebar heads and pins on the main bridge truss and oversaw repairs to stonework. He also assisted in the renovation of a historic kiosk and in the oversight of geometric improvements to the Queens approach lower roadway, which included replacement of two support columns for the Queensboro Plaza subway station.

Amtrak Fire Standpipe Systems Modification CM Phase III & Phase IV - Resident Engineer
Served as a liaison between Amtrak and the construction contractor, and supervising the inspection staff for the estimated $24 million modification to add deluge valve and air monitoring systems, along with several mechanical equipment rooms (MERs), to Amtrak's fire standpipe systems in the East and North River tunnels in Northern New Jersey and New York City. The scope of work incorporated air-vacuum isolation valves with fail-safe actuators for the rapid-fill deluge and leak detection systems, as well as installed air compressors to monitor system integrity. In another task, each segment of the 16-mile fire standpipe system had a dedicated MER added to serve as a control room. The construction also included the installation of associated piping, electrical power, conduit runs, and system controls. Mr. Prest oversaw the daily coordination with contractor operations, superintendents, and supervisory-level Amtrak and Long Island Rail Road support staff. He reviewed the contractor's materials and the procedures for incorporating materials into the project. Mr. Prest also supervised eight construction inspectors, scheduled work, provided relevant technical documents, responded to questions, and reviewed daily field reports. He reviewed, implemented, and documented the systems testing procedures. In addition, Mr. Prest reviewed, approved, and monitored the contractor's site-specific work plans, including hazard assessment and safety procedures.

NJDOT Rockaway Road over Morristown Line - Project Manager
Oversaw the feasibility assessment, final scope development, and initial design for the $6.2 million New Jersey Department of Transportation (NJDOT) replacement of the Rockaway Road Bridge over the NJ TRANSIT Morristown Line and Rockaway River in Morris County, NJ. During the feasibility assessment, studies were performed for a number of profile alternatives to maximize roadway sight distance while minimizing environmental impacts. Mr. Prest was responsible for coordination with survey and geotechnical subconsultants, environmental and cultural resources specialists, the client, and local officials. He oversaw preliminary design for a detour route and traffic study that was performed to determine impacts along the route. Mr. Prest held meetings with local officials and convened a public forum. During the final scope development process, he managed advanced design services, including a complete subsurface exploration program, utility discovery, and verification and preparation of preliminary right-of-way plans. Mr. Prest managed power outages that were required for work on structural borings adjacent to the electrified railroad, and coordinated schedule and safety requirements with NJ TRANSIT. He also oversaw preparation of a scope development package in support of the recommended alternative.

NJTA Intersection Improvements - Senior Project Engineer
Provided design services; coordinated with hydraulic, traffic, electrical, and structural engineering teams; and performed site investigations and quality assurance reviews for New Jersey Turnpike Authority (NJTA) intersection improvements, as part of a project to construct a new ramp from the turnpike to a traffic light at the intersection of the County Route 535 in South Brunswick Township. The project also included the expansion of Route 535 between the new ramp intersection and State Route 32.

Ruwan A. Rajapakse, P.E., AVS

RESIDENT ENGINEER

Mr. Rajapakse has more than 15 years of experience in project and construction management (CM), geotechnical engineering, tunnel design, and environmental remediation. His project management experience includes coordinating among disciplines, overseeing contractors and subconsultants, monitoring costs and schedules, and supervising safety procedures. Mr. Rajapakse is adept at preparing proposals, scope of work documents, work plans, and design drawings. He has recently worked on several task-order assignments for the New York City Housing Authority and the Triborough Bridge and Tunnel Authority, providing project management and cost estimating services.

PANYNJ One World Trade Center and National September 11 Memorial & Museum - Estimator

Performed cost estimating for One World Trade Center and the National September 11 Memorial & Museum, two of the major projects included in the PANYNJ redevelopment of the 16-acre World Trade Center site in Lower Manhattan. Mr. Rajapakse had responsibility for providing cost estimates for structural aspects of these facilities.

TBTA Bronx Whitestone Bridge Emergency Structural Repairs - Resident Engineer

Supervised the contractor's activities, prepared reports and cost estimates, and performed change-order negotiations and closeout for emergency repairs to the 3,770-foot-long Whitestone Bridge spanning the East River from the Bronx to Queens, NY, as part of a $6 million on-call construction management and inspection services contract. The scope of work included repair of the connections between existing roadway stringers and floor beams, installation of additional reinforcing stringers and bearings under the existing roadway stringers, repair and reinforcement of existing floor beam brackets, and miscellaneous other steel structural repairs.

NYCDDC New York City Police Training Academy CM - Project Engineer

Providing CM services and engineering support for concrete superstructure work at the east and west campuses of the new New York City Police Department Academy in the College Point section of Queens, NY. Prior to that, Mr. Rajapakse monitored pile driving work at the campuses. He has resolved issues related to pile driving, pile load testing, and pile cap construction. Mr. Rajapakse has also overseen concrete pouring for foundations and superstructures. He is responsible for responding to requests for information, performing design reviews, reviewing submittals, and resolving engineering issues related to all the concrete work in both campuses of the project. Mr. Rajapakse is also performing change order estimating and coordination among disciplines for the construction of the academy, which is being built in two phases on a 33-acre municipal site. The facility is intended to earn LEED® Silver certification.

DASNY Namm Building Construction Management Services - Project Manager

Oversaw exterior modernization and interior renovation of an 11-story building at the New York City College of Technology campus in Brooklyn, NY, for the Dormitory Authority of the State of New York (DASNY). The building houses most of the college's classrooms and labs for general studies, as well as the registrar and other academic offices. The $13.3 in renovations included construction of a new limestone façade, installation of new windows, and repair of structural beams. The project also involved construction of a computer technology center with more than 200 workstations, a new cooling tower, ceiling work, and other upgrades to existing classrooms. Mr. Rajapakse supervised structural repairs to the roof slab, HVAC duct-

work installation, data wiring for computers, new plumbing for bathrooms, computer installations, electrical wiring, roofing, and general construction work. His responsibilities included inspection of structural repair work to the roof; coordination between the school, DASNY, and contractors; cost estimating; change-order negotiations; and closeout.

TBTA Randall's Island Robert Moses Building Interior Renovation - Resident Engineer
Provided daily supervision and coordination between disciplines, performed change-order negotiations, and prepared monthly reports for a boiler replacement and utility tunnel upgrade at the Triborough Bridge and Tunnel Authority (TBTA)'s main office facility on Randall's Island, NY. Mr. Rajapakse oversaw the demolition and replacement of the boilers; installation of a new vehicle lift, louvers, and electrical panels; and floor repairs. Work also included structural repairs to tunnel walls and beams, removal and replacement of weak concrete, structural investigations of the utility tunnel roof, electrical panel and communication cable upgrades, and rerouting of electrical wiring.

Amtrak East and North River Tunnel Fire Standpipe Installation CM - Safety Engineer/Project Control Cost Engineer
Coordinated several contractors in the $40 million installation of 76,500 feet of 6-inch-diameter fire standpipe in the East River and North River Amtrak tunnels in New York City. Mr. Rajapakse was responsible for project control, cost estimating, budgeting, cost forecasting, contractor payments, as-built drawings, and closeout. He supervised project safety, generated work summary and executive summary reports, attended meetings, created quantity tables and progress charts, and processed and reviewed change orders.

IDOT Galena Highway Tunnel - Project Manager
Designed a 1-mile, soft rock highway tunnel liner system for a tunnel in Galena, IL. The Illinois Department of Transportation (IDOT) project included full geotechnical engineering design of the tunnel lining, as well as preliminary designs for the drainage, lighting, and ventilation systems.

Hackensack Development Authority Meadowlands Water Tunnel - Engineer
Designed a water tunnel and earth-retaining structures at the Hackensack Meadowlands of New Jersey. Mr. Rajapakse conducted a design feasibility study and provided a design methodology in which he decided which geological profile to use, what structures to design, and alternatives to these structures. He also developed a construction methodology for the project.

Ruben Ciocci, P.E.

RESIDENT ENGINEER

Mr. Ciocci has more than 20 years of experience providing resident engineering services for large-scale transportation and infrastructure projects. His diverse experience includes bridge rehabilitation, pile and foundation work, utility relocations, and roadway reconstruction. Mr. Ciocci also managed the development of maintenance of traffic plans and critical path method scheduling. He has extensive knowledge of industry construction standards and is familiar with the policies and procedures governing projects for transportation agencies throughout the New York metropolitan area.

Project Experience

NYCDDC Northbound Whitestone Expressway Sewer Construction - Senior Resident Engineer

Provided construction management and engineering services for a $60 million storm and sanitary sewer installation for the DDC. The project scope also included new water mains and street lighting, as well as traffic signal engineering. Mr. Ciocci oversaw a nearly 1-mile-long installation of 9'6" x 9' storm sewers on piles along the northbound Whitestone Expressway service road from 25th Avenue to the Flushing River in Queens, NY. The installation also included siphon chambers.

NYCDDC Roadway Reconstruction - Resident Engineer

Supervised reconstruction of roadways in Queens and Manhattan for the DDC. Mr. Ciocci also oversaw the demolition of concrete structures; construction of new footings and retaining walls; and reconstruction of sidewalks, curbs, roadways, storm sewers, and street lighting systems.

TBTA Verrazano-Narrows Bridge Toll Plaza Improvements - Resident Engineer

Managing inspection services for widening the access ramps to the Verrazano-Narrows Bridge, connecting Brooklyn and Staten Island, NY, for the Triborough Bridge and Tunnel Authority (TBTA). The initial phase of this $55 million project involved improving traffic flow through the toll plaza and onto the bridge by removing eight tollbooths as well as various related elements such as concrete islands, utilities, canopy structures, electronic signs, and related utilities. Mr. Ciocci is inspecting the replacement of the Narrows Road south bridge over the existing Lily Pond Avenue exit ramp, as well as construction of a new eastbound connector ramp, and replacement of existing Ramp J3. In addition, he is inspecting construction of a new bridge carrying the Lily Pond Avenue entrance ramp over the new eastbound level connector and modifications to the deck carrying the Staten Island Expressway over Lily Pond Avenue. Mr. Ciocci is also inspecting the modification of existing stormwater treatment service as well as the installation of guiderails, concrete barriers, landscaping, pavement, and lighting on the new and reconstructed ramps. He is working closely with the contractor to complete work on schedule.

NYCDOT Rikers Island Bridge Deck and Repairs - Senior Resident Engineer

Oversaw staff and documentation related to the Rikers Island Bridge deck repairs for the NYCDOT. The bridge, over the East River, connects Rikers Island, the site of the city's largest correctional facility, with Queens, NY. Mr. Ciocci supervised engineering and construction for the replacement of existing overlay concrete and structural steel repairs, including the repair of existing deteriorated floorbeam web sections in the river spans that involved a reinforced area of web section loss with a repair plate on each side. He also oversaw the repair of existing deteriorated stiffeners in the approach spans and river spans, the repair of existing deterio-

rated stringer web sections in the approach spans, and the replacement of deck joint seals. Mr. Ciocci also supervised the repair of hollow-sounding areas and under-deck concrete spalls with overhead patching material and shotcrete, painting that involved power tooling and blasting structural steel, and the repair of cracked and spalled pedestals.

NYSDOT Region 11 Jamaica Avenue Bridge Replacement - Senior Project Engineer
Provided design review for the replacement of the Jamaica Avenue Bridge over I-678, the Van Wyck Expressway, in Queens, NY, for the NYSDOT. Mr. Ciocci conducted the design review and submitted it to the NYSDOT for the bridge roll-in/roll-out operation. The project involved the removal of the 110-foot superstructure, removal and relocation of abutments, and installation of a new 2-span continuous bridge that was 28 feet longer than the existing bridge. Mr. Ciocci reviewed calculations and submitted new structural steel drawings for review by NYSDOT. He focused on the jacking procedures and pulling systems during the roll-in/roll-out operation, which was designed as a sled on fixed rollers. Mr. Ciocci also supervised the construction of retaining walls and the temporary support of excavation at the abutments, using H piles, tie-backs, and bored-in piles designed to avoid lateral loads in an adjacent subway tunnel. He also implemented a project safety plan for lifting operations, night lighting, demolition, and maintenance of traffic plans. He was also responsible for supervising a staff of engineers assigned to the project.

NYSTA Tappan Zee Bridge Deck Partial Replacement - Resident Engineer
Oversaw the contractor's safety installation of a working platform during the partial replacement of the Tappan Zee Bridge's west truss deck for the New York State Thruway Authority (NYSTA). The 3-mile-long cantilever structure across the Hudson River connects Westchester and Rockland counties. Mr. Ciocci supervised a staff of six for construction modifications to an existing longitudinal catwalk over river spans. Deck repairs included raising the top railings, installing a toe board, and repairing cracked floorbeam top flanges and web sections in river spans. Mr. Ciocci was responsible for inspecting orthotropic bridge deck construction, including saw-cutting and removal of bridge deck slabs, and replacement with new orthotropic bridge deck sections during overnight shifts. He also performed inspections and marked out repairs for damaged girders.

TBTA Whitestone Bridge Rehabilitation - Resident Engineer
Oversaw resident engineering services for the $15 million rehabilitation of the Whitestone Bridge for the TBTA. A number of components of the bridge, which crosses the East River and connects Queens and the Bronx via I-678, were rehabilitated, including the connecting viaduct, end ramps, and the approach slab. Mr. Ciocci oversaw a staff of four who developed plans for partial and full-depth deck repairs, using rapid set patching materials, as well as the removal and replacement of deck expansion joints. Other tasks included removing and replacing the overlay with rapid setting latex modified concrete, repairing spalled areas on the underside of the viaduct deck, repairing fixed bearings and resetting 16 rocker bearings, and upgrading and strengthening concrete beams.

Susan Wong, P.E.

RESIDENT ENGINEER

Ms. Wong is a resident engineer with more than 30 years of experience in inspection, design, and construction management for roadways, bridges, airport facilities, and wastewater treatment plants. She is well-versed in providing on-site resident engineering and inspection (REI) services, from reviewing staging plans to directing construction activities and managing field testing and commissioning. Ms. Wong is skilled in supervising and coordinating field work and inspections for all phases of construction and in ensuring all work conforms to contract plans and specifications. She has successfully executed road reconstruction projects in the New York metropolitan area for various agencies including the NYCDDC and is particularly skilled at verifying that all work is performed in accordance with project guidelines and client specifications.

Project Experience

NYCDDC 34th Avenue/Brookeside Street Storm Sewer and Water Main Reconstruction REI - Resident Engineer

Overseeing construction and environmental services for the $7.8 million replacement of the stormwater sewers in the Little Neck neighborhood of Queens, NY. The project is part of a NYCDDC requirements contract. Ms. Wong is providing day-to-day oversight of the installation of the new storm sewer system and replacement of water mains adjacent to the sewers. She is also responsible for ensuring that contractors comply with erosion control plans, stormwater pollution and prevention plans, and requirements of federal and state permits. The project's location, in a densely populated residential area surrounded by wetlands, necessitates special mitigation measures. The high water table requires the team to continuously pump water while work is being performed. Ms. Wong is overseeing the use of hydraulic features to treat and convey stormwater runoff into the wetlands area, including the installation of an outlet stilling basin. When installing pipes, the team is using only one feed from one direction. Ms. Wong ensures the system is connected at the end of each day to provide water to area residents. She is also monitoring the use of the pipe bursting method, a trenchless alternative, for the replacement of a section of water main under LIRR tracks that can't be disturbed.

NYCDDC Chatham Square Realignment - Resident Engineer

Provided on-site engineering services for the $18.2 million reconstruction of Chatham Square along Bowery Street from Canal Street to East Broadway for the NYCDDC. The project encompassed 10 streets in Manhattan, including major thoroughfares such as St. James Place, Worth Street, and Mott Street. The reconstruction required extensive traffic engineering, the establishment of park areas within the square, and landscaping and refurbishing of the existing Lin Ze Xu and Confucius statues. Ms. Wong provided REI services for the rebuilding of the streets and sidewalks, as well as for the installation of new drainage, traffic signals, streetlights, 36-inch trunk water mains, and appurtenances. She also supervised excavation, compaction of sub-grade, form preparation, and concrete placement for curbs and sidewalks. Ms. Wong managed the adjustment and modification of existing utility structures and the paving of new asphalt concrete-wearing coarse. Additionally, she verified strict maintenance and protection of traffic guidelines during construction and inspected installations for new 36-inch, 20-inch, 12-inch, and 6-inch water mains, house connections, and hydrants.

TBTA Construction Inspection Services for RFK Bridge T-48 Roadway Replacement - Resident Engineer

Managed on-site engineering services for the $9.3 million rehabilitation of the Robert F. Kennedy (RFK) Bridge roadway surfaces for the TBTA. Ms. Wong supervised the removal of the T-48

overlay and installation of Stirling Lloyd Bridgemaster, a methyl methacrylate polymer slurry overlay, for all three spans: the Queens Suspended Span, the Harlem River Lift Span, and the Bronx Kills Truss Span. She oversaw the field office and inspection personnel; reviewed and approved contractor payments; and participated in meetings for construction, progress, change orders and negotiation, and staffing. The project was completed ahead of schedule and within budget.

NYCEDC Adams Street Reconstruction - Resident Engineer
Oversaw the $3 million reconstruction of a portion of a 10-lane major thoroughfare in downtown Brooklyn, NY, for the New York City Economic Development Corporation (NYCEDC). The project included the addition of a mid-block intersection for access to a new Marriott Hotel.

NYCDOT Ninth Avenue Bridge Reconstruction - Resident Engineer
Managed the $5 million reconstruction of a 300-foot-long, 10-span, steel girder bridge with a concrete deck over a New York City Transit subway line in Brooklyn, NY, for the NYCDOT.

NYCEDC Hollis Avenue Reconstruction - Resident Engineer
Coordinated on-site engineering services for the $5 million reconstruction of a commercial and residential roadway in Queens, NY, for the NYCEDC. Ms. Wong managed the construction of an entire stormwater drainage system and partial sanitary sewer system.

NYCDOT Lefferts Boulevard Bridge Renovation - Resident Engineer
Provided engineering services for the $4.5 million reconstruction of a 200-foot-long, 4-lane, 3-span, steel girder bridge with a concrete deck over the main line tracks of the Long Island Rail Road in Queens, NY, for the NYCDOT. Located in a densely populated neighborhood, the bridge is flanked on either side by retail stores on separate supporting bridges.

NYCDEP Newtown Creek Water Pollution Control Plant Main Building North Modifications - Project Manager
Guided modifications to the Main Building North of the Newtown Creek Water Pollution Control Plant in Brooklyn, NY, a $225 million renovation for the NYCDEP. Ms. Wong managed the replacement of the main sewage pumps, bar screens, and channel sluice gates; the installation of a new odor control system; and the extension of the screening wing to accommodate new screening conveyor and container handling equipment. She processed all payments and reviewed and approved the subcontractor's schedule of values and payments. Ms. Wong maintained the progress schedule, managed change orders, and participated in all project meetings and weekly management meetings. She also coordinated the submittal of Operation & Maintenance manuals and all equipment training.

NYCDEP Newtown Creek Water Pollution Control Plant Main Building South Addition - Deputy Resident Engineer
Managed the addition and upgrades to the Main Building South of the Newtown Creek Water Pollution Control Plant in Brooklyn, NY, a $225 million renovation for the NYCDEP. Ms. Wong coordinated construction management activities to provide new boilers, emergency turbine generators, and electrical switchgear, while maintaining a fully operational plant. She managed the startup and commissioning of nine 750-HP boilers and four 6-MW emergency turbine generators. Ms. Wong oversaw the field office and inspection personnel, reviewed and approved payments for four prime contractors, and administered construction schedules. She participated in meetings for progress, critical path method, change order and negotiation, and staffing.

Hemant Pereira, P.E.

RESIDENT ENGINEER

Mr. Pereira has more than 20 years in the field of transportation and infrastructure and construction management (CM) services for commercial, residential, and industrial facilities. He possesses in-depth knowledge and practical experience with all aspects of construction, construction inspection, estimating, bidding, construction planning, scheduling, contracting, financial planning, and reporting on the closeout process. As a contractor representative, Mr. Pereira has reviewed bid documents and final estimates, qualified subcontractors for bidding, issued requests for information (RFIs), worked out site logistics plans and sequences of operation for projects, identified schedule milestones, developed schedule recovery plans, negotiated contracts, offered alternative designs and products, reviewed progress and quality of work, prepared and monitored budgets, gathered pricing information through vendors and subcontractors, prepared payment cost breakdowns for monthly payment requisitions, prepared cost control tables and analyses for monthly owner reviews, monitored cash flow in coordination with the schedule, prepared/reviewed in-house punch lists, and maintained positive client/buyer relationships. He is currently completing projects with the NYSDOT and NYCDOT.

Project Experience

NYSDOT Reconstruction of Route 9A and Lower Manhattan Streets - FHWA Coordinator

Providing CM oversight on all street reconstruction projects resulting from the September 11th terrorist attacks on the World Trade Center (WTC) and the subsequent restoration efforts in Lower Manhattan, funded by FHWA under Emergency Relief. The project is receiving federal funding of $145 million. Mr. Pereira is reviewing design approval documents to verify if the project is aligned with the scope and design for FHWA funding. He performs reviews of plans, specifications, and estimates for acceptance and approval of the project for the NYCDDC to advertise for public bid. Mr. Pereira is also reviewing payment requests submitted by the NYCDOT and NYCDDC, as well as preparing compliance reports on payment and change order reviews.

NYSDOT Route 9A Project Management and Controls - Senior Inspector

Reviewing construction plans and schedules submitted for reconstruction of work on the Route 9A/West Side Highway in Manhattan. Mr. Pereira is coordinating designs with consultants and NYSDOT engineers to finalize repair details and specifications for restoration of compromised pavement and roadways. He has corresponded with the NYCDOT, NYSDOT, and other agencies to approve work zone traffic controls during reconstruction and performed initial and final field coordination meetings/inspections related to the permit process.

NYSDOT Route 9A West Street Promenade - Inspector

Reviewing consultant contract bills submitted for payments on this $300 million project to construct a tree-lined pedestrian promenade along Route 9A's vehicular zone from Battery Park City to West Thames Street, in Manhattan. The promenade also connects the bicycle path from Hudson River Park through Battery Park. During construction, Mr. Pereira made sure that the safety and accessibility of the area for pedestrians and bicyclists was maintained. This included protection from adjacent work zones and provision of detour routes during reconstruction of the bikeway and walkway. He also provided quality assurance for urban landscape features, including historic street lighting and promenade architecture, granite-paved surfaces, substantial plantings, insulation of new irrigation systems, and decorative precast crosswalks.

NYSDOT WTC Neighborhood Streets Reconstruction - FHWA Coordinator
Providing CM oversight on all street reconstruction projects resulting from the September, 11, 2001 attacks on the World Trade Center (WTC) and the subsequent restoration efforts in Lower Manhattan, funded by the Federal Highway Administration (FHWA), under Emergency Relief. Mr. Pereira is reviewing payment requests submitted by the NYCDOT and NYCDDC, as well as preparing compliance reports on payment and change order reviews. He is performing regular construction inspections on the progress of excavation, utility work, backfill, concrete sub-base, asphalt overlay, sidewalk, and granite curb installation. He also performs final punch list walkthroughs, and reviews of civil rights compliance.

NYCT Fan Plants Rehabilitation - Assistant Project Manager/Project Manager/QA Engineer
Supervised construction of two underground fan plant facilities for the New York City Transit (NYCT), located at 14th Street/Avenue D, and Old Slip in Manhattan. Mr. Pereira supervised the installation of new fans, asbestos abatement in manholes and tunnels, structural steel installation, communications work between NYCT's central station and advanced fan controls system, instrumentation and controls that included the development of software programming for automated fan functions, mechanical services, major electrical services and wiring, structural renovations, and restoration of the park and streets above the plants.

NYCHPD Apartment Building Construction and Rehabilitation - Senior Project Manager
Directed the $37 million construction and renovation of over 30 multifamily residential buildings in New York City for the New York City Department of Housing Preservation and Development (NYCHPD). The buildings held four to 20 units. For each of these mid-end projects, Mr. Pereira supervised all construction services, including complete interior demolitions, complete gut rehabilitations, renovations, asbestos abatement, interior and exterior structural stability and replacement of floor joists, restoration of brick façade and cornices, baseboard heating, spackling, painting, Department of Buildings (DOB) inspections, punch lists, and closeouts. He also directed installations of new interior framing and drywall, oak floors, steel stairs, concrete sidewalks and adjacent roadwork, windows, doors, hardware, appliances, compactors, lobby and building entry doors, security systems, plumbing, mechanical ventilation, sprinklers, electrical services, wiring and fixtures, and boiler rooms.

Marco Maiorano, P.E.

RESIDENT ENGINEER

Mr. Maiorano is a civil engineer with more than 15 years of experience providing resident engineering and inspection (REI) services and design for highways, roadways, and bridges. He has particular expertise with horizontal and vertical alignment analysis and design, and the development of construction staging and maintenance and protection of traffic (MPT) plans for highway and roadway projects. Mr. Maiorano has coordinated with transportation clients in the New York metropolitan area, including DDC, the NYSTA, the NYSDOT, the PANYNJ, and the NYCDOT.

Project Experience

NYCDDC Grinding, Milling, and Roadway Repaving Program - Senior Construction Inspector

Provided inspection for milling and resurfacing projects as part of a DDC program to rehabilitate deteriorated streets and roadways throughout Manhattan and the Bronx, including Second Avenue in Manhattan. Mr. Maiorano monitored the contractor's compliance with MPT schemes, and health and safety regulations. He also prepared daily reports and pay quantities.

NYSTA/NYSDOT Jackson Avenue Reconstruction - Resident Engineer

Oversaw construction activities during a $2.5 million roadway widening project on Route 9A, Jackson Avenue, and Ravensdale Road in Westchester County, NY. The project was part of an REI contract with a private developer to support the construction of the new Ridge Hill Village in Yonkers in accordance with NYSDOT, the Town of Greenburgh, and the Village of Hastings standards and specifications. Mr. Maiorano managed the day-to-day oversight of inspection services, including supervising inspectors, preparing inspection reports, and developing solutions for problems in the field. The scope of work included various storm drainage work; the installation of a cast-in-place reinforced concrete retaining wall; soldier pile and precast concrete lagging retaining wall; new traffic signal foundations; and signals, milling, and paving in accordance with MPT guidelines set forth by the NYSDOT. The project also involved relocating an 18-inch-diameter sewer main in accordance with the Westchester County Department of Health (WCDOH) guidelines and the installation of permanent steel sheeting retaining wall.

City of Glen Cove Glen Cove Road Extension - Chief Inspector/Resident Engineer

Provided REI services for the extension of Glen Cove Road (Pratt Boulevard) in Glen Cove, NY, a locally administered federal aid project. Mr. Maiorano inspected pile driving and the installation of a precast arch bridge with architectural stone-face finish, reinforced concrete pier cap, and abutment substructure supported on concrete-filled steel pipe piles. He was also responsible for the redesign of the drainage system, as well as the design and inspection of traffic signals and controls. Mr. Maiorano inspected foundations, asphalt paving, drainage, lighting, utility relocation, landscaping, excavation of embankments and retaining walls. He also reviewed the installation of a weir, sheet piling and riprap, landscaping, and MPT.

NYSTA Tappan Zee Bridge I-87 Deck Replacement - Assistant Resident Engineer

Managed installation of new and removal of existing fiber-optic conduits from the west abutment to east abutment for the $150 million replacement of the Tappan Zee Bridge superstructure's inner three roadway lanes 3, 4, and 5, from Nyack Abutment to Bent 178 in Rockland County, NY. The scope of work included removal of the existing bridge deck, movable barriers, conduits, and some of the steel stringers as well as the reconstruction of existing keyway joints and steel diaphragm installation in east deck truss spans. The project also involved

removing and replacing existing deteriorated rivets along the top flange of existing steel floor beams, gusset plates of the lower chord of existing truss and connection gusset plate of existing lateral bracing members in main span. In addition to providing REI services, Mr. Maiorano oversaw installation of fiber-reinforced epoxy conduit for the entire length of the bridge. He also supervised the cleaning, prime coating, and painting of existing steel floor beams, cross bracings and inside face of bottom chords of main truss in the main spans and installation of upgraded necklace lighting and traffic speed signs.

NYSTA/NYSDOT Ridge Hill Village Bridge Replacement and Roadway Reconstruction - Resident Engineer

Provided REI services for the $25 million replacement of the Ridge Hill (Bates) Bridge over the New York State Thruway, widening of the northbound Exit 6A ramp, widening of Tuckahoe Road, and a new off-site ramp to the Sprain Brook Parkway in Yonkers, NY. Mr. Maiorano managed the day-to-day oversight of inspection, including supervising inspectors, preparing inspection reports, and developing solutions for problems in the field. He also solved issues resulting from changes in the field, including drainage, paving, geotechnical, and utility modifications. In addition, Mr. Maiorano made certain that stormwater was managed to comply with the New York State Department of Environmental Conservation regulations. The project is part of an REI contract with a private developer to support the construction of the new Ridge Hill Village in Yonkers in accordance with NYSTA, NYSDOT, and the City of Yonkers standards and specifications. The scope of work included the demolition and removal of the existing Ridge Hill Bridge in accordance with maintenance and protection of traffic guidelines set forth by the NYSTA. The project also involved construction of the replacement bridge, installation of a new culvert, and widening and improvement of Tuckahoe Road.

NYSDOT Reconstruction of Route 9A and Lower Manhattan Streets - Highway Engineer/Design Team Member

Responsible for the construction staging and MPT plans for the $350 million reconstruction of roadways near the World Trade Center (WTC) site in Lower Manhattan. The project scope included rebuilding Route 9A adjacent to the WTC site between West Thames Street and Chambers Street, creating a landscaped promenade, widening sidewalks on the east side of the street, installing pedestrian crossings across Route 9A, and rebuilding the playgrounds between West Thames and Albany Street.

Raymond W. Cholewka, P.E.

PROFESSIONAL REGISTRATIONS
PROFESSIONAL ENGINEER: NEW YORK AND NEW JERSEY

Mr. Cholewka has 45 years of experience in construction management of major transportation and wastewater projects, with special emphasis on bridge construction and rehabilitation projects for the NYSDOT, NYCDOT, and ConnDOT Highways and Bridges.

Project Experience

PANYNJ Bollard Project at Newark-Liberty, John F. Kennedy, and LaGuardia Airports - Resident Engineer

Supervised construction of crash barriers on the Port Authority Bollard Project at three major NYC Airports. The work involved constructability reviews and bid package preparations for 12 separate contracts plus construction management of two individual contracts at LaGuardia Airport (Terminals C & D).

NYCDOT 15th Avenue Bridge over Sea Beach Line - Resident Engineer

Supervised repair of cracked deck and sidewalk on 4 span 15th Avenue Bridge over Sea Beach Line (N Train) for the NYCDOT in Brooklyn, NY. Work included installation of micro silica concrete overlay on milled sidewalks and application of epoxy resin sealer to penetrate and fill cracks in precast post-tensioned piers. Attended safety training for MTA-NYC Transit Track Safety Certification. Worked closely with NYC Transit Inspectors & Flagmen at 18th Ave. & New Utrecht Ave. Subway Stations during General Outages.

New York City Department of Environmental Protection (NYCDEP) New Croton Aqueduct (NCA) Rehabilitation Project, New York - CM Site Safety Officer

Successfully reduced the accident rate by promoting compliance by the CM field inspection staff and the Contractor's work force with their respective Health and Safety Plans (HASP) for this $100 Million unique repair project. Updated the CM HASP and reviewed job hazard analyses for all major work activities. Participated in routine safety audits conducted by BEDC EHS representatives and documented all significant safety and environmental incidents with independent reports that identified root causes and recommended corrective actions.

NYSDOT Interstate 86 Upgrade of Route 17 - Resident Engineer

Supervised 12 inspectors and field office staff providing construction inspection services for the $65 Million Interstate 86 upgrade of Route 17 in Orange County for the NYSDOT (Region 8). This 9 mile stretch of highway from Exit 116 to Exit 121 at Middletown was successfully rehabilitated on time by using Primavera P6 software for schedule control. Sections of roadway were milled, rubblized, and resurfaced, including a 4-mile section with full-depth reconstruction. Three bridges underwent various repairs and upgrades including replacement of concrete deck, back walls, pedestals, and bearings. Also supervised the construction of a new multi-steel girder bridge carrying Route 17 over a future Town of Wallkill connecting road between two shopping centers in Middletown. Environmental considerations mandated the construction of six wetland mitigation areas on project. Work involved coordination with Metro-North Railroad personnel for the rehabilitation of an existing bridge carrying Route 17 over the Port Jervis Commuter RR Line.

NYCDEP Bowery Bay Water Pollution Control Plant - Resident Engineer

Supervised a field staff of 12 inspectors during construction for the upgrade of the NYCDEP Bowery Bay Water Pollution Control Plant in Queens, NY. This $200 million project included

construction of new process air headers for aeration tanks, installation of five new process air blowers, replacement of sluice gates and actuators for the final settling tanks and installation of new influent bar screens. In addition, successfully reconstructed concrete tanks, provided mini-pile foundations for temporary blowers and performed lead paint abatement for the removal of old piping and other hazardous waste material, following OSHA guidelines and procedures.

Connecticut Department of Transportation (ConnDOT) I-95 Rehabilitation - Resident Engineer

Coordinated and managed 18 inspectors and office staff involved in the supervision of construction for 7 replacement bridges along a one-mile-long section of Interstate I-95 in Bridgeport, Connecticut. Work included temporary sheet piling with tie-back anchor installations, reinforced-earth retaining walls, 8' diameter drilled shaft caissons, post-tensioned pier cap beams as well as curved steel girder erection, and placement of concrete for new abutments, wingwalls and bridge decks. This $122 million, six-year ConnDOT project required management of hazardous waste materials and other environmental concerns encountered along this heavily traveled transportation corridor. Work involved extensive coordination with Metro-North Railroad flagmen and power division personnel for four track outages necessary during existing bridge removal and new steel girder erection over catenary power cables of the New Haven Commuter RR line.

New York State Dept. of Transportation (NYSDOT) Kosciuszko Bridge - Resident Engineer

Performed as Resident Engineer in charge of the interim rehabilitation of this mile-long, 103-span viaduct carrying the Brooklyn-Queens Expressway (I-278) over Newtown Creek in New York City. This $18 million NYSDOT project involved the placement of a thin polymer concrete overlay on the roadway as well as extensive repairs of the steel truss spans and supporting concrete piers.

Carl Ortmann, P.E.

RESIDENT ENGINEER - STRUCTURAL

Mr. Ortmann has more than 25 years of experience in the successful completion of major bridge and highway projects, building foundations, power plant and transit structures. He has provided on-site administrative and technical supervision on heavy construction projects, directed multi-trade craft work forces and determined methods of construction, manpower levels, material quantities, equipment, temporary facilities and work schedules. In addition, he supervised all construction activities, materials and equipment received for compliance with company directives, contract drawings, specifications, approved submittals and standards of accuracy. Mr. Ortmann has been in charge of monitoring the quality of work completed and provides quality assurance as required, coordinated submittals to owners, overseen work progress and schedule compliance to ensure a completed project within budget and schedule, resolved field and drawing problems, and reviewed and implemented change orders. He coordinated scheduling of subcontractors and suppliers, reviewed project safety manual and monitored compliance with safety procedures.

PANYNJ George Washington Bridge Lower Level - Team leader

Performed priority, safety and routine verification inspection of the lower level including the lower level roadway and framing, the bottom chord of the stiffening truss, the New Jersey abutment and New York anchorage, and the travelers including their support framing and connections. The purpose of this inspection was to determine the overall condition of the lower level structure and to identify structural and non-structural deficiencies.

PANYNJ Center Avenue Bridge over the Upper and Lower Approaches to the George Washington Bridge - Team leader

Performed inspection and verification of the existing condition of the bridge elements including the roadway, superstructure, substructure and appurtenances to determine the rehabilitation or replacement design options.

NYSDOT I-278 Staten Island Expressway Improvements - Senior Project Manager

Provided on-site project management for the $74.8 million I-278 Staten Island Expressway Improvement Project Contract D261292 including 2.78 Km of asphalt and concrete highway reconstruction including the demolition and widening of three bridges with precast concrete deck units and the construction of a new on-ramp using precast concrete deck units. Maintenance of site storm water run-off and implementing compliance with the environmental protection requirements for Brady's Pond. Installation of new drainage systems, new roadway lighting and ITS installations. Maintenance and protection of traffic included 4 stages of construction.

PANYNJ World Trade Center, Tower 1 - Project Manager

Served as a Project Manager for the $40 million construction of the 120,000-sf foundation for Tower 1 including rock excavation, support of excavation, drilling and grouting of rock anchors, placement of reinforcing steel and concrete for the core, building perimeter footings, slab on grade. Coordination with the PATH and Port Authority Resident Engineer's Office personnel.

NYCT Reconstruction of West 72nd Street Station - Project Manager
Served as a Project Manager for the $35 million completion of the renovation and restoration of the existing landmark station house, construction of a new station building including installation of elevators, lengthening of both existing platforms, complete electrical upgrade including new station lighting, floor and wall finishes, and expansion of Verdi Park pedestrian plaza. Coordination of over 40 subcontractors and suppliers.

New York Post Port Morris Printing Facility - Project Manager
Served as a Project Manager for the $22 million demolition and replacement of reinforced concrete 2nd floor of printing facility in Bronx, NY inserting area in stages while newspaper production maintained. Erection of structural steel to reinforce existing 80-foot-long floor trusses.

Astoria Energy Power Plant Phase 1 - Project Manager
Served as a Project Manager for the $9 million installation of structural steel support structure, unloading from barges and erection of 12 modular air-cooled condensers weighing 280 tons each, erection of steam duct and riser sections weighing up to 60 tons, and miscellaneous mechanical equipment for this plant in Queens, NY. Reviewed and submittal of crane placement and erection plans.

Newark International Airport Parking Structure - Project Superintendent
Served as a Project Superintendant for the $85 million construction of a six-level parking structure including erection of steel columns and support beams, erection of prestressed concrete double tee deck units, cast in place double threaded reinforced concrete helix access ramps. Installation of elevator shafts and elevators, site work, electrical work, erection of a prestressed concrete 3-span bridge and approach roadways, parking lot, entry and exit plazas and canopies in Parking Lot E. Coordination of subcontractors and suppliers.

TBTA Randall's Island Junction Structure and Bronx Truss over the Bronx Kill - Assistant Resident Engineer
Served as Assistant RE for this $145 million project including the Bronx Truss that has a main span of 383 feet and a total length of 1,217 feet. Project work included demolition of the existing substructure and superstructure on the Approach and replacement with new cast in place concrete substructure with precast concrete deck panels. The Bronx Truss reinforced concrete deck was removed and replaced with steel orthotropic deck panels on the Bronx Truss. Inverset deck panels were placed on the Queens-Bronx Mainline, and curved welded plate girders with composite reinforced concrete deck for the Junction Structure ramps.

Scott Plant, P.E.

RESIDENT ENGINEER - STRUCTURAL

Mr. Plant has more than 25 years of experience providing resident engineering services for many of the local transportation agencies in the New York and New Jersey marketplace, including: NJ Turnpike Authority, NYSDOT, NYCDOT, Metro-North Railroad and MTA-Bridges and Tunnels.

Manhattan West Platform Brookfield Properties - Project Manager

This project involves the construction of a segmental girder platform over LIRR track to the Hudson Yards and Amtrak's Northeast Corridor. The platform is constructed with 16 segmental girders composed of 33 precast segments which are post-tensioned and grouted together to form one girder. The each girder is placed adjacent to each other on cap beam bearings to create the working platform for high-rise building construction. As Project Manager, Mr. Plant's responsibilities include management and supervision of independent 3rd party post-tensioning and grouting inspection, and secondary inspection of bearing installation, anchorage elastomeric coating, temporary post-tensioning and material handling.

14th Street Viaduct Construction Management - Resident Engineer

The existing 14th street viaduct is a 30 span, 1459 feet long bridge running east to west from Willow Avenue to Manhattan Avenue in the city of Hoboken, Hudson County, NJ. The viaduct crosses over several local streets such as Madison Street, Jefferson Street, Adams Street, Grand Street, Clinton Street and also NJ TRANSIT rail tracks towards the west end under Span 28. The existing bridge superstructure comprises of multiple steel girders in most of the spans except two truss spans - one over Adams Street and the other over the NJ TRANSIT tracks. The substructure units are steel bents supported on piles. The existing bridge structure has been showing signs of deterioration and has required a few emergency repairs. This contract is for providing construction management service for this project. As Resident Engineer, Mr. Plant's duties included being the Owner's direct on-site representative to the contractor, direct supervision of the Construction Project's Field Inspection/Engineering staff, performing quality assurance oversight of major items of work in progress and ensuring that the project is constructed in accordance with the plans and specifications for the owner.

Specific items overseen/inspected by Mr. Plant included:

- MPT on local roads
- Construction of pedestrian precast concrete tunnel and retaining walls
- Installation of lighting conduits and wiring
- Rock excavation for new abutment construction
- Substructure construction of reinforced concrete footings, pier columns and caps

Rehabilitation of Dodd Street and Clark Street Bridges - Resident Engineer
This project involved design engineering and construction inspection services for the Replacement of the Center Street Bridge over Third River in the Township of Nutley, and the Rehabilitation of Dodd Street Bridge over Second River in East Orange and the Rehabilitation of Clark Street Bridge over Toney's Brook in Glen Ridge. As Resident Engineer, Mr. Plant's duties included being the Owner's direct on-site representative to the contractor, direct supervision of the Construction Project's Field Inspection / Engineering staff, performing quality assurance oversight of major items of work in progress and ensuring that the project is constructed in accordance with the plans and specifications for the owner. Specific items overseen/inspected by Mr. Plant included:

- MPT on local roads
- Complete demolition of a temporary sidewalk bridge over Second River
- Superstructure construction of elastomeric bearings, precast concrete deck beams and barrier parapets
- Reconstruction of asphalt driveway aprons

NJTA New Jersey Turnpike Widening Program Contract 201 - Resident Engineer
This project included the construction of one mile of three northbound and southbound outer travel lanes, seven MSE walls, three steel-framed bridges, narrowing two existing bridges, VMS and static sign structures, tunnel and under-bridge lighting. As Resident Engineer, Mr. Plant was responsible for a constructability review program wide, construction inspection and material testing supervision, field issue resolution, utility and agency coordination, change order/claim resolution, and payment processing.

PANYNJ World Trade Center Vehicle Security Center - Estimator
This project included all estimation of work involved with the proposed construction of the Vehicle Security Center. As Estimator, Mr. Plant's responsibilities included performing quantity take-offs and developing costs for all building trade work.

Stephanie Dreher

ASSISTANT RESIDENT ENGINEER

Ms. Dreher is a project officer with experience providing oversight and assistance in managing preconstruction and construction activities for commercial, residential, industrial, and environmental projects, with a focus on understanding and resolving construction and drainage/water quality issues. She has experience overseeing contracts, assisting in auditing construction manager and contractor payments, checking costs, preparing change orders, performing concrete tests, and monitoring field work.

BACHELOR OF SCIENCE, CIVIL ENGINEERING; MANHATTAN COLLEGE

Project Experience

PANYNJ One World Trade Center - Project Engineer

Providing program and construction management (CM) services for the design and construction of a new high-rise office building incorporating approximately 3.5 million gross sf of new construction, above- and below-grade, in a Class A office building complex at the World Trade Center site in Lower Manhattan. The project is a combination of modern, innovative architecture, sustainable design, and safety. It is also the most environmentally sustainable project of its size in the world, with design elements aimed at meeting requirements of LEED® certification to the Gold level. Ms. Dreher is reviewing the scope and pricing of post-award contract changes from contractors. She is also reviewing payment requisitions submitted by the contractors and walking the site to assess progress of contractors' work, including rough carpentry, resin matrix flooring, vinyl composition tile flooring, hollow metal doors, and hardware.

NYCHA Comprehensive Modernization of Walt Whitman and Raymond V. Ingersoll Houses - Project Engineer

Assisted the project manager in preconstruction and construction activities for Phase 2B and Phase 3A of the $160 million major renovation of the Walt Whitman and Raymond V. Ingersoll Houses in Brooklyn, NY. The NYCHA project included renovations to 602 vacant and occupied apartments, new spray foam roofs on 35 building, and the rehabilitation of 32 elevators in eight buildings. Ms. Dreher reviewed subcontractor prequalification packages, coordinated with contractors, reviewed project plans and specifications, and compiled and reviewed reports. She also compiled and reviewed change order packages, attended progress meetings, and walked the site to view the contractors' progress in the field. Ms. Dreher was the construction management point person for the review of asbestos abatement work plans to be sent to the client for approval. In addition, she reviewed and logged submittals from contractors.

NYCHA CM/Build Requirements Contract - Project Engineer

Assisted in managing preconstruction and construction activities for several projects as part of a construction management (CM)/build contract with the New York City Housing Authority (NYCHA). Ms. Dreher coordinated with contractors, reviewed subcontractor prequalification packages, reviewed project plans and specifications, and compiled and reviewed monthly and weekly reports. She also assisted the project managers in reviewing asbestos abatement work plans before they were sent to the client for approval. The contract consisted of renovation projects in the Bronx, NY, including exterior masonry repair and related work at the Middletown Plaza apartments for seniors; repairing exterior brickwork along with parapet and roof replacement at the Highbridge Gardens apartments; and the repair of precast, precast/prestressed, and cast-in-place concrete members at the substructure of the Morrisania Air

Rights, an apartment complex consisting of three high-rise buildings that tower over the Metro-North Railroad right-of-way. The contract also included roof replacement and related work at Unity Turnkey and Unity Plaza in Brooklyn, NY.

NYCHA IDIQ Construction Management Kingsborough Houses - Project Engineer
Assisting the project manager with coordination and oversight of construction activities for the $34 million renovation to provide major improvements for the 17-building Kingsborough Houses and Kingsborough Extension in Brooklyn, NY, under an indefinite delivery/indefinite quantity (IDIQ) task-order agreement with NYCHA. Improvements include exterior asbestos abatement, complete roof replacements for all buildings, replacement of the water tower at Kingsborough Extension, demolition of brick parapets to be replaced with metal railings, and exterior brick repair. Ms. Dreher is performing as the construction management point person for the review of asbestos abatement work plans to be sent to the client for approval. In addition, she is reviewing and logging submittals from contractors, compiling and reviewing reports and change orders, and coordinating with the contractor and subcontractors.

NYCHA Johnson Houses Phase IIA and Phase IIB Renovation CM - Project Engineer
Provided project management assistance during preconstruction for the construction management (CM) of the $60 million second phase of renovations to the James Weldon Johnson Houses in Manhattan. Ms. Dreher helped review project plans and specifications and assisted with the compilation and review of monthly and weekly reports. She reviewed subcontractor prequalification packages and reached out to potential bidders for the New York City Housing Authority (NYCHA) project. Ms. Dreher also assisted the project manager in coordinating with contractors after they were awarded contracts and reviewed asbestos abatement work plans before they were sent for approval by the client. The project included a roof replacement, elevator rehabilitation, and renovations to apartments.

Michael Roncevic

ASSISTANT RESIDENT ENGINEER

Mr. Roncevic is a project engineer adept at providing construction management services for educational facilities and residential renovation projects. He is experienced in supervising field work and processing submittals and change orders. Mr. Roncevic also has extensive knowledge of structural and reliability analyses, reinforced concrete, geotechnical engineering, and fluid mechanics.

MTA Capital Construction/LIRR East Side Access - Project Engineer

Performed design calculations for the East Side Access project, which will establish direct LIRR) service to Grand Central Terminal in Manhattan. The design work involved reinforced concrete beams, slabs, and ribs. Mr. Roncevic also compiled pre-blasting inspection reports and analyzed post-blast data.

Amtrak Fire Standpipe Systems Modification CM Phase III & Phase IV - Project Engineer/Inspector

Served as project engineer/inspector for the $24 million modification that will add deluge valve and air monitoring systems, along with several mechanical equipment rooms (MERs), to Amtrak's fire standpipe systems in the East and North River tunnels in Northern New Jersey and New York City. The scope of work will incorporate air-vacuum isolation valves with fail-safe actuators for the rapid-fill deluge and leak detection systems, as well as install air compressors to monitor system integrity. In another task, each segment of the fire standpipe system will have a dedicated MER added to serve as a control room. The construction also includes the installation of associated piping, electrical power, conduit runs, and system controls. Mr. Roncevic's primary responsibilities included reviewing Amtrak force account (labor) invoices and developing cost estimates and comparative cost analyses for contractor change order requests. He also acted as an on-site safety inspector and prepared daily field reports

NYCHA Johnson Houses Phase I Renovation CM - Project Engineer

Provided supervision of roofing, tiling, and plumbing renovation as part of the construction management (CM) of the $36.5 million Phase I renovation of the James Weldon Johnson Houses in Manhattan. The scope of work for this New York City Housing Authority (NYCHA) project comprised complete construction oversight for improvements to the four buildings including exterior masonry repairs, roof replacement, manhole bunker replacements and repavement, renovation of 488 kitchens, and 488 bathroom upgrades. Mr. Roncevic also oversaw check requisitions and payroll.

NYU Langone Medical Center Hurricane Sandy Recovery - Assistant Project Manager

Assisting the management of the $20 million rehabilitation of New York University (NYU)'s Medical Science Building, which was flooded and lost power following the unprecedented 13-foot East River storm surge caused by Hurricane Sandy. A temporary power system has been installed until a new permanent power generation facility is constructed. In order to continue sensitive scientific and medical research, university staff have been temporarily moved into other buildings within the NYU Langone Medical Center campus, until construction work is completed. Mr. Roncevic is supervising project field work, as well as overseeing document control. He's also acting as an on-site safety inspector and preparing weekly inspection reports.

Avenues World School Holdings, LLC Avenues: The World School - Project Engineer
Managed daily operations of field work activities and coordinated subcontractors for the $52 million adaptive reuse of a 1928 warehouse into a private school, complete with elevators, cafeteria, libraries, gymnasium, exercise room, playground, art and science labs, and Wi-Fi access. In addition, new plumbing, fire protection, and HVAC systems were installed. Mr. Roncevic reviewed payrolls, work tickets, change orders, and punch lists.

Westchester Community College Gateway Center CM - Field Engineer/Inspector
Processed submittals and stood in for the supervisor as part of construction management (CM) services for this 3-story, 70,000-sf facility in Valhalla, NY, that houses state-of-the-art classrooms, seminar rooms, a lecture hall, computer labs, and language labs. The $40 million project was completed on schedule and within budget, and is LEED® certified to the Gold level.

Manhattan College Parking Lot Surveys - Surveyor
Conducted civil surveys of the Broadway and Manhattan College parking lots in Manhattan with the use of a theodolite, rod and level, and measuring tape.

Laura Tornatore

ASSISTANT RESIDENT ENGINEER

Ms. Tornatore is a project coordinator with experience performing civil engineering and cost estimating duties for structural projects in the New York City metropolitan area. She currently provides engineering services for the One World Trade Center (WTC) and National September 11 Memorial & Museum in Lower Manhattan.

PANYNJ One World Trade Center - Project Coordinator

Performed construction management services for the $2.8 billion One WTC, a major project for PANYNJ in the redevelopment of the 16-acre WTC site in Lower Manhattan. At 1,776 feet tall, One WTC will be the centerpiece of the new complex and will encompass more than 3.6 million gross sf, including office space, restaurants, an observation deck, and broadcast facilities. The building will also house below-grade shopping and access to the PATH transit system and the World Financial Center. Ms. Tornatore attended bid meetings and prepared monthly bid packages. She also gathered information from weekly field visits and monthly requisition walk-throughs and negotiated the cost of change orders with contractors. In addition, Ms. Tornatore performed detailed takeoffs of drawings for estimating purposes, prepared requests for PANYNJ board presentations, and coordinated document control.

PANYNJ National September 11 Memorial & Museum - Project Officer

Providing construction management services for National September 11th Memorial & Museum on the WTC site in Lower Manhattan. Ms. Tornatore collected information from weekly field visits and monthly requisition walk-throughs, negotiated the cost of change orders with contractors, attended bid meetings, and prepared monthly bid packages. She also performed detailed takeoffs of drawings for estimating purposes, prepared requests for PANYNJ board presentations, and coordinated document control.

New Jersey Sports and Exposition Authority Meadowlands Xanadu - Project Coordinator

Completed numerous reports for project managers as part of the development of Meadowlands Xanadu, a 5-story retail and entertainment complex undergoing construction in the Meadowlands Sports Complex in East Rutherford, NJ. When completed, the Meadowlands will be the largest combined entertainment, sports, and retail complex in the United States, with 4.5 million sf of entertainment, sports, retail, office, and hotel space. Ms. Tornatore prepared several reports including quality control, ATPs, and invoices. She also responded to RFIs.

Charles Young
SENIOR INSPECTOR

FIRM
STV CONSTRUCTION, INC.

YEARS OF EXPERIENCE
35

EDUCATION
BACHELOR OF CIVIL ENGINEERING; TSINGHUA UNIVERSITY, BEIJING

Mr. Young has more than 35 years of experience as a superintendent and construction manager. He has performed planning and scheduling, coordinated with all trades, and completed construction management for quality control, site safety control, cost management, and payment control for the public and private sectors. Mr. Young had worked with the NYCSCA as a project manager and construction superintendent overseeing a variety of the agency's Mentor Program/Emergency Contract projects.

Project Experience

MSDC/PANYNJ Moynihan Station Phase I CM - Quality/Safety Inspector

Directly supervising comprehensive construction activities for the estimated $200 million development of a new train hall in the James Farley Post Office Building in Midtown Manhattan, with connections to New York Pennsylvania Station and Amtrak, NJ TRANSIT, Long Island Rail Road (LIRR), and New York City Transit service. This major transportation hub is being built in two phases by the Moynihan Station Development Corporation (MSDC) in partnership with the Port Authority of New York and New Jersey (PANYNJ). The firm is managing the construction of entrances to Penn Station from the Farley Building and new vertical access points to the platforms, thereby improving passenger access to the west side of platforms for all railroads. The firm is also supervising improvements to pedestrian concourses and platform ventilation, the creation of a waiting room for LIRR passengers. Included is construction of three fan rooms and an electrical substation and generator rooms in the moat area of the James Farley Office Building along 33rd Street. Mr. Young is overseeing daily construction activities with all trades on-site and monitoring the contractor's work plan, schedule, testing, quality of work, and safety procedures. Challenges he is addressing include coordinating complex project staging with contractor operations, Amtrak, and LIRR field support staff.

Amtrak Fire Standpipe Systems Modification CM Phase III & Phase IV - Quality/Safety Inspector and Project Engineer

Providing project engineering services between the client and the construction contractor on the estimated $24 million modification to Amtrak's fire standpipe systems in the East and North River tunnels in Northern New Jersey and New York City. Mr. Young is working with the construction management (CM) team to add deluge valve and air monitoring systems as well as 10 mechanical equipment rooms to the 16-mile system. He is coordinating with contractor operations, Amtrak, and Long Island Rail Road field support staff. In addition, Mr. Young is reviewing the contractor's submittals for equipment and materials used and verifying the compliance with Buy American requirements. He is also assisting in the review of contractor's change order requests, verification of the quantity, labor rate, and dollar amount, and performing independent estimates CM change orders. Mr. Young also directly supervises daily construction activities with all trades on site and monitors the contractor's work plans, schedule, testing, quality of work, and hazard assessment and safety procedures.

NYCSCA Mentor Program CM - Project Officer

Provided oversight of school capital improvement projects from inception to project closeout as part of the NYCSCA Mentor Program. The mission of the program was to foster growth and increase the participation of minority and women-owned business enterprise (MBE/WBE) contractors and locally based enterprise (LBE) firms in New York City's construction community,

by providing hands-on training during various school construction projects. Projects included interior room renovations and conversions, as well as exterior reconstructions and rehabilitations of school buildings and facilities for school projects throughout New York City. Mr. Young produced and maintained construction documents including scope of work and change orders. He guided and led mentor contractors through all project phases in accordance with contract documents and within budget restraints and deadlines. Mr. Young also coordinated with clients, project owners, and school staff, and oversaw safety and quality issues through the entire construction process.

NYCSCA Emergency On-Call Construction Management Services - Project Manager
Oversaw comprehensive construction management services on an emergency on-call basis for the NYCSCA for school projects in all five boroughs of New York City. Projects included work varying from small interior room conversions and renovations to large reconstructions of school buildings. Mr. Young completed all required work according to deadlines imposed by school occupation. He also provided diligent coordination with school stakeholders and made sure of safety and quality throughout the entire construction process.

NYCSCA P.S./I.S. 189 Renovations and Upgrades - Project Officer
Mentored and managed the general contractor, subcontractors, and vendors for all required paperwork, submittals, project issues, project meetings, payment requisitions, construction schedule, and project closeout for the New York City School Construction Authority (NYCSCA) at this elementary/intermediate school in the Bronx, NY. Mr. Young directly supervised daily construction activities on site for an electrical upgrade, retaining wall repairs, ice maker and plumbing drainage installation, ductwork and fire damper installation, temperature control systems, sub-slab depressurization system fan installation, and roof patching work. He coordinated with the NYCSCA senior project officer, architects, engineers, general contractors, subcontractors, and all trades from inception to construction to complete the project on schedule.

NYCSCA P.S. 153 Demo Science Lab - Project Officer
Directly managed the general contractor and subcontractors for all required paperwork, submittals, project issues, project meetings, payment requisitions, construction schedule, and project closeout for a new science lab at this elementary school in the Bronx, NY. Mr. Young supervised daily construction activities for asbestos abatement, new flooring, new lab furniture and equipment, electrical upgrade, and installation of plumbing piping and sinks. He provided coordination from inception to completion with the New York City School Construction Authority (NYCSCA), architects, engineers, general contractors, subcontractors, and all trades.

Jamal Ismail

SENIOR INSPECTOR

FIRM
STV CONSTRUCTION, INC.

YEARS OF EXPERIENCE
29

EDUCATION
BACHELOR OF SCIENCE, CIVIL ENGINEERING; WEST VIRGINIA UNIVERSITY

Mr. Ismail has more than 29 years of experience providing a range of professional services for a wide variety of recreational, commercial, and transportation projects. His expertise includes performing oversight, management, and inspection services for significant roadway and bridge improvements for clients including the New York State Thruway Authority, the NYSDOT, the NJDOT, the NJTA, the PANYNJ, and Amtrak. Mr. Ismail has proven skills in managing high-visibility construction projects and in maintaining complete project and documentation control from the planning and permitting stages though project implementation, and is experienced in claim resolution and project close-out procedures for final acceptance.

Project Experience

Amtrak Fire Standpipe Systems Modification CM Phase III & Phase IV - Assistant Project Manager/ Construction Manager/Project Control Manager

Performing lead control requirements in estimating, contract administration and mitigation, cost control, scheduling, and risk and budget management for a $24 million modification that will add deluge valve and air monitoring systems, along with several mechanical equipment rooms (MERs), to fire standpipe systems in the East and North River tunnels in Northern New Jersey and New York City. Mr. Ismail is managing and maintaining contract requirements, owner expectation, and site-specific scope implementation throughout the active Amtrak tunnel system. Mr. Ismail prepares weekly progress charts and outages requests, as well as monthly reports for construction management (CM) requirements for the modification. He is maintaining and preparing all claim/change order analyses and recommendations to Amtrak and the LIRR for more than 130 potential changes. As a result of being on the committee for change orders, Mr. Ismail has helped solidify the $24 million project's requirements and intent.

NJTA Garden State Parkway Interchange 123 Improvements - Senior Inspector

Oversaw the inspection of $7.1 million in improvements to the Garden State Parkway connector to US 9 in Sayreville, NJ. The work included adding a lane to two mainline bridges; new ramps, lighting, drainage, and overhead sign structures; utility relocations; and asphalt pavement. Mr. Ismail coordinated extensively with utility owners, the NJTA, the NJDOT, NJ TRANSIT, and Conrail. Mr. Ismail also filled in as Acting Resident Engineer for part of the project

Amtrak East and North River Tunnel Fire Standpipe Replacement - Resident Engineer/Safety Inspector

Provided on-site engineering and safety oversight for the $30 million replacement of the fire standpipe system in the North River and East River tunnels, shaft throats, and the New York Pennsylvania Station sub-basement in Manhattan. Mr. Ismail implemented quality assurance and safety procedures and coordinated track outages with Amtrak operations and other host rail operations for contractor access to perform the work.

NJDOT Main Street and Union Street Intersection Improvements - Assistant Resident Engineer

Guided inspection of engineering services for improvements in Lodi Borough, Bergen County, NJ, that included widening of a roadway over a box culvert; relocation of lighting, drainage and signals; demolition; construction of a retaining wall; asphalt pavement; and daily maintenance and protection of traffic configuration.

NJTA Vince Lombardi Service Area Truck Parking Improvements - Senior Inspector
Oversaw quality assurance and quality control (QA/QC) for the construction of a new 5,700-sf truck driver rest facility in Ridgefield Park, Bergen County, NJ; for the New Jersey Turnpike Authority (NJTA). The project included demolition of an existing building, including asbestos abatement; construction of a new building and expanded truck parking lot, including earth excavation; drainage; new high-mast lighting; milling; and pavement of new and existing lots. Mr. Ismail tracked QA/QC, identified issues, and provided written reports to the client.

NJDOT Beesley Point Bridge Structural Evaluation - Assistant Team Leader
Oversaw a safety evaluation of a 4,000-foot-long bridge that formerly carried US 9 over the Great Egg Harbor River, connecting Upper Township in Cape May County to Somers Point in Atlantic County, NJ, for the NJDOT. Mr. Ismail employed BAR7 bridge analysis and rating software to perform the evaluation and compiled a summary of the results per NJDOT specifications.

Morris County DPW Mount Vernon Avenue Bridge over the Passaic River Replacement - Assistant Resident Engineer
Directed the $2.9 million replacement of a roadway bridge between the City of Summit and the Township of Chatham, NJ, by the Morris County Department of Public Works (DPW). Mr. Ismail monitored the removal of the existing steel structure and construction of a wider, 103-foot-long, single-span, pretensioned, prestressed concrete bridge.

NYCHA IDIQ Construction Management Hurricane Sandy Recovery - Estimator
Reviewed project worksheets and estimates provided by the Federal Emergency Management Agency (FEMA) and the NYCHA to capture damages from Hurricane Sandy at public housing properties citywide, under an indefinite delivery/indefinite quantity (IDIQ) contract. Mr. Ismail initiated field visits to perform site assessments with all parties involved. He provided supporting documents to FEMA, negotiated revised cost estimates, and provided comments and feedback. Mr. Ismail also prepared and submitted qualified additional costs to NYCHA for reimbursement through the Hazard Mitigation Plan per each development, as well as cost estimates for repairs within FEMA's guidelines to prevent or minimize future flood damages.

Ricardo DePaoli

SENIOR INSPECTOR

FIRM
STV CONSTRUCTION, INC.

YEARS OF EXPERIENCE
18

EDUCATION
BACHELOR OF SCIENCE, CONSTRUCTION MANAGEMENT ENGINEERING TECHNOLOGY; STATE UNIVERSITY OF NEW YORK

Mr. DePaoli has more than 15 years of experience managing contractors and subcontractors and inspecting construction work for compliance with specifications, contract documents, and safety requirements. He has experience estimating/processing change orders, performing scheduling, ordering materials, reviewing submittal logs, and submitting requests for information (RFIs). Mr. DePaoli has worked on numerous projects for the TBTA and various task-order contracts with the NYCSCA and NYCHA.

Project Experience

NYCDDC New Police Academy CM - Superintendent

Providing construction supervision for the fire alarm system installation at the academic building on the 33-acre campus of the new police academy in the College Point section of Queens, NY, a joint venture project for the NYCDDC. The design-bid-build project is being built in two phases. The $750 million Phase I comprises a new academic building, a physical training facility, and a central utility plant. Mr. DePaoli is also supervising the construction of mechanical bulkheads on the academic building. The LEED®-registered project is seeking certification to the Silver level.

NYCSCA Emergency On-Call Construction Management Services - Superintendent

Oversaw renovations and repairs performed by contractors and subcontractors on an emergency basis for schools in all five boroughs of New York City. Work under this contract included small interior room conversions and renovations; computer classroom upgrades; and electrical plumbing, flooring, sidewalk bridge, and brick pointing replacement. STV was responsible for quickly negotiating and mobilizing trades to make sure that continuous work was performed when facilities were available. Mr. DePaoli was responsible for safety compliance, contract and specification conformance by contractors and subcontractors, scheduling, attending job meetings, and record-keeping. All projects were completed on time and within budget, without injury or incident.

NYCHA Hurricane Sandy CIP Ocean Bay-Bayside - Superintendent

Contributed to a fast-track, multidisciplinary site assessment report and developed plans for installing new mechanical equipment at the Ocean Bay-Bayside apartments in Queens, NY, as part of an ongoing capital improvement program (CIP) for New York City Housing Authority (NYCHA) properties damaged by Hurricane Sandy. STV developed due-diligence options, schematic designs for the site, floor plans, building cross sections, one-line riser diagrams, and mechanical and electrical schedules. The plans call for raising the equipment above Hurricane Sandy flood levels, thereby making it eligible for Federal Emergency Management Agency (FEMA) funding.

TBTA Randall's Island Alternative Processing Center Renovation Rooftop HVAC Equipment Replacement Phase I - Inspector/Superintendent

Oversaw demolition and removal of old rooftop HVAC equipment and installation of two new 6-ton exterior heat exchangers with 10 interior air handlers at the TBTA Alternate Processing Center in Randall's Island, NY. The project also included electrical and mechanical upgrades and interior finishes. Mr. DePaoli's responsibilities included safety compliance, contract and specification conformance by contractors and subcontractors, estimating, and processing change orders.

TBTA Randall's Island East Ramp Garage - Inspector/Superintendent
Supervised the installation of four recessed vehicle lifts and three new exhaust reels at this Randall's Island, NY, garage facility. The project also included electrical and plumbing upgrades. Mr. DePaoli was responsible for safety compliance, contract and specification conformance by contractors and subcontractors, and participating in job meetings.

TBTA Randall's Island Water Main Installation - Inspector/Superintendent
Supervised the installation of 1,200 feet of 12-inch-diameter water main, including valves, that will service TBTA Building 104 in Randall's Island, NY. The project included trenching, shoring, installation, and testing of the new water main. Mr. DePaoli was responsible for coordinating safety compliance, contract and specification conformance by contractors and subcontractors, estimating, and processing change orders.

ESDC Atlantic Yards Relocation and Owner's Representative Services for Barclays Center Arena - Superintendent
Monitored progress to maintain schedule compliance by general contractors and subcontractors for the $4.9 billion Empire State Development Corporation (ESDC) development in Brooklyn, NY, featuring 17 new buildings — including the 670,000-sf Barclays Center Arena — for residential, office, retail, community facilities, parking, and possibly hotel uses.

NYC Rapid Repair Program for Hurricane Sandy Damage - Superintendent
Supervised the installation of boilers and electrical systems in residential homes in the Far Rockaways area of Queens, NY, which suffered extensive damage from Hurricane Sandy. During a 4-month period, STV assessed and oversaw emergency repairs, including permanent or temporary restoration of heat, power, and hot water, as well as limited repairs to protect homes from further significant damage. The Rapid Repairs program was offered by the City of New York, and has aided more than 1,000 families.

NYCHA Unity Plaza Turnkey - Inspector/Superintendent
Responsible for safety compliance and contract and specification conformance by contractors and subcontractors for $2 million in exterior repairs to the Unity Plaza Turnkey complex in Brooklyn, NY. The scope of the project included abatement of asbestos roofing material and lead paint, replacement of roofing, and masonry work including brick repair and re-pointing of mortar joints at bulkheads at the three 6-story housing units, which are occupied by approximately 475 tenants.

NYCDCAS One Center Street Building Repairs - Superintendent
Provided project management services, including field supervision, trade coordination, and daily contract administration, for the conversion of 9,500 sf of space into a state-of-the-art conference and training center at the landmarked Manhattan Municipal Building. Mr. DePaoli also oversaw major renovations, including the fire alarm, HVAC, partitions, electrical systems, and flooring, following damage from Hurricane Sandy.

Zaher Saliby

SENIOR INSPECTOR

Mr. Saliby is a senior construction inspector with more than 25 years of experience providing inspection of civil and electrical construction for various roadway projects in the New York metropolitan area. He is skilled in performing inspections of power supply and distribution systems, structural steel and concrete, steel bolting and welding, temporary shoring structures, and safety programs. Mr. Saliby is certified and trained by the American Concrete Institute, OSHA, and International Codes Council. He is also adept at performing soils inspection and testing.

Project Experience

NYCDDC WTC Campus Security Plan REI - Senior Inspector

Inspecting water and sewer installations for a $28 million contract with the NYCDDC to provide resident engineering and inspection (REI) services for infrastructure improvements around multiple security centers at the new 16-acre World Trade Center (WTC) campus in Lower Manhattan. The firm is inspecting roadway and streetscape improvements during preconstruction, construction, and post-construction. Mr. Zaher is inspecting excavation work around the No. 1 line subway station and the PATH station for installation of an upgraded water main and sewer system. He is performing inspections for the installation of the main catch basin, water and sewer mains, and sewer connections.

NYSDOT Route 9A Construction Management - Electrical Inspector

Provided a quality control review of a 200-foot-long, temporary pedestrian bridge in Lower Manhattan as part of a project to restore Route 9A (West Street), a major artery that was damaged by the September 11, 2001, terrorist attacks. The $10.5 million Liberty Street Bypass Bridge passes over West Street and is serving as a temporary bypass to allow construction of the Vehicle Security Center at the 16-acre World Trade Center site. Mr. Saliby was responsible for all electrical components of the L-shaped bridge, including identifying and interfacing with available power sources, new elevator construction and controls, and full lighting of the interior space of the covered bridge. He inspected the electrical schematic design, wire specifications, mechanical room, elevator specifications, conduits, and electrical panels. A challenging aspect of this project was making sure the electrical load schedule was calculated properly. Mr. Saliby confirmed that calculations were correct and that all wiring was installed according to National Electric Code standards.

NYSTA Tappan Zee Bridge Redecking Phase II - Senior Construction Inspector

Performed a quality control review of Phase II of the $148.8 million concrete deck replacement of this 3-mile-long bridge that carries the New York State Thruway across the Hudson River between Rockland and Westchester counties, for the New York State Thruway Authority (NYSTA). The bridge, which opened in 1955, carries about 140,000 vehicles every day, with volumes as high as 170,000 vehicles daily. Phase II replaces approximately 28 percent of the bridge's total concrete deck area, and is part of an ongoing $2.1 billion highway and bridge capital improvement program focused on rebuilding and upgrading the Thruway's infrastructure. Mr. Saliby inspected the steel structural retrofits, including drilling holes, bolt torque welding, and magnetic particle tests. He monitored the demolition and replacement of the deck panels, and checked tolerances for final geometry. Mr. Saliby inspected the installation of fiber communications cable, conduit, and special junction boxes. He also monitored the painting of the steel structure, asphalt milling and paving, and application of pavement delineation.

NYSDOT Korean War Veterans Parkway Overpass - Construction Inspector
Performed construction inspection services for a new $7.5 million, 370-foot pedestrian overpass that crosses the Korean War Veterans Parkway near Jefferson Boulevard in Staten Island, NY. Mr. Saliby led inspections for all maintenance and protection of traffic (MPT) and safety inspections, including inspecting existing superstructure and substructure demolition. In addition, he inspected the mechanically stabilized earth system, temporary shoring, storm drainage system, and street lighting. Mr. Saliby managed several contractors and made sure all New York State Department of Transportation (NYSDOT) specifications were followed.

Syria Ministry of Health Eye Surgery Hospital Addition - Former Electrical Inspector
Provided electrical design and inspection of permanent power supply and distribution to a $4 million 3-floor hospital facility addition for the Ministry of Health in Syria. The 10,000-sf, 100-room expansion included new hospital beds, office space, and emergency rooms, which included standard surgery and laser equipment. Mr. Saliby designed and inspected lighting, telephone and network communication systems, fire alarm and detection systems, and security systems. In addition, he provided medical missionary services, maintaining expensive and important medical equipment.

Private Client Makton Palaces - Former Electrical Designer/Workshop Manager
Managed and provided electrical design for the $8 million construction of two 2-floor, 1,500-sf royal palaces in Dubai, United Arab Emirates. Each 6-bedroom palace, one for the royal family and one for guests, consisted of a large luxury reception hall, dining room, children's play room, billiard room, and indoor pool, gym, and sauna. Mr. Saliby inspected daily workshop activities, including machinery maintenance and material procurement. He evaluated electrical designs, verified adherence to Dubai Electricity and Water Authority (DEWA) document requirements, and provided pricing and cost estimates.

Abdul Ranginwala, NICET III

SENIOR INSPECTOR

Mr. Ranginwala is a NICET III-certified construction inspector with more than 25 years of experience providing inspection services for roadway, bridge, and highway projects including concrete, asphalt, utilities, drainage, sewer and water main, electrical, and painting operations. He has been involved with numerous construction inspection projects for the NYSDOT, NYSTA, and other public agencies in New York and New Jersey. In addition, Mr. Ranginwala has received formal training in the maintenance and protection of traffic (MPT).

Project Experience

NYCDDC 34th Avenue Storm Sewer and Water Main Reconstruction REI - Inspector

Provided inspection services for the $7.8 million replacement of the stormwater sewers in the Little Neck neighborhood of Queens, NY. The project is part of a DCC requirements contract. Mr. Ranginwala inspected the installation of a new sewer system and repairs to water mains while making sure contractors complied with erosion control plans, stormwater pollution and prevention plans, and requirements of federal and state permits. The project's location near a large area of wetlands necessitated special mitigation measures.

NYCDOT Manhattan College Parkway Reconstruction - Chief Inspector

Provided inspection services during this NYCDOT roadway reconstruction that included the installation of new combined sewers, water mains, street lighting, traffic signals, and fire alarm facilities along Manhattan College Parkway from Delafield Avenue to West 242nd Street and along West 242nd Street from Manhattan College Parkway to Broadway in the Bronx, NY. Mr. Ranginwala also provided extensive MPT.

NYSTA/NYSDOT Ridge Hill Village Bridge Replacement and Roadway Reconstruction - Senior Inspector

Oversaw inspection services for the $25 million replacement of the Ridge Hill (Bates) Bridge over the New York State Thruway, widening of the northbound Exit 6A ramp, widening of Tuckahoe Road, and a new off-site ramp to the Sprain Brook Parkway in the City of Yonkers, NY. The project was part of a resident engineering and inspection contract with a private developer to support the construction of the new Ridge Hill Village in Yonkers in accordance NYSTA, NYSDOT, and City of Yonkers standards and specifications. The scope of work included the demolition and removal of the existing Ridge Hill Bridge and the construction of the replacement bridge. This involved demolition, precast deck panel installation, precast concrete parapet walls, integral abutments, steel bearing piles, center pier construction consisting of cast-in-place reinforced concrete, installation of new steel beams, bridge railing and fencing, and 12-inch gas service, cable, telecom, 16-inch water main, signal communication, and street lighting installation. Work also involved the installation of a new culvert consisting of two 8-foot-diameter reinforced concrete culvert pipes to carry the Sprain Brook under the southern portion of the newly constructed southbound service road; temporary steel sheeting for the installation of culverts; stormwater detention system tanks including organic filters and flow control manholes; cast-in-place concrete headwalls; and a temporary stream diversion channel stabilized with riprap, in conformance with New York State Department of Environmental Conservation criteria for a variety of drainage improvements and areas of utility relocations. In addition, the scope of work included the widening and improvement of Tuckahoe Road and the installation of a new, off-site ramp to the Sprain Brook Parkway. This involved the construction of a new 2-lane, 500-foot service road, including full-depth rigid/bituminous

pavement reconstruction milling; guiderails; chain link fences; permanent concrete barriers; retaining walls (precast T-wall); backfill; grading; pavement markings; signage; and installation of traffic signals at new locations, including junction boxes, roadway loops, microcomputer cabinets/controllers, foundations, poles, and signal heads.

Metro-North Cortlandt Station Intermodal Access, Parking, and Route 9A Intersection Improvements - Chief Inspector

Performed inspections and reviewed contract plans to check compliance with proposal and standard specifications as part of resident engineering and inspection services for improvements at the Cortlandt Station in Cortlandt, NY. The scope of work included creating 730 parking spaces at the 9.5-acre site, along with a canopy-covered, intermodal drop-off plaza, covered walkways, a "green" restroom (composting facility), and a new parking pay station. The project also included an additional heated shelter with new lighting, signage, security call boxes, and bicycle racks on the north end of the platform, as well as the extension of a pedestrian overpass to the west side of the tracks where a new elevator, enclosed staircase, 220-sf waiting area, and 240-sf concession and vending area were added. Mr. Ranginwala inspected all work performed by the contractor, including piling and concrete retaining wall construction; lighting and utilities installation; structural steel erection; temporary protective shielding installation; excavation and trenching; paving; striping; installation of precast, prestressed concrete beams; construction of a new bridge abutment; rock removal; MPT; and installation of fill material. He maintained daily progress records, conducted biweekly meetings, monitored project schedules, processed contract payments, reviewed change orders, and issued monthly progress reports during the $21 million project. Mr. Ranginwala also reviewed inspection reports of products manufactured off site to make sure that they meet quality standards.

NYSTA/NYSDOT/City of Yonkers Ridge Hill Village Bridge Replacement and Roadway Reconstruction - Senior Inspector

Provided inspection services for the $22 million replacement of the Ridge Hill (Bates) Bridge over the New York State Thruway, widening of the northbound Exit 6A ramp, widening of Tuckahoe Road, and a new off-site ramp to the Sprain Brook Parkway in the City of Yonkers, NY. The project was part of a resident engineering and inspection contract with a private developer to support the construction of the new Ridge Hill Village in the City of Yonkers in accordance NYSDOT, NYSTA, and City of Yonkers standards and specifications. The scope of work included temporary steel sheeting for the installation of culverts; stormwater detention system tanks including organic filters and flow control manholes; cast-in-place concrete headwalls; and a temporary stream diversion channel stabilized with riprap, in conformance with New York State Department of Environmental Conservation criteria for a variety of drainage improvements and areas of utility relocations; and the installation of a new culvert. Work also involves the demolition and removal of the existing Ridge Hill Bridge in accordance with MPT guidelines set forth by the NYSTA and the construction of the replacement bridge.

City of Glen Cove Glen Cove Road Extension - Senior Inspector

Provided construction inspection during the extension of Glen Cove Road (Pratt Boulevard) in Glen Cove, NY. The $8 million project featured a new precast concrete arch bridge over the headwaters of the Glen Cove Canal and new roadways through environmentally sensitive wetlands. Mr. Ranginwala's responsibilities included roadway excavation and reconstruction, asphalt paving, drainage installation, cast-in-place concrete, curbs and sidewalks, and the installation of underground utilities. He also provided extensive MPT and prepared daily reports.

Alex Shell, NICET

SENIOR INSPECTOR

Mr. Shell is an inspector with more than 20 years of experience providing services for construction administration and inspection projects. He is providing construction management for a $50 million transportation project with the Triborough Bridge and Tunnel Authority involving the toll plaza on the Staten Island end of the Verrazano-Narrows Bridge. Mr. Shell is inspecting roadway modifications, drilling and concrete work, cold weather construction of a steel-reinforced concrete deck and barriers, mechanically stabilized earth walls with prefabricated reinforced concrete panels, and drainage structures. He is also inspecting the installation of H-piles and soldiers piles for retaining walls, as well as the installation of timber and precast legging and reinforced concrete pipes.

TBTA Verrazano-Narrows Bridge Toll Plaza Improvements, Phase B - Construction Inspector

Providing construction administration and inspection services for improvements by the TBTA to the toll plaza on the Staten Island end of the Verrazano-Narrows Bridge, which is a major link in the interstate highway system connecting Brooklyn and Staten Island, NY. The $50 million project, to be completed in three phases, will remove 11 toll booths, relocate an HVAC unit, replace the toll plaza canopy roof, and improve access to the Staten Island Expressway (SIE). STV is providing construction administration and inspection services for Phase B, which will be completed in a 10-stage process over nearly four years. In addition to the removal of the remaining three toll booths and islands, this phase includes construction of a new eastbound lower-level connector ramp to the bridge, retaining walls, and extensive roadwork to provide new on- and off-ramps to the SIE. Mr. Shell is inspecting substantial modifications to the Lily Pond Avenue intersection, which includes replacement of the 140-foot Narrows Road South on-ramps, construction of a 90-foot Lily Pond Avenue on-ramp bridge, and construction of manholes and catch basins. He is also inspecting drilling and concrete of a 60-foot, 3-foot diameter tangent pile, the construction of reinforced concrete abutment walls, erection of steel girders, and diaphragms. Mr. Shell is also providing inspection of cold weather construction of steel reinforced concrete deck and barriers, mechanically stabilized earth walls with prefabricated reinforced concrete panels, and 12-foot drainage structures. He is also inspecting the installation of H-piles and soldiers pile for retaining walls, installation of timber and precast legging, and installation of 24-inch diameter and 18-inch diameter reinforced concrete pipes. Mr. Shell is also inspecting the installation of expanded polystyrene fill at the Lily Pond Avenue ramp.

NYSDOT Wantagh State Parkway ITS and Lighting Upgrade - Inspector

Inspected conduit excavation and jacking operations and the installation of pull boxes and cabinets and electrical and fiber optic cables for the NYSDOT as part of the modernization of the Intelligent Transportation System (ITS) and lighting upgrade for the Wantagh State Parkway. The parkway is located approximately 30 miles east of Manhattan and links the Ocean Parkway at Jones Beach State Park with the Northern State Parkway in Westbury, NY. Project tasks included reinforcing the footing for overhead sign structures, camera poles, and lighting posts, and structural concrete testing. Mr. Shell also worked on the installation of corrugated beam guide railing, drainage structures, asphalt pavement, concrete sidewalks, and curb replacement.

Handycraft Corp. - Construction Project Manager
Performed estimating and scheduling for contracts to renovate offices and residences in the New York metropolitan area. Mr. Shell oversaw quantity take-offs and coordinated with inspectors of city agencies, material suppliers, and subcontractors.

Hilton Hotel - CM Project Manager
Oversaw the estimating, scheduling, and materials for the construction management (CM) of a Hilton Hotel facility in Parsippany, NJ. Mr. Shell provided communications and coordination with inspectors of city agencies, material suppliers, and subcontractors.

Chernovtsy Construction Corporation Residential Building Construction - Former Foreman, Shift Manager
Oversaw the process of manufacturing and erecting precast residential buildings in the Ukraine. Tasks included construction of foundations, pre-stressed reinforced concrete piles, utilities, and sidewalks.

John Mangione, NICET II

SENIOR INSPECTOR

Mr. Mangione is a construction inspector with more than 10 years of experience providing construction management (CM) services for transportation projects, specializing on bridges and roadways. He has also provided CM services on projects for security and education facilities. Mr. Mangione is proficient performing safety and quality control tasks in the field, as well as office tasks, such as the preparation of reports, requests for proposals, requests for information, schedules, and meeting minutes.

TBTA Verrazano-Narrows Bridge Toll Plaza Improvements, Phase B - Construction Inspector

Inspecting improvements to Staten Island end of the Verrazano-Narrows Bridge, which is a major link in the interstate highway system connecting Brooklyn and Staten Island, NY, for the TBTA. The $50 million project, to be completed in three phases, will remove 11 toll booths, relocate an HVAC unit, replace the toll plaza canopy roof, and improve access to the Staten Island Expressway (SIE). The firm is providing construction administration and inspection services for Phase B, which will be completed in a 10-stage process over nearly four years. In addition to the removal of the remaining three toll booths and islands, this phase includes construction of a new eastbound lower-level connector ramp to the bridge, retaining walls, and extensive roadwork to provide new on- and off-ramps to the SIE. Mr. Mangione is inspecting formwork, concrete and asphalt placement, bridge deck modifications, drainage, and milling and paving for the on-ramp

NYCDOT Bridge Design and Reconstruction - Construction Inspector

Performed field inspections of bridge design and reconstruction projects for the NYCDOT Division of Bridges. Mr. Mangione compiled inspection criteria, including sketches, photographs, and descriptions for the final report. He conducted inspections of the 96th Street Bridge over Henry Hudson Parkway in Manhattan, a pedestrian bridge on Navy Street in Brooklyn and another in Staten Island, the Northern Boulevard Bridge in Queens, and on a cross-island parkway overpass.

NYCDOT Annandale Road Bridge Reconstruction - Resident Engineer

Performed on-site project management duties on a Staten Island bridge for the NYCDOT. Since the Annandale Road Bridge crosses over the Staten Island Rapid Transit, Mr. Mangione developed scheduling for rail service with the affected railroad. He also maintained daily communication with the resident engineering office, served as the on-site equal employment opportunity officer, procured materials from an approved list, and coordinated construction activities with local utilities. He also prepared bid packages, purchase orders, company payroll, partial payment requests, submittals, RFIs, RFPs, change orders, and conducted value engineering analyses.

NYSDOT Staten Island Expressway New Lanes - Construction Inspector

Performed CM services for a $100 million roadway and bridge modernization of the Staten Island Expressway for the NYSDOT. The project's primary aim was to accommodate a new bus and high-occupancy vehicle lane, but the project also included widening three bridge overpasses, demolition of abandoned bridge structures, installation of new catch basins and manholes, construction of new mechanically-stabilized earth retaining walls and sound walls, installation of water retention ponds, and the erection of new sign and light pole structures. In

the field, Mr. Mangione performed compaction and sieve analysis testing of engineered materials, field-tested and sampled materials for compliance with NYSDOT standards, enforced site safety controls for workers and civilians, monitored compliance of lane closures with standards, and provided photo documentation of preconstruction and ongoing construction activities. He also generated daily reports using SiteManager software, logged contractors' work, documented in-place work for compliance to specifications, and filed weekly State Pollutant Discharge Elimination System reports.

NYSDOT Pedestrian Bridge Reconstruction - Resident Engineer
Performed on-site project management duties for the reconstruction of a Staten Island pedestrian bridge. Mr. Mangione oversaw the demolition and reconstruction of the bridge over the Korean War Veterans Parkway at Jefferson Boulevard for the NYSDOT. He maintained daily communication with the resident engineering office, represented the client as the on-site equal employment opportunity officer, used applicable NYSDOT software, procured materials from an approved list, and coordinated construction activities with local utilities. He also prepared bid packages, purchase orders, company payroll, partial payment requests, submittals, RFIs, RFPs, change orders, and conducted value engineering analyses.

NYCSCA Fast-Track High School Conversion - Construction Manager
Managed the fast-track conversion of a 48,000-sf warehouse in Long Island City, Queens, into a high school for the New York City School Construction Authority (NYCSCA). Mr. Mangione coordinated the building trades to meet a 16-week completion schedule, and attended weekly owner and subcontractor meetings. He also served as the safety liaison with NYCSCA personnel.

TSA Federal Air Marshal Service New York City Field Office Interior Build-Out - Project Superintendent
Supervised the interior build-out for the New York City field office of the Federal Air Marshal Service for the Transportation Security Administration (TSA) in Queens, NY. The facility was used as a multi-purpose training center with offices, a gun-cleaning room, and ammunitions bunker. Mr. Mangione managed construction of long-lead specialty items, including ballistic doors, frames, and partitions; a noise-attenuating slab; and a replica airplane fuselage for training purposes.

AOL/Time Warner and Lehman Brothers Alterations Projects - Project Superintendent
Supervised building modifications for high-profile clients, including AOL/Time Warner and Lehman Brothers. Mr. Mangione coordinated fast-track construction of disaster recovery space for companies displaced by the events of September 11, 2001, in New York City. He also managed on-call construction management projects for Bloomberg LLP.

Valter Cilka, NICET III

SENIOR INSPECTOR

Mr. Cilka has more than 40 years of experience as an inspector, site engineer, and designer for infrastructure projects, including roads, highways, and railroad facilities. He has expertise in inspection of a variety of construction elements, including rigid and flexible pavements, concrete, earth work, foundations, and utility installations. Mr. Cilka is skilled at providing site inspection from excavation, foundation, and construction to project completion. He was an inspector with the NYSDOT Region 11 for road and highway projects throughout New York City, and he was also a chief manager and designer of infrastructure projects for the Government of Albania.

Metro-North Railroad Cortlandt Station Intermodal Access, Parking, and Route 9A Intersection Improvements - Inspector

Reviewing utility relocations and upgrades, along with signage, pavement, and marking, for the Route 9A intersection improvements, part of a 4-phase, $21 million project to improve Cortlandt Station in Montrose, NY, for Metro-North Railroad. STV is providing on-site project management and construction inspection services for a new 730-car parking lot, as well as a new access road from nearby Route 9A. Mr. Cilka is inspecting measures to prevent damage to the many utilities, both above grade and subgrade, affected by the installation of drainage structures, pipelines, signaling, and cables. He is reviewing safety measures for workers, and is also inspecting the complex maintenance and protection of traffic measures required to perform work around the 4-direction intersection with only one lane open at a time.

The Trust for Governors Island Redevelopment of Governors Island Resident Engineering and Design Review - Senior Inspector

Conducting inspections of electrical and concrete elements during $250 million in infrastructure improvements to redevelop Governors Island, located in New York Harbor, for the Trust for Governors Island. The firm, in joint venture, is providing resident engineering and design review services for this massive undertaking that will see more than 2,500 new trees planted and areas of flat topography transformed into rolling hills for viewing the Manhattan skyline. The first phase of the project, covering 64 of 150 total acres, comprises 15 interrelated projects, including landscape architecture to establish a new park; rehabilitating multiple ferry landings and approach platforms; reconstructing the seawall, its promenade, and drainage systems; restoring potable water and electrical distribution systems; and stabilizing historic buildings. Mr. Cilka is conducting on-site concrete testing per ACI standards, including the making of cylinders for off-site compression testing. He is also inspecting sanitary sewers on piles, storm sewer construction, and extensive fill operations (up to 20 feet high, placed in 8-inch lifts), paving, precast decorative concrete curb installation, and Geofoam installation. In addition, Mr. Cilka is inspecting electrical components including wiring, manholes, conduit, transformers, switchgear, and illumination.

Town of Wilton Route 7 Reconstruction - Inspector

Provided inspection for a wide range of construction elements for the widening of four miles of Route 7, adding one lane in each direction, for the Town of Wilton, CT. Mr. Cilka reviewed the project excavation and the construction of small drainage structures, culverts, and bridges,

as well as the installation of electrical facilities and water and sewage structures. He also inspected the new road embankment, new pavement, road signs, and landscaping, along with roadside safety elements including barriers and guard rails.

NYSDOT Region 11 Pavement Repairs/Requirements Contract - Inspector
Provided inspection services for both rigid and flexible pavement repairs on major highways in New York City as part of a requirements contract with NYSDOT. Mr. Cilka inspected the asphalt pavement repairs along four miles in all three westbound lanes of the Staten Island Expressway and inspected repairs to the concrete slabs in all lanes of the Korean War Veterans Memorial Parkway, both in Staten Island, NY. Mr. Cilka also inspected the asphalt pavement repairs along five miles of all lanes of the Clearview Expressway in Queens, NY.

NYSDOT Region 11 Cross Bronx Expressway Corridor Intelligent Transportation System Improvements - Inspector/Transportation Inspector
Monitored the testing and installation of equipment improvements to the intelligent transportation system along the Cross Bronx Expressway in the Bronx, NY, for NYSDOT. Mr. Cilka inspected steel conduits, electrical, fiber-optic cables, cabinets, cameras, variable message signs, and vehicle detectors, as well as the landscape restoration of the surrounding area. Mr. Cilka reviewed as-built drawings and other final project paperwork. In an earlier phase of the project he inspected the earth and concrete work, manhole installation, restoration of pavement, and installation of utilities including water, electrical, and telephone.

General Road Directorate of Albania Infrastructure Projects - Former Chief Manager/Project Manager/ Designer
Managed and performed inspections for highway and roadway construction projects and prepared bid documents for more than 40 infrastructure projects for the Government of Albania, including the Tropoje National Road, Gramsh National Road, and the Bence Bridge along Tepelene National Road. Mr. Cilka performed measurements and made calculations, prepared layouts and diagrams, and ascertained project specifications. He analyzed engineering schematics, produced design and shop drawings, and provided design recommendations for 150 km (93 miles) of rural roads and 140 km (87 miles) of highways. Mr. Cilka prepared budgets and cost estimates for labor and material. He also prepared and maintained construction schedules in conjunction with design engineers, reported on work progress, and made sure of compliance with safety regulations.

General Road Directorate of Albania Highway Construction - Former Project Manager
Managed the design and construction of major highway projects for the Government of Albania, including the 55-km (34-mile) Tirana-Durres Expressway, 140-km (87-mile) Tirana-Shkoder Expressway, and the 70-km (44-mile) Durres-Macedonia Expressway. Mr. Cilka provided project control and approvals of roadway design and construction operations. He managed budgets, prepared overall estimates of labor and materials, and monitored design procedures in accordance with engineering documentation. Mr. Cilka also visited sites, facilitated land planning, prepared reports on construction work in progress, and confirmed specification conformance.

State Road Enterprise Road Construction - Lead Engineer
Developed all construction phases for road projects in Albania. Mr. Cilka prepared and reviewed project documentation and specified engineering mark-ups. He verified design drawing, provided adjustments, and resolved technical and design problems.

Reynaldo Libunao

SENIOR INSPECTOR - ELECTRICAL

Mr. Libunao has more than 15 years of international and domestic experience with project management, power, telecommunications and lighting distribution design for residential, commercial, educational, recreational, infrastructure and marine facilities. He is a proven team player with the ability to coordinate with people. In addition he has excellent organization skills and is able to use different tools to streamline the design process and generate accurate calculations.

NYCDEP WP-283 Newtown Creek WPCP Plant Upgrade - Senior Electrical Inspector

Oversees the new construction of the Central Residuals Building (NC-41) and the Upgrade of the existing South Battery (NC-47). These projects are Wick's Law contracts, covering four prime contractors (G – Structural, E – Electrical, P - Plumbing and H – HVAC). Contract NC-41 is the construction of the Central Residuals Building, consists of a Secondary Screening, a Grit Disposal, Skimming Systems which segregates and channels this primary treatment residual to dumpster containers for proper disposal. This treatment process has a Consent Order Decree Milestone of $20 million from the state and federal authorities that will be achieved more than one year ahead of schedule for the City of New York.

Contract NC-47 provided the full upgrade of the existing South Battery consisting of a grit removal facility, aeration and settling tanks, and a return activated sludge pumping station, similar to the new North and Central Batteries. All aeration tanks will be covered and provisions made for a process air system including blowers, odor control and a polymer feed system. Odor equipment and controls will be in the newly constructed South Control Building. Contract NC-47 also includes the wrap-up of miscellaneous items in the North and Central Batteries such as modifications to the spray water nozzles, the spray water system and the seal water system.

- Responsible for enforcing the National Electrical Code, New York Electrical Code and other related codes and regulations, including Department of Environmental Protection Construction Rules and Regulations. Interprets codes in the field. Authorizes acceptable alternative methods of code compliance within limits of authority.
- Works under the guidance of the Project's Resident Engineer
- Reviews Contract Documents to address possible conflicts in advance. Formulates "Request for Clarifications (RFC)" to the Engineer to resolve conflicts
- Review "Request for Information (RFI)" from Contractors to make recommendations to the Engineer and shorten review process
- Maintains close coordination with other trade inspectors to assure nothing is compromised
- Performs field investigations of electrical activities, assuring all applicable code requirements are satisfied and corrected by the electrical contractor. Activities involved installation of conduit, wires/ cables, enclosures, panel boards, disconnect switches, Motor

Control Centers, Substations/Transformers, Automatic Transfer switches, Local Control Panels for Power, Lighting, Fire Alarm, Access control, Public Address, Communications, LV Controls, Gas Monitoring, and HVAC systems

- Conducted Fire Alarm System Inspection prior to AHJ Inspections to catch any issue that may cause the AHJ to issue a Letter of Defect or a Violation
- Address and correct issues in the field, if possible, to avoid delays
- Completes and maintains records of daily report of the electrical contractor's daily activities. Issues correction notices
- Conducted Equipment Testing for Acceptance
- Delegate work and provide guidance to electrical inspectors
- Evaluate Contractor's monthly progress payment requisitions. Reconciled contract changes and claims with the contractor
- Prepared a detailed punch list of unfinished or non-compliant installations

NYFD Berths 11 and 12 Rehabilitation Brooklyn Navy Yard - Electrical Engineer
Responsible for providing engineering services to the Fire Department of New York for the Rehabilitation and Upgrade of Electrical Service for Berths 11 and 12 at the Brooklyn Navy Yard. The upgrade included the installation of a substation at the dock to provide power for new electrical and mechanical equipment for the new vessels of the Fire Department.

U.S. Coast Guard Pier Reconstruction - Electrical Engineer
Responsible for providing engineering services to Arthur Henry Inc and Viteri Construction Management for the design-build of the reconstruction of the 300 ft section of Pier 4 at the U.S. Coast Guard Training Center in Cape May, NJ. The structure was designed with the utility trenches along both sides of the pier to accommodate new electrical and mechanical utilities for the USCG Vessels and the existing floating dock.

Pier 86 Intrepid Museum - Electrical Engineer
Responsible for the planning, design and assistance during the construction phase of electrical systems of Pier 86 for Hudson River Park Trust with costs of $30.5 million. The project consists of demolition of the existing pier and detail design of the new pier and design repairs. Participated in the design of the new facilities and landscaping on the proposed Upland Park.

Kwesi Amegah

SENIOR INSPECTOR – CIVIL/STRUCTURAL

Mr. Amegah has more than 25 years of multifaceted experience encompassing inspection, civil and structural engineering as a Civil Engineer. His experience in construction inspection and bridge inspections including completion of various in-depth inspection programs in the New York metropolitan area. He also has experience in civil design including roadway replacements involving drainage, sewers, utilities, curbs and sidewalks. In addition, his structural experience includes the removal, replacement and reinforcement of steel and concrete bridge elements.

PANYNJ NY Marine Terminal, Howland Hook & Teterboro Airport PIDS - Senior Inspector

Responsible for inspection of building demolition at Howland Hook, Staten Island contractor oversight as part of work at NYMT. Mr. Amegah is participating in the testing phase and inspection of the perimeter intrusion detection system, fencing sensors and radar system both day and night at PANYNJ Airport. Also supervised the assembly of large erosion mats made of concrete sections encased in geotextile material being fabricated in Bayonne for future relocation and installation.

NYSDOT Route I-495 Mill & Fill Exit 57 to 64, Towns of Brookhaven & Islip & Village of Islandia - Senior Inspector

Provided inspection and other related services for $19.9 million project involving grinding existing asphaltic concrete wearing concourse and repaving. Inspection services also include site maintenance and safety protection.

NYCDDC Resident Engineering Inspection Services for HWCR08B, Citywide Milling Project Involving Grinding Existing Asphaltic Concrete Wearing Course - Inspector

Responsible for this $7 million project, providing inspection and other related services for projects involving grinding existing asphaltic concrete wearing concourse at various locations on an as-needed basis. Some issues that involve inspection services include site maintenance and safety, protect tree from construction debris, milling two inches of existing asphalt, smaller milling machine was used to grind asphalt in hard to reach places such as around catch basin or corner of a curb and a sweeper was used behind milling machine to clean up the debris. Tasks include all services necessary and required for the inspection, management and administration of this project, for the required construction work to be properly executed, completed on time and conforms to the plans, specifications and requirements of the construction contract.

NYCDDC Resident Engineering Inspection Services for HW2CR08B, Grinding and Milling of Various Streets in the Borough of Manhattan, NY- Senior Inspector

Responsibilities included inspection of milling of roadway pavement resurfacing in the borough of Manhattan for NYCDDC. Responsible for managing inspection staff, reviewing and approving field changes, resolving any construction problems, claims and disputes, supervision of contractor's work, processing of contractor's monthly payments, coordinated with the various community boards, NYCDDC and other related agencies.

ConnDOT, Construction Inspection Services for I-84 Widening between Waterbury and Cheshire - Senior Inspector

Provided inspection services for the widening of Interstate 84 between Waterbury and Cheshire, CT. Responsible for inspection of reinforced concrete pipes and the inspection of modifications made to existing interstate bridges. Also was responsible for the investigation of catch basins.

NYCDDC Resident Engineering Inspection Services for Richmond Road - Senior Inspector

Provided field inspection and preparation of daily reports for the installation of sewers, water main, and roadway replacement for this roadway in Staten Island, NY. The scope of work included the installation of a new 72-inch trunk main in Richmond Road between Narrows Road and Duzer Street and in Vanderbilt Avenue between Van Duzer Street and Tompkins Avenue. A new 60-inch water main was also installed in Swan Street between Van Duzer Street and Bay Street.

NYCDDC Construction Inspection for Capital Reconstruction Projects - Senior Inspector

Responsible for providing inspection on NYCDDC capital reconstruction projects, including replacement of major roadways in Brooklyn and Queens and associated drainage, sewer, utilities, curbs, and sidewalks.

NYCDOT Rehabilitation of Inwood Hill Park Pedestrian Bridge - Senior Inspector

Provided inspection services for the rehabilitation of bridge components including partial reconstruction of pedestals, repairs to bottom of staircase stringer, removal and replacement of landing plate, partial removal and replacement of deck, field cleaning and painting of staircase.

L. Brittany Griffis

INSPECTOR

Ms. Griffis is a project officer with experience in coordinating documentation and large-scale change orders and requisitions for multibillion dollar projects in New York City. She is also adept at the preparation and management of project records.

MSDC/PANYNJ Moynihan Station Phase I CM - Project Officer

Managing project documentation using CM13 software and preparing weekly documentation for construction management (CM) services for the development of a new train hall in the James Farley Post Office Building in Midtown Manhattan, with connections to Pennsylvania Station and Amtrak, NJ TRANSIT, Long Island Rail Road (LIRR), and New York City Transit service. This major transportation hub is being built in two phases by the Moynihan Station Development Corporation (MSDC), in partnership with PANYNJ. For Phase I, the firm is managing the construction of new entrances and vertical access points to the platforms, improvements to pedestrian concourses and platform ventilation, and the creation of a waiting room for LIRR passengers. Ms. Griffis is tracking submittals and weekend rail service outages. She is developing cost estimates, comparing daily reports to contractors' work, writing post-award contract changes, and following up on outstanding items.

PANYNJ National September 11 Memorial & Museum - Project Officer

Processed numerous change orders and coordinated requisitions for the program management of the construction of the National September 11 Memorial & Museum, a landmark PANYNJ project at the World Trade Center in Lower Manhattan. The memorial, which has a goal of LEED® certification to the Gold level, consists of two recessed square pools with waterfalls along the walls, situated on 8 acres, with a pavilion from which visitors can access the underground museum. Ms. Griffis also provided weekly updates and reviewed punch lists.

NYCHA III CM Task-Order Contract - Clerk

Provided administrative services for several task orders under a $76 million construction management (CM) contract. Tasks included rehabilitations and renovations at Boulevard Houses, Linden Houses, and Bayview Houses, which comprise 18-, 23- and 19-building apartment complexes, respectively, in Brooklyn, NY. Renovations included exterior masonry and brick repair; asbestos and lead abatement; glass block caulking; parapet flashing; window replacements; and replacement of two water tanks. Ms. Griffis facilitated project closeouts and filed emails and reports.

Brian Malt

STRUCTURAL STEEL & BOLTING INSPECTOR

Mr. Malt has 20 years of professional experience in welding and bolting inspections and performing non-destructive testing (NDT) services for variety of projects He is experienced in providing quality assurance/quality control services for owners and general contractors on-site and at fabrication shops. As a Quality Control Inspector, Mr. Malt has worked in the production system of manufacturing telecommunication and transmission towers, sports lighting, and overhead sign structures for public utilities and departments of transportation.

Bronx Mental Health Rehabilitation Center - Welding and Bolting Inspector

Conducted visual inspections to ensure compliance with drawings, codes, specifications, procedures, and the quality control program at this facility in the Bronx, NY. Mr. Malt also conducted on-site erection and bolting inspections.

Bowline Gas Pipe Line Inspector - NDT Inspector

Provided NDT inspections consisting of ultrasonic and magnetic particle inspections of circumferential and longitudinal welds using multiple 5-point Distance Amplitude Curves and American Welding Society (AWS) D1.1 testing methods. Mr. Malt also performed welder qualification testing for employment purpose, in accordance with AWS D1.1.

New Jersey Generating Station - Structural Welding and Bolting Inspector

Assisted in field service operations and performed all structural welding and bolting inspections for a generating station project in New Jersey.

EN Bridge Rehabilitation - QC Inspector

Conducted quality control inspections during the rehabilitation of EN Bridge. Mr. Malt performed all NDT inspections and reviewed design fabrication drawings, welding procedures, specifications, welder qualification records, and NDT procedures. He also maintained the daily log for all records and reports. Mr. Malt also conducted inspections of galvanizing, metalizing, and coating applications for adherence and thickness.

Sign Structures - Inspector

Provided NDT inspections including ultrasonic and magnetic particle inspections on various sign structures as per specifications identified by NJDOT and the New Jersey Turnpike Authority.

Earl Brockenberry

INSPECTOR – COATING

Mr. Brockenberry is an inspector with more than 30 years of experience inspecting the fabricating, welding, and coating of steel bridge elements and variable message signs (VMS). He has performed quality control and quality assurance inspections of bridge steel, cantilever overhead steel tubes truss sign structures, and VMS platforms for clients including the Connecticut Department of Transportation (ConnDOT) and PANYNJ. Mr. Brockenberry is familiar with the American Welding Society (AWS)'s D1.5 and D1.1 codes, the New York State Department of Transportation's steel construction manual, and the American Society of Mechanical Engineers, American Petroleum Institute, American National Standards Institutes, and American Association of State Highway and Transportation standards.

ConnDOT Bridge Steel Fabrication - Coating Inspector

Performed quality inspections during the fabrication and coating of bridge steel for ConnDOT. Mr. Brockenberry conducted inspections onsite at the fabricator's facility in Colfax, NC, including performing in-process welding and paint inspection, as well as non-destructive evaluation testing and inspection. All work was performed in accordance with AWS D1.5 Bridge Welding code and ConnDOT specifications.

ConnDOT/PANYNJ VMS Fabrication - Coating Inspector

Conducted visual and coating inspections of VMS for ConnDOT. Mr. Brockenberry inspected the fabrication of steel tube cantilever overhead truss sign structures and VMS platforms for ConnDOT's New Haven Harbor Crossing and PANYNJ's Elizabeth Port Authority Marine Terminal.

ConnDOT Sign Structures and Platform Fabrication - Quality Assurance Inspector

Inspected the fabrication of cantilever overhead steel tubes truss sign structures and platforms for VMS signs that were installed in Norwich, CT, for ConnDOT. Mr. Brockenberry ensured that all fabrication work was performed in accordance with ConnDOT specifications.

Miscellaneous Bridge Superstructure and Steel Fabrication - Quality Officer

Performed in-process quality assurance inspections of bridge superstructure and steel elements at various locations in the continental United States and Canada. Mr. Brockenberry inspected the fabrication of superstructures, structural steel, casting and forgings, timbers, bridge railings, steel barriers, joint systems, and steel gird decking and machined components. He also inspected coatings, epoxy-coated rebar, mesh, fiberglass reinforced polymer, lighting, sign structures, and camera poles.

Virginia and Maryland QA Inspections - AWS-Certified Inspector

Performed in-process quality assurance inspections at various locations in Maryland and Virginia. Mr. Brockenberry inspected structural steel, rebar, concrete, soil, asphalt, and substructures for accordance with the uniform building code.

NYSDOT NY 110 Bridge over the LIE - Project Manager

This design project was to rehabilitate, raise and widen the two bridges that carry NY 110 over I-495 (Long Island Expressway) in Melville, NY. Hirani was directly responsible for the Maintenance & Protection of Traffic (MPT) design required for both the I-495 and NY110 corridors within the project limits, and for the coordination of the MPT with the adjoining project to widen and reconstruct NY 110. In addition Hirani was responsible for the new vertical profile of the reconstructed bridges and approaches, and all grading work.

NYSDOT Bridge Parapet Replacement - Project Manager

This contract was to replace deficient parapet walls at nine locations of highway bridges over the Southern State Parkway in Nassau County. Hirani was responsible for the field survey for the project and updating the existing topo mapping. Hirani also prepared condition diagrams of each existing parapet. These were then compared to As-Built construction plans and were used to design the new parapets and all existing guiderails and guiderail attachments to the new walls. Hirani assisted in the final design of these elements.

NYSDOT Bridge Preventive Maintenance - Project Manager

This contract was to perform preventative maintenance on six NYSDOT Region 10 bridges at various locations. One of the locations was on the Robert Moses Causeway at it passes over the Sunrise Highway and South Service Road. Hirani surveyed all the locations and prepared Digital Terrain Module (DTM) for each location. The elevation and cross section data collected enabled Hirani to design the profiles and grading required when the deck wearing course was reconstructed. Additionally, Hirani will perform cost estimating as required.

NYSDOT Bridge Underside Repairs - Project Manager

This contract addressed a need to make concrete repairs to the underside of 13 concrete arch bridges identified previously by NYSDOT Structures personnel. These bridges were at various locations throughout the region. Hirani was tasked with the preparation of a comprehensive MPT Plan for the entire project. The proposed MPT plan utilized full closures, partial closures and the designation of locations where construction could occur adjacent to closed lanes. This plan was for the roads above and below the concrete work.

NYSDOT Bridge Deck Joint Replacement - Project Manager

This contract was to repair and replace deteriorated bridge deck joints identified by the NYSDOT at various highway overpasses over State Highways. Hirani's role was to coordinate with the designer of the point replacements and prepare the comprehensive MPT for the entire project. The MPT plan consisted of protection for both the overpasses and the under roadways at each location. A combination of lane closures and detours were utilized.

NYSDOT Deficient Bridge Rehabilitation - Senior Civil Engineer
Development of Preliminary MPT Plans including layouts, schemes, notes and operation sequence tables for various locations. Also performed accident analysis for several locations and other traffic engineering services.

NYSDOT Wantagh State Parkway ITS and Lighting, Suffolk County - Project Manager
The project installed ITS Improvements along the Wantagh State Parkway corridor. In addition, a new lighting system was installed. Hirani was responsible for structural design of the new overhead sign structures, locating and plotting the utility location plan, and performing various survey tasks which included spot cross sections at the overhead sign locations, supplemental topo mapping for the base maps, and establishment of a centerline station line.

NYSDOT Route 454 Drainage Improvements - Project Manager
This project constructed a new positive drainage system, including new recharge basins on the NY 454 corridor within the project limits. Hirani was responsible for preparing the inventory and plotting of existing utilities, performing various survey tasks including creation of baseline points, GPS points, topographic survey in unmapped or poorly mapped areas, and cross sections, and to assist with the design elements in the drainage analysis and design.

NYSDOT Concrete Pavement Repair - Project Manager
This contract was to perform concrete pavement repairs and other rehabilitative work at various highway locations in Nassau and Suffolk Counties. Hirani provided a pavement specialist as part of the field team that field investigated the pavement and prepared the repair tables (lists) in the plans. Hirani was also responsible for the utility inventory.

NYSDOT Recharge Basin Reconditioning - Project Manager
This contract constructed improvements as required at 30-35 existing recharge basins. Hirani was responsible for the field investigation, preparation of reconditioning plans, and all other work design tasks for final PS&E for several of the recharge basins in the East end of Suffolk County. In addition, Hirani performed spot surveys to upgrade existing mapping where necessary.

NYSDOT Southern State Parkway Mill & Fill - Project Manager
This project constructed a new asphalt riding surface on a section of Southern State Parkway from Route 110 to Nassau Road. This was accomplished by milling and filling. Other miscellaneous construction such as guiderail work, drainage, etc. was done as required as the budget permitted. Hirani was responsible for the design of the MPT for the project. This was night time construction involving numerous road/ramp closings and detouring. Hirani was also the project surveyor for topographic data and establishing existing bridge clearances.

NYSDOT Design Services, Phases I-IV, SPEDS MS4 Storm Water Outfall Mapping Regions 8, 10 and 11 - Senior Civil Engineer
Developed and implemented a Geographic Information System (GIS) to map storm water discharge points entering waters of the United States for NYSDOT roadways in Regions 8, 10, and 11 (Dutchess, Orange, Putman, Rockland, Ulster, Westchester, Nassau, Suffolk, Bronx, New York, Queens, Kings and Richmond Counties). The system utilized portable Geographic Positioning Systems (GPS) to record the location of each outfall, attributes of the outfall and receiving waters. The system allows for graphic display of each outfall location referenced to the attribute informational database. The project was undertaken by the NYSDOT to comply with the NYS Department of Environmental Conservation General Permit for Storm Water Discharges from Municipal Separate Storm Sewer Systems (MS4).

Gijo Varghese, P.E.

CIVIL ENGINEER

Mr. Varghese has seven years of experience and a strong track record of delivering high profile and challenging projects for a broad range of clients throughout New York.

Project Experience

NYCDDC - Project Engineer

- Design experience includes Highway/Street design/ Piping Design/ Tunneling of pipes/Conditional Assessment of Structures /Sheeting Design and other infrastructure improvements
- Undertaking technical and feasibility studies including site investigations
- Developing detailed designs by using a range of computer packages
- Undertaking the Design of sewerage, storm water and potable water
- Undertaking the design of Chambers/Precast Manholes using LRFD Methods
- Undertaking the condition assessment and rehabilitation of structures by formulating the existing condition of structures and the repair recommendations
- Resolving design and development problems
- Review design and co-ordinate with all disciplines to ensure constructability
- Undertaking complex and repetitive calculations
- Liaising with clients and a variety of professionals including engineers, contractors, etc.
- Compiling job specs, technical reports and tender documentation
- Respond to emergency situations while the project is in the construction phase
- Review and comment on contractor shop drawing submittals
- Ensuring projects run smoothly and structures are completed within budget and on time by providing construction support

NYCDDC - Inspector/Office Engineer

- Review design and assist in co-ordination with all disciplines to ensure constructability
- Assess whether the construction is carried out in accordance with the specification
- Supervise contractor's works and maintain QA documentation and associated registers
- Verify measures of works completed and prepare monthly progress reports
- Report to Resident Engineer and update on issues as required. Participate in planning and assist in resolution of issues in a timely manner

Project Experience

DRJTBC, Upper Black Eddy-Milford Toll-Supported Bridge Contract No. TS-444A - Painting and Structural inspector

Performed structural and painting inspection for this bridge rehabilitation project, a three (3) span Warren truss structure with a total length of approximately 700 feet between abutment backwalls. Work included: replacement of entire existing floor system, including 3 1/2" thick concrete filled inverted T-beam deck, steel stringers, steel floorbeams, associated deck joints, and lower chord lateral cross-bracings with new galvanized structural steel members; replacement of the entire length of existing steel plate sidewalk with a new sidewalk while maintaining the existing sidewalk cantilever brackets; installation of new sidewalk support stringers and tension ties; identify areas of steel sectional loss and check for damage and loose rivets and approve locations for rivet replacements; replacement of existing truss fixed and expansion bearings in all spans; cleaning and painting of all structural steel utilizing a Class 1 A Containment System and surface preparation standard of SSPC SP-10 level of abrasive blast cleaning of steel and application of a three coat zinc system; replacement of entire existing lighting system and CCTV with system; replacement of entire existing pedestrian railing with a new decorative pedestrian railing and replacement of abutment backwalls; repair of deteriorated areas of concrete and stone masonry at all abutments and piers; removal and replacement of existing near and far approach curbs and sidewalks in the immediate vicinity of the bridge; milling and overlaying of both approach roadways; cleaning of existing inlets and pipes; installing traffic stripes within the project limits, and installing new traffic control signs. All construction work performed under a full-time detour.

DRPA Construction Monitoring Services for the Walt Whitman Bridge Steel Painting - Construction Inspector/Bridge Painting Inspector

Performed inspection of surface preparation for the coating of steel members that included removal of existing lead-based paint and application of new high-performance coating system to the Philadelphia deck-truss spans, the Philadelphia twin-girder simple spans, and the 2 lower-layer interior cells of the Philadelphia Tower and the Gloucester Tower. The project also included maintenance painting of the Philadelphia girder spans and the approach overpass bridge structures in New Jersey and Pennsylvania. Work included application of 3 coats of paint for the steel members, using Class 1A containment for abrasive blasting. Primer, intermediate, and final coat were applied and reports were prepared for placement in contract document files.

NYSDOT Region 11, Nassau Expressway & Interim Nassau Expressway Pavement Rehabilitation & Resurfacing (Including painting of 7 bridges) - Chief Inspector

Provided civil engineering/inspection expertise to the whole construction project of rehabilitation of 7 bridges and ramps. Responsibilities included protecting client's interest through quality control and mitigation of schedule problems relating to completion deadlines. Monitor CPM schedule and progress of work as per schedule deadlines. Check RFIs, evaluate RFIs feasibility and coordinate with field inspectors and design consultant and contractor. Widening of highway ramps. Installation of new sub base and concrete pavements. Shoring and replacement of bridge decks. Replacement of bridge bearing. Operations involve shoring and hydraulic jacking of bridges. Installation of Calcium Patch to replace deteriorated concrete on approach slabs at abutment locations. Review shop drawings, perform site inspection, ensure all construction proceeds in accordance to contract specifications and approved shop drawings. Oversee MPT setup and sign installations. Check installation of vehicle arresting barrier net. Coordinate and liaise with different City and State agencies to mitigate upcoming problems and conflicts. CALL INFORM traffic communication about all lane closures and openings. Review and sign off Daily Work Records of Construction Inspectors daily reports. Performed office engineering duties also by obtaining work completion information from all inspectors daily reports and tallied the quantities completed with quantities approved for payment and matched the same with CEES quantities data entry.

NYSDOT Project Cleaning & Painting of 26 Bridges on Major Deegan Expressway (Contract #D257788) - Bridge Painting Inspector

Responsible for overseeing lead removal and protective coating of 26 bridges on I-87. Work entailed environmental protection, air monitoring, and construction of Class A containment for surface preparation of steel in accordance with NACE 3/SSPC 6 and NACE4/SSPC 7 standards; quality control; engineering safety; environmental compliance specially pertaining to lead removal; design of highway construction zone, maintenance and protection of traffic, and night time construction illumination. Coordinated with traffic advisory and NYPD Highway Patrol Police.

Tectonic Engineering & Surveying Consultants - Construction Special Inspector
Responsible for comprehensive site inspection, including reinforcing steel, fire stopping, fire resistance rated construction and fireproofing.

Long Island Materials Testing Lab - Senior Civil-Structural Construction Inspection Engineer
Duties included identification of structural integrity problems in buildings under construction, and working with blueprints and specifications. Responsible for comprehensive site inspection, including reinforcing steel, fire stopping, fireproofing, welding, high strength bolts, decking, roofing, masonry, ultrasonic testing of welding, structural steel fabrication, and inspecting concrete at the batch plant and in the field. Performed follow-up audits of corrective actions. Prepared engineering inspection and weekly progress reports. Experienced in inspection of federal, state, city, and commercial projects. Gained extensive knowledge of construction codes and regulations.

City Construction Corporation - Civil Construction Engineer-Superintendent
Specialized in residential and commercial construction: apartment and office buildings, schools, hospitals, and industrial plants. Managed all phases of construction from excavation to commissioning of the building. Scheduled and coordinated work with subcontractors. Responsible for the quality and completion of work according to the time schedule.

TD Construction Corp. - Assistant Superintendent
Responsibilities included repair and reconstruction of industrial and civil buildings, and supervision of excavations for building foundations. Estimated materials and labor costs. Controlled and enforced compliance with safety regulations.

Sheldon Williams

CONSTRUCTION INSPECTOR – PAINTING AND STRUCTURAL

Mr. Williams has more than 10 years of experience as a welding and painting inspector including inspection for bridge painting for multiple contracts with NYSDOT. His experience includes performing QA/QC oversight for welding operations and conducting review of quality checks for welding and radiographic work.

NYCDOT Resident Engineering and Inspection, Services for Component Rehabilitation of 10 Bridges - Inspector

Scope of work includes constructability review of the design documents; CPM review of schedule and updates; continuous REI services and material testing; and public outreach. Construction cost - $6.35 million.

NYSDOT Region 10 Term Agreement Contract D030568 for Bridge Painting - Inspector

Inspected bridge painting for multiple contracts on all of the Region's major highways including: Rte 27, Southern State Parkway, Long Island Expressway, Northern State Parkway, Rte 25, Rte 25A, Meadowbrook Parkway, Rte 135 and more. Much of the work was performed at night with WZTC for lane closures. Work included containment and hazardous waste (lead paint) removal prior to installing primer, and a minimum of two coatings. Construction cost - $20 million.

NYCDEP Croton Water Treatment Plant - QA General Field Inspector

Supervised all welder qualification tests. Reviewing of weld procedures and welder qualifications. Oversight of all welding operations and NDE requirements. Supervised mapping and tracking of weld, the receiving and installation of equipment (Tanks, pumps, UV units), all QC contractors welding/painting/and mechanical. Walking of packages consisting of pneumatic testing. Pre-hydro and post hydro testing. Supervised all painting and mechanical contract. Piping system restoration. Supervised NDE inspection using the PT and MT process. Construction codes: ASME Section IX, ASME B31.1, ASME Section V, AWS D1.1, and AWS D1.6.

NYCDEP Croton Water Treatment Plant Raw and Treated Water Tunnels Connecting UV Plant - QA Welding Inspector

Supervised all welder qualification tests. Oversight all welding operations and NDE requirements. Review all welding procedures and qualifications. Supervised mapping and tracking of the weld. Supervised NDE inspections using the PT process. Construction codes are AWS D1.1.

S&B Engineers and Constructors, Ltd. - QA Welding Inspector

Responsible for conducting visual and dimensional examinations. Oversight all welding operations. Walking of packages consisting of pre-hydro, hydro, and post-hydro test. Mapping and tracking weld. Performed NDE inspections using the PT and the MT process. Construction codes are: ASME Section V, ASME Section VIII, ASME Section IX, ASME section B31.1, and AWS D1.1.

S&B Engineers and Constructors, Ltd., Meeker II Gas Plant - QA/QC Welding Inspector

Conduct visual and dimensional examinations. Oversight all welding operations. Walking of packages consisting of pre-hydro, hydro, and post hydro. Supervised all painting of mechani-

cal contract. Mapping and tracking welds. Supervised NDE inspections using the PT and MT process. Construction codes: ASME Section V, ASME Section VIII, ASME Section IX, ASME Section B31.1.

Oil States Industries, Inc. - QC Welding Inspector
Oversight of all welding operations. Dimensional verifications of fabricated structures. Supervised all painting of mechanical contract. Visual acceptance of weld and weld mapping. Supervised NDE inspections using the PT and MT process. Construction codes AWS D1.1 and API 1104.

Borco Oil Refinery Upgrade Project - (C.W.I.) Welding Inspector
Conducted/reviewed quality checks of all welding and radiographic. Testing procedures during the upgrade phase of Borco Oil Refinery tanks and associated piping. Construction codes are ASME Section V, ASME Section VIII, ASME Section IX, and ASME B31.3.

Weld Services - (C.W.I.) Welding Inspector
Welding of piping and structural members in accordance with the American Society of Mechanical Engineers code requirements during the shop fabrication phase of various projects. Responsible for visual acceptance of completed weldments. Construction codes are: ASME Section V, ASME Section VIII, ASME Section IX, and ASME Section B31.3.

Edward McManus, NICET I

ELECTRICAL CONSTRUCTION INSPECTOR

Mr. McManus is a Field Quality Control Inspector with 26 years of experience in civil and electrical inspection, especially electrical substations. He has expertise in construction management tank installation, the removal and remediation of petroleum contaminated sites, and public utility substation operations. He is also recognized for attention to detail and communication skills.

MTA LIRR, Bridge Painting - Construction Inspector for Maintenance and Protection of Traffic (MPT) for the Meadowbrook Parkway Bridge Painting Contract
Painting work done in accordance with national MUTCD and NYSDOT Specifications.

NYCDEP Sodom and Bog Brook Dams - Construction Inspector, Senior Quality Specialist II
Responsible for the inspection of drilling and installing anchors and sheathing.

NYCDDC Management Remediation of Petroleum Contaminated Sites - Senior Quality Specialist II
Provided direct supervision of four Field Inspectors. Responsible for the coordination of two to five Subcontractors and Subconsultant design firms.

- Ensured the fieldwork at 15 tank and 44 remediation sites, complied with plans, specifications, applicable laws and regulations, and was completed according to schedule. Additional duties included approving requisitions.

- Team nominated for CMAA Achievement Award. Won Gold Award Environmental American Society of Engineers of NY.

NYCDDC New York City Fire Department Storage Tank Program - Quality Control Inspector
Closed, removed, upgraded, and installed petroleum storage tank systems.

New York State Department of Transportation (NYSDOT) Reconstruction on Route 25A - Construction Inspector
Responsible for the asphalt resurfacing, drainage, traffic signal, sidewalk rehabilitation, full-depth pavement repairs (calcium chloride), sidewalks, six curbs, resetting catch basins, and traffic signal installation.

New York City Department of Transportation (NYCDOT) Various Locations - Construction Inspector
Responsibilities included the resurfacing with 1½ inch asphaltic concrete wearing course, installation of pedestrian ramps, and new curbs with sidewalks.

NYCDOT 64 Avenue Reconstruction Project - Construction/Electrical Inspector
Responsible for placement of base concrete, asphalt, and replacement of street lighting.

Triborough Bridge and Tunnel Authority (TBTA) Queens Ventilation Building - Construction Inspector
Responsible for masonry restoration and roof replacement.

Pilgrim Psychiatric Center - Senior Mechanical Inspector
Responsible for rehabilitation of three seven-story buildings approximately 500,000 square feet.

MTA MNR 110th Street Substation - Construction Engineer
Responsible for Construction Management for Traction Power.

MTA MNR Grand Central Terminal - Electrical Inspector
Responsible for PCB transformer removal and replacement, construction of four transformer houses and high voltage loop.

MTA MNR Traction Power Substation in Grand Central Terminal - Electrical Inspector
Primary responsibilities included ensuring that the General Contractor and Subcontractor comply with specifications, contract drawings, approved materials, and the National Electrical Code.

Tony Chanderjeet

ACI CONCRETE CONSTRUCTION SPECIAL INSPECTOR

Mr. Chanderjeet is an inspector with 10 years of experience supervising concrete and rebar testing and installation for construction projects, including parks, rail lines and stations, and commercial, recreational, residential, and hospitality facilities. An experienced concrete placement control inspector, he is an American Concrete Institute (ACI) Level I and II-certified Concrete Laboratory Testing Technician and a National Institute for Certification in Engineering Technologies (NICET)-certified Soil and Asphalt Inspector.

Hudson River Park Trust Hudson River Park - Senior Concrete Construction Special Inspector
Overseeing concrete and rebar inspections, installation, and placement at the 55-acre Hudson River Park, which spans from Battery Park to West 59th Street in Manhattan. Mr. Chanderjeet is verifying plans for rebar placement. He is also performing concrete field testing and asphalt and concrete plant inspections.

MTA Second Avenue Subway Station - Senior Concrete Construction Special Inspector
Conducted on-site construction observation and testing services at the Second Avenue subway station in Manhattan for the MTA. Mr. Chanderjeet performed moisture tests on fine aggregates and lightweight course aggregates, as well as gradation of course aggregates and lightweight aggregates. He prepared daily reports for project activities under inspection, calculated water to cement ratios, and verified specifications and tolerances of add mixtures according to the design mix.

NYCDDC The Bronx Zoo - Senior Concrete Construction Special Inspector
Prepared masonry cube samples, conducted soil compactions testing for foundation placement, and monitored concrete plant and field inspections at the Bronx Zoo in New York City.

USTA New Stadium - Senior Concrete Construction Special Inspector
Performed on-site quality control and testing during the construction of a new stadium for the United States Tennis Association (USTA). Mr. Chanderjeet conducted moisture tests on fine aggregates and lightweight course aggregates, as well as gradation of course aggregates and light weight aggregates. He calculated water to cement ratios and verified specifications and tolerances of add mixtures according to the design mix. Mr. Chanderjeet also composed daily reports for project activities under inspection and reviewed plans for rebar placement.

Fred Koomson

ACI CONCRETE CONSTRUCTION SPECIAL INSPECTOR

Mr. Koomson has over 35 years of construction inspection experience including performing bridge inspection, milling, roadway paving with concrete and asphalt, roadway reconstruction, drainage, sewer and water main installation. His experience includes providing construction oversight to ensure project schedule and specifications are adhered and keeping daily logs. These services have been provided for various agencies including the PANYNJ, NYCDDC, and NYCDEP.

PANYNJ New Jersey Marine Terminal Construction - Civil Inspector

Performed monitoring activities at Marine Terminal construction sites. Work includes installation, testing and inspecting Civil works. Provides oversight to ensure construction progresses as scheduled and contract specifications are adhered to. Prioritizes multiple assignments, maintain deadlines, and works in a team environment. Inspects construction site daily and works with contractors to schedule deliveries, follow safety requirements, adhere to quality and code compliance; files daily narratives and progress reports detailing personnel, equipment, materials and work summary. The following is a brief description of tasks that Mr. Koomson has completed for KSE under this assignment:

- Contract MFP-926.527, New Jersey Marine Terminals Building and Site Work Order - The work under this contract consists generally of general building construction for miscellaneous facility improvements including repair, rehabilitation, demolition and construction of various interior and exterior building systems such as curtain wall, roof, concrete slab, ceiling, floor tile, interior finish construction and fit up, painting, mechanical, HVAC, electrical, electronics, sprinklers, plumbing, conveying systems, interior landscaping and various utility runs within buildings and site work related, but not limited to repair, rehabilitation, demolition and construction of concrete and or asphalt paving, landscaping, concrete pads, sidewalks, curbs, erosion control, cracks and slurry seals irrigation, pavement striping, lighting, concrete traffic barriers, signage, traffic signals, electrical/communications ductbanks and wiring, drainage structures and piping, guide rails, exterior screening, exterior screening, exterior demising walls, fencing, and various utility runs to building lines and maintenance of traffic and work area protection at the New Jersey Marine Terminals of Port Newark, Elizabeth-Port Authority Marine Terminal and Port Jersey [Work Order #'s 1; 2; 5: 180 Heater Installation; 6; 8; 10; 14:Corbin and Tyler Street Sign Work; 17: Portable Guard Booth Installation; 18: Flood Protection at Build 260 and 111 Protective measures]

- Contract MFP-926.323, Port Newark Rail Repair via Work Order - The work under this contract consists generally of general repairs to, or replacement of, existing railroad track and turnouts, such as replacement of cross timers, surface and appurtenances and gauging of track, repair, rehabilitation, demolition and construction of drainage maintenance of traffic and Work area protection, pavement markings.

- Contract MFP-926.525, New Jersey Marine Terminals Paving and Utility Rehabilitation via Work Order - The work under this contract consists generally of asphalt milling, paving and installation of underground utilities, at Port Newark, Elizabeth Port Authority Marine Terminal, Port Jersey Marine Terminal North and South [Work Order #'s 1 Port St to Doremus; 4 BMW access road rebuild at Port Jersey; 10 Shoreline Restoration]

- Contract MFP-926.317, New York and New Jersey Marine Terminal Facilities Railroad Track Rehabilitation via Work Order - The work under this contract consists generally of performing general repairs to, or replacement of, existing railroad track and turnouts and or components of turnouts, replacement of rails and appurtenances and gauging of track, repair, rehabilitation, demolition and construction of concrete and/or asphalt pavement; concrete pads and walls; guide rails and fencing utilities; drainage; maintenance of at Port Newark, Elizabeth-Port Authority Marine Terminal. [Work Order #2 Berth 15 – 17 – 19; #4 Toyota Shoreline]

- Contract MFP-926.526, New Jersey Marine Terminals Priority Marine Rehabilitation via Work Order - The work under this contract consists generally of marine construction above and below deck; marine structure work; timber pile work; structural and concrete work including pile extensions and shortening; pile wrapping; excavation at the mud-line; cleaning of piles; chipping of concrete underwater, replacement of concrete underwater, installation of exterior or interior piles.

- MFP 926.319, New Jersey Marine Terminals Paving and Utility Rehabilitation via Work Order - The work under this contract consists generally of asphalt milling, paving, installation of storm drainage structures, piping and related work via Work Orders(s) at Port Newark, Elizabeth Port Authority Marine Terminal and Port Jersey Multi Facility Fender System Rehabilitation – Removal, replacement, and disposal of damaged fender system; installation of vertical sheeting; re-securing of fender piles; reinstallation of rubber blocks at Berth 21-25, Berth 1 at Bayonne

- Contract PN – 652.532, Doremus Avenue Lift Station Replacement - This work consisted of replacement of the existing lift station, including excavation, structural, mechanical, plumbing, electrical, and related work adjacent to building #377 and building #1900 at Port Newark

- Contract EP – 684.009, McLester Street Widening and Curve Realignment - This work consists of roadway realignment, including, paving, utilities, traffic controls, overhead signage, a storm water treatment unit, and related work

Mr. Koomson provided construction inspection on the following individual projects under this assignment:

- Multi-Facilities Projects (MFP) at Port Newark & Port Elizabeth covering change order work covering involving roadway, ports and terminals, etc.

- Port Elizabeth – North Ave/McLester St. Curve Realignment - The work consisted of roadway realignment, including paving, utilities, traffic controls, overhead signage, caissons, storm water treatment units and related work.

- Port Elizabeth Expressrail, Elizabeth Lead Tracks & South Bay Avenue - The work consisted of construction of second lead track into Expressrail, reconstruction of existing lead track, construction of rail bridge over McLester St., reconstruction of Bay Ave., construction of new South Bay Ave. roadway, utility and other related work.

Frederique Napiorski

SENIOR ESTIMATOR

Ms. Napiorski is a senior mechanical, electrical, and plumbing (MEP) estimator with 30 years of experience preparing cost proposals and estimates and providing project management for a wide variety of new building construction, fit-out, and renovation projects. She has extensive experience in developing and establishing architectural and engineering design and planning costs as well as project site-wide infrastructure costs. Ms. Napiorski has particular expertise involving electrical upgrades to rail power systems and fan plants; traction power; transit signals; utility service and distribution systems; and security, data/communications, and fiber-optic networks. In addition, she has also been responsible for the purchasing and scheduling of labor, materials, and equipment.

PANYNJ WTC Reconstruction Project Cost Control and Management Group - Chief MEP Cost Estimator/MEP Cost Engineer

Managing day-to-day operations of the MEP Cost Estimating Unit for the cost engineering and cost estimating program to integrate and control costs among all projects composing the redevelopment of the 16-acre World Trade Center (WTC) site in Lower Manhattan, for the Port Authority of New York and New Jersey (PANYNJ). Ms. Napiorski has assisted in the development and implementation of policy and procedures to conform to FTA guidelines. She has developed and standardized labor unit production and indirect costing of general conditions, which is being used across all programs, including One World Trade Center, the Memorial & Museum, the Transportation Hub, and the Vehicle Security Center. Ms. Napiorski is performing QA/QC reviews on estimates prepared and preparing engineering estimates from Stage 1 thru Stage IV. She has provided alternative analyses studies and evaluations, and performed audits and reconciliations on costs and scope. Ms. Napiorski has provided contract and change order negotiations and is supporting PANYNJ on negotiations with outside agencies. She has provided monitoring, trending and forecasts of project cost and is performing cost deviation studies, value engineering and impacts studies, and risk analysis. In addition, Ms. Napiorski is developing package scoping strategies and identifying project scope to be allocated or shared by other stakeholders. She is also developing and implementing methodologies to be used in cost sharing allocations and is monitoring program changes.

PANYNJ WTC Tenant Services Contract - Project Manager

Oversaw this contract to provide power, lighting, fire alarm, and data/telecommunication systems for approximately 400 tenants throughout the World Trade Center (WTC) complex in Lower Manhattan. The work for the Port Authority of New York and New Jersey (PANYNJ) had a total construction value of approximately $2.5 million.

PANYNJ Condenser Water System No. 1 Emergency Power Upgrade - Project Manager

Managed the $2 million, 5-kV emergency power upgrade of condenser water system No. 1 at the World Trade Center in Lower Manhattan for the Port Authority of New York and New Jersey (PANYNJ).

MWAA Rail to Dulles - Senior Electrical Estimator

Provided independent cost estimates for elevators and escalators, cathodic protection and corrosion control systems to support the $6.2 billion, 23.1-mile Federal Transit Administration New Starts project to extend Metrorail into the rapidly growing Dulles Corridor in Fairfax and Loudoun counties, VA. The Metropolitan Washington Airports Authority (MWAA) extension

will broaden service from the existing Orange Line at the East Falls Church station in Fairfax County to Route 772/Ryan Road in Loudoun County. Ms. Napiorski also prepared estimates for the and traction power system equipment.

NYCT Subway Cable Replacement - Project Manager
Oversaw this $5.9 million project to replace 100,000 feet of battery and control cables along the subway right-of-way in Brooklyn, Queens, and Manhattan for New York City Transit (NYCT).

NYCT 60th Street Tunnel Fan Plant Rehabilitation - Project Manager
Supervised the $2.1 million electrical rehabilitation of the fan plant in the 60th Street Tunnel in Manhattan, part of the New York City Transit (NYCT) subway system. The fan plant provides smoke evacuation for small track fires.

NYCT Johnson Street Fan Plant Rehabilitation - Project Manager
Managed the $1.5 million electrical rehabilitation of the Johnson Street fan plant in Brooklyn, NY, part of the New York City Transit (NYCT) subway system. The fan plant provides smoke evacuation for small track fires.

Confidential Transportation Agency Capital Security Program IDQ - Senior Electrical Estimator
Responsible for electrical cost analysis and estimates for the renovation of a portion of the second floor of an office building in White Plains, NY. This area will be renovated to include a new computer room, open area, and conference room, as well as several existing offices. The entire building is being renovated in phases to house various departments and functions. The electrical costs were estimated at $3 million. Ms. Napiorski developed scope, quantities, and material, labor, and equipment costs for secondary and emergency power distribution systems, lighting fixtures and branch circuiting, alarm systems, and telephone and data communication empty raceway systems.

PANYNJ PABT CCTV and Security System Upgrade - Project Engineer
Provided electrical engineering design for this $1.5 million CCTV and security system upgrade at the Port Authority Bus Terminal (PABT) in Manhattan for the Port Authority of New York and New Jersey (PANYNJ).

Columbia University Medical Center Change Order Review - Senior MEP Estimator
Estimating costs for a review of the MEP change orders and scheduling for a $23 million relocation of the Columbia Doctors Midtown office for Columbia University Medical Center. The project includes the fit-out of approximately 30,000 sf of Manhattan office space. Ms. Napiorski is verifying the Medical Center is providing estimation services for MEP system change orders. There are a total of 272 proposed change orders for the entire project. The firm is assisting the Medical Center with the project's change-order negotiation process by helping the center reach a settlement with the construction manager and subcontractors.

Columbia University Term Consultant for Cost Estimating and Change Order Review - Senior MEP Estimator
Provided estimating services for a term contract with Columbia University for independent cost estimating for multiple assignments at two Manhattan campuses on an as-needed basis. The firm is serving as an extension of Columbia's facility and project management staff and is reviewing change order requests related to various facility upgrades on the 32-acre Morningside Heights campus on Manhattan's Upper West Side, as well as providing independent cost estimating services for a new 17-acre campus under development in West Harlem. Ms. Napiorski evaluated MEP change orders.

John Solano, CCP

MEP ESTIMATOR

Mr. Solano is a mechanical estimator with more than 40 years of experience providing design and construction cost estimates for mechanical, electrical, and plumbing (MEP) systems for commercial, industrial, education, and healthcare facilities. He is skilled at coordinating subcontractors; managing and negotiating bid scopes, specifications, and pricing, and at preparing and updating critical path method schedules. In the course of his career, Mr. Solano has established excellent working relationships with unions, employees, clients, and associates, resulting in a strong network within the industry.

PANYNJ One WTC West Bathtub Vehicle Access and Performing Arts Center - Senior Mechanical Estimator

Developing cost estimates for engineering and design services for Phase III and Phase IV, as well as ongoing construction management services, for construction of the new West Bathtub Vehicle Access project and the Performing Arts Center at the 16-acre World Trade Center (WTC) site in Lower Manhattan, for the Port Authority of New York and New Jersey (PANYNJ). The scope of work includes construction phasing for the demolition of the North Temporary Access to PATH, coordination with the Tower One interim and permanent tenant and retail loading dock requirements, and integration of the Transportation Hub egress and program spaces. Mr. Solano is preparing cost estimates for all construction trades for engineering, design, and related construction services.

PANYNJ One WTC Below-Grade Pre-Tenant Retail Space - Senior Mechanical Estimator

Preparing cost estimates for the new below-grade retail space for the World Trade Center (WTC) in Lower Manhattan for the Port Authority of New York and New Jersey (PANYNJ). The retail space encompasses the below-ground areas of One World Trade Center; Towers 2, 3, and 4; and the Transportation Hub, parking garage, and Vehicle Security Center. Mr. Solano is responsible for providing takeoffs, pricing, and contractor estimate reconciliation for plumbing, fire protection, and HVAC pipe and ductwork. He is validating and negotiating contractor change orders. Mr. Solano is also overseeing junior mechanical estimators and preparing estimates with cost share responsibilities for various stakeholders, utilizing PlanSwift and Adobe "On Screen Takeoff" capabilities. He has designed a Microsoft Excel takeoff template utilizing pivot tables to provide cost data analysis.

PANYNJ One World Trade Center and National September 11 Memorial & Museum - Senior Mechanical Estimator

Provided cost estimates for One World Trade Center in Lower Manhattan for the Port Authority of New York and New Jersey (PANYNJ). Mr. Solano managed plumbing, fire protection, and HVAC pipe and ductwork takeoffs; pricing; and estimate reconciliation. He also validated and negotiated contractor change orders. He prepared estimates with cost share responsibilities for various stakeholders using PlanSwift and Adobe "On Screen Takeoff" capabilities, and developed a Microsoft Excel takeoff template that used pivot tables to provide improved cost data analysis.

PANYNJ WTC Center HVAC System Repairs - Project Manager, Mechanical Division

Oversaw estimating, client contract negotiation, construction, union labor relations, scheduling, material procurement, billings, selling, buyouts, audit reviews, and profitable contract execution for the restoration by the Port Authority of New York and New Jersey (PANYNJ) of the World Trade Center (WTC) in New York City following damage by a bomb. The project was completed in a 3-month period, with staff working 24 hours a day, 7 days a week. It involved coordination of the insulation of the temporary chillers, cooling towers, and related chilled

water and river water piping systems to restore operation of the damaged HVAC system. Mr. Solano negotiated the fee basis contract with billings in excess of $2 million for the project.

PANYNJ WTC Transportation Hub - Senior Mechanical Estimator
Preparing cost estimates for the new World Trade Center (WTC) Transportation Hub in Lower Manhattan for the Port Authority of New York and New Jersey (PANYNJ). The $3.2 billion hub includes a permanent PATH terminal; pedestrian connections to PATH subway lines; and state-of-the-art safety, security, and environmental enhancements. Mr. Solano is managing plumbing, fire protection, and HVAC pipe and ductwork takeoffs, pricing, and estimate reconciliation, as well as validating and negotiating contractor change orders. He is preparing estimates with cost share responsibilities for various stakeholders, utilizing PlanSwift and Adobe "On Screen Takeoff" capabilities and developing a Microsoft Excel takeoff template that uses pivot tables to provide improved cost data analysis.

PANYNJ WTC Vehicle Security Center and Tour Bus Parking - Senior Mechanical Estimator
Prepared cost estimates for the new World Trade Center (WTC) Vehicle Security Center in Lower Manhattan for the Port Authority of New York and New Jersey (PANYNJ). Mr. Solano managed the takeoffs, pricing, and contractor estimate reconciliation for plumbing, fire protection, and HVAC pipe and ductwork. He validated and negotiated contractor change orders, and reviewed junior mechanical estimators' calculations. Mr. Solano used PlanSwift and Adobe "On Screen Takeoff" capabilities to prepare estimates with cost share responsibilities for various stakeholders, and designed a Microsoft Excel takeoff template using pivot tables to provide meaningful cost data analysis.

BGPAA Bob Hope Airport RITC PM/CM - Senior Mechanical Estimator
Prepared cost estimates as part of STV's program and construction management (PM/CM) services to the Burbank-Glendale-Pasadena Airport Authority (BGPAA) for the development of the 3-level, 505,000-sf Regional Intermodal Transportation Center (RITC) at Bob Hope Airport in Burbank, CA. The $87.5 million facility will include rental car facilities; a bus transit area; links to local and regional train lines; an elevated walkway connecting to the airport terminal; and a 5-level, 1,043-space valet parking structure. Mr. Solano was responsible for plumbing, fire protection, and HVAC pipe and ductwork takeoffs and pricing for a 30% preliminary design performance scope estimate.

MTA Capital Construction/LIRR East Side Access - Senior Mechanical Estimator
Developed takeoffs, pricing, and estimate reconciliation for plumbing, fire protection, and HVAC pipe and ductwork as part of the $10 billion Metropolitan Transportation Authority (MTA) extension of Long Island Rail Road (LIRR) service to Manhattan's East Side. Mr. Solano responded to requests for proposals and prepared models for the client's proposed cost methodology. He designed a Microsoft Excel takeoff template utilizing pivot tables to provide cost data analysis, and prepared cost estimates with HeavyBid software.

Columbia University Term Consultant for Cost Estimating and Change Order Review - Senior Mechanical Estimator
Providing mechanical estimating oversight for a 3-year term contract with Columbia University for evaluation of change orders and independent cost estimating for multiple assignments at two Manhattan campuses on an as-needed basis. The firm is serving as an extension of Columbia's facility and project management staff and is reviewing change order requests related to various facility upgrades on the 32-acre Morningside Heights campus on Manhattan's Upper West Side, as well as providing independent cost estimating services for a new 17-acre campus under development in West Harlem.

Alex Sinayuk

MEP ESTIMATOR

Mr. Sinayuk is a mechanical engineering specialist with more than 36 years of experience preparing estimates of MEP design and installation projects for new and renovated facilities, including major transportation, commercial, municipal, educational, and medical facility projects. Having served as head of his own mechanical contracting firm, he is particularly experienced in preparing bid estimates; negotiating change orders; and managing subcontractors, mechanics, and staff. Mr. Sinayuk is also adept at reviewing contract designs for omissions and errors, purchasing equipment, determining construction schedules, and managing quality and safety controls. Based on this experience, he has served on Constructability Review Teams focusing on preparing MEP constructability reviews and reports.

PANYNJ JFK International Airport Building 14 HVAC Upgrades - Chief Estimator/Project Manager

Managed the cost estimates and purchasing of new HVAC equipment for this building at JFK International Airport in Queens, NY, for the Port Authority of New York and New Jersey (PANYNJ). Mr. Sinayuk supervised the development of mechanical shop drawings and material submittals, reviewed contract documents for omissions and errors, and handled bid preparation. He also scheduled construction, managed subcontractors and installation crews, and handled change order requests. The project involved replacing the air handling unit, repairing the damaged roof and slab, replacing existing ductwork, upgrading VAV boxes to ones that have electric heating coils, installing power wiring and a new temperature control system.

PANYNJ One World Trade Center - Senior Mechanical Estimator

Provided cost estimates for HVAC, plumbing, and fire protection systems for the $2.8 billion One World Trade Center (WTC), a major project included in the redevelopment of the 16-acre WTC site in Lower Manhattan, for the Port Authority of New York and New Jersey (PANYNJ). The tower is the centerpiece of the new WTC complex and will encompass more than 3.6 million gross sf, including office space, restaurants, an observation deck, and broadcast facilities. The building will also house below-grade shopping and access to the PATH transit system and the World Financial Center. Mr. Sinayuk provided value engineering services to identify potential cost savings. He reconciled mechanical estimates with independent subconsultants, developed unit prices and engineer's estimates for various project packages, restructured mechanical estimates for different cost allocations, checked estimates, and negotiated change orders.

PANYNJ WTC Towers 2, 3, 4 - Senior Mechanical Estimator

Prepared cost estimates for HVAC, plumbing, and fire protection systems for the construction of Towers 2, 3, and 4 as part of the new World Trade Center (WTC) complex in Lower Manhattan, for the Port Authority of New York and New Jersey (PANYNJ). Mr. Sinayuk provided value engineering for constructability and cost savings. He reconciled mechanical estimates with independent subconsultants, developed unit prices and engineer's estimates for various project packages, and restructured mechanical estimates for different cost allocations.

PANYNJ National September 11 Memorial & Museum - Senior Mechanical Estimator

Providing cost estimates for HVAC, plumbing, and fire protection systems for the World Trade Center (WTC) Memorial & Museum in Lower Manhattan, for the Port Authority of New York and New Jersey (PANYNJ). The memorial consists of two recessed square pools with waterfalls along the walls, representing the footprints of the destroyed twin towers, along with an 8-acre landscaped Memorial Plaza filled with more than 300 oak trees. Complementing the memo-

rial will be a state-of-the-art museum accessed through an entry pavilion. Mr. Sinayuk is providing value engineering for constructability and cost savings. He is reconciling mechanical estimates with independent subconsultants, developing unit prices and engineer's estimates for various project packages, restructuring mechanical estimates for different cost allocations.

PANYNJ WTC Vehicle Security Center and Tour Bus Parking Facility - Senior Mechanical Estimator
Developed cost estimates for HVAC systems for the World Trade Center (WTC) vehicle security center and tour bus parking facility in Lower Manhattan for the Port Authority of New York and New Jersey (PANYNJ). This $500 million facility is expected to screen an average of 2,000 vehicles daily. The design of the underground facility includes blast resistant structures and addresses sophisticated HVAC and exhaust ventilation requirements.

PANYNJ WTC Transportation Hub - Senior Mechanical Estimator
Generated cost estimates for HVAC systems for the $3.8 billion World Trade Center (WTC) Transportation Hub in Lower Manhattan, for the Port Authority of New York and New Jersey (PANYNJ). The hub includes a permanent PATH train terminal; pedestrian connections to PATH, ferries, and 11 Lower Manhattan subway lines; complex MEP facilities; and state-of-the-art safety, security, and environmental enhancements.

Chelsea Public Recreational Center HVAC Upgrades - Chief Estimator/Project Manager
Managed the installation of rooftop air handling units, split systems, exhaust and supply air fans, hot water boilers, radiators, duct hot water coils, dehumidification, heating and cooling air handling systems for swimming pool area with associated ductwork, piping, and automatic temperature controls for this project at West 25th Street and 10th Avenue in Manhattan. Mr. Sinayuk also led the development of cost estimates.

MTA LIRR Department of Program Management - Senior Estimator
Providing cost estimates for various LIRR projects, reviewing and negotiating change orders with contractors under a program management contract with the Metropolitan Transportation Authority (MTA) and Long Island Rail Road (LIRR).

MTA Capital Construction/LIRR East Side Access - Senior Mechanical Estimator
Developed HVAC take-off and cost estimates for tunnel ventilation and facility power at both the Manhattan and Queens, NY, sections of the $10 billion project for the Metropolitan Transportation Authority (MTA) to bring Long Island Rail Road (LIRR) service to Grand Central Terminal. The construction includes integration of the Amtrak high-speed rail program, tunneling beneath active transit lines, underpinning existing buildings and structures, shaft construction in a dense urban environment, and extensive utility relocation while maintaining ongoing rail operations.

MTA LIRR Police Interior Fit-Out - Chief Estimator/ Project Manager
Managed cost estimation and purchasing of HVAC equipment, developed the scheduling for construction, and provided overall project management for this interior fit-out project in the Jamaica section of Queens, NY, for the Metropolitan Transportation Authority (MTA) and Long Island Rail Road (LIRR). Mr. Sinayuk supervised the development of shop drawings and material submittals; reviewed contract designs for omissions and errors; and handled bid preparation, estimation, and negotiation of change orders. He also coordinated with other trades and monitored subcontracted personnel. The project involved the complete interior fit-out of three floors, which included installing a new HVAC system, plumbing, fire protection, power, fire alarm, data communication, security, CCTV and control wiring, walls and partitions, doors, windows, ceilings, holding cells, floors, ceramic tiles, and lockers.

Nicholas J. Rollizo

SCHEDULER

Mr. Rollizo is a scheduler and mechanical engineer with experience developing schedules for government, commercial, and transit projects, including bridge, rail, highway, and multimodal. He is also experienced in preparing and analyzing schedules for complex projects and large construction sites, including the 35-acre New York City Police Training Academy in Queens, the Hoboken Ferry Terminal and Yard Complex, and the East Side Access project. Mr. Rollizo is adept at providing critical path method (CPM) schedules and updates.

Project Experience

PANYNJ One World Trade Center - Schedule Analyst

Analyzed sequencing scenarios for the completion of the foundations for One World Trade Center (WTC), the centerpiece of the new WTC complex in Lower Manhattan, for the Port Authority of New York and New Jersey (PANYNJ). The 1,776-foot tower includes more than 3.6 million gross sf, and houses below grade shopping and provides access to the WTC Transportation Hub and the World Financial Center.

PANYNJ WTC Vehicle Security Center and Tour Bus Parking Facility - Schedule Analyst

Developed possible means and methods and durations of construction work activities for schedules for this facility, which will be used to examine vehicles entering the World Trade Center (WTC) site in Lower Manhattan. The Port Authority of New York and New Jersey (PANYNJ) project also includes a parking facility to serve up to 80 tour buses. Mr. Rollizo built a scale model of the structure's garage to use in the planning process.

NJ TRANSIT Hoboken Terminal and Yard Complex Rehabilitation and Redevelopment - Schedule Analyst

Developed and analyzed the Stage 3 CPM construction schedule for the renovation and redevelopment of NJ TRANSIT's historic Hoboken Terminal and Yard Complex on the New Jersey waterfront. The $120 million restoration encompassed the Hoboken Terminal building, both railroad and ferry terminals, and a Bush train shed and storage yard, as well as support facilities for the six commuter rail lines that terminate at the station. Mr. Rollizo provided the construction schedules using Primavera Project Planner.

MTA Capital Construction/LIRR East Side Access - Schedule Analyst

Migrated all CPM schedules from Primavera Project Planner to Project Portfolio Management (P6) for the $10 billion Metropolitan Transportation Authority (MTA) project to provide direct service for Long Island Rail Road (LIRR) trains to Grand Central Terminal in Manhattan. Mr. Rollizo also managed the database for all schedules developed with P6.

Town of Fairfield/ConnDOT Fairfield Metro Station CEI Services - Schedule Analyst

Developed the monthly update schedule to portray ongoing construction activity and quantify progress for a new train station along the New Haven Line in Fairfield, CT. STV performed daily quality control of all construction activity for this $42.7 million Connecticut Department of Transportation (ConnDOT) project, which included a vehicular bridge over the tracks, a pedestrian overpass, and an expanded parking lot. The station was built in conjunction with a mixed-use development and incorporated 1,000-foot-long, high-level platforms along the 4-track main line.

NYSDOT Gowanus Expressway Rehabilitation - Schedule Analyst
Analyzed contractor CPM construction updates against the baseline schedule for the $146 million rehabilitation of the Gowanus Expressway in Brooklyn, NY, for the New York State Department of Transportation (NYSDOT). The project included replacement of the concrete roadway deck, deteriorated bolts, rivets, diaphragms, and bracing; reinforcement or limited replacement of deteriorated stringers and floor beams; and painting to maintain the integrity of the steel.

NYCDOT Willis Avenue Bridge Reconstruction REI - Schedule Analyst
Evaluated contractor CPM construction updates against the baseline schedule as part of resident engineering and inspection (REI) services for the $640 million New York City Department of Transportation (NYCDOT) replacement of the Willis Avenue Bridge over the Harlem River. The replacement involved a movable swing span bridge that was fabricated off-shore and floated in place. The main swing span and approach spans have a new alignment just south of the bridge with new ramps connecting to a rebuilt Harlem River Drive viaduct.

ConnDOT Moses Wheeler Bridge Replacement - Schedule Analyst
Examined various construction sequencing and methodologies to calculate the shortest project completion time for the $218 million Connecticut Department of Transportation (ConnDOT) replacement of the Moses Wheeler Bridge, which carries I-95 over a local roadway, parking areas of a retail shopping center, and the Housatonic River between Stratford and Milford, CT. Mr. Rollizo took into account the complicated phasing required, as the bridge will be in use at all times during construction. The project also involves concrete segmental construction and marine work.

NYCDDC New York City Police Training Academy CM - Scheduler
Developed the weekly engineering submittal schedule, coordinated construction schedules, and provided monthly progress updates as part of construction management (CM) services for the new 35-acre New York City Police Department (NYPD) academy campus in the College Point section of Queens, NY, for the New York City Department of Design and Construction (NYCDDC). This joint-venture, design-bid-build project will accommodate all of the NYPD's recruitment and in-service training requirements, and it will be the largest public building project ever undertaken in New York City. The $656 million Phase I of the project will provide a new academic building, a physical training facility, and a central utility plant. Phase II will include firing ranges, a tactical village for urban training, and other elements. The project has been designed for a LEED® Silver rating.

DASNY Bronx Family and Criminal Court House - Preliminary Scheduler
Developed the preliminary schedule for the interior renovation of the Bronx Family and Criminal Court House, a $30 million project for the Dormitory Authority of the State of New York (DASNY). The renovations will improve the holding areas for New York Police Department arrest-to-arraignment functions. Mr. Rollizo used Primavera Project Planner to provide construction schedules as well as supporting drawings and documents.

Rohit Ahuja

CONSTRUCTION SCHEDULER

Mr. Ahuja has 20 years of experience in CPM scheduling, construction management, project and program management, project controls, claims analysis, resource/cost management, strategic, and organizational planning, business process reëngineering, and performance improvement. Clients include both private and public organizations in the fields of construction, transportation, pharmaceutical, process, finance, real estate, and information systems. Responsibilities include developing, updating, analyzing, and reporting on detailed cost/resource loaded CPM schedules.

PANYNJ Newark Liberty International Airport Terminal B Renovations - Project Scheduler
This project included providing CPM scheduling for major renovations at Terminal B in Newark, NJ. The scope of work comprised final design and contract documents (stage iii) and post award services (stage iv) for Terminal B mid and upper levels and other related infrastructure.

PANYNJ Newark Liberty International Airport North Cargo Building Facility - Project Scheduler
This project involved developing, managing, updating and analyzing detailed CPM schedules for North Air Cargo Building in Newark, NJ. Mr. Ahuja's responsibilities included developing and maintaining detailed resource and cost-loaded CPM schedules, and performing time-impact analyses and making presentations to clients.

United Airlines Maintenance Operations Center - Project Scheduler
This project involved analyzing and developing strategies, schedules, resources, and costs for the construction of a $1 billion Maintenance Operations Center for United Airlines.

PANYNJ Newark Liberty International Airport Continental Airlines Terminal Expansion - Project Scheduler
This project included developing, managing, updating and analyzing detailed CPM schedules for this Continental Airlines terminal expansion project in Newark, NJ. Responsibilities included developing and maintaining detailed resource and cost-loaded CPM schedules for the North Air Cargo Building at Newark Airport. Also responsible for performing time-impact analyses and making presentations to clients.

PANYNJ Newark Liberty International Airport Project Management Support - Project Scheduler
This project involved developing, updating, analyzing and reporting on detailed cost/resource loaded CPM schedules using Primavera, in Newark, NJ.

PANYNJ JFK International Airport Terminal 4 - Project Scheduler
This project involved the construction of a new $1.4 billion, 1.5 million-sf terminal, which replaced JFK's old International Arrivals Building in Queens, NY. Mr. Ahuja's services involved developing and managing a detailed CPM schedule for the electrical contractor client during the construction phase, who was under a separate contract with the PANYNJ for the extensive, approximately $20 million electrical scope of work.

PANYNJ JFK International Airport Project Management Support - Project Scheduler
This project involved developing, updating, analyzing and reporting on detailed cost/resource loaded CPM schedules using Primavera in Queens, NY.

MTA Task Order Design/Technical Services Security Capital Program - Project Scheduler
This assignment involves providing cost estimating and project scheduling services for engineering design and technical services for the Metropolitan Transportation Authority (MTA) security improvement capital program in New York, NY. Services include risk and vulnerability assessments, development of a security program and security design guidelines, engineered solutions for threat mitigation, cost/benefit analyses of alternative mitigations, conceptual design, design development, final design, contract document preparation including drawings and specifications, preparation of project phasing plan and cost estimates, value engineering, and pre- and post-construction contract award services for a variety of security projects.

MTA Rail Control Center - Project Scheduler
This project involved developing, and updating detailed CPM schedules in New York, NY. Responsibilities also included analyzing delays, and performing time impact analyses. This was a project for a Bonding company that resulted from a defaulted contractor. Tasks involved managing the scheduling efforts that include developing and analyzing the detailed CPM schedules for remaining work, as well as working with new contractors and subcontractors to develop strategy, WBS and CPM schedules to complete remaining work.

MTA Times Square and 53rd Street Renovations - Project Scheduler
This project involved providing scheduling services for various renovations in New York, NY.

MTA Union Square Station - Project Scheduler
This project involved providing scheduling services for various renovations in New York, NY.

World Trade Center - Project Scheduler
This project involved the development of CPM schedules and re-construction strategies to restore the entire World Trade Center facility, within an aggressive time frame, following the explosion in February, 1993. There were evaluations to the damages to the World Trade Center, incorporated in the CPM schedule and analyzed impacts. Assistance was given to the Port Authority in preparation of claims to the insurance companies as a result of the blast. These claims were presented in Primavera graphics and schedule formats. Conducted schedule and risk analysis on the project. These claims were used for testifying against the persons responsible for the bombing of WTC. Project and program controls/management support services for a $970 million capital program for World Trade Center, New York. The capital program had four major programs: Building Systems, Security Systems, Public Space and Asset Renewals. These programs were divided into 30 major projects and 110 sub-projects consisting of software design, development, computer hardware, security and digital equipment procurement, installation, renovation, base building and interior construction. Develop, manage and update detail cost and resource loaded CPM Schedules for an integrated Program Controls/Project Management System (PC/PMS) for the World Trade Center Capital Program from conception to delivery. The system was developed in Sybase with Power Builder in LAN environment. Major role in managing the design, development, testing and implementation of the PC/PMS.

Yvonne E. Dennis

SENIOR CONTRACT SPECIALIST

FIRM
STV CONSTRUCTION, INC.

YEARS OF EXPERIENCE
46

EDUCATION
COURSEWORK IN COMPUTER SCIENCE; GRAHAM BUSINESS COLLEGE

DIPLOMA, STENOGRAPHY; DURHAM COLLEGE, JAMAICA, WEST INDIES

COMPUTER SKILLS
PRIMAVERA EXPEDITION, MS ACCESS

Ms. Dennis has more than 45 years of experience in administrative support, including document control, and monitoring submissions, correspondence, and logs. She is adept in maintaining change orders, and assisting with billing, ledgers, and reconciliation of accounts. As a documents control administrator, Ms. Dennis has maintained all reports and logs, in addition to distributing all project-related correspondence and information. She has been responsible for running an office and supervising out-of-house and in-house operations such as payroll, timesheets, and supply and equipment maintenance. In addition, Ms. Dennis' familiarity with the archiving program Primavera Expedition has proven invaluable in providing document control services.

Project Experience

PANYNJ WTC Transportation Hub - Document Control/Project Control

Providing document control services during the engineering and design of the 2-million-sf, $3.2 billion Transportation Hub at the World Trade Center (WTC) site in Lower Manhattan, for the Port Authority of New York and New Jersey (PANYNJ). The intermodal facility will link 11 subway lines, PATH trains, and ferry service to locations on and around the WTC site; provide 400,000 sf of retail space; and serve 250,000 users per day. The firm is architect of record and also providing cost estimating and value engineering services and supporting construction staging plans. Ms. Dennis is responsible for fielding incoming and outgoing correspondence, tracking and scanning all documents, archiving the documents using Primavera Expedition, and preparing invoices and correspondence. She is updating and maintaining an electronic database of all records and documents, and is generating and preparing hard copies of all Expedition logs. Ms. Dennis established and is maintaining a drawing list database with Microsoft Access. She is securing hard copies of documents in the document control file room. In addition, Ms. Dennis is providing special handling of secure client and subconsultant correspondence, and helping train new employees and interns. She reports to the project manager.

PANYNJ AirTrain JFK - Document Control

Maintained document control for a $1.3 billion design-build-operate-maintain (DBOM) project for an elevated light rail system servicing JFK International Airport in Queens, NY, and connecting passengers to the New York City and Long Island subway/bus systems and rental car areas. The project included a $29.5 million, six-track, 64,000-sf operations, maintenance, and storage facility in Queens that houses a 2,500-sf operations control center houses for the 8.4-mile, 10-station system, and security operations that integrate hundreds of CCTVs and direct communication to each station's emergency command center. Ms. Dennis was responsible for fielding incoming and outgoing correspondence, tracking and scanning all documents, archiving the documents using Primavera Expedition, and preparing invoices and correspondence. She worked reported to the project manager and monitored over 1,000 boxes and packages of documents for this project. The firm provided complete architectural and engineering design, environmental, and construction support services.

MBTA Greenbush Line Rail Restoration Design-Build - Document Control

Monitored incoming and outgoing correspondence for the Massachusetts Bay Transportation Authority (MBTA)'s restoration and reconstruction of this right-of-way through the towns of Braintree, Weymouth, Hingham, Cohasset, and Scituate, MA, on the South Shore of Massachu-

setts. The project included the implementation of seven new stations (each with an 800-foot-long high-level platform), a new signal and communication system, and a layover facility at the end of the line in Scituate. Ms. Dennis tracked, scanned, and archived documents, and prepared invoices and letters for all documentation that passed through the firm's New York office.

Federal Bureau of Prisons Field Office - Former Administrative Assistant/Document Controls
Provided document control services using Primavera Expedition and maintained the project flow of submissions, incoming and outgoing correspondence, and all associated reports and logs for this office in Brooklyn, NY. Ms. Dennis worked independently, with minimum supervision and guidance.

Federal Bureau of Prisons Field Office - Former Secretary/Receptionist
Maintained and distributed all correspondence, minutes of meetings, submittals, and change orders at its office in Brooklyn, NY. Ms. Dennis managed in-house staff payroll, timesheets, and supply and equipment maintenance. She also oversaw the operation of the office.

Construction Firm Main Office - Former Staff Accountant
Maintained billing, recording, and issuing of credit and debit memos; reconciled accounts receivable to general ledgers; conducted collection calls; and resolved billing errors with clients from a construction firm's main office in New York. Ms. Dennis maintained a monthly report, completed A/P invoice entries, and verified entries and reports. She updated and revised vendor lists, maintained employee counts and salaries, updated net plan information as received from project managers, and created net plans and modifications for new projects or change orders. Ms. Dennis also handled outgoing mail and ordered office supplies.

Dennis Abbate

CONTRACT SPECIALIST

Mr. Abbate has nearly 15 years of experience in document control, including maintenance of electronic databases and hard copy files of records and documents. He is adept at establishing and maintaining drawing list databases with Microsoft Access and is proficient in the use of Primavera Expedition software. Mr. Abbate is leading a team responsible for document control services during construction of the World Trade Center Transportation Hub in Lower Manhattan, and was recognized by STV's project team as the 2010 Employee of the Year. He is responsible for monitoring and uploading requests for information (RFIs), requests for comment (RFCs), shop drawings, and submittals for this $3.2 billion project, as well as performing quality assurance/ quality control (QA/QC) for all contract drawings.

PANYNJ WTC Transportation Hub - Document Control Specialist/ Project Engineer

Updating and maintaining an electronic database of records and documents using Primavera Expedition software for the design of the $3.2 billion World Trade Center (WTC) Transportation Hub in Lower Manhattan, as part of a joint venture and working with renowned Spanish architect Santiago Calatrava. The 2-million-sf, $3.2 billion intermodal facility will link 11 subway lines, PATH trains, and ferry service to locations on and around the 16-acre WTC site; provide 400,000 sf of retail space; and serve 250,000 users per day. Mr. Abbate is maintaining electronic PDF documents in the project electronic network and Primavera contract manager, and is preparing periodic contract manager logs. He is responsible for establishing, updating, and maintaining a drawing list and final design deliverables database with Microsoft Access; generating and editing summaries for weekly meetings; and generating, processing, reviewing, and routing RFIs and shop drawings. The project has included approximately 85,000 submittals/shop drawings and more than 14,000 RFIs. As a document control specialist, he is managing a team responsible for services during construction including the RFI/RFC/shop drawing/submittal process. Mr. Abbate's responsibilities include delegating work and responsibilities, developing and updating procedures, and training new staff. He is also continuing to maintain the Microsoft Access contract drawing database; recording every contract drawing, sketch, bulletin, and addendum sent from the Downtown Design Partnership (DDP); and performing QA/QC of contract drawings before releasing them to PANYNJ. In addition, Mr. Abbate has created a Microsoft Access database containing more than 40,000 records of all contract drawings and associated revisions. He is emailing and uploading RFIs to the proper reviewers; emailing and uploading reviewed RFIs, RFCs, shop drawings, and submittals at the close of each business day; and generating reports and checking due dates of RFIs, shop drawings, and submittals. Mr. Abbate is making sure deadlines are met for RFI and shop drawing reviews to be returned, and is confirming that RFIs and shop drawings are submitted to the contractor with proper requirements and follow the appropriate protocol. He is providing QC of all shop drawings and submittals received from the contractor, and resolving any discrepancies. Mr. Abbate is in daily communication with the construction manager and client to maintain a fluid work flow with each entity.

Anthony J. Boyd

CONTROL SPECIALIST

Mr. Boyd has more than 15 years of experience managing documents on large, complex projects in the New York City metropolitan area. He has prepared and maintained control records and has been responsible for tracking design and shop drawings. Mr. Boyd is skilled at maintaining labor schedules; managing personnel; and coordinating with contractors, subcontractors, and architects. He is also experienced in organizing and analyzing reporting data for management and in overseeing requests for information (RFIs).

NYCDDC New York City Police Training Academy CM - Document Control Manager

Managing preconstruction documentation for the New York City Police Academy, being built in two phases on a 33-acre municipal site in the College Point area of Queens, NY, for NYCDDC. The state-of-the-art facility will accommodate all of the New York City Police Department's recruitment and in-service training requirements. The $656 million, 720,000-sf Phase I comprises a new academic building, a physical training facility, and a central utility plant. Mr. Boyd is overseeing the blueprints, shop drawings, specifications, and invoices. The LEED®-registered project is seeking certification to the Silver level.

USPS Brooklyn Post Office - Document Controller

Oversaw the transmittals, submissions, and RFIs for the $146 million renovation and adaptive reuse of a 540,000-sf U.S. Postal Service (USPS) building in Brooklyn, NY.

GSA Federal Courthouse Renovation - Document Controller

Coordinated the documents and processed RFIs for the $197 million renovation of an 85,000-sf federal courthouse in Brooklyn, NY, for the U.S. General Services Administration (GSA). The addition created 40,000 sf of office space and judges' chambers.

Metropolitan Museum of Art Expansion - Document Controller

Facilitated the coordination of the file clerking, correspondence, and project documents for the $52 million refurbishment and expansion of one of the world's largest museums, located in Manhattan. The expansion created space for the new Greek and Roman galleries, as well as staff space. Mr. Boyd assumed responsibility when the previous controller left the job suddenly. He also coordinated the specifications for the cooling and electrical systems upgrades.

Private Developer Maxwell Place on the Hudson - Document Control Lead

Coordinated the construction documents and labor work sheets for the $195 million construction of Block A and Block B of a luxury condominium and mixed-use facility in Hoboken, NJ. The scope of work included a 12-story, 350,000-sf building with 169 units and a below-grade parking deck in Block A, and a 376-unit, 990,000-sf space with a 27-month completion schedule in Block B.

Private Developer 535 West End Avenue - Document Control Lead

Oversaw the construction documents and tracked samples for the $200 million construction of a 20-story luxury residence building located in the Upper West Side neighborhood of Manhattan. Mr. Boyd provided file clerking and correspondence for approvals.

Menorah Home and Hospital - Document Controller
Organized the close-out construction documents for a $40 million renovation, of a nursing home in Brooklyn, NY. Mr. Boyd coordinated the mock-ups for the field and managed the construction documents, including locating windows and doors on plans.

Davinder Kaur

CONTRACT SPECIALIST

Ms. Kaur has more than 10 years of experience as a contract administrator and is skilled at developing and administering contracts and requests for proposals (RFPs) for multimillion-dollar construction projects. Her expertise includes managing contracts and pre-award contracts and administering change orders, progress measurements, and correspondence. Through Ms. Kaur's extensive work with the Port Authority of New York and New Jersey (PANYNJ) for the construction of the World Trade Center (WTC) Transportation Hub, she is proficient in standard operation procedures and best practices relating to contracts management in the government contracting environment, including Federal Acquisition Regulation (FAR) requirements. She is adept at organizing and executing project plans and collaborating with diversified technical teams.

PANYNJ WTC Transportation Hub - Contract Administrator

Prepared and issued RFP packages and contracts for approximately $500 million worth of subcontracted work for the construction of the WTC Transportation Hub in Lower Manhattan. The 2-million-sf multi-modal center will link Port Authority Trans-Hudson (PATH) service, numerous subway lines, the Battery Park City Ferry Terminal, the World Financial Center, the National September 11 Memorial & Museum, and One World Trade Center. Underground pedestrian concourses will serve 10 million sf of commercial development in five office towers and more than 400,000 sf of retail development. Ms. Kaur managed all phases of contract management for 60 contracts, from initial procurement through release of RFPs to award of subcontracts. She prepared and coordinated all required closeout correspondence and documentation for a timely closeout of contracts, and prepared and maintained a contract file check list of completed closeouts. Ms. Kaur reconciled the contracting and accounting systems, and she made sure of subcontractor compliance with FAR, New York City, and PANYNJ regulations. She audited subcontractor invoices, verified work in place, made sure of timely payment for all subcontractors, and participated in procurement meetings with client and meetings with subcontractors. Ms. Kaur developed and maintained contract management systems to track correspondence, invoices, modifications, payment and performance bonds, and insurance. She also reconciled monthly contract reports and maintained contract management files. In addition, Ms. Kaur managed and mentored two contract technicians.

NYCDDC New York City Police Training Academy CM - Contract Administrator

Providing document control for the construction management (CM), including preconstruction, construction, and post-construction services, of the new $656 million academy being built by New York City Department of Design and Construction (NYCDDC) for the New York City Police Department in the College Point section of Queens, NY. This joint-venture, design-bid-build project consists of two phases, and will encompass a new academic building, a physical training facility, a central utility plant, firing ranges, and a tactical village for urban training. The project is registered for LEED® with the certification goal of Silver. Ms. Kaur is responsible for the timely and accurate submission of project documents, including developing and maintaining the document development and approval systems, and providing recommendations for improvements. She is managing FASTTAC and Constructware updates, including drawings and bid packages. Ms. Kaur is tracking requests for information and architect's supplemental instructions, and making sure the team is working with updated drawings and specifications. She is also arranging weekly management meetings.

Lisa Canton

NYCTA CM-1256 Construction Management Services for the Fulton Street Transit Center - Document Control Specialist

Providing construction management services for this $880 million project. The Metropolitan Transportation Authority and MTA Capital Construction are building a new Fulton Street Transit Center in the general vicinity of Fulton Street and Broadway, incorporating six existing Lower Manhattan subway stations which includes: Fulton Street for nos. 2, 3, 4, 5, J, M and Z trains; Broadway-Nassau Street for A and C trains; Chambers Street / World Trade Center for E train; and Cortlandt Street for R and W trains. The FSTC project's goal is improve access to and connections between 12 subway lines for hundreds of thousands of daily commuters and Lower Manhattan residents and visitors, and will link NYC Transit facilities with PATH service and the World Trade Center site. Construction of the Fulton Street Transit Center is underway and parts of the new station have already been opened for commuter use.

CH2M HILL, Inc. - Document Controls Assistant

Responsible for submittals during Construction (SDC) Coordinator. Served as the Southeast Regional (SER) Lead Point-of-Contact for construction services coordination; by providing leadership to peers in administrative communication by training external SER staff on corporate database procedures; and providing the technical skills necessary to coordinate, research, and track construction Submittals, compiling engineer comments on submittals; processing submittals after engineer dispositions; working on fast paced deadlines for Requests for information (RFI's), Clarification/Interpretation Requests, Field Orders, and Operation & Maintenance Manuals for reviewing design engineers, client, field representatives & Project Managers; providing technical assistance and training of SDC coordinators in tracking construction procedures using Expedition (Primavera- Contract Manager); maintaining Project Records during the phase, and archiving at closeout; assisting Operations Leader (OL) with meeting staff utilization goals, communication on project chartering meetings/provide copy of project instructions to OL. Maintained project schedule and submittal reports for all in-house projects, including duration and provide primary project point-of-contact with direct informative technical feedback meetings on a biweekly basis.

CH2M HILL, Inc. - Document Publishing Specialist and Lead Construction Specifications Coordinator

Responsible for setting up CSI master specifications for projects in Panagon database, tracking specification sections, attending project meetings, processing and proofing specifications and references, communicating with Project Assistants and Engineering team on the project, scheduling, forwarding, and assembling the contract documents for reproduction, distributing the contract documents for internal, Client, Plan Rooms, and Contractor distribution. Bidwork procedures include selling contract documents to bidding contractors, subcontractors, and equipment suppliers; creating, compiling and distributing addenda on project to distribution list; and sending out weekly bidder's list to companies interested in networking with bidders in the event they win bid. Conforming documents which include revising all changes per

addenda to specifications; and preparing signed Contract Documents for client and awarded contractor to use in the field during construction. Assisting engineers and other processors to meet their deadlines so that workload and deadlines are compatible.

CH2M HILL, Inc., Gainesville, FL - Administrative Assistant
Served as the only administrative assistant for the Environmental Department of 23 engineers. Had independently prepared reports for the Senior Environmental Department Manager and coordinated presentations and production (graphics, editing and reproduction), routinely solved problems and questions for engineers; performed workload leveling for administrative work group; drafted and tracked project and subcontractor invoices; setup and maintained financial and procurement databases and tracking systems; developed new or recommended revised procedures; coordinated conferences, weekly & monthly staff and client professional meetings and organized community events. Collected and compiled data in response to special requests; screened calls, arranged meetings and engineer travel; and maintained the schedule for senior management and other personnel.

CH2M HILL, Inc. - Document Publishing Specialist and Construction Specifications Processor
Responsible for setting up CSI master specifications for a project in Word Perfect & SAROS software, tracking specification sections, attending project meetings, processing and proofing specifications and references, communicating with Project Assistants and Engineering team on the project, scheduling, forwarding, and assembling the Contract Documents for reproduction, distributing the Contract Documents for internal, Client, Plan Rooms, and Contractor distribution. Bidwork procedures include selling Contract Documents to bidding contractors, subcontractors, and equipment suppliers; creating, compiling and distributing addenda on project to distribution list; and sending out weekly bidder's list to companies interested in networking with bidders in the event they win bid. Conforming documents which include revising all changes per addenda to specifications; and preparing signed Contract Documents for client and awarded contractor to use in the field during construction. Assisted engineers and other processors to meet their deadlines so that workload and deadlines are compatible.

Shands-Alachua General Hospital - Part-Time File Clerk
Responsible for filing confidential documents and medical records; also billing appropriate patient insurance companies for medical services patients received from hospital.

Christine Stanton

CONTRACT SPECIALIST

Ms. Stanton has 14 years of experience as a document control specialist for the A/E and Construction Industry. Her experience includes: preparation of Subcontracts and Vendor Agreements and Change Orders for Owner and Subcontractors; processing request for information and submittals; management of insurance certificates; and maintaining current logs (Change Orders, Contracts, Drawing Lists and Insurance) using Primavera Expedition.

PANYNJ Construction Management Services on a "Call-In" Basis – Field Position for Contract Specialist for Construction Management Division - Contract Specialist

Working out of the Office of the Assistant Chief Engineer – Construction and the Engineer of Construction, Construction Administration, Engineering Department at the Port Authority Tech Center in Jersey City, NJ. Responsible for consultant invoices, purchase order budgets, new call-in agreement requests, distribution of bid-tabs, non-disclosure agreements, and the bid log.

NJSDA Construction Management Services for Roberto Clemente School - Document Control Engineer

This project consists of the renovation of an existing 8,200-sf commercial building into four kindergarten classrooms, one multi-purpose room, a kitchen and administration spaces. The project also includes building a parking lot on a different site adjacent to the building site. Scope of work also includes a new roof and 5 HVAC roof top units. The existing building is one story on grade steel frame structure that has no basement.

Hudson Meridian Construction Group, New York, NY - Project Document Control Administrator

- Prepare Subcontracts and Vendor Agreements
- Prepare Change Orders for Owner and Subcontractors
- Process request for information and submittals
- Manage and obtain insurance certificates
- Maintain current logs (Change Orders, Contracts, Drawing Lists and Insurance) using Primavera Expedition
- Code all invoices and requisitions
- Set up and maintain files for correspondence and submittals
- Set up and maintain Control Books and PM Binders
- Assist Director of Field Operations/Project Executive

Jeffrey M. Brown Associates, New Jersey & New York - Project Document Control Administrator

- Prepare Subcontracts and Purchase Orders
- Prepare Change Orders for Owner and Subcontractors
- Process all change management, request for information and submittals utilizing Expedition
- Manage and obtain all insurance certificates
- Maintain current logs Change Orders, Change Proposals, Contracts, Cost Worksheet, Drawing Lists,
  Insurance and Potential Change Orders) using Primavera Expedition
- Request, gather and process all closeout material
- Review and distribute all faxes and incoming mail using DocStar
- Set and maintain files for correspondence and submittals

Jeffrey M. Brown Associates, New Jersey & New York - Project Secretary

- Managed a field office for a construction site
- Handled all calls for this site
- Scheduled and coordinated meetings between management, owners and subcontractors
- Ordered all supplies needed for the jobsite
- Maintain all filing

J.D. Edwards and Company, Rutherford, NJ - Training Center Coordinator

- Provided receptionist service for a training facility housing over 300 students
- Prepare and coordinate training and marketing material for all classes
- Act as corporate "point person", providing clients with assistance on issues ranging from using the software to accessing the Internet

J.D. Edwards and Company, Rutherford, NJ - Office Receptionist

- Provided receptionist services for an office housing over 500 employees
- Processed administrative requests utilizing the Microsoft Office
- Managed the appointments for several key company officers, as well as conference rooms, utilizing Microsoft Outlook
- Acted as the "backup" Office Manager, during the Office Manager's vacation periods

Venestina Cuevas

OFFICE ENGINEER

Ms. Cuevas has more than 10 years of experience in the design and construction of transportation projects, including roadway, bridge, infrastructure, and facility improvements, primarily in the New York metropolitan area. Her bridge experience ranges from providing condition inspections, load rating calculations, and design drawings for emergency repairs and capital improvements for a variety of roadway and rail bridges through construction inspection of roadway/tollway improvements on a major suspension bridge, the Verrazano-Narrows. In addition, Ms. Cuevas has provided structural design for the rehabilitation of retaining walls and is experienced in preparing and revising structural drawings.

BACHELOR OF SCIENCE, CIVIL ENGINEERING; TECHNOLOGICAL INSTITUTE OF SANTO DOMINGO (INTEC)

Project Experience

NYCDDC 34th Avenue/Brookside Street/Storm Sewer and Water Main Reconstruction REI - Engineering Specialist

Providing resident engineering and inspection (REI) services for the installation of storm sewer and water main near 34th Avenue and Brookside Street in Queens, NY, for the DDC. Ms. Cuevas maintains records in compliance with DDC record-keeping procedures, and prepares change orders to incorporate condition revisions. She also reviews as-built record plans showing all changes from the contract plans and documents work progress, specific problems encountered, and other pertinent project information.

NYCDDC Requirements Contract - Structural Engineering Specialist

Provided civil and structural engineering services for the inspection and design of various retaining walls throughout New York City under a requirements contract with the DDC. Assignments included the replacement of a retaining wall at 181st Street in the Bronx; civil engineering and design for the reconstruction of a retaining wall along St. Paul's Avenue in Staten Island; and structural design of the final wall section for the replacement of two retaining walls, 305 feet and 294 feet long, respectively, on Kappock Street in the Bronx.

NYCDDC Kappock Street Retaining Wall Replacement - Structural Engineering Specialist

Oversaw preliminary through final design of the final wall section for the replacement of the 305-foot-long north and 294-foot-long south retaining walls on Kappock Street in the Bronx, NY, as part of a requirements contract with the DDC. Ms. Cuevas also reviewed drawings and calculations.

NYCDDC St. Paul's Avenue Retaining Wall Rehabilitation - Structural Engineering Specialist

Performed field surveys and reviewed drawings for the reconstruction of an approximately 35-foot-long by 2-foot-wide retaining wall in Staten Island, NY, as part of a requirements contract with the DDC.

TBTA Verrazano-Narrows Bridge Toll Plaza Improvements Phase B - Construction Inspector

Monitoring and documenting road and bridge construction for compliance with project plans and specifications for improvements by the TBTA to the toll plaza on the Staten Island end of the Verrazano-Narrows Bridge, a major link in the interstate highway system connecting Brooklyn and Staten Island, NY. Phase B of this project, which will be completed in a 10-stage process over 45 months, will improve the flow of traffic along the Staten Island Expressway (SIE) through the Verrazano Plaza area. In addition to the removal of the remaining three toll booths and islands, this phase includes construction of a new eastbound lower-level con-

nector ramp to the bridge, retaining walls, and extensive roadwork to provide new on- and off-ramps to the Staten Island Expressway.

TBTA Triborough Bridge Toll Plaza Concrete Deck Replacement - Construction Inspector
Performed construction inspection of the reinforced concrete decks of the Manhattan and Bronx toll plazas of the Triborough Bridge for the Triborough Bridge and Tunnel Authority (TBTA). Ms. Cuevas generated daily reports of the work performed and estimated quantities for payment submissions. The repairs included demolition of the affected plaza areas and replacement of the concrete deck.

PANYNJ Cortlandt Station - Assistant Team Leader
Performed a condition inspection of the Cortlandt Street Subway Station at the World Trade Center in Lower Manhattan for the PANYNJ. As part of the inspection team, Ms. Cuevas reviewed and generated a structural inspection report, provided assistance developing drawings, and developed estimates.

MTA/LIRR East Side Access - Structural Engineering Specialist
Assisted in preparing reports and drawings for yard structures potentially affected by construction of the $10 billion East Side Access project for the LIRR in New York City for the MTA. Ms. Cuevas is part of the inspection team for the structures surrounding the Sunnyside Yard construction site in Queens. The project will bring LIRR service to Grand Central Terminal on Manhattan's East Side.

NYCDDC West 181st Street Retaining Wall Reconstruction - Structural Engineering Specialist
Oversaw preliminary design of cross-sections and provided information for the creation and review of the Visual Inspection Report for repairs to a massive retaining wall at West 181st Street in Manhattan, as part of a requirements contract with the DDC. The rough-hewn stone wall rises from 4 feet to 30 feet above grade and extends for approximately 1,300 feet along the west side of Riverside Drive from just south of the George Washington Bridge (GWB) to a point about 1,200 feet north of the GWB.

NYSDOT Robert Moses Causeway Northbound Bridges In-Depth Inspection - Structural Engineering Specialist
Generated the inspection report based on field notes and pictures for the rehabilitation of the 2-mile northbound structure of the Robert Moses Causeway over the Great South Bay in Suffolk County, NY, for the NYSDOT. Ms. Cuevas also generated an estimate file for the alternates described in the BRPR.

Sandeep Vaidya, NICET III

OFFICE ENGINEER

Mr. Vaidya is a construction inspector and office engineer with expertise in safety and compliance management, time management and organization, and concrete and asphalt inspection for bridge, transportation, and commercial projects. He has inspected the replacement and repair of large bridges throughout New York City, and is adept at monitoring excavation, compactions, and soil stability. Mr. Vaidya is also experienced at inspecting maintenance and protection of traffic (MPT) implementation and reviewing worker safety and abatement procedures. He has monitored project schedules and change orders, and assisted the engineer-in-charge with project hour summaries and project closeout.

Project Experience

NYCDDC Street Resurfacing - Assistant Resident Engineer/Office Engineer

Providing engineering support during the grinding or paving of existing asphaltic roadway throughout New York City for the DDC. The project was initiated due to the poor condition of local streets throughout New York City. Mr. Vaidya is maintaining construction files and logs for this $13 million project. He is also managing submittals and change orders, preparing daily, weekly, and monthly progress status reports, and attending project meetings and recording meeting minutes.

Metro-North Cortlandt Station Intermodal Access, Parking, and Route 9A Intersection Improvements - Construction Inspector/Assistant Office Engineer

Monitored and recorded the construction progress for improvements to Metro-North Railroad's Cortlandt, NY, station. The project entailed construction of a new 730-car parking lot and access road from Route 9A, extension of a pedestrian overpass, and addition of a new elevator and waiting area. The parking lot includes a canopy-covered, intermodal drop-off plaza, covered walkways, and retaining walls. Mr. Vaidya inspected the excavation, which included rock, and backfilling for retaining walls, and the excavation of trenches for drainage and utilities. He assessed the sheeting in place for protection from cave-ins. Mr. Vaidya also inspected the installation of drainage structures and conduits for electric lines. In addition, he assisted in maintaining logs for submittals and requests for information.

NYSDOT Region 11 Bridge and Highway Drainage Rehabilitation - Construction Inspector

Provided construction inspection services for a $2 million drainage rehabilitation project which included which included cleaning existing structures, bridges, and roadway drainage structures such as catch basins, manholes, scuppers, and cleaning bridges in Brooklyn, Queens, and Staten Island, NY, for the NYSDOT. Mr. Vaidya inspected the replacement and repair of deteriorated drainage structures and recorded findings. His on-site duties included inspecting traffic control procedures and the visibility of detour and safety signs, monitoring compliance with the client's specifications, and preparing daily labor and progress reports. Mr. Vaidya assisted the engineer-in-charge with project closeout of the intelligent transportation system (ITS) project, installation of surveillance cameras, preparing MPT hours, and summarizing job hours for labor, electricians, and other workers, for both the prime contractor and subcontractor for the NYSDOT.

TBTA RFK Bridge Replacement of T-48 Roadway CI Services - Construction Inspector

Inspected the construction services and monitored compliance with contract specifications for full- and partial-depth repairs on the 15,000-sf Randall's Island-to-Queens approach ramp

of the Robert F. Kennedy (RFK) Bridge in New York City. Mr. Vaidya monitored worker safety and dust control procedures, and he reviewed the deck removal, including safe removal of debris. His inspection encompassed reinforced steel, concrete placement, and concrete breaks. Mr. Vaidya also monitored the replacement of the T-48 wearing surface of the bridge, removal of the deteriorated surface, shot blasting of the deck, performance of profile tests, dew point surface temperature and dry mill tests, primer placement, and bridge master installation. In addition, he inspected MPT on the bridge.

TBTA Throgs Neck Bridge Toll Plaza Repairs - Construction Inspector
Provided construction inspection services for the concrete roadway slab and sidewalk replacement at the Throgs Neck Bridge toll plaza, in Queens, NY, as part of a task-order project with the TBTA. On the northbound side of the plaza, 990 sf of concrete was demolished and replaced, and 120 sf of concrete was replaced on the southbound side. There was also 390 sf of sidewalk repaired along the southwest side of the plaza. Mr. Vaidya inspected slabs and roadway decking construction as per drawings and monitored concrete breaks. He made sure the temperature was maintained in the tent area surrounding the newly placed concrete, using ground heaters to avoid a drop in temperature.

TBTA RFK Bridge Randall's Island-to-Queens Approach Ramp Deck Repair - Construction Inspector
Performing construction inspections for deck repairs on the Randall's Island-to-Queens approach ramp of the Robert F. Kennedy (RFK) Bridge in New York City, as part of STV's on-call inspection services contract for TBTA. Mr. Vaidya is overseeing the removal and replacement of concrete as well as the 11,000 sf of partial deck repair and approximately 1,000 sf of full deck repair on this more than 40-year-old ramp.

TBTA Verrazano-Narrows Bridge Toll Plaza Improvement Phase A - Inspector/Office Engineer
Provided construction inspection services for improvement of the 470-foot-long westbound toll plaza of the Verrazano-Narrows Bridge in Staten Island and Brooklyn, NY, part of a $55 million, multiphase project for the TBTA. This phase included demolition and replacement of eight inactive toll booths and concrete islands, removal of a variable message sign and other electrical devices, construction of new toll plaza traffic lanes, and construction of a tunnel roof cap. Mr. Vaidya inspected all work performed by the contractor, kept daily records of progress, conducted biweekly meetings, monitored project schedules, processed contract payments, reviewed change orders, and issued monthly progress reports to the client. He performed concrete testing in accordance with ASTM standards, inspected reinforced steel for the tunnel roof cap and roadway decking, and assessed the milling and paving operations. Mr. Vaidya also monitored the daily maintenance and protection of traffic set up, inspected and monitored contractors' quality assurance and safety procedures, and oversaw lead abatement procedures.

Nony Constantino, NICET III

OFFICE ENGINEER

Mr. Constantino has more than 30 years of experience in civil engineering and the construction of bridge, roadway, and transportation facility improvements in the New York metropolitan area. He is proficient at field office recordkeeping, knowledgeable about the Manual for Uniform Recordkeeping (MURK), and experienced with on-site technical inspection of construction to verify compliance with contract documents.

Project Experience

TBTA Verrazano-Narrows Bridge Toll Plaza Improvements - Office Engineer

Maintaining records and processing change orders for a multi-phase $55 million program of improvements to the toll plaza on the Staten Island end of the Verrazano-Narrows Bridge connecting Brooklyn and Staten Island, NY. The TBTA project entails removal of 11 toll booths, relocation of an HVAC unit, and replacement of the toll plaza canopy roof. The first two phases of the project are complete. STV has begun construction administration and inspection services for Phase B, which includes construction of a new eastbound lower-level connector ramp to the bridge, retaining walls, and extensive roadwork to provide new on- and off-ramps to the Staten Island Expressway.

NYCDOT Honeywell Street Bridge and Queens Boulevard Bridge Replacement REI - Senior Office Engineer

Responsible for overall project recordkeeping for the $90 million replacement of the 19-span Queens Boulevard Bridge and the 22-span Honeywell Street Bridge in Queens. The resident engineering and inspection (REI) project for the NYCDOT involved using staged construction to meet a compressed 20-month schedule. Mr. Constantino reviewed as-built record plans and inspection reports, prepared the Quantity and Materials Acceptance Book, and processed the contractor's progress payment package and railroad traffic force account payments. He also reviewed MURK force account documentation for over $7 million in extra contract work.

NYSDOT I-895 (Arthur Sheridan Expressway) Rehabilitation REI - Office Engineer

Responsible for recordkeeping and preparation of change orders for this $26 million major highway reconstruction project in the Bronx. The REI project featured six lanes of full-depth concrete pavement, new drainage, lighting, and Intelligent Transportation System (ITS) components. In addition to performing office engineering tasks in compliance with MURK recordkeeping procedures and the updated Computerized Engineers Estimate System (CEES) program for progress payments, Mr. Constantino was responsible for preparing numerous orders-on contracts due to several major changed condition revisions. He reviewed and prepared as-built plans showing all changes from the contract plans, and prepared diaries describing the progress of the work, specific problems encountered, and all other information relative to the execution of the contract in the absence of the resident engineer.

NYSDOT Roslyn Viaduct Replacement CI - Office Engineer

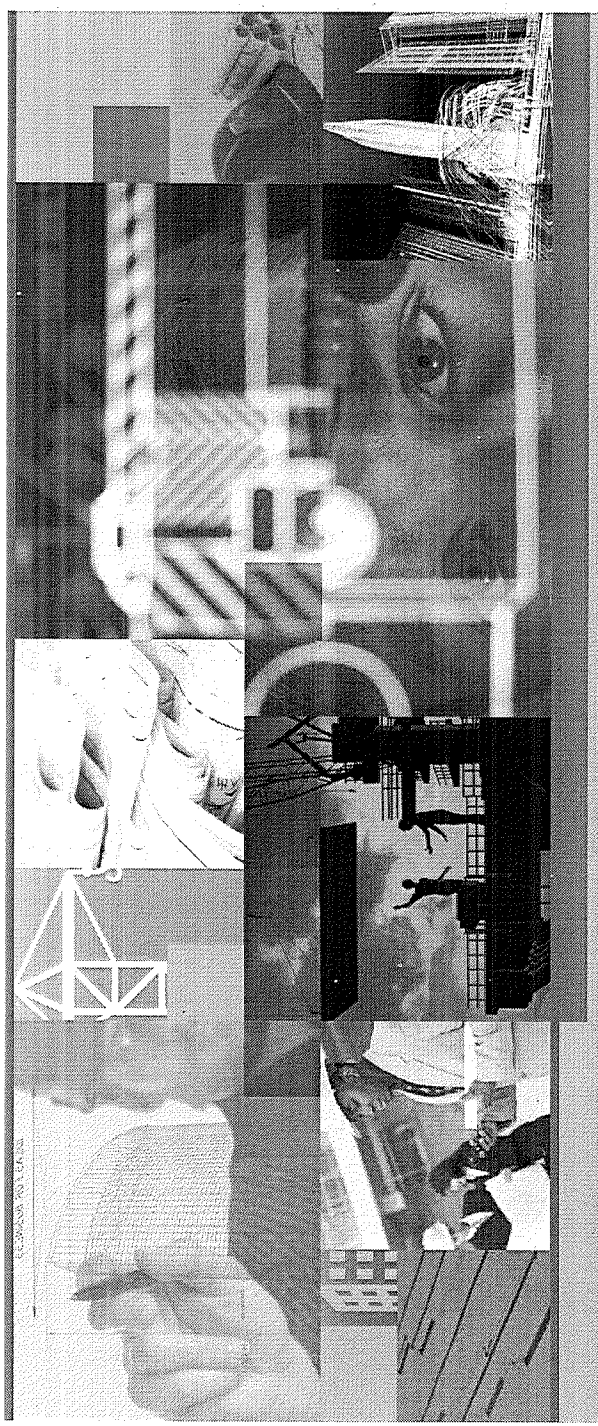
Provided office engineering for the $130 million replacement of a half-mile steel viaduct with twin precast, post-tensioned segmental concrete box girders that carries NY 25A over Roslyn Harbor in Roslyn, NY. In addition to providing all facets of office engineering, Mr. Constantino provided incident response coordination for the project. He performed project recordkeeping and processes contract payments and change orders.

NYCDOT Rockaway Boulevard Reconstruction - Office Engineer
Responsible for recordkeeping at the construction field office using MURK forms and guidelines for the $14 million reconstruction of 3.5 miles of Rockaway Boulevard in Queens. The project included widening the roadway and installing new pavements, curbs, sidewalks, street lighting, traffic signals, sewer, and water mains. Mr. Constantino checked all inspection reports for adequacy, cross referenced them with other records on file as necessary, and posted all data into the appropriate record books. He prepared the contractor's monthly pay estimates and NYCDOT payment forms, including all back-up documents. Mr. Constantino served as an inspector as needed and prepared all documents for final payment package and project completion.

NYCDOT Bedford Avenue Reconstruction - Construction Inspector/Office Engineer
Supervised and inspected the work of the contractor for compliance with the contract documents for the $15 million reconstruction of 4.5 miles of Bedford Avenue in Brooklyn, including new curbs and sidewalks, pavements and lighting, sewers, drainage, and water mains. Mr. Constantino also took samples of materials used, and recorded and reported all pertinent field data and details of the contractor's daily operations for the project. He also assisted the office engineer with project recordkeeping.

NYCDOT 39th Street Bridges over Amtrak/LIRR at Sunnyside Yard - Office Engineer
Conducted recordkeeping based on MURK guidelines from inception to completion of this $25 million reconstruction of two bridges over the Sunnyside Rail Yard in Queens, NY. The NYSDOT project involved replacing piers, superstructures, and reinforced concrete decks, as well as bridge supported utilities such as gas, electrical, water, and electric traction power catenary structures. Mr. Constantino reviewed inspection reports; prepared contractor's payments and force account payments for the contractor, Amtrak, and the LIRR; and prepared all documentations and records for the finalization of the project.

F. Rates



F. RATES

THE PORT AUTHORITY OF NY & NJ

The following hourly rates would be in effect at the start of the Agreement term (January 1, 2015) for professional personnel who will be assigned to perform any services requested.

Company Policy for Premium Pay

If a contract has a provision for differential compensation, STV will abide by the terms of the contract.

Full-time salaried employees who work more than 40 hours per week receive overtime pay at their normal rate. If an employee is classified as an non-exempt employee, they are paid at the premium rate of time-and-one-half their rate for all hours worked in excess of 40 hours worked per work week, except where state law requires over-time pay in excess of 8 hours worked per day.

HIRANI	Joseph Perricelli, PE	Civil Engineer	$50.24
HIRANI	Gijo Varghese, PE	Civil Engineer	$40.86
HIRANI	Leonid Sigal, NICET III	Construction Inspector	$37.00
HIRANI	Charles Butler	Construction Inspector	$49.00

Company	Name	Title	Hourly Pay Rate
JPCL	Brian Malt	Inspector - Structural Steel and Bolting	$50.00
JPCL	Earl Broockenberry	Inspector - Coatings	$50.00
JPCL	Tony Chanderjeet	Inspector - ACI Concrete Construction	$40.00
ELLANA	Rohit Ahuja	Scheduler	$51.70

G. FIRM EXPERIENCE

THE PORT AUTHORITY OF NY & NJ

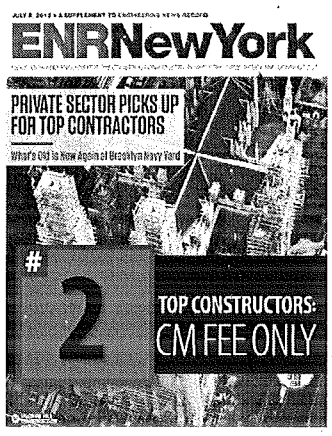
This section describes the relevant project experience of the STV team. STV has been working with PANYNJ for more than three decades and has provided a variety of services for a number of transportation projects. To augment our capabilities and meet or exceed PANYNJ's MBE/WBE goals, STV has teamed with **KS Engineers, P.C. (MBE), The Hirani Group (MBE), JPCL Engineering (DBE), and ELLANA Construction Consultants, Inc. (WBE).** The STV team is as follows:

STV Construction, Inc.

STV Construction, Inc. (STV) offers a nationwide practice in construction management (CM), including program management, owner's representative services, and project controls. The firm provides comprehensive services to assist public and private sector clients through the entire construction process—from pre-construction, through construction, to project close-out. Our mission is to create exceptional value for our clients and deliver our services with integrity, vision, innovation, quality, and environmental sensitivity.

The firm employs construction management professionals, builders, owners, and designers who have extensive hands-on technical and managerial experience — giving us a comprehensive understanding of all facets of construction, the ability to foresee issues, to develop relationships in the industry, and to negotiate resolutions quickly. We offer time- and cost-saving insights that can only be offered by those who have actually managed the construction and/or rehabilitation of facilities. Since STV's project managers, estimators, schedulers, contract administrators, and inspectors collaborate as a team, we quickly respond to clients' needs. Moreover, because STV is an employee-owned firm, all employees have a personal stake in the success of our projects and in producing high quality work.

STV advocates proactive construction management to monitor schedules, staffing, and budgets, to maintain ongoing operations of facilities during construction, and to provide timely information to owners and stakeholders. Our dedicated project controls staff remains actively involved in all phases of construction, offering cost estimating, scheduling, claims and change-order analysis, document control, value analysis, and constructability review. They use project reporting formats such as Primavera, eBuilder, and Contract Manager.



Our commitment to safety is an integral part of our corporate culture and is consistently reinforced with our staff. STV has licensed Site Safety Managers and OSHA trained instructors on staff. All of STV's field staff receive OSHA training and certification. We make sure that all contractors perform work in compliance with OSHA regulations and applicable local laws and that a safe and secure environment is maintained for the public.

STV has performed a variety of services for PANYNJ, some under on-call contracts. In addition, STV has provided CM and construction inspection services under task-order agreements with various public agencies in the NY/NJ metropolitan area. STV has become well-versed in the PANYNJ organization of client departments and their relationship to the engineering department and its various divisions; PANYNJ procedures and regulations; and the overall PANYNJ organizational structure.

STV is noted for providing flexible, focused project management and technical services that our clients depend on time and again. With resources of over 200 local project management professionals, the firm is currently managing projects with construction costs ranging from $50,000 to $2.5 billion.

KS Engineers, P.C. (MBE)

KS Engineers, P.C. (KSE), a certified MBE with offices in New York, New Jersey, Pennsylvania, and Connecticut, is a highly qualified professional engineering firm which has successfully completed work on large and small, multi-disciplinary projects throughout the region. Their work has included site improvements, renovations and additions to existing facilities and the design of new facilities and infrastructure. They also have experience conduct-

ing feasibility studies, developing cost estimates and providing construction phase services.

KSE offers comprehensive geotechnical engineering services for the construction of buildings, parking areas, pavement, and bridges. They have well established strategic partnerships with highly qualified and reputed drilling companies and testing laboratories. Their geotechnical engineering department is staffed with highly qualified professional geotechnical engineers, and technicians with more than 80 years of combined experience. This professional staff, in conjunction with drilling and material testing sub-contractors, enables KSE to provide accurate, reliable, and complete subsurface evaluations and recommendations.

KSE also provides a full range of professional site/civil engineering and design services that are customized to be compatible, environmentally sensitive, economically feasible and community focused in meeting clients' needs and objectives. They work collaboratively with state, county, local, and federal, clients to provide the best possible solutions to design challenges they may encounter in the design of buildings, public parks, state, county and municipal roadways, streets and inner-city networks, toll roads, interchanges, highways and park and rides.

From concept development and preliminary engineering to final design and construction support, KSE has the knowledge, skill, and experience to deliver high quality, sustainable engineering solutions. They have a staff of nearly 200 full-time employees, including 35 licensed structural/civil engineers, 35 full-time design professionals, more than 20 support engineers and surveyors, over 80 construction inspectors of various levels, four licensed land surveyors, four survey crews, eight LEED accredited professionals, and a landscape architect.

Port Authority Experience

KSE has a longstanding working relationship with the PANYNJ. The firm is intimately familiar with PANYNJ's design and CAD standards. Their key design staff is well known to PANYNJ's engineering staff for their ability to think and to provide innovative and cost-effective solutions. Aside from various project-specific contracts, KSE has several previous and currently active Prime Call-In Agreements with PANYNJ for the following disciplines:

- Call-In Civil Engineering Services
- Call-In Traffic Engineering Services
- Call-In Survey and Mapping Services
- Call-In Structural Engineering Services
- Call-In Condition Inspection Services
- Call-In Construction Management Services

The Hirani Group (MBE)

Hirani Engineering & Land Surveying, P.C., based in Jericho, New York, was formed in 1991. The company provides civil and structural engineering, land surveying, construction inspection/management, site safety and special inspection services. Hirani continues to strengthen its presence in the New York Metropolitan area. Hirani has been successful in building an excellent reputation of professional service and experience with all of our clients. They place great emphasis on client communication, quality, meeting project deadlines, and innovative problem solving. The firm is a certified Disadvantaged/Minority Business Enterprise.

Hirani's total staff is 75 personnel including:

- 12 Land Surveyors
- 4 CAD Drafter
- 3 Civil Engineers
- 2 Office Engineers
- 16 Construction Inspectors
- 1 Resident Engineer
- 6 Construction Manager
- 4 Safety/Occupational Health Engineer
- 2 Electrical Engineers
- 6 Structural Engineers

Construction Inspection and Construction Management Services

Hirani has a highly experienced staff of NICET and NACE certified inspectors. They also have inspectors who are certified for lead abatement and asbestos handling. Hirani's inspectors ensure that contractors adhere to specifications, building codes, and quality standards. The focus of the construction inspection services is the completion of construction projects on time, within budget and in compliance with the contract documents. Construction Inspection/Management services include:

- Cost estimating and scheduling
- Reviewing plans and specifications for compliance
- Conducting controlled inspections for fire stopping
- Building department expediting and filings
- Change order requests and analyzing contractor claims

Structural/Civil Design Services

Hirani has highly qualified, licensed and experienced civil and structural engineers with project specific experience in design of buildings, roadways, bridges, tunnels, and site development work.

STRUCTURAL/DESIGN SERVICES INCLUDE BUT NOT LIMITED TO:

- Building design
- Pre-stressed concrete design
- Concrete design
- Highway and roadway design
- Steel design
- Traffic studies & analysis
- Site/civil design
- Geo-technical analysis

Port Authority Experience

Hirani holds a prime consulting contract (No,. 410-07-027 to perform on call construction surveying services and presently has a full time survey crew working on the World Trade Center site. Assignments have included the provision of continuous 24 hour a day readings during pile compaction testing, utilizing a party chief and instrument person working with Port Authority personnel.

Presently at the site, the crews are providing surveys for three dimensional as-built locations of the infrastructure and utilities, checking construction layout for new tower construction, and monitoring with fixed prisms.

Under this contract, additional survey has also been performed at LaGuardia Airport and Newark Airport, for three dimensional as-built location of infrastructure and utilities.

ON CALL CONSTRUCTION / CONSULTING LAND SURVEYING SERVICE ASSIGNMENTS

1. LaGuardia (LGA): Two person field crew providing three dimensional as- built location of infrastructure and utilities.
2. World Trade Center: Provided continuous monitoring 24 hours a day during pile complexion testing, HE&LS provided a Crew Chief and Instrument Person to work alongside PANYNJ personnel.
3. Newark Airport: HE&LS provided CAD supervisor for three dimensional mapping of infrastructure and utilities.
4. World Trade Center: Providing 2-person field crew for monitoring, inspection, and construction lay-out.
5. JFK Airport: Setting Control Baseline, Lay-out of new Center Line, Runway Light configuration and striping.

JPCL Engineering (DBE)

JPCL Engineering is a multi-disciplined professional engineering firm that provides civil and transportation engineering, special inspections, green building design, and materials supply and testing services to private clients, public agencies, design firms, construction managers and general contractors. The JPCL team consists of professional engineers, certified inspectors, lab technicians, and LEED accredited professionals.

JPCL has an accomplished Special Inspections Unit that provides a timely response to meet the client's schedules and budget. With strict adherence to the Quality Management Systems for both the Special Inspection Agency and the Materials Testing Laboratory, the company is committed to protecting the clients' interests and assets through Quality Assurance/Quality Control procedures. The company has adequate resources and technical staff to undertake projects of any size.

JPCL Engineering is a woman owned small business, certified as an M/WBE/DBE/SBE in the states of New York, New Jersey, Pennsylvania, and Washington D.C.

CEO and Founder Asma Hashmi P.E., is a registered professional engineer in the states of New York, New Jersey and Pennsylvania with over 20 years

of experience, working for private developers, and state and local government agencies including New York City Department of Transportation, New York City School Construction Authority, and New Jersey Department of Transportation.

The JPCL team consists of Professional Engineers, Certified Inspectors, Lab Technicians, and LEED Accredited Professionals. Most of the inspectors have multiple certifications to carry out inspection work in more than one area. For example, ACI Level I certified inspectors also possess ICC certifications to carry out masonry and fire proofing inspections. Similarly, CWIs also possess additional certifications and experience in conducting NDT testing and coating inspections. The laboratory technicians possess required ACI certifications in both field and strength testing.

Port Authority Experience

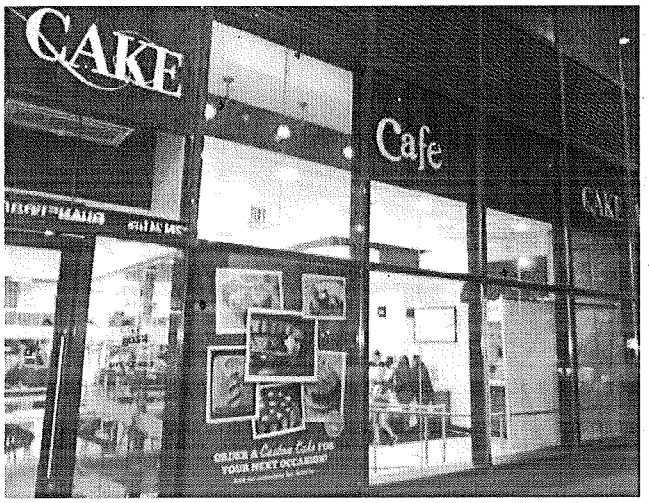
Cake Boss Café was constructed in the Port Authority Bus Terminal and it is one of the newest locations in New York City. JPCL was retained as a Prime Inspection Agency to provide the inspection services including structural steel and NDT, MEP, concrete, sprayed fire proofing and water portability tests.

JPCL also provided related project management services, onsite supervision, project coordination with EOR, Client & GC and attended technical meetings. JPCL also reviewed the reports, drawings and other construction submittals.

ELLANA Construction Consultants, Inc. (WBE)

Incorporated in 1998, ELLANA, Inc. is a certified Woman-owned Business Enterprise (WBE) and Disadvantaged Business Enterprise (DBE) construction consultant firm that provides four core services consisting of cost management, project controls, owner representation and professional training services to a wide range of A/E/C industry clients. They are also a certified WBE through the Woman's Business Enterprise National Council (WBENC).

With offices in New York, New Jersey, Pennsylvania, and Massachusetts, they can service the PANYNJ locally. Their staff includes architects, engineers and construction experts poised to provide quality cost estimating, scheduling, administration and project cost control services at all stages of design and construction.



Cost Management

Cost certainty and control are essential for any construction project. Their approach to cost management involves safeguarding clients' interests at every stage of the design, procurement and construction process by focusing their efforts on achieving the best results for the project.

As part of the cost management process, they work with the team to first identify, then address any risks or issues that arise, ultimately providing solutions to any discrepancies or conflicts that arise. Their cost management services include:

- Construction cost estimating
- Value engineering exercises
- Constructability reviews
- Project schedule development
- Feasibility studies
- Work breakdown structure development
- Budget allocation and asset management
- Cost forecasting / trending
- Early warnings / mitigation
- Cash flow / accruals / value of work completed
- Contingency management
- Monitoring of commitments and expenditures
- Project forecasting and reporting
- Independent reporting to project or finance partners
- Reconciliation / integration with financial reporting

Project Schedule Evaluation

The project schedule is the backbone of the construction management effort. It is the framework for measuring performance against plan; a means for optimizing project sequence before labor, materials

and facilities are committed; and a means for developing effective workarounds to address unforeseen events. The project schedule identifies milestones that include, but are not limited to:

- Approval period for the owner and the design team
- Regulatory agency approvals and permits
- Bid/award activities
- Key information deliverable dates from all consultants and how each matrix item interfaces with each other and the entire schedule
- Mock-ups to determine detailing and QC
- Long lead item procurement
- Protection plan
- Construction activities
- TCOs and CO milestones
- Punchlist activities

They will work with STV to see that the construction schedule is updated regularly, and the overall construction schedule is updated on a weekly basis as it relates to the evolving master schedule. They can also devise the schedule to incorporate a phased certificate of occupancy program n the most expeditious time possible and in the most cost effective timeframe.

Construction Schedule Monitoring

The comprehensive CPM master schedule, prepared during the design phase, will serve as the program's controlling document. This baseline schedule links all project activities and identifies tasks, responsibilities, and milestones for major actions for each project participant. Trade contractors will develop detailed CPM schedules in compliance with the master schedule. These schedules will reflect the trade contractors' means and methods for accomplishing the work. Working closely with STV, ELLANA will review and analyze the schedules for completeness, logic and reasonability. The trade contractors' schedules will serve as the contract baseline by which trade contractor progress will be measured and tracked. They will continually review and monitor actual progress and resource usage, and record it against planned logic, sequencing, as well as quantities installed to identify deviations from the approved schedule.

Port Authority Experience

ELLANA provided CPM scheduling services, cost estimating services, and initial planning, design development, and construction-document cost estimating services to the PANYNJ in recent years. Their project experience includes:

- JFK International Airport - Redevelopment of JetBlue Terminal
- LaGuardia Airport - Master Plan / Modernization
- Logan International Airport - On-Call Services, Improvement Projects
- Hurricane Sandy Damage Assessment of Port Authority Facilities
- PANYNJ Architectural Services Call-In for 2007-2010
- World Trade Center, Tower One
- Port Authority of New York & New Jersey Headquarters
- WTC Public Safety Radio Room
- World Trade Center Final Streets & Surfaces
- Port Authority Bus Terminal - South Wing Physical Assessment
- WTC Vehicle Security Center & Tour Bus Parking Facility

STV's Relevant Experience

STV's relevant experience includes a long history of providing construction management (CM), engineering, and architectural services to the PANYNJ for over 100 projects, including the One World Trade Center and National September 11 Memorial & Museum, Moynihan Station Phase I CM, JFK AirTrain Light Rail Airport Access System, and the GWB Bus Station Redevelopment Program. The following projects showcase STV's successful completion of CM services similar to those required for this on-call contract within the past three years.

PANYNJ IQC for Federally Funded Hurricane Sandy Projects

REFERENCE: Antonino (Tony) Marino, P.E., LEED AP
Assistant Chief Mechanical Engineer
Engineering/Architecture Design Division
(973) 565-7628

PANYNJ operates and maintains tunnels, bridges, and rail lines in a 1,500-square-mile area in the two states. Many of these facilities were devastated by Hurricane Sandy and half of that damage was inflicted on the PATH commuter rail system. To repair and protect the commuter rail line in future superstorms, PANYNJ launched a $3 billion resiliency program and selected STV as one of a select group of consultants to carry out the work, on an as-needed basis, under an indefinite quantity contract (IQC). The firm is providing project management, electrical/electronics, architectural, structural, civil, geotechnical, environmental, traffic, HVAC, plumbing, and fire protection expertise to address a wide range of vulnerabilities in maintenance yards, passenger stations, substations, other parts of the rail infrastructure.

STV and its team have prepared a Stage I study for 11 PATH projects to assist PANYNJ in the completion of Tier 3 grant applications through the FTA under the Public Transportation Emergency Relief Program and the Disaster Relief Appropriations Act of 2013. For each project, the team compared existing site locations to those designated by the current FEMA Flood Insurance Rate Maps (FIRM) released in December 2013. Each location falls within "Zone AE," which represents the 100-year flood with a base flood elevation (BFE) of +11 feet (NAVD88). STV compared existing elevations to the FEMA Flood Insurance Study (FIS), which indicated stillwater elevations for the 10-, 50-, 100-, and 500-year floods. The stillwater elevations from the transect data were used to develop the elevation vs. frequency curve in order to more closely represent the predicted flood elevations for each particular location. STV established design criteria to protect against storm surges of BFE + 2.5 feet and BFE + 4.0 feet.

PANYNJ One World Trade Center & National September 11 Memorial & Museum

REFERENCE: Alan Reiss, Director, WTC Construction, (212) 435-5530

STV has served as program manager and owners representative on behalf of the PANYNJ for construction of the National September 11 Memorial & Museum at the World Trade Center and One World Trade Center in lower Manhattan. The firm is holding walkthroughs with the subcontractors to confirm completion of the work, helping to control costs, and tracking a general conditions budget and breakdown on a monthly basis. One World Trade Center will include 3 million sf of office space on 71 office floors and has a goal of LEED® certification to the Gold level. The Memorial, which opened on September 11, 2011, is set within the footprint of the original Twin Towers and consists of two massive voids with waterfalls cascading down their inner walls. A state-of-the-art museum will complement the memorial.

PANYNJ On-Call Security Capital Program

REFERENCE: Pasquale Buzzelli, Project Manager, (201) 595-4569

STV is providing architectural and engineering services related to the security of various PANYNJ facili-

ties. Tasks include design for a new closed circuit television system for three bridges between Staten Island, NY, and New Jersey; plans for the relocation of an operations control center in the Port Authority Bus Terminal; and security design for a baggage area surveillance system at Newark Liberty International Airport and JFK International Airport.

NYCT Indefinite Quantity Architectural/Engineering Design and Construction Management Consultant Services Contract CM-1261

REFERENCE: Stephen J. Rogers, Director of Consultant Services, On-Call Projects, Capital Program Management, (646) 252-3553

As the largest public transportation agency in North America, New York City Transit (NYCT) is constantly designing and implementing projects to improve service and upgrade facilities. From installation of new mechanical and electrical systems to station reconstruction and studies of renewable energy, a wide range of projects are completed each year.

STV, as part of a joint venture team (JV), provided architectural, engineering, and cost estimating services to NYCT on a task-order basis to improve existing facilities, plan for future work, and develop station components. Tasks included preliminary design for the reconstruction of the 30,000-sf Cortlandt Street subway station, which was devastated in the September 11, 2001 attacks; survey of the cooling and electric power distribution systems at the Rail Control Center and Power Control Centers in Manhattan as well as the facility at Livingston Plaza, in Brooklyn; and design of new fire protection systems for three bus depots.

Delta JFK Terminal Redevelopment Program Phase I

REFERENCE: Ryan Marzullo, Program Director, JFK International Airport, Phase II, (718) 490-5905

Delta Air Lines is relocating international operations at JFK International Airport, in Queens, NY, from Terminal 3 to Terminal 4. For this $1.4 billion redevelopment program, STV is overseeing multiple construction management and general contractor teams completing landside and airside improvements during multiple phases, as part of a joint venture. For Phase I, the firm received a 2014 American Council of Engineering Companies of New York Diamond Award in the transportation category. The firm acted as the master construction manager for the renovation of Terminal 4. This included multiple headhouse expansions, a 540,000-sf gate extension, taxi-lane and apron paving, utility infrastructure improvements, and environmental remediation. STV is now performing as owner's representative for the demolition of Terminal 3 and the addition of aircraft parking space, and as construction manager for a second gate extension and associated site work, all being performed during Phase II.

MSDC/PANYNJ Moynihan Station Phase I CM

REFERENCE: Bruno Signorelli, (212) 435-4433

STV, in a joint venture, is providing CM services for Phase I of the development of a new train hall in the James Farley Post Office Building in Midtown Manhattan, with connections to Pennsylvania Station and Amtrak, NJ TRANSIT, LIRR, and New York City Transit service. This major transportation hub is being built in two phases by the Moynihan Station Development Corporation (MSDC), in partnership with PANYNJ. STV is managing the construction of entrances to Penn Station from the Farley Building and new vertical access points to the platforms, thereby improving passenger access to the west side of platforms for all railroads. The firm is also supervising improvements to pedestrian concourses and platform ventilation, and the creation of a waiting room for LIRR passengers. STV is providing contract design review, construction supervision and inspection, quality assurance, and project controls, as well as assisting in coordinating the complex staging among three railroads.

NYSDOT Reconstruction of Route 9A & Lower Manhattan Streets

REFERENCE: Joseph Brown, Project Director, 9A, (718) 482-4526

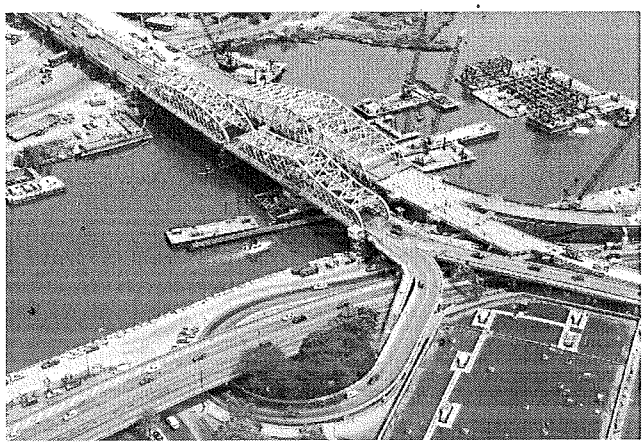
In a joint venture, STV is providing full-service construction management to NYSDOT for the $350 million reconstruction of Route 9A (West Street), a major artery in Lower Manhattan that was damaged in the September 11th terrorist attacks. The scope of work is to reconstruct West Street from Battery Park to Chambers Street, rebuild utility infrastructure, improve pedestrian circulation, and streamline construction of adjacent WTC projects. Also included is the construction of a promenade from West Thames Street to Battery Park and restoration of Battery Park City's West Thames Park.

The firm is managing roadway reconstruction, which includes realignment and raising the highway grade by as much as seven feet. STV is also providing construction management and oversight for New York City projects let under the Lower Manhattan Recovery Plan. The work involves reconstruction of nearly 100 local streets south of Canal Street that were damaged in the attacks and the subsequent recovery operations.

NYCDOT Willis Avenue Bridge Reconstruction REI

REFERENCE: Rahul Shah, Director, Movable Bridges, (212) 839-4145

STV, in joint venture, provided resident engineering and inspection (REI) services for NYCDOT during the replacement of the Willis Avenue Bridge linking Manhattan and the Bronx. This $640 million effort involved replacing the 110-year old bridge with an 11-span swing bridge immediately to the south, and, constructing new ramps and interchanges. Constructed offsite and floated into place, the new Willis Avenue Bridge features a composite reinforced concrete deck, concrete barriers, steel-rolled sections, steel-welded girders, and transverse steel box girders. The project also involved replacing a separate, 2-span continuous steel-stringer bridge over the Major Deegan Expressway with a 4-span,



400-foot-long, continuous curved girder bridge. Our other responsibilities included critical path method scheduling and geotechnical and environmental engineering. Environmental oversight was a significant component, given the need to prevent contaminated soils, water, and construction materials from entering the Harlem River, which the New York State Department of Environmental Conservation rated as pristine. STV's environmental scientists worked closely with the NYCDOT Environmental Quality Assurance manager to inspect construction operations for compliance with environmental regulations and permits, including waste management provisions, the stormwater pollution and prevention plan, and state pollutant discharge elimination system.

NYCDCAS Construction Management Services

REFERENCE: Jesus Coombs, RA, Deputy Director, Construction, (212) 669-3215

STV is providing construction management services on a series of projects for the New York City Department of Citywide Administrative Services (NYCDCAS) under a 2-year task-order contract. The projects consist of complex interior renovations, exterior rehabilitations, exterior site work, and building system modernizations in occupied buildings throughout all five boroughs of New York City. STV is providing services for the inspection, management, coordination, and administration of the projects, from construction commencement through completion, final acceptance, and project close-out.

H. MANAGEMENT APPROACH

THE PORT AUTHORITY OF NY & NJ

Project Understanding

This consultant services contract involves the performance of Expert Professional Construction Management and Inspection Services as requested on a call-in basis during calendar years 2015 through 2018. Under authorized task orders issued by the PANYNJ for assignment of professional staff on an individual or team basis, the required services will include responsibility for managing the following activities, from design development (Stage II), contract preparation (Stage III), and construction phase (Stage IV) through completion.

Tasks our team's personnel may be requested to provide include constructability/biddability and general engineering review, construction staging, schedule development and monitoring, quality assurance inspection, contract administration, cost engineering and estimating services, and deployment of additional resources to support PANYNJ as required.

For each assignment, STV will look to provide the appropriate level of reporting regarding our personnel's performance relative to their specific assignments. STV will implement proven operating procedures with which we can manage a multitude of small or large task assignments simultaneously. We have demonstrated this capability on numerous call-in contracts in the past for such clients as:

- Port Authority of New York and New Jersey
- New Jersey Transit
- New York City Transit
- Metro-North Railroad
- Long Island Rail Road
- NYC Department of Transportation
- NYC Economic Development Corporation
- NYC Department of Design and Construction
- NYC School Construction Authority
- NYC Department of Citywide Administrative Services
- US Army Corps of Engineers
- US Postal Service

Currently, a major segment of STV's work consists of call-in assignments under general engineering consultant and construction management contracts; accordingly, we have developed proven methodologies for work of this type. As an experienced call-in consultant for local public agencies, STV recognizes that there is no such thing as a "minor" task; all tasks — no matter how large or small — play a significant part in the daily operation of public facilities. We pride ourselves on our ability to mobilize our resources quickly and address all task assignments successfully.

Key Challenges

STV recognizes that, to meet the PANYNJ's goals, the following key challenges must be addressed as expeditiously as possible.

- **Augmenting the PANYNJ's staff, thus increasing the PANYNJ's reach and ability to meet its schedules:** STV has made available a team of CM, inspection, contract administration and project controls professionals, from its New York and New Jersey offices, ready for immediate assignment to the PANYNJ. These individuals will be selected based on their experience and trade discipline background, in response to PANYNJ's task requests, and upon PANYNJ acceptance will receive orientation and training from the Project Director and his senior PM staff prior to their assignment.

- **Handling a diverse range of projects, thus providing the range of services needed to meet the needs of different lines of business:** Our CM and Inspection personnel possess a wide range of technical backgrounds. Complementing these skills, those individuals also have extensive experience in managing the non-technical, programmatic and business elements of successful projects, dealing with both internal and external interfaces. These responsibilities, for both public and private clients, relate to transportation and building facilities, over the entire spectrum of the PANYNJ's regional mission.

- **Handling multiple projects simultaneously, freeing the PANYNJ from the administrative burden of managing more than one consultant:** STV has formed a team of Senior Project Managers and Project Managers, with the necessary administrative, managerial, and supervisory skills, to handle and

track multiple projects simultaneously, involving different consultants and multidisciplinary trades. To accomplish this most efficiently, and to deliver the quality of deliverable that is expected, these individuals must have the experience working in dynamic professional environments, be proficient in the most recent engineering management systems, and be able to lead teams of diverse architectural/ engineering functional staff. Our proposed project managers possess those qualities and will be supported when needed, with experienced project management control systems, provided by both STV and its M/W/DBE subconsultants.

An alternate approach to handling multiple projects is to set up a complete project team, led by an STV Senior Project Manager, and compromised of several STV resources, to manage a number of projects of similar type, program or Port facility. Under this arrangement, the STV "squad" would report to the PANYNJ, and could be located either in Port facility or STV New York or New Jersey offices.

- **Complying with PANYNJ Policies and Procedures, eliminating the need for the PANYNJ to adjust to different management styles:** It is the intent of STV to assign Project Managers who, through prior PANYNJ employment or experience, and for orientation by our Project Director, Gus Maimis, and his senior project management staff, are familiar with the PANYNJ's capital authorization process; reporting structure; management style; policies and procedures; quality standards; and work ethic.

The PANYNJ must have absolute confidence in the managerial and technical talent of its call-in consultants. The STV team has the depth and breadth of resources to respond to any request for service, a clearly predefined and field-tested management plan, and strong management capabilities to keep all project activities on track.

A call-in contract differs from a standard construction program in that the consultant needs to react quickly to the PANYNJ's specific request for services, and be able to be responsive to the widely varying needs and concerns that arise. Therefore, the program must be managed and staffed by seasoned personnel who are experienced with PANYNJ standards and operations. Project work will often be performed in a condensed time period and a project learning curve will be virtually nonexistent. Work may include the provision of a wide variety of CM and inspection professional support professionals on projects ranging in value.

Management Approach

Organizational Structure

The team on this assignment is led by STV's highly seasoned professionals, all with experience serving PANYNJ. This team is also complemented by hand-picked subconsultants with specific PANYNJ expertise relevant to the lines of business this contract is meant to serve.

Management Plan

STV has developed a proven plan to manage call-in contracts for task services. This approach is based on STV's experience working with many different programs and agencies. Our management approach is geared toward rapid response to task proposals, assignment of the correct staff, and project execution through adherence to a management plan and work plan drafted specifically for each assignment and geared to understand and represent the best interests of the lines of businesses for which this contract may be used. In addition, this structure incorporates a total quality approach to the provision of our services, such that the senior level leaders are active participants in the development and execution of the Quality Assurance/Quality Control (QA/QC) plan for the contract.

Objectives

Successful project execution depends on planning and communication, in addition to sound management and engineering principles and practices. In conformance with PANYNJ's Quality Assurance Division, our management plan has been specifically developed for successful completion of the tasks using the best construction managers for each specific assignment. The objectives of our management approach are to:

- Allocate necessary resources in a timely manner and secure on-time task completion

- Define all project goals and work towards those goals on the PANYNJ's behalf at all times
- Satisfy technical requirements of each task
- Comply with budgetary limits and invoicing requirements
- Comply with PANYNJ and STV quality standards
- Monitor contractors' enforcement of safety regulations
- Communicate and report regularly to PANYNJ regarding key project issues

The team's management approach will provide the PANYNJ with effective and timely solutions to whatever project challenges that may arise in any of the PANYNJ's lines of business. This will be accomplished by appropriate technical specialists who have a thorough understanding of the tasks required, working under experienced task managers and project leaders and the team's Project Director, Gus Maimis. Mr. Maimis is a Vice President at STV and previously served as the Project Executive at the World Trade Center (WTC) site on the National September 11 Memorial & Museum project. He brings to this assignment over 30 years of experience in the construction industry. As principal of his own CM firm for over 10 years, he provided executive direction for large-scale projects throughout the New York metropolitan area. Mr. Maimis played an instrumental oversight role for STV's program management team on the National September 11 Memorial & Museum. Through his involvement with the WTC site reconstruction, he has become fully versed in PANYNJ policies, procedures, quality assurance requirements, and the specific security requirements of the site.

Supporting Mr. Maimis will be a team of highly experienced practice leaders, all senior managers with experience to identify the best resources in the lines of business where resources may be deployed for this assignment.

Coordination with Outside Agencies & Organizations

The STV team will manage and coordinate all project activities among the designer, contractor, adjacent stakeholders, utility companies, and various public agencies, as deemed appropriate by the PANYNJ. STV will develop a responsibility matrix specific to each task to enhance accountability for required actions and their due dates. In addition, our team will work on the specific business line's behalf and interface with the PANYNJ's Quality Assurance Division, CM Division, and all other departmental project stakeholders.

Managing our Subconsultants

STV recognizes PANYNJ's need to have a "call-in" consultant with the greatest possible depth and breadth of engineering capability at its disposal so that resources are always available to respond to the PANYNJ's project requirements in a timely manner. To meet this need, STV has carefully selected a team of specialty subconsultants, including M/W/DBE firms, to assist us in providing specialized services. The subconsultants who will augment our team are **KS Engineers, P.C. (MBE), The Hirani Group (MBE), JPCL Engineering (DBE), and ELLANA Construction Consultants, Inc. (WBE).**

Task Management

Upon receiving a task from the PANYNJ, Mr. Maimis will assess and coordinate the assignment with the appropriate practice leader and subconsultants, and will begin the planning and scheduling activities and allocate the necessary professionals to effectively complete the task assigned.

THE FOLLOWING QUESTIONS WILL BE ADDRESSED:

- What is the work to be done?
- When is this work to be done?

- How much will the execution of the work cost?
- Who will perform the work?

Project Definition

Upon receiving a task assignment, the Project Director will define the project's requirements and the methodology to be used during each task and activity. We recognize that particular assignments will vary in terms of complexity, duration, and types of resources required.

Project Staff Selection

We will select the appropriate staff from our large pool of qualified individuals. The project team members will be selected based on the following criteria:

- Their technical skills and expertise
- Their familiarity with the project issues involved
- Their availability at the time of the assignment

Managing Multiple Projects

We are aware that this contract will require managing multiple tasks simultaneously. The STV team offers the breadth and depth of staff resources to manage and execute multiple and diverse assignments concurrently. Our project management procedures, work flows, business processes and on-line communications capability facilitate the close coordination needed to manage multiple assignments effectively and enable integration of multiple projects information into a single repository that can be monitored and reported upon in various levels of reporting metrics. Mr. Maimis and the PANYNJ will have full access to live reports on work completed with a comparison to work planned for all project assignments to maintain cost and schedule control, anticipate problems before they arise, and take corrective action when necessary. This management information will also be compiled and submitted to the PANYNJ periodically to demonstrate each task order's performance metrics along with our analyses of these metrics.

Technical Approach

For each specific assignment, the work plan will directly correlate with the programmatic and/or project needs of the PANYNJ's business line and all project goals. Our professionals will work alongside the PANYNJ and fill the areas of expertise requested to accomplish the goals at hand.

The STV team has developed a general approach to project management and owner's representative services, inclusive of keeping the PANYNJ apprised of project status, maintaining service delivery, and assuring the quality of work. Understanding the nature of a call-in contract, we will modify the approach according to the complexity and duration of each task to which we are assigned.

Communication & Reporting Requirements & Implementation

Communication for any call-in contract requires a multi-pronged approach. STV will identify the level and frequency of communication throughout the life of the assignment with all PANYNJ and project-related stakeholders in the project management plan. In addition, the STV team will constantly communicate and report to the PANYNJ the progress of all assignments. We will also provide full access to all live project records through the Integrated Project Management Platform. This communication will include STV's monthly report, weekly or biweekly meetings, invoicing, contract documents, cost management reports, scheduling reports, change orders, RFI's, shop drawings/submittals through status of close-out documentation.

Integrated Project Management Platform (IPMP)

Under this assignment, STV will implement a document control system, which will track, report, and control all project documents as well as maintain all related records and documents. This system will track all "ball-in-court" actions required by all parties to confirm timely resolution to any issues that may arise and can impede the progress of the project. This system will also be customized to address PANYNJ Security Protocol requirements for restricting access as directed by the PANYNJ.

The STV team will use a web-based integrated project management platform (IPMP) to support the management and control of the project scope, cost, schedule, quality, and safety. STV's preferred

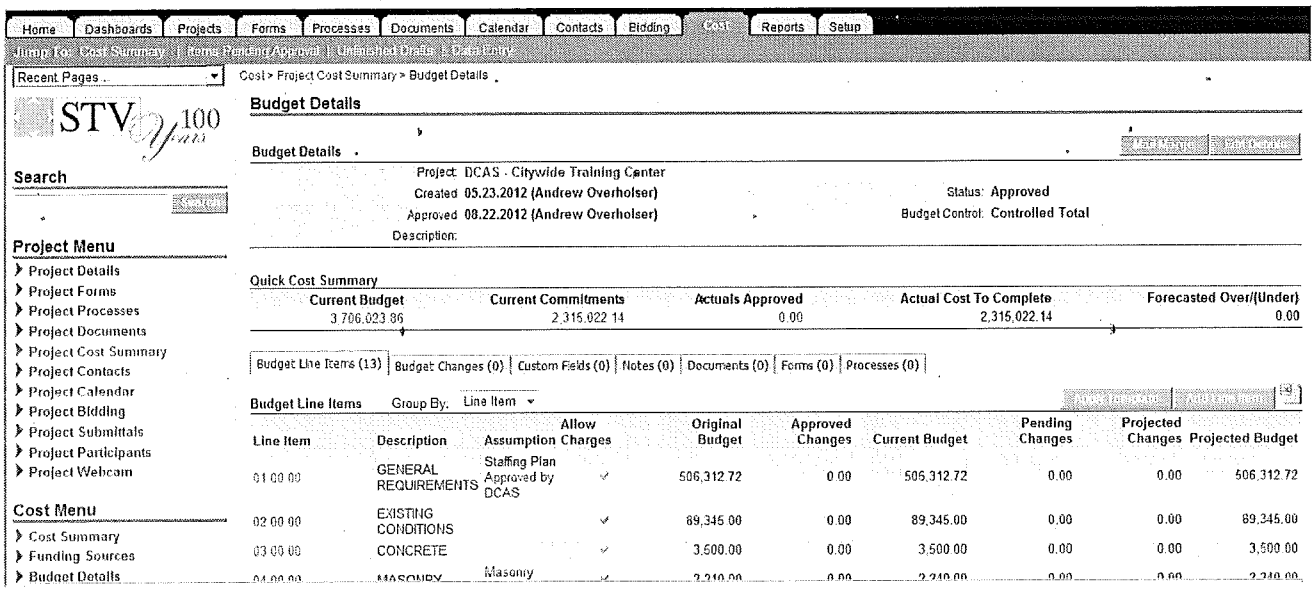


Figure 1: Screenshot of STV's IPMP Cost Module

(IPMP) system is eBuilder®. This platform is accessible from any device with an internet connection, thus allowing access to as many stakeholders as needed, as determined by the PANYNJ at the very beginning of the project. This capability allows the entire team to be engaged in the project and allows instant access to the project information, logs, and reports. The IPMP includes several modules: Cost, Forms, Processes, Reports, Bidding, Calendar, and Contacts. The integrated modules support all project processes such as submittals, RFIs, design reviews, change order management, cost control, daily reports and safety reports throughout the project lifecycle. It also provides the ability to manage meetings and document meeting minutes. In addition, **STV staff members are experts with various other systems including Wintrak**, and if required, any of these systems can be implemented and adopted immediately. STV is willing to adapt to any new technology that can assist in the successful delivery of the project.

Cost Management & Control

The PANYNJ, Project Director, and Senior Project Managers will have access to the cost module, where the budgets, commitments, invoices, and payments are documented. This allows the management team to oversee and track the progress of each phase and confirm that the budget is not exceeded and is also trending to remain within the project budget through its completion.

Change Order Management

The change order process is configured in the IPMP according to the specific flow processes as determined by the PANYNJ's contract requirements. It includes:

- The project members required to initiate, review, approve, and respond to all post award contract changes
- The workflow and the data required at each step of the process
- An audit trail for all data entry
- Web-based documentation of all data entered
- Integration with budget, commitments and payment information.

The IPMP tracks pending, projected, and approved post award contract changes providing an optimum financial control over the project budget including the ability to report at the various levels of details for each project.

Submittals and Shop Drawings Management

The submittals module is preconfigured in the IPMP; STV will configure this module to support PANYNJ's process and user permissions. It includes an import-export capability to integrate with MS Excel to facilitate information input if needed. It

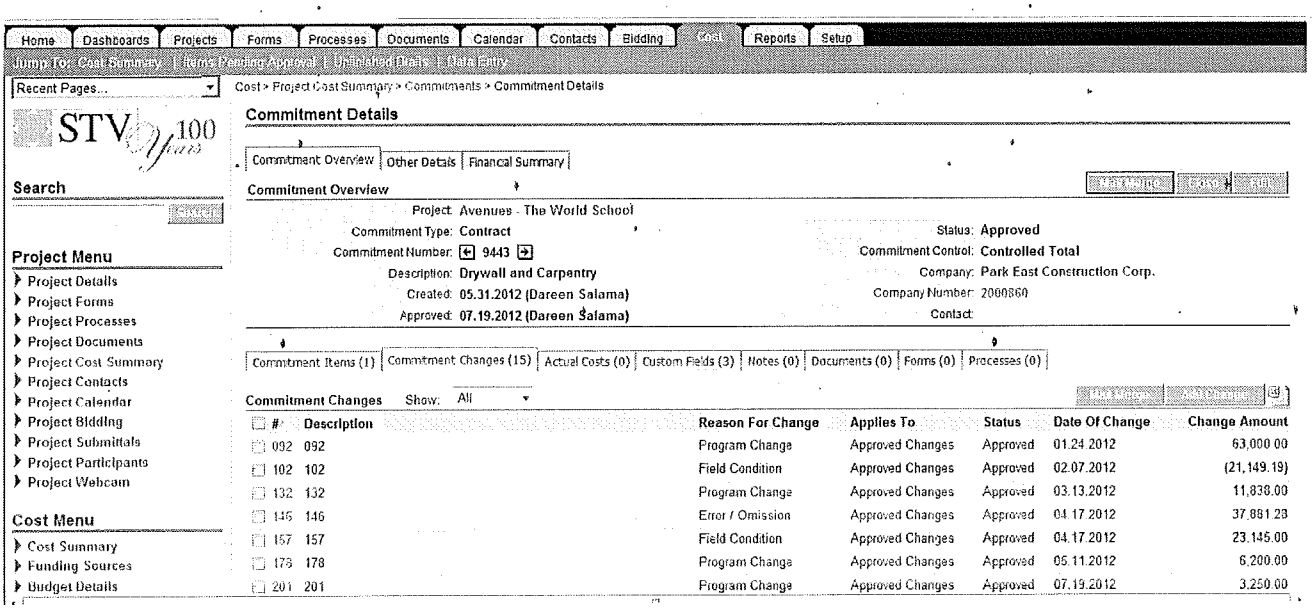

Figure 2: Screenshot Commitment Changes for a Project

allows users to upload, send, comment, review, redline, and approve submittals seamlessly on the web-based platform. It provides a paperless and efficient method of managing submittals.

THE IPMP SUPPORTS THE STV PROJECT TEAM IN:

- Maintaining a submittal log to record and track all submittals
- Reviewing submittals and distributing them to required parties
- Documenting every step of the submittal review process
- Seamlessly producing reports and submittal logs
- Verifying that submittals are being received, reviewed, and returned in a timely manner to meet schedule requirements

The STV team will work with the design team to develop a submittal register as an outline for all the required submittals on a given project or task. STV will require the contractors to provide their projections as to when these submittals will be issued. These projections will be reviewed in conjunction with the requirements of the project schedule to provide adequate time for the submittals review and any possible resubmittals and subsequent reviews. In addition, the STV team will manage the submittal process to assure that the contractors are responsive to the A/E's requirements and review comments as well as to assure that the review comments from the design team are reasonable so as not to have any negative impact on the project delivery.

Process Management & Control

The process module provides the capabilities to configure custom processes specific to accommodate a specific procedure and workflow. A structured workflow will be created and tailored for the PANYNJ for any process such as document review, request for information, change order approval, and invoice approval. This is a paperless and fast solution, where a project user would upload the documents to the cloud, and the required party can review and comment electronically. The integrated platform is easily accessible from any remote location with internet connection available, which creates real-time communication. It facilitates the documentation by providing web-based document storage capabilities. It assures accountability by providing an audit trail of the users and dates of uploading, downloading, and commenting on any design document. An example processes that STV is currently using is the RFI process.

Requests for Information

The process module includes template RFI workflows currently used by STV (example above), and also provides the capabilities to configure custom RFI processes to accommodate a specific workflow at different stages of the project.

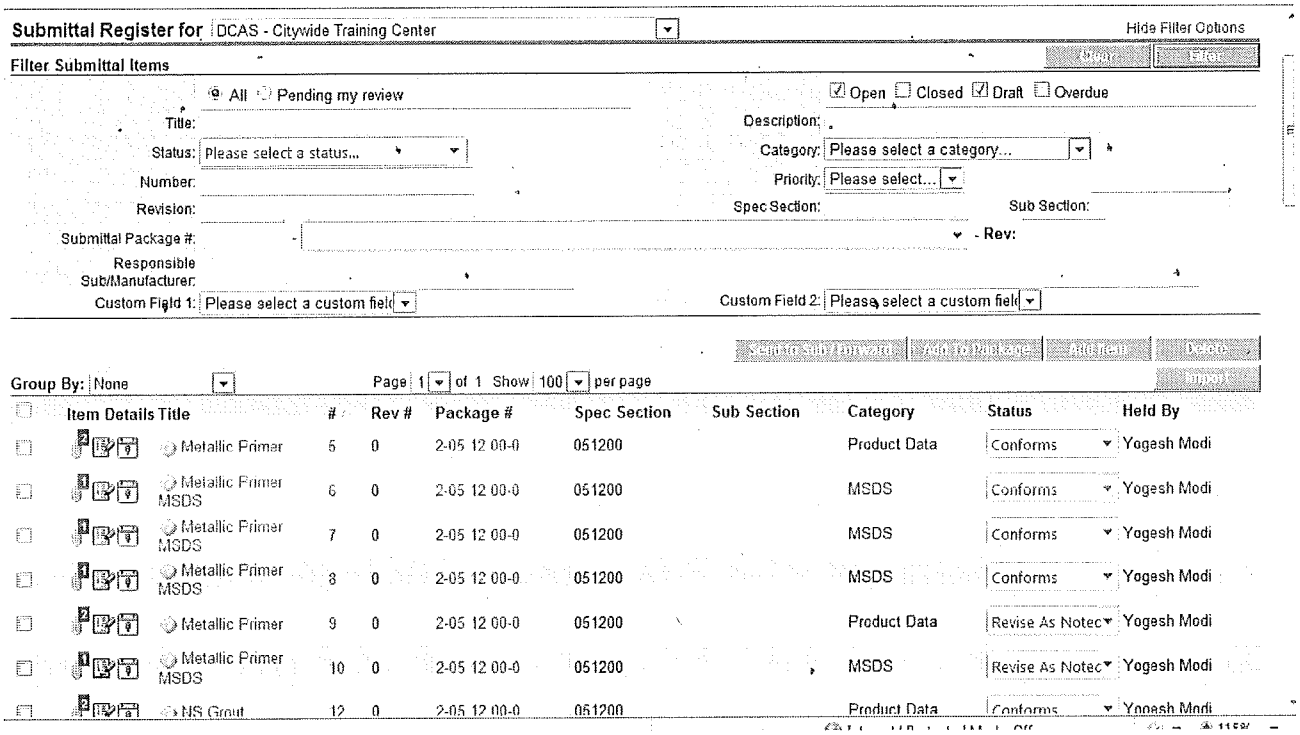

Figure 3: Screenshot of Submittals Register for a Project

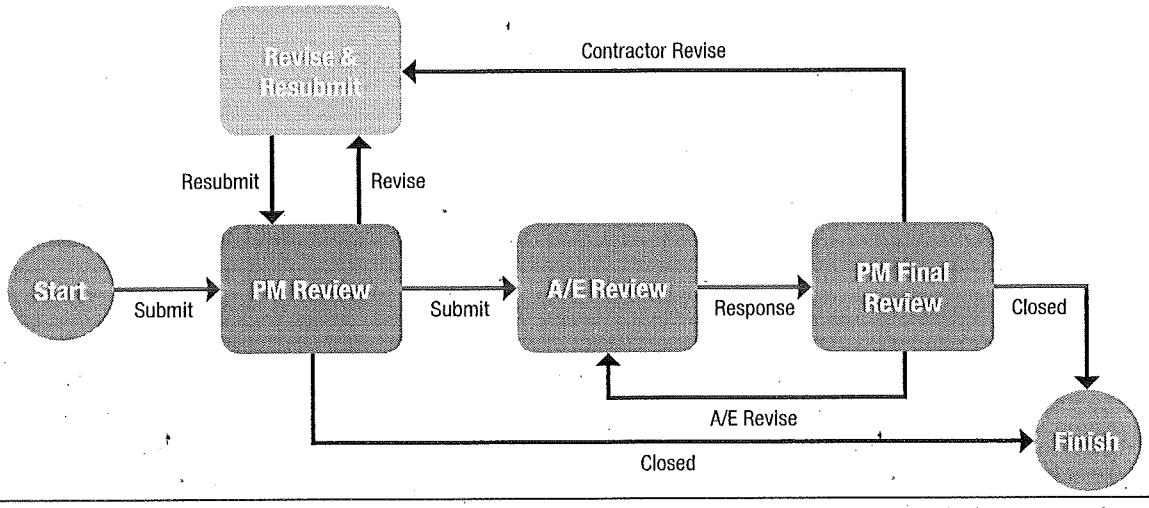
STV will maintain an RFI answer log to record and track all RFI's, their status, and their answers using the integrated project management platform. The computerized log is reviewed on a daily basis to verify that RFI's are processed and answered in a timely manner to meet schedule requirements. The STV RFI review process is shown on the previous page. STV can configure the platform to follow any RFI process required by the PANYNJ and format reports and logs to accommodate the PANYNJ's standards and requirements.

The STV team will review all RFI's generated by the contractors for validity and scope prior to submittal to the responsible party for response. The responses will also be reviewed for validity and compliance to confirm that they do not unnecessarily add scope to project.

Document Control

The document control module is customizable for each project to include a project-specific folder structure. It facilitates document sharing, review,



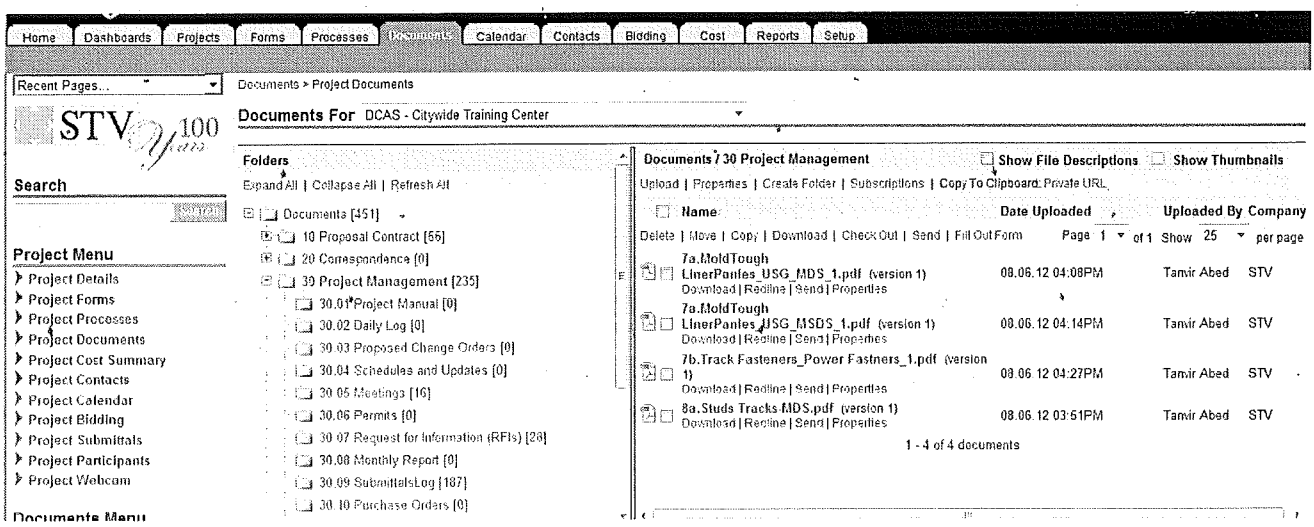


Figure 5: Documents Module

markups and updates. It assures that all project parties have the latest version of documents at all times. It includes:

- An audit trail for all document downloads, uploads, and comments
- A time stamp on all document related actions
- An email in and out feature, where documents could be sent directly to a specific folder through the email and vice versa
- The ability to make folders available for viewing and downloading by parties that are not IPMP users

The STV team will provide full control on the project documents. One very important component is the management of the contract documents. The contract drawings and specifications will be indexed to confirm that only the current documents are being used by the project team. Earlier versions, although archived, will also be used in evaluating changes as they may occur during the project.

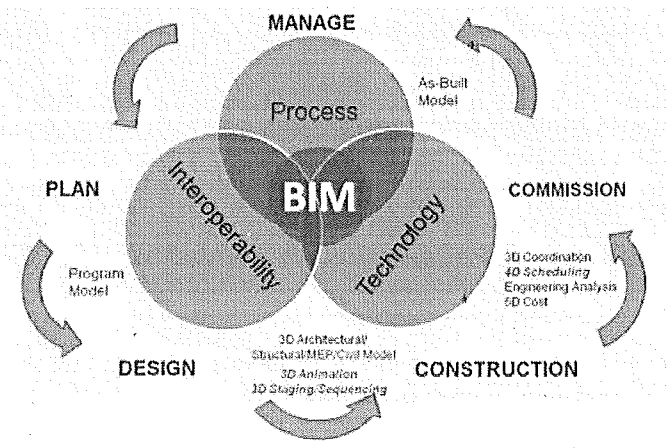
BIM Services (Available Option)

The STV team is prepared to provide the PANYNJ with BIM-456 services which can add substantial value to the project by improving communication and collaboration between all project participants. The STV team has the capability to provide BIM services across the program's lifecycle, from design to post-construction services. The services provide enhanced transparency around many fundamental project metrics.

Schedule Management and Analysis

Integrating the cost loaded schedule (Primavera P6) with the 3D model (Autodesk Revit) produces a 4D schedule, which allows STV to report on the project progress by:

- Visual representation of the work completed in comparison to the work planned
- Visual representation of the upcoming activities (4D Look-ahead schedule)
- Graphical representation comparing the planned dates and actual dates of the work in place (production rate analysis)



- Graphical representation of the Earned Value Analysis, which reports on the project progress in terms of both schedule and cost
- Graphical representation of the weekly progress of the project scope broken down by area and by trade
- Analysis of the variance between the planned and actual dates of critical activities
- Graphical analysis to show the probability of meeting the current schedule

Scope Analysis and Change Management

STV uses the construction BIM model to extract quantities and carry-out cost estimating for change orders, scope changes, and revisions. The project team used Assemble Systems to carry-out quantity take-off tasks and report on quantity variances between model iterations.

BIM Services Available

a. Model Validation

- Assure the model is accurate and matches the 2D drawings for all information
- Run a clash detection test on the design models to confirm adequate coordination is provided by the design team
- Conduct design coordination meetings to resolve any clashes in the model

BENEFITS GAINED

- Verify the model conforms to the BIM execution plan and PANYNJ BIM standards
- Improve the quality and coordination of design documents
- Provide a 3rd party review of the building information models developed by the A/E.

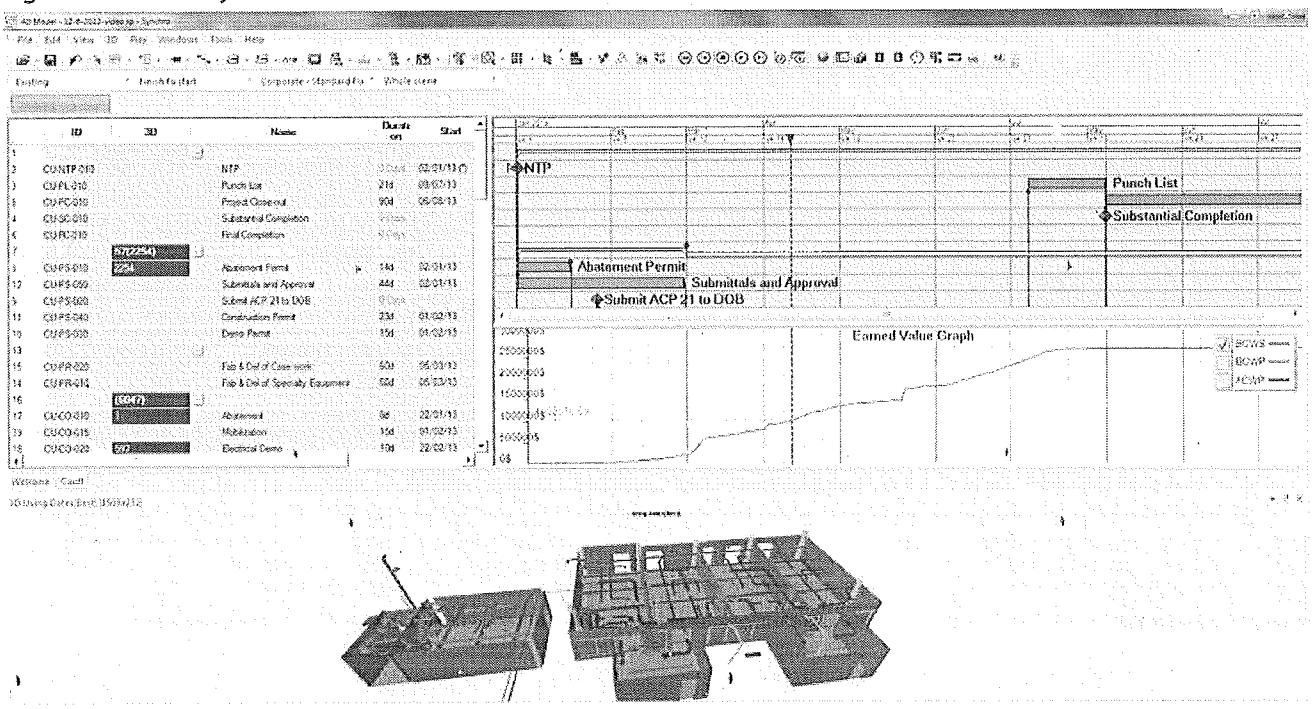
b. Model Conditioning

Condition and transition the model from a design to a construction model increasing the level of detail. The project team will use Autodesk Revit to produce a construction model suitable for 4D scheduling and 5D estimating services. (Note: All changes to the model must be documented)

BENEFITS GAINED

- Prepare the model for use in the construction phase to facilitate cost and schedule management

Figure 6: BIM Analysis



c. Use the model to carry out quantity takeoffs at various stages of the design process

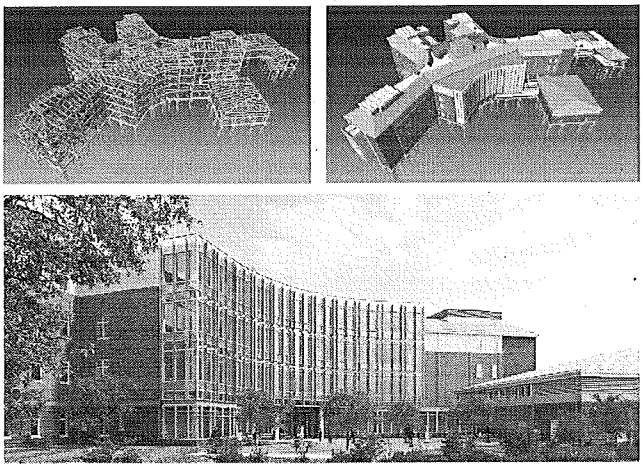
BENEFITS GAINED

- Reduce time spent on quantity-take-off
- Focus time and effort on pricing, material availability, constructability issues, and value engineering

d. Use BIM tools to produce a variance report for any design changes in an efficient manner

BENEFITS GAINED

- Reduce time spent on comparing different version of 2D drawings
- Compare different design alternatives faster than using traditional 2D take-off tools



STV USED BIM FOR THE DESIGN OF THE OGS BRONX PSYCHIATRIC CENTER PROJECT.

Technical Approach for Assigned Tasks

Task A. Constructability, Biddability & General Engineering Review

STV's constructability reviews will focus not only on the design and construction process, but the effect that changes to the documents can have on the reliability and maintainability of the facility.

Constructability reviews will be conducted as part of the design review milestones. The design documents will be reviewed to verify that the project can be built within budget and on schedule. These reviews will focus on the following:

Design
• Design details
• Design coordination
• Design features
• Spare parts.
• Permitting/utility approvals
Construction
• Coordination with other facility contracts
• Construction details
• Scheduling/staging
• Work hours
• Temperature sensitive materials
• Space conflicts
• Contractor coordination
QA/QC
• Reliability
• Maintainability
• Testing
• Turnover

- Elimination of impractical/impossible construction requirements
- Ability of design to meet site conditions and constraints
- Availability and sustainability of labor, material, and equipment
- Verification of site conditions such as contractor access and storage
- Determining and assessing construction milestones and durations
- Verification of QA/QC requirements
- Ability to meet public requirements such as adjacent land use, level of service, and ADA requirements
- Verification of utility locations and procedures for service interruptions/outages
- Conformance with local work practices
- Obtaining operation and maintenance input from impacted users

The goal of these reviews is to provide a design that is economical, buildable, and minimizes exposure to claims and cost growth.

The biddability review will be conducted in parallel with the constructability review but with a slightly different approach to assure that:

- The design is clearly defined and detailed
- Structural member sizes and connection details/ requirements are called out and follow standard industry practice
- Material and equipment specified is conventional and readily available
- Proper inter-discipline coordination has taken place for all systems and building components
- Proper coordination has taken place between design and phasing documents and the project schedule
- Long lead items are defined
- The scope of work has been clearly defined and clearly delineated among the various contracts/ subcontracts without any scope gaps

The General Engineering Design review will include checking the design documents for clarity, completeness, consistency, and construction detailing in drawings and specifications. Design options/ alternatives presented by the design team will be reviewed, and others developed, to improve the facility operations and minimize active facilities inconveniences throughout the construction period and into the new facility's operations.

Sustainability analyses will be performed in conjunction with the design reviews, to improve upon the project's LEED compliance during construction and for permanent use. Recommendations may be generated which trade off short-term and long-term costs and savings, to achieve better cost effectiveness on a life-cycle basis.

Using the project's contract administration software, STV will track all issues and comments raised during the constructability review. All issues will have a unique number and be logged and shared with the project team with appropriate coding to designate the issue/comment. All issues/comments will remain open until designated as implemented or closed. It will be the responsibility of the designated Project Manager to make sure that all issues are adequately evaluated, addressed, and implemented if accepted by the PANYNJ.

Task B. Construction Staging

STV's professionals will review design documents prior to bidding to evaluate the efficiency and feasibility of performing construction around the constraints and requirements of any of the PANYNJ's ongoing operations. All of the PANYNJ's facilities require close coordination. STV will review all documents with a focus whether all required details and constraints are clearly delineated in the bid documents. In addition, we will look for opportunities to streamline construction activities, depending on the needs of the PANYNJ's tenants, and we will make recommendations to changes on areas of construction phasing, staging, construction site access routes, laydown areas, material access, construction cranes assigned locations, maintenance and protection of traffic and most importantly minimize disruption to PANYNJ's active facilities.

Task C. Schedule Development & Monitoring

The STV team recognizes that schedule control is an essential element for the successful execution of any project.

The schedule will serve as the contract baseline by which the designers' and eventually the contractors' progress will be measured and tracked. Actual progress and resource usage will be continuously reviewed, monitored and recorded against planned logic, sequencing, and quantities installed, to identify deviations from the approved plan so that we can recommend immediate corrective action, if required.

In collaboration with the entire project team for a given task, STV will develop a detailed construction schedule, using prescribed software in the specifications — such as Primavera (P6), which will be used as the master project schedule to integrate all project components including design and construction. The schedule will identify the critical path and all project predetermined

milestones. The schedule will show the sequence and interdependency of all the project activities, including non-construction (drawing approvals, procurement, and the like), and design and construction activities. The detailed schedules will be developed in accordance with the project specifications. This schedule will be updated periodically, typically on a monthly basis, to reflect updates from the various project components and report on any delays or any work that is being performed out of sequence. STV will work with the project team to arrive at the proper recovery plans to make sure that the project milestones are met.

In addition, STV will review the A/E's and contractor's schedules to assure conformance to the contract requirements and compliance with the overall milestones for the project. Depending on the project complexity and duration, STV has typically mandated that contractor's schedules be resource loaded (quantity of material to be installed, manpower requirements such as crews, major equipment, and crew production rates) and cost loaded to reflect the value of the contracted work on the detailed schedule of activities. This information is used to assess the contractor's performance of the work, from schedule and budget standpoints, when reviewing their monthly updates. This is also used in analyzing delays and any claims for time extensions.

STV understands the project schedule, for both design and construction, will be thoroughly coordinated at the very early stages of the project. Issues such as proposed phasing of the work, local approvals, separate Prime Contractor coordination or CM at risk must all be addressed to logically approach the execution of the project. STV has worked through these very same issues on a wide variety of projects with numerous clients, and is confident in our experience and approach.

STV's schedulers build Critical Path Method (CPM) schedules, using leading edge scheduling software, that conform to contract requirements and industry standards. The project manager will engage with the design team to provide the planning, work breakdown structure, and the schedule logic along with estimated time durations for each activity. The STV scheduler will enter the data into the scheduling program and prepare the reports that show the shortest time in which the project can be completed, identify those activities which cannot be slipped, and show the potential slippage (float) available for those activities that are not critical. In cases where the resultant time requirement exceeds available time, the project manager and the design team must re-evaluate the entire program and take whatever action is required to meet time objectives.

Activities include not only technical interfaces such as architectural backgrounds, geotechnical reports, structural member sizes and elevations, equipment requirements (electric, air, water, fuel, drain) but also quality control activities. The schedule includes activities for reviews, technical checks, publishing and shipping of documents. Client driven changes in work or schedule will be evaluated for impact on the project schedule. The changes will be treated and processed as a schedule deviation and the resources and schedule adjusted upon consultation and concurrence of the PANYNJ.

Schedule Control/Time Impact Analysis Approach

STV will manage the project schedule to minimize slippage within the elements or subsets of the schedule. STV's schedule control is based on predicting rather than reacting to problem areas. The approach is both simple and comprehensive and impacts all aspects of project implementation.

The schedule is updated with actual progress on a daily, weekly or monthly basis as required to determine compliance with the baseline. Updates include input of actual dates, remaining durations, percent completes and actual costs/resource usage (where applicable), and comparisons are made with variances highlighted. Recommendations are provided to the PANYNJ regarding the status of the project, including the status of key milestones and the critical path.

Time impact analysis (TIA) is an industry-recognized analytical technique intended to facilitate a reasonable estimation of the time impact to the project caused by a single event or a series of events. At STV, TIA is incorporated in our scheduling approach where we use forward looking tools to analyze the magnitude and responsibility of

potential delays as they occur to minimize disruption to the project.

Task D. Quality Assurance Inspection (QAI)

The STV team's mission will be to provide high quality products and services that meet your requirements. We accomplish this on each project by integrating a high level of vision, innovation, and integrity with a quality system that is based on clear objectives and a commitment to continual improvement. The STV quality manual, for example, adheres to the latest applicable standards and procedures defined in ANSI/ASQ Q9001.

With extensive quality assurance guidelines defined within the PANYNJ's Quality Assurance Department, our job will be to identify all necessary QA/QC requirements on the project from the onset, recognize the role each member of the project team plays in the QA/QC program's implementation, and then manage and report on the quality of the work product to be produced. This is done through the development of the Quality Management Plan, a document which we will develop based on criteria indicated in the project plans and specifications and within the PANYNJ's quality assurance requirements. After review and approval by the PANYNJ, we will clearly define the plan to all project team members.

Construction Inspection

Our field/construction inspection teams (resident engineers and inspectors) will carry out their duties and responsibilities to determine if construction work, including material fabrication, is being performed in accordance with the construction documents and specifications. The assigned resident engineering and inspection team will audit contractor activities to make sure that there is no deviation from contract requirements and that work is performed with proper safety and with expected quality. Field teams will assist each project manager in verifying quantities of work performed, materials used, fabrication dimensions, consistency with contract documents, and adequacy of the contractor's resources.

Our field teams will be trained in our project-specific QA Plan and will become familiar with the contractor's plan and procedures. They will monitor the work of the contractor using these documents as a basis. We will provide the services of a survey party, if required, to monitor the layout of the placement structures, verify elevations and confirm accuracy of the contractor's survey control. Other services we may provide to assist PANYNJ include:

- Facility Inspection - Based on the requirements of the PANYNJ and the complexity and importance of the specific component being fabricated, we will determine if full- or part-time inspection will be required at the facility.

- Materials Monitoring - We will monitor the contractor's placement of material orders to determine if scheduled delivery will support the project milestones. We will review any early procurement items or long-lead items.

- Maintenance & Protection of Traffic (MPT) - If required, we are able to call in our expertise to mitigate potential traffic situations.

- Night and Weekend Work - STV is accustomed to performing work in multiple shifts, such as night work and weekend work. We are aware of the importance of revenue collections and the need to keep buildings occupied with tenants.

- Security - The STV team understands the need to maintain a secure work site. We are aware of additional security measures that have been instituted as a result of 9/11 and will carefully follow and observe all rules, regulations, and measures. We will be mindful to "lock the gate behind us." We will follow security control protocol by coordinating with facility police; by issuing ID badges to personnel cleared to be present in the work zones and making sure that personnel carry that identification while on site; and by making sure proper identification is displayed on vehicles and equipment to be used on the site.

Contractor Monitoring & Coordination

On the PANYNJ's behalf, STV's professionals will monitor, review, and evaluate the actual construction by the contractor in accordance with contract

documents, PANYNJ requirements, and industry procedures. To achieve close coordination of all work activities among the numerous parties, we will participate in contractor coordination meetings. Attendees may include our field representatives, the construction manager or contractor's representatives, PANYNJ representatives, and design team members, as appropriate.

Additional activities which STV's project management and technical professionals may complete during the construction phase will include but not be limited to:

- Monitor that the work is performed in accordance with the contract documents, with PANYNJ requirements, and with previously agreed-to methodology
- Verify the contractor has obtained all necessary easements, permits, and variances
- Make sure of the contractor's compliance with contractual reporting requirement
- Facilitate the resolution of outstanding submittals and/or RFIs

Safety

The STV team cannot overemphasize the prime importance of safety on any construction site. Hard hats, safety vests, eye protection, ear protection, respirators, work shoes, emergency telephone numbers, tool box meetings, and OSHA, to name a few things related to safety, are common topics of discussion on a construction project. Throughout the life of the project we will continue to maintain safe work conditions.

The STV team will monitor the contractor's compliance with their own safety guidelines, standard industry safety practices, and client site safety regulations. To verify the contractor's understanding of the job site safety regulations and procedures, we will make sure that the contractor submits a project safety program.

In the process of monitoring the contractor's adherence to safety practices, the STV team will notify the contractor and the PANYNJ's safety department of any safety violations or noncompliance observed by filing a safety infraction report. Safety issues or violations will also be reported in the monthly reports that we will prepare for the PANYNJ.

STV believes safety is of prime importance on any construction site, particularly projects involving occupied facilities.

Daily, Weekly, & Monthly Reports

The primary purpose of STV's reports is to provide a complete chronological history of all significant events during the construction period. These reports will be considered documents of record in possible future claims hearings or court cases. Therefore, the writing style will feature clear and concise presentation of facts in neat and legible handwriting. By noon on the Wednesday of the week following any construction work on the site, we will furnish a weekly activity report to the PANYNJ. We will also prepare and deliver a detailed monthly report to the PANYNJ. Copies of the report will be submitted by the 10th of each month covering the work performed during the previous month.

Post-Construction, Closeout, & Acceptance

For completion and acceptance of each portion of the work, STV will develop a detailed plan and schedule for the completion and acceptance of each stage, and of the closeout of the construction contract. The development of the completion plan will be initiated at least 60 days prior to scheduled completion of each phase. STV will work with the project team to identify critical items or issues that need to be expedited or resolved to not jeopardize the successful timely completion of the project.

The completion plan will establish the administrative and management activities necessary to accomplish the remaining work and will provide for a coordinated turnover to the PANYNJ. The plan will be completed and submitted to the PANYNJ 30 calendar days prior to completion of each phase.

Contract Closeout

Our final inspection and acceptance of work will certify completion of punchlists and will close out the contract when the construction and instal-

lation contract is completed. The STV team will consider a contract to be closed out when the following items have been finished:

- Final punch list has been completed and signed
- Contract closeout checklist has been completed and signed off by the appropriate entity
- Final amendment has been approved, issued, and signed
- Final progress payment request has been checked and agreed upon and paid, including retention
- Function or performance of equipment installed has been verified
- All claims have been resolved

Task E. Contract Administration

The early notification of a potential change or claim is crucial to the financial health of a project. Each potential change must be addressed expeditiously for its validity, fair cost value, and impact to project budget and schedule. Any potential claims that are observed or suspected must be identified immediately so the process of collecting and reviewing all pertinent data expedites a resolution.

In conjunction with and as approved by PANYNJ, STV will implement a Change Management System that meets the PANYNJ's needs by providing early identification, evaluation, processing, controlling, and approval of:

- Pending Item Notifications (PIN) - the early notification of a potential change or potential claim accompanied by a rough order of magnitude estimate (ROM). For potential claims, this stage alerts the Authority and begins the process of collecting and analyzing data Pre-PACC.
- Post Award Contract Changes (PACC) – Post PIN, the initiating document for change order work that must be evaluated based upon supporting documents and drawings/sketches, as applicable, to determine if 1) there is a contractual change, whether deletion, addition or contractor charge back and 2) the scope and reason of the change is clear. An analysis of Engineer's estimate vs. contractor's proposal for cost and scope leading to formal contractor negotiation and implementation based upon the Authority's approval.
- Change Orders (CO) - Post PACC, document that formally sets forth the parties and incorporates the agreement into the contract as authorized by the Authority.

Depending on the site of a given project, STV can create a Change Management Team (CMT). The CMT is responsible for managing and monitoring the PIN, PACC, CO process and its status to make sure information is accurate, valid, and addressed in a timely manner by integrating themselves within the project team and conducting periodic review meetings such as:

- PIN Review Meeting – Conducted once a quarter minimally, this meeting reviews all open PINs to determine their current validity as a potential change or potential claim, and if valid, determine if the ROM estimate should be adjusted based upon present circumstances.
- PACC Review Meeting – Conducted weekly, this meeting reviews the status of all open PACCs based upon criteria such as PACC age, impact to the construction schedule, stakeholders, life safety/environmental concerns, engineering estimate completed, contractor proposal received, negotiation date set, etc. Through this meeting critical PACCs are identified, issues raised are discussed, and next steps identified to forward the PACC. Also reviewed at this meeting are the approved PACCs, not yet executed as a CO, and their status within the CO process.

In addition, the CMT will provide the Authority a weekly summary update highlighting the status of potential claims, critical items that arose from the previous week, and overall weekly change status.

The Change Management System will be fully integrated into the project's cost model and is a critical component in containing project cost by identifying scope growth, changes in project schedule and cost, items that may impact regulatory requirement, future risk and forecasts of Estimate at Completion (EAC) and Estimate to Complete (ETC). All pertinent data such as correspondences, estimates, analysis, recommendations, negotiations, etc., related to the progress

of each PIN/PACC/CO item shall be electronically filed by PIN/PACC/CO item providing an ongoing history of the item. The System's framework will allow it to interface with several projects and/or sub-project within a larger project.

Reports generated from the Change Management System shall be continuously used by the project team, accessible to the Authority, and included in monthly progress reports.

STV will also have a set method for establishing earned value for work performed that can be monitored against the project budget. The STV team will provide full control over processing of T/M records. Only authorized T/M work will be considered. STV will manage the contractor's payment application process which will be reviewed in conjunction with the project schedule deliverables, milestones, and earned value assessment.

STV will collect project information at the right intervals, the right granularity and will provide meaningful analysis that can be monitored and reported upon in various levels of reporting metrics. At project completion, we will inventory and document all records so that they can be easily transferred and used in the PANYNJ archives.

Task F. Cost Engineering/ Estimating Services

All of the STV team's major milestone estimates will be reviewed with the project team and the STV team will continue to monitor/evaluate/ reconcile these estimates against the project's Cost Model and Schedule. Cost estimates will be performed in accordance with PANYNJ's Construction Estimating Guide. At the onset of each task-order, the STV team will work with the PANYNJ to develop the template for all soft costs, contingencies and Proforma costs that are applicable to the task order. The contingencies will be monitored and adjusted throughout the various phases of the project. The STV team will establish a Work Breakdown Structure that will be used throughout the various phases of the project to enable monitoring of all project costs and cost accounts to a great level of accuracy. STV will also identify to the PANYNJ, any risk factors, ahead of time, that can jeopardize the project budget.

Schematic Design Phase

Based on the Schematic Design Documentation, the STV team will prepare the cost estimate around an understanding of the scope, from the collaborative meetings, the schematic drawings, the project narratives, and the outline specifications. At this early stage in the design process, the estimate will include detailed quantities for both architectural and structural items. Benchmark system quantities and costs will be used for the MEP disciplines as design content will not have been developed.

It is imperative that all parties understand and concur with the STV team's understanding of the scope of the work at all stages. Value engineering in the form of a checklist of system cost saving items will be presented with the schematic design estimate for review and discussion. The estimates will be reviewed with the client and the design team as required.

Design Development Phase

The Design Development Cost Estimate will be based on developed drawings and will outline specifications prepared by the design team. This estimate will include quantities for the design scope and provide allowances for undefined areas. Elemental and cost per square foot will be established for the estimate and reconciled to the cost model and previous estimates. And audit trail/variance report will form part of the cost plan submission document.

The STV team will continually monitor and evaluate the progress of the documents to make sure that they are proceeding in conformance with the cost model and are on schedule. Value engineering will be concurrent with the design development estimate.

To assure pricing is consistent with current market procurement, the STV team will bring in subcontractors for price checks with budgets after Design Development.

Construction Documentation Phase

Construction Document Cost Estimates will be developed at levels consistent with the project's requirements. The STV team will continue to monitor/evaluate during this phase, the progress will be constantly checked against the cost model and schedule, and

value engineering will continue. At this stage the estimate normally contains a significant element of bid-out work scopes which will be included within the estimate to reduce risk. Bid-buys included within the estimate will be reviewed and appropriate provisions for scope holds and contingencies included, ensuring complete scope coverage.

STV has applied the design assist methodology to several current and previous projects where a significant benefit has been realized and these designers and subcontractors have worked alongside the design team throughout the design period, with a common goal of achieving performance specifications while meeting budget needs.

Task G. Resources

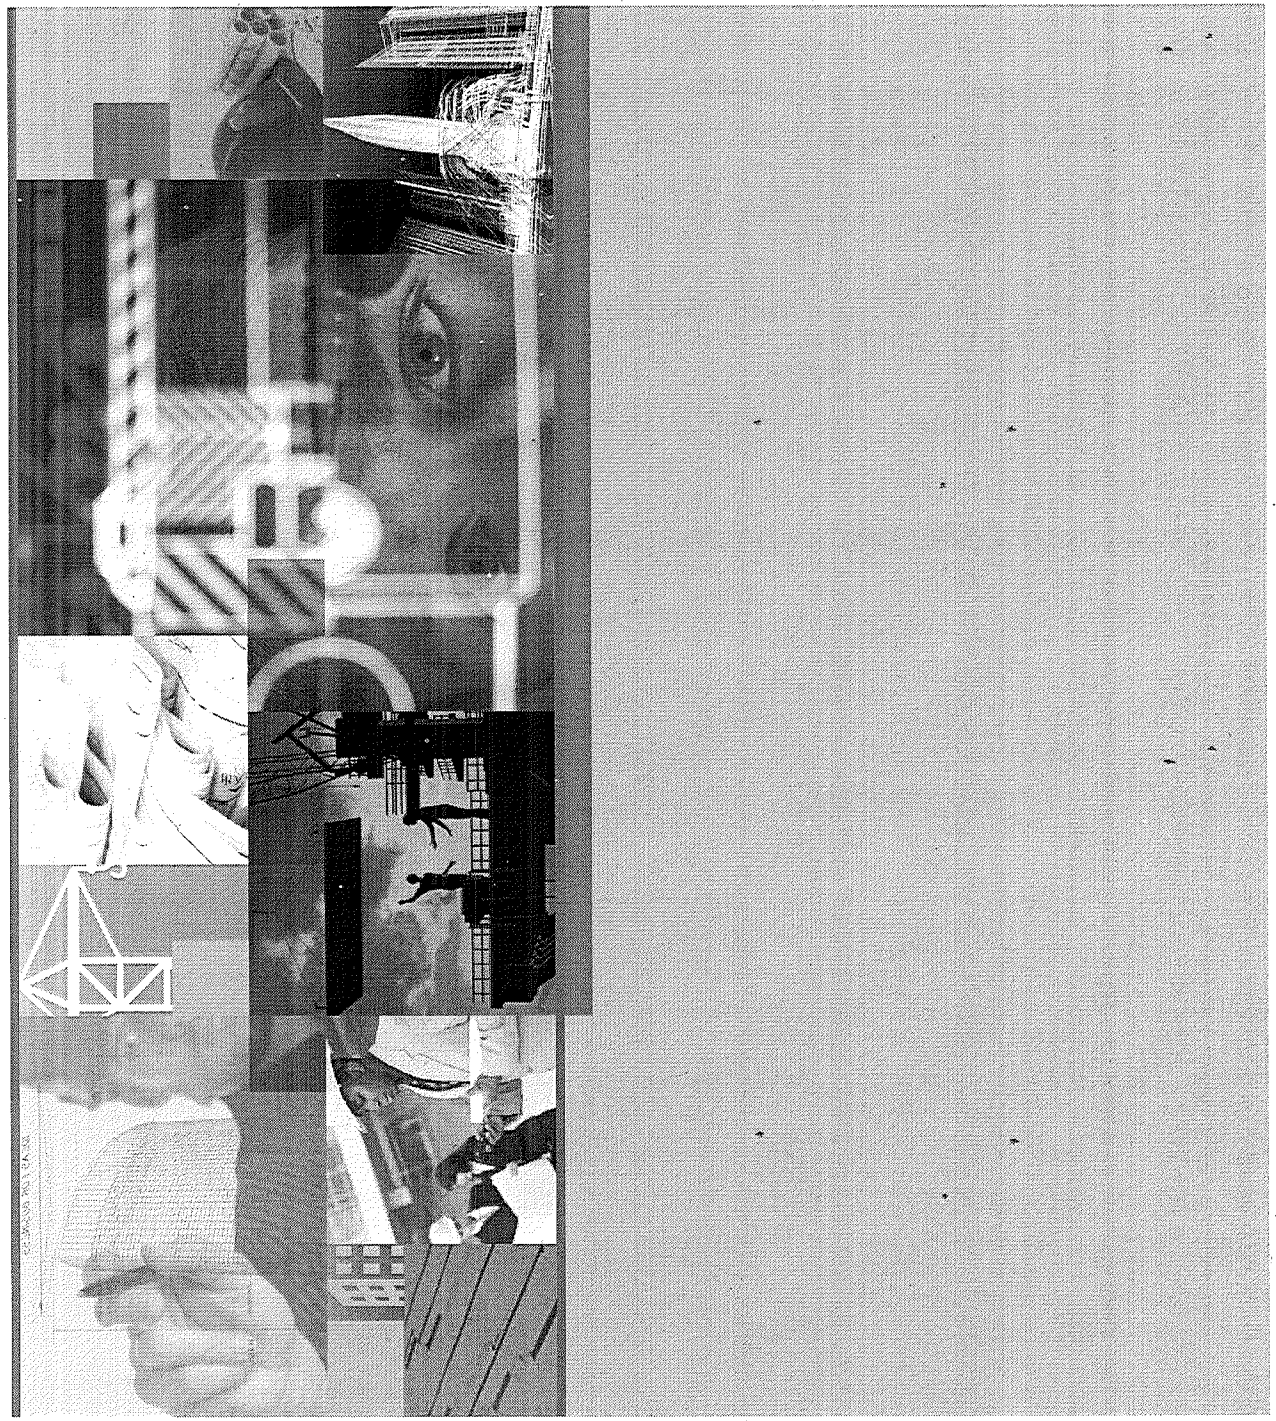
STV, being a firm of multi-disciplined construction managers, architects, engineers and planners, can provide the whole spectrum of services for all phases of the project. Beyond the construction management services that are outlined in this proposal, our entire staff is at arms reach and can be made available for any of the tasks that are required for the contract.

Supplementing our staff, STV has previously engaged the services of several material and testing firms, one of which is JPCL Engineering, providing material and testing services under the supervision of licensed professional engineers on multiple other projects and can have their services available depending on the type of services required for a given task order. Such services include:

- Materials testing in accordance with applicable ASTM and AASHTO guidelines, including the requirements of ASTM E329, standards and recommended practices of inspection and testing agencies.
- Pile driving inspection and monitoring
- Steel inspection and non-destructive testing of steel components
- Geotechnical inspection of earthwork, subgrades and backfill
- CIP and precast concrete inspection and testing
- Asphalt paving inspection and testing
- Establishment of an on-site materials testing laboratory
- Fireproofing/firestopping

Summary

STV is uniquely qualified to undertake the variety of assignments that may result from this "call-in" contract. Our firm offers the range of expertise required to creatively address all of the key issues for this contract because we offer the depth of experience and the management capabilities need to respond to diverse needs in a timely manner. The STV team, conveniently located in Manhattan (over 200 CM and CI personnel at our 225/233 Park Avenue South location) near the PANYNJ's executive offices and facilities, can provide a rapid response team to provide you with needed and critical staff support.



I. FIRM'S AFFILIATES

THE PORT AUTHORITY OF NY & NJ

STV Construction, Inc.

STV Construction, Inc. is a wholly owned subsidiary of STV Incorporated. STV Incorporated is a wholly owned subsidiary of STV Group, Incorporated. STV Group, Incorporated is wholly owned by the STV Employee Stock Ownership Plan (STV ESOP). STV ESOP c/o STV Group, 205 West Welsh Drive, Douglassville, Pennsylvania 19518. There are no individuals within the STV ESOP that hold 5% or more of the outstanding STV ESOP shares.

Subsidiaries

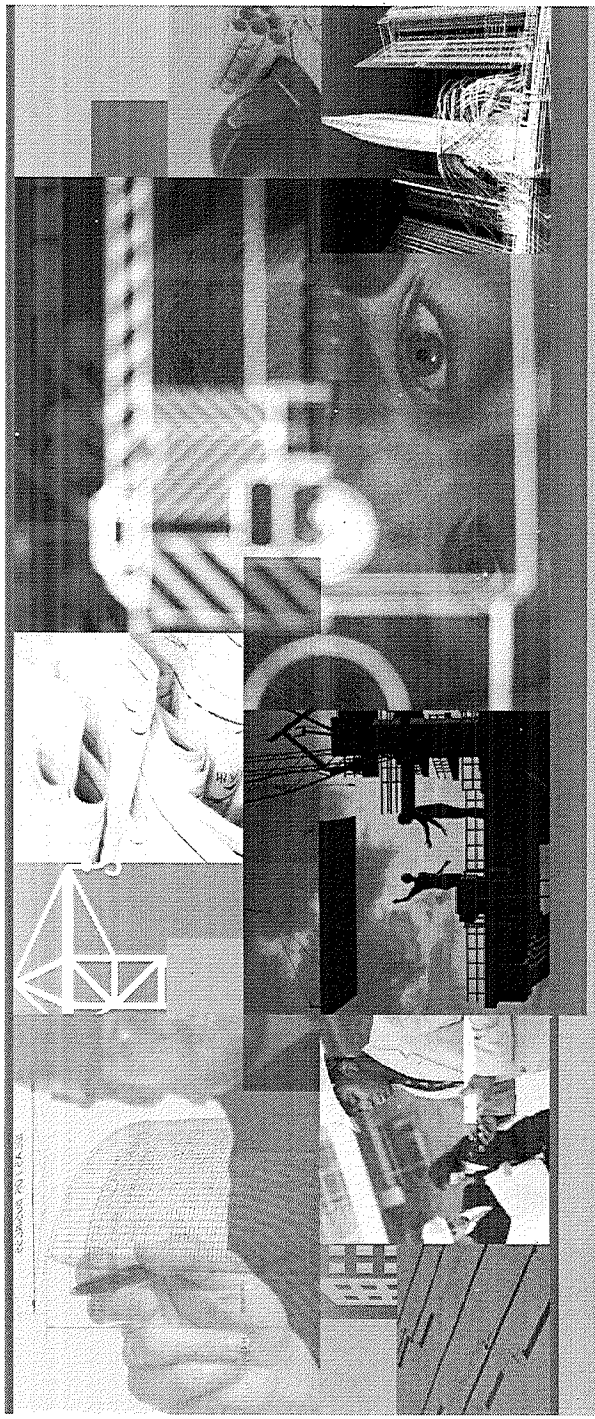
The following subsidiaries are 100% owned and controlled by STV Incorporated or its subsidiaries:

- STV Canada Construction, Inc.
- STV Canada Consulting, Inc.
- STV Construction Services, Inc.
- STV Construction, Inc.
- STV Energy Services, Inc.
- STV International, Inc.
- STV Massachusetts, Inc.
- STV Michael Lynn Associates, Inc.
- STV Middle East, Inc. (Wholly owned by STV/WAI)
- STV WAI, Inc. (Wholly owned by STV Incorporated)
- GWD Design, Inc. (Wholly owned by STV Energy Services, Inc.)
- GWD Field Services, LLC

Related Entities

The following entities are controlled by STV Group, Incorporated, and/or STV Incorporated:

- STV Architects I, P.C.
- STV Architects, Inc. (Controlled by STV Incorporated. STV Incorporated owns 33.3 %.)
- STV Architects, P.C.
- STV Canada Architects, Inc.
- STV Design Puerto Rico, LLC
- STV Energy Engineering, P.C.
- STV Energy Services II, P.C.
- STV Puerto Rico, LLC
- STV Silver & Ziskind Architects, P.C.



J. CONFLICT OF INTEREST

THE PORT AUTHORITY OF NY & NJ

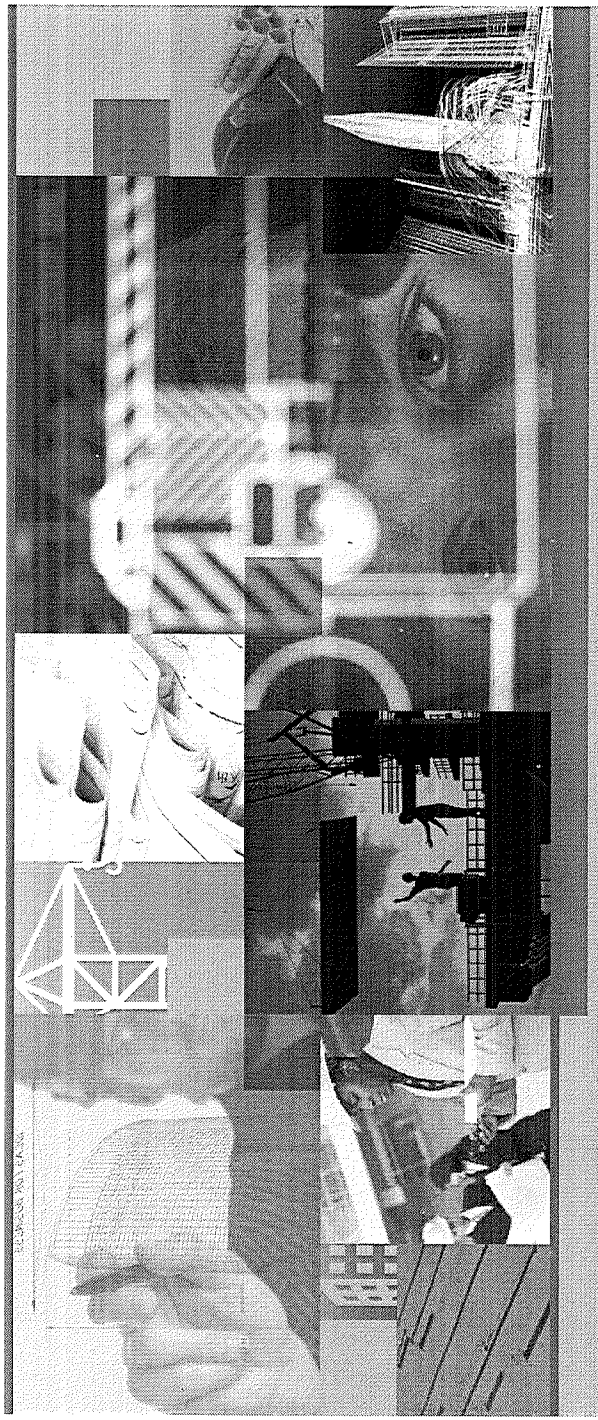
Neither STV nor any employee, agent, or subcontractor of STV has any conflicts of interest to disclose regarding this contract. STV currently provides services to the PANYNJ on multiple projects. Some of these contracts include, but are not limited to the following:

- One World Trade Center and National September 11th Memorial and Museum Owner's Representative and Expert Program Management Services
- World Trade Center Chiller Plant
- World Trade Center Transportation Hub
- Cost Control and Project Management Services for World Trade Center (WTC) Projects
- World Trade Center Site-Wide Operations Control Center
- World Trade Center Vehicular Security Center and Tour Bus Parking Facility
- Cortlandt Street Station

As this is an on-call contract, it is possible that a particular assignment could conflict with STV's other contracts with the PANYNJ. Upon receipt of an on-call assignment, STV would review the assignment's scope of work against its prior and existing contracts with the PANYNJ to determine if there would be a potential conflict with the new assignment.

If there appeared to be any conflict of interest, STV would bring the matter to the attention of the PANYNJ and respond as directed, as well as implement STV's conflict mitigation procedures.

K. Exceptions to Standard Agreement



K. EXCEPTIONS TO STANDARD AGREEMENT

THE PORT AUTHORITY OF NY & NJ

STV takes no exceptions to the standard agreement included as part of this RFP.

Attention: RFP Custodian

RE: REQUEST FOR PROPOSALS FOR THE PERFORMANCE OF EXPERT PROFESSIONAL CONSTRUCTION MANAGEMENT AND INSPECTION SERVICES AS REQUESTED ON A "CALL-IN" BASIS DURING 2015 THROUGH 2018 (RFP NUMBER 39247)

Dear Sir or Madam:

Savin Engineers, P. C. (Savin) in association with Hudson Valley Engineering Associates (HVEA) and Haider Engineering, P. C. (Haider) is pleased to submit our proposal to provide construction management and inspection services as requested by the Port Authority of New York and New Jersey on a "call-in" basis as specified in Attachment A of RFP No. 39247 dated August 27, 2014. We have formatted the proposal in accordance with the information provided and have enclosed one (1) reproducible original and three (3) copies, along with four (4) compact disc copies per your request. We have limited the proposal to fewer than 25 pages for Letters F and G in Section II, and each resume is limited to a 2-page maximum, using 12-point font size. We intend to meet or exceed compliance with Paragraph 23 of the Authority's Standard Agreement in which are stated the goals for Minority Business Enterprise participation.

We believe that Savin Engineers, P. C. is extremely well-suited for this assignment because:

- **Since 2001, Savin Engineers, P. C. has performed on-call construction management services almost continually for the Port Authority.**
- **We have the depth and breadth of experienced staff required to staff this project. This includes certified inspectors, licensed professional engineers, schedulers, estimators, and claims specialists, among others.**
- **We have a proven track record in being responsive to the Port Authority and the CMD (Construction Management Division). We are consistent in our ability to properly staff our on-call projects, often times on short notice, in a very short turnaround time.**
- **We have the right staff to provide exceptional service. Many of our staff have experience working with the Port Authority. Their understanding of the standards and processes used by the Port Authority are invaluable.**

KNOWLEDGE OF YOUR PROJECT

We believe a sound knowledge of the requirements and intent of a project is critical to performing it successfully. Savin has provided construction inspection services on numerous "on-call" or "call-in" type agreements over the years, and is currently providing such services for the Port Authority on a very similar project. These projects have all required quality personnel who must often be available for varying durations.

Based on our experience, this project will require coordination, responsiveness and an overall knowledge of Authority expectations in order to be performed successfully. It may require numerous construction management personnel of varying levels be provided to numerous facilities throughout the Authority, on short notice, and for varying durations. Savin is extremely familiar with the constant vigilance demanded by this type of project such that the Authority gets quality individuals where and when needed.

THE FIRM TO MEET ALL YOUR NEEDS ON THE PROJECT

Savin has worked on over fifteen different "CALL-IN" type construction contracts in the Metropolitan Area, including six for the Port Authority of NY and NJ.

Savin Engineers, P. C. is a New York State Professional Corporation and is authorized to practice professional engineering in the states of New York and New Jersey. Founded in 1988, Savin Engineers, P. C. is a multi-discipline consulting engineering firm encompassing an array of professional services unmatched in the industry. Our services are designed to keep pace with our clients' unique and ever-expanding needs. We offer an integrated suite of engineering, planning, design, construction, and operations services to public and private sector clients. Our experience with both institutional and corporate clients has provided us with a broad understanding of what makes projects successful. Committed to value-driven and high-quality solutions for our clients we provide engineering designs and services that result in efficient and reliable systems. Savin has provided services to public and private sector clients in the Greater New York/New Jersey Metropolitan Area, including the Port Authority. Savin has worked for the Port Authority on construction management projects almost consistently since July of 2001. This makes us well-versed in all Port Authority procedures and requirements with a minimal learning curve.

Savin Engineers has 136 employees, including 21 licensed professionals, 5 LEED Accredited professionals, 72 construction engineers/managers/ field personnel, and 38 administrative, technical and financial support personnel. We have been the prime consultant or significant sub-consultant on numerous projects in the New York/New Jersey Metro area. Clients for whom we have provided construction management services as a prime include the NYSDOT, Connecticut DOT, NYS Thruway Authority, Westchester County, Dutchess County, NYS Dormitory Authority, as well as the Port Authority of New York and New Jersey. Projects have ranged from over $150 million to under $0.5 million in construction cost.

Hudson Valley Engineering Associates is a certified Disadvantaged Business Enterprise (DBE) and a certified Women-owned Business Enterprise (WBE). HVEA is also WBE certified by PANYNJ and the City of New York. HVEA provides professional consulting services in planning, design, and construction management and inspection of infrastructure and facilities projects. Supporting both public and private sector clients, they are recognized for their ability to produce creative solutions and solve problems within the confines of economic constraints.

Haider Engineering, P. C. provides discipline consulting services and resident engineering inspection services. They retain on staff Resident Engineers, Design Engineers Office Engineers, Team Leaders, Assistant Team Leaders, Estimators, Schedulers and Inspectors (ACI, NICET Level I-IV) to carry out various engineering project assignments. They commit their full resources to ensure the successful completion of all assigned projects and are committed to providing quality construction engineering services to clients.

PROPOSED TEAM

The staff included in our proposal to provide "call-in" construction management and inspection services are

at a minimum. Additional staff are continually being identified, vetted, assessed and made available to the Port Authority as needed and as their skill sets apply. Our team of resources from Savin Engineers, P. C., Hudson Valley Engineering Associates, and Haider numbers 229 employees. They are experienced in Civil, Structural, Electrical and Mechanical Engineering. They have the education and technical expertise to perform the services outlined in the scope of work for this project, and they are readily available when necessary. Most recently, Savin Construction Management personnel assisted the Port Authority with post Superstorm Sandy cleanup efforts. At the Exchange Place, Hoboken and WTC PATH Stations, Savin employees David Post, Frank Montefusco, and Ron Novello, worked on restoration of the facilities including power, lighting and signals. The work also included restoration of power and the signal system at F and E Tunnels.

The team exceeds the RFP requirement of 10 engineers/architects licensed in the state of New York and/or New Jersey, 10 certified ACI Concrete Construction Special Inspectors, 3 ICC Certified Structural Steel and Bolting Inspectors, and 1 NACE Level 1 certified coating inspector. Most of our personnel hold multiple certifications in addition to that which is required. These include, but are not limited to, certifications in:

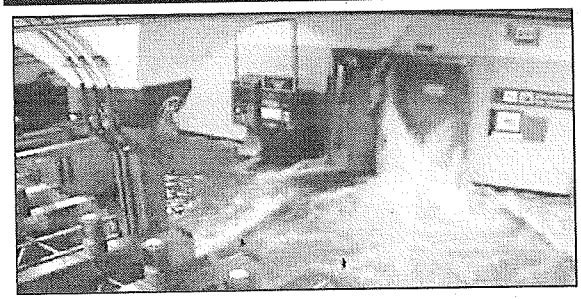
Concrete
PCB's
NICET III, IV
Asphalt
Code Enforcement

Asbestos Air Sampling
ICC Welding Special Inspector
ISO 9000
Hot Work
OSHA

Lead
Structural Welding
Masonry
HAZPOWER

Our proposed project manager, Hussein M. Elzoghby, P. E. has nearly 29 years of experience in the planning, design, and construction of transportation facilities ranging from ports to parking structures. He has been the project manager on nearly all of the many "call-in" type construction management project Savin has been involved in, including the one we are currently performing for the Port Authority. He conducts periodic site inspections, monitors staff, and implements our Quality Assurance plan. He will be the single point of contact between the Authority and Savin and will coordinate any needs of the Authority for this project.

Savin Construction Management personnel have been assisting the Port Authority with critical construction management efforts at Exchange Place, Hoboken, and WTC PATH facilities.



He has also been involved in nontraditional assignments for the Port Authority including the "Lesson Learned Initiative", post 9-11-01 WTC cleanup, concurrent delay schedule analysis at Port Newark, claims assistance for the Hackensack River Lift Bridge, and post superstorm Sandy cleanup.

CURRENT WORKLOAD

As a prime, Savin currently has only one (1) other construction management contract in in progress with the Port Authority of New York and New Jersey. This will enable us to readily staff the proposed project without stressing resources.

In summary, Savin has performed and is currently working on very similar projects and consider ourselves extremely well-suited for this project. We have had the privilege of gaining significant experience working on Port Authority projects and intend to bring that to bear on this project. We remain grateful for the experience gained on past assignments and would appreciate the opportunity to continue to be of service to the Port Authority.

Very truly yours,
SAVIN ENGINEERS, P. C.

R. Srinivasaraghavan, Ph. D., P. E.
President

REQUEST FOR PROPOSALS FOR THE PERFORMANCE OF EXPERT PROFESSIONAL CONSTRUCTION MANAGEMENT AND INSPECTION SERVICES AS REQUESTED ON A "CALL-IN" BASIS DURING 2015 THROUGH 2018 (RFP #39247)

AGREEMENT ON TERMS OF DISCUSSION

The Port Authority's receipt or discussion of any information (including information contained in any proposal, vendor qualification, ideas, models, drawings, or other material communicated or exhibited by us or on our behalf) shall not impose any obligations whatsoever on the Port Authority or entitle us to any compensation therefor (except to the extent specifically provided in such written agreement, if any, as may be entered into between the Port Authority and us). Any such information given to the Port Authority before, with or after this Agreement on Terms of Discussion ("Agreement"), either orally or in writing, is not given in confidence. Such information may be used, or disclosed to others, for any purpose at any time without obligation or compensation and without liability of any kind whatsoever. Any statement which is inconsistent with this Agreement, whether made as part of or in connection with this Agreement, shall be void and of no effect. This Agreement is not intended, however, to grant to the Port Authority rights to any matter, which is the subject of valid existing or potential letters patent. The foregoing applies to any information, whether or not given at the invitation of the Authority.

Notwithstanding the above, and without assuming any legal obligation, the Port Authority will employ reasonable efforts, subject to the provisions of the Port Authority Freedom of Information Code and Procedure adopted by the Port Authority's Board of Commissioners on March 29, 2012, which may be found on the Port Authority website at: http://www.panynj.gov/corporate-information/pdf/foi-code.pdf, not to disclose to any competitor of the undersigned, information submitted which are trade secrets or is maintained for the regulation or supervision of commercial enterprise which, if disclosed, would cause injury to the competitive position of the enterprise, and which information is identified by the Proposer as proprietary, as more fully set forth in the FOI Code, which may be disclosed by the undersigned to the Port Authority as part of or in connection with the submission of a proposal.

September 18, 2014

In accordance with Item C of the Submission Requirements of the Request for Proposals for the Performance of Expert Professional Construction Management and Inspection Services as Requested on a "Call-In" Basis During 2015 through 2018 (RFP Number 39247), shown below is a chart demonstrating Savin Engineers, P. C. compliance with each of the "Proposer Requirements" specified in Items A and B of Section I: Proposer Requirements.

Complies with:	YES	NO
Office is located in the Greater New York/New Jersey Metropolitan Area.	●	
Office has at least 50 individuals on staff who have demonstrated experience performing construction management and/or construction inspection services in the Greater New York/New Jersey Metropolitan Area.	●	
Firm has a Certificate of Authorization to practice Professional Engineering or Architecture in the states of New York and/or New Jersey.	●	
Construction staff are experienced in the performance of one or more of the following: Civil, Structural, Electrical and Mechanical Engineering.	●	
At least ten (10) of our employees are engineers/architects licensed in the states of New York and/or New Jersey.	●	
At least ten (10) of our employees are ACI Concrete Construction Special Inspectors.	●	
At least three (3) of our employees are ICC Certified as a Structural Steel and Bolting Inspector.	●	
At least one (1) of our employees is NACE Level 1 coatings certified.	●	

Complies with:	YES	NO
Proposal is no more than 25 pages single-sided using 12 point or greater font for Letters F and G in Section 2 of the RFP.	●	
Each resume is a 2-page maximum using 12 point or greater font.	●	
Proposal pages are numbered and bound.	●	
Firm name and RFP Number 39247 is clearly indicated on the cover of the proposal.	●	
Each section of the proposal is separated with a tab divider labeled in accordance with the letter of the corresponding requirement specified in RFP Section II: Submission Requirements.	●	
Proposal is being delivered in a sealed envelope/package addressed to: The Port Authority of New York and New Jersey, 2 Montgomery Street, 3rd Floor, Jersey City, New Jersey, 07302, Attention: RFP Custodian.	●	
One (1) reproducible original and three (3) copies, along with four (4) compact disc copies have been submitted for review.	●	
The firm's full legal name without abbreviations has been used on the return address label, information on the compact disc and information on the reproducible and original copies of the proposal.	●	
Proposal is to be delivered within the specified deadline of no later than 2:00 p.m. on September 18, 2014.	●	
The outermost cover of our submittal includes the RFP Number and the RFP title.	●

compliance with proposer requirements: multiplier

section D

In accordance to the second and fifth lines of subparagraph 9A of the Authority's accompanying Agreement with reference to "multipliers", **Savin Engineers, P. C. multipliers are 2.14, and 2.70, respectively.**

It is comprised of the following components:

- Vacation, sick, holidays
- Medical, dental, life insurance
- Marketing
- Administration
- Rents
- Profit
- Insurance, Equipment, Supplies, etc.

Staffing Qualifications

Savin team have over 100 full time construction management staff located in the NY NJ metropolitan area, These include PE, ACI Special Inspectors, ICC Certified inspectors, NICET certified inspectors, and NACE certified inspectors.

One of the most important issues on this type of project is the quality and depth of experience of the proposed staff. The Savin Team's proposed staff includes exceptional individuals of sufficient number to be able to handle the most demanding assignments, short or long term. With over 100 field personnel located within the New York and New Jersey area, Savin offers a significant pool of Construction Management personnel to the Authority. In addition, our proposed staff has direct Port Authority experience at nearly all of its facilities. Experience includes but not limited to flood repair post flood resiliency projects such as stormwater pumping stations, flood walls and standby generator facilities. Whether it is Quality Assurance Inspection, Contract Administration, Cost estimating, or scheduling Savin staff have done it. The specific experience of key personnel is outlined in the resumes and is also summarized in the Qualifications Chart in this section.

Hussein Elzoghby serves as the single point of contact on all of Savins "Call-In" Construction Management Projects, including 6 for the Port Authority.

He plays an active role in each project ensuring highly coordinated service delivery and client satisfaction.

RELEVANT EXPERIENCE

Over 28 years of experience as Construction Manager and Structural Engineer on various projects including sewer pumping stations, roadway rehabilitation, bridge inspections, bridge rehabilitation, and other civil works. Duties included coordination with various municipalities, utilities, merchant groups and the traveling public. Presentations at public meetings, prepared flyers and notices for dissemination to interested parties, and provided QA/QC audit on all field staff.

Project Manager for On-Call Construction Management Services (MBE) for Port Authority of New York and New Jersey. Coordinate needs of Authority for construction management staff including construction managers, construction inspectors, field engineers, fire protection engineers, schedulers and cost estimators. Performed regular field monitoring and QA checks. Under this agreement Mr. Elzoghby oversaw Savin's role in the Port Authority "Lessons learned" initiative. He assisted the PA in the development of the initiative and helped establish standard questionnaires and processes for its implementation. The initiative is aimed at improving the performance of construction contracts by in-depth review of "lessons learned" from recently completed contracts. He was involved in the following projects with lessons learned initiative: Lincoln Tunnel, Contract LT-524, Red Garage at JFK, Contract JFK-134.100B and Terminal B Improvements at Newark Airport, Contract EWR-434.070

Project Manager for On-Call Construction Management Services (MBE) for Port Authority of New York and New Jersey 2004-2006. Coordinate needs of Authority for construction management staff including construction managers, construction inspectors, field engineers, fire protection engineers, schedulers and cost estimators. Performed regular field monitoring and QA checks.

Project Manager for On-Call Construction Management Services for Port Authority of New York and New Jersey 2001-2003. Coordinate needs of Authority for construction staff including construction managers, construction inspectors, field engineers, fire protection engineers, schedulers and cost estimators. Performed regular field monitoring and QA checks.

Project Manager for various "Term" or "On-Call" type agreements including:

- Port Authority "Call-In" Construction Management Services, for Teterboro Airport – 2002-2006.
- NYSDOT Region 10 On-Call Construction Inspection Services – Term Agreement. 2001-2003
- TBTA Term Agreement - Construction Inspection Services –2001-2005
- NYC Dept. Parks & Recreation On-Call Construction Management Services Throughout the Five Boroughs of New York City, 2001-2002
- New York State Thruway "On-Call", Construction Inspection Services 2006-2007
- NYSOGS – "On-Call" Engineering Services

Project Manager on Mason Island Road Bridge Replacement over Amtrak for Connecticut Department of Transportation. Work included preparation of 10" subbase and spreading 6" of class 4 bituminous concrete and another 3" of class 1 bituminous concrete. Each lift was compacted and graded according to required specifications.

Project Manager for the reconstruction of the Woodland Viaduct Bridge, Westchester County, NY. Work included complete deck replacement of concrete arch bridge, new approaches, retaining walls, erosion and sediment control, and complex maintenance and protection of traffic. Duties included coordination with Westchester County, Metro-North Railroad and local residents.

Project Manager on the reconstruction of New England Thruway. Work included preparation of daily reports, computation of quantities for unit price items, on-site material testing such as concrete slump and air entrainment tests and documentation of work progress with diagrams. Duties included QA/QC and agency coordination.

Project Manager on Long Island Expressway HOV Lane Project, Suffolk County, NY. Project involved the installation of electrical traffic signal loop wire into all Eastbound and Westbound Expressway lanes, including HOV lanes, from exits 57 to 61. Also involved was the installation of new lampposts alongside expressway, and maintenance and protection of traffic.

Project Manager on the reconstruction of Route 6. Work included replacement of superstructure of bridge, and highway widening, utilities relocation, median barrier installation and maintenance and protection of traffic.

Project Manager for Region 9 Biennial Bridge Inspection 1992-93 season. Coordination of team activities, scheduling issues, inspection reports and quality control.

Project Manager for Bronx Biennial Bridge Inspection. Coordination of team activities, safety issues, quality control and meeting production schedule requirements.

Responsible charge of all structural design of Sanitary Sewer Overflow Facilities for the New Rochelle sanitary Sewer District. Project involved the design of two 120-feet by 50-feet underground sanitary sewer overflow retention, disinfection, diversion and pumping facilities and aboveground chemical treatment, odor control and backup power facilities.

Bernard Vaughey, P.E.

Constructability Review

EDUCATION

Bachelor of Civil Engineering, Manhattan College, Riverdale, NY, 1977

LICENSE/CERTIFICATION

Professional Engineer, New York

RELEVANT EXPERIENCE

33 year construction management professional specializing in highway and bridge projects. Mr. Vaughey is knowledgeable of all aspects of NYSDOT and NYSTA requirements for construction. He held positions ranging from inspector, resident engineer and project liaison for highway and bridge projects. Mr. Vaughey was most recently Acting Division Construction Engineer for New York State Thruway Authority, New York Division.

1991-2010

New York State Thruway Authority – Mr. Vaughey has over sixteen years of professional experience working as a Construction Supervisor for NYSTA on projects on the New England Section (I-95). In Responsible Charge of the management and contract administration for construction and consultant inspection contracts worth up to $70M. Duties also included interaction with MNCRR, NYC OCMC, ConnDOT, NYSP, local utilities and local municipalities as well as review of future contracts. He was also NYSTA Liaison Engineer for some NYSDOT projects, including Division and Memorial Highway replacement over I-95 in New Rochelle, Interchange 5 reconstruction on I-287 and rehabilitation of I-287 between Exit 9 and I-95.

Some major contracts incluTANE 06-21 – concrete pavement restoration, diamond grinding, traffic data system, repairs to 4 bridges - $25.2M.

295 Concrete Arch over Hutch – New superslabs on top, shotcrete repairs under (over Hutch)

295 over Kings Highway, Mill and Fill

295 over Cross County Connector/Cedar Street – Replacement of bonded overlay

- TANE 03-27 – Rehab of I-95 bridge over Byram River - $10.6M

  Class D repairs and replacement of cap beams and class D repairs to columns
- TANE 01-56 – Thin overlay removal, pavement repairs and diamond grinding PCC-MP 7.2 to 14.1 - $5.7M.
- TANE 99-112B – Replacement of Potter Ave. over I-95/MNCRR - $9.3M

Remove old 5 span composite – replace with 3 span

- TANE 98-87B – Replacement of I-95 over Midland Ave., MP 14.1 - $6.7M
  Remove old 3 span – replace with single span.
- TANE 94-45 – Reconstruction of I-95, MP 10.8 to 13 - $42M
- TANE 92-34B – Replacement of Eastchester Creek Bridge on I-95 - $29.5M
- TANE 95-30 – Reconstruction of I-95, MP 7 to 8.8 - $30.4M - Larchmont Parking Structure – Repair ¼ w/ft miller panels – repaired remaining ¾

Mr. Vaughey also worked as Project Manager for NYSTA – As Project Manager he oversaw multiple projects with numerous subordinate project engineers as well as one Thruway engineer (CEI). Duties included:

- Review of MPT
- Review & signing Change Orders
- Spot check Contract MURK Records
- Certified pay rolls
- Daily inspection report
- Material certs
- Preparation for FHWA audits

New York State Department of Transportation, Region 8 – Construction Inspector through Engineer in Charge for numerous highway and bridge projects. Mr. Vaughey was involved in the use of and implementation of new materials and processes, including superslabs pavement for pavement repairs, microsurfacing and ultrathin asphalts.

He was involved with a number of projects throughout Westchester, Putnam and Rockland Counties. Most projects involved matching federal funds. This requires specific record keeping, testing and audits. One of the most notable projects in which he was an EIC, was the project to reconstruct I-287 from exit 9 to I-95. (D500689)

Victor J. Frazita, P.E.

Senior Engineer

EDUCATION

A.A.S - Westchester Community College, Valhalla, NY, 1975
BECE - Manhattan College, Bronx, NY, 1977

PROFESSIONAL REGISTRATION

Professional Engineer: New York #[redacted]

Victor Frazita brings overs three decades of experience to his role at Savin.

Throughout his career, Victor has established a large and broad portfolio of projects, ranging from the development of site and civil projects to final plans and specifications for rail projects.

RELEVANT EXPERIENCE

Mr. Frazita has over 30 years of civil engineering experience and has served as project manager, designer, and inspector and QA/QC Engineer for a variety of site/civil and rail projects. He has been involved in all aspects of project development including the preparation of feasibility studies, preliminary engineering reports, public presentations, and final plans and specifications. Mr. Frazita's experience includes:

Port Authority of New York and New Jersey (PANYNJ)
Project facilitator for its Lessons Learned Initiative. Obtained input from all involved parties on a construction project including but not necessarily limited to, contractor, subcontractors, facility, design division, materials division, construction management division, planning and program management subcontractors. Key individuals from each party were then interviewed utilizing a standard questionnaire in order to assess the project as well as the process. Mr. Frazita conducted a summary review meeting where key recommendations/findings were developed, and a summary report issued. Mr. Frazita was involved in the following projects under the "Lessons Learned Initiative":

Contract LT-524 0 Resurfacing of the Westbound Helix Lane 4 at the Lincoln Tunnel
Contract LT-524 was an in-house designed project that generally involved the milling and resurfacing of Lane 4 of the Westbound Helix lane ramp at the Lincoln Tunnel facility in New Jersey.

Contract JFK-134.100B JFK International Airport Red Garage
Contract JFK-134.100B was an in-house and outside consultant designed project consisting of a 5 level parking garage adjacent to the American Airline Terminal (Terminal Building 8) in the "Red Quadrant" of the John F. Kennedy International Airport in Queens, NY. The project site was constrained by adjacent roadways, structures, and the elevated Airtrain rail line.

Contract EWR-434.070 Newark Airport Terminal "B' Roadway & Drainage Improvements
Contract EWR-434.070 was an in-house and outside consultant designed project consisting of the construction of a steel and glass canopy, and replacement/widening of roadway ramps and bridges at Terminal "B" of the Newark Liberty International Airport.

Long Island Rail Road Structural Evaluation of Undergrade Bridges, Brooklyn and Queens, New York: Senior Project Engineer for the preparation of the Long Island Rail

Road (LIRR) Structural Evaluation of Undergrade Bridges Study. Fourteen (14) bridges out of twenty-three (23) existing railroad bridges along the MTA-LIRR right of way in Brooklyn and Queens have insufficient structural capacity to carry 286,000-pound freight cars under normal conditions. Under this study a testing program of eight (8) of the (14) marginally rated bridges was conducted to account for inherent redundancies not considered under AREMA guidelines and requirements to determine if their load ratings could be upgraded, or if the structures would have to be replaced.

Long Island Rail Road Plate F Clearance Study, Brooklyn and Queen, New York: Senior Project Engineer for the preparation of the Long Island Rail Road Plate F Clearance Study. This study evaluated the feasibility of operating 286,000-pound AREMA Plate F freight traffic along the MTA-LIRR right of way in Brooklyn & Queens & quantified infrastructure improvements required to facilitate Plate F rail freight traffic by:

- Performing a Plate F Clearance Envelope Survey of the ROW and identifying the location and extent of any near hits or hits against this clearance requirement.
- Developing and evaluating conceptual alternatives to eliminate the clearance obstructions identified by the survey.
- Recommending an alternative course of action to eliminate each clearance obstruction identified along with an estimated construction cost and a construction schedule.

The report identified a total $12.5 million in infrastructure improvements to eliminate the 8 locations in non-compliance with AREMA Plate F clearance requirements.

Amott Culvert Rehabilitation, Syosset, New York: Senior Project Engineer for the rehabilitation of the Long Island Rail Road (LIRR) Amott Culvert. As a result of the development of the surrounding area, the original culvert beneath the LIRR tracks had become unable to handle the stormwater flows directed to it resulting in trackside flooding. Additionally, the sluiceway conveying runoff flows from the adjacent area down the railroad embankment had become eroded and was in need of replacement. Work performed included evaluation of the 121-acre drainage basin, development of alternatives to handle the projected stormwater flows and preparation of Contract Documents for the alternate selected by the LIRR for implementation. Notable elements of the selected alternative included replacement of two (2) existing sluiceways with new stair type sluiceways, installation of approximately 370f of precast concrete trough and 800lf of 42inch diameter RCP parallel to the LIRR tracks, rehabilitation of two small culverts each consisting of twin 12-inch diameter cast iron pipes, and the jacking of a 72-inch diameter concrete pipe utilizing a 96-inch diameter casing beneath the tracks. Duties included primary point of client contact, monitoring of project schedule and budget, development of project technical requirements and preparation of contract documents.

Drainage Improvements at Four Locations at LIRR Station Locations, Long Island, New York: Project Engineer acting as the primary point of contact with the client while providing Design Services during construction for drainage improvements at 4 locations.

Bob Firneis' background and training in the fields of architecture, construction management, and client administration add insight and value to the construction administration process.

This has resulted in a cumulative record of high quality performance and leadership with solid results, and customer satisfaction on his projects.

RELEVANT EXPERIENCE

Robert Firneis has over 27 years of experience as an architect. His experience, knowledge, and expertise extends to the planning, design, and construction management of complex multidisciplinary projects for both public and private clients. Having managed over $500 million of, primarily, K – 12 educational and public construction projects in New York State, Bob's experience combined with his architectural, code, and construction certifications and continuing education make him a valuable resource to Savin projects. His extensive experience in the design of structures and in the development and review of front-end specifications is invaluable in the assessment of facilities and building system components.

As a **Savin** employee for over 16 years, Bob's diversity of experience and knowledge is an asset to the company. He has been involved in facilities reviews, developing and executing five year plans and prioritizing capital projects. He has also been instrumental in analyzing and preparing space utilization studies. His diverse experience and extensive knowledge of construction techniques, building materials and their use assures client satisfaction.

Bob is responsible for the overall success of the projects assigned to him. He is responsible for setting and defining the vision and culture, managing the day-to-day operations, and ensuring all necessary resources are available to ensure project success. Responsible for all detailed tasks, he directs all job activities, develops the project plan, and manages projects schedules, budgets, and project team members. Bob's ability to manage multi-discipline staff and teams, and to efficiently provide

quality services to public and private clients is second to none. This is accomplished due to his design, program and construction management skills and experience combined with his impeccable organization and communication skills.

A representation of Bob's experience is listed below.

- ***Long Beach Public Schools*** - $98 million district wide renovations and additions at Long Beach High School and the Lido Complex; $24 million in infrastructure work due to damage by Hurricane Sandy, and $4 million to rebuild the Administration Building.

- ***North Shore Central School District*** - $19.6 million in infrastructure improvements including HVAC, roofs, security and electrical repairs and upgrades, windows and masonry work.

- ***Pelham UFSD*** - $27.6 million in additions, upgrades, renovations, repairs, and replacement projects (2004 – 2006); $24 million in renovations at the High School and elementary schools (2008 – 2010); $3.4 million in EPC projects (2008 – 2009); classroom renovations (2011 – 2012); and $750,000 for security upgrades (2014).

- ***Greenwich (CT) Public Schools*** - $34 million in capital project/infrastructure upgrades, renovations, repair and replacement projects (2005 – 2010); preconstruction services, and $5 million for CM services at all schools (2014).

- ***Scarsdale UFSD*** – $58.8 million – Middle School & High School renovations (2000); $19 million – district-wide renovations (1998).

- ***Blind Brook-Rye UFSD*** – $17 million New Middle School addition connected to High School (2002), $18 million Auditorium & Renovation to High School (2007).

- ***Tarrytown Public Schools*** - $72 million additions and renovations.

- ***Yonkers Public Schools*** – $7 million – CM services & renovations (2007); $16 million – exterior renovations/athletic field rehabilitation (2008); $12 million – masonry restoration, replacement of roof, exterior doors and windows (2009).

Fernando Polletta, R. A.

Senior Architectural Inspector

Fernando's architectural insight, strong management skills, excellent listening skills, and flexibility has allowed him to direct numerous complex projects and develop strategies that overcome obstacles and deliver success.

RELEVANT EXPERIENCE

Fernando Polletta is a Registered Architect experienced and knowledgeable with regard to the architectural, structural, HVAC, electrical, and plumbing design and construction components of a building. He has over 20 years of experience in all phases of construction management and design of major building projects in New York State. He is familiar with the New York State Building Code.

Mr. Polletta has been responsible for the supervision of both renovation and new construction projects where he was responsible for coordinating and overseeing the project specific work and the work to be accomplished by the contractors: managing and monitoring the work progress, making sure materials and equipment are delivered to the site on time and that the work progresses on schedule, tracking and communicating progress to the Owner; identifying potential problems or delays, communicating design questions to appropriate personnel, working to minimize disruptions in the building during the construction, maintaining all documentation associated with the project; and supervising the closeout process regarding the archival of documents and transfer of project information to the client.

Mr. Polletta has provided construction management/inspection services on numerous assignments including the following:

Brooklyn Battery Parking Garage – Elevator Improvements
Providing resident engineering and inspection services for the replacement of 6 passenger elevators, including lift motors, controls, guides, cables, cabs and finishes. Prepare daily reports, monthly summaries, and field clarifications.

Westchester Medical Center, Sound Shore Medical Center and Mount Vernon Hospital.
Provided inspection services for these 3 hospitals which included inspecting

the existing construction, interior and exterior components and building systems based on overall integrity, probably useful life and the need for replacement. Project also included an analysis of potential problems that may require attention.

Poughkeepsie City School District
$17 million district wide renovation and alterations. Mr. Polletta was responsible for overseeing various renovation work including but not limited to masonry, roofing and architectural finishes for the renovation to several schools in the district. He was responsible for the preparation of daily field reports, evaluated changes orders and reviewed contractor submittals.

Yonkers Public Schools
District-wide school renovations projects totaling $37 million. Mr. Polletta oversaw various renovation work including but not limited to masonry, roofing, carpentry, building enclosure and architectural finishes for the renovation to several schools in the district. He prepared daily field reports, evaluated changes orders and reviewed contractor submittals.

Tarrytown Public Schools - District-wide school renovations and expansions project totaling $4.6 million. Mr. Polletta oversaw various renovation work including but not limited to masonry, roofing, carpentry, building enclosure and architectural finishes for the renovation to schools in the district. He prepared daily field reports, evaluated changes orders and reviewed contractor submittals.

Scarsdale Union Free School District
$58.8 million district- wide renovations and additions at the district's Middle and High schools. Mr. Polletta oversaw various renovation work including but not limited to masonry, roofing, carpentry, building enclosure and architectural finishes for the renovation to schools in the district. He prepared daily field reports, evaluated changes orders and reviewed contractor submittals.

Mount Pleasant Central School District - $24 million classroom addition, renovations of existing spaces, and site upgrades at Columbus Elementary School. Mr. Polletta oversaw various renovation work including but not limited to masonry, roofing, carpentry, building enclosure and architectural finishes for the renovation to the school. He prepared daily field reports, evaluated changes orders and reviewed contractor submittals.

Steven A. Martino, PE, LEED AP, CEM

USGBC LEED® Accredited Professional
Association of Energy Engineers, Certified Energy Manager®

Steve Martino has decades of experience and a thorough knowledge in electrical, mechanical and plumbing engineering.

He has managed a wide range of MEP project types while at Savin and has been instrumental in building the firm's MEP portfolio.

RELEVANT EXPERIENCE

Mr. Martino is a Vice President and Business Unit Leader at Savin Engineers, responsible for all MEP work for the Company. He provides program over sight for MEP projects for the firm and ensures that the client's objectives of cost, schedule and quality are being met. Mr. Martino has extensive experience designing electrical distribution and emergency generator systems for large municipal and private clients. The projects listed below are projects that Mr. Martino worked on directly over the course of his Consulting Engineering career. Detailed relevant project experience includes:

Project Manager/Lead Electrical Investment Grade Feasibility Study for Cogeneration at the North River Wastewater Treatment Plant. Project Engineer for the feasibility and design stages of this 15MW cogeneration facility currently in the design phase. Project consists of 3MW spark ignited natural gas reciprocating engines being installed. The new engines will serve as an on-site continuous power source as well as the emergency power source, replacing existing tri-fuel direct drive engine driven pumps and blowers. Mr. Martino is responsible for the design of the engine-generators and the design management of the heat recovery, gas conditioning and exhaust gas treatment systems.

Red Hook WPCP Electrical Service and Emergency Generator Upgrade New York Power Authority (NYPA) / New York City Department of Environmental Protection (NYCDEP) Project Manager for $25M project that consisted of the complete replacement of incoming Con Edison 27KV feeders with associated 5KV distribution switchgear and the Emergency Generator system. Mr. Martino wrote the bid specifications and developed the drawings for 900RPM, 2.6 MW emergency diesel engine generators that will become a standard at NYCDEP facilities. Also responsible for technical engineering oversight, engineering personnel coordination, problem resolution, change order negotiations and coordination with client and contractors.

Coney Island WPCP Electrical Service Upgrade New York Power Authority (NYPA) / New York City Department of Environmental Protection (NYCDEP). Project manager for $18M project that consisted of complete replacement of incoming Con Edison 27 KV feeders and associated 5 KV distribution switchgears with incoming service feeders.

Created phasing plan to allow the plant to remain in operation 24/7 while existing feeders were demolished and new feeders were brought on line. Coordinated with the plant to work out a specific phasing plan to meet their needs. Responsible for technical engineering oversight, engineering personnel coordination, problem resolution, change order negotiations and coordination with client and contractors.

Newtown Creek WPCP Contract NC30E – Electrical Facilities Upgrade Electrical Project Engineer New York City Department of Environmental Protection (NYCDEP). Designed emergency generator power plant consisting of 5MW, 15KV gas turbine generators, 750KW diesel generator black start units. Designed extensive phasing sequence and electrical substation key interlocks. Produced electrical drawings and specifications for bid.

Newtown Creek WPCP Contract NC101E - Interim Emergency Generators Electrical Project Engineer / Project Manager New York City Department of Environmental Protection (NYCDEP). Designed temporary 4160V emergency power delivery system consisting of 2MW, 480V diesel generator units with associated switchgear, transformers and key interlocks. Produced all electrical drawings and specifications for bid, addendums, shop drawing review, change order preparation, and complete construction support through project closeout.

Manhattan Pumping Station Contract NC40E Electrical Upgrade Electrical Project Engineer / Project Manager New York City Department of Environmental Protection (NYCDEP). Designed permanent emergency generator power plant consisting of two (2) 5MW, 4.16KV gas turbine generators, including two (2) 750KW diesel generator black start units. Also designed a complete portable, 480V interim emergency diesel generator system consisting of three (2) 2MW units, load banks, interim switchgear, cable trucks, and two (2) 6000A manual transfer switches. Oversaw the production of electrical drawings and wrote the specifications for bidding.

New York Power Authority Project – Rikers Island Cogeneration Feasibility Study Project manager of this 15MW cogeneration feasibility study with an estimated Construction Contract value of $80M. Managed a complete energy audit and cogeneration analysis of steam, electric and fuel usage at Rikers Island. Presented findings to NYC Department of Correction and NY City Department of Citywide Administrative Services. Coordinated with Con Edison, NY to develop the interconnect details required to allow a cogeneration facility on Rikers Island to parallel with the grid as part of preliminary design and cost analysis. Provided the City with a complete feasibility study and economic analysis justifying the project.

Newark International Airport – Fuel Facility Emergency Generator Project Engineer/Project Manager Allied Aviation. Project manager and lead electrical engineer for a permanent 1750KW, 480V emergency diesel generator and emergency lighting system for main fuel farm facility, complete with key interlocks and utility interface. Duties included design, design supervision and coordination. Produced all electrical drawings and specifications for bid, addendums, shop drawing review, change order preparation, and complete construction support through project closeout.

Joseph J. Fiteni, Jr., P.E.

Vice President, Constructability Review

EDUCATION

MCE, Civil Engineering, Geology Minor, Cornell University, 1977
BS, Civil Engineering, Cornell University, 1976

PROFESSIONAL LICENSES

Professional Engineer, New York, #[redacted] 1983

PROFESSIONAL MEMBERSHIPS

American Society of Civil Engineers
Water Environment Association

Joseph Fiteni is a highly regarded professional engineer with over 30 years of experience specializing in waste management. His portfolio of experience and knowledge ranges from inspections and permitting to planning and design.

RELEVANT EXPERIENCE

Mr. Fiteni has more than 30 years of experience in management, planning, environmental studies, design, permitting, and construction inspections for major projects related to civil/site engineering, geotechnical engineering, waste management, water, and wastewater for both public and private sector clients.

PROJECT EXPERIENCE

Waste Management of New York – Review Avenue Transfer Station, Queens, New York. Project Manager for environmental and solid waste permitting, design, plans and specifications and construction inspection services for a new 2200TPD truck to rail putrescible solid waste transfer station. The transfer station will be 31,000 square foot state of the art fully enclosed odor controlled building designed to meet LEED certification requirements. Site work includes new paving, drainage and utilities on a 3 acre site, the reconstruction of an existing bulkhead, construction of on site intermodal rail loading area and use of best available control technology to manage potentially contaminated storm water.

Rhode Island Resource Recovery Corp., Central Landfill Solid Waste Tipping Facility, Johnston, Rhode Island. Principal-in-charge of the engineering design and final contract document preparation for a 4,000-ton per day, truck-to-truck solid waste transfer station. The multidisciplinary project includes project management, civil-site plan design, and architectural, electrical, mechanical, structural, and geotechnical services. The civil-site plan design work for the nine - acre site includes grading and drainage, roadways, and utilities.

Waste Management, Inc., Harlem River Yard Solid Waste Transfer Station, Bronx, New York. Program manager for the conceptual layout through the final design (including solid waste permitting) for a 5,000-tpd, truck-to-rail putrescible solid waste transfer

station. The final design included all aspects of the facility including site, grading, drainage and access roads, utility, railroad, architectural, foundation, structural, HVAC, Plumbing, electrical, odor control and fire protection. Building department permits and DEP permits were applied for and obtained CM services including coordination with general contractors were carried out.

Atlantic Waste Disposal, Inc., Atlantic Waste Disposal Landfill, Sussex County, Virginia. Project manager for the permitting, design, and construction supervision of a 7,000-tpd double composite lined sanitary landfill, and all associated civil/site development, utility and highway access improvements on the 700-acre site. The landfill design included cell construction, linear plans, detailed excavation and phasing plans, final grading and leachate management, final closure plans, groundwater monitoring, and landfill gas management.

The Mills Corp., Meadowlands Mills, Carlstadt, New Jersey. Project manager for all civil/site infrastructure, utility, and foundation design services for a 592-acre commercial retail development site within the environmentally sensitive Hackensack Meadowlands district. Site engineering included the design of over two million cubic yards of fill, erosion and sediment control, hydraulics and flood control, grading and drainage, utilities, internal roadways, and foundations for a 2.4-million-square foot mall.

New York City School Construction Authority, PS/IS 366K, Brooklyn, New York. Project manager for the design and design services during construction of civil/site, utilizes foundation and below-ground structure elements of an elementary/middle school.

New Jersey School Construction Corporation, PS 3/MS 4 Staff Parking Feasibility Study, Jersey City, New Jersey. Project manager for a feasibility study and design of a parking facility for approximately 100 faculty on a site totaling 20,000 square feet. Managing hazardous soils, environmental and land use issues, design of site/civil, geotechnical, utilities, and traffic improvements.

Harlem River Yard Ventures, Inc., Harlem River Yard Intermodal Transportation Center, Bronx, New York. Project manager for the development of a 96-acre former rail yard into a modern intermodal terminal and industrial park. Managed site planning, hazardous waste site assessments, environmental impact studies to supplement previous studies by the New York State Department of Transportation. , Design and construction management of infrastructure including civil/site, rail, utilities and waterfront.

New York City Department of Design and Construction, College Point Sports Park-Phase I, Queens, New York. Principal-in-charge of the development of a public recreational facility on 22 acres of reclaimed marshland. Phase I (five acres), includes site/civil, engineering, geotechnical, utilities, and the design of a field house.

New Rochelle WWTP Composite Performance Implementation and Plant Expansion - Project Manager for design and construction management for the expansion/upgrade.

David G. Fredericks, PE, LEED AP

Senior Electrical Engineer

EDUCATION

B.S. – Marine Engineering, United States Merchant Marine Academy, Kings Point, NY, 6/1998

CERTIFICATIONS

Registered Professional Engineer: Pennsylvania, New Jersey, New York
USGBC LEED® Accredited Professional

SKILLS

SKM Power Tools, Latest Version (Power System Study Software), Lighting Simulation and Calculation Software (Lumen Micro, Lumen Designer)

Dave Frederick's has in-depth knowledge and experience in the design of electrical systems, including service, power distribution, lighting, fire alarm, and security systems.

EXPERIENCE

Mr. Fredericks is the Lead Electrical Engineer and is responsible for the quality control and or design of all Electrical Design projects produced by Savin. Mr. Fredericks has extensive experience in completing Electrical Design and Construction projects from start to finish, including the production of drawings, specifications and providing design services during construction (RFIs, Shop Drawings, etc.). Mr. Fredericks also specializes in performing complex electrical systems analysis (Short Circuit, Relay Coordination, Arc Flash, Voltage Drop and Load Flow) using SKM powertools software.

Binghamton-Johnson City Joint Sewage Treatment Plant, Vestal, NY – Plant Restoration and Rehabilitation – BAF Facility & New DAF Plant

Electrical Engineer/Electrical Project manager for the complete electrical renovation of the BAF facility due to severe storm damage. Responsible for production of Contract Drawings and Specifications, and a condition survey of the incoming 4.8kV underground service run. Design included new work to facilitate the upgrade of the BAF facility, including transformers, relocated utility metering, 4.8kV distribution power, 480 volt distribution power, new switchgear, paralleling switchgear, generator automatic transfer switchgear, new lighting, controls and electrical back-up support for the new instrumentation and HVAC designs. Performed all power calculations and complete interface and coordination with the Power Utility (NYSEG). Also served as Electrical Engineer/Electrical Project manager for the electrical design of the new DAF facilities. Design entailed a new 4.8kV underground power run, new distribution transformers (1500 kVA each) and building distribution switchgear (480 volts and modifications to the Blower House equipment.

NYCDEP Newtown Creek WWTP Contract NC30E – Electrical Facilities Upgrade

Performed several types of power system analyses including short circuit studies, load flow calculations, voltage drop calculations and protective device coordination. Large motor starting studies were performed on new 3000 HP process air blowers to investigate the effect of large motor starts on the plant distribution system.

NYCDEP Risk and Prioritization Study
Provided conditions assessment services for 12' NYCDEP facilities. Responsible for inspecting and evaluating all electrical systems including but not limited to distribution transformers, standby generator, switchgears, moto control centers and control panels. Each element was inspected, evaluated and scored on a rating system from 1 to 5. Further analysis incorporated a risk-based approach to prioritizing repairs.

NYCDEP AWTPA-02, Bronx, NY – Carbon Addition Facilities (2012-Present)
Lead Electrical Engineer responsible for design of 5 Carbon Feed facilities located at Jamaica, 26th Ward, Bowery Bay, Hunts Point, Tallman Island and Wards Island WWTPs.

NYCDEP Hunts Point WWTP, Bronx, NY – Stabilization Project (2008-Present)
Electrical Engineer/Project Manager for $80M electrical system upgrade design of the Hunts Point Wastewater Treatment Plant (WWTP) including new 15kV electrical service entrance equipment, 5kV distribution equipment, interior and exterior lighting and lightning protection systems. Provided technical reports and detailed calculations for several types of Power System Analyses. Provided Design Services during Construction (DSDC) including coordination with the Utility, RFI responses, shop drawing review, change order preparation, construction phasing and coordination between trades.

Westchester County – New Rochelle WWTP BNR Facilities – Contract 09-514
Lead Electrical Engineer. Produced all Electrical Design Drawings covering 480V power distribution and lighting for the BNR Building, Process Control Building and Sodium Hydroxide Building including all motor controls, motor control centers, grounding and power interface with process mechanical, instrumentation and HVAC systems. Design also included extension of the fire alarm system and page/party system to these areas.

MTA – East Side Access Queens Bored Tunnel Project
Electrical Project Engineer providing design and construction services for the installation of a new interim electrical substation for boring two new tunnels under the Sunnyside Train Yard. Design included new 26.4kV service switchgear (34kV rated), new 6MVA liquid filled transformers, and new 13.2kV switchgear. Engineering services also included performance of a site-wide short circuit and device protection study including equipment evaluation and recommended protective device setting development.

Port Authority NY/NJ – World Trade Center complex Power System Study
Provided engineering services related to the development of a short circuit and device coordination study for the World Trade Center Tower One. Scope of study included Con Edison service down to 208V panelboards throughout Tower One and included service equipment at the Memorial site, Transportation Hub and Central Chiller Plant. Scope of equipment included medium voltage (13.8kV) service entrance rated switchgear lineups,feeder 13.8kV-480V spot networks, 480V fused distribution switchboards, 2500kVA 480V generators and associated distribution switchgear, and 480V and low voltage panelboards. Engineering services also included protective device coordination study including equipment evaluation and recommended protective device setting development.

Edward Patrick Conn, P.E.

Senior Mechanical Engineer

EDUCATION

B.S. – Mechanical Engineering, Rutgers University – College of Engineering, Piscataway, NJ, May 1997

CERTIFICATIONS

Registered Professional Engineer: New Jersey, New York

PROFESSIONAL AFFILIATIONS

Member of the American Society of Heating, Refrigerating, Air-Conditioning Engineers
Member of New Jersey Chapter of the US Green Building Council
Advisory Group Member for the production of Rutgers University's "NJ Green Remodeling Guidelines".
Successful completion of The Dale Carnegie Course ®, Presented with the "Highest Award of Achievement" as voted by classmates, February 2006

SKILLS

Computer Aided Drafting – AutoCad 2005
Heating and Air Conditioning Calculations, Carrier - Hourly Analysis Program, Ver. 4.4
Microsoft Office

Ed Conn takes the lead on all Savin mechanical projects. His expertise in the design of a wide range of mechanical projects and his thorough knowledge of technical criteria, standards, and codes and how they apply to the design and construction of mechanical systems makes him a key member of Savin's MEP team.

EXPERIENCE

Mr. Conn is the Lead Mechanical Engineer and is responsible for the quality control and or design of all Mechanical Design projects produced by Savin. Mr. Conn has extensive experience in completing Mechanical Design and Construction projects from start to finish, including the production of drawings, specifications and providing design services during construction (RFIs, Shop Drawings, etc.). Mr. Conn specializes in large industrial HVAC system design.

Philadelphia Water Department (PWD) Baxter WTP – Ammonia System Improvements
Lead Mechanical Engineer responsible for the HVAC and plumbing designs associated with the modifications to the existing ammonia feed system and the construction of new underground, chemical storage/pumping vault. Design included heating and ventilation for the pump room and storage room, domestic hot water for combination eyewash/showers, PVC water piping and heat tracing. Responsibilities involved heating, ventilation and domestic hot water calculations, equipment selections, duct and piping layouts, cost estimation, bid document production including drawings and specifications, and inter-discipline coordination.

Westchester County – New Rochelle WWTP BNR Facilities – Contract 09-514 (2010)
Served as Lead Mechanical Engineer for Savin Engineers. Produce all of the Mechanical Design drawings covering heating, ventilation, and cooling design for the BNR building,

Process Control Building and Sodium Hydroxide Building.

New York Power Authority – Bronx Community College, Bronx, NY
Served as Project Manager/Mechanical Engineer. Performed site survey of existing central hot water boiler plant and its distribution system and provided existing energy usage calculations. Developed feasibility report regarding possible upgrade of the central boiler plant and the creation of a new campus central chiller plant. The options of high pressure steam versus medium temperature hot water heating systems were investigated and compared for advantages/disadvantages and construction costs. Performed Life Cycle Cost Analysis for recommended building upgrades including central heating and cooling systems, in which the estimated annual electricity and gas usage were calculated to determine the payback period from the proposed construction cost estimates.

NYCDEP Hunts Point WPCP, Bronx, NY – Stabilization Project (2008)
Lead HVAC Engineer responsible for construction support services of both Phase I and II portions of the design, whose HVAC construction contracts total $27 million. Responsibilities included shop drawing review, requests for information, contractor-engineer coordination, on-site inspections, and change order preparation, which involved the design of an additional $1 million due to scope changes and field conditions. Design of Phase III is ongoing, including design of new, upgraded heating and ventilation to new egg-shaped digester facility and existing thickener area. Both areas will be provided with a heat recovery system totaling 114,000 cfm and 160,000 cfm respectively. Hot water will be provided from the 5-750HP dual fuel boilers designed and installed in a previous phase.

NYC DEP - Catskill & Delaware Water Treatment Ultra Violet Disinfection Facility, Contract CAT-210
Served as Project Manager and HVAC Designer for large Ultra Violet (UV) Disinfection Facility. The facility, rated for 2,020MGD, provides New York City with up to 90% of the nearly two billion gallons of water consumed daily. Project responsibilities include value engineering participation, inter-discipline coordination, cost estimating, applications for permits, assistance in bidding, and direct supervision of three (3) HVAC designers. Highlights of the design include the following:

- Design of a hot water boiler plant with (3) 300 HP boilers divided into three primary zones.
- Desiccant dehumidification (humidity control) systems serving the main pipe galleries totaling 124,000 CFM with a spare unit and complex interconnecting ductwork for redundancy.
- Utilizing plant raw water to provide approximately 500 tons of "free cooling" to numerous air conditioning units through a three loop, stainless steel heat exchanger system. Entire system equipped with redundant pumps, heat exchangers and piping to prevent system failure.
- A dedicated smoke removal system sized to serve approximately 1.6M CF of space in the main UV piping gallery

PROFESSIONAL AFFILIATIONS

American Society of Civil Engineers

Tim Cheatham is an innovate design engineer providing practical solutions for unique projects often times with challenging constraints.

His strong work ethic combined with his commitment to excellence in all projects undertaken results in high quality work and client satisfaction.

RELEVANT EXPERIENCE

Mr. Cheatham has over 13 years of professional experience in the areas of Environmental, Structural, and Civil Engineering. Mr. Cheatham has designed numerous water and wastewater facilities. These have ranged from 25 gpm facilities to 2 bgd facilities. All designs comply with local building codes and the GLUMRB "Ten States" standards for water and wastewater facilities. He has also performed numerous inspections of existing facilities for structural and mechanical deficiencies. His current assignment: Dissolved Air Floatation Thickener. Westchester County DPW. Contact Leah Radko, PE, (914) 995-2471. Estimated completion date, Summer 2015. 60% of time.

Repair Construction and Rehabilitation of the Little Dam Lake Dam, New York. Project Engineer. All permitting for this project including the preparation of a NYSDEC/ACOE joint application. As part of this application a mitigation plan for the Northern Cricket Frog (a NYSDEC endangered species) was prepared.

Design Engineer for Route 9G Connection for Dutchess County Water and Wastewater Authority. Construction of approximately 7,500 linear feet of new water distribution mains within an existing system to connect existing piping terminations and improve system redundancy and pressure distribution. Piping was ductile iron and varied in size from 6" to 16" diameter. Specific elements designed included upgrade and calibration of the existing water distribution system hydraulic model, use of the model to evaluate several alternative piping configurations and sizing alternatives, preparation of the Storm Water Pollution Prevention Plan, and preparation and coordination of permitting documents for regulatory agency review.

Design Engineer for Replace Water Tank and Replace Water Main at the Otisville Correctional Facility for NYS Office of General Services, Department of Correctional Services. Construction of a new water storage tank, the construction of new supply force mains and distribution water mains to connect to the existing distribution network, the installation of several pressure reducing valves throughout the existing network, the demolition of the existing water storage tank, and the remediation of lead and asbestos contaminated soils. Specific elements designed include a new storage tank

and appurtenances, storage tank foundation, temporary site access road, soil erosion and sediment control measures, and the preparation of a detailed Storm Water Pollution Prevention Plan (SWPPP) in accordance with NYSDEC GP-02-01. Construction details and requirements were coordinated with DOCS security requirements.

Hydraulic Model for the Staatsburgh Water System, New York. Project Engineer for the development of a hydraulic model for the water distribution system, including pumps, storage tanks, piping and pressure reducing valves. Project included analyses of different flow conditions as well as field testing to calibrate model.

Design Engineer for Westlake Trunk Sewer Rehabilitation for Westchester County Department of Public Works. Rehabilitation of approximately 2,400 linear feet of 12-inch diameter ACP and RCP gravity sewer pipe and approximately a dozen manholes to reduce infiltration and inflow into the sanitary sewer system. Rehabilitation included cured-in-place-pipelining, grout injection and manhole frame and cover replacement. Specific elements designed include the CIPP lining system, sealing of manhole risers by grout injection, installation of manhole frames and covers, and maintenance and protection of traffic measures. The project site was located within the New York City public water supply watershed and additional environmental controls were required due to the sensitive location.

Design Engineer for Catskill / Delaware Water Treatment Ultraviolet Light Disinfection Facility for New York City Department of Environmental Protection. Construction of the world's largest ultraviolet (UV) light drinking water disinfection facility with an ultimate capacity greater than 2 billion gallons of treated water per day. Design included an approximate 2-acre footprint disinfection building with 56 UV disinfection units, connections to the existing aqueducts, energy dissipating chambers, valve chambers and flow meter chambers. Specific elements designed included all structural work for a below-grade, 65-feet by 40-feet flow meter chamber and a below-grade, 120-feet by 25-feet valve chamber. Additional elements designed included structural steel framing including columns, beams, and bracing members, to support aluminum access grating for a number of structures at the site, including access to all 56 UV disinfection units. All design was completed in accordance with current ACI and AISC codes.

Design Engineer for Central Dutchess Water Transmission Line for the Dutchess County Water & Wastewater Authority. Design of approximately 70,000 linear feet of ductile iron water transmission line, including seven bored and jacked NYSDOT Highway, MTA railroad and stream crossings, and a 5,000 square foot pumping station. Specific elements designed include pipeline alignment, valves, hydrants, water meters and backflow prevention, road and minor stream crossings, thrust restraint, corrosion protection and all structural work associated with valve and water meter vaults, including foundations, walls and roof beams and slabs. Coordinated design of pumping station with pipeline. Also designed all erosion and sediment controls and prepared the Storm Water Pollution Prevention Plan (SWPPP). All design was performed in accordance with current AWWA, Ten States and ACI standards and code

David Han, P.E.

Structural Engineer

EDUCATION

Bachelor of Engineering in Civil Engineering - Stevens Institute of Technology, Hoboken, NJ, 2008

CERTIFICATIONS

Registered Professional Engineer: New York

ACTIVITIES

American Society of Civil Engineers
American Institute of Steel Construction

David Han brings his considerable skills, knowledge, and experience in structural design to Savin clients.

RELEVANT EXPERIENCE

Structural Engineer - Responsibilities include work on numerous water, wastewater and building projects. All design work was in accordance with the New York State Building Code, New York City Building Code, including the appropriate seismic provisions, AISC Manual, and ACI Codes.

North River Water Pollution Control Plant – Cogeneration Design. Performed structural analysis of an existing steel framed, reinforced concrete structure to determine the maximum allowable loading in order to support new equipment associated with new pumps, motors and engines. Completed preliminary structural design of additional steel framing to an existing floor to support new motors.

New Rochelle Wastewater Treatment Plant – Upgrade and Expansion. Detailed structural design of all reinforced concrete and precast concrete components associated with the new BAF facility. This included N-Unit structures, DN-Unit structure, intermediate pumping state structure, UV Facility structure and NaOH structure. All structures were designed in accordance with ACI-350 - 2006.

Green Haven Correctional Facility, Wastewater Treatment and Water System Improvements, NYSOGS. Design services for improvements to the existing wastewater treatment plant and the water distribution system at the Green Haven Correctional Facility. The approximate 300,000 gallon per day wastewater facility includes preliminary screening, followed by extended detention in an aerated lagoon and ultraviolet light disinfection. The water system includes several pumped wells, a softening plant, storage tanks and a booster pumping station.

Westchester County Asset Management Program. Performed inspection of 19 pumping stations and five wastewater treatment plants to identify structural deficiencies in the steel and concrete facilities. The inspections included visual observation and sounding of concrete elements. All inspections were conducted in accordance with ACI inspection standards. The facilities inspected included:

Below-grade tanks – grit removal, primary and secondary sedimentation, aeration, and disinfection.

- Above-grade tanks – sludge thickeners, primary and secondary digesters.
  Superstructures – process buildings, administration buildings, pump stations.

Inspections included identifying corrosion, cracks, section loss, misalignment, and other elements in need of repair. The repair of the deficient elements was prioritized based on risk of failure.

Canastota CSO Facilities, Canastota, New York. Detailed structural design of a timber pile supported, reinforced concrete Headworks Building and a steel H-pile supported reinforced concrete foundation for a glass lined CSO storage tank with an approximate capacity of 750,000 gallons.

Pleasantville Alum Plant – Caustic Soda Storage and Feed System. Structural design of reinforced concrete foundation associated with a new caustic soda containment building for the New York City Department of Environmental Protection.

Wards Island Water Pollution Control Plant – Concrete Evaluation. Performed concrete evaluations of multiple aeration tanks and grit chambers at Wards Island.

- Visual inspection and documentation of structural deficiencies.
- Utilized the Windsor Pin System to test for compressive strength of concrete.

New Rochelle Wastewater Treatment Plant – Upgrade and Expansion. Structural design of concrete and steel elements.

- Design of a multi-story steel framed building.
- Design of multiple new concrete structures (tanks, retaining walls, foundations) as well as rehabilitation and retrofitting of existing concrete structures.

Structural Engineer, Replace Water Tank and Replace Water Main at the Otisville Correctional Facility for NYS Office of General Services, Department of Correctional Services. Project involved the construction of a new water storage tank, the construction of new supply force mains and distribution water mains to connect to the existing distribution network, the installation of several pressure reducing valves throughout the existing network, the demolition of the existing water storage tank and the remediation of lead and asbestos contaminated soils.

Siphon Chamber Walkway Restoration. Performed field inspections and condition assessments for multiple siphon chambers.

- Inspections consisted of sounding of concrete elements, visual documentation of cracks, exposed reinforcing steel and areas of structural deficiency.

Catskill / Delaware Water Treatment Ultraviolet Light Disinfection Facility. Structural design of concrete elements (columns, beams, roof beams, structural slabs).

RELEVANT EXPERIENCE

Responsible for the engineering design of complex projects which, includes planning, engineering design, coordination, cost estimates, bidding supervision and construction management. Preparation of the contract documents which includes the advertisement, information to bidders, special conditions, bid items, payment items, technical specifications and design drawings.

Technical expertise includes: structural engineering, civil engineering, geotechnical engineering, building design, design-build, value engineering, and code reviews. Responsible for the detailed technical reviews, value engineering workshops and code reviews of completed design material, geotechnical evaluations and design and coordination of soil borings and laboratory analysis programs. Design of shallow foundations, mat foundations, deep foundations and uplift foundations. Structural analysis and design – Steel, reinforced concrete, wood and aluminum.
Material and coating selection – evaluation of environments relative to protective coating of materials. Code review and conformance analysis. Project management and construction administration. Schematic design, design development, programming, planning & feasibility studies. Project cost estimating.

ELECTRICAL SUBSTATIONS

Responsible for the structural and foundation design of electrical substations, related buildings and facilities. Responsible for the development of the subsurface investigation programs, coordination, drawing development, preparation of specifications and contract documents, shop drawing review and construction supervision. Responsible for studies to evaluate and analyze existing electrical substations and related facilities. Supervision of designs to implement the necessary rehabilitations, modifications and expansion activities.

Madison Wind Energy Project, Electrical Substation, Madison, NY
Fenner Wind Energy Project, Electrical Substation, Madison County, NY
Noble Wind Energy Project, Two Electrical Substations, Clinton County, NY
Salamanca Frank Street Electrical Substation addition with secondary containment for two 10MVA transformers, Salamanca, NY

Delsa Fermin Has a detailed working knowledge of all phases of construction management.

RELEVANT EXPERIENCE

Paerdegat Basin CSO

Civil Engineer/Inspector. Assist with construction management for DEP (Department of Environmental Protection) on Paerdegat CSO Project - Project included the construction of a waste water channel. Ms. Fermin's daily responsibilities in the field included the inspection of: Excavation, forms works, concrete placement, installation of reinforcement, backfilling for road construction, construction of road ways including sub-grade to asphalt finish and landscaping. Her responsibilities in the office were to inspect and coordinate with DEP throughout the project, from the onset of design, through the construction and finish work to maintain quality standards while maintaining a mandated schedule deadlines review. In addition, she was responsible for negotiation and coordination of any RFI / COR submissions from the General Contractor. Throughout the day additional responsibilities included monitoring of daily work activities throughout the project to maintain safety standards as outlined by the DEP, DOB and OSHA 1910 / 1926 regulation standards.

Professional Contractors, Inc.

Project Management. Assist with construction management responsibilities for retail store and office suite remodel projects. Duties included reviewing of blue prints for overlay conflicts between disciplines, site visits for quality control and problem solving, project turn over and generating of punch list for clients.

BP& Associates Santiago, Dominican Republic. Supervising Engineer. Project management and supervision of residential and commercial projects. New construction for private residence and apartment complexes (general construction).

- Design solid waste removal system for land development projects.
- Project management for the installation of solid waste removal plumbing. Trouble shoot as required per field conditions to complete project at hand.

Marte Castillo Construction Co., Santiago, Dominican Republic
Supervising Engineer

- Project management and supervision of streets, curbs, gutters and sidewalks.
- Project management and supervision of waste and supply water systems to ready location for the general construction of residential dwellings.
- Project management and supervision of residential and commercial projects. New construction for private residence and apartment complexes (general construction).
- Completion of company payroll process for the projects directly supervised by writer.

Caraasan, Santiago, Dominican Republic
Project Manager/Superintendent

- Design solid waste removal system for land development projects.
- Project management for the installation of solid waste removal plumbing. Trouble shoot as required per field conditions to complete project at hand.

Lead Inspector/Risk Assessor

Ken Odum has extensive experience in providing inspection service to the Port Authority of New York and New Jersey.

His familiarity with Port Authority processes and facilities is an asset.

RELEVANT EXPERIENCE

Construction Inspector – Port Authority of New York and New Jersey – Inspected and desk audited various port projects including:

Port Street and Brewster Road Connector.
New Jersey Marine Terminal Marine Rehabilitation.
New Jersey Marine Terminal Immediate repairs via Work Order.
New Jersey Marine Terminal Paving and Utility Via Work Order.
New Jersey Marine Terminal Multi-Facility Fender System Rehabilitation Via Work Order.
PN - 654.089 Maintenance dredging (Port Newark, Berths 18, 20 & 22)
MFP - 654.058A Maintenance dreging Port Newark and Elizabeth
MFP - 654 .126 NJMT Pavement and utility via work order
MFP - 954.701 NJMT Concrete roadway rehabilitation
MF - 100.538 NJMT Phase 111 CCTV camera system
MFP - 654.073 NJMT Priority marine rehabilitation via work order
MFP - 654.125 NJMT Asbestos and Lead abatement via work order

Mr. Odums responsibilities include:

- Multi-Facility maintenance dredging and berth deepening

Port Newark container terminal berth deepening
- Paving and utilities at 1300& 2200 series
- Water main replacement at Maracaibo and Calcutta Streets
- Installation of marine terminal emergency warning system
- WTC emergency clean-up, steel removal operations and by weeks marine

Tyler Street railroad track upgrade.
- Berths 2 through 36 wharf repairs (PN354.034)
  - Replace timber line and interior pile
  - Replace timber pile with post and concrete extension from pile cap to mud line
  - Clean and wrap timber piles
  - Clean and patch spalled concrete pile caps, deck soffit etc.
  - Install concrete jackets, replace broken or missing bollards, utility box covers and cleats
- Asbestos and lead abatement via work order (MFP 234.034)
- Replacement of water meters (MFP 954.566)
- Demolition of buildings 102, 110, 190, & 321 (PN 924.565)
- Building demolitions and construction of expressrail tracks 9 & 10
- Expressrail Elizabeth administration building (EP 384.060)
- Multi-facility fender system repairs via work order (MFP 954.911)
- Multi-facility wharf rehabilitation/reconstruction via work order (MFP 994.580)
- Immediate repairs (MFP 100.533)

Inspector
- Construction management, for asbestos remediation, Queens midtown tunnel including, soil and water sampling and indoor air quality survey

Field Geologist
- Gravel and bedrock deposit field studies, including diamond drilling for road usage.
- Soil – Moisture content studies using Troxler

Field Geologist
- Mining Supervisor, involved in studying soil and rock characteristics and advised on best mining methods

Exploration Geologist
- Worked with team of geologist exploring and drilling for gold

Wahaj Warsi

Wahaj Warsi brings a wealth of experience in civil engineering, civil inspections, and project management.

RELEVANT EXPERIENCE

Civil Inspector – DDC Rehabilitation Project, Brooklyn, NY. $20 Million Rehabilitation Project of sidewalks which covers all of the five boroughs. Rehabilitation of sidewalks, driveways, milling and paving in order to match the existing grade with the catch basins of catch basins. Responsible for the construction inspection for conformance with the plans and specifications, and reports any deviations to the Resident Engineer. Prepare and maintain daily construction inspection reports, progress of the work, crew size and composition, weather, equipment utilization, and all other information relative to the execution of the work. Maintain payment records, including the verification of the Contractor's time and material sheets, and assist in the review of the Contractor's partial payment requests. Maintain as-built drawings of the work, including any deviations from the contract drawings or approved shop drawings. Coordinate with the contractor towards the preparation of the CPM schedule. Monitor contractor's work progress based upon his approved construction schedule and report any deviation. Perform all other inspection and field duties as required by the Resident Engineer.

Civil Inspector – Techno Consult, Inc., Princeton NJ - $1.5 billion Newtown Creek Wastewater Treatment Plant, NY. Completion of significant upgrades to the structures and systems that treat wastewater from a combined sewage treatment system. Some of the project elements included improvements to the plant bar screens, electrical, plumbing, HVAC, and controls and instrumentation upgrades, new screening and control buildings, new barge facilities and site work. The plant was undergoing a major capital improvement and upgrade program to expand its intended capacity from 1.2 to

1.8 cubic meters per day – a 50% increase. Responsible for the construction inspection for conformance with the plans and specifications; prepare and maintain daily construction inspection reports; maintain payment records, maintain as-built drawings including any deviations from the contract drawings or approved shop drawings and monitor contractor's work progress based upon his approved construction schedule and report any deviation.

Civil Inspector/Cost Engineer - $155 million Delaware Aqueduct Rehabilitation of Shafts 9, 10 & 18 for NYCDEP, Carmel/Kent, New York. Replacement of all existing sluice gates and operators and various other systems and components including but not limited to: screens, feed systems, scrubbers, emergency generator, sewage pumps, and potable water system. Remediation of hazardous materials including lead paint, asbestos, mercury, and PCBs. Also responsible for checking and reviewing certified payroll, prevailing wages and daily report with the Inspector's Reports and for the supervision and inspection of structural steel, placing and splicing of rebar, quality and quantities of reinforced concrete in compliance of project specification; storm water and sewer water pipes (gravity & force main) inverts and elevations of distribution network containing of pump stations man holes and cleanouts. Supervision in storm water prevention protection plan, supervision of site safety and assure local and state regulation, assisting Deputy Resident Engineer, interfacing both, site main office and field office. Also responsible for keeping track of scope of work, machinery, man power and T&M items, supervision of demolition work and disposal of debris according to city and state regulation.

Construction Inspector – Rehabilitation of Betsy Ross and Commodore Barry Bridges – Delaware River Port Authority, Maple Shade, New Jersey. Responsibilities included performing construction inspection for conformance with the plans and specifications, comprises removal of defective bearing stiffener/plates made of soft metals for main columns, purlins, under deck repair work using special type of the boom lift, truss railing repair work, studs replacement, jacking bridge to desired height in order to replace the main bearing plates, localize paint removal, excavation, embankment, erosion control, landscaping, seeding & sod, planting, hot mix asphalt pavement, traffic control on Authority Roadway, disposal of hazards material as per city & state regulations and report any deviations to the Resident Engineer. Prepare and maintain daily construction inspection reports, which shall indicate the Contractor's work activities, progress of the work, crew size and composition, weather, equipment utilization, and all other information related to the execution of the work. Maintain and update shop-drawing log; coordinate with the field and the design team to resolve conflicts in the drawings; review contractor's Monthly Requisition to conform the percentage completion of pay items. Coordinate with contractor and the Maintain as-built drawings of the work, including any deviations from the contract drawings or approved shop drawings. Perform all other inspections and field duties as required by the Resident Engineer.

David Post

Civil/Structural Construction Inspector

EDUCATION

Associate Degree in Civil Engineering Technology – I.C.S. Center for Degree Studies, Scranton, PA
Butler High School, Butler NJ

SKILLS & AFFILIATIONS

Auto Cad R14 (Sussex Vo-tech Certified Auto Cad course (1994)
OSHA, BOCA and MESHA Codes
The Construction supervisor Building Contractors Assoc, NY
ACI Certified Special Inspector

David Post has successfully provided construction inspection, project management, and civil engineering services for public and private clients, including the Port Authority.

RELEVANT EXPERIENCE

David Post of Savin Engineers was recently promoted to a supervisory role for all night operations on various construction contracts at the Port Authority's PATH facilities. Mr. Post has over 24 years of experience in construction management and inspection and has been working on PANYNJ projects for over 5 years. His experience includes train station construction work as well as a variety of buildings types. He is an ACI Certified Special Inspector.

Construction Management Term Agreement, PANYNJ – Responsibilities included:

- Supervise, direct and provide technical support for Electrical Contractors on Homeland Security construction projects located throughout the entire PATH train station and tunnel system.
- Provide coordination between related PATH construction projects.
- Supervise work train movements and placement by coordinating with the contractor and providing direction to the assigned train crew.
- Coordinate tunnel and train station construction work with various PATH personnel (Train Masters, Power Rail Men, Communications Department, Signal Department, Yard Masters, Dispatchers, Surveyors, other EIC's)
- Provide Assistant Resident Engineer with written reports (Spreadsheet format) and mark-up pictorial reports of project progress and deficiencies.
- Evaluate and mark-up monthly Payment Requisitions.
- Evaluate submittal logs.
- Provide electrical inspection of contract work performed.

Project Manager – Chrisdon Homes, Inc. – Chrisdon Homes is a general contracting company specializing in construction of pre-fab homes in the $200K to $800K price range. As Project Manager, his responsibilities include:

Site preparation and foundation design
- Subcontractor negotiations
- Building construction operations
- Material procurement and scheduling
- Specification and Contract Compliance
- Final Inspections

Project Manager – RSA Enterprises, Inc. – RSA is a construction management company specializing in commercial and residential projects in the 1 to 20 million dollar range. Project manager for a $2.5 million project at a prestigious New Jersey Golf and Country Club and a $2.1 million jewelry center. Responsibilities included:

- Budget estimated
- Project scheduling
- Site preparation
- Customer relations
- Building construction operations
- Subcontractor negotiations
- Material procurement and scheduling
- ADA compliance
- Change orders-formulation and negotiation
- Specification and contract compliance
- Final inspections

Construction Engineer & Lead Designer – Worked as group lead designer and construction engineer for projects in the 1 to 60 million dollar range, for power plants, mining and quarry operations. Designed bulk material, handling conveyors, steel and concrete structures and g.a.'s with design teams of 5 to 25 employees.

Kwasi John

Senior Construction Inspector

EDUCATION

AAS - Civil Engineering Technology - New York City Technical College
Civil Engineering - Polytechnic University of New York

CERTIFICATIONS

ACI American Concrete Institute
- Trained and certified concrete inspector

ACI Special Inspector
NACE International Corrosion Study
- Trained and certified in corrosion inspection

NICET III Certification
OSHA U.S. Dept. of Labor, Occupational Safety and Health Administration
- Trained and certified in construction safety and health

Leighton Associates Inc. Environmental Health and Safety Trainers
- Lead awareness trained and certified

Kwasi John has conducted hundreds of structural inspections for municipal, state, and federal clients throughout the Creater New York Metropolitan area.

RELEVANT EXPERIENCE

Senior Structural Inspector on structural, civil and mechanical work with over 13 years experience. Perform detailed inspection of construction work, including rebar installation and concrete pours, to ensure compliance with contract documents, resolve field issues and record quantities and activities.

New Rochelle Wastewater Treatment Plant, New Rochelle, NY. Senior Structural Inspector for Composite Performance Implementation, Plant Expansion and Biological Nutrient Removal Contracts at the 20 MGD, New Rochelle WWTP. Total Construction value of the projects is $235 million. Work includes replacement and upgrade of all existing plant process equipment including; headworks, primary clarifiers, pure or secondary treatment and final clarifiers, new electrical service, odor control and solids handling. Biological Nutrient removal project includes new construction of a BAF and UV process trains.

New York City Health and Hospitals Corporation, Queens Hospital. Structural inspector for $5 million upgrade for a new wing to the Queens Hospital Center. The work included structural excavation and backfilling, temporary sheeting and bracing, 2 new reinforced concrete 27 kV duct banks, a new reinforced concrete retaining wall, storm and sanitary sewer work; and miscellaneous concrete repair work. All concrete work was checked for conformances with ACI 318 and NYC Building Code.

NYCDEP, Wards Island. Concrete Aeration Tanks Upgrade, modifications, improvements and repairs. Mr. John's work included repairing damaged reinforced concrete y-walls, tank floors, installed new expansion joints, baffle walls, as well as new concrete

handrails, and structural support towers for process air piping and headers. New Electrical Substations – Installed piles, foundations, grade beams, steel structural-framing, curtain & masonry walls, roofing, equipment, switchgears and transformers.

New Rochelle WWTP. Senior Structural Inspector for the demolition of obsolete structures and equipment. Work included the removal of outdated equipment and piping, including two former sludge incinerators and their associated pollution control equipment. Coordination of contractor's activities with ongoing plant operations including shutdowns and treatment systems isolation to facilitate demolition activities. Senior Structural Inspector for structural evaluation and repair design for existing steel framing for sludge processing building. Included field inspection and measurements analysis of capacity of deteriorating steel members.

Yonkers Joint Treatment Plant, Primary Digester Roof Replacement. Senior Structural Inspector for the Yonkers Joint Treatment Plant, Primary Digester Roof Replacement project. The project consisted of the removal and replacement of the aging steel dome roofs on three anaerobic sludge digesters. Work involved close coordination with plant personnel and the removal contractor as well as the installation of shoring towers and support trusses to secure the roof during removal and the placement of a 330-ton crane for removal of the entire dome assembly as one unit.

Henry Hudson Bridge, TBTA, New York. Senior Structural Inspector for deck replacement of the Henry Hudson Bridge. Supervised inspection of coating application for the protection of structural steel and concrete. Specific elements included inspection of:

- Deck reinforcing and concrete placement and expansion joint installation
- Concrete repairs to existing north abutment wing walls
- Sandblasting and surface prep of existing structural steel
- Metal pan deck installation
- Replacement of navigation lights for bridge.
- Installation of temporary gantry crane hoist on Bridge
- Placement of new lighting control system for bridge.
- Miscellaneous steel repairs

Brooklyn Battery Tunnel Roadway Rehabilitation, TBTA New York. Structural Inspector – **Brooklyn Battery Tunnel.** Mr. John performed inspection on the Brooklyn Battery Tunnel Roadway Rehabilitation Project. Most of this work was performed at night. He performed inspection to ensure compliance with Contract Documents, resolve field issues and record quantities and activities. Inspection included: significant under deck concrete repairs including cathodic protection, placement of 6" ductile iron dry stand pipe embedded in a 24" x24" horizontal trench located on the west wall of the tunnel

Jason A. Giel

Senior Construction Inspector

EDUCATION

St. John the Baptist Diocesan High School, June, 1995

CERTIFICATIONS

American Concrete Institute Concrete Strength Testing Technician ID#: [redacted], 2004
American Concrete Institute Concrete Field Testing Technician-Grade 1 ID# [redacted], 2002

COMPUTER SKILLS

Windows, Word, Excel, Quadrel, Proficient in use of Internet

Jason Giel has a detailed working knowledge of performing inspections during and after construction to ensure compliance with the specifications, standards, and other requirements.

RELEVANT EXPERIENCE

New Rochelle WWTP - Composite Performance Implementation and Plant Expansion
Structural Inspector for the $235 million plant upgrade and BNR upgrade at the New Rochelle Wastewater Treatment Plant. Performed inspection of erection of a multi-story structural steel framed building. Ensured steel sections were erected in accordance with the plans and specifications. Witnessed torque-testing of bolted connections and radiographic testing of field welds. Assisted in preparing change orders for modified steel connection details as a result of field conditions.

NYCDEP Paerdegat Basin CSO-4B Facility Project - Field Inspector (Civil & Mechanical)
Responsibilities include: Daily inspection of quality assurance and quality control of small and mass concrete placement during cold and hot weather conditions to within ACI, SOP, shop drawing and job specifications for a 20 million gallon CSO storage tank slabs, walls, pipe cradle and road base. Daily inspections include:

- Reinforcing steel
- Concrete formwork
- RCP piping installation
- Water proofing
- Concrete finishing
- Removal of mass earth material off site
- Dredging of canal

CSO-5G – Responsibility included daily inspection for quality assurance and quality control of small and mass concrete placement in cold and hot weather conditions to within ACI, SOP, shop drawing and job specifications for connection into existing as well as new CSO system and new plant facilities and garage facility department for DEP. Daily responsibility inspections were as follows:

- Reinforcing steel
- Concrete formwork
- RCP piping installation
- Demolition of existing building and tide gates
- Installation of site security and ornamental fencing

- Day and night roadwork
- Building equipment pads
- Road base
- Asphalt placement (site and road)
- Concrete encasements of building columns
- Site planting of trees and flower vegetation
- Sidewalks and curbs for facility and city roadways

CSO-5H – Responsibility included inspection to within SOP, shop drawings, contract drawings, and job specifications on installation for boiler heat piping system and HVAC units with ductwork installation within the office, garage and processing plant for DEP CSO facility.

CSO-6 – Responsibility included daily inspections to within SOP, shop drawings, contract drawings, and job specifications of a nature preserve and ecology center within the borough of Brooklyn. Daily inspections included the following:

- Excavation and removal of mass earth material off site to contract grade drawings
- Excavation and removal of contaminate material
- Removal of tree and invasive vegetation
- Rough grading to contract drawings
- Installation of reinforced silt fencing and debris exclusion fencing along shoreline.

Concrete Placement Inspector – NYC DEP QAS Concrete Placement Inspector (Batch Plant and Field) – Responsibilities include:

- Overseeing field-testing and placement on various NYC DEP concrete job sites.

Lab Technician Assistant – Responsibilities include:

- Removal of molds from concrete, capping of concrete, and strength testing of PSI in concrete.

Sales Representative – Long Island Paneling – Responsibilities include:

- Supervising customer relations, sales, coordination of building materials to be delivered to construction sites, and reviewing of blueprints and specifications.

Construction Worker – Rooney Brothers Corporation – Responsibilities include:

- Construction of private homes and businesses, including framing and extensions, review of blueprints and specifications, as well as building concrete patios and steps.

Hany Costandy

Construction Inspector

EDUCATION

Bachelor in Mechanical Engineering – Alexandria University, 1994

SKILLS/LICENSES

Computer skills
ISO 9000
ACI Certified Inspector
NJ DCA Special Inspector License
NJ Licensed Inspector for Concrete Placement
NJ State Licensed Inspector for Reinforced Concrete Inspection

Hany Costandy has a balance portfolio of work in inspections and project management.

RELEVANT EXPERIENCE

Project Manager – SCA, DASNY, NYCH projects.

Project Manager – Cameron Group, Bayonne, NJ – Responsible for monitoring and coordinating between the different trades and contractor on the job site.

- Generate and approve all change orders
- Observing the quality of work done on the job and trying to keep the time schedule.
- Writing daily reports.
- Schedule the project in logical steps and budget time to meet deadlines
- Inspect and review projects to monitor compOliance with building and safety codes and other regulations
- Interpret and explain plans and contract terms to administrative staff and clients
- Prepare contracts and negotiate revisions, changes and additions to contractual agreements with architects, consultants and clients.
- Negotiate Sub-contractors agreements
- Supervise Subcontractors and coordinate their material deliveries
- Supervise Superintendent and staff on the project
- Coordinate with Owner and Owner's Representative requested revisions or errors on drawings and documents.
- Participate in inspections and preparation of punch lists.

Senior Project Manager/Head of Inspectors – Craig Testing Labs, Mays Landing, NJ – Performed site inspections such as concrete sampling, slump, temperature, unit weight, air content (volumetric and pressure methods), rebar inspection (geotechnical probe test), soil compaction tests (nuclear gauge test), soil bearing capacity (dynamic core penetration test). Masonry inspection (Mortar, rebar, grout-durra wall), pile driving inspection, asphalt testing, writing daily reports and organizing, work between contractors on site. Report all discrepancies to the contractor, construction manager

and structural engineer. Training new inspector to be qualified to work on site and to be qualified for ACI test. Also observing the contractors work and make sure they follow the job specs and requirements.

Head Quality Control Construction Inspector – Atlantic Engineering Labs, Rahway, NJ – Performed site inspections such as concrete sampling, slump, temperature, unit weight, air content (volumetric and pressure methods), rebar inspection (geotechnical probe test), soil compaction tests (nuclear gauge test), soil bearing capacity (dynamic core penetration test). Masonry inspection (Mortar, rebar, grout, durra wall), pile driving inspection, asphalt testing, writing daily reports and organizing work between contractors on site. Report all discrepancies to the contractor, construction manager and structural engineer. Training new inspector to be qualified to work on site and to be qualified for ACI test. Also observing the contractors work and make sure they follow the job specs and requirements.

Assistant to Purchasing & Technical Manager – Globe Automotive Import – Middletown, NY – Worked with the Purchasing Manager in issuing all the purchase orders and placed them with domestic and foreign suppliers (European, South America and Asian suppliers), negotiate prices with suppliers while maintaining quality; categorize new parts on the online catalog, add the applications for each part; research Mercedes Benz, BMW, Audi and VW on line catalogue to find new items and add to the inventory. Solved all technical problems with customers and sales team.

Alex Serebrennik

Construction Inspector

EDUCATION

MS E in Engineering Technology, State University – New York, NY

CERTIFICATIONS

Boating Safey, OSHA 10 Hours 2011, NJSA, Certified Concrete Filed Testing Technician, Concrete Construction Special Inspector

Alex Serebrennik brings his thorough knowledge of construction inspections on a wide variety of civil and site projects that include bridges, roadways, and sewage projects to all Svin projects..

RELEVANT EXPERIENCE

Senior Construction Inspector

NJDOT – Route 35, Restoration (Sandy Restoration) (MP 9.0-12.0) Borough of Mantoloking & Bay Head). (Sub-contract to Ammann Whitney, Senior Construction Inspector – on a 39 Mil Restoration Project, Inspect General Contractors work involving drainage work (New Drainage Inlets) 4 Pump Stations, upgrading of existing water and sewer mains (Laterals), removal of Existing concrete pavement, new curb/sidewalk, new asphalt pavement, landscaping and TC. Provided video inspection of sewers and hydrostatic pressure tests of the water main. Existing High water table warranted dewatering activities throughout utility excavations. Perform force account monitoring, provided Inspection to 4 Pump Stations.

NJDOT – Weldon Road – Espanong Road Over Route 15 Jefferson Township Contract #MOE113210 Bridge Deck Replacement.. (Sub-Contract to Dewberry) Senior Construction Inspector responsible for Bridge Deck Replacement along with most able Stages on Espanong Road – Weldon Road. Major and complex Removal Deck Replacement, new armor joints, reinforcement steel installation, partial wing wall replacement, parapet, bridge sidewalk, concrete median Center, fence, vertical spall and pier cracks repair and waterproofing, drainage, roadway milling, pavement restoration, surveying structural grades and road alignment. Maintained the purity of the road under the bridge, preventing it from contamination from leaking flows of slurry from the bridge. Involved in MPT Construction Signs installation MPT detours / lane shifts. Assisted the review of shop drawings written procedures and miscellaneous assignments. Successfully cooperate with safety inspector form the NJDOT, fixing all deficiencies and responding to their comment.

Construction Inspector NJTA, Roadway Improvements at Garden State Parkway and Interchanges 157 and 161. Grading, Paving, and lightning. Construction Inspector for Contract P300.213 the Authority widening project, electrical and drainage improvements. This project was performed along one of the busiest sections of the GSP and has to goal to reduce a traffic bottleneck at Exit 157 of GSP S.B. and upgrade the lighting systems over Exit 161 of GSP S.B. and N.B. Responsibilities included supervis inspection of construction and quality control activities for earthwork, embankment improvement, sidewalks, driveways, and curbs, new drainage network construction,

new electric installation, roadway lighting systems, replacement of existing utility pole mounted lighting with NJTA standard lighting facilities. ITS and facilities, roadway reconstruction, asphalt milling and paving, baseline control, staged construction including extensive maintenance and protection of traffic, signing and striping, utility lines installation under the bridges. Responsibilities also included submittals, daily reports and shop drawings review, filed testing of construction materials.

Senior Construction Inspection, Montville, NJ. Hudson County NJ Rehabilitation of 3 Span Arch Bridge over West Hudson Park Lake. This 6 month widening construction project is being performed in West Hudson Park in Kearny, NJ over the Park's Lake. Responsibilities included supervision / supervision inspection of construction and quality control activities involved the reconstruction and widening of the3 span arch bridge, demolition of old bridge structures and clearing from trees and vegetation. Also included construction of a temporary bridge structure which included modifying the approach to the bridge and adding steps to the stair, installation of girders and other structural streel constructions, pile driving, construction of retaining walls, substructures, and bridge piers.

Structural steel and pre-cast concrete plants inspector. NJTA Interchange 6-9 Widening Program and GSP Mullica River Bridge. For clients such as AECOM, PB, IEW, HARMS, RENCOR and other, conducted inspection of precast plants manufacturing for different related projects. Inspected a lot of pre-cast plants in NJ, Maryland and Pennsylvania such as: M & M Precast, Inc., North East, MD; Old Castle Telford, PA; Faddis Concrete Products, PA; NorthEast Precast, Millville, NJ; Concrete Safety Systems, LLC, Bethel, PA etc. Controlled the manufacturing of noise reduction barriers panels and posts, traffic control barriers and different MSE wall panels for different projects (101, 102, 103, 201, 203, 501, 502, 801, 802 etc.), inspected production of culvert boxes for Turnpike. Verified the panel's dimensions with shop drawings and verified their position on Wall elevation's drawings.

Controlled fabrication, welding, cleaning and blasting, galvanized and paint coatings of different steel units such as bridge girders and their parts, piles. Also inspected sign supports used on NJ Turnpike and Garden State Parkway such as butterflies, cantilevers and overheads within a whole process of their manufacturing from the beginning until the shipping. Also inspected quality of manufacturing pre-cast concrete units such as different slabs, sewage units, drainage structures, checked spacing and placement of rebar configuration and their set into forms pursuant to plans; reviewed QC's monthly records for moistures for sand and aggregate and audited the gradation certifications for the concrete aggregate products, cement and reinforcement steel. Controlled consistency of suppliers. Prepared and submitted daily inspector reports to clients providing them with stage of readiness and quality of their products, etc.

Mark Zaki

Construction Inspector

EDUCATION

B.S. in Civil Engineering – Assiut University, Egypt, AR, 2011

CERTIFICATIONS

ACI Concrete Construction
ICC Structural Masonry

SKILLS

AutoCAD (Structural Drafting), SAB2000 (structural analysis), ICDL (Windows, Word, PowerPoint, Excel, Access, Outlook and IT), Surveying Equipment (Totalstation, GPS, Theodolite, Level, Planemeter and Steroscope)

Mark Zaki's engineering skills combined with his working knowledge of construction inspections is applied to Savin projects.

RELEVANT EXPERIENCE

A highly talented Construction Inspector with experience in examining site elements such as soil, paving, concrete, rebar, and masonry to ensure that their construction, alteration, or repair complies with building codes and ordinances, zoning regulations, and contract specifications.

Special Inspector – Queens, NY – Responsibilities include:

- Soil compaction and asphalt inspection and testing using Troxlar
- Concrete and rebar inspection
- Structural Masonry

Douglas Barillas

Construction Inspector

EDUCATION

High School
Instituto Tecnico Vocacional – Guatemala, 1993

SKILLS/CERTIFICATIONS

Welding – SMAW, GMAW, GTAW, FCAW, SAW
CWI (Certified Welding Inspector), ICC Bolting Inspector

Douglas Barillas is fully versed in structural steel, steel and metal fabrication, and welding assessment.

RELEVANT EXPERIENCE

Mr. Barillas has over twenty four years of experience in the inspection of structural steel and other steel and metal fabrication. He is a certified welding inspector and is familiar with a variety of welding methods and procedures. He has excellent communication skills and proficient at preparing proper field reports and documentation.

Field Inspector – Duties include but not limited to visual inspection of structural steel, field welding and shop welding and high strength bolting inspection. Performed inspection of structural steel installation, welding, bolting and repairs. Inspected columns, beams, girders, splices, connections and field modifications.

Leadman/Inspector – Leadman/Field Inspector on numerous steel construction projects throughout the New York Metro Area. Projects included: The New York Times Building, Goldman Sachs Building, World Trade Center Tower 1 and Tower 4 and the PATH Transportation Hub.

Welder Fabricator and Steel Erector – Custom Steel, Kearny, NJ – Worked as a welder and was promoted to layout/fitter. Responsible for fabrication of steel stairs, hand railings, beams and columns. Also worked on the fabrication of aluminum and stainless steel hand railings. Extensive experience in reading and interpreting detailed installation drawings.

Leadman/Customer Service – Cargo Logistics, Carteret, NJ – Started working on picking and packing. In one year he was promoted to Leadman overseeing 7 people. Also worked in the office as customer service rep.

Welder/Fitter – Pam International, Garfield, NJ – Worked as a welder/fitter in a production shop using GMAW and GTAW.

Albert Wong

Construction Inspector

EDUCATION

Bachelor's Degree in Aircraft Engineering, The Chelsea College of Aeronautical & Automobile Engineering, UK

Diploma – Major Aero-engines, Instruments, Sheet Metal Work, Electrical & Hydraulic Equipment, Far East

Flying & Technical School, Hong Kong, China

QUALIFICATIONS/CERTIFICATIONS

Certified American Welding Society Welding Inspector (CWI)

International Code Council (ICC) Registered Special Inspector for Structural Steel & Bolting

Non-Destructive Testing: SNT-TC-1A (U.T., M.T., P.T. Level II, E.T., R.T. Level I)

Welder's Qualification Test (Q2) in according with ABS procedures

MEMBER

The American Society for Non-Destructive Testing

The American Welding Society

The American Society of Metal

The Hong Kong Institute of Engineers

The British Institute of Non-Destructive Testing (Licensed member)

Albert Wong is a construction inspector with broad-based experience in structural and active construction site inspection.

RELEVANT EXPERIENCE

Construction Management, Engineer, Architecture, Land-surveying, & Material Testing
NY EPA, City Tunnel #3, Stage 2 – Special Inspector for welding, structural steel and bolting – New York, NY – Responsible for witnessing testing and inspection of:

- Welding Certification Test
- Welding Procedure Test
- Welding of stainless steel pipe, carbon steel, pipe, galvanized steel pipe
- Hydrostatic test of pipe systems on pipe size from 1" to 48" in diameter
- Cathodic Protection Test (Corrosion Protection Test of carbon Steel)
- NDT, RT, PT, UT, and RT Film Interpretation
- Structural steel erection and welding
- High strength bolts installation of skid more test
- Aluminum grating and support installation and welding
- Heating and ventilation pipe and support installation and welding
- Load test of telescoping monorail, jib crane, personnel transport elevator
- Installation of chemical grouting, expansion anchor bolt
- Verification of calibration certificates of testing instruments

Quality Control Engineer (Structural Steel) - Fluor EPCM Services – Phoenix Constructors – **World Trade Center Transportation Hub** – New York, NY – Responsible for the management of a comprehensive quality control program for the $4 billion work

- Led the processing audit on contractors and the documentation and issuance of the non-conformance reports
- Accountable for the review and implementation of the contractor's submittals, quality control program, welding procedure, welder certification record, structural steel erection procedures and punch list record.
- Led the coordination and client interaction for special control inspection and testing, AS destructive testing, non-destructive testing, high strength bolt pretension testing, fabrication ship inspection, and the corrosion protection testing of structural steel and piping.
- Managed surveillance of daily site activities for welding, bolting, and erection of structural steel.
- Managed the relationship with key client management (project manager level) and kept them adequately informed with the timelines and status of required corrective activities.
- Ensured that the contractor's quality personnel are in compliance with the current quality control program
- Permits and certifications obtained in relation to this project:
    - World Trade Center Transportation Hub Security Clearance
    - MTA NYCT track safety training
    - The PATH/The Port Authority of NY/NJ Roadway Worker Protection Training
    - OSHA 10 hour & 30 hour Safety Training

Senior QA/QC Inspector (Structural Steel) – U.S. Engineering Laboratories, Inc. - In charge of the inspection and surveillance of construction work to ensure compliance with contract stipulations.

- Responsible for witnessing various tests and surveillance of operations for fabrication and erection of structural steel work.
- Led the tracking and review of all contractor testing reports and material testing to ensure conformance with specifications.
- Managed project progress and documented problem areas in preparation for the submission of progress and inspection reports.
- Projects for which the above was performed include:
    - Conoco Phillips Bayway Refinery – Linden, NJ
    - Hudson Bergen Light Rail Transit System – Various locations, NJ
    - Merck & Co. – Research Building 820 – Rahway, NJ
    - Battery Tunnel and Mid-town Tunnel Exhaust System – New York, NY
    - Tri-Borough Bridge – New York, NY
    - George Washington Bridge – New York, NY
    - Newark Liberty Int'l Airport, North Cargo Building – Newark, NJ

Michael Fradua

Structural Engineer

EDUCATION

B.S. in Civil Engineering – Manhattan College, Riverdale, NY

CERTIFICATIONS

Certified International Code Council (ICC) Special inspector

CORE CAPABILITIES

Design & Inspection Management Administration
Commercial & Industrial Buildings; Project Management; Contract Management; Special Inspection & Reports; Team Leadership; Scope & Budget Development; Emergency Response; Union Workforce Management; Scheduling; Seismic retrofit upgrade; Client & architect relations; Production Drawings; Structural damage assessment; Contractor oversight; Budget monitoring

Michael Fradua Has extensive experience in performing inspection and monitoring services at construction sites to ensure adherence to structural and safety standards, building codes, and specifications.

RELEVANT EXPERIENCE

Mr. Fradua is a structural engineer with over 28 years of experience. He is a Certified International Code Council (ICC) Special inspector. Excellent communicator and team leader who quickly establishes rapport and credibility with diverse stakeholders, including architects, developers, contractors, and local and state agencies. Experience in private and public sectors in US and globally.

Skyline Engineering, New York, NY Director of Special Inspections Structural. Conduct special inspections of NYC heavy construction projects; both new construction and renovations. Inspections include bolting, welding, masonry, concrete, steel structures, soils, and fire stopping. PE approved to sign and seal structural Technical Reports (TR) for NYC Department of Buildings.

- Ensured safety and structural integrity of rooftop framing and supports HVAC equipment for 60 story building on Wall Street.
- Responsible professional in charge of structural inspection for a high-rise reinforced concrete building.

Galli Engineering, Melville, NY. Structural Engineer -- Design and inspect commercial, industrial, residential and environmental building projects, including generating preliminary designs and calculations, preparing drawings, inspecting ongoing construction jobs, and producing reports. Projects include:

- Produced forensic report on commercial building damaged by adjacent Long Island Rail Road construction project.
- Delivered structural design for multi-building/multi-use apartment complex.

Project Engineer – Galli Engineering, Westbury, NY – Inspect and design commercial buildings, including historic renovations, foundations and underpinnings. Monitored demolition, assess load-bearing capacity of foundations and structures.

- Successfully engineered underpinning of historic landmark building in Brooklyn, NY.
- Designed foundations and steel framing for new commercial building; oversaw demolition of existing building.

NYC Transit. Assistant Chief Operating Officer, Contract Inspection — Oversaw outside contractors on NYC Transit operation and capital construction projects. Managed inspection of external construction projects to ensure safety and integrity of NYC Transit routes and facilities. Supervised 3 directors and managers, and crew of 80 union engineering and field personnel. Represented Transit Authority in emergency response and supervised TA field forces during disasters.

- Oversaw inspection of World Trade Center 7 reconstruction
- Contributed to FEMA regional planning for disaster response in NYC, including terrorist attack & hurricanes.
- Delivered yard paving and facility roofing projects system wide, within budget and on deadline.

NYC Transit. Director, Contract Inspection — Spearheaded project scoping, design, budgeting and inspection of NYC Transit multi-million dollar capital and operation projects, including repair, upgrading and maintenance of system-wide elevated and tunnel structures. Supervised managers and 50 engineering & field staff. Liaison to City, State and Federal agencies.

- Coordinated all NYC Transit operations at OEM Command Center after 9/11 World Trade Center collapse.
- Reopened closed subway lines 2 month ahead of schedule after 9/11.
- Monitored all aspects of Columbus Circle development, including interconnection with subway system.'
- Led NYC Transit engineering team inspecting old Yankee Stadium, coordinating fabrication of emergency support stanchions.

NYC Transit. Manager, Contract Inspection — Led team of 30 engineers and field inspectors to inspect development projects that affected TA facilities in all 5 boroughs. Developed design solutions to underpinning and foundation problem.

Project Manager – Basil Engineering, Consulting Engineers, Italy & Saudi Arabia

Job Captain – Weiskoph & Pickworth, Consulting Engineers, Texas

Feld, Kaminetzky & Cohen, Consulting Engineers, New York City

Eric Davis

Construction Inspector

EDUCATION

KrautKramer Branson School of Nondestructive Testing, Charlotte, NC, 1997
Washington County Technical School, Johnson City, TN, 6/94-4/94

CERTIFICATIONS

ICC Structural Steel & Bolting Special Inspector, Dec. 2013-Dec. 2016
ICC Welding Special Inspector, Jan. 2014-Jan. 2017
Certified Welding Inspector, October 2016
OSHA – 30 Hour, Oct. 2013-Present
30 Hour Occupational Safety and Health Training Course in Construction Safety & Health

Eric Davis utilizes his skills and professional certifications to determine structural soundness, compliance with building specifications and building codes, and other regulations to ensure high-quality work.

RELEVANT EXPERIENCE

WTC Oculus, Skanska Koch Inc., New York, NY. Superintendent –Directed all inspections on steel member for fit-up, welding and non-destructive testing (NDT)

- Reviewed and endorsed all daily special inspection and NDT reports
- Closed punch list items related to welding non-conformances
- Tracked progress of all welding and bolting activities
- Quantified and managed development of all NDT procedures, including non-conventional methods and base metals.
- Attended all punch list meetings with client and engineering department
- Witnessed qualification tests for stainless and D1.5 welders
- Tested orbital welding machine for welding procedure of round pipes on site.

WTC Transportation Hub, DCM Erectors, Inc. New York, NY. Site Quality Manager/Lead Bridge Inspector — Directed all inspections on fracture critical member for fit-up, welding and NDT.

- Reviewed and endorsed all daily special inspection and NDT reports
- Developed critical repair procedures for unacceptable welds and/or poorly fabricated joints
- Performed NDT inspections and in-process welding activities when needed
- Continuous internal auditing of all site CWIs and NDE technicians
- Managed all interaction between contractor's QC and client's QA (Port Authority)
- Attended all punch list meetings with client and engineering department
- Monitored field progress and compliance to required schedule milestones.

URSSA Fabrication Plant – DCM Erectors, Inc. Welding Inspector — Performed fit-up verification of joints and in-process welding inspections of assemblies for the WTC Transportation HUB.

- Supervised NDT inspection of welds, performing additional inspection as required
- Performed final visual inspection and documentation review for completed assemblies prior to turning over to client's QA (Port Authority).

Archer Western Contractor – RDU International Airport Terminal, Morrisville, NC.
Quality Control Engineer - Performed inspection and testing on project's components – RDU International Airport Terminal 2 Renovation/Expansion Project.

- VT, NDT or welded connections
- Verification of bolted connections
- Moisture verification
- Paint thickness verification
- Assistant concrete testing technician
- Mechanical inspections of plumbing, duct, pipe and fire suppression systems
- Ongoing inspections including those requiring owner's representative and/or county inspector's verification
- Coordination of daily activities and testing

MACTEC Engineering, Raleigh, NC. Senior Metals Technician– Performed NDT and weld inspection at various project sites.

- Structural steel fabrication plants
- Bridge manufacturing plants
- Major pharmaceutical plants (Coordinate inspections/testing during shut down projects as well as performing ongoing inspections of plant pressure vessels.

Southern Monopole & Utilities Co – Steel, AL Quality Control/Quality Assurance Manager — Implemented the Quality Control Program during startup of company.

- Qualified welding procedures and welders
- Trained welding inspectors and NDT personnel
- Maintained daily inspection records and performed NDT – Visual, Ultrasonic and Magnetic Particle
- Procured testing agencies for destructive testing of qualification plates.

Carolina Steel Corporation – Abingdon, VA. **Fitter's Helper** –

- Performed dimensional verification inspections
- Qualified welders – Shielded Metal Arc, Submerged Arc, Arc and Flux Cored Arc Welding Processes
- Performed NDT of welded joints
- Performed coating inspections
- Assisted with fit-up of bridge girders in fabrication plant.

Anna Hrisomallis

Senior Construction Inspector

REGISTRATIONS/PROFESSIONAL AFFILIATIONS

NACE CIP Level I Coatings Inspector
SSPC C3 Supervisor/Competent Person Training
OSHA 10 Hour Construction Safety
Confined Space Safety Certification
Visible Emissions Evaluation

Anna Hrisomallis has performed numerous successful inspection projects throughout the Greater New York Metropolitan area including bridges, roadways, water treatment plants, and most recently the JFK terminal for the Port Authority.

RELEVANT EXPERIENCE

JFK International Airport, Port Authority of New York and New Jersey. Construction inspector for inspection of terminals and roadway modifications.

New York State Thruway Authority. Bridge Painting and Steel Repairs to the New England Viaduct in Westchester County/Rehabilitation of eight New England Thruway Bridges in, Bronx and Westchester. Chief Inspector for all Class A, and B Containment Systems, SP-12 Power Jetting, SP-10 Abrasive Blast, SP-3 and SP-11 Power Tool Cleaning and all coating Systems Documentation to the NYSTA as well as Payment Requisitions. Also responsible for MPT along the mainline on I-95, and in the inspection of under deck bridge lighting, which consisted of installing 1" steel conduit with a three phase wiring system. During the winter shutdown period assisted the office engineer with correspondence, created spreadsheets with excel to finalize quantities, and helped with the preparation of Order on Contracts.

On the New England viaduct, Ms. Hrisomallis oversaw all steel repairs including stringer web and stiffener repairs rivet replacement, cap beam stiffener repairs and column brace repairs. All work was completed as per approved shop drawings and New York State Steel Manual. The project was completed with a three coat Carboline coating system.

New York City Department of Transportation, Belt Shore Parkway. Senior construction inspector for the Protective Coating of six BSHP Bridges. Work involved Using Class "1A" Containment System, Performing SP-12 Surface Preparation and Cleaning of the steel by high pressure water jetting,SP-10 Near White Metal Blast Cleaning , SP-7 Brush Off Blast Cleaning and SP-15 Commercial Grade Power Tool Cleaning, followed by Paint System B' - Total Coating Replacement/ Epoxy Zinc-Rich Primer / Epoxy Penetrating Sealer / Epoxy Intermediate / Urethane Finish using Carboline product.

LIRR for the Atlantic Ave. Viaduct Rehabilitation Phase II. QC/HS officer for Performed QC painting inspections and worker lead exposure and handling of all documentations for SSPC/QP-1.

Water Tank in New Rochelle. Work included SP-6 Commercial Blast Cleaning and SP-10 Near White Metal Blast Cleaning with the application of four coats of paint including the sealer.

New York State DOT-NYS Thruway. QC/HS Officer for performing quality control and QC/HC on various bridges for NYSDOT. Responsible for inspections and documentation related to the contractor's OSHA, DEC and EPA compliance matters. Perform QC painting inspections and worker lead exposure monitoring and handling of the documentation for SSPC QP-IIAP-2.

New York City Department of Transportation. Senior Construction Inspector for performing quality assurance painting inspections on multiple NYCDOT painting projects: Williamsburg Bridge, Manhattan Bridge, Queensboro Bridge, Martha Washington Bridge & East 241st Bridge.

Quality Control Officer and Competent Person – Responsible for inspections and documentation related to the contractor's OSHA, DEC and EPA compliance matters. Performed QC painting inspections and worker lead exposure monitoring and handled the documentation for SSPC QP-IIQP-2 quality control designations for the contractor. Some of the projects worked on include the following:

- **Staten Island Expressway** – Rehabilitation of 12 Bridges (NYS)
- **Kolb Pedestrian Bridge** at Riverside Drive – Blasting and Repainting (NYC)
- **Queensboro Bridge** – Blasting and Repainting (NYC)
- **Tappan Zee Bridge** – Blasting and Repainting (NYS)
- **Fresh Kills Overpass Bridge** on West Shore Expressway – Blasting and Repainting (NYS)
- **Korean War Veterans Memorial Parkway and West Shore Expressway** – Painting of 39 Bridges (NYS)
- **Spring Creek Water Treatment Plant** in Brooklyn – Maintenance Painting (NYC) Broadway
- **Sunrise Highway** – Maintenance Painting of 11 Bridges (NYS)
- **Williamsburg Bridge** – Blasting and Repainting (partial) and Maintenance Painting (partial) (NYC)
- **Manhattan Bridge** – Blasting and Repainting (partial) and Maintenance Painting (partial) (NYC)
- **Marine Parkway Bridge** – Blasting and Repainting (TBTA)

NACE 2
KTA-Tator Coatings Failure
Analysis-Level I, 1996
KTA-Kator Coatings Training, 1999
SSPC-3 Supervisor/Competent Person Training, 1999

PROFESSIONAL MEMBERSHIPS

The Society for Protective Coatings (SSPC)
National Association of Corrosion Engineers (NACE)

Edward Obara is an expert in the inspection of coatings with a specialty on bridges.

RELEVANT EXPERIENCE

Mr. Obara has over 30 years in the coatings industry including 15 years of experience as a coatings inspector. He spent a portion of his career with the New York City Department of Transportation where he served as District Supervisor of Bridge Painting Section. In that position, he managed activities of supervisory and union bridge painters, and he as responsible for major East River bridges and overpasses through the five boroughs. Mr. Obara received excellent work performance reviews by Director of Bridge Painting. He is extremely knowledgeable and experienced with inspection of bridges and other complex steel structures. He has a comprehensive knowledge of OSHA and EPA regulation, as well as climbing and rigging procedure and SSPC Standards. Mr. Obara has performed on-going emergency repairs on various bridges and overpasses. He is experienced with graffiti removal and assigned to the Mayor's Anti-Graffiti Task Force. He is experienced in sand blasting, power tool cleaning, airless spray painting, and testing of new paint systems. In addition, he assisted in designing and erecting containment systems used for lead abatement, maintained equipment and material budget, and coordinated scheduling and personnel overtime.

Verrazano Narrows Bridge, TBTA, NY – Inspector for the abrasive blasting and coating of the lower tower legs, lower tower leg cells and the lower tower strut cells. Also provided inspection for the seismic retro fit of bearings at various locations, oiling of the main cable strands in the anchorages, guard rail installation on the VNB approach from the Belt Parkway, conduit rack repair, both direction entire lower level, installation of 14 stainless steel doors at the toll plaza tunnel. Also the maintenance contract, inspecting scupper and drain cleaning upper level and maintenance painting on the lower level.

Brooklyn Queens Express Bridges, NYCDOT, NY – Chief Coating Inspector for the abrasive blasting and coating of eleven overpass bridges along Brooklyn-Queens Expressway. Various containment enclosure such as rapid deployment containers, platform based and drop down containments are being utilized on this project to accommodate access restriction, community issues, noise and other restrictions.

Protective Coating of the Queensboro Bridge, NYCDOT, NY – Coating Inspector for this $170 million bridge protective coating project. Responsibilities included existing coating removal and new coating installation.

Protective Coating of the Washington Bridge, NYCDOT, NYC, NY – Chief Inspector of the construction inspection services for the repainting of the Washington Bridge. The coating work included abrasive blasting and recoating of the entire structure.

Broadway Bridge, NYCDOT, Manhattan, NY – Chief Inspector for this project that involved construction inspection services for the repainting of the Broadway Bridge. This project required close coordination with the NYCT, MNR, Coat Guard, and NYCDOT. As a moveable bridge, the scheduling of activities adjacent to trains and traffic is critical to the success of the project. Responsibilities included overseeing all field work and assuring protection of traffic, trains, and pedestrians. The coating work included abrasive blasting and recoating of the entire structure.

Goethals Bridge Repainting, Staten Island, NY and Linden, PANYNJ, NJ – Chief Inspector for this project that involved construction inspection services for the repainting of the Goethals Bridge. The work involved deleading the structure by abrasive blasting and application of a new coating system. In addition to coating inspections, oversaw electrical conduit removal and replacement, structural steel repairs, shotcreting and fiber optic cable splicing.

Michael Betanzos

Resident Engineer

EDUCATION

Ulster County Community College, Surveying
Ulster County Community College, Associate in Science

CERTIFICATIONS

American Concrete Institute Certification
OSHA 10 hour Construction Safety- 2006
Troxler Nuclear Testing Equipment Certification
NICET IV (Equivalent)

Michael Betanzos is highly regarded for his engineering expertise that spans over three decades..

RELEVANT EXPERIENCE

Mr. Betanzos has over 35 years of experience on major construction projects. In his capacity as assistant NYSDOT materials engineer, he established, implemented and oversaw QA/QC programs related to asphalt and concrete plant production and advised personnel as to equipment and procedures necessary to achieve density required by NYS Asphalt Concrete Density Specs. He is familiar with all aspects of roadway, bridge and utility construction, repair, reconstruction, inspection, and testing. He has been the resident engineer on numerous Thruway, New York Division, projects including TANY 01-5 Rock Remediation; TANY 03-6; TANY 01-60 Noise Barriers and TANY 01-4 Mill/Fill Thruway Mainline. In addition to his technical duties Mr. Betanzos is adept at community relations as it pertains to the construction activities on his projects. He regularly meets with local homeowners, merchants and officials to respond to concerns and keeps the owners staff informed at all times. He recently worked on I84/87 Interchange Phase III Project and recently finished working on a safety upgrades project for the New York State Thruway Authority.

D213941 - Chief Inspector, TANY 10-18, Safety Upgrades at Mile Post 46.0 thru Mile Post 60.5, New York Division, Orange County. Project consisted of upgrades to the guide rails throughout the project. Drainage upgrade including culvert extensions / replacement, headwall removal and replace A.O.B.E. drainage. Structure alterations at various locations. Flattening of slopes, shoulder backup throughout project. Provided tree trimming and clearing as needed throughout project. Project includes various visual inspections and as needed safety upgrades.

D213520 - Senior Construction Inspector, 1-87/I-84 Interchange, Contract 3, NYS Thruway Authority. Senior Construction Inspector for construction inspection services for the I-84/Rt. 300 intersection and highway and bridge work. Project consisted of 7 bridges.

D213522 - Assistant to the Project Engineer for the New York State Thruway New High Speed E-Z Pass in Spring Valley. Work included 4 VMS boards and 2 cameras along the New York State Thruway, installation of space frame structure, instrumentation, conduit

and related work. Mr. Betanzos was in charge of all field operations and reviewed all contracts. He coordinated MPT with all Thruway units and the Toll Plaza Manager.

D213289 - Resident Engineer – New York State Thruway Authority - Responsibility includes – the construction of noise wall barrier for the New York State Thruway in West Nyack, NY, Rockland County. Work included construction of new noise barrier, utilities relocation, pile driving, rock blasting and maintenance and protection of traffic.

D213005 - Resident Engineer – New York State Thruway Authority on the Rock Remediation and Noise Barrier Construction New York State Thruway, South Nyack, NY. Responsibilities include complete construction management of 1.2 miles of precast concrete noise barrier along thruway. Work included drain cleaning, clearing and grubbing, reinforced concrete footings, precast posts and wall segments as well as miscellaneous shoulder repair.

D212995 - Resident Engineer – New York State Thruway Authority – Noise Barrier Installation in Rockland County - Performing office engineer duties including: processing estimates, reviewing daily IR's, produce meeting minutes, track contractors progress with EEO requirements and payroll, provide correspondence for Thruway Authority and Contractor.

D212995 - Resident Engineer – Mill & Fill – Provided inspection for milling, repaving and line stripping of nearly 10 miles of I-87. Installation of rumble strip and saw cutting joints. Also inspected daily lane closure patterns.
2500

D212799 - Resident Engineer - Noise Barrier Installation – Construction inspection of noise barrier along north bound I-87. Work included drilling footings, placement of reinforcement steel and concrete, erection of prefab. Posts and panels, joint caulking, installation of R.O.W. fence and paintings.
Reference: Stephen Grabowski, (845) 918-2500

Resident Engineer on the construction of noise wall barrier for the New York State Thruway in West Nyack, NY. Work included construction of new noise barrier, utilities relocation, pile driving, rock blasting and maintenance and protection of traffic.
Reference: Stephen Grabowski, (845) 918-2500

Civil Engineer I/Assistant Materials Engineer – Assisted Department in establishing procedures and specifications for the Quality Control Quality Assurance program being implemented in New York State. Reviewed and made recommendations on Quality Control Plans submitted for annual asphalt plant approvals. Advise project personnel as to the equipment and procedures necessary to achieve density as required by New York State Asphalt Concrete density monitoring specifications. Instruct field inspectors on field-testing of Portland Concrete, in accordance with the American Concrete Institute.

Frank Montefusco

Historical Preservation Local Level -2000
Clean design Pharma 1999
Historical Preservation National level 1999

Frank Montefusco has significant project management experience on Port Authority projects that include, but are not limited to PATH and JFK Airport.

Early in his professional career, Frank served as a Project Architect for the Port Authority's Capital Improvement Program.

RELEVANT EXPERIENCE

Mr. Montefusco has over thirty years of experience encompassing Architectural design, construction and program management, estimating, and scheduling of new and retrofit work. Experienced Project Managing in all aspects of site and facility design, from programming through construction of manufacturing, research, and administration buildings for the pharmaceutical, biotechnology industry and Commercial and Residential design. His areas of expertise include building code compliance, coordination of design disciplines, construction scheduling, field supervision, project close out, developing and upgrading project plans, including schedules and budgets; monitoring and reporting project progress; implementing appropriate recovery actions when project deviates and construction management.

PATH – Journal Square, Port Authority of New York and New Jersey – Responsibilities include:

- Supervise, direct and provide technical support for Contractors on Homeland Security construction projects located throughout the entire PATH train station and tunnel system.
- Provided coordination between related PATH construction projects.
- Supervise work train movements and placement by coordinating with the contractor and providing direction to the assigned train crew.
- Coordinate tunnel and train station construction work with various PATH personnel (Train Masters, Power Rail Men, Communications Department, Signal Department, Yard Masters, Dispatchers, Surveyors, other EIC's etc.)
- Provide Assistant Resident Engineer with written reports (Spreadsheet format) and mark-up pictorial reports of project progress and deficiencies.
- Evaluate and mark-up monthly Payment Requisitions.
- Evaluate submittal logs.
- Post Sandy Emergency Construction; 14 hour shifts, 7 days a week

PANYNJ New York Airports. Senior Construction Manager - Manages project teams of professional staff composed of Port Authority engineers, architects, project control engineers and outside consultants. Major areas of responsibility include; managing all

engineering efforts from conceptual design through construction completion; developing and upgrading project plans, including schedules and budgets; monitoring and reporting project progress; implementing appropriate recovery actions when project deviates; serve as the Engineering Department representative with the Line Department of JFK Airport.

New York City School Construction (SCA). Project Manager. Representative Projects

- Restructuring Bronx HS (12)
- Reso A Cafeteria's (6) and Auditoriums (4)
- Bathroom renovations ADA
- HVAC upgrades

University of Medicine & Dentistry of NJ. Project Manager - Responsible for managing project at UMDNJ from inception through construction completion. Responsibility for RFP, Architect coordination, contract drawings, developing schedules and budgets. Representative Projects

- U Hospital Lobby (5 mil)
- Pediatric Private Practice @DOC. (2.5 mil)
- Ambulatory Care Center (200mil)
- MCC @ SSB (1.5 mil)

Port Authority of NY & NJ. Project Manager - Responsible for managing project at JFK Airport from project inception through construction completion. Responsibility for contract drawings, developing and project plans, including; schedules and budgets as well as serving as the Engineering Departments the Line Department owners representative. Representative projects

- JFK Roadway Recirculation Refinement Outbound ($9mil)
- Demolition cost Estimates for Buildings and Hangers ($25mil)
- Rental Car Site & Road Modification with New Air Train Station ($30mil)
- Rehabilitation of Cargo Service Road to Federal Circle ($5.5mil)
- Additional projects from $250k to $5mil

Foster Wheeler USA Corporation. Principal Project Architect, Project Manager - Owner's representative for programming, design development, through design process for duration of project and construction management support. Managed design team and construction personal. ISO 9001 compliance.

Port Authority of NY & NJ. Construction Manager and Project Architect (PANYNJ) - Management of Capitol Improvement Projects and tenant fit-up owner requirements. Established long range forecast for owner and tenant occupied space.

Joe Tola

Associate/Construction Manager

EDUCATION

NY Institute of Technology Old Westbury, New York- Bachelor of Science, May 1996

CERTIFICATION

OSHA Outreach 10 Hour

COMPUTER LITERACY

Proficient in Windows, Microsoft Project, Primavera Expedition, and Facility Planning tools

Joe Tola's strength in developing strong relationships between all individuals involved in a project has led to continued success.

RELEVANT EXPERIENCE

Mr. Tola is an Associate at Savin, and has over 19 years experience in the construction industry of which 13 years experience are at Savin, which includes the following projects:

World Trade Center – Performing commissioning services related to the following building systems listed below: This includes development of Pre-functional checklists (PFCs) and Functional Performance Test (FPT) scripts and participation in the review of field installation and in the field system and integrated system testing.
Sewer ejectors, duplex sump pumps, elevator sump pumps, fire suppression-including sprinklers and water mist system, storm water system – including gray water treatment plant, tunnel exhaust system, and emergency generators and paralleling switchgear

Westchester Medical Center – Evaluating site assets, existing construction, interior and exterior components and building systems based on overall integrity, probable useful life, and the need for replacement; and provided an analysis of potential problems that may require short or long-term attention, detailed information was provided for the maintenance of the HVAC equipment including CAD drawings of the mechanical rooms.

Sound Shore & Mt Vernon Hospital – A $47 million facility planning and evaluation of site assets, existing construction, interior and exterior components and building systems based on overall integrity, probable useful life, and the need for replacement.

Eldred Central School District-$17 Million additions and renovations.
Port Jervis City School District- $25 million district wide renovations.
Syracuse City School District – Provided Facility Planning for Five Year Plan and Capital Projects Plan

Pocantico Hills C.S.D. - $18 million capital project.

Greenburgh 7 UFSD– Infrastructure projects through multiple years including roofing and mechanical work

Westchester County Department of Public Works - Set up Facility Center, created a five year plan, and building condition survey of all County owned property. Used basic AutoCAD functions to polyline areas and add asset blocks and AutoCAD with links to Facility Center.

Westchester County Penitentiary - $60 million project which included demolition of existing jail and the construction of a general population mid-rise housing 264 inmates in single cell and dormitory pods, and a separate single-story special housing unit for 16 inmates in single cells.

CERTIFICATION

OSHA Outreach 10 Hour

Mike Melocoton has an outstanding ability to manage projects – providing quality assurance in terms of budget, schedule, and cost control.

RELEVANT EXPERIENCE

Mike Melocotan has a verifiable track record in construction management successfully completing multi-million dollar projects through coordinating trades, developing partnerships, and building positive rapport with architects, engineers, contractors and sub-contractors, local officials and clients while maintaining costs and schedule.

Mike is adept at maintaining contract documentation, tracking projects and costs, and developing reports. He is responsible for maintaining a full set of drawings, specifications, and submittals on site, a list of required permits, inspections, surveys and utility notifications, interfacing with administration regularly with regard to the construction process, and photographing work in place as a record for the Owner. Day-to-day activities also include management and coordination of the various trades, insuring that all work is performed as specified by the Architect/Engineer/Owner. Mike also attends all project meetings, conducts daily site inspections, prepares detailed field reports and monitors the progress of work in the field, including monthly payment requests, change in work directives, quality control and compliance with the construction schedule and site safety issues. He has extensive familiarity with K – 12 construction financing, budgeting, and scheduling criteria. He is highly knowledgeable in engineering change orders and is proficient in the use of Primavera scheduling software, Excel spreadsheets and database software.

Mike's advanced understanding of client needs in the K – 12 educational market and his diligent attention to detail results in outstanding client service and high levels of client satisfaction.

A representation of Mike's experience is listed below.

- ***Long Beach Public Schools*** - $98 million district wide renovations and additions at Long Beach High School and the Lido Complex; $24 million

in infrastructure work due to damage by Hurricane Sandy, and $4 million to rebuild the Administration Building.

- ***North Shore Central School District*** – $19.6 million infrastructure project (2014).
- ***Nassau Community College*** - $6 million parking lot reconstruction
- ***Hempstead UFSD*** - $33 million districtwide renovations including site access, lots, and athletic fields.
- ***Comsewogue UFSD*** - $14 million District-Wide Renovations including athletic fields, new parking lots, roads, and security.
- ***Rocky Point UFSD*** – $28.5 million District-Wide Additions and Renovations including parking lot rehabilitation.

Tony Darien

Civil/Structural Construction Inspector

EDUCATION

High School G.E.D.
Tech Drafting Course – Lehigh Technical Institute
MPT Training/New York State Thruway Authority

CERTIFICATION

NICET Level III

Tony Darien has served as a construction inspector on a variety of types of projects including transportation, and water treatment plants for public clients, including work at the World Trade Center Ground Zero.

RELEVANT EXPERIENCE

Tappan Zee Bridge Redecking, Phase II, NYS Thruway Authority project. Inspector -. Work includes removal of the existing bridge deck from the right and center lanes northbound and southbound from the eastern point of the superstructure to the Nyack shoreline. Along with oversight of the necessary demolition (saw-cut & removal of existing road deck) and the joint work between the new deck panels (grout & sealant applications); Mr. Darien also performed structural oversight of the installation of the panels. This included: monitoring the installation of new diaphragms, plates / brackets and bearing stools at floor beams; Inspection and monitoring of '2-cell, 4-cell, and 5-cell modular joints' between bridge spans; monitored re-bar and concrete placements at headers between bridge spans; and monitored daily maintenance of the ramped steel road-plate system (for MPT) during the process of new joint installations.

Bowery Bay Water Pollution Control Plant upgrade project. Sr. Construction Inspector Responsible for the inspection of the Primary and Final Tanks, including demolition and reconstruction. Inspected rebar installation, formwork and concrete pours. Responsible for the oversight of the Froth Control Building including foundations (grade beams and pile caps), masonry walls and Architectural finishes. Site work oversight included roadway grading and paving, curbs and concrete sidewalks.

Paerdegat Basin. Sr. Construction Inspector — Construction of an in-ground CSO retention facility for NYCDEP. Monitored installation of slurry wall shoring, including calculation and recording of quantity installed. Calculation and recording of quantities of various soil types excavated, stockpiled and removed from site. Checking re-bar installation and concrete pours for structure walls and floors.

World Trade Center Emergency for the Port Authority of New York and New Jersey Construction Inspector Computations of steel and debris tonnages (removed from Ground Zero and trucked over to the Pier-6 location), were documented as per shift. Responsibilities included reporting the final quantities to my supervisor; which were determined by the water-displacement levels of the barges, as they arrived empty and shipped out fully loaded. Worked around the clock on numerous day and evening shifts.

World Trade Center for the Port Authority of New York and New Jersey. Construction Inspector — Demolition and removal of existing 6" conc. Floor-slab at the B-1 level,

truck-dock area of the north tower. Steel corrugated decking and new 6" depth, reinforced conc. was than re-installed in manageable sections to accommodate truck traffic.

Removal of and upgrading of the existing H-Vac system in the north and south projection rooms of World Trade Center towers 1 and 2. The existing ventilating fans were directly above the path trains of tunnels E and F, which required supervising work along the tracks at off-peak hours. Obtained the necessary certification for this supervision (EIC/Employee in charge), on Sept. 6, 2001. Work had just begun.

Jamaica Avenue Reconstruction (127th Street to Sutphin Boulevard. Senior Inspector This was a high profile project in an area that is both commercial and residential. Major utility facilities were relocated to accommodate water mains, sewers, and drainage. Close coordination with two community boards (Q-9 and Q-13), merchants, and property owners was necessary to minimize disruption due to construction and interruption of water service. Jamaica Hospital was constructing a new parking garage adjacent to this project and special coordination was required there as well.

Project specifics included:

- 10,000 l.f. of distribution water mains
- 1,500 l.f. of sanitary sewers
- 1,100 l.f. of storm sewers up to 24" diameter
- 1,400 l.f. of storm sewers 30" - 36" diameter
- 10,000 l.f. of curbing
- 130,000 s.f. of sidewalk
- 15 reinforced concrete bus pads
- 3" asphalt on 9" concrete base
- urban park area
- drainage and ancillary structures
- extensive MPT including detours and the employment of traffic enforcement agents

Long Island Expressway (I-495) Reconstruction – Suffolk County, NY. Senior Inspector – This project included the construction of new High Occupancy Vehicle (HOV) lanes on the Long Island Expressway and the reconstruction of the LIE mainline pavement from Exits 57-61. A total of eight bridges were reconstructed and/or replaced. Construction encompassed three phases to allow for an unimpeded traffic flow.

Project specifics included:

- Drainage: Over 28,000 lf of RCP and PE pipe in sizes ranging from 15 in. to 42 in. diameter.
- Asphalt: Over 240,000 tons. All asphalt is placed in accordance with Superpave specifications.
- Sound Barrier: Precast concrete panels and posts are mounted on cast-in-place piers. 640,000 sf total
- Concrete Curb: 12,000 lf.
- Concrete Median Barrier: 30,000 lf, all precast.

Magdi F. Iskander

Construction Inspector

EDUCATION

Bachelor of Science in Mechanical Engineering

CERTIFICATIONS/TRAINING

Asphalt Institute - Hot Mix Asphalt Training
Structural Steel and Bolting Inspection
Masonry Society - Special Inspection of Structural Masonry
ACI 1 - Concrete Field Testing
OSHA 10 hour Construction Safety
Environmenal Issues Associated with Construction projects

Magdi Iskander has significant construction inspection experience with the Port Authority having been assigned to the Teterboro Airport project since its inception.

RELEVANT EXPERIENCE

As a Senior Construction Inspector, Mr. Iskander's responsibilities include management and coordination of the building trades, ensuring that all work is performed as specified by the Owner. He attends all project meetings, conducts daily site inspections, prepares detailed field reports and monitors the progress of field work, including monthly payment applications, change in work directives, quality control and compliance with the construction schedules & site safety issues.

Teterboro Airport for the Port Authority of New York & New Jersey. Construction Inspector. Work includes: taxiway renovations, drainage systems, drainage pipes, new hangar, terminal building, soundproofing, mechanical, sprinkler systems, fire alarms, emergency light and generators. Mr. Iskander's responsibilities include:

- Construction of new passenger terminal buildings, new taxiways and runways
- Entire Airport drainage system to be connected wit the main station (78" pipes, manholes, runway, taxiway side drainage perforated pipes and complete box culvert.)
- Construction of new underground fire hydrant system including 2500 feet DIP 8" steel pipe and six hydrants
- Manage New Hangar (4,250 SF).
- Provided sound proofing to local schools

New Rochelle City Schools, New Rochelle, N.Y.
$38.6 million for additions and renovations to several elementary schools. Completed new addition and renovation work on: Trinity Elementary School, (three story building; 64,000 square feet), three sports fields and replacement of New Rochelle fire alarm system to control underground water.

Scarsdale Union Free School District, Scarsdale, NY
$15 million addition to the Middle School. Completed new addition and renovation work on Scarsdale Middle School, 75,000 square feet, including large detention facilities and drainage systems to control all the underground water.

He utilized his industrial, mechanical engineering and electromechanical engineering experience here. His accomplishments are as follows:

- Developed new methods of production to improve cost efficiency and product quality.
- Designed the layouts for equipment for efficient and production in factories.
- Founded Al Doofa Establishment, an Engineering and Manufacturing Contracting firm.
- Organized deliveries of material to ensure timely completion of projects
- Planned the design and production of special tools as per specification.
- Evaluated contract costs for specific projects, including warranties.
- Handled all relations and contracts with manufacturing companies.
- Prepared tender bidding strategies and pricing policies.
- Prepared both shop drawings and as-built drawings.

Roshan Sidhar has significant construction inspection experience.

RELEVANT EXPERIENCE

Mr. Sidhar has over 35 years experience as an inspector on large wastewater plant improvement projects, buildings and transportation (roads and bridges) projects in Westchester, New York City and Connecticut. Degreed engineer with specific expertise in mechanical, structural and civil disciplines.

Senior Process Mechanical Inspector, New Rochelle Wastewater Treatment Plant. The project is a $235 million plant upgrade and BNR upgrade at the New Rochelle Wastewater Treatment Plant.

NYCDEP – Wards Island Water Pollution Control Plant. Provided mechanical, structural and civil inspection for plant stabilization upgrade and improvements of structures and equipment. The following were some of his areas of responsibility.

- **Aeration Tanks Upgrade, Modifications, Improvements and Repairs.** Repairs of damaged y-walls, tank floors, installed new expansion joints, baffle walls, ceramic & EPDM diffusers, process air piping system, froth hoods, surface wasting lines, purge system, sluice gates, mixers, sensors, concreting, handrails, and structural support towers for process air piping and headers.
- **Final Settling Tanks** – Responsible for the installation of new bearings at flights, new electric motors and control system, cross collector drives, maintenance of collector shafts, & cleaning & dewatering.
- **Pump and Blower Building** – Work included demolition of existing process air blowers, motors, oil lines, blow off lines, and installation of new blowers, motors, silencers, heat exchangers, valves, oil pumps & cooling lines.
- **Return Sludge Pump Stations** – Demolition of old system structures and equipments, and replacement with new return activated sludge pumps & sensors, waste activated sludge pumps and sensors, equalizing lines, valves, gauges, and new seal water system.
- **Sludge Storage Tanks** – Work included demolition of existing centrifugal pumps and installation of new centrifugal pumps to transfer sludge to the dewatering

- building. Installed new sensors, switches, pads, and seal water system and controls.
- **Hypochlorination Facility** – Installed new 6000 gals storage tanks for sodium hypochlorite pumps, fill ports, piping, valves, gauges, and control system. Also installed hypochlorite piping system, instrumentation, and truck unloading containment areas/pads.
- **New Electrical Substations** – Installed piles, foundations, grade beams, steel structural-framing, curtain & masonry walls, roofing, equipment, switchgears and transformers.
- **Yard Piping and Utilities** – Installed air headers with fixed and sliding supports and new city water and fire lines and hydrants.
- **Pipe Galleries** - Installed new centrate lines, surface wasting lines, process air piping system, sodium hypochlorite lines, supports and hanger system, concrete pads for panels and equipments, controls for heat tracing system, process air lines in the effluent and influent channels.
- **Instrumentations/Control and Mounting** - Installation of level sensors, venturis, suspended solids/ph sensors, transducers, fill tank control panels, grounding, overflow relay, flow meters, magmeters.

New York City DEP, Bowery Bay Water Treatment Plant Upgrade. Chief Inspector for the Construction work included all civil and structural work including masonry, steel and installation of roofing as well as excavation for electrical work. Responsible for change orders and estimates.

New York State Hudson Valley Transportation Management Center. Senior Inspector for inspections of site work, upgrade of drainage system, installations of underground utilities, grading, retaining wall, curbs, paving, concrete, steel reinforcement, metal fabrications, steel structure, masonry, roofing, all steel, architectural and civil construction activities, review of shop drawings and of all reports. Construction inspection services for this important facility included: excavation, utility relocation, concrete foundation, steel superstructure, architectural finishes and landscaping.

Lincoln Hospital, Bronx and Harlem Hospital, Manhattan. Senior inspector for construction of Responsibilities included overseeing all renovation and new construction work at emergency ward, pediatric ward and the pre-natal ward. Duties also included supervision of all construction activities, like flooring, walls, roofing, HVAC, elevators, medical gases, fire stopping and protection, hatchways, steel beams (structural steel work), masonry, metal and wood work and other related site work.

Administrative duties on these projects included evaluation of bids, selection of subcontractors, submittal of work material to architect and the hospital corporation for approval, updating drawings, estimating, preparing work schedules, progress meetings and overseeing QA program.

Yonkers Joint Wastewater Treatment Plan.t Senior Inspector — Inspected the series of work activities for engine modifications, blower reconditioning and other related improvement work. workmanshjp, protection of utilities and structures, reviewed

Thomas Tanner is intimately familiar with the processes and facilities of the Port Authority having provided construction management services on various projects over a period of 10+ years.

RELEVANT EXPERIENCE

Mr. Tanner has over 18 years of diverse construction inspection experience ensuring compliance with plans and specifications of projects involving civil, structural, mechanical, architectural, and environmental engineering. Experience includes:

- Field assessment of concrete and structural steel
- High rise building construction: foundation, superstructure, electrical, plumbing, mechanical & office fit-out
- Sewer and water line installation/rehabilitation
- Assistance in project start-up and all phases of project construction. Also responsible for quality control, daily reporting, and quantity measurements.

Port Jersey, Port Authority of New York and New Jersey. Construction Inspector for Building 108 roof rehabilitation at Port Jersey. Priority protective measures for flood protection. TAA-PJ-002, RCCL Berth N-1, cut off wall repair.

Harrison Station Intermodal Improvements, Port Authority of New York & New Jersey Construction Inspector for improvements and enhancements to the Harrison Station. Project included demolition to existing staircase and rebuilding new staircase and platform, including handrails and lighting.

PATH – Journal Square, Port Authority of New York and New Jersey. Construction Inspector for security work at the PATH station. Night work included mitigation, flood gates and electrical improvements.

Port Newark Capital Projects, Port Authority of New York and New Jersey. Construction Inspector, Port Newark Wharf Reconstruction of Berth 8 & 10

- Pile Driving – Total of 430 18" steel pipe piles filled with reinforced concrete – 207 Closed end plumb pipe piles with rock crusher tip, 98 Closed end battered pipe piles with rock crusher tip, 99 Open end pipe piles with 20' deep rock socket
- Rotex Pile Driving – 26 18" open end pipe piles with 10' deep rock socket filled with reinforced concrete forced concrete pile caps, cross beams, steel sheet piling cap, face of wharf sea wall & 80' x 652' reinforced concrete deck
-

- Setting 35 ton reinforced precast concrete pile caps & 8" thick precast panels on top of the precast pile caps for a 70' X 652' 8" Thick Cast-In-Place reinforced concrete deck with a 10" x 652" 8" thick C.I.P reinforced concrete approach slab
- Overall total rehabilitation limits of construction 120' X 752" with the upland infrastructure & tying into the east & west existing berths
- State of art Fender System, Ballard's, Timber Curb System
- Outfall System
- Upland Infrastructure
- Paving

Senior Construction Inspector – Demo of Building 291 and Upgrades to Railroad Crossings throughout Port Newark

PA Facilities Port Newark Tenant Alteration Applications (TAA'S) Hoboken, Legal Center, Jersey City/Bayonne Auto Marine Terminals, Elizabeth Industrial Park, Bathgate Industrial Park. Also immediate repairs and work orders in all the above locations

Construction Inspector for a 140,000 sq. ft. two-story steel framed educational campus building in the Bronx, New York. The building consists of three distinct high schools of 500 students each. Mr. Tanner on behalf of the Port Authority of NY & NJ performed inspections including, but not limited to: Above Ceiling and Elevator Inspections, Sprinkler System testing on all tamper and flow switches, Emergency Generator load tests, Emergency lighting testing, Fire Alarm System Testing: Fire Damper Testing, All strobes and audible alarm devices were tested to ensure proper operation during an emergency; Facility Occupational Health Inspections for Kitchen/Dining Areas, Other life safety equipment was inspected and approved

Construction Inspector – Waterfront Corporate Center, Hoboken, N.J. Port Authority of New York and New Jersey, Construction Inspector on all phases of construction including:

- Electrical Inspection for construction use and permanent power
- Ceiling Inspection, spray on fireproofing, sprinkler piping hangers including seismic bracing, ceiling grid, hangers for ceiling grid, including seismic bracing for ceiling grid and electrical inspections.
- Sprinkler system installation and testing, Spray on fireproofing inspection for columns and beams
- Fire Pump Testing
- Fire Alarm System Testing
- Smoke Exhaust System Testing
- Stair pressurization inspection
- Emergency lighting testing
- Emergency generator testing

Port Authority Staten Island Bridges. Construction Inspector Construction Inspector on the **Port Authority of New York & New Jersey/Outerbridge Crossing** – Construction

George G. Van Sant

Senior Construction Inspector

RELEVANT EXPERIENCE

Mr. Van Sant has over 35.years of construction experience.

2009-2010

Resident Engineer, New Rochelle WWTP - Resident Engineer for the demolition of obsolete equipment project at the New Rochelle WWTP. Mr. Van Sant provided inspection and construction administration services for project which involved the removal of outdated equipment and piping, including two former sludge incinerators and their associated pollution control equipment. Project also involved the relocation of a natural gas pipeline and replacement of the existing meter and regulator assemblies. Project also included the cleanout, dewatering and disposal of residuals from two enclosed pure-oxygen aeration tanks. Access to these tanks was provided by temporarily removing the existing surface mixers. Mr. Van Sant coordinated contractor's activities with ongoing plant operations including shutdowns and treatment systems isolation to facilitate demolition activities.

2006-2009

Senior Construction Inspector (Night shift) – World Trade Center PATH Transportation HUB, New York – Responsibilities included – opening and closing of general orders in coordination with MTA Transit on the #1 line and the R&W lines. This was track work which entailed complete power outages on either of those subway lines in order to complete the contract work or emergency track/tunnel sub-contractor monitoring work to detect any movement/settlement in subway station or in tunnels caused by nearby demolition at the WTC contract work. Work duration was usually between 11 pm and 7 am. Power had to be restored by 5 am in preparation for morning rush hours. During this time, Mr. Van Sant would be in continuous contact with an MTA Track Engineer, Track Supervisor for that sector and MTA Flag Persons, who would monitor and protect the outage areas for the safety of all personnel involved. Responsibilities include:

- Oversee any work connected with underpinning of the 1-Line contract, including, minipile driving, track removal and replacement; preparation for temporary structural steel placement; constructing and monitoring protective barriers and any other track related underpinning work.

- Oversee and record any and all work activity related to site demolition, including safety, in coordination with contractor supervisor, work location(s), work crew manpower, machines, equipment and materials used.
- Oversee any nearby related street/roadway activities.

- Responsible for safety of PATH customers passing beneath, through or near contract work areas, usually involving water penetration and cleanliness of temporary PATH underpass stairways, escalators and walkways.

- Oversee and record all General Conditions work, paid on a T&M basis. This work involved all East Sector site maintenance, safety, clean up, delivery and removal of machines and equipment from site and other on-going shift personnel and activities (i.e. lighting, repair and maintenance equipment, machines and personnel).

1999-2006
Mortgage Plus Financial Group, Newark, NJ - Duties include:

- Provided inspection reports on various properties
- Supervised construction – reconstruction – repairs for clients
- Received and reviewed architectural prints, constructions permits, etc.

1994-1999
Port Authority of NY&NJ, New York, NY - Duties include:

- Reconstruction of various sections of the Vista Hotel post '93 bombing including:
  - Installation of new commercial kitchen, dining hall and related facilities.
  - Inspection of utility testing including pipe pressure and leakage testing & disinfection
  - Inspection of plumbing, HVAC, steam lines as well as waste facilities, grit trap, automatic fire suppression systems
  - Manage field changes and change orders
  - Commissioned all equipment including startup testing & training
  - Coordinate with PA Code Compliance Division.

Morgan H. Scott

Senior Construction Inspector

EDUCATION

SUNY College at Brockport

CERTIFICATIONS/TRAINING

NICET Level III
ACI 1 - Concrete Field Testing
Structural Steel and Bolting Inspection - 2009
OSHA 10 hour Construction Safety- 2008

RELEVANT EXPERIENCE

As a Senior Construction Inspector Mr. Scott's responsibilities include insuring that all work is performed as specified by the Owner. He attends all project meetings, conducts daily site inspections, prepares detailed field reports and monitors the progress of work in the field, including monthly payment requests, change in work directives, quality control and compliance with the construction schedule & site safety issues.

Lead /Senior Civil Inspector at Stewart International Airport for the Port Authority of New York and New Jersey. Mr. Scott is performing construction inspection services on several projects at the airport including:

- Long Term Parking Lot Expansion - Project includes cut/ fill, placement of subgrade material choker stone, #2 stone and then pave. Contractor will realign toll booths and supply power to the new parking lot lighting system and communications to the new toll booths. Contractor also installed steel faced curbing, ductbanks, drainage structures, manhole structures, new light poles, overhead signs and a traffic signal.

- Rehabilitation of the Weather Instrument Power Circuit
  Installed the Infrastructure for the New WIP Circuit. (Included installation of Manholes/Handholes Electrical and Communication Ductbank) Excavation / Rough Grading /High Early Concrete.

Project Superintendent – Rockland Children's Psychiatric Center. Performed on site construction management for this important DASNY project. This new 56-bed facility included site preparation, excavation, utilities, reinforced concrete foundation, steel superstructure and building enclosure. It will provide an environment that supports a multi-faceted effort to improve clinical research and training in the field of children's mental health.

Senior Inspector – Teterboro Airport reconstruction for the Port Authority of NY&NJ. Duties include on site inspection of security fencing upgrades, soil erosion and

sedimentation protection measures, taxiway extensions and coordination with airport operations.

Senior Civil Inspector – Teterboro Airport – New Taxiways and Taxiway Improvements/Tenant Hangar & Administration Buildings – Responsibilities include:

- Civil Inspector for the new hangar and administration building erection. Involving structural steel erection, reinforced concrete floor slab installation & steel corrugated roof installation.
- Inspection of all utilities associated with these hangars and buildings, water main and sewer tie-ins.
- Inspection of installation and construction of several new high-speed taxiways, involving the excavating of unsuitable material, undercutting, backfilling and asphalt paving.
- Participation in the preparation of cost estimates
- Preparation of all required job related paperwork such as Daily Narratives, T&M records, etc.
- Reviewing of Plans & Specifications for completeness, accuracy and constructability.

Senior Inspector –TANY 00-47 Reconstruction of I-87/287 Interchange or Interchange 8.

- Involved in the inspection of the reconfiguration of Interchange 8.
- Involved in the Construction of Pre-cast Concrete Piers, Inverset Panels.
- Involved in the Realignment of ramps on the westbound side of I-287.
- Involved in the Construction of a New Bridge connecting the Saw Mill River parkway with I-287 west and Route 119.
- Installed steel bearing piles, and pre-cast concrete slabs at the Tappan Zee toll plaza.

Senior Inspector – Worked on multiple projects, including TANY 99-13B & 12B. Rehabilitation of Three Bridges Over I-87 & Rehabilitation of I-87 Over Sawmill River Parkway and Northbound Ramp.

- Involved in inspection of elastometric bearing installation, both fixed and expansion.
- Pedestal reconstruction, concrete deck repairs both partial and full depth.
- Responsible for installation of guide rail and protective fencing, structural lifting operations, concrete testing, in classified excavation (stone fill, trench excavation) and MP&T compliance.
- Handled steel spicing, joint removal and replacement, as well as bridge painting.

Senior Inspector – Construction Engineer - Worked on 5 projects: TANY 00-3A, 99-70 & 99-74, Construction of Maintenance and Garages.

- Erected 2 maintenance garages, on each at East Fishkill and Middletown section Maintenance areas, on I-84.
- Poured concrete footings, foundations and floors.
- Erected wood frame buildings using a truss system roof.

Venard Johnson, Jr.

Senior Construction Inspector

EDUCATION

B.A. Oswego – State University of NY, 1998
Pace University – Construction Management
Forensics of Sustainable Architecture Certificate, Summer 2009

Construction Project Management Certificate - April 2009

CERTIFICATIONS/LICENSES

OSHA-30
7hr. Site Safety Manager Certification
NYCDOB Registered Licensed Construction Superintendent
ACI - Pending

RELEVANT EXPERIENCE

Mr. Johnson is a NYCDOB Registered Licensed Construction Superintendent with over 10 years of industry experience. He has proven track record of success in achieving budget and quality goals on Multimillion-Dollar projects. He excels in Planning, Phasing, Coordinating, Blue Print reading, Contract Administration, Schedule Management and Cost Control. Dedicated to completing projects on time while following all OSHA, Facilities, and Company Safety Guidelines.

Project Superintendent – Currently serving for Confidential and Secure Security Projects at JFK Airport. Managing and coordinating all multiple trade construction activities for various projects. Performing construction installations, phasing, scheduling, and quality assurance management.

Checkpoint Digital CCTV Installation Project for Multiple Terminals JFK Airport - $16M Project. Manage electrical contractor conduit and camera installations. Supervise and plan installations for various Airline Terminal Checkpoint Areas. Coordinate with TSA and Facility Management. Supervise restoration of penetrations to structures containing asbestos. Managed manpower, material, equipment and access for secured area installations.

Delta Barrier and Gate Arm Installation Project for Multiple Guard Post JFK Airport - $13M Project. Construction Manager for Electrical Contractor Gate Arm and Delta Barrier Installations of various JFK Guard Post. Supervised and Planned Installations for Electrical Wiring and Controls. Supervised restoration of Roadway and Curbs on Air Side and Land Side after underground conduit installation. Managed Manpower and Access for Secured Air Side Installations. Performed Construction Phase and Coordinated Scheduling Management.

Police Radio Communication Expansion Project for Terminal 5 JFK Airport - $3M Project. Managed electrical contractor Fiber Optic cable and Antenna installations. Supervised and planned installations for Departure, Arrival, Public, and Secured Areas. Supervised restoration of penetrations to structures containing asbestos. Managed manpower, material, equipment and access for secured air side installations.

NYU Langone Clinical Research Facility Renovation Fit-Out Project - $30M Project. Planned and supervised installation layouts for electrical, mechanical, carpentry, structural, and masonry contractors. Handled strategic demolition management for occupied building. Supervised multiple story facility build out.

Two Way Radio Communication Expansion Project for Port Authority Tunnels - $17M Project. Managed and coordinated all electrical contractor construction activities including manpower, materials, and equipment. Monitored layout installation plans for fiber optic and radiating cable which included monitoring cable testing and inspection for installation specification. Implemented and enforced all Port Authority established construction policies and safety procedures.

Perimeter Strengthening Project for Port Authority LaGuardia Airport - $9M Project. Installed reinforced concrete barriers and security fencing installation. Inspected concrete for all perimeter barriers, ballards and fencing to ensure they were completed and built as per contract drawings and specifications. Phased and scheduled all contactor airport installation.

Construction Inspector - Manhattan Bridge Rehabilitation - In partnership with the New York City Department of Transportation (NYCDOT) - $160M project which included rehabilitation to the Lower Roadway, Brooklyn Plaza, Sands Street realignment, and Street lighting. Inspected welding and alignment of new grid deck, stringers, and floor beams of new steel installation. Inspected and coordinated excavation and compaction for concrete and asphalt. Inspected installation of piping for roadway drainage system. Safety inspector for burning operations for removal of old steel beams, stringers and grid deck. Electrical inspector for removal/installation of conduit and cable for lighting and traffic signals.

Con Edison Construction Inspection Services Westchester County, New York - Coordinated and monitor MPT for various Con Edison operations in accordance with NYSDOT approved MPT plans. Performed construction inspection services on Con Edison contracts for gas main, conduit, and over head high voltage cable installations. Performed and monitored asphalt standardized tests for quality and strength. Documented field measurements and sketched work for report. Maintained all records in accordance with NYS Manual of Uniform Record Keeping (MURK)

Sidewalk, Pedestrian Ramp, and Curb Restoration Project in Borough of Queens - In partnership with the New York City Department of Design & Construction (NYCDDC) - $80M Project. Coordinated, setup and monitored MPT.

Binghamton Johnson City Joint Sewage Treatment Plant - Backwash Equalization Tank Stabilization Project.

Chief Inspector/Project Engineer – Contract included installation of geofoam and placement of controlled low-strength material adjacent to existing tank walls to reduce lateral loading. Mr. D'Addio's responsibilities include:

- Coordinate with contractors
- Inspection of excavation and stabilization of tank walls
- Coordinate change orders
- Prepare meeting minutes and lead progress meetings
- Photo documentation of project progress
- Process payment
- Prepare close out reports

Binghamton Johnson City Joint Sewage Treatment Plant - Interim Demolition

Chief Inspector/Project Engineer – This project included installation of steel bracing, demolition of existing reinforced concrete walls and media removal. Mr. D'Addio's responsibilities included:

- Coordinated with contractors
- Inspection of demolition and installation of steel bracing
- Coordinated change orders
- Prepared meeting minutes and lead progress meetings
- Photo documentation of project progress
- Process payment

- Utilize Primavera Contract Management
- Prepared close out reports

Throgs Neck Bridge Repairs
Construction Inspector/ Engineer – Worked as an onsite construction inspector and office engineer assisting in construction management for the MTA (Metropolitan Transportation Authority) on the 15 Million Dollar Anchorage and Tower Protection Project and the 47 million dollar Interim Repairs of Orthotropic Deck Structure Project at the Throgs Neck BridgDaily responsibilities for field work included inspection and preparing reports for: installation of FRP piles and steel fenders, construction of new steel walkways, inspection of existing structural elements, installation of new navigation and decorative lighting systems, and repairs of deteriorated steel members. Additional responsibilities included daily coordination with the MTA throughout the project, from the onset of design, through construction and finished work to uphold quality standards while maintaining a mandated schedule of deadlines. Office tasks and responsibilities included additional coordination with the MTA, preparing estimates for change orders, verifying shop drawings and work records, and compiling quantities of work completed for payment.

Paerdegat Basin CSO
Construction Inspector – Worked as an onsite construction inspector assisting in construction management for the DEP (Department of Environmental Protection) on the Paerdegat Basin CSO Improvement Project. Scope of work for the project included inspecting and preparing reports for: excavation, removal, and shoring of existing roadway and sewer pipe, construction of concrete pipe, manholes, and supporting reinforced concrete pads, and the installation of supporting timber piles for sewer pipe cradle. Additional responsibilities included coordination with the DEP and monitoring all daily work activities to maintain proper safety standards.

Structural Engineer– Responsible for project coordination tasks and deliverables including:

- Designing structural steel members
- Generating computer models for analysis
- Providing structural calculations for steel framing and concrete reinforcing.
- Reviewing shop drawings and specifications
- Creating drawings and sketches
- Performing structural inspections of repairs
- Preparing written technical reports
- Coordinating with contractors and responding to RFI's.

John V. Codella

Civil/Structural Construction Inspector

EDUCATION

Nassau County BOCES – Architectural Drafting
Nassau Community College – Elementary Surveying I
Various computer and drafting course

CERTIFICATION

Level III Inspector, Heavy Highway Construction
N.I.C.E.T. Certification # [redacted]
OSHA Course completed 2012

RELEVANT EXPERIENCE

Mr. Codella's 28 years of experience on major highway and bridge construction inspection projects with the NYS Department of Transportation includes a strong background working in topography, surveying and drafting. Project responsibilities include concrete testing, soil sampling and testing, asphalt paving, erosion control and Maintenance and Protection of Traffic. Duties include supervision and control of contractor's construction activities, enforcement of safety standards, accurate payment and reporting of contract items and quality assurance of material specifications. Major items of work involve concrete and rebar installation for bridge substructures, concrete and asphalt paving, drainage installation and stone bridge construction.

Senior Inspector: Bronx River Parkway Bridges at Crane Road, Westchester County
Mr. Codella is providing construction inspection services for the replacement of the Bronx River Parkway Bridges, at Crane Road over the Bronx River and Metro-North Railroad in the towns of Scarsdale and Greenburgh.

Senior Inspector: NYSDOT - Reconstruction of Cross Westchester Expressway I287 Stage III, Harrison, N.Y. $141M
Senior inspector in charge of subbase placement and asphalt paving operations; excavation and embankment operations; precast culvert and guide rail installation. Supervised rebar installation and concrete placement for bridge footings, abutments, wingwalls and pedestals.

Senior Inspector: NYSDOT - Reconstruction of Taconic State Parkway, Yorktown, N.Y. $68M
Inspector in charge of asphalt paving operations, subbase placement, drainage and precast culvert installation, guide rail installation, wetlands mitigation and soil erosion control and final computations.

Senior Inspector: NYSDOT - Reconstruction of Route 6 and Construction of Bike Trail,

Town of Carmel/Mahopac, N.Y. $6M - Duties on this project included installation of GRES Wall, precast box culvert installation, rehabilitation of existing drainage system, paving operations, wetland creation, fence and guide rail installation and supervision of inspectors and final computations.

Senior Inspector: NYSDOT - Reconstruction of the Hutchinson River Parkway, Rye Brook, N.Y. $30M - Inspector in charge of Daily Maintenance and Protection of Traffic, paving operations, stone bridge rehabilitation, guide rail installation and final drainage computations.

Senior Inspector: NYSDOT - Reconstruction of Route 9, Town and City of Poughkeepsie, N.Y. $10M - Inspector in charge of Daily Maintenance and Protection of Traffic, slipform concrete median barrier installation and paving operations.

Senior Inspector: NYSDOT - Reconstruction of the Saw Mill River Parkway, Towns of New Castle and Mount Pleasant, N.Y. $9M - Duties on this project included the creation of an 8' shoulder, installation of new storm sewer systems, traffic signal rehabilitation, granite curb and concrete sidewalk installation, topsoil placement and establishing turf. Final computations for drainage quantities.

Senior Inspector: NYSDOT - Reconstruction of the Saw Mill River Parkway, Towns of Pleasantville and Mount Pleasant, N.Y. $7M - Duties on this project included creation of an 8' shoulder, installation of new storm sewer system, plantings and extensive stone bridge rehabilitation. Emphasis placed on Maintenance and Protection of Traffic and final computations for quantities.

Various Civil Engineering firms working as a topographic, survey and engineering draftsman.

WORK EXPERIENCE HIGHLIGHTS

- NYSBA-Newburgh-Beacon Bridge Expansion joint replacement
- NYSTA – I-87 I-84 Interchange Phase II at Newburgh, NY
- DCW&WA – Water main installation – Rail trail & Hyde Park
- NYSTA – Noise walls & rock outcrop remediation
- NYSDEP – Restoration of West Branch Dam
- Landfill Closures

Inspector, TANY 10-18 D213941, Safety Upgrades at Mile Post 46.0 thru Mile Post 60.5, New York Division, Orange County
Project consisted of upgrades to the guide rails throughout the project. Drainage upgrade including culvert extensions / replacement, headwall removal and replace A.O.B.E. drainage. Structure alterations at various locations. Flattening of slopes, shoulder backup throughout project. Project includes various visual inspections and as needed safety upgrades.

Geologist/Inspector – NYSBA-Newburgh - Beacon Bridge – North Span – Responsible for the field inspection for the NYSBA North Span expansion joint replacement. The scope of the project was the removal of fifteen modular joints and replacing them with steel finger expansion joints. The project included saw cutting the bridge deck, disassembling the existing joints, and then removing the sections with a crane. Then the new joint was assembled and installed. The diaphragm, angle clips and scuppers were bolted to the existing steel structure. The new finger joints were lower into place with a crane. Once in place the finger joint was then bolted and welded to the steel structure of the bridge. Inspected the installation of the joints and the torque testing of the bolts. Inspected the painting of the newly installed structure and the clean-up which included the removal of debris and scaffolding. The project spans over two railroad tracks and the main channel of the Hudson River. Coordinated with Metro-North, CSX and tug boats to stop work when they were approaching to pass under the work zone.

Environmental/Construction Inspector – NYSTA-I-87 & I-84 Interchange Phase II - Responsible for field inspection for NYSTA Interchange Phase II. This phase constructed six new buildings including maintenance buildings, two salt sheds, two-toll plazas, a toll

plaza building and NYS trooper barracks. The project included demolition of all existing buildings on site and relocating all utilities. Responsible for the inspection of all undergrbund utilities – sewer, water, storm drains, telephone and electric lines. Inspected the installation of pipe, valves, hydrants, pre-cast vaults and manholes. Observed subcontractor set up equipment to tunnel under I-84 and Route 300. Once all the utilities were in place, witnessed the disinfection and hydrostatic testing of the water lines and the pressure testing of the sewer lines. Assisted with environmental issues such as collecting soil samples to be tested for contamination before the slab foundation is poured. Observed subcontractors remove asbestos from several buildings slated for demolition.

Witnessed the demolition of old buildings. Inspected the excavation for building footings and retention ponds and calculated soil volumes. Helped with the inspection of the new buildings which included the re-bar and form work for footings, grade beams, and the installation of roof trusses. Assisted with the concrete pours by coordinating with the concrete testing lab's inspector, checking truck tickets and observed the placement of the concrete.

Inspector – Dutchess County – Central Dutchess Water Transmission Line – Responsible for field inspection for the Dutchess County Water and Wastewater Authority water transmission line. This twenty-four inch water line was designed to bring water from Poughkeepsie to IBM's East Fishkill manufacturing plant. This is the same thirteen-mile waterline project for which she supervised the soil borings while working for Savin Engineers, P.C.. Worked with clearing and grubbing crews to insure that they stayed inside project boundaries. Inspected the installation of silt fence and haybales along the railroad corridor and the roadways. Prior to the installation of the pipe, worked with blasters. There were several miles of rock, which had to be blasted before the pipe could be installed in the ground. Responsible for the preparation of blasting reports with detailed drawings of the blast layout. Inspected the installation of ductile-iron pipe, valves, hydrants, thrust blocks and the installation of pre-cast vaults. Observed the contractor set up equipment and tunnel under streams, state and county roads. Observed the installation of forty-eight inch concrete pipe, which would house the twenty-four inch ductile-iron pipe. Witnessed the disinfection of the waterline and observed the contractor perform hydrostatic testing of the pipeline. Conducted weekly environmental survey and implemented the Storm Water Pollution Prevention Plan (SWPPP) prepared under the requirements of New York State Department of Environmental Conservation SPEDES Permit No GP-02-01. This task included record keeping and weekly inspection of the site for environmental problems. Issued a weekly report to the contractor dealing with deficiencies and required actions to comply with the SWPPP.

Inspector – NYSTA – Noise Barrier Wall – Responsible for conducting field inspections at a NYSTA noise wall projects at Spring Valley and Hillburn.

John J. Franco

Structural Inspector

EDUCATION

B.S. – Civil/Environmental Engineering, Manhattan College, NY, 2012

SKILLS

Microsoft Office, familiar w/ AutoCAD, HECRAS, EPANET, SWMM, Primavera Contract Manager, Fluent in Spanish

RELEVANT EXPERIENCE

Mr. Franco's experience includes working as a Construction Manager where he used Primavera Contract Manager to produce daily reports, file submittals and RFI's; prepared meeting minutes for all construction team personnel; prepared schedules for contractors concerning construction activities in accordance with due dates and reviewed payment applications for processing. He recently performed construction inspection at the New Rochelle Wastewater Treatment Plant for the BNR and non-BNR contracts. Specific Project Experience includes:

Structural Construction Inspector - New Rochelle Wastewater Treatment Plant, New Rochelle, NY

- Inspected installation of reinforcing steel in accordance with the contract documents and approved shop drawings for the walls and foundation slabs associated with the UV Building, Process Control Building and BNR Building.
- Inspected the fabrication and installation of concrete formwork for walls, foundation slabs, suspended slabs, and beams associated with the UV Building and BNR stair tower, equipment galleries and backwash tanks. Checked for wall and slab thickness, beam dimensions, waterstop locations and installation, and keyways.
- Inspected installation of structural steel framing and metal deck associated with the Process Control Building garage.
- Inspected placement of 5,000 PSI concrete for the filter cell walls for the BNR Building and junction chambers walls for the UV Building. Concrete placement was in accordance with the contract specifications in regards to mixing requirements, time restrictions, and curing requirements.
- Witnessed and recorded concrete testing including slump test, air test and temperature test.
- Inspected installation of upper and lower grid piping and grid air brackets in the N and DN filter cell walls for proper spacing and elevation.

- Ipected assembly of 30-inch diameter static mixer and spool for N and DN filter cells, mechanical joints, 30-inch butterfly valves, and 42-inch diameter stainless steel backwash piping.

Construction Manager - Hawthorne PEARLS Elementary School, Yonkers, NY

- Full Interior Restoration (Classrooms, Hallways, Restrooms) and Abatement New windows and new roof
- Daily Reports, took pictures every day to show progress of job, reviewed submittals and made sure material used was correct, helped answer RFI's, Meeting minutes, reviewed Payment requisitions, scheduling. Constant interaction with every contractor, client and own supervisor to let them know everything that's happening on the job. Made sure all aspects of the job followed the Specifications.

Construction Manager- P.S 10, Yonkers, NY

- Masonry repairs, new roof and Abatement work
- Daily Reports, took pictures every day to show progress of job, reviewed submittals and made sure material used was correct, helped answer RFI's, Meeting minutes, reviewed Payment requisitions, scheduling. Constant interaction with every contractor, client and own supervisor

Construction Manager - Saunders H.S, Yonkers, NY (Kitchen Renovation)

- New kitchen plumbing and electrical. New floor, ceiling, paint. Abatement
- Daily Reports, took pictures every day to show progress of job, reviewed submittals and made sure material used was correct, helped answer RFI's, Meeting minutes, reviewed Payment requisitions, scheduling. Constant interaction with every contractor, client and own supervisor to let them know everything that's happening on the job. Made sure all aspects of the job followed the Specifications.

Construction Manager - Saunders H.S, Yonkers, NY (Athletic Field Restoration)

- Excavation, grading, storm drain installation and synthetic field installation.
- Daily Reports, took pictures every day to show progress of job, reviewed submittals and made sure material used was correct, helped answer RFI's, Meeting minutes, reviewed Payment requisitions, scheduling. Constant interaction with every contractor, client and own supervisor to let them know everything that's happening on the job. Made sure all aspects of the job followed the Specifications.
- Assisted in testing concrete for the drains.

Construction Manager - Lincoln H.S, Yonkers, NY

- New Handicap ramp, new bathrooms to accommodate the handicapped, installed new handicap lift in auditorium, installed new eye/face wash stations.

RELEVANT EXPERIENCE

Mr. Balagula has more than 35 years of project experience in large-scale municipal projects involving preparation of plans and specifications, construction management and resident engineering. Responsible for design of electrical and control systems, pump stations, electrical and process equipment selection for wastewater, water, chemical, petroleum, fossil and waste-to-energy plants; paper mills and hazardous waste processing. Supervise the electrical and control system engineering staff with overall responsibility for the conceptualization, design of electrical and instrumentation systems for industrial, waste water, hazardous waste, and solid waste projects. Outline scope of work and define system architecture based on the process requirements. Responsible for preparation of detailed specifications, electrical One Lines, Electrical Load plans, schematics and P&IDs as a complete bid package.

NYCDEP, Hunts Point WPCP Stabilization Design, Bronx, NY:
Electrical and Control Systems Design Engineer, Design of instrumentation and control for the upgrade of this 200-mgd WPCP including upgrade of the main 400-mgd sewage pump lift station. The project includes a plant wide digital distributed control system (DCS). Data will be transmitted from distributed control units located throughout the plant via a fiber-optic data highway to the central plant control room. The DCS will provide centralized supervisory control, monitoring, recording, reporting, and trending capabilities.

Nassau County, Cedar Creek Wastewater Treatment Plant, Cedar Creek, NY: Electrical and Control Systems Design Engineer, responsible for construction administration of electrical and instrumentation systems for this wastewater treatment plant upgrade project. The plant, with a capacity of 120 mgd, underwent major expansion including a large-scale upgrade to the digester facility. Designed 120-mgd main sewage pump lift station. Significant involvement with the computer system that controls and monitors a diesel generation facility, including electrical power distribution system; implementation of Distributed Control System (CDS) manufactured by Fisher and Porter that controls second stage aeration. Assisted in the development of plant Designed flow distribution algorithm to optimize BOD treatment. Designed distributed SCADA system for four 3,000 kW diesel generators. Developed detailed P&ID and interconnecting wiring diagrams based on the manufacturer shop drawings

NYCDEP, Flushing Bay 28.5 mgd CSO Storage Facility, Queens, NY: Control Systems Design Engineer, Design of instrumentation and control system and 28 mgd pump station for this $200 million facility. Included is a SCADA system tying control of the facility to the Tallman Island WPCP.

NYCDEP, Hunts Point WPCP Stabilization Design, Bronx, NY: Electrical and Control Systems Design Engineer, Design of instrumentation and control for the upgrade of this 200-mgd WPCP including upgrade of the main 400-mgd sewage pump lift station. The project includes a plant wide digital distributed control system (DCS). Data will be transmitted from distributed control units located throughout the plant via a fiber-optic data highway to the central plant control room. The DCS will provide centralized supervisory control, monitoring, recording, reporting, and trending capabilities.

Elf Autochem Plant Upgrade, Buffalo, NY: Project Manager for Electrical and Instrumentation design of chemical plant upgrade. Project involved upgrade of two 3,000 KVA electrical substations and evaluation of all existing electrical systems. Design plant-wide personal computer-based Supervisory Control and Data Acquisition (SCADA) system to monitor Power Distribution and other plant processes. Responsible for preparation electrical and instrument contract bid documents.

NYCDEP, 108th Street Pump Station, Brooklyn, NY: Electrical Design Engineer, Electrical and Instrumentation design of a 40 mgd lift station. Responsibilities include preparing cost estimates, creating and reviewing electrical Contract Drawings, electrical Specifications and providing coordination efforts for the project.

NYCDEP, Corona Avenue 400 mgd CSO Vortex Facility, Queens, NY: Electrical and Control Systems Design Engineer, Design of instrumentation and control system for this $35 million facility. Instrumentation and control includes design of testing facilities for a two-year evaluation of this prototype CSO treatment facility.

NYCDEP, Designed Electrical and Control Systems, Boiler Plant Upgrade, New York: Designed electrical and control systems, coordinated mechanical civil and electrical

Member of the Illumination Engineering Society of North America (IESNA)
Member of the Society of American Military Engineers (SAME)
Citation from Commanding Officer R.M. Honey, Captain, US Navy, "For Professional Achievement in the Superior Performance of Your Duties During the Power Outage at Naval Weapons Station Earle Pier Complex from 16 to 24 March 2000"

EXPERIENCE

Mr. Craven has over 36 years of experience in senior management, project management and design engineering, including power distribution, lighting, controls, power generation, lightning protection systems, primary and secondary grounding systems, fire alarm systems, fiber optic systems, communications, demolition and cost estimating. Over 23 years of experience with projects for the Department of Defense, Veterans Administration and Army Corps of Engineers. Responsible for multiple design engineering projects, including administration, design analysis/narrative, engineering, specifications, and cost estimation. Responsible for scheduling of project work.

Explosive Truck Holding Yards # 1 & 2 – Security Improvements
Naval Weapons Station Earle (NWSE), Colts Neck, NJ
Electrical design engineer for the electrical and security up-grades to two explosive truck holding yards. The design called for the installation of an emergency back-up generator system as well as a complete CCTV security system. Responsibilities included the interconnection of all required equipment and run of fiber optic cables from the Truck Holding Yards to the station security offices. Included with this was the placement and mounting of all CCTV cameras. Head-End equipment and CCTV camera units were used on the project. The fiber optic run included transmitters, receivers, patch panels and associated data surge suppression devices. New power was designed for the CCTV cabinets and the internal equipment, including power surge protection. Combination of both single-mode and multi-mode fiber optic cables were used. Fusion splicing was specified for all required connections as necessary.

Security Up-Grades to Ordnance Storage Magazines
Naval Weapons Station Earle (NWSE), Colts Neck, NJ
Electrical design engineer for electrical and security upgrades to multiple ordnance storage magazines located in a secure area of NWSE. Design included new power for equipment, lighting, and security systems for intrusion detection and CCTV observation and recording. Responsibilities included the interconnection of all required equipment

and run of Fiber Optic cables from the magazines to the station security offices. Included with this was the placement and mounting of all CCTV cameras. Head-End equipment and CCTV camera units were used on the project. The fiber optic run included transmitters, receivers, patch panels and associated data surge suppression devices. New power was designed for the CCTV cabinets and the internal equipment, including power surge protection. Combination of both single-mode and multi-mode fiber optic cables were used. Fusion splicing was specified for all required connections as necessary.

Great Neck Schools – Emergency Generators
Great Neck School District - Great Neck, New York
Design Engineer for the design of three natural gas fired emergency generators to provide back-up power to the High School, Middle School and Commons Building. Three generators were designed: two 250kW units and one 350kW uniThe design included the removal of the existing antiquated generators and a new up-rated electrical distribution system necessary to interconnect the generators to the associated building's distribution system. The new system was also configured to connect into very specific loads within the buildings via two emergency panel boards, one for critical emergency loads and the second for non-emergency but essential building supporting loads. An upgraded natural gas train was designed for each new unit. All three generators were provided with Level 2 sound attenuation enclosures. Distribution system voltage was rated at 208Y/120 volts, three-phase, four-wire. Responsibilities included contract drawings and project specifications.

Rehabilitation of the High Bridge over the Harlem River
New York City Department of Design and Construction (NYC-DDC) and,
City of New York Parks and Recreation (NYC-DPR)
Electrical Engineer responsible for the design of control and power distribution for the new lighting proposed to be installed on the historic bridge structure. Power was derived from a new Con-Edison service and distributed throughout the bridge to both the decorative and pedestrian lighting systems. Lighting was provided for accent, pedestrian safety, and "attic" space lighting required for maintenance purposes. Lighting fixture types included LED, Induction and Compact Fluorescent. Responsibilities included the coordination of all aspects of the power distribution with Con-Edison, NYC-DDC, NYC-DPR, and New York City Department of Transportation (NYC-DOT). Incoming service, delivered by Con-Edison, was a 208Y/120 volt, three-phase, four-wire system. The electrical design was developed to meet the criteria of the NYC-DOT and the Historic Preservation Authority having jurisdiction. During design, the placement of conduit, wire, junction boxes, etc. to minimize impact on the historic structure was paramount.

Mohamad A. Oghli

Senior Mechanical Inspector

EDUCATION

B.S - Mechanical Engineering - SUNY@ Stony Brook, 1984

CERTIFICATIONS & TRAINING

American Concrete Institute (ACI)
Hot Work Permits
Confined Space
Scaffolding – User Safety
OSHA Construction Safety & Health
FIT Test Certified
Familiar with new DEP Standard Operating Procedure and applied the SOPs into Mechanical and some civil work.

RELEVANT EXPERIENCE

Mr. Oghli has over 25 years of construction and commissioning experience. He has performed commissioning of mechanical, HVAC, electrical and related work. He has overseen commissioning and inspection staff and reported directly to the owners representative.

Sr. Construction Inspector
NYCDEP – Paerdegat Basin CSO Facility Contracts: 4B, 5G, 5H, 5P and CSO-6.

- Oversaw the commissioning, testing, document conformance and installation of HVAC systems to include:
  - Unit Heaters (Electrical & gas fired)
  - Air Handling Units
  - Air conditioning and condensing units
  - Computer Room Air Conditioning Units (CRAC Unit)
  - Motorized Smoke fire and gravity dampers
  - Automatic temperature controls systems, including life safety interlocks and shut downs.
- Inspected and documented conformance with contract documents for all testing, adjustment, and balancing of HVAC ductwork systems.
- Field testing of equipment and ATC control systems.
- Inspected and documented equipment startup and commissioning, including manufacturers certifications for warrantee and guarantees.
- Compiled equipment and HVAC system deficiencies and punch lists and implemented corrections for acceptance.
- Reviewed, attended and audited all HVAC equipment and system operation and training to ensure appropriateness of scope of work.
- Oversaw installation and commissioning of Instrument Control system with assistant of

I & C Engineer

- Inspected installation and testing of piping for water, drain, gas, SS air, and sprinkler piping system including the insulation for required piping.
- Inspected installation, testing and commissioning of sluice, slide and tide gates, service water skids, boilers and related breeching system, hot water heaters, fuel oil filtration and pumping skids, circulating water pumps, sump pumps, grit pumps and related valves.
- Oversaw installation, testing and commissioning of Carbon Vessel for Odor Control System.
- Oversaw the installation, testing and commissioning of screening and conveyor systems.
- Involvement with shop drawings and drawings review.
- Inspected the installation and testing of a 2000 gallon underground storage fuel tank for boilers and connecting piping.
- Also inspected underground gasoline, diesel tanks, pump dispersion, control devices and fire protection systems of vehicle fueling station.
- Inspected the installation of piping for storage tank for backup generator.

Remex Construction Corp., Astoria, NY – Responsible for different phases of mechanical/structural rehabilitation of commercial buildings in New York related to pumps/motors and pipe supports.

Kent Construction Co., Inc., Woodside, NY – Responsible for overseeing demolition of balconies in a 36-story building, restoration of boiler rooms, placement of concrete and arrangement of pipe support systems. Obtaining permit from NYCDOB "CD5" for submittal related to stage scaffolding using outrigger beams and/or hooks.

Worked as an independent contractor; managing all different phases of new construction, restoration/rehabilitation of commercial/residential buildings.

Andrew Denniser

Construction Inspector

EDUCATION

Queensborough Community College, Queens, NY, 2002
APEX Technical School, New York, NY, 2003

TECHNICAL SKILLS

Electrical/I&C: Low voltage control wiring, control instruments and gauges, RGS conduit, mega-ohm testing, continuity testing, wiring diagrams and wiring schematics

Mechanical: Boilers (Hydronic, steam, electric, direct vent), HVAC units (split system, package unit, chilled water system, heat pump), piping, refrigeration lines, industrial and commercial pumps

RELEVANT EXPERIENCE

Construction Inspector, Yonkers WWTP

As a Construction Administrator/Inspector acted as liaison between the contractor, designer and the client. Coordinated all construction activities with working plant operations. Prepared documentation for and participated in Pre-Construction, Monthly Progress, and Issues and Tasks Meetings. Maintain and prepare logs and documentation for Federal and State funding appropriation audits. Reviewed, negotiated and authorized all payments.

Provided Electrical/I&C Inspection which included:

- installation of conduits, fixtures, disconnect switches, wires and cables
- testing of wires and cables (mega-ohm, continuity, millivolt, milliamp testing)
- installation and testing of instruments and controls
- installation of electrical meters, circuit breakers and panels

Provided Mechanical Inspection which included:

- installation and testing of boilers and other HVAC equipment
- insulation of piping, ductwork, and ventilation equipment
- exhaust and odor control systems
- Installation of windows & doors
- metal fabrication and welding
- roof systems

Provided Plumbing inspection which included:

- metal piping, fiberglass, drainage and storm piping
- hanger and support systems
- seismic anchoring systems

- hydrostatic testing
- installation of various types of valves (electrical and manual)

Provided civil inspection which included:

- Installation of rebar, form work, steel I-beams and channels
- Placement of concrete pads/piers and asphalt roadways
- Construction of masonry walls

Construction Inspector, Port Richmond WWTP, NYCDEP

Performed Construction Inspector duties as well as maintained quantities log book, reviewed new shop drawings, monitored adherence to DEP specifications and Standard Operating Procedures (SOPS) to ensure no conflicts, maintained ARRA logs and prepared for ARRA audits, HAZMAT logs and results, assisted in change orders (drafted, estimating, and negotiations) and payments.

Provided Electrical/I&C Inspection which included:

- installation of conduits, fixtures, disconnect switches, wires and cables
- testing of wires and cables (mega-ohm, continuity, millivolt, milliamp testing)
- installation and testing of instruments and controls
- security monitoring and communication systems
- street lighting
- installation of electrical meters, circuit breakers and panels

Provided Mechanical Inspection which included:

- installation and testing of boilers and other HVAC equipment
- natural gas piping and fuel oil piping
- insulation of piping, ductwork, and ventilation equipment
- exhaust and odor control systems
- metal fabrication and welding
- roof systems
- finished carpentry

Provided Plumbing inspection which included:

- water mains and waste water treatment systems
- fire systems (dry, wet, deluge, stand pipe)
- various metal piping, fiberglass, drainage and storm piping
- hanger and support systems
- seismic anchoring systems
- various types if hydrostatic testing
- installation of various types of valves (electrical and manual)

Provided civil inspection which included:

- Installation of rebar, form work, steel I-beams and channels

Robert E. Krom

Sr. Mechanical Inspector

EDUCATION

B.S. – Land Surveying, Sullivan County Community College
Licensed Land Surveyor since 1973
Adjunct Professor at Sullivan County Community College, 1990-1992

CERTIFICATIONS/TRAINING

40 Hour OSHA trained
Confined Space Certified
40 Hour OSHA Hazardous Waste
8 Hour Refresher Course HAZMAT
GPS Training – LETZ equipment
CPR and AED Trained & School Bus Rescue
Volunteer Fireman – Cragsmoor Fire Co. - 31 years

RELEVANT EXPERIENCE

Mr. Krom has a broad background in construction management and inspection with over 30 years of experience. His experience includes all aspects of Resident Engineering inspection and the duties of an owner's representative. His responsibilities includes overseeing inspection and office engineering staff, chairing progress meetings, conducting special utility meetings, payment processing, submittal review, resolving field issues, coordinating controlled inspections, commissioning and preparing monthly progress reports

Yonkers School District, Saunders Trades and Technical High School. As construction inspector he was responsible for construction inspection of a new kitchen for the school. Mr. Krom also inspected the installation of gas lines, electrical, plumbing and kitchen equipment.

Melville School District. Mr. Krom was construction inspector responsible for the inspection of the addition of 8 new classrooms, elevator and kitchen. He inspected all mechanical, electrical, HVAC and structural work.

Yonkers School District, School 21. This project consisted of a new auditorium. Mr. Krom inspected the electrical, plumbing and general construction work.

Construction Inspector at the Woodbourne Correctional Facility, Woodbourne, NY, Sullivan County.- NYSOGS Project included rehabilitation of over 12,000 sq. ft. flat membrane (EPDM) **roof** for the main kitchen building. Provided electrical inspection of new Transfer Station building, removal and wiring. Inspection of horizontal boring of storm water piping as well as manhole replacement and electrical duct banks.

Senior Construction Inspector at the Tappan Zee Bridge Redecking, New York State Thruway Authority This contract includes the removal of the existing bridge deck from the right and center lanes northbound and southbound from the eastern point of the superstructure to the Nyack shoreline.

New York State Thruway Authority - Inspector for the pavement striping of various roads including I-84, I-287, I-87 and I-95. Responsibilities also included as builts and pay requests.

Inspector for the 4.6 million upgrade of the Hill Sparrow WWTP 35,000 gal per/day. Work included the demolition of a sand filter building and sand filters also part of the mud well building. Demo also included several waste water distribution lines and air lines. The upgrade consisted of a new building approximately 43' x 43' x 12' which now houses a EQ tank, three new UV units, a holding tank and three seimens micro filter units, also an electrical room and a new lab room. The upgrade also included one additional sand filter, new mixers for the secondary chaifer and a new chemical food system. The Hill Sparrow WWTP now has all new control panels (PLC's) and is entirely run by a new SCADA master control panel. Mr. Krom also inspected the George Fischer WWTP 4,000 gal per/day facility. This 4.3 million upgrade consisted of a new building, EQ tank, 3 UV units, 2 micro filter units, 2 sand filters and all the control panels and SCADA system. Both jobs were NYCDEP projects. Responsibilities included overseeing inspection and office engineering staff, chairing progress meetings, payment processing, resolving field issues, review submittal, and being the eyes and ears for the design engineer.

Mr. Krom worked on the Hyde Park Superpulsator Project which involved the repair of existing concrete. Work included sand blasting of the concrete tank walls and floor. After cleaning tank he inspected for cracks and spalling. The smaller cracks were repaired by epoxy crack injection method and the larger cracks were v-notched and a structural non-shrink grout was applied. Areas where the rebar were exposed - the area around the rebar was routed at least ¾ inch all the way around and then filled with a structural crack material. Some areas were so bad that they had to saw cut the area remove the existing concrete. They drilled holes and doweled the concrete. Forms were constructed around area and a rebar mat was installed and tied to the dowels then poured with concrete.

Mr. Krom also worked on several smaller bridge jobs where parts of the concrete decking were removed and replaced on wing walls that were in need of repair (Route 52 East Ellenville, Route 32 South New Paltz and Route 52 West Greenfield Park).

Inspector For the $4 Million upgrade of the Blackberry and Hills Barrow WWTP. Work included new advanced sand filter units, equalization tanks and significant sitework. Performed Storm Water Pollution Prevention (SWPP) Inspections, including erosion control inspections to insure compliance with approved SWPP

- Process and Maintain all TAA Correspondence and Reports

Assistant Office Engineer for the Port Authority of New York and New Jersey - Responsibilities included:

- Administer and coordinate all daily functions including:
- Maintain and process all Personnel records for on site employees.
- Track and record all employees vacation and sick time
- Maintain and compute all daily written correspondence
- Interact and provide assistance to Subcontractors and PA Personnel
- Maintain and process all expense reports for on site employees
- Interact and provide assistance on a daily basis with the Office Engineer
- Maintain and process Net Cost Audit Letters and summary reports for Subcontractors
- Maintain and process all Subcontractors Approval requests for signatures
- Maintain and Input all Post Award Contract Changes (PACC) for approval
- Maintain and Input all Change Order forms for approval
- Maintain and Download all site photos to various contracts for access availability
- Maintain all contract filing for available access
- Maintain and process all Contractor Performance Evaluations for closeouts
- Maintain and process all Net Cost Items to Wintrak per contract
- Prepare Weekly Construction Newsletter/ Progress Reports
- Prepare and process Blue Folders for signature
- Assist in all Contractors Payments
- Assist in Contracts Monthly Report

Assistant to Facility Manager - Responsibilities included:

- Administer and coordinate all daily functions including:
- Maintain and process all Personal records for all on site employees.
- Track and record all employees' vacation and sick time.
- Dispatch employees to address maintenance issues within the facility.
- Interact and provide assistance to all Clients, Vendors and Subcontractors.
- Maintain and process all accounts payable on a daily basis.
- Coordinate Facility Managers daily functions.
- Investigate and follow-up on all client complaints.
- Administer and coordinate all monthly billings and reports for clients.

Divisional Administrator – Responsibilities included:

- Administer and coordinate all divisional functions including:
- Maintain and process all expense reports and travel arrangement for Divisional Vice President.
- Maintain and process monthly invoicing for various sites.
- Maintain and update all Workers Compensation and General Liability claims Division wide.
- Interact and provide assistance on a daily basis with site Facility Managers.
- Maintain and process all accounts payable for Divisional Office.

Senior Inspector - Tappan Zee Bridge Redecking, Phase II, NYS Thruway Authority. This contract includes the removal of the existing bridge deck from the three middle lanes of the main span to the Nyack shoreline. Duties include inspection of precast roadway sections, structural steel installation and blot up, bearing replacement, pedestal reconstruction and steel repairs. Review force account submissions and submit daily IDR.

Senior Inspector - Tappan Zee Bridge Redecking, Phase I, NYS Thruway Authority. This contract included the removal of the existing bridge deck from the two outer lanes northbound and southbound from the main span to the Nyack shoreline. Project also included replacement of bridge rail and expansion joints. Duties included inspection of installed precast roadway sections, structural steel installation and bolt up, bearing replacement, reviewed submitted force account info and submitted daily IDR.

Construction Engineer - NYCDEP- Jamaica Water Pollution Control Plant – Performed construction inspection of plant upgrades including sheeted excavations, pipe installation, caisson installation and building construction.

Construction Inspector - Paerdegat Basin CSO, NYCDEP – Provided inspection of storage tank construction including reinforced steel and concrete placement.

Office Engineer - Noise Barrier Installation – Performed office engineer duties which included: processed estimates, reviewed daily IR's, produced meeting minutes, tracked contractors progress with EEO requirements and payroll, provided correspondence for Thruway Authority and Contractor. Duties include review of daily work reports for accuracy and conformance with NYSDOT Specifications and Manual of Uniform Record Keeping (MURK). Review and enter quantities, material certifications and partial payment of stored materials for processing contractor payments in the CEES program. Review and process Orders-On-Contract for new contract work and overruns items;

Field Change Orders for force account (T&M) work and performed cost analysis for negotiated agreed to prices for new items.

Construction inspector - Noise Barrier Installation – Construction inspection of noise barrier along north bound I-87. Work included drilling footings, placement of reinforcement steel and concrete, erection of prefab. Posts and panels, joint caulking, installation of R.O.W. fence and paintings.

Construction inspector - Noise Barrier Installation – Construction inspection of noise barrier along north bound I-87. Work included drilling footings, placement of reinforcement steel and concrete, erection of prefab. Posts and panels, joint caulking, installation of R.O.W. fence and paintings.

Construction Inspector on the I-287 Cross Westchester Expressway. Work included reconstruction of 3-mile stretch of I-287 including reconstruction of two ramps and replacement of three bridges. Work included asphalt overlay, cracking and seating of underlying concrete pavement, super pave hot mix asphalt overlay, concrete median barrier, steel bearing piles, drainage, guide rail, extensive rock blasting, noise walls, utility relocations and installation of variable message signs.

Construction Inspector Woodland Viaduct Bridge, Westchester County, NY. Work included complete deck replacement of concrete arch bridge over active Metro-North Railroad tracks, new approaches, retaining walls, erosion and sediment control, & maintenance and protection of traffic.

Senior inspector for the $15 million project that involved the installation of an asphalt overlay on the main runway of the Westchester County Airport. In addition other work elements included drainage improvements, lighting repair, sediment and erosion control and maintenance and protection of airport traffic. To accommodate air traffic volume, most of the project work was completed at night as well as using 24-hour shifts on selected weekends.

Construction Inspector on the New England Thruway. Responsibilities include preparation of daily reports, computation of quantities for unit price items, on-site material testing such as concrete slump and air entrainment tests and documentation of work progress with diagrams.

Construction Inspector Chatsworth Ave. Bridge, Weaver St. Bridge and Larchmont Parking Deck. Work included removal of existing paint by sandblasting and application of paint from prime coat to finished coat. All work was done in accordance with NYSTA specifications including containment and removal of waste. Responsibilities included inspection of paint removal and application and testing for proper film thickness.

RELEVANT EXPERIENCE

Office Engineer - Tappan Zee Bridge Rehabilitation TZB 2 (TANY 10-9B) - Superstructure Replacement of the TZ Bridge for NYSTA ($148M). Project consisted of removal of existing deck slabs and stringers for installation of new prefabricated Inverset concrete deck panels for travel lanes 3, 4 & 5 along the Causeway, West Deck Truss and Main Span of the Tappan Zee Bridge. Other work includes Class "A" containment and bridge painting of the Main Span substructure, replacement of the Causeway bridge joints and bearings, replacing the existing concrete moveable barrier system with steel units, installation of ITS and electrical systems. Project required extensive maintenance and protection of traffic utilizing the moveable barrier system during night time panel installation. Duties include review of daily work reports for accuracy and conformance with NYSDOT Specifications and Manual of Uniform Record Keeping (MURK). Review and enter quantities, material certifications and partial payment of stored materials for processing contractor payments in the CEES program. Review and process Orders-On-Contract for new contract work and overruns items; Field Change Orders for force account (T&M) work and performed cost analysis for negotiated agreed to prices for new items. Review of certified payrolls and monthly utilization reports for compliance with D/M/WBE & EEO requirements. Coordinate and review contractor's submission of shop drawings and catalog cuts, maintain correspondence logs using Expedition program, complete final estimate and project closeout documents, and prepare As-Built records. Maintain and track FHWA and Railroad Force Account records and forms.

Office Engineer - Tappan Zee Bridge Rehabilitation TZB 1 (TANY 05-31B) - Superstructure Replacement of the TZ Bridge for NYSTA ($176M), Project consisted of removal of existing deck slabs and stringers for installation of new prefabricated Inverset concrete deck panels including ESB fascia barrier system for travel lanes 1, 2, 6 & 7 of the N/B and S/B Tappan Zee Bridge. The Causeway portion consisted of (166) 50' spans including bearing replacement; West Deck Truss consisted of (35) 50' spans including modular joint installation at piers and Main Span consisted of (72) 35' spans including installation of new bearing seat assembly brackets fixed to web of existing floor beams. Other work includes substructure repairs of the concrete piers and replacing the existing bridge lighting system. Duties include review of daily work reports for accuracy and conformance with NYSDOT Specifications and Manual of Uniform Record Keeping (MURK). Review and enter quantities, material certifications and partial payment of stored materials for processing contractor payments in the CEES program.

Review and process Orders-On-Contract for new contract work and overruns items; Field Change Orders for force account (T&M) work and performed cost analysis for negotiated agreed to prices for new items. Review of certified payrolls and monthly utilization reports for compliance with D/M/WBE & EEO requirements. Coordinate and review contractor's submission of shop drawings and catalog cuts, maintain correspondence logs using Expedition program, complete final estimate and project closeout documents, and prepare As-Built records. Maintain and track FHWA and Railroad Force Account records and forms.

Office Engineer - Interchange 8 (TANY 00-47) - Reconstruction of I-87/I-287 from Tappan Zee Bridge Toll Plaza to the Saw Mill River Parkway for NYSTA ($173M). Project involves construction of 4 new bridges, reconstruction of 5 existing bridges and rehabilitation of 2 existing bridges; installation of precast pavement panels at toll plaza; construction of modular retaining walls, concrete post and panel noise barrier walls and extensive pile driving, rock sockets and rock blasting. Duties include review of daily work reports for accuracy and conformance with NYSDOT Specifications and Manual of Uniform Record Keeping (MURK). Review and enter quantities, material certifications and partial payment of stored materials for processing contractor payments in the CEES program. Review and process Orders-On-Contract for new contract work and overruns items; Field Change Orders for force account (T&M) work and performed cost analysis for negotiated agreed to prices for new items. Review of certified payrolls and monthly utilization reports for compliance with D/M/WBE & EEO requirements. Coordinate and review contractor's submission of shop drawings and catalog cuts, maintain correspondence logs using Expedition program, complete final estimate and project closeout documents, and prepare As-Built records. Maintain and track FHWA and Railroad Force Account records and forms.

Office Engineer - Tappan Zee Bridge Rehabilitation (TANY 97-32B) - Deck Replacement and Rehabilitation, Joint Replacement and Rail Upgrade ($36M). Project consists of removal of existing deck slabs for installation of new Exodermic deck panels with Polycarb overlay, repair of the joint system and upgrade of the existing bridge rail along the East Deck Truss spans of the TZ Bridge. Duties include review of daily work reports for accuracy and conformance with NYSDOT Specifications and Manual of Uniform Record Keeping (MURK). Review and enter quantities, material certifications and partial payment of stored materials for processing contractor payments in the CEES program. Review and process Orders-On-Contract for new contract work and overruns items; Field Change Orders for force account (T&M) work and performed cost analysis for negotiated agreed to prices for new items. Review of certified payrolls and monthly utilization reports for compliance with D/M/WBE & EEO requirements. Coordinate and review contractor's submission of shop drawings and catalog cuts, maintain correspondence logs using Expedition program, complete final estimate and project closeout documents, and prepare As-Built records. Maintain and track FHWA and Railroad Force Account records and forms.

Office Engineer - PATH, Journal Square Transportation Management Center for the Port Authority of New York and New Jersey. Currently assigned to various Security contracts, specific duties and responsibilities include:

- Working on 2 security projects combined worth of $232 million
- Contact all field offices to receive close-out documents for 2 out 3 security projects
- Prepare and distribute monthly close-out status report
- Prepare and enter time sensitive RFI information through **Contract Management (Expedition)** software
- Review all payment requisitions for payment
- Work closely with contractor to go over necessary paperwork needed
- Reconcile and process payments; making entries in Wintrak and SAP
- Coordinate with audit department to have proper audits conducted
- Work closely with Security Project Management Division to ensure the proper charge codes are funded
- Working on Stage I preparation of the close-out for contract that is close to closing out
- Provide paperwork and information to the OEM's office for contracts under grant supervision
- Attend security meetings
- Work closely with the main office and the EOC's office
- Prepare and track audit reports of Security Contracts
- Prepare and track in-house Consultant overtime reports.
- Prepare and finalize Contractor Payment Application/Requisitions.
- Prepare and enter time sensitive information into Wintrak and SAP software
- Prepare and enter PACC's, Change Orders of Contracts

Assistant Office Engineer - Port Authority of NY & NJ, Port Newark, NJ – Provided a variety of administrative duties and responsibilities which included:

- Typing of correspondence and reports using PC applications
- Scheduling/coordinating meetings and maintaining calendars

- Use of **Contract Management (Expedition)** for Payment Processing/tracking
- Back-up for inputting Payroll/Timekeeping through PeopleSoft
- Handling and screening mail and telephone calls
- Troubleshooting of hardware and software
- Preparing new contract files and pre-con meetings (EP 384.063 & PN 924.565)
- Preparing & verifying Subcontractor Approval forms and submitting for signature to the appropriate department (Risk & Insurance) (EP 384.053, EP 384.057)
- Prepared, reviewed and sent correspondence on MBE/WBE/DBE performance percentages (EP 384.059, EP 354.038, MFP 954.911, EP 384.060, MFP 944.901 & EP 384.057)

Contract Manager Version 13, Primavera (Project Schedule), Microsoft Word 2007, Excel 2007, Outlook 2007, Power Point 2007, Project, Publisher, InDesign

SKILLS

Type 60 wpm, Bilingual: English/Spanish

EXPERIENCE

Ms. Coitino is a skilled and dedicated Project Engineer who provides project support to Project Executives, Project Managers and Junior Staff members. She assists with meeting minutes and all correspondence such as letters and transmittals. Ms. Coitino monitors project finances for up to date reporting. This includes tracking RFI's, submittals, financial/change orders. Additionally, she monitors all insurance, general requirements, and closeout documents.

Savin Engineers, P.C., Pleasantville, NY
Sr. Project Administrator/Office/Project Engineer

New York State Office of General Services
Troop F Headquarters Addition & Renovations and Field Investigation Unit Bldg. (FIU)
Project/Office Engineer for review of submittals, RFI's, track and maintain logs, update team members, send notifications to all parties involved. Some responsibilities include:

- Document control coordination
- Project schedule maintenance
- On-site LEED coordinator
- Job Meeting coordinator
- Review and process contractor's requisition for payment
- Track and maintain project field and change orders
- Monitor all insurance, general requirements, and close-out documents
- Implemented monthly newsletters, which provides the client with update project progress
- Generate cost worksheets utilizing the "Cost Works" program

Port Authority of NY & NJ (PANYNJ) - Contract Manager Specialist (Expedition)
TB&T Various Projects

- Review & knowledge of Project Specifications related to submittals for each project.

Attend Pre-construction meetings to advise the Contractor of PANYNJ's proper submittal process and numbering system.

- Track, log and maintain project submittals in Contract Manager.
- Generation of Contract Manager reports (submittal log) related to submittals.
- Handling of electronic submittals utilizing "**Livelink**".
- Track project substantial completion to expedite project archiving related to files as well as in Contract Manager.
- Organize and maintain an efficient submittal filing system.
- Utilizing WinTrak to vie project updates as it pertains to schedule, budget etc.

Office Engineer

Provided a wide variety of project administrative support to clients as well as the firms Project Associate. Worked on multiple projects simultaneously from project start-up until project completion.

Relevant Projects:

Norwood Jackson Facility, Valhalla - $50 million dollar project
Richard J. Daronco Courthouse, White Plains, NY - $120 million dollar project
Hyde Park Central School District, Hyde Park, NY - $15 million dollar project
Yonkers Central School District, Yonkers, NY - $7 million dollar project

- Generation of Contract Manager Reports. (Issues, Cost Worksheets).
- Logged, tracked and maintained **shop drawings**, certificate of insurance, daily reports and **"Request for Information"** (RFI)'s utilizing "Expedition".
- Review and process all applications for payment and **change orders**.
- Meticulous review of the financial reporting to insure the utmost accuracy of the projects' accounts.
- Set up new projects with cost codes in "Expedition".
- With the use of Primavera Contract Manager tracking software, **monitor project finances** for up to date reporting. This includes tracking issues, submittals, financials, change orders, and potential change orders. Additionally, she monitors all insurance, general requirements, and closeout documents via internet.
- Word Processing: generated letters, memos, faxes, agendas, and various excel spreadsheet. Weekly meeting minutes, project budget, change orders and Contractors requisition for payment where created, tracked and maintained utilizing "Expedition".
- Editing: proof read, formatted, edited correspondence generated by all personnel to company standards.
- Project Schedules - Utilized (Primavera) to create and maintain on a bi-weekly basis or as required by the Project Manager and Owner/Client the projects schedule. This helped in tracking the projects milestones and project completion.
- Implemented the creation of monthly Project Executive Reports.
- Generated "ManPower" reports

RELEVANT EXPERIENCE

Administrative Assistant – Stewart International Airport for the Port Authority of New York and New Jersey – Assisted the Terminal/Landside Operations General Manager. Used good organization, typing, data entry skills on a daily basis, as well as other office clerical duties and administrative procedures. Responsible for providing airline data to the rest of company, by collecting all the data and formulating accurate timely monthly reports. Assist client needs regarding statistical data collection at all times.

Ensured airport standards for quality and customer service as it relates to the terminal services and upheld documents on daily housekeeping reports and subsequent follow up inspections. Maintained records of problems reported by customers and tenants, and reports that information to the appropriate areas for correction. Assisted in the coordination of events and promotions at the airport such as fund raising, VIP ceremonies, conferences, commercials and any other function where terminal space is required. Ensured all needs and security requirements. Responding to feedback on web site/pages, and worked with clients to make appropriate changes also updating public information programs to address passenger's needs. Performing related duties including tracking MWDBE utilization.

Responsible for recording, producing and distributing daily, weekly, monthly and yearly airport traffic statistics. Assist the General Manager of the Department with basic administrative duties including filing, travel arrangements, maintaining expense reports and daily schedules.

Marketing Assistant – Assisted the General Manager of Marketing – Responsible for supporting management in conceptualizing a strategic marketing program which includes air service development, public relations, community awareness programs, website development/maintenance, media placement and management.

Prepare and coordinate distribution of news clips on a daily basis. Assist in initiating various morale building steps within the company – monthly newsletters, monthly "all hands" meetings, picnics, awards and distinctions program, employee birthdays, company holiday parties, employee farewells, etc. Responsible for recording, producing

and distributing daily, weekly, monthly and yearly airport traffic statistics. Assist the General Manager of the Department with basic administrative duties including filing, travel arrangements, maintaining expense reports and daily schedules. Produce and maintain accurate accounts payable documents for payment on a daily basis. Communicate effectively with company management and co-workers, airline management at transportation services, state police and TSA. Check and respond to daily emails.

Key liaison in developing, producing and maintaining accurate information on the airport's printed material covering cargo, air service schedules and diversionary operations. Create, organize and maintain selective databases for accurate distribution of marketing materials aimed specifically at travel agents, media, cargo companies, tenants, community leaders and regional business. Maintain an inventory control program aimed at effectively distributing and managing printed material. Supervise all interns and volunteers in the Marketing Department. Oversee the decorating of the main terminal at Christmas.

Assist management in creating and launching campaigns in the Hudson Valley Region for the new airline entrants from an advertising, public relations and customer service perspective. Support management in organizing and placing of all national and local trade advertising. Assist in launching community outreach programs positioning the airport as the "friendly alternative" to the major New York metropolitan airports. Support the key airport spokesperson on all issues related to airport emergencies and information distribution to the media. Prepared and participate in an Airport Emergency/Crisis situation. Facilitated management in researching and collecting information for writing and broadcasting press releases through all mediums. Key representative to several business related trade shows, exhibitions, business functions, press conferences, community and company social events (Orange County Chamber yearly Expo), travel shows, as well as other Travel & Business Expo throughout Hudson Valley. Attend strategic group meeting within the local business community in the absence of the General Manager.

Coordinate and maintain contracts for airport terminal art displays and photo shoots for commercials and television shows. Collect, maintain and produce graphs and statistical reports on regional demographics for air service and cargo development efforts. Create and maintain a filing system for photos and negatives that could be accessed easily for all future ad campaigns. Assist in the coordination of special activities at the Airport such as the Y3 Kids Program. Create, produce and maintain an airport informational guide book for employee's assistance. Shop for Airport supplies such as for the kitchen, employee birthday certificates, cards, supplies for trade shows. Maintain the Airport's trade shows equipment: booth and supplies. Organize and prepare for press conferences. Take photos for the airport when called upon.

Contract Administrator – PATH, Journal Square Transportation Management Center for the Port Authority of New York and New Jersey. Responsible for facilitating the Contract close-out process for all PATH/TAA projects. Prepare and request all Certificates of Occupancy. Maintain weekly materials installation and project delay logs. Validate Subcontractor Approval Requests. Perform desk audits for net cost work. Process and track RFI's, and submittals for Security projects. Distribute weekly schedules and approved submittals to the Engineering Staff. Provide administrative support to the Resident Engineer and Assistant Resident Engineers as needed.

Project Administrator – Toll Brothers, Long Island City, NY - 48th Avenue/Queens West Project $40M Project. Primary responsibilities included the set-up and management of the home office. Developed and maintained procedural and administrative protocols. Processed and tracked RFI's and submittals. Assembled, and distributed bid packages. Prepared shop drawings and specifications listings. Created and maintained RFI, submittal, permit and contract status logs. Provided administrative support to the President as needed.

Project Planner for NYC Transit Authority – Responsible for the development and distribution of weekly contractor activity schedules. Prepared and issued monthly flagging utilization reports. Coordinated tier services for daily work crews. Formulated actual TA labor charge reports.

Project Administrator – Bronx Criminal Courthouse Project, Bronx, NY – $ 580M Project – Established and managed field office. Purchased equipment, furniture, fixtures and supplies through competitive bidding. Developed and maintained office procedures and filing systems. Designed and maintained security database. Coordinated staff meeting schedules and planned conferences. Prepared and distributed job meeting minutes. Supervised administrative staff.

Assistant Project Manager – Battery Park City Authority- PS 89, NYC/ Smithsonian Cooper Hewitt Museum – Procured $ 3M worth of furniture, fixtures, equipment and supplies. Created and maintained all project related databases. Processed scope changes, change orders, and RFI's. Prepared Owner's meeting minutes and monthly

reports.

Office Manager/ Project Secretary – HPD Bronx, Early Childhood Centers 1, 2, & 3 - Executed monthly requisitions for 35 contractors. Administered the Equal Employment Opportunity program. Prepared monthly report for the Client. Designed and maintained RFI's, change order, and shop drawing databases. Supervised administrative staff. Provided administrative support to the Project Executive and Team as required.

Stuart F. Schiller, CSI, CDT

Sr. Scheduler

EDUCATION

S.U.N.Y. College of Environmental Science in association with Syracuse University
B.S., Construction Engineering

PROFESSIONAL AFFILIATIONS

Construction Document Technologist, Construction Specifications Institute

RELEVANT EXPERIENCE

Mr. Schiller is responsible to the Owner for providing project scheduling, phasing plans and construction claims analysis.

Project scheduling services includes creating master project schedules, critical-path-method (CPM) construction schedules and progress updates for comparison to the baseline. Narrative reports accompany the schedules to better communicate the information provided by the scheduling software, Primavera P6. The reports generally provide the status of project milestones, issues encountered that will affect the schedule, changes made to logic, added/deleted activities, lookaheads and other data requested by the Owner. When required, recovery schedules are created to reduce or eliminate delays.

Scheduling services are also provided to review and prepare analysis of construction schedules submitted by others. Mr. Schiller will import the Primavera P6 files to provide a report of the schedule completeness, activity logic, critical path and conformance to contract requirements. The progress schedule updates are also analyzed to determine if the forecast milestone dates are reasonable and the progress of work is substantiated.

Phasing plans are provided to graphically depict the sequence of work areas or scope, either for public presentation, as part of bid package or during construction.

Construction claims analysis typically involves a project delay and the associated cost of delay, submitted by contractor(s), consultant(s) or the Owner. Using schedule files submitted during the course of the work, daily field reports, change order documentation and other project reports, the project history is reconstructed tracing the source of the delays and the legitimacy of the claim. The cost of such delay, if any, is calculated based on one or more methods, depending on the nature of the claim.

Mr. Schiller has over 24 years of experience providing construction cost estimating, scheduling, project management and claims analysis for multi-phase, multi-site and multi-contractor projects up to $282 million. He is proficient in Microsoft Project, Primavera Contract Manager, Building Information Modeling (BIM) and many cost estimating and graphics software. Some relevant project experience includes:

State University of New York at Binghamton, Rehabilitate Domestic Water Distribution System, Binghamton, NY. Prepared CPM construction schedule, progress updates and recovery schedule including narrative reports using Primavera P6 for campus-wide water system upgrade including water main, pump stations, water tanks and related construction.

Wake Tech Community College Health Sciences Building, Charlotte, NC. Performed analysis of contractor delay claim involving multiple delays and concurrent delays based on the default of a subcontractor.

Levine Cancer Institute, Charlotte, NC. Performed analysis of contractor delay claim involving multiple delays and concurrent delays based on the default of a subcontractor.

Port Authority of New York and New Jersey – Construction Claim Analysis for Newark International Airport Terminal B Modernization Electrical Upgrades, Lobby B-1 and Vertical Circulation Project, Newark, NJ. Under term contract agreement, performed analysis of $6 million contractor delay claim involving multiple delays, concurrent delays and change order analysis for the $53 million rehabilitation and renovation.

Port Authority of New York and New Jersey – Schedule Analysis of Howland Hook Marine Terminal Open Area Paving and Utilities Project, Staten Island, NY. Analysis of baseline schedule submitted by Contractor to determine if proper activities were included and completion dates achievable. Analysis of 'as-built' schedule for delays and inefficiencies.

New York State Office of General Services. Performed scheduling services for construction management term agreement. Projects include new Firing Range at Fishkill Correctional Facility in Fishkill, NY and New York State Police Troop "F" Headquarters Addition, Renovation and new FIU Building in Middletown, NY.

Queens Midtown Tunnel Rehabilitation, New York, NY. Performed concurrent delay analysis of a claim submitted by the contractor. Using Primavera Project Planner and on-site submittal logs forecasted different scenarios and determined the validity of delays. Responsibilities also included report preparation outlining the scenarios and making recommendations on resolving claims.

Roosevelt UFSD - $170 million District Wide Replacements and Improvements.
North Shore UFSD - $30 million district-wide renovations and additions
Miller Place UFSD - $10.8 million district-wide infrastructure improvements
Rocky Point PS - $28.5 million annual capital project plans

Robert Dean Sproch

Scheduler

EDUCATION

College of DuPage, Glen Ellyn, Illinois

COMPUTER SKILLS

SAP, Word, Excel, Access, Power Point, Expedition, Microsoft Project, P6, FoxPro and Lotus Notes

RELEVANT EXPERIENCE

Mr. Sproch is a disciplined self-starter who works well in a structured environment. He has practical experience in a variety of construction disciplines and enjoys working in the field of construction from the conceptual stage in creating a schedule through the construction phase in comparing the actual construction to the approved schedule.

His experience in understanding the critical path of construction systems does well in transferring the information to the software of choice by the Owner. The Microsoft Project software is often accepted as a project schedule which includes the tasks of the Owner, architect, construction manager and consultants for the pre-construction phase and construction durations with milestone dates for the construction period.

His experience with the P6 software is has proven successful in tracking the detailed tasks during construction. Useful to both the Owner and consultants in keeping the project on track, it also provides a sure way of protecting the Owner in the event the contractor fails to meet the schedule.

Mr. Sproch has provided scheduling services for the following:

- Westchester Medical Center
- Sound Shore & Mt Vernon Hospital
- Town of Stratford, CT
- West Haven, CT
- Richmond Library, Marlborough, CT
- Town of New Canaan, CT
- Eldred Central School District, NY
- Greenwich Public Schools, CT
- Pelham Union Free School District, NY
- Nassau Community College, NY
- Pocantico Hills Central School District, NY

Prior to joining Savin, Mr. Sproch's experience includes:

Managed architectural trade crews and support departments for a 27-building, 1.9 million s.f. educational complex. Represented Owner in weekly meetings regarding personnel and housing needs in order to meet established schedules. Provided comments at meetings for all construction disciplines to review each week's construction progress, the release/review of building plans, and adjustments needed in the construction schedule. Produced weekly agenda and meeting minutes.

Established personnel load levels to meet construction schedule as well as ancillary departments. Monitored staffing needs and recruited eligible part-time and full-time workers. Reviewed applications and expedited necessary paperwork for new personnel in all areas.

Robert J. Kalpin

Estimator

EDUCATION

B.A. – New York Institute of Technology, Old Westbury, NY, 1978

COMPUTER LITERACY

Word, Excel, & AutoCAD

RELEVANT EXPERIENCE

Mr. Kalpin will be the lead person in charge of preparation of estimating and scheduling for your project. Mr. Kalpin's role will include the following responsibilities during pre-construction and construction phases:

- Prepare construction cost estimates (Schematic, Design Development, Construction Documents) by architectural takeoffs and utilizing Timberline Estimating.
- Prepare estimate reports.
- Recommend bid packages.
- Recommend alternates to bid.
- Cross-check contract documents to ensure completeness and accuracy.
- Review general conditions and requirements and suggest changes to protect the Owner.

Mr. Kalpin has over 30 years of experience on a broad range of projects. His current scheduling, estimating and construction management experience at Savin includes:

- Pelham UFSD - $24 million capital projects include upgrades and renovations to High School, electrical service upgrades at 4 elementary schools, roof repairs and replacements at the High School and Siwanoy Elementary School.
- Yonkers Public Schools – $7 million – renovation in 2007 & $16 million – renovation in 2008.
- Pocantico Central School District – $26 million infrastructure; renovations.
- North Shore Central School District – School Additions
- Port Jervis CSD - $16 million renovations and reconstruction
- Tuckahoe UFSD – $13.6 million – new three story addition to the high school & renovations to the elementary school

Architectural Project Manager/Construction Contract Administrator - Monitoring of Public School construction projects from bid award to final closeout; owner meetings for review of capital and bond projects, and SED approvals, review of Contract Documents for constructability and MEP coordination. Coordination and tracking of submissions, permits, and testing inspections. Construction inspection for quality control and schedule conformance. Analysis of contractor payment

applications and change order proposals. Inspection of completed projects and preparation of final punch lists. Some of the projects include:

- Eastport – South Manor Secondary School, Eastport, NY; new 350,000 square foot High School and various other school building projects.

Architectural Project Manager - Development of Construction Contract Documents from conceptual design and Owner's program, review for building code and SED requirements and construction cost estimating. Inspections for quality control, construction progress, and review of payment applications and change order proposals.

Assistant Project Manager –Field inspection, schedule coordination and detailing of high-rise curtain wall installations. Projects include: Barney's, NY, 660 Madison Avenue, NYC; and Foley Square Courthouse, Foley Square, NYC; New 30 story Federal Courthouse.

Oscar Hinkle has over 12 years of experience in construction and facilities management with a focus on building facilities and a strong emphasis on all aspects of project documentation including the submittal and review process, RFI's, and executive summaries. With Savin for over 10 years, Mr. Hinkle's knowledge to detail and exceptional written and verbal communication skills have made sure our clients receive the quality they expect. Mr. Hinkle has been responsible for the on-site, field supervision and project administration for the following Savin projects:

Port Jervis City School District – Project administration for $14 million Excel project and additional $3.8 million in Capital projects including boiler replacements, unit ventilator replacements, conversion to DDC controls, installation of District-wide VoIP telephone system, window replacements, office renovations, toilet room renovations, installation of emergency generator systems and installation of new domestic well and storage tank. Some of his responsibilities included but not limited to:

- Logged all incoming correspondence on Contract Manager 13.1
- Distributed the contractor's shop drawing for review by various disciplines
- Coordinate Submittal, RFI's, PCO's, CO's
- Attend weekly Progress Meeting.
- Contract Manager Routine Maintenance – Meeting Minutes and Payment Requisitions
- Scanned documents into Contract Manager using Image Tool v5.0 Document Management

Pocantico Hills Central School – Project administration for $18 million infrastructure renovation project including boiler and unit ventilator

replacement and new DDC controls along with roof replacement. Some of his responsibilities included but not limited to:

- Logged all incoming correspondence on Contract Manager 13.1
- Distributed the contractor's shop drawing for review by various disciplines
- Coordinate Submittal, RFI's, PCO's, CO's
- Attend weekly Progress Meeting.
- Contract Manager Routine Maintenance – Meeting Minutes and Payment Requisitions
- Scanned documents into Contract Manager using Image Tool v5.0 Document Management

Monticello Central School District - Project administration for $7 million Excel project, included boiler replacements, upgrade of all IDC's and construction of a new Network Operations Center. Also included a 50 camera network based security system. This was followed by a $4 million Energy Performance Contract that included additional boiler replacements and converting the entire HVAC systems of seven buildings to DDC controls. Some of his responsibilities included but not limited to:

- Logged all incoming correspondence on Contract Manager 13.1
- Distributed the contractor's shop drawing for review by various disciplines
- Coordinate Submittal, RFI's, PCO's, CO's
- Contract Manager Routine Maintenance – Meeting Minutes and Payment Requisitions
- Scanned documents into Contract Manager using Image Tool v5.0 Document Management

Tuckahoe Union Free School District - Project administration for $14 million additions and renovation project including new fully-equipped science and computer labs. Project included a new artificial turf football field and a new underground fuel storage tank. Some of his responsibilities included but not limited to:

- Logged all incoming correspondence on Contract Manager 13.1
- Distributed the contractor's shop drawing for review by various disciplines
- Coordinate Submittal, RFI's, PCO's, CO's
- Contract Manager Routine Maintenance – Meeting Minutes and Payment Requisitions.
- Scanned documents into Contract Manager using Image Tool v5.0 Document Management

HVEA ENGINEERS

Christopher J. Sotanski
Senior Testing Technician

Mr. Sotanski has over 4 years experience in the testing of Construction Materials. He holds many certifications relevant to the field; most of his experience was working at PANYNJ on a term agreement for the Freedom Tower and JFK Runway Projects.

CERTIFICATIONS/ SPECIALIZED TRAINING

- ACI Aggregate Testing Technician – Level I
- ACI Concrete Field Testing Technician – Grade I
- ACI Concrete Lab Technician – Grade I
- ACI Concrete Strength Testing Technician
- ACI Concrete Special Inspector
- Certified Nuclear Density Testing Technician
- OSHA 10-Hour Safety Trained
- OSHA 40-Hour Hazwoper Certified
- NYS HMA Density Testing Inspector

EDUCATION

- **Grantham University–** Bachelors of Science, Engineering Management and Technology Expected May 2015

SELECTED PROJECT EXPERIENCE

- **MNR 26596, Fordham Station Improvements (2014 – present)**
  Mr. Sotanski is serving as senior testing technician on this project which includes on-site and laboratory testing of concrete, nuclear density testing of compacted fills, crosshole sonic logging of drilled shafts, and a variety of laboratory services.

- **PANYNJ, Goethals Bridge Replacement Project (2014 – present)**
  Mr. Sotanski is serving as senior testing technician on this project which includes on-site and laboratory testing of concrete, nuclear density testing of compacted fills, and a variety of laboratory services.

- **NYCDEP, Rondout-West Branch Tunnel Bypass Shafts, Contract BT1 (2013 – 2014)**
  Mr. Sotanski served as senior testing technician on this project – which included: Laboratory trial batching of concrete for mix design, including testing of aggregates (gradations, specific gravities, and sulfate soundness), fresh concrete tests following batching, compressive strength tests, shrinkage tests, and heat signature of concrete; Field testing of placed concrete, including casting cylinders for compressive strength and heat signature of concrete.

- **MNR 16394: Rock Slope Remediation, Pawling & Brewster, NY, Putnam County (2013 – present)**
  Mr. Sotanski is serving as senior testing technician for this project; work includes concrete field and lab testing, grout field and lab testing, bolt proof testing (pullout testing of rock anchor bolts).

- **FHWA, Liberty Island Emergency Docks Repairs (2013)**
  Mr. Sotanski served as senior testing technician on this project which included concrete field testing (slump, air, temp, unit weight, casting cylinders) and lab testing of concrete (compressive strength testing, coulomb testing)

- **Senior Testing Technician, D262100: Dingle Ridge Road, Brewster, NY, Putnam County – NYSDOT (2013)**
  Mr. Sotanski served as senior testing technician for this project. He assisted in the collection of field data for Crosshole Sonic Logging (CSL) of 8' diameter drilled shafts.

- **D262218, Route 134 Rehabilitation, Ossining, NY (2013)**
  Mr. Sotanski served as senior testing technician for the NYSDOT project which included nuclear density testing of asphalt for the three courses of asphalt (60 series pavement).

- **PANYNJ, SWF-164.021A, Stewart Airport (2013)**
  Mr. Sotanski served as senior testing technician on this project which included laboratory testing (gradation, modified proctor) of subbase material followed by on-site Nuclear Density Testing of subbase and asphalt materials.

HVEA ENGINEERS

Andrew J. Feldt
Supervising Lab Technician/Field Technician

Mr. Feldt has a broad range of experience in construction inspection, with a strong emphasis in construction materials testing. His projects have ranged from concrete and masonry to asphalt milling and paving. Mr. Feldt has worked on projects for the NYSDOT, USACE, and many municipal and private owners.

EDUCATION

- B.S. Civil Engineering, Stevens Institute of Technology – May 2006
- E.I.T, New York - 2013

CERTIFICATIONS/ SPECIALIZED TRAINING

- ACI Aggregate Testing Technician – Level I
- ACI Concrete Field Testing Technician – Grade I
- ACI Concrete Laboratory Testing Technician – Level I
- ACI Concrete Strength Testing Technician
- ACI Concrete Construction Special Inspector
- Certified Nuclear Density Testing Technician
- ICC Spray-applied Fireproofing Special Inspector
- ICC Structural Masonry Special Inspector
- NETTCP Soil & Aggregate Inspector
- NYS AGC HMA Density Testing Inspector
- OSHA 10-Hour Safety Trained

SELECTED PROJECT EXPERIENCE

- **Field Testing Technician, NYCDEP, Rondout-West Branch Tunnel Bypass Shafts (2013 – present)**
  Serves as a QA Concrete Field/Lab Tech for this project; work includes lab trail batching for concrete mix design. HVEA has completed trial batches for eight classes of concrete (four points per mix) in their laboratory; testing fresh concrete for unit weight, slump, air and temperature, casting cylinders, casting shrinkage bars; lab testing for compressive strength and shrinkage results. Once the mix was accepted and batching for field placement began, additional work is being performed; which included field testing of fresh concrete and heat signature of concrete, and lab testing for compressive strength.

- **Field Testing Technician: D262218, Route 134 Improvements, Ossining, NY**
  Mr. Feldt is served as a field testing technician (DTI) on this paving project. He was responsible for compaction testing by nuclear methods, coring operations of asphalt and generating reports.

- **Inspector, D262037, PIN 9067.39 – Route 17 (Future I86), Sullivan County line to Exit 106, Sullivan County - NYSDOT (2012-2013)**
  Served as a Level III Inspector for this project. Work includes asphalt milling and paving, and various safety improvements

- **Testing Engineer**, Atlantic Testing Laboratories (2010 – 2011)
  - Mr. Feldt served as a Supervisory Testing Engineer for Atlantic Testing Laboratories, in their Hudson Valley Region. In this role, he performed and supervised inspection efforts and a wide ranging testing program for several agency, municipal and private clients. Services included:
    - Embankment/subgrade preparation (including compaction)
    - Structural concrete formwork and reinforcing
    - Reinforced masonry construction
    - Concrete slabs and flatwork
    - Hot mix asphalt; both field and plant inspection

- **Technician**, Atlantic Testing Laboratories (2006 – 2009)
  - Mr. Feldt served as a field inspector/technician on a variety of construction projects for a broad range of agency and private owners. In this role, he reviewed project specifications, identified inspection responsibilities and protocols, established testing schedules and executed the inspection/certification plan.

7/07 – Present
Construction Management Services During 2010, 2011 and 2012 – Newark Airport Construction Inspector Responsibilities are Reviewed Schedule, Specifications, Shop Drawings and processed payment requisitions. Check Daily contractor work and prepared daily reports.
Contact Person: Peter Rozpedowski, Resident Engineer, PA, 973-961-6110

Haider Engineering, P.C., New York Project: NY & NJ Port Authority #410-07-002, Performance of Expert Professional Construction Management Services During 2007, 2008 and 2009 – Newark Airport- Construction Inspector; Responsibilities are Responsibilities are Reviewed Schedule, Specifications, Shop Drawings and processed payment requisitions. Check Daily contractor work and prepared daily reports.
Contact Person: Peter Rozpedowski, Resident Engineer, PA, 973-961-6110

Oct. 06 – End of April 2006. Lead Project Officer New York City, NY – USA: Job totaling $30,000,000.00 work included building a new school and two level 90 feet long bridge over the highway to existing school, foundations, structural steel, Fireproofing, extensive concrete placement, plumbing, electrical, fire sprinkler, intercom system, data lines, fiber optics, security cameras, central air conditioning, roofing, emergency generator installation etc. In charge of all field operations managed 12 Engineers, 12

Subcontractors and 110 Laborers. Reviewed Schedule, Specifications, Shop Drawings and processed payment requisitions.

Mar 2005 - August 2006 MAG Construction, Dubai, UAE, Contracts Manager – Contract Assignment; 66 Story Tower in the Arabian Gulf, total cost $105 MM. Construction included a four-story day care center; Prepared BOQs (Bill of Quantities) based on Architectural Contract Drawings, Prepared, related by trade, Contract Drawings and Specifications for Bidding, Advertised/solicited Subcontractors, Conducted walk-through with potential Subcontractors, Qualified Subcontractors to perform required work, i.e. Bonding, Insurance.

Dec 2003– Mar 2005 QAD, Inc. Upper Montclair, NJ Chief Engineer – General Contractor: Constructed a 16-unit apartment building located in East Orange, NJ, Designed and constructed a 16,000 SF commercial space located in Orange, NJ, Designed and built homes, Designed financed and built residential building in Amman, Jordan, Estimated, scheduled and obtained financing for projects, Prepared Contract Drawings and wrote job specifications, Obtained zoning and building permits.

May 2001– Dec 2003 Jacobs Engineering, New York, NY : Construction Manager of nineteen Public Schools of the State of NJ Health and Safety Program at Paterson Public School System, total construction cost $700 MM; Managed six civil engineers. Reviewed Architectural Designs, structural, electromechanical, entertainment arenas, theater for three schools, worked with independent estimators, prepared phasing plan to conduct construction during School occupancy, Prepared Site Specific Health and Safety Program.
Prepared QA/QC Plans, Determined and prioritized school repairs, i.e. meeting fire code requirements/safety regulations, eterias, HAVC, etc, Advertised for job biddings.

Oct 1996- May 2001 Jacobs Engineering RE/Construction Manager; Extensive Steel/Concrete Repairs at Bayonne and Outer bridge Crossing (The Port Authority of NY and NJ – Client). Brooklyn Polytechnic (Assistant RE): Construction of Dormitory, Stadium and Cafeteria. In Charge of Contract Specifications, Estimates and Design Review and 24Hrs/3 Shift Field Operations, Work Totaling $115 MM.

TECHNICAL SUMMARY

Mr. James A. Yhap NICET IV has more than 22 years of Experience in the field of Construction management, Inspection and supervision. His professional experience includes: reconstruction and rehabilitation of road and bridges, buildings, treatment plant, upgrading drainage systems, construction of pipes, steel erection, deck construction, and demolition. He gained this experience with NYCDEP,TBTA, NYSDOT and other agencies. He has supervised Contractor's work in accordance with Construction Plans and Specifications. Prepared Inspector's Daily Report kept track of Pay Items, Performed Slump and Air-Entrainment Tests to check the consistency of the Concrete. Following are the projects he has worked on:

PROFESSIONAL EXPERIENCE

Haider Engineering P.C- Chief Inspector, 6/13 to 2/14.
ConnDOT CSO 2183, Project No. 0172-0412 & 0172-0413 for Construction Engineering and Inspection Services (Road, Bridge, Aviation) Pavement Marking. This project consisted of installation of Epoxy Resin Pavement Markings on Interstate Routes in the same locations as the existing epoxy resin pavement markings, except when indicated otherwise in the contract documents or by the Engineer in Various Towns in District 2. The new pavement marking that was installed differed from the previous pavement markings, per the contract plans for the updated pavement markings. As an inspector, his assignment was to inspect all contractors work and ensure conformity with the ConnDOT's plans and specification for the duration of the project. Some of his assignment also included maintenance and protection of traffic during project activities. All records were kept in accordance with the Manual of Uniform Record Keeping (MURK).
Contact Person: Mr. John Dunn, Project Engineer, ConnDOT. Tel: (860)823-3262

Haider Engineering P.C-Senior Construction Inspector, 12/08 to 2/13
NYCDEP Contract NC-CM03, New Town Creek CM Services
Contract: NC-CM03, PIN: 82607WP01081: NC-CM03 provides for Construction Management Services in connection with Construction Contracts NC-41 (G, E, H, P), NC-43, NC-47 (G, E, H, P), NC-48, NC-50 and NC-51 (G, E, H, P).
This construction contract involves construction of the Residuals building and all its mechanical components. The Central Residuals Building (CRB) was designed to centralize the removed residuals (screenings, grit, and scum) to facilitate the removal of residuals from the site and to maximize the necessary odor control of these residuals. The CRB will include the following equipment;

§ Secondary Influent Screens
§ Waste Sludge Screens
§ Grit Cyclones
§ Grit Classifiers
§ Skimming Concentrators

§ Residuals container storage and loading areas
§ Manhattan Flow Meters
§ Carbon Absorber Odor Control Systems

This reconstruction involved the demolition of block walls installed in the tanks under the interim upgrade to simulate step feed flow and demolition of tank walls where the new detritor grit facilities and a new common channel upstream of the aeration tanks will be constructed. The complete replacement of tank equipment, piping and auxiliary systems is included in the reconstruction. The existing South Control Building was originally slated for demolition, including construction of a completely new South Control Building. This plan is currently being reviewed for possible schedule benefits from a partial reuse of the existing south control buildings.

Contact Person: Claude Oriol, Project Engineer NYCDEP Phone# (718) 707-4105

02/05 to 12/08-The LiRo Group.,Senior Inspector:
NYCDOT: Rehabilitation inspection of the Brooklyn Tower Esplanade of the Brooklyn Bridge spanning the East River between the boroughs of Manhattan and Brooklyn, NY.
NYCDOT: Rehabilitation inspection of the Gun Hill Road Bridge over Metro-North Railroad in Bronx, NY.

05/02-02/05- Urbitran Associates,Senior Inspector:
NYCDOT: Rehabilitation inspection of the Cross Bay Boulevard Bridge over Conduit Boulevard in Queens, NY. **NYCDOT:** Rehabilitation inspection of the Guy R. Brewer Boulevard Bridge over Belt System-Southern Parkway in Queens, NY.

09/96-05/02 Munoz Engineering P.C, Senior Inspector / Inspector:
NYCDOT: Reconstruction inspection of the Flatbush Avenue Bridge over Belt Parkway in Brooklyn,NY
NYSDOT: Construction inspection of asphalt concrete, milling, and resurfacing on various routes in Westchester, **NY.** **NYSDOT**: Construction inspection of asphalt concrete, milling, and resurfacing on various routes in Putnam and Dutchess, NY.
NYSDOT: construction inspection of sign structure installation on the Major Deegan Expressway in Bronx, NY. NYSDOT: Construction inspection of sign structure installation on I-295, I-695 and 907F in Bronx, NY.
NJHA: Construction inspection of the Garden State Parkway Bridge repair in Monmouth County, NJ. MISC: Topographic surveying of several projects in NY and NJ.
NYSDOT: Construction inspection of guide rail, overhead signs and landscaping improvements on Routes I-278 and 440 in Staten Island, NY. NYCDOT: Reconstruction inspection of the Melrose Avenue viaduct over Conrail in Bronx, NY.
NYSDOT: Overhead Sign Structure Installation on the Major Deegan Expressway in The Bronx, NY
He was responsible for the inspection of daily MPT setups, excavation for sign structure footings and foundations, installation of steel and timber sheeting, placing rebar cages, setting anchor bolts, structural concrete placement, installation of sign posts and columns, installation of overhead cantilever and span trusses, installation of reflectorized sign panels, installation of galvanized steel conduits, installation of luminaires, pulling, testing and terminating of electrical conductors. A number of sign structures were installed on the 72 span Major Deegan Expressway Viaduct and Ramps to the George Washington Bridge. Some were anchored to the existing concrete parapets. Others were bolted on to the existing structural steels. The existing structural steels were drilled and the new sign structure posts and columns were bolted on.
Reference: Mr. Doug Effner, Engineer In Charge (NYSDOT- Region 11)

NYSDOT: Guide Rails, Overhead Signs and Landscaping Improvements on Routes I-278 and 440 in Staten Island, NY (Contract No.
He was responsible for the inspection of daily MPT setups, short and long terms construction signs installation, clearing site, unclassified excavation, guide-rail installation, asphalt mow strip (under guide rail and around bases of sign structure columns) installation, topsoil, fertilizer, grass seeds and mulch installation.
Reference: Ms. Joan Titus, Engineer In Charge (NYSDOT- Region 11)

TECHNICAL SUMMARY

Mr. Tahir is NICET-IV certified and has a Master Degree from NJIT (New Jersey Institute of Technology) with over 20 years of experience as a *Resident Engineer/Chief Inspector/Office Engineer* with a demonstrated record of success in Resident Engineering Inspection Services for roadways, sidewalks, bridges, sewers and water main civil, related projects. He gained this experience on NYCDDC, NYSDOT, NYS Thruway and NYCDEP projects. As a **Resident Engineer**, he supervised Contractor's work and the Inspection Staff in a professional manner. He acted as Liaison Person on various projects to coordinate with the various agencies concerned. He has worked on the following Projects:

PROFESSIONAL EXPERIENCE

Haider Engineering, P.C. - (03/2014–Present): Resident Engineer: HWS2013Q, PIN: 8502013HW0052P Resident Engineering Inspection Services for Sidewalk Reconstruction and Replacement Borough of Queens, NY. DDC. Responsibilities includes project record keeping as per MURK, official correspondence, material certifications and acceptances, verification of condition/quality of material delivered and work performed, concrete testing, pre-construction pictures, punch list, as-built, payrolls, daily reports, weekly and monthly project status reports, change orders, contractor's partial payments, meeting minutes, daily work schedule notifications and MPT violations. **Haider Engineering, P.C.** providing Resident Engineering Inspection Services for construction of new concrete and steel faced concrete curb, construction of sidewalk, site safety and liaison of work with city agencies, maintenance protection of traffic; installation of sidewalk on various communities in the Borough of Manhattan; Sidewalk assessments accurate and properly recorded by block, lot and address; Photographs of existing sidewalk conditions for each sidewalk violation properly indexed by address, block and lot; Conducted Field survey to mark the limits of sidewalk to be constructed for designated properties as per DOT list. **Contact Person: Engineer in Charge: Mr. Jocelyn Damis, Deputy Director, Ph# 718-391-1955**

Haider Engineering, P.C. - (02/2013–02/14): Office Engineer: HWCRQ02S, HWP2012R, Construction of Pedestrian Ramps, Borough of Staten Island, NY. DDC. Responsible for project record keeping as per MURK, reports for field inspections, review of contractor's project schedule, meetings and its minutes, monthly contactor's estimates, correspondences and coordination of office and field activities with contractor and the client. Inspector reports, payments, and liaison with City agencies and utility companies.

The inspection work for the Installation of <u>Pedestrian Ramps and Sidewalks</u> at the designated locations in the Borough of Staten Island, Assisting the Resident Engineer in Coordination with NYCDOT, NYCDDC to obtain the list of locations for the various properties and coordination with the various communities' boards about the schedule of works. Also checking of the contractor's MPT Plans to make sure the work has been done in a safely manner

Contact Person: Mr. Mansukh Mavani, P.E. EIC, NYCDDC (917) 939-6792

Haider Engineering P.C- (Nov. 12 - 01/2013): Chief Inspector: REI FOR Three (3) Emergency Contracts HWSEMERG4 following 2012 Hurricane Sandy, Boroughs of Queens, Manhattan, Staten Island, Brooklyn and the Bronx. PIN: 8502013HW0040C, 8502013HW0041C, 8502013HW0042C – NYC DDC Haider Engineering, P.C. has provided Construction Inspection Services for the installation of **new sidewalks** at designated locations in various community boards in the boroughs of Staten Island, Brooklyn, Queens, and the Bronx. It included the following:

- Conducted Field survey to mark the limits of Sandy damaged sidewalk from the DOT list
- Computed quantities for each location showing Lot, Block & address
- Replacement of Steel and Concrete faced curbs at designated locations
- Coordination with community board prior and duration of the project
- Checking Contractor's MPT for the safety of pedestrians
- Inspection of the pedestrian ramps to make sure the slope does not exceed 8%
- Inspection of reveal of curb and ramp as per specifications
- Sidewalk assessments accurate and properly recorded by block, lot and address
- Photographs of existing sidewalk conditions for each sidewalk violation properly indexed by address, block and construction. **Contact Person: Mr. Mahesh Rana, E.I.C., NYCDDC, 718-391-1965**

Haider Engineering P.C: (7/2012-10/2012) Chief Inspector-NYCDOT- Reconstruction of Carlton Avenue Bridge over LIRR - Types of works includeed Demolition of sub-structure, Installation of Piles, Abutments, Wing Walls, Beams and Girders, Deck, Approach Slab, Parapet, **Sidewalk, Curbs**, Street lighting and Pavement Marking.
Contact Person: Engineer in Charge: Mr. Tony Ohikuare, Project Engineer, NYCDOT, 212-839-4015

Haider Engineering P.C: (05/2008-07/2012) Resident Engineer - WSHD-2A and 3A CM: Construction Management Services in Connection with Miscellaneous Projects in the New York Watershed Area. PIN: 82606WM00182 & 82606WM00183, DEP. The work under this Contract is to provide Construction Management Services for Capital Project WM-30, which includes the various construction contracts.
DEL-25, "Rehabilitation of Kensico South Effluent Chamber & Catskill Screen Chamber" This is mostly Shaft 18 Chlorination System / New Equipment Installation. Meetings with NYCDEP and to discuss & optimize work plan/procedures to effect completion, without disrupting ongoing chlorination during necessary shut-offs.
DEL-57, This is the Health & Safety / Work Plan for DEL-25. The Report was completed by WESTON SOLUTIONS and submitted to DEP.

Resident Engineer – New York State Thruway Authority Contract for Pavement Resurfacing and Miscellaneous Safety Work between M.P. 11.75± and M.P. 25.03± in Rockland County (2003) Responsibilities involved project record keeping as per MURK, material certifications and acceptances, preconstruction and progress pictures, payrolls, subcontractor's approvals, nighttime lighting plans, contractor's monthly payments, meeting minutes, lane closure notifications, change orders, progress schedule, and punch list. Periodic inspection of contract activities involving full depth repairs, cold milling of existing asphalt concrete pavement and shoulders, resurfacing, routing and sealing joints, pavement striping, installation of S.T.A.R., replacement of inductance loops, modification of existing guide rail systems, miscellaneous drainage work, maintenance & protection of traffic.

Office Engineer – New York State Thruway Authority Contract for Pavement Repair, Interchange Modifications, Bridge Joint Repairs, Noise Wall Modifications from M.P. 16.80± and M.P. 29.54± and Miscellaneous Work in the New York Division of the New York State Thruway in Rockland County (09/2005 – 11/2007)_The work consisted of ramp widening, noise wall modifications, concrete and steel repairs to bridges, armored expansion joints, waterproofing bridge decks, guide rail, rehabilitation of roadway drainage, milling and paving. Responsibilities involved project record keeping as per Manual for Uniform Record Keeping (MURK), material certifications, contractor & subcontractor payrolls, contractor's bi-weekly estimates, meeting minutes, lane closure notifications, Order-on-Contracts (OOC), force account work, progress schedule, Equal Employment Opportunity (EEO) correspondences, periodic field inspections and coordination of daily office and field activities with contractor and the client.

Experience of Firm

Section F

Savin Engineers provides consulting services in engineering and construction management to Municipalities, Industries and other Contracting and Engineering firms. We are certified as a Minority Business Enterprise (MBE) by the City of New York, the States of Massachusetts (SOWMBA), New York, New Jersey, and the Port Authority of New York and New Jersey. Our offices are located in Pleasantville, Syracuse, and Plainview, New York, as well as Bridgewater, New Jersey.

Savin Engineers Construction Management group provides services ranging from bidding assistance, shop drawing review, change order preparation, through construction inspection, contract administration and negotiation, clarifications to project closeout services. Individuals in our Construction Management Group, ranging from NICET I through IV as well as licensed professional engineers have extensive field experience offering the needed breadth and quality of engineering services to our clients.

Savin's staff of special inspection personnel include: American Concrete Institute (ACI) Certified Special Inspectors, International Code Council (ICC) structural steel and bolting inspectors as well as National Association of Corrosion Engineers (NACE) certified coating inspectors.

SAVIN ENGINEERS, P.C.

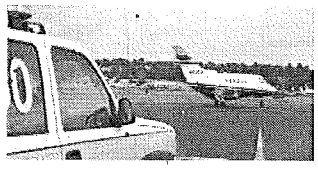
CONSTRUCTION MANAGEMENT SERVICES

- Construction Management
- QA Inspection
- Cost Estimation
- Shop Drawing Review
- Payment Processing
- Agency Coordination
- Public Participation
- Contract Modifications
- Personnel Training
- CPM Scheduling
- On-site Testing
- Proficiency in SAP system
- Maintenance & Protection of Traffic
- Federal Funding Documentation

We possess the demonstrated experience and expertise in providing construction management/inspection services for a broad spectrum of facilities. Currently, we have over 80 individuals assigned to construction projects in the New York/New Jersey area, including 12 at various Port Authority facilities. We have personnel who know PANYNJ facilities and whom the Port Authority knows and trusts.

As a prime consultant, we have provided construction management services for the Port Authority at Teterboro Airport, Stewart International Airport, Port Newark/Elizabeth, Port Ivory/Howland Hook, Port Authority Bus Terminal, Brooklyn Piers, Bathgate Industrial Park, PATH/Journal Square, JFK International Airport, Waterfront Corporate Center at Hoboken, World Trade Center PATH/HUB, George Washington Bridge and the Lincoln and Holland Tunnels. Some of our recent projects with the Port Authority include:

- **Construction Management Call-In Agreement, 2010-Present, PA# 410-10, New York Airports and Port Commerce Facilities**



As prime consultant, Savin is providing construction inspection for various projects including Stewart International Airport, PATH security program, Teterboro Airport, Port Newark, Port Ivory, and assisting the Port Authority on its "lessons learned" initiative for construction contracts.

- **Construction Management Call-In Agreement, 2007-2009, PA# 410-07-007, New York Airports and Port Commerce Facilities**
  As prime consultant, Savin is providing construction inspection for various projects including Stewart International Airport, PATH security program, Teterboro Airport, Port Newark, Port Ivory, and assisting the Port Authority on its "lessons learned" initiative for construction contracts.

- **Construction Management Call-In Agreement, 2004-2006, PA# 410-04-005, New York Airports and Port Commerce Facilities**
  As prime consultant, Savin is providing construction inspection for various projects including Jamaica AirTrain at JFK, La Guardia Airport, Port Newark/Elizabeth, Security Capital Program, and new container-rail transfer facility at Howland Hook.

- **Construction Management Call-In Agreement 2002-2006, PA# 410-02-003, Teterboro Airport**
  As Prime Consultant, Savin is providing complete construction management services throughout Teterboro Airport. Projects include Runway improvements, Taxiway improvements, navigational lighting, security fencing, drainage, utilities, sound proofing neighboring schools and overseeing tenant construction.

- **Performance of Expert Professional Construction Management Consultant Services for the World Trade Center Including the World Trade Center Transportation HUB-PA# PCP-05-002.**
  As subconsultant, Savin has provided construction management/inspection services associated with the PATH HUB including temporary shoring/bracing of the No. 1 & 9 Transit Tunnels, utility relocation and other improvements.

- **Performance of Expert Professional Contract Submittal/Request For Information Management Services as Requested on a Call In Basis During 2009- PA # 402-12-018**
  As a prime consultant, Savin is providing as needed staff for the submittal/ request for information management services.

Savins experience extends to nearly every facility operated by the Port Authority as shown in Figure 1.

Additional on call experience and specific project information including reference contacts follows.

Construction Management on a Call-In Basis - 2007, 2008, 2009

Description

Savin Engineers is providing "call-in" construction management services for numerous Port Authority Facilities. Services include but not limited to construction inspection, office engineering, cost estimating services, constructability reviews and CPM Scheduling. These services were performed for Stewart International Airport, Teterboro Airport, Howland Hook Marine Terminal, PATH/Journal Square, Port Newark and Hoboken Corporate Center. In addition Savin was selected under this contract to assist the Port Authority with its "lesson learned initiative". The projects completed under this initiative included; Lincoln Tunnel Contract LT-524, Red Garage at JFK and Terminal B at Newark Airport.

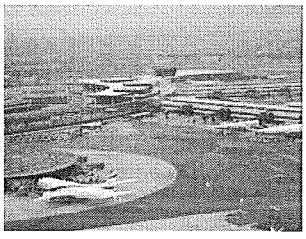
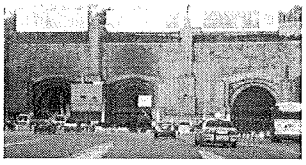
Lessons Learned Initiative

Description

As part of the M/WBE "Call-In" agreement, Savin was selected to act as the facilitator for the Port Authorities Lessons Learned Initiative. The initiative was established by the PANYNJ to improve the performance of construction contracts. Its basic approach is to obtain input from all involved parties on a construction project including but not necessarily limited to, contractor, subcontractors, facility, design division, materials division, construction management division, planning and program management subcontractors.





Key individuals from each party are interviewed utilizing a standard questionnaire in order to assess the project as well as the process. Once all parties have been interviewed, a summary review meeting is held and key recommendations/findings are developed, and a summary report prepared.

Thus far Savin has assisted the PANYNJ on 3 projects with this initiative:

- Lincoln Tunnel, Contract LT-524
- Red Garage at JFK, Contract JFK-134.100B
- Terminal B Improvements at Newark Airport, Contract EWR-434.070

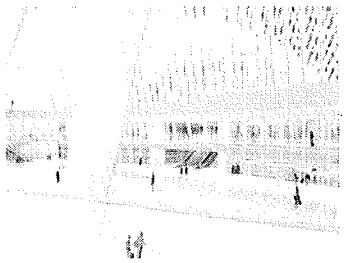
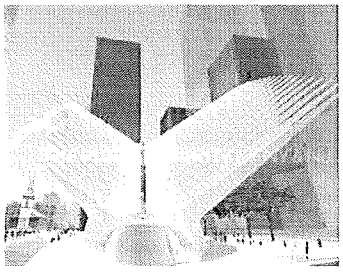
World Trade Center Transportation Hub

Description



Savin Engineers, P.C., as a subconsultant to the PB•URS Joint Venture, is providing construction management services for the new World Trade Center PATH Transportation Facility. The new Hub will consist of a state of the art, climate controlled, open building, which will be ADA compliant.



The project includes:

- Removal of existing structures and related excavation
- Restoration of platform stations
- Creation of a multi-level transit building
- Pedestrian connections
- Street entrances to the Hub

This project will greatly contribute to the recovery of Lower Manhattan by meeting the transportation needs of commuters, residents and visitors.

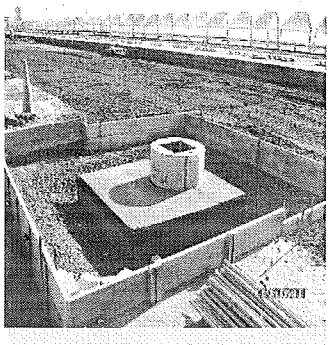
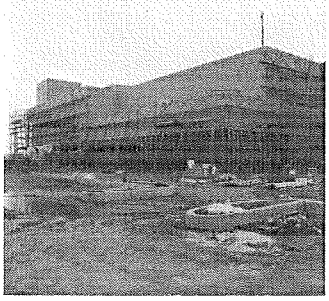
Experience of Firm

Section F





Haider Engineering P.C. is a consulting Engineering Firm, experienced in the field of Construction Management and Inspection Services, located in Farmingdale, NY with a branch office in Baldwin, NY. Haider Engineering, P.C. is a minority owned multi-discipline consulting engineering firm founded in 1990. Haider is a certified Minority and Disadvantaged Business Enterprise (DBE/MBE), certified as such by the New York State Governor's Office, NYSDOT and the NYC Department of Business Services. Haider Engineering P.C. has strong history, managing and providing comprehensive construction and engineering, inspection and construction support services to various government agencies. As a firm, it has directed about $500 Million worth of Construction projects for NYSDOT, NJDOT, TBTA, PANY&NJ, NYCDOT, NYCDDC, NYCHA, NYSTA & NYCDEP. Some of their recent Port Authority experience includes:

Performance of Expert Professional Construction Management Services (MBE/WBE) For New York Airport And Port Commerce Projects As Requested On A "Call In" Basis During 2007, 2008 And 2009 (PA# 410-07-002): Services performed included: Construction Inspection Services, Structural Steel, Structural Concrete, Asphalt and Concrete Paving, Painting of Structural Steel, Electrical, Mechanical; Construction Contract Administration; Constructability Review; Cost Engineering/Estimating. Task Assignments Includes: JFK, LaGuardia and Newark Liberty International Airports.

Performance Of Expert Professional Construction Management Services (MBE/WBE) For New York Airport And Port Commerce Projects As Requested On A "Call In" Basis During 2010, 2011 And 2012(PA# 410-11-016): Services to be performed include: Construction Inspection Services, Structural Steel, Structural Concrete, Asphalt and Concrete Paving, Painting of Structural Steel, Electrical, Mechanical; Construction Contract Administration; Constructability Review; Cost Engineering/Estimating. Task Assignments Includes: JFK, LaGuardia and Newark Liberty International Airports.

Performance of Expert Professional Construction Management Services (MBE/WBE) For New York Airport and Port Commerce Projects As Requested On a "Call-In" Basis During 2007, 2008 And 2009 (PA# 410-07-002): Services to be performed include: Construction Inspection Services, Structural Steel, Structural Concrete, Asphalt and Concrete Paving, Painting of Structural Steel, Electrical, Mechanical; Construction Contract Administration; Constructability Review; Cost Engineering/Estimating. Task Assignments Includes: JFK, LaGuardia and Newark Liberty International Airports.

Experience of Firm

Section F

Hudson Valley Engineering Associates, HVEA is a certified Disadvantaged Business Enterprise (DBE) and a certified Women-owned Business Enterprise (WBE). HVEA is also WBE Certified by PANYNJ and City of New York.

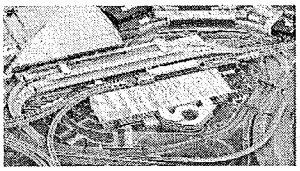
HVEA specializes in design and construction inspection of transportation infrastructure with offices located in Dutchess and Rockland Counties. Founded in 2002, the firm has evolved as a premier transportation firm in the region. HVEA has completed a wide variety of federal-aid local projects throughout the region with costs ranging from $0.650 to $66 million. Savin and HVEA have worked together on several construction management projects. Some of their recent Port Authority experience includes:

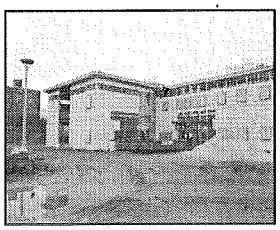
Stewart International Airport - Rehabilitation of Cargo Road and Parking Area for Building 2290

This Port Authority of New York and New Jersey project was started and completed November 2013. HVEA staff was responsible for the laboratory testing of subbase material followed by the on-site Nuclear Density Testing of subbase material and asphalt. HVEA staff tested the subbase by completing a modified proctor and obtained an optimal moisture percentage and density value to be referenced in the field. Subbase was then tested for compaction in the field using our laboratory acquired numbers. Approximately 970 tons of asphalt was laid down over the fresh subbase. Nuclear Density Testing was performed by HVEA staff on site for QC purposes. Port Authority of NY & NJ Materials Division staff was on hand to provide QA. PANYNJ staff will be responsible for the coring of the fresh asphalt.

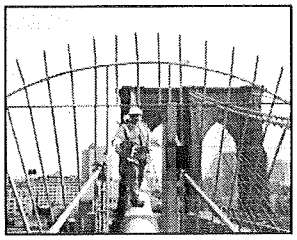
Goethals Bridge QA

The design-build project is a Public-Private partnership (P3) between the PANYNJ and NYNJ Link Partnership—a joint venture of Macquarie Infrastructure and Real Assets Inc. and Kiewit Development, with Parsons Transportation Group of New York as lead designer. HVEA will perform on-site testing of concrete, nuclear density testing of compacted fills, and a variety of laboratory services. We will also perform cross-hole sonic logging (CSL) of the drilled shaft foundations. The new 900-foot-long span will be located south of the existing structure, over the Arthur Kill, a channel separating New Jersey and Staten Island. Construction is expected to begin this year and will be finished in late 2017. The new span will have six 12-foot-wide lanes and 12-foot- wide shoulders and include a central strip wide enough to accommodate mass-transit service. A 10-foot-wide sidewalk and bike path will run along the northern edge of the New Jersey bound roadway.





The Construction, Bid-ability, and General Engineering Review process has to be thorough enough to make sure that costly errors are found and avoided before the contractor finds them during construction.



The following approach demonstrates how the Savin team will perform the required services and ensure the quality of the work product. Our approach addresses each of the tasks outlined in Item III: Description of Consultant Tasks in Attachment A.

CONSTRUCTABILITY, BIDABILITY, AND GENERAL ENGINEERING REVIEW

Savin Engineers will conduct an ongoing analyses of the constructability of designs during Design Development at the 50 to 60 percent phase of construction documents, and again at the 90 to 100 percent phase.

During the review at the Design Development/Stage II, our review primarily focuses on finding major constructability and coordination issues, along with checking preliminary code compliance resolutions. At the final Design and Contract Document Preparation/Stage III phase, Savin will perform a final cross check and coordination review of the plans and specifications.

The following constructability review services are provided:

- Review of all drawings and specifications, schedule, estimate, and sequencing.
- Return red-line drawings to assist A/E with corrections.
- Generate a list of questions, observations and recommendations.
- Provide detailed observations sorted by drawing/specification.
- Document all constructability comments in a log.
- Meet with appropriate parties to review detailed observations.
- A back-check to verify that observations were incorporated into the contract documents.

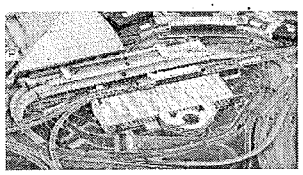
These tasks are accomplished by utilizing a **Five-Step Process**:

Step 1: Preparation

- Disciplines to be reviewed will be identified.
- Staff will be assigned to each discipline.
- A kick-off meeting will be scheduled and held.

Step 2: Review and Comment

- Discipline will be thoroughly reviewed, along with its applicable technical specification section.
- Work discipline will be compared to bid schedule.
- Ensure specs describe the work to be done and corroborate what is on the drawings and that the drawings correspond to the specs.



Savin's review addresses drawing discrepancies conflicting information, and design information that may result in inefficiencies and schedule delays during the construction process.

Finding the errors is only part of the solution - verification that the problems that were found have actually been resolved in the documents is crucial.

CONSTRUCTABILITY, BIDABILITY, AND GENERAL ENGINEERING REVIEW (cont.)

Step 2: Review and Comment (cont.)

- Ensure drawings logically lead from general information to precise details.
- Ensure all relevant existing conditions are clearly depicted and defined by location, size and include a description.
- Check all cross references by bubble or cut marks for a match.
- Review bid schedule concurrently with the drawings and spec sections.
- Verify bid schedule item description matches scope of work.
- Confirm pay modes (i.e. unit price, allowance, etc.) are appropriate.

Step 3: Final Check and Reproduction

- Re-read all comments to assure they are clear.
- Note: this information will be turned over to the designer and the owner after Step 4 has been completed.

Step 4: Spec Read

- A review meeting to discuss the bid documents with all stakeholders will be scheduled and facilitated by Savin; marked-up plans and specifications and/or spreadsheets will be handed over at the end of the meeting.

Step 5: Back-Check

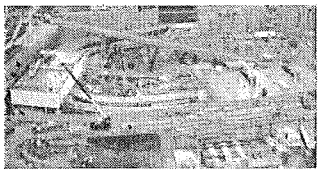
- Revised plans and specifications will be reviewed to determine which comments the designer has incorporated, how they were incorporated, and what elements were not incorporated.

Savin has provided constructability and bid-ability reviews to the following clients:

- NYCDEP (New York City Department of Environmental Protection)
- Newtown Creek Interim Upgrades
- North River Co-gen Facilities
- Crane Road Bridge Replacement
- 5 Upstate Watershed Bridges for NYDEC
- Woodland Viaduct Bridge Replacement

The individuals who perform this work are seasoned construction professionals and are selected based on their expertise. They include:

Hussein Elzoghby, P. E.	Structural/Mechanical
Joseph Fiteni, P. E.	General Construction
Robert Firneis, F.A.R.A.	Architectural/Civil
David Fredericks. P. E.	Electrical/Instrumental
Victor Frazita, P. E.	Transportation/Civil

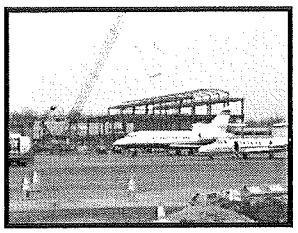


CONSTRUCTION STAGING

Savin Engineers will review and provide input and recommendations on how to maintain facility operations and minimize disruption and inconveniences to building users at those sites that are undergoing construction activities.

All submittals shall include a Construction Staging Plan which includes the site layout of temporary construction measures.

A construction staging site, generally located adjacent to the area under construction required to manage construction activities will be specified and designated by the architect during the preliminary stages of design. The temporary designated area of the staging for necessary construction related purposes, such as a construction trailer, construction equipment, a materials trailer, building materials and other related work uses, will be presented and reviewed with the Owner for approval. Fencing and access will be included on the proposed construction staging plan for review.



The main purpose is to identify the temporary construction measures that will be implemented to provide a safe work environment, and minimize disruption.

Criteria shall include, but not be limited to size, access, fencing, and impact on users. These impacts will include: multimodal (pedestrian, bicycle, motorized vehicles) circulation routes, proximity of adjacent activities, emergency vehicle access, trees and other major landscape material, and cost constraints as well as development opportunities in restoring the construction staging area back to its pre-construction condition including repairs to any damaged pavement, curbs, markings, or other public infrastructure components.

Items to be included in a Construction Staging Plan generally include, but are not limited to the following:

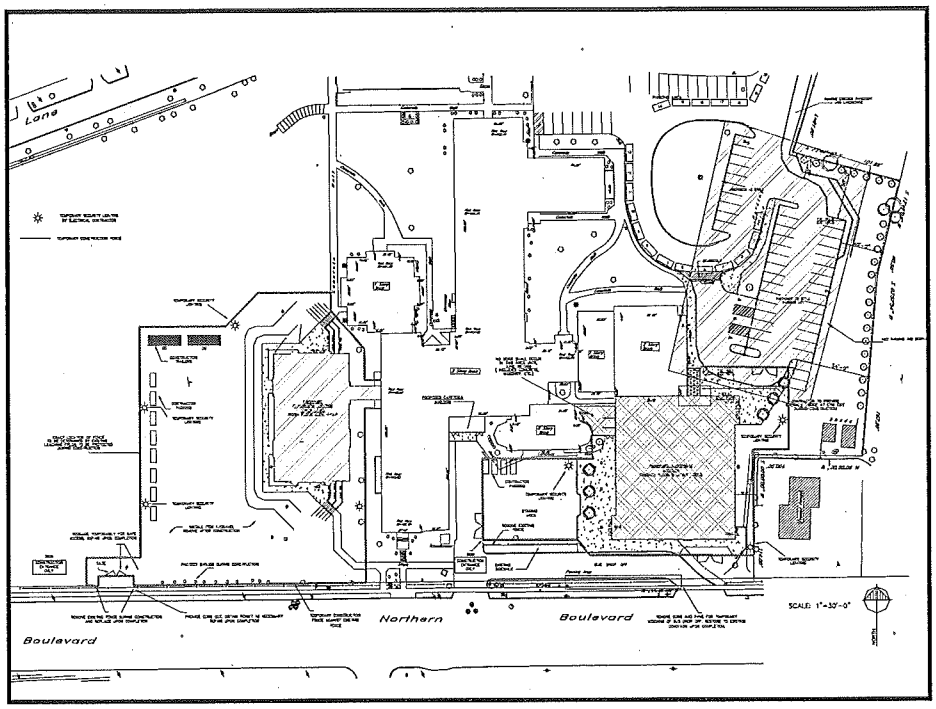
- Temporary Construction Fencing: A temporary construction fence may be installed along portions of the perimeter of a construction site which are not readily accessible to pedestrian traffic
- Construction Sign: Indicate the location of the sign which shall be secured to a barrier or temporary construction fence. The sign shall display the following verbiage:
  - "CONSTRUCTION SITE – NO TRESSPASSING"
  - The contractor's name and 24-hour emergency contact telephone number and,
  - The barrier and/or fence contractor's name and 24-hour emergency contact telephone number.

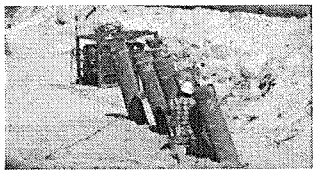
- *Work areas to perform the work will be limited.*
- *Work that will interfere with facility operation will not be scheduled without approval.*
- *All equipment will be properly stored at all times, including those times when no work is being performed at the site.*
- *Materials and equipment will be stored within the fenced area.*
- *Work hours will be coordinated with the Project Manger assigned to the site.*

CONSTRUCTION STAGING (cont.)

- Traffic Plan: Provide drawing or written narrative indicating proposed street paths to be used for movement of equipment and debris.
- Parking Plan: Provide drawing or written narrative indicating proposed parking areas to be used for parking for construction workers.
- Construction Sign
- Dumpster: Indicate size and location of dumpster to be used for construction debris.
- Construction Staging Area: Indicate location of construction staging areas, including the location of construction hoists, cranes, delivery areas and fabrication areas.
- Material Storage: Indicate location of area to be used for storage of construction materials to be incorporated into the work.
- Porta-Potty: Indicate the location of porta-potties.

Sample Construction Staging Plan





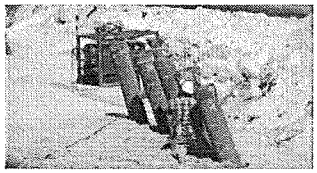
SCHEDULE DEVELOPMENT AND MONITORING

The Critical Path Method (CPM) schedule not only keeps the project on track, but is a powerful tool in avoiding construction delays and, if necessary, in formulating a claim against a defaulting contractor. The schedule is established during the post bid phase and is then updated monthly during the following phases. Savin's scheduling is separated as a task by our scheduler who can be at the site monthly and then updates the schedule. This serves as a check and balance against the activities in the field.

The schedule will identify the critical path and address staging, project interferences, facility operational restraints, and other requirements.

The steps we take include:

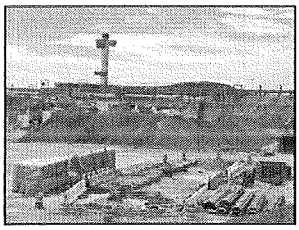
- Creation of a master project schedule itemizing tasks and durations for all Team members. This includes development of a detailed construction schedule for individual contracts.
  - Schedule will identify the critical path.
  - Schedule will address staging, project interferences, facility operational restraints, and other requirements.
  - Schedule will be updated regularly beginning at the receipt of bids.
  - Any/all problems that impact the schedule will be identified. Alternative solutions to minimize or eliminate any negative impact on the schedule will be recommended.
- Report based on our communication plan, adherence to the schedule.
- Recommend pre-bid materials in the schedule if the schedule is aggressive.
- Establish pre-bidder qualifications to be part of the specifications.
- Solicit bids in multiple bid packages beyond the four prime contractors allowing for decreased costs by saving General Contractor overhead and profit.
- Closely monitoring work in progress.
  - Contractor's schedules will be reviewed as received for consistency with contract requirements and appropriateness.
  - Comments and recommendations for schedule for approval/ disapproval will be provided when appropriate.
  - Regular monitoring of contractor schedules as construction progresses will be provided.



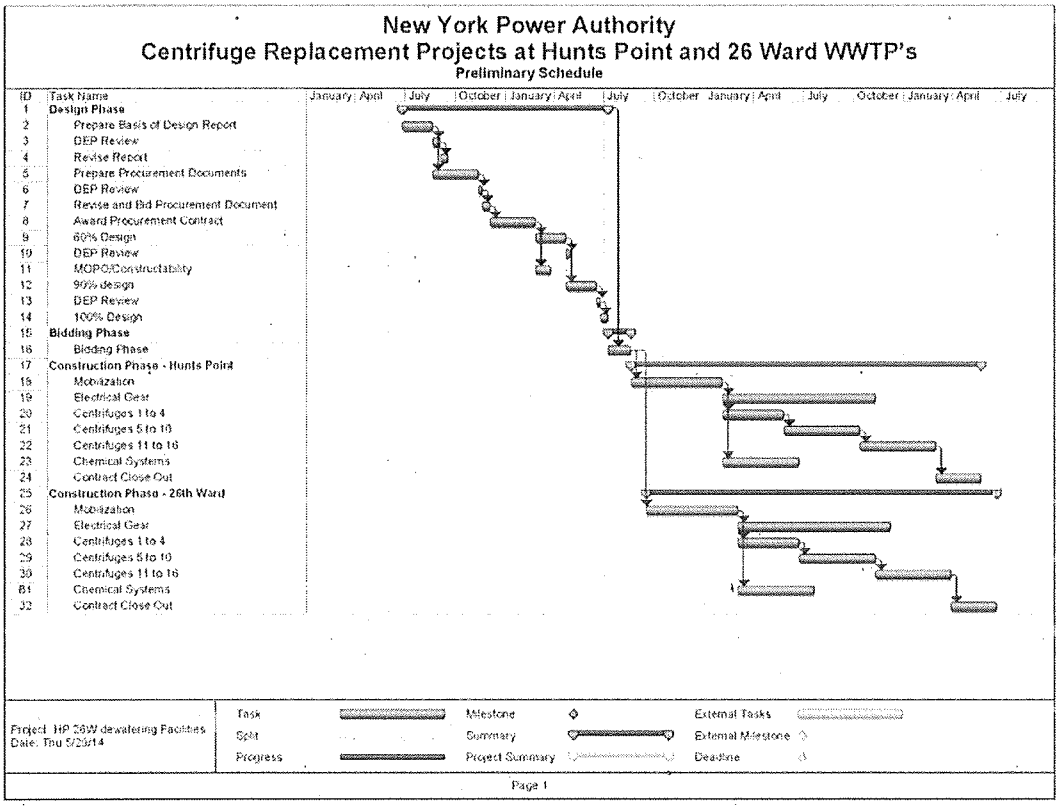
SCHEDULE DEVELOPMENT AND MONITORING (cont.)

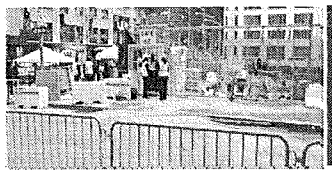
- Where contractor schedules are not in conformance with contract requirements, methods to accelerate the contractor's work to meet the requirements will be provided.

- Implement quality control plan.
- Secure all closeout documents.
- Coordinate training for all new equipment.
- Maintain cost records and assist with final reports.
- Provide final project report.



Savin has provided schedule analysis for the Port Authority on the following projects: Howland Hook Marine Terminal Teterboro Airport Newark Liberty International Airport.





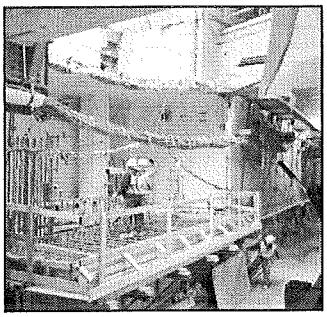
CONTRACT ADMINISTRATION

Contract administration procedures are essential to ensure effective project management.

Contract administration can be straightforward or complex, depending on the nature and size of the project. Administering a contract entails creating an administration plan, and then monitoring performance throughout the varied activities that occur during project execution.

Key contract administration activities include:

- Ensuring compliance with contract terms and conditions.
- Practicing effective communication and control.
- Managing contract changes, invoicing and payment.
- Resolving claims and disputes.



An organization's failure to fulfill its contractual obligations could have legal consequences.

PACC (Post Award Contract Changes)

During this process Savin will ensure that each party's performance meets contractual requirements. Because of the legal nature of the contractual relationship, Savin's project team is acutely aware of the legal implications of actions taken when administering the contract.

A Savin project team member will observe performance of contractual obligations. This individual, acutely aware of the legal and financial consequences of an action or failure to act, will take steps to ensure required actions are taken and prohibited actions are avoided. He/she will monitor Savin and the other party to ensure that both parties are keeping their obligations.

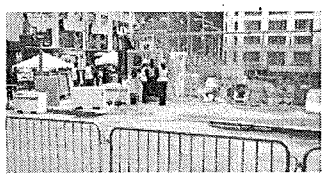
The post-award phase of the contract management process includes applying the appropriate contract administration and project management actions to the contractual relationships and integrating the output from these into the general management of the project.

Change Order Resolution and Claims

Savin Engineers endeavors to hold to a "no change order policy" exclusive of Owner driven scope changes. Holding the line on project costs will allow the Authority use the funds more effectively elsewhere.

This goal of **Savin Engineers**, results in change orders in the value of 1.5% – 2% of The project costs. We are able to meet this by implementing the following:

- Detailed plan reviews prior to bid by all disciplines.
- Include specific cost allowances as part of base bids.
- Analyze requests for change orders.



CONTRACT ADMINISTRATION (cont.)

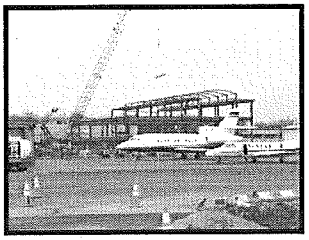
Time and Materials

Savin will monitor and process all contracts for time and materials. All payables and receivables for the job will be tracked and entered. Invoices will be computed, reviewed, and job cost records will be edited, if necessary.

Payment Applications

As a method of controlling what items or materials have been provided by the contractor, Savin will utilize the application for payment to identify and present the method on how a contractor will be paid. This will include services or items that are being incorporated or jobs being executed under the contractor's specific contract agreement. It is generally presented as a list with the unit price of each item and the quantities of product/material being furnished. Savin will facilitate the calculation and documentation of progress payments where the basis of payment is a guaranteed maximum price and where the contract price is a lump sum. Savin's payment application process also includes the Schedule of Values, and Schedules 2 and 3.

An application for payment is a valuable tool to expedite payment and minimize the possibility of error.

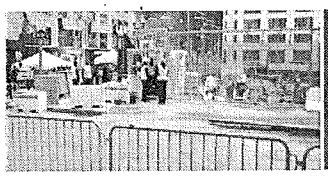


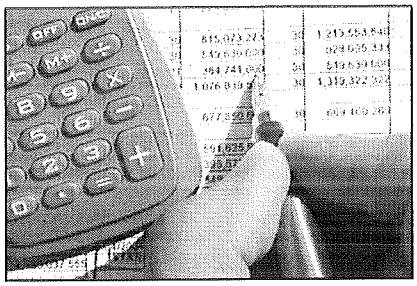
Analysis of Contractor Claims

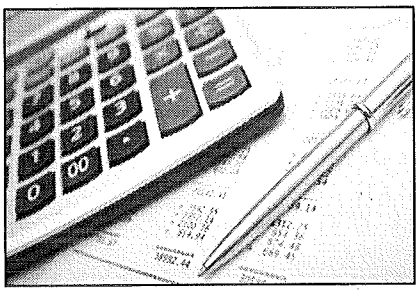
Savin Engineers, P.C. is providing claim analysis services for the Port Authority of New York and New Jersey's project "EWR264.003 Newark Liberty International Airport – Terminal B Modernization Program". The project scope includes the Lower Level Expansion, Vertical Circulation and Electrical Upgrades at Terminal B.

The analysis includes the review and response to the General Contractor's claim for damages, totaling over $7 million, submitted in three (3) parts: the Extended General Conditions claim seeks compensation for additional time; the Loss of Productivity claim seeks to recover costs expended for labor due to delays; and, the Remote Parking includes reimbursement for off-site parking and associated Loss of Productivity costs to shuttle employees.

The claim analysis report includes evaluation of the critical path progress schedules and project records to assign responsibilities for delays and calculate the cost of delays. The contractor's use of the Measured Mile method to calculate Loss of Productivity is challenged and an alternative customized formula was employed.







CONTRACT ADMINISTRATION

Reporting & Document Control

Since control of the contractors depends largely upon the ability to accurately track change orders, requisitions, and payments, our project accounting department tracks costs from the pre-construction phase until project closeout. Requests for payment, previous payment amounts and approved change orders are cross-checked before being signed by the designer. Payment amounts are recommended, open balances and retainages are reported, and finally, job specific, contractor specific lien releases are provided. An Executive Summary keeps the Port authority Team apprised of the financial status of the project on a bi-monthly basis. Monthly reports are customized as needed.

The result is a comprehensive report. Our office tracks the following contractor Requirements: Contract, performance bonds, payment and labor bonds and Approved schedules of values, list of vendors/subcontractors, safety Submissions, product submittals and shop drawings. Especially important, certificates of insurance are continually monitored to assure that the Port Authority is protected.

Meetings

Savin personnel attend and facilitate project team, construction, Owner, and public meetings as required and/or requested.

Savin utilizes three cost estimating systems to obtain construction costs with a customized program database by Wintrack:

- *Means Database Software* Means data, adjusted by region and updated periodically, is utilized to produce unit costs of typical and usual items.

- *Savin Unit Costs Database* Savin maintains unit cost from recently bid jobs and applies these in estimating projects of a similar nature and/or geographic location

- *Costs for Specialties* Each project contains specialty items. Unit costs for such are obtained through contact with the manufacturer of the item and installers

COST ENGINEERING/ESTIMATING SERVICES

The project's budget will be established by the Authority's team. It is important that the budget be maintained. This is achieved by monitoring the budget during the pre-construction and construction phases. The first tool of monitoring of the budget during the pre-construction phase is via cost estimating as described below.

The purpose of cost estimating is to provide the Owner with budget confirmation by monitoring construction cost trends to achieve highly competitive bids within the established budget. This is accomplished by:

- Performing detailed takeoffs and pricing.
- Preparing estimate reports for Owner review.
- Recommending alternate bid packages and general condition changes if needed, to protect the Owner.

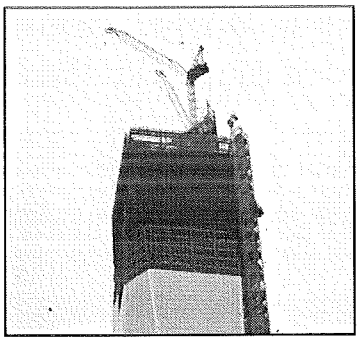
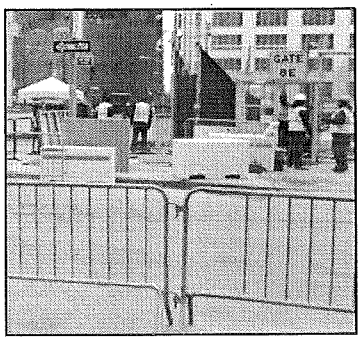
RESOURCES

Savin will ensure that the Port Authority has all the resources necessary to successfully complete the work on time and within budget.

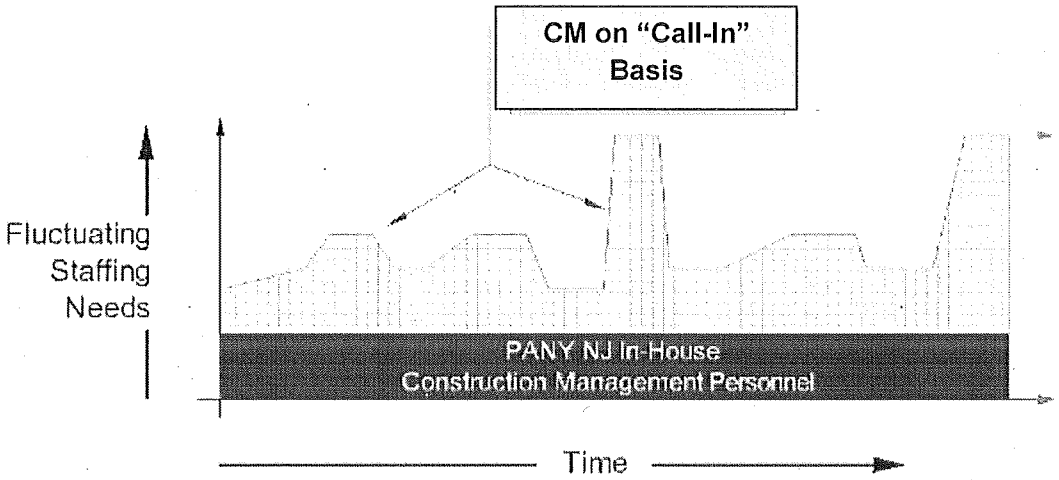




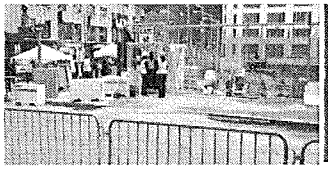
PROJECT UNDERSTANDING

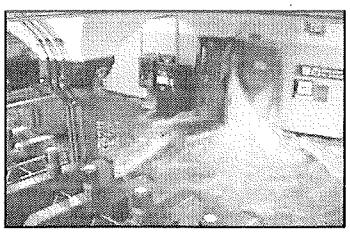
In order to supplement and support its in-house engineering and construction management staff on various capital projects, the Port Authority has developed professional construction management services on a "call-in" or as-needed type agreement. This means that if a Port Authority Engineer of Construction or Resident Engineer is in need of inspectors, administrators or cost estimators to augment in-house resources, he may request them under a "call-in" type agreement.

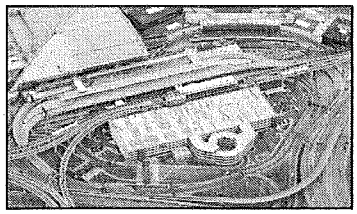
As delineated below, in order to be successful the consultant must have the ability to staff up (and down) to continually provide the Port Authority with access to the particular technical staff expertise it needs to help it efficiently and cost effectively manage the constantly changing project management workload.



For staff at Port Authority facilities, it is the consultant's role to provide the Port Authority with resumes of quality candidates, schedule interviews and set up the individual(s) at the respective site in as expeditious a manner as possible. It is also the consultant's role to ensure that field staff has the equipment and training required, that their direct rates are within the rates established in the contract, that they are monitored by the firm's Project Manager and that they adhere to Port Authority procedures.







For tasks performed at consultant offices or other specialty tasks such as scheduling or cost estimating, it is the role of the Consultant to assign staff to the task quickly, identify any additional information needed to perform the task and complete it proficiently. Savin has performed numerous such tasks for the Authority, as outlined below:

- Schedule Analysis of Howland Hook Marine Terminal Open Area Paving & Utilities Project.
- Cost estimating for the Jackson Avenue School near Teterboro Airport.
- Assistance with the Port Authority's "Lesson Learned Initiative" including reports for the following projects:
  - Lincoln Tunnel, LT-524
  - Red Garage, JFK-134.100B
  - Terminal B, EWR-434.070
- Claims assistance for the Hackensack River Lift Bridge Project. Assistance with Post Super Storm Sandy Cleanup at Exchange Place, Hoboken and World Trade Center PATH Stations.

PROJECT ORGANIZATION

Having provided professional services in connection with several "call-in" type projects, including for the Port Authority, we have learned how best to structure ourselves so as to meet the needs of the project and the Port Authority's expectations. We believe that it is important to have a single point of contact between the Authority and the Savin team. For this project, this individual will be Hussein M. Elzoghby, P.E.

With over 29 years of experience, Mr. Elzoghby has been the project manager for nearly all of Savin's "call-in" type projects and all projects for the Port Authority. He will receive all Authority requests for services and manage the Team's extensive and growing pool of construction management staff to provide the most suitable candidates for tasks requiring staffing. For other tasks such as constructability/bid-ability reviews, scheduling or estimating, he will identify the most suitable

PROJECT ORGANIZATION

in-house staff member to perform the requested task in a timely fashion. He will follow up with the individual(s) requesting the task to ensure it was completed satisfactorily. He will be available to the Port Authority seven days a week, and 24 hours a day if necessary. In the event that he is out for an extended duration, a backup project manager will be designated. He has also been intimately involved in all of Savin's assignments including claims analyses, schedule analyses.

REQUEST FOR PROPOSALS FOR THE PERFORMANCE OF EXPERT PROFESSIONAL CONSTRUCTION MANAGEMENT AND INSPECTION SERVICES AS REQUESTED ON A "CALL-IN" BASIS DURING 2015 THROUGH 2018 (RFP #39247)

AGREEMENT ON TERMS OF DISCUSSION

The Port Authority's receipt or discussion of any information (including information contained in any proposal, vendor qualification, ideas, models, drawings, or other material communicated or exhibited by us or on our behalf) shall not impose any obligations whatsoever on the Port Authority or entitle us to any compensation therefor (except to the extent specifically provided in such written agreement, if any, as may be entered into between the Port Authority and us). Any such information given to the Port Authority before, with or after this Agreement on Terms of Discussion ("Agreement"), either orally or in writing, is not given in confidence. Such information may be used, or disclosed to others, for any purpose at any time without obligation or compensation and without liability of any kind whatsoever. Any statement which is inconsistent with this Agreement, whether made as part of or in connection with this Agreement, shall be void and of no effect. This Agreement is not intended, however, to grant to the Port Authority rights to any matter, which is the subject of valid existing or potential letters patent. The foregoing applies to any information, whether or not given at the invitation of the Authority.

Notwithstanding the above, and without assuming any legal obligation, the Port Authority will employ reasonable efforts, subject to the provisions of the Port Authority Freedom of Information Code and Procedure adopted by the Port Authority's Board of Commissioners on March 29, 2012, which may be found on the Port Authority website at: http://www.panynj.gov/corporate-information/pdf/foi-code.pdf, not to disclose to any competitor of the undersigned, information submitted which are trade secrets or is maintained for the regulation or supervision of commercial enterprise which, if disclosed, would cause injury to the competitive position of the enterprise, and which information is identified by the Proposer as proprietary, as more fully set forth in the FOI Code, which may be disclosed by the undersigned to the Port Authority as part of or in connection with the submission of a proposal.

The Port Authority of New York and New Jersey
Two Montgomery Street, 3rd Floor
Jersey City, New Jersey 07302
Attention: RFP Custodian

RE: Proposal for the Performance of Expert Professional Construction Management and Inspection Services as Requested on a "Call-In" Basis During 2015 Through 2018

Parsons Brinckerhoff (PB) is pleased to present our proposal to The Port Authority of New York and New Jersey (Authority) to provide Expert Professional Construction Management and Related Technical Services on a "Call-in" basis during 2015-2018. PB is a world leader in the engineering, design and construction of public facilities. PB is recognized for providing exceptional professional construction management, program management and engineering services to federal, state and local agencies, as well as private enterprises. Our firm is proud of our extraordinary record of performance over the past 129 years of continuous service on some of the world's most challenging projects.

The following summary clearly demonstrates that PB and its team far exceed the minimum requirements established in the RFP.

A. Firm Experience

A1. PB, whose corporate headquarters office is located in the heart of New York City, also has principal offices in Newark and Lawrenceville, New Jersey. Our team members also have offices in the New York/New Jersey Metropolitan Area. The PB Team vastly exceeds the minimum staff requirements established in the RFP. The following table displays the locally available professional construction management and inspection resources of PB and our subconsultants.

	PB	Hirani/MTL	JCMS	LPE	ManTech	
Discipline	Number of Employees					Total
Construction Management	98	7	8	16	2	131
Construction Inspection	120	18	16	9	15	178

A2. PB's Certificate of Authorization to practice Professional Engineering is attached.

B. Staff Experience

B1. Our team is highly experienced in performing construction inspection services in all disciplines including, Civil, Structural, Electrical and Mechanical Engineering. The following is a small sampling of the skilled staff that fulfill the Authority technical certification requirements:

1. Engineers/architects licensed in the states of NY and/or NJ	2. ACI Concrete Construction Special Inspectors	3. ICC Certified Structural Steel and Bolting Inspectors	4. NACE Level 1 Coatings Certified
R. Moran, PE	S. Latus	W. Jaramillo	I.Parbhunath, NACE
G. Colban, PE	W. Grooms	S. Parajuli	J. Marecki, NACE
T. Marko, PE	G. Atsalis	H. Kim	G. Castro, PE, NACE
M. Markowitz, PE	M. Kashif Syed	D. Upadhyaya	
J. Prokop, PE	M. Neil	M. Ninnisai	
P. Pan, PE	D. Ridulfo	L. Ford	
R. Antonios, PE	M. Petrescu	M. Neil	
G. Castro, PE	O. Olatunbosun	D. Ridulfo	
M. Perez, PE	W. Jaramillo	R. Stribling	
A. Zajac, PE	D. Guilas		
M. Hanna, PE	N. Chintanippu		
I. Parbhunath, PE	W. Castaneda		
L. Ford, PE	S. Pereira		
Y. Huang, PE	M. Pantke		
J. Higgins, PE	I. Barnett		
S. Latus, PE			

Having served the Authority under these same terms continuously for the past 10 years, we are confident that the PB team is ideally suited to manage this call-in agreement. We look forward to the opportunity to continue to serve the Authority in the years 2015 thru 2018. As the Parsons Brinckerhoff National Director of Construction Services, I offer my personal commitment that we will deliver the resources, technical expertise and management skill that is needed to make every task assignment an unconditional success.

If you have any questions or require any additional information, please do not hesitate to contact me at 212-465-5127 or at NunesG@pbworld.com.

Sincerely,
PARSONS BRINCKERHOFF, INC.

Garry E. Nunes
National Director of Construction Services
Senior Vice President

Attention: Ms. Krista A. Miller, Marketing Coordinator

Subject: Disclosure of Proprietary Information

Reference: RFP Number 39247

Dear Ms. Miller:

After careful consideration, ManTech Advanced Systems International, Inc. (ManTech) has deemed no escalation necessary to the multiplier and proposes the same 2.15 Multiplier for this proposal period. Parson Brinckerhoff has requested that ManTech provide our approved indirect financial information, which ManTech considers this information to be of a sensitive and proprietary nature and will not be able to release to PB. ManTech is willing to provide this proprietary financial information directly to the Government upon written request. The Government can contact the undersigned at (703) 814-4302 or via email at Virgina.Manning@ManTech.com or Ms. Mary Pat Pope at (301) 862-7415 or via email at MaryPat.Pope@ManTech.com.

Sincerely,

MANTECH ADVANCED SYSTEMS INTERNATIONAL, INC.

Virginia Manning
Contracts Supervisor

E. Resumes

Parsons Brinckerhoff has assembled a team of experienced construction management and inspection specialists, cost estimators, schedulers, and contract administrators to provide ample resources to meet the staffing requirements outlined in the Request for Proposals. With more than 1,200 staff located in the New York/New Jersey metropolitan area, we are able to respond quickly to task-order requests, mobilize rapidly when assigned to a specific task, and provide expedited services to satisfy Port Authority objectives for any task assignment. Please see the organization chart on the following page.

Gerry Chi
Project Manager

Gerry Chi has extensive experience in planning, design, management, operations and maintenance, and condition auditing of physical plants for transit maintenance facilities, bridges and tunnels, educational facilities, commercial buildings, industrial facilities, power facilities, and municipal properties. Gerry has served as project executive, project manager, deputy project manager, and discipline leader for a number of construction management/inspection on-call, as-needed services contracts for agencies throughout the New York/New Jersey metropolitan area, including the Port Authority, New York State Office of General Services, and New York City Transit, among others. He has a proven record of managing projects, supervising multidisciplinary operations and completing projects under budget and within schedule and scope. He has performed design and construction management for these facilities as well as comprehensive management, staffing, and workflow analysis for maintenance operation and capital improvement programs. His knowledge of design and construction of mechanical, architectural, civil/structural, electrical, and environmental systems provides a broad base of experience that he will apply to all task-orders assigned to the Parsons Brinckerhoff Team under the Federally Funded Storm Resiliency contract.

Highlights

Firm: Parsons Brinckerhoff

Years of Experience: 28

Education: M.S., Industrial and Operation Management, University of Michigan, 1986; M.S., Mechanical Engineering, University of Michigan, 1985; B.S., Mechanical Engineering, Fung Chia University, Taiwan, 1982

Professional Affiliations:

American Society of Mechanical Engineers; International Society for Pharmaceutical Engineering, Construction Management Association of America

Port Authority of New York and New Jersey (PANYNJ) CM Call-In Services Contract, New York/New Jersey: project manager responsible for assessing task-order requirements and assigning construction managers and inspectors to work with Port Authority staff on projects for rehabilitation, renovation and construction of the Port Authority's rail, aviation, bus, and tunnel and bridge facilities. Gerry manages the Parsons Brinckerhoff Team's staff that provides management, inspection and contract administration of civil, structural, mechanical, and electrical construction activities at the Authority's facilities.

New York State Office of General Services (NYS OGS) Construction Management Program, New York: on three consecutive task-order contracts for the OGS, Gerry has served as downstate manager for coordinating task-order requirements with OGS, assigning staff to meet task-order project requirements, and managing the performance and activities of all task-order teams. He coordinates with OGS managers to ensure that capable staffs are assigned to the needed projects and manages them to ensure performance to OGS expectations.

New York City School Construction Authority (SCA), New York City: project executive for supplying and managing project officers and staff to work with the SCA on task-order projects for construction management and inspection of new construction and rehabilitation of schools and support facilities as part of the Department of Education's capital improvement program. Gerry

has managed teams on three consecutive 3-year task-order contracts with the SCA, which has involved assigning more than 60 construction managers to school construction projects in all five boroughs.

General Service Administration (GSA) Region 2 Construction Quality Management Services, Northeast United States: project executive for this task-order contract with GSA, which involved construction/renovation of spaces for the Department of Homeland Security in various locations in the New York City area and space alterations projects at 26 Federal Plaza, the FBI Building in Newark, and other projects in New York City, New Jersey, and other cities throughout the Northeast.

Port Authority Trans Hudson (PATH) Main Repair Facility, Harrison, New Jersey: deputy project manager responsible for the development of the maintenance concept, maintenance routine, report scheme, master equipment list and spare parts concept for this new transit vehicle repair and maintenance facility. Mr. Chi also assisted in the development of a plan for routine and overhaul maintenance.

Port Authority Staten Island Bridges Physical Plan Investment Plan, New York City: project manager responsible for condition assessment survey; financial analysis; and development of cost estimates, maintenance management plan, and implementation plan for three crossings and support facilities in Staten Island. This plan is the first step toward asset management, which is the foundation of sound investment planning.

New York City Transit Electronic Security System (ESS) Program, New York: serves as task-order manager under CM-1409 for construction management services for the installation of security monitoring equipment at NYCT's 51st Street/Lexington Avenue and 74th Street/Roosevelt Avenue subway stations.

City University of New York (CUNY) Condition Assessment Project, New York: project manager responsible for condition assessment survey, cost estimates, probable cause and solution analysis, and preparation of reports for 49 educational facilities on two campuses and utilities on five campuses totalling 3.6 million square feet. The project involved structural, mechanical, and electrical disciplines.

Garry Nunes
Principal-In-Charge

Highlights

Firm: Parsons Brinckerhoff

Years of Experience: 40

Education: B.S., Civil Engineering, Worcester Polytechnic Institute

Garry Nunes has four decades of proven successful experience in the construction industry. He is a Senior Vice President of Parsons Brinckerhoff and the firm's National Director of Construction Services. In this role, he has served as Project Executive and Principal-in-Charge on numerous construction management projects, including the firm's largest construction services projects in the New York City area – Second Avenue Subway, Fulton Street Transit Center, New Jersey Turnpike Widening, and the Water Siphon Replacement Project to name just a few. He has an extensive track record of success in providing program management, construction management, resident engineering, inspection and related construction services to federal, state and local agencies as well as private business clients. Garry will ensure that our Project Manager Gerry Chi has all the resources necessary to successfully meet all task-order project requirements and will meet periodically with Port Authority management to assess the Parsons Brinckerhoff team's performance.

Port Authority Trans-Hudson (PATH) Main Repair Facility, PANYNJ: as construction manager, responsible for providing construction management services to the PANYNJ for construction of PATH's $205 million Main Repair Facility and Yard. The 207,000-square-foot (19,231-square-meter), state-of-the-art maintenance facility and yard equipped PATH with complete inspection, maintenance, overhaul and storage capabilities for its entire fleet of 450 passenger and work rail cars. Mr. Nunes supervised the field construction staff of 30 engineers and supervisors responsible for project management, resident engineering, office engineering, contracts administration, planning, scheduling, cost-control, claims mitigation and construction inspection. He successfully integrated the work of seven prime construction contractors and multiple subcontractors, through detailed construction staging on a fast-track construction schedule. The project was completed on time and below the original budget.

Various Projects, New York/New Jersey: Garry has served in increasingly responsible management positions where he has managed the firm's staff responsible for providing construction management, resident engineering, construction inspection, and other related services on numerous projects. He also served in similar roles with other firms prior to joining Parsons Brinckerhoff. Projects have involved highways, bridges, tunnels, airports, rail facilities, schools, higher education facilities, psychiatric centers, correctional facilities, hospitals and other facilities. Representative major projects, for which he has served as principal in charge include:

- Second Avenue Subway – Phase I, New York City
- World Trade Center Transportation Hub and Site Projects, New York City
- Fulton Street Transit Center , New York City

- Triborough Bridge Randalls Island and Wards Island Viaduct Rehabilitation, New York City
- Brooklyn Queens Expressway Reconstruction , Brooklyn/Queens, New York
- Water Siphon Replacement Project, Brooklyn/Staten Island, New York
- NYCT Atlantic Avenue Terminal, Brooklyn, New York
- Roslyn Viaduct Replacement , Nassau County, New York
- NJ Turnpike Widening, Interchanges 6-9, New Jersey
- Newark Liberty International Airport CM Services, New Jersey
- Jersey City Abbott Schools PM/CM, New Jersey
- Route 52 Reconstruction , New Jersey
- Driscoll Bridge Deck Replacement, New Jersey
- Morrisville Yard Expansion and Wheel Truing Facility, Morrisville, PA
- Southern Bridges Widening, New Jersey

Ray Moran, PE
Resident Engineer

Ray Moran is an experienced professional engineer/project manager at Parsons Brinckerhoff with a background in mechanical and civil engineering as well as construction management. His responsibilities include managing a staff of engineers and technicians, performing constructability and design review, implementing field design changes, performing inspection, performing claims defense, negotiating change orders, processing and approving contractor pay requests, project close-out, monthly status reports, procurement management, invoicing, and proofing of mechanical and civil plans.

Highlights

Firm: Parsons Brinckerhoff

Years of Experience: 19

Education: Ph.D. Candidate, Civil Engineering and Engineering Management, Columbia University, expected 2014; M.S., Civil Engineering & Engineering Management, Columbia University; B.S., Mechanical Engineering, Columbia University

Professional Licenses:

New York, 2004 (#[redacted];
New Jersey, 2005 ([redacted])

Third Avenue Bridge Reconstruction, New York City: project manager and resident engineer in charge of swing span acceptance testing/commissioning for the new Third Avenue Bridge and completion of all contract work with a staff of up to 15 employees. Onsite activities included six stages of work for the flanking spans, a temporary bridge, new rest piers and center pivot pier, reconstruction of the ramps on both sides of the bridge, control house, installation of submarine cable in the Harlem River for control and power, and a number of other amenities. In addition, he supervised the installation of 6-foot drilled shafts, 2-foot pipe piles and H-piles. He coordinated technical RFIs among the contractor, designer, resident engineering staff and client, negotiated and processed contract change orders, and verified and approved monthly payment requisitions. This project required coordination with various agencies including NYCDOT, NYSDOT, NYCDEP, NYSDEC, U.S. Army Corps of Engineers, U.S. Coast Guard, Con Edison, Verizon, CSX Railroad and OCMC. Ray has also been instrumental in successfully defending NYCDOT in claims made by the contractor through the dispute resolution process.

New Jersey Turnpike Widening Program Exits 6 Through 9, New Jersey: Parsons Brinckerhoff's project manager and a lead constructability reviewer on this project. The New Jersey Turnpike Authority (NJTA) has planned a $2.7 billion program to widen the existing New Jersey turnpike to 12 lanes from the existing 6 and 10 lane configurations. The project consists of over 35 miles (56 kilometers) of widened highway with 3 complex interchanges and 28 bridges over the turnpike. As constructability consultant, Ray reviewed the project estimate and schedule, developed contract packages, performed high level constructability reviews, and assessed the construction contractor and SBE capabilities within the state.

I-287 Viaduct Replacements, Westchester County, New York: Ray served as senior civil and structural inspector for the replacement of the Saw Mill River and Bronx River viaducts and associated approach roadways. Ray provided inspection for all elements of the project including erection and tensioning of precast concrete deck panels on steel tub girders mounted on post

tensioned precast concrete piers. Ray also assisted with the field office engineering, scheduling, and estimating. These 8-lane viaducts, part of the Cross Westchester Expressway, were demolished and replaced due to the demand for enhanced vehicular capacity and safety. The project also consisted of removed old foundation elements that conflict with the new, mainline approach modifications, enhancement of several access ramps, construction of a bike trail and an adjacent parking facility, and construction of noise barriers and retaining walls. The contract incorporated A+B bidding and lane rental charges. Much of the work was performed at night and all work was accomplished under active traffic.

Stamford Rail Yard, Stamford, Connecticut: office engineer responsible for $33 million rehabilitation of an existing Metro-North rail yard and project close out. This project included the removal and/or realignment of the existing catenary and tracks, as well as addition of new tracks and catenary on a 13-acre site, remediation of soils containing PCB's and hydrocarbon wastes, and construction of a new 57,000-square-foot rail equipment maintenance facility. All work was performed while keeping the rail yard in operation to minimize impact on Metro-North. He prepared monthly contractor estimates and compiled construction orders for all contract revisions. He prepared final close-out documents and submitted a final construction report. He maintained various field information and project logs as well as tracked item payments, subcontractors, trainees and equipment according to state and federal auditors. Ray compiled packages for state approval, helped estimate extra work items, prepared progress meeting minutes and assisted on plans and specifications interpretation. He also compiled delivery ticket totals for tracking and payment of bituminous as well as reviewed inspector reports and created invoices from work monitored by the consultant.

Ben Sawyer Bridge Reconstruction, South Carolina: off-site resident engineer in charge of the fabrication of all swing span mechanical, electrical and structural steel components on this $30 million movable bridge replacement for SCDOT. The design-build contractor is currently in the shop drawing phase and he is providing review and comments on the submittals. This fast tracked project is scheduled to complete the replacement of the swing span and approached within 12 months. Fabrication is the critical long lead time activity for successful completion of this vital project.

George Colban, PE
Resident Engineer

Highlights

Firm: Parsons Brinckerhoff

Years of Experience: 38

Education: B.S., Electrical Engineering, Northeastern University, Boston, Massachusetts, 1972

Additional Studies: Engineering Project Management; Construction Law; Defending Contract Claims; Presentation Skills; Federal Transit Administration Project Manager Workshop; Occupational Safety and Health Administration Safety Training

Professional Licenses:

Professional Engineer: New Jersey, 1992 [redacted]; New York, 1988 ([redacted]

George Colban has nearly four decades of experience in engineering, management, and construction in the transportation, infrastructure, and power industries. His diverse background has included positions and responsibilities in executive management, program/project management, construction management, engineering, and marketing/business development. He possesses technical expertise and sound judgment, and has developed client relationships based on trust and integrity, established through timely and cost-effective project execution as well as an understanding of clients' needs in both the public and private sectors. He is experienced in management of multiyear capital programs and monitoring program scopes, budgets and schedules with the goal of advancing the client's objectives and priorities. George is effective in assessing staff requirements and capabilities, managing workload and providing support as necessary. He is also familiar with the political arena that shapes the transportation industry and has particular expertise in the New York Tri-state region.

Port Authority Security Program Management Services on an On-Call Basis, New York and New Jersey: project executive providing expert professional program management services for the Port Authority's 5-year, $500M Security Capital Program. Working directly with Authority personnel, he is responsible for all consultant activity as well as managing, coordinating, scheduling and monitoring the design, systems integration and construction phases of the agency's 2003-2007 Security Capital Program. Program elements include asset strengthening at Port Authority facilities including airports, bridges, tunnels, marine terminals and transit rail; operations and Security Command and Communications centers, intercommunication and public address systems; multi-technology access credentials and integrated CCTV; and integrated perimeter security, including fencing, barriers, detection, deterrent/notification/apprehension assistance technologies. He is also in charge of developing and implementing project procedures and control systems to allow PANYNJ managers to advance the Security Program forward in a coordinated fashion.

AirTrain JFK, New York: deputy project manager responsible for the engineering management for the $400M rehabilitation of LIRR's Jamaica Station and the intermodal aspects of the AirTrain Jamaica Station with connections to the LIRR, NYCT Sutphin Blvd. Station, and MTA and local bus routes. His responsibilities included the management of design preparation and engineering support for Jamaica Station construction encompassing all engineering disciplines and LIRR systems. These systems included electrical distribution, lighting, fire protection, CCTV-security, public address, Solari message boards, LIRR TVMs, elevators/ escalators, telephone and

communications. In this role George was the liaison between Port Authority engineering, LIRR, NYCT and the contractor to ensure that design reflected the requirements of the LIRR, NYCT and local community groups. He was involved in daily interaction with LIRR operating personnel to facilitate force account activities and systems design.

Metro-North Railroad (MNR) - Capital Engineering, New York: assistant director of construction management and project manager responsible for the execution, monitoring, and control of over $400 million in capital construction projects undertaken by MNR. He managed all administrative and technical functions associated with directing a staff of 25 MNR construction professionals as well as consultant personnel, who monitored contractor performance and safety and quality programs. George was also involved in all construction activities, including schedule control, claim review and negotiation, compliance with specifications, and constructability reviews, including value engineering. He interfaced extensively with MNR operating personnel developing force account budgets, schedules and monitoring performance against project scope.

Various Projects, New York City: office manager responsible for managing a staff of 18 senior professionals directly responsible to the MTA Board for oversight of the $15 billion MTA capital improvement program. As an independent engineering consultant, he provided technical reports to the board and monitored the management and execution of the program and capital projects by the five operating entities of the MTA. Typical assignments included:

Revitalization of Grand Central Terminal: provided project oversight early on in this project. George reviewed the management structure and made recommendations that were instrumental in refocusing and redefining the contractual relationships of the involved parties.

East Side Access: during the initial stages of this project, George, as a member of the oversight team, assisted in organizing and developing a framework for the project, as well as in defining specific organizational responsibilities and lines of authority.

Development of Scoping Guidelines: directed the implementation of guidelines at each of the MTA agencies in order to improve project definition and assess project risk during the conceptual stages. This resulted in more defined project scopes and more definitive budget projection for the MTA capital program.

- NYCT 63rd Street Connection, Canarsie Line Communications Based Train Control, and Automatic Train Supervision for NYCT; North End Access and Station Rehabilitation for Metro-North Railroad (MNR); and Rehabilitation of the Triborough Bridge and Queens Midtown Tunnel.

Thomas Marko, PE
Resident Engineer

Highlights

Firm: Parsons Brinckerhoff

Years of Experience: 40

Education: M.S.C.E., New Jersey Institute of Technology, 1981; B.S.C.E., Newark College of Engineering, 1974

Professional Licenses/Certificates:

Professional Engineer: New York, 1988 ([redacted]) New Jersey, 1980 [redacted]

OSHA 30-Hour Safety Certificate

Tom Marko has acquired a broad base of high quality experience in project management and control of transit, bridge, health care facility, industrial, and commercial, projects. During his career, he has been responsible for project delivery from inception through completion and has served in the capacities of resident engineer, senior resident engineer, construction manager and project manager on construction management assignments including: railroad electrification, industrial facilities, bridges, health care facilities, education facilities and commercial buildings. He is particularly skilled in the management of multiple prime contracts, with all assignments completed on time and within budget. Tom is experienced in coordinating projects with various state and federal agencies as well as with private clients, other consultants, contractors and financial institutions. He has managed an area design office with assignments in the design of industrial, traction power and commercial facilities.

Hamilton Township Transit Complex, New Jersey: resident engineer for development of a state-of-the-art rail station along Amtrak's Northeast Corridor between Trenton and Princeton, and a 130,000-square-foot bus storage and maintenance facility. The aggressive schedule proposed for this project by NJ TRANSIT was facilitated by a two-phase approach to construction with the rail and bus portions issued as separate work orders to a common general construction contractor. Tom managed the rail portion of the project from notice to proceed and has assisted with the construction management of the bus portion, particularly in the areas of mechanical and electrical systems installation. His project responsibilities included: schedule review, change order evaluation and negotiation, coordination of the shop drawing review process, inspection of completed work, and Amtrak force account participation. The completed project provides direct service to New York for over 1,000 passengers per hour with public parking for over 1,700 cars.

Morrisville Yard Improvements – Phase II, Morrisville, Pennsylvania: construction manager for complete construction management services for the expansion of the Morrisville Yard facility under Phase 2 of a three phase program. The $97 million in improvements will provide storage for 250 rail commuter cars as well as service and inspection facilities and wheel truing capabilities at the west end of the NJT Northeast Corridor (NEC) service area and will provide the capacity to improve and consolidate storage and running repair functions now served at two different locations, as well as provide adequate capacity to accommodate immediate and long-term service growth on the NEC and Atlantic City lines.

Newark School Reconstruction, Newark, New Jersey: Tom served as project manager for the rehabilitation and modernization program at the Newark school district's grammar, middle and

high schools. Services included project management services, oversight, direction, coordination and reporting on projects undertaken by the New Jersey School Construction Corporation (NJSCC) for the Newark Public Schools. The assignment involved significant mechanical/electrical/plumbing retrofit work with complete replacement of fire alarm systems and emergency generators at several of the schools. Work included the construction of 20 new elementary schools, additions/alterations to 6 existing elementary schools, construction of 15 new elementary/middle schools, additions/alterations to 8 elementary/middle schools, construction of 5 new middle schools, additions/alterations to 4 existing middle schools, construction of 3 new high schools, additions/ alterations to 9 existing high schools, and additions/alterations to 2 existing special education schools.

Meadows Maintenance Complex, Kearny, New Jersey: construction manager, later project manager, responsible for construction management of a new $150 million rail-car maintenance facility designed to accommodate 1,000 vehicles on an 80-acre site. Overall project included the construction of eight primary buildings, development of a 77-acre tract, including electrification of layover yards at two voltages, and construction of an 800-foot railroad bridge over active PATH and Conrail tracks. Tom had complete responsibility for a field staff of 20, including 3 resident engineers and 12 professional/technical employees assigned to 8 construction contracts and 14 major equipment supply/installation contracts. He supervised construction and determined contract compliance including: engineered fills, pile foundations, general building construction, building mechanical and electrical systems, finish trades, electric traction, site electrical and primary distribution, site utilities, roadways, and access bridges. Tom proposed/implemented several innovative solutions for coordination problems brought on by accelerated owner occupancy requirements. He scheduled and coordinated $7.5 million of railroad force account work for the construction of 15 track-miles (24 track-kilometers) of yard and running track. Tom led the project from groundbreaking through owner acceptance.

Mourad Hanna, PE
Resident Engineer

Highlights

Firm: Parsons Brinckerhoff

Years of Experience: 25

Education: B.S., Civil Engineering, Alexandria University, Alexandria, Egypt, 1982

Professional Licenses:

Professional Engineer: New York, 2004 ([redacted]); Delaware, 1997 [redacted]

Mourad Hanna has extensive experience in construction inspection with an emphasis on transit and bridge construction. He has proven communications and people skills with the ability to interface with clients, contractors, architects, builders, and project managers. Mourad has served in a variety of positions beside Resident Engineer, including field inspector and quality control technician, on projects involving transit bridge rehabilitation and new construction as well as transit facility expansion to accommodate operational improvements.

NJ Transit Hamilton Transit Complex, New Jersey: Quality Control Technician for a 63-acre NJ TRANSIT site development project. The project included the construction of a 130,000-square-foot state-of-the-art bus maintenance facility and a 10,000-square-foot passenger rail station. Mourad's responsibilities included testing and verification of materials, including soil, concrete, asphalt, fire proofing, test pits, soil boring, roofing, structural steel, underground utilities, and site development items for all construction activities on this bus maintenance facility and rail station. His responsibilities also included maintaining daily construction logs, quality assurance and quality control reports, and assisting the resident engineer with monthly estimates and change order estimates.

NJTA Mullica River Bridge Reconstruction, Bass River Township, New Jersey: Senior Inspector. This $51M project was first contract of several to widen the Garden State Parkway in Burlington and Ocean Counties. Mourad served as Senior Inspector for the new six span, post-tensioned concrete structure built offline to east of the existing structure. The superstructure is 1,230' long, 56' – 8 ¾" wide with a High Performance Concrete (HPC) deck supported by seven precast griders. The structure consists of five cast in place (CIP) piers supported on (15 – 8)' diameter columns/drilled shafts and two abutments supported on 248 – 16" square concrete piles. In addition to bridge work, he inspected the extensive approach work, which required soil densification involving the installation of 2,129 Controlled Modulus Columns (CMS's), 5,300 SY of mechanically stabilized earth (MSE) walls involving precast panels, stainless steel ladders (below flood level), galvanized straps, select structural fill and precast barrier.

Brooklyn-Queens Expressway (BQE) 25th Ave to Broadway, New York City: Senior Inspector for the construction inspection of the BQE from 25th Avenue to Broadway in Queens. Mourad performs oversight and monitoring of contractor operations and reports on project progress daily through an Inspectors Report and also monitors construction quality and maintenance and protection of traffic (MPT) provisions. The work also employs traffic management strategies such as transportation system management/intelligent transportation systems (TSM/ITS), construction phasing, lane closure restrictions, and some work performed at night and on weekends. Time

related provisions include A+B bidding, lane rentals, and incentive/disincentive construction clauses.

NJTA Contract No P100.130 Bass River Bridge Widening and Rehabilitation, Township of Bass River, Burlington County, NJ: Senior Inspector. The $55 million project involves the construction of a new parallel bridge carrying the Garden State Parkway over Bass River, rehabilitation of the existing structure and construction of approximately 4,700 linear feet of new approach roadways as well as construction of a new fender system to protect the new and existing bridge piers. The project includes a new 980 foot long bridge consisting of pre-stressed concrete spliced girders with a 9" HPC deck, pile supported piers and abutments, plastic lumber fender system, approximately 5,000 linear feet of MSE retaining walls and column supported embankment. The rehabilitation consists of replacing the existing steel stringers with new rolled sections, repainting the existing structure, steel repairs, a new deck system and a scour monitoring system.

Four Ocean Drive Bridges, Cape May County, New Jersey: Resident Engineer for miscellaneous structural repair of four bridges. Responsibilities included construction inspection, verifying the contractor's work and payment & quantity. The work performed under this contract included various steel bridge repairs, jacking for bearing resetting and plate bearing replacement, girder bearing retrofit, concrete pedestal rehabilitation, concrete under/top deck repairs, and installation of stringer catch system, cleaning and painting of girder bearing, and restoration of the areas of disturbance. The maintenance and protection of traffic and all other work associated with the specified bridge construction and repair.

Installation of Electronic Toll Collection System (E-ZPass), New Jersey: Inspector on the New Jersey Turnpike, Garden State Parkway and Atlantic City Expressway. Mourad's responsibilities included inspecting construction activities and verifying that the contractor performed the work as per required specification and contract documents. He verified and monitored MPT utilizing various agency standards and job-site safety issues; prepared the daily Inspectors Report, which reflects the day's work with emphasis on the type of operation, location, and status of the operation; and reported daily to a resident engineer to review work and any other construction related issues and activities.

Michael Markowitz, PE
Resident Engineer

Highlights

Firm: Parsons Brinckerhoff

Years of Experience: 30

Education: MBA, Cornell University, Johnson Graduate School of Management, 1988

B.S., Civil Engineering, University of California, Berkeley, 1982

Professional Licenses:

Professional Engineer: California, 1984 [redacted]

Michael Markowitz has program management, construction management, and project management experience in building, bridge, airport, security, and tunneling projects. Michael has worked in both the private and public sectors and has held a variety of positions ranging from construction engineer to senior project manager. Michael has excellent communications, interpersonal, analytical, and project management skills. In addition to having both engineering and business experience, Michael is extremely capable in roles calling for enhanced teamwork in challenging situations.

Port Authority Security Capital Improvement Program: Michael served as a senior engineering manager to assist the PANYNJ with the development and implementation of the agency's Security Capital Improvement Program to address post-9/11 needs. The $1 billion 8-year program included upgrades at all Port Authority facilities, including the metropolitan region's airports, the Hudson River Bridge and tunnel crossings, the PATH rail transit system, and the region's ports. The diverse range of projects consisted of asset strengthening and hardening including perimeter intrusion defense systems (PIDS), fencing, lights, gates, barriers, vehicle control; and limited integration of new or existing security systems such as access control/alarm monitoring, closed circuit television (CCTV), and communication systems. In addition, Michael worked within the Office of Emergency Management in support of its security program oversight role, as project manager for a complex risk management and resource allocation effort, as co-author of the RFP for new World Trade Center security, and as project manager for the General Counsel's security call-in consultants.

World Trade Center Reconstruction, New York: As acting general manager, Michael managed all administrative and startup functions for the joint venture engaged in the installation of post-tensioned rock anchor tiebacks in the World Trade Center basement "bathtub" slurry walls, as well as the marketing of more conventional suspension bridge and Fiber Reinforced Polymer (FRP) projects in the northeast. Responsibilities included general management, staff supervision, labor union liaison, financial controls, human resources, payroll, benefits, and procurement for both the corporate office and the World Trade Center Recovery Project itself, where the combined firms functioned as a general contractor with on-board engineering expertise on a vital 24/7 specialty operation, valued at $5 million.

Second Avenue Subway, Phase I, New York, New York: Served as the agency coordinator and project manager for the $3.6 billion Second Avenue Subway, which will create a new subway line in Manhattan from 96th Street to 63rd Street by December 2016. He served as the agency coordinator for the Second Avenue Subway's relationship with the New York City Department of Buildings, and managed an associated $13M program of surveying approximately 250 adjacent

buildings prior to nearby subway construction, and designing and constructing repairs and additional reinforcement as necessary to approximately 50 of those buildings. Additionally, Michael was the project manager for design and construction efforts totaling approximately $4M for complex utility and structural modifications to buildings at the 72nd Street Station which need to accommodate a future station entrance.

Newark Regional Schools, Newark, New Jersey: Michael served as a project manager for the rehabilitation and modernization program for the Newark Public School district. He was responsible for construction at 13 schools, under six simultaneous contracts, valued at $13 million. Our services included project management services, oversight, direction, coordination and reporting on projects undertaken by the New Jersey Economic Development Authority (NJEDA)/New Jersey Schools Construction Corporation. Work included construction of 20 new elementary schools, additions/alterations to 6 existing elementary schools, construction of 15 new elementary/middle schools, additions/alterations to 8 elementary/middle schools, construction of 5 new middle schools, additions/alterations to 4 existing middle schools, construction of 3 new high schools, additions/ alterations to 9 existing high schools, and additions/alterations to 2 existing special education schools.

American Airlines Terminal 8/9 Replacement Project at JFK International Airport, New York: As senior construction manager/civil coordinator, Michael served as a senior member of the American Airlines Program Management Team (AA PMT). He managed all airside and landside civil construction for this $1.3 billion project. Responsibilities included: scheduling, phasing, quality assurance and cost management of all airfield work associated environmental remediation; reconfiguration of frontage roadway structures and construction of a new parking garage – all on complete demolish and rebuild-in-place fast-track basis, and in full coordination with ongoing operations of multiple airlines and the Port Authority of New York and New Jersey.

Continental Airlines Global Gateway Program, Newark International Airport, Newark, New Jersey: As project manager, Michael managed airport design, construction and renovation projects at Newark International Airport for the $500 million Global Gateway Program, including a $60 million project to renovate Terminal A, which encompassed all aspects of aviation facilities design and construction. He was responsible from concept through design and construction phases for programming, scope development, cost estimating, budgeting, project scheduling, staging, and contract administration. Michael supervised architect and engineer consulting firms, construction managers, and internal control staff. He coordinated project development and construction activities between Continental management, other airlines' management, and the Port Authority of New York and New Jersey. The Terminal A project was opened on time and under budget.

Jaroslav Prokop, PE
Resident Engineer

Highlights

Firm: Parsons Brinckerhoff

Years of Experience: 20

Education: B.S., Ocean Engineering , Major in Design of Marine Structures, Florida Atlantic University, 1993

Professional Licenses:

Professional Engineer: New York, 2005 ([redacted]); Florida, 2003 [redacted]

Jaro Prokop has over a decade of extensive experience in Quality Control , and Quality Assurance, Field Engineering, Project Management, Structural Inspections, and Materials Testing. In his current assignment as Quality Manager, Jaro is in charge of Quality Assurance on the Second Avenue Subway Project in Manhattan, New York City, a major MTACC project, total value of $3.84 billion. Previously he was in charge of Quality Assurance and Inspections for $130 million, design-built portion of major MTACC project in New York City, total value at 880 million. His assignments, as responsible person in charge, focus on Project Management, Quality Assurance, and Project Oversight. Jaro is an excellent communicator and team player with strong work ethics.

Second Avenue Subway (SAS) Project, Phase I New York City: as a core team member and owner's representative, Jaro is a Quality Manager for this $3.6 billion mega project. The SAS Phase I includes tunnels from 105th Street and Second Avenue to 63rd Street and Third Avenue, new stations along Second Avenue at 96th, 86th and 72nd Streets, rehabilitation of existing Lexington Avenue/63 Street Station, and all systems, track, signals, power and communication.

Fulton Street Transit Center, New York City: as the owner's representative, Jaro was in charge of quality assurance and inspections for this $130 million, design-built portion of major MTACC project. He was responsible person in charge of supervision of field engineers assigned to contract, scheduling of construction work activities to be monitored by field engineers each day, participating in review of construction quality plans and coordinating contractor's quality control staff, coordinating verification testing, performing spot reviews, reviewing and approving of monthly pay requisitions, and signing of daily construction reports. Jaro oversaw construction for the second contract, the Day Street structural box which began in July 2005 and was completed in April 2008.

Third Avenue Bridge Reconstruction, New York City: for this $118 million swing span bridge project, Jaro supervised quality assurance and quality control during fabrication, assembly and erection of the movable, 351-foot-long, 65.6-foot-wide, swing truss span. This portion of the project was conducted in three phases. The phase one, fabrication and truss sub-assembly, was performed in Alabama fabrication shops, in Russellville and Cordova. For phase two, the two main trusses and a partial floor system were moved to Mobile, Alabama. There the entire movable swing truss span of the bridge was completely assembled and erected, including the mechanical elements. Once completely assembled, the bridge was moved to New York City on an ocean-going barge for phase three, completion of erection and docking onto the center pier.

General Aviation Center and Guard Station Project, Miami, Florida: for this $6.5 million project, a part of Miami Dade Aviation Department's $8 billion Capital Improvement Program, Jaro was the resident engineer and in charge of quality assurance and quality control. He managed and coordinated all orders of the owner, quality plan reviews, on-site inspections and testing, budgets, scheduling, proposal reviews, and pay requisitions.

Mixed Use Office Building, Miami, Florida: owner's representative and chief project engineer in charge of quality assurance on this $160 million landmark downtown office building. This 36-story building is comprised of 16 stories of offices, 10 stories of hotel, 10 stories of condominium with an adjacent 10-story parking garage and recreation deck.

Mixed Use Office Building, Ft. Lauderdale, Florida: owner's representative and chief project engineer in charge of quality assurance on this $120 million, 23-story downtown office building - 18 stories of offices over a 5-story parking garage, with a ground floor retail space.

Furniture Warehouse/Distribution and Retail Center, Tamarac, Florida: owner's representative and chief project engineer in charge of quality assurance on this $80 million, 800,000-square-foot building which involves a tilt-wall design up wall with structural steel roof framing.

Peter Pan, PE
Resident Engineer

Highlights

Firm: Parsons Brinckerhoff

Years of Experience: 32

Education: Ph.D., Civil Engineering, University of Missouri-Rolla, 1987; M.S., Civil Engineering, University of Missouri-Rolla, 1983; B.S., Civil Engineering, Tamkang University, Taiwan, 1978

Professional Licenses:

Connecticut, 1991
New Jersey, 1996 ([redacted])
New York, 2007 (84730)

Peter Pan has extensive experience on the design, analysis and management of commercial and industrial buildings. He has worked on a wide variety of complex projects, including tall and super tall buildings, sport arenas (long span structures), airport terminals. He also has extensive experience including seismic and wind lateral analysis, dynamic analysis, thermal analysis, and structural steel and concrete detailing. Peter serves as a project manager/senior supervising engineer and chief structural engineer in the department responsible for the supervision of the engineers in the analysis and design of structures; the coordination of project tasks between disciplines and clients in schematic, design, and construction stages; and performance of quality assurance/quality control for the structural work performed in the firm's Architect and Building Service Center.

Charleston Bus Annex, Staten Island, New York: this design/build project involved a one-story steel building for the maintenance of MTA buses with mezzanine and second floors. As supervisor, he is responsible for providing supervision and guidance to team members during the design and construction stage and performing site visits to resolve site issues. He is also responsible for quality control. He prepares contract drawings and specifications of the structures and reviews shop drawings, requests for information (RFI) and job standards and calculations.

Building 51 Relocation and Expansion, Newark International Airport, New Jersey: he was responsible for supervising and guiding team members on the design and construction stages, quality and budget control and coordinating the project between disciplines and clients. He prepared contract drawings and specifications of the structures and review of the shop drawings, RFIs, job standards and calculations. He also coordinated, prepared performance specifications, and reviewed contractor's designs for the building relocation.

Risk Assessment for MTA Bus, New York City: structural engineer for the threat, risk and vulnerability (TRV) studies as well as the development of a security and emergency preparedness plan for the Yonkers, Eastchester and College Point Bus Depots. The project developed a prioritized list of security improvements for MTA buses. Work included performing site walkthroughs, assisting with employee interviews and coordinating the project.

IS 259 Addition, Brooklyn, New York: this four-story steel building and one cellar floor is for the addition of the IS 259 Junior High School for the NYC School Construction Authority. He was a supervisor responsible for supervising and providing guidance to team members on the design and construction stage and responsible for quality control. He prepared structure contract drawings and specifications and reviewed shop drawings, RFIs, job standards and calculations.

Metro-North Railroad Harmon Shop Replacement Program – Phase III, Croton-Harmon, New York: this design/build project included one locomotive and one coach maintenance shop. As a supervisor, he was responsible for the supervision and guidance of team members on the design and construction stages of this project. He was also responsible for quality control, prepared contract drawings and specifications of the structures and reviewed shop drawings, RFIs, job standards and calculations.

Marine Parkway Gil Hodges Memorial Bridge Facility Service Building, Queens, New York: lead structural engineer responsible for supervising and guiding team members on the design and construction stages, quality and budget control, and coordinating between project disciplines and clients. He prepared contract drawings and specifications of the structures and reviewed shop drawings, RFIs, job standards, and calculations.

Newark Liberty International Airport Call-In Services, Newark Liberty International Airport, New Jersey: as lead structural engineer, supervised and guided team members on the design and construction stages, quality and budget control and coordinated the project between disciplines and clients. He prepared contract drawings and specifications of the structures and reviewed shop drawings, RFIs, job standards and calculations.

Aviation Bridge Vehicle Maintenance Facility, Fort Drum, New York: for this design/build project, he was the lead structural engineer responsible for supervising and providing guidance to team members on the design and construction stages, quality and budget control and coordinating between project disciplines and clients. He prepared contract drawings and specifications of the structures and reviewed shop drawings, RFIs, job standards and calculations.

New Corona Maintenance Shop and Car Wash, Queens, New York: for this design/build project, he was the lead structural engineer responsible for supervising and guiding team members on the design and construction stages, quality and budget control and coordinating between project disciplines and clients. He prepared contract drawings and specifications of the structures and reviewed shop drawings, RFIs, job standards and calculations.

Rock Antonios, PE
Resident Engineer

Highlights

Firm: Parsons Brinckerhoff

Years of Experience: 25

Education: Post Graduate Studies Aachen University RWTH Germany, Engineering Studies; Jesuits University ESIB, University Claude Bernard Lyon, France Professional Registrations: Engineer-in-Training, NY

Professional Licenses:

Connecticut, 1991 [redacted]
New Jersey, 1996
New York, 2007 ([redacted]

Rock Antonios has over 25 years of technical experience in the rail transit, airports and transportation industry, specializing in the construction of rail transit centers, airports, hospitals, central energy plants, educational and commercial centers. Rock is an accomplished project manager well versed in observing cost, applying quality management techniques and completing projects on budget and schedule. With strong communication and interpersonal skills and the ability to adjust work practices for fast-paced team environments, he manages multiple project deadlines and fulfills all Owner's Projects Requirements (OPR), which has fostered client relationships and has led to repeat work from the clients.

Fulton Street Transit Center Project, New York, NY: Senior Construction Manager / Lead Commissioning Engineer for the design evaluation of all MEP systems, including HVAC, fire protection, fire alarms, plumbing, elevators and escalators at the new Fulton Street Transit Center. His responsibilities include work scopes and scheduling, risk management, construction plans, quality and safety. Rock administered improvements to project management, construction plans, means and methods and testing and commissioning plans and procedures. He handled all change orders and recommend cost-effective solutions to the client. The Fulton Street Transit Center project involves reconstruction of the Fulton Street Station complex to provide better connections and passenger flow among ten subway lines that are served at this complex in Lower Manhattan and to integrate it with the new transportation hub and other redevelopment at the World Trade Center site.

Continental Airlines Terminal Redevelopment, Newark Liberty International Airport, New Jersey: Mechanical Engineer responsible for the design and supervision of MEP and PFP installations with coordination of all other trades including commissioning services for terminals and maintenance facilities at Newark Liberty International Airport.

New York City School Construction Authority, New York, NY: Senior Project Manager/Principal Mechanical Engineer responsible for design and engineering of mechanical and electrical installations and coordination with all other trades including weekly site visits and construction services. Controls used BACnet and Modbus protocols with Lon talk connected to an enterprise platform.

Penn Station and Grand Central Station Improvements, New York, NY: Technical Director, Associate, Principal Mechanical Engineer for the design and engineering of mechanical installations, utilities and coordination of all other trades. Responsible for performing the quality control for the planning, design and preparation of plans, specifications, and estimates of

mechanical system requirements for major projects and also responsible for management and supervision of various systems for airport projects. Senior Engineer for the design of HVAC, plumbing, and fire protection control systems in the new building concourses. The project included departure lounges, waiting areas, arrival (sterile) corridors, tenant spaces, and baggage handling areas. Audit and Quality Control for HVAC, plumbing, and fire protection systems were part of the scope. Punch list and approval of TAB reports.

NJ TRANSIT, Locomotive Shop Expansion Value Engineering Study, New Jersey: Program Manager and Principal Mechanical Engineer that worked on Rail Maintenance Facility Assessment MMC Locomotive Shop Drop Table and Consideration/Study and expansion at tracks 11 and 12. Responsible for monitoring and evaluating building systems and all MEP management systems, HVAC, fire detection/suppression, elevator/escalator on capital programs and projects, including work scopes, budgets, cost-estimating and scheduling, risk management, construction plans, quality and safety. Provide value engineering from information through implementation. Selection of optimal solutions, enhanced performance and reliability and minimized capital improvements costs. Minimized and eliminated Health and Safety hazards.

Dallas Forth Worth Terminal Renewal and Improvement Program Dallas, TX: Senior Group Leader of Mechanical Engineering that performed work that included design and engineering of HVAC installations including SCADA, FIDS, PA and FA with coordination of all other trades for airport terminals. Performed quality control for the planning, design and preparation of plans, specifications, estimates of mechanical system requirements, construction services and commissioning. Recommend improvements to project management, construction plans, means and methods and testing and commissioning plans and procedures. Developed points list and interface into mechanical and electrical equipment, including industrial control system applications. Directed site survey, system design, calculations, equipment layout, wiring drawings, and specifications and was responsible for design, construction support, and commissioning of all airport systems.

Giovanni Castro, PE, NACE
Resident Engineer

Giovanni Castro has 18 years of experience in construction management and inspection of major bridge and high-volume roadways. His project skills include construction engineering inspection for roadway repair/construction, bridge construction, building construction, concrete pavement, MPT, drainage rehabilitation, materials testing, waterline construction and scheduling software. He has excellent communication skills and experience with supervisory roles, coordinating among project stakeholders, and interfacing with numerous agencies on major rehabilitation projects.

Highlights

Firm: Parsons Brinckerhoff

Years of Experience: 18

Education: B.S., Civil Engineering, University of Connecticut, 1996

Professional Licenses/Certifications:

ATSSA MPT Supervisor; ACI – Grade 1; Advance Maintenance and Protection of Traffic; SSPC C5 Supervisor/competent Person for Deleading of Industrial Structures; OSHA; Nuclear Gauge Certification; NACE LEVEL 1

Third Avenue Swing Bridge Reconstruction, New York City: Supervising Field Engineer on this $120M project. Giovanni supervised construction, including the maintenance and protection of traffic. Additionally, he served as Office Engineer with the responsibilities of: reviewing extra work requests in order to justify issuing or rejecting change orders, estimating, negotiating, processing and managing change and work orders (MURK forms), preparing reports/letters. Additional responsibilities included generating accurate projections of the potential overrun costs due to design and field changes. The project involves six stages of work for the flanking spans: the pivot span, a temporary bridge, new rest and pivot piers, reconstruction of the ramps and sidewalks, sewer realignment, machinery and electrical components, storage building construction, and a number of other amenities.

Roosevelt Island Bridge Reconstruction, New York City: Assistant Resident Engineer & Office Engineer. This $86M project involved the rehabilitation of a vertical lift bridge and its approaches. Work included the rehabilitation of the Architectural, Civil, Electrical, Marine Fender, Mechanical, MPT, Paint System, Scour Control, Street Lighting, and the Structural elements of the entire bridge. The construction was conducted in three stages for a duration of thirty-six months. During the construction the lift span remained operational by utilizing an auxiliary system, which would allow passage of marine traffic. In addition, vehicular and pedestrian traffic was allowed on the bridge at all times since the bridge is the only vehicular access to the island. Furthermore, Environmental Mitigation was required for the removal of asbestos containing materials, lead paint removal, removal of pigeon waste, and for the excavation of river material for the purpose of submarine cables installation. Giovanni reviewed contractor's request for payment for initial approval, reviewed work completed in order to verify compliance to contract specifications, reviewed inspector's reports, inspection of maintenance and protection of traffic, construction activities, and supervising inspection staff and administrative assistants.

City of New Haven, RT 34 Downtown Crossing Project: Resident Engineer for this $14 million municipal project that includes federal participating TIGER Grant monies and overseen by both

FHWA and ConnDOT. The project involves the abandonment and demolition of a four-lane highway, two-way arterial highway, expansion of perimeter roads into 'complete street' boulevards, demolition and reconstruction of the College Street Bridge and associated major MSE and retaining walls. As Resident Engineer, Giovanni is responsible for management of all inspection and project administration overseeing a staff of 8-10 personnel, including a project engineer (design liaison), office engineer, chief inspector, inspectors, environmental monitor, materials technicians, surveyors, and office clerk. Significant interface was required with third party utilities during the construction of underground storm drainage, due to conflicts with existing conditions, and desire of utility companies to perform their own system relocations or upgrades within the same corridor. Maintenance of traffic planning and implementation was critical, due to urban congestion and construction staging. Construction stages were modified regularly to avoid impacts to pedestrians and motorists. Community outreach was important considering the urban location, which included hospitals and colleges. Schedule reviews were performed to assist the City with management and achievement of all project milestones.

I-95 Milford/Orange Resurfacing and Safety Improvements, Connecticut: Resident Engineer for this $35M project which involved the rehabilitation of 6 miles in both northbound and southbound directions on I-95. The 6 miles were composed of a minimum of three travel lanes with left and right shoulders in each direction. The project included repairs to ramps, interchanges and service plaza; rehabilitation to concrete pavement and/or bituminous concrete pavement; bridge deck repairs; clearing and grubbing; roadway electrical, sign, and guardrail installation; and drainage pipe rehabilitation. This project was on a high volume roadway and the use of detours was required to provide minimal impact to the public; with simultaneously coordinating traffic patterns with adjacent projects.

Central Artery Tunnel – Charles River Bridges Project, Massachusetts DOT: Field Engineer. The $100M project involved the construction of two bridges over the Charles River. As the field engineer, Giovanni was responsible for all phases of construction, including the cable-stay stressing and post tensioning of bars and the erection of the steel box girder.

Martin Tagliaferro
Resident Engineer

Highlights

Firm: Parsons Brinckerhoff

Years of Experience: 34

Education: B.S., Civil Engineering, Union College, 1980

Professional Affiliations:

American Society of Civil Engineers

Construction Management Association of America

Martin Tagliaferro specializes in managing the planning, design and construction of major bridge and highway projects including steel and concrete viaducts, cable stayed and precast segmental concrete bridges, cut-and-cover tunnels, open boat sections, local surface roadways along with landscaping features, pump stations, electrical substations, commercial piers, and multi-story buildings for public and private owners. As a principal project manager he has thorough knowledge of all phases of a project, from the concept and study phase through permitting, field surveys and investigations, right-of-way considerations, constructability reviews, Value Engineering initiatives, dispute resolution and design and construction management.

Fulton Street Transit Center, New York City: resident engineer for the Consultant Construction Management team responsible for providing construction management and inspection services for the reconstruction of the Fulton Street station complex in Lower Manhattan. The project, which comprises 11 separate construction contracts, involves construction of the new transit center's foundation and building, demolition of various commercial and office buildings necessary to clear the site; cut-and-cover construction of the Dey Street Connector tunnel; various subway station improvements to improve circulation and connectivity; and extensive utility relocation and maintenance and protection of traffic.

Inspection and Rehabilitation of Various Bridge and Marine Facilities, New York and New Jersey: project engineer/project manager for the inspection and rehabilitation of various bridge and marine facilities for the Port Authority. Martin was responsible for in-house and consultant inspection, renovation, and failure investigation contracts. He established project scopes and schedules, prepared and reviewed requests for proposals, managed contract costs and negotiated changes, evaluated technical findings, reviewed and accepted inspection reports with repair recommendations, and evaluated and rated both in-house personnel and contracted consultant performance. Major projects included:

Bayonne Bridge: structural integrity inspection

Goethals Bridge: structural integrity inspection

Lincoln and Holland Tunnels: structural integrity inspection

Port Newark Berths 10-12: failure investigation

Port Elizabeth Berth 76: investigation and repair of damage incurred from a cargo liner collision

Bayonne and George Washington Bridges: structural integrity inspection of the cables

Central Artery/Tunnel Project, Boston, Massachusetts: project engineer responsible a $14.7 billion extension of the Massachusetts Turnpike (I-90) through South Boston and East Boston. One of the largest US public works projects ever undertaken work included representing the CA/T during presentations at public and private meetings with Massport, the Massachusetts Bay Transit Authority, numerous City of Boston Agencies, all local utilities and several active Community and Environmental Groups while managing and coordinating all design and subsequent construction activities for specific project sections.

Central Artery/Tunnel Project, Boston, Massachusetts: project manager responsible for final design management and construction phase services for the $250 million Bird Island Flats cut-and-cover tunnel. This portion of the CA/T Ted Williams Tunnel connected the adjacent immersed tube portion of the tunnel with State Route 1A, the entrance to Logan International Airport and local streets. Responsibilities included oversight and administration of Section Design Consultant contractual requirements, plan review, compliance with contract specifications, and coordination with Massport, the local Fire Department, local utilities and security firms and representing the Highway Department at numerous public and private meetings. The tunnel was constructed adjacent to Logan International Airport and required the temporary relocation of an airside taxiway without disruption to Massport facilities.

Central Artery/Tunnel Project, East Boston Airport/Route 1A Interchange, Boston, Massachusetts: project manager for the final design of the $200 million East Boston Airport/Route 1A Interchange, preliminary design management of a $7 million multi-story toll plaza facility, final design management of the $147 million Logan Airport Interchange.

Various Bridge Inspection Projects, New York, New Jersey, Connecticut, Massachusetts and Illinois: structural engineer/inspector for various bridge inspection projects for a New York City-based consulting firm. Inspected and designed repair details for fixed and movable bridges along with adjacent bridge appurtenances (including approach roadways, fender systems and bulkheads); supervised and trained field engineers for in-depth structural integrity inspections; writing structural integrity inspection reports with structural analyses, repair recommendations, and cost estimates; and writing technical specifications, reviewing shop drawings and preparing responses to Requests-For-Information for construction contracts.

Rajesh Kissoon
Office Engineer

Rajesh Kissoon brings an in-depth understanding of transit center construction experience. As a practiced office engineer, he has a variety of experience coordinating submittals and requesting for information and various correspondences between the client, contractor and designer. Since 2009, he has served as an Order Coordinator, Office Engineer, and Inspector for the $1.4 billion Fulton Center Project that will renovate and rebuild the station complex to facilitate the connections between train lines, decrease the congestion of the pathways, and enhance the travel experience for the 300,000 people who will use the complex daily.

Highlights

Firm: Parsons Brinckerhoff

Years of Experience: 5

Education: B.S. Engineering Management, New York Institute of Technology, 2010

Professional Affiliations:

American Society of Civil Engineers

MTA-NYCT Fulton Street Transit Center, Contract A-36119 – Transit Center Foundation & Corbin Building Underpinning: Served as the office engineer for the foundations contract of the transit center. This involved coordination with the client, contractor, and designer for submittals, and request for information for contract close-out.

MTA-NYCT Fulton Street Transit Center, Contract A-36121 – A/C Mezzanine Reconstruction & J/M/Z Vertical Circulation: The A/C Mezzanine Reconstruction & J/M/Z Vertical Circulation involved complete demolition of the original mezzanine and installation of new structural steel support for the above roadway, necessary for construction of the new mezzanine. Rajesh originally served as the office engineer coordinating submittals, request for information and various correspondences between the client, contractor and designer. He was involved with field inspection regarding, structural steel, electrical, communications, mechanical, testing, and safety. He currently serves as the additional work order (AWO) coordinator. This contract boasts four hundred AWO's and Rajesh coordinates between client and contractor for estimates, proposals, and negotiations.

MTA-NYCT Fulton Street Transit Center, Contract A-36137 – Dey Street Head House & 4/5 Fulton Street Station Rehabilitation: The Project involved the construction of Dey Street Head house to facilitate easier customer flow to the newly renovated 4/5 Fulton Street Station. I served as the office engineer coordinating submittals, request for information and various correspondences between the client, contractor and designer. Rajesh was involved in field inspection regarding, electrical, communications, mechanical, testing, and safety. Currently serves as the additional work order (AWO) coordinator. This contract boasts over two hundred AWO's. He coordinates between client and contractor for estimates, proposals, and negotiations.

MTA-NYCT Fulton Street Transit Center, Contract A-36138 – Dey Street Concourse & R/W Underpass and Platform Finishes: Responsible for field inspection regarding, electrical, communications, mechanical, testing, and safety. Currently serves as the additional work order

(AWO) coordinator. This contract boasts over fifty AWO's. Rajesh coordinates between client and contractor for estimates, proposals, and negotiations.

MTA-NYCT Fulton Street Transit Center Contract A-36125 – Fulton Street Transit Center Enclosure: Project involved the construction of the glass enclosure and structural steel framing within the transit center building. Served as the office engineer coordinating submittals, request for information and various correspondences between the client, contractor and designer.

MTA East Side Access: Jr. Estimator/Intern on this $8B project. Prepared cost estimates for contractor change order requests including site preparation, excavation, additional steel, and catenary structures.

Second Avenue Subway Line: Jr. Estimator/Intern on this $4.4B project. Primarily responsible for estimating the utility systems including gas, water, and electric with support of excavation and saw cutting. Conducted field visits for accurate knowledge for estimation of the project

Fulton Street Transit Center: Jr. Estimator/Intern on this $1.4B project. Responsible for field surveys for project conditions, manpower efficiency, and preparation of reports for estimates.

South Ferry Terminal: Jr. Estimator/Intern on this $530M project. Conducted field surveys for accurate quantities, manpower, equipment, and overall project efficiency regarding use of time and manpower. Completed take-offs for various phases of construction in preparation for estimates.

West Farm Houses, New York City Housing Authority: Superintendent/Intern on this project. Superintendent during the roof replacement and exterior restoration at the NYCHA West Farm Houses facility responsibilities included completion of daily reports and supervision of construction and project site for efficiency and inspection.

Johnson Houses, New York City Housing Authority: Superintendent/Intern responsible for performing survey of the existing building conditions for the exterior restoration, roof replacement, and interior renovation as part of the planning for the next phase of construction.

Wise House, New York City Housing Authority: Superintendent/Intern that worked as the Project Superintendent in the final phase of the roof replacement at NYCHA Wise House facility. Supervised construction being done and completed daily reports. Coordinated with client, NYCHA, to complete closeout documents for project.

Maximo Perez, PE
Office Engineer

Maximo Perez has worked in the construction engineering field with an emphasis on highway and bridge construction. He has served in a variety of positions including inspector, assistant office engineer, and design engineer on projects involving bridge rehabilitation, highway expansion to accommodate high occupancy vehicle (HOV) lanes, and highway drainage improvements. Albert is also experienced in residential, watermain and sanitary and storm drainage system construction.

Highlights:

Firm: Parsons Brinckerhoff

Years of Experience: 31

Education: B.S. Electrical Engineering, City College of New York

Professional Affiliations:

American Engineering Alliance

Manhattan Bridge Painting & Interim Rehabilitation, New York, New York: assistant office engineer responsible for preparation of partial payments using the project's computerized engineering estimate system (CEES) for preparing, as well as for processing of change orders and time and material sheets. Al also certified all material brought to the site, reviewed shop drawings, and monitored the progress of the job through progress meetings and correspondence between the field office and all involved agencies. Parsons Brinckerhoff (PB) served on the resident engineer inspection team on this $124 million project for the New York City Department of Transportation.

Manhattan Bridge West Upper Roadway Rehabilitation, New York, New York: assistant office engineer on this $96 million project to rehabilitate the entire west upper roadway of the Manhattan Bridge including replacement of the suspended span deck. Working with the project's CEES program, Al processed payments to the contractor for work performed, as well as changes orders and time and material costs. He also certified all material brought to the site to ensure it met contract specifications, reviewed shop drawings, attended project progress meetings, and reviewed contractor progress against bar charts and the critical path method (CPM) schedule.

Newark Abbott School District, Newark, New Jersey: planner on a $1.6 billion program. Al is responsible for assisting the New Jersey School Construction Corporation (NJSCC) in acquiring the necessary property to construct new schools. As planner, Al reviews and oversees feasibility studies, conducts progress meetings and coordinates efforts with DEP and DOE for fast track approvals. He also reviews and approves consultant's invoices and assists the NJSCC in the appraisal, purchase and relocation of homes and manufacturing facilities that are displaced through property acquisition.

New Jersey Department of Motor Vehicles Inspection and Maintenance Facility Retrofit Program Management, New Jersey: lead engineer assigned to this project which involved the retrofitting of centralized and private inspection and maintenance facilities statewide to meet the new USEPA emissions standards. In this position, Al was responsible for reviewing subcontracts and scopes of work completed by subconsultants. He also developed and implemented the Project

Management Plan; developed and implemented quality assurance/quality control procedures and plan; reviewed contract documents and field construction to confirm drawings were being followed; and performed quality assurance on construction activities.

Installation of Electronic Toll Collection System (E-ZPASS) on the New Jersey Turnpike, Garden State Parkway and Atlantic City Expressway: as a resident engineer his responsibilities included planning, reviewing, and assignments of work of subordinate field personnel. Al reviewed all construction processes and engineering layouts, reviewed project activities with the client representative and contractor field supervisor resolving disputes and daily issues, and reviewed daily inspector reports and prepared resident engineers summary report from his/her comments as well as data compiled from the inspection reports.

N.J. Turnpike Exit 13A Expansion, Elizabeth, New Jersey: inspector on this $24 million highway expansion project to accommodate HOV lanes for the New Jersey Turnpike Authority. Al's responsibilities included overseeing and inspecting highway expansion, working with steel members crossing over several interior streets in the town of Elizabeth, and latex-modified concrete. He calibrated truck equipment, inspected the work of earthmovers on various soils to create a good base for the expansion, and monitored paving and milling of large sections of the highway and rerouting of utilities that crossed over any given section. Albert also laid out miles of parapet (both removal and installation).

Garden State Parkway Drainage Rehabilitation, New Jersey: inspector on this $45 million project to rehabilitate storm drainage systems running along and underneath the Garden State Parkway from Exit 122 to Exit 38, a length of 100 miles (161 kilometers). Al's responsibilities included overseeing the contractor during the rehabilitation of the drainage systems. The project involved using new methods of lining the inside of drainage systems without having to remove the existing piping or jack the roadway. He walked through several size systems, performing visual analyses on smaller systems and video inspection of the pipes to determine the types of repairs necessary.

Albert Himaia
Office Engineer

Highlights

Firm: Parsons Brinckerhoff

Years of Experience: 16

Education: B.S., Civil Engineering, New Jersey Institute of Technology, 1988; A.A.S., Civil Engineering, Middlesex County College, 1986; Paralegal Degree, Middlesex County College, 1994

Albert Himaia has extensive experience in the construction industry, focused on electrical and communication systems upgrades for rail transit stations. He has managed design and construction of smoke detectors and alarms, CCTV, public address, telephone and computer network systems and approved bulletin for the installation of telephone cables, emergency alarms, public address systems and the relocation of radio base stations.

MTA-NYCT Fulton Street Transit Center: Parsons Brinckerhoff's Senior Commissioning Representative working on commissioning the Fire Alarm Systems for all 5 Contracts for the $1.4B project. This project will improve access to, and connections between, 12 subway lines for hundreds of thousands of daily commuters and lower Manhattan residents and visitors, and will link NYCT facilities with PATH service and the World Trade Center site.

MTA – NYCT, Capital Program Management Station Rehabilitations: Administrative Engineering Manager. Mr. Perez managed the communication engineering staff assigned to the Station Rehabilitation Office. He was responsible for the design of various capital projects including stations rehabilitations, ADA accessibility, and employee facilities and offices. He oversaw the preparation of contract documents for station smoke detection and alarm, CCTV, public address, telephone and computer network systems and approved bulletin for the installation of telephone cables, emergency alarms, public address systems and the relocation of radio base stations.

MTA – NYCT, Station Rehabilitation: Electrical Engineer, Level III. Supervised the designs of public address, Closed Circuit Television, and radio and telephone systems for capital projects; prepared bill of material for communication equipment used in the construction of projects built by in-house personnel; assisted in the solutions of construction problems; drew the final as-built drawings for station rehabilitation projects constructed by in-house forces; and reviewed and approved maintenance and operational manuals for Public Address, CCTV, and Fire Alarm systems.

MTA – New York City Transit, Station Rehabilitation: Subdivision Engineer. Supervised four engineers in the production of drawings and specifications for communication capital projects. Reviewed the designs and construction of projects prepared by consultants; met with contractors to answer questions and explain procedures for placing communication equipment in service; inspected equipment at the factories and the installation of telephone terminating facilities at the construction sites; and reviewed and approved bulletin procedures for the installation of communication equipment.

MTA – NYCT, Communication Engineering Office: Project Coordinator. Developed scopes of work and schedules for capital projects; supervised, assigned, and reviewed the work of Assistant Engineers; scheduled meetings and obtained design inputs from other engineering disciplines; prepared Engineering Force Accounts for the electrical engineering department and capital contracts; and coordinated with Rapid Transit (DOS) on the schedule of General Orders.

Dominick DeNicolo
Scheduler

Highlights

Firm: Parsons Brinckerhoff

Years of Experience: 17

Education: Business Management, St. John's University, 1982

Additional courses: Project Management Training; Steam Generating -Nuclear Plant Technology; Structural Design Drafting; Design Technology (1 year credit courses), Queensborough Community College

Dominick DeNicolo is highly experienced in planning, scheduling and cost control in design and construction of highways, tunnels and ventilation support buildings, new and renovation of public high schools. He also has experience in the power industry for both nuclear and fossil generating plants during design, construction, operational and outage phases. Dominick has developed, monitored, and analyzed CPM schedules; prepared reports/presentations; performed cost, trend/impact and performance analyses based on earned value progress; and interfaced with internal and external customers for positive results. He is experienced with Windows7, Primavera (P3 & P6), Microsoft Word and Excel, and is familiar with WordPerfect, Lotus, Oracle and Artemis. Other PC software includes Promis and Macro, and Mainframe database systems (PROJECT/2, Nucleis, Novell, CPM/PERT).

Port Authority Security Program, New York/New Jersey: as senior scheduler, Dominick was responsible for developing, updating and maintaining an integrated design and construction CPM project schedule for all Port Authority PATH Security contracts in Primavera P3. Dominick collaborated with project managers for monthly progress within their assigned network activities and assisted in mitigating delays to the overall project milestones completion, by developing work-a-rounds within the assigned activities to reduce major impacts. He has developed and performed monthly schedule analysis reports to the Port Authority senior project manager and director.

Second Avenue Subway, Phase 1, New York City: project consisted of the following but not limited to: the removal & replacement of existing utilities, the trenching and placement of slurry panel tunnel walls and the offsite-construction of the Tunnel Boring Machine (TBM). As lead project scheduler reporting to MTA's Chief Project Controls Manager, utilizing Primavera P6, Dominick was responsible for reviewing, monitoring and analyzing contractor's monthly CPM Updates submittals; also (on case-by-case basis) analyzed contractor's requests for time extension and determine if time extension is warranted or not in his prepared analysis report for the Chief with recommendations of a recovery plan, if needed. Dominick also made specific suggestions to Project Director Tom Peyton on various occasions to help resolve schedule work conflicts within the assigned CPM tasks.

Third Avenue Bridge Reconstruction, Manhattan-Bronx, New York City: senior scheduler and project controls administrator for the $118 million reconstruction of this swing bridge over the Harlem River. Dominick performed scheduling services required to monitor the contractor's performance based on budget and schedule maintenance adherence. The project consisted of was not limited to, six stages of work for the flanking spans, the pivot span, a temporary bridge,

new rest piers and pivot pier, reconstructed ramps at both ends of the bridge, new pivot machinery and electrical components, and control house. Maintenance of traffic and large diameter drilled shaft foundations were integral to this work.

Grand Central Parkway Reconstruction, Queens, New York: as senior project scheduler, Dominick provides scheduling support services to the project team and NYSDOT-Region 11 for this $165 million project that entailed reconstructing / realigning ramps on the Grand Central Parkway from 84th to 111th Streets (east & west bound), pavement rehabilitation, reconstruction of the center median barriers, and replacement of the 94th Street bridge. Scheduling services include review contractor's progress updates, development of schedule analysis reports addressing all problems and delays within the contract CPM schedule network to the Resident Engineer and/or Engineer-in-Charge, providing recommendations regarding CPM issues and/or developing what-if schedules for possible work-a-rounds to resolve / recoup delays in the CPM critical path.

World Trade Center Reconstruction Project, New York City: as senior project scheduler/controls, Dominick monitored daily construction site excavation activities, including equipment in use. He tracked progress performance of soil removal/tied-backs installation in bi-weekly reporting.

Mass-DOT Central Artery/Tunnel Project, Boston, Massachusetts: as senior project scheduler/controls reporting to PB-RE Dave Flanagan, Dominick reviewed, approved construction contractor's CPM schedules and applications for payment as it pertained to work performed within the assigned scope for specific tunnel and building ventilation contracts. He implemented the cost-loaded CPM schedule specification for such construction contracts. He also monitored and reported critical path status and progress performance. Additionally, Dominick developed and maintained detail and summary schedules and forecast remaining work; identified trends, action items, and critical issues within assigned contracts; performed cost/schedule impact analyses for new added scope of work; updated monthly the project integrated schedule by reporting progress based on earned value. He also participated in assessment of claims and changes submitted by contractors for time entitlements by providing specific case-by-case special analysis for justification of claims.

Manhattan Bridge over the East River, Manhattan-Brooklyn, New York: As senior scheduler and project controls for this $148 million reconstruction of the Manhattan Bridge Rehabilitation of The Lower Roadway. Dominick assisted the Prime Consultant Greenman-Pedersen in performing scheduling services as per required to monitor the contractor's performance based on budget and schedule maintenance adherence. The project consisted of, replacement of the lower roadway framing in the approaches and suspended spans; rehabilitation of anchorage, towers, sub-structures and retaining walls on both the Brooklyn and Manhattan approach spans.

Gary Simmons
Scheduler

Highlights

Firm: Parsons Brinckerhoff

Years of Experience: 41

Education: B.B.A., Marketing & Finance, Iona College, 1973

Gary Simmons has more than 30 years of construction and project management experience involving project controls for scheduling, cost control, and estimating. He is highly experienced in the development and usage of conventional and state-of-the-art technologies in project controls for managing both large and small projects. He is completely knowledgeable in P3 (Primavera), Microsoft Project & Microsoft Access. Gary has developed schedules and estimates for construction as well as reviewed schedules and costs prepared by contractors. He has developed and instituted project controls requirements in the specifications for preparation and submittal of cost applications, schedule baseline/progressing, manpower/resource loadings, change order control and monthly contractor and client reporting for management. He also has provided comparisons of baseline to current activities and manpower loadings, forecasted completions and potential impacts of suggested alternatives.

Port Authority Security Program, New York and New Jersey: as project control manager, Gary develops and maintains an integrated cost and scheduling system for the Port Authority on various project assignments, including constructability reviews and construction schedule reviews. Additional responsibilities include development of a document control system, consultant cost/schedule monitor/reporting system, invoice tracking system and development/publication of monthly progress reports to client management. This effort spans all Port Authority facilities (airports, ports, bridges and tunnels, terminals and PATH system.

Route 219, Southern Expressway, Section 5, Cattaraugus and Erie Counties, New York: construction constructability assessment to determine feasibility of schedule. The overall project involves providing construction inspection services associated with the new alignment of 4.2 miles (6.8 kilometers) or Route 219 with new Portland cement concrete mainline pavement and 11 new bridges.

Newtown Creek Water Processing Center, Queens, New York: served as the CPM manager responsible for schedule and cost review of contractor and the associated subcontractors on two specific contracts at the project site valued at $950 million. Additional responsibilities included oversight of construction activities and interfacing with design/engineering and the New York City Department of Environmental Protection.

Central Connecticut State University Project, New Britain, Connecticut: as project control manager, Mr. Simmons initiated a dialogue within the joint venture thereby allowing development of a recovery plan of the construction schedule. This effort included a comparison of baseline to

current activities and manpower loadings, forecasted completions and potential impacts and suggested alternatives. During this effort, he participated in the development of the start-up/commissioning schedule and manpower estimates, which ultimately became part of the construction schedule. Finally, Mr. Simmons expanded and maintained the negotiations within change order process.

Hudson River Park Trust Project, New York City: as project control manager, Mr. Simmons reviewed, refined and further developed the project schedule of the nine contractors associated with the project. This effort included manpower allocations, financial commitments and limitations and procurement issues. He instituted the weekly site walkthrough with the client, architect and contractor personnel to resolve problems, discuss "Plan of the Week Work" and provide alternative work efforts to maintain the targeted project completion. This effort also included the development of the change order process, which included negotiations with the client and contractors. Finally, on an as needed basis, Mr. Simmons worked with the resident engineer to ensure compliance with project specifications and code regulations.

500-MW Power Facility for the New York Power Authority, New York: as project controls manager, Mr. Simmons developed and instituted the project controls requirements for the project. The requirements included the specifications for preparation and submittal of cost applications, schedule baseline/progressing, manpower/resource loadings, change order control, and monthly contractor and client reporting for management and government use.

In-City Generation Facilities of the New York Power Authority, New York: completed the project controls effort for the installations. As project controls manager, he instituted and maintained the requirements of cost applications, schedule baseline/progressing, manpower/resource loadings, change order control and monthly contractor and client reporting for management and government use. The importance of this effort is that it erected eleven 50-MW power facilities in four boroughs of New York City and Long Island in 6 months.

Ian Fisher
Estimator

Highlights

Firm: Parsons Brinckerhoff

Years of Experience: 28

Education: B.Sc., Quantity Surveying, 1984, Leeds Metropolitan University, Leeds, England

Professional Affiliations: Professional Associate of The Royal Institution of Chartered Surveyors, 1991

Ian Fisher is a senior capital cost estimator with more than 28 years of experience in engineering design and construction cost estimating. During this time, Ian has held positions of increasing responsibility such that his current position requires him to perform overall coordination and execution of complex building and facilities cost estimates and to provide technical supervision of more junior cost estimators on projects in the range of $250M. Ian has gained extensive experience in the development of cost estimates during the conceptual/preliminary design phases of projects, through detail engineering and bid phase, and during construction.

Boston Logan International Airport Consolidated Rental Car Facility ($250M), Boston, Massachusetts: supervising estimator for the Boston Logan International Airport Consolidated Rental Car Facility. Project scope includes preliminary design estimates on a 1,200,000 sf parking garage, an 116,000 sf Customer Service center, and Four Quick Turn-around Facilities, along with a 40 acre site development and infrastructure upgrade. Project Management role includes drafting the RFP for construction management services and reviewing 9 CM proposals.

Daedalus Projects, Inc., Boston, Massachusetts: as chief estimator/project manager, Ian was responsible for management of workload within the office and co-ordination of projects, including schools, colleges, public safety facilities, residential, airports, parking garages, museums, laboratories, theatres and courthouses. Other significant duties included regular reconciliations and negotiations with construction managers on behalf of the employer. Project valued from $1M to $275M.

Rider Hunt Chartwell LLC., Boston, Massachusetts: as an associate, Ian was responsible for management of workload in office, co-ordination of projects, and office computer network and filing system set-ups. Project valued from $1.5M to $85M.

Hanscomb (now Faithful + Gould), Cambridge, Massachusetts: as senior estimator, Ian's responsibilities included performing quantity take-offs, pricing, scheduling, bid negotiation, reconciliation and client liaison. Project valued from $1.8M to $35M.

Andrew Chartwell Co., Boston, Massachusetts: as project manager/quantity surveyor Ian was responsible for estimating and project management on schools, universities, hospitals, and luxury retirement homes. Values ranged from $2M to $15M.

Kirklees Metropolitan Council (a local government organization), England: acting as a quantity surveyor team and design team leader/project manager in a multi-disciplinary environment. Ian was responsible for the production contract documents and final payment authorizations, due diligence, bidding reports, and negotiation. He was also responsible for claim evaluation and

litigation on contractual disputes. Ian was frequently involved in the restoration of 19th and early 20th century municipal buildings.

The Walton Horsfall Partnership, England: as quantity surveyor, Ian was working in a multi-disciplinary environment on projects valued at $250K to $20M. His responsibilities included acting as owner's representative on a design-build four-star hotel, Inn refurbishment projects, banks, and office buildings.

Rider Hunt and Partners, England: as quantity surveyor, Ian was responsible for pre- and post-contract duties; working on various types of projects valued at $300K to $20M, including commercial and industrial projects, hospitals, private and public sector housing, and educational establishments.

Fairclough Building Ltd (A General Contractor; part of the Amec Group of companies), Leeds, England: as project quantity surveyor, Ian was responsible for post-contract duties, which included site measurement, authorizing subcontractor valuations and final accounts, and performance of background work for preparation of a loss and expense claim.

Rex Procter & Partners, England: as trainee quantity surveyor, Ian worked on various retail, office building, and hospital projects which valued from $350K to $10M.

Indardeo Parbhunath, PE, NACE
Inspector

Indardeo Parbhunath (Parbs) has three decades of proven successful experience as a construction inspector with a background in highway and bridge construction and reconstruction projects in the northeastern United States. His responsibilities have included inspection supervision, final quantity calculations, preparation of construction change orders, and daily review of inspection reports. Since joining Parsons Brinckerhoff, Parbs has been serving as a supervising construction engineer on several major assignments.

Highlights

Firm: Parsons Brinckerhoff

Years of Experience: 35

Education: B.S., Civil Engineering, University of Guyana, 1975

Professional Licenses/Certifications: Professional Engineer: CT. [redacted] NY # [redacted]

National Institute for Certification in Engineering Technologies (NICET), Level IV, 1986 (#[redacted])

NACE Training I, II, and III Certification (#[redacted]); Coating Inspection Technician

Certified Traffic Control Supervisor (ATSSA) – Cert. No. 29980

ACI, Grade 1

World Trade Center Reconstruction, New York City: Senior Inspector for nighttime construction work for Towers 2,3&4. Work includes inspection supervision for excavation, underpinning, slurry walls construction, maintenance and protection of traffic, extra work (time and material) and track work.

Manhattan Bridge Reconstruction Contract #11, New York City: served as project safety and maintenance and protection of traffic (MPT) manager for this $175 million project. The project involved reconstruction of the lower roadway suspended and approach spans, rehabilitation of anchorage chambers, rehabilitation of substructures and retaining walls in the Brooklyn and Manhattan approach spans and travelers in the suspended spans, installation of new street lighting and traffic signs, replacement of maintenance platforms at the towers, and canopy work at the towers. The MPT provisions were monitored on both sides of the bridge daily for proper signage, detours, etc. per MUTCD. When work was scheduled around the clock, MPT was on a 24 hr. basis. MPT provisions include temporary concrete barriers at staging areas with warning lights; temporary/ permanent traffic signs, barricades, drums and lane-control signals; flashing arrow panels; and impact attenuators.

Manhattan Bridge Reconstruction #10, Project Safety Manager: In charge of project safety and maintenance and protection of traffic for this $180 million project. The project involved resident engineering inspection services for the North Spans of the structure. Primary elements of the work were stiffening of the main span trusses C and D; reconstructing the North Subway Framing; reconstruction of the North Upper Roadway Deck; rehabilitation of the North Approach Spans involving trusses C and D, modular deck joints, pavement, curb, railing and bridge overlay; rehabilitate the North Elevated Structures at both Manhattan and Brooklyn and the North Subway Tunnels; painting, new inspection platforms and a new north bikeway. The M&PT provisions were monitored on both sides of the bridge daily for proper signage, detours, etc. per MUTCD.

Manhattan Bridge Reconstruction #8C, Project Safety Manager: In charge of project safety and maintenance and protection of traffic for this $125 million reconstruction. The project involved paint removal and repainting of structural steel with lead abatement operations, main cable and suspension system rehabilitation, and subway floorbeam and stringer replacement on the west side of the bridge. The M&PT provisions were monitored on both sides of the bridge daily for proper signage, detours, etc. per MUTCD. When work was scheduled around the clock, M&PT was on a 24 hr. basis.

Old Baldwin Bridge Removal Connecticut, Project Manager: served as Project Manager for removal of a 1948 four-lane steel girder bridge following construction of a 2,522-foot-long (769-meter-long) precast concrete segmental replacement bridge to carry I-95, U.S. 1, and SR 9 across the Connecticut River between Old Saybrook and Old Lyme in Connecticut. His oversight of this $10 million project included supervision of the subconsultant responsible for cutting and removal of the bridge's concrete deck slabs, construction of a cofferdam for collection of substructure fragments as the concrete is broken down with jackhammers; construction of a replacement boat launch facility south of the new bridge requiring excavation and the building of a boat launching ramp, a fishing pier, and a parking lot. Demolition of the 12-span, 2,450-foot-long (747-meter-long) existing structure also involved environmental precautions to avoid disturbing the riverbed and responsible disposal of debris. Steel elements were sent to scrapyards for recycling and the concrete helped form an artificial reef to provide a habitat for marine life in Long Island Sound.

East Bridgeport Railroad facility improvement, CTDOT, Chief Inspector: chief inspector for this $18M construction project. Responsibility includes inspection supervision for various stages of construction such as excavation,,subgdade preparation,guanular fill, sub-ballast,ballast,track installation,underground and overhead utilities,foundations and extensions for the catenary structures,paving,fence installation,monitoring of waste storage areas pavement marking, signs installation and finalizing contract quantities for payment.

Connecticut Department of Transportation (ConnDOT) District 2 Bridge Replacement, Connecticut: chief inspector for a $1.5 million construction project that included the removal and replacement of superstructure and substructure, finalization of quantities, preparation of construction orders, and daily inspection.

Route 8 Rehabilitation, Litchfield to Torrington, Connecticut: chief inspector for an $11 million resurfacing and safety improvement project, including the rehabilitation of 18 bridges. His responsibilities included inspection supervision, preparation of construction orders and correspondence, finalization of quantities, and daily review of inspection.

Jose Castro
Inspector

Jose Castro is a Senior Construction Inspector with an extensive record of success overseeing all phases of construction, infrastructure, and environmental projects for state and private-sector clients.

Highlights

Firm: Parsons Brinckerhoff

Years of Experience: 20

Professional Licenses/Certifications:

OSHA -10 HR Certified;

Certificate of Erosion & Sediment Control; MTA NYC Track Safety Certification

MTA-NYCT Fulton Street Transit Center, Contract A-36119, Transit Center Foundation & Corbin Building, New York, NY: Responsible for the administration and implementation of all phases of work related to the Heating, Ventilation & Air Conditioning, Electrical, Plumbing and Fire Protection (MEP) disciplines for construction of the new Fulton Street Transit Center and the rehabilitation of the historic Corbin Building. Also responsible for the oversight of all phases of work related to elevators, escalators reviewing of contractor's payment applications, shop drawings and submittals and commissioning of MEP equipment along with elevators and escalators.

New York City School Construction Authority (SCA), Various Projects, New York, NY: Project Officer for the SCA responsible for the inspection and management of various construction projects. Reviewed contractor's payment applications and submittals for accuracy insuring that the contractor meets his obligations and projects are completed on-schedule and within budget. Also responsible for tasks such as: scheduling meetings with clients as required; coordination of construction crews; Inspecting construction of waste water treatment facilities; supervising electrical upgrades; inspecting work done on NYSDOT right-of-ways, traffic pattern changes for the new Taconic Center in the Town of LaGrange; inspect new sanitary waste lines for the Town of East Fishkill's waste water treatment facility; confirming elevations of newly installed sanitary waste lines; and Verify all NYSDOT specification and regulations were adhered to.

NYS Office of General Services (OGS), Various Projects, New York, NY: Superintendent / Senior Construction Inspector for various NYS OGS projects. Responsibilities included: supervision and inspection of various forms of construction and rehabilitation; supervised emergency projects and repairs in various correctional facilities; insured that all construction phases run smoothly, efficiently and meet the standards of the State of New York; reviewed contractor's payment applications for accuracy, insuring that the contractor meets his obligations, and projects are completed on schedule; scheduled meetings with contractors and designers as required; coordinated officer coverage for the construction crews; supervised various heating jobs; supervised electrical upgrades; coordinated lead and asbestos remediation; verified Installation of exhaust fans for isolation wards; inspected construction of a waste water treatment facility; supervised environmental clean-up; inspected CCTV installation; inspected rehabilitation of fire suppression systems; inspected upgrades of existing lighting systems and incorporated emergency

lighting for egress; coordinated an emergency job to replace transformers while minimizing power interruptions.

Siemens Building Technologies: Systems Technician responsible for directly assisting the Project Manager in multiple aspects of his duties including the following: Coordinating the installation of monitoring and control devises; troubleshooting control panels, monitoring devices and created graphical designs for HVAC systems; programming and testing various HVAC systems and equipment.

Daniel Lochard, EIT

Inspector

Highlights

Firm: Parsons Brinckerhoff

Years of Experience: 26

Education: B.S. Electrical Engineering, New York Institute of Technology, NY 1988

Professional Licenses/Certifications: Engineer in Training (EIT); OSHA 30-Hour Safety Certificate

Daniel Lochard is a construction inspector with over two decades of experience in the construction industry. He has overseen construction management on major building renovation and new construction projects including the $3B construction of the Freedom Tower as well as the numerous multi-million dollar projects for the NYC Housing Authority and NYC School Construction Authority. He has experience in construction management from the pre-bid phase through final closeout.

Newark Liberty International Airport International Terminal, New Jersey: Senior Supervising Engineer supervising electrical installations for the $300 million renovation of Newark Liberty International Airport's International Building. The project consisted of the replacement of all switchgears and switchboards in two (2) sub-stations, installation of two (2) 2.8 MW emergency generators and installation of new elevators and escalators to accommodate the vertical circulation requirements. The project also included total replacement of all lighting, fire alarm and communications systems.

World Trade Center Reconstruction, New York City: As project manager, oversaw comprehensive construction management services as part of the Owner's Representative team for the $3.0 billion construction of the Freedom Tower. This state-of-the-art and LEED certified landmark skyscraper will contain office spaces for commercial and governmental entities. The challenge of constructing this building entailed coordinating all activities with construction activities of the PATH Station, WTC Memorial and WTC Museum.

Newark Liberty International Airport International Terminal, New Jersey: Conducted electrical inspections for line projects and tenant alteration projects for the Port Authority of NY & NJ, at Newark Liberty International Airport. Projects included installation of new elevators, escalators, emergency generators, switchboards and construction of new tenant spaces. Projects also included installation of CCTV systems, FAA Air Traffic Control tower high-magnification cameras and the pilot program for the Sarnoff Video Flashlight system. This modern video surveillance and monitoring system incorporated the use of multiple cameras for object recognition, 3D exploitation and analysis.

NYC Housing Authority, Various Projects, New York City: Project Manager for two (2) multi-million dollar projects for a CM/Build contract with the NYC Housing Authority. The projects consisted of exterior masonry renovations of ten (10) six-story buildings in the South Bronx and Washington Heights. Duties included the following CM responsibilities from the Pre-bid phase to the Final Completion phase: constructability reviews of preliminary scope of work, preparation of

bid packages, awarding of contracts, managed CM field staff that supervised the contractors' activities, conducted progress meetings with the client and processed payment requisitions.

NYC School Construction Authority: Managed and supervised General Construction teams on three (3) concurrent multi-million dollar construction projects. Duties included phasing and scheduling of all construction activities from the Notice-To-Proceed date to the Certificate of Occupancy, coordination of all sub-contractor activities, managing all contractual and non-contractual expenses and interfacing with the client. The projects included roof replacements, masonry restoration, electrical upgrades and playground replacement.

Alan Weddell
Inspector

Since joining Parsons Brinckerhoff, Alan Weddell has worked on three major projects. As one of the biggest public works projects in the world the Central Artery Tunnel Project, a $15-billion project in Boston, Massachusetts, consisted of the fabrication, construction and erection of 3 miles of major tunnels, bridges and seven tunnel vent buildings. For more than 12 years, Alan worked at several different positions within the QA metals group helping to oversee on-site erection and off-site fabrication of building and bridge structural steel. He also provided quality assurance inspection services at structural steel fabrication plants for railroad station rehabilitation projects for the $21 million New York City Transit/Underwriters Laboratory Worldwide Inspection Services Contract. The $1 billion Huey P. Long Bridge Widening Project for the Louisiana Department of Transportation, one of the largest transportation projects in Louisiana history. The Huey P. Long Bridge is the longest railroad and motor vehicle bridge in the U.S. This bridge consisted of fabrication including plate girders for the approaches to the main bridge, box trusses over the 2,381-foot water span, expansion joints and bridge bearings. He organized and supervised a team of quality assurance fabrication inspectors at several major bridge fabrication plants. He was also for a period of time the Parsons Brinckerhoff corporate training instructor/manager for a welding inspection training program, providing training to field engineers on Parsons Brinckerhoff projects throughout the U.S. and Puerto Rico.

Highlights

Firm: Parsons Brinckerhoff

Years of Experience: 34

Education: Additional Studies: American Society for Quality Auditing Seminar; FHWA High Strength Bolts for Bridges Seminar; Hellier NDT Training School Radiographic Film Interpretation Training; Coastal NDT Inspection Training School Magnetic Particle Testing Level II Classroom Training

Professional Licenses/Certifications: American Welding Society Certified Welding Inspector with Endorsements: API 1104, AWS D1.5 Bridge Welding Code, AWS D15.1 Railroad Specification for Cars & Locomotives; American Society for Nondestructive Testing Certified ACCP Level II VT; National Association of Corrosion Engineers Certified Coatings Inspector; American Society for Quality Certified Quality Auditor ;American Concrete Institute Concrete Testing Technician-Grade I

MTA Laboratory Worldwide Inspection Services, NYC: principal supervisory inspector whose duties include:

- Performing fabricator audits prior to the start of work to ensure all required submittals are approved, welders qualified, etc.; meetings with quality control managers to review results; and providing detailed audit results to the client.
- Performing QA in-process inspection during structural steel fabrication involving welding, dimensional and coating inspections of structural steel.
- Witnessing non-destructive testing of welds and review of completed NDT reports.
- Working with the MTA Request for Inspection approval process, inspection documentation and material tracking systems.
- Receiving and processing/storing MTA fabrication approval documentation.

- Training new inspectors in the use of the MTA documentation process.
- Providing email notification to client with digital photographs of any fabrication issues.
- Providing in-process daily reports with photographs describing fabrication issues.
- Scheduling fabrication shop visits and making travel arrangements.

Huey P. Long Bridge Widening Project, LA: lead QA inspector responsible for:

- Supervising a staff of QA welding/fabrication inspectors.
- Setting up and implementing a quality assurance program to satisfy client requirements.
- Scheduling and holding bridge pre-fabrication meetings with major bridge fabricators.
- Organizing and leading weekly conference calls between fabricator and the jobsite to review progress and any quality issues.
- Performing stored material verification for payment.
- Witnessing fracture critical Welder Qualification & Welding Procedure Qualification.
- Review and approval of all fabricator required submittals prior to official submittal, including: Fracture Critical Welding Procedures, Non-Critical and Critical Repair Procedures, Heat Straightening and Cambering Procedures and NDT Technician Qualifications.
- Witnessing non-destructive testing, including UT, RT, MT and PT.
- Witnessing fabricator QC dimensional inspections on welded plate girders for camber, straightness, web flatness, tilt of flange, etc.
- Providing monthly progress photographs to on-site resident engineer.
- Providing weekly reports on inspections performed and fabrication issues to the resident engineer.
- Hold weekly meetings with fabricator management to address fabrication concerns and issues.
- Performing high strength bolting inspection, including witnessing of rotational capacity testing, installation verification testing and final installation inspection.
- Performing in-process and final coating inspection.
- Formulated and presented a welding inspection training class for project field engineers.

Central Artery/Tunnel Project (Ted Williams Tunnel), Boston, MA: welding/fabricator QA inspector for fabrication at Bethship Shipyard in MD. Responsibilities included:

- Monitoring fabricators' quality control activities during fabrication and welding to ensure compliance to approved drawings, contract requirements and AWS D1.5 bridge welding code or AWS D1.1, structural welding code, notifying engineers of any deviations.
- Witnessing fabricator non-destructive testing of completed welds.
- Signing off on final weld inspection.
- Reviewing fabricator-submitted pay packages for completeness.

James Conroy
Inspector

James Conroy's experience includes both heavy construction and contract management. He has supported numerous New York State highway, bridge, and tunnel projects. Jim's responsibilities have included supervising field inspectors, reviewing inspectors' reports, and updating the resident engineer regarding the status of field work operations.

Highlights

Firm: Parsons Brinckerhoff

Years of Experience: 31

Education: A.A.S. Civil Technology, State University of New York at Farmingdale, 1978

Professional Licenses/Certifications: Maintenance and Protection of Traffic Certificate: New York State Department of Transportation (NYSDOT);

NICET Level IV, National Institute of the Certification of Engineering Technologies; ACI Concrete Field Testing Technician, Grade 1;

Occupational Safety and Health Administration (OSHA) 40-Hour Hazmat Certification

Stamford Rail Yard Rehabilitation, Stamford, Connecticut: senior construction engineer for a Connecticut Department of Transportation project consisting of an equipment maintenance building, storage tracks, and related rail yard improvements. The equipment maintenance building is a three-story 30,700-square-foot steel frame building, with tracks and pits for rail equipment repair and support shops on the main floor, and office space on two other floors. Construction includes placement of concrete, masonry walls, structural steel, steel joists, metal roof deck, trackwork, waterproofing, fireproofing, single ply roofing, roof accessories, sheet metal, doors and frames, and overhead doors, as well as interior finishes and furnishings, plumbing, fire protection, HVAC, electrical systems, lighting and communication/alarm signal systems. Storage yard work includes building demolition, trackwork, and catenary construction, grading, and drainage. Site improvements include construction of a retaining wall, paving of parking areas and walkways, perimeter fence, and site utilities. The project required removal of asbestos and contaminated soils.

Brooklyn-Queens Expressway, Broadway to 61st Street, New York, New York: chief inspector for this $123M reconstruction project. The project is the second phase of an ambitious effort being undertaken by New York State to revitalize, rehabilitate and enhance one of the busiest and most important highway links in metropolitan New York. The major work includes replacing existing seriously deteriorated pavement from 69th Street to Broadway and resurfacing the pavement from 61st Street to 69th Street; relocating northbound exit and entrance ramps from Roosevelt Avenue to Broadway; improving existing entrance and exit ramps; replacing/repairing existing retaining walls; realigning the roadway—vertical and horizontal—to improve limited stopping sight distance; replacing three bridges—Roosevelt Avenue Bridge, 41st Avenue Bridge and 70th Street Bridge over BQE; superstructure replacement of two bridges—65th Place Bridge and Queens Boulevard Bridge over BQE; rehabilitating/repairing five bridges; constructing noise walls, highway lighting, and half section barriers; and landscape work.

I-287 Viaduct Replacements, Westchester County, New York: chief inspector for the replacement of the Saw Mill River and Bronx River Parkway viaducts and associated approach roadways. These eight-lane viaducts, part of the Cross Westchester Expressway, were demolished and replaced due to the demand for enhanced vehicular capacity and safety. Removal of old foundation elements

that conflict with the new design was a major undertaking affecting the project schedule, rivers below, and the Bronx River Park. There were also main line approach modifications, enhancements to several access ramps, a bike trail, an adjacent parking facility, and construction of noise barriers and retaining walls. The contract incorporated A+B bidding and lane rental charges. Much of the work was performed at night and under active traffic conditions.

North Channel Bridge over Jamaica Bay, Queens, New York: chief inspector responsible for supervising inspectors, producing field documentation, monitoring maintenance of traffic, reviewing project materials, and progress reporting for this bridge replacement project. The 2,500-foot-long replacement bridge uses prestressed concrete construction for a six-lane span with a bicycle lane. The replacement bridge is supported with 80-foot-long, 54-inch-diameter cylindrical concrete piles, which were used for the main portions of the substructure. Construction was performed in an environmentally sensitive area, which made demolition of the existing bridge difficult.

Greenpoint Avenue Bridge, Brooklyn, New York: assistant resident engineer for a New York City consulting engineering firm on the construction of this $36 million project which included construction of a bascule bridge and towers; placement of cofferdams; driving 54-inch (1.4-meter) steel caissons; placement of tremie and structural concrete and rebar; installation of steel bascule girders and deck; excavation; installation of subbase material and finish asphalt; and the placement of a high-density concrete overlay bridge deck. He also supervised inspectors, reviewed daily reports, prepared change orders, reviewed shop drawings, and interfaced with the contractor.

Street and Roadway Construction, Various Locations: assistant resident engineer/office engineer for a consulting engineering firm on various street and roadway construction projects. His responsibilities included quality control of the contractors' work; supervising inspectors; inspection documentation; preparing change orders; and coordinating work with city agencies, the construction manager, and the contractor. Projects he supported include:

- $1 Million Roadway Rehabilitation Project, New York City: demolition and removal of parts of an existing roadway; roadway widening; and installation of sewer lines, curbs, sidewalks, and catch basins, all in Manhattan
- $8 Million Bridge Rehabilitation Project, New York City: reshaping two truss bridges in the Hunts Point section of the Bronx
- Sidewalk and Curb Rehabilitation, The Bronx, New York City

Arkady Livshatz
Inspector

Highlights

Firm: Parsons Brinckerhoff

Years of Experience: 34

Education: B.S, Mechanical Engineering. College of Construction and Engineering, Leningrad, USSR.

Professional Licenses/Certifications: OSHA 10-Hour Construction Safety

NYCDOB Recognized Scaffold Safety Challenge Training and Exam

The Greater New York Safety Council, Inc. – Fall Protection

The Greater New York Safety Council, Inc. – Labor Management Safety and Health

The Greater New York Safety Council, Inc. – Steel Erection

GWB Bus Station Redevelopment, Port Authority NY NJ TAA-0901: Project Field Engineer responsible for:

- Daily inspections for compliance with contract documents
- Inspection/observation of all construction activities on site including Civil, Structural and MEP work
- Coordinated and enforced safety requirements in accordance with PA of NY NJ and OSHA guidelines.
- Requested information, notice of non-compliance, incoming and outgoing submittals, etc.
- Maintained plans and specifications as well as daily reports of all activities on site.
- Coordinated with PA NYNJ inspectors on all phases of Construction

Life and Safety Upgrades Statue of Liberty National Monument, Liberty Island for National Park Services: Project Field Engineer/Cost Estimator responsible for:

- Daily inspections for compliance with contract documents
- Inspection/observation of installation Mechanical, Electrical and Plumbing work
- Estimated, prepared and processed change orders.
- Inspections/observation of upgrading of BAS System in National Monument
- Coordinated and enforced safety requirements in accordance with NPS and OSHA guidelines.
- Requested information, notice of non-compliance, incoming and outgoing submittals, etc
- Maintained plans and specifications as well as daily reports of all activities on site.
- Authorized and negotiated field modifications, developed schedules for coordination and access in critical areas.

Project: 59th Street Recreation Center Renovation for Department of Parks & Recreation. Capital Projects Division: Resident Engineer responsible for:

- Daily inspections for compliance with contract documents
- Inspection/observation of installation Mechanical, Electrical and Plumbing work
- Estimated, prepared and processed change orders

Sherry Samuel
Inspector

Newark Liberty International Airport Terminal B Lower Level Expansion Project: The project consists of the replacement of all switchgears and switchboards in two (2) sub-stations, installation of two (2) 2.8 MW emergency generators and installation of new elevators and escalators to accommodate the vertical circulation requirements. The project also consists of total replacement of all lighting, fire alarm and communications systems.

Newark Liberty International Airport Terminal B Mid and Upper Level Expansion Project: The project consists of renovating the departure level ticket counters, building new mezzanine level for airline offices and add ticket counters to the . The project also consists of replacing all the old electrical power panels and adding new distribution panels. The project will also replace all the old fire alarm system and add more as needed for the new areas.

Newark Liberty International Airport Terminal B Fire Alarm Upgrade: This project consists of upgrading all Fire Alarm devices in the Terminal to addressable devices, also adding devices to improve coverage and notification. The project also consists of updating Fire Finder System in Building 46 to show all devices with proper textual designations.

Firm: Parsons Brinckerhoff

Years of Experience: 11

Education: B.S. New Jersey Institute of Technology Mt. Laurel, NJ

Professional Licenses/Certifications: Maintenance and Protection of Traffic Certificate: New York State Department of Transportation (NYSDOT);

NICET Level IV, National Institute of the Certification of Engineering Technologies; ACI Concrete Field Testing Technician, Grade 1;

Occupational Safety and Health Administration (OSHA) 40-Hour Hazmat Certification

Newark Liberty International Airport Central Heating and Refrigeration Plant Replacement of High Temperature Hot Water Generators: This project consists of replacing the existing Four High Temperature Hot Water Generators with newer more efficient ones. This includes the replacement of Power and control for each one.

Newark Liberty International Airport Replacement of Switchboards at Underpass #2 substation at Flag Pole Road: This project consists of replacing two existing switchboards and conduits associated with them.

John Marecki, NACE
Inspector

John Marecki has 30 years of experience working as a Chief Inspector for the NYS-DOT, NYC-DOT, CT-DOT, NYS Thruway Authority, and MTA Bridge and Tunnels. His experience includes managing inspection staff and bridge construction (steel erection, concrete placement, and drilled shaft installation).

Pearl Harbor Memorial Bridge Replacement, I-95 New Haven, CT for CTDOT: Provided construction inspection services for this $554 million project (contract B1 and contract B). Major elements include construction of the replacement bridge, the construction of two work trestles, installation of 4 cofferdams, installation of forty-two 8ft diameter drilled shafts at the 4 main span foundations, installation of cast in place footings, columns, and caps at each pier location, installation of cast in place segmental box girder structure and cable stay. The East Approach included installation of drilled shafts (8ft and 11ft diameter), installation of columns and pier caps, installation of bearings, erection of steel girders and placement of concrete deck and LMC overlay. Responsibilities included supervision of field inspectors and support personnel.

Route 9a, West Street Promenade, Battery Place To Chambers Street For NYSDOT: Major elements of this $190 million project included: replacement of northbound and southbound roadway; landscaping a median and buffer; sidewalk construction featuring granite curbs, pavers and protective ballards at the crosswalks; installation of new traffic signals and decorative street lighting; installation of major utilities (gas, FOC, electric, water, sewer, steam).

Route 98, West Street, Battery Place to West Thames St. (South Promenade) In Manhattan for NYSDOT: Major elements of this $70 million project included: northbound and southbound lanes; a landscaped median and buffer; sidewalk construction featuring granite pavers and curbs, protective ballards at the crosswalks; installation of new traffic signals and decorative street lighting; installation of new utilities.

Post-Tensioning Technician — Level 1

Grouting Technician — Level 2

NETTCP Certified Field Concrete Technician

Welding Inspector — Pending Renewal

Reconstruction Of I-87/I-287, Tappan Zee Bridge To Saw Mill River Parkway For The NYS Thruway Authority: Major elements of this $187 million project included: new roadways through environmentally sensitive wetland areas, new bridges, asphalt roadway construction, rock

blasting, retaining walls, drainage, utility relocation and noise walls. Awarded NYSSPE Project of the Year.

Stamford Railroad Station for CT-DOT: Major elements of this $98 million project work included replacement of existing bridges carrying Metro-North Railroad tracks over Washington Boulevard, lowering and widening Washington Boulevard, installation of new water mains, gas main and drainage lines. Responsibilities included recording coordination of work with Metro-North as well as other agencies and supervision of field inspectors.

Reconstruction Of Approach Viaducts To The Williamsburg Bridge For The NYCDOT: This $310 million project involved complete replacement of the south roadways for the Brooklyn and Manhattan approach viaducts. Responsibilities include supervision of erection of the structural steel interim bracing, installation of new water mains and drainage lines, removal of the lead based paint from existing structural steel members prior to demolition, installation of variable message signs, fiber optic cable for the Traffic Management System, installation of the interim signal system for New York City Transit, and coordination of lane closures on the main bridge, approaches and local city streets. Responsibilities also include coordination of work with New York City Transit and other agencies, supervision of field inspectors and support personnel, supervision of the bored in pipe piles and seismic casings, and construction of new concrete piers in the limited space between the existing steel piers. September 1995 to October 1996.

Fast-Track Rehabilitation Of The Approach Roadway Viaducts For The Cross Island Parkway To The Throgs Neck Bridge In Queens For Mta Bridges And Tunnels: This project received the Construction Management Association of America's 1995Project of the Year Award and the Concrete Industry Board, Inc.'s Award of Merit. Project work involved the removal/replacement of the viaducts, including all concrete deck slabs, armored joints, bearings (upgrade to seismic bearings), cleaning/repainting of the structural steel members, modification of bridge lighting system on ramps and under deck, replacement of on-grade subbase and asphalt payment, modification of approach roadway catch basins and miscellaneous repairs to structural steel.

Rehabilitation of the Miller Highway Viaduct, From 59th St. To 72nd St. In Manhattan For NYSDOT: This $70 million project included the installation of bored-in pipe piles for the two new approach ramp construction and attachment of the new concrete columns to the existing caissons. Also involved the complete deck replacement and structural rehabilitation of the elevated portion of the West Side Highway. This project was the first project in New York State that utilize a movable barrier for maintenance and protection of traffic. This allowed added capacity in the peak travel direction during the morning and evening rush hours. Project work consisted of steel viaduct and concrete roadway rehabilitation. Specific construction operations of this project included structural concrete placement, sidewalk, curbs, concrete road base, asphalt wearing course, electrical, traffic signalization, structural steel, water services, drainage installation and other related work.

David Bell

Inspector

Mr. Bell is a degreed Civil & Environmental Engineer with 4 years of experience. He is currently serving as a consultant Office Engineer/Financial Coordinator for the Port Authority in the Journal Square Transportation Center (JSTC) located in Jersey City, NJ. Mr. Bell is enthusiastic and energetic, with the ability to work in either a team-oriented or an independent setting. He has gained valuable knowledge and experience concerning proper medium to large sized project management while maintaining good client relationships. He is personable and understands human behavior as it applies to leading and motivating others. Mr. Bell has excellent organizational skills and is highly effective with both oral and written communications. He is able to understand the nature and process of solving problems by recognizing the problem, developing alternatives, and making decisions to reach the best solutions. Mr. Bell is proficient with the following computer programs: SAP, Primavera Contract Manager, WinTrak, Field Automated Communication Systems (FACSware), Integrated Project Management Information System (iPMIS), CapEx Manager, Microsoft Word, Microsoft Excel, Microsoft Office, Matlab, Minitab, and AutoCad.

Port Authority Trans-Hudson (PATH) Multiple Projects:

- PAT 024.027: PATH Hoboken Corridor Modernization Improvements
- PAT 024.038: PATH Replacement of Switching Station No. 6
- PAT 024.089: Harrison Station Abatement of Existing Buildings
- PAT 084.003: PATH Train Control and Communications System Installation
- PAT 214.004: PATH JSTC Bus Terminal Escalator Replacement
- PAT 624: PATH Police Command Facility
- PAT 624.154: PATH Replacement & Upgrade of Christopher St. Substation
- PAT 628: Tunnel E&F Interior Strengthening and Water Management and Equipment Control Systems
- PAT 631: PATH Asbestos & Lead Abatement Via Work Order NY & NJ Facilities
- PAT 632: Chemical Grouting Via Work Order
- PAT 633A: PATH Corporation NY & NJ Facilities-Building and Site Improvement Via Work Order
- PAT 635: PATH Corporation-JSTC 2nd Floor Computer Equipment Room Cooling System
- PAT 640: PATH Building, Site and Track Improvements Via Work Order
- PAT 643: Cleaning Operations in Tunnels E & F to Remove Surface Salt from Hurricane Sandy
- PAT 924.003: PATH Running Repair Shop Replacement of Boilers
- PAT 924.102: PATH Corporation-Portal Backus Substation No. 5 Roof Rehabilitation
- PAT 924.103: Hackensack River Bridge Deck and Rail Replacement
- PAT 935.001: NY & NJ Facilities Immediate Repairs

The Port Authority of New York & New Jersey: Engineering Office Manager. The Port Authority of New York & New Jersey conceives, builds, operates and maintains infrastructure critical to the New York/New Jersey region's trade and transportation network. These facilities include the PATH rail transit system. The PATH system is undergoing an extensive modernization program that will bring it into the 21st Century using the latest technology while continuing to provide customers with reliable and safe service. Current PATH projects range from modernization improvements and equipment upgrades to interior strengthening and water management. I am responsible for a wide range of PATH office duties within the Journal Square Transportation Center (JSTC) located in Jersey City, NJ. My primary role is to manage the financial budgeting of many (30+) ongoing PATH projects, aiming for good financial performance. I coordinate between the Engineer of Construction and the Resident Engineers to ensure that no project runs over the authorized budget. I am also responsible for the following tasks: Contract payments, Net Cost Conversions, Change Order processing, monthly reports, internal auditing, T&M Ticket organization and entry, etc.

New Jersey Turnpike Authority (NJTA): Office Engineer; Inspector. The $2.5 billion NJ Interchange 6 to 9 Turnpike Widening Program will expand the turnpike from six lanes to 12 lanes from a point approximately 2 miles South of Interchange 6 to the existing 10-lane dual-dual roadway South of Interchange 8A. This will require adding a new 3-lane roadway in each direction for a 25-mile section of the Turnpike (Milepost 48 to Milepost 73). The result will be a dual-dual facility (3 "cars/trucks/buses" lanes and 3 "cars only" lanes in each direction). A third lane will be added to the "cars/trucks/buses" lanes (outer roadways) of the 10-lane dual-dual roadway between Interchanges 8A and 9. This will require adding 1 new lane to the existing "cars/trucks/buses" lanes in each direction for a 10-mile section of the Turnpike (Milepost 73 to Milepost 83). Connections to interchanges and service areas will be improved by relocating and expanding the Interchange 8 Toll Plaza and associated ramps as well as widening the existing Interchange 7A Toll Plaza.

Bashir Ahmad

Inspector

Syed Ahmad is a chief construction inspector with more than 30 years of experience in project and construction management, quality assurance, field and laboratory testing, construction inspection supervision of major highways, and airport and bridge rehabilitation projects.

Highlights

Firm: Parsons Brinckerhoff

Years of Experience: 40

Education: B.S., Osmania University, India, 1959.

Professional Licenses/Certifications:

NICET: Level IV Certification

OSHA: Certified-Construction Safety, Health & Lead Abatement

NYSDOT: Traffic Control of Construction & Maintenance Operations

AIRPORT: Certification – 14 CFR, Part 139

PATH/AMTRAK/MONORAIL: "On-Track" Safety Training

Port Authority of New York and New Jersey (PANYNJ) CM On-Call Services Contract, New York/New Jersey: provided construction management on projects for rehabilitation, renovation and construction of the Port Authority's rail, aviation, bus, and tunnel and bridge facilities. Provided construction management and construction inspection of civil, structural, mechanical, and electrical construction activities at the Authority's facilities.

World Trade Center Transportation Hub and Other Site Projects, New York, New York: providing professional construction management services associated with the World Trade Center Transportation Hub and other construction projects at the World Trade Center site. Services include coordination of all on site construction activities with each of the stakeholders. Major project elements include the $2 billion WTC Transportation Hub and the $250 million east bathub structural support system. Other site projects during the first phase of the site reconstruction include the security center, central plant, WTC memorial, WTC cultural center, WTC Performing Arts Center, the Freedom Tower, and Tower 2.

World Trade Center Projects, New York, New York: responsibilities included the protection of several impacting areas of the World Trade Center and PATH during the reconstruction of the West Side Highway.

Newark Liberty Airport, Newark, New Jersey: field engineer and project coordinator for construction management on various multi-discipline airport, railroad and roadway projects. Syed performed inspection to assure compliance with plans and specifications, with utmost important to safety and traffic concerns. He was also responsible for coordination with different agencies.

I-278 Bruckner Expressway and Ramps Reconstruction, Bronx, New York: chief inspector in charge of field operations and personnel. This $80 million three-mile-long project with 260 spans (includes 8 ramps) extends from Triboro Bridge interchange to Sheridan interchange. The project involved deck rehabilitation with micro-silica overlay; pier repair, replacement of elastomeric bearings; drainage; electrical and Class "A" containment painting.

Hutchinson River Parkway Bridge Reconstruction, Bronx, New York: chief inspector in charge of all field operations and supervision of engineering inspection staff for this $30 million project. The project involved rehabilitation of continuous girders, floor beams, superstructure members and abutments. Bascule machinery was rebuilt and electrical elements were replaced. The 700-foot-long bridge consists of six fixed spans and two double leaf bascule spans. Syed was fully conversant with Class "A" containment system specifications, guidelines, and inspection methods for pain and asbestos removal.

Reconstruction of Westbound BQE and Gowanus Expressway Merge, Brooklyn, New York: senior inspector for the reconstruction involving demolition of the existing three barrel bridge and its replacement with a three-lane, multi-span composite girder viaduct having a length of approximately one half-mile as well as a 450-foot-long, three-span bridge also of composite construction.

Roadway Reconstruction, Staten Island, New York: chief inspector for water main; pile support storm and sanitary sewers, fire communication facilities, landscaping, traffic signals, maintenance, and protection of traffic and roadway work. He also acted as resident engineer.
BQE Highway and Bridge Rehabilitation, Brooklyn, New York: as senior inspector, Syed performed inspection to assure compliance with plans and specifications for the following operations: removal and replacement of structural concrete, sub-grade approval, concrete pavement, asphalt placement, maintenance and protection of traffic. The project involved the rehabilitation of several bridges and approach roadways.

Highway and Bridge Rehabilitation on Belt Parkway, Brooklyn, New York: senior inspector in charge of soils operation for detour road construction. He established soils laboratory and trained inspectors. Syed also performed engineering inspection for removal and placement of structural concrete; pile driving; drainage, and basic maintenance and protection of traffic.

Roadway Reconstruction Project, Frelinghuysen Avenue, Newark, New Jersey: project/office engineer responsible for interpreting job specifications, scheduling daily work, verification of quantities and record keeping for estimates. Syed also prepared change orders and contract claims.

Westway Project, New York: assistant project manager primarily involved in contract administration (cost and scheduling, weekly progress reports, scope of work, etc) records management, hiring of personnel and office administration. Syed directed and maintained complete control of project budget. He also assisted the project manager with planning control, coordination, and quality assurance aspects of the interdisciplinary geologic and geotechnical studies.

Alexander Zajac, PE
Civil/Structural

Mr. Zajac has more than 35 years of design experience as well as all phases of construction inspection and supervision.

Highlights

Firm: Hirani/Municipal Testing

Condition Survey of 4 Parking Garages Bldgs. At JFK Airport, Queens, NY: Senior Structural Engineer. Conducting a visual condition survey of the existing parking deck, ramps and pedestrian bridges. Elements being inspected include top and bottom of decks, pavement, exposed portions of concrete tee beams and planks.

15 Bay Street, Bellmore, NY: Performed structural inspection and prepared repair drawings for storm damages related to Hurricane Sandy for two story residence.

21 East Main Street, Oyster Bay, NY: Conducted structural condition survey for a two story, 10,000 sq. ft. retail structure specifically: severely, deteriorated, collapsed and shored basement wood framing. Designed new steel framing and footings to correct and improve the structure.

Barnyard Restaurant, Totowa, NJ: One story steel framing addition over an existing 30,000 sq. ft. restaurant. Preliminary structural design. Performed the inspection and prepared the Bridge Rehabilitation Plan Report (BRPR) for the single span, double deck, steel plate girder bridge at W. 79th Street Boat Basin Structures over Amtrak, carrying W. 79th St., under the Henry Hudson Pkwy. Conducted the inspection and prepared the inspection report and repair drawings for the under deck traveler at the George Washington Bridge lower level. Team leader performed bridge inspection for the URS team , as part of a joint venture for the Interim Inspection and Critical Monitoring of the Gowanus Expressway, I-278

Triborough Bridge: Queens Approach,Performed engineering and construction logistics planning for bridge contractors, (i.e., erection of Inverset deck panels .

LIRR Main Line Branch: Project engineer for a seven bridge rehabilitation. The bridges varied in size from 3 spans to 47 spans and required field inspection, shoring, bridge seat and bearing design, waterproofing, concrete under deck and steel framing rehabilitation.

Cross Bay Blvd. Bridge: Project engineer/team leader for the 1997 NYS Biennial and Special Inspection. The Special Inspection included coring, GPR and ultrasound inspection of the deck and the superstructure to determine prestressing tendon locations and deck deterioration.

NYC Region 11, JFK Airport Terminal Bridges, Newark Airport and Port Newark Bridges and NJ Turnpike District #8 Bridges: Team leader for the Biennial Inspections.

Pennsylvania Station, NY: Supervised the structural condition survey required for the feasibility study for the realignment of railroad track and structural framing to accommodate the Extension of Platform #11. Designed the shoring and structural modifications for the West End Concourse

Pedestrian Bridge and the Liberty State Park Museum of Science & Technology, NJ. Planned the erection of the 20t precast pre-stressed concrete beam superstructure using 200t and 500t cranes ($30 million, 4 story, 200,000 sq. ft.). Prepared drawings and calculations for construction logistics and erection sequencing.

North River Water Pollution Control Project (W.P.C.P.): West of the Henry Hudson Pkwy at145th St. Designed the structural steel bases to secure (3) Kodiak, hammerhead tower cranes to the building structure.

Review of Construction Equipment Loadings on Pennsylvania Ave. Overpass at the Belt Pkwy, Brooklyn, NY: Non-redundant, two span, steel, through-girder bridge) for the contractor, in conformance with AASHTO, as required by NYSDOT.

56 Hester Street, Manhattan, NY: Developed the scheme to erect a 3 story addition on top of an existing 5 story building by placing an 18t rough terrain crane on top of the roof of the building with a 250t hydraulic crane.

197 East Post Road, White Plains, NY: $175,000, 10,000 sq. ft. "design-build" project requiring coordination of architectural services and mechanical/electrical contractors.

Dipak Upadhyaya, ICC
Inspector

Mr. Upadhyaya has over 30 years of experience in all phases of civil engineering and construction from pre-project activities to project completion. He has provided special inspection services on numerous facilities throughout New York City since joining Hirani in 2012. Noteworthy projects include LaMarqueta Building 3, American Airlines Terminal 8 and Décor Planet.

Highlights

Firm: Hirani/Municipal Testing
Years of Experience: 30
Education: Bachelor's Degree in Civil Engineering
Professional Registrations:
CWI & ICC Special Inspector - Structural Welding and Bolting, ACCP Level II
NICET IV – Bridge Inspection;
NICET II – Highway Construction
OSHA 10/30

Senior Project Engineer (QA/QC): Provided engineering and project management, quality control and quality assurance services major projects.

- NJ Transit –Hoboken Train Station Building, Maintenance Building, Train Shed, Ferry Terminal
- Metropolitan transportation authority of NY. – Penn Station Building, NY
- Montclair State University – New Student Complex, Administration Building, Theater Building
- New Jersey Institute of Technology – Architectural School Building, Student Center, Fenster Hall
- Drew University – Administration Building
- Merck & Co. – MOSF & MOS Buildings
- NJSSC School Construction

PSEG, NJ. Hudson Generation Station: Responsibilities include review of drawings and overlooking the construction activity of reinforced concrete foundations, deep foundations. Quality assurance of ongoing work.

Resident Engineer: In this position, I was responsible for managing projects from conceptual to completion and fully operational of all aspects of:

- Effluent Treatment Plant for dyes, chemicals, and intermediates for Atul Products
- Pesticide effluent treatment Plant for Cyanamid

Senior Project Manager: Attended training in ABB Germany for basic and application engineering, erection and commissioning of the project, network management, supervisory control and data acquisition, setting general safety and protection system.
Coordinated and produced project from the site review to the commissioning of the power 450 MW power plant, which includes three number of gas turbine and one number of steam
Senior Project Engineer: Involved into design and construction of projects on turnkey basis. Major projects successfully completed as a project manager, include:

- Textile Mills
- Research Lab.

- UN Administration office
- Multistoried building
- Main Waterline for the city

Project Manager: Involved in heavy industrial construction and management for Zambia consolidated copper mines. Provided Project engineering and technical support to Zambia Consolidated Copper Mines including: project development, scoping, equipment selection, project bidding, contractor selection, construction oversight, and management of safety and environmental activities as a full project engineer.

Site Engineer: Became a part of NDDB's engineering services group providing technical assistance and engineering inputs for the execution of the projects including setting up dairy plants, chilling centers, cattle feed plants, and milk packaging industry. Assisted in pre-project activities, preparation of conceptual planning and detail engineering of the project and project management up to commissioning. Projects includes: Ajmer Dairy Project. Ajmer Cattle feed plant, Paper Laminating Plant.

Michael Ninnisai, PE, ICC

Inspector

Mr. Ninnisai has 29 years of engineering experience in the US and abroad. He has provided services on projects for NYCDEP as well as airlines, mass transit, commercial buildings, public schools, bridges and highways.

Highlights

Firm: Hirani/Municipal Testing
Years of Experience: 29
Education: ME, Structural Engineering, The City College of The City University of New York, 2014

Professional Registrations:
Professional Engineer: New York and Connecticut
ICC Special Inspector - Structural Welding and Bolting
OSHA:
Construction Safety and Health
NYC DOB 4-Hr Scaffolding User
NYC DOB 32-Hr Rigging

DEP Engineering Auditor, DEP, New York, New York: Senior Civil/Structural Engineer. Reviewing and approval of change order requests and drawings for registration on NYCDEP sewer and water treatment plant projects ranging from a few thousand to multi millions. Checking cost estimates based on lump sum or time and material basis. Monitored partial payment of change orders.

Project Manager/Estimator: Project Management and estimating for steel structure and fabrication for American Airline Terminal at JFK International Airport; 405 West 53rd Street, NYC; 103-105 Norfolk Street, Brooklyn.

New York MTA Train Station Rehabilitation: Structural Engineer. Works included rehabilitation above ground train station platforms, public stairs, handrails and all miscellaneous items.

Estimator/Quantity Surveyor: on a wide variety of construction projects which included commercial buildings, public schools and institutions, and residential buildings. Projects included Irvington Union Free School District, PS 93X, PS 100X, Isaac E. Young Middle School, JFK Elementary School.

Bangkok Mass Transit System: Project Manager/Structural Engineer. Design and construction of an elevated heavy rail system including 25 stations, depot, and administration building, Bangkok, Thailand

Construction of Central Plaza Pinklao Project: Project Engineer. Works included a shopping plaza and a 28-floor hotel building with two underground basements, Bangkok, Thailand

The construction of The Stock Market Exchange of Thailand Building: Project Engineer. Sintorn Tower Extension Building for the stock market exchange of Thailand. Works included 32 stories building and 6 levels of car parking basement underneath ground water table level, Bangkok, Thailand.

Laurence Ford, PE, ICC
Inspector

Mr. Ford is a Licensed Professional Engineer with 40 years' experience. He has worked as a Licensed Code Enforcement for New York State, municipal engineer for a town in NJ, in the Civil Engineering Dept. for a consultant and Chief Engineer for Empire State Development. He was also employed by NYCDEP and was responsible for overseeing the construction for all public work improvements, which includes demolition, shoreline reconstruction, infrastructure installation, roadway and curb installation and park construction along the East River in Queens, NY. For the last 13 years Mr. Ford ran the Queens West project. At any given time there was up to 4 contractors on-site in addition to the building developers, coordination was only part of the work. Overseeing all construction, inspection of work after completion, making field changes on the fly and obtaining all requisite approvals. Also packaged plans and spec for bidding in accordance with state contract law for all contracts. In the 1980's, due to contamination of groundwater he was responsible for the design and construction of 37 miles of water main, 1 million gallon ground storage tank and associated water treatment.

PANYNJ Call-In Security Program Management Services, NY/NJ: project executive providing expert professional program management services for the PANYNJ's 5-year, $500 million Security Capital Program. Working directly with PANYNJ personnel, George is responsible for a team of consultant staff involved in managing, coordinating, scheduling and monitoring the design, systems integration, and construction phases of the agency's Security Capital Program. Under George's leadership, the PANYNJ extended Parsons Brinckerhoff's contract for another 5 years, and the overall program now includes in excess of $1.1 billion in projects. Program elements include asset strengthening at PANYNJ facilities including airports, bridges, tunnels, marine terminals, and transit rail; operations and security command and communications centers, intercommunication and public address systems; multi-technology access credentials and integrated CCTV; and integrated perimeter security, including fencing, barriers, detection, deterrent/notification/apprehension assistance technologies. He is also in charge of developing and implementing project procedures and control systems to allow PANYNJ managers to advance the Security Program forward in a coordinated fashion.

NYC Build It Back, NYCEDC: Project Manager. Scope of work includes Provide land surveying, special inspections, engineering and architectural services for lifting residential homes.

Rehabilitation of Spalling Concrete at the Brooklyn Army Terminal, NYCEDC: Project Manager. Services included inspection and documentation of building facade defects, Investigating and determining the cause of water infiltration into existing building basements; Preparation of contract documents detailing the necessary repairs for public bidding.

Project in Staten Island, NY: Lead engineer in charge of all structural analysis and design of this 900,000sf project. Included a 12 story concrete hotel with a 2-story steel retail structure, which sits on a 3-story concrete parking lot. Project is under design with 50% CDs recently issued

Project in Midtown East, New York, NY: Lead engineer in charge of all structural analysis and design of the 57 story concrete high rise tower. Analysis and design of the structural lateral system using ETABS. Additional finite element analysis of concrete slabs and foundations using SAFE. Strut and tie modeling and design of outrigger walls. Project is currently under construction

Project in Midtown East, New York, NY: Lead engineer in charge of all structural analysis and design of the concrete building. Structure involved the addition of 14 stories onto an existing 19-

story incomplete tower. Numerous renovation designs include cutting and removing a column and shear wall at the base of the building (both elements support the full height of the existing structure)

Metro-North Power System Upgrade, Systemwide: during his tenure as Metro-North's assistant director of construction management, George served as project manager of a $250 million program that involved construction of 32 substations, replacement of 300 miles of contract rail, construction of 3 signal power generating stations, and installation of new power control and SCADA systems. The program consisted of six major construction contracts ranging from $10 million to $80 million, all completed on time and within budget.

Mid-Harlem Station Improvements, New York, NY: was instrumental in formulating a recovery plan for this $30 million design/build fast-track project, which was behind schedule and claims oriented. George instituted a partnering agreement with the contractor that resulted in a reduction in claims and 6-month schedule improvement. The project involved construction of improvements at eight stations, including new 12-car platforms, pedestrian overpasses, elevators, and ADA compliance.

William Castaneda, ACI
Inspector

William Grooms, ACI

Inspector

Mr. Grooms is NICET certified inspector with over twenty nine (29) years of experience in construction management and inspection. His project experience includes inspections of building projects, environmental projects as well as highway construction. He has also performed technical special inspections as and when the projects required. Mr. Grooms is an experienced project manager and inspector of public works projects and is capable of reviewing NYC Building and Zoning Codes, NYS Building Codes, NYSDOT Specifications, ASTM and ACI codes, and is able to work with MURK record keeping. He is a member of ASTM, ASCET, NICET and ICC. Mr. Grooms' software experience includes several project management applications such as: Primeravera, Constructware, Skire and Ibuild.

Highlights

Firm: JCMS, Inc.

Years of Experience: 29

Education: Associates in Applied Science – Architecture/Construction Technology, 1998

Professional Registrations:

ACI Concrete Construction Special Inspector

NICET Level - II

Highway Construction

OSHA HAZWOPER-40 Hour Certified

OSHA-Confined Space Entry

Tectonic, Columbia University-Manhattanville Campus, NY: Project Manager for special inspections of construction of new 450,000 square foot Jerome L. Greene Science Building. Mr. Grooms' responsibilities were to oversee construction from foundation through superstructure for compliance with NYCDOB 2008 Building Code in compliance with Special Inspection Requirements, review project plans and specifications, review inspection reports, prepare summary reports, non-conformance reports and report findings to client. He also directed a team of up to 18 special inspectors, kept inspection logs and records for client on Skire.

Columbia University – Term Agreement Projects, NY: Mr. Grooms was a Project Manager for Special Inspection for Columbia University building renovation of various buildings on the Columbia University Campuses (16 locations at this time). His duties were to oversee construction for compliance with NYCDOB 2008 Building Code, compliance with Special Inspection Requirements, review project plans and specifications, review inspection reports, prepare summary reports, non-conformance reports and report findings to client. Supervise special inspection teams.

NYCDDC - New York City Department of Design and Construction Projects, NY: As Project Manager Mr. Grooms oversaw major municipal construction projects for compliance with NYCDOB 2008 Building Code for compliance with Special Inspection Requirements, review project plans and specifications, review inspection reports, prepare summary reports, non-conformance reports and report findings to client. Two of the larger projects were PSAC II in the Bronx and new Police Academy in College Point

DASNY – Term Agreement for Construction Inspection and Materials Testing Services Construction Inspector: Mr. Grooms performed construction inspections and materials testing for concrete, rebar, fireproofing and fire stopping. He led several projects to completion, reported

findings to appropriate parties, communicated with on-site personnel to ensure compliance and worked together with various trades.

NYC School Construction Authority, Various Boroughs, NY: Consultant Services for Controlled Inspection - Mr. Grooms' responsibilities included performing Controlled Inspection and testing inspections of Concrete placed on-site, rebar, masonry, curtain walls, fire proofing and fire stopping at various project locations, reporting circumstances of field activity to Project officers and maintaining supportive documentation of field activities and Contractor operations.

Domani Consulting, Inc., NY : Director of Technical Services -Mr. Grooms provided technical assistance to all divisions of CRSG, Inc., conducted special inspections of various buildings during construction, reviewed all construction inspection reports for conformance to plans, specifications and NYC Building Department requirements, provided interpretation of NYC Building and Zoning codes as required. He started vibration monitoring programs for subway tunnels and landmark buildings per NYCTA requirements; NYC regulation 10/88 for landmark buildings, designed and recommended various training programs for technical staff and also created a technical division with 12 inspectors, on 46 projects in various stages of construction and implemented a full record keeping system.

Town of Smithtown, NY: Assistant Civil Engineer - Duties and Responsibilities: Public works construction project management and inspection (concrete, rebar, fire stops, fire proofing, masonry, soils, curtain walls, piles driven and drilled, excavation, shoring, sheeting, major steel retaining wall w/grouted tie back system, pile design, timber bulkheads, storm water system design and inspection, project design from inception through construction; prepared specifications and bid documents, building inspections, material testing, estimating, environmental projects and waste management groundwater monitoring, methane monitoring/recovery, and landfill construction. Designed and implemented storm water runoff control projects to protect local rivers and Long Island Sound. Reviewed all commercial site plans for compliance with town engineering requirements. Was clerk of the works on landfill capping project and clerk of works for the reconstruction of town swimming pool complex at Smithtown Landing Country Club. Instrumental in redesigning landfill gas flare to provide continuous operation; started maintenance program for methane recovery systems to decrease costs and time.

Suffolk County Department of Public Works, NY : Traffic Technician II - Mr. Grooms conducted complex traffic studies - In charge of construction for traffic signal requirement programs and construction at high accident locations. He completed turning movement studies on traffic signal systems for all county roads in western Suffolk County for Federal Highway Project and managed traffic signal installations by 5 contractors at one time.

Suffolk County Department of Public Works, NY: Traffic Technician I-Duties were overseeing traffic sign layout, traffic studies and inspection of traffic department construction projects

Suffolk County Department of Public Works, NY: Engineering Aide - Surveying for various highway projects, project design, construction inspection (asphalt, concrete, sub grade, rebar, electrical, drainage, landscaping and material testing). Mr. Grooms was the chief construction inspector on all highway construction projects.

George Atsalis, ACI

Inspector

Mr. Atsalis has over 16 years of experience in construction field as Sr. Field Inspector/Engineer and Project Manager on a variety of infrastructure projects that include reconstruction and rehabilitation of roadways, highways, bridges and buildings for various agencies. Areas of inspection include heavy excavations and foundation construction, construction of concrete piers and abutments; superstructure construction including structural steel framing deck and installation of reinforcing steel and concrete placement; construction/ installation of water mains, sewers, culverts, drains, traffic signals, street lighting etc.

Mr. Atsalis is fully knowledgeable and experienced in the enforcement of Federal, State and City Codes for Construction, Site Safety and Maintenance and Protection of Traffic. His computer capabilities include Windows XP, NT, MS Word, AutoCAD, Autodesk2006, Micro Station, MS Office, Excel and PowerPoint.

M International PLLC, New York, NY: Project Manager Construction administration and management, concrete, masonry, welding/bolting inspections. Hired by the owner to ensure the contractor's compliance with the approved drawings and specifications. Bid review and award, drawings review, contractor's requisitions and progress payments review quality assurance, field inspections, and meetings with owner's reps, state reps, contractor, and material review.

Z&T Engineering PC, New York, NY: Senior Project Manager

Concrete inspections (concrete special inspections, masonry inspections – new buildings) Responsible for complete daily narratives, reports for T&M work and controlled inspection report, schedule and conduct site inspections.

Frelance Engineer, New York, NY: Field Inspections (local law 11, concrete, rebar, masonry) Special inspections (concrete, masonry, welding), local law 11

Joy Construction Co. New York, NY: Quality Control Engineer- New building construction (building envelope) Working with architect on new architectural details concerning the building envelope, quality control, field inspections, progress reports, meetings with subcontractors

Kenry Contracting Inc., New York, NY: Project Manager - Concrete Works (Building frame), Foundations, Structural steel, masonry. Working for the concrete contractor, drawings review, quality control, subcontractor's coordination.

Thornton Tomasetti, New York, NY: Senior Field Engineer, Building Performance: Façade & Roof Rehabilitation/Renovation, Condition Assessment, Construction Administration, Forensics – Structural/Architectural Property Loss Consulting: Scope of Damage Determination, Cause & Origin Investigation, Building Code Consulting

AKTOR S.A., Athens, Greece: Deputy Project Manager - Athens Suburban Railway, Railway Works including Micro piles, Driven Piles, Road Construction (including widening of existing routes, deep excavations, highway interchanges), Utilities Infrastructure, new building construction.

Attiki Odos Freeway & Athens Northern Ring Road, Athens, Greece: Construction Engineer - Site Manager- Road Construction, Utilities Infrastructure, New Building Construction

Muhammad Kashif Syed, ACI

Inspector

Mr. Kashif Syed holds a Bachelor's Degree in Civil Engineering and has over 13 years of experience working as Inspector, Assistant Structural Inspector and Field Engineer in the field of Construction Management. He has worked on a variety of projects that include transit, roadway and bridge, marine terminals, airport cargo facilities, and housing/industrial buildings. He has been responsible for supervising day to day contractor activities, reviewing the work performed by contractors, scheduling, progress meetings, plan review and report writing. Mr. Syed is familiar with contract documents, contract drawings, specifications, OSHA safety rules, and all applicable codes and standards.

Some of his technical skills include structural inspection, inspection of reinforcement and steel installation, concrete deck, reinforced concrete placement, construction supervision of residential buildings, installation of catch basin, storm sewer, street light, bridge deck, concrete and pavement placement, sidewalk and curb, granite slab pavement, façade inspection, street milling and pavement.

PANYNJ - Teterboro Airport, Teterboro, NJ: Assistant Structural Inspector–Responsibilities included conducting Survey and Façade Inspection of Bldg. # 112 (Jet Aviation), Bldg. # 3 (Atlantic) and Bldg. # 19 (Air – Traffic Control Tower). Also surveying of all structural items to find and document any deficiencies.

PANYNJ - John F. Kennedy International Airport (JFK), New York, NY: Assistant Structural Inspector – Conducted Visual and Close-Up Inspection of the entire British Airways Cargo facilities (Bldg. # 66) And KIAC PARTNERS ENERGY CENTER (Bldg. # 49). Assisted in preparing the Structural Condition Assessment report and in determining the immediate attention, priority repair and safety Conditions.

PANYNJ - Port Elizabeth Marine Terminal: Assistant Structural Inspector – Responsibilities included Condition Surveys of Building Facilities including bldg. 1100, 1150, 1400, 1900, 2350 and 2360. Also included conducting 100% visual and 10% hands on of all structural items to find and document any deficiencies.

PANYNJ World Trade Center Site (Memorial), New York, NY: Assistant Structural Inspector – Quality Control and Quality Assurance at the World Trade Center Memorial and Cultural projects under the supervision of Professional Engineer. Responsibilities included supervising and

administrating the controlled inspection work of the reinforcement steel installation of the entire R.C. Structure (footings, new liner and shear walls with steel detail for new tieback and footings, piers, slabs etc.)

NYCDDC - Queens Safe Routes to Schools, Phase III, Queens, NY: Inspector- The Project includes the installation new catch basin, fire hydrant, 18 inch combined sewer, distribution of 12-inch water main, new 12-inch water main valve, sidewalk; curb and raised crosswalk as also installation of furnish light pole and removal of the existing light pole. All work performed according to NYCDOT and NYCDDC plans and Specifications. Construction Cost $4 M. Responsibilities included ensuring that work was being performed according to plans, specifications.

City of Newark- Delancy Street Drainage and Roadway Improvement, Essex County, NJ: Inspector-The project included the installation of 36-inch Reinforcement Concrete pipe, Catch basin, 18-inch RCP, Manhole, curb, sidewalk and Pavement. All work was performed in accordance with NJDOT, and Newark Standard Specifications Plan.

NYC Department of Environmental Protection (NYCDEP) /NYC Department of Transportation (NYCDOT) Bioswale Project: Sr. Inspector The New York City Department of Environmental Protection (DEP) uses the term ROW Bioswale to describe planted areas in the sidewalk that are designed to collect and manage stormwater or rainwater that runs off the streets and sidewalks.

NYCDDC - Manhattan Grand Street Reconstruction Project: Sr. Inspector - The project included the installation of a 36-inch steel trunk main, running east-west along the north side of Grand Street, and a 20-inch ductile iron main on the south side of Grand Street, as well as valve-controlled interconnections between trunk and distribution mains, butterfly valves, insulated flanged joints, reinforced concrete chambers and all related components. Responsibilities included detailed inspections of all components of the mains, on-site testing of construction and site materials, field measurements and data collection for monthly and final construction estimates, progress reports, and preparation of record plans. Construction Cost $110 Million

NYCDDC Complex Pedestrian Ramp, New York: Inspection of complex pedestrian ramps throughout the Borough of Brooklyn, New York. Sr. Inspector Inspected all intersections within various community boards, maintained daily reports and used GPS technology to report information to New York Department of Design and Construction quality of construction, and ensured that each completed location had double ramps with zero reveals, adequate drainage, not more than 8% slope, other related work where interferences existed, such as catch basin modifications or relocations, fire hydrant relocations, traffic signal relocations and above all, that all work was performed according to NYCDOT and NYCDDC plan and Specifications.

NYCEDC Reconstruction Brooklyn Marine Terminal: Resident Engineering Inspection, Infrastructure Reconstruction at South Brooklyn Marine Terminal for NYCEDC. One of the several critical issues was the removal of contaminated soil. Soil for the S-Curve project was tested in advance via test pits and disposed of according to NYCEDC environmental requirements. Coordination with Industry City and various stakeholders including City agencies, private utility owners and leases of SMBT property was critical to complete the project in a timely manner.

Ketul Gandhi
Estimator

Mr. Gandhi has over 5 years of experience working with USMA (United States Military Academy), PANYNJ, NYCSCA (New York School Construction Authority), NAVFAC (Naval Air Base), GSA (General Service Administration), NYC Housing Authority as Estimator, Project Scheduler & Project Engineer and involved in a variety of projects that include infrastructure, industrial, institutional, commercial and residential building projects. He prepared change order, negotiated with clients, implemented activities related to Change Order without delaying/disturbing any existing activities. Mr. Gandhi has expertise in preparing quantity take-off and costing of projects including vendor verification of costs for specialty items. He has a keen understanding of market prices of material and equipment as it relates to various types of projects.

His software skills include Win Estimator software, OST (On-Screen Takeoff), Primavera Project Planner P5 & P6 and Microsoft Project in addition to AutoCAD and MS Office products such as Word, Excel etc.

Highlights

Firm: JCMS, Inc.

Years of Experience: 5

Education:

M.S-Construction Management, Stevens Institute of Technology, NJ

B.E. - Civil Engineer Gujarat University, India

Polytechnic University, Brooklyn, NY

Research Assistantship

Professional Affiliations:

CMAA-Construction Management Association of America

Professional Registrations:

OSHA 30 hours, NJ TRANSIT Construction Management

PANYNJ - Newark Aviation Fuel System Modification, Newark, NJ: Cost Estimator The $90M Newark Liberty International Airport Fuel Systems Modifications project will install nearly 30,000 linear feet of underground double walled aviation fuel piping. The project will also add two new 47,600 bbl above ground tanks, two new truck fueling racks, a contact water treatment facility, fuel selection area manifold, modifications to four pump stations including new PLCs and controls. Mr. Gandhi is responsible for providing cost estimating services.

MTA- Penn Station Visioning Study, New York, NY: Cost Estimator-The Penn Station Visioning Study is a "blank slate" planning study intended to optimize customer circulation and way finding, customer service amenities and station real estate utilization through 2035. The study is also tasked with creating a street presence for the station and a unifying vision for the station's three railroads. His responsibilities include performing construction cost analyses to score the different concepts.

TBTA - Substructure and Underwater Work at the Marine Parkway Bridge, New York, NY: Cost Estimator-The project consists of detailed design services and supporting design services during construction for the scour protection restoration at Piers #2 (7) through #11 (18); rehabilitation of damaged bridge pier protection steel plates, rehabilitation of unsound concrete on all substructure elements such as North and South abutments, pier caps and pier stems above high water, within the tidal zone and underwater, and upgrade of the ancillary electrical system at the Marine Parkway Bridge. Mr. Gandhi is responsible for reviewing the detailed Construction Cost

Estimate to ensure that the cost estimate reflects all the final revisions and comments incorporated in the 100% design document.

LIRR - Jamaica Stations Expansion Project, New York, NY: Cost Estimator- The "Jamaica Capacity Improvements – Phase I Design" provides the Cross-Borough Scoot and the infrastructure improvements needed to increase capacity required for ESA operations. The creation of Platform F will permit the separation of Brooklyn service from the main station platforms to accommodate the projected needs of ESA. Phase I will also include modification of the existing microprocessor-based signal system, with respect to added switches and other modifications required for Phase I , construction. Mr. Gandhi is responsible for providing estimating services at 30, 60, 90 and 100%.

NJ Transit - Newark Penn Station Raymond Plaza East Architectural Improvements, Newark, NJ: Cost Estimator. The project consists of Removal of Existing ADA Ramp, Construction of New ADA Ramp, Glass Canopy with Structural Steel-Concrete Footing, New Screen Wall, New Concrete Sidewalk, Electrical Modification including new light fixtures. Mr. Gandhi has provided estimating services at 30% & 90%.

NJ Transit Sandy Recovery: Initial Flood Assessment and Initial Near-Term Recommendations: Developed cost estimate for identified portions of NJ transit system which requires "near-term" flood mitigation and resiliency measures based on interim draft report. Estimate includes cost for Flood Mitigation, Backup Generator & Electrical hook-up-conduits-wire-transfer switch, Sump Pump, Trash Pump, On call implementation cost for contractor before and after storm for NJ Transit facility: Newark Penn Station, Secaucus junction, NLR Bloomfield Station, NLR Broad Street Station.

NJ Turnpike Authority- Garden State Parkway Miscellaneous Repairs: Worked with Tran Systems in developing cost estimates for Substructure (Abutment & Pier-Under Water & above Grade) located at Swimming River, Matawan Creek, Cheesequake Creek. Estimate included cost for Substructure Concrete Spalled repair, Bridge repair, Concrete Collar installation-Underwater, Embankment-Slope protection, Membrane Waterproofing.

Amtrak/NJ Transit - Portal Bridge Capacity Enhancement – North River Bridge, New Jersey: The $1 billion project is to replace the existing Yr-1910 built, swing span structure bridge with a new '3' span network tied arch bridge to ensure uninterrupted NE Corridor service as well as navigation through Hackensack river. Mr. Gandhi was responsible for quantity take-off thru 100% CD drawings. Performed take-off for Structural and Reinforcement Steel, Concrete for following bridges and retaining wall:

Tracks 2 and 3 over Newark-Jersey City Turnpike

Tracks 2 and 3 over West Lagoon and Belleville Turnpike

Duck under Structure carrying Tracks 2 and 3 over future Track 4

West Approach Spans (carrying Tracks 2 and 3) to the River Bridge

Tracks 2 and 3 over the Hackensack River (River Bridge)

East Approach Spans (carrying Tracks A, 2 and 3) to the River Bridge and over Norfolk Southern.

Kevin Meehan

Estimator

Mr. Meehan has over 14 years of experience in the field of Construction Cost Estimating. His diverse experience comprises a wide variety of projects that includes estimation of Transit / Industrial / Commercial/ Institutional/ High-Rise / Educational etc. Mr. Meehan has been responsible for developing budgetary and final construction cost estimates, contract pricing and change orders, contract negotiations, interface and coordination with contractors, owners and A/E consultants on project issues, assisting owners on construction phasing and scheduling, coordinating with the A/E of record regarding change orders, interpretation of contract documents, submittal and approvals and related technical matters, review of contractors claims of disputed work, providing detailed takeoff and pricing for site-work, foundations and recommending appropriate action to owner.

Highlights

Firm: JCMS, Inc.

Years of Experience: 14

Education:

BS - Civil & Environmental Engineering, Rutgers College of Engineering, New Brunswick, NJ, 1999

PANYNJ - Newark Aviation Fuel System Modification, Newark, NJ: Cost Estimator-The $90M Newark Liberty International Airport Fuel Systems Modifications project will install nearly 30,000 linear feet of underground double walled aviation fuel piping. The project will also add two new 47,600 bbl above ground tanks, two new truck fueling racks, a contact water treatment facility, fuel selection area manifold, modifications to four pump stations including new PLCs and controls. Mr. Meehan is responsible for providing cost estimating services.

PANYNJ - National September 11th Memorial & Museum, New York, NY: Mr. Meehan provided detailed cost estimates for bid packages relating to the $530 Million Museum/Memorial portion of the reconstruction of the World Trade Center site.Provided detailed takeoff and pricing for sitework, foundations, super-structure and architectural building elements. Analyzed and tracked cost impact of revisions, changes, addenda, etc. Negotiated contract pricing and change orders with subcontractors and general contractors.

NJ Transit - Sandy Recovery and Long Term Flood Mitigation and Resiliency: Secaucus Junction and Newark Penn Station. Flood barriers, electrical redundancy, Sandy repairs. The Secaucus Junction Platform Extensions project is a $1.5M effort to extend two island platforms an additional 120 feet each on the four tracks NJ Transit Main Line.

NJ Transit - Hoboken Terminal and Yard: Sandy Repairs and Remediation, Flood Mitigation and Resiliency: The project is to restore the terminal and yard operations, while at the same time increasing the system's resiliency - its ability to withstand and recover quickly from future storms. Mr. Meehan is responsible for providing cost estimating services on the three above mentioned projects.

NJ Transit- Sandy Recovery: Initial Flood Assessment: Estimate includes cost for Flood Mitigation, Backup Generator & Electrical hook-up-conduits-wire-transfer switch, Sump Pump, Trash Pump,

on call implementation cost for contractor before and after storm for NJ Transit facility: Newark Penn Station, Secaucus junction, NLR Bloomfield Station, NLR Broad St. Station.

NJ Transit - Capital Asset Replacement Program (HBLR &SNLRT), NJ: Sr. Cost Estimator The CARP program consists of projects including Resurfacing of the Plank Interlocking and the Lackawanna Curve, Harborside track replacement, Replacement of light fixtures, the UPS system and fire protection piping at the LRV Maintenance Facility, bollard replacement at the Newport Viaduct and replacement of various equipment and furniture. Mr. Meehan is responsible for providing capital cost estimates for NJ Transit's Hudson-Bergen Light Rail and River Line system infrastructure and facilities.

CATS Charlotte Area Transit System, Lynx Blue Line Extension: The Charlotte Area Transit System Blue Line Extension is a $1 billion, 9.3 mile extension of the Charlotte, NC light rail system. The extension will service 11 new stations, including seven walk-up stations and four stations with park and ride facilities. Mr. Meehan's responsibility as the Cost Estimation Manager for the Project Management Oversight Contractor (PMOC) team was to perform a Risk Management and Contingency Review related to project cost.

Columbia Pike Streetcar, Arlington County, Virginia: Mr. Meehan was the Cost Estimating Manager for the Hill International Project Management Oversight Contractor contract, which provided a Readiness Review for Entry into Project Development.

The Columbia Pike Streetcar project is a 4.93 mile electrically powered modern streetcar system that originates in the Pentagon City area of Arlington County, VA and terminates in the Skyline area of Fairfax County, VA. $310 Million

NJ Transit TOC - Secaucus Junction Platform Extension, Secaucus, NJ: Sr. Cost Estimator The Secaucus Junction Platform Extensions project is a $1.5M effort to extend two island platforms an additional 120 feet each on the four track NJ Transit Main Line. Mr. Meehan was responsible for providing cost estimating services.

NJ Transit TOC - Frank R. Lautenberg Station Intermodal Facility - Soil Improvement Contract, Secaucus, NJ: Sr. Cost Estimator-The Soil Improvement Contract is a $3.5M project to improve the bearing capacity of the swamp adjoining the station in order to build a bus station at the facility. Mr. Meehan was responsible for providing cost estimating services.

LIRR - Station Master's Office Renovation, New York, NY: The renovation of Station Master's Office (SMO) on the concourse level of New York's Penn Station was a $2.5M project to update the nexus of the railroad's station monitoring and information network. Mr. Meehan provided preconstruction management and estimating services.

LIRR - Jamaica Stations Expansion Project, New York, NY: The "Jamaica Capacity Improvements – Phase I Design" (the subject of this RFQ), shall provide the Cross-Borough Scoot and the infrastructure improvements needed to increase capacity required for ESA operations. Mr. Meehan provided estimating services at 30, 60, 90 and 100%.

MNR - Grand Central Terminal Leak Remediation, New York, NY: Grand Central Terminal in midtown Manhattan is planning a $20M Leak Remediation project to repair and prevent damage from water intrusion. Mr. Meehan provided preconstruction management and estimating services.

Murali Nambiar

Scheduler

Mr. Nambiar is an engineering professional with over 24 years of experience on diverse construction projects including mass transit, commercial, industrial and institutional buildings, and defense department projects. Areas of experience include project management, construction management and project control providing planning, scheduling, resource/cost control, delay claims analysis and schedule risk analysis on a variety of engineering, procurement and construction projects from bidding to design, construction and closeout. Mr. Nambiar is a Primavera Certified Trainer. He has incorporated change orders with associated logic changes, prepared Recovery Schedules and performed Time Impact/Delay Analysis to determine the impact of changes on project completion.

Highlights

Firm: JCMS, Inc.

Years of Experience: 24

Education:

B.S. Civil Engineering, MNIT, India

MBA, Marshall School of Business, USC, Los Angeles

Professional Affiliations:

CMAA, PMI, Metropolitan Railway Club of NY

Professional Registrations:
Primavera Certified P6 Trainer

Project Risk Management in Primavera Pertmaster – Oracle University

Construction Quality Management – U ACOEs, Philadelphia

PANYNJ - World Trade Center Transit Hub Project, New York: (Mr. Nambiar is responsible for developing and maintaining two master schedules – West Bath Tub & East Bath Tub. Both master schedules are level 5 detailed schedules with over 6,000 activities each.

PANYNJ - PATH Capital Program Management Services: Mr. Nambiar developed integrated resource loaded schedule and optimized resource requirements for proposed $2.5B, 10 year capital program projects for PANYNJ's PATH Rail System. Mr. Nambiar's responsibilities included preparation of questionnaire for interviews, understanding the scope, duration and resource requirements.

NJT / Amtrak - Portal Bridge Capacity Enhancement – North River Bridge, New Jersey: The $1 billion project is to replace the existing Yr-1910 built, swing span structure bridge with a new '3' span network tied arch bridge to ensure uninterrupted NE Corridor service as well as navigation through Hackensack river. Mr. Nambiar developed program master schedule including detailed staging to ensure uninterrupted NE Corridor operations during construction and cut-overs based on 60% design documents.

LIRR Jamaica Capacity Improvement, New York: Mr. Nambiar developed detailed resource loaded schedule for LIRR for construction of new platform at Jamaica and signal and track modifications necessary to connect Long Island with Grand Central in Manhattan.

NJ Transit - The Trans-Hudson Express Tunnel, NJ-NY: The Trans-Hudson Express Tunnel is a railroad tunnel that was to be built under the Hudson River, connecting New Jersey and New York. Mr. Nambiar was involved in the early stages of the project for developing the Master Schedule for the construction phase of the project.

NYCT - Rehabilitation of Culver Line Viaduct, Signal & Communication Upgrades, NY: The project consisted of removing all track, repairing and waterproofing the concrete deck, setting new low-vibration track in place and installing all-new track drains. The project also comprised of signal and power work to the third rail and communications work. Mr. Nambiar was responsible for developing the resource loaded baseline schedule and performing resource analysis.

MSDC Moynihan Station Phase I, New York: The $220 million projects will double the width and length of West-end Concourse at the New York Penn Station. Mr. Nambiar developed program master schedule, and resource and cost loaded it to develop budget, and annual cashflow. Also, incorporated Amtrak and LIRR force account work in the schedule to develop force-account budget and schedule.

LIRR – Power & Track Project Control/ Scheduling Services for LIRR Force Account Projects, New York, NY: Mr. Nambiar provided Project Control/CPM Scheduling services to the Engineering Department at Long Island Rail Road (LIRR) where he was responsible for power and track projects

MNR – Hudson Line Station, Phase 2C – Tarrytown, NY: The Metro North Line Tarrytown Station Project involves the reconstruction of platforms #2, #3 and #4 and the installation of new overpasses. Mr. Nambiar is responsible for reviewing the contractor prepared CPM Schedule for accuracy and reasonableness of schedule duration, logic and critical path.

NJ Transit – Morrisville Train Storage Yard, Morrisville, NJ: The $100 Million Phase II work includes expansion of the Morrisville Yard to double train storage capacity, including additional electrified tracks to accommodate 120 rail cars, two elevated inspection tracks in a fully enclosed Service & Inspection (S&I) facility, a Wheel Truing Facility, and expansion of the Crew Quarter Building and employee parking area. Mr. Nambiar was responsible for reviewing and analyzing contractor's CPM baseline schedule, monthly updates and comment on schedule integrity and progress. He was also responsible for reviewing and analyzing contractor's Time Impact analysis requesting time extension.

Miami-Dade Transit - Metrorail Extension, Miami, FL: The North corridor Metrorail Extension is an elevated 9.2 mile double-track, heavy-rail extension of the Miami-Dade Metrorail system. This is a New Starts involving design, procurement and construction. Mr. Nambiar was also responsible for evaluating project schedule and project risk. Mr. Nambiar was also responsible for review, analysis and comments on grantee's cost estimates; which involved independently verifying major cost components in conformance with PMOP Operating Guidance #33.

Ian Barnett, ACI

Inspector

- Successful track record in completion of multi-million dollar
- Construction contracts within allotted schedule and budget.
- Diverse construction management background, encompassing paving, concrete, piles, structures, drainage, traffic, landscaping, and marine construction.
- Supervision experience with staffing of multiple trades and coordination of their work.
- Estimating and reviewing of change orders.
- Working knowledge of the office procedures, and protocols of the Port Authority of New York and New Jersey.

Highlights

Years of Experience: 32

Education: New Jersey Institute of Technology - (Civil /Construction Technology) Date: June 1984

Middlesex County College - Associate Applied Sciences- (Civil Engineering Technology) Date: June 1982

Professional Registrations:

ACI Special Inspector Certified

PANYNJ JFK and Newark International Airports: Supervision and coordination of multi-million dollar construction contracts, including high visibility projects of a -1200 space parking garage, runway and taxiway paving, police administration building and a major terminal expansion. Design/Build of an eight (8) tower cooling plant and the upgrade of, and installation of chillers and substation. Review of design documents for completeness and comments to improve on the design. Estimate and review change orders, and cost engineering. Projects include:

- JFK - Delta Airlines Terminal T-4
- JFK - Area One Parking Garage (Green Garage)
- JFK - Rehabilitation and expansion of the Police Admin. Building
- JFK - Rehabilitation and expansion of Central substation
- JFK - Rehab. And Overlay of Runway 13R/31L
- EWR - Emergency Rehab. Of Runway 4R/22L
- EWR - Design and construction of a Cooling Tower System.

Superintendent /Assist. Project Engineer: Responsible for the execution of construction projects in the multi-million dollar range. Conduct weekly meeting with owners, contractors and sub contactors. Coordination of trades and subcontractors associated with the construction, so as to meet all milestones. Generated estimates for contract bidding. Responsible for the day-to-day activities on each project, Inclusive of scheduling, cost estimating temporary structures and Safety. From takeoff to bid, estimate cost of commercial site work, inclusive of drainage (12" to 72"rcp) manholes and catch basins, electrical conduit and duct banks, deep foundations for light standards and traffic control devices, braced cuts and excavation, rehabilitation and new construction of roadways, taxiways and runways using both concrete and asphalt. Projects include:

- JFK - Relocation of Taxiway "I" and "O"
- JFK - Rehab of Taxiways "P", "R&S"
- JFK - JFK Expressway including a concrete box girder bridge.

- EWR - Terminal "C" Foundation and site work. Including drainage, hydrant fueling system, sanitary system, fire hydrants, asphalt and concrete pavements.

Assistant Engineer: Supervise the installation of driven pile foundations, including pre-stressed concrete, wood, steel and sheet piles. Design of temporary structures and the production of shop drawings and as-builts. Projects include:

- New York - South Street Seaport – Deep Foundation
- New York - Pier 59 – Marine Transfer Station
- New York – Amerada Hess – Installation of new sheet pile bulkhead at their Brooklyn fuel farm.

Ronald Stribling, ICC
Inspector

- Electrical Inspection and Engineering / Construction Management / QA – QC leadership with over 30 years of experience managing electrical and construction installations and implementing strategic plans to meet and exceed the objectives of organizations ranging from small business, major corporations, to major local, federal and DOD projects.
- As a key member of a management team that compressed 4 years of construction into 3 years to meet a congressionally mandated deadline. This 1.8 billion dollar twin office complex and campus averaged 1 million dollars of daily construction for 27 months safely while achieving our objective of a LEED Gold Certification.
- Ability to streamline directions, and give clear focus to projects from inception to completion utilizing key means and methods with innovative approaches enhances my experience to manage multiple projects.

PANYNJ - Newark International Airport: Contracted to manage the ongoing construction, rehabilitation and tenant space at the Newark Liberty International airport. A member of the construction management division specializing in electrical construction and engineering for numerous projects and improvements to the facility including but not limited to rehabilitations to existing runways and new high speed taxiway systems, ground up construction of aircraft hangers, FAA, ILS, and MALSR systems. Tenant space renovations, and alterations, parking structures, and airline terminal renovations.

US Army Corps of Engineers: Contracted to manage the design / build and installation of the mechanical, electrical and plumbing systems for the Brac 133 Mark Center Project. As a key member of the MEP design/build team we managed the installation for all of critical systems, security, telecommunications, and dual redundant primary utility services for this project. Spearheaded the underground utility construction of all the building services; the dual gas, water, telecommunications, and the dual 34.5 KV primary service entrance to the indoor primary switchgear, to the secondary unit substations, to all of the facility distributions through horizontal and vertical risers of medium voltage (13.8 KV). Coordinated and assisted in the resolution of design issues /project problems. Provided guidance and support during all testing, commissioning, startup testing, and third party inspections. Supported business development giving due diligence in project budgets, pay applications, RFI, Submittal approval, Change orders, scheduling, and

constructability. Provided reports of progress, variances, and deficiencies. Actively participated in the LEED AP Gold process in multiple phases of the project design and construction team through consulting, supervising, and providing leadership in securing the LEED Gold Certification. Coordinated final inspections of utility services, and finish construction. Finalized the project from construction to the transition of the project to the O&M Teams.

Sr. Electrical Project Manager / Inspector: Contracted to manage the construction and installation of two pumping stations and renovation of an existing pump station for the District of Columbia Water and Sewage Department. Lead the Sir, electrical and mechanical initiatives for the construction and management team. Coordinated and reviewed all of the projects installation for compliance with QA Standards. Simultaneously monitored the three projects electrical installations for three different sites and multitasked efforts to oversee the installation of the onsite power substation and distribution center, Motor Control Center, PLC, Backup Power Generation, Automatic Transfer System and SCADA System for the control and remote operation of the pumping stations Medium and low voltage power distribution for the pumps and control wiring, and lighting systems. Analyzed and assess the cost and constructability of proposed change orders, reported daily construction and safety. Reviewed and approved monthly contractor invoicing, coordinated scheduling, and assisted in the resolution of design issues, chaired weekly progress meetings to discuss construction issues, and supported the resident engineer as the owner's representatives.

Sr. Electrical Project Inspector: Led daily observation and inspections for the expansion and construction of an addition to an existing museum. Monitored the daily construction of steel erection and concrete placement. Oversaw the replacement and installation of the existing electrical service. Maintained and monitored the service records of the back-up power generation during power shutdowns. Ensured that the contractors work was done safely and in compliance with the contract documents, specifications, and applicable codes and standards. Documented construction activities, daily reports, and photographs. Attended weekly progress meetings, and safety meetings.

Master Electrician: Established and managed this small business performing various electrical installations, repairs, service upgrades, retrofitting for residential, commercial, intuitional facilities, and Data Centers Contracting, estimating, and bided several small to medium projects. Highly regarded as a preferred small business from established customers for the quality and workmanship. Specialized in Historic repairs and renovations involving Knob and tube wiring systems, Electrical, communication, Security and fire Alarm installations for custom homes to retail and office build outs, restaurants, and specialty shops. Preferred minority subcontractor to larger electrical and construction firms for the City of Detroit, and Detroit Public Schools System projects.

Jose Cernadas, Jr.
Inspector

- Background in electrical inspection protocols and field experience in industrial electrical inspections
- A committed individual with great work ethic and an expanding knowledge of engineering
- Working knowledge in MATLAB, PSPICE, LabVIEW and Microsoft Office Suite

Vice President of the Council of Commuting Students, 2007-2009

Professional Affiliations:
Institute of Electrical and Electronics Engineers (IEEE), 2006 - present

Consultant to PANYNJ - Newark Liberty International Airport:

- Lead Electrical Inspector on the following contracts
- Rehab of Runway 4R22L
- Rehab of Taxiways A, B, PA, D, & N
- Rehab of Taxiway P
- Repair of Z Helipad
- Rehab of Runway 4L22R (current)
- In charge of coordination with electrical contractor and Airport Maintenance Electrical Division for lock out and tag out permit requests
- Experience in coordination with Airport Operations for closures of work areas
- Controlled Inspection experience with Hi-Pot testing, and Megger Testing

Newark Liberty International Airport Terminals ABC, Travelex of America, Newark, NJ:

- Supervisor of all Travelex locations at Newark Airport
- In charge of Travelex FXATM maintenance and upkeep
- On site information technician
- Exchange of foreign currency and customer relations

Engineering Intern, Irvington, NJ:

- Performed testing on transformer oil temperature gauges
- Tested communication between network protector transmitters and relays
- Maximized inventory by cataloging spare printed circuit board parts
- Analysis of data from products designed

Rainer Burger
Civil/Structural

Senior Project Manager with over twenty six (26) years of Program/Project Management, Communications Engineering, Systems Engineering, and Acquisition Management experience on State and DoD Command, Control (C2) Information Systems. Extensive experience in managing major security and communications systems integration, installation and construction projects for The Port Authority of New York and New Jersey and the U.S. Department of Defense.

Professional Affiliations: ASIS International
Professional Registrations:

Physical Security Professional (PSP) – American Society of Industrial Security (ASIS)

Project Management Professional (PMP) – Project Management Institute (PMI)

Perimeter Intrusion Detection System (PIDS), New York/New Jersey Area Airports: ManTech security consultant for the Port Authority of New York and New Jersey (PANYNJ) under a Design and Technical Services contract. Security Project Manager for the installation of a $200M integrated perimeter intrusion detection and assessment system at John F. Kennedy International Airport, LaGuardia Airport, Newark Liberty International Airport, and Teterboro Airport. Responsibilities include overall security system design and project/construction management through-out all construction stages of the project. This includes tracking cost and schedule, requirements definition, security risk analysis, development of comprehensive airport facility security upgrade plans, management of systems design, system specification and acquisition, request for proposal development, construction, system installation, environmental, safety and operational health services, technology assessment, documentation review, contract support, test and sustainment.

Force Protection Security Directorate, Hanscom AFB MA: Security Consultant to Information Technology Services Program (ITSP), assigned to the Air Force, Force Protection (FP) C2 Systems Program Office as a Security Project Manager. Responsible for managing 40 contractor personnel under the ITSP contract. Managed and integrated all contractor activities and requirements for the Force Protection C2 System program office. This included management and support of ITSP personnel located at Ramstein AB Germany. Provided cost effective acquisition support (Cradle to Grave) for Physical Security Systems/Construction Projects. Led and managed a European Force Protection Initiative worth $27M - Flightline Security Enhancement Program (FSEP). Managed critical aspects of major security systems construction and installations.

Air Force Life Cycle Management Center, Command, Control, Communications, Intelligence and Networks Directorate (C3I&N), Hanscom Air Force Base MA: Served as the Individual Mobilization Augmentee to the Program Executive Officer (PEO) for Air Force Life Cycle Management Center, Command, Control, Communications, Intelligence and Networks Directorate (C3I&N), Hanscom Air Force Base Mass. Direct and lead the Reserve workforce at Hanscom and within the Program Executive Office that is responsible for the development, deployment and sustainment of Air Force, joint and coalition cyberspace, communications, crypto logic and space/nuclear network systems enabling decisive combat operations in support of air, space and cyberspace domain.

Richard "Dutch" Eisold
Inspector

Security Design Engineer with over three (3) decades of extensive and in-depth experience in Security System Design/Installation Management, direct installation oversight, configuration management , design , procurement, installation, integration and test and turnover of large scale physical security Systems. Proven ability to lead, manage and supervise; a consummate team player.

Highlights

Firm: ManTech International

Years of Experience: 51

Education: High School Diploma

PANYNJ Security Project Management: Currently working within the Security Program Management Division as a Senior Systems Engineer for the Perimeter Intrusion Detection System (PIDS) project. Monitor, review and interface with the PANYNJ contractors responsible for deployment of Perimeter Security Systems at the four NY/NJ airports. Support the PANYNJ in the design implementation of PIDS. Evaluate contractor prepared integrated security systems and infrastructure designs to ensure conformance to functional performance requirements and contracted specifications. Plan, coordinate and support site surveys, integrated security design reviews and technical interchange meetings for the development of 30%, 60%, 90% and 100% Systems and Infrastructure Designs. This includes review and finalization of as-built drawings and all hardware, software and training documentation. Support as required for security systems installations and acceptance testing on newly installed security systems to ensure system meets performance requirements.

Army Corp of Engineers New England District Headquarters: Served as a Security Systems Field Engineer for the Army Corps of Engineers in Concord, MA for the implementation of an integrated security system at the New England District headquarters compound covering the 10-acre site at Concord Park.Implementation consisted of significant civil works to improve barriers (rock walls, fencing and earth berms) rerouting of entrances and access road ways, installing of hydraulically controlled drop arm barriers and guard houses, communication and power conduits, cabling and integrating security consoles, CCTV, access control devices and intrusion detection devices.

World Trade Center, New York: Served as one of the two Security Systems Design/Installation Engineering Managers overseeing the design, installation, integration and test of the physical security systems comprised of Access Control (turnstiles, card readers and badges), Intrusion Detection (sensors), Data Management, and Command, Control and Display Subsystems (CCTV, intercom, annunciation systems, and systems dual redundancy). Previously participated in developing the comprehensive specification for a physical security system upgrade at the World Trade Center.

Government-Funded Test Facility, Port of Tacoma, WA: Managed construction activities for a structure to house two high-pulsed x-ray systems used to examine overseas shipping containers on trucks. Managed the design of facilities , utilities, safety features, physical security, selection of construction contractors, as well as each phase of the project. This contract was under the oversight of the Advanced Research Project Agency (ARPA).

U.S. Embassies: Conducted security site surveys at U.S. Embassies in Peru, Columbia, Nicaragua, India , Sri Lanka and Consulates in Peru and India in support of the Department of State's Physical Security upgrade program. Developed designs, installation plans, cost estimates and work schedules.

Department of Energy: Participated in value Engineering study for physical security system upgrade for the Department's facility at Rocky Flats, Co. Designed and supervised installation of perimeter security systems at the Idaho Chemical Processing Plant and Test Reactor Area at the Idaho National Engineering Laboratory, Idaho Falls, ID.

U.S. Air Force Security Force Protection: Responsible for design and installation of perimeter and interior physical security systems at the Presidential Aircraft Area, Andrews AFB, MD; NORAD Cheyenne Mountain Complex, Colorado Springs, CO.; High-Priority Areas at Pease AFB, NH., Tinker AFB, OK .and Plattsburgh AFB, NY. Participated equipment procurement, final system design documentation, test procedures, and system acceptance testing. Performed testing of commercial and government designed intrusion detection systems/sensors at Eglin AFB, FL; Fairchild AFB, WA and Wurtsmith AFB, MI.

Alan Bright

Inspector

Senior Test Engineer with over 16 years of experience in installation, testing and certification of security and intelligence collection systems for state and federal government clients in the transportation and Department of Defense industries. Hands-on approach to integration and testing has led to the delivery of numerous certified security and intelligence collection systems around the world, while working as a part of multi-discipline project management teams.

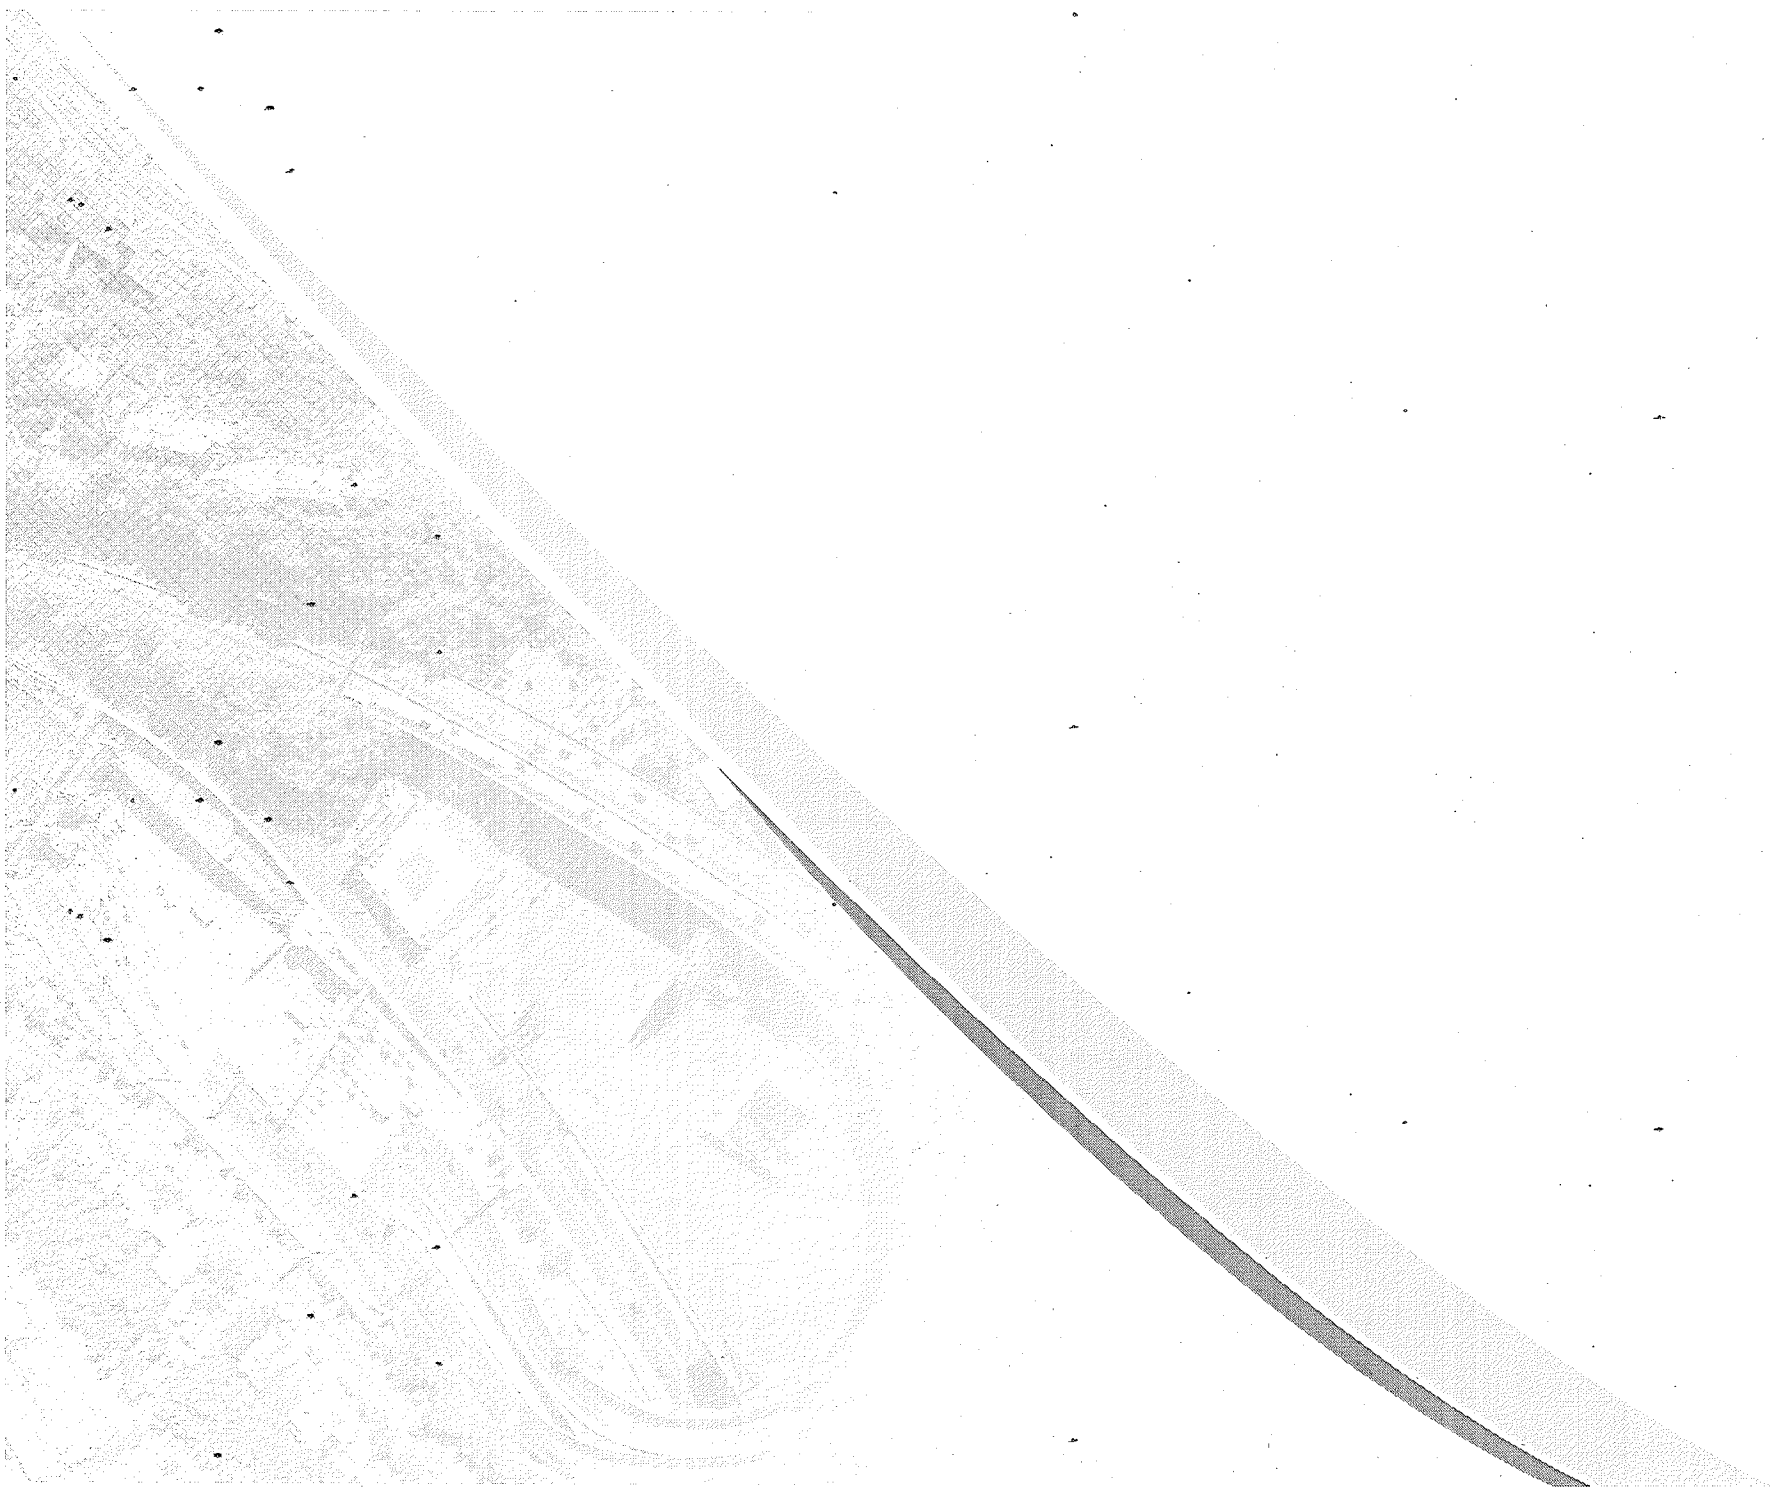
G – Relevant Experience



G. Relevant Experience

As a multi-disciplined planner, designer and construction manager, PB brings a superior resource pool of highly skilled professionals available to serve the needs of the Authority. The firm has been successfully providing Construction Management services on a call-in basis to multiple agencies in the New York/New Jersey region including the current call-in with PANYNJ that we have held for over the past 8 years. Under the direction of *Garry E. Nunes, Senior Vice President*, the firm offers comprehensive professional construction management capabilities. The expertise of our professional staff spans all project phases from conceptual planning, design, and pre-construction through construction and facility commissioning.

PB enjoys our current standing as Engineering News Record's highest ranked Construction Management firm that maintains its corporate headquarters in New York State. As a direct result, we can offer the full toolbox of services with locally based resources from every discipline including many specialties such as LEED Accredited Professionals, specification writers and a vast cadre of estimating, scheduling and other construction management support staff. PB, one of the nation's preeminent construction management firms, is presently managing the construction of public projects with a combined capital program value exceeding $50 billion.

PB delivers professional construction management services tailored to the size and complexity of any given project. On complex assignments involving numerous projects and contractors, PB's construction management services typically begin during design, and continue through construction and close-out.

- Pre-Construction Services – PB is currently providing constructability and design reviews, construction phasing and logistics, contract strategy development, bid package reviews, cost projections and estimating, value engineering, critical path method scheduling, and other services for numerous projects in the region.
- Construction Services - The firm is currently managing some of the most high profile and complex construction projects in New York area and New Jersey collectively valued in excess of $10 billion. The firm is or has recently been engaged in such significant local projects as:

    - the $3.6 billion Second Ave Subway for MTA Capital Construction
    - the $3.4 billion World Trade Center Transportation Hub for the PANYNJ
    - the $1.4 billion Fulton Street Transit Center for the MTA
    - the $2 billion New Jersey Turnpike Widening project for NJTA

Assignments include the simultaneous management of multiple construction contractors, extensive quality control/quality assurance inspections, interface coordination with building tenants and multiple agency stakeholders, working within occupied facilities, claims prevention and analysis, and the interaction with facility operations for testing, start-up, commissioning and training. In addition, PB is engaged in the management of numerous renovation and

reconstruction projects in the region that require comprehensive environmental remediation services for both hazardous and non-hazardous materials.

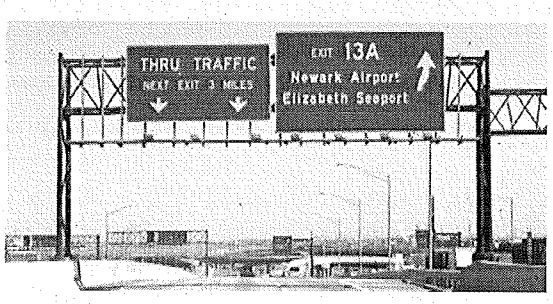
- Call-In and Term Contract Experience – PB currently provides professional services in an efficient and cost effective manner on a call-in basis for multiple New York and New Jersey agencies, including but not limited to:
  - The Port Authority of New York & New Jersey
  - New York State Office of General Services
  - NYC MTA – Long Island Railroad
  - New York City School Construction Authority
  - The General Services Administration
  - United States Postal Service
  - Federal Emergency Management Agency
  - NJ Department of Transportation
  - NJ Transit

Tasks consist of both individual position assignments as well as projects requiring a complete management staff. Assignments are both long and short term, and are performed at the project location, the client's offices and/or PB's offices. The following table offers a sample of our similar call-in agreements:

NY Region CM Call-In and Term Agreement Experience	
Project	Duration
PANYNJ Call-In Construction Management Services	8 yrs +
PANYNJ Call-In Traffic Engineering Services	7 yrs +
NYSOGS Construction Management Term Agreement	12 yrs +
NYCSCA Professional Management Staffing Service	12 yrs +
PANYNJ Call-In Structural Engineering Services	27 yrs +
PANYNJ Call-In Tunneling Technology Services	6 yrs
PANYNJ Call-In Facility Condition Surveys	3 yrs
PANYNJ Call-In Program Management for Security Projects	5 yrs
PANYNJ Call-In Geotechnical Engineering Services	10 yrs
PANYNJ Call-In Aviation Services	3 yrs
PANJYNJ Call-In Mechanical Engineering Services	6 yrs

The Authority has the unconditional commitment of PB and Mr. Nunes that all services will be delivered professionally, efficiently and to the professional standards set by the Authority. PB is prepared to continue to deliver exceptional people and responsive top quality services on each and every assignment. We have selected the following recent projects to demonstrate PB's capability to serve every need of the Authority:

Project Name/Location	PANYNJ Call-In – 2006-2010 and 2011-2014 (ongoing), NY & NJ
Client Name/Contracting Entity	Port Authority of New York and New Jersey
Brief Description of Scope of Work	PB has been providing Construction Management and Related Services for the Authority on a Call-in Basis during 2006-2010 and 2011 to 2014 periods. Projects may be located at the various Authority facilities, including terminals, bridges and tunnels; JFK, Newark, LaGuardia and Teterboro Airports; the PATH Rail System; New York and New Jersey marine terminals and other facilities. PB is providing a full range of construction management and inspection on an as-needed basis, including pre-construction, construction and post-construction services. The firm has provided Construction Management and Inspection Personnel for projects at different PANYNJ facilities. This project is ongoing and within schedule and budget.



Client Contact Name	Paul Salvatore, PE
Client Contact Email Address	psalvato@panynj.gov
Client Contact Phone Number	201-595-4892

Project Name/Location	OGS On-Call – 2004-2007, 2007-2010, 2010-2013, 2013-2015 (ongoing), NY
Client Name/Contracting Entity	New York State Office of General Services
Brief Description of Scope of Work	PB, as the prime consultant, performed construction management services statewide on a call-in basis for various projects over four (4) consecutive three-year terms. Projects include New York State-owned facilities representing various State agencies and demand a broad range of services from pre-construction through construction and closeout services, similar to the requirements of the proposed agreement with the Authority. In total, 180 different personnel performed services on either a full-time or part-time basis for NYSOGS during these term agreements throughout New York State. Services included scheduling, estimating, civil inspection, mechanical inspection, electrical inspection, project management, project controls, office engineering and computer aided drafting and design (CADD). This project is ongoing and within schedule and budget.

Project Name/Location	NYCSCA Call-In - 2004-2007, 2007-2010, 2010-2013, 2013-2015 (ongoing), NY
Client Name/Contracting Entity	New York City School Construction Authority
Brief Description of Scope of Work	PB performed Construction Management services as the Prime Professional Staffing consultant for the NYCSCA. PB provided project team members working directly within the NYCSCA organization in various levels of project construction managers for a multitude of projects over a three-year term. Projects ranged from renovations and upgrades to construction of new facilities. PB employees performed a broad range of services from pre-construction through construction phase and closeout services similar to the requirements of this Request for Proposal. More than 40 PB personnel were assigned on a full-time basis to the SCA during this term agreement. As a preferred provider of CM services to the SCA, *PB was awarded a fourth consecutive contract beginning in 2013.* This project is ongoing and within budget.

Project Name/Location	CM Support Services for Runway Safety Area (RSA) Program at SFO
Client Name/Contracting Entity	City and County of San Francisco
Brief Description of Scope of Work	Parsons Brinckerhoff is the prime consultant augmenting SFO staff and supporting them in the performance of the RSA Program that successfully met the critical August 2014 open deadline set forth in the SFO Master Plan. During the execution of this contract, Parsons Brinckerhoff is managing risks for the Airport and anticipating and mitigating those risks. Through Partnering with the RSA program team, including: SFO, FAA, contractor and program manager, Runways 1-19 which was scheduled to be shut down for four months opened one month ahead of schedule. Parsons Brinckerhoff's role includes: FAA Coordination; Project Scheduling; Project Controls and Reporting; Quality Material and Construction; FAA NAVAID Construction Support; Construction Management and coordination of; Concurrent Projects (Phase I (R/WS 10-28s); and Phase II (R/W 1-19s). Parsons Brinckerhoff is providing labor, equipment, material and construction management support services for Phase I and Phase II of the RSA Program, which are required to support Airport staff with NAVAIDS design and overall construction management of this Program. The RSA Program involves enhancements to Runways 10-28s (Phase I) and 1-19s (Phase II) necessary to comply with Public Law 109-115 requiring airport sponsors to enhance RSAs according to Federal Aviation Administration (FAA) airport design standards by no later than December 31, 2015. The first phase of the Program was completed in 2013. Phase II was completed August 8, with the planned opening of Runways 1-19s. The RSA program at SFO will complete the mandated RSA work almost a year and a half before the December 2015 FAA mandated deadline.

Project Name/Location	Second Avenue Subway, Phase 1, New York City, NY
Client Name/Contracting Entity	New York City Transit/MTA Capital Construction Company
Brief Description of Scope of Work	Consultant Construction Management Services for Phase 1 of the Second Avenue Subway project, which entails resident engineering and inspection services, design/ constructability reviews, contract management and administration, project controls, utility coordination, maintenance and protection of traffic, management of contract interfaces for six concurrent contracts, commissioning and startup, and project closeout. Phase I entails 1.5 miles of two-track tunnels from 96th to 63rd Streets along Manhattan's East Side, constructed using TBD tunneling and drill-and-blast excavation; three new stations and extensive rehabilitation of the 63rd Street Lexington Avenue Station to accommodate the new line; and access shafts and the TBM launch box. The project also involves extensive utility relocations and maintenance and protection of traffic to maintain four lanes at all times. This project is ongoing and within budget.
Client Contact Name	Anil Parikh, PE
Client Contact Email Address	[redacted]

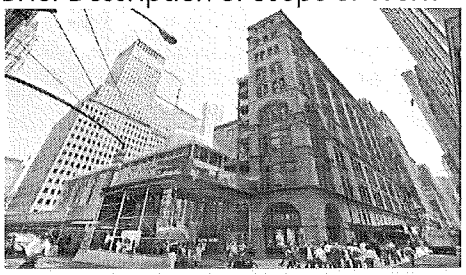
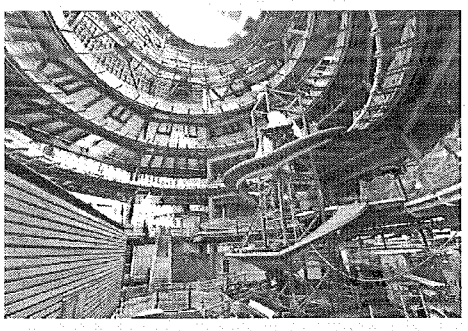
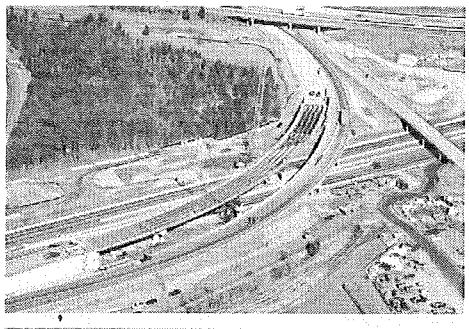
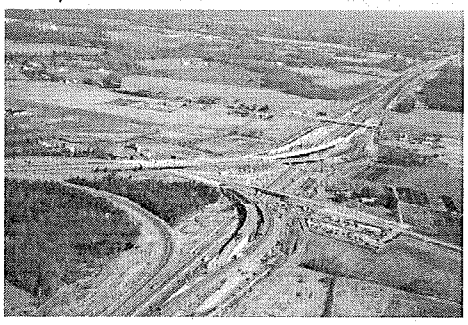
Project Name/Location	Fulton Street Transit Center, New York City, NY
Client Name/Contracting Entity	New York City Transit/MTA Capital Construction Company
Brief Description of Scope of Work	In joint venture, Parsons Brinckerhoff is serving as Consultant Construction Manager responsible for providing preconstruction services during the project's design phase, technical assistance during bid and award, and construction management of all contracts during construction and closeout. The project will transform the existing Fulton Street Station complex into a modern hub connecting stations serving the A/C, J/Z, E, 4/5, R, and 2/3 subway lines. It will also provide access to PATH trains and the redeveloped World Trade Center site via the Dey Street Connector, a new underground passageway. The transit hub will also feature more than 30,000 square feet of retail space. The project, which comprises 11 separate construction contracts, involves construction of the new transit center's foundation and building, demolition of various commercial and office buildings necessary to clear the site; cut-and-cover construction of the Dey Street Connector tunnel; various subway station improvements to improve circulation and connectivity; and extensive utility relocation and maintenance and protection of traffic planning given the project's location in a densely developed and heavily travelled area in Lower Manhattan. This project is ongoing and within budget.
Client Contact Name	Uday Durg
Client Contact Email Address	[redacted]
Client Contact Phone Number	



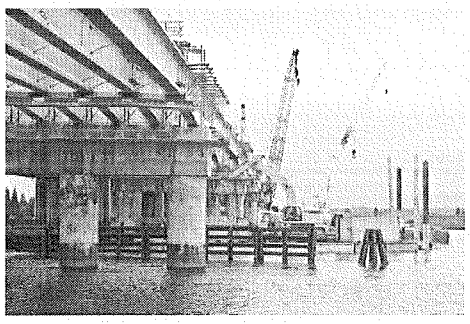


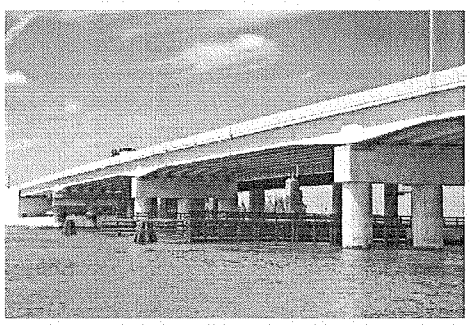
Project Name/Location	New Jersey Turnpike Widening, Interchanges 6-9, Burlington, Mercer and Middlesex Counties, NJ
Client Name/Contracting Entity	New Jersey Turnpike Authority
Brief Description of Scope of Work	In joint venture, Parsons Brinckerhoff is serving as construction manager responsible for program-wide scheduling, cost control, progress reporting, utility relocations, fabrication inspection, materials testing, and construction supervision and inspection of 18 construction contracts. Construction activities will include replacing and lengthening more than 20 bridges over the turnpike; constructing turnpike bridges over waterways and local streets; reconstructing Interchange 6; relocating toll plazas; realigning ramps; constructing new toll plazas; relocating major utilities; and other features, including MSE walls, noise barriers, VMS signs and service area access flyovers. Approximately 170 additional lane miles will be constructed during this program, which extends over 34 miles of the Turnpike, through 11 communities and 3 counties in central New Jersey. This project is ongoing and within budget.
Client Contact Name	Larry Williams
Client Contact Email Address	[redacted]
Client Contact Phone Number	



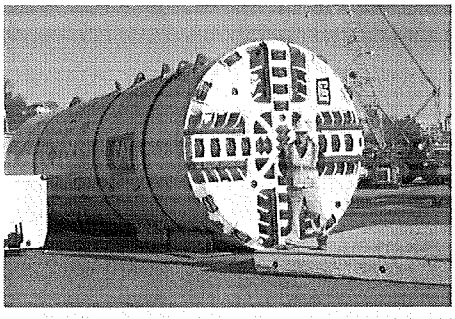


Project Name/Location	Mullica River Bridge Rehabilitation/Widening, Bass River Township, NJ
Client Name/Contracting Entity	New Jersey Turnpike Authority
Brief Description of Scope of Work	Construction supervision services for two separate construction contracts: construction of a new 1,230-foot-long, six-span, prestressed concrete spliced girder bridge that will carry three lanes of northbound traffic; and the rehabilitation, deck replacement and site-specific seismic retrofit design of the existing 980-foot-long, eight-span steel girder/ floorbeam/stringer bridge that will carry three lanes of southbound traffic. Both bridges will carry the Garden State Parkway and Route 9 over the Mullica River. The new bridge was constructed parallel to the existing structure using large-diameter drilled shafts with self-consolidating concrete (SCC) that enabled the project to be finished within the required time frame and with ample foundation capacity. Due to regulatory requirements, all in-water construction could be performed only between July 1st and December 31st. Protected shellfish beds and designated wetland areas adjacent to the project site also required that disturbance to the river environment be kept to a minimum. Three 8-foot-diameter (2.4-meter) drilled shafts at each pier location were selected to ensure in-water construction would be completed within the designated time period. This project was completed on time and within budget.
Client contact Name	Rick McNeil
Client Contact Email Address	[redacted]
Client Contact Phone Number	

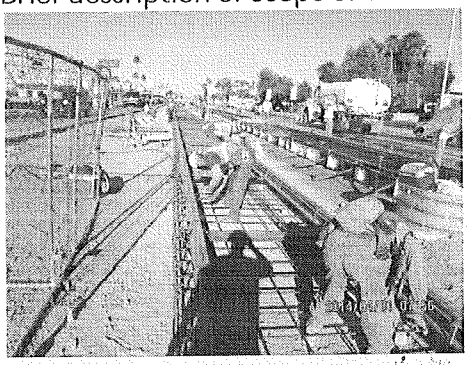




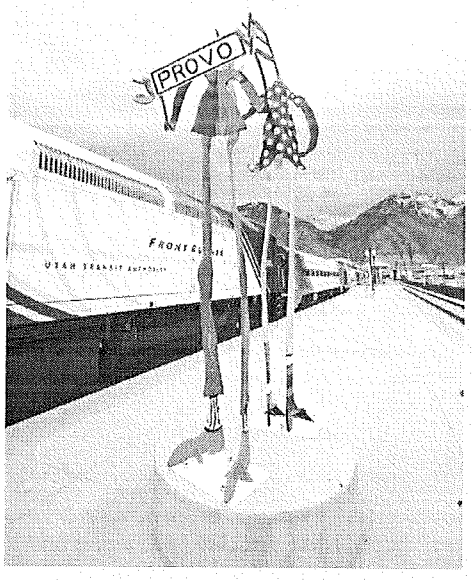
Project Name/Location	Water Siphon Replacement, Brooklyn-Staten Island, NY
Client Name/Contracting Entity	New York City Economic Development Corporation
Brief Description of Scope of work	In joint venture, Parsons Brinckerhoff is providing resident engineering and construction inspection services, including construction management, change control, contract administration, quality assurance, critical path method (CPM) scheduling, cost estimating, cost management, fabrication inspection, materials testing and progress reporting for the replacement of an existing water siphon between Brooklyn and Staten Island. In addition, we are providing oversight for construction of two microtunnels under the Staten Island Railroad and the installation of the new 72-inch steel water transmission main encased within a one-pass liner constructed by an earth-pressure balance (EPB) tunnel boring machine (TBM). The existing water siphons must be removed to allow for dredging and deepening of the Anchorage Channel to accommodate increased cargo volumes and the larger, next-generation "Post-Panamax" vessels into the Port of New York and New Jersey. The new water transmission main between Bay Ridge in Brooklyn and Stapleton and Tompkinsville in Staten Island is being constructed 100 feet beneath the surface and will be connected to the local water distribution network by installing 6,545 feet of new water mains in Staten Island and 1,710 feet of new mains in Brooklyn. This project is ongoing and within budget.
Client contact Name	Brian Larsen
Client Contact Email Address	[redacted]
Client Contact Phone Number	



Project Name/Location	Valley Metro Rail Program/Construction Management Services, Phoenix, Tempe and Mesa, AZ
Client Name/Contracting Entity	Valley Metro Rail, Inc.
Brief description of Scope of work	Under a task-order contract scenario, Parsons Brinckerhoff is a joint venture partner providing program and construction management services for four extensions of the Central Phoenix/East Valley Light Rail Transit System in the Phoenix Metropolitan area. Construction has begun on the 3.1-mile Central Mesa Extension and the 3.2-mile Phase 1 segment of the 5-mile Northwest Extension. Future extensions include the 2.6-mile Tempe Streetcar, Phase 2 of the Northwest Extension, and the 11-mile Phoenix West extension. Parsons Brinckerhoff is leading specific tasks, including: • Project/program management • Quality oversight • Cost estimating • Project controls/programming • Constructability review • Specification review • Document control • Value engineering • Claims mitigation • Construction Administration and Inspection–Central Mesa and NW extensions This project is ongoing and within budget.
Client Contact Name	Martin Spong
Client Contact Email Address	[redacted]
Client Contact Phone Number	



Project Name/Location	FrontRunner Commuter Rail System, Salt Lake City, UT
Client Name/Contracting Entity	Utah Transit Authority
Brief Description of Scope of Work	Program and construction management services for development of two commuter rail lines serving the Salt Lake City, Utah area. The $650 million FrontRunner North project from Salt Lake City to Pleasant View, which opened for revenue service in 2008, entails 44 miles and 8 stations. The $850 million FrontRunner South from Salt Lake City to Provo, which opened in 2012, comprises 45 miles and 8 stations. As program manager for development of the commuter rail program, we oversaw and managed the program from the concept stage through the construction and testing/start-up phase. We were responsible for establishing the program's development plan, procurement planning, public outreach, financial planning, technical concept development, vehicle selection, vehicle procurement oversight, and management and oversight of project contracts. We developed an integrated project controls system for project scheduling, cost, document control, budgets and scopes, and risk tracking, and are providing scheduling and program experts to integrate different functions into the project control tools. The contractor was procured through a construction management/ general contractor (CM/GC) agreement. This project delivery method combined final design and construction into a single design-construct stage. FrontRunner North was one of the largest projects (and one of the only FTA New Starts projects) to use the CM/GC method, which allowed Parsons Brinckerhoff to provide value engineering services that saved UTA $18 million in bid costs. This project was completed on time and within budget.
Client Contact Name	Steven Meyer
Client Contact Email Address	[redacted]
Client Contact Phone Number	



Project Name/Location	Gilmerton Bridge Replacement, Chesapeake, VA
Client Name/Contracting Entity	Virginia Department of Transportation, Hampton Roads District
Brief Description of Scope of work	Construction and risk management services for replacement of the Henry G. Gilmerton Bridge, a four-lane, double-leaf bascule bridge, and its approaches with a four-lane (expandable to six lanes) state-of-the-art vertical lift span bridge. The $140 million project was constructed in three phases to allow 35,000 vehicles per day and maritime traffic to be maintained while the new bridge was built in parallel alignment underneath and over the existing bridge. • Phase I involved shifting four lanes of traffic to two lanes; constructing the approach spans, lift span (off site), 12-foot drilled shafts and bridge towers; and installing the bridge's mechanical/electrical components. • In Phase II, the lift span for the new bridge was floated by barge from the offsite assembly location to the project site—a process that required a 14-day closure of the existing bridge and a 10-day closure of the harbor channel. Activities included deconstructing and removing the existing bascule leaves and attaching the new lift span to the towers. • Phase III consisted of demolishing the existing bridge and constructing the north approach spans and a new fender and dolphin protection system. Parsons Brinckerhoff developed a precedent-setting risk management plan, in which the owner and contractor agreed to manage risk jointly. This created a proactive approach to identify and mitigate potential risks before they become problematic, which saved VDOT money, time and resources. This project is ongoing and within budget.

H. Management Approach

Parsons Brinckerhoff has assembled a team of experienced construction management and inspection specialists, cost estimators, schedulers, and contract administrators to provide ample resources to meet the staffing requirements outlined in the Request for Proposals. With more than 1,000 construction, engineering, planning and design professionals located in the New York/New Jersey metropolitan area, we are able to respond quickly to all types of task-order assignments, mobilize rapidly when assigned, and provide expedited services to satisfy Port Authority objectives. Specific to Professional Construction Management Services, our National Director Of Construction Services, Garry Nunes, has worked with the Authority on numerous Construction Management assignments continuously for the past 27 years. As a result, he brings to the Authority a passionate personal commitment and corporate commitment to efficiently serve the needs of the Authority in all regards.

Assignment of Personnel

The nature of call-in or as-needed agreements often requires that Parsons Brinckerhoff personnel be assigned to a particular project or office and work seamlessly within the client organization and report directly to a client supervisor. For our most recent call-in construction management contract with the Authority (2011 to 2014), as well as our ongoing program management contract with the Authority for the $1 billion security upgrade at all Port Authority facilities, our staff report directly to an Authority supervisor and we operate seamlessly as a top to bottom integrated team.

Parsons Brinckerhoff is extremely familiar with working as an extension of its client's staff and is fully prepared to meet every expectation of the Authority in a timely fashion. Our management team understands the importance of staffing individual assignments with personnel who have both the technical qualifications and interpersonal skills to work effectively within the Authority's organization. Some of the key issues that are considered in the selection of personnel to be proposed for assignment to the Authority include:

- Technical qualifications and certifications
- Construction management and inspection experience
- Prior experience on Port Authority assignments
- Prior experience on the specific Port Authority facilities
- Ability to function as a team member
- Specialized technical training
- Interpersonal skills
- Ability to work independently or in groups
- Work ethic
- Geographic location in relation to the proposed assignment

Upon receipt of a Request for a competitive Task Order, our Project Manager Gerry Chi will consult with our Principal-in-Charge Garry Nunes to identify proposed candidates who best meet

the needs of each task order. Mr. Chi will also reach out to our M/WBE subconsultants and send the scope of services for that particular task to solicit potential candidates. After careful evaluation of all potential candidates, we will select those qualified candidates that best meet the technical qualifications while offering the best value to the Authority.

When a task order involves the assignment of multiple staff to perform a specific task, or a detailed technical proposal, we will use the same process to develop the team. Efficient staffing of each position results in the most qualified team providing the best value to the Authority.

This approach to responding to as-needed task orders has proven to be highly successful for all of our clients that we serve under similar "call-in" agreements. Parsons Brinckerhoff can confidently assert that we will provide added value to the Authority under this agreement.

Detailed Staffing Plan

The Parsons Brinckerhoff Team's detailed Staffing Plan and organization chart are presented in the Staff Qualifications and Experience Section (Section B) of our technical proposal.

Tracking System

A key element of effective communication is efficient document control and the use of a simple and intuitive tool for tracking deliverables, controlling costs, and managing open items for quick resolution. For this contract, Parsons Brinckerhoff offers to utilize our proprietary, secure, web-based project management and collaboration tool, ProjectSolve, wherever practical.

ProjectSolve allows project teams of all sizes to communicate easily regardless of their location. Tailored for the AEC industry, ProjectSolve adapts to unique business processes and methodologies, while leveraging existing IT investments. It is an important tool that fosters smooth and effective teamwork and integration by enabling the distribution of real-time project information to allow for timely decision making and actions.

ProjectSolve streamlines planning and decision-making, enhances communication and preserves project information by linking team members and agency stakeholders into a secure, shared – collaborative – information management environment. Within this shared environment, users have access to project-specific content, collaboration tools and process management solutions.

Keeping the Authority Informed

Project Management Plan - Parsons Brinckerhoff's approach to delivering quality professional services in conformance with the Authority's standards starts with the preparation of a Project Management Plan (PMP). Based on the Authority's Scope of Services, Parsons Brinckerhoff will prepare the PMP – a quality control document that identifies who performs specific services, the quality acceptance criteria, when services are to be delivered, frequency of reporting, and project close-out procedures.

The information maintained in the PMP is finalized upon project completion. The final version of the PMP serves as the technical closeout report and will be forwarded to the Authority. The PMP will document the methods our Project Manager Gerry Chi will use to monitor and control project performance with respect to scope, schedule, and budget. Specific methods will be determined by the PM and will be appropriate to the type, complexity, and magnitude of the project and services provided. Project records will be sufficient to provide objective evidence that the processes related to monitoring and controlling project performance are being implemented.

Continuous Communication - The project management plan simply provides a structure for reporting and provides a guideline to meet contractual requirements. Continuous communication with Authority personnel on each assignment both at the project level and from the corporate level are required for successful services.

The construction management and inspection personnel of Parsons Brinckerhoff are well prepared to work closely and cooperatively with the Authority, other consultants, and contractors. We recognize that *effective and efficient communication between our staff, the Authority project personnel, and facility personnel is critical to project success.* Virtually all of our current construction management assignments involve interdependencies with owner's representatives, design consultants, outside agencies and multiple construction contractors. We train our professional staff to manage and facilitate project communications in the best interest of our clients.

Because of our extensive task order agreement experience, the majority of our personnel are skilled in working within client organizations as an extension of their staff. That experience provides such individuals with an in-depth understanding of the important interdependencies between project participants. Parsons Brinckerhoff management team and our staff understand that our success can only be built on the success of the Authority.

Quality Control/Quality Assurance

Parsons Brinckerhoff's dedication to quality is a long-standing commitment to ensure client satisfaction through our formal quality system. To further its commitment to quality, Parsons Brinckerhoff embraced ISO 9001, a quality system recognized worldwide. We found that an orientation around the ISO standards provides an effective framework and structure for the development of project-specific quality management, and gives our project managers an efficient means to arrive at the optimum project plan.

In 1998, Parsons Brinckerhoff was the first nationwide provider of program and construction management (PM/CM) services to undergo the rigorous preparation and training to successfully become certified and implement an ISO 9001 compliant quality system. This entailed an extensive corporate commitment to ensure that internal operations and projects are performed consistently, completely, and in fulfillment of our clients' requirements. Parsons Brinckerhoff uses the system to assure our clients that we have a management system in place that will help deliver

a quality product. Since it is a renewable process, it forces member firms to maintain their quality levels in preparation for internal and independent audits.

Our internal audits verify that our teams are not only performing all internal requirements to maintain our certification but are also meeting the quality requirements of the contract. The Parsons Brinckerhoff Team's quality assurance (QA) program will establish a specific quality organization and responsibilities, as well as all procedures and documentation required for the work. The QA program will be a part of the overall Project Management Plan for our task order assignment and will provide the Authority a level of confidence that the project is being constructed in accordance with all project requirements.

Technical Approach to Scope of Services

Parsons Brinckerhoff's approach to the performance of services required for successful completion of all tasks to which we are assigned is described in the following sections.

Task A. Constructability/Biddability and General Engineering Review

As an industry leader in construction management, Parsons Brinckerhoff has long been an advocate of integrating the construction perspective early in the design process. With our comprehensive construction management capabilities, Parsons Brinckerhoff can offer constructability reviews for every type of Authority facility including buildings, terminals, bridges, tunnels, air fields, ports, rail transit, and other projects. With our depth and breadth of professional resources we can quickly assemble a local team of reviewers with the full range of field experience and technical expertise to conduct an in-depth review of the documents. Our team will bring the insight and expertise of hands-on construction managers and technical experts to our analysis.

When it comes to constructability the investment will be returned several times over in reduced project cost and schedule, while minimizing exposure to claims for delays. Our review typically focuses on the following:

- Clearly defined contract interfaces between plan sets and existing structures to reduce disputes and claims
- Efficient and complete bid documents
- Agreement in the documents between various trades (e.g. review to identify physical conflicts between mechanical, structural and electrical plans)
- Staging and phasing issues
- Site access constraints and efficiencies
- Work hours, noise, vibration and environmental restrictions and other constraints that may impact the construction process and equipment usage
- Coordination with facility operations

Parsons Brinckerhoff will prepare a comprehensive report for the Authority detailing our findings, comments and recommendations for enhancement to the project. The objective of these

comments will be to reduce costs, enhance quality, maintain schedule, and minimize the number of potential RFIs, change orders, and extra work requests. The result will be biddable and efficiently buildable construction documents and an effectively maintainable facility.

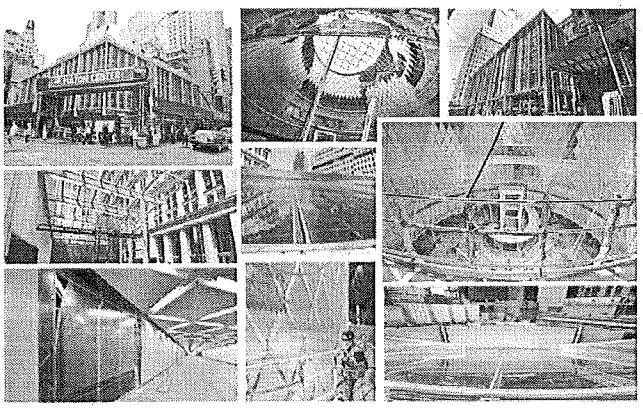
Task B. Construction Staging

With our many years of providing both design and construction management services for some of the most important and complex projects in the New York metropolitan area, Parsons Brinckerhoff understands the importance of a sound construction staging plan. Some of the essential factors influencing construction staging that we consider during a design/plan review include:

- Access during construction for personnel, materials and equipment; movement of materials and equipment are essential in parallel with the cost and schedule
- Laydown and storage availability
- Need for off shift and night work
- Need to maintain positive separation from facility operations (air, rail, port, etc.)
- Natural flow of work
- Effects of adjacent construction on planned operations
- Maintenance and Protection of Traffic Plan considerations, if needed
- Needs of the Authority and its tenants
- Schedule of PANYNJ operations
- Security requirements

Each of the Authority's facilities has its own restrictions and conditions that will affect staging plans. Having experience in all the various types of Authority facilities allows Parsons Brinckerhoff to bring specific expertise to any project.

Parsons Brinckerhoff is also a pioneer in the development and use of 4D modeling, which integrates 2D or 3D models of a project with a time-scaled schedule. This allows instant visualization of the planned construction sequence and staging for even the most complex of projects. *4D modeling has been used very effectively on the Fulton Street Transit Center and World Trade Center Transportation Hub program to quickly and effectively identify and minimize construction conflicts* at the major interface points between the contract packages as well as the restraints to be imposed by ongoing system operations. We have the capability in house in our New York office to support the Authority with this powerful tool on any project assignment.



Parsons Brinckerhoff's use of state-of-the art 4D virtual design and construction (VDC) software enabled the project team to proactively identify and resolve potential conflicts among 11 construction packages for the Fulton Street Transit Center

Task C: Schedule Development and Monitoring

The Parsons Brinckerhoff Team has in-house critical path method (CPM) scheduling experts who work with the Authority and our technical staff to develop and/or review detailed construction schedules. Our scheduling professionals will address the adequacy, completeness, and suitability of the schedule for control of the project. During our development and/or review of schedules, we will focus on:

- Time frames for submittal/approval of shop drawings and samples
- Lead times for delivery of key materials and equipment
- Sequence and overall plan for performing the work, including identification of specific work plans necessary to interface with ongoing operations
- Staging and phasing of activities
- Adequacy of the duration of activities, including the need for additional work periods
- Those specific items of the project that will require input from either the Authority or tenants.
- Identification of mandatory and/or statutory inspections
- Identification work restrictions identified in the contract or mandated by local jurisdictions
- Feasibility of the overall construction plan

A comprehensive report of our schedule analysis will be submitted to the Authority Resident Engineer and Engineer of Construction.

Our schedulers are fully trained in the use of all scheduling software products, particularly Primavera P6. More importantly, our scheduling staff understands the construction process and applies that construction knowledge to the development or review of construction schedules. Parsons Brinckerhoff has provided extensive scheduling services to the Port Authority in our extension of staff role on the Security Upgrade Program for all Authority facilities.

The initial baseline schedule can be developed by Parsons Brinckerhoff or by the construction contractor. Once the baseline schedule has been completed and accepted, the emphasis shifts to time control and reporting. This is an ongoing process that extends through project completion. Time control involves monitoring the progress of all activities against the baseline schedule, including shop drawing status reports, material status reports, and contractor construction progress. *Variances to the schedule are reported to project management for appropriate action of alternative plan development, thus averting potential problems and conflicts before they have been allowed to materialize.*

The cornerstone of project control is the Schedule Report. It includes an update of the master schedule. The report highlights monthly progress, lists goals to be achieved in the upcoming month, identifies potential schedule variances or conflicts, and charts individual contractor performance. For time critical projects, we usually prepare or require the contractor to provide a two week look-ahead schedule every week so more detailed monitoring can be achieved. Our CM teams understand that after identifying any schedule issue that a recovery plan must be immediately coordinated with the contractor to confirm that the schedule can be maintained.

Task D. Quality Assurance Inspection

Parsons Brinckerhoff understands that our resident engineers and inspectors serve as the first line of quality assurance in the construction process on behalf of the Authority's Engineer of Construction and Resident Engineers. Quality inspection requires both technical experience and the sound judgment of the qualified, competent team of Parsons Brinckerhoff and Authority inspectors. As a full service provider of engineering and construction management services, Parsons Brinckerhoff has the experienced inspectors available within the metropolitan area that have the project background in all trades required for any type of Authority facility whether it be from the ground up, or a renovation and rehabilitation.

Our field staff will closely monitor the contractor's work in the field using the procedures established by the Authority. Resident engineers and inspectors will:

- Coordinate the contractor's daily work
- Meet with the contractor to review daily work plans
- Confirm equipment, material and labor availability
- Observe and document conformance of materials with the contract documents and submittals
- Observe the performance of the construction contractor for conformance to the drawings, specifications, codes and standards
- Document conformance and non- conformance of the work
- Verify and document corrective action of any non-conforming work
- Observe and advise the Authority of the contractor's compliance with approved safety and quality plans

Parsons Brinckerhoff personnel are knowledgeable in materials testing programs and will implement the Authority's protocol to schedule, monitor and document all required material testing. Inspection staff will hold required credentials for the inspections they are performing where ACI, ICC, or NACE certification is required. Our Inspectors are trained to notify the Resident Engineer (whether Authority or Parsons Brinckerhoff) immediately upon witnessing any materials, erection or installation processes, or levels of quality that do not meet the requirements of the contract documents and which the contractor does not correct. All inspectors will submit an Inspector's Daily Report using Authority forms. Parsons Brinckerhoff will work seamlessly with Authority staff at all levels from assistant inspectors to resident engineers in delivering quality construction throughout the program.

Task E. Contract Administration

Parsons Brinckerhoff resident engineers, office engineers and records management staff will manage the flow of documents among all project entities as defined and approved in the Authority Procedures Manual. They receive shop drawings, samples, catalog sheets, RFI's, pay requests, QA records, and all correspondence, and act on each promptly and according to the established procedures. Action shall include maintaining logs of all document flow, documented transmittal of documents, pre-review of certain shop drawings, and prescribed document storage. The staff will be fully trained in Authority software database such as CONTRAK and will be

knowledgeable of the PACC process, T&M work and other administrative processes of the Authority. Our staff reviews the log and the engineering program to determine whether:

- The master construction schedule and all short term, look-ahead schedules contain critical submittal dates reflected in the logs
- Submittals from contractors, sub-consultants, suppliers and /or manufacturers are received by the design engineer on time
- Submittals are processed in a timely fashion by the design engineer and returned to the originator and that logs are updated
- Disapproved submittals receive prompt review by the design engineer, the contractor and the field staff, and whether timely corrective action is implemented
- Shop drawings have been approved before associated work or manufacture has begun
- All submittals are maintained on file

Parsons Brinckerhoff staff will fully support the Authority in all other contract administration matters including participation in contract status meetings. In addition to having experience in nearly every construction management and inspection database tool such as Primavera Contract Manager Parsons Brinckerhoff also has the ability to provide program level management through our proprietary project management Information System (PMIS) or our ProjectSolve database tool.

Task F: Cost Engineering/Estimating Services

Parsons Brinckerhoff will provide cost engineering and estimating throughout the design and construction process in accordance with the Authority's "Construction Estimating Guide". During the process we have the capability to prepare or review the individual engineer's estimates to be submitted with each bid package at the various stages of design. The phase submissions for each project design increase in level of detail and completeness and our efforts will be applied accordingly. We will take a contractor's approach/methodology to preparing or analyzing the estimate. Our approach to estimating is to work within the guidelines established for the project under the direction of the Program Manager and provide our independent review and recommendations for adjustments to unit costs and bid item breakouts where necessary. We will give consideration to recent cost results and trends, actual material/labor/equipment costs, quantity breakouts (cy, sf, lbs, lump sum), risk factors, constructability comments, and general conditions when determining the appropriateness of the unit costs provided in the design estimate.

We will concentrate on identifying major cost drivers and validating bid package strategies. Known cost drivers can be divided into 3 primary categories:

1. *Labor* – Availability, wage escalation, and the ability to reduce through accelerated construction

2. *Equipment* – Contractor (Availability, operating expense) Facility – Equipment (types and manufacturers)

3. *Materials* – Trends and alternatives for cost drivers such as structural steel, reinforcing steel, structural concrete, copper wire, conduit, etc.

For long term and larger construction projects, Parsons Brinckerhoff will review the most up to date national and local economic data available to verify that appropriate escalation rates are utilized. As the project progresses through the design phases towards 100% we will continue to verify that previous comments have been addressed and that the appropriate unit costs have been applied based on the updated designs and most recent cost data available.

Task G. Resources

Parsons Brinckerhoff prides itself on the quality and integrity of our professional staff and their ability to integrate easily into the Authority's project organization. We have staffed numerous positions across the City and State under our existing agreements with the Authority, and are prepared to continue to provide available resources where and when needed by the Authority. The organization chart and resumes included in the section labeled as Resumes represent some of the available professional resources that Parsons Brinckerhoff and our subconsultants have to offer.

Parsons Brinckerhoff has enlisted the services of a team of subconsultants to supplement our in-house resources and enhance our ability to respond to multiple task-order assignments simultaneously. We selected these subconsultants based on their proven ability to deliver services as demonstrated on previous projects where we have worked together as well as their experience with the Port Authority.

Hirani/Municipal Testing (M/DBE) – Civil/Structural Inspections

Hirani Engineering & Land Surveying, P.C. (Hirani), based in Jericho, New York, provides civil and structural engineering, land surveying, construction inspection/management, site safety and special inspection services. The firm's market sectors include transportation (highway, bridge, and rail infrastructure); building and facility projects inclusive of schools and colleges, medical care, housing, waste water treatment, commercial and site development; and municipal engineering. Hirani has a highly experienced staff of NICET and NACE certified inspectors as well as inspectors who are certified for lead abatement and asbestos handling. The firm's inspectors ensure that contractors adhere to specifications, building codes, and quality standards. The focus of the construction inspection services is the completion of construction projects on time, within budget and in compliance with the contract documents.

Hirani has provided, and continues to provide, a range of services to the Port Authority under call-in, as-needed services contracts, including:

- Call-In Contract for Construction Management Services during 2007, 2008 and 2009 (Prime)
- Call-In Contract for Land Surveying Services during 2007, 2008 and 2009 (Prime)
- Performance of Expert Professional Construction Management Services on a Call In Basis during 2012 (Prime)

- Terminal B Rehabilitation at Newark Liberty International Airport
- Terminal 4 Head House "Delta" Site Safety Inspection at JFK International Airport

Hirani Special Inspections and Testing, part of the Hirani Group, also a M/DBE firm and NYC DOB approved special inspection agency firm #000679, along with Municipal Testing Lab (MTL), work closely together on various projects in and around New York City. MTL is also an approved NYC DOB agency firm #000250 and a NYC approved special inspection Lab #19. In this association between the two firms their relationship has taken the form of a JV arrangement or a simple prime sub, depending on the circumstances surrounding each project opportunity.

JCMS, Inc. (DBE) – Cost Estimating/Scheduling

JCMS has been providing program, project and construction management services to public and private sector clients since 1985. The firm has 85 employees on its full time staff in various disciplines, including cost and scheduling engineers, cost estimators, computerized document control specialists, office engineers, resident engineers, and construction inspectors their firm has provided services to clients on numerous projects throughout the New York/New Jersey metropolitan area, including the Port Authority, NYCT, NJ TRANSIT, Long Island Rail Road and Amtrak, among others. JCMS is currently providing program management and cost estimating services to NJ TRANSIT on Sandy-related repair and resiliency projects. JCMS provides conceptual, preliminary, budget and definitive cost estimates from the beginning of a project and develops construction cost estimates through the various design phases and for various scenarios. The firm also prepares design schedules, pre-bid schedules and detailed cost and resource loaded construction schedules.

Representative New York City metropolitan area project experience includes:

- PANYNJ –PATH Planning, Oversight and Related services on an "As-Needed" basis: JCMS is developing integrated resource loaded schedule & optimizing resource requirements for PATH's proposed $2.5B, 10 year capital program
- PANYNJ Project Delivery Services: JCMS is responsible for maintaining an enterprise level schedule in Oracle Primavera P6 for both design and construction projects for the Authority's TB&T Department and has performed constructability and logistics reviews for several projects, including the Multi-Facility Tolling System and Lincoln Tunnel/PABT bus parking and staging facility
- LaGuardia Airport: Expert professional CM support services for various MEP projects
- Fulton Street Transit Center: Construction inspection and document control services
- East Side Access: Construction management and project controls services

LPE Enterprises (WBE)

LPE Enterprises is a certified WBE construction management support services firm, which serves the needs of construction management and engineering companies for skilled and experienced project-based personnel. The firm's staff members, all of whom are actively engaged on projects are full-time employees of LPE. LPE's personnel have extensive expertise in such areas as

construction inspection, estimating, document controls, and technical and contract administrative services.

LPE's professionals are fully integrated into the project team, committed to meeting the highest standards of performance, and are dedicated to the success of the project and the Port Authority of NY & NJ.

ManTech International

ManTech was founded in 1968 to provide advanced technological services to the United States government. ManTech began with a single contract with the U.S. Navy to develop war-gaming models for the submarine community. Over the years, the government's technology needs have increased dramatically in scope and sophistication, and ManTech has grown to meet that challenge.

For more than 45 years, ManTech has kept a careful eye on where emerging technologies were taking the government, and developed the resources to master those technologies—by staying close to customers and anticipating needs, hiring talented professionals to propel ManTech into the future, and acquiring companies with proven capabilities.

ManTech has always been a customer-driven company, and has approximately 8,000 employees that span the globe. ManTech fully dedicates themselves to customers' missions and act as a trusted partner helping customers stay ahead of technology, gain efficiencies, and cut costs.

Conclusion

Parsons Brinckerhoff brings to the Port Authority of NY & NJ the technical resources, managerial expertise and the commitment to excellence that are ideally suited to this agreement. We understand the needs of the Authority and are prepared to meet or exceed every expectation. The ability of our personnel to integrate so successfully and efficiently within the Authority organization has been a key element of the success we have enjoyed on our many assignments with the Authority. The firm has served the Authority in this same capacity for many years and looks forward to the opportunity of continuing our outstanding professional relationship.

REQUEST FOR PROPOSALS FOR THE PERFORMANCE OF EXPERT PROFESSIONAL CONSTRUCTION MANAGEMENT AND INSPECTION SERVICES AS REQUESTED ON A "CALL-IN" BASIS DURING 2015 THROUGH 2018 (RFP #39247)

AGREEMENT ON TERMS OF DISCUSSION

The Port Authority's receipt or discussion of any information (including information contained in any proposal, vendor qualification, ideas, models, drawings, or other material communicated or exhibited by us or on our behalf) shall not impose any obligations whatsoever on the Port Authority or entitle us to any compensation therefor (except to the extent specifically provided in such written agreement, if any, as may be entered into between the Port Authority and us). Any such information given to the Port Authority before, with or after this Agreement on Terms of Discussion ("Agreement"), either orally or in writing, is not given in confidence. Such information may be used, or disclosed to others, for any purpose at any time without obligation or compensation and without liability of any kind whatsoever. Any statement which is inconsistent with this Agreement, whether made as part of or in connection with this Agreement, shall be void and of no effect. This Agreement is not intended, however, to grant to the Port Authority rights to any matter, which is the subject of valid existing or potential letters patent. The foregoing applies to any information, whether or not given at the invitation of the Authority.

Notwithstanding the above, and without assuming any legal obligation, the Port Authority will employ reasonable efforts, subject to the provisions of the Port Authority Freedom of Information Code and Procedure adopted by the Port Authority's Board of Commissioners on March 29, 2012, which may be found on the Port Authority website at: http://www.panynj.gov/corporate-information/pdf/foi-code.pdf, not to disclose to any competitor of the undersigned, information submitted which are trade secrets or is maintained for the regulation or supervision of commercial enterprise which, if disclosed, would cause injury to the competitive position of the enterprise, and which information is identified by the Proposer as proprietary, as more fully set forth in the FOI Code, which may be disclosed by the undersigned to the Port Authority as part of or in connection with the submission of a proposal.

Attn: RFP Custodian

Re: Expert Professional Construction Management and Inspection Services as Requested on a "Call-In" Basis During 2015 Through 2018 (RFP Number 39247)

Dear RFP Custodian:

Urban Engineers of New York, P.C. (Urban) is a multidisciplinary engineering firm that is well-positioned to serve the needs of the Port Authority of New York and New Jersey (PANYNJ). To meet the M/WBE participation goal established by the PANYNJ we have invited the following subconsultants to join our Team:

- Distinct Engineering Solutions, Inc.
- Haider Engineering, P.C.

These subconsultants have several certified construction managers and inspectors who are included in our list of staff with required certifications.

As outlined below, the Urban Team meets each of the requirements detailed in the Proposer Requirements section of your RFP.

PANYNJ Requirement	Urban Engineers Response
A. Firm Experience	
1. An office in the Greater New York, New Jersey Metropolitan Area and must have at least 50 individuals on staff who have demonstrated experience performing construction management and/or construction inspection services in the Greater New York/New Jersey Metropolitan Area.	1. Urban Engineers of New York, P.C. and our parent company, Urban Engineers, Inc. have a total staff of over 450 employees with 230 of that staff performing construction management and inspection. We have several projects in the New York City Metropolitan area where our staff has been performing construction inspection services. Our local staff consists of over 80 technical employees.
2. A Certificate of Authorization to practice Professional Engineering or Architecture in the states of New York and/or New Jersey.	2a. Urban Engineers of New York, P.C. is registered and authorized to do business in New York and Urban Engineers, Inc. is registered and authorized to do business in New Jersey. Any New Jersey based assignments issued under this Agreement will be performed by Urban Engineers, Inc. as a subconsultant to Urban Engineers of New York, P.C. 2b. Urban Engineers, Inc. is former affiliate of Urban Engineers of New York, P.C. via common ownership. Urban Engineers, Inc. became 100% employee owned ("ESOP") effective 12/30/2013. Urban Engineers of New York, P.C. and Urban Engineers, Inc. still share common management. *Note: Certifications are included in Section I, Additional Information*

B. Staff Experience – Construction staff experienced in Civil, Structural, Electrical, and Mechanical Engineering shall include:	
1. At least 10 of which must be engineers/architects licensed in the states of New York and/or New Jersey 2. At least 10 of which must be ACI Concrete Construction Special Inspector 3. At least three of which must be ICC Certified as a Structural Steel and Bolting Inspector 4. At least one of which must be NACE Level 1 coatings certified.	The following table summarizes the certified inspectors and licensed professional engineers that Urban is capable of delivering to support the PANYNJ under this contract. The totals are compared to PANYNJ requirements and show compliance of the requirement of RFP #39247. This is a representative sample of the inspection capacity of Urban.

Staff Experience

No.	Staff	Title	Professional Engineer (NJ/NY)	ACI Concrete Construction Special Inspector	ICC Certified – SS & Bolting Inspector	NACE Level 1 Coatings Certified
1	William Thomsen, PE	Project Executive	1

Urban is an accredited and registered Special Inspection Agency in 39 categories with the International Accreditation Services (IAS) and New York City Department of Buildings (DOB). Urban is a Class 1 Special Inspection Agency per the rules and regulations of the City of New York.

Urban's focus on quality is supported by our **ISO 9001:2008 Certification;** the definitive quality standard for design/consulting firms. We are one of only a handful of consulting engineering firms in the country to have achieved and maintained this status, which serves as a testament to our commitment to quality.

We acknowledge the receipt of Addendum No. 1, dated September 12, 2014 and Addendum No. 2, dated September 15, 2014. If you have any questions regarding our proposal, please contact our New York City Office Manager and Project Manager, **Charles F. King, PE,** at **212-736-9100,** or at **cfking@urbanengineers.com.** Thank you for considering the Urban Team.

Very truly yours,

WHY SELECTED

- **36 years of professional experience**
- **National expertise in Program Management requirements for major capital projects**

REGISTRATIONS/ MEMBERSHIPS

- Professional Engineer NY, NJ, PA, MD
- NJ DOT ETRP Compliance NJ
- American Society of Civil Engineers
- Past President - Philadelphia Section
- Chairman of Transportation and Urban Development
- Secretary - District IV Legislative Affairs Committee
- Member - National Committee, High Speed Ground Transportation
- American Public Transit Association
- Light Rail Transit Committee
- High Speed Inter City Ground Transportation Subcommittee
- Chairman, Capital Projects Subcommittee
- Intercity Corridor Development Committee

EDUCATION

- MS, 1985, Drexel University, Engineering Management
- BS, 1978, Clarkson College of Technology, Civil/Environmental Engineering
- Certificate, 1997, Dale Carnegie Course

RECORD OF PROFESSIONAL EXPERIENCE

Mr. Thomsen's experience with Urban Engineers, Inc. encompasses the management/engineering of major projects in the fields of Transportation and Infrastructure systems. He presently serves as Senior Vice President overseeing National Consulting and Program Management and has performed project management, planning, design, construction, value engineering, construction claims support, and expert witness services. He also serves as the executive in charge of Urban Engineers, of NY. Mr. Thomsen led the firm's development in the Practice Areas of Transit, Railroad, and Project Management Oversight and Program Management. . He has significant national experience with major capital project development from planning through construction for SEPTA, MARTA, DART, RTD, RTC, Tri-Rail, MDTA, Lynx, and MTA. He has served as associate professor (part-time) at Temple University, lecturing on transportation engineering, and has taught a professional engineering registration review seminar.

Mr. Thomsen has special expertise concerning Public Transit systems. He has participated as a member of Urban's in-house constructability review committee, which examines contract documents for their constructability in order to mitigate construction claims. He is familiar with all aspects of civil engineering as they relate to transportation, and is well qualified in the special requirements for coordination of engineering projects with active railroads and systems of public transportation and infrastructure in urban environments. He has represented ASCE on the planning committee for the Area Coalition for Transportation in support of funding for SEPTA and is active in legislative affairs. Mr. Thomsen's recent relevant experience includes the following:

High Bridge Park Slope Stability Project, New York City Parks & Recreation, New York City , NY – Principal in charge of this emergency rock slope stability project. Responded through an emergency contract to provide engineering services for the NYC Parks and Recreation Department. Urban Engineers provided Construction Management and Inspection of the clearing of a Rock slide and the associated material as well as the design and placement of Rock Bolts and rock slide protection to stabilize the slope for the future along the Harlem River Drive a major Urban arterial. Urban Inspected the work of Trocom the contractor responsible for the work. The project was completed and the slope stability measures were achieved.

Project Management Oversight, Metropolitan Transportation Authority (MTA) and New York City Department of Transportation (NYCDOT), Federal Transit Administration (FTA), New York City, NY – Mr. Thomsen serves as Program Director for the Project Management Oversight Program to monitor the progress of all FTA-funded transit projects in New York City for FTA Region 2 above lower Manhattan. The PMO Team serves as an extension of FTA's staff in assessing the grantee's project management, construction management, and technical capacity in executing major rail car procurement projects. The total value of these programs is approximately $30 billion in transit projects for the MTA which includes: New York City Transit (NYCT), Long Island Rail Road (LIRR), the East Side Access (ESA) Project; the Second Ave Subway and several projects for NYCDOT.

Schuylkill Valley Metro Feasibility Study, Southeastern Pennsylvania Transportation Authority, Philadelphia to Reading, PA - Quality Assurance/Executive Advisor for the feasibility, MIS/DEIS study of introduction of rail service in a 60-mile corridor, including branches to major suburban locations.

Project includes right-of-way assessments, route selection and operations planning, ridership forecasting, station location and evaluation, operating and capital costs, and performance evaluation. Both commuter rail and light rail modes were evaluated.

Integrity Monitoring Freedom Tower Project, Port Authority of New York and New Jersey (PANYNJ), New York City, NY – Mr. Thomsen serves as Managing Director for Engineering for the Fortress Monitoring Group (FMG) for the Integrity Monitoring of the Freedom Tower Project. FMG is a Joint Venture of Engineers, Investigators and Accountants. Mr. Thomsen was integrally involved in the formation of FMG and serves as a JV Principal. This assignment provides the PANYNJ with expert advice in monitoring the implementation of Design and Construction activities to accomplish the reconstruction of the Freedom Tower (Tower 1) .This building is planned as one of the tallest buildings in the United States upon its completion and will take more than 5 years to construct and cost over $2 Billion. He provides leadership and guidance for all engineering activities, studies and investigations associated with FMG's efforts in the mitigation and avoidance of fraud waste and abuse.

Cross County Metro, Southeastern Pennsylvania Transportation Authority, Philadelphia, PA - Project Manager to study the feasibility of the institution of a new public transportation service along a 53-mile corridor between Downingtown, Pennsylvania and Trenton, New Jersey. This service represents one of the first suburb-to-suburb public transportation services being proposed throughout the United States. The total project, when implemented, is expected to cost between $100 and $200 million. (1992 - 1994)

Project Management Oversight, Dallas Area Rapid Transit, Dallas TX – Previously served as Project Manager for the oversight of the DART North Central Corridor Light Rail Buildout Providing Project Management Oversight Services for review and monitoring the FTA funded DART and Railtran (Trinity Railway Express) Major Capital Projects. The DART Project included the $517 million LRT expansion program along the North Central Corridor between the existing Park Lane Station in Dallas and Plano, Texas and the $184 million DART/FWTA Trinity Railway Express Commuter Rail expansion between Dallas and Fort Worth, Texas. Both Projects were completed on time and within budget. Another aspect of this project was the DEIS and Preliminary Engineering of the Northwest/Southeast Corridor this extension is now in construction.

Project Management Oversight, Los Angeles County Metropolitan Transportation Authority Metro Red Line Tunnels, Federal Transit Administration, Los Angeles, CA - Mr. Thomsen served as the Project Manager for an in-depth evaluation of the Metro Red Line subway tunnels (MOS1). The study reviewed and evaluated the structural integrity and safety of a 3.5-mile segment of twin bored transit tunnels. The study was commissioned in response to questions of potential construction deficiencies. A series of testing programs, both destructive and nondestructive, were performed. A final report was delivered to the LACMTA and presented publicly, which proved the tunnel's capacity under extreme static and seismic loading. This evaluation has been said to be the most comprehensive review ever performed on a subway construction project the United States.

Project Management Oversight, Downtown People Mover Reconstruction, Detroit Transit Corporation, Detroit, MI - Mr. Thomsen served as the Project Manager for the oversight of the Reconstruction of the Detroit Downtown People Mover. The project was a result of an unplanned collapse of the Transit structure when an adjacent building implosion project damaged the facility causing a service shutdown and emergency situation for reconstruction. Initial investigations were performed to determine if the structure could be reused. Following NTP and construction initiation, the entire facility was replaced within nine months, on time, and within budget. The project team was recognized for outstanding service in performing the reconstruction.

RECORD OF PROFESSIONAL EXPERIENCE

Mr. King has extensive, diverse experience as a Project Manager and Resident Engineer spannig nearly three decades on complex bridge and highway construction projects. His management experience on design / construction programs includes strategic planning, cost analysis and budgeting, stakeholder relations, schedule and scoping analysis, contracts, and public relations. Mr. King's experience ranges from "on site" management, including inspection and field engineering, to document control, change order processing, claims mitigation, and quality assurance/quality control. These management skills coupled with his engineering background in both design and construction help him immediately understand issues on complex projects and manage the resolution of cost, schedule, quality, and safety issues. Mr. King's experience includes:

George Washington Bridge Bus Station Redevelopment Program Management Services, Port Authority of New York and New Jersey (PANYNJ), New York, NY - Program Manager responsible for supporting the PANYNJ in managing the public/private venture for redeveloping a bus station located on 178th Street in Upper Manhattan, directly on the George Washington Bridge approach. Redevelopment cost for the PANYNJ Bus Spaces is $53M, Leased spaces for the developer are estimated to be $100M. The station, designed by Pietro Nervi, was originally constructed in the 1950s and now serves 20,000 daily commuters as a connection point for trips from New Jersey to Manhattan. In a public/private partnership, the PANYNJ has contracted with a retail developer to modernize the bus station and introduce a retail shopping complex to serve the local Washington Heights community. A new bus platform and pavilion were configured for improved operations and passenger comfort. Services managed by Mr. King include assisting with the program definition, including permitting and historic preservation analysis; design management; cost control; scheduling; document control; and project management (2010-2011)

World Trade Center Site Redevelopment Program (Downtown Restoration Program), Port Authority of New York and New Jersey (PANYNJ), New York, NY - Deputy Program Manager supervising the program management team for the reconstruction of the World Trade Center in Lower Manhattan. This $16 billion program for reconstructing the WTC site includes a new transportation hub, a 1,776-feet-tall Freedom Tower; the 9/11 National Memorial; Towers 2, 3, and 4; a Vehicle Security Center; Rte. 9A realignment; a central chiller plant; and the extensive site roadways and utilities. Assisted in managing the program, including budgets, forecasts, cost variance analysis, project status reports, financial analysis and invoice processing, monthly financial and progress reports, program CPM scheduling (deterministic and probabilistic), site logistics, project communications, document control, contract management, and serving as a liaison with the FTA and other stakeholders. (2008-2009)

Reconstruction of Interchange 17 (Contract 3), New York State Thruway Authority, Newburgh, NY - Project Engineer responsible for managing the construction of the direct connection between the New York State Thruway Authority (I-87) with I-84. This $68 million project involved constructing seven new highway bridges, associated ramps, MSES walls, drainage structures, pavements, lighting, signals, and wetlands. This new connection eliminates the need for traffic to enter local roads when transferring from one interstate to another. Also managed several aspects of the project, including compliance with contract, safety, document control, change order management, CPM schedule review, construction inspection, and quality assurance oversight of the project testing program. (2006-2008)

Southeast Pennsylvania Transit Authority (SEPTA) on the Market Street Elevated Reconstruction Program, Philadelphia, PA - Deputy Program Manager for this $567 million program that involved replacing 2.5 miles of elevated transit structure with a new composite steel/concrete guideway carrying dual track service. Six transit stations are being completely demolished and replaced under this program. Located in the inter-city neighborhood of West Philadelphia, the program is divided into four construction contracts. Responsibilities included oversight of four construction contracts, one design contract, and several specialty support contracts for quality, cost control, and schedule compliance. He managed a staff of over 50 construction engineers, inspectors, and safety and office personnel. Also managed community relations and reporting to SEPTA's board. At the conclusion of each construction contract, managed the claims analysis and negotiation process. This process included performing in-depth review of RFI and submittal histories, time impact analyses, cost estimating, and contractual interpretations. The examples of claims on this project included: structural steel price increase, return to service delays, interferences from adjacent construction activities, impacts of design changes, and hidden underground conditions. Claims totaled more than $20 million for the four construction contracts. (2004-2006)

Design/Build Emergency Deck Replacement for the Brooklyn Bridge, New York City Department of Transportation, New York City, NY - Served as Deputy Project Manager for Design and Resident Engineering / Construction Inspection Services on this $50 million bridge deck replacement project. Responsible for scope development, contract negotiations, bid preparation, and managing resident engineering staff and subconsultants. (2000-2002)

Pier Protection and Tower Painting at the Tappan Zee Bridge, New York State Thruway Authority - Project Manager for Resident Engineering/Construction Inspection Services on this $45 million bridge rehabilitation project. Was responsible for, project delivery, staffing, budget, and schedule performance. Project includes installing pile-supported precast concrete fenders to protect the bridge foundations from dynamic barge collisions. Rehabilitation and painting the steel tower structures were also included in the scope of work. This project included the installation of large diameter steel pipe piles within the soft geotechnical strata of the Hudson River at the Tappan Zee crossing. This piles were installed adjacent to the (1999-2002)

Construction Management Services for Roadway Rehabilitation and Installation of Cathodic Protection at the Brooklyn-Battery Tunnel for the Triborough Bridge and Tunnel Authority, New York City, NY. Project Manager for the on site construction management team for the roadway rehabilitation work that was performed primarily during night time, off peak hours. The construction activities included concrete restoration, electrical distribution, demolition, paving and shotcrete. The work included an active Cathodic Protecction System that was expected to retard further reinforcing bar corrosion and extend the life of the roadway structure. Construction cost was $16 million.

Project Management Resource Forecasting Method, Port Authority of New York and New Jersey (PANYNJ), New York, NY – Project Manager responsible for development of an analytic tool for forecasting the Project Management Resources needed to manage the annual $3B Capital Program of the PANYNJ. The tool was developed using past project management data combined with 10 complexity dimensions, including (1) Cost, (2) Schedule, (3) Design Complexity, (4) Construction Complexity, (5) Operational Complexity, (6) Safety, (7) Stakeholder Management, (8) Authorization Policy, (9) Technical Innovation and (10) Sustainability. This project included determining the present role of the Project Managers in the Line Departments and their relationship with other PA departments including the Engineering Department. (2011)

Risk Assessment for Various Projects, Port Authority of New York and New Jersey (PANYNJ), New York, NY – The PA Board requires risk assessments for all capital projects presented to them for funding authorizations. Mr. King led a team that performed the first risk assessments for the Line Departments (Ports, Aviation, PATH and Tunnels, Bridges and Terminals). These assessments focused on cost risk as the Board wants to mitigation cost and scope creep on Capital projects. Mr. King served as Project Manager and Subject Matter Expert for the following projects:

- JFK Hanger 12 & Bldg 94 Demolition, $11.0M
- Port of Newark Berth 6 Wharf Reconstruction, $33.0M
- George Washington Bridge Structural Steel Rehabilitation, $130M

These projects were analyzed, contingencies developed and presented to the PA Board for approval. (2010)

EDUCATION

MS, 1981, Polytechnic Institute of New York, Construction Management

BE, 1977, City College of New York, Civil Engineering

RECORD OF PROFESSIONAL EXPERIENCE

Thirty-eight years of experience in the engineering and construction industry. Held leadership roles in both corporate and industry settings (Professional Societies/Committees). Possess technical and administrative skills in all aspects of project development and delivery with responsibility for permitting, design, costing, purchasing, scheduling construction management and claims. Diversified project experience in both the public and private sectors include power plant, transit facility and high-rise construction.

Former Chief, Construction & Project Management for New Jersey Transit Corporation - Newark, NJ
Responsible for the management and overall performance of the Division and in the successful delivery of capital construction projects. Program averaged $600 million annually and project varied in complexity and duration over the entire service network and involved both new construction and rehabilitation of existing facilities.

Project Executive, Trenton Station Rehabilitation - $53.1 million expansion of the existing facility. Current facility is an overpass/concourse structure which serves a daily ridership of 4,600 passengers. Station is owned and operated by NJ Transit with tenant agreements with other transportation operators including Amtrak, SEPTA, and Greyhound. This rehabilitation has a two-year duration and the scope entails the relocation and maintenance of station operators, food/service vendors, and transit police; upgraded mechanical/electrical systems, construction of a mezzanine level; and the expansion of the building footprint which will more than double available square footage of the complex.

Project Executive, Morrisville Yard - $97.8 million rail yard expansion to accommodate 120 railcars as a layover facility for the Northeast Corridor. Features include 21,000 ft. of additional electrified track, a enclosed Service Inspection facility, a Wheel Truing facility, expanded Crew Quarters and new Control Tower.

Project Executive, Wayne Bus Facility - $28 million; 210,000 SF Bus Maintenance Facility with storage capacity for 135 buses. Located on a 24-acre tract near the intersection of Routes 1-80, 46 and 23 in New Jersey this project included construction of an access viaduct, wetland/site remediations, bus washer, paint booth, service road and parking lot.

Project Manager, Wall Street Subway Station - $12 million expansion of the subway station mezzanine. Responsible for supervision of all construction operations, budgeting and quality control. Multi-phase project included open cut excavation of the roadway and sidewalks of Pine Street (downtown Manhattan), relocation of various utilities and support of adjacent substructures, significant coordination and staging of contractor work.

Project Manager, Morgan Guaranty World Headquarters - $230 million Base Building contract for the construction of a 43-story concrete/steel structure at 60 Wall Street. Worked directly with Owner; developed budget and purchasing schedules, procured various material and labor contracts; and was responsible for supervision of earthwork, concrete, stone and carpentry trades.

Purchasing Agent - bid package development, advertisement, bid evaluation, negotiation and contract execution with various building trades for high profile building projects, most notably, Carnegie Hall Restoration, Barclays Bank, and the 7 World Trade Center.

Project Manager, - Claim Analysis and Litigation Support for the Corporation Counsel of New York. Provided consulting services in defense of a $26 million claim filed by the contractor of the Port Richmond Wastewater Treatment Plant.

Assistant Project Manager, Stamford Plaza Parking Garage - a design/build 687-space multi-level deck.

Project Manager, Low-Head Hydroelectric Improvements - responsible for conducting feasibility studies for the upgrade of existing plants and development of new sites for hydroelectric installations in Michigan and Indiana under a Department of Energy grant.

Associate Engineer, Underwater Repairs to Intake Structures - three intake structures for cooling water at Donald C. Cook Nuclear Plant were significantly damaged due to icebergs on Lake Michigan. Responsible for damage assessment via diving inspection, design of repair, and implementation of the remediation program.

Assistant Engineer, Smith Mountain Lake Pumped Storage - $15 million, 105 MW pump/turbine installation in Virginia. Served on the technical support team for the Operating Company. Responsible for technical specifications, cost estimating, bid documents, construction assistance and contract administration.

Oscar F. Bustos, PE

Senior Civil/Structural Engineer

- Society of American Military Engineers (SAME) New York City Post
- America Council of Engineering Companies (ACEC) – Member of the International Committee.

EDUCATION:

- BS, 2000, Pontifical Xavierian University, Civil Engineering

RECORD OF PROFESSIONAL EXPERIENCE

Mr. Bustos is a Project Manager and Resident Engineer with over 14 years of experience in civil heavy construction. Mr. Bustos is a registered Professional Engineer in New York. The most recent projects Mr. Bustos has been involved with include the construction of a fishing pier and bulkheads on the Long Island Sound as well as the installation of new DEP sewer lines on piles for the New York City Economic Development Corporation in the Bronx; and the emergency repair of multiple linear feet of seawall on the East River as part of a Sandy Relieve project for NYC Parks in Brooklyn. Mr. Bustos' experience includes:

South Bronx Greenway Program – Reconstruction of Food Center Drive, New York City Economic Development Corporation – Resident Engineer responsible for the reconstruction of one of the busiest 1.3-mile roadway in the food destruction center of NYC in Hunts Point. The construction cost is $5.5 million and encompasses the installation of new sewers and water mains as per DEP's standards and specs, streetscape and green infrastructure in conformance with DEP and DPR, management of excavated material including storage around the limited site space, sampling and testing as per NYSDEC's regulations, new pavement, sidewalks, curbs, ADA ramps, landscape and street lighting and traffic signals in coordination with DOT, and coordination with stakeholders including the Cooperative Meet Market, the New Fulton Fish Market, Baldor Foods and Krasdale Foods.

Reconstruction of the Wellhouse Located South of Lookout Hill and North of the Peninsula on Wellhouse Drive in Prospect Park, Brooklyn, Prospect Park Alliance – Project Manager responsible for coordinating with the client and scheduling all the required special inspections, reviewing contractor's submittals, performing civil/structural inspections and preparing final report.

Emergency Cleanup and Make Safe of Shore Parkway Bikeway and Pedestrian Path Between 92nd St & Bay Pkwy in Brooklyn, New York City Department of Parks and Recreation – Construction Manager responsible for the contract management of a $1.8 million FEMA funded post-Super Storm Sandy recovery reconstruction of the seawall and shared biking/pedestrian path. The construction scope encompassed debris removal, installation of temporary construction fencing, new asphalt pavement and lawns stabilization and restoration. The seawall repair included concrete repairs of the core wall, resetting and replacement of cap and façade stones, grouting and anchoring of stones and pointing of joints.

South Bronx Greenway Program - Hunts Point Landing Project, New York City Economic Development Corporation – Resident Engineer responsible for the construction oversight of a $6.8 million, Federal Aid Waterfront Park in Hunts Point in the Bronx. The construction scope encompasses the construction of a new 150 long fishing pier in the Long Island Sound on steel pipe piles and reinforced concrete pile caps, construction of a new steel sheet piling bulkhead, new sanitary and storm sewers on piles, a new 12" water main, the roadway reconstruction of Farragut Street, a kayak launch, creation of ecological habitats through tidal pools, passive recreational areas, a biking path, concrete walks, park and street lights, landscaping, retaining walls, park's amenities and decorative fencing.

South Expansion Reconstruction Union Square Park, New York City Department of Parks and Recreation – Assistant Resident Engineer responsible for the construction oversight of reinforced concrete retaining walls for

new planters inside the park and planting malls on Union Square East between 15th Street and 17th Street; water trunk-main upgrade on Union Square West, new catch basins and storm sewer piping, sidewalks, pedestrian ramps, pavers, water founts and monuments, landscaping, street and parks lighting, and traffic signals installation. The entire area of the Union Square South expansion is sitting on top of the Union Square/14th Street Subway Station, which required coordination with the Metropolitan Transit Authority (MTA) New York City Transit personnel.

Design/Build Complex Pedestrian Ramps Citywide, New York City Department of Design & Construction – Office Engineer and Inspector responsible for the document control and construction inspection of the installation of concrete pedestrian ramps, sidewalks and driveways reconstructions, catch basins installation and relocation, chute connections, street lighting and traffic poles relocation in more than 2,500 locations in Manhattan, the Bronx, and Brooklyn. Also in charge of community liaison. This was a $20-million contract.

Eagle Lane Reconstruction, Town of Oyster Bay Department of Public Works, Long Island, NY – Inspector responsible for the construction inspection of the reconstruction of a residential road encompassing boring tests, driveway and driveway aprons reconstruction, new concrete sidewalk and curbs, pedestrian ramps; mixed-in-place asphalt pavement, and pavement marking.

Capital Heights Road Reconstruction, Town of Oyster Bay Department of Public Works, Long Island, NY - Inspector responsible for the construction inspection of the street reconstruction encompassing water main offsets, retaining walls, boring tests, driveway and driveway aprons reconstruction, new concrete sidewalk and curbs, pedestrian ramps, re-grading of the road, asphalt pavement replacement and pavement marking.

Curley Street Reconstruction, City of Long Beach Department of Public Works, Long Island, NY - Inspector responsible for the construction inspection of the street reconstruction including a new water main and storm sewer, driveway and driveway aprons reconstruction, new concrete sidewalk and curbs, pedestrian ramps, asphalt pavement reconstruction, pavement marking and the replacement of the marine bulkhead.

Searingtown and Ridder's Pond Parks, Town of Hempstead Department of Engineering, Long Island NY - Inspector responsible for the construction inspection of the dredging of two ponds, installation new pond aeration systems, replacement of existing park furniture, landscaping and installation of concrete and asphalt paths.

Cedar Creek Water Pollution Control Plant and Bay Park Sewerage Treatment Plant, Nassau County Department of Public Works, Long Island, NY – Assistant Resident Engineer and Inspector for the construction of a new dechlorination facility in Bay Park STP, including the installation of new mechanical and electrical equipment, piping, HVAC equipment, dechlorination pumps and reinforced concrete structures. Construction of the piles foundation system for the S Building in the Cedar Creek WPCP.

Various Residential Roads Resurfacing in Massapequa, Town of Oyster Bay Department of Public Works, NY - Inspector responsible for the construction inspection of the resurfacing of various local and residential roads, curbs, sidewalks, driveway and driveway aprons replacement, new asphalt pavement binder and wearing courses, base repairs, and pavement marking.

Milburn Creek Culvert Extension, Nassau County Department of Public Works, Long Island, NY - Inspector responsible for the construction inspection of the extension of two 5' by 5' reinforced concrete box culverts under the LIRR embankment in the limit between Baldwin and Freeport, adjacent to the Baldwin LIRR station. The construction included the installation of the bulkhead and sheeting system to protect the LIRR embankment, excavation, dewatering, steel structural reinforcement and concrete installation, landscaping and fencing.

Cornell Lane Phase 3 in Hicksville, Town of Oyster Bay Department of Public Works, NY – Inspector responsible for the construction inspection of the drainage improvements, storm sewer upgrade, new catch basin, manholes, sidewalks, driveways and pedestrian ramps restoration and pavement structure reconstruction.

Milburn Creek Culvert Extension, Nassau County Department of Public Works, Long Island, NY – Responsible for the structural design of two 5' by 5' reinforced concrete box culverts under the LIRR embankment in the limit between Baldwin and Freeport, adjacent to the Baldwin LIRR station.

William Kroth, PE

Geotechnical/Civil Engineer

URBAN ENGINEERS
Formulating Excellence

WHY SELECTED

- **38 years of professional experience**
- **NACE Certified**
- **Geology/Geotechnical Engineering Professor – New Jersey Institute of Technology**
- **Underpinning, piles, piers, and excavations experience**
- **Experience with NYSDOT, NYCDOT, and TBTA**

REGISTRATIONS/ MEMBERSHIPS

- Professional Engineer NJ
- Professional Engineer (inactive) NY
- Society of Asphalt Technicians

EDUCATION

MS, 1980, New Jersey Institute of Technology, Civil Engineering

BA, 1976, New Jersey Institute of Technology, Civil Engineering

2005, NACE Level 1- Corrosion Inspection Program

2005, Rutgers University, Traffic Control Coordinator

RECORD OF PROFESSIONAL EXPERIENCE

Mr. Kroth has extensive experience in construction supervision and inspection of bridges, railroads, highways, tunnels, sewers, and other structures, as well as extensive experience in design, analysis, and report writing. He has also provided university-level geotechnical engineering instruction at New Jersey Institute of Technology. Mr. Kroth's experience includes:

Improvements to Interchange 168 (Garden State Parkway) and Route 17, Bergen County, NJ – Resident Engineer responsible for ramp widening, new signage, drainage and street lighting improvements. Construction cost: $1 million.

Meadowlands Railroad and Roadway Improvement Project, East Rutherford, NJ - Resident Engineer responsible for construction of two viaducts, three bridges, 2.5 miles of rail, and a train station that will serve the Meadowlands Sports Facility. Complex issues, including environmental regulations, contamination remediation, traffic flow/parking, and adjacent Xanadu construction, required special considerations. Work included deep foundations, surcharge placement, directional drilling, precast and cast-in-place bridge elements, drainage, paving, electrical conduit banks, plaza construction, and track and signal work. Construction cost: $160 million.

Painting of Ten Bridges is Northern New Jersey for Garden State Parkway, Bergen to Essex Counties, NJ - Resident Engineer responsible for containment and complete lead removal for ten bridges spanning the Garden State Parkway. After receiving a SP-10 blast, bridges were painted with an organic zinc primer, epoxy intermediate coat, and a urethane finish coat. Also responsible for lane closure coordination, community relations, and all aspects of QA/QC and record keeping as per NACE guidelines. Construction cost: $3 million.

Belt Parkway Bridge Over Ocean Parkway, Brooklyn, NY - Resident Engineer responsible for this award-winning NYCDOT design/build project. Elements of this project included replacing the exiting Belt Parkway Bridge with a new "Inverset" composite girder bridge, and installing T walls, mini-piles, SuperPave pavement, and a completely new "modified diamond" ramp configuration to replace eight existing loop ramps. Also included necessary drainage, electrical, utility, and landscaping. Construction cost: $60 million.

Secaucus Road Separation Project, NJ Transit, Secaucus, NJ - Construction Engineer responsible for quality assurance for two steel girder bridges and one concrete box girder bridge over Route 1-9 and Conrail/NYW&S. Also included construction of four reinforced-earth ramps, soldier pile/rock socket walls, and CSO work. Work included construction of concrete bridge decks, latex overlays, new asphalt pavement, and associated electrical and drainage work. Upon completion of the project, the entire section of Route 1-9 was widened, scarified, and repaved. Construction cost: $38 million.

Construction Management for Northeast Corridor Newark Liberty International Airport AirTrain Extension, NJ Transit, Newark, NJ - Resident Engineer responsible for contract administration and direct inspection. Project involved construction of new train platforms connected by an enclosed pedestrian bridge to a new monorail station. Monorail station consisted of transformer rooms, wet and dry fire protection systems, HVAC systems, ITS

systems, and elevators and escalators. Also conducted plumbing and electrical testing for DCA compliance involving the monorail station. Construction cost: $20 million.

New Jersey Institute of Technology, Newark, NJ - Adjunct Professor for the instruction of undergraduate courses in Geology and Geotechnical Engineering.

Seven Bridge Rehabilitation Studies, NYCDOT, Boroughs of Manhattan and the Bronx, NY - Project Engineer for projects involving in-depth inspection, report preparation specifying substandard elements, preliminary design, and final design. Structures included the Broadway Lift Bridge, City Island Bridge, Riverside Drive Viaduct, and East 78th Street Pedestrian Bridge over the FDR Drive.

Dunraven Causeway Bridge, NYCDEP, Delaware County, NY - Project Engineer for performance of stability analyses of abutments, foundations, and approaches for this structure located over the Delaware River.

Inspection of the Main Towers and Underdeck Steel Structures of the Williamsburg Bridge and the Riverside Drive Viaduct, NYCDOT and NYSDOT, Manhattan, NY - Team Leader for inspections of the main approach towers and underdeck steel structures of the Williamsburg Bridge and all structural elements of the Riverside Drive Viaduct.

Rehabilitation and Reconstruction of Three Highway Bridge Projects, NYCDOT and NYSDOT, Staten Island, NY - Resident Engineer for rehabilitation and reconstruction of three highway bridges, along with various roadway improvements on the Staten Island Expressway. Work also included new asphalt pavement, drainage, and lighting.

MTA Tunnels and Bridges (TBTA), Rehabilitation of End Ramps and Approach Deck Slabs, Miscellaneous Structural Repairs, and Administration Building Rehabilitation at the Bronx-Whitestone Bridge, NY - Resident Engineer for work involving structural steel repairs, latex-concrete overlay installation, joint repairs, bearing replacement and alignment, and concrete repairs.

Reconstruction of Cross-Bronx Expressway over Metro-North and Webster Avenue, NYSDOT, Bronx, NY - Resident Engineer for supervision of $17 million in construction, report preparation, design evaluation, corrosion surveys, and inspection. Construction included additional exterior fascia girders to widen roadway, microsilica concrete overlay, joint repairs, drainage structure installation, and pier reconstruction.

Reconstruction of Webster Avenue Exit Ramp off Sheridan Expressway, NYSDOT, Bronx, NY - Resident Engineer for the $5 million reconstruction of the entire structure. Duties included structural evaluation, corrosion surveys, and reconstruction inspection.

Safety Improvements on Various Routes, NYSDOT, New York, NY - Resident Engineer for milling and resurfacing 8.4 miles of the Cross-Bronx Expressway. Work also included installation of new barrier, curbs, joints, drainage structures, pipe, and lighting.

Metro-North Railroad Fixed Bridge Inspection Program, New Haven Line, MTA Metro-North - Project Manager for detailed structural inspection and analysis of conditions for 61 bridges along the New Haven Line.

Construction of the 65th Street Railroad Yard, NYCDOT and NYSDOT, Brooklyn, NY - Project Manager/Resident Engineer for supervision of construction and design of field changes for this intermodal freight terminal. The facility included five miles of track, 32 turnouts, loading platforms, intermodal roadways, grade crossings, drainage systems, lighting, utilities, and small station.

Westway Highway Project, NYCDOT, New York, NY - Design Engineer for preparation of various monitoring systems to protect all Hudson River tunnels from increased stresses of proposed large-scale fill placement.

Jacob Javits Convention Center, New York, NY - Resident Geotechnical Engineer for supervision of the installation of 2,800 step-taper piles and 60 rock-socketed caissons, underdrain system, and foundation piers adjacent to the Lincoln Tunnel. Specialized work included seismic monitoring of tunnel vibration levels.

Rugnab W. Bangura, PE

Construction Manager

URBAN ENGINEERS
Formulating Excellence

WHY SELECTED

- **25 years of professional experience**

REGISTRATIONS/ MEMBERSHIPS:

- Professional Engineer NJ
- American Institute of Steel Construction (AISC)
- National Society of Professional Engineers (NSPE)
- American Society of Civil Engineers (ASCE)

EDUCATION:

- BS, 1991, University of London, Civil Engineering
- MBA Candidate, Ellis College New York Institute of Technology, Project Management

RECORD OF PROFESSIONAL EXPERIENCE

Mr. Bangura has extensive experience in heavy construction, engineering management, and streetscape construction. He is a results-driven Engineer with proven success managing and supervising heavy construction projects and streetscape projects. Mr. Bangura brings vast experience in deep foundations construction; subsurface and embankment slope stabilization; retaining structures and retention systems; railroads; roads; bridges; railroad stations; and streetscape construction. He has the seasoned ability to coordinate cross-functional teams of owners, designers, and contractors, including private and public agencies, such as Amtrak, NJ Transit, NYCDOT, NYCDEP, NYCDPR, etc. with successful results. Mr. Bangura also has experience recruiting, training, and supervising junior engineers and project managers. He is experienced in construction materials lab analyses and testing. Mr. Bangura's experience includes:

South Bronx Greenway Projects (Produce Market Fence, Lafayette Avenue Reconstruction, Hunts Point Landing Waterfront Park, and Food Center Drive), NYCEDC, Bronx, NY – Resident Engineer and Project Manager responsible for the administration and Quality Assurance of these $36 million multiple package Streetscape and Park projects. Providing general oversight and supervising constructability review of contract documents, bid packages including Engineer's Estimate, and responsible for projects' change order reviews and negotiations with contractors. Reviewed for the accuracy and completeness, contract documents and bid packages before advertised for bid.

West 125th Street Streetscape Improvement Project, NYCEDC, Manhattan, NY – Resident Engineer responsible for the accuracy and completeness of the contract documents and bid packages of this $20 million project before advertised for bid. This task also includes supervising constructability review of contract documents, bid packages including Scheduling, and Engineer's Estimate of bid items.

Metropark Platform and Station Reconstruction, NJ Transit, Iselin, NJ – Resident Engineer and Project Manager for contract administration and Quality Assurance on this $29.7 million active train station platform project in one of the busiest train stations along the Northeast Corridor (NEC) in New Jersey. Reviewed for approval, cost proposals of change orders and monthly pay invoices from contractors. Also reviewed invoices from consultants for payment release; reviewed contractors' claims and provided rebuttals and/or recommendations; coordinated and conducted construction progress meetings and workshops. Edited, compiled, and published monthly reports for client.

Meadowlands Railroad and Roadway Improvement Project, NJ Transit, East Rutherford, NJ – Resident Engineer with the responsibility to manage a $106 million of this $211 million project. Reviewed the contract documents, conducted site investigative studies and supervised the start of construction activity including access roads to the project site.

Camden K-12 Schools, NJEDC, Camden, NJ – As Project Manager, supervised junior engineers and project managers on every aspect of managing the design and construction of multi-million dollar K-12 schools in Camden. Reviewed for approval, cost proposals for change orders and monthly pay invoices. Also reviewed contractors' claims and provided rebuttals; coordinated and conducted design and construction progress meetings and workshops; edited, compiled, and published monthly reports for client.

NJ Transit Main-Bergen Connection Project, NJ Transit, Secaucus, NJ - As Resident Engineer, completed this $32.5 million project on time and within budget, coupled with zero claims. Supervised the construction of 5.5 miles of railroad tracks, including 15 track turnout switches for a new connecting loop in the NJ Transit network. Supervised the construction of five bridges with 69 spans, including one, four-bay bridge rehabilitation that required synchronized jacking for bearings replacements. Directed the installation of 90' to 100' deep caisson foundations adjacent to NJ Transit active train tracks with great success. Supervised station platform rehabilitation adjacent to NEC Amtrak and NJ Transit active tracks. Reviewed for approval, cost proposals of change orders, and monthly pay invoices. Provided clarification and guidance to contractors' requests for information. Coordinated and conducted job progress meetings and workshops. Recruited, trained, and supervised civil engineers to meet and exceed project's goals. This contract was part of the multiple prime $610 million Secaucus Transfer Program.

Secaucus Transfer Station, NJ Transit, Secaucus, NJ – As Assistant Resident/Project Engineer, worked on various contracts, including: $30 million access roads; $10 million high transmission poles; $80 million deep foundations; and $60 million superstructure and $120 million railroad station finishes contracts. Assumed all management duties of Assistant Construction Manager during vacation breaks. Provided structural design consultation for architects on building structural elements. Also reviewed design calculations and shop drawings of various civil, structural, and architectural elements; coordinated work issues with Amtrak and NJ Transit directors and program managers, architects, design consultants, fabricators, manufacturers, and contractors; and reviewed for approval, Site Specific Work Plans (SSWP) for installation of foundation piles, caissons, structural steel, and various precast concrete elements using long boom cranes adjacent to NEC Amtrak active high-speed trains and power lines. Responsible for all cranes' capacity reviews and approvals for various loads picks on the project. Monitored and inspected subsurface soil (peat) stabilization and construction of several retaining structures and tiebacks. Conducted quality control plants' inspection on fabrication of structural steel members, prestressed/precast concrete, and structural and architectural elements. Coordinated quality control inspections on the construction of numerous bridges of diverse structural elements and roads through impassable terrains.

Virginia Waste Treatment Plant, Sterling, VA – As Engineering Staff/Lab Supervisor, worked on several multi-million dollar projects in Maryland and Virginia including Virginia Waste Treatment Plant. Responsible for projects' geotechnical lab analyses and evaluation of construction materials for roads, landfills, foundations, and retaining structures, etc. Supervised and trained field and lab engineers in construction inspection and materials testing.

Federal Triangle, Perini, Washington DC – As a field engineer, worked on several multi-million dollar projects, including Interstate 95 and Federal Triangle in Washington, DC. Provided geotechnical and general construction inspection services, in addition to supervising junior engineers and inspectors on road construction and traffic control systems.

Canadian Bank, Laing, London Bridge, London, UK – As Engineering Assistant/Site Supervisor, worked on several projects, including the Canadian Bank Building in London. Also provided on-site quality control services and supervised tradesmen of different crafts and trades.

Abrar Alam, P.E.

Civil/Structural Engineer

URBAN ENGINEERS
Formulating Excellence

WHY SELECTED

- **30 years of professional experience**
- **New York City Agency experience**
- **Knowledge of MURK**

REGISTRATIONS/ MEMBERSHIPS:

- Professional Engineer NY
- ACI Certified
- NYCDDC Concrete Testing Certified
- Troxler (Nuclear gauge) Certified
- NYSDOT Bridge Inspection Certificate
- Certification Asphalt Pavement Construction, NJ Society of Asphalt Technologist
- Construction Management Certificate

EDUCATION:

- BS, Civil Engineering
- Safety OSHA Training 10 hr. Construction

RECORD OF PROFESSIONAL EXPERIENCE

Mr. Alam brings diversified experience in Construction Inspection of infrastructure, including water mains, sewer, storm sewer, sidewalks, bridges, highways, industrial, commercial and residential buildings. He also has experience designing of concrete and steel structures, checking and approval of structural shop drawings, material, submittals, bar bending schedules. He has performed structural inspection of steel reinforcement, structural steel, roofing, footings, caissons, shoring and underpinning works. His experience includes condition survey of various types of structures and supervision of garage restoration and he is familiar with ACI design code, ASTM AASHTO and bridge inspection manual.

Resident Engineer for Reconstruction of Food Center Drive, Bronx, NY for NYC Economic Development Corporation This $11M construction project consists of reconstruction of 1.5 mile loop road servicing the Hunts Point Markets in the Bronx. The project includes roadway, landscaping, amenities, water, sewer, ConEd, and railroad track construction. (2014)

Assistant Resident Engineer for New York City Department of Design and Construction, QED 983, Queens, NY
The project consists of sidewalk, roads, curbs, installation of 36 inch and 48 inch diameter trunk mains, water distribution 12", and 20" sizes; Sanitary sewer of 10" and 12" sizes. Storm sewer pipes 98Wx63H,60Wx38H, 68Wx43H,HEP and 36 inch diameter reinforced concrete pipes. Duties included inspection of water mains, sanitary sewer and storm sewer pipe installation works. Preparation of daily reports, which includes quantities of work completed, sketches for pipe installed, quality control, material delivered to site, manpower and machinery used. Taking care of the site safety and coordination with other utility inspectors. Preparation of sketches for installed pipes and its connections. Preparation of Tape Card for house connection. (April 2013-June 2014)

Senior Construction Inspector
Reconstruction of Claremont Parkway Bridge Bronx, NY (NYCDOT) (from 04/2011 to 11/2012) Responsibilities includes but not limited to inspection of construction activities. Prepared daily reports. Attended progress meetings, calculated the quantities of work executed daily, demolition of concrete, excavation etc. Preparation of sketches. Testing of concrete for air, slump test for workability and prepare samples for laboratory testing of concrete. Restoration of Borden Avenue bridge (NYCDOT) Construction cost $42 million in Long Island City, Queens, NY. (2011)

Senior Construction Inspector
Construction of South Marine Brooklyn Terminal Project, NYCEDC (2009-2010)
The project consists of construction of the following structures:

- Construction of railway track, about 1,000 ft. long
- Two transformer foundations for Con Edison
- Water main installation
- 30 ft. deep Caissons foundations for 100 ft. high electric poles
- Construction of new pavement
- Chain link fence

Team Leader for Structural Inspection/Condition Survey of the Lincoln Tunnel Buildings and miscellaneous Structures for PA NY & NJ. The project consists of a total of 18 structures, 8 in New York and 10 in New Jersey side. (Jan. 2008 to Feb. 2009)

Team Leader for Condition Inspection of NYSDOT bridges in Region 11, borough of Manhattan. Contract No. D015609, PIN XPB07.02. Biennial Inspection of bridges based on state and federal rating system. Preparation of sketches, taking photograph, writing report using BIPPI computer software program. Putting safety and structural flags as per NYSDOT standards. Controlling site safety measures. Coordination with various agencies regarding traffic control.

Field Engineer/Senior Inspector
Construction Inspection of NYCDDC project no. RED-361, Water Main Installation in the Borough of Brooklyn and Staten Island. Duties included inspection of water main trench excavation, checking its dimension to comply with project specification and standard drawing, checking sand bedding, installation of geotextile fabric if required (all around the D.I. pipes). Inspection of the D.I. pipe and fittings, measuring length prior to the backfill of pipes. Making sure that the back filling work is done in layers and compacted properly before start of temporary paving of trench. Taking care of the site safety, and coordination with other utility agencies. Preparation of sketches for installed pipes and its connections and preparation of tape card for households. Verification of change order if any. At the end of the project, worked as office engineer for closing of project. (May 2004 to Jan. 2008)

Structural Designer/Structural Inspector
Design of concrete and steel buildings. Review and approval of shop drawings. Review and approval of bar bending schedules. Inspections of structural concrete and steel building works for high and low rise buildings. Condition survey of existing structures and redesign for restoration and renovation. Review and approval of concrete mix design, test reports for approval of structural works. Design software used, ADOSS, PCA Column, SODA and various in-house foundation designs and Load run down programs. (May 1999 to May 2004)

Toronto Inspection and Testing Services Inc., Markham, Ontario, (Consulting Engineers) Engineer Inspector
Inspection of geotechnical works such as foundation inspection, caissons, and installations of soldier piles, caisson walls, lagging and underpinning works. Soil and concrete testing at site. Inspection of reinforcement details for structures. Preparation of daily and monthly progress reports. Soil and concrete testing laboratory (July 1997 to April 1999)

Ministry of Defense and Aviation, Riyadh, Saudi Arabia, Quality Control Engineer
Quality Assurance of ongoing construction of building and roads for Ministry of Defense projects. Review and approval of structural shop drawings. Approval of materials as per project specifications. Supervision of soil and concrete laboratory. Review of pre-qualification documents for contractor. (1992 to May 1997)

USSGAIR Consulting Engineers, Riyadh, Saudi Arabia, Civil Engineer Inspection of reinforced concrete and steel structures. Checking of surveying works and structural shop drawings. Review and approval of payment certificates. Supervision of concrete and soil testing in laboratory. Determining quantities for structural materials and estimating costs. (June 1988 to March 1992)

Ebrahim Suleiman Abalkhail EST., Saudi Arabia, Project Engineer
Worked as a Project Engineer and was responsible for all phase of waste water and solid waste facilities construction and start-up. The project consisted of structures for bar screen, grit chamber, primary clarifier, aeration tank, final clarifier, chlorine contact tank, digester, dewatering system and administration buildings. Project experience includes lined landfill construction. Leachate collection and pumping system. Duties included inspection of all construction activities, coordination between various disciplines, review of shop drawings, solving construction problem and change orders. (July 1986 to Aug. 1988)

Sahara Building Contractors, Jeddah, Saudi Arabia, Site Engineer
Building layout and preparation of bar bending schedules. Preparation of progressive payment certificate. Responsible for execution of all construction activities and preparation of change orders. (Jan. 1983 to June 1986)

Robert Golisch, PE, CCM

Senior Construction Manager

URBAN ENGINEERS
Formulating Excellence

WHY SELECTED

- **39 years of professional experience**
- **Heavy infrastructure construction experience**
- **Amtrak & RR experience**
- **Special Inspection Safety/Stability**
- **Special Inspection Structural Bolting/Welding**

REGISTRATIONS/ MEMBERSHIPS

- Professional Engineer NY, NJ, PA
- Professional Planner NJ
- Certified Construction Manager
- ICC Structural Welding Special Inspector (S2)
- ICC Structural Steel and Bolting Special Inspector (S1)
- Fellow - American Society of Civil Engineers
- Member - National Society of Professional Engineers

EDUCATION

MS, Polytechnic Institute of NY (now known as Polytechnic Institute of New York University), Civil Engineering

BS, University of Missouri – Rolla (now known as Missouri University of Science and Technology), Civil Engineering

RECORD OF PROFESSIONAL EXPERIENCE

Mr. Golisch has extensive experience in program and construction management. His emphasis has been on ensuring the quality and timeliness of projects and has a proven history of success in partnering with project stakeholders of diverse agencies to meet project goals and objectives. Mr. Golisch has been successful in completing major projects within their allocated funding with contract values up to $610 million without litigation. Mr. Golisch's experience includes:

Special Inspection Projects, NYC Department of Building Permits, New York, NY - Lead Structural Special Inspector for projects, 2013-Present:

- **350 5th Avenue, Empire State Building, Human Rights Watch 34th floor alteration** - includes structural safety/stability, shoring, bolting, welding, and demolition.
- **1551-1556 3rd Avenue, Whole Foods interior alteration** – structural safety/stability, shoring, bolting, welding, and demolition.
- **475 Fifth Avenue 25 story building renovation** - structural stability; transfer girder erection, bolting, and welding.
- **Novotel Times Square Hotel, W 52nd Street, 33-story boutique hotel renovation** - structural safety/stability, bolting, welding, and demolition.

Project Management Oversight Program, USDOT Federal Transit Administration (FTA), Region II Capital Projects, MTA East Side Access (ESA) and Second Avenue Subway (SAS), New York City, NY - Construction Management Manager on the senior manager team tasked with oversight of ESA projects. Also, review of the grantee's readiness to bid work, helps ensure that the grantee has developed the design documents to an appropriate level of completion; the documents are complete, accurate, and consistent with project management plans; has a plan for bid/award; and that the grantee's organization is prepared to successfully manage procurement and construction. 2010-Present

New Jersey Transit and Amtrak, Portal Bridge Capacity Enhancement Project (PBCE), Kearny-Secaucus, NJ - Deputy Construction Manager for this multi-agency project working in the busiest passenger rail corridor in North America. PBCE received ARRA funding and restarted design in 2011 for the replacement bridge, after a companion initiative, the ARC Mass Transit Tunnel, was cancelled late 2010. Overall, the current PBCE project consists of a new North Bridge two track alignment with high level network tied arches above the Hackensack River to allow the existing 100-year-old swing bridge to be replaced. Improvements include the following components: trackwork, signals, communications, foundations, and bridges, electric traction, excavations, embankments, demolitions, wetland mitigation, environmental restoration, access roads and platforms, and roadway improvements. Currently providing constructability reviews, construction staging plan reviews and construction schedule reviews. 2010-Present

Meadowlands Railroad and Roadway Improvement Project, New Jersey Sports and Exposition Authority, East Rutherford, NJ - Construction Manager for this $216 million multi-agency project of five prime contracts to bring NJ TRANSIT passenger rail service to the New Jersey Meadowlands Sports Complex. The project includes a new 2.3-mile railroad alignment on elevated structure through sensitive environmental areas, a new passenger rail station, and roadway improvements. 2005-2012

New Jersey Transit, Northeast Corridor Modifications Project - Secaucus Transfer Program, Secaucus, NJ - Deputy Construction Manager for an unparalleled $610 million public-private project that was completed within the funding allocation and on time, using multiple shifts, along the busiest rail line in the country. Twelve prime contracts renovating Amtrak's Northeast Corridor and building the Frank R. Lautenberg Rail Station, the project included 20 highway/railroad bridges (250 spans), 20 miles rail track and interlockings, 33 escalators, 12 elevators, MEP systems, roadways, sitework, and heavy civil construction with deep foundations for five future high-rise buildings totaling 3 million SF. Performed constructability/bidability reviews of contract documents. Mr. Golisch's responsibilities included all aspects of construction management, administration, and engineering services: change orders, RFIs, schedule, QA/QC, document control, meetings and records; directing key staff (Resident Engineers, Contracts Manager, Scheduler, Quality Control Manager, Office Engineer, Safety Coordinator, Inspectors); guiding client through program management issues (such as bid prequalification, OCIP, and occupancy by Owner); creating Project Management Manual (PMM), health and safety program, work procedures (SSWP) requirement, and monthly status report; developing/updating program Master Construction Schedule (MCS). 1989-2005

New Jersey Transit, North Jersey Coast Line Electrification and Signal Project, Matawan to Long Branch, NJ - Resident Engineer and Office Engineer on $100 million modernization project of 10 prime contracts for rail terminus with station, underpass tunnel, multi-track rail yards, catenary, traction and signal power, four-tower digital microwave communications system, crew facility buildings, and public utilities, while maintaining 18 miles of active rail lines. UMTA (now known as FTA) recognized project as one of a handful of federal fully funded projects to be completed within the funding allocation and on time. 1985-1989

Multiple Task Order Projects, US General Services Administration (GSA) Region 2 - Project Manager CQM for building projects: MEP systems, historic preservation, interiors, restoration, for the courts, DEA, GSA, and the IRS. 1989-1993

Science Laboratories Project, Stockton State College, NJDBC, Pomona, NJ - Construction Manager for a $2 million project of multiple prime contracts with specialized MEP systems and laboratory equipment, completed on time during an active school year. 1989-1990

Other: Developed schedules and basis for construction claims analysis and presented findings. Assisted Owner's Representative on Route 1 grade separation interchange project in Princeton, NJ (NJDOT).

ORBA Corporation, Fairfield, NJ - Managed design/build industrial construction for material handling facility projects in SC and OH. Conducted forensic investigations at operating facilities in IA and WI, then implemented solutions. Led civil/structural design for design-build projects worldwide.

Rockland County Department of Highways, New City, NY - Designed, completed contract packages, and preformed construction support services for public works facilities, including three bridges and approach highways, according to New York State Department of Transportation (NYSDOT) specifications, in a politically sensitive environment.

Paul T. Dionisio, PE

Senior Civil/Structural Engineer

URBAN ENGINEERS
Formulating Excellence

WHY SELECTED

- **38 years of professional experience**
- **Substantial NYC waterfront design experience**
- **Prior NYCEDC, Hurricane Sandy Recovery and NYC Parks Department experience**

REGISTRATIONS/ MEMBERSHIPS

- Professional Engineer FL
- Professional Engineer NJ
- Professional Engineer CT
- Professional Engineer NY
- American Society of Civil Engineers
- AIA/American Consulting Engineers Council Committee
- American Consulting Engineers Council - Metro Region

EDUCATION

MS, 1976, Cornell University, Civil Engineering

BS, 1975, Cornell University, Civil Engineering

RECORD OF PROFESSIONAL EXPERIENCE

Mr. Dionisio has extensive experience in the inspection, design, and construction management of civil works, commercial, municipal and transportation facilities and structures. Mr. Dionisio's experience includes:

Integrity Monitoring World Trade Center, Tower 1, Port Authority of NY/NJ, New York, NY - Deputy Managing Director for the integrity monitoring of the construction of $3.5 billion Tower 1, World Trade Center, 3.6 million SF (335,000 sq. m.) office building in downtown New York City. This responsibility is centered on eliminating fraud, waste and abuse. Duties include monitoring the activities of the design professionals and the construction manager, as well as monitoring the construction for safety, compliance with drawing and specifications, schedule cost avoidance. 2011-2014

NYC Economic Development Corporation Marine Engineering Call-In, New York, NY - Project Manager responsible for structural engineering. On-call services for evaluations of pier, bulkhead and waterfront structures throughout the New York metropolitan area. Included plan and elevation drawings and physical inspection of bulkhead walls, identification of areas requiring immediate repair, estimated repair costs; diagrammatic marina layouts at specified waterfront sites; and general information on marina space requests; consultation on facility docking requirements; inspection and analyses of existing pier structures; fathometric survey; and assisting in preparation of permits.

Transit Hub at Financial Plaza Deck on Civic Center Plaza, City of Poughkeepsie, NY - As Project Manager, he was responsible for the design and construction management of a new bus hub which accommodates up to six buses. The project includes utility improvements, shelters, variable message signage, security and communication systems, lighting and customer amenities. Coordination with the community board, and SEQR process were performed for this FTA-funded project. Geotechnical investigation, survey services and revenue collection and card reader system coordination for the passenger vehicle parking deck were also included. 2012-2014

Pier 17, New York, NY - Supervised inspectors for the precasting of prestressed slabs and piles, pile driving, cast-in-place concreting, pile load testing and erection operations. Prepared quality control reports for the pier construction which was designed to carry AASHTO loadings. 1986

NYC Department of Sanitation, Thirteen District Garages, New York, NY - Project/Lead Structural Engineer he led the investigation, design, contract documents and construction supervision for the modernization and renovation of these garages totaling about 400,000 SF. As Resident Engineer, he inspected and reported on the conformance to contract documents of construction work installed for six District Garages (i.e., 3/3A/5, 6/8, 43/46, 45, 50 and 70/72). Mr. Dionisio monitored and reported progress, negotiated change orders, conducted progress meetings, reviewed and approved multiple prime contractors' invoices. Also managed field interfaces between client engineering, operations, audit and other departments. The total construction contract value for these six facility renovations was approximately $14 million (1980 dollars). The work inspected and/or supervised included cast-in-place concrete, reinforcing bar layouts, structural steel erection, masonry, roofing, power, lighting, HVAC, water, drainage, air conditioning, air handling units, tailpipe exhaust, heaters, sanitary sewer, plumbing fixtures, flooring, painting, insulating, fireproofing and architectural finishes. 6/83 – 3/85.

District Garage 6 - NYC Department of Sanitation, Queens, NY – As Project Manager/Resident Engineer, he led the design and construction management for installation of large tanks in an existing garage utilizing a sheet-pile cofferdam with a pile supported, tremie concrete base. 1986

Rehabilitation of Four Stations and Elevated Structures on the West End Line, MTA New York City Transit, Brooklyn, NY - Project Manager for civil, traffic, structural, geotechnical engineering and transit operations analysis for this $160 million project. He led the rehabilitation design of four elevated stations. Mr. Dionisio also led the rehabilitation design of six miles of elevated structure and component rehabilitation for eight stations. He served as key member of high profile, Risk Management study. 2008-2010

Mount Vernon (East) Transportation Center, MTA Metro-North Railroad, Mount Vernon, NY. As Project Manager responsible for extensive interfaces with the City and the development of alternatives analyses. for the engineering services to upgrade and replace the existing Mount Vernon East Transportation Center rail station facilities that services Metro-North's New Haven Line. Designed a station building and platform, a new pedestrian overpass, intermodal transportation center amenities, bus access and a 350-parking space commuter parking facility. 2000-2003

Rehabilitation of Atlantic Avenue Viaduct, MTA-Long Island Rail Road, Brooklyn, NY - Project Manager for preliminary design services to develop design-build bid documents for the $150M rehabilitation of the 8,000 foot long, 199-span Atlantic Avenue Viaduct. 2008-2010

Building Facade Replacement 635 Madison Ave. Corporation 635 Madison Avenue, New York, NY. Project Engineer. He directed the investigation, analysis and replacement design for the facade of this 18-story office building.

Rehabilitation of Pelham Parkway Bridge Over Eastchester Bay - NYSDOT, Bronx, NY – As Lead Structural Engineer, Mr. Dionisio led the structural analyses, load ratings, rehabilitation design, and contract document preparation for this bridge built in 1907. It has 6 reinforced concrete, filled spandrel arch spans and a Scherzer Rolling Lift (double-leaf bascule) span for the. Prepared portions of the bridge reconstruction project report and supervised shop drawing review. Also Resident Engineer for portions of the reconstruction.

Reconstruction of Little Neck Bridge over Alley Creek, Department of Transportation, Douglaston, NY - Resident Engineer responsible for client interface, reporting, progress payment reviews and supervision of the contractor's work on this $1.2 million bridge reconstruction on Northern Boulevard. He inspected deck replacements, steel repairs, bearing replacements, latex topping, paving work and other items. 11/83 - 4/86.

MTA Metro-North Demolition And Removal Of Obsolete Railroad Structures, MTA Metro-North Railroad, Bronx/Westchester/Putnam Counties, NY: Project Manager. Responsible for structural engineering and inspection and construction support services for the demolition of several buildings and bridge structures along Metro-North's Harlem and Hudson Lines. This included several brick buildings; a steel overhead bridge and cable rack; and an overhead concrete and steel movable bridge. Also included monitoring and/or follow-up for on-site inspection of contractor's workreview of work platform design and submittals, lifting and demolitions plans, protection of adjacent structures and shielding adjacent to active tracks; and review of plans for maintenance of vehicular, pedestrian and train traffic. 1998-1999

Columbia Broadcasting System, CBS Broadcast Center, New York , NY. Lead Structural Engineer for the Preliminary Engineering Phase and Quality/Lead Structural Engineer for the construction support services and controlled inspection. The building was a thirteen story steel-framed office building. Mr. Dionisio monitored construction including underpinning of existing buildings, complex catwalk framing and concrete footings. 1984-1985

Lincoln Pequannock Water Treatment Facility, Morris County, NJ – As Assistant Resident Engineer, Mr. Dionisio was responsible for inspection of all earthwork and concrete construction including major clarifiers, tunnels, and foundations. 1982

NJ Transit General Architectural/Engineering Services, NJ. As Task Leader he was responsible for various NJ Transit projects including Hoboken Terminal improvements, and Secaucus Transfer Station cost estimating. The Secaucus Transfer Station task required interface with the NJ Transit Program Manager and the Design Engineer. Design verifications were performed for an advanced design stage, together with development of costs estimates for the additional foundations needed to support **a** high rise office building over the Terminal. One Hoboken Terminal task involved the condition assessment of the North Wall of the Terminal. In a subsequent task the design was prepared for the replacement of the wall's structural system. Other tasks included the New Brunswick Station tunnel waterproofing, and various rail station platform improvements.

Andrew G. Royston, EIT

Civil/Structural Inspector

URBAN ENGINEERS
Formulating Excellence

WHY SELECTED

- **5 years of professional experience**
- **NYC construction management experience**
- **Certified special inspector**

REGISTRATIONS/ MEMBERSHIPS

- Engineer in Training, NJ
- ACI Concrete Field Testing Technician, Grade I
- ACI Concrete Construction Special Inspector
- ICC Structural Masonry Special Inspector
- 4hr NYC DOB Supported Scaffold User

EDUCATION

- BE, 2009, Stevens Institute of Technology, Mechanical Engineering
- MS, 2009, Stevens Institute of Technology, Project Management

RECORD OF PROFESSIONAL EXPERIENCE

Mr. Royston's experience as a Construction Manager includes civil, rail, bridge, high rise and facility engineering projects. He is an excellent communicator with clients, contractors, and designers. He ensures high quality of work for all projects that he manages and has proven experience in delivering projects on time and within budget. Mr. Royston has successfully managed multiple design, construction, and special inspection projects, providing clients with the service they expect from Urban. Mr. Royston's experience includes:

Central Bus Maintenance Facility Dynamometer Design, County of Westchester, Yonkers, New York – Assistant Project Manager for the design of a new dynamometer and brake tester to accommodate 60' buses at this maintenance facility. Project involves evaluation and recommendations for the new equipment, electrical power for the new equipment, HVAC exhaust system upgrades, additional make-up air, air cooling, fire protection and controls. Managed the design effort between MEP department, Civil/Structural departments, architectural and cost estimating subconsultants. Participated in site surveys, reviewed drawings and monitored schedule and budget throughout all phases of the design.

New York City Special Inspections – Project Manager and Special Inspector for multiple projects in New York City. Responsibilities include supervising inspection staff, tracking project schedules and budgets, coordinating inspections with clients and contractors, and filing required NYC Department of Buildings documentation. Several recent projects include:

- 475 Fifth Avenue Renovation, Jones Lang LaSalle, Manhattan, New York – Class A office building.
- 222 Broadway Renovation, L&L Holding Company, Manhattan, New York – Class A office building.
- St. Luke's Roosevelt Hospital, The Linde Group, Manhattan, New York – Bulk Oxygen System replacement.
- 1551 3rd Avenue, Whole Foods, Manhattan, New York – Retail renovation.
- Novotel Hotel Times Square, UBSL Ltd., Manhattan, New York – Structural renovations.

Hunts Point Landing, New York City Economic Development Corporation (NYC EDC), Bronx, New York – Construction Manager for a new 1.25 acre waterfront park as part of the South Bronx Greenway program. Inspected cast-in-place concrete, pile and pier installation of marine-based construction operations, grounding and lighting systems, landscaping and park amenities. Provided onsite management and tracked contractor progress.

Lafayette Avenue Reconstruction, New York City Economic Development Corporation (NYC EDC), Bronx, New York – Construction Manager for streetscape construction of South Bronx Greenway program including underground utility improvements, reconstruction and paving of a five-city-block roadway, landscaping and installation of concrete medians, sidewalks and pedestrian features. Verified that construction followed NYC DOT specifications and contract documents. Calculated and verified payment quantities per NYC DOT specifications and maintained quantity book. Prepared calculations and spreadsheets for payment documentation. Maintained project punchlist, inspecting and accepting rework items. Tracked material, labor and equipment records for change orders.

West 125th Street Streetscape Improvements, New York City Economic Development Corporation (NYC EDC), Manhattan, New York – Construction Manager for constructability. Reviewed and commented on contract drawings for and determined engineer's estimates for payment items. Developed contract bid list and engineer's estimate for all divisions of work including utilities, site/civil, landscaping, traffic signals, roadway reconstruction, curb realignment, lighting and pedestrian features. Reviewed contract documents for accuracy and completeness. Confirmed all bid items meet NYC DOT Specifications. Calculated and verified additional bid quantities and estimates as design progressed. Analyzed construction bids after advertisement.

Fort Monmouth Base Realignment And Closure (BRAC) Program, US Army, Fort Monmouth, New Jersey and Aberdeen, Maryland – Engineering Support for US Army CECOM General's Staff (C4ISR G4) for the BRAC program to move personnel, laboratories and equipment from Fort Monmouth, NJ to new and reuse space at Aberdeen Proving Ground, MD. Program involved a design-build contract of a new six multi-story building campus and five design-bid-build contracts for four new multi-story buildings and one building renovation. The new facilities included customized laboratory spaces for complex Army research and operations, office spaces, secure storage areas, a high quality acoustic auditorium, and IT infrastructure. The campus and other buildings included new parking lots, open landscaped areas and pedestrian areas. Determined electrical, HVAC, water, Sewer and other utility requirements for final fit out of these buildings by conducting design review meetings with Generals and directors of Army mission organizations. Identified gaps between design documents and evolving user architectural and utility needs. Provided design information and drawings for scope changes to the designer for architectural, utility, HVAC, and complex security systems. Inspected buildings for final acceptance by the Army and participated in the commissioning of building equipment and systems. Coordinated bid process to obtain food service vendors through the Army's vendor program and worked with vendor design teams to develop the food service locations. Provided oversight and support for logistics move of over five thousand people and all laboratory and office equipment from Fort Monmouth to Aberdeen Proving Ground.

Meadowlands Railroad and Roadway Improvement, NJ Transit, East Rutherford, New Jersey – Construction Inspector for three construction contracts including railroad work on bridge structures, a new three track train station and multiple road realignments, paving, roadway bridges, and a pedestrian overpass. Responsibilities included inspection of electrical and signal systems, cast-in-place bridge foundations and piers, steel girders, precast bridge beams, and railroad construction including track alignment and turnout installation. Additional inspections involved bridge drainage, bridge waterproofing, earthwork and landscaping. Inspected construction of new rail station including directly monitoring pile driving operations of over 400 H-piles, HVAC installation, poured and precast concrete and building finishes. Calculated field quantities of items for payment.

New Jersey Sports and Exposition Authority, East Rutherford, New Jersey - Engineering and Construction: Coordinated construction activities and schedules among the New Meadowlands Stadium, NJ Transit Rail Line, and Xanadu projects. Created project-specific Font End, RFQ, and RFP documents. Negotiated contract overruns and contractors. Maintained and catalogued project documents. Worked with architects to design alternative solutions to issues during construction. Coordinated multiple permit applications with the NJDCA. Acted as site engineer for inspection of temporary structures. Managed numerous maintenance projects onsite at the Meadowlands Sports Complex.

Patty C. Robles, EIT

RECORD OF PROFESSIONAL EXPERIENCE

Ms. Robles is an Engineer in Training with diverse inspection and project management experience on multi-million dollar projects. Her leadership qualities and knowledge related to project coordination make her a valuable asset. Ms. Robles' experience includes:

PATH Task Order 15; Interim Project Management Support for Projects Related to Super Storm Sandy, Jersey City, NJ – Following the emergency work completed by the Port Authority Trans-Hudson Corporation (PATH) in response to Super Storm Sandy, PATH retained Urban's services to provide expert Professional Planning, Project Management, Program Management, FTA Application Grant Assistance and Related Services. Ms. Robles was fully engaged with the Federal Transit Administration's (FTA) grant application process immediately following Super Storm Sandy and is able to provide knowledgeable support to PATH. Ms. Robles is also directly involved with the preparation of a Program Management Plan (PMP) that will serve as a guideline for PATH's management and operations. In a Project Management capacity, Ms. Robles is actively tracking project progression to keep the Task Order within budget. (2013-2014)

Shore Parkway Bikeway and Pedestrian Path, Brooklyn, NY – In response to the damage from Super Storm Sandy, the Department of Parks and Recreation has awarded a contract for "Emergency Clean Up and Make Safe". As a Resident Engineer, Ms. Robles was responsible for the continued progression of the project as designed. As the owner's representative Ms. Robles was responsible for any resolutions needed on the field as well as for creating daily reports. She was also responsible for tracking quantities, assuring quality, and keeping the project within budget. (2013-2014)

Novotel Times Square Hotel Renovation, UBSL, Manhattan, NY – Special Inspector for renovation of public spaces (lobby, entrance, concierge, etc.) for this 33-story boutique hotel near Times Square. Project included installation of a canopy over the West 52nd Street Entrance and renovations to the mezzanine and sky lobby. Ms. Robles was responsible for Special Inspection of Cast-in-Place Concrete. Tracked and reviewed contract drawings, shop drawings, contract specifications, relevant ACI specifications and submittals for special inspections. Reports were created and submitted by Ms. Robles following each inspection. (2013)

Super Storm Sandy Relief Effort, New York, NY – In response to the devastation created by Super Storm Sandy, the Federal Transit Administration (FTA) has employed Urban's Project Management Oversight Program engineering support contract to assist them in establishing the cost to repair and/or replace transit capital assets in the region. Ms. Robles served as a Project Coordinator where she was responsible for obtaining and confirming the accuracy of all damage assessment project data with all project managers assessing MTA, LIRR, NJ Transit, PATH, Metro North Railroad, and New York City Transit Restoration Projects for Super Storm Sandy. Ms. Robles was essential in preparing and collecting all FEMA Forms for over 300 projects where damage was assessed throughout the region. She was also responsible for aiding in the writing, assembly, and packaging of weekly and term reports that were combined to be voted on by the U.S. Congress for Federal Financial Aid. (2012-2013)

River Terrace Apartments Elevator Upgrades, Courtyard and Garage Repairs, 158th Street and Riverside Drive Housing Co., Inc., Manhattan, NY – Special Inspector for elevator upgrades, courtyard, and garage repairs for the 431-unit, 16-story apartment building. Project included repairs of the concrete garage decks, complete demolition of the courtyard, installation of new courtyard with landscape features, rehabilitation of existing steel and new pedestrian canopy, and new mechanical equipment for the elevator machine rooms. Ms. Robles was responsible for Special Inspection of Cast-in-Place Concrete. Tracked and reviewed contract drawings, shop drawings, contract specifications, relevant ACI specifications and submittals for special inspections. Reports were created and submitted by Ms. Robles following each inspection. (2012-2013)

United Airlines, LaGuardia Airport, New York, NY – Urban designed and performed construction support services for apron paving at LaGuardia Airport. Ms. Robles reviewed construction drawings and inspected concrete pouring activities. Observed, assessed, and documented findings. She also attended the Port Authority inspection walk through for Partial Inspection and provided information as needed. (2012)

Saratoga Bus Maintenance Facility, Saratoga Springs, NY – Urban was selected to provide MEP and Civil Engineering design services for the design of a Bus Maintenance Facility in Saratoga Springs, NY. Ms. Robles was responsible for aiding the project manager and assuring all necessary documents have been received and properly maintained. Assisted project manager with project management duties including preparing the scope of work and maintaining the budget. She also maintained communication with the Client to assure quality and timely submittals. (2012-2013)

West 125th Streetscape, NYEDC, Bronx, NY – The West 125th Streetscape Project is a large multi-million dollar effort involving four separate phases of construction requiring coordination with Columbia University construction projects in one of Manhattan's most intermodal neighborhoods. She performed extensive research into public databases on vault information within the project limits. Also conducted the building vault survey on-site to locate and assess the contents of all building vaults within the project's limits. This required outreach and coordination with local vendors, owners, and tenants. (2012)

Transit Hub, City of Poughkeepsie, Poughkeepsie, NY – Urban was selected to address the needs and desires of the City of Poughkeepsie for a safe, functional transit services center. The project will create an ADA-accessible central location for bus transit passengers and also be a hub of information allowing for intermodal connections. Urban's team is providing project management, civil engineering, electrical, traffic, maintenance and protection of traffic (MPT), landscaping, cost estimating and constructability construction inspection services. Ms. Robles prepared contract documents and has been an integral part in mobilizing the project. She is also responsible for aiding the project manager and assuring all necessary documents have been received and properly maintained. (2012-2013)

Claims Project, Chartis, Astoria, NY – This claims project required a field investigation of claimant's report of property damage resulting from neighboring construction. Observed, assessed, and documented findings. Reviewed Shoring and Underpinning plan as a basis for interpreting damage. (2012)

Claims Project, Chartis, Brooklyn, NY – This claims project required a field investigation of claimant's report of property damage resulting from Hurricane Irene. Observed, assessed, and documented findings. Research was conducted of as built conditions available for public access as a basis for interpreting damage. (2012)

C. V. Associates NY; PE, LS, P.C., Harriman, NY – As an Engineering Technician/Assistant Culvert Inspector, assisted the Project Manager and Project Engineers in evaluating structural ratings of highway structures with contract value of $2.7 million. Established inspection lists and maintained database for culvert inspections. Created weekly schedules for culvert inspections and updated GIS map. Assisted Team Leader in inspecting assigned small culverts between 5 and 20 feet. Inspected small bridges and calculated capacity upon request. Provided plan drawings, photo location plans, inventory sheets, and any other requests from Team Leader post-inspection to prepare reports. (2011-2012)

North Jersey Transportation and Planning Authority, Newark, NJ – Intern/External Affairs. Assisted with coordinating various symposia in a transportation and technology series. Also created PowerPoint presentations to be to be used for different forums; created CAD layouts of office for internal use; created a digital layout of a conference room for internal staff use and future planning; tracked approximately 100 sub-regional studies for the past 15 years to determine if any improvements have been implemented; and assisted with different surveys conducted in different counties. (2010-2011)

Kevin J. Buchanan

Senior Civil/Structural Inspector

URBAN ENGINEERS
Formulating Excellence

WHY SELECTED

- **30 years of professional experience**
- **ACI / ICC Certified Inspector**
- **AWS / CWI Inspector**
- **NY State DOT Certified UT Inspector**
- **NDE Level III MT/PT**

REGISTRATIONS/ CERTIFICATIONS & MEMBERSHIPS

- ASNT Level III PT & MT
- AWS CWI
- ACI Special Inspector
- ACI Concrete Field Testing Technician Grade I
- NDT UT NY State DOT
- ICC Special Inspector-Structural Welding#S2, Structural Steel and Bolting #S1, Structural Masonry #84, Sprayed-Applied Fireproofing #86
- NDT Level II, MT, PT, RT, UT, VT, AWS, CAWI, PCI Level II, ACI Special Inspector
- NDT Level III Military MT, PT, RT, UT, ET
- American Welding Society
- American Society of Nondestructive Testing
- America Concrete Institute
- International Code of Council
- American Society of Civil Engineers

Military

- Vermont Air Nation Guard, Burlington, VT

EDUCATION

- Burlington High School - Diploma

RECORD OF PROFESSIONAL EXPERIENCE

Mr. Buchanan has over 30 years of experience in the inspection and NDT testing industry. Inspection experience includes field inspections and shop inspections on buildings (pre-cast and steel), bridges (pre-cast and steel) nuclear and fossil power plants, paper mills, military aircraft and pipelines. Mr. Buchanan has working knowledge of ASTM's, ASNT, ASME, AWS, AISC, ACI, Military Standards, NY City Building Code, NY State Construction Manual, ICC codes. He has managed inspection offices for large engineering firms, and inspection & testing firms.

Special Inspection Experience

Mr. Buchanan has been work in the New York City area since the inception of the Special Inspection Program. He has been involved with the NYC Building department in special projects during the development of the Special Inspection Program. Some of the major projects that Mr. Buchanan was involved with are listed below:

Staten Island Hospital Addition – Special Inspections included Structural steel bolting & welding and Gas Piping Welding

NYU Bio Center 12-16 Waverly Place (9 Story Building) – Special Inspections included – structural welding, bolting, sprayed on fire proofing, fire stopping, sprinkler system, structural masonry and structural stability

Con Edison Mont Haven Sub-station Bronx, NY – Special inspections included Structural welding, bolting, Pre-cast concrete (plant & field), Rebar, Cast-in-place concrete, Fire stopping, sprinkler system and structural stability

Con Edison Aster Sub-station Manhattan, NY - Special inspections included Structural welding, bolting, Pre-cast concrete (plant & field), Rebar, Cast-in-place concrete, Structural masonry, Fire stopping, sprinkler system and structural stability

Con Edison Parkview Sub-station Harlem, NY - Special inspections included Structural welding, bolting, Pre-cast concrete (plant & field), Rebar, Cast-in-place concrete, Structural Masonry, Fire stopping, sprinkler system and structural stability

Con Edison Academy Sub-station Harlem, NY - Special inspections included Structural welding, bolting, Pre-cast concrete (plant & field), Rebar, Cast-in-place concrete, Structural Masonry, Fire stopping, sprinkler system and structural stability

NYU 34 Stuyvesant Place - Special Inspections included – structural welding, bolting, fire stopping, sprinkler system, structural masonry and structural stability and Energy Code Compliance

Con Edison 4 Irving Place – Local Law 11 special Inspections – Structural masonry, Structural welding and Structural stability

7 World Trade Center – Special Inspections – Concrete Coring Inspections for the NYC Building dept.

Whole Foods 87th Street and 3rd Ave. Manhattan, NY. – Special inspections include – Structural welding & bolting, rebar, cast-in-place concrete, Sprinkler system

Mr. Buchanan has been involved in many smaller projects that have required special inspections not listed here.

Major Contract Experience

NY State DOT Structural Steel Contract
NY City Steel Inspection Contract
Massachusetts DOT Steel Inspection Contract
New Hampshire DOT Steel Inspection Contract
Maine DOT Inspection Contract
Rhode Island DOT I-95 Rehab Project
Vermont DOT Steel Inspection Contract
Connecticut DOT Steel Inspection Contract

Mr. Buchanan has managed the above listed inspection contracts with various companies, providing CWI inspectors at fabricating facilities and field project sites. His involvement included supplying certified personnel and review project specifications and drawings along with final review of reports for quality compliance with drawings and specifications.

Major High Rise Experience

New York Hospital Addition over FDR Drive – Inspection Team Project Manager supplying CWI inspectors at fabricating facilities from Toronto, Canada down to South Carolina and west to Grand Junction, Colorado. Mr. Buchanan reviewed welding procedures and drawings on all of the structural members being fabricated. He provided a team of inspectors to provide all of the structural steel inspection on site. Reviewed all reports for compliance with drawings / specifications and that the NYC Building Code requirements were complied with.

42nd Street Towers (65 stories) – Project Manager in conjunction with the NYC Building Department in taking core samples to determine concrete strength in areas of the building as designated by the Structural Engineer for compliance with undocumented concrete breaks during the construction of these two projects. Reports were documented evidence for the NYC Building department.

South Station Boston, Massachusetts - Inspection Team Project Manager supplying CWI inspectors at fabricating facilities around the northeast. Inspection personnel were provided for onsite inspections. Mr. Buchanan performed all welding inspections including reviewing and approving welding procedures to be utilized on the project. Reviewing drawings / specifications along with all inspection documentation to be submitted was conducted.

Other Large Projects:
Dana Farber Cancer Center Boston, MA.
TF Green Airport Warwick, RI
St. Francis Hospital, Hartford, CT
New York University Hospital Addition Staten Island, NY

Major Pre-cast, Concrete & Masonry Experience

Con Edison – Mont Haven Sub-station (Pre-cast building) Bronx, New York
Con Edison – Aster Sub-station (Pre-cast building) Manhattan, New York
Con Edison – Park Ave Sub-station (Pre-cast building) Harlem, New York
Con Edison – Rock View Sub-station (Pre-cast building) Yonkers, New York
Con Edison – Elmsford Sub-station (Pre-cast building) Elmsford, New York
Freedom Tower – New York City – Concrete Mock-up tests for footings
4 Irving Place – Local law 11 - Masonry
NY Racquet Club – Local Law 11 – Masonry

Mr. Buchanan monitored and conducted the testing and inspection operations on the above listed projects. This included visiting the precast fabricating facilities and providing the inspectors for the project site. It also included reviewing drawing and specifications, insuring the reports were in accordance with NYC Building Code requirements including insuring TR-1 and TR-2 were filed correctly.

Ronald Popotte

Senior Civil/Structural Inspector

URBAN ENGINEERS
Formulating Excellence

WHY SELECTED

- **15 years of experience**
- **Task order Inspection experience**

CERTIFICATIONS:
MEMBERSHIPS:

- ACI Level I, ACI Level II
- ICC Masonry

EDUCATION:

- BS, 2001 City College of New York, Civil Engineering
- BS, 1998, SUNY OSWEGO, Physics

RECORD OF PROFESSIONAL EXPERIENCE

Recent project experience with Task Order type assignments, serving as the primary point of contact and the responsible party in the field for the client. Works with Design Engineer team to provide input on constructability reviews for project development, and when applicable suggested edits and changes to standard details, specifications and guideline documents. Review and comment on Contract and Work Order drawings before awarded for Bid. Prepare public reports such as bid proposals and environmental impact statements, Prepare period reports and assessments for each project phase.

Chairs meetings (Pre-Construction Meetings, Construction Progress Meetings and Partial/Final Inspections) with contractors, facility personnel, design consultants and other stakeholders. Has managed 12 direct reports consisting of Civil/Structural Engineers, Electrical/Mechanical Engineers, Office Engineer and Construction Inspectors.

Performs reviews on contractor's construction baseline schedule, prepares and initiates field change notices, and ensures all required tests, operations, measurements, and inspections are scheduled, ordered, and satisfactorily completed and documented. Reviews status of correspondence, monthly updates, payments, PACC's and close out documentation to assure timely processing of Contract administration paperwork.

Evaluate, negotiate and prepare documentation for change orders (review and negotiate contract change orders on behalf of the Authority) or claims.

Downtown Path Restoration Program between Exchange Place and World Trade Center
The contract provided construction modification to PATH Tunnels "E" and "F" between World Trade Center Station and Exchange Place Station. Construction included the removal of existing construction, asbestos removal, the construction of track including track support structure, the construction of duct bank, cables including high voltage traction power, communication and signals, the construction of lighting, drainage, fire protection operation.

PATH-Building & Site Repairs (Hurricane Sandy)
Immediate Repairs at Port Authority Trans-Hudson Corporation facilities via Work Orders, in order to minimize the potential for loss of life and property and to facilitate the resumption of safe operations and essential agency functions in a timely manner.

Consolidated Maintenance Facility at Waldo Yard-Miscellaneous Modification
The contract provides for the upgrade of the HVAC system; work includes installation of ventilation equipment for the rail, welding and carpenter shops: installation of access doors; replacement of miscellaneous air handling units; modification of air ducts, structural steel supports and electric service panels; caissons; foundations; and miscellaneous replacement of walls, ceilings and doors.

Washington Street Substation #2 Emergency Diesel Generator Replacement
The contract provides for the installation of an emergency generator, including low voltage switchboard and controls at the Washington Street substation to replace the existing emergency generator, low voltage switchboard and controls.

PATH-CCTV Installation
The contract provides for the installation of equipment such as cameras, digital video recorders, cables, multiplexers, network servers, monitors, and video equipment and in some cases control room. It also required soft ware's such as monitoring system, a response or reaction system, video footage storage system and record system and an evidence control system

Upgrade Underground Storage Tanks
The major work under this Work Order was the replacement of tank sump and equipment, slab removal and replacement, & 10,000 gallon tank upgrade.

PATH Train Operations Building Construction
Contract calls for construction of a 22,000 square feet building to house a primary Security and Control functions required for operations of the PATH rail system. Scope of work included related site improvements, mechanical/plumbing, electrical, architectural, HVAC systems, etc.

Replacement & Upgrade to Switchstation #6 & #10
The contract provides for replacement and upgrade of two direct current (DC) switchgear in two switching stations (#6 and #10), including major components such as high voltage equipment and transformers, auxillaries, control systems, protective equipment

Path - Bus Terminal Escalator Replacement
Contract calls for replacement of eight escalators at JSTC from the Concourse Level to the Bus Terminal with new heavy-duty escalators, including associated components and controller.

New York City Transit-SPM 2 Broadway New York, NY
As Field Engineer monitored and inspected installations of exhaust fan/HVAC work, conduits, lighting fixtures, electrical panels, and electrical cables. Inspected all aspects of the work including dimensions, connections, embeds, finishes and coordinated GO Request and Flagging Request. Reviewed requirements with the contractor and resolved all questions and/or differences of interpretation prior to start-up of each phase of the work. Define records to be maintained and or turned over to the NYCT quality record Matrix. Oversee inspections for completeness and quality.

Kennedy Airport (Monorail Access) Merk Power Plant (Linden, New Jersey)
Pile Inspection.
Set up and monitored Vibration Monitor, Static Load Test according to NY&NJ building code.
Performed Surface Excavation Test, Pile Dynamic Analysis Testing

PATH-Harrison Car Maintenance Facility - South Yard Site Work for Track Installation
The contract calls for installing four storage tracks within the South Loop to provide storage for 16 additional cars. Contract work included excavation and disposal of soil, sub grading, install new conduit duct banks and hand holes and install 12 inches of ballast.

PATH –FM 200 Fire Suppression Systems
The contract calls for installation of underground fire mains, wet automatic sprinkler systems, and clean agent FM 200 system in existing maintenance facilities and support facilities. Project scope included: installation fire alarm systems, security cameras, access controls, voice and data systems, pro-sound systems.

Waldo Yard-Hazardous Waste Storage Facility
The contract calls for the erection of a 2,100 square feet modular Hazardous Waste Storage Building. Work includes foundations, paving, perimeter fencing, utilities and installation of a closed-circuit video camera.

PATH –Harrison Station Demolition of Existing Buildings
The contract provides for demolition of existing three single story industrial manufacturing buildings that is required for the redevelopment of the PATH Harrison Station. All abatement and disposal of materials was performed in accordance with all applicable standard and environmental requirements.

John Cochrane, Jr.

Civil/Structural Inspector

URBAN ENGINEERS
Formulating Excellence

WHY SELECTED

- **18 years of professional experience**

REGISTRATIONS/ MEMBERSHIPS

- AWS Certified Welding Inspector and Educator
- Certified Combination Welder
- ASNT Level 2 PT\MT\UT Certification
- ICC Certified Structural Steel and Bolting Inspector
- ICC Certified Structural Welding Inspector
- ICC Spray Applied Fireproofing Inspector (Previously)
- Troxler Certification for use of Nuclear Density Gauge
- Certification from the State of New Jersey Department of Community Affairs/Uniform Construction Code as a Structural Welding/Steel/Bolting Inspector
- ACI Concrete Field Testing Technician – Grade 1 Certification
- OSHA 8 Hour Safety Training
- Current TWIC card for restricted access

EDUCATION

Supervisory and Project Management Training, Bucks County Community College

Major in Metallurgy of Welding and Joining under the direction of the ASM International Education Department

RECORD OF PROFESSIONAL EXPERIENCE

Cyclesport – Welder\Fabricator

- GTAW Welding of thin wall aluminum, titanium, and chromoly custom bike frames. Frames include track bikes and tandem bicycles.

SEPTA – Welding Inspection and Existing Steel Discovery

- Contracted to evaluate the condition of the existing structural steel canopies and welds at train, subway and above ground rail lines.
- After installation of the new structural steel, reports and documentation of the bolted and welded components were supplied in accordance with the applicable standards.

I Tool Co – Quality Assurance Development

- Contracted to develop a quality control manual and specifications for the various products developed and manufactured at the Knoxville, TN plant.
- Welder training and continuing education developed to continually improve welding proficiency and advancement through different required welding capacity.
- Develop quality guidelines for material procurement and documentation of traceability throughout the manufacturing process.

Skyline Steel – Quality Assurance Engineer\Authorized Inspector\Welding Manager

- Responsible for welder and procedure qualification for sub-contractors and full time employee.
- Responsible for Welder Training, Certification and Continuing Education.
- Equipment set up and calibration.
- Site visits to ensure quality standards continue to be met according to the customer requirements.
- Responsible for keeping traceability from procurement to the final product.
- Responsible for ordering consumables and outside equipment in order to keep production flowing smoothly for the full time employees and sub-contractors.
- Internal audits completed to ensure that the applicable codes and company requirements are met during production.

AMER Industrial Technologies – Quality Assurance Engineer\Authorized Inspector\Welding Manager

- Responsible for creating and qualifying the welding procedures used for all jobs (Process or Nuclear).
- Responsible for tracking and keeping welder qualifications up to date.
- Responsible for ensuring the consumables meet the customer and code requirements for each particular job and welded connection.
- Responsible for ensuring the materials meet the customer and code requirements for each particular job and welded connection.
- Responsible for receiving inspection to insure the chemical analysis, heat treatment schedule, surface preparation, machining, documentation, paint, packaging and dimensional tolerances meet the customer and code requirements. Also ensuring the vendors have been approved\audited to meet customer, code, and NQA-1 requirements. All materials were also required to have a heat and material identification number assigned to them and to also be stored in accordance with the customer requirements and at a minimum the requirements of the code and material manufacturer requirements.

- Responsible for pre and post heating material during welding processes as required by the customer or applicable code.
- Responsible for creating forms to document traceability of the welds and material throughout the fabrication process.
- Constant communication with the management and engineers to provide accurate timelines for work to be completed and meetings to discuss ways to improve our fabrication processes as well as root cause analysis of failures or delays which cost the company valuable time and money.
- Conducted weekly welding and safety training to improve and provide continuity in the way that we work. The safety aspect is important in order to enforce accountability and to also improve awareness of how much easier it is to prevent accidents by giving the employees the tools required to operate in a safe and controlled workplace. I use the welding training courses as an opportunity to pass on the tricks of the trade that I have learned over the years and to also allow input from other welders to make any changes to work policies that will increase quality\productivity and or provide a better program as a whole. Welding training is also hands on in which I work with the welders individually to improve their skills and to also ensure that everyone is following the same welding principals that have been taught for years.
- There are many other tasks that I complete on a daily basis, however these are what I feel to be the most important in reference to the position held.

ATC Associates – Senior Field Inspector\Project Manager

- Responsible for implementation of the applicable construction codes at multiple job sites.
- Coordination and scheduling of various types of inspection at various stages of construction.
- Close interaction with contractors and construction managers to carefully develop a relationship so that I could give realistic estimates of when specific phases of construction would be completed, while maintaining the highest quality possible.
- Precise documentation of work performed as well as deficient work so that all parties involved would have access to job files, this is to prevent wrongful liability.
- Site meeting to discuss specific details with the construction manager and contractor in order to precisely complete tasks and keep everyone aware of any issues that may need the approval from the engineer of record.
- Steel, Concrete, Soil, Masonry and Fireproofing inspection were performed daily.

Bureau Veritas – Senior Field Inspector\Project Manager

- Responsible for implementation of the applicable construction codes at multiple job sites.
- Coordination and scheduling of various types of inspection at various stages of construction.
- Close interaction with contractors and construction managers to carefully develop a relationship so that I could give realistic estimates of when specific phases of construction would be completed, while maintaining the highest quality possible.
- Precise documentation of work performed as well as deficient work so that all parties involved would have access to job files, this is to prevent wrongful liability.
- Site meeting to discuss specific details with the construction manager and contractor in order to precisely complete tasks and keep everyone aware of any issues that may need the approval from the engineer of record.
- Steel, Concrete, Soil, Masonry and Fireproofing inspection were performed daily.

Nooter Construction – QA/QC Coordinator (Contract Position)

- Responsible for welder qualification including visual inspection and X-Ray interpretation
- Responsible for coordinating hydro tests and also ultrasonic/magnetic particle examination by third party inspection agencies hired by client.
- Responsible for breaking down the job scope into piping/test packages for job turn around and new construction
- Responsible for requesting weld procedures and ensuring material is properly identified and documentation is in place
- All work completed and inspected in accordance with AWS and ASME code

Gregg A. Mehl, EIT

Construction Inspector

URBAN ENGINEERS
Formulating Excellence

WHY SELECTED

- **5 years of professional experience**
- **Material testing experience**
- **ACI Concrete Construction Special Inspector**

REGISTRATIONS/ MEMBERSHIPS

- Engineer In Training
- American Society of Civil Engineers (ASCE)Maryland Chapter
- ICC Certified Spray-applied Fireproofing Special Inspector
- ICC Certified Structural Masonry Inspector
- AWS Certified Welding Inspector (CWI)
- ACI Concrete Construction Special Inspector
- ACI Concrete Field Testing Technician – Grade I
- Certified – Construction Safety & Health (10-hr-OSHA) Confined Space Training (OSHA), NYCDOB Scaffold Training (16-hr user course) and Transportation Worker Identification Credential Card)

EDUCATION

BS, Civil & Environmental Engineering, University of Maryland, A. James Clark School of Engineering

RECORD OF PROFESSIONAL EXPERIENCE

Mr. Mehl is a graduate civil engineer with extensive experience in laboratory material testing and special inspection work.

Kline, Engineering, P.C., Farmingdale, NY
Civil Engineer, EIT/Chief Inspector
Responsible for conducting quality control inspections of construction materials on-site. Interpret structural shop and contract drawings, in order to complete inspections. Manage all aspects of special inspections in the construction phase, from initiation to completion, to ensure all specifications and requirements are met. Prepare daily reports and logs to document completed work. Evaluate and examine field and laboratory data/results. Coordinate with Project Managers and Superintendents to schedule effective QC inspections.

Representative projects that Mr. Mehl participated on include:

- NYU Center for Genomics and Systems Biology; Special Inspections
- Academy Substation ConEd of New York; Special Inspections
- World Trade Center Transportation Hub; Concrete Testing and Quality Control

Michael Owamagbe, EIT

Inspector

URBAN ENGINEERS
Formulating Excellence

WHY SELECTED

- NYSDOT experience
- Roadway/Bridge Inspection experience
- Engineer in Training

REGISTRATIONS/ MEMBERSHIPS

EDUCATION

- University of Buffalo, Buffalo, NY BS-Civil Engineering

CERTIFICATIONS:

- New York State – Engineer in Training (EIT)
- Certified Earthwork Inspector – NYSDOT
- Certified Concrete Field Testing Technician – NYSDOT
- ACI Concrete Field Testing Technician – Grade I

RECORD OF PROFESSIONAL EXPERIENCE

Mr. Owamagbe is a graduate civil/structural engineer with experience as a construction inspector on NYSDOT Highway construction projects. He is experienced with testing of soils, concrete and steel in accordance with NYSDOT standard specifications.

Office Engineer/Construction Inspector - Food Center Drive-Bronx, NY-NYCEDC - Mr. Owamagbe serves as office engineer and construction inspector. He is responsible for reviewing contractor compliance with plans and specifications. He also maintains records per MURK. The Reconstruction of Food Center Drive is a large multi-million dollar project that involves the reconstruction of over a mile and half of a heavily trafficked service road in the South Bronx. This roadway provides access for heavy volumes of truck traffic for New York City's food distribution centers. Mr. Owamagbe assisted in constructability reviews at the 90% completion phase of the design drawings. He assisted developing the bid packages for the project, identified and assessed potential budget decreasing scope reductions, and advised the design team with comments for the bid list and constructability review.

Transportation Construction Inspector - ITS/INCIDENT MANAGEMENT/PHASE 4B & 4C, NYSDOT; RTS 5, 20, 33, 75, 198, 219, 290I, 400 & 990I; CITIES OF BUFFALO & LACKAWANNA, TOWNS OF AMHERST, HAMBURG, ORCHARD PARK & WEST SENECA; NYSDOT – D261629 – Installation and testing of fiber optic lines for loop detectors, traffic cameras, traffic lights, DMS boards, etc for NYSDOT region 5. Installation of pull boxes and vaults for storage of Fiber Optic slack. Responsible for pay items, measurements and record keeping, work zone safety and traffic control, inspection of fiber optic installation and testing and, NYSDOT spec compliance.

Transportation Construction Inspector - PMI- MILL AND OVERLAY OF NY 263 FROM US 62 TO IVYHURST& US 62 FROM NY 5- TO NY 263; TOWN OF AMHERST; NYSDOT – D262159 - The construction scope encompassed the milling and the repaving of the Asphalt pavement, adjustment and replacement of drainage structures, and striping of the two mile long stretch of road and side streets. Responsible for construction inspection; daily inspection reports; pay item measurements and record keeping; concrete testing; and work zone safety and traffic control.

Transportation Construction Inspector - ADA COMPLIANCE ON SIDEWALK RAMPS; VARIOUS LOCATIONS ON RTs 62, 950K & 324; TOWNS OF AMHERST & TONAWANDA, NYSDOT – D262160 - This project featured installation of sidewalk where there were gaps in the sidewalk system and the modification of existing curb ramps and driveway aprons to comply with the current ADA standards. Responsible for construction inspection; daily inspection reports; pay item measurements; concrete testing; work zone safety and traffic control; verification of grades

Ryan E. Matthews, NICET III

Civil/Structural Inspection

URBAN ENGINEERS
Formulating Excellence

WHY SELECTED

- **4.5+ years of professional experience**
- **NICET III, Highway Construction**
- **NYC utility and roadway construction experience**

REGISTRATIONS/ MEMBERSHIPS

- NICET Level III, Highway Construction
- NICET Level II, Highway Materials
- NICET Level I, Construction Materials Testing Concrete
- ICC Structural Masonry Special Inspection
- ACI Concrete Field Testing Technician - Grade I
- PennDOT Concrete Field Testing Technician
- NECEPT Bituminous Field Testing Technician

EDUCATION

BS, 2009, Villanova University, Civil Engineering

GC, 2012, Drexel University, Engineering Management

RECORD OF PROFESSIONAL EXPERIENCE

Mr. Matthews created and arranged organization charts for various proposals. He also participated in the process of preparing and submitting proposals to potential projects. Visited and walked through both proposed and established work sites. Mr. Matthews' experience includes:

NYCEDC West 125th St. Streetscape Improvements, Manhattan, NY – Mr. Matthews is currently serving as Office Engineer for the West 125th street streetscape improvements project. The $19 million project involves four separate phases of construction that requires coordination with multiple Columbia University Construction projects in one of Manhattan's most intermodal neighborhoods.

Mr. Matthews has verified bid quantities with independent calculations and field measurements, confirmed existing conditions, and analyzed potential construction related issues or delays. Mr. Matthews verified field locations of vaults, hydrants, lighting poles, bridge clearances, telephone lines, roadway pavement and curb conditions, as well as truck traffic trends. Mr. Matthews analyzed the phased construction schedule and made recommendations as to alleviate potential conflicts that may arise while coordinating with other construction projects on or near the project site.

Mr. Matthews reviewed the contract drawings and specifications for bid item errors, missing details and cross sections, and prepared suggestions for clarifications to reduce RFI's for the bid process. Mr. Matthews confirmed traffic turn radii and signage placement met all AASHTO requirements through the use of engineering calculations.

Mr. Matthews evaluated all field conditions of concrete pedestrian ramps at the site's street corners by field measuring and examining their compliance with the NYCDOT Standard Specifications, the accessibility guidelines proposed by the ADAAG and the AASHTO code (Green Book). The locations that did not meet specifications were noted and advised for reconstruction.

Mr. Matthews located and analyzed all locations of Building Vaults within the project limits to ensure the drawings confirmed the location of building vaults to reduce the possibility of damaging them during demolition. Mr. Matthews performed engineering calculations to confirm that the weight and location of the projected construction equipment and materials installed or maneuvering over building vaults would not damage or displace the structures. I located areas of concern and recommended that the contractor submit shop drawings and supporting calculations for review of projected work within these areas.

NYCEDC South Bronx Greenway Program, Food Center Drive Construction of Green Street, Hunts Point, Bronx NY - Mr. Matthews has performed daily project administration and coordination of project stakeholders involved in an infrastructure project entailing reconstruction of a four block city street located in the Hunts Point district of Bronx, NY. Project included construction of water main, sewers, curb, and drainage structures, installation of new and relocation of existing utilities, excavations and excavation support system, and steel reinforcement placement. Project also included concrete placement and testing, maintenance and protection of traffic and utilities, coordination of work with numerous stakeholders, and overall site safety.

Mr. Matthews' responsibilities have included processing RFIs, submittals, and monthly progress payments, maintaining as-built drawings and project records which include daily inspection reports, material conformance and testing reports. Mr. Matthews' responsibilities have also included reviewing certified payrolls and extra work bills for compliance with prevailing wage rates and allowable equipment rental rates, coordinating and scheduling material testing and surveying services, preparing weekly, monthly and special reports, and generating correspondence.

Mr. Matthews has also performed cost and schedule monitoring and reporting as well as assisting the resident engineer with claims mitigation and dispute resolution, identification and tracking of potential change orders and preparation and tracking of contract modifications; punch list compilation and project closeout activities. 6/2013-Present

SR 202, Sec 320 Widening Project, PennDOT District 6-0, Malvern, PA (E02201) (Urban# 2011600107.001) - Mr. Matthews inspected the installation of Sound Wall Barrier. This included the auguring of caissons up to 23' in depth, the inspection and placement of the rebar cages, the placement of concrete via the tremie method, the forming of the foundations with anchor bolts, and the installation of both posts and panels. Includes coordinating and scheduling of material testing.

Mr. Matthews is the lead inspector of the extensive ITS section of the project. Mr. Matthews inspected the installation of junction boxes and controller cabinet pads along with the excavation of Type I trench and the installation of PVC and rigid conduit.

Mr. Matthews also inspected the installation of 35' DA poles and TR cabinets and pedestals. This included the installation of transformers, disconnect switches, the corresponding wiring and the Stand Alone Test.

Mr. Matthews inspected the partial demolition and construction of a Dual Simple Span P/S Concrete Box Beam Bridge. This included the inspection of the forming and pouring of cheek walls, and diaphragms, the placement of beams and deck pans, and the forming and pouring of the deck, approach & moment slabs, pavement relief joint and the glare screen and concrete barrier.

Mr. Matthews inspected the installation of Mechanically Stablized Earth retaining wall. This included the setting of panels, the forming and pouring of the cast-in-place headwall and the coping as well as the installation of the precast traffic barrier.

Mr. Matthews inspected the installation of inlets with RCP ranging from 18" to 33" along with Class 3 & 4 excavation and boxing out.

Mr. Matthews also inspected the installation of 144 Strand and 12 Strand Fiber Optic Cable. 8/2011-6/2013

SR 9410, Sec TF3, Traffic Signal Improvements at 33 Intersections, PennDOT, District 6-0, Bridgeport, PA - Mr. Matthews inspected curb and sidewalk removal and installation, which included Class 1B excavation, the placement and grading of 2A subbase, and the pouring of the curb and sidewalk to include the ADA ramps. Measured total area of completed sidewalk for payment and the grade for Ramp Inspection Form. Mr. Matthews inspected installation of push buttons and c-posts. This included the excavation up to 6' in depth, the inspection and placement of the rebar cages, and the forming of the foundations. Mr. Matthews also inspected Type I trench, the installation of 2" and 3" PVC conduit and the installation of junction boxes. Inspected the installation of 30' traffic support with 10' mast arms and luminaries. Mr. Matthews inspected the installation of 9.5 mm top coat for asphalt restoration. 5/2011-8/2011

SR 95, Sec. ITB/ITF, Traffic Incident Management Project, PennDOT, District 6-0, Levittown & Newton, PA - Mr. Matthews inspected various aspects of the project, including installation of DMS and TR foundations. This included auguring of caissons up to 16' in depth, inspection and placement of rebar cages, and forming of the foundations. Mr. Matthews also inspected installation of junction boxes and controller cabinet pads, along with excavation of Type I trench and installation of PVC conduit. 5/2010-5/2011

SR 95, Sec CP1, Cottman-Princeton Interchange, PennDOT, District 6-0, Philadelphia, PA - Mr. Matthews inspected various aspects of the project including the installation of inlet connections. This included Class 4 excavation, the installation of saddle connections and R/C pipe, the removal of abandoned inlets and the placement of HES concrete for pavement restoration. Mr. Matthews also inspected curb and sidewalk removal and installation, which included Class 1B excavation, the placement and grading of 2A subbase, and the pouring of the curb and sidewalk to include the ADA ramps. Mr. Matthews also inspected an extensive amount of electrical construction that included Type I, II, and III trench excavation for placement of 1", 2", and 3" PVC conduit, installation of luminaries with 6' bracket arms, and the installation of C-posts with signals and PEDs. Also inspected the installation of foundations for mast arms ranging from 15' to 50', foundations for controller cabinets, installation of video detector, fiber optic termination panels and CCTV Camera Assembly with the Stand Alone Test. 7/2009-3/2010

Manish Patel
Project Engineer / Inspector

EDUCATION

B. S. Civil from Sardar Patel University, Vidhyanagar India. January, 1991

PROFESSIONAL REGISTRATIONS

ACI Concrete Field Testing Technician Grade
ACI Concrete Construction Special Inspector
NJSAT Asphalt Paving Construction Technologist
OSHA-10 Hour Construction Safety and Health Training
Nuclear Gauge Safety Certification
Hazmat Certification
ICC Structural Steel Bolting Inspector

EXPERIENCE SUMMARY

Mr. Manish Patel has more than 22 years of experience in the civil and structural construction field, and has an In-depth understanding of construction practices and methodologies. He has proven skills in managing a team, and has implemented and maintained QA/QC standards in accordance with contract documents. He has prepared punch-lists and implementation follow up.

REPRESENTATIVE PROJECTS

NYCEDC, Green Infrastructure, Newtown Creek, Brooklyn, NY: Engineer responsible for performing engineering inspections, testing and evaluations for construction activities and implementing quality assurance plan requirements. Conducted inspections of various stage of soil boring and permeability tests.

Replacement of Bridge EH-1, Atlantic City, NJ: Engineer responsible for performing engineering inspections, testing and evaluations for construction activities and implementing quality assurance plan requirements. Conducted inspections of various stage of soil boring tests, soil sampling, soil classification, and installation of observation wells.

Metropolitan Transportation Authority (MTA), 55th Street Ventilation Facility, New York, NY: Engineer responsible for performing engineering inspections, testing and evaluations for construction activities and implementing quality assurance plan requirements. Conducted inspections of various stages of tunnel for concrete, shotcrete and rebar installation.

MTA, Pelham Line, Bronx, NY: Project Engineer responsible for performing engineering inspections, testing and evaluations for construction activities and implementing quality assurance plan requirements. Conducted inspections of various stages of concrete and rebar installation.

NYC Economic Development Corporation, Rockaway Boardwalk Evaluation, Queens, NY: Engineer responsible for performing engineering inspections, testing and evaluations for construction activities and implementing quality assurance plan requirements. Conducted inspections of various stage of Pile driving analysis, Pile integrate tests.

MTA Long Island Railroad, Massapequa Park Track Replacement, NY: Engineer responsible for performing engineering inspections, testing and evaluations for construction activities and implementing quality assurance plan requirements.

Conducted inspections of various stage of concrete and rebar inspection, anchor installation, testing anchor for pull tests and torque tests.

66th - 73rd Concrete/Rebar Inspection, New York, NY: Engineer responsible for performing engineering inspections, testing and evaluations for construction activities and implementing quality assurance plan requirements. Conducted inspections of various stage of buildings being constructed to include concrete, rebar, soil, etc. for various projects.

Los Angeles Swaminarayan Temple: Project Engineer responsible for performing engineering inspections, testing and evaluations for construction activities and implementing quality assurance plan requirements. Additional activities included Master Planning, Designing, Development of Buildings, Infrastructure, Landscaping and Project Management, Supervision and Monitoring of the work for New Constructions and Infrastructure work on campus

Medical College at Gandhinagar, India: Senior Construction Manager at Frishmann Prabhu (India) Pvt. Ltd. The work included Master Planning, Designing, Development of Buildings, Infrastructure, Landscaping and Project Management, Supervision and Monitoring of New Construction and Infrastructure projects on campus. Accordingly, a complex of extended hospital facilities and a new medical college for 185 students and associated infrastructure work was recommended for the existing hospital campus. The college and extended medical facilities covers a total built-up area of 0.8 million square meters. Additional facilities included a new college building, addition of a 600 bed ward block to augment existing capacity of 300 beds, hostel facility for students and interns, residential quarters for teaching faculty, and an auditorium.

Assembly Hall at Rajkot, India: Project Engineer for assembly hall within the Swaminarayan Temple at Rajkot. He was involved in planning, designing, scheduling, estimating and day to day monitoring of the project. Project included a 120 foot span space frame with central air cooling and acoustical treatment.

Assembly Hall at Jamnagar, India: Project Engineer for assembly hall within Swaminarayan Temple at Jamnagar. He was involved in planning, designing, scheduling, estimating, and day-to-day monitoring of the project. Project included a 90 foot span, multi-story framework with central air cooling and acoustical treatment.

Kutchh, India: Project Engineer responsible for performing engineering inspections, testing and evaluations for construction activities and implementing Quality Assurance Plan requirements. He conducted inspections of various stages of soil boring tests, permeability tests, soil sampling, and soil classification for various projects during post-earth quake. Project Engineer during resettlement of 8 villages and 45 schools affected by post-earthquake at Kutch area in 2001. All villages were resettled with amenities that included water tanks, primary schools, Anganwadi, mid-day meal halls, community halls, Panchayat Ghar, village road and Gate, Street lights, and plantations.

Assembly Hall at Anand, India: Project Engineer for assembly hall within the Swaminarayan Temple at Anand. He was involved in planning, designing, scheduling, estimating, and day-to-day monitoring of the project. Project included a 60 foot span, multi-story framework with central air cooling and acoustical treatment.

Terence Hampton, E.I.T.
Senior Staff Engineer / Inspector

EDUCATION
Rutgers University, College of Engineering: B.S. in Civil Engineering

PROFESSIONAL REGISTRATION
Engineer In Training: New Jersey

EXPERIENCE SUMMARY
Mr. Hampton is a Senior Staff Engineer with 5 years of experience in Civil Engineering projects, including concrete and rebar, soil and groundwater sampling, analyses and evaluation, subsurface investigation, bidding and estimating. He has provided Quality Assurance oversight on both public and private projects, and has experience with environmental compliance in the construction/demolition industry. While a laboratory technician for Rutgers University, he worked on several high profile projects including asphalt recipe testing for JFK Airport and The White House; foundation masonry tests for One World Trade Center; and on-site concrete testing for a new water filtration facility in the Bronx.

LABORATORY TEST SKILLS
ASTM D6752; AASHTO T27, T84, T85, T166, T209, T269, T304; Hot mix asphalt; aggregate angularity impact on pavement wearing characteristics; and sample compaction testing

PROFESSIONAL CERTIFICATIONS
OSHA 40-hr HAZWOPER; OSHA 10-hr Construction Safety
ACI Concrete Construction Technology; ACI Concrete Field Testing Technician Grade 1; ACI Concrete Construction Special Inspector
MTA LIRR Track Training; MTA NYCT Track Training; Amtrak Training

REPRESENTATIVE PROJECTS
Metropolitan Transportation Authority (MTA), East Side Access/LIRR Harold Structures, Queens, NY: Performed construction special inspections to check rebar, form work, and concrete placement (including slump, air content, and temperature and prepared cylinders. Prepared the daily and monthly field inspection reports.

MTA, 86th Street and 2nd Ave. Subway project, New York, NY, NY: ACI Concrete Construction Special Inspector, inspected placement of concrete and rebar; performed slump, air content tests in the field; inspected concrete mixed at site verifying meets project specifications including fine and coarse aggregate. Collected concrete sample for compressive strength testing. Prepared the daily field inspection reports.

MTA, Pelham Line – Five Stations: Mr. Hampton was a field inspector for MTA Pelham line five stations project. His responsibilities include concrete field concrete testing; rebar inspection, and preparation of reports for Castle Hill and Middle Town station.

MTA, 55th Street Ventilation Facility, New York, NY: Mr. Hampton has performed concrete field tests, where he checked concrete air content, density, temperature, and slump. He prepared daily field reports, under direct supervision of project professional engineer and ACI level II certified personnel.

NYC Department of Design and Construction, Newtown Creek Green Infrastructure Bioswales – Yellow Area: Responsible for onsite field investigation for the geotechnical project work to develop subsurface information for construction of Right of Way Bioswales (ROWB) and Stormwater Greenstreets (SGS) in Brooklyn, New York. Geotechnical work included performing subsurface investigation for soil characterization and permeability tests.

MTA, 2nd Avenue Subway, 72nd Street Station Cavern Project, NY, NY: Acting as an Environmental Engineer, supported Resident Engineers with environmental monitoring and

inspection of special equipment. Performed data collection for air and noise baseline monitoring, downloaded data directly from equipment as well as remotely through computer software, reviewed data, and submitted weekly and monthly reports.

MTA, 2nd Avenue Subway, 63rd Street Station Cavern Project, NY, NY: Acting as an Environmental Engineer, supported Resident Engineers with environmental monitoring and inspection of special equipment. Performed data collection for air and noise baseline monitoring, downloaded data directly from equipment as well as remotely through computer software, reviewed data, and submitted weekly and monthly reports.

MTA, Long Island Railroad, Massapequa Park Viaduct: Inspector overseeing installation and testing of permanent anchor inserts for direct fix rail fasteners, which involves epoxy installation inspection, anchor pull-out testing with hydraulic jack, anchor torque testing, and rail fastener torque verification. Also conducted Quality Assurance for inspection team.

New York City Economic Development Corporation, High Bridge Rehabilitation Project, Bronx, NY: Responsible for implementation of soil sampling pursuant to the Material Handling Plan, Field Vapor Monitoring Plan, and Soil Sampling Plan during excavation operations as part of the rehabilitation project for the bridge.

New Jersey Department of Transportation, I-295 / Route 42 / I-76 Direct Connector, Bellmawr, NJ: Environmental Engineer involved with preliminary site preparations for the improvement of the interchange and construction of two missing traffic movements. Responsibilities include soil sampling from test pit excavations for waste characterization pursuant to the requirements of the disposal facility, identifying and classifying soil, coordination with laboratory for sample analysis, and preparation of sampling reports.

New Jersey Turnpike Authority, Interchange 14A Improvements, Jersey City / Bayonne, NJ: Geotechnical and Environmental Engineer. Geotechnical work included performing subsurface investigations; and soil sampling, identifying and classifying soil using modified Burmister system; installation of monitoring wells, cross-hole seismic borings, borehole permeability testing, and percolation testing. Environmental work included identifying, classifying and disposal of contaminated soil encountered during the subsurface investigation.

NYC Department of Environmental Protection, BT-1 Contract, Rondout West Bypass Tunnel, SHAFT 5B AND 6B, Delaware Aqueduct, Dutchess County, NY: Environmental Engineer involved with environmental noise monitoring investigations to determine baseline ambient noise levels prior to construction phase, determining location of noise monitoring devices, installing devices in the field, and collecting monitoring data.

National Waste & Recycling Services, LLC, Hamilton, NJ: Engineer/Estimator responsible for supervising subcontractors performing take-down and selective demolition of buildings for replacement construction; project planning and budget calculations for demolition operations; coordinated transportation and disposal of demolition materials to selected landfills; obtained excavation permits for digging near utilities and other infrastructure; administered accounts payable and resolved payroll issues with union contractors.

Rutgers University Asphalt Pavement and Civil Engineering Laboratories, Piscataway, NJ: Undergraduate Laboratory Technician assisting with streamlining data collection by introducing automated, web-based data sheets. Projects included: researching the impact of aggregate angularity on pavement wearing characteristics; the study of creep modeling and high-performance concrete recipes; asphalt testing for JFK Airport and The White House; foundation masonry tests for One World Trade Center, replacing New York's Twin Towers; and on-site concrete testing for a water filtration facility in Bronx, New York.

Rumit Pandya
Staff Engineer / Inspector

EDUCATION
New Jersey Institute of Technology: M.S. Environmental Science

CERTIFICATIONS
ACI-I & II Certification, ACI Concrete Construction Special Inspector
NJSAT, CWI (August 2012)
40 Hour HAZWOPER 29 CFR 1910.120 (e); 30 Hour OSHA Construction Health and Safety Supervisor; 10 HOUR OSHA-Construction. Confined Space, Lead Evaluator and Risk Assessor
MTA NYCT Track Training

EXPERIENCE SUMMARY
Mr. Pandya has over 5 years of experience in construction, geotechnical and environmental services. He has served as on-site engineer providing construction oversight for the installation of auger cast piles, sheet piles, soldier piles and lagging; tieback installation, including grout tests, installation of dowels, rock anchors; proof and performance tests to verify pull strength, and reporting. He has performed inspections to verify footing subgrade, placement of rebar, forms and concrete placement for foundation elements, and torque tests for structural steel bolts and anchors. He has performed Pre- and Post-construction surveys of existing buildings, installed geotechnical instrumentation including inclinometers, deflection monitors (crack and strain gauges), and vibration monitoring. He has developed and performed air and gas monitoring for remediation projects, as well as Community Air Monitoring Plans, and evaluated data collected and prepared reports. He has used field equipment for air monitoring such as Minirae-2000, Multirae Plus (LEL, H_2S, NO, CO, VOC, Oxygen, etc.), DustTrak 8520-Aerosol Monitor, PDR 100, and ADR1200 to measure particulates.

REPRESENTATIVE PROJECTS
Port Authority of NY & NJ, World Trade Center Transportation Hub, Manhattan, NY: Responsible for soil characterization for presence of contamination and disposal for WTC Transportation Hub PATH Hall construction. He reviewed project plans for compliance with project specifications; collected grab samples from test pits and composite samples from stock piles; analyzed samples in the lab for different parameters and compared the results with current NYCDEC soil guidance values and assessed whether it was contaminated.

Metropolitan Transportation Authority (MTA), 7 Line Extension Site L, New York, NY: As a Field Engineer performed pull tests tie-backs to verify compliance with the project specifications. Inspected placement of concrete, rebar, performed slump, air content tests in the field, inspected concrete batch plant verifying concrete mix prepared meets project specifications including fine and coarse aggregate.

MTA Long Island Rail Road, East Side Access Madison Yard Project, New York, NY: Performed construction inspections to verify subgrade soil and rock quality and compaction of backfill material; provided structural inspection including welding and bolt tests; checked rebar, form work, and concrete placement (including slump, air content, and temperature and prepared cylinders); checked installation of dowels into rock, grout placement, and tested grouting material. Reviewed strength test results and prepared reports to meet NYSDOB special testing requirements.

MTA, Second Avenue Subway 86th Street Station, Manhattan, NY: Performed Pre-construction condition surveys of buildings, including taking photographs and video to document existing conditions prior to the commencement of construction activities, and assisted with preparation of reports. Installed crack gauges to monitor existing cracks and seismographs to monitor vibrations. Performed baseline air monitoring to document existing particulate, VOC, NO and SO_2 levels; and prepared Air Monitoring Reports.

Courtlandt Corners Remediation Project, Bronx, NY: Construction inspection services, including supervision of soil borings and collection of rock cores; oversight of installation of monitoring wells, supervision of auger-cast H-pile installation, grouting of H-piles, oversight of excavation, and installation of timber lagging between soldier piles; dewatering; supervision of grouting tiebacks and tieback proof and performance testing; verification of subgrade and rock quality prior to placement of floor slabs; rebar and form work for footings of an 11-story building; and inspection of concrete slump tests, making cylinders and determining air content to confirm that footings are constructed as per project specifications. Provided structural inspection of welding and bolt tests.

NYC Department of Environmental Protection (NYCDEP), Pleasantville Alum Plant: Oversight of borings for installation of new caustic soda tank; collection of soil samples for geotechnical evaluation; provided assistance with geotechnical analysis and Foundation Recommendation Report.

NYCDEP, Oak Wood Beach WPCP, NY: Oversight of borings at waste water treatment facility for new shower trailer and office trailer; collection of soil samples for analytical testing and geotechnical evaluation; review of analytical test results to evaluate whether the material was contaminated; and provided assistance with geotechnical analysis and foundation design. Reviewed analytical test reports, and identification of options for the disposal of excavated material.

BICC Cable Site, Yonkers, NY: Performed oversight of installation of sheeting for excavation of PCB and lead contaminated soils on former BICC cable site adjacent to the Hudson River. As part of adherence to the Storm Water Pollution Prevention Plan (SWPPP), performed weekly inspections of excavated material storage stock piles to verify that containment structures, drainage and other control measures were effective and submitted report to NYSDEC.

Consolidated Edison, Pelham Former MGP Site, Pelham Manor, NY: Responsible for oversight of soil borings and collection of rock cores to identify depth and quality of rock to design sheet pile wall and tie-back system; supervision of subgrade for canopy foundation, rebar, concrete placement and anchors; performed slump test, made cylinders and checked for air content of concrete.

New Meadowlands Stadium Project, East Rutherford, NJ: Provided technical assistance with air monitoring during excavation and within confined spaces; used field screening equipment for air monitoring (using Minirae-2000 for VO; MultiRae Plus for LEL, Toxic gas, CO and Oxygen; Dust Trak 8520 for dust level) during the construction activity; downloaded data from the instrument using appropriate Software and provided daily reports to General Contractor. Also performed work as a Health and Safety inspector and assisted contractor Health and Safety Officer.

Vikas Patel, E.I.T.

Senior Staff Engineer / Inspector

EDUCATION

M. S., 2010, Structural and Geotechnical Engineering, Cleveland State University
B. S., 2007, Civil Engineering, Gujarat University

PROFESSIONAL REGISTRATIONS

Engineer in Training (EIT)
ACI Concrete Construction Special Inspector, ACI Concrete Field Testing Technician Grade I, ACI Concrete Construction Technology certificate
ICC Structural Steel and Bolting Special Inspector, ICC Structural Masonry Special Inspector, ICC Fireproofing Inspector, HILTI FireStopping Training
OSHA 10 Hour Construction Safety and Health Training
MTA NYCT and LIRR Track Safety Certifications, Amtrak Safety Training
NICET Level I – Asphalt, Highway Construction, NICET Level II – Concrete, Soil
NYS DEC Erosion and Sedimentation Control Training
NJSAT Asphalt Paving Construction Technologist
Rutgers Traffic Control Coordinator, Work Zone Traffic Control Supervisor (Ohio)
AWS Certified Associate Welding Inspector
NJDOB Special Inspector – Concrete Placement, Reinforced Concrete, Structural Masonry

EXPERIENCE SUMMARY

Mr. Patel has over four years of engineering experience, including concrete, rebar, masonry, firestop, soil compaction, asphalt and steel field inspections, and geotechnical instrumentation, as well as bidding, estimating and designing. He has excellent skills in AutoCAD 2009, STAAD Pro 2007, ArcGIS and SAP 2000.

REPRESENTATIVE PROJECTS

Metropolitan Transportation Authority (MTA), East Side Access / LIRR Harold Structures, Queens, NY: ACI Concrete Construction Special Inspector, inspected placement of concrete and rebar; performed slump, air content tests in the field; inspected concrete mixed at site verifying meets project specifications including fine and coarse aggregate. Performed soil subgrade and fill inspections and tests using sand cone, electrical density gage and nuclear density gauge. Collected concrete samples for compressive strength testing. Prepared daily and monthly field inspection reports.

MetroNorth Embankment Stabilization at Milepost 43.8, Peekskill, NY: Instrumentation Engineer involved in installation of geotechnical instrumentation, including in-place inclinometers, settlement monitoring points and solar panels for solar energy. Responsibilities included performing maintenance on installed geotechnical instruments, preparing weekly reports for client, and maintaining real-time monitoring ARGUS software.

MTA, South Ferry Repair and Resiliency Design, New York, NY: Performed field inspection on the station and adjacent tunnel section to document existing leaks; documented findings and prepared field inspection reports. Assisted in monitoring progress of test program for grouting of leaks; recorded numbers of holes were drilled including length and diameter of the holes, hole cleaning process, total quantity of water injected during water test and its findings, total quantity of grout injected on wall and tunnel section, prepared daily field inspection reports to document activities and progress.

NYC Economic Development Corporation, Rockaway Boardwalk Pile Evaluation, NY: Geotechnical Engineer for field investigations and evaluation of existing boardwalk piles damaged by Super Storm Sandy. Monitored driving of new piles and evaluated capacities

using PDA and CAPWAP analyses. Prepared Field Investigation Summary Report, and recommendations for the reconstruction of new boardwalk.

MTA Capital Construction, 7 Line Extension Sites K and L, New York, NY: As an ACI Concrete Construction Special Inspector and ACI Concrete Field Inspector, inspected placement of concrete and rebar; performed slump, air content, unit weight and temperature tests; inspected concrete mixed at batch plant verifying compliance with project specifications, including fine and coarse aggregate; performed soil subgrade and fill inspections and tests using sand cone and electrical density gage; performed firestopping, masonry, and structural steel inspections; collected mortar, grout and concrete samples for compressive strength testing; and prepared daily and monthly field inspection reports.

Hunts Point Avenue Subway Station, Bronx, NY: Performed construction Special Inspections to check rebar, form work, and concrete placement, including slump, air content, temperature, and prepared cylinders. Performed steel inspection to verify compliance with project specifications. Prepared daily and monthly field inspection reports.

MTA, Five Stations Renewal, Bronx, NY: Performed construction Special Inspections to check rebar, form work, and concrete placement (including slump, air content, and temperature and prepared cylinders). Conducted steel inspection to verify compliance with project specifications. Prepared daily and monthly field inspection reports.

BICC Cable, Yonkers, NY: ACI Concrete Field Inspector. Performed slump, air content, unit weight and temperature tests to ensure concrete complied with contract specifications.

MTA, 86th Street Station, Manhattan, NY: ACI Concrete Construction Special Inspector, inspected placement of concrete and rebar; performed slump, air content tests in the field; inspected concrete mixed at site verifying compliance with project specifications, including fine and coarse aggregate. Collected mortar, grout and concrete samples for compressive strength testing. Prepared daily and monthly field inspection reports.

Belt Parkway over the Fresh Creek Basin and Rockaway Parkway, Brooklyn, NY: As a Geotechnical Engineer for the widening/improvement projects of two Belt Parkway bridges, which included, replacing the bridges carrying the Belt Parkway over the Fresh Creek Basing, and Rockaway Parkway; and widening the roadway. Geotechnical work included Installation of piezometers, geophones, tilt meters, survey prisms, and automated remote monitoring systems. Preparation of the daily and weekly monitoring reports for settlement plates, vibration, tilt meter and displacement.

MTA LIRR, Massapequa Park Viaduct, Massapequa Park, NY: Lead Inspector/QA Designee for the replacement of rail fasteners project in Massapequa Park, involved in the inspection of holes and epoxy mix prior to placement of inserts for anchor insert installation. Additionally, conducted pull tests and torque tests on inserts, and inspected production bolts for the correct torque. Also responsible for overall quality assurance for the project, field coordination and management of the field inspection crew.

MTA, East Side Access / LIRR Ventilation Shaft Building at East 55th Street, Manhattan, NY: ACI Concrete Construction Special Inspector, inspected placement of concrete and rebar; performed slump, air content tests; inspected concrete mixed at site verifying compliance with project specifications, including fine and coarse aggregate; performed soil subgrade and fill inspections and tests using sand cone and electrical density gage; performed firestopping, masonry, and structural steel (High Strength Bolts and Welding) inspections; collected mortar, grout and concrete samples for compressive strength testing; and prepared daily and monthly field inspection reports.

TECHNICAL SUMMARY

Mr. James A. Yhap NICET IV has more than 22 years of Experience in the field of Construction management, Inspection and supervision. His professional experience includes: reconstruction and rehabilitation of treatment Plant, road and bridges, buildings, upgrading drainage systems, construction of pipes, steel erection, deck construction, and demolition. He gained this experience with **NYCDEP,** NYSDOT and other agencies. He has supervised Contractor's work in accordance with Construction Plans and Specifications. Prepared Inspector's Daily Report kept track of Pay Items, Performed Slump and Air-Entrainment Tests to check the consistency of the Concrete. Following are the projects he has worked on:

PROFESSIONAL EXPERIENCE

Construction Inspector - Haider Engineering P.C. June 2013 Ongoing: ConnDOT CSO 2183, Project No. 0172-0412 & 0172-0413 for Construction Engineering and Inspection Services (Road, Bridge, Aviation) Pavement Marking. This project consists of installation of Epoxy Resin Pavement Markings on Interstate Routes in the same locations as the existing epoxy resin pavement markings, except when indicated otherwise in the contract documents or by the Engineer in Various Towns in District 2. The new pavement markings to be installed will differ from the existing pavement markings, per the contract plans for the updated pavement markings. As an inspector, his assignment is to inspect all contractors work and ensure conformity with the ConnDOT's plans and specification for the duration of the project. Some of his assignment also includes maintenance and protection of traffic during project activities. All records are been kept in accordance with the Manual of Uniform Record Keeping (MURK). **Contact Person: Mr. John Dunn, Project Engineer, ConnDOT. Tel: (860)823-3262**

12/08-2/13: Chief Inspector Construction Contract NC-CM03, New Town Creek CM Services (NYCDEP)
Contract: NC-CM03, PIN: 82607WP01081: NC-CM03 provides for Construction Management Services in connection with Construction Contracts NC-41 (G, E, H,.P), NC-43, NC-47 (G, E, H, P), NC-48, NC-50 and NC-51 (G, E, H, P). The construction management services performed on this contract is divided into the following Tasks:
Task 1 - Project Management.
Task 2 - Resident Engineering Inspection.
Task 3 – Project Operation Services Task 4 - Subcontracted Expert Services and Other Direct Costs.
Task 5 – Supplemental Services
Example of one of the projects:
Contract NC-47
NC-47 South Battery Reconstruction and South Control Building.

This reconstruction involves the demolition of block walls installed in the tanks under the interim upgrade to simulate step feed flow and demolition of tank

walls where the new detritor grit facilities and a new common channel upstream of the aeration tanks will be constructed. The complete replacement of tank equipment, piping and auxiliary systems is included in the reconstruction. The existing South Control Building was originally slated for demolition, including construction of a completely new South Control Building.
Contact Person: Claude Oriol, Project Engineer NYCDEP Phone# (718) 707-4105

02/05-Senior Inspector: **NYCDOT**: Rehabilitation inspection of the Brooklyn Tower Esplanade of the Brooklyn Bridge spanning the East River between the boroughs of Manhattan and Brooklyn, NY. NYCDOT: Rehabilitation inspection of the Gun Hill Road Bridge over Metro-North Railroad in Bronx, NY.

05/02-02/05 Senior Inspector: **NYCDOT**: Rehabilitation inspection of the Cross Bay Boulevard Bridge over Conduit Boulevard in Queens, NY. NYCDOT: Rehabilitation inspection of the Guy R. Brewer Boulevard Bridge over Belt System-Southern Parkway in Queens, NY.

09/96-05/02 Senior Inspector / Inspector: **NYCDOT**: Reconstruction inspection of the Flatbush Avenue Bridge over Belt Parkway in Brooklyn, NY. NYSDOT: Construction inspection of asphalt concrete, milling, and resurfacing on various routes in Westchester, **NY. NYSDOT**: Construction inspection of asphalt concrete, milling, and resurfacing on various routes in Putnam and Dutchess, NY. NYSDOT: construction inspection of sign structure installation on the Major Deegan Expressway in Bronx, NY. NYSDOT: Construction inspection of sign structure installation on I-295, I-695 and 907F in Bronx, NY. NJHA: Construction inspection of the Garden State Parkway Bridge repair in Monmouth County, NJ. MISC: Topographic surveying of several projects in NY and NJ. NYSDOT: Construction inspection of guide rail, overhead signs and landscaping improvements on Routes I-278 and 440 in Staten Island, NY. NYCDOT: Reconstruction inspection of the Melrose Avenue viaduct over Conrail in Bronx, NY.

03/93-09/96 Senior Inspector / Inspector: **TBTA**: Main cable inspection of the Verrazano-Narrows Bridge spanning the Narrows between the boroughs of Brooklyn and Staten Island, NY. NYSDOT: Biennial inspection of bridges, including the 176-span Bruckner Expressway viaduct and the 72- span Major Deegan Expressway viaduct in Bronx, NY. NJDOT: Construction inspection of highway lighting Routes 440 and 287 in Middlesex, NJ. NJDOT: Construction inspection of milling, resurfacing, and shoulder reconstruction of Route 27 in Middlesex, NJ. NYCDOT: Bridge component rehabilitation inspection of the145th Street Bridge (Swing Bridge) over Harlem River in Bronx, NY. NYSDOT: Semiannual inspection of the Gowanus Expressway viaduct in Brooklyn, NY. NJDOT: Construction inspection of Route 9 resurfacing and median guide rails in Middlesex, NJ.

06/85-03/93 Inspector: **FDC: Construction inspection of the canopy at Faith Mission Alcoholism Crisis Center in Queens, NY.** Inspector: PANY & NJ: Report writing for biennial inspection of three bridges at LaGuardia Airport in Queens, NY. NBBJ: Exterior wall inspection of the New York Downtown Hospital in Manhattan, NY. TBTA: Biennial inspection of the Throgs Neck Bridge spanning the East River between the boroughs of Queens and Bronx, NY.
NYCDOT: Construction inspection of resurfacing of pedestrian ramps, sidewalks and curbs in Queens, NY. NYCDOT: In-depth inspection of the Flatbush Avenue Bridge over Belt Parkway in Brooklyn, NY. NYCDOT: In-depth inspection of Route 209 Bridge (single-span steel pony truss) over Vernooy Kill Creek in Ulster County, NY. NYCDOT: In-depth inspection of the Cropsey Avenue Bridge (double-leafed bascule) over Coney Island Creek and Bank Street viaduct over an abandoned railroad in Brooklyn, NY. NYSDOT: Biennial inspection of the Long Island bridges in Nassau/Suffolk Counties, NY. NYSDOT: Biennial inspection of the bridges in the Bronx, Manhattan, and Staten Island, NY. NYCDOT: In-depth inspection of the Brooklyn Queens Expressway viaduct in Brooklyn, NY. HINES: Local Law 10 inspection of 885 Third Avenue in New York, NY. PANY &NJ: Final report for structural integrity inspection of buildings and hangers of JFK International Airport. MISC: Technical support in Shop Drawing Department.
MISC: Computer Aided Drafting of steel and concrete multi-story buildings using GDS in CAD Department.

Contact Person: Peter Rozpedowski, Resident Engineer, PA, 973-961-6110

Oct. 06 – End of April 2006. Lead Project Officer New York City, NY – USA: Job totaling $30,000,000.00 work included building a new school and two level 90 feet long bridge over the highway to existing school, foundations, structural steel, Fireproofing, extensive concrete placement, plumbing, electrical, fire sprinkler, intercom system, data lines, fiber optics, security cameras, central air conditioning, roofing, emergency generator installation etc. In charge of all field operations managed 12 Engineers, 12

Subcontractors and 110 Laborers. Reviewed Schedule, Specifications, Shop Drawings and processed payment requisitions.

Mar 2005 - August 2006 MAG Construction, Dubai, UAE, Contracts Manager – Contract Assignment; 66 Story Tower in the Arabian Gulf, total cost $105 MM. Construction included a four-story day care center; Prepared BOQs (Bill of Quantities) based on Architectural Contract Drawings, Prepared, related by trade, Contract Drawings and Specifications for Bidding, Advertised/solicited Subcontractors, Conducted walk-through with potential Subcontractors, Qualified Subcontractors to perform required work, i.e. Bonding, Insurance.

Dec 2003– Mar 2005 QAD, Inc. Upper Montclair, NJ Chief Engineer – General Contractor: Constructed a 16-unit apartment building located in East Orange, NJ, Designed and constructed a 16,000 SF commercial space located in Orange, NJ, Designed and built homes, Designed financed and built residential building in Amman, Jordan, Estimated, scheduled and obtained financing for projects, Prepared Contract Drawings and wrote job specifications, Obtained zoning and building permits.

May 2001– Dec 2003 Jacobs Engineering, New York, NY : Construction Manager of nineteen Public Schools of the State of NJ Health and Safety Program at Paterson Public School System, total construction cost $700 MM; Managed six civil engineers. Reviewed Architectural Designs, structural, electromechanical, entertainment arenas, theater for three schools, worked with independent estimators, prepared phasing plan to conduct construction during School occupancy, Prepared Site Specific Health and Safety Program.
Prepared QA/QC Plans, Determined and prioritized school repairs, i.e. meeting fire code requirements/safety regulations, eterias, HAVC, etc, Advertised for job biddings.

Oct 1996- May 2001 Jacobs Engineering RE/Construction Manager; Extensive Steel/Concrete Repairs at Bayonne and Outer bridge Crossing (The Port Authority of NY and NJ – Client). Brooklyn Polytechnic (Assistant RE): Construction of Dormitory, Stadium and Cafeteria. In Charge of Contract Specifications, Estimates and Design Review and 24Hrs/3 Shift Field Operations, Work Totaling $115 MM.

EDUCATION

BS, 1994, Drexel University, Electrical Engineering

RECORD OF PROFESSIONAL EXPERIENCE

Mr. Price has extensive experience in the consulting engineering industry. He is skilled in the management of multi-discipline projects. These projects often required close interaction with disciplines outside of MEP, including architects, planners, contractors, and other sub-consultants. Projects are often performed across a number of sectors such as transportation (highways and airports), federal, education, hospitality, entertainment, and commercial. Professional experience includes medium and low-voltage distribution, communications infrastructure, Intelligent Transportation, fire alarm, security, CCTV, paging, mass notification, and photovoltaic. Mr. Price's experience includes:

TRANSPORTATION

New Jersey Turnpike Authority (NJTA), Garden State Parkway South Maintenance Facility Rehabilitation, Statewide, NJ - Senior Electrical Engineer for 20 new and renovated vehicle maintenance buildings, administration buildings, as well as salt and material storage facilities in five (5) maintenance district yards. Construction cost is $75 million.

US Airways, Express Hangar, Philadelphia International Airport, Philadelphia, PA - Senior Electrical Engineer for the renovations to the existing fire protection systems and addition of a foam fire suppression system for the US Airways express hangar located at the Philadelphia International Airport.

Ardmore Transit Center, Lower Merion Township, Ardmore, PA - Senior Electrical Engineer for the new, $43 million transportation center, servicing Amtrak and SEPTA train lines and a bus station. MEP design involves the new 11,000 SF, three-story station building, including retail and commercial space, passenger ticket and waiting areas, a 220,000 SF parking garage accommodating 375+ cars, and a new 7,000 SF township public safety building.

South Jersey Transportation Authority (SJTA), South Jersey Traffic Operations Center & State Police Barracks, Hammonton, NJ - Electrical Engineer for the design of a 2,000 SF addition and renovations to The State Police Barracks at Farley Service Plaza of the Atlantic City Expressway.

Wilkes-Barre Intermodal Facility, Wilkes-Barre, PA - Project Manager for the design for a five-story parking garage with first floor bus transportation and four parking levels above. Design required ventilation of bus parking area, and lighting and special systems for the areas above.

Lakehurst Naval Air Base, Aircraft Hangars and Air Control Tower, Lakehurst, NJ - Project Manager and Senior Electrical Engineer for the MEP design of multiple projects at Lakehurst Naval Air Base, including renovations to Aircraft hangars, and revisions to an Air Control Tower to incorporate an elevator and canopy additions.

Bradley International Airport, Terminal B Reconstruction, Windsor Locks, CT - Senior Electrical Engineer for the preliminary MEP engineering and schematic design for the half-billion dollar terminal redevelopment for Connecticut's largest airport. Design includes relocation of airfield lighting vault and associated electrical, apron design, utility relocations, and aircraft layout. Terminal areas include arrivals, departures, parking garage, rental car facility, utilities, and the terminal building for airline operations, baggage, ticket lobby and federal inspection, concessions and passenger/public areas. Design involves demolition of the existing terminal for a new 500,000 SF terminal to be constructed in two

phases.

Capital District Transportation Authority (CDTA), Saratoga Bus Maintenance Facility, Saratoga Springs, NY - Senior Electrical Engineer for the design of a new 72,700 SF bus maintenance facility. This project includes a satellite bus garage with administrative offices, dispatch and driver areas, maintenance bays, a fuel dispensing station, a bus wash unit and an indoor bus storage area for a 50 bus fleet. This design of this new facility will be LEED® Certified.

MISCELLANEOUS

Octavius V. Catto Elementary School and Boys and Girls Club, Camden, NJ - Electrical Project Engineer for the electrical engineering for a new 122,729 SF elementary school and Boys and Girls Club facility. This new building on North Dudley Street houses both an elementary school and the Boys & Girls Club and contains an indoor pool, a gymnasium, an auditorium and a cafeteria with a kitchen. Project will be certified as a LEED® 2.1 building. As such, the building systems must meet the requirements of the U.S. Green Building Council.

Sunoco Logistics, Eagle Point Pipeline Facility, Westville, NJ - Senior Electrical Engineer for this $2.5 million project at the Sunoco Logistics Eagle Point Refinery site. The project consists of replacing an existing 6700 hp steam boiler with (2) 800 hp boilers with economizers, a deaeration unit and new boiler feedwater pumps. Upgrading to high efficiency equipment that is more appropriately sized to serve the new operations of the Power House and ancillary processes at the facility is projected to have a Return on Investment of under three years.

Controlled Environment in Lab Building 355, Lakehurst Naval Base, Lakehurst, NJ - Electrical Project Engineer for the development of plans and specifications for a new dedicated HVAC system to provide a controlled environment in the laboratory on a year round basis, design of two new exhaust systems for two existing hoods located in the laboratory, and design modifications to two existing interconnected exhaust hood systems in the laboratory.

2301 Chestnut Street and 2300 Ionic Street, Property Condition Assessment, S. Harris Ltd, Philadelphia, PA - Senior Electrical Engineer for a Property Condition Assessment (PCA) of the mechanical, electrical, plumbing, elevator and life safety systems in the properties located at 2301 Chestnut Street and 2300 Ionic Street in Philadelphia. The Chestnut Street building is a four-story office building of approximately 128,000 SF. The Ionic Street building is a two-story office building of approximately 11,000 SF.

Rutgers University, Cook/Douglass Campus, Ruth Adams Building New Brunswick, NJ- Project Manager and Electrical Engineer for the HVAC upgrades to the Ruth Adams Building consisting of a basement, first, second and third floors, with a mix of classrooms and offices. Chiller was upgraded from 60-ton to 100-ton, replaced steam radiation system and window air conditioners with a two-pipe fan coil unit system. Installed variable speed primary pumping package; expanded system and installed steam to heating hot water heat exchanger. Provided electrical upgrades to support new chiller.

Rutgers University, Cook/Douglass Campus, New Brunswick, NJ- Project Manager for the renovations to Murray Hall consisting of the first floor classrooms within the building including HVAC, plumbing and electrical fit-out.

Camden County Vocational-Technical School, Science Laboratory Building, Pennsauken, NJ - Project Manager and Electrical Engineer for the design and construction administration services for a new two-story building built on the site of the Camden County Technical School's Pennsauken campus. The building is a total of 48,900 SF, with a 29,100 SF first floor and a 19,800 SF second story. The design included dual temperature fan coil units with a dedicated outdoor air ventilation system that incorporates energy recovery.

Clean Harbor Development, Bridgeport, NJ - Project Manager and Senior Electrical Engineer for the design of a 1.2 MW solar power production facility for groSolar at the Clean Harbor landfill in Bridgeport, NJU. The project involved DC and AC design, including circuiting for modules, arrays, and connection to the utility grid.

RECORD OF PROFESSIONAL EXPERIENCE

Mr. Bilella is Director of Building Systems, managing all Mechanical, Electrical, and Plumbing (MEP) Engineering services, as well as Fire Protection and IT Systems design. He is skilled in the management of multidiscipline projects. His background includes design, system and equipment selection, project field administration, specification writing, feasibility and conditions reports. Major projects include public and private educational institutions, museums, housing development, financial and corporate centers, shopping malls, hotels, and transportation related facilities. Mr. Bilella's experience includes:

TRANSPORTATION FACILITIES

The County of Westchester, Replacement of Dynamometer System at the Central Bus Maintenance Facility, Yonkers, NY - MEP Principal for the design of a new dynamometer and brake tester for the Central Bus Maintenance Facility. This project involves evaluation and recommendations for the new equipment, electrical power for the new equipment, HVAC exhaust system upgrades, additional make-up air, and air cooling. Potable water service, discharge system, and fire protection and controls will be evaluated.

New Jersey Turnpike Authority (NJTA), Garden State Parkway South Maintenance Facility Rehabilitation, Statewide, NJ - MEP Project Manager for 20 new and renovated vehicle maintenance buildings, administration buildings, as well as salt and material storage facilities in five (5) maintenance district yards. Construction cost is $75 million. Design - current

Philadelphia International Airport, Terminals D and E, Daroff Design, Philadelphia, PA - MEP Project Manager for the renovations to Terminal D and E located at the Philadelphia International Airport. The project consisted of enhancements to passenger safety, security and comfort, including optimizing gate capacity, expanded passenger screening, enlarged ticketing lobbies, new baggage handling systems, renovation and construction of 30 new restrooms, over 25 new concession spaces, as well as management and executive office spaces. Services included modifications to existing air distribution systems, hydronic distributions systems, domestic water systems, underground sanitary systems, and fire-suppression systems. Design - current

Southeastern Pennsylvania Transportation Authority (SEPTA), Elmwood Shop Roof Replacement, Philadelphia, PA - MEP Principal responsible for reviewing the existing site and record drawings, maintaining the existing mechanical and plumbing systems, and making improvements while the existing roof was replaced. For the mechanical systems, new roof curbs and equipment supports were provided to existing rooftop devices, new refrigerant lines were installed for existing split systems, a new rooftop unit was provided, and an 8" vent and exhaust fan were relocated. For the plumbing system, new roof drains, piping and an emergency roof drainage system were installed.

South Jersey Transportation Authority (SJTA), Traffic Operations Center and State Police Barracks, Hammonton, NJ - MEP Principal for the design of a 2,000 SF addition and renovations to The State Police Barracks at Farley Service Plaza of the Atlantic City Expressway. The addition will provide for a new Traffic Operations Center and IT equipment room. Design included new electric power distribution, emergency backup systems, IT systems, and HVAC and plumbing, along with extension of the Life Safety Systems. This project involved coordination with the Department of Community Affairs (DCA) and the architect for reviews and

permitting.

Widening, Reconstruction, Drainage and Intersection Improvements of Route 47, Sec. 1C, NJDOT, Middle Township, Cape May County, NJ - Electrical Designer for the roadway lighting for four intersection improvements included in the project. Reviewed the project for lighting warrants. Also designed the lighting system to current NJDOT standards using Calapro.

Interchange 13A Toll Plaza Expansion, New Jersey Turnpike Authority, City of Elizabeth, NJ - Electrical Designer for interchange widening project. This project encompasses the addition of six toll islands and widening the approaches to the toll plaza. Responsibilities included interchange and highway lighting system design along with electrical power system design. Lighting design was performed with Calapro software. Also responsible for toll plaza lighting canopy lighting and power distribution.

MISCELLANEOUS

New Jersey Department of Transportation (NJDOT), Electrical Safety Training Program, Statewide, NJ - MEP Principal for the update of NJDOT's existing electrical safety training program to reflect the changes to the National Fire Protection Association (NFPA) 70E, National Electric Code (NEC), Occupational Safety and Health Administration (OSHA), the State of New Jersey Public Employee Occupational Safety and Health Program (PEOSH), and current NJDOT safety practices. The existing program includes training on general electrical safety, personal protective equipment, personal protective grounding, high voltage lines, lockout/tagout, insulated and nonconductive tools, substation entry, confined spaces, ladder safety, aerial lifts, asbestos avoidance, fall protection, rig and hoist, and green energy. Urban is also conducting a complete statewide arc flash/blast hazard assessment "approach plan" for NJDOT that presents the methodology that will be used to conduct the full assessment at the NJDOT facilities. The intent of this plan is to document NJDOT's intent to perform the assessment in order to be in compliance with federal, state, and local regulations.

Whitemarsh Boat Club, Conshohocken, PA - MEP Principal for the renovations to the 9,600 SF boat club consisting of boat storage, maintenance areas, locker/shower facilities and exercise/training area. Project included an investigation and assessment of the existing building systems, including mechanical, electrical and fire protection systems.

The RCA Victor Building, Camden, NJ - MEP Principal for the renovation and reuse of the historic RCA Victor building on Camden's Waterfront. The RCA Victor's 75-foot-high Nipper stained glass tower is a defining feature of the Camden skyline. Renovations included transforming the former manufacturing and industrial complex into 314-unit luxury loft apartments. Cost, energy efficiency, and unique design features posed significant challenges for the design team. Mechanical design employed high efficiency boilers to provide heating at low temperature and heating from 0 degree water without thermal shock.

South Jersey Transportation Authority (SJTA), Traffic Operations Center and State Police Barracks, Hammonton, NJ - MEP Principal for the design of a 2,000 SF addition and renovations to The State Police Barracks at Farley Service Plaza of the Atlantic City Expressway. The addition will provide for a new Traffic Operations Center and IT equipment room. Design included new electric power distribution, emergency backup systems, IT systems, and HVAC and plumbing, along with extension of the Life Safety Systems. This project involved coordination with the Department of Community Affairs (DCA) and the architect for reviews and permitting.

(ITS AND TRAFFIC SYSTEMS)

Operational and Intersection Improvements of Route 47, Sites 2 and 7, NJDOT, Glassboro Borough, NJ - Electrical Designer for this five intersection improvement project. Designed ITS elements for video surveillance and variable message sign for this heavily utilized shore travel route. Designed fiber optic interconnect for coordinating the signalized intersections. All plans are being prepared in accordance with NJDOT's Traffic Signal Standards. Currently overseeing comment resolution for final submission.

- Certificate, 2009, ASHRAE Basic Course
- Certificate, 2009, Carrier HAP for LEED®

RECORD OF PROFESSIONAL EXPERIENCE

Mr. Shelly holds a Master of Science degree in Sustainable Engineering from Villanova University. Since joining the firm, Mr. Shelly has been responsible for many phases of completed and ongoing projects including building energy simulations, life cycle analysis, load calculations, HVAC systems design, equipment selection and documentation, LEED® submissions lighting simulations and streetscape lighting design. He is a LEED® Accredidate Professional and a Certified Energy Manager and Certfied Energy Auditor. Adam is also a member of USGBC's Education Review Team and the leader of Urban's Green Committee. He is proficient in AutoCAD, Revit MEP 2013, Carrier Hourly Analysis Program v4.7, Visual 2.6 Lighting Software and NIST's Building Life Cycle Cost Program. Mr. Shelly's experience includes:

University of Pennsylvania, Richards Medical Research Laboratories, EYP Architecture, Philadelphia, PA – Deputy Project Manager for the phased renovation of the building mechanical and electrical systems in the Richards Medical Research Laboratories. The research laboratory facility building was constructed in 1962 and was an innovation in laboratory facility space design and construction by Louis Kahn and his consultants. *Richards Medical Research Laboratories is declared a National Historic Landmark.*

The Curtis Institute of Music, Rock Resource Center, Venturi, Scott Brown & Associates, Philadelphia, PA – Sustainability Project Manager for the upgrades to the mechanical and electrical systems for Building 1720 Locust Street (Rock Resource Center). The HVAC system consisted of elimination of the existing steam heating system and utilizing is a variable refrigerant flow system (VRF) system for the entire building. The electrical system included a new electrical service to support the buildings electrical loads and new HVAC equipment. Simulated energy of building dormitory building to optimize the design and to comply with LEED® Credit 1, Optimize Energy Performance. Designed systems to ensure criteria would achieve a LEED® Gold building.

Lafayette College, Renovation, KSS Architects, Inc./Kieran Timberlake Architects, Easton, PA – Sustainability Project Manager for the 30,000 SF, two-building renovation and expansion to accommodate the college's new Film and Media Studies theater facility. The project included the renovation and expansion of two existing buildings (Case and Mohican) into offices, classrooms, a screening room, theatrical support areas, residential space, and black box theatre. Special consideration was given to establish and maintain a working arts campus at the bottom of College Hill, creating spaces that promote interaction between students, faculty, staff and community members.

Curtis Institute of Music, Lenfest Hall, Venturi, Scott Brown & Associates, Philadelphia, PA – Sustainability Project Manager and LEED® Specialist for 98,700 SF of environmentally sensitive, state-of-the-art music education and student residence building. Simulated energy of building dormitory building to optimize the design and to comply with LEED® Credit 1, Optimize Energy Performance. Designed systems to ensure LEED® criteria would be achieved for a LEED® Gold building.

Camden County College, Gabriel E. Danch CIM Center, Blackwood, NJ – Sustainability Project Manager for the 1,500 SF renovation within the Gabriel E. Danch CIM Center located at the Blackwood Campus of Camden County College. The project consisted of converting two traditional classrooms into new, smaller rooms to accommodate staff and equipment used as part of the college's laser

program.

East Stroudsburg University, Koehler Fieldhouse and Natatorium, Chiller Replacement, East Stroudsburg, PA – Sustainability Project Manager for the construction documentation and construction administration services for the replacement of a central chilled water system. The project included the replacement of the existing chiller, cooling tower, pumps, associated piping, electrical power equipment and controls. Replacement equipment included an outdoor, air cooled, liquid chiller with new pumps, new disconnects and starters. All new controls associated with the replacement were connected to the existing Building Management System (BMS).

Kemerer Museum of Decorative Arts, SaylorGregg Architects, Philadelphia, PA – Sustainability Project Manager for the 21,200 SF schematic design for new collection storage, new galleries and renovations of the entire facility, including the facility's MEP/FP infrastructure.

Cabrini College, Grace Hall Renovations, Radnor, PA – Sustainability Project Manager for the construction project that renovated the Co-op and Career Services, and portions of Registrar office spaces in Grace Hall. The 1,800 SF renovation project consisted of survey of the existing space, new ceilings and office cubicles, revised ductwork and diffuser layout, new lighting fixtures, revised fire alarm configuration and new power/data outlets to match new open space office configuration. In addition to these improvements, additional scope was added to the project to provide a revised lighting design for the college President's office.

Drexel University, North Residence Hall, Philadelphia, PA – Sustainability Project Manager for the complete HVAC equipment replacement project for this 160-bed dormitory suites building. Design included replacement of the cooling towers, central pumps, DDC control system, rooftop make-up air units and the water source heat pump units in four phases. This project involved mechanical and electrical designs, as well as architectural and structural designs.

Philadelphia Museum of Art, Philadelphia, PA – Sustainability Project Manager for a research report for the Philadelphia Museum of Art investigating the life cycle costs of various energy sources. The current system requires steam produced by a utility, but several options, including producing their own steam using co-generation plants, were evaluated and analyzed.

The ARCH, University of Pennsylvania, SaylorGregg Architects, Philadelphia, PA – Sustainability Project Manager for the complete renovation of a 1927-29 building of the late-Gothic Revival period with a richly detailed facade and interior. The building currently houses three cultural centers, administrative offices, classroom, performance, and meeting space. By restoring the ARCH, the building will serve as another focal point for student activities. This building is being designed for LEED® 2009 Commercial Interiors.

The Academy of Natural Sciences, Master Plan & Lobby Renovations, SaylorGregg Architects, Philadelphia, PA – Sustainability Project Manager for the lobby renovations and the $70 million, 250,000 SF master plan renovations for new exhibits, enhanced public spaces and work areas, along with improved building infrastructure to support the extensive collections, library, and laboratories. *The Academy of Natural Sciences is listed in the National Register of Historic Places.*

Curtis Institute of Music, Lenfest Hall, Venturi, Scott Brown & Associates, Philadelphia, PA – Sustainability Project Manager for 98,700 SF of environmentally sensitive, state-of-the-art music education and student residence building. Simulated energy of building dormitory building to optimize the design and to comply with LEED® Credit 1, Optimize Energy Performance. Designed systems to ensure LEED® criteria would be achieved for a LEED® Gold building.

Woodmere Art Museum, Venturi, Scott Brown & Associates, Philadelphia, PA – Sustainability Project Manager for renovation and construction inspection for the mechanical system upgrades, roof air distribution, and rooftop HVAC system renovations to the 19th century, stone Victorian mansion located in the Chestnut Hill section of Philadelphia. The system consisted of a heat recovery chiller, air handling system, exterior ductwork distribution, humidifier, and modifications to existing boiler system and DDC controls designed to maintain consistent museum quality humidity and temperature space conditions.

Edward J. Godorov, PE

Senior Mechanical Engineer

URBAN ENGINEERS
Formulating Excellence

WHY SELECTED

- **46+ Years of Professional Experience**
- **Mechanical Engineering & Project Management**
- **New Construction & Historical Renovations**

REGISTRATIONS/ MEMBERSHIPS

- Professional Engineer IL, MD, NJ, PA
- American Society of Heating, Refrigeration & Air Conditioning Engineers (ASHRAE)
- American Society of Plumbing Engineers (ASPE)
- National Society of Professional Engineers (NSPE)
- Delaware Valley Green Building Council (DVGBC)

EDUCATION

BA, 1967, Pennsylvania State University, Architectural Eng.

RECORD OF PROFESSIONAL EXPERIENCE

Mr. Godorov is a registered professional engineer with 46+ years of experience. He is responsible for the engineering design and construction management of heating, ventilation, air conditioning, plumbing and fire protection systems. Major projects include engineering design for public and private academic institutions, museums and theaters, municipal buildings, high-rise development, shopping malls, food markets, corporate centers, medical buildings, and transportation facilities. Highlighted project experience includes:

Penn Valley Elementary School, Lower Merion School District, SPG^3 Architects, Narberth, PA – Senior Mechanical Engineer for the renovation and addition of the MEP systems for this elementary school, including classrooms, gymnasium, kitchen and cafeteria/dining area, auditorium and library.

Drexel University, North Residence Hall, Philadelphia, PA – Senior Mechanical Engineer for a 160-bed dormitory suites building. This project was a complete HVAC equipment replacement project that was designed to replace the cooling towers, central pumps, DDC control system, rooftop make-up air units and the water source heat pump units in four phases. This included architectural, structural, mechanical and electrical design work to accomplish the work.

The University of Pennsylvania, Richards Medical Research Laboratories, EYP Architecture, Philadelphia, PA – Senior Mechanical Engineer for the historical 50,000 SF restoration and renovation to this iconic 1950s Louis Kahn-designed building. This building is targeted for LEED Silver certification. *Richards Medical Research Laboratories is declared a National Historic Landmark.*

The University of Pennsylvania, College Hall, Building Feasibility Study, Atkin Olshin Schade Architects, Philadelphia, PA – Project Manager/Senior Mechanical Engineer for the historic 100,000 GSF College Hall, the oldest building on the Penn Campus, built in 1873. The building's feasibility study included the HVAC, Plumbing, Electrical and Fire Protection condition assessment services for the west wing of the facility. Schematic HVAC diagrams were designed, along with recommendations for the other building systems. *College Hall is listed in the National Register of Historic Places.*

The Curtis Institute of Music – Lenfest Hall, Venturi, Scott Brown & Associates, Philadelphia, PA – Senior Mechanical Engineer for a new 98,700 SF, nine-story building to accommodate the school's world-renowned music program, along with a 22 dormitory residence hall. The building houses a rehearsal facility, practice rooms, kitchen/dining and lounge area, music classrooms, and student bedrooms. Among the demanding constraints that needed to be achieved were acoustical considerations, space limitations, and historic preservation. This building achieved LEED Gold certification and received the Preservation Alliance's Grand Jury Award.

Drexel University, College of Law School & Hagerty Library Alterations, SaylorGregg Architects, Philadelphia, PA – Senior Mechanical Engineer for the $5 million MEP/FP design upgrades for a 78,000-SF renovation to two buildings on Drexel's Philadelphia campus, while maintaining the architectural beauty of the Library and the Law School. Renovation was for the expansion of the Law School into the third floor of Hagerty Library and renovation of the parts of the Law School.

Brian R. McElwee

Plumbing/Fire Protection Designer

URBAN ENGINEERS
Formulating Excellence

WHY SELECTED

- **16+ Years of Professional Experience**
- **Historical Renovations & New Construction**
- **Experienced in all aspects of Plumbing and Fire Protection Engineering**

REGISTRATIONS/ MEMBERSHIPS

- American Society of Plumbing Engineers (ASPE)

EDUCATION

- Certificate, Camden County College AutoCAD Training, 1998
- Certificate, A.S.S.E. Plumbing Design School I, 2000
- Certificate, A.S.S.E. Plumbing Design School II, 2001
- Certificate, Philadelphia Engineers Club, Automatic Sprinkler Design I, 2001
- Certificate, Philadelphia Engineers Club, Automatic Sprinkler Design II, 2002
- Certificate, Carrier, HVAC Design Course, 2005

RECORD OF PROFESSIONAL EXPERIENCE

Mr. McElwee is a Senior Plumbing and Fire Protection Designer for the firm's MEP engineering division. His experience encompasses the design of retail, commercial, healthcare, educational, industrial and municipal facilities. Practical experience includes the design of plumbing systems, medical gas systems, laboratory gas systems, purified water systems, specialty waste drainage systems, as well as various water-based fire suppression systems. Additonal experience includes the review of sprinkler shop drawings and hydraulic calculations for conformance to design documents and NFPA 13 requirements, as well as performing job site inspections to determine compliance of systems installation per contract documents and all revelant codes and standards. Mr. McElwee's experience includes:

New Jersey Turnpike Authority (NJTA), Garden State Parkway South Maintenance Facility Rehabilitation, Statewide, NJ – Plumbing/Fire Protection Designer for 20 new and renovated vehicle maintenance buildings, administration buildings, as well as salt and material storage facilities in five (5) maintenance district yards. Construction cost is $75 million.

Capital District Transportation Authority (CDTA), Saratoga Bus Maintenance Facility, Saratoga Springs, NY – Plumbing/Fire Protection Designer for the design of a new 72,700 SF bus maintenance facility. This project includes a satellite bus garage with administrative offices, dispatch and driver areas, maintenance bays, a fuel dispensing station, a bus wash unit and an indoor bus storage area for a 50 bus fleet. This design of this new facility will be LEED® Certified.

Harrisburg International Airport (HIA), Feasibility Study and Generator Replacement, Airport Rescue and Fire Fighting Building, Harrisburg, PA – Plumbing/Fire Protection Designer for the initial feasibility study and generator replacement for the Airport Rescue and Fire Fighting building, a one-story fire stations serving landside and airfield operations. The 175 kW generator will enable the ARFF to maintain functions critical to the operation of the airport through a variety of conditions.

The University of Pennsylvania, Richards Medical Research Laboratories, EYP Architecture, Philadelphia, PA – Plumbing/Fire Protection Designer for the historical 50,000 SF restoration and renovation to this iconic 1950s Louis Kahn-designed building. This building is targeted for LEED Silver certification. Richards Medical Research Laboratories is declared a National Historic Landmark.

South Jersey Transportation Authority (SJTA), Traffic Operations Center and State Police Barracks, Hammonton, NJ – Plumbing/Fire Protection Designer for the design of a 2,000 SF addition and renovations to The State Police Barracks at Farley Service Plaza of the Atlantic City Expressway. The addition will provide for a new Traffic Operations Center and IT equipment room. Design included new electric power distribution, emergency backup systems, IT systems, and HVAC and plumbing, along with extension of the Life Safety Systems. This project involved coordination with the Department of Community Affairs (DCA) and the architect for reviews and permitting.

Norfolk Southern Railroad, Enola Welfare Building, Enola, PA – Plumbing/Fire Protection Designer for the new, two-story, 15,000 SF building to be constructed in Enola, PA for the Norfolk Southern Railroad. The new building will house offices, training rooms, and locker room facilities. The design features

an Energy Recovery Ventilation unit that uses energy from the exhaust air to temper the make-up ventilation air. Lighting systems controlled with occupancy sensors will further reduce energy use.

The ARCH, University of Pennsylvania, SaylorGregg Architects, Philadelphia, PA – Plumbing/Fire Protection Designer for the complete renovation of a 1927-29 building of the late-Gothic Revival period with a richly detailed facade and interior. The building currently houses three cultural centers, administrative offices, classroom, performance, and meeting space. By restoring the ARCH, the building will serve as another focal point for student activities. This building is being designed for LEED® 2009 Commercial Interiors.

Lafayette College, Renovation, KSS Architects, Inc./Kieran Timberlake Architects, Easton, PA – Plumbing/Fire Protection Designer for the 30,000 SF, two-building renovation and expansion to accommodate the college's new Film and Media Studies theater facility. The project included the renovation and expansion of two existing buildings (Case and Mohican) into offices, classrooms, a screening room, theatrical support areas, residential space, and black box theatre. Special consideration was given to establish and maintain a working arts campus at the bottom of College Hill, creating spaces that promote interaction between students, faculty, staff and community members.

Philadelphia International Airport, Terminals D&E, Philadelphia, PA – Fire Protection Designer for the renovations to Terminal D and E located at the Philadelphia International Airport. The project consisted of enhancements to passenger safety, security and comfort, including optimizing gate capacity, expanded passenger screening, enlarged ticketing lobbies, new baggage handling systems, renovation and construction of 30 new restrooms, over 25 new concession spaces, as well as management and executive office spaces. Services included modifications to existing air distribution systems, hydronic distributions systems, domestic water systems, underground sanitary systems, and fire-suppression systems.

The Bank of New York Mellon (BNY) and CenterSquare Investment Management Group, Existing Conditions Assessment, Meyer Design, Inc., Radnor, PA – Plumbing/Fire Protection Designer for an Existing Conditions Assessment of the 241,000 SF, seven-story office building at 555 Lancaster Avenue in Radnor. The project was the initial phase of a lease arrangement between BNY/CenterSquare and Radnor Properties-555 LA, L.P. The project includes renovation of the 30,000 SF, third floor of the building for occupancy by the CenterSquare Investment Group.

Newton Memorial Hospital, Newton, NJ – Plumbing/Fire Protection Designer for an ambulatory care expansion which included revisions to entire site fire sprinkler system.

615 Chestnut Street, HVAC Renovations, Philadelphia, PA – Plumbing/Fire Protection Designer for the evaluation and replacement of the existing boilers and cooling towers at 615 Chestnut Street. The project included the evaluation of the existing systems and recommendations for the replacement of the closed circuit coolers and boilers serving the existing water source heat pump loop in this 12-story, commercial building.

4300 Liberty Heights, ATI Architects, Baltimore, MD – Plumbing/Fire Protection Designer for the renovation of a three-story, residential building located in Baltimore, Maryland. The project included 14 apartment units served by split-system air conditioning units with gas-fired furnaces, individual metered electric services to each tenant, water and sanitary building services.

Hamilton Mall, SOSH Architects, Hamilton, NJ – Plumbing/Fire Protection Designer for the interior renovation and expansion of an existing retail enclosed mall located in Hamilton, New Jersey. The project also including site lighting for the entire parking lot surrounding the mall.

The Pointe at River Station, Barton Partners, Downingtown, PA – Plumbing/Fire Protection Designer for a new, mixed-use, three-story residential building located in Downingtown, Pennsylvania. The project included retail shell space, 25 apartment units, and green roofs served with air source heat pump units, individually metered electric services to each tenant, water and sanitary building services.

Thomas F. Kerins, EIT

Constructability Specialist

URBAN ENGINEERS
Formulating Excellence

WHY SELECTED

- **32 years of professional experience**

REGISTRATIONS/ MEMBERSHIPS

- Engineer in Training PA
- Construction Management Association of America
- American Society of Highway Engineers

EDUCATION

BS, 1981, Temple University, Civil Engineering

Certificate, 1997, Dale Carnegie Course

RECORD OF PROFESSIONAL EXPERIENCE

Mr. Kerins directs Urban's Constructability Review Group in the Construction Services Practice in which he is responsible for performing detailed constructability reviews on all design documents prepared by Urban in addition to performing these reviews for non-Urban designs for numerous public and private clients.

Mr. Kerins also has extensive experience in the construction and rehabilitation of major highways, interchanges, and bridges throughout Pennsylvania and New Jersey. He has been involved in the design of major highway projects for the Pennsylvania Department of Transportation (PennDOT), the Pennsylvania Turnpike Commission (PTC), and the New Jersey Turnpike Authority (NJTA). Mr. Kerins has also managed construction assignments for these clients that involve complex staging and phasing where the coordination of numerous contractors, utilities agencies, local businesses, and communities has been significant. He is extremely proficient in the practices and procedures utilized by these owners. Mr. Kerins has performed detailed constructability reviews on numerous projects and has developed detailed Critical Path Method (CPM) schedules and preliminary construction schedules that have been included in contract documents. Further, he has experience in evaluating claims issues to protect owners' interests. Mr. Kerins' experience includes:

Open-End Agreement (Plans Checking), Pennsylvania Department of Transportation, PennDOT, District 3-0 - Construction Engineer for an open-end agreement for the review of highway design plans developed by outside consultants, as well as District 3-0 personnel. The work entailed review of plans for conformance with PennDOT's Design Manual Part 3, Design Manual Part 4, Publication 7, Publication 218, Publication 408, applicable Strike-off Letters, and other PennDOT publications and standards. Plans reviewed consisted of, but were not limited to, construction plans, erosion and sediment pollution control, traffic control plans, signing and pavement marking plans, highway lighting plans, structure plans, cross-sections, and right-of-way plans.

I-95/I-276 Connection Project, Pennsylvania Turnpike Commission, Bucks County, PA - Constructability Review Coordinator for this project involving construction of a new interchange between I-95 and the Pennsylvania Turnpike. The entire $700 million program will involve up to 12 separate construction contacts, which will be completed over a 10-year timeframe. The project will include widening and reconstructing the existing five-mile length between MP 351 and MP 356. Construction of new mainline toll facilities, modifications to two existing interchanges at US Route 1 and US Route 13, and replacement of the existing Trevose maintenance facility are also included in the program.

Roadway and Bridge Reconstruction between MP 326.01 and MP 331.33, Pennsylvania Turnpike Commission, Montgomery County, PA - Mr. Kerins helped develop detailed staging and phasing plans required to construct this $158 million project for widening and reconstructing approximately five miles of the Pennsylvania Turnpike, including replacing five Turnpike bridges, new retaining walls, box culverts, noisewalls, and interchange modifications. Additionally, Mr. Kerins provided detailed constructability reviews throughout final design and developed the project's pre-bid construction schedule.

State-Wide Open-End Constructability Review Agreement, Pennsylvania Department of Transportation, PennDOT - Indicative of Urban's leadership in the area of constructability reviews is the fact that they have been retained by PennDOT to assist Engineering Districts throughout the state in performing constructability reviews on non-Urban projects. As Project Manager, Mr. Kerins currently manages this $1 million Open-End Constructability Review Agreement, and has performed reviews on 14 separate projects having a total construction value in excess of $300 million.

SR 168, B05 Shippingport Bridge, Pennsylvania Department of Transportation, PennDOT, District 11-0, Beaver County, PA - CPM Schedule and Claims Manager providing "as-needed" Construction Management Support Services for this $19.8 million project. Urban supports the District's Assistant Construction Engineer in documenting, monitoring, evaluating, and resolving all scheduling concerns, field construction problems, engineering design problems, community and public concerns, contractors submissions, and contractors claims for additional time and costs. Mr. Kerins supervises the Urban Scheduler assigned to the project and reviews, comments, and makes recommendations concerning all major scheduling and claim issues on the project.

Frankford Transportation Center, Southeastern Pennsylvania Transportation Authority, (SEPTA), Philadelphia, PA - As part of Urban's program management assignment, Mr. Kerins performs detailed constructability reviews for SEPTA's Guideway and Systems Contract at the Frankford Transportation Center. This project involves construction of a new guideway on either side of the new terminal building and the supply and cut-over of all rail systems. This project is the most difficult of the six contracts to be let, since all of its work must be coordinated with both an active elevated rail line and surface transportation activities, including bus and trackless trolley service, as well as several other construction phases.

Widening and Rehabilitation of the Schuylkill River Bridge and Replacement of the Diamond Run Viaduct, Pennsylvania Turnpike Commission, Montgomery County, PA - As a Senior Construction Engineer, Mr. Kerins performed detailed constructability reviews for all contract documents prepared by Urban. The plans, specifications, and applicable standards were checked for compatibility; traffic control plans, staging and phasing plans, structure plans, and erosion and sedimentation control plans were reviewed for consistency; site logistics and constraints were identified; alternate methods of performing various construction operations were investigated and evaluated; all bid items and tabulated quantities were checked for clarity and accuracy; and the Engineer's estimate was reviewed and determined to be a realistic means of evaluation and comparison of bids. Mr. Kerins also developed a detailed CPM schedule for the project and a summary level schedule that was included in the contract documents for the bidders' information. He also developed several alternate schedules and cost estimates to demonstrate the potential time and cost impacts associated with accelerating the project schedule to varying degrees.

SR 322-Chester Access Ramps, Pennsylvania Department of Transportation, PennDOT, District 6-0 - CPM Schedule and Claims Manager providing "as-needed" Construction Management Support Services for this $71 million project. Urban was just recently brought onto the project to implement a Project Control System to document, monitor, evaluate, and resolve all related issues, including scheduling, field construction problems, engineering design problems, community and public concerns, contractors submissions, and contractors claims for additional time and costs. Urban now monitors and maintains a CPM schedule for the project in conjunction with the contract documents and the contractor's submitted CPM schedule. Mr. Kerins supervises the Urban Scheduler assigned to the project and reviews, comments, and makes recommendations concerning all major scheduling and claim issues on the project.

SR 1056, Sec. 001, Athens River Bridge, Pennsylvania Department of Transportation, PennDOT, Bradford County, PA - Senior Scheduler and Claims Manager providing "as-needed" Construction Management Support Services for this $7 million project. Reviewed all project documentation, including project Critical Path Method (CPM) Schedules, interviewed project participants, and developed a thorough familiarity with job history and alleged claim history. Met with the Department's representatives and reviewed contractor submitted requests for additional direct costs, indirect costs, and schedule impacts. Reviewed contractor furnished bid information for reasonableness and accuracy. Prepared and submitted to PennDOT's Office of Chief Counsel and Engineering District 3-0 advisory opinions and recommendations on all issues presented by the contractor and participated in the successful resolution of all outstanding claims against the Department.

Charles A. Halboth, PE, PMP

Constructability Reviews

URBAN ENGINEERS
Formulating Excellence

WHY SELECTED

- **36 years of professional experience**
- **Previous RR & Transit construction management experience**
- **Heavy Civil construction inspection experience**

REGISTRATIONS/ MEMBERSHIPS

- Professional Engineer PA
- Professional Engineer (INACTIVE) NJ
- Professional Engineer (INACTIVE) NY
- Certified Project Management Professional (PMP)

EDUCATION

MS, 1982, New Jersey Institute of Technology, Engineering

BE, 1975, Stevens Institute of Techonology, Engineering

RECORD OF PROFESSIONAL EXPERIENCE

Mr. Halboth is an experienced, energetic, and hands-on engineering and construction professional with extensive experience in all aspects of capital project execution. He has a verifiable track record of success in executing complex projects within critical schedule and budget constraints. Mr. Halboth's specific areas of expertise include leadership and team development; construction planning and scheduling; design and constructability reviews; contract administration; and change order management and negotiation. He believes in improving performance through applying the lessons learned resolving numerous construction claims and disputes. Mr. Halboth's experience includes:

Project Management Oversight of Second Avenue Subway (Phase 1), Project Manager on a $4.45 billion extension of subway service from 105th Street to 63rd Street beneath Second Avenue. Responsibilities included monitoring and evaluating design and construction progress as well as conducting independent cost and schedule evaluations to verify project performance. Also assisted in developing strategic plans for enhancing project delivery processes, as well as conducted in-depth assessments of project management capacity and capability in support of the development of funding agreements.

Port Imperial Ferry Terminal, New Jersey Transit - New $45 million ferry terminal built on pile foundations in the Hudson River. Implemented approximately $6 million of value engineering recommendations to maintain budget. Coordinated tenant modifications with owner/client.

PATCO Station Enhancements, Delaware River Port Authority - Renovations to nine line stations, including ADA upgrades, elevator, escalator replacements, and general improvements. Also coordinated all construction with ongoing rail operations.

Walt Whitman Bridge (two contracts), Delaware River Port Authority - Featured reconstruction on eastern approaches (Contract WW-02-2001) and repainting of main and approach spans (Contract No. WW-06-2003).

Frankford Transportation Center, Southeastern Pennsylvania Transportation Authority, Philadelphia, PA - Program/Construction Manager on this project that achieved on-schedule opening of the $120 million multi-modal terminal complex. Planned and executed the complete demolition and reconstruction of 400-foot-long elevated viaduct structure in nine days, including the cutover and recommissioning of all railroad systems. Recovered three month schedule delay through selective acceleration of critical path activities and detailed coordination of work. Regained lost time with minimal additional expense. Daily coordination of nine prime contractors and more than 30 major subcontractors with ongoing owner operation of active terminal servicing 50,000 riders per day. Scope included replacing all rail turnouts and third rail systems within the adjacent Bridge Street Yard. Work was accomplished via weekend track outages while maintaining overall yard operation. Also resolved conflicts and technical problems through comprehensive design reviews prior to construction.

Market Street Elevated Reconstruction Program, Philadelphia, PA - Provided detailed engineering analysis and dispute resolution assistance in defense of contractor's claim arising from termination on a $69 million contract for the reconstruction of an elevated viaduct structure and two passenger stations. Prime contractor was terminated with less than 30 percent of the work completed. Contractor's claim for improper termination involved multiple technical issues and

the evaluation of their individual and cumulative impact on the project schedule. Developed detailed "as-built" and "window schedule" analyses to demonstrate the effect of individual issues on the overall schedule. Claim is was excess of $45 million. Surveys, engineering design, constructability, maintenance of rail operations, third rail power, installation of DFF system, and construction quality were all significant elements in the dispute. Assisted attorneys in deposition preparation and presentation of case at mediation.

Railworks Program, Philadelphia, PA - Project Controls/Construction Manager responsible for replacing 26 bridges, two stations, and 4.5 miles of mainline track, catenary, signal and communications systems in two service shutdowns totaling 10 months in duration. Total Program value was approximately $300 million. Developed program master schedule and incorporated contract schedules as they became available; provided schedule and project status briefings to client and FTA utilizing the "earned value" technique; and negotiated all contract change orders. Also implemented a structured design review process to minimize changes during construction. The project received 11 national awards for management and engineering excellence.

Market-Frankford Railcar (M-4) Procurement, Southeastern Pennsylvania Transportation Authority, Philadelphia, PA - Provided project controls support, including contract administration, scheduling, cost control, cost estimating, change order management, and claims evaluation services for the design and fabrication of 220 subway vehicles for the SEPTA. The $285 million design/build project included improvements to control center and communication systems as well as installing platform surveillance equipment at 28 stations. Developed and implemented an earned value reporting system that combined schedule and cost to demonstrate the effect of both critical and non-critical schedule slippages on the overall project progress. This technique provided an early indication of project schedule problems and facilitated early action to correct the matter.

Freshkills Landfill, Staten Island, NY - Program Manager for multiple projects with a total value of $110 million. Major features included a new maintenance building, new methane gas extraction and transmission facilities (delivered via design/build contract), and improvements to all existing unloading facilities. Also included roadway, waterfront unloading, and utility and security improvements throughout the complex. Performed independent design phase and constructability reviews of all projects prior to bidding. Also developed formal phase completion criteria to validate design progress and authorize commencement of subsequent phase.

Southeastern Pennsylvania Transportation Authority - Technical assistance in evaluating and resolving various contract disputes and claims arising from capital construction projects. Specific efforts have included:

- **Market Street Elevated Reconstruction Program** - Reviewed and evaluated design engineer's request for additional compensation for design phase services. Performed a detailed entitlement and valuation of the 15 issues raised in this $3.5 million request. Assisted in the ultimate negotiation and resolution of the matter for approximately $425,000.
- **Manayunk River Bridge - Evaluated claim brought by contractor as a result of contract default determination** by client. Determined that owner had incorrectly defaulted contractor. Negotiated revised contract, returned to work by contractor, and successful completed project in accordance with revised agreement.
- **Radnor Station** - Delay analysis and estimate of damages claimed by general contractor during the renovation of a commuter rail station in suburban Pennsylvania. Work included the phased reconstruction of outboard platforms, canopies, and parking facilities as well as the complete restoration of the historically significant station building. Prepared expert report and assisted in negotiation that resulted in a favorable settlement.
- **Paoli Transportation Center** - Evaluated the role and responsibility of the construction manager with respect to schedule delays, cost overruns, and defective performance as part of the environmental remediation of a superfund site.
- **Overbrook Station** - Developed expert report in support of SEPTA termination of general contractor during $2.7 million station reconstruction project. Provided technical support and negotiation assistance to general counsel in successful counterclaim against surety for additional costs incurred by SEPTA.
- **FERP Contract CL-2S** - Prepared expert report evaluating the responsibility of the designer, construction manager, and contractor relative to defective structural steel construction. Provided technical support during negotiations, which resulted in a settlement for a significant portion of the additional costs incurred by SEPTA.
- **FERP Contracts CL-2D, CL-4D, SCB-1** - Prepared expert report evaluating the responsibility of the designer, construction manager, and contractor relative to improper connection of precast concrete deck sections to structural steel framing. Provided technical support during negotiations, which resulted in a settlement for a significant portion of the additional costs incurred by SEPTA.

- Institute of Certified Management Accountants (ICMA)
- National Contract Management Association (NCMA)
- Association of Certified Fraud Examiners (ACFE)
- Association of General Contractors of America (AGC)

EDUCATION

MBA, 1999, St. Joseph's University, Financial Management

BS, 1983, La Salle University, Accounting (Minor Concentration Pre-Law)

RECORD OF PROFESSIONAL EXPERIENCE

Mr. Holak is a dedicated and adaptable financial and administrative executive with extensive experience in increasing responsibility in the solicitation, administration, and negotiation of private and government contracts and the preparation, audit, and analysis of financial systems and statements. He is a proven leader who takes pride in the integrity, efficiency, and thoroughness of all work. Mr. Holak's experience includes:

Risk Assessment, Los Angeles County Metropolitan Transportation Authority (LACMTA) Westside Subway Extension Project, Federal Transit Administration - Led two detailed risk assessments of LACMTA's $5.9 billion Westside Subway Extension Project as the project prepared to enter into the Preliminary Engineering and the Final Design phases. Responsibilities included managing the characterization, risk identification, risk significance, mitigation strategies, and Contingency Management Plan for the project by coordinating numerous technical experts, along with key representatives from the grantee and FTA. Facilitated the performance of multiple Risk Workshops in support of the initiative.

Risk Assessment, Los Angeles County Metropolitan Transportation Authority (LACMTA) Regional Connector Project, Federal Transit Administration - Led a detailed risk assessment of LACMTA's $1.36 billion Regional Connector Project as the project prepared to enter into the Final Design phase. Responsibilities included managing the characterization, risk identification, risk significance, mitigation strategies, and Contingency Management Plan for the project by coordinating numerous technical experts, along with key representatives from the grantee and FTA. Facilitated the performance of a Risk Workshop in support of the initiative.

Risk Assessment, San Francisco Municipal Transportation Agency (SFMTA) Central Subway Extension Project, Federal Transit Administration – Facilitated and chaired a two day Risk Workshop pertaining to the Risk Assessment of the SFMTA's Central Subway Extension Project for the FTA, as part of the grantee's request for a Full Funding Grant Agreement (FFGA). Responsibilities included evaluating the scope, cost, and schedule projections expressed by the grantee against the FTA's OP 40 Risk Assessment guidelines. Results of the Risk Assessment were then incorporated into the FTA's Report on the FFGA request and led to the need for the grantee to expand on primary and secondary mitigation measures as part of their Risk and Contingency Management Plan.

Federal Transit Administration New Starts Workshop, Cost Estimating Section – On invitation and request from the FTA, moderated the Cost Estimating section of the annual FTA New Starts Workshops, offered to grantees and FTA regional staff. Workshop moderators were chosen based on their proven national expertise in the New Starts process and provided guidance to owner representatives and FTA staff on best practices, procedures, and requirements.

Federal Transit Administration New Starts Workshop, Cost Estimating Section – On invitation and request from the FTA, moderated the Risk Assessment practices section of the annual FTA Engineer's Conference, offered to the PMOC community and FTA regional staff. Workshop moderators were chosen based on their proven national expertise in specific areas, with Mr. Holak being one of two moderators appointed to discuss current practices and updates in the area of Risk Assessments of major capital projects.

Assessment of Regional Transit District's 2009, 2010, 2011, and 2012 FasTracks Financial Plan, Denver Regional Council of Governments - Project Manager for the assessment of the annual Financial Plan for one of the nation's largest transportation projects - the FasTracks project in Denver, CO for four consecutive years. Working for the MPO, DRCOG, the assessment included evaluation of the 2009, 2010, and 2011 Capital and Operating budgets for this $6.9 billion project, and overseeing the analysis of Revenue and Financing plans to enable the project to successfully meet its program schedule within budget. Assessment required presentations in public session for this highly visible and scrutinized program.

Lead Instructor for Risk Assessment Course @ Various Locations, National Transit Institute (NTI) – Led a two-day Risk Assessment course as part of Urban's contract with NTI, under a grant from the FTA, to provide FTA-sanctioned risk assessment instruction at various locations throughout the United States. The course is structured in accordance with the FTA's Oversight Procedures and is continually updated to be consistent with current regulations.

Physical Infrastructure Sustainability Research Project, Utah Transit Authority - Project Manager for the evaluation of UTA's existing asset infrastructure inventory and an assessment of the strategic and financial plans required to maintain the inventory in a State of Good Repair. Research and report is consistent with heightened national concern on eroding transportation infrastructure and developing proactive Asset Management Plans.

Special Assignments, Federal Transit Administration Project Management Oversight Consultant Contract – On request from the FTA, analyzed and opined on Buy America issues related to several high-profile national capital projects. Also, was asked to evaluate and offer refinement to the Procurement section of FTA's Quality Assurance/Quality Control Manual for Project Management Oversight Consultants, and to review and opine on revisions to the FTA's Operating Procedures for Cost Estimating and Project Scoping.

Chief Financial Officer, Neshaminy Constructors, Feasterville, PA – Full charge executive providing complete direction and management of all financial, accounting, human resource, office, information technology, contract administration and purchasing activities. Developed and monitored several significant technical entitlement and time delay claims resulting in favorable settlements. 2008

Senior Director of Procurement and Director of Contract Administration, Southeastern Pennsylvania Transportation Authority, Philadelphia, PA - Performed all tasks associated with being the Contracting Officer for North America's fifth largest public transportation company having an annual capital budget of approximately $500 million. Responsible for overseeing more than $400 million of purchases and contract awards per year. Directed, managed, and controlled the daily activities of over 140 diverse individuals in all aspects of procurement, contract administration, supply chain management, and regulatory compliance. Administered and managed the negotiation of contracts, legal matters, cost/price analysis, vendor performance ratings, and quality assurance issues that impacted procurements. Coordinated and communicated with supporting departments within SEPTA and senior representatives from vendors and funding agencies. Monitored industry trends, legislative changes, and peer group ideas to explore new and better ways for simplifying the procurement process, while promoting the concepts of cost savings, increased competition, enhanced efficiency, and conformance to governmental funding requirements. 2005

Contracting Officer/Manager, Overhead Accounting, Parsons Brinkerhoff, New York, NY - Ensured that all contracts complied with relevant regulations and were legally enforceable. Negotiated contract terms, disputes, and claims with top-level representatives from client organizations, audit agencies, and funding sources. Directed internal pre-proposal cost/pricing reviews for accuracy and compliance with applicable contractual and regulatory sanctions. 2000

Manager, Contract Audit, Senior Contract Auditor, and Contract Auditor, Southeastern Pennsylvania Transportation Authority, Philadelphia, PA - Planned and conducted audit programs, providing an independent evaluation of contractor's costs, financial statements, and internal controls in compliance with GAAS, CAS, and FAR. Assisted in preparing, negotiating, and administering numerous types of contracts with vendors spanning a wide range of industries and disciplines. Analyses of over 700 pre-contract and contract modification proposals resulted in more than $5 million of cost avoidance. Developed strategic plans, goals, and budgets for the department that ultimately led to several organization-wide policy and procedural changes. 1999

Logistics Management Specialist, United States Naval Air Technical Services Facility, Philadelphia, PA - Developed and analyzed fiscal and multi-year budgets for a division responsible for the multi-billion dollar F/A-18 Aircraft Program. Formulated and reviewed cost proposals and expenditure reports. 1985

EDUCATION

BS, 1982, Loyola Marymount University, Civil Engineering

MS, 1996, Villanova University, Civil Engineering

Certificate, 2008, Urban Engineers, Inc., Project Management Training

RECORD OF PROFESSIONAL EXPERIENCE

Mr. Mitchell's 30+ years of construction consulting experience includes expert witness testimony for construction claims, as well as technical and management experience. He has worked with clients on federal, state, local, and private projects. Project types include heavy, marine, highway, transit, educational, hospital and health-care, military, aviation, hotel, and other commercial construction. His experience includes all aspects of construction contracts - procurement, management, and dispute resolution.

He also has experience with the design, drafting, and editing construction contracts; drafting general and special provisions for contracts; and technical specifications. While working on construction projects, he performed construction inspections, quality control inspections, and quality assurance inspections. He has performed construction management and contract administration; change order evaluations and negotiations; and construction claims analyses for time extension and cost damages entitlement.

Mr. Mitchell's experience includes dispute resolution of construction claims. When construction claims have been elevated to litigation, Mr. Mitchell has successfully provided expert testimony on matters related to quality management, entitlement, damages, and delays. He provides training courses and seminars on a wide variety of construction topics, including construction management, CPM scheduling, claims avoidance, writing, and dispute resolution. In addition to construction experience, Mr. Mitchell has provided insurance claim investigations to determine cause and origin of physical property damage.

Mr. Mitchell's experience includes the following:

AIG/Lexington/Chartis Insurance - Directed and/or conducted insurance claim investigations on behalf of AIG and related companies for construction-related projects, such as a high-rise commercial complex, commercial and residential structures, public works facilities, and municipal properties. Insurance policies related to property and casualty claims. The investigations required documentation research and review, site inspections, engineering analysis, and estimate of damages. Approximately 75 assignments have been performed since 2006.

Management of Transit Construction Projects, National Transit Institute, Nationwide- Project Manager and course instructor for the Management of Transit Construction Project, which is provided by the National Transit Institute, funded by the Federal Transit Administration (FTA). Instruction is provided to transit agency professionals nationwide. The course content covers federal transit laws requiring projects for a major capital investment (>$100 million) to have a Project Management Plan approved by the FTA. This course covers the basics of good project management for transit projects from preliminary engineering, through construction, and ending with start-up and testing. Mr. Mitchell has provided this course in Los Angeles, CA; Detroit, MI; Seattle, WA; Anchorage, AK; Miami, FL; Honolulu, HI; Portland, OR; Phoenix, AZ; St. Paul, MN; Fort Lauderdale, FL; Newington, CT; and Washington, DC.

Replacement of Clifton Avenue and Nesbitt Street Bridges over NJ Transit and I-280, New Jersey Department of Transportation, Newark, Essex County, NJ - As a subconsultant to Ammann-Whitney, review of baseline and updated schedules. Project started in April 2009 and scheduled to be completed by November 2010. Evaluation of schedules focuses on contract compliance, delay analysis between each updated period, and project progress evaluation. Evaluated time impact analyses presented by the contractor for project

completion extension. Project inspection is performed periodically to monitor contractor's progress.

Route 280 at GSP Interchange 145, Burnet Street to Steuben Street, New Jersey Department of Transportation, East Orange, Essex County, NJ - Analyst for a $30 million reconstruction of the interchange at I-280 and Garden State Parkway. The assignment was to evaluate the contractor's submitted schedules for compliance with contract documents and acceptability. Additionally, evaluated time extension analyses related to value engineering changes, change of plans, and change of phasing.

Construction Claim Analysis, Haynes Construction v. ConnDOT, Highway Maintenance and Electrical Facility and Salt Storage Shed, Southbury, CT - Claim evaluator for a $917,000 construction claim, including 133-day delay to project completion date. ConnDOT required evaluation of entitlement for claim issues for the $5.5 million construction of the Maintenance and Electrical Facility. Claim issues included differing site conditions, productivity inefficiencies, and changed conditions. Additionally, an as-built schedule analysis was performed to determine the source and magnitude of the delays. The project documents were reviewed to determine liability of the claim issues and delays. Testified in mediation on behalf of the State in July 2009. Mr. Mitchell assisted the Department and Office of Attorney General in settlement of claim issues.

Construction Claim Analysis, Oxford -Waterbury Airport, ConnDOT, Southbury, CT - Evaluated a $509,000 construction claim, including a 421-day delay to the project completion date. ConnDOT required evaluation of entitlement for the claim issues related to changed conditions and increased quantity of material. An as-built schedule analysis was required to be performed using the project documentation. Liability analysis was determined using the project documentation. Assisted ConnDOT in settlement negotiations.

General Engineering Services: Construction Monitoring and Inspection, Delaware River Port Authority (DRPA), New Jersey and Pennsylvania - Mr. Mitchell performed project management functions for this GEC contract with the DRPA in 2011 and 2012. The assignments included Mr. Mitchell performed project management functions for this GEC contract with the DRPA in 2011. The assignments included oversight, attending progress meetings, and communication with DRPA officials during construction progress for the Walt Whitman Bridge Permit Vehicle Staging Area (WW-15-2010), Commodore Barry Bridge Security and Lighting Improvements (CB-19-2010), and Replacement of Electrical Sub-station on Commodore Barry Bridge.

Second Avenue Subway Project Management Oversight, Federal Transit Administration, New York, NY - Analyst for a $3 billion project for the Second Avenue Subway project. The work included tunnel boring and cut and cover station construction. The assignment was to assess the labor availability and provide a risk analysis if the labor market would support construction of project from 2007 to 2013. Additionally, he provided an ongoing assignment to evaluate change orders for compliance to prescribed procedures outlined in the Project Management Plan and requests for time extension by reviewing Primavera schedules.

EXPERT TESTIMONY EXPERIENCE:

- 2009, Expert Witness, Mediation, Ames/Dawson vs. US Department of Veterans Affairs (VA), critical path method (CPM) scheduling issues, delays, and damages, presentation on behalf of the VA regarding delays at Building No. 650, Mather Field, Sacramento, CA.
- 2009, Expert Witness, Mediation, Haynes Construction vs. Connecticut Department of Transportation (ConnDOT), Construction Impacts and Scheduling issues, presentation on behalf of ConnDOT.
- 2010, Expert Witness, Arbitration, Shire Corporation (Crum & Foster) v. Rholde Island Department of Transportation, CPM schedule analysis and responsibility for excusable and compensable delays to the project completion for the reconstruction of the Greenwood Railroad Bridge, Warwick, RI.
- 2012, Expert Witness, Pennsylvania Board of Claims, Sordoni Construction Services, Inc. v. Pennsylvania Department of Transportation (PennDOT) v. City of Scranton, PA v. Pasonick Engineering Services, Inc. Testified on behalf of PennDOT on issues related to construction documentation, quality control/quality assurance contract compliance, and related issues for the construction of the Park, Plaza, and Pedestrian Court, Scranton, PA.

RECORD OF PROFESSIONAL EXPERIENCE

New Transit Hub at Financial Plaza Deck, City of Poughkeepsie, NY – Office Engineer and Document Control for this $1.2 million heavy civil project to create a new bus transit services hub. (2013 – present)

Project Management Oversight Program, USDOT Federal Transit Administration (FTA), Region II Capital Projects, MTA East Side Access (ESA) and Second Avenue Subway (SAS), New York City, NY - Construction Management Manager on the team tasked with Oversight Procedure 53 - Readiness to Bid Construction Work (OP53). Provided assistance with document retrieval, organizing, and review. (2010 - present)

Portal Bridge Capacity Enhancement, New Jersey Transit (NJT) and Amtrak, Secaucus, NJ - Office Engineer for this over $1 billion multi prime contractor project which is due to get underway shortly. (2010 - present)

Meadowlands Railroad and Roadway Improvement Project, New Jersey Sports and Exposition Authority (NJSEA), New Jersey Transit (NJT) and New Jersey Department of Transportation (NJDOT), East Rutherford, NJ - Office and Contracts Manager on this $211 million multi prime contractor project with alignment through sensitive environmental areas including Superfund sites.

Office Manager responsible for hiring and training office staff, maintaining office and computer network, maintaining all project records, both paper and electronic, logging and distributing all incoming and outgoing correspondence and processing, logging and maintaining all contractor submittals. Also, responsible for compiling and maintaining all project cost records and reporting same on a monthly basis.

Contracts Manager prepare requests for proposals for owner and engineer requested changes, prepare independent estimates, analyze contractor proposals, perform detailed analysis of time and material invoices, consult with Resident Engineers and advise owner, and negotiate with contractors and prepare all documentation required to effect the changes.

Successfully analyzed, negotiated and processed over 100 time and material invoices incorporating over 350 vendor invoices for unanticipated work on a superfund site with a final value of $1.4 million, $200,000 less than the contractor's request. Also maintained and prepared documentation and invoices which allowed the Owner to recover over $3.5 million in cleanup and other costs from the original superfund site owner.

Also, audit contractor invoices for allowance items, review contractor submittal logs for accuracy, maintain insurance certificate and certified payroll files and report all deficiencies to Resident Engineer and prepare notifications to the contractors for all noted deficiencies. (2005 - 2010)

Northeast Corridor Modifications Project - Secaucus Transfer Program, New Jersey Transit, Secaucus, NJ - Contracts Manager on this $610 million multi prime contractor project responsible for preparing requests for proposals for owner and engineer requested change orders, analyzing contractor requested changes and advising owner, preparing independent engineers' estimates for potential change orders, assisting the owner in negotiating change

orders, and preparing records of negotiation meetings for owners' representative's signature. Also maintained historical project cost data, prepared cash flow projections, reviewed and processed contractor payment requests and process, and logged and distributed all incoming and outgoing correspondence.

Successfully tracked, analyzed, negotiated and processed host railroad force account invoices reducing the billings by over one third saving the Owner many millions of dollars. After years of savings, the Owner requested a presentation on our tracking and verification system, and subsequently based on confidence in the system utilized our work to reduce millions of outstanding billings from other projects realizing about one third in savings

Construction Management Site Office Administration Manager responsible for budgeting and cost control of a $6.9 million operating budget. Also responsible for negotiating lease for 18,000 square feet of field office space to support the CM team and owner's field and office personnel for the duration of the project. Also designed the office layout and supervised the build-out of the space. Purchased and supervised installation of a PC-based network with over twenty-five workstations including the implementation of project management and scheduling software and trained personnel in use of the system. Responsible for developing project forms and systems, purchasing, expediting, inventory control, personnel administration and training, and providing support services to the 80-person construction management team including various joint venture partners, subconsultants, and railroad personnel. (1993 - 2005)

Martin Luther King, Jr. Courthouse and Federal Office Building, US General Services Administration (GSA), Newark, NJ - Field Office Manager responsible for the cost control of a $100,000 operating budget on this GSA project. Prepared requests for proposals for owner and engineer requested change orders, analyzed contractor requested changes and advised owner, and prepared independent engineers estimates for potential change orders. Assisted the owner in negotiating change orders and prepared records of the negotiation meeting for the owner's representatives to sign. Maintained historical project cost data and prepared cash flow projections. Reviewed and processed contractor payment requests. Processed, logged and distributed all incoming/outgoing correspondence. Responsible for field office leasing and build-out including three office relocations during the course of the project, design and implementation of computerized document and shop drawing control systems, development of project forms, purchasing, expediting, inventory control, personnel administration and training, and provision of support services for the construction manager and five resident engineers and inspectors. Assisted in inspection of the construction work primarily in the foundation and earthwork areas. (1989 - 1993)

North Jersey Coastline Electrification and Signal Project, New Jersey Transit, Matawan to Long Branch, NJ - Construction Site Office Manager responsible for the budgeting and cost control of a $600,000 operating budget. Developed project forms, purchased, expedited, performed inventory control, trained personnel, and provided support services to the construction manager and five resident engineers. Designed and implemented a document and shop drawing control system and maintained the main office and two satellite offices for field staff. (1985 - 1988)

Various Job Site Offices, Mountain Lakes, NJ - Construction Office Manager responsible for setting up new job site offices, supervised and trained office staff, purchased supplies, expedited materials, controlled inventory, shipped and received materials, and prepared preventive maintenance manual for bulk material handling facilities.

Field Engineer responsible for quality control inspections. Inspected subcontractor's installation work to ensure conformance to plans/specifications. Inspected fabrication shops and equipment being built for the project and prepared as-built drawings depicting field changes. (1980 - 1984)

RECORD OF PROFESSIONAL EXPERIENCE

Sita Mohan is an engineering professional with over 17 years of experience in the field. A certified Engineer-in-Training (State of New Jersey, 2005); Ms. Mohan has almost 12 yrs of experience in Project Management and Construction Administration. Her expertise includes Project Documentation Control, Estimating and preparation of Change Orders. Ms. Mohan has completed the 40-hour OSHA HAZWOPER Training. Has Excellent Computer and communications skills.

Phase 4 Hoboken Rail & Ferry Terminal Facilities Repair, NJ Transit, Hoboken, NJ

The Phase 4 Project on the Hoboken Terminal Repairs has a Contract cost of $948,000.00. The contract involves the repairs to the roof over the Rail & Ferry terminals and replacement of copper gables. As Assistant Resident Engineer/Office Engineer, main responsibilities include project documentation control, preparation of meeting minutes and review of contractor pay application documents. (2013-Present)

Hoboken Terminal -YMCA Building Roof & Façade Renovation, NJ Transit, Hoboken, NJ

The YMCA Roof & Façade Renovation Project has a Contract cost of $4,129,150.00 including almost $2,000,000.00 of copper installation/repair work. The contract includes the repairing/replacing the copper façade of the YMCA building & roof work. As Assistant Resident Engineer/Office Engineer, main responsibilities include project documentation control, preparation of meeting minutes and review of RFIs/Shop drawings/Submittals , contractor pay application & backup documents. (2013-Present)

Hudson-Bergen Light Rail (HBLR) 2nd St. Station Walkway, NJ Transit, Jersey City-Hoboken, NJ

The HBLR project had a contract cost of $2,597,000.00 and duration of 360 days. The scope of the project included the construction of a 3300 mile of Asphalt/Concrete Walkway equipped with fencing, lighting, CCTV, Landscaping etc from the west end of the 2nd St. Light Rail Station in Hoboken to a future development site which is currently vacant (Previously Van Leer Chocolate Factory site) in Jersey City. In the role of the Assistant Resident Engineer/Office Engineer, main responsibilities included project documentation control, preparation of meeting minutes and review of RFIs/Shop drawings/Submittals , contractor pay application & backup documents. Also was involved in site supervision as required. (2013-2014)

Lower Hack Bridge Rehabilitation Project, NJ Transit, Jersey City, NJ.

The Lower Hack Bridge is a 3-Track NJ Transit Railroad Bridge over the Hackensack River. This is the second phase of the project with a contract cost of approximately $14.8 million. The scope of the project includes under-deck repairs of the approach slabs, repairs of the concrete piers, parapet walls, concrete slab and waterproofing, track & ballast removal and also repairs to the structural steel members in the lift and tower span. As Assistant Resident Engineer/Office Engineer, responsibilities include project documentation control, preparation of meeting minutes and review of contractor pay application & backup documents. (2010-2013)

Metropark Platform Reconstruction Project, Metropark Station, New Jersey Transit, Iselin, NJ
Metropark Station is situated on the Northeast Corridor of NJ Transit Railroad System. It is served by both Amtrak and NJ Transit Rail systems. The Contract value was $29.8 million. The project scope included the reconstruction and extension of both the existing east bound & west bound platforms, improvements to the station building, installation of climate controlled waiting shelters, reconstruction of existing elevator, installation of a new elevator with access to the east bound platform and improved access to the station platforms from Rt. 27 for commuters. As Assistant Construction Manager, main responsibilities besides assisting the Construction Manager included Documentation Control, Preparation of Meeting Minutes, Maintenance of Submittal, RFI & NPC Logs, Review Pay Applications, Processing NPCs, and Site supervision. (2009-2010)

Newark Drawbridge and Approach Structures Rehabilitation, NJ Transit, Newark/Harrison, NJ
The Newark Drawbridge is a NJ Transit Railroad Bridge over the Passaic River, MP 5.8 and located adjacent to Newark Broad St Station, Newark, NJ. The Project Contract was approximately $23 million. The scope of construction included rehabilitation of the structural and mechanical components of the bridge & its operating system, substructure concrete repairs and repairs to the existing fender system in the navigation channel. Responsibilities as Office Engineer included the following, Documentation Control, Preparation of Meeting Minutes, and Maintenance of Submittal & RFI Logs. (2008-2009)

The Capacity Constraint Relief and Historic/ADA Improvements Project at Newark Broad St. Station, NJ Transit, Newark, NJ.
Newark Broad St Station is a major historic station located in Newark, NJ. The improvements were made to make the station compatible with the American with Disability Act (ADA). The contract value was approximately $58 million. The project scope included the construction of a new center island high-level Platform, a new eastbound high-level platform, reconstruction of Martin Luther King, University Avenue & Broad St railroad bridges, installation of new elevators, stairs and rehabilitation of the main station building. Main responsibilities as Office Engineer included Documentation Control, Preparation of Meeting Minutes, Communicating with Consultants & the Contractor on Submittal Management, RFIs & Mock-up related issues, Maintenance of Submittal & RFI Logs, Preparing and negotiating Change Orders, Site work (2006-2009).

Estimation of Change Orders on various mentor and emergency projects in the 5 Boroughs, NYC School Construction Authority, New York, NY
As Assistant Estimator, main responsibilities included assisting the Chief estimator in the following areas: - Processing & Preparation of Change Orders using Expedition Primavera; Communicating with Contractors & Subcontractors on the various aspects of Change orders; Negotiating Change Orders with Contractors; Preparing all necessary documentation for Change orders & obtain SCA approval; Performing all necessary tasks to complete Change Order processing; Maintaining & preparing logs and reports on status of Change Orders; Communicating with suppliers & vendors to obtain pricing on materials for estimating; and Estimating and conducting Quantity Take-offs on various construction projects mainly for Bidding purposes (TDX Construction Corp., NY 2004-2006).

Improvement of Newark Pennsylvania Station, New Jersey Transit, Newark, NJ
The project mostly involved construction work for station renovation, installation of wastewater facilities, fencing Transit property, Punch List work etc. Main responsibilities as Project Engineer included assisting the Project Manager & Quality Control Manager in the following tasks: Preparation of Change Orders and cost proposals; Preparation of quantity take-offs; Procurement of materials and man power; Negotiation of subcontracts; Supervision and assistance in the preparation of Submittals based on Contract Specifications and Drawings; Preparation and maintenance of Submittal and RFI Logs; Verification, review and submission of Submittals, Shop Drawings, As-built drawings etc; Maintenance and documentation of Daily Construction Reports; Review of subcontractor progress payment request; Preparation of payment requisition; and Preparation of O & M Manuals. (Volmar Services Inc., NY, 2002-2004)

Various Job Order Contracts for New York City Transit Authority, New York, NY
The project mostly involved construction work for station renovation, installation of wastewater facilities, fencing Transit property, Punch List work etc. Main responsibilities as Project Engineer included assisting the Project Manager & Quality Control Manager in the following tasks: Preparation of Change Orders and cost proposals; Preparation of quantity take-offs; Procurement of materials and man power; Negotiation of subcontracts; Supervision and assistance in the preparation of Submittals based on Contract Specifications and Drawings; Preparation and maintenance of Submittal and RFI Logs; Verification, review and submission of Submittals, Shop Drawings, As-built drawings etc; Maintenance and documentation of Daily Construction Reports; Review of subcontractor progress payment request; Preparation of payment requisition; and Preparation of O & M Manuals. (Volmar Services Inc., NY, 2002-2004)

Steve Mathew Contract Administration

URBAN ENGINEERS
Formulating Excellence

WHY SELECTED

9 years of professional experience

REGISTRATIONS/ MEMBERSHIPS

EDUCATION

- Manhattan College, Riverdale, NY, BS - Civil Engineering
- Saint Thomas Aquinas College, Sparkill, NY, BS - Mathematics

RECORD OF PROFESSIONAL EXPERIENCE

Mr. Mathew's experience as an Engineer entails a high level of detail and accuracy in various aspects of construction, as an Inspector or an Office Engineer. He is a team player, who is successful at establishing rapport with contractors, clients. He is capable of adapting to the sometimes fast-paced nature of certain projects, and is calm under pressure. Mr. Mathew's experience includes the following:

Interim Project Management Support for Projects Related to Superstorm Sandy, Port Authority Trans-Hudson Corporation, Jersey City, NJ – Communications Coordinator who assisted PATH in developing a Project Management Plan for all projects that require restoration due to the events of Superstorm Sandy. Conducted meetings with various managers for the understanding of policies across departments, then collected, compiled, and organized this information to complete the plan, which is required for funding by the Federal Transit Administration for Sandy-relief projects. Prepared reports and meeting minutes. (2013 – Present)

Robert F. Kennedy Bridge Utility Relocation, MTA Bridges & Tunnels, New York, NY – Office Engineer who oversaw the day-to-day functions of the field office on a utility-relocation project on Randall's Island, in New York City. Prepared all reports, including meeting minutes and monthly progress reports. Organized all files. Maintained communication with all personnel, including the contractor, subcontractors, and client. Evaluated payment requisitions. (2013)

Repaving and Debris Removal, MTA Bridges & Tunnels, New York City – Inspector who presided over work performed at the Throgs Neck Bridge (repaving) and on the Verrazano-Narrows Bridge (debris removal). Observed and documented actions taken by the Contractor, as well as site conditions prior to work performed and after work was completed. Communicated with Contractor and Project Engineer on project issues and progress. Prepared daily reports. (2012)

Throgs Neck Bridge Steel Repairs, MTA Bridges & Tunnels, Bronx, NY – Assistant Office Enginer who assisted staff on creation of database of all steel repairs to be performed on the Throgs Neck Bridge in the Bronx, NY. Populated database with repair details, and added and updated repair locations as new issues arose. Programmed spreadsheets to automatically generate reports. (2011 – 2012)

Lane Striping, New York State Thruway Authority, Westchester, Rockland, Orange, and Ulster Counties, NY – Inspector who presided over work performed by the Contractor on a new and experimental procedure designed by the Thruway Authority. Maintained a chronology of events onsite, and maintained constant communication with the Project Engineer and the Contractor. Conducted measurements and collected samples of items installed by the Contractor. Conducted cost analyses and produced estimates. Prepared reports using the New York State DOT's CEES program (Computerized Engineer's Estimate System) and spreadsheets. (2011 – 2012)

Logistics Planning, Port Authority Trans-Hudson Corporation, Jersey City, NJ – Project Engineer who assisted PATH in developing and implementing new management processes and procedures focused on long- range planning and scheduling of all PATH facility forces, including meeting equipment needs as well as track rights to support the Capital Program, and planning ongoing system

repair and maintenance work and various other construction activities. Evaluated proposed changes to project schedules for their impact on other planned work and on available and planned resources. Managed the acquisition of data regarding actual performance of work and utilization of resources for comparison against original plans and schedules. (2009 – 2010)

Yankee Stadium City Work, New York City Economic Development Corporation, Bronx, NY – Office Engineer who coordinated, scheduled, and presided over meetings and site walkthroughs with contractors, agencies, and utility companies. Prepared meetings minutes, and maintained communication with contractors, agencies and utility companies. Reviewed drawings and documents. Maintained and organized files. Evaluated payment requisitions from contractors for submission to city agencies. Prepared reports. (2007 – 2009)

Assorted Projects, GEA Engineering, Nanuet, NY – Staff Engineer who performed calculations and worked on drawings on various projects. Prepared reports. Performed fieldwork, including topographical surveys, percolation tests, and sampling. Maintained contact with clients and contractors. (2006 – 2007)

Douglas Chin

Compliance Monitoring

URBAN ENGINEERS
Formulating Excellence®

WHY SELECTED

- **3 years of professional experience**
- **Compliance experience from working on One World Trade Center (Freedom Tower)**
- **Experience working with law enforcement**

REGISTRATIONS/ MEMBERSHIPS:

- Associate member of the Association of Certified Fraud Examiners
- Member of the National Association of Inspector Generals
- Member of the New York – New Jersey Chapter of the Association of Inspector Generals
- Pi Alpha Alpha Public Administration Honor Society
- Phi Beta Kappa Honor Society

EDUCATION:

- M.A., 2012, CUNY John Jay College of Criminal Justice, Public Administration
- B.A., 2009, SUNY Binghamton, Sociology

RECORD OF PROFESSIONAL EXPERIENCE

Mr. Chin holds a Master's degree with experience in compliance monitoring, labor investigations, and background checks on construction projects. He works as a consultant with the Port Authority of New York and New Jersey Office of the Inspector General to oversee the construction of One World Trade Center, a ($4 billon plus project) for overseeing integrity related fraud, waste, abuse, and misconduct. Mr. Chin has reviewed certified payrolls, wage schedules, and Collective Bargaining Agreements in accordance with the Davis-Bacon Act and New York State Labor Laws. Mr. Chin's experience includes:

One World Trade Center Integrity Monitoring – Analyzes certified payrolls, attendance records, wage rates, union records, contracts, checks, and paystubs for wage, benefit, classification, and labor violations. Maintains electronic records and organized files including documents needed for evidence and litigation. Works and coordinates with attorneys, investigators, and forensic accountants in related investigations, including cases referred to prosecution. Assists in additional audits and investigations as needed.

City University of New York (CUNY) – Performed prevailing wage investigations and background checks for the Facilities Planning Construction Management of CUNY. Received and investigated allegations. Conducted site visits and interviewed workers. Background checks consisted of checking for criminal misconduct, verification of licensing and certifications, debarments, safety violations, liens, tax warrants, and outstanding debts. Wrote reports and summary of findings.

City of Binghamton Economic Development Office – Contacted and surveyed businesses in triple cities (Binghamton, Johnson City, Endicott New York) area. Designed and composed the first edition of the Green Resource Guide. Pioneered the program succession plan.

Moses J. Gaster, EIT, CEP

Estimator

URBAN ENGINEERS
Formulating Excellence

WHY SELECTED

- **15 years of professional experience**

REGISTRATIONS/ MEMBERSHIPS

- Engineer in Training PA
- Certified Estimating Professional
- Med-Tex Refiner's Traininbg Process Safety Mgmt
- TWIC Card

EDUCATION

BS, 1999, Penn State University , Civil Engineering

RECORD OF PROFESSIONAL EXPERIENCE

Mr. Gaster is an estimator with experience in a wide variety of construction fields, projects, and responsibilities. He has experience estimating industrial projects up to $1 billion, including coal, natural gas, and geothermal power plants and water treatment facilities. His responsibilities have included field engineer, estimator, scheduler, and cost engineer for construction contracting firms on large design-build projects.

Blanket Purchase Agreement for Cost Estimating Services, General Services Administration, Region 3 - Estimator for continuing, open-ended assignment, including plan development for conceptual through final design and construction costs ranging from $200,000 to $20 million. These have included interior and exterior renovations, new construction, and security enhancements throughout the full range of CSI divisions. Facilities users include US Marshals, FEMA, FBI, IRS, NARA, SSA, FBI, federal and state courts, and Immigration.

Student Housing, Rutgers University, Camden, NJ - Cost Engineer for construction manager, Joseph Jingoli & Son, Inc. (JJS). on fast-paced project to complete a 12-story student apartment building before the Rutgers fall semester furniture move-in date. Provided change order/claims management, review, tracking, and reporting for the prime contact and all subcontracts in order to minimize the project cost without delaying the schedule delivery dates.

Data Center Expansion/Renovation, Nomura Securities International, Inc., Piscataway, NJ - Cost Engineer for design-build construction manager, JJS, on fast-paced project to upgrade/expand existing operating data center facility in order to meet the client's deadlines (two phases). Provided claims management of all subcontracts and change order management of the prime contract.

Security Upgrades, Exelon, Pottstown, PA - Cost Engineer for design-build general contractor, JJS, on fast-paced project to implement security changes to existing nuclear power plants in order to meet government audit deadlines: Limerick, Peach Bottom, and Oyster Creek. Provided daily cost tracking. Projections, and change management in order to keep the project within budget.

Senior Estimator, O'Brien & Gere Inc., Blue Bell, PA - Provided in-house estimates of environmental, reservoir, utility, and water treatment projects at various design levels in order to manage the client's needs vs. budget. Priced and compared construction options to assist design decisions.

Scheduler, O'Brien & Gere Inc., Blue Bell, PA - Provided in-house schedule baselines, analyses, and updates for conceptual designs and construction projects.

Walter Scott, Jr. Energy Center Unit #3 Upgrade, MidAmerican Energy, Council Bluffs, IA - Scheduler for $181 million design/build Kiewit/Burns (Kiewit) & McDonnell joint venture to upgrade an existing coal power plant's air emissions scrubbing equipment in order to meet new EPA requirements. Provided client with approved baseline schedule and progress updates integrated with monthly cost reporting/tracking. Coordinate/integrate designer's, general contractor's, and major equipment supplier's schedules.

New Ethanol Plants, Fagen Engineering, LLC, Rochell & Pekin, IL, and Rensselaer, IN - Scheduler for general contractor, Kiewit, building three new ethanol plants simultaneously in three different locations. Provided on-site schedule updates and facilitated communication of schedule issues and resolutions

among projects.

Estimator, Kiewit Power Constructors Co., Overland Park, KS - Worked as part of the company's industrial power plant estimating team to provide the civil, concrete, and piping discipline estimate for each power plant estimate: coal, natural gas, geothermal, and emissions projects. Design/build lump sum projects were competitively bid using analysis of previous project cost data, conceptual planning, and working closely with the designers.

Ultra-Low Sulfur Diesel Unit, Flint Hills Resources, Pine Bend Refinery, Rosemount, MN - Field Engineer/Cost Engineer for Kiewit on above-ground structural/mechanical contract portion of new unit built within operating refinery. Responsibilities included safety and quality inspection, cost tracking, analysis and reporting, RFIs, work plans, and verification.

Carville Energy Center, St. Gabriel, LA - Field Engineer/Subcontracts Administrator for design/build Kiewit/Bibb & Associates joint venture building, a 500MW combined cycle natural gas cogeneration facility on a green-field site. Responsibilities included safety and quality inspection, schedule and cost tracking and reporting, RFIs, subcontract requisition, coordination, change order management, and closeout.

Level 3 Communications, Nationwide Fiber Optic Network, Baltimore, MD Area - Field Engineer for nationwide, fast-track, design/build Kiewit/Parsons joint venture project to construct underground cross-country fiber optic cable and major city gateway distribution facilities. Responsibilities included utility coordination, as-built drawings, documentation, reporting, and testing.

Estimating

- Constructability review to determine scope of work with design team to bring project within budget by making suitable recommendations and exploring alternatives.
- Accurately complete estimates that require a quick turnaround time after scope of work evolves during conceptual phase in order to meet the project's initial pricing deadlines.
- Organize and de-scope competitive subcontract bid packages and maintain historical pricing and man-hour records.

Cost Engineer

- Maintain project cost tracking, reporting, and projections: general conditions, direct work, contingency, fee, and profit.
- Thoroughly investigate subcontract change proposals: labor, equipment, & material rates, verify the origin of change vs. original scope of work, and perform check estimates or get comparative pricing.
- Prepare owner change request proposals, track and report the status of project change management, and maintain records for future auditing.
- Verify and present detailed schedule of values, monthly progress, and invoices for owner approval.

Scheduling

- Build owner approved estimate level baseline including all procurement, continue to refine schedule as more information becomes available, and accurately update comparing variance to baseline using Primavera Software: Versions 3, 5, and 6.
- Anticipate delays and mitigate overall impact on construction schedule by working closely with project team to expedite and properly sequence design, fabrication, and construction.
- Identify and demonstrate impact on multiple projects due to manufacturer production delays using critical path analysis and ensure delivery delays do not prevent the project from meeting its deadlines.

Alan Pizzi, PE, PLS, CCE

Cost Estimating Practice Leader

URBAN ENGINEERS
Formulating Excellence

WHY SELECTED

- **40 years of professional experience**
- **Cost Estimator for heavy heavy construction contractors**

REGISTRATIONS/ MEMBERSHIPS

- Professional Engineer PA
- Professional Land Surveyor PA
- General Contractor License Certification VA
- Certified Cost Engineer
- American Society of Highway Engineers - Past President
- Association for the Advancement of Cost Engineering - Member
- Design-Build Institute of America - Member

EDUCATION

- BA, 1981, Eastern University, Business Administration
- Civil Engineering Courses, 1974, Drexel University
- Certificate, 2005, Dale Carnegie Course
- Certificate, 2006, Urban Engineers, Inc., Project Management Training

RECORD OF PROFESSIONAL EXPERIENCE

Mr. Pizzi has extensive experience with the cost estimating, engineering, management, and claims resolution for public and private sector construction projects. His project experience includes transportation (highway, railroad, subway, bridge, and airport), water and sewage treatment, pollution mitigation (containment structures in petroleum refineries), dam/ hydroelectric, and industrial. He has held the position of Chief or Senior Cost Estimator for three major heavy construction contractors operating nationwide: Allan A. Myers (highways, bridges, and treatment plants); Buckley Co., (highways, bridges, transit, subways, and airports); and The Conduit and Foundation Corp. (highways, bridges, transit, subways, airports, treatment plants, dams/hydroelectric, and industrial projects). Mr. Pizzi serves on the faculty of the Pennsylvania State University and Drexel University, where he teaches construction estimating. He also served as President of the American Society of Highway Engineers, Delaware Valley Section. Mr. Pizzi's experience includes:

Second Avenue Subway Project, New York City, MTA (owner) - As part of Urban Engineers, Inc. role as the Project Management Oversight Contractor for the Federal Transit Administration, Mr. Pizzi performed a detailed review of the MTA's $3.8 billion cost estimate for Phase 1 of the project, using preliminary engineering documents. The estimate included tunneling in hard rock using TBM equipment, shoring of existing facilities using "secant pile" method, drill and blast rock excavation, and station finishes / systems. Also was part of the team which performed a **risk assessment** of the total project budget and schedule.

Integrity Monitor for Freedom Tower Project - World Trade Center Site, NY, NY (Port Authority of NY & NJ - owner) - Selected as "Cost Engineer" as part of Urban Engineers, Inc. role on the Integrity Monitoring team known as Fortress Monitoring Group.

Cost Estimating Projects:

South Bronx Greenway, Produce Market Fence Project - New York City Economic Development Corp. (client) - As part of Urban Engineers, Inc. role as Construction Manager, performed a detailed cost estimate for this $4.2 Million project whose main feature is a caisson-supported pre-cast concrete wall.

GSA Open Ended Cost Estimating assignment - Courtroom Renovation Project, Harrisburg, PA - Conceptual Cost Estimate VA Data Center New Power Feed System, Philadelphia, PA - Design/Build Cost Estimate

Sullivan County Bus Garage - Sullivan County, NY (client) - as part of Urban's role as construction manager, performed a detailed cost estimate for this 11,000 sf, $2.6 million facility, including sitework, foundations, structural, architectural, mechanical, and electrical components.

SugarHouse Casino on the Delaware River - marine bulkhead, floating docks, floating breakwater, riverside high deck, and vehicle access structures - As part of Urban Engineers, Inc. role as project designer, performed a detailed estimate for 3,500-feet of anchored steel sheet pile bulkhead, 22,000 SF of marine deck structure, and 400-feet of vehicle access bridge structure. The value of this work is approximately $20 million.

Dock Extension (750 feet), Fairless Hills, PA, Delaware River, US Steel (owner) - As part of Urban Engineers, Inc. role as project designer, performed a detailed cost estimate of five dock extension options whose value ranged between $11 million and $20 million. These options included installation of sheet pile cells and pipe pile-supported concrete (precast and cast-in-place) platforms and seawalls, with tied-back sheet pile cutoff walls.

University Link Light Rail Project, Seattle Sound Transit (owner) - As part of Urban Engineers, Inc. role in performance of a **risk assessment** of the total project budget and schedule for the Federal Transit Administration, performed a detailed review of Sound Transit's $1.5 billion cost estimate for this phase of the Link Light Rail Project, using preliminary engineering documents. The estimate included tunneling in soft ground using TBM equipment, shoring of existing facilities using "secant pile" method, and station finishes/systems.

Southern Beltway Project, US Rt. 22 to I-79, PA Turnpike Commission (owner) - Performed an *independent cost validation* of the FEIS estimate, as required by the FHWA for "major projects". This $600 million project is 13 miles of limited access highway in Allegheny County, Pennsylvania, and includes 20 bridges, multiple box culverts, mainline and ramp toll collection facilities, and a major interchange at I-79.

Project Management Experience:

Cooling Water Pipeline and Storage Tank, Limerick Nuclear Power Plant, Philadelphia Electric Company (owner) - Project Field Manager in charge of overall construction, scheduling, and budget. This project involved construction of a supplemental cooling water supply system including an eight mile long, 36" diameter ductile iron pipeline and a 1.5 million gallon steel storage tank. Deep rock excavation, utilizing drill and blast methods, were integral to the construction process. The entire system was pressure tested in a single operation.

Dundee Dam Rehabilitation and Hydroelectric Project, American Hydropower Inc. - Clifton, NJ - Project Manager and civil designer of the project, in charge of FERC, U.S. Army Corps of Engineers, state and local permitting, dam safety analysis, HEC dam-break analysis, and hydraulic studies including historic river flows, energy and head-loss calculations. Construction management included material and equipment purchasing, project scheduling and start-up. This project involved rehabilitation of a 500' long, 15' high dam across the Passaic River, and the retrofit to install 11 turbine-generators to produce 2 MW of electrical power.

I-95 Emergency Bridge Replacement - Tanker Truck Fire, PennDOT, Chester, PA - Construction Manager in charge of schedule coordination and emergency procurements of structural steel (plate girders fabricated and delivered in four weeks), precast concrete barrier, reinforcing steel, and stay-in place deck forms. This emergency construction contract was awarded to Buckley Co. based on previous performance on an I-95 fire damage contract. It involved the demolition and replacement of a 300' long section of bridge deck severely damaged by an oil tanker truck fire.

I-95 Center City Access Project, PennDOT, Philadelphia, PA - Project Engineer in charge of schedule oversight, coordination of all fabrication submittals and deliveries, redesign of foundations at out-of tolerance bearing piles, design of concrete formwork/falsework, and design of temporary shoring for earth retention, preparation of contractor-changed Traffic Control Plans for staged construction, bridge deck placement and deflection calculations, claims preparation and negotiation, and all other aspects of construction engineering solutions. The project involved reconstruction of the I-95 Expressway to provide on and off ramps in the vicinity of Penn's Landing at the Delaware River. Major structures included a "slide-under" southbound ramp with 8' thick base slabs to counteract uplift, a new curved girder northbound bridge over the ramp, a multi-span off ramp to Washington Ave., a 40' deep pumping station, and a new bridge carrying Walnut St over the I-95 Expressway and Delaware Ave. The project included an Incentive/Disincentive payment/penalty of $30,000. per calendar day.

Burton G. Kohlman, PSP

Senior Scheduling Engineer

- Emergency Response Training
- OSHA 8 Hour Refresher Course
- AACE Planning & Scheduling Professional
- American Society of Highway Engineers
- American Society of Civil Engineers
- Articles Published - Scheduling, Delay Claims, & Litigation for Pennsylvania Bar Association, Construction Litigation Committee, 1990

EDUCATION

BS, 1979, Drexel University, Civil Engineering

Certificate, 1997, Dale Carnegie Course

RECORD OF PROFESSIONAL EXPERIENCE

As Vice President of Urban Engineers Mr. Kohlman is a certified Planning and Scheduling Professional (PSP), and provides direction, guidance, and training for Urban's Construction Services Practice on scheduling, cost control, and project administration. Through his career of over 35 years he has experience from working on major airport, highway, marine, bridge, railroad structure, transit, and building projects. In addition he has worked on site layouts for heavy construction, and provided project coordination between government agencies and private industry on multi-phase projects.

As part of the Federal Transit Administration's (FTA) continuing oversight of transit mega projects, Mr. Kohlman has been involved in all aspects of risk assessments and mitigation planning for numerous transit agencies. Quantitative risk assessment requires calculations of two components of risk the magnitude of the potential effect, and the probability that it will occur. On behalf of the FTA he has been part of a facilitation team that investigates, evaluates and assembles risk profiles for specific project approaches and agency capabilities. The potential vulnerabilities and threats, once exposed and evaluated, can be addressed with the most effective resolution that meets the project's goals.

He uses specific risk modeling techniques such as Monte Carlo Analysis and proprietary methods to determine probabilistic outcomes. Specific risk items can then be targeted for mitigation strategies which help to reduce the risk. Megaprojects have been shown to be particularly risky in terms of finance, safety, and social and environmental impacts. The risk assessment process provides management with the best understanding of near and long term threats and provides a forum to develop alternate methods to handle those risks.

Metropolitan Transit Authority (MTA), Federal Transit Administration, New York, NY - Project Schedule Engineer and Risk Assessment manager responsible for evaluating the grantee's project controls methodology. Services include in-depth analysis and schedule characterization for integrated contracts leading to new transit services. He conducted monthly reviews of schedule updates and meetings with the MTA to discuss status, trends, and alternate approaches to the program. He led several schedule risk assessment evaluations, documenting potential risks and their time and cost implications and assessing the effectiveness of mitigation measures documented in reports. This was done on both projects utilizing Oracle Primavera Risk Analysis statistical methods and probabilities to arrive at ranges of costs and completion dates. Assignments included document review and characterization; risk identification workshops; risk model development; analysis of results; and documentation. The results are used to develop a management plan with contingency reserves. These services are used on two MTA projects. **East Side Access (ESA)** is a $8.3 billion new alignment for Long Island Rail Road that begins at the Harold Interlocking in Queens and runs under the East River to a new terminal station situated under Grand Central Station with eight tracks. The work involves two 22' diameter tunnel boring machines, drilling and blasting caverns, track, systems, station mezzanine, platforms, and entrances. **Second Avenue Subway (SAS)** is a $3.3 billion new subway line under Second Avenue. This work is the first of a four phase program that provides service from 96th Street to 63rd Street. The work involves two 22' diameter tunnel boring machines, drilling and blasting caverns, track, systems, three stations, platforms, and entrances. Ongoing

Integrity Monitor, Freedom Tower (1WTC) New York City, NY - Project Schedule Engineer on an integrity monitoring assignment responsible for

evaluating the project controls methodology. Services include conducting schedule risk assessment evaluations, documenting potential risks and their time and cost implications for reporting to the Inspector General. This is done utilizing state-of-the-art software and statistical methods and probabilities. The results are used to analyze progress and develop contingency or alternate plans. The effort supplements the search for waste, fraud, and abuse that may be systemic to the construction industry and the evaluations, reports, and analyses are forwarded to the NYNJPA Inspector General. He also performs in-depth analysis and schedule characterization for integrated contracts leading to new 1,776-foot, high rise tower at the World Trade Center site. He conducts monthly reviews of schedule updates and meetings with the contractor to discuss status, trends, and alternate approaches to the work. Participate in claim evaluations and negotiation sessions.

Urban is a joint venture partner of the Fortress Monitoring Group (FMG), which brings together professional personnel recognized for their engineering, forensic auditing, investigative, and legal abilities and experience. Urban's personnel constitute FMG's Forensic Auditing Division. FMG's purpose is to prevent fraud, waste, and abuse and/or corruption; to detect it; and, if detected, to coordinate with the Inspector General on definitive and effective actions to be taken. The key points of this assignment are: Integrity Monitoring, Risk Assessment, Constructability Reviews, Construction Monitoring

Driscoll Bridge, New Jersey Highway Authority, Perth Amboy, NJ - Served as Scheduling Engineer for widening the Driscoll Bridge, which involved demolishing the existing Driscoll Bridge fender system; partially demolishing its abutments; and constructing a new bridge to carry the proposed southbound roadway over the Raritan River. Work included foundation excavation; constructing pipe pile and drilled shaft foundations; and constructing reinforced concrete footings, abutment, and wingwalls. Also included constructing reinforced and post-tensioned concrete piers; mechanically stabilized earthwalls; and erecting and constructing the bridge superstructure. The overall length of the proposed bridge is approximately 4,380 feet and the overall width is 96 feet. The construction cost was $85 million. The second project, Driscoll Bridge Widening, Approaches, and Miscellaneous Structures Project, involved improving the bridge's approach roadway. This included constructing retaining walls and sign support structures; widening the two bridges carrying the Garden State Parkway over local roads; and constructing roadway pavement, curbing, drainage, earthwork, highway lighting, and other miscellaneous work. The construction cost for this project was $23 million. Responsibilities included reviewing and commenting on contractor's baseline construction schedule, monthly updates for each contract, participating in job meetings, claims avoidance, and negotiation assistance. The construction cost of this facility was approximately $180 million.

Master Plan Review Philadelphia International Airport, City of Philadelphia, Division of Aviation, Philadelphia, PA - Reviewed, analyzed, and prepared comments on the three alternate master plan schemes under consideration for the airport. Under consideration are runway and taxiway realignments as well as passenger handling and amenities. Conducted preliminary constructability analyses of the alternates. As a continuing effort, a master construction coordination analysis for ongoing projects was conducted. It included an annual review of construction conflicts with operational objectives and is used by airport management to prepare operational mitigations.

Project Management Oversight, Utah Transit Authority, University Avenue Line, Salt Lake City, UT – Lead Schedule Engineer for oversight services to perform a special investigation of a design/build project that was a new LRT extension from downtown to the site of the opening and closing ceremonies for the Olympics. Conducted a site visit and interviewed project participants to assess the grantee's capability and capacity (TCC). This initial review and follow-up review was conducted to determine if the grantee would be able to complete the project within the timeframe required to open service for the 2002 Winter Olympics. A detailed review of schedule, scope of work, budget, and possible constraints was performed and recommendations were provided. It opened on time and within budget on December 15, 2001 as projected.

University Link Light Rail Project, Central Puget Sound Regional Transit Authority, Seattle Washington - Project Schedule Engineer on a Risk Assessment team responsible for evaluating the grantee's project controls methodology. Services include in-depth analysis and schedule characterization for integrated contracts leading to new transit services in Seattle. Provided a pre-FFGA risk assessment and report on 7.2-mile light rail sub-surface segment connecting the Northgate Urban Center, through the Roosevelt area, the University District, and Capitol Hill to the Initial Segment in downtown Seattle. Provided analysis of the Civil, Architectural, Trackwork, Vehicle and System packages possess a level of definition and clarity. Conducted contract packaging reviews and cost and schedule sampling for consistency with the project scope. Participated in workshops and breakout sessions to obtain optimal schedule parameters for evaluation and incorporation into the risk assessment.

Sean T. Duffy, PE

Scheduling Construction Engineer

WHY SELECTED

- **19 years of professional experience**
- **CPM scheduling, cost & claims experience**

REGISTRATIONS/ MEMBERSHIPS

- Professional Engineer PA
- OSHA 30 Hour

EDUCATION

BS, 1994, University of Pittsburgh, Civil Engineering Technology

MBA, 2008, Drexel University, Administration

RECORD OF PROFESSIONAL EXPERIENCE

Mr. Duffy is a Construction Engineer and critical path method (CPM) Scheduler working in Urban's Construction Management Support Services Division. Mr. Duffy provides "as-needed" CPM scheduling and construction engineering services for numerous heavy and highway transportation projects in Pennsylvania and the surrounding region. He has been recognized for project leadership; strong analytical skills; strategic thinking; ability to develop schedules, budgets, negotiate change orders, and control costs; and provide effective interface among numerous disciplines. Mr. Duffy's experience includes:

SR 322 Chester Access Ramps, Pennsylvania Department of Transportation (PennDOT), District 6-0 - CPM Schedule Engineer providing "as-needed" construction management support services for this $71 million project. Mr. Duffy monitors and maintains a CPM schedule for the project in conjunction with the contract documents and the contractor's submitted CPM schedule and reviews all CPM schedule updates for the Department. Urban was recently brought onto the project to implement a project control system to document, monitor, evaluate, and resolve all related issues, including scheduling, field construction problems, engineering design problems, community and public concerns, contractors submissions, and contractor's claims for additional time and costs. Mr. Duffy reviews, comments, and makes recommendations concerning all CPM scheduling issues on the project and prepares correspondence for the District's Assistant Construction Engineer on schedule-related issues. 2009-Present

SR 168, B05 Shippingport Bridge, Beaver County, Pennsylvania Department of Transportation, (PennDOT), District 11-0 - CPM Schedule Engineer providing "as-needed" construction management support services for this $19.8 million project. Urban supports the District's Assistant Construction Engineer in documenting, monitoring, evaluating, and resolving all scheduling concerns, field construction problems, engineering design problems, community and public concerns, contractor's submissions, and contractor's claims for additional time and costs. Mr. Duffy participated in a schedule workshop to assist the contractor in developing a schedule that meets all contract requirements, reviewed and commented on the contractor's baseline CPM schedule, and prepares correspondence for the Department's Assistant Construction Engineer on all schedule-related issues. 2008-Present

East Side Access, Program Oversight and Project Controls, Federal Transit Administration, New York, NY - The project is a 3.5-mile commuter rail extension of the Long Island Rail Road (LIRR) service from Sunnyside, Queens to Grand Central Terminal (GCT), Manhattan, utilizing the existing 63rd Street Tunnel under the East River and new tunnels in Manhattan and Queens, including new power and ventilation facilities. The project includes a new eight-track terminal constructed below the existing GCT and new surface rail yard in Queens for daytime rail storage. The project will procure 160 new electric rail cars. Ridership forecast is 160,000 daily riders (27,300 new riders) in 2020. Mr. Duffy's responsibilities include assessing risk, analyzing cost and schedule, and evaluating management practices of the Metropolitan Transportation Authority.

Second Avenue Subway, Program Oversight and Project Controls, Federal Transit Administration, New York, NY - The Second Avenue Subway project will include a two-track line along Second Avenue from 125th Street to the Financial District in Lower Manhattan. It will also include a connection from Second Avenue through the 63rd Street tunnel to existing tracks for service to West Midtown and Brooklyn. A total of 16 new ADA-accessible stations will be constructed. The Second Avenue Subway will reduce overcrowding and delays on the Lexington Avenue line, improving travel for both city and suburban commuters, and provide better access to mass transit for residents of the far West Side of Manhattan. Stations will have a combination of escalators, stairs, and, in compliance with the Americans with Disabilities Act, elevator connections from street-level to station mezzanine and from mezzanine to platforms. Mr. Duffy's responsibilities include assessing risk, analyzing cost and schedule, and evaluating management practices of the Metropolitan Transportation Authority.

Metropark Train Station Rehabilitation, New Jersey Transit, Iselin, NJ - The project entailed phased reconstruction of Metropark Station located on Amtrak's Northeast Corridor (NEC). Construction cost is approximately $30 million. The scope of work includes phased reconstruction of platforms and canopies, while maintaining service to the NEC's New Jersey Transit's busiest station. Construction also includes installation of a state-of-the-art information services system, elevator rehabilitation, installation of a temporary ticket office to permit expansion of the existing ticket office, and installation of bus operation facilities. Work is progressed while maintaining Amtrak, New Jersey Transit (NJT), and freight operations. Mr. Duffy's responsibilities include performing baseline and monthly reviews of contractor's CPM schedule. Mr. Duffy successfully negotiated time extensions, change order work, and extended overhead costs for NJT, and effectively integrated contractor's schedule with ancillary construction and maintenance activities to minimize Amtrak and NJT disruptions.

Commodore Barry Bridge Access Ramp Construction, Pennsylvania Department of Transportation, Chester, PA - Performed baseline and monthly reviews of contractor's CPM schedule.

New Haven Rail Yard Fueling Facility Improvements, Connecticut Department of Transportation, New Haven, CT - Performed baseline and monthly reviews of contractor's CPM schedule.

Pennsylvania Turnpike Widening Project, Valley Forge, PA ($158 million project) - Assistant Project Manager/Scheduler led crews of up to 25 foremen, carpenters, operators, and laborers that delivered Phase 1 Interchange within time and budget. Utilized lean production systems that yielded a 7% decrease in costs, netting $100,000 savings. Developed, maintained, and analyzed a 3,500 activity Critical Path Method schedule that was utilized by the project team to effectively construct the project. Trained and mentored two junior engineers who were quickly promoted to project engineers.

Cool Springs Reservoir Project, Wilmington, DE ($18 million project) - Managed two concrete crews that exceeded estimated productions rates yielding $125,000 by standardizing forming procedures. Resulted in continuous efficiencies and increased quality control.
Developed and negotiated two value engineering proposals that resulted in $110,000 profit.

SR222 Bypass Project, Trexlertown, PA ($48 million project) - Prepared a $4 million construction claim that is being used to negotiate a settlement with the Pennsylvania Department of Transportation.

Trauner Consulting Services, Philadelphia, PA,- Consultant successfully analyzed, prepared, and negotiated several multi-million dollar construction claims. Utilized CPM delay analysis to assess damages that mitigated liability for the clients. 2002-2004

The Durta Group, San Rafael, CA (1997 - 2002)
Project Manager/Scheduler/Estimator
Coast Guard Island Bridge Replacement Project, Alameda, CA ($8 million project)
San Rafael/Richmond Bridge Seismic Retrofit Project, Richmond, CA ($12 million subcontract)
Port of Oakland Construction of Berths 57/58 Project, Oakland, CA ($60 million project)
Dredging Projects (varied $2 million - $40 million) - Instrumental manager of a small marine construction firm. Responsibilities included estimating, scheduling, subcontract and supplier contracts, scheduling, cost controls, and management. Consistently achieved project budgets that increased company's profits and bonding capacity.

WEEKS MARINE, Camden, NJ (1994 - 1997)
Project Engineer performed and supervised hydrographic surveys for numerous dredging projects. Prepared monthly labor cost estimates and quality control reports. Monitored logs for proper disposal of dredged materials.

THE URBAN ADVANTAGE

Urban is an **ISO 9001:2008-Certified**, multidisciplinary design, environmental, planning, and construction services consulting firm. Founded in 1960, Urban provides services for buildings, ports, transit, railroads, airports, bridges, and highways. We attribute our reputation and excellence as a recognized leader in our fields of professional practice to our ability to provide clients with a superior level of competence, quality, and commitment.

Urban has a distinguished history of providing innovation, technical excellence, and on-time performance on bridge, roadway, transit, aviation and marine projects in the Northeast United States. We have 466 employees in 11 offices, including a staff of more than 50 professionals in the New York Metro region.

SERVICES

Urban provides clients with a broad range of services in such markets as:

- Aviation
- Bridge Design and Inspection
- Building Systems Design
- Civil/Site Design and Material Testing
- Claims Litigation Support
- Construction Management and Construction Inspection
- Environmental Services
- Highway Design
- Marine (Ports and Waterways) Services
- Planning Services
- Program Management
- Railroads and Rail Transit Services
- Traffic Engineering and Intelligent Transportation Systems

Urban has been recognized by the Engineering News Record as one of the top 500 engineering firms and has been repeatedly selected by local, state, and the federal government clients for complex and high-profile technical assignments. Our Construction Management and Construction Inspection Practices comprise approximately 50 percent of our business. The quality of Urban's work has been recognized by our clients in the form of return business and by ENR in their listing of Urban as one of the top Construction Management firms in the United States.

Our Construction Management team in New York City is thoroughly familiar in New York City having performed service for numerous New York City clients including New York City Economic Development Corporation (EDC), New York City Parks Department and the Battery Park City Authority, among others. We have also served New Jersey Transit and the New York State Department of Transportation on Construction Management projects adjacent to Port Authority properties.

Urban served several private clients as Construction Manager within the New York and New Jersey region on marine and aviation projects. Our work has included work at LaGuardia Airport for United Airlines. We have ports projects on the New Jersey waterfront and at the Brooklyn Navy Yard for Sunoco. We have also worked with NYCDOT on the Ferry Program, including ferry terminals in Staten Island and Manhattan.

Urban is well known for our capability and capacity to perform Resident Engineering and Construction Inspection work on infrastructure projects in congested urban environments with multiple stakeholders. This is particularly evident through the execution of our REI work for ongoing EDC projects at 125th St.

in Manhattan and the South Bronx Greenway projects. We have introduced our procedures, discipline, quality approach and staff to EDC on these projects resulting in cost savings, on-schedule performance, improved contractor relationships and quality construction.

THE URBAN MISSION

We will strive to be our clients' first choice through planning, engineering, and management excellence.

THE ISO ADVANTAGE

Urban is distinguished by our **ISO 9001:2008 Certification**; the definitive quality standard for design/consulting firms. This certification verifies that Urban's Quality Management System complies with the stringent requirements of the International Organization for Standardization for the planning, design, and construction management of engineering projects. Urban is one of a select number of consulting engineering firms in the United States to have earned this distinction.

THE PROJECT TEAM

Urban will serve the Port Authority as prime consultant. To enhance our capabilities and capacity to deliver qualified staff, we have added the following subconsultants:

- Distinct Engineering (D/MBE) specializes in Special Inspection services and maintains a robust staff of certified ACI Special Inspectors and ICC certified Steel Bolting and Welding Inspectors.;
- Haider Engineering (D/MBE), a Construction Management firm with numerous assignments in the New York City region and a highly qualified staff and;
- Advanced Testing Company, a top rated testing laboratory and inspection firm with whom we have teamed on numerous Inspection projects in New York City. Urban and ATC have a strategic alliance and long standing working relationship.

The makeup of our Team includes subconsultants that we know and trust to perform quality services. With this Team, we will meet or exceed the subcontracting and DBE goal:

ADDITIONAL BENEFITS

In New York City, Urban is accredited as a **"Special Inspection Agency"** in 39 categories by the International Accreditation Service (IAS). The IAS accreditation has enabled Urban to achieve registration in compliance with NYC's Department of Building (DOB) rules and regulations as a "Special Inspection Agency – Class 1".

We are proud to say that we are one of the few firms in the metropolitan area that is:

- Accredited in all categories of the DOB code, and;
- Met the DOB's requirements of all registered Class 1 Special Inspection Agencies being accredited by an approved accrediting body by May 13, 2013.

For more than 50 years, Urban has been performing construction services for our clients. We are a **"charter member" of the Construction Management Association of America** and have been instrumental in the development of the CMAA-recommended standards and procedures for performing profession construction management services. Our firm has a well-defined Construction Services Division with documented standards for inspecting and reporting on construction projects. We employ our standards to help our clients achieve solid schedule, cost, and quality performance.

SCHEDULE/BUDGET PERFORMANCE

Urban strives to maintain good cost and schedule performance on our projects. To accomplish this, we employ proven project management procedures for tracking costs and schedule and we communicate frequently with project team members to coordinate efforts and resolve issues before they impact cost

and schedule. As such, Urban's services on the projects presented herein were successfully delivered on time and within budget. Additional information regarding these projects can be found in the project profiles following this section.

PROJECT DESCRIPTIONS

Our list of project descriptions are representative of our work in the New York City region that are relevant to the type of work and facilities owned and operated by the Port Authority of New York and New Jersey. During the past five years, Urban has robust experience in performing CM/CI services for various New York City agencies and other government clients in the Northeastern United States on several projects.

URBAN ENGINEERS
Formulating Excellence

West 125th Street
New York City (Manhattan), NY

"Urban provided construction management and inspection for this $19 million streetscape project in historic West Harlem."

Client: New York City Economic Development Corporation

The purpose of the West 125th Street Streetscape Improvements Project is to increase pedestrian access to the waterfront and improve intermodal connections. The project, with a construction value of $19 million, involves streetscape improvements on 125th Street, extending between the Harlem Piers to the west, and Old Broadway to the east, as well as portions of adjacent side streets. This area of Harlem is a vibrant community and dynamic business district with a history rich in American entertainment and culture. Construction activities include:

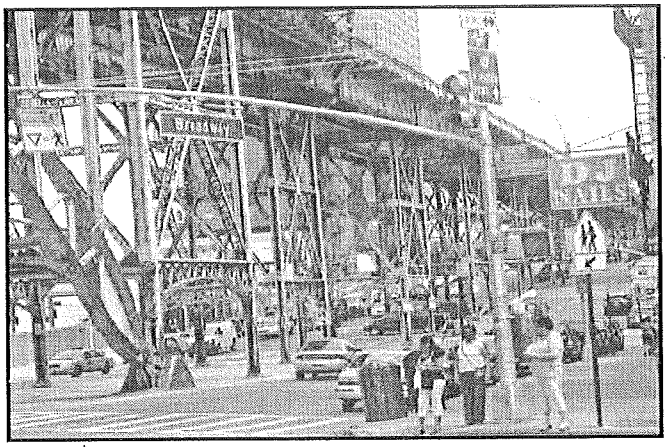
- Street furniture, including benches, bicycle racks, and trash receptacles
- Planting beds and sidewalks
- Cobblestone and asphalt roadway reconstruction
- Drainage and sewer improvements
- Plaza, street, and architectural lighting
- Aesthetic treatments at a new transit plaza adjacent to 12th Avenue
- Addition of transit shelters at bus stops

HIGHLIGHTS:

- Constructability Reviews
- Coordination with Client & Design Team
- Construction Management & Inspection
- Community & Project Stakeholder Relations
- Pedestrian Vehicular Safety
- Maintaining Access to Business
- Utility Coordination
- Schedule Adherence
- Coordination with Columbia University Expansion & Other Adjacent Projects by Others
- Material Procurement/Specialty Items
- Budget Administration

Urban Engineers (Urban) is responsible for construction management and inspection services, including preconstruction phase constructability and biddability reviews, monitoring construction activities, reviewing and monitoring the project schedule, coordinating the efforts with adjacent construction projects on the Columbia University campus and other developments, preparing progress payments, chairing progress meetings, reviewing technical submittals, and implementing a community outreach plan. Key issues include:

- Community and stakeholder relations
- Pedestrian and vehicular safety
- Maintaining access to businesses
- Utility coordination
- Schedule adherence
- Coordination with Columbia University expansion
- Material procurement/specialty items
- Budget Administration



URBAN ENGINEERS
Formulating Excellence

Hunts Point Landing / South Bronx Greenway
Bronx, NY

"The South Bronx Greenway is a more than $7 million effort that will provide a vital connection between the waterfront and residential and business communities."

Client: New York City Economic Development Corporation

The Hunts Point Landing Project is a $7.3 million park construction project that involves the use of more than 1.25-acres of waterfront area. Construction involves updating utilities within the park through coordination with Con Edison, the New York City Department of Environmental Protection, and New York City Department of Sanitation. This was made possible through the reclamation of waterfront area previously used for commercial purposes and a portion of a former street, which was removed from the City's maps as a public thoroughfare for reuse for recreational purposes. The project also introduces waterside green space and shore access in a once uninviting area.

HIGHLIGHTS:

- Constructability Reviews
- Coordination with Client & Design Team
- Construction Management
- Scenic Overlook
- Fishing Pier
- Amphitheater
- Aquatic Recreation
- Ecological Habitat
- Reuse of "Recycled" Stone from the Willis Avenue Bridge

The park includes an outdoor amphitheater, scenic overlook, fishing pier, and kayak and boat launch. These additions provide Hunts Point with a leisure area filled with scenic views and aquatic recreation. More than 150 large granite stones have been recycled from the nearby Willis Avenue Bridge, which was being reconstructed, to be incorporated as a part of the design of the park. These reclaimed stones each weigh over 1,000 pounds and are set in the amphitheater and scenic overlook to provide an area for relaxation.

As a part of an aquatic habitat development, the fishing pier incorporates artificial reefs used to create a new ecological habitat through the creation of tidal pools.

URBAN ENGINEERS
Formulating Excellence

Reconstruction of Lafayette Avenue / South Bronx Greenway
Bronx, NY

"This more than $4 million project will transform the community with landscape and infrastructure improvements, creating desperately-needed green space."

Client: New York City Economic Development Corporation

Lafayette Avenue currently serves as a connecting road between the Hunts Point Food Distribution Centers and the Bruckner Expressway. It is a diverse city street that contains residential buildings, local businesses, Hunts Point Riverside Park, small produce markets, and even a NYC public school. After reconstruction, Lafayette Avenue will no longer serve as a truck route to industrial areas, but will be a residential roadway connecting residential neighborhoods to the newly developed Hunts Point Riverside Park.

HIGHLIGHTS:

- Constructability Reviews
- Coordination with Client & Design Team
- Construction Management
- Streetscape
- Medians with Irrigation System
- Gas Main, Water Main, & Sewer Construction
- Coordination with Con Edison, Other Utility Companies & City Agencies

The project involves roadway reconstruction, concrete and cobblestone sidewalk replacement, a Class II bicycle lane, introduction of planted medians, installation of a church fence, and replacement and expansion of utilities on one of the most heavily trafficked roadways in the South Bronx. The project's utility work includes but is not limited to installation and relocation of a 12" water main, 8" gas main, 36" and 18" combined sewers, as well as replacing city fire hydrants and installing planting bed irrigation systems.

The project will transform the community with landscape and infrastructure improvements, such as roadside and median planting beds, street furniture, improved street lighting, and a massive increase in the areas biomass and street tree viability, creating desperately-needed green space in an otherwise large expanse of asphalt and concrete.

URBAN ENGINEERS
Formulating Excellence

Produce Market Fence / South Bronx Greenway
Bronx, NY

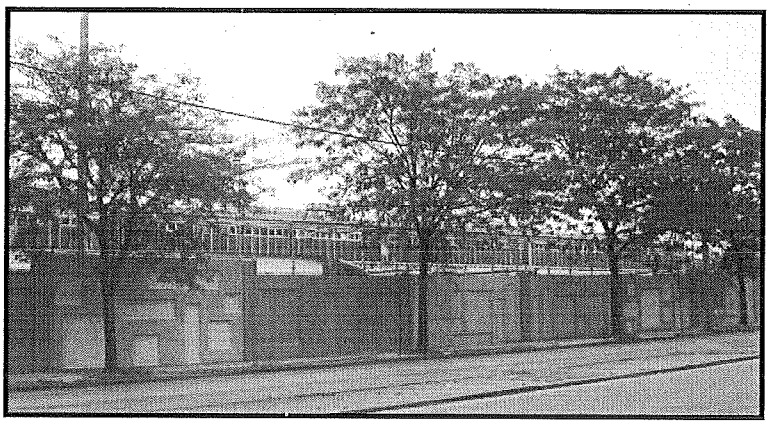
"This more than $2 million project features installing a precast concrete wall that ranges in height from 9.5-feet to 14.5-feet and will span more than 1,900 feet in length."

Client: New York City Economic Development Corporation

The Hunts Point Produce Market Fence Project involved installing a precast concrete wall that ranges in height from 9.5-feet to 14.5-feet. Located along Halleck Street, it is more than 1,900-feet long and will serve as an aesthetically pleasing security barrier for the world's largest food distribution center. The Hunts Point Produce Market is open 24-hours-a-day, 7-days-a-week, and receives fresh produce deliveries by rail, tractor trailer, and air cargo from 49 states and more than 55 countries. Each year more than 2.7-billion pounds of produce are sold from the market's 475,000-SF warehouse.

HIGHLIGHTS:

- Constructability Reviews
- Coordination with Client (New York City Economic Development Corporation) and Project Design Team
- Assistance with Bid Documents and Bid Administration
- Construction Management



The contract included removing the existing unsightly galvanized corrugated steel wall and barbed-wire fence; installing a wall system with over 160 precast concrete panels with their respective piles and concrete columns; and a landscape architectural design that includes the addition of vines, pines, and shade trees, increasing the areas existing biomass. The wall panels have been designed with different sized "panes," which could accommodate local artwork in the future.

Urban Engineers' (Urban) role was initially to provide construction management and inspection services, however it was later expanded to incorporate reviewing the design drawings and a constructability analysis. The 24-hour operation of the market presented a logistical challenge to construction, which was simplified to a great extent by Urban's review of designs and constructability suggestions. The limited on-site storage area and constrained work areas were reviewed by Urban and construction staging was revised to allow minimal impact to the site and trucking traffic. The result was a bid package that met the needs of market tenants and reduced the impact of construction on local residents and businesses.

URBAN ENGINEERS
Formulating Excellence

Food Center Drive / South Bronx Greenway
Bronx, NY

"This Phase I Project will improve the vehicular flow through the Food Distribution Center and create a safe access route to the new Greenway amenities for residents and local workers."

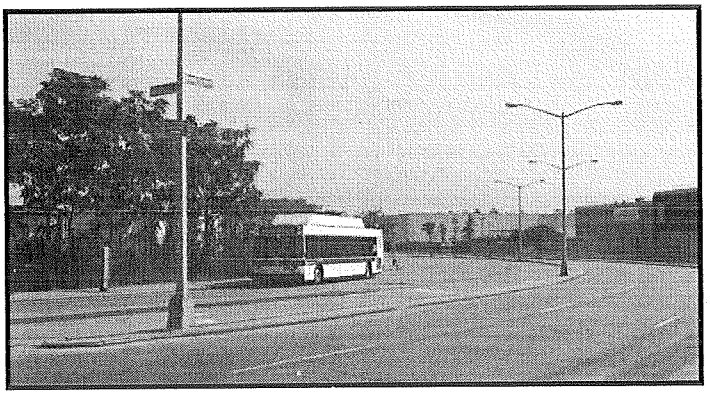
Client: New York City Economic Development Corporation

The Food Center Drive Project is the fourth and final element of the New York City Economic Development Corporation's South Bronx Greenway Program and is designed to enhance and restore elements of the Hunts Point neighborhood surrounding the Hunts Point Produce Market. The project will provide a vital link for residents and workers to access Hunts Point Landing Park and will help to develop employment in the area.

HIGHLIGHTS:

- Constructability Reviews
- Coordination with Client & Design Team
- Assistance with Bid Documents & Bid Administration
- Construction Management

This project will transform Food Center Drive, a loop road serving the New Fulton Fish Market, Hunts Point Produce Market, Hunts Point Cooperative Market, and other private food distribution centers, from its current configuration as a six-lane roadway (three lanes in each direction) to a more user-friendly three lanes for through traffic operating in a counterclockwise direction, starting at the intersection of Halleck Street and Ryawa Avenue, and ending at the intersection of Halleck Street and Hunts Point Avenue. The narrowed roadway will feature two "inner" lanes for local traffic and a widened pedestrian sidewalk, tree lawn, and separated bicycle lane, and will tie into the improvements effected under this program at Hunts Point Landing (former Farragut Street).



The tree lawn will be carefully landscaped to provide a natural buffer between the three lanes remaining for general traffic and the local service lanes. Roadway lighting will be modernized as part of this effort.

The project is valued at $11 million and will involve the entire 6,800-foot length of Food Center Drive.

Urban Engineers' (Urban) role will entail the providing a constructability review, assisting in preparing bid documents, assisting the EDC in regards to bid administration, and construction management/inspection services. Design of the project is complete and it is anticipated to be advertised for bids in mid-winter 2012, with construction scheduled to begin in early summer and lasting through summer 2013.

URBAN ENGINEERS
Formulating Excellence

Hudson River Sediment Remediation Project
New York

"Urban has been awarded four assignments for what could be one of the most complex environmental cleanups in the country."

Client: General Electric Corporation
Environmental Programs

General Electric is dredging the Hudson River in upstate New York to remove PCBs in one of the largest and most complex environmental cleanups in United States' history. The US Environmental Protection Agency will oversee the work and estimates the work will continue for five-to-seven years.

HIGHLIGHTS:

- Construction Management
- Blast Cleaning
- Removing and Disposing of Lead Paint
- Structural Steel Maintenance and Replacement
- Extensive Coordination Efforts with Multiple Stakeholders
- Establishing and Enforcing Safety Measures

The dredged material is being loaded onto 195-foot-long hopper barges that, when filled, are pushed by tugboats to a 110-acre processing treatment and transportation facility. Loaded barges are moored at the facility's 1,500-foot unloading wharf. A land-based excavator then lifts the sediment from the barges and places it into hoppers that feed a large piece of equipment called a trammel. The trammel separates finer sediments from debris, gravel, and rocks. The fine sediments are pumped into a gravity thickener, and then are sent to one-of-12 specially manufactured filter presses housed in a 41,000-SF dewatering building. The presses squeeze water from the slurry, resulting in cake-like bales. The cakes are then trucked to a staging area where they are loaded onto rail cars for disposal at permitted hazardous waste disposal facilities.

The debris, gravel, and rocks removed from the sediments during processing are transported by truck to on-site staging bins, at the Great Lawn Stock Pile Area, to await loading onto rail cars. A geomembrane liner is installed under the Great Lawn Stock Pile Area to ensure PCBs do not migrate from the site.

Urban Engineers (Urban) has been given four tasks to date:

- Design of Barge Dock Fender System.
- Design of Additional Barge Loading Wharf.
- Design of the Great Lawn Stock Pile Area
- Foundation Design for Gravity Thickener Tank, De-aeration Tank, and Size Separation Process Water Tank.

URBAN ENGINEERS
Formulating Excellence

Emergency Clean Up and Make Safe of Shore Parkway Bikeway and Pedestrian Path Brooklyn, NY

"Helping rebuild New York City after one of the most catastrophic natural disasters in the region."

Client: City of New York
Department of Parks and Recreation

Urban Engineers (Urban) is the Construction Manager for the $1.8 million Emergency Clean Up and Make Safe of Shore Parkway in the Bay Ridge area of Brooklyn, NY. Super Storm Sandy caused massive damage to this project site and created an unsafe condition for the public. The purpose of this project is to remove debris and other material, as well as provide safety measures to secure the Shore Parkway Bikeway and Pedestrian Path between 92nd Street and Bay Parkway for continued public use.

HIGHLIGHTS:

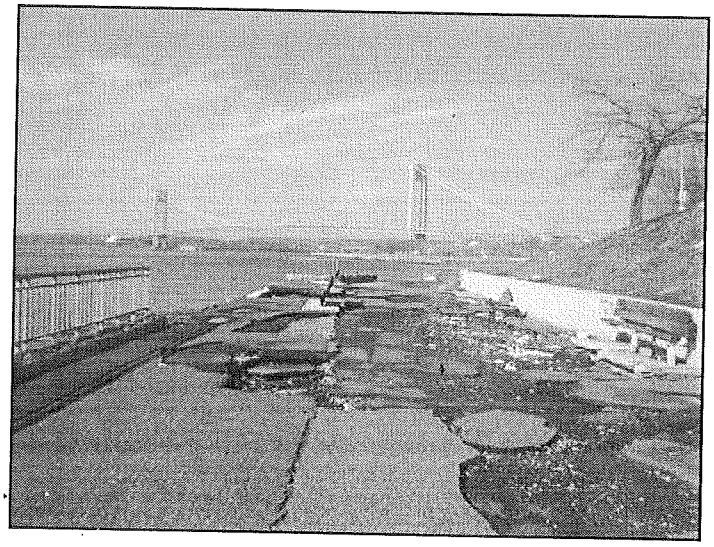
- Construction Management, Resident Engineering, and Construction Inspection
- Construction Schedule Monitoring
- Change Order Review and Negotiation
- Contract Administration

Urban's team is providing construction management and supervision services as the owner's representative on this project. Urban is responsible for field inspections and administrative services necessary for the continued progression of the project. Urban's role includes construction management and resident engineering services, monitoring construction activities, and preparing progress payments.

Construction activities include:

- Removal of 500 CY of miscellaneous debris
- 200 SY of full-depth pavement reconstruction and 1,200 SY of asphalt concrete top course
- Restoration with borrowed fill of 1,000 SY of washouts and eroded lawn areas
- Resetting of 600 SF of face stones and 500 LF of cap stones for the restoration of the damaged seawall
- 100 CY of reinforce concrete structural repairs of the seawall and pedestrian stairs

This post-Sandy recovery emergency contract is funded by the Federal Emergency Management Agency (FEMA). In order to guarantee reimbursement to the Department of Parks and Recreation by FEMA, Urban must prepare daily and weekly reports documenting construction progress and payment quantities, which are presented to FEMA as the record documents that substantiate and secure the federal funds.



The Shore Parkway's four-mile-long Bikeway and Pedestrian Path is heavily used by the local community, and bringing it back to a safe condition is essential.

URBAN ENGINEERS
Formulating Excellence

Construction Management Services for 2014 Pile Remediation
New York, NY

"Urban recommended several adjustments to the project requirements to facilitate reaching the client's important schedule goals while maintaining quality."

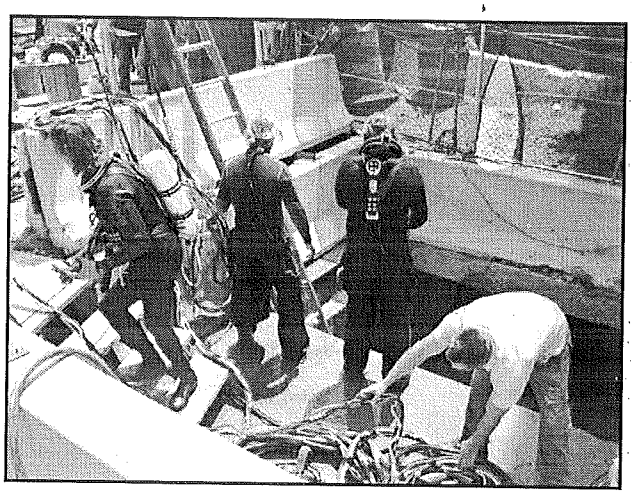
Client: **Battery Park City Authority**
One World Financial Center, 24th Floor
New York, NY 10281
Ken Windman, Director Facilities Maintenance and Construction
[redacted]

Construction Cost: **$8 million**

Urban provided construction management for the Battery Park City Authority's third phase of pile remediation. The scope of remediation work included the installation of protective encasements on 650 square concrete piles. The encasements are located in the water and were designed to address existing deterioration and to extend the service life of the structure surrounding the north PATH tunnel and at the North Esplanade along the Hudson River. The encasements were formed with a square section one eighth inch thick fiberglass jacket to create a 1" annulus. The annulus was then filled with a two-part epoxy offering upwards of 8000 psi in compressive strength to seal the structural pile from the harsh marine environment to minimize future deterioration.

HIGHLIGHTS:

- Epoxy Repairs for Concrete Piles
- Underwater inspection
- Critical Schedule Constraints requiring daily production tracking
- Coordination with NYSDOT, NYSDEC and USACE



The environmental permits for the project restricted the amount of time available to complete the work. Access to the work was a significant challenge which also affected the production schedule. Half of the work was only accessible through a 6' x 12' opening. Due to the challenges and schedule requirements, the contractor requested several changes to the required materials and procedures to help achieve the schedule goals. Urban reviewed and provided feedback to the client in order to select the option which provided the greatest overall value.

Urban also managed the four-step inspection process required by the contract. These inspections were coordinated with the contractor to review cleaning, forming, filling and capping of the encasements. Diving inspectors worked alongside construction divers on a daily basis to monitor quality of work. These monitoring efforts were focused on documenting the time elapsed between pile cleaning and encasement completion to promote an effective bond between the existing pile and encasement epoxy. Inspectors also verified the amount of encasement embedment into the river bottom. Urban also monitored and provided input on one of the most significant challenges to the contractor, which was to maintain the shape of the square encasement from initial pumping to curing.

Urban monitored the contractor's schedule and reviewed applications for payment which were based on unit prices for work performed. Diving inspectors played a critical role in that all of the work is below water and out of sight.

URBAN ENGINEERS
Formulating Excellence

City of Poughkeepsie Transit Hub Design
City of Poughkeepsie, NY

"Urban had to address the transit service needs, as well as bus operations for three different entities."

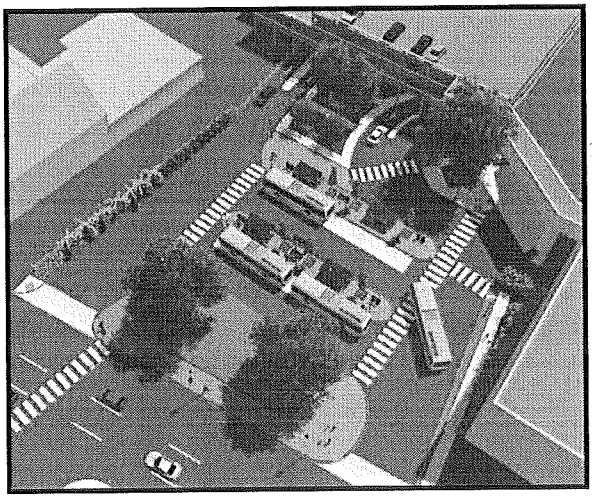
Client: City of Poughkeepsie, NY

Urban Engineers (Urban) is the design consultant for the Transit Hub at Civic Center Plaza in the City of Poughkeepsie. This project not only had to address the needs and desires of the City for a safe, functional transit services center, but it also had to have definitive requirements for maintaining the bus operations of the City of Poughkeepsie Transit Line, as well as the Dutchess County Loop and private bus services. The project will create an ADA-accessible central location for bus transit passengers and also be a hub of information allowing for intermodal connections.

HIGHLIGHTS:

- Project Management
- Civil Engineering
- Electrical Engineering
- Traffic and Maintenance and Protection of Traffic
- Landscaping
- Cost Estimating and Constructability Reviews
- Construction Inspection Services

Urban's team is providing project management, civil engineering, electrical, traffic, maintenance and protection of traffic (MPT), landscaping, cost estimating, constructability reviews, and construction inspection services.



The design includes the creation of a one-way bus loop to accommodate buses for off-street pick-up and drop-off of passengers. The loop will allow for approximately four buses to park simultaneously. , This project will also include landscaping, sidewalk improvements, and bike racks on site. Multiple bus shelters will be provided for waiting passengers, as well as an advanced traveler information systems to ease intermodal transfers. The Transit Hub will aid in alleviating congestion on Civic Center Plaza in the City due to the increased demand of ridership.

Urban conducted a subsurface investigation for the purpose of optimizing pavement design. Split-barrel sampling and penetration tests were performed in accordance with ASTM and other standard procedures. The recovered subsurface soil samples were inspected in Urban's laboratory, John H. Roberts Testing.

Urban provided stormwater management and erosion and sediment control design for the site and prepared a Storm Water Pollution Prevention Plan (SWPPP). Storm drainage is being handled by drainage structures located within the paved areas of the property with proposed connections to the existing drainage system on Civic Center Plaza Street. Electrical services included design of Transit Hub site lighting, lighted shelters, and provision of uninterrupted power supply to the communication and security systems. Bus services will continue to operate during the construction process.

The project is progressing towards 100% design completion and preparation of a Transit Design package for construction procurement. It is being funded by the American Recovery & Reinvestment Act (ARRA) administered by the Federal Transit Administration (FTA) and all work provided is being performed according to FTA and NYSDOT requirements.

URBAN ENGINEERS
Formulating Excellence

Gates C12 & C14 Apron Paving for United Airlines, Central Terminal, LaGuardia Airport New York, NY

"Urban provided full time "on site" inspection services during construction."

Client: United Airlines / Giuliani Associates
Date: 2013
Contact: Richard Ryan, Architect
Phone: [redacted]

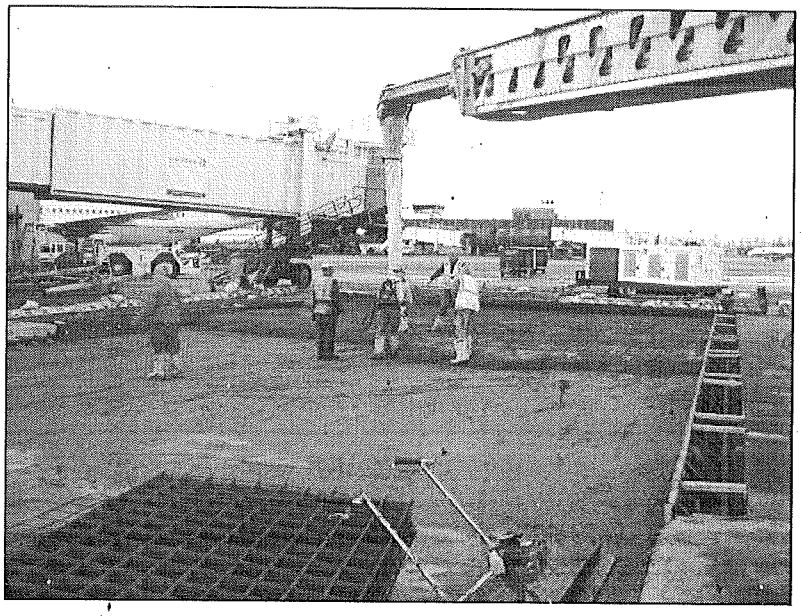
Urban designed and performed construction support services for apron paving at United Airlines Gates C12 and C14 at Central Terminal, LaGuardia International Airport in New York City. The owner of the airport, Port Authority of New York and New Jersey (PANYNJ) reviewed all design and construction work to confirm it was performed in accordance with the Tenant Alteration Agreement.

HIGHLIGHTS:

- Construction support services for apron paving
- Pavement design
- "On site" inspection services

Urban designed the pavement and prepared plans and specifications for bidding and award of the construction contract.

Urban provided full time "on site" inspection services during construction. Urban's Resident Inspector reviewed construction drawings and inspected soil preparation and concrete pouring activities. Urban observed, assessed, and documented the work in accordance with New York City Department of Building Special Inspection rules and regulations. Urban staff attended the PANYNJ partial inspection walk through for acceptance by the PANYNJ and United Airlines. Urban provided inspection reports and other information as needed to assist with project close out. (2012-13)

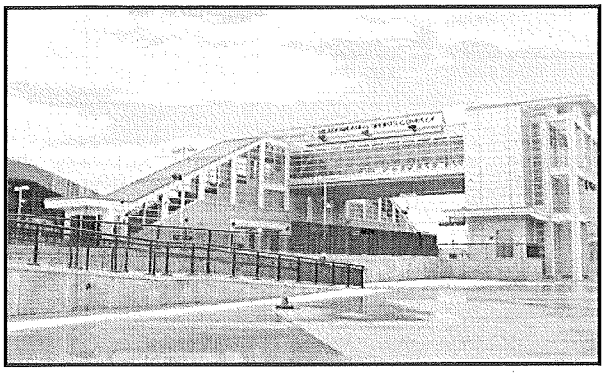


URBAN ENGINEERS
Formulating Excellence

Meadowlands Railroad & Roadway Improvements
East Rutherford, NJ

"This new rail service helps cement the Meadowlands' status as a world-class destination for spectator sports and other major events." Dennis Robinson President and CEO of NJSEA

Client: New Jersey Sports and Exposition Authority



HIGHLIGHTS:

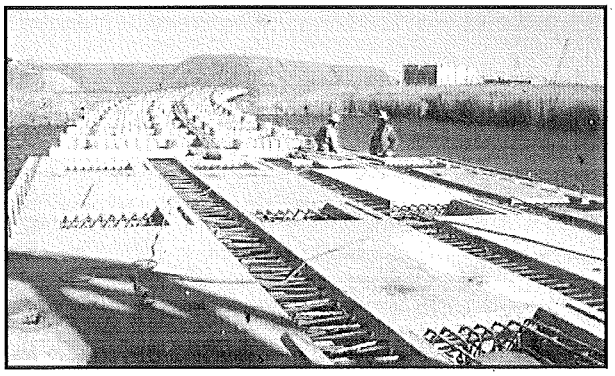
- Program Management
- Construction Management
- Construction Inspection
- Scheduling
- Cost Estimating
- New Rail Spur with Station
- Extensive Interagency Coordination

The New Jersey Sports and Exposition Authority hired Urban Engineers, Inc. (Urban) to provide program management, construction management, and construction inspection services for the Meadowlands Railroad and Roadway Improvement Project. The assignment also included development, tracking, and updating a master schedule, and preparation of an independent cost estimate.

Mutilple clients created the need for extensive interagency coordination to keep players on the same page through the process. Urban successfully worked within this multi-agency environment in a cooperative effort to provide rail access to the Meadowlands Sports Stadiums and the future Xanadu entertainment and retail complex.

The project included construction of a 2.1-mile dual track rail spur off New Jersey Transit's (NJT) Pascack Valley Rail Line, which serves NJT's new Meadowlands Rail Station. The station, located within the Meadowlands Complex, is directly adjacent to the new Giants/Jets Stadium. The line included three interlockings, bi-directional signaling, hazardous material remediatin, and approximately 3,500 feet of viaduct over wetlands. The rail station features an island platform approximately 950 feet in length, and a waiting area for passenger queuing and shelter. All aspects of code required egress and passenger flow, including pedestrian overpasses, escalators, stairs, and elevators.

The project was completed on time and within budget through two superfund sites, with constraints due to unreliable utility information, a moratorium due to anadromous fish, construction impacts due to race track operations, and numerous major concurrent construction projects on the site, including the Giants/Jets Stadium, Xanadu Entertainment Complex, and New Jersey Turnpike Authority's Interchange 16W.



URBAN ENGINEERS
Formulating Excellence

Sunoco Pipeline L.P.: Engineering and Design for Eagle Point Dock Repairs, Gloucester County, NJ

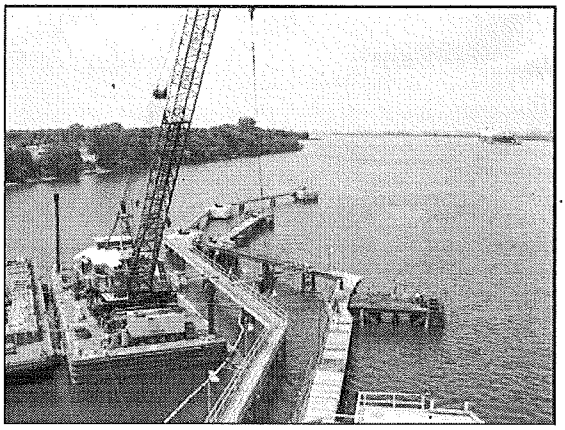
"Urban maintained coordination with Sunoco to ensure dock operations could be maintained during construction activities."

Client: Sunoco Logistics Partners LP
Address: 1735 Market Street
Philadelphia, PA
Contact: Colleen Armstrong
Phone: [redacted]
Cost: $25 million
Dates: 2009

The Eagle Point Refinery of Sunoco, Inc. is located along the southern shore of the Delaware River in Westville, New Jersey, approximately three miles upriver of the proposed Paulsboro Marine Terminal. This refinery is equipped with four docks. Dock 1A, 1, 2, and 3 constitute the 3,000-foot-long dock facility at this refinery. The docks are presently owned and operated by Sunoco Logistics, LP. The dock facilities were built in several stages, with the first dock constructed circa 1948. All docks at this facility are in need of rehabilitation. Sunoco has plans to rehabilitate all four docks prior to 2010 using a phased approach.

HIGHLIGHTS:

- Geotechnical Investigation
- Economic Analysis
- Design of Liquid Bulk Terminal
- Emergency Permits
- Construction Management & Inspection
- Design Accommodated Dock Operations Throughout Construction
- Removable Walkway for Future Access
- Approximate Cost: $25 Million



Urban Engineers (Urban) was contracted by Sunoco to review the existing condition of the four docks; establish the scope of rehabilitation work based on the priority of repairs; provide cost estimate for the construction work; assist Sunoco in budgeting and developing a phased approach for the construction work; perform off-shore geotechnical investigation; secure environmental permits; design the rehabilitation; assist Sunoco during the bid phase; procure material; and provide construction management services.

It was determined during the review and evaluation of the structural condition of the docks at this facility that most of the pile-supported walkways, mooring dolphins, and breasting dolphins at Docks 2 and 3 were in critical condition and required removal and renewal. Dock 3 was designed to receive up to 160,000 DWT vessels (900-feet long x 158-feet wide) while Dock 2 was designed to receive up to 70,000 DWT vessels at a berth depth of 45 feet. The breasting dolphins were designed such that their construction could be accomplished in two weeks to minimize dock shut-down time. Pre-fabricated, jacket-type construction was utilized to achieve this objective. Mooring analysis was performed and vessel mooring layouts proposed to account for the loads imposed during hurricane winds, current, tide, and passing vessels. Phase 1 of the construction work has been completed and Phase 2 is underway. Evaluation and design of rehabilitation to Docks 1 and 1A are also included under Urban's scope of work.

URBAN ENGINEERS
Formulating Excellence

Benjamin Franklin Bridge
Steel Painting over the Delaware River
Philadelphia, PA

"Protective shielding, netting, and containment measures shield workers and the public from the lead-based paint."

Client: Delaware River Port Authority
Date: 2005
Cost: $1.1 million
Contact: Vijay Pandya
Phone: [redacted]

Urban Engineers (Urban) provided construction management and construction inspection services for preparing the Benjamin Franklin Bridge's surface, removing lead-based paint, and applying a new coating system to the bridge's Camden, NJ and Philadelphia, PA towers. As part of the project, the existing concrete crosswalks were removed and replaced with new steel gratings. Urban's services included reviewing and approving shop drawings and product submittals.

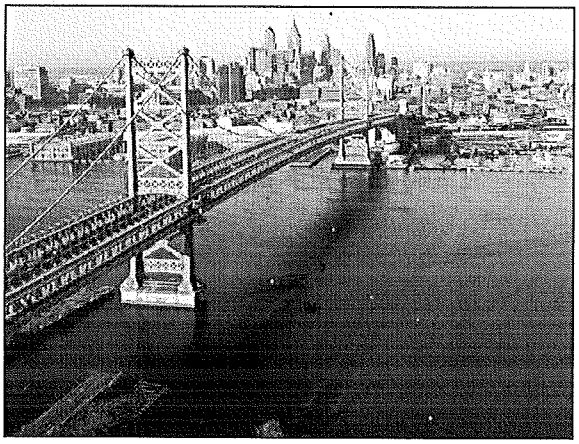
HIGHLIGHTS:

- Review and Approval of Shop Drawings and Product Submittals
- Bridge Surface Preparation
- Coating System Application
- Containment System to Protect Workers and the Public

The scope of work consisted of preparing the bridge surface for application of a new coating system by propelling expendable abrasives or recyclable steel-grit abrasives through a concentrated stream of compressed air to remove leadbased paint down to bare metal. This method was used to clean the steel component surfaces of the Camden and Philadelphia towers. Hazardous waste generated during paint removal operations was collected, transported, and disposed of in compliance with federal, state, and local environmental or other applicable regulations.

Following surface preparation, a new exterior coating system was applied that consisted of an organic zinc rich primer (stripe coat and full coat), full intermediate coat, and a urethane finish coat (stripe coat and full coat). The new interior coating system consisted of moisture cure urethane aluminum primer and a moisture cure urethane aliphatic finish coat.

A critical component was erecting protective shielding, netting, and containment to protect workers and the public from the lead-based paint. All areas where the paint was removed were fully enclosed using impermeable containment materials with seams completely sealed. The system was designed so the bridge's towers and the containment could support the equipment, materials, and workers in addition to being able to withstand adverse weather conditions. Filtered exhaust ventilation provided airflow through the work area and controlled emissions for workers and the public. Specially designed shielding platforms were constructed to protect the driving lanes, pedestrian sidewalks, and Port Authority Transit Corporation's (PATCO) tracks.



The bridge supports seven vehicular lanes that carry more than 100,000 vehicles per day and the PATCO Speedline on the outboard sides. The bridge was coated with lead-based paint during construction in the mid 1920s and the bridge has been re-painted several times since then. The bridge was previously last painted in 1989.

URBAN ENGINEERS
Formulating Excellence

Walt Whitman Bridge
Suspension Span Deck Replacement
Philadelphia, PA / Camden, NJ

"Deck replacement required complex construction activities while minimizing impacts to 110,000 daily vehicles crossing the bridge."

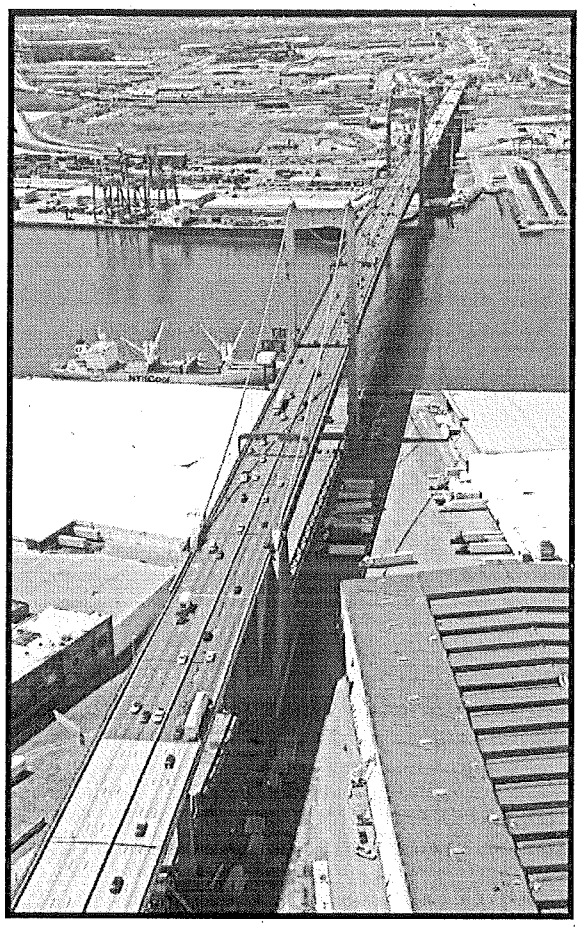
Client: Delaware River Port Authority

The Walt Whitman Bridge, opened to traffic in 1957, provides a critical link between Philadelphia and South Jersey, accommodating 110,000 vehicles per day. The project involves replacing the suspension span grid deck and supporting stringers with a floating grid deck system, and replacing reinforced concrete deck of the anchorages.

HIGHLIGHTS:

- Construction Management/Inspection
- Schedule Monitoring
- Coordination with Bridge Operations

The work includes maintenance and protection of traffic, procurement and installation of a new movable barrier, removal and replacement of four signal gantries, removal and replacement of the suspended span deck and stringer system, floor truss strengthening, removal and installation of new suspended span lateral bracing system, floor truss strengthening, and installation of new suspended span bearings, fabrication and installation of new stringers and diaphragms, fabrication and installation of new lightweight concrete filed grid deck, finger joint replacement, cast-in-place concrete anchorage deck replacement, partial stiffening truss top chord cleaning and painting, and installation of new TL-4 traffic barriers. Also included is modification to under-deck maintenance walkways, ladder relocations, replacement of sidewalk maintenance walkways and support framing, deck truss span partial concrete deck and concrete barrier replacement, saddle enclosure modifications, installation of new asphalt overlay, light pole replacement, relocation and protection of electrical and communication cables, modifications to fire department standpipe system, replacement of existing drainage structures, and signing and pavement markings.



Construction will occur over a four-year duration, using seven "long-term" traffic stages.

The JV Team is responsible for construction management and inspection services. Tasks include monitoring construction activities; coordinating work activities with the DRPA's engineering, bridge operations, and safety departments; monitoring the project schedule; preparing progress payments; chairing progress meetings; and processing technical submittals.

H. Management Approach

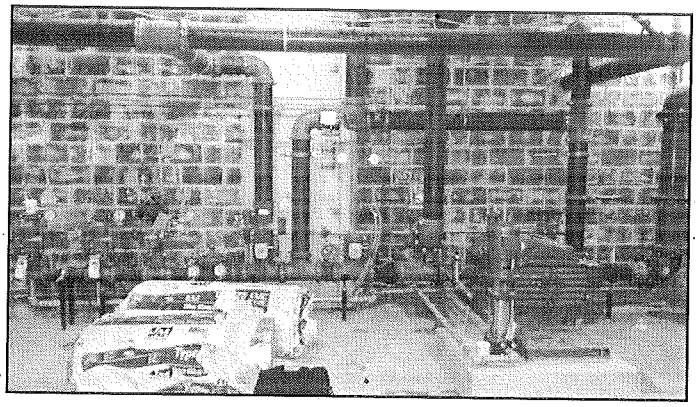
URBAN ENGINEERS
Formulating Excellence

Management Approach

Urban has cultivated a highly successful management approach through years of experience on similar construction management "call in" contracts locally for several New York City and New Jersey clients. We maintain a robust qualified construction inspection work force from which we draw exceptional candidates to serve on various facility and infrastructure construction management and inspection assignments. Our Team will utilize these proven methods on task orders for this "call in" construction management contract for PANYNJ.

Inspection Certifications

Urban is a registered accredited Special Inspection Agency per the rules of the City of New York. This status requires our firm to undergo a rigorous review by International Accreditation Service (IAS) to verify that our procedures and ongoing work complies with the standards of ACI, IBC, ICC, and other guidelines for quality control of construction. Our construction inspection staff is knowledgeable and fully certified in accordance with our Special Inspection Agency status.



Urban presently has more than 20 ongoing assignments on both private and public projects in New York City. To maintain our status, we undergo an annual rigorous accreditation review wherein we demonstrate that our inspectors have current ACI, ICC, and other certifications. To comply with these requirements, we implement a training program for our Special Inspection and Construction Inspection staff wherein we monitor status of their certifications and review their compliance with the rules and regulations of our clients, including the New York City Department of Buildings and the PANYNJ.

Experienced Leadership

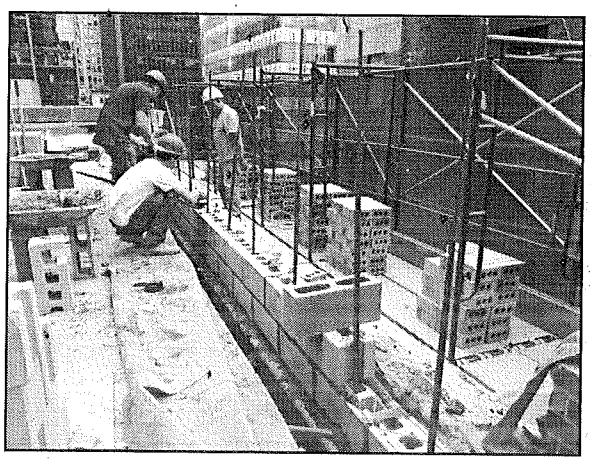
This "call in" construction management assignment with diverse and potentially complex assignments requires a project manager with: an understanding of the needs of PANYNJ; similar experiences that match the anticipated technical challenges; and a demonstrated ability to manage "call in" assignments. Our Project Manager, **Charles "Chuck" King, PE**, is well-known to the PANYNJ from his work on project management and construction management assignments on such projects as PATH Sandy Repairs, World Trade Center Reconstruction, and George Washington Bridge Bus Station Reconstruction. His qualifications include:

- Technical Director for Urbans' Special Inspection Agency #221
- Registered Structural Engineer
- Construction manager on Tappan Zee Bridge Rehabilitation, SEPTA Market Street Elevated Reconstruction, I-87/I-84 (Interchange 17) Reconstruction and other projects
- Manager for several PANYNJ "Call In" Project Management and Construction Management Contracts since the mid-1990's.
- Over 30 years professional engineering experience

Qualified Construction Inspection Staff

Urban has over 450 employees, including a staff of more than 50 professionals located in our New York City Office and 30 professionals in our New Jersey office. In addition, we have over 300 professional staff in our Philadelphia headquarters office, of which over 150 are engaged in construction management and inspection projects.

Our status as an SIA places Urban in a superior position to provide PANYNJ with inspectors who have the right certifications and meet your expectations. We understand that PANYNJ embraces the Special Inspections approach and applies the same rigor to construction management and inspection as that of the New York City Department of Buildings.



Urban is accredited and registered as a Class 1 Special Inspection Agency in over 30 categories of building construction, including structural, civil and all MEP trades.

"Call In" Contract Management Experience

Urban has extensive experience with "Call In" (or On-Call, IDIQ, Task Order) contracts and has been serving numerous clients through these types of contracts for more than 30 years. Our Team will utilize a time-tested procedure for managing "Call In" assignment contracts that has been developed and refined over time. Depending on the nature of the assignment, the project management approach may include the following steps:

- Define assignment scope (in-person or telephone interview).
- Determine staffing, subconsultants, include and define small business or M/WBE participation, identify discipline and other special abilities needed (scheduling, cost estimating, surveying, environmental permitting, etc.).
- Budget man-hours and fee for the task.
- Perform QA/QC reviews of employee performance.
- Attend job progress meetings (if necessary).
- Prepare meeting minutes (if necessary).

Our Team has considerable experience administering "Call In" contracts. Since "Call In" contracts are essentially a series of multiple contracts (tasks) with associated budgets within an overall contract ceiling, it is important to establish and monitor the fiscal and man-hour budgets on a task basis to avoid cost overruns. Our Team utilizes comprehensive spreadsheets and electronic programs, improved and adjusted over the years, to manage each task in the contract. The same spreadsheets are also used to track invoicing on a line item basis to confirm that billing is registered against the proper task, and to monitor small business or M/WBE participation.

Our knowledge of PANYNJ policies and procedures, facilities, and organizational structure, combined with our experience managing similar construction management "Call In" agreements, provides us with an understanding of the needs of the PANYNJ and, in turn, allows us to develop a management approach that will allow for the successful and timely execution of assignments. Among the identified needs are:

Project Communications

We are committed to being local. Urban has a New York City office conveniently located to all the PANYNJ facilities and offices, thereby maximizing our Team's ability to coordinate our task order design work with the PANYNJ staff. Our approach will include bi-weekly face-to-face meetings, with on-line access for those who cannot attend, between the Urban Team and the PANYNJ Engineering and Line Departments as well as stakeholders, such as airlines and tenants, outside agencies and federal agency (FAA, FTA, FEMA) personnel.

Urban utilizes a software-based project information management system (Project Share). The project information management system manages the information distribution for the Team, as well as

providing you with access and updates on our coordination and progress. The system is used to track files, submissions, and comments, as well as schedule coordination and stakeholder meetings. During design, the software is used to transfer CAD files, reports, and specifications. During construction the software is used to coordinate and track requests for information, shop drawings, and submissions for reviews, and distribute and review meeting minutes.

In addition to the file management, the project team will utilize conference calls and webex meetings to discuss the tasks, identify issues, and coordinate the design between disciplines that are in various offices in New York, New Jersey, and Pennsylvania.

Timely Response

Urban is prepared to respond immediately to the PANYNJ request for task order services. A "Call In" agreement is a mechanism used to expedite work and it is imperative that the consultant respond to PANYNJ request in a timely manner. Furthermore, on-call assignments often involve construction and/or engineering tasks that address impacts to the traveling public or resolve important safety issues, activities that are critical to maintaining operations for PANYNJ clients. Recognizing that a timely response is critical to the success of an assignment, Urban prepares to respond long before an individual task order is issued. First, through the significant resources available to our Team, we are able to identify experienced, knowledgeable, available individuals, allowing the "right" Team to be quickly assembled and mobilized.

We will routinely meet with PANYNJ staff to ascertain what on-call assignments may be forthcoming. Additionally, an accurate and responsive proposal will be prepared and submitted, in accordance with the PANYNJ requirements.

Diverse Resources

The PANYNJ requires a consultant Team with diverse resources. The PANYNJ's needs are as varied as the facilities it operates and maintains and the consultant Team must be prepared to provide a wide range of construction management and engineering services. Inspectors, construction managers, engineers, schedulers, estimators, and claims specialists must be available to respond to the PANYNJ tasks.

Familiarity with PANYNJ

The PANYNJ needs a consultant Team that can begin work immediately following awarding of the contract. Urban is familiar with the PANYNJ operations and procedures and we can respond quickly, perform task assignments accurately, and require minimal guidance from the PANYNJ staff.

Our Team understands the PANYNJ policies, protocol, and procedures and the operational characteristics of the facilities. In addition, most of our proposed staff have worked on PANYNJ facilities. This experience will eliminate learning curves, expedite issue resolution, and facilitate coordination among PANYNJ departments and stakeholders, as we intend to serve as an extension of your staff.

One Point of Contact

Mr. Charles "Chuck" King, PE, our Project Manager, will serve as the PANYNJ "one point of contact." Mr. King will evaluate each Task Order Request and determine the optimum staffing and resources needed to efficiently complete the assignment. As Urban's project manager he will be responsible for oversight of staff once assigned to a specific task. Our approach promotes continuity among concurrent task order assignments, presents clear lines of communication for our staff, and provides PANYNJ with one point of contact accountable for performance in a timely manner.

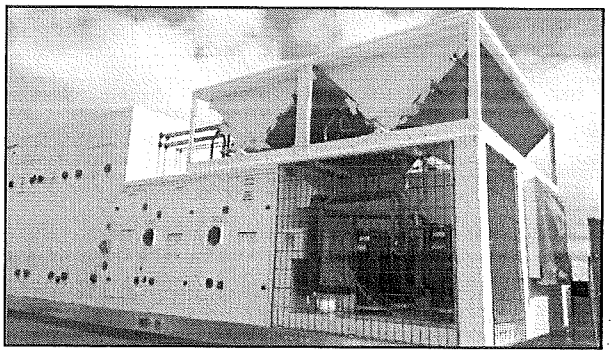
Minority and Women Owned Business Participation

Urban maintains strong working relationships with several Minority and Woman Owned Business Enterprises. We select our M/WBE partners based on the need in the scope of work from the client. For instance, a structural engineering assignment needs a qualified structural or civil firm; therefore we review qualifications of the M/WBE firms in our pool and select the most qualified firm for the project.

With the scope of tasks unknown at this stage, Urban is reserving our selection of consultants until we start receiving task order requests. Upon receipt of the Task Order Requests, we will select the best qualified M/WBE firms to assist us with the assignment and use our best effort to meet or exceed the participation goals of 12% MBE and 5% WBE.

Approach to Performing Requested Construction Management Tasks

Task A. Constructability/Biddability and General Engineering



If requested, Urban will actively participate in the design phase, which will afford it the opportunity to establish **Urban's Integrated Constructability Evaluations (ICE) Program** early on. The **ICE Program** enables designers to produce high-quality, cost-effective design documents that can reasonably be constructed in the field without unnecessary cost or project delays, and without sacrificing quality. When initiated early in the design process and continued throughout the design, **Urban's Integrated Constructability Evaluations typically produce a return on investment of up to 25:1.**

Urban has identified millions of dollars in savings as a direct result of the constructability reviews we have performed on over $3 billion worth of construction. Urban's constructability reviews are performed by a Team of individuals who are former contractors with extensive field experience, as well as a clear understanding of the design, the constraints of the project site, and the concerns of the various regulatory agencies involved with the project.

At every phase of design, the project's proposed plans and specifications are subjected to a detailed constructability review performed from a contractor's perspective. These reviews are distinctly different from other design reviews. Our reviewers utilize a checklist tailored to the type of project. Our checklists have been developed for highway/bridge, transit, and marine projects. For example, transit checklists require the reviewers to address the following items:

- Impact on the Railroad, Airport, Port, etc. - Are access and protection requirements determined?
- Operations
  - Is third party or Force Account work required?
  - How does the work influence pedestrian and vehicular circulation, paths of travel and use of the facility?
- Temporary Access - Is the work on or near the Right-Of-Way (ROW)?
- Coordination - Is interface between new and existing facilities and equipment shown?
- Time – Is the project duration adequate?
- Site Constraints - Are property lines/easements clear and documented?
- Safety – Has the project plan accounted for protection of the public and workers?

The Team will visit the project job sites to identify existing site conditions that could impact the success of the project, including utility locations, contractor access, commercial and residential access, laydown and storage areas, among other site features.

As part of its constructability review, Urban will evaluate the design requirements and specifications, including establishment of unit price elements and rates, and terms and conditions of the contract packages to minimize the likelihood of ambiguous, omitted, or redundant terminology.

Urban will evaluate any anticipated tests, pricing, or unit (material) allowances for reasonableness in consideration of the anticipated site conditions and construction means and methods. Urban will provide an independent evaluation of key contract terms, such as insurance and bonding requirements, payment terms, and change order/dispute policies to foster a mutually agreeable template contract that should encourage competition. We will also advise relative to market trends, material shortages, and resource issues that could influence pricing and interest.

Lastly, Urban will evaluate the overall bid schedule to provide a comprehensive, clear, and understandable pricing mechanism that will avoid protests based on ambiguities or redundancy within the bid schedule.

Task B. Construction Staging

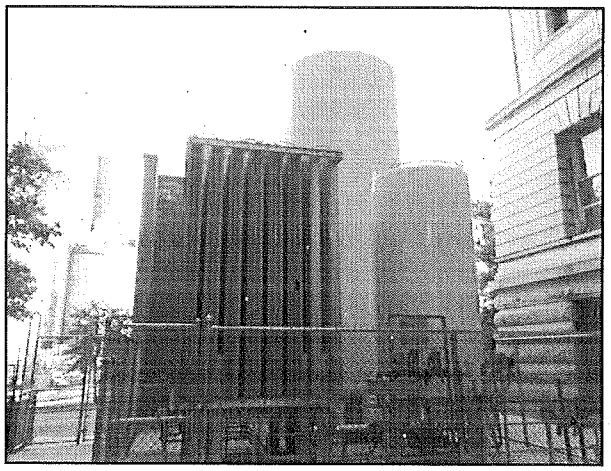
At the very outset, after receiving NTP, Urban will conduct a thorough review of the related documents, sequencing, bid package alternatives, long lead procurements, estimated fabrication and delivery times, third-party constraints and interfaces, vehicular and patron circulation, Force Account requirements, ROW status, operational requirements, and utility conflicts. Each of these elements must be addressed if a successful staging of construction is to be developed.

Urban is experienced in both design and construction management and knows how to integrate construction planning into the design phase of a project.

The earlier the construction manager gets involved, the greater the positive influence on the documents, thus defining the scope and parameters for the construction effort and enabling the contractor to better cost the job. The procurement will be more effective, prices will more accurately reflect reality, resulting in an avoidance of claims.

Once the construction phase is initiated, Urban will receive construction staging plans submitted by the general contractor (GC). Urban will review the sequencing of these construction activities for discussion with PANYNJ. These discussions will result either in comments for the GC's action or in a recommendation for approval.

During construction, as the job progresses, variations in the work plan may become necessary. If a schedule update indicates that a contractor has fallen behind schedule, a contractor-generated revision, or recovery schedule, will be required to illustrate how the lost time will be recovered. We will analyze the contractor-generated revision and recommend to the PANYNJ whether a modification to the baseline schedule is appropriate. Requests and directions to modify the schedule will be reviewed and analyzed for resulting implications prior to approval and implementation.



Change Orders involving a modification to contract schedule must include a time-impact analysis (TIA) to demonstrate the delay of specific work activities and establish the magnitude an impact may have on the overall project or intermediate milestones. Urban will evaluate TIAs received from the contractor for entitlement, reasonableness, and quantification. We will actively investigate alternatives to any proposed

TIAs as a means to mitigate or eliminate the delay. Actions such as changing the construction sequence, utilizing additional forces, or increasing daily work hours are some of the alternatives that will be analyzed.

Task C. Schedule Development and Monitoring

Just like labor, equipment, and materials, time must be used judiciously to build a project, and it is therefore essential to adequately plan and monitor the progress against the plan to confirm that optimal performance can be obtained. Any organization involved in construction on a regular basis must have an orderly and effective time management philosophy and a schedule of performance.

The bidding documents will be reviewed for relevancy and thoroughness of scheduling content information. A particular project may require tailored standard specifications, a set of supplementary conditions, or a set of special conditions detailing the contractual requirements for scheduling the project, coordination, or work zone availability. Such conditions may call for special scheduling efforts, the frequency of an update cycle, requirements of performance, liquidated damages, or binding milestones.

Urban will attend and participate in a pre-construction conference and pre-bid conference, if so desired. The pre-construction conference will be used as a workshop for the parties involved, where the requirements, duties, and responsibilities relating to the schedule can be emphasized. If necessary, a presentation as to the scope and sequencing of the conceived project can be made.

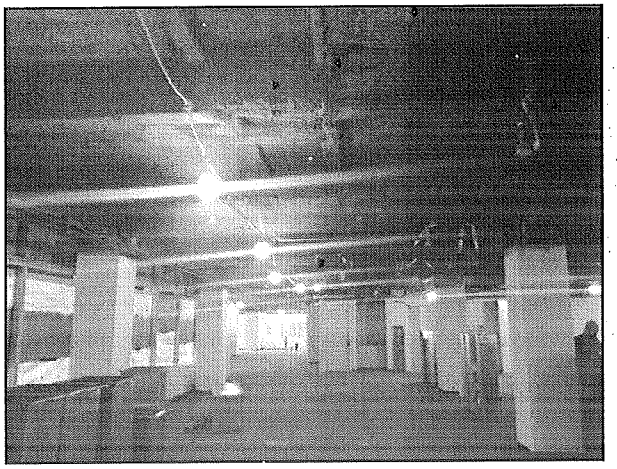
Urban will review the contractor's submitted detailed CPM construction schedule for thoroughness, clarity, and practicality of construction and will make comments and offer suggestions for schedule logic, timing, and coding for the development of a reasonable schedule. Urban will keep the PANYNJ and appropriate parties apprised of the contractor's schedule development progress. The schedule must be a reasonable approach to the project, have adequate detail, and show any coordination efforts required to keep the project running on time.

The intent is to plan and monitor the progress of the project and to make progress payments to the contractor. It is critically important that a suitable and accurate construction schedule that delineates the project in that fashion be developed and accepted. Urban will make recommendations on the schedule and their updates for approval or rejection, depending on its suitability, and offer corrective comments as necessary.

Monthly job site meetings will be held to document the contractor's construction progress. Meetings will be used to gather project status updates and negotiate future project status milestones if necessary, so that the project schedules are accurate and can predict the timing of future events. During the monthly schedule update, a site walk, where the aspects of the construction are observed, is conducted so that there is confidence in the project status. Appropriate photographs are taken to document the project status. The status update meeting will also be used to identify problems encountered in the update cycle and formulate possible solutions for regaining lost time.

Schedule updating is a dynamic process that calculates revised performance times of the remaining work on the project. The timing of remaining work is based on the performance of current work and, because of that, each update will vary when it shows future work being performed. Because the schedule will vary from update to update, it is important that an analysis be conducted and a record kept of the project status for a particular update. The schedule update will include the work accomplished to date, as well as the remaining work on the job, identifying the critical path and any near critical work tasks. A narrative about the status of the job and any other important points that may have occurred over the intervening update cycle will be prepared.
Change orders that are issued to the contractor will be analyzed for the time impact on the overall project. Changes to non-critical items that affect the contractor's ability to progressively work will be

noted and incorporated into the schedule. Change orders that have an effect on the contractor's critical path will be analyzed for possible work-around plans in order to mitigate the change's impact.



A recovery schedule is necessary when the construction contractor falls behind schedule, forcing the project to be completed later than required. Urban will review the work elements and collaborate with the contractor in identifying methods to recover the lost time and finish the contract on its originally scheduled date. The schedule represents the contractor's best estimate of the tasks, timeframes, and relationships necessary in order to proceed with the construction project. Frequently, a workshop is used to identify work, relationships, and alternate methods that can be used to better the contractor's approach to the work. If such a workshop can lead to regaining lost time, it will be used to prepare the contractor's recovery schedule.

The baseline schedule represents the contractor's initial approach to working on the project. As the project proceeds, frequently a contractor will change methods or equipment used to construct the project. The schedule must always reflect the contractor's current approach to work. Revising the schedule to reflect the contractor's revised approach may be necessary. Any acceptable revisions will be facilitated and incorporated into the schedule.

Task D. Quality Assurance Inspection

Practical construction experience and sound engineering judgment, combined with a thorough understanding of project requirements, are the key ingredients in a successful construction inspection program.

Urban will provide competent and well-trained personnel from its staff of Resident Engineers and Inspectors to monitor construction activities and perform administrative services. **Our staff will be selected specifically for each on-call assignment and will be based on certification, training, qualifications and experience working on PANYNJ projects and/or projects with similar construction activities and challenges.** Our inspection Team is identified in the included organization chart and accompanying resumes. We take pride in the depth of our inspection force and have presented a deep team of qualified inspectors with experience in transit, facilities, airports, marine, tunnel and bridge construction and rehabilitation.

Our inspectors will: provide a comprehensive and continuous full-time, on-site field organization to monitor that the construction is being performed in accordance with the requirements of the contract documents; identify and have non-compliant work corrected in an efficient manner; and prepare detailed daily inspection reports, documenting the activities for which they were responsible.

An effective field inspection and documentation program is an important tool used in the delivery of a successful project. The goal of construction inspection is to monitor and document conformance to requirements and early identification and correction of nonconforming work.

Unacceptable Work or Materials – During construction, monitoring and inspection of work by our inspectors will be carried out in accordance with the requirements of the individual activity. Upon identifying non-conforming or unacceptable work, the inspector will make a judgment as to the severity of the problem and whether he can implement a corrective action on his own or whether to seek assistance. If the inspector has any doubt whether work conforms to project requirements, he will

immediately seek the assistance of the lead inspectors and/or the resident engineer. On a daily basis, the inspector will document deficiencies in work via the Daily Inspection Report.

After identifying a defect or problem, it is important that the root cause of the deficiency be identified and corrected so the defect will not be repeated. Frequently, this may be accomplished by a discussion of the problem between the inspector and the contractor's foreman or superintendent. If this approach is not successful or if the root cause of the problem is beyond the control of the contractor's field staff, e.g. delivery of defective materials, the inspector must obtain assistance. If the problem cannot be expeditiously resolved, the resident engineer will notify the PANYNJ, evaluate the circumstances, and recommend remedial action(s). Instances of defective work not immediately corrected in the field will be documented.

Daily Inspection Report – On a daily basis, each inspector will prepare a written report documenting the activities for which they were responsible. Inspection reports will include a brief description of the work performed, manpower and equipment utilized, material and/or pay quantities, weather conditions, and observations. The resident engineer and/or the lead inspector will carefully review daily inspection reports and promptly resolve errors or discrepancies. If requested, we can prepare a weekly summary level report, incorporating pertinent information from the daily inspection reports and transmitted electronically to the appropriate PANYNJ personnel.

Task E. Contract Administration

Change Orders – Urban's philosophy is to minimize change orders during construction by maximizing our pre-construction reviews and assessments. However, differing site conditions from those anticipated during design or revised design requirements provide potential for changes to contract work. Efficient handling and management of changes is critical to the project's success.

Frequently, changed work can proceed at no additional cost to the contract and can be performed within the originally scheduled time frames. Our Team fully understands the importance of keeping costs within the project funding limitations, and it has always been our practice to attempt to mitigate potential project overruns without sacrificing project integrity.

Urban will evaluate each proposed change relative to need and/or desirability; the reasonableness of the costs involved; and the impact it will have on the environment, traffic, community, other construction contracts, and schedules. Change requests submitted by the contractor will be reviewed to determine the entitlement of the change.

A structured and consistent procedure for handling contract changes on a project is a key element of our approach to construction management.

Equitable and timely disposition of contract changes will produce a beneficial ripple effect far beyond any individual issue. Having performed this task on many task order-type assignments, our Team is intimately familiar with the process, including: prompt identification and notification to the PANYNJ; preparation of an independent estimate (Task F) and/or schedule; tracking of the Request for Quotation; review of the contractor's proposal; negotiations; preparation of a comprehensive Post Award Contract Change (PACC) package and change order. Our Team's construction managers and estimators are prepared to generate independent cost estimates for contract change orders to be used as the basis for negotiating final terms with the contractor.

The Urban field team will maintain a Change Order Log that is updated regularly and is to be reviewed and "checked against" with every Pay Application submitted by the Contractor.

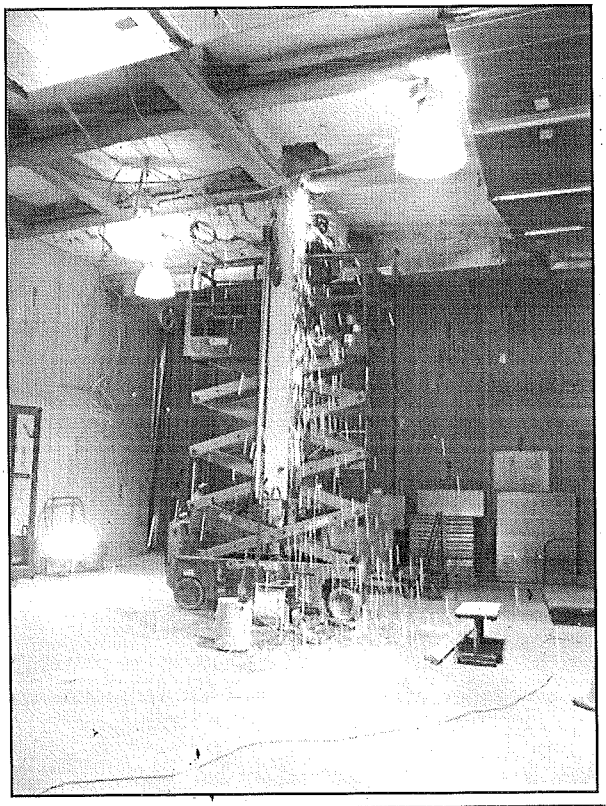
Status Reporting Document Control – In today's time- and budget-conscious environment, managing project documentation is integral to overall project execution. A comprehensive document control system will provide the necessary communication for tracking project documents and expediting outstanding correspondence and submittals.

Urban will log incoming and outgoing documents, including correspondence, submittals, memos, RFIs, schedules, reports, and logs, into the document control system on a daily basis. Each document will be electronically inputted and will include the tracking number, organization sending, organization receiving, subject description, and necessary comments. The document control system will track and link documents and their respective responses on a project, and the appropriate action will be noted.

Reports showing answered or outstanding correspondence and average contractor, designer, and owner response time will be available for internal use or for review during Contract Status Meetings. Back-ups of the document control system will be performed to minimize the possibility of losing data.

Attending Progress Meetings – Urban will attend progress meetings and, if requested, assist the PANYNJ in preparing for and conducting meetings with the contractor and other appropriate agencies, as required. At these meetings, the progress of the previous period will be reviewed, the impact of schedule slippages or advancements will be assessed, the contractor's work plan for the next work period will be discussed, manpower and equipment resources will be quantified by the contractor, and any special problems or concerns will be addressed.

Progress Meetings will be a forum to review problem areas, evaluate alternatives, and discuss resolutions. Urban will track the resolution process to monitor that action items do not "fall through the cracks." Our Team's primary function at the Progress Meetings will be to promote and maintain effective job communications and document that stakeholders have a clear understanding of the critical issues involved.



A standard meeting format, structured to report progress and address project issues, has been developed during the course of conducting thousands of Progress Meetings. Below is the typical meeting agenda we propose:

- Discuss safety issues
- Discuss schedule-related issues
- Review status of old issues and record new issues
- Review environmental, permitting, and public concern issues
- Review open contractor submittals
- Review the contractors' supervision, work force, and equipment
- Partnering items

Task F. Cost Engineering/Estimating Services

Urban will provide cost engineering and estimating services throughout the design and construction phases of the various projects in accordance with the PANYNJ's "Construction Estimating Guide." The cost estimating tasks will begin early for projects under

design. Initial budgets will be confirmed or developed, as needed. Subsequently, revised cost estimates will be prepared at key milestone junctures.

For projects under construction, our estimating professionals will prepare estimates of anticipated change orders and review contractor prepared cost estimates. The estimators will also be responsible for financial analysis, cost trending, and cost tracking during construction.

To improve the accuracy and applicability of our cost estimates, we use an approach similar to a contractor's estimating process in which detailed crew analysis is used, rather than unit prices. The estimate is developed so that there is a detailed analysis of direct costs, indirect costs, overhead and profit, and anticipated risks. Any assumptions used will be clearly indicated. Material costs are obtained from price quotes solicited from local vendors. This approach allows the estimate to reflect the precise conditions to be expected during construction and accordingly reflect productivity.

Task G. Resources

Urban has a robust staff of qualified Construction professionals in our New York City office who are ready and able to work on PANYNJ assignments. We have over 80 professional employees located in our New York City and New Jersey offices. Additionally Urban has over 300 employees in our Philadelphia Headquarters, one half of this staff is experienced in Construction Management and Inspection.

Urban has a strategic alliance with Orange County based Advance Testing Company (ATC), a Material Testing and Special Inspection consulting firm. ATC serves Urban for soil testing (compaction, etc), concrete sampling and testing, structural steel weld testing, asphalt tests and masonry sampling. In addition ATC has a robust laboratory where they perform various ASTM tests on the majority of building materials.

We also maintain relationships with specialty testing companies for items such Radiographic weld tests, Ultrasonic and dye penetrate testing as needed for DOB inspections.

Due to our experience in the field of Special Inspections and Construction Inspections, Urban has the capability to perform all necessary tests and inspections as needed by the PANYNJ for projects at all facilities.

I. Firm's Affiliates

URBAN ENGINEERS
Formulating Excellence®

Firm's Affiliates

Urban Engineers, Inc. is a former affiliate via common ownership. Urban Engineers, Inc. became 100% employee owned (ESOP) effective December 30, 2013. Urban Engineers of New York, P.C. and Urban Engineers, Inc. still share common management.

Urban Engineers of New York, P.C. is registered and authorized to do business in New York, and Urban Engineers, Inc. is registered and authorized to do business in New Jersey. Any New Jersey-based assignments issued under this Agreement will be performed by Urban Engineers, Inc. as a subconsultant to Urban Engineers of New York, P.C.

J. Conflict of Interest

URBAN ENGINEERS
Formulating Excellence®

Conflict of Interest

We have reviewed and considered the General Conflict of Interest (Section, I.) requirements and restrictions included in the RFP documents, and we offer the following for your consideration:

PROPOSER POTENTIAL CONFLICTS

Urban Engineers of New York, P.C. ("Urban" or "Proposer") has identified the following active agreements that may give rise to conflicts of interest with assignments to be issued under this Agreement:

1. Integrity Monitoring at the Tower One (Freedom Tower) at the World Trade Center site for the PANYNJ, as a member of a joint venture with Fortress Monitoring Group;

2. Performance of Expert Professional Planning, Project Management and Related Services as Requested on a "Call-In" Basis for PATH - P.A. Agreement #PAT-10-005 as a member of The Louis Berger Group/Urban Engineers Joint Venture;

3. Performance of Expert Professional Project Risk Analysis and Related Project Management Services as Requested on a "Call-In" Basis - P.A. Agreement #COO-11-023;

4. Performance of Expert Professional Tenant Alteration Application (TAA) Code Review Services as Requested on a "Call-In" Basis - P.A. Agreement #405-13-035; and

5. PMO assignments for the Federal Transit Administration in New York City, could create a conflict of interest with Task Orders issued under this Agreement.

PROPOSER MITIGATION STATEMENT

To the extent any of the Task Orders issued under this Agreement would give rise to an actual or potential conflict of interest (COI) relative to any of the agreements listed above, Urban will immediately notify and work with the PANYNJ to avoid, neutralize, or mitigate those COIs.

Mitigation measures will be developed on a Task Order-by-Task Order basis and may, depending on the circumstances, include implementation of an organization firewall, delegation of duties to non-conflicted subconsultants, Urban not submitting a proposal on a Task Order where conflicts exist, or other suitable mitigation measures as approved by the PANYNJ.

PROPOSER EMPLOYEE/SUBCONSULTANT POTENTIAL CONFLICTS

During the Agreement and task order performance periods, Urban will take a proactive approach to avoid conflicts of interest for our employees and our subconsultants. Urban believes that proactive conflict avoidance begins with an understanding of the restrictions and requirements, and we offer the following for your consideration:

a. Urban's ongoing business ethics and conduct awareness training program and Standards of Conduct and Business Ethics are design to facilitate timely discovery of actual or potential personal conflicts of interest with any of our employees working on, or having access to, information concerning any of our clients. Employees are required to immediately report any such conflict to Urban for consideration and resolution.

b. To the best of our knowledge, information, and belief, as of the date of our Proposal, no actual or potential conflicts of interest exist for any Urban employee relative to this proposed Agreement.

c. Urban subconsultants, if any, will be contractually required to comply with the Authority's General Conflict of Interest and Organizational Conflict of Interest requirements and restrictions. Agreements with our subconsultants will include provisions to address conflict of interest requirements, including: (1) a requirement to provide Urban with up-to-date conflict of interest information during the contract and task order performance periods, (2) a requirement to provide us with immediate notification of any corporate mergers, acquisitions, and/or divestures that may present a potential conflict of interest, and (3) requirements for subconsultants to immediately notify Urban of any actual or potential personal conflict of interest with regard to any of its employees working on, or having access to, any information regarding the contract.

PROPOSER EMPLOYEE/SUBCONSULTANT MITIGATION STATEMENT

a. As mentioned above, Urban administers an ongoing business ethics and conduct awareness training program for its employees as part of its Standards of Conduct and Business Ethics. This is an ongoing effort and will continue through the duration of this Agreement. Urban personnel who will perform work under this Agreement, or relating to any Task Order issued under this Agreement, will be reminded of their obligations to immediately report personal conflicts of interest to Urban.

   If at any time an actual, apparent, or potential personnel/individual conflict arises with any of Urban's employees, we will immediately notify the Authority. The notification will identify the conflict or potential conflict and will also include the proposed actions taken to avoid or mitigate the conflict of interest, up to and including removing the employee from the Agreement/Task Order.

b. Urban will contractually require its subconsultants to immediately notify us of any actual or potential conflicts of interest concerning the organization and any of its employees working on or having access to any information regarding the Agreement.

   In addition to contractual requirements, Urban will utilize the following measures in an effort to mitigate/avoid conflicts with our subconsultants and their employees:

   1. Use non-conflicted subcontractors. A deep pool of qualified subconsultants provides the opportunity to engage not-conflicted subconsultants, while isolating conflicted subconsultants.

   2. Sever relationships that create actual or potential conflicts. At times, a subcontractor may have to be removed from the program to avoid organizational/personal conflicts of interest. We will work closely with the Authority in making such determinations.

   3. If at any time an actual, apparent, or potential conflict arises with any subconsultant or their employee(s), Urban will immediately notify the Authority. The notification will identify the conflict or potential conflict and will also include the proposed actions taken to avoid or mitigate the conflict.

K. Exceptions to the Standard Agreement

URBAN ENGINEERS
Formulating Excellence®

Exceptions to the Standard Agreement

We have reviewed the Terms and Conditions / Sample Agreement included in the RFP. Based on our review, we offer the following exceptions and requested modifications pursuant to Section J of the Submission Requirements. In submitting these exceptions/requested changes, our intent is to help achieve mutually agreeable language that provides the PANYNJ with appropriate terms and conditions that protects its interests, while at the same time being insurable for the benefit of the PANYNJ and Urban Engineers.

1.) 26 Insurance

A (1) The insurance requirements at VII A(1) state that the consultant shall provide Commercial General Liability and Auto Liability Insurance each in the amount of $25MM (combined single limit). Urban currently carries Commercial General Liability in the amount of $1MM ea occ./$2MM agg and Auto Liability in the amount of $1MM combined single limit. Urban also has an umbrella/excess policy in the amount of $10MM ea occ/ $10MM gen agg that sits on top of these policies, effectively giving us $11MM ea occ / $12MM agg of Commercial General Liability and $11MM CSL of auto insurance.

If selected, Urban is proposes meeting the required Commercial General Liability and Auto Liability Insurance limits by placing an additional excess/umbrella policy. Urban respectfully requests that the PANYNJ accept this proposed arrangement to meet the limits cited in the RFP documents-kindly confirm.

C (1) Please note that our professional liability insurance policy ($5MM/$5MM) is written on a per claim basis and not a per occurrence basis (coverage for full prior acts). This has been acceptable to the PANYNJ is the past and we assume will not be an issue in this case either – kindly confirm.

REQUEST FOR PROPOSALS FOR THE PERFORMANCE OF EXPERT PROFESSIONAL CONSTRUCTION MANAGEMENT AND INSPECTION SERVICES AS REQUESTED ON A "CALL-IN" BASIS DURING 2015 THROUGH 2018 (RFP #39247)

AGREEMENT ON TERMS OF DISCUSSION

The Port Authority's receipt or discussion of any information (including information contained in any proposal, vendor qualification, ideas, models, drawings, or other material communicated or exhibited by us or on our behalf) shall not impose any obligations whatsoever on the Port Authority or entitle us to any compensation therefor (except to the extent specifically provided in such written agreement, if any, as may be entered into between the Port Authority and us). Any such information given to the Port Authority before, with or after this Agreement on Terms of Discussion ("Agreement"), either orally or in writing, is not given in confidence. Such information may be used, or disclosed to others, for any purpose at any time without obligation or compensation and without liability of any kind whatsoever. Any statement which is inconsistent with this Agreement, whether made as part of or in connection with this Agreement, shall be void and of no effect. This Agreement is not intended, however, to grant to the Port Authority rights to any matter, which is the subject of valid existing or potential letters patent. The foregoing applies to any information, whether or not given at the invitation of the Authority.

Notwithstanding the above, and without assuming any legal obligation, the Port Authority will employ reasonable efforts, subject to the provisions of the Port Authority Freedom of Information Code and Procedure adopted by the Port Authority's Board of Commissioners on March 29, 2012, which may be found on the Port Authority website at: http://www.panynj.gov/corporate-information/pdf/foi-code.pdf, not to disclose to any competitor of the undersigned, information submitted which are trade secrets or is maintained for the regulation or supervision of commercial enterprise which, if disclosed, would cause injury to the competitive position of the enterprise, and which information is identified by the Proposer as proprietary, as more fully set forth in the FOI Code, which may be disclosed by the undersigned to the Port Authority as part of or in connection with the submission of a proposal.

Transmittal Letter

Louis Berger

September 18, 2014

The Port Authority of New York and New Jersey
Procurement Department
Two Montgomery Street, 3rd Floor
Jersey City, NJ 07302
Attn: RFP Custodian

RE: Request for Proposals for the Performance of Expert Professional Construction Management and Inspection Services As Requested On a "Call-In" Basis during 2015 through 2018– RFP No. 39247

Dear RFP Custodian,

The Louis Berger Team is especially well suited to provide the Port Authority of New York and New Jersey ("Port Authority", "the Authority", or "PANYNJ") with the construction management and inspection services as defined in the subject Request for Proposal. This team, comprised of Louis Berger, Techno Consult, JCMS, Atlantic Engineering Laboratories, and Naik Consulting Group, provides a tremendous depth of experienced talent for the performance of these services. We have immediately available staff consisting of construction management professionals, resident engineers, certified inspectors, design experts, and project controls specialists with experience that is directly applicable to the range of projects that the Authority could be expected to undertake. This staff proposed herein exceeds the Port Authority's requirements and the resources available within this team extend beyond those required.

Louis Berger has performed construction management services for the Port Authority for more than 25 years, often on a "call-in" basis, and has successfully delivered those services on dozens of projects during that time, on time and within budget. Through this long-term partnership, Louis Berger has successfully provided the services being requested by the Port Authority at this time, including constructability, biddability, and general engineering reviews; construction staging planning and development; schedule development and monitoring; quality assurance inspection; overall contract administration; and cost engineering and estimating services.

Louis Berger offers a committed, readily accessible, and dedicated team with extensive relevant experience, a history of successful performance for Port Authority projects, and a depth of resources in multiple disciplines. Given our depth and breadth of relevant expertise, demonstrated level of commitment and diligence, and proven track record of superior performance, the Louis Berger Team offers the Port Authority perhaps its best option for achieving success in the timely delivery of a high-quality and cost-efficient program. We hope and look forward to continuing our role as a ready and reliable partner to the Port Authority under this contract.

Louis Berger Firm Experience:	Meets	Exceeds
1. An office in the Greater New York, New Jersey Metropolitan Area and at least 50 individuals on staff who have demonstrated experience performing construction management and/or construction inspection services in the Greater New York/New Jersey Metropolitan Area.		✔
2. A Certificate of Authorization to practice Professional Engineering or Architecture in the states of New York and/or New Jersey.	✔	
Staff Experience **Construction Inspection staff shall be experienced in performance of one or more of the following: Civil, Structural, Electrical and Mechanical Engineering; and shall include:**	**Meets**	**Exceeds**
1. At least ten (10) engineers/architects licensed in the states of New York and/or New Jersey		✔
2. At least ten (10) ACI Concrete Construction Special Inspectors		✔
3. At least three (3) ICC Certified Structural Steel and Bolting Inspectors		✔
4. At least one (1) NACE Level 1 coatings certified inspector		✔

In the case of presentation scheduling or if you have any questions, please contact me at 202-303-2742 or jwillis@louisberger.com ; and Michael Regan at 732.948.9527 or mregan@louisberger.com as alternate.

Sincerely,

Jeffery D. Willis
Senior Vice President

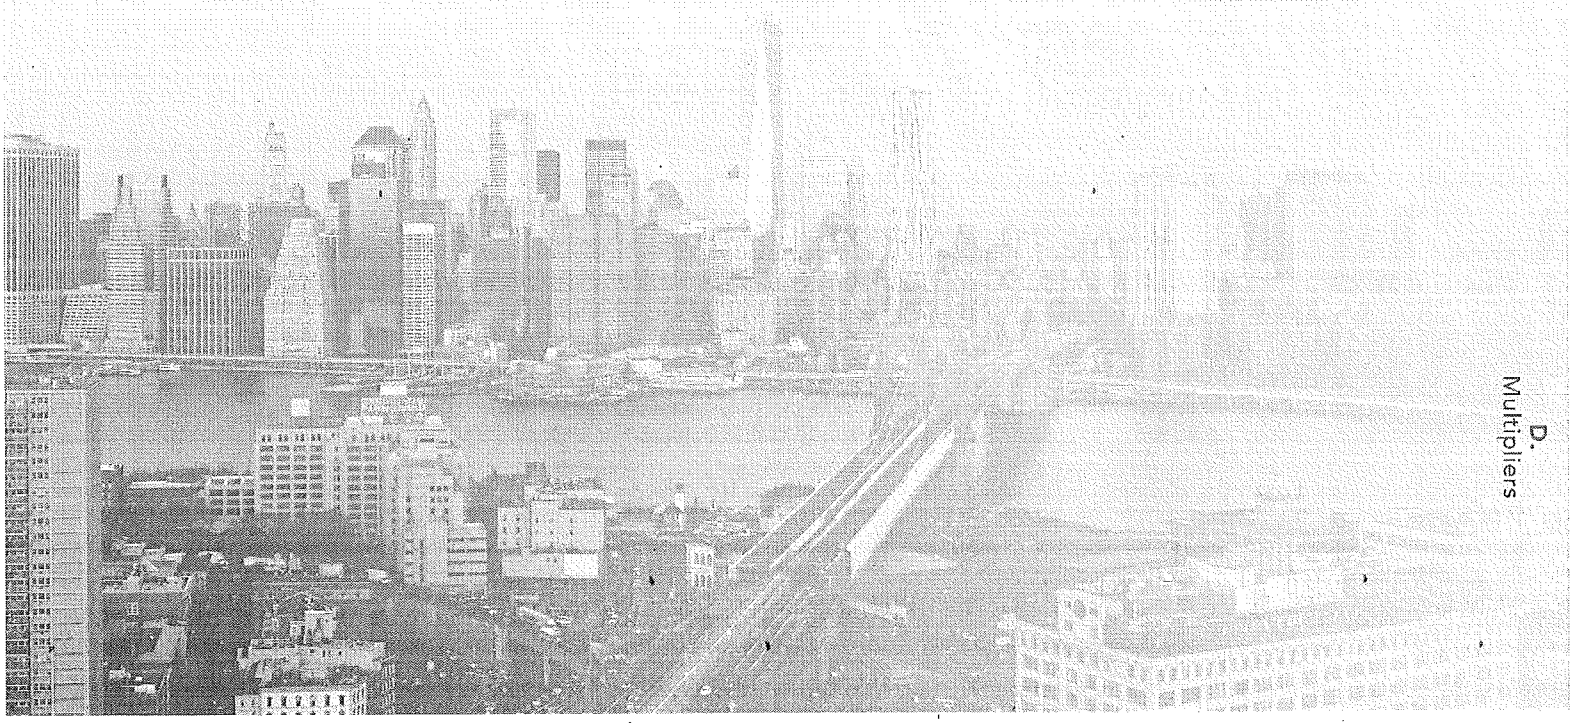
Multipliers



SALARY MULTIPLIER FOR PROJECT STAFF

The proposed multipliers for this project are 2.5 for office work and 2.0 for field work. The following is a derivation of the salary multipliers based on The Louis Berger Group,'Inc.'s overhead rates.

Deviation of Salary Multipliers	
Base Salary	1.00
Overhead Rate and Profit (office work)	1.68
Total (office work)	2.68
Discount	-0.18
New Office Multiplier	2.50
Overhead Rate and Profit (on-site work)	1.36
Total (on-site work)	2.36
Discount	-0.36
New On-Site Multiplier	2.00

The rates included in this proposal are based on current salaries through June 30, 2014. Annual escalation of 2.5% is anticipated beginning July 1, 2015, subject to the provisions of paragraph 9A of the draft agreement.

Derivation of Multiplier

The table below is a standard audited derivation of the overhead for The Louis Berger Group, Inc.

	Total Company Costs	Adjustments (Note 5)	Allowable Costs	Allocation Methods (Note 4)	Field Office	Home Office
DIRECT LABOR	$ 46,349,010	$ (147,778)	$ 46,201,232		$ 17,901,199	$ 28,300,033

E.

Resumes

STAFF QUALIFICATIONS AND EXPERIENCE

Louis Berger has drawn upon its depth of NY/NJ-based construction management and inspection resources to assemble a team that exceeds the required number of certified professionals as identified in the request for proposal. The Team currently includes:

- 23 Professional Architects/Engineers licensed in the states of New York and/or New Jersey
- 16 ACI Concrete Construction Special Inspectors
- 5 ICC Certified as Structural Steel and Bolting Inspectors
- 3 NACE Level 1 coatings certified individuals

In addition to those resources listed herein, Louis Berger and its team members actively engage in succession planning. For each individual identified on the organization chart, a potential replacement can be drawn upon from the staff pool of technical experts available within this team.

At Louis Berger, construction and project management is a discipline taught and nurtured. Louis Berger selects promising candidates from its engineering staff possessing the interest, leadership, communication, and organizational skills necessary to master construction management and inspection assignments. This discipline includes learning the tools to manage schedule and budgetary performance. Louis Berger's project managers (PMs) are all technical experts with superior managerial skills. These managerial skills are developed through in-house training in cost and schedule control, including advanced training with the systems (P6, Cost Manager, etc.) used to monitor cost and schedule. An essential part of Louis Berger's PM training includes effective communications, both internally with management and staff and externally with clients and other stakeholders. Louis Berger's communication procedures include both meetings and written communications such as regular project status reports, meeting minutes, public presentations, and financial reports. The Louis Berger Team has the depth of talent to assign personnel with relevant experience and with an understanding of the technical challenges of each specific project. Louis Berger's personnel will also bring design and construction expertise in an array of construction project types, a diversity of experience which augments the team's ability to address the unique combination of challenges that each project can present.

The key individuals responsible for the successful completion of each task under this contract include the following:

Jeffery Willis is a senior vice president with Louis Berger and has more than 25 years of experience in the management and implementation of facilities program management, construction management, and A/E design requirements directly related to state, local, and federal facilities planning, engineering, and management both in the U.S. and abroad. With Louis Berger, he has overseen and been primarily responsible for a wide range of some of the largest facility program and construction management projects in the world. This includes his principal PM role at the $20 billion World Trade Center redevelopment program in Lower Manhattan and also his principal PM role on several major aviation construction programs, including those at Hartsfield-Jackson Atlanta International Airport and throughout the Houston Airport System. Mr. Willis has been the principal-in-charge for more than 100 independent assignments in his more than 14 year career with Louis Berger, all of

them having been delivered on time and on budget.

Mr. Willis has been highly effective in supporting complex assignments with multiple stakeholders and will dedicate all necessary effort to support this very important program. As a corporate officer with Louis Berger, he is authorized to negotiate on behalf of the firm and is responsible for ensuring required resources are available and are assigned in order to meet client requirements. Mr. Willis brings a long and impressive track record of success in the management of complex and high-profile projects to this contract.

Michael Regan, CCM, has more than 18 years of construction management experience on a diverse portfolio of complex, high-visibility projects totaling more than $2 billion. His accomplishments include dispute resolution, system start-up, and project closeout on over $150 million of plant improvements at the 740 MGD Blue Plains Wastewater Treatment Plant; the management of the $145-million U.S. Supreme Court Modernization Project; and the leadership of the preconstruction and procurement phases for the $750-million Cannon House Office Building Renewal project. As an associate vice president at Louis Berger, Mr. Regan has performed in leadership positions for the CDBG-funded New Jersey Superstorm Sandy Housing Incentive Program and has led Ocean County, New Jersey's Hazard Mitigation Grant Program (HMGP) project development and application process.

Wayne Valentine, PE, has provided management oversight on a number of Port Authority contracts throughout the past 10 years. His understanding of Port Authority requirements and industry best practices makes him well suited to lead this IQC in a continuation of this role for the Authority. In addition to overseeing the services provided for the Authority, Mr. Valentine has also performed constructability reviews and cost estimates for existing engineering contract with the Port Authority.

John Hasselmann, PE, CCM, is a licensed civil engineer with 20 years of professional experience in engineering, management, design, and construction. He manages construction support services including engineering during design services, inspection and scheduling, and multi-discipline A/E teams for planning and design of facilities. Mr. Hasselmann is currently performing a project management role at the George Washington Bridge Bus Station project for the Port Authority. He has extensive management experience that includes broad oversight of regional programs, management of construction and A/E contracts at numerous sites both in the U.S. and abroad, and leadership and management of design-build project delivery teams.

Ken Favaro has been a marine construction and site work project manager in the New York metropolitan area since May 1984. Mr. Favaro's current position with Louis Berger is senior civil inspector for the Port Authority, handling complex, large-scale marine construction projects for the Port Commerce Division, operating primarily at the Brooklyn Marine Terminal in Red Hook and the New York Container Terminal in Port Ivory, Staten Island. His primary job responsibilities include workmanship and materials quality assurance, daily detailed job inspections, site safety/OSHA compliance, and approving and processing contractor payment requisitions. In addition to providing field representative/marine construction inspector services to the Port Authority at Brooklyn Marine Terminals (Piers 7,

8, and 9B) in Brooklyn, Mr. Favaro also received accolades for his efforts on the development of post-Sandy repair options for a Snug Harbor dock on behalf of the Authority.

Rich Law, PE, CCM, PMP, has nearly 28 years of technical and management experience in civil engineering related projects. The majority of his experience has been on projects in the New Jersey and New York metropolitan area. He has also spent nine years working overseas managing some noteworthy and high-profile projects. He has served as a project manager, design manager, and resident engineer throughout his career. As a designer and project manager, he has worked on all aspects of civil engineering and has prepared many designs and complete bidding documents on many different types of projects. While serving as a resident engineer, he has gained a significant amount of field experience, which he has successfully reflected on the designs under his supervision..

Richard Barrington, PE, is a principal engineer serving as the manager of facilities engineering. He has 16 years of experience in design services for civil and environmental engineering including the past 18 months in an operational manager capacity. Mr. Barrington has been involved in a wide variety of projects for both private and public sector clients. His experience ranges from preliminary investigations and conceptual plans, through design and preparation of contract documents, to construction phase services. He has worked in many sectors, most notably education, aviation, transportation, and sports and recreation.

The Louis Berger core leadership team will be responsible for assembling and proposing tailored teams for each individual Port Authority project, and leading these teams to a fully successful completion of each task.

FIRM COMMITMENT AND STAFF AVAILABILITY

Louis Berger is committed to delivering the resources indicated in this proposal, specifically the proposed staff. Louis Berger understands that the most important factor in selecting a construction management consultant is the quality of the proposed personnel; therefore, if selected by the Authority, Louis Berger will deliver the individuals proposed herein. All members of the Louis Berger team value the long-term relationships that have been formed with the Authority. The staff offered here has therefore been selected not only on the basis of their technical capabilities, but also their availability and commitment to the Port Authority. Louis Berger has assembled a team that exceeds the requirements as defined by the Port Authority. This provides additional flexibility in constructing a tailored team and greater capability to withstand any changes in staff availability. Further, all member firms of the Louis Berger Team have a long-demonstrated ability to identify and retain top-caliber professionals to ensure that overall team composition and quality will not be compromised at any point during the performance of work under this contract.

The following pages are the organizational chart and detailed resume of the team members.

Statement of Premium Pay

As required by the Authority's RFP to provide a company policy for compensation for premium pay (i.e., holidays, shift differentials, regular days, weekends and night work or union required payments), The Louis Berger Group, Inc.'s policy is as follows:

"The Louis Berger Group, Inc., overtime policy is to pay overtime in compliance with FLSA regulations. Non-exempt employees are paid premium pay (time and a half) for all hours worked in excess of 40 in an FLSA workweek (Sunday through Saturday). Although not required by the FLSA, when Exempt employees work in excess of 40 hours in an FLSA workweek, they are paid for the additional hours at their usual hourly rate. Employees who work on a company Holiday may receive Holiday pay in addition to work pay, at their usual rate. No premium pay applies. Employees who work at night or on weekends generally receive pay for hours worked at their usual rate without any premium. However, in some circumstances, they may receive premium pay if the client or employment contract includes premium pay because of special conditions." The hourly rates table of our proposed technical personnel including key personnel indicated on our project organization chart is provided in the next pages.

Jeffery Willis

PRINCIPAL-IN-CHARGE

Firm: Louis Berger
Years' Experience: 25

Education:
MBA
Project Management Certification
Electrical Engineering Curriculum

Professional Summary

Mr. Willis is a senior vice president with Louis Berger and has more than 25 years of experience in the management and implementation of facilities program management, construction management, and A/E design requirements directly related to state, local, and federal facilities planning, engineering, and management both in the U.S. and abroad. With Louis Berger, he has overseen and been primarily responsible for a wide range of some of the largest facility program and construction management projects in the world. This includes his principal project manager role at the $20-billion World Trade Center redevelopment program in Lower Manhattan and the multi-billion U.S. Department of State, Bureau of Overseas Buildings Operations new Embassy capital program requirements. Mr. Willis has been the principal-in-charge for more than 100 independent assignments in his 14+ year career with Louis Berger, all of them delivered on time and on budget. As a corporate officer with Louis Berger, he is authorized to negotiate on behalf of the firm and is responsible for ensuring required resources are available and assigned in order to meet client requirements. Mr. Willis has attended the George Washington University for several certification courses including: project management, business management, and facility operations management. As an undergraduate, he majored in electrical engineering at Capital College and received a Master's of Business Administration from the University of Maryland.

Selected Experience

Redevelopment of the World Trade Center, New York, New York. Port Authority of New York & New Jersey (PANYNJ). Principal-in-charge. Mr. Willis was responsible for overseeing the planning, site development, design, and construction to deliver the PANYNJ's master program to redevelop the 16-acre World Trade Center (WTC) site. This $20 billion program consists of four high-rise buildings (Tower One now the tallest building in the U.S.), a new intermodal transportation hub, a vehicle screening center, the National September 11 Memorial plaza, the National September 11 Memorial Museum, and the LEED certified complex infrastructure for power, communications, and HVAC utilities. Under the expert guidance of Mr. Willis, Louis Berger successfully provided all cost engineering, cost estimating, claims management, risk management, P6 integrated master scheduling, and document management consulting support services to include other various administrative support services.

Various Projects, worldwide. Goldman Sachs. Principle in charge and principal cost management consultant. Mr. Willis was responsible for a number of projects for Goldman Sachs for the past four years, including:

- Hotel: This $240-million project is currently in its closeout phase. This involves placing assets into service, budget transfer to clean up trade codes, and reviewing and approving final invoices.
- Sao Paulo: The fit-out budget for this project currently in its close-out phase is $60 million. This involves decommissioning of existing space and placing assets into service for depreciation.
- Mexico City: This new project involves everything in the project life cycle, including overseeing AP, forecast/cash flows, liaison with other departments to ensure cost and government regulations are followed.
- Balance Sheet Reconciliation: This project involved 10 entities, 38 accounts, reviewing recons done by the team, providing guidance for any month-end adjustments, and researching any unsubstantiated balances.
- America's Project Closeout: Led the team to closeout more than 200 Goldman Sachs completed projects.

Red Bull Stadium, Harrison, New Jersey. Red Bull Corporation. Principle-in-charge. Mr. Willis was responsible for the construction administration and inspection services for this large sports and entertainment stadium. He successfully managed a team of 11 inspectors, which included a resident engineer, four field inspectors, and a subcontractor inspection/laboratory team of New Jersey state-certified DCA Special Inspectors. Project scope included structural steel bolting/welding, concrete placement and testing laboratory, concrete reinforcement pre-placement inspection, and spray-on fireproofing. Additional team members were utilized when structural steel fabrication (in Canada) and precast concrete fabrication (in Bethlehem, Pennsylvania and Gettysburg, Pennsylvania) were active.

George Washington Bridge Bus Station Modernization, New York, New York. PANYNJ. Principle-in-charge. Mr. Willis was responsible for the program management for this redevelopment. His oversaw services that included program definition, permitting, historic preservation analysis, design management, cost control, scheduling, documenting control, and project management. Construction was staged and phased to allow for continued operation of the station during its three-year construction period.

Fulton Street Transit Center, New York, New York. For Plaza Construction/Schaivone Joint Venture. Principle-in-charge. Mr. Willis was responsible for the CPM scheduling support services for the $1.4 billion Transit Center Enclosure component at Fulton Center, which will serve as an essential transportation and retail hub in Lower Manhattan.

Engineering, Technical, and Management Support Services Worldwide. Missile Defense Agency (MDA), Arlington, Virginia. Principal-in-charge. Mr. Willis provided executive oversight of A/E services to support the MDA's construction and facility sustainment program worldwide. This program, under continuous contract with Louis Berger since 1994, requires the firm to provide agency-level planning, programming, budgeting, and execution efforts for all worldwide MDA facilities and real property/infrastructure.

Michael Regan CCM

QUALITY ASSURANCE

Firm: Louis Berger
Years' Experience: 17

Education:
MBA
BS, Engineering and Environmental Sciences

Registration/Certifications:
Certified Construction Manager

Professional Summary

Mr. Regan has more than 18 years of experience in construction and program management for a wide range of clients and project types including such public entities as Ocean County, New Jersey and the federal government. Prior to joining Louis Berger, he served as a construction program executive for the Architect of the Capitol in Washington, DC. During this time he managed all aspects of the $145 million U.S. Supreme Court Building Modernization Project and the project planning and design effort for the $750 million Cannon House Office Building Renewal, as well as the execution of multiple original agency-wide management initiatives including strategic plan development and establishment of project management procedures for projects over $100 million. He is fully skilled in CPM schedule development and analysis, project budget management, change order negotiation, complex project staging, constructability reviews, and value engineering. He is a Certified Construction Manager as designated by the Construction Management Association of America.

Selected Experience

Architect of the Capitol, U.S. Supreme Court Modernization Project, Washington, DC. Project manager. Responsible for overseeing the entire construction operation for this full-building modernization project within the historic U.S. Supreme Court building. This project involved the full replacement of all major building systems using a complex phasing approach while protecting this monumental building's historic fabric. The building remained occupied and the Supreme Court remained in operation without disruption throughout construction. Additional considerations included coordination with multiple Supreme Court departments, Justices' Chambers, and external governmental agencies for a highly-integrated execution strategy.

Architect of the Capitol, Cannon House Office Building Renewal, Washington, DC. Construction program executive. Led the project planning and design effort for this $750-million renewal of historic Cannon House Office Building. This project included a phased-while-occupied renewal of the oldest of the office buildings for the House of Representatives, including a technically challenging replacement of all systems using a limited project site while maintaining the historic fabric of the building. The preconstruction effort required a collaborative effort among multiple in-house and external entities, including the House Sergeant-at-Arms, U.S. Capitol Police, House Subcommittee on Appropriations for the Legislative Branch, and the Office of the Speaker of the House.

Renew Jersey Stronger Disaster Recovery Grant Administration Program. New Jersey Department of Community Affairs. Manager of facilities, assets, and security. Established nine housing recovery center offices throughout New Jersey as well as program headquarters within 30 days of contract award. Planned and executed interior furnishings and infrastructure as well

as procedures for maintaining facilities and supporting program operations. Established and implemented protocols for security and asset management for all 10 sites.

Ocean County College Technology Building, Toms River, New Jersey. Project manager. Responsible for pre-construction and construction phases for a new LEED certified technology building on the main OCC campus. Conducted value engineering to ensure delivery of the project within the available budget. Successfully incorporated savings of 20 percent from the initial project scope without significant impact to the building's operation needs or architectural elements.

Ocean County Library Expansion and Renovation, Toms River, New Jersey. Project manager. Responsible for numerous tasks during the pre-construction and construction phases of this project including conducting a value engineering study and recommended developing, critical cost-saving measures, managing multiple construction contracts, and for developing a comprehensive construction management plan that included complex staging to keep the facility operational during construction.

Ocean County Courthouse Renovation, Toms River, New Jersey. Project manager. Responsible for developing a comprehensive construction management plan, including staging plan for renovation of an operational courthouse, including Chambers and support offices for several Courtrooms, as well as the restoration of "Historic Courtroom No. One" to its 1860 condition.

Ocean County Fire and EMS Training Center, Waretown, New Jersey. Project manager. Responsible for the construction phase project management activities for a new comprehensive Fire and EMS training center that includes an administration/classroom building, five training buildings, three training, pads (including a natural gas burn simulator), and a catch basin/water recirculation system for capture and re-use of non-potable training water. Construction included extension of sewer, water, gas, and electrical utilities along a new 4,000-linear-foot access road from Route 9 in Waretown.

Ocean County Engineering Department Long-Range Planning, Toms River, New Jersey. Utilized Primavera scheduling and project management software to develop long-range planning and budgeting controls for the Ocean County Engineering Department. Developed custom forms and Expedition procedures to automate project development and management procedures. Used resource-loaded schedules and cost leveling capabilities of Primavera Project Planner to develop long-range design and funding plans for County infrastructure projects.

Fair Lawn Board of Education, District-Wide School Improvement Program, Fair Lawn, New Jersey. Project Manager. Project Manager for a district-wide school improvement plan that included a combination of interior renovations, additions, and new construction at ten K-12 school sites throughout Fair Lawn, New Jersey. Provided a full range of pre-construction, construction, and closeout services for this school program, which included an addition and interior modernization work to the historic Radburn Elementary School.

Egg Harbor Township Board of Education, District-Wide School Improvement Program. Egg Harbor Township, New Jersey. Project Manager. Responsible for project management services on a district-wide school improvement program that included a combination of interior renovations, additions, and new construction at ten K-12 school sites throughout Egg Harbor Township, New Jersey. Mr. Regan was part of this management team that was awarded a "Project of the Year" award by the Construction Management Association of America in 2002.

Wayne Valentine PE

PROJECT MANAGER

Firm: Louis Berger
Years' Experience: 40

Education:
MS, Civil Engineering
BS, Civil Engineering Technology

Registration/Certifications:
Professional Engineer (NJ)

Professional Summary

Mr. Valentine has more than 40 years of experience in construction and engineering design. He has experience in project and construction management and quality control for a wide range of public and private agencies, as well as experience in the administration of construction contracts. He has additional experience in procurement, negotiation of subcontracts, financial forecasts, scheduling, cost estimating, and claims. Mr. Valentine also performs administrative oversight for onsite construction inspectors, several of whom are located out of state. He provides constructability reviews of plans and specifications and provides quality assurance checks on cost estimates, plans, and specifications. Previous experience includes: on-site contract administration and construction management for water and wastewater treatment plants and sewer piping systems; seven years' experience with the inspection, rehabilitation, and structural design of fixed-span and movable-span bridges and concrete culverts; eight years' experience in the structural design of large natural draft / mechanical draft cooling towers, tall chimneys, and large storage silos; and project management of several large design-build projects.

Selected Experience

Replacement of Baird Boulevard Bridge over Cooper River and Roadway Improvements, Camden County, New Jersey. City of Camden, New Jersey. Project construction manager/resident engineer. Mr. Valentine provided construction administration and inspection services on the removal and replacement of the existing two-span bridge with a single-span bridge; installation of pile supported abutments and new retaining walls, concrete curbs, sidewalks and drainage structures; and pavement replacement and restoration. He provided construction administration, on-site construction inspection, and coordination of material testing with an outside firm. Evaluated and approved pay requests. He was responsible for overall supervision of one fulltime and one part-time construction inspector and coordination with the Camden County Engineering Department. Total construction value for this project is nearly $5.8 million.

Training Facility, Red Bull Arena. Hanover, New Jersey. Red Bull Arena, Inc. Project manager, construction manager, and resident engineer. Mr. Valentine provided construction administration and inspection services on the construction of the training facility and three soccer fields. He performed inspections to verify that construction was in accordance with the plans, specifications, local codes, and standards of the owner. He provided progress reports to the Corporate Representative and assisted client in reviewing construction costs. He also monitored project schedules, evaluated change orders, and assisted client in the buy-out of the project. Scope of responsibilities on site included but were not limited to monitoring of all concrete work (below/above grade); structural steel erection; all MEP installations; all building

envelope installations; two natural turf and one artificial turf soccer field construction including drainage and underground heating systems; site utility and drainage installation; and all audio-visual, security, telecast systems; as well as overseeing the architectural finishes of four multi-use buildings that include the player locker rooms, coaches offices, training weight room, and workout areas. This effort included direct management of fulltime field inspector, a subcontractor inspection/laboratory team of New Jersey state certified DCA Special Inspectors for structural steel bolting/welding, concrete placement and testing laboratory, concrete reinforcement pre-placement inspection, and soil and asphalt density testing. The total construction value for the project was nearly $20 million.

Terminal Buildings Frontages Protection, LGA, JFK, and EWR Airports. PANYNJ. QA reviewer. Mr. Valentine provided reviews of the cost estimate and performed constructability reviews of the plans. This program involved the design of physical, hardened crash-rated bollards and gates at various terminal buildings at three major metropolitan airports. The overall installation objective was to provide for hardened bollards along the terminal frontages to prevent vehicular encroachment into the terminal building at various levels. In order to maintain passenger and vehicle movements at each level of the terminals, the work was staged.

Lincoln Memorial Reflection Pool, National Mall, Washington DC. U.S. National Park Service. Senior cost estimator and constructability reviewer. Mr. Valentine provided reviews of the cost estimate and performed a constructability review for rehabilitation of this high-profile $36-million Lincoln Memorial Refection Pool project at the National Mall in Washington, DC. The rehabilitation—NPS's largest American Reconstruction and Recovery Act project—will address structural deficiencies in the reflecting pool and enhance the infrastructure, safety, and pedestrian circulation systems in the surrounding area. Provided review of construction cost estimates, reviewed plans and specifications, and provided a complete constructability review of the project components. Project involved demolition of existing facilities, installation of new piping and filtration system, underground utilities, piling, new basin slab and walls, reset of all stone granite, adjacent site restoration, ADA compliant access, new pathways, security features, and site lighting.

On-Call Construction Management Services, New Jersey & New York. PANYNJ. Project Manager. Mr. Valentine served as the supervisor to inspectors located on site providing construction administration and inspection services on the construction of various new and maintenance type projects at Newark Liberty Airport, Stewart Airport and the Brooklyn Marine Terminal. Projects included installation of fire alarm system upgrades, emergency repairs to waterlines, drainage improvements, resurfacing of parking lots, and the installation of security devices and CCTV cameras in Terminals A and C at Newark Airport, as well as piling repairs/restoration and structural repairs to existing bulkheads/piers at the marine terminal. Responsible for overall supervision of four on-site construction inspectors and providing contract administration with the PANYNJ Construction Management Department.

John Hasselmann PE, CCM

CONSTRUCTION MANAGER/ RESIDENT ENGINEER

Firm: Louis Berger
Years' Experience: 20

Education:
BS, Civil Engineering

Registration/Certifications:
Professional Engineer (NJ, VA)
Certified Construction Manager, CMAA

Professional Summary

Mr. Hasselmann is a licensed civil engineer with 20 years of professional experience in engineering, management, design, and construction. He manages construction support services including engineering during design services, inspection and scheduling, and multidiscipline A/E teams for planning and design of facilities. Mr. Hasselmann has extensive management experience that includes broad oversight of regional programs, management of construction and A/E contracts at numerous sites both in the U.S. and abroad, and leadership and management of design-build project delivery teams.

Selected Experience

Nationwide Construction Management BPA. U.S. National Park Service. Project manager. Mr. Hasselmann worked on construction management services that included oversight of on-site inspection, review and coordination of submittals, preparation of estimates and scopes, confirmation of progress for payment, and the resolution of technical issues in support of the Depew Recreation Site in New Jersey. Scope included development of a designated New Jersey swim beach at the preferred site, upgrading and realigning of existing access roads, development of a 100-125-car parking lot, development of a picnic area with tables and shelters, and excavation and re-grading of 300 linear feet of river shoreline to create a swim beach.

Armament Integration Facility Concept Design and Construction Support, Picatinny Arsenal. Dover, New Jersey. Project manager. Project included Code 3 Parametric Design (15 percent) to construct a testing and simulation laboratory and an indoor firing range, as well as a full design resulting in complete specifications, drawings, and biddable documents. Design included lab and range site location, utility identification, storm water drainage plan, and firing range safety appurtenances. Mr. Hasselmann managed a multi-disciplined design team to provide design and drawings, design analysis and recommendations, and cost estimates for this $10 million laboratory and firing range facilities for weapons research and development. Project management plan included customer interviews, site visits, technical expert consultation, and a final funding, design, and construction plan that were approved by Congress for Federal Fiscal Year 2007.

Officer's Club Renovations, Picatinny Arsenal. Dover, New Jersey. Senior civil engineer. Mr. Hasselmann worked on the preparation of a complete design package suitable for bid solicitation for the renovation of Building 121, the Officers Club, and Picatinny Catering Facility. Project consisted of the entire building interior and structural renovation, including the kitchen, banquet rooms, seminar rooms, fitness and locker rooms, and restrooms.

17th Street Potomac Park Levee Floodwall Project. Washington, DC. Program manager. Mr. Hasselmann provided design and construction management services, as well as federal agency

coordination and permitting. This $6 million project consisted of post and panel construction for a removable floodwall across 17th Street on the National Mall. Project site was complicated by reverence to National Mall view impacts and archaeological considerations of a historical buried canal and pier.

Pyrotechnics Research Facility Design, Picatinny Arsenal Area. Dover, New Jersey. Mr. Hasselmann conducted constructability and independent technical review of 65 percent DDESB submittal and 90 percent design documents, as well as coordinating the revisions to design narrative, blast safety plan, drawings, and specifications. He coordinated responses to comments in the DrChecks review system. The facility is designed with substantial dividing walls for blast protection in accordance with DA PAM 385-64 base on the hazardous operations involving classified explosives. Primary facilities consisted of 11,000-square-foot laboratory with a flare tunnel and 9,500-square-foot pilot plant; 6,500-square-foot engineering building; 1,600-square-foot magazine storage building; 1,300-square-foot flammable storage building; and 7,000 square feet of covered walkways. Scope also included ultra-high speed deluge fire protection, fire service tanks/pumps/piping, intrinsically safe electrical fixtures, explosion-proof HVAC systems, fugitive emissions controls, storm and sanitary sewers, access roads, potable water, electrical service, natural gas service, fiber optics/information systems, security systems, and industrial gases.

Design for the Modified Record Fire (MRF) Range. West Point Military Academy, New York. USACE New York. Mr. Hasselmann conducted a constructability and independent technical review (ITR) of the 90, 95 percent, and final construction documents of the modified record fire range and coordinated revisions to the plans, specifications, and cost estimates, as well as uploading responses in DrChecks review system. He also reviewed architectural and civil design analyses and incorporated improvements in the construction documents. He worked with the project manager and USACE to provide bid options to ensure base bid was within the programmed amount of $4 million.

USACE Northeast Regional Office (North Atlantic Division), Emergency Management. Brooklyn, New York. Emergency program manager. Mr. Hasselmann managed the Emergency Flood Control Program for the Northeast, as well as the on-going relationship with the Federal Emergency Management Agency (FEMA), under which several million dollars were assigned for recovery efforts, including emergency temporary housing, power, and other utility connections. He ensured that the regional office was prepared to manage responses to hurricanes, local floods, river ice jams, oil spills, and national security events. He advised the Division Commander (General Officer) on rehabilitation efforts and emergency de-watering of reservoirs. During emergency response operations, negotiated new work with FEMA and worked closely with USACE headquarters to allocate national resources. He advised and directed subordinate offices on emergency re-construction of flood control structures.

National Special Security Event, Republican National Convention (RNC). Mr. Hasselmann worked on the threat assessment development, in coordination with New York City EMO and FEMA Region II. Project included the identification of USACE role in federal response to unique threat, identification of incident command organization, and technical resources. He oversaw increased readiness during RNC.

Rich Law PE, CCM, PMP

CONSTRUCTION MANAGER/ RESIDENT ENGINEER

Firm: Louis Berger
Years' Experience: 28

Education:
BS, Civil Engineering

Registration/Certifications:
Professional Engineer (NY, NJ)
Certified Construction Manager, CMAA
PMP

Professional Summary

Mr. Law has nearly 28 years of technical and management experience in civil engineering related projects. The majority of his experience has been on projects in the New Jersey and New York metropolitan area. He has also spent nine years working overseas managing some noteworthy and high-profile projects. He has served as a project manager, design manager, and resident engineer throughout his career. As a designer and project manager, he has worked on all aspects of civil engineering and has prepared many designs and complete bidding documents on many different types of projects. While serving as a resident engineer, he has gained a significant amount of field experience, which he has reflected on the designs under his supervision.

Selected Experience

Various Projects. Louis Berger, Morristown, New Jersey. Corporate coordinator. Mr. Law manages Louis Berger's Corporate Quality Management Group responsible for the group's activities. This includes the monitoring and evaluation of the QA/QC activities for all significant projects (domestic and international), holding monthly meetings, and coordinating the technical evaluations and recommendations of projects that have encountered significant technical problems in both the construction and design phases. He was also instrumental in the implementation of Louis Berger's new quality control/quality assurance program, including all related procedures and documentation.

General Services Administration, New York, New York. Construction manager. Mr. Law was responsible for the management and supervision of the building redevelopment program, which included the design and construction of 10 medium-sized building construction/ renovation projects at various locations in New York City for clients that include the Federal Bureau of Investigation (FBI), U.S. Department of Homeland Security (DHS), and U.S. Department of Veteran Affairs (VA).

World Trade Center (WTC) Redevelopment Program, New York, New York. Construction and design management specialist. Mr. Law prepared the project management manuals for One World Trade Center and the WTC Memorial projects. He compiled all procedures, controls, roles, responsibilities, and technical obligations required for these two major components of this extremely high-profile project. His responsibilities included numerous technical review/evaluation meetings, which were necessary to provide realistic and useful project management manuals that could serve as the primary management resource during the lifespan of the projects.

Route 280 Reconstruction, New Jersey. New Jersey Department of Transportation (NJDOT). Project manager. Mr. Law was responsible for the design of the reconstruction and resurfacing of 4.7 miles (8 km) of Route 280 from Livingston to Roseland, New Jersey. He was responsible for preparing the design and construction documents, which involved pavement reconstruction and rehabilitation, super elevation upgrading, safety upgrades, LMC bridge deck repairs, traffic control and staging, highway lighting, electrical plans and connections, fiber optics, traffic management/monitoring installation, rumble strips, and call-box installations.

Route 202/206 Reconstruction. Somerset County, New Jersey. NJDOT. Project manager. Mr. Law was responsible for the full design for the reconstruction of Route 202/206, which involved extensive traffic reconfiguration and detouring, super elevation upgrading, utility research, row research, impact attenuation design, electrical and structural plans, and a full field survey to provide up-to-date base mapping for this pavement resurfacing and reconstruction project.

Route 120 Realignment. East Rutherford, New Jersey. NJDOT. Project manager. Mr. Law was responsible for the utility research and utility relocation plans. This project involved extensive research and design of numerous utility relocations due to the full highway and interchanges realignment, designed to pass through the Meadowlands Sports Complex. Project required the staged construction of nearly all of the belowground facilities in order to keep all utilities operational during each stage of construction. An extensive coordination effort was required to ensure that the staged construction of the utility relocations, including temporary connections, would not hinder the construction of the road and bridge construction.

Bridge Deck Repair Contracts 5A, 5B, 94-1, 95-1, 96-1 & 1A, and 97-1. Northern New Jersey. NJDOT. Project manager. Mr. Law was responsible for the full design for the deck repairs and safety upgrades on numerous bridge sites throughout northern New Jersey, released under multiple contracts. Scope included bridge plans, construction plans, traffic control plans, construction staging, and detouring, including utility research and all site-specific details for more than 100 sites. Drawings, specifications, and cost estimates were prepared for all repair sites.

Lot G Reconstruction, Newark Airport. Newark, New Jersey. PANYNJ. Project manager. Mr. Mr. Law was responsible for the design of the reconfiguration of the access roads to and including Lot G at Newark Airport, in order to provide a safe access road and an organized parking facility consistent with the ongoing airport expansion program. This involved the monitoring of existing and proposed traffic management systems and the design of the parking facility, including the layout, temporary traffic control (including detours), lighting and construction staging, and multiple discipline coordination with the adjacent road systems, parking garages, and access roads. Traffic management for these reconstruction projects were particularly difficult due to the necessity of extremely efficient traffic control to limit the impact of the project in these heavily utilized areas by both private and commercial vehicles, including heavy container and general cargo trucks that used the system to connect to passenger and cargo terminals, storage areas, and warehouses.

Ken Favaro

CIVIL/ STRUCTURAL INSPECTOR

Firm: Louis Berger
Years' Experience: 36

Education:
Masters, City and Regional Planning, Urban Design
BA, City Planning (Urban Design) and Political Science

Registration/Certifications:
See below

Registrations/Certifications

- ACI Concrete Field Testing Technician – Grade 1
- ACI Concrete Construction Special Inspector (Separate Certifications for NY and NJ)
- ACI Certification / Concrete Construction Technology Course
- S-1 Structural Steel and Bolting Special Inspector
- SSTC Certification / Structural Steel and Bolting Inspection Seminar
- SSTC Certification / Plan Reading for Steel Construction Seminar
- SSTC Certification / Structural Welding Inspection Seminar
- OSHA 10-hour Construction Safety & Health Course/Certification
- OSHA Confined Spaces Certification
- OSHA Demolition Certification
- Crane Seminar / Training (CE 198 and CE 199 Vertical Transportation Machines)
- Member / American Planning Association
- TWIC Clearance / Escort Status
- PATH Certified Employee in Charge
- PATH Certified Roadworker
- USCG Certification in recognition of work with NY Waterway during the WTC attack evacuation

Professional Summary

Mr. Favaro has been a marine construction and site work project manager in the New York metropolitan area since May 1984. His current position with Louis Berger is Senior Civil Inspector for the Port Authority of New York and New Jersey, handling complex, large-scale marine construction projects for the Port Commerce Division, operating primarily at the Brooklyn Marine Terminal in Red Hook and the New York Container Terminal in Port Ivory, Staten Island. Mr. Favaro's primary job responsibilities include workmanship and materials quality assurance, daily detailed job inspections, site safety/OSHA compliance, and approving/processing contractor payment requisitions.

Selected Experience

Brooklyn Marine Terminals, Piers 7, 8, & 9B. Brooklyn, New York. PANYNJ. Field representative/marine construction inspector. Mr. Favaro worked on a $2.8-million marine rehabilitation project contracted to Trevcon Construction Company. Work included 354 pile jacket repairs (of seven various types) to eliminate further pile deterioration from marine borers; removal and replacement of 650 linear feet of deteriorated steel walers supporting existing steel bulkheads; preparation and welding of 30 large steel plates along the existing bulkheads to prevent upland wash-out; and removal and replacement of the timber fendering pile system in order to replace steel walers. Job responsibilities included providing quality assurance to ensure that materials and the contractor's means and methods resulted in repairs called for on the contract drawings and specifications; daily job supervision and performance of detailed work inspections resulting in daily job reports; scheduling and witnessing underwater

inspections by the Port Authority's Diver/Engineer Contractor; assuring that OSHA safety regulations were being adhered to at all times including daily review of job conditions, weekly safety/toolbox talks with the contractor, scheduling site inspections with risk management and insurance representatives; attending job meetings to discuss project status, open RFIs and means and methods to address special situations during construction; and reviewing and approving contractor's financial documents, including job status reports (monthly percentage completion documents) and monthly payment requests.

Various Restaurant Projects. U.S. East Coast. RM Hospitality Group – dba Rosa Mexicano. Director of construction. Mr. Favaro served as company director of construction, responsible for the construction of new restaurants and the upgrade of a total of 10 restaurants in New York City and along the Eastern seaboard. Pertinent construction management skills included his ability to secure all required permits in a complex regulatory environment; design, scheduling, and construction of three units per year; selection of general contractors; value engineering; preparation of job cost estimates developed through blueprint take-offs and contract/labor negotiations; development of capital expense and repair/maintenance budgets; generation and management of job schedules and task coordination time lines; negotiation of repair and maintenance (R&M) contracts with all mechanical and service contractors including scope of work, schedule and price, which resulted in zero increase in cost of R&M contracts during the time managing this task (2007-2009 contracts); implementation of warranty procedures and protection; drafting O&M manuals written with emphasis on safety procedures and compliance with OSHA requirements; and review of leases for compliance with landlords' requirements relative to tenant responsibilities for shell improvements and maintenance.

New York Waterway and Arcorp Properties, Inc. Director of construction. Mr. Favaro was responsible for permitting, design, construction, and maintenance of 37 ferry terminals and maintenance facilities. He was responsible for the procurement of all regulatory and environmental permits including those from the Army Corps of Engineers, Section 10 Permits (Rivers and Harbors Act) and Section 404 Permits (Clean Water Act); the NY Department of Environmental Conservation (Waterfront Development Permits); and the NJ Department of Environmental Protection (NJ DEP) (Waterfront Development Permits / CAFRA Compliance). Specific construction and environmental related issues reviewed by federal and state agencies included: demolition and removal of debris posing potential hazard to navigation; dredging and dredge spoils remediation; installation of turbidity curtains / environmental controls during construction; pile driving / bulkhead and breakwater construction; water quality control; conformance with seasonal construction and dredging windows; and shoreline stabilization / erosion control.

WTC Terrorist Attack Action and Construction. N Y Waterway. Director of construction. Mr. Favaro directed ferry activity during the emergency evacuation of approximately 180,000 people fleeing New York City using all fleet vessels after the WTC attacks. He immediately identified the locations for new and relocated upgraded ferry terminals in the NY Harbor as described in the Ferry Project List. Mr. Favaro worked closely with USACE and other federal, state and municipal Agencies to fast track plans to expedite construction and/or relocation of these ferry terminals to meet commuter needs due to the closure of major train tunnels.

Quinton "David" Hapke

CIVIL/ STRUCTURAL INSPECTOR

Firm: Louis Berger
Years' Experience: 15

Education:
Not Applicable

Registration/Certifications:
See below

Registrations/Certifications

- NICET Level II exam passed (being renewed)
- American Concrete Institute Special Inspector
- HazMat Endorsement
- NYSDOL Asbestos Project Monitor (under renewal)
- NYSDOL Asbestos Inspector (under renewal)
- NYSDOL Asbestos Air Sampling Technician (under renewal)
- 10- Hr. OSHA Safety Certification
- Blaster's Certificate of Competence
- ATF Clearance
- Explosives License
- CPR Certified

Professional Summary

Mr. Hapke is currently serving as construction inspector/environmental specialist specializing in onsite construction inspection, asbestos project monitoring/survey services, and lead inspections. In this role, Mr. Hapke provides on-site project monitoring oversight, air sampling, and surveys for potential hazardous materials to a variety of clients including local, state, and federal agencies. In addition, Mr. Hapke also has an extensive background in general construction that includes the tasks of controlled inspections, project oversight and scheduling, seismic monitoring, field safety coordination, and public relations. He has also previously served as blaster-in-charge, foreman, field crew supervisor, and liaison to state, local, and federal governing agencies.

Selected Experience

Stewart International Airport. New Windsor, New York. PANYNJ. Construction inspector. Mr. Hapke was responsible for the inspection and management of various projects including, but not limited to civil, structural, electrical, life safety systems, and tenant alterations on Port Authority property. Mr. Hapke worked closely with the resident engineer on submittal reviews and payment applications as well as all other documentation necessary for successful project performance and closeout. Projects include but are not limited to:

- **Rehabilitation of Weather Instrument Power (WIP) Circuit:** Mr. Hapke was responsible for coordinating with the Stewart Airport Operations group on the issuance of Notices To Airmen (NOTAMs) relative to work location in critical areas on the airfield. Because the project required closures of runways and taxiways to facilitate duct bank crossings, the work was compressed into 48-hour schedules to complete the work on each duct. Scope of work also included installation of manholes outside of safety areas but between taxiways and runways.
- **Rehabilitation of Taxiway Edge Lighting:** Mr. Hapke coordinated with Airport Operations to manage the closing of numerous crossings and manage the work that was being done on the taxiway edges. The scope of work included circuit shut downs for

edge lights, trenching to accommodate new conduits, and new wiring for high efficiency LED edge lights.

- **Rehabilitation of Runway 9 Approach Lighting and Cables:** In order to maintain Stewart's CAT II airport status, the FAA required an upgrade of, and insurance of, a fully functioning system. Elements of this project included displacing the main runway (9-27), which were 11,817-feet long. Light cans were replaced and new light can locations were cored and installed for conformance to appropriate Advisory Circular requirements. New power lines were fed from the airfield electrical vault and four new manholes were added over the NYC Aqueduct that runs underground, perpendicular to the runway. Timing was also of the essence in this task due to multiple closures to vital areas of the runway.
- **Airside Pavement Repairs and Markings:** Under this work order Mr. Hapke oversaw concrete and pavement repairs, landside paving, airside trench drains, airfield restriping, airfield slab repairs, and paving of fuel pad ramp airside.
- **Runway Weather Information System:** Mr. Hapke performed inspection duties on this project to install all new sensors into the runways at Stewart Airport. Due to the sensitivity of the locations, work was performed at night.
- **Terminal Building Roof Replacement:** Oversaw the removal of the old terminal roof and reinstallation of the new TPO roof and associated equipment.
- **Sewer Rehabilitation Project:** 6,000 feet of outdated and damaged clay pipe was replaced by means of pipe bursting. Mr. Hapke was involved from cradle to grave on this project. He inspected the maintenance and protection of traffic daily, as well as the installation of the new HDPE piping.
- **Building 2290 Roof Replacement:** Mr. Hapke oversaw not only the asbestos abatement, but also the new roofing installation for the 40,000-square-foot roof over Building 2290. His qualifications allowed him to "switch hats" and manage the project from the submittal process to the final closeout for both the construction and environmental fields.
- **Mid-Hudson Regional Crime Laboratory Design-Build:** Mr. Hapke served as the lead inspector on this unique Design-Build for the Port Authority. He has been involved from the design stage to the actual construction of the 10,000-square-foot building that houses confidential, state-of-the-art equipment, involving every discipline in building construction. Due to the high profile status of the project, meeting deadlines and ensuring conformance to specifications is paramount on this project.

Various Airport, Bridge, and Facility Projects. New York and New Jersey. PANYNJ. Industrial hygienist. Mr. Hapke performed asbestos air and project monitoring in addition to ACM surveys at various PANYNJ facilities. Responsibilities included adhering to all levels of regulation as well as Port Authority's more stringent regulations regarding asbestos abatement in highly sensitive areas.

Education

- BS, Civil Engineering

Professional Qualifications and Certifications

- OSHA Confined Space Safety
- Asphalt Paving Construction Technologist (SAT)
- ACI Concrete Field Testing Technician Grade 1Cert#[redacted]
- ACI Concrete Construction Special Inspector
- OSHA 10-Hr Construction Safety and Health Course
- Traffic Control Coordinator, TCC (Rutgers University)

Summary

Mr. Anwar has extensive experience in heavy industrial projects, power plants, bridges, highways, drainage, and earthwork projects. He has worked with Cansult Inc. in Riyadh, Saudi Arabia on their Riyadh Sewerage and Storm Project and supervised pipe laying (RCC, AC, PVC, and GRP pipes ranging from 8" to 72" in diameter), testing , and construction of manholes, catch basins, and house connections. Construction supervision of pre-cast and cast in-situ concrete box channel with cell, retaining walls, level control for rock excavation and concrete pours. Supervised construction of deep manholes, invert checking, catch basins, and checking. Coordinated between team members and construction supervisors for the assigned work. Responsible for land development project that included planning, designing, and specifications preparation for a sub-division of Toronto, Canada, which included roads, water mains, storm water, sanitary, and lot grading. He participated in preparing tenders, specifications, evaluation, and clarification, as well as provided liaison with sub-contractors, suppliers, and clients. He prepared follow-up of site activities from site handing to project completion. He worked with FIDIC and was involved in the contract interpretation clauses. He has expertise in several PC applications, such as MS Office Applications, MS Project, and Primavera Scheduling Software P3/P5/P6.

Experience

Techno Consult, Inc., Princeton, New Jersey.

REI Services for Resurfacing, Pavement Improvements, and General Repairs at Various Locations within Brooklyn, the Bronx, and Queens, New York. Mr. Anwar is responsible for the construction inspection for conformance with plans and specifications. He also prepares and maintains daily construction inspection reports and payments. Scope includes milling and resurfacing, concrete work (curbs, sidewalks and pedestrian ramps), and tree work.

REI Services for NYCDDC Annadale Road Sanitary & Storm Sewer Project, Borough of Staten Island, New York. For this $14 million project, Mr. Anwar, as civil inspector, is responsible for the preparation of daily construction inspection reports; maintaining payment records (including verification of contractor's time and material sheets and assisting in review of contractor's partial payment requests); monitoring contractor's work progress based upon his approved construction schedule and reporting any deviation; performing all field duties as required by the resident engineer, and inspection of micro-tunneling for 2000 linear feet of 12-inch sanitary pipe.

Downstate Misc. CM-Chemical and Petroleum Bulk Storage Facilities Upgrade. Wards Island. WPCP. This project mainly consists of constructing a number of concrete containment pads to prevent spillage or contamination from chemical/fuel oil loading trucks. It includes modification of existing ferric chlorite and hypochlorite tanks. It also includes installing two new ferric chlorite tanks along with related pumps, dyke, piping, and associated filling containment pad. Contract also includes work on the boiler building existing temporary fuel tank, which has to be removed, cleaned, and replaced with new 4,000-liter tank along with associated new piping, new transfer pumps, and new 275-liter day tank. Scope also calls

for installation of three new 15,000-liter permanent aboveground fuel oil tanks along with related piping and pumps. As office engineer, Mr. Anwar provides as-built updates, maintenance of all tracking logs, processing monthly pay requisitions, tracking material certification, maintaining field office files and filing system, preparing correspondence, preparing change orders, facilitating RFIs, and writing meeting minutes.

$300-million Polycarbonate Industrial Project, Saudi Arabia.As project control manager, Mr. Anwar was responsible for SR 1 billion (approx. $300 million) involving heavy civil, mechanical, electrical works including construction of RCC pipe racks, tank farms, sub-station buildings, remote interface buildings, incinerator building, heavy equipment foundations, vessel foundations, development of infrastructure, underground/overhead piping, and steel structures. His major duties included review and analysis of contractor's resource-loading Primavera P6, baseline schedule, and monthly progress schedule updates. He was also responsible for preparation of responses to contractor's schedule narrative reports, independent cost estimates for delay claims using RS Means methods, analysis of contractor's time extension and/or liquidated damages based on TBTA Master Legal, attending monthly project meetings, and independently preparing several monthly schedule updates in the absence of contractor's schedules for the client.

$75-million Natural Gas Pipeline (N.G.L ARAMCO), Saudi Arabia. As project control manager, Mr. Anwar was responsible for SR 250 million (approx. $75 million) involving heavy civil, mechanical, electrical work including construction of RCC pipe racks, heavy foundations, underground/overhead piping, plumbing stations, and infrastructure development. His major duties include reviewing and analyzing contractor's resource-loading Primavera P5, baseline schedule, monthly progressing schedule updates, preparing responses to contractor's schedule narrative reports, analyzing risk exposure on a monthly basis using variances, and exceptions delay claims.

Toronto Land Development Project, Toronto, Canada. As project coordinator, Mr. Anwar was responsible for $10 million land development project that included planning, designing, and specifications preparation for a sub-division of Toronto. Scope included roads, water mains, storm water, sanitary, and lot grading. He participated in preparing tenders, specifications, evaluation, and clarification, as well as providing liaison with subcontractors, suppliers, and clients. He planned and prepared construction schedules, milestones, and monitored progress against established schedules; followed up on site activities from site handing to project completion; coordinated with other engineers and suppliers/subcontractors for the execution of the project on time and on budget. He prepared as-built drawings, attended monthly progress meetings and weekly site meetings, and submitted weekly reports on site activities. He attended to problems that rose during the implementation phase and reported same to head of the section. Mr. Anwar implemented company HSE policy, suggested improvements, designed and operated common database and engineering software, and use spreadsheets and project management applications.

Education

- BS, Civil Engineering

Professional Qualifications and Certifications

- ASCE Grade PIV
- OSHA 10-Hr Construction Safety and Health Course
- ACI Concrete Field Testing Technician Grade I Cert #[redacted]
- HOT WORK-PAI (Permit Authorizing Individual)
- 8-Hr HAZPOWER Refresher Course
- 40-Hr HAZWOPER
- Confined Space Entry
- Structural Steel and Bolting Inspection (completed course work)
- Structural Welding Inspection (completed course work)

Summary

Mr. Warsi has extensive experience working on large projects around the world. He is a highly skilled inspector having successfully performed work on projects for CSO abatement, bridge rehabilitation, building construction, and water supply. Mr. Warsi is also very familiar with the various day-to-day reporting requirements for civil engineering projects.

Experience

Techno Consult Inc., Princeton, New Jersey. REI Services for Resurfacing, Pavement Improvements, and General Repairs at Various Locations within Brooklyn, the Bronx, and Queens, New York. Mr. Warsi is responsible for the construction inspection for conformance with plans and specifications; the preparation and maintenance of daily construction inspection reports; and maintaining payment records. Project scope includes milling and resurfacing, concrete work (curbs, sidewalks and pedestrian ramps), and tree work.

$1.5-billion Newtown Creek Wastewater Treatment Plant. NYCDEP, New York. Mr. Warsi is responsible for the construction inspection for conformance with the plans and specifications; preparation and maintenance of daily construction inspection reports; and maintaining payment records, including the verification of contractor's time and material sheets and review of contractor's partial payment requests. Maintains as-built drawings of the work, including any deviations from the contract drawings or approved shop drawings, and monitors contractor's work progress based upon his approved construction schedule and reports any deviation.

The project involves the completion of significant upgrades to the structures and systems that treat wastewater from a combined sewage treatment system. Some project elements include improvements to the plant bar screens, electrical, plumbing, HVAC, controls and instrumentation upgrades, new screening and control buildings, new barge facilities, and site work. The plant is undergoing a major capital improvement and upgrade program to expand its intended capacity from 1.2 to 1.8 cubic meters per day – a 50% increase. Process improvements will result in dramatic reductions of biochemical oxygen demand (BOD) and help bring NYC into compliance with the secondary treatment standards required under the Clean Water Act.

$155-million Delaware Aqueduct Rehabilitation of Shafts 9, 10, & 18. NYCDEP. Carmel/Kent, New York. As a cost engineer, Mr. Warsi was responsible for checking and reviewing certified payroll, prevailing wages, and daily report with the inspector's reports; checking quantities and the percentage of work done; verifying pencil copy of invoices with site representative and notifying contractor of any deviation; sending out request for insurance verification for the contractor and subcontractors to NYCDEP; reviewing final copy from the pencil copy, processing payment and updating payment log, and making PowerPoint

presentation for NYCDEP auditors. As civil inspector, Mr. Warsi was responsible for supervision and inspection of structural steel, placing and splicing of rebar, quality/quantities of reinforced concrete in compliance of project specification, supervision of storm/sewer water pipes (gravity and force main) inverts and elevations of distribution network containing pump stations manholes and cleanouts; storm water prevention protection plan; site safety and assuring local/state regulations were followed, assisting deputy resident engineer, interfacing with both the site main office and field office; keeping track of scope of work, machinery, manpower and T&M items; and demolition work and disposal of debris according to city/state regulation. Project consists of replacing all existing sluice gates and operators; remediation of hazardous materials including lead paint, asbestos, mercury, and PCBs; replacement of existing incremental valves and piping; replacement of existing manually cleaned screens with mechanically cleaned screens; installation of new chlorination feed system in building addition; installation of chlorine gas scrubber; replacement of all un-watering and sump pumps; replacement of house water system, including a new separate potable water system; construction of new water quality station; providing improved entrance and parking area; installation of new emergency power generator, dredging of influent channel of sediment; upgrading electrical and HVAC systems; replacement of chemical feed and storage facilities, including chemical unloading stations; replacement of all un-watering and sewage pumps; installation of a new water quality station; installation of separate potable water system; replacement of flat roof over the operator building; installation of emergency power generator in a dedicated structure; providing improved entrance and parking area; and stabilizing eroded embankment.

$25-million Kensico Flow Improvement and Control Project. NYCDEP. Valhalla, New York. As a civil/structural inspector, Mr. Warsi was responsible for the construction inspection for conformance with the plans and specifications and reporting any deviations to the resident engineer; preparation and maintenance of daily construction inspection reports; maintaining payment records, and as-built drawings; assisting in the preparation and negotiation of construction change orders; coordinating with contractor regarding the CPM schedule; and monitoring contractor's work progress. Project was divided into three phases: Phase I Construction of a Dividing Wall Buttress at Hillview Reservoir; Phase II Kensico Flow Control Modifications, with construction of the Flow Control Structure; and Phase III Construction of Hillview Cover. Flow Control Modifications - Shaft 18 & 19. The new structure included access man-ways for inspection of the structure and accompanying supply conduits, as well as stop plank grooves with removable concrete planks at ground elevation for isolation of supply conduit sluice gates; connection with piping and blind flange for future drinking water connection for the town of Mount Pleasant, and a similar connection for water supply to future water fountain in the existing aerator. Modifications to Shaft 19 of the Delaware Aqueduct consisted in removal of existing concrete weirs and provision of new vent structure at shaft if necessary. These modifications reduced head losses through the structure and increased the flow discharge capacity of the aqueduct.

Rehabilitation of Betsy Ross and Commodore Barry Bridges. Delaware River Port Authority. Maple Shade, New Jersey. Mr. Warsi's responsibilities included performing construction inspection for conformance with the plans and specifications, and report any deviations to the Resident Engineer; Prepare and maintain daily construction inspection reports, which shall indicate the Contractor's work activities, progress of the work, crew size and composition, weather, equipment utilization, and all other information relative to the execution of the work.

Education

- AS, Business Management

Professional Qualifications and Certifications

- ICC Structural Steel and Bolting Special Inspector
- ACI Concrete Construction Special Inspector
- ACI Concrete Filed Testing Technician – Grade I Certification
- MTA NYCT Track Safety
- Path Roadway Worker Protection Certification (Employee in Charge)
- Special Inspection of Structural Masonry Construction (The Masonry Society 10-Hr Seminar)
- OSHA Training (10-Hr)

Summary

Mr. Nunez has 15 years of experience as a civil construction inspector. This knowledge has given him the expertise in inspecting for different projects in which he supervised 400 guest room renovations, inspected construction for the phased MTA 1/9 subway lines project, and performed construction inspection for transit center police renovation.

Experience

Techno Consult, Inc. Princeton, New Jersey. Journal Square Transit Center Police Command Renovation and Christopher Street Substation Upgrade/Renovation. Port Authority of New York and New Jersey. Mr. Nunez was responsible for performing construction inspection for conformance with plans and specifications, and reporting any deviations to resident engineer; preparing and maintaining daily construction inspection reports, including contractor's work activities, progress of work, crew size and composition, weather, equipment utilization, and all other information relative to the execution of the work. He maintained payment records, including the verification of contractor's time and material sheets and assisted in the review of contractor's partial payment requests. He reviewed contractor payment requests and recommend reasonableness to the resident engineer, identified potential extra work issues and advised resident engineer, prepared estimates of extra work; maintained as-built drawings, including any deviations from the contract drawings or approved shop drawings; reviewed plans for constructability and prepared comments; assisted in preparation and negotiation of construction change orders; coordinated contractor towards preparation of CPM schedule; monitored contractor's work progress based upon his approved construction schedule and report any deviation; performed all other inspection and field duties as required by the resident engineer; and ran project meetings and kept minutes. Renovation of the police command facility, which is located on the concourse level of One Path Plaza in Jersey City, included new command desk; new locker rooms; new kitchen; upgrade of security systems (access control); and upgrade of data systems, intercom, and telephone. Substation upgrade/renovation included steel reinforcement of existing floors receiving new electrical system, construction of new offices, and new access/egress for the existing five-story building.

PB-URS-World Trade Center (WTC) Transportation HUB/SITE. Port Authority of New York and New Jersey. Mr. Nunez's responsibilities included inspection of construction during underpinning (preloading/loading) phase of the MTA 1/9 Subway line, demolition, excavation, and clean-up for Towers Two, Three, Four and Path Hub building areas. He assisted resident engineers on both the East and West Bathtubs work packaged by conducting inspection services during construction of WTC East/West connector. He ensured that arch erection, concrete/steel reinforcement installation, and fire proofing application was performed in accordance with approved contract documents and that project site specific rules, regulations, and applicable plans for operations management, site safety and quality management

were followed. Responsibilities included monitoring daily activities of all trades under general condition package, keeping detailed documentation and maintenance of working files, monitoring and approving all time and material for payment, daily report completion, management of material deliveries and supporting documents, And daily inspections of job site for safety and compliance, as a result of on-site problem solving.

New York Hilton Towers. New York, New York. Mr. Nunez's responsibilities included management and coordination of staff members and assigning tasks to various trades as an engineering and maintenance dispatcher.

Martin Construction Brooklyn. New York. As foreman, Mr. Nunez worked on numerous residential renovation projects. His responsibilities included estimating, purchasing materials, and overseeing crew to ensure work was performed as per the contract. Hands-on field responsibilities included coordination and oversight of electrical systems, demolition, installation of 120/240-volt lighting and power circuits, panel board, and transformer installation with associated conduit, sink, and tub installation; installation of heater and A/C systems; and plastering, drywall installation, and painting.

New Yorker Hotel. New York, New York. As construction team foreman, Mr. Nunez's responsibilities included supervision of this 400 guest room renovation project, preparation of purchase orders, submittal of daily progress reports, and keeping the time and material log.

Summary

Mr. Feroz has 20 years of experience working on diversified projects. He is a skilled inspector having performed work very successfully on the different projects, construction, water supply and water treatment. He is familiar with the various day-to-day reporting requirements for civil engineering projects.

Experience

Techno Consult, Inc., Princeton, New Jersey. Storm and Sanitary Sewers in South Railroad Street, Borough of Staten Island for NYCDDC, New York. Mr. Feroz responsibilities include inspection and preparation of reports for the installation of DI Pipe Water Mains at various streets, inspection and preparation of reports for the installation of Storm Water Sewer at various streets and inspection and preparation of reports for the installation of Sanitary Sewer at various streets.

QED 992, Water Main Work in Various Locations (Grand Ave., 188 Str., ETC.) for NYCDDC, New York. Mr. Feroz was responsible for performing construction inspection; coordinate with the field and the design team to resolve conflicts in the drawings; coordinate with contractor and the Maintain as-built drawings of the work; Perform all other inspection and field duties as required by the Resident Engineer. Resident Engineering Inspection Services for NYCDDC Capital Water Main Project limits in very highly traveled areas in Queens (QED 992): Grand Central Parkway, Union Turnpike and Queen Blvd along with numerous side streets. The area has numerous commercial businesses and MTA bus route, NYC Transit Subway system along Queens Blvd. The project comprises of replacing of old unlined cast iron water mains with new 8-in, 12-in, and 20-in water distribution and fire protection systems in the busiest area of Queens.

$5 million East Windsor Twp. Water Mains Improvement Project, New York. Mr. Feroz was responsible for the preparation of daily construction inspection reports, which indicated the contractor's work activities, progress of the work, crew size and composition, weather, equipment utilization, and all other information relative to the execution of the work. Maintain payment records, including the verification of the contractor's time and material sheets, and assist in the review of the contractor's partial payment requests. Monitor contractor's work progress based upon his approved construction schedule and report any deviation. Perform all field duties as required by the resident engineer. The Township of East Windsor, New Jersey is embarked a project for the Improvement of their water main, which includes laying of 5,645 feet of pipes in three different segments, which are as follows:
Millstone Road - Laying of 2,914 feet of 16" diameter Ductile Iron Pipe (DIP) by open cut method both in paved and non-paved areas, including all fittings, bends, gate valves, manual air release valves, pressure testing at 125 psig, pavement restoration and lane striping.

Rocky Brook Road - Laying of 1,691 feet of 12" diameter DIP by open cut method both in paved and non-paved areas, including all fittings, bends, gate valves, manual air release valves, reducers, pressure testing at 125 psig, pavement restoration and lane striping.

Old Cranbury Road - Laying of 275feet of 12" diameter DIP by open cut method both in paved areas, including all fittings, bends, gate valves, manual air release valves, pressure testing at 125 psig, pavement restoration and lane striping.

Laying of 765feet of 12" dia. High Density Polyethylene (HDPE) pipe by Horizontal Directional Drilling (HDD) method in paved areas, including all fittings, bends, gate valves, manual air release valves, heat fusing of pipes and connection with DIP pipe at both ends, pressure testing at 125 psig, house connections, pavement restoration , and lane striping.

$25 million CSO Abatement Project for the City of Newark, New Jersey. As a civil inspector, Mr. Feroz was responsible for performing construction inspection for conformance with the plans and specifications, and report any deviations to the Resident Engineer; prepare and maintain daily construction inspection reports, maintain and update shop-drawing log; coordinate with the field and the design team to resolve conflicts in the drawings; review contractor's monthly requisition; coordinate with contractor and the maintain as-built drawings of the work, including any deviations from the contract drawings or approved shop drawings; perform all other inspection and field duties as required by the Resident Engineer. The project is spread out in phases. Phase: I consist of sewer separation projects in the Third Avenue, Orange Street and Bridge Street drainage areas. Specifically, this phase involves the installation of sanitary and storm sewers, cleaning of storm sewers and modifications to existing regulators. Phase II will include the removal of illegal connections from storm sewers in the Meadowbrook, Oriental, Brown, Lockwood, Blanchard, and Haynes Avenue drainage areas, and Phase III includes the construction of ten (10) screening facilities covering 14 outfalls, one each in the Verona, Delevan, Herbert, Fourth, Clay, Rector/Saybrook, City Dock, Jackson/Polk, Freeman and Roanoke drainage areas and four in-ground netting facilities covering six outfalls, one each in the Adams, Wheeler, Queen and Waverly drainage areas.

Government of Sindh, Pakistan: Local Government/ Public Health Engineering Department, Sindh, Pakistan. As a section officer (technical) Mr. Feroz worked for scrutinizing, evaluation, and processing of development projects related to water supply and sanitation sector.

Planning Monitoring and Evaluation Section, Local Government/Public Health Engineering Department for Social Action Program (SAP – A World Bank Program). Mr. Feroz served as an assistant director (civil engineering), the main objective was to coordinate Government of Sindh and World Bank for Water Supply and Sanitation Sector in rural areas of Sindh as the SAP was designed for betterment and improvement of standard of livings of rural areas. Periodically, discussions and understanding of policy matrix prepared by the World Bank for the implementation of program. The main focus was on the sustainability of the projects and finalization of methodology for the community mobilization through project implementation, teams and awareness campaign through electronic and as well as print media for the World Bank delegations endured that efforts are made for the preparation, implementation/execution of schemes by the departmental/local engineers.

Education

- BS, Facility Management
- AAS, Civil Engineering Technology
- AAS, Construction Management

Professional Qualifications and Certifications

- ACI Concrete Field Testing Technician, Grade 1
- ACI Concrete Construction Special Inspector
- NICET Material Testing Method, Level 1
- USNRT, Radiation Safety, Nuclear Densometer
- OSHA Occupational Safety and Health Administration 10 Hours
- Member of ASCE
- Member of ASTM
- Member of ACI

Summary

Mr. Mowla has more than 10 years of experience as a civil engineer inspector. As an inspector he has worked for various companies in which his skills have been beneficial. His duties have included maintaining daily inspection reports, supervising and evaluating staff with daily details on building departments requirements and ensuring field technicians were properly trained.

Experience

Techno Consult, Inc., Princeton, New Jersey. LT-234.026 Structural Rehabilitation and Repaving the Helix, NJ, The Port Authority of NY & NJ. Mr. Mowla's responsibilities for the Structural Rehabilitation and Repaving of the Helix are preparing and maintaining daily construction inspection reports, which indicated the Contractor's work activates progress of the work, crew size and composition, weather, equipment utilization and all other information relative to the execution of the work; performing special inspections for special work, such as, the concrete placement, welding, bolting, and soil investigation; maintaining payment records (creating monthly log of payments, forecast of upcoming work / payment), including the verification of the Contractor's time and material sheets and assist in the review of the Contractor's partial payment requests; reviewing contractor payment requests and recommend reasonableness the Resident Engineer (RE); identifying potential extra work issues and keep RE advised of issues. Preparing Estimates of extra work (PACC); maintaining as-build drawings of the work, including any deviations from the contract drawings or approved shop drawings; authorizing related sketches and documentation; reviewing plans for constructability and prepare comments; assisting the preparation and negotiation of construction change orders along with the coordination of the contractor towards preparation of the CPM schedule. Lincoln Tunnel Route 495 roadway approach, known as the Helix. This iconic roadway structure leading directly into the Lincoln Tunnel is more than 70 years old, and is nearing the end of its useful life. The Lincoln Tunnel Helix Rehabilitation Project will repair this crucial infrastructure over a period of three years in order to extend the roadway's usability.

DELTA Testing Laboratories, New York. As a senior inspector/quality assurance officer, Mr. Mowla's responsibilities included supervising and evaluation of field and laboratory technicians and provide daily management details, specifications and building department requirement; provide quality assurance by meeting with clients and contractors in the field to validate reports and to coordinate and surrounding metropolitan area at major projects such as schools, hospital, theaters, office buildings, shopping centers and residential units. Specializing in the inspection of construction with regard to soils and subgrade, reinforcing steel, formwork, concrete, structural steel, structural stability, integrity of building modifications and investigation of material failures; performed MEP controlled inspections at commercial and residential

job sites for various life safety systems, for suppression systems, fuel burning and storage systems, chimney and breeching systems, air conditioning and ventilation systems and refrigeration systems; supervise, perform and witness Mechanical, Electrical and Plumbing functional operational test including but not limited to fire suppression / detection systems, emergency generators, fire pumps, emergency lighting & exit sign, domestic water and storm piping at construction projects; provided technical oversight and supervisory guidance to maintain various accreditations such as AMRL, CCRL, IAS and AASHTO. The project is quality management of field and laboratory operations for a construction inspection / material testing laboratory that provides quality and inspection sign-off of building construction site development.

Independent Testing Laboratories, Inc., New York. As a field technician / lab. manager/inspector, Mr. Mowla's responsibilities included ensuring Field Technicians are properly trained, ensuring job coverage and overseeing their performance in the field and in the laboratory. Concrete, mortar, and grout inspection by determining P.S.I. using the Windsor Pin & Windsor Probe Test System; determining lump using slump cone; obtaining air percent in concrete utilizing air pressure pot; obtaining concrete core samples using concrete coring drilling equipment; concrete batch plant inspection and masonry and core drilling. steel inspection by reinforcement steel inspection; bolting inspection; fire stopping inspection and load test / pull test. soil inspection by soil compaction using nuclear densometer / sand cone; determining soil bearing capacity using the Windsor Penetrometer; sub grade inspection and soil boring. Laboratory testing by wash sieve analysis; compressive strength of concrete materials; calibration of various gauges; soil classification; air content (concrete); wash sieve analysis; unit weight test; brick & cmu absorption test; plastic limit, liquid limit; and modulus of elasticity.

U.S. Construction, Inc. As a project manager, Mr. Mowla's responsibilities include management of general construction projects with respect to estimating, purchasing, subcontracting, scheduling, billing and project coordination; provided field supervision for site development work consisting of site remedial work, roads, utilities, landscaping, foundations, common septic systems and pump station as well as overseeing the third-party party inspection and testing agency; successfully coordinated the MEP details and specifications for the CLUB house to achieve LEEDS objectives while pursuing alternative HVAC methods such as radiant floor heating.

Education

- BS, Civil Engineering

Professional Qualifications and Certifications

- National Institute of Civil Engineering Technology
- Society of Asphalt Technology, New York Chapter
- NYSDOT QA/QC Technician
- U.S. Nuclear Regulatory Commission (Moisture/ Penetrant Certified Inspector)
- ACI Concrete Special Inspector Level 2
- ACI Concrete Laboratory Testing Technician
- ACI Concrete Field Technician Level 1
- Confined Space Entry Trained
- 40 hour HAZWOPER Trained
- Federal Aviation Administration Asphalt Technician

Summary

Mr. Capito has 30 years of experience in conducting engineering inspections and testing, preparing reports, monitoring field activities, reviewing and approving plans and specifications, overseeing rebar and concrete placement, soil compaction, asphalt pavement inspection, masonry, fire stopping, fireproofing and trouble-shooting.

Experience

Techno Consult, Inc., Princeton, New Jersey. Goethals Bridge Maintenance Building and Administration building Roof Replacement, The Port Authority of NY & NJ. Mr. Capito's responsibilities monitor contractor's daily work by installing roofing and flashing system; inspecting completed work in conformance with plans and specification; preparing daily inspection reports which indicates and includes work performed by the contractor, manpower and equipment used; assisting in other project field inspections; attending constructors progress meetings. The project is to remove and replace Goethals bridge maintenance and administration building roof (entire roof).

Downstate Misc. CM-Hunts Point WPCP Phase III Upgrade, New Jersey. Mr. Capito's responsibilities include reviewing submittals for the project, monitoring day to day construction activities; conducts review and approval of contractor's payment requisitions; conducts progress meetings, and prepares reports. The work includes emptying and cleaning the tanks, then replacing the seals between the roof slab and walls (upper corner - visualize the wall-ceiling interface in a room) and the seal between the wall and floor; replacing various mechanical components on the roof, sight glasses, sample ports, cavity drains, the roofing membrane and the various valves and pumps associated with the digester tanks.

CDM, New York: Catskill/Delaware Water Treatment Ultraviolet Light Disinfection Facility, New York. For the City of New York Department of Environmental Protection, Mr. Capito was serving as the on-site resident inspector for the demolition of Catskill and Delaware aerators, the backfilling operations with approximately 200,000 cubic yards of fill materials, the construction of two dewatering system which includes the installation of more than 100 ejector wells, the removal of contaminated and non-contaminated water and soil inside the supply and aerators pipelines and the daily activities performed by the contractor and sub-contractors.

Soil Vapor Extraction System Project, New York. Mr. Capito was serving as the resident project representative for the New York State Department of Environmental Conservation's (NYSDEC's) soil vapor extraction interim remedial measure project. The project involves the construction of six new soil vapor extraction (SVE) wells and five monitoring points that connect to the existing SVE wells. The purpose of the

system is to remediate soil gas containing VOC (perchloroethylene) vapors along the vadoze zone. His responsibilities have included reviewing submittals for the project, monitoring day to day construction activities, specifically the removal and disposal of excavated and augered contaminated material (soil) on the jobsite. He conducts review and approval of contractor's payment requisitions; monitors the start-up period on the new system; conducts progress meetings, and prepares reports.

Appari & Associates: Spring Creek Auxiliary Water Pollution Control Plant Upgrade, New York. For the New York City Department of Environmental Protection, Mr. Capito was assigned as the civil inspector on the $90 million project. He was responsible for engineering inspection, monitoring construction activities and preparing reports. He oversaw earthwork activities (including soil excavation, soil testing, compaction, and site grading), rebar and concrete placement, formwork, structural steel erection, and other related testing and inspection activities on the jobsite.

Slattery, NY: Air Rail Transit at JFK Airport, New York, New York. For the Port Authority of New York and New Jersey, Mr. Capito performed inspections and coordinated general construction activities from foundation to finished work. He was in charge of and supervised a group of independent (sub-contractor) testing laboratories covering inspections on soil excavation, backfill and compaction operation. He assisted the project manager with preparing inspector/technician construction inspection procedures for soil, concrete, asphalt and other construction inspection related materials.

Cole Consulting, Inc.: American Airlines Redevelopment Project, New York. For the Port Authority of New York and New Jersey, Mr. Capito was the supervising inspector and engineer at JFK Airport, New York for the rehabilitation and reconstruction of concrete and asphalt runways and taxiways. He managed and supervised field and laboratory personnel. He conducted engineering inspections and testing; prepared reports; monitored field activities; and reviewed and approved plans and specifications. In addition, he oversaw all rebar and concrete placement, soil compaction, asphalt pavement inspection, masonry, fire stopping, fireproofing and consultations with the client on non-conformance issues. He also provided trouble-shooting for all projects.

Municipal Testing, New York: Harrisburg International Airport Redevelopment Project, Harrisburg, Pennsylvania. For the Harrisburg International Airport in Harrisburg, Pennsylvania, Mr. Capito was responsible for supervising inspectors overseeing soil excavation, backfilling and compaction, rebar and concrete placement, asphalt paving, masonry, and fireproofing. In addition, he performed concrete and asphalt plant inspection, and supervised general construction activities from foundation to super-structures and finished work.

George Atsalis

CIVIL/ STRUCTURAL INSPECTOR

Firm: JCMS, Inc.	**Education:**	**Registration/Certifications:**
Years' Experience: 16	MS, Surveying Engineering	See below

Registrations/Certifications

ACI - Concrete Field Testing Technician Grade I
ACI – Concrete Construction Special Inspector
OSHA 10-Hr Occupational
NYC DOB 4-Hr Supported Scaffold Certificate

Professional Summary

Mr. Atsalis brings more than 16 years of experience in the construction field as senior field inspector/engineer and project manager on a variety of infrastructure projects that include reconstruction and rehabilitation of roadways, highways, bridges, and buildings for various agencies. Areas of inspection include heavy excavations and foundation construction, as well as construction of concrete piers and abutments; superstructure construction including structural steel framing deck and installation of reinforcing steel and concrete placement; and the construction/installation of water mains, sewers, culverts, drains, traffic signals, and street lighting. Mr. Atsalis is fully knowledgeable and experienced in the enforcement of federal, state and city codes for construction, site safety, and maintenance and protection of traffic. His computer capabilities include Windows XP, NT, MS Word, AutoCAD, Autodesk2006, Micro Station, MS Office, Excel, and PowerPoint.

Selected Experience

Various Inspections. New York, New York. M International PLLC. Project manager. Scope includes construction administration and management, along with concrete, masonry, and welding/bolting inspections. Hired by owner to ensure contractor's compliance with approved drawings and specifications. Other responsibilities included bid review and award, drawings review, contractor's requisitions and progress payments review, quality assurance, field inspections, material review, and meetings with owner's representatives, state representatives, and contractor.

Additional Experience

Concrete, Masonry Inspections. New York, New York. Z&T Engineering PC. Senior project manager. Responsible for concrete inspections, including special and masonry inspections for new buildings). Also responsible for complete daily narratives, reports for T&M work, controlled inspection report, schedule, and site inspections.

Field Inspections Various projects. New York, New York. Engineer. Field inspector. Responsible for field inspections (relating to local law 11, concrete, rebar, and masonry), as well as special inspections (concrete, masonry, welding) and local law 11.

Joy Construction Co., New York, New York. Quality control engineer. Responsible for new building construction (building envelope) and working with architect on new architectural details concerning the building envelope, quality control, field inspections, progress reports, and meetings with subcontractors.

Kenry Contracting Inc., New York, New York. Project manager. Responsible for concrete Works (building frame), foundations, structural steel, and masonry. Worked for the concrete contractor and was responsible for drawings review, quality control, and subcontractor coordination.

Building Performance. New York, New York. Thornton Tomasetti. Senior field engineer. Scope included façade and roof Rehabilitation renovation, condition assessment, construction administration, forensics, structural/architectural property loss consulting, including scope of damage determination, cause and origin investigation, and building code consulting.

Athens Suburban Railway. Athens, Greece. Aktor S.A. Deputy project manager. Scope included railway works including micropiles, driven piles, road construction (widening of existing routes, deep excavations, and highway interchanges), utilities infrastructure, and new building construction.

Attiki Odos Freeway and Athens Northern Ring Road. Athens, Greece. Construction engineer - site manager. Scope included road construction, utilities infrastructure, and new building construction.

Aktor S.A. New Athens International Airport. Athens, Greece. Aktor S.A. Construction engineer/ safety engineer. Responsible for new building construction, airport runways, and airport utilities infrastructure.

Muhammad Kashif Syed

CIVIL/ STRUCTURAL INSPECTOR

Firm: JCMS, Inc.	**Education:**	**Registration/Certifications:**
Years' Experience: 13	BS, Civil Engineering	See below
	AS, Electrical Engineering	

Registrations/Certifications

ATI Certificate Masonry Special Inspector
ACI Certified Concrete Inspector Grade -1
ACI Certified Concrete Construction Special Inspector
OSHA Safety Certification

Professional Summary

Mr. Kashif Syed holds a bachelor's degree in civil engineering and has more than 13 years of experience working as an inspector, assistant structural inspector, and field engineer in the field of construction management. He has worked on a variety of projects that include transit, roadway and bridge, marine terminals, airport cargo facilities, and housing/industrial buildings. He has been responsible for supervising day to day contractor activities, reviewing the work performed by contractors, scheduling, progress meetings, plan review, and report writing. Mr. Syed is familiar with contract documents, contract drawings, specifications, OSHA safety rules, and all applicable codes and standards. Some of his technical skills include structural inspection, inspection of reinforcement and steel installation, concrete deck, reinforced concrete placement, construction supervision of residential buildings, installation of catch basin, storm sewer, street light, bridge deck, concrete and pavement placement, sidewalk and curb, granite slab pavement, façade inspection, street milling, and pavement.

Selected Experience

Queens Safe Routes to Schools, Phase III. Queens, New York. NYCDDC. HAKS Engineering. Inspector. Project includes the installation of new catch basin, fire hydrant, 18-inch combined sewer, distribution of 12-inch water main, new 12-inch water main valve, sidewalk, curb and raised crosswalk, and installation of furnished light pole and removal of existing. All work performed according to NYCDOT and NYCDDC plans and specifications. Responsibilities included ensuring that work was being performed according to plans and specifications.

Delancy Street Drainage and Roadway Improvement. Essex County, New Jersey. City of Newark. Inspector. Project included the installation of 36-inch reinforcement concrete pipe, catch basin, 18-inch RCP, manhole, curb, sidewalk, and pavement. All work was performed in accordance with NJDOT and Newark standard specifications plan.

Bioswale Project. New York, New York. NYC Department of Environmental Protection / NYC Department of Transportation. Senior inspector. Scope included ROW Bioswale (the planted areas in the sidewalk designed to collect and manage storm water or rainwater runoff).

Manhattan Grand Street Reconstruction Project. New York, New York. NYCDDC. Senior inspector. Project included the installation of a 36-inch steel trunk main, running east-west along the north side of Grand Street, and a 20-inch ductile iron main on the south side of Grand Street, as well as valve-controlled interconnections between trunk and distribution mains,

reinforced concrete chambers, and all related components. Responsibilities included detailed inspections of all components of the mains, on-site testing of construction and site materials, field measurements and data collection for monthly and final construction estimates, progress reports, and preparation of record plans.

Inspection of Complex Pedestrian Ramps. Brooklyn, New York. NYCDDC. Senior inspector. Inspected all intersections within various community boards, maintained daily reports, and used GPS technology to report information to New York Department of Design. Scope also included adequate drainage, not more than 8-percent slope, other related work where interferences existed (such as catch basin modifications or relocations, fire hydrant relocations, and traffic signal relocations), and that all work was performed according to NYCDOT and NYCDDC plan and specifications.

Infrastructure Reconstruction at South Brooklyn Marine Terminal. New York, New York. NYCDDC. Resident engineering inspector. One of the several critical issues was the removal of contaminated soil. Soil for the S-Curve project was tested in advance via test pits and disposed of according to NYCEDC environmental requirements. Coordination with Industry City and various stakeholders (including city agencies and private utility owners). and leases of SMBT property was critical to complete this project in a timely manner.

Bronx Reconstruction of Claremont Parkway Bridge. Bronx, New York. NYCDOT. Resident engineering inspector. Scope involved the reconstruction of Claremont Parkway Bridge over Metro North Rail Road, which included the removal of 11 girders from the bridge, demolition performed over half of the bridge at a time so that traffic could be maintained over the other half, and other demolition, including removal of bridge superstructure, approach roadways, pavements, sidewalks, curbs, guide rail, fences, and utilities. Additional construction items included new water and gas mains, electric lines, approach roadways, pavement markings, signs, traffic signals, and street lighting.

Brooklyn Water Street Reconstruction Project. New York, New York. NYCDDC. Inspector. Scope included reconstruct and upgrade to exiting water distribution system, sewers, and streets in and around the area of Water Street. Responsibilities included ensuring that work was being performed according to plans, specifications, OSHA safety rules, and federal/state requirements. Other responsibilities included ensuring that all site material was used per ASTM requirements, including concrete sampling, slump, and air tests; monitoring the progress schedule per CPM method and reporting progress to supervisor; monitoring all survey work (installation of combined sewers, new 36" trunk main, pigmented sidewalk, granite slab pavement crosswalks, curbs, catch basin connection, manholes, chambers and reconstruction of street with cobble stone pavement).

Richard Davies

CIVIL/ STRUCTURAL INSPECTOR

Firm: Naik Consulting Group, PC	**Education:** BS, Construction Engineering	**Registration/Certifications:** NICET III-Highway, Construction ACI Field Testing Technician, Grade 1
Years' Experience: 21		

Professional Summary

Mr. Davies has more than 20 years of experience in the construction inspection field that includes site/civil work; structural repairs; concrete and formwork; grading and drainage; MPT, paving; striping; and sign installation.

Selected Experience

NJDOT, Routes 1 & 9 Highway Rehabilitation, North Bergen, New Jersey. Senior construction inspector. Widening and reconstruction of Routes 1 & 9, Tonnelle Avenue. Inspected and supervised 36" diameter gas main installation (including testing) for PSE&G, 20"-diameter water main installation for United Water, traffic signal and conduit installation (ITS & VMS), and pavement markings for NJDOT.

Additional Experience

MTA MNR, Night Shift Supervisor, Grand Central Terminal Upper Level Train Shed Repairs, New York, New York. Senior construction engineer. inspection of structural repairs to the train shed and Park Avenue Tunnel.

MTA MNR, Grand Central Terminal Infrastructure Improvements, New York, New York. Senior structural inspector. Inspection of steel construction of the North End Access project, masonry and concrete inspection on the reconstruction of the brick arches in the Park Avenue Tunnel at 67th Street, inspection of the platform tactile warning strip installation, and concrete sidewalk inspection in front of the Terminal on 42nd Street. Prepared daily reports and field sketches, and monitored job safety requirements.

NYCDEP, Newtown Creek Waste Water Treatment Plant, New York, New York. Civil construction inspector. Inspection of formwork installation and concrete placement for the construction of eight egg-shaped digesters and two sludge holding tanks. Prepared daily reports of ongoing construction activities, and monitored noise levels of construction activities.

NYSDOT, Route 22 Bridge Replacement, New York. Senior construction engineer. Inspection and tabulation of final quantities of all drainage and retention pond construction using the CEES and METDRAIN programs.

NYSDOT, Sprain Parkway SB Reconstruction, Westchester, New York. Senior Construction engineer. Inspection, preparation of daily reports and tabulation of final quantities of new guide rail, fence, MPT inspections and sign installation, pavement markings, and the painting of six overpasses.

NYSTA, I-87/I-287 Exit 8 Reconstruction, New York. Senior construction engineer. inspection and preparation of daily reports of all drainage construction including RCP and plastic pipe installation, box culvert, MPT inspections, and retention pond construction, signing and striping, and asphalt paving inspection.

NYSDOT, I-95 Eastchester Creek Bridge Replacement, Bronx, New York. Senior construction inspector. Inspection and preparation of daily reports of the existing drawbridge removal and replacement with a six lane steel girder, concrete deck structure including approaches, MPT inspections, and retaining wall construction. The project also included repainting the Conner Street overpass under Class A containment, on force account.

NYSDOT, Region 8 Roadway Rehabilitations, New York. Senior construction inspector. Responsibilities included ensuring compliance with contract documents, preparing daily reports, recording installed quantities, and assisting with contract administration on various municipal road rehabilitation projects involving drainage construction, MPT inspections, full-depth pavement reclamation, paving, and associated site work.

County of Rockland, Sickletown Road Bridge Replacement, Rockland County, New York. Resident/office engineer. Inspection of the removal and replacement of the existing box culvert structure and inspection of traffic staging.

Dutchess County Water Transmission Pipeline and Pump Station, New York, New York. Senior construction inspector. Inspection of pipeline construction, backfill, concrete placement, steel construction and environmental compliance.

NJTA, Troop "D" Station Replacement, New Jersey. Civil inspector. Site/civil work consisting of grading, utilities, drainage, paving and other incidental tasks. Prepared inspector reports using CapEx.

NJTA, Newark Bay/Hudson County Viaduct Project, New Jersey. Senior construction inspector. Removal and replacement of the shoulder concrete deck slab, concrete parapet, bridge drainage system, street lighting, pavement markings and minor structural steel cleaning, painting, and replacement. Prepared inspector reports in CapEx. Total project approximately $18 million.

NYU Medical Center Institute for Biomolecular Research, New York, New York. Construction project manager. Responsible for monitoring on-site construction activities, monitoring and coordinating testing and inspection agency activities, reviewing and approving contractor's progress payments, and assisting with the startup of mechanical and electrical systems in the 23-story structure.

UMDNJ, Various Projects, New Jersey. Construction project manager. Supervised all architects, engineers, contractors, testing and inspection agencies, approved progress payments and change orders, prepared job status reports, and maintained job records and files for various new construction and major renovation projects, including construction of a 1,600-car parking garage, expansion of the mental health clinic, and construction of a heliport atop University Hospital.

TECHNO
ENGINEERS & CONSTRUCTION MANAGERS

MUHAMMAD SARWAR MALIK
Office Engineer

Education

- Bachelor of Engineering, Civil

Professional Qualifications and Certifications

- OSHA 30 hours Construction Safety Training
- ACI Concrete Field Testing Technician Grade 1 Cert #[redacted]
- TCC Traffic Control Coordinator (Rutgers)
- Certified Asphalt Technologist (SAT)
- Work Zone Safety Awareness
- Hazardous Waste Operations and Emergency Response – 40 hours
- DOT hazardous Materials Transportation

Summary

Mr. Malik is a construction and development professional with 29 years of expertise in all facets of the industry; verifiable track record for the completion of multi million dollars projects through coordinating trades, developing partnership and building positive rapport with architects, engineers, local officials, vendors and clients while maintaining costs; versed in contract negotiation, project estimating, impending design problems, documents preparation, building code and regulations, material purchasing, site management. Areas of expertise lie in: handling multiple projects; cost control management; team building and leadership; quality control management; permitting and building code safety and compliance management; construction planning and scheduling; organization and time management; critical path project management; vendors and material management; budget analysis; estimating and job costing.

Experience

Techno Consult, Inc., Princeton, New Jersey. REI Services for Resurfacing, Pavement Improvements and General Repairs at Various Locations within Brooklyn, the Bronx & Queens. Office engineer. As an office engineer, Mr. Malik is responsible for the following:

- Coordinating with materials engineer regarding status of material approvals
- Maintaining and organizing contract records
- Maintaining current plan sets and contract files for the Resident Engineer and staff Maintaining project correspondence, Non-Conference Notices (NCN), change orders and their corresponding logs
- Preparing and maintaining daily construction inspection reports and payment records, including the verification of the contractor's time and material sheets.
- Reviewing the contractor partial payment requests.
- Monitoring the contractor's work progress based upon his approved construction schedule and reporting any deviation to the RE.

Project Overview:

The Project includes milling & resurfacing, concrete work (curbs, sidewalks and pedestrian ramps) and Tree work.

Detail quantities of work are as follow:

1. Grind. Ex. Asp. Conc. Wearing Course (Milling)
2. ASP. Conc. Wearing Course 2"(Paving)
3. Pre-identified Binder mixture
4. Concrete Curb 18" Deep
5. Straight Steel Face Curb 18" Deep, 24,000 LF
6. Corner Steel Face Curb 18" Deep, 9,000 LF
7. 4" Concrete Sidewalk (Un-pigmented), 37,500 SF
8. 7" Concrete Sidewalk (Un-pigmented), 37,500 SF

9. Embedded Preformed Detectable Warning Unit
10. Maintenance Tree Pruning (Under 12" CAL)

Citywide Street Milling, NYCDDC. REI Services for Prior Notice Sidewalks in the Borough of the Bronx, NYCDDC. Mr. Malik is responsible for performing sidewalk construction inspection; coordinating with the field and the design team to resolve conflicts in the drawings; coordinating with the contractor and the Maintain as-built drawings of the work; Performing all other inspection and field duties as required by the resident engineer; preparing and maintaining daily construction inspection and activities reports.

Multiple School Safety Improvement Projects, New York. Mr. Malik worked as a civil inspector in multiple school safety projects in Brooklyn and Queens for the following Projects: PS 190, PS 257 and PS 91 in Brooklyn and PS 227 in Queens, Duties as an inspector included:

Sidewalk supervision including curbs and pad-ramps, road neck-down, street milling and paving and road marking; supervised the water main and sewer relocation and installation of new systems; supervised the removal of old site fixtures such as hydrants, valves and DIP 6" to 20" Pipes; catch basins and manholes installation supervision and inspection; supervised the field-testing for soil, concrete and asphalt; managed the punch list.

Mass Transit Projects, Hotel, Laboratory Building, Karachi, Pakistan. As a project manager, Mr. Malik's primary responsibilities were Karachi City Govt. Mass Transit Project funded by World Bank and Asian Development Bank; Construction of Boys Hostel for University of Karachi; Construction of Girls Hostel for University of Karachi; Construction of Basement + Ground + 24 story; Tower Building for Karachi Port Trust; Construction of Agha Khan Medical Centre Clifton Karachi; Construction of Laboratory Building and Oncology Building Agha Khan; University Hospital.

Construction of Exchange Buildings, Telecom Network, Jeddah and Makah, Saudi Arabia. Mr. Malik's primary responsibilities were Designing of Primary and Secondary Telecom Network; Installation of Microwave Towers in Jeddah and Makah Region; Construction of Exchange Buildings in Jeddah and Makah Region; Installation of Telecom Network in Qasim, Jeddah and Makah Region. Involved in materials testing and inspection of Parking structure construction, asphalt, soil, concrete and steel rebar inspection.

Various Primary and Secondary Telecom Network Projects, Pakistan. Mr. Malik's primary responsibilities were designing of Primary and Secondary Telecom Network; Installation of Microwave Towers all over Pakistan; Construction of Exchange Buildings all over Pakistan; Installation of Telecom Network all over Pakistan.

Various Multi-purposes Buildings, Hospital, Abu Dhabi, UAE. As a project manager, Mr. Malik's primary responsibilities were overseeing the construction of various projects such as low cost houses projects in Abu Dhabi; residential complex for ADNOC Ruwais; construction of Mufraq Hospital Abu Dhabi; construction of G + 22 story residential buildings (eight Units)

Education

- BEng (Hon.), Civil Engineering
- CEng - Chartered Engineer

Professional Qualifications and Certifications

- Engineer-In-Training
- M.ASCE - Member of the American Society of Civil Engineers
- MICE - Member of the Institution of Civil Engineers in the UK

Summary

Ms. Giffen has more than eight years of experience in project and engineering management on a wide variety of infrastructure and building projects. Her experience has included transportation, water and wastewater projects, structural monitoring and Health and Safety. She has extensive experience working for Designers, Contractors and Owners in successfully working with teams to tight deadlines with limited budgets and resources.

Experience

Project: BAA Contract Safety Documentation, Heathrow Airport UK. Project manager. Seconded to BAA Ltd to manage safety procedures and documentation for various project teams on Heathrow Airport. Integrating across disciplines and with all levels of project staff to ensure safe working practices planned at all stages of projects, including baggage handling and airside security operations

- Modifications to airports
- Health and Safety requirements

Project: Great Manmade River project, Libya. Design engineer. Design of appurtenant structures to pipeline to International Design codes. Managing program and budget constraints as well as design requirements and water related projects

Heathrow Express Rail Link, Heathrow Airport UK. Section manager. Managing construction teams as client representative. Responsible for package amending and upgrading services around the airport to prevent damage and support construction during tunneling works.

- Modifications to Airports
- Tunneling requirements
- Services co-ordination and amendment
- Construction Management

Project: Thames Water Extended Arm, vs sites in South East England. Site engineer/inspector

Site engineer acting as client representative on construction of various water and wastewater related construction and refurbishment projects. Liaison with all levels of site management. Responsible for all aspects of quality control of subcontractors work, maintenance of budget and schedule.

- Water and wastewater new build
- Water and wastewater refurbishment
- Construction Management

Project: Docklands Light Railway extension, London, UK. Site engineer/inspector. site engineer on Gallions reach section, ensuring construction compliance during construction of overhead rail. Assistant project planner, supporting creation of project plan for multimillion dollar project

- Piling
- Reinforced concrete construction
- Precast concrete construction
- Project planning

Education

- BS, Mechanical Engineering

Professional Qualifications and Certifications

- ICC Certified Commercial Mechanical Inspector
- PPE Training (Equipment and Hazardous Communication)
- Confined Space Training (Entry & Rescue): OSHA 29 CFR 1910.146
- Completed construction safety & health : OSHA 10-Hr Course
- Training of Lead Containment, Asbestos and Polychlorinated bi-phenols
- Registered Professional Engineer, Pakistan Engineering Council
- Member of American Society of Heating, Ventilation and Air Conditioning Engineers (ASHRAE)
- Basic Rigging Awareness Training
- Member of American Society Of Quality (ASQ)
- 4-Hour NYC Department Of Building (Scaffold Training)

Summary

Mr. Warsi has extensive managerial and on-site practical experience of electro mechanical multimillion construction and maintenance projects in various capacities from site engineer to consultant engineer to design, installation and testing of pipelines of drinking water, steam, firefighting, sewer mains along with installation of boilers, chiller units, packaged units, air handling units, split units and supply/return ducting and computerized building management system.

Experience

Techno Consult, Inc., Princeton, New Jersey. 26th Ward Plant Emergency Generator Upgrade: Up gradation of Emergency Generation Plant to 7.5MW for New York City 180mgd Wastewater Treatment Plant, NYCDEP. As an electro-mechanical inspector/mechanical engineer, Mr. Warsi is working on the following aspects: cost analysis, resource load CPM schedule, processing payments, managing inspections and reviewing start up and commissioning plan for system. He is also supervising mechanical and instrumentation construction work including PLC system for odor control monitoring panel and all other inspections and evaluations.

Work is being done and is in progress by being segregated into the following Phases:

Phase.1: Managed and completed installation of Diesel Fuel Transfer system. Cleaning the above-ground and under-ground fuel Storage Fuel Tanks and installation, startup strategy as per approved SOP'S and Commissioning of step-up transformers.

Phase.2: Field inspected, installation of 2.5MW MSDG(middle speed diesel generators) and 600kw black start generator, Permanent Fuel Transfer System with leak detection and central system monitoring including 5KV switchgear

Phase.3: Work on Quality assurance, attending construction strategic meeting for POP(Priority Operational Plan) writing reports on any contract deviation and various proposed site modifications

Phase.4: Performing engineering and technical support to connect Black Start Generator, Emergency generator with switchgear and existing Plant Distribution System.

$44 million (Contract 33) and $85 million (Contract 35) for the Upgrade of the Odor Control System of the North River Water Pollution Control Plant, New York City, NYCDEP, Mr. Warsi worked as a mechanical inspector and was responsible for inspection of mechanical components and systems associated with wastewater treatment He oversaw testing and acceptance of mechanical components and systems. Reported any deviations to the resident engineer. Assisted the resident engineer with resolution

of issues resulting from field conditions and with contractor relations. Interacted with design and trade personnel. Assisted with writing, evaluating and pricing of change orders. Monitored contractor's work progress based upon his approved construction schedule and report any deviation. Performed all other inspection and field duties as required by the resident engineer. In addition to all mechanical works (pumps, various pipes, process & normal valves, tanks, scrubbers, absorbers, HVAC System, AHU'S etc.) Mr. Warsi performed the following duties in 35G Contract:

Attended the start-up meetings to clarify all incomplete "Action Items"(related electrical panels functions with PMCS display); Prepared comments on related instrument drawings all missing display/ warning/ sensing instruments comparing the Specifications. Witnessed calibrations of: Pressure Gauges, Level Transmitters, Pressure Sensors, emergency alarms, Emergency Eye wash/Shower, Pressure Switches, Leak Detectors, duplex and simplex sump pumps controls. Witnessed "Functional Testing" & "Operational Testing" with Complete PLC (Program Logic Control) on PMCS and Local Station Panel and confirmed as per approved "Field Test Procedure"; Chemical Dosing and sampling system control strategy with existing system (includes DCU'S & SCP'S); Sub-contractors: (ABB, Maverick, Sage Controls, North East Controls, Dual Div.) for System Panel instruments "Functional" demonstration report to him and am scheduled to meet with them on site.

The Project included installation of new motorized FRP dampers on all scrubber and carbon adsorbers inlets and outlets; Elimination of bypass dampers between scrubber discharges and adsorbers inlet plenum; Installation of new recirculation pumps; Replacement of existing scrubber media with Jaeger Tripack media; all existing chemical metering pumps and associated piping as well as PH and ORP probes and controllers; existing carbon in carbon adsorbers with new carbon; existing sprays nozzles within the scrubbers; modification of existing carbon adsorber beds; Construction of new plenum and installation of new fans for North Odor Control System. In addition to the upgrading of the existing odor control systems under Contract 33, a number of process improvements are included in the contract: Extension of Baffle Walls within the Aeration Tanks; Installation of new waste sludge line from RAS splitter box; Replacement of existing Dissolved Oxygen (DO) Control System; 18-inch dumps valves for aeration tanks; aeration tank diffusers and piping including new droplegs and diffuser grid piping; installation of 2.0 MW Emergency Generator.

Fisher Stainless Steel Tubing Inc., Waterloo, Canada. As quality assurance coordinator, Mr. Warsi was responsible for production of stainless steel tubing as approved standard, laboratory analysis of failure parts, process improvement study using lean manufacturing system, FMEA and PPAP studies as per client requests. He was responsible to develop and deploy project management techniques, process and procedures which include technical and financial exposure, provide technical expertise for material selection, process design, product development and reduction in rejection rates / lead-time / production costs; prepare bid packages for mechanical trades, estimate change orders.

Education

- BS, Civil Engineering
- AS, Mathematics & Science
- Fundamentals of Engineering Exam (EIT)

Professional Qualifications and Certifications

- ACI Concrete Field Testing Technician Grade 1 Certification
- ICC Commercial Mechanical Inspector
- Member of American Society of Civil Engineers (ASCE)
- Member of American Society of Safety Engineers (ASSE)
- Member of Chi Epsilon, National Civil Engineering Honor Society
- Member of Golden Key National Honor Society
- Competed OSHA 40-Hours HAZWOPER
- OSHA 30-Hours Construction Safety Course
- OSHA Confined Space Entry Course

Summary

Mr. Lund has 30 years of professional experience including more than 15 years working in senior level positions on different projects. A very experienced engineer, he brings to the table years of practical experience gained from coordinating and monitoring contractor performance.

Experience

Techno Consult, Inc., Princeton, NJ: $2.5 billion Croton Water Filtration Plant, Van Cortland Park, NY, NYCDEP. Mr. Lund is working as lead mechanical engineer and his responsibilities include examining the construction of structures and sewer, water, and electrical systems, to ensure compliance with contract requirements and local building codes. Management of the construction of the NYCDEP Resident Engineer's Field Offices, construction cost estimating, testing of main excavation rock bolts, monitoring rock blasting and excavation. Reviewing payment requisitions, reviewing of time and material reports. Collecting as-built data, supervision of the implementation of Best Available Technology (BAT), on non-road diesel powered construction vehicles as required by the City of New York's Local Law 77.

The most unique aspect of the project is that the facility will be built completely underground. Construction of the facility will require two major underground construction phases: site preparation and tunneling. Each phase requires specialized expertise by both the contractors and the construction management team. The complexity includes the fact that a massive rock excavation must be undertaken before subsequent stages can begin, and tunnels must be completed before the plant can go on line. These contracts have particular risk because they are subject to unanticipated or unknown rock conditions.

John P. Picone, Inc.: Construction and Demolition of NYCDEP's Wastewater Processing Facility, Hunts Point, New York. As a project engineer, Mr. Lund coordinated construction and demolition activities and work included improvements to plant head works including the construction of a new Forebay throttling gate chamber, the replacement of main sewage pumps with variable frequency drive control, the installation of new bar screen equipment, the installation of a new scum and sludge processing system, the construction of a new personnel facility and centralized residuals handling facility, and the installation of a plant-wide instrumentation and control system. His responsibilities included coordination of work activities with various fabricators and subcontractors, procuring submittal approvals and materials and preparation of as-built drawings, coordination of the layout of new structures and equipment with a team of surveyors, coordination of the removal of hazardous materials from worksite and development of safe work procedures and maintaining safety records.

TECTONIC Engineering Consultants P.C. As a project engineer he was responsible for site planning and design related to wireless communication site; prepared construction and permitting drawings; performed structural analysis and design of telecommunication related equipment; scheduled CADD personnel to ensure project deadlines were met; inspection of sites during and after construction for coherence with design drawings.

M.G. McLaren Consulting Engineers P.C. As a project manager, Mr. Lund performed structural analysis and design of marine and special structures; performed structural inspection of marine facilities.

U.S. Department of Energy – Industrial Assessment Center. As a project engineer, Mr. Lund conducted analysis of energy usage and waste streams for Arizona manufacturers; generated comprehensive reports with recommendations for methods to conserve energy and reduce operating costs.

Thor Lund Co. Inc., Bronx, New York. As an elevator mechanic, Mr. Lund performed construction and repair of sidewalk elevators and electric dumbwaiters; prepared bid proposals for new construction and repair of elevator units; prepared plans and specifications for lifts submitted to NYC Building department.

Education

- BS, Mechanical Engineering
- Key Courses: Energy Resources & Utilities; Refrigeration & A/C; Heat Transfer; Thermodynamics; Welding Technology; Electrical Technology; Gas Dynamics, Strength of materials, Machine Design & Engineering Graphics

Professional Qualifications and Certifications

- Engineer-In-Training (EIT), Fundamentals of Engineering (FE)
- 10 Hour Construction Industry Outreach
- 10-Hour Occupational Safety and Health Training Course in Construction Safety & Health
- Certification in Auto Cad awarded by Edit system Pvt. Ltd. India
- Certification in Air Conditioning Refrigeration awarded by Government of India.
- Certifications in 3d Animations awarded by Edit system Pvt. Ltd. India

Summary

Mr. Majid has more than 15 years of experience in both mechanical design and inspection. He has extensive HVAC design and implementation using AutoCAD. He is also experienced with Microsoft office Carriers HAP 4.30, Cad pipes and was exposed to pipe/fitting/welding economics.

Experience

Techno Consult, Inc., Princeton, New Jersey. 1.5 billion Newtown Creek Wastewater Treatment Plant, New York. This project involves the completion of significant upgrades to the structures and systems that treat wastewater from a combined sewage treatment system. Some of the project elements include improvements to the plant bar screens, electrical, plumbing, HVAC, and controls and instrumentation upgrades, new screening and control buildings, new barge facilities and site work. The plant is undergoing a major capital improvement and upgrade program to expand its intended capacity from 1.2 to 1.8 cubic meters per day – a 50% increase. Process improvements will result in dramatic reductions of biochemical oxygen demand (BOD), and will help bring NYC into compliance with the secondary treatment standards required under the Clean Water Act.

Mr. Majid is responsible for inspection of mechanical components and systems associated with wastewater treatment. He oversees testing and acceptance of mechanical components and systems and reports any deviations to the Resident Engineer. Generating daily reports on contractor activity on jobsite. Assisting the Resident Engineer with resolution of issues resulting from field conditions and with contractor relations. Interacting with design and trade personnel with the aim of progressing the work in an orderly and timely manner.

Various projects for DEP, MTA, LIRR, NYCT, Metro North Railroad and NJ Transit & New Jersey Turnpike Authority. Mr. Majid gained HVAC experience in the design, coordination and construction of water / wastewater treatment plants, government and transit facilities. He performed different tasks as a mechanical engineer for numerous projects for clients including DEP, MTA, LIRR, NYCT, Metro North Railroad and NJ Transit & New Jersey Turnpike Authority. Familiar with design / construction processes and requirements. He was responsible for the design process including calculations, scoping reports, equipment sizing, layout coordination (between all trades), contract drawings/ specifications, cost estimates, shop drawing review and requests for information from contractors / engineer coordination and on-site inspection.

Project: DC WASA 358 Main and "O" Pumping Station Rehabilitation. Responsibilities involved sizing and layout of piping, boilers, pumping system, heating and ventilation units, Fans and Ductwork. Verified

existing conditions in the field for HVAC Design. Responded to RFI. Prepared design revisions. Prepared cost estimation. Reviewed contract HVAC submittals with respect to contract drawings & specifications involved during field coordination. Calculated sufficient air-change per hour in the Battery room to keep the hydrogen level low and maintained explosion proof equipment selection for battery room.

Project: Newtown Creek Contract 30H, Main Building South Addition. Reviewed contract HVAC submittals with respect to contract drawings & specifications. Maintained proper relocation of convectors in the staircases. Calculated heating and ventilation requirements.

Project: Bowery Bay –57H & 58H - HVAC Design, Prepared Cost Estimation. Reviewed contract HVAC submittals with respect to contract drawings & specifications and involved during field coordination. Prepared change orders during construction phase.

Project: Catskill Delaware. Calculated heating and ventilation loads, HVAC Equipment, ductwork & piped layouts in the various locations of the facility.

Project: New York state office of Mental Retardation and Development Disabilities. Prepared estimated cost for HVAC equipment by piping, having pipe support for feasibility study for New York state office building. Copiloted engineering data to analyze Energy Efficient Strategies.

Project: Adam Clayton Powell Jr., State Office Building. Reviewed Contract HVAC submittals with respect to contract drawings and specifications.

Project: Rutgers Houses. Reviewed Contract HVAC submittals with respect to Contract Drawings & specifications.

Project: Lehman HS, Bronx. Surveyed existing school conditions at the basement floor "Ballet Studio/Smoke Purge system" and prepared a report describing Mechanical findings & Recommendations for air-Handling unit & Ventilation system for the Ballet Studio and Smoke Purge System as per New York City Building Codes & SCA Standards. Completed scoping phase, design phase and construction phase. Performed cooling load calculation using computer software to ensure existing system-cooling performance, and proposed new HVAC equipment to optimize the Cooling performance.

Project: NYCSCA Public School PS-229, Bronx Surveyed existing conditions for the structural stabilization and water leaks; replaced existing HVAC equipment, and duct and pipes. Completed HVAC design phase and prepared HVAC contract drawings.

Project: NJSCC New Elementary School #5, East Orange - HVAC design & CAD

Project: NYCSCA Public School PS-41K & PS-332K - HVAC design & CAD

Education

- BS, Electrical Engineering

Professional Qualifications and Certifications

- NEC 2011 Review course
- OSHA 10-Hr Construction Safety and Health Course
- Certification from Professional Engineers Ontario, Canada
- Registered Professional Engineer, Pakistan Engineering Council
- Member of Institution of Engineers, Pakistan
- Member of Association for the Advancement of Cost Engineering (AACE), USA
- SCADA and DCS course

Summary

As a senior electrical inspector Mr. Syed has many key qualifications like:

- Management of a team of multi-discipline/multi-national professionals which involved creating and managing financial budgets, human/capital resource allocation plans, and supervising and reviewing preparation of contract documents and schedules.
- Conversant with North American codes and standards such as CSA, NEC IEEE, NEMA, NFPA etc, computer well-versed and able to use engineering software.
- *Completed switchgear system design and selection of equipment for High voltage system (34.5KV, 13.8KV, 4.16KV and LV Systems.) for expansion of seawater Cooling facility in Jubail, Saudi Arabia*
- Development of Control System Engineering related to power generation, distribution and pumping station along with DCS logics.
- Supervised the design and execution of medium and low voltage (34.5KV, 13.8KV) distribution network including transformers, switchgears, cables and related protection system.
- Development of electrical infrastructure network, plant's major electrical system & equipment.
- Completed auxiliary system design, UPS, DC chargers, Batteries and Fire alarm systems.
- Preparation of electrical drawings, single line diagrams, schematics, wiring cable block diagrams, schedules and various layout drawings.
- Investigation of electrical systems, UPS, SCADA and DCS system failures, and preparing and implementing directives for corrective actions.
- Analysis and investigation of plant problems and developing remedial strategies.
- Development and implementation of operations/maintenance plan and procedures and quality assurance guidelines.

Experience

Techno Consult, Inc., Princeton, New Jersey. $1.3 billion CAT/Del UV Disinfection Facility, Valhalla, NY, NYCDEP. In accordance with the terms of the Filtration Avoidance Determination (FAD) issued by the USEPA, the New York City will construct and place into operation an Ultraviolet Light (UV) Disinfection Facility for the Catskill/Delaware Water Supply System capable of disinfection a maximum flow of 2,020 million gallons per day (mgd), with an average flow of 1,310 mgd. The project will meet the water supply needs of the City and lower Westchester County and will comply with state and federal drinking water standards. The introduction of the UV Disinfection Facility will provide an additional disinfection "barrier" against *Giardia* and *Cryptosporidium* which will significantly enhance the City's water supply protection program.

Mr. Syed is responsible for construction inspection, prepare and maintain daily construction inspection reports, maintain and update shop drawing log; coordinate with the field and the design team, review contractor's monthly requisition; perform all other inspection and field duties as required by the Resident Engineer.

$260 million Wards Island Wastewater treatment Plant, Borough of Manhattan, NYC, NYCDEP. Construction phasing will be conducted in seven phases, the first of which has been completed. Phase 2 involves the construction of the Bronx and Manhattan Grit chambers. Phase 3 consists of solids handling and miscellaneous improvements. Phase 4 involves construction of personnel facilities and other miscellaneous improvements. Phase 5 involves Secondary System Improvements. Phase 6 involves Residuals Handling and Miscellaneous Improvements, and Phase 7 consists of miscellaneous improvements.

Mr. Syed was responsible for technical review of engineering packages comprised of following systems: power distribution and equipment, illumination, fire alarm and protection, lightning protection and grounding, monitoring and security, data/voice communication and cathodic protection system. Perform engineering and commissioning using PANELBUILDERS 32, QUANTUM, FAUNC, WONDERWARER, MATH CAD, RSVIEW32, CIMPLICITY, PMCS, and VERSAPRO and perform construction inspection for conformance with design and contract specification. Prepare and implement directives for corrective actions. Evaluate modifications, change orders and prepare recommendations for negotiations and approvals. Coordinate and review the CPM schedule and perform all other inspections and evaluations. Supervise the execution of day to day work on site; preparing and recommending solution of day-to-day problems encountered during the execution of work on-site.

$166 million Flushing Bay CSO Retention Facility, NYCDEP, New York. The project consists of the construction of screening and chemical treatment plant, offices and recreation facilities and equipped with the following: An advanced telemetry system control through SCADA; Power and protection monitoring system; fire alarms and fire lighting system; grounding and lighting protection system; public address system; security system; all of these above are implemented controlled and monitored through the "DCS" system.

Mr. Syed was responsible for reviewing and implementing the contract documents and designs; reviewing the modifications and change orders for approvals and implementations; review and recommend the monthly payments of contractors for final approval; Review and approve the as-Built drawings and final documents of the contracts; Supervise the execution of day to day work on site; Preparing and recommending solution of day-to-day problems encountered during the execution of work on-site.

Expansion project of technical coating facility in Burlington for Dextran Chemical Products Scarborough and GEN pharmaceutical Company. As an electrical designer he developed complete engineering package for reconstruction of Dextran chemical products. He was also responsible for completing design of low voltage distribution loads center and illumination, grounding, lighting protection system and fire alarm system, supervising the execution of construction activities of all electrical works and certifying progress payment claims, and developing complete engineering package for several community centers.

Plato Moschides

ELECTRICAL INSPECTOR

Firm: Naik Consulting Group, PC
Years' Experience: 27

Education:
BS, Computer Science

Registration/Certifications:
See below

Registrations/Certifications
NICET IV- Transportation Engineering Technology
ACI Certified, Concrete Field Testing Technician Level I
ACI Certified, Concrete Construction Special Inspector Level II
OSHA Occupational Health and Safety Act- Scaffolding and Fall Protection
MTA NYC Track Safety Certification

Professional Summary

Mr. Moschides has twenty seven years' experience in transportation engineering technology. Technical expertise in electrical, electronics, communications, mechanical, civil, structural, and architectural disciplines. professional grade construction management and inspection and professional grade construction report preparation.

Additional Experience

PANYNJ HVAC Rehabilitation and Installation of Fire Alarm and Fire Suppression Systems Various Locations. Construction manager. Electrical, electronics, communications, computer-based systems, mechanical, architectural, plumbing, sprinkler, FM 200, and environmental elements to replace existing HVAC, fire alarm, and fire suppression systems, testing and commissioning throughout the Goethals Bridge Administration and Maintenance buildings.

PANYNJ Light Pole and Light Pole Support Repairs at Goethals, Outerbridge Crossing and Bayonne Bridge Various Locations. Construction manager. Electrical, civil, and structural elements required to repair 30 light pole, light pole foundation, and light pole support locations at Goethals and Bayonne Bridges, and Outerbridge Crossing; including asbestos abatement.

PANYNJ Bayonne Bridge Emergency Electrical Repairs, Various Locations, New York. Construction manager. New raceway and cable, automatic transfer switch sequencing and testing for destroyed backup power feeders at Administration building; field testing.

PANYNJ Staten Island Bridges Fire Hydrant System Upgrades. Construction manager. Mechanical and civil elements required to upgrade the existing fire hydrant systems at Goethals and Bayonne Bridges, and Outerbridge Crossing.

PANYNJ Outerbridge Crossing Highway Speed EZ- Pass. Construction manager. New plaza traffic reconfiguration; mechanical, electrical, electronics, plumbing, civil, structural and architectural removals and installations to facilitate new highway-speed electronic toll collection system; testing and commissioning.

PANYNJ Goethals Bridge Replacement of Condenser Water Strainers and Modifications to Chemical Feed System. Construction manager. Replace existing strainers with new duplex strainers, including all supply and return piping; modify existing chemical feed supply piping; mechanical identification, hydrostatic testing.

PANYNJ Upgrade Emergency Egress Signage and Lighting for the Goethals, Bayonne Bridge and Outerbridge Crossing. Construction manager. Electrical, structural, architectural, and civil elements to upgrade emergency egress signage and lighting within Administration Buildings and hollow abutments. Work included construction of three new egress corridors with fireproof ceilings, walls and doors, facade reconstruction, replacement of overhead garage door.

PANYNJ Central Access Door Control System for the Goethals, Bayonne Bridge and Outerbridge Crossing. Construction manager. Deployment of Lenel™ software based Central Access Door Control Systems at Goethals, Bayonne Bridges and Outerbridge Crossing. installation of 130 new fail-secure doors, new PTZ CCTV/Motion detection systems, new electrical and electronics hardware, communications, uninterruptible power supplies, intra-facility networking of software based access control systems, RFID badge readers, badge creation software with intra-facility replication of access privileges using Windows 2000™ Professional, and Server operating systems, Legato™ RAID 5. Installation of new electrical conduit and cable feeders and branches, access control panels, dual-reader interfaces; integration into PAWANET mesh topology. Review final documentation: software manuals, operations and maintenance manuals, etc. Oversee 30-day operational testing.

PANYNJ Rehabilitation of Lighting Feeds and CCTV Systems for the Goethals, Bayonne Bridge and Outerbridge Crossing. Construction manager. New bridge lighting power feeds, automatic transfer switches, new enclosures, cable, branch circuit wiring, conduit, field testing. New aviation lights, navigation lights, radar beacons, foghorns, and associated feeders. Testing and commissioning.

NYCTA, 2ND Avenue Subway Contract 4C, New York, New York. Project engineer. Managing mechanical, electrical, 300kVA uninterruptible power supply, electronics, communications, fiber-optics, instrumentation, controls, signaling, traction power, plumbing, multiple fire suppression systems and conveying equipment for new 72nd Street station.

NYCTA, 2nd Avenue Subway Contract 3, New York, New York. MEP specialist. Mechanical, electrical, 375kVA uninterruptible power supply, electronics, communications, fiber-optics, instrumentation, controls, signaling, traction power, plumbing, multiple fire suppression systems, traction and hydraulic elevators and escalators (conveying equipment) for 63rd Street station 'F' line.

Richard Barrington PE

CIVIL/ STRUCTURAL ENGINEER

Firm: Louis Berger	**Education:**	**Registration/Certifications:**
Years' Experience: 16	BS, Civil and Environmental Engineering	Professional Engineer (NY, NJ)

Professional Summary

Mr. Barrington is a licensed principal engineer serving as the manager of facilities engineering. He has 16 years of experience in design services for civil and environmental engineering including the past 18 months in an operational manager capacity. Mr. Barrington has been involved in a wide variety of projects for both private and public sector clients. His experience ranges from preliminary investigations and conceptual plans, through design and preparation of contract documents, to construction phase services. He has worked in many sectors, most notably education, aviation, transportation, and sports and recreation.

Selected Experience

Newark Liberty International Airport (EWR), Terminal A Redevelopment and Infrastructure Assessment. Newark, New Jersey. Port Authority of New York and New Jersey (PANYNJ). Engineer. Mr. Barrington was responsible for providing design evaluation and civil engineering services for the development of the Terminal A Sustainability Report. Provided utility assessment and master planning in support of the overall airport redevelopment program. Provided evaluation of transportation and infrastructure elements in addition to sustainable options for addressing storm water management, increased utility demand, and other affected elements by the redevelopment project within the airport environment.

Perimeter Intrusion Detection Systems (PIDS), Design-build project. New York and New Jersey. PANYNJ. Civil/structural engineer. Mr. Barrington was responsible for providing lead design engineering services for civil/utilities and environmental/permitting aspects, as well mechanical and electrical engineering support services within the command and control rooms for this confidential security PIDS design-build project for all major New York and New Jersey airports.

On-Call Security Engineering Services, Unmanned Gates Stage 3 Design, EWR. Newark, New Jersey. PANYNJ. Project manager. Mr. Barrington was responsible for civil engineering and design associated with security improvements at unmanned gate locations at EWR. The project included both physical and technical improvements consistent with existing PANYNJ technology requirements and design based threat requirements.

On-Call Security Engineering Services, Unmanned Gates Stage 3 Design, Teterboro Airport (TEB). Teterboro, New Jersey. PANYNJ. Project manager. Mr. Barrington was responsible for civil engineering and design associated with security improvements at unmanned gate locations at TEB. The project included both physical and technical improvements consistent with existing PANYNJ technology requirements and design based threat requirements.

On-Call Security Engineering Services, Unmanned Gates Stage 3 Design at LaGuardia Airport (LGA). New York, New York. PANYNJ. Project manager. Mr. Barrington was responsible for civil engineering and design associated with security improvements at unmanned gate locations at

LGA. The project included both physical and technical improvements consistent with existing PANYNJ technology requirements and design based threat requirements.

On-Call Civil Engineering Services. New York and New Jersey. PANYNJ. Project manager. Mr. Barrington was responsible for civil engineering and design associated with roadway, utility, drainage, and pavement design at John F. Kennedy International Airport (JFK), EWR, and LGA. Performed engineering assessments and development of design plans, specifications and cost estimates for EWR bay water piping removal, Building 141 site/civil and parking design, and JFK cargo road rehabilitation.

On-Call Site Feasibility Investigation Services, Statewide, New Jersey. New Jersey Schools Development Authority (NJSDA). Project manager. Mr. Barrington served as project manager for on-call engineering and environmental support program to NJSDA. Under this task order, provided program management for the contract that provided engineering and environmental services for more than 20 schools throughout New Jersey. Provided a multitude of services ranging from civil engineering, building assessments, cultural resources, environmental engineering, expert witness testimony, utility investigation, geotechnical engineering, traffic analysis, conceptual site planning, demolition and abatement, and site/civil engineering design for the schools ranging from Pre-K-4 through high school.

On-Call Site Feasibility Investigation Services. Essex Region, New Jersey. New Jersey Schools Construction Corporation (NJSCC). Project manager. Mr. Barrington served as project manager for the on-call engineering and environmental support program to NJSCC. Under this task order, provided program management for the contract that provided engineering and environmental services for more than 10 schools throughout the Essex Region. Provided a multitude of services ranging from civil engineering, building assessments, cultural resources, environmental engineering, expert witness testimony, utility investigation, geotechnical engineering, traffic analysis, conceptual site planning, demolition and abatement, and site/civil engineering design for the schools ranging from Pre-K-4 through high school.

On-Call Engineering. New York. City University of New York (CUNY). Project director. Mr. Barrington was responsible for providing proposal information and negotiating task orders for on-call contract. The on-call engineering contract provided civil, structural, mechanical, electrical, and plumbing engineering services to a variety of CUNY campuses. Awards to date include structural evaluation for a renovation for Gershwin Hall at Brooklyn College and special inspections for renovation to the Kupferberg Arts Quad at Queens College.

On-Call Security Engineering Services. New Jersey. New Jersey Turnpike Authority (NJTPA). Project manager. Mr. Barrington was responsible for various civil improvements to address security needs at various building facilities and major bridges within the state of New Jersey.

Dance Building, Purchase. New York. State University of New York (SUNY). Project manager. Mr. Barrington was responsible for providing lead civil and utility engineering services for the drainage improvements associated with water infiltration issues surrounding the Dance Building. Services rendered included site assessment, investigation of existing utilities, storm water management design, and construction oversight.

Fredrick McCarthy PE

CIVIL/ STRUCTURAL ENGINEER

Firm: Louis Berger	**Education:**	**Registration/Certifications:**
Years' Experience: 29	BS, Civil Engineering	Professional Engineer (NJ, NY, PA, DE, RI, FL)

Professional Summary

Mr. McCarthy is vice president of facilities engineering including remedial design services with more than 20 years of facilities, structural, and security engineering experience. He has performed and managed numerous facility evaluations, upgrades and designs involving buildings, utilities and site restoration, and has conducted environmental investigations and remediation system designs for private industries as part of plant operations and maintenance. He is also responsible for the Louis Berger Corporate Quality Assurance Program.

Selected Experience

Port Authority of New York and New Jersey (PANYNJ), Professional Design and Technical Services for Security Capital Programs on a "Call-In" Basis. Director. Mr. McCarthy was responsible charge for providing various confidential security related design services for various tunnel, bridge, airport, rail (PATH) and port facilities projects in New York and New Jersey. Under this contract, presently preparing Stage I reports and design documents for construction and installation of crash barriers, perimeter intruder detection systems, structural hardening of access points, Infographics systems, ventilations systems safeguards and landside improvements.

PANYNJ, Baseline Structural Condition Surveys of Block A (north and south) and Block C, Hoboken, New Jersey. Project principal and QA/QC review. The task order consisted of the baseline structural inspection and façade evaluation of three structural steel framed/masonry clad 13 story high rise office and condominium structures. The manlifts and mobile scaffold were used to inspect the building facades. Deliverable included the condition survey report in PANY&NJ format with photographic documentation and building plans detailing the locations of identified immediate, priority, safety and routine repair recommendations.

PANYNJ, Cyclical Structural Condition Surveys of the Lincoln Tunnel Ventilation Buildings, located in Weehawken, New Jersey and New York (Manhattan) New York. Project principal and QA/QC review. The task order consisted of the facade structural inspection (NYC Local Law 11) and evaluation of five structural steel framed/masonry clad high rise structures. The manlifts and mobile scaffold were used to inspect the building facades. New York City Department of Transportation Sidewalk Closure permits were acquired for elevations above public sidewalk. Deliverable included the condition survey report in PANYNJ format with photographic documentation and building plans detailing the locations of identified immediate, priority, safety and routine repair recommendations.

PANYNJ, Facility Condition Survey Program buildings, Baseline Condition Survey of Buildings 37, 54, 301, 302, 304, 306, 308, 310, 312, 313, 314, 315, 316, and 317 and a Cyclical Condition Survey of Buildings 11, 34, 39, 84, 85, 123, 124 and 125 at LaGuardia Airport located in Queens, New York. Project principal and QA/QC review. Task order consisted of the completion of an existing conditions assessment of various operations, maintenance, antenna

and support buildings servicing FAA and the Airside Operation Area (AOA) of the airport. Deliverable included a report of the inspection findings, including repair and/or replacement of the noted deficiencies.

PANYNJ, Facility Condition Surveys for Building Facilities on a Call-In Basis. Director. Mr. McCarthy was responsible for executing completion of multiple buildings assessments and report preparation at JFK and Newark Liberty Airport.

PANYNJ, Quality Assurance Division, Structural Condition Assessment of JFK International Airport Buildings 30, 36, 38, 43 and 44. Quality control engineer. Mr. McCarthy was responsible for the review of structural inspections and façade evaluations and the associated reports of 5 buildings, totaling approximately 1,010,000 GSF of cast-in-place concrete, pre-cast concrete and steel construction, at JFK International Airport. The surveyed buildings were two parking garages (Blue and Green Garages) and their associated toll booth canopies.

PANYNJ, Quality Assurance Division, Structural Condition Assessment of New Jersey Marine Terminal Buildings 111, 122, 124, 125, 126, 130, 131, 135, 136, 142, 143, 147, and 151. Quality control engineer. Mr. McCarthy was responsible for the review of the structural inspection and façade evaluation and the associated reports for 13 buildings, totaling approximately 400,000 GSF of diverse construction, including steel and timber framing, and function, at Port Newark. The surveyed buildings were operated by Port Newark tenants as warehouses (ambient, refrigerated, and subzero), storage buildings, offices, commercial facilities, and domestic water pumping station.

PANYNJ, On-Call Civil Engineering Services. Program director. Mr. McCarthy was responsible for QA/QC of civil engineering services involving roadway, drainage and pavement design at JFK, Newark and LaGuardia Airports. In responsible charge of engineers and in the performance of engineering assessments and development of design plans, specifications and cost estimates. Representative projects included JFK Airport Service Road and Taxiway Rehabilitation, LaGuardia Airport Service Road Restoration, Oil/Water Separator Installations at Buildings 14, 75 and 79 at Newark International Airport, JFK Cargo Road Rehabilitation and Guard Post Crash Barriers at JFK.

Bryant Park Corporation, New Underground Facility Building and Call-in Structural and Civil Design Services, New York. Principal-in-charge. Mr. McCarthy was responsible for project oversight of this on-going design of a new underground building to support the park's electrical power requirements. Responsible for Division's design of the civil, structural, electrical lighting, plumbing and HVAC systems. Also responsible for design of various pole and telescope structural mounts throughout the park and currently providing design solutions for water supply needs within the park.

County of Essex, Division of Engineering, Culvert Management System, New Jersey. For the County of Essex, Mr. McCarthy directed the development of a management system for 240 culverts of concrete and masonry construction involving inventory, inspection and remedial design recommendations and the development of an electronic database.

Robert Thiel PE

CIVIL/ STRUCTURAL ENGINEER

Firm: Louis Berger	**Education:**	**Registration/Certifications:**
Years' Experience: 18	MS, Construction Management	Professional Engineer (NJ, NY)
	BS, Civil Engineering	

Professional Summary

Mr. Thiel has 18 years of experience in civil engineering design including roadway alignment, preparation of construction contract documents for public bidding, including design of construction staging and traffic control plans. He is thoroughly knowledgeable in the use of virtual design and construction applications in both the AutoCAD and MicroStation platforms, having managed, and served as a technical advisor to, Louis Berger's CAD group in its Morristown office for more than 10 years. Mr. Thiel has designed and /or served as project manager for the design of major transportation projects, such as the Interchange 7A and I-195 Interchange reconstruction (Interchange 7A of the NJ Turnpike), an interchange between I-95 and I-195, as a part of the Interchange 6 to 9 Widening Program for NJ Turnpike and for the Port Authority of New York and New Jersey's study of the expansion of the PATH system to Newark Liberty International Airport. His experience includes all aspects of design, from preliminary Engineering to final design and post design services, and include roadway geometric design, ROW, utilities, access, bridges, retaining walls, culverts, signing and pavement marking plans, environmental and soil erosion and sediment control permitting, and project specifications.

Selected Experience

Port Authority of New York & New Jersey, PATH-EWR Connection Update, Essex County, New Jersey. Engineering lead. Mr. Thiel worked on the update of design for extension of PATH system to Newark Airport Rail Link Station. Updated engineering estimates and concepts, including development of new station and storage yard alternatives. Development of conceptual alternatives and estimates to avoid or mitigate adjacent projects also under development.

Port Authority of New York & New Jersey, PATH Storage Yard Study, Hudson and Essex Counties, New Jersey. Project manager. Mr. Thiel worked for the yard capacity study to accommodate proposed capital improvements and fleet expansion. Evaluated the peak storage at three yard locations, and developed storage projections throughout the service expansion. Developed multiple yard expansion options and evaluated effects on PATH operations.

Port Authority of New York & New Jersey, PATH-EWR CTA Connection, Essex County, New Jersey. Engineering task leader for study to extend PATH system to the Newark Liberty International Airport Central Terminal Area. Mr. Thiel developed in conjunction with the EWR redevelopment study, the project provided preliminary engineering, ridership analysis and environmental review based upon the previous Stage I design to extend the PATH system to the Newark Rail Link Station. The project explored storage options for the additional train sets, as well as a phased implementation approach.

Port Authority of New York & New Jersey, Stage I, PATH-EWR Connection, Essex County, New Jersey. Civil task leader for preliminary design of $500 million in construction. Mr. Thiel developed the transportation component to the Lower Manhattan Recovery Effort. Particular Focus was placed on extending the existing South Street tail tracks on a new alignment between the Northeast Corridor and the McCarter Highway with multiple bridge crossings, an alignment under NJ 21, US 22, the CSX truss bridge, and I-78 with a short tunnel section under NJ Transit's Raritan Valley Line. Major considerations included the yard configuration and location, Rail Link Station, platform modifications, ROW requirements, cut and cover vs. NATM tunneling, embankment vs. structured cantilever bridges. Focus was placed on a one seat ride from Newark Liberty Airport to Lower Manhattan. The project refined the recommended alternatives from the feasibility study and the conceptual design was refined for the 2.1 mile extension of the PATH system between Newark Penn Station and the Newark Liberty Airport's Rail Link Station. Provided a DC-traction power, two track system by extending the system west of the Northeast corridor.

The Port Authority of New York and New Jersey, PATH, Interim Program Management for PATH Sandy Recovery. Program manager. Mr. Thiel worked on program management services, including scheduling, document control, and supplemental staff for PATH's Hurricane Sandy recovery program. Support PATH in management of FTA grant program and applications, including development of FTA compliant Program Management Plan (PMP) and associated supporting documents and schedules.

Port Authority of New York and New Jersey, On-Call Security Engineering Services, Terminal Frontage Protection (EWR, LGA, JFK). Deputy project manager. Mr. Thiel is responsible for architectural, civil, structural, electrical, and traffic engineering and design associated with improvements along terminal frontages at JFK Airport, part of a program to provide frontage protection at the PANYNJ's three major airports. The design packages were developed in a staged manner over the course of 18 months working with various stakeholders within NJTA and within the private leasee organization. The construction work at the terminals is currently ongoing. The $90 million program, was developed with strict phasing and staging guidelines due to the active nature of airport terminal buildings. Louis Berger worked with the terminal tenants to develop staging plans that were cognizant of vehicle/pedestrian movements, commercial delivery schedules, and were cognizant of peak period experienced by certain terminals throughout the calendar year. Louis Berger coordinated various improvements at each site in a manner that was consistent with the terminals future plans for growth and did not conflict with ongoing maintenance projects and future construction efforts expected to occur within similar timeframe.

Port Authority of New York & New Jersey, Stage III, JFK Cargo Road Service Road Reconstruction, Phase I and Phase II, New York, New York. Civil task leader. Mr. Thiel worked on the final roadway design of new connection to JFK intermodal facility at JFK Rail Link Federal Circle Station, including temporary connection to existing Rental Car Lane. Final design of connection between intermodal facility and existing JFK Cargo Road, including reconstruction of JFK Cargo Road and construction of a new intersection. Major considerations include ROW requirements, superelevation study for intersection with curved roadway, drainage, utility conflicts, accommodation of existing lease holders.

Kirit Mevawala PE

CIVIL/ STRUCTURAL ENGINEER

Firm: Louis Berger	**Education:**	**Registration/Certifications:**
Years' Experience: 32	BS, Civil Engineering	Professional Engineer (NY)

Professional Summary

Mr. Mevawala has more than 32 years of experience in overseeing civil engineering projects from their conceptual stages to their completion. Expertise includes managing construction of underground tunnels; concrete and steel structures; MEP engineering; utilities; track; signal; and communication contracts. Possess extensive knowledge in overseeing quality control/assurance program, safety program, risk management, contract procurement & management; heavily involved in interacting with city, state, federal, and community agencies; and highly skilled in resolving claims and disputes before they become change orders and saved millions to MTA. His contributions have resulted in saving of millions of dollars for the Metropolitan Transportation Authority. As the director of rail and transit at Louis Berger, Mr. Mevawala oversees the engineering and project management task with respect to feasibility study contract of the high speed rail system design development in the U.S. He manages program management for ongoing temporary and permanent repair to PATH system due to damage from Super Storm Sandy. The project includes both permanent repair and resiliency projects to protect the system from future storm. The repairs include replacement of damaged facilities, such as substations, and also relocation of such facilities away from hazard. Coordination with FTA and FEMA is included as a part of PATH ongoing grant program for Sandy recovery.

Selected Experience

Louis Berger, Morristown, New Jersey, Director of Rail/Transit. Mr. Mevawala oversees engineering and project management tasks with respect to the feasibility study and contract of high speed rail system design developments in the U.S. Perform feasibility studies of tunnels and elevated structures. Mr. Mevawala also verified and validated the preliminary alignment, and basic capital cost, operation cost, and maintenance cost, based on a corridor evaluation of the field. In addition, he verified and validated the work plan and budget for impacted infrastructures as well as for storm water management facilities. Last but not least, Mr. Mevawala created a database of all the maintenance and station facilities organized by size and location.

The Northeast Maglev, Baltimore-Washington SCMAGLEV Project Advisory Services Contract 2013-14, Washington, DC. Project manager. Mr. Mevawala was responsible for project management of project tasks including planning, environmental and engineering related to the preparation of an environmental impact report for the Washington-Baltimore segment of the Northeast Corridor SCMAGLEV Project. Developed preliminary alignment, and basic capital costs, operation costs, and maintenance costs based upon corridor field evaluations. Prepared the work plan and budget for impacted infrastructures as well as for stormwater management facilities. Created a database of all maintenance and station facilities organized by size and location.

Metropolitan Transportation Authority Capital Construction (MTACC), Second Avenue Subway C-26009: Track, Signal, Traction Power, and Communications Systems, New York, New York. Program manager. Mr. Mevawala managed the engineering and project management with respect to design development, contract procurement and on-site construction management. Specifically focuses on new low vibration track design and installation; traction power; station lighting; signal modernization; state-of-the-art communication systems; and system integration. Interacted with various New York City Transit operating departments and outside agencies. Particularly involved in coordination with third party stakeholders, utility companies, and Mayoral Agencies. Also communicated and coordinated with adjacent contractors who are involved in various construction contracts pertaining to the Second Avenue Subway project.

Metropolitan Transportation Authority Capital Construction (MTACC), Second Avenue Subway C-26006: 63rd Street/Lexington Avenue Station Rehabilitation, New York, New York. Program manager. Mr. Mevawala managed the engineering and project management with respect to on-site construction management. Performed enhancements to the existing 63rd Street Station with the addition of elevators and escalators; modifying the current steel structures, including evaluation of loading criteria, design of connections and stiffeners for bolted steel structures; review the contractor's means and method for underpinning and support of excavation (SOE); geotechnical instrumentation; chemical grouting for water remedy; review safe work plan and quality work plan; evaluation of the design criteria and installation of various fan plants, cooling towers, chillers, pump rooms and electrical distribution rooms; coordination of asbestos and lead abatement; and enforcing environmental compliance. Interacted with various New York City Transit operating departments and outside agencies. Particularly involved in coordination with third party stakeholders, utility companies, and Mayoral Agencies. Also communicated and coordinated with adjacent contractors who are involved in various construction contracts pertaining to the Second Avenue Subway project.

Metropolitan Transportation Authority, Second Avenue Subway Project Contract C-26002 - Route 132 A Tunnels from 92nd to 63rd Streets, New York, New York. Construction manager. Mr. Mevawala served as construction manager for the construction of the Tunnel Boring Machine (TBM) launch box involving slurry wall and secant wall construction, ground freezing, utility relocations, building remediation, twin TBM-driven tunnels from East 96th Street to East 63rd Street in Manhattan. Managed cost and schedule tracking with respect to both contract and project schedules; reviewed and approved monthly progress payments to the contractor, and was heavily involved in the negotiation and implementation of change orders. Participated in the evaluation of contractor submittals; enforcement of safety provisions; decision making related to construction procedures; technical evaluation of disputes and potential claims; participated in Dispute Resolution Board meetings; and addressed general public concerns associated with related construction. Responsible for contract administration; constructability reviews; enforcement of contract specifications/drawings; maintenance and protection of traffic flows; environmental investigations and enforcement; geotechnical instrumentation; coordination of efforts between design professionals; interaction with third party stakeholders, utility companies, and Mayoral Agencies. Involved in the review of future construction contract documents with respect to current as-built conditions and constructability.

Joseph Dietrich PE, LEED AP BD+C

CIVIL/ STRUCTURAL ENGINEER

Firm: Louis Berger
Years' Experience: 22

Education:
MS, Civil Engineering
BS, Civil Engineering

Registration/Certifications:
Professional Engineer (NY, NJ)
LEED Accredited Professional

Professional Summary

Mr. Dietrich is a manager with more than 20 years of experience in civil, geotechnical, and environmental engineering. His experience includes design of infrastructure improvements (roadway, storm, and sanitary systems), civil/site design, stormwater management design, E&S control design and permitting, building and structural condition assessments, geotechnical engineering evaluations and investigations, foundation system and earth structure designs and recommendations, retaining wall design, ground improvement and geosynthetic technologies, asphalt and concrete pavement evaluations and design, and construction quality control and assurance.

Selected Experience

PANYNJ, Security Division, George Washington Bridge, Ramp J, TR-2 and TR-4 Barrier Gate Update Project, Stage I, Fort Lee, New Jersey. Project manager. Mr. Dietrich was responsible for the completion of Stage I investigation and report for the upgrade of three existing gate accesses to the George Washington Bridge. Project includes the development of barrier crash ratings at each location and the preparation of preliminary designs for installation of new gates. Included interconnection with existing electrical and communication infrastructure and coordination with facility personnel to ensure design solutions fit with facility operations.

PANYNJ, Security Division, PA Bus Terminal Vulnerability Assessment, Stage I, New York, New York. Project manager. Mr. Dietrich was responsible for the completion of Stage I report involving the investigation of the vulnerability of the PABT to potential progressive collapse under several internal explosive threat scenarios. Project includes the identification of vulnerable elements and development of cost-effective retrofit options or operational mitigations to enhance the current level of protection.

PANYNJ, Security Division, JFK International Airport, Stage III and IV Services, AOA Perimeter Fence Replacement Project, Jamaica, New York. Project manager. Mr. Dietrich was responsible for the completion of Stage III design documents and Stage IV construction support services for the installation of non-metallic fencing along Runway 4L and concertina wire fencing along Runway 4R that was damaged by Hurricane Sandy. Project was fast-track priority project and included the verification of existing conditions and FAA requirements, coordination with future perimeter intrusion detector installations, and the development of work order packages (plans, specifications and estimates) for the construction and implementation of the improvements.

PANYNJ, Security Division, LaGuardia Airport, Stage III and IV Services, AOA Perimeter Fence Upgrade Project, Flushing, New York. Project manager. Mr. Dietrich was responsible for the completion of Stage III design documents and Stage IV construction support services for

approximately 5,500 lf of fence upgrades which included installation of midrail to tighten the fence fabric, gate repairs, and installation of approximately 200 lf of new non-metallic fencing at stormwater pump stations along Runway 13. Project was fast-track priority project and included the verification of existing conditions, coordination with future perimeter intrusion detector installations, and the development of Work Order packages (plans, specifications and estimates) for the construction and implementation of the improvements.

PANYNJ, Security Division, JFK International Airport, Stage III and IV Services, AOA Perimeter Fence Upgrades PACC 47, Jamaica, New York. Project manager. Mr. Dietrich was responsible for the development of construction plans and details for upgrades to existing chain link and non-metallic fencing in Airside Operation Areas. Project was fast-track priority project and included the verification of existing conditions, coordination with future perimeter intrusion detector installations, and the development of PACC Work Order packages (plans, specifications and estimates) for the construction and implementation of the improvements.

PANYNJ, Security Division, JFK International Airport, Stage III & IV Services, Guard Post Delta Barrier Upgrades, Jamaica, New York. Project manager. Mr. Dietrich was responsible for the completion of Stage III design documents and Stage IV construction support services to upgrade Delta barrier control panels, gate arms and improve traffic control striping and signage at 8 manned guard post locations. Project included the verification of existing conditions to be current with previous studies and the development of Work Order packages (plans, specifications and estimates) for the construction and implementation of the improvements.

PANYNJ, Security Division, LaGuardia Airport, Stage III & IV Services, Guard Post Delta Barrier Upgrades, Flushing, New York. Project manager. Mr. Dietrich was responsible for the completion of Stage III design documents and Stage IV construction support services to upgrade Delta barrier control panels, gate arms and improve traffic control striping and signage at two manned guard post locations. Project included the verification of existing conditions to be current with previous studies and the development of work order packages (plans, specifications and estimates) for the construction and implementation of the improvements.

PANYNJ, Security Division, Port Authority Bus Terminal, Pre-Stage I Interior Column Blast Vulnerability Analysis, New York, New York. Project manager. Mr. Dietrich was responsible for the completion of pre-stage I design evaluation assessing the vulnerability of the interior columns at the Port Authority Bus Terminal. Project included the review of as-built drawings and the development of computer models to assess the building's structural components.

PANYNJ, Security Division, Port Commerce Department (PCD) Access Control Project; Newark, Elizabeth, New Jersey and Brooklyn, New York. Assistant project manager. Mr. Dietrich worked for the project to support civil and structural support aspects relative to access control points at the Port Commerce Department's (PCD) New York and New Jersey Marine Terminal facilities. An estimated 60 access points were involved at Vehicle Gates at Public Berths, Pedestrian Gates at Public Berths and Personnel Doors at the Administration Buildings.

Jose Hernandez PE, SE

CIVIL/ STRUCTURAL ENGINEER

Firm: Louis Berger
Years' Experience: 30

Education:
MS, Civil Engineering

Registration/Certifications:
Professional Engineer (NJ, FL, PA)
Structural Engineer (NV)

Professional Summary

Mr. Hernandez has more than 30 years of experience as a project manager and engineer for the structural engineering design and inspection of complex, multi-task projects. His knowledge encompasses roadway/highway bridges, railroad bridges, and earth retaining structures with extensive experience in the field of seismic design and analysis.

Selected Experience

PANYNJ, Newark Liberty International Airport. Project engineer/team leader. Responsible for performing the Facility Condition Survey for the Federal Express Complex-Buildings 155, 341 and 342 located in the Newark Liberty International Airport. The survey work includes field inspection of the buildings in order to determine its overall condition and to identify the structural and safety deficiencies.

PANYNJ, Port Newark, New York Marine Terminal, New York. Project engineer/team leader. The scope of work consists of performing a inspections analysis Cyclical Condition Survey of Piers 88, 92 and 94 located along the west side of the West Side Highway in Manhattan. The survey work includes field inspection of piers and building structures on the piers. Fenderings, PST Viaduct and its foundations as well as bulkhead along the West Side Highway are excluded.

PANYNJ, Port Newark, New Jersey Marine Terminal, New Jersey. Project engineer/team leader. The scope of work consists of performing a cyclical condition survey, of Port Newark/Elizabeth Marine Terminal Buildings 1140 and 1150 located in the Elizabeth Marine Terminal on the west side of Polaris Street, between Southern Cross Street and Bay Avenue. The survey work included field inspection and analysis of the buildings in order to determine its overall condition and to identify the structural and safety deficiencies.

PANYNJ, Red Hook Wharf, New York Marine Terminal, New York. Project manager. Mr. Hernandez was responsible for inspection analysis and condition survey of Timber and steel pipe piles, concrete cap beams, Precast concrete girders, steel sheetpile bulkhead, underdeck, rip-rap, tie-rods/deadman, fender system and 3 light towers. The purpose of these surveys is to determine the structural and geotechnical condition of wharves and piers to provide repair recommendations to restore structural adequacy.

PANYNJ, Howland Hook Wharf, New York Marine Terminal, New York. Project manager. Mr. Hernandez was responsible for inspection analysis and performing a cyclical conditional survey of timber and steel pipe piles, concrete cap beams, precast concrete girders, steel sheetpile bulkhead, and underdeck. The purpose of the survey is to determine the structural and geotechnical condition of wharves, to provide repair recommendations to restore structural adequacy. The project site is located on the northwest end of Staten Island, just north of the Goethals Bridge.

Two Bridges Road Bridge over the Pompton River and West Belt Extension, Passaic County, New Jersey. Structural project engineer. Mr. Hernandez was responsible for the design and development of plans for the replacement of the existing Two Bridges Road over the Pompton River. The existing bridge will be replaced with a new two equal span continuous structure measuring 250 feet long. The new bridge will be located on a new alignment upstream of the existing bridge and the existing bridge will be restricted to pedestrian traffic only. The superstructure consists of a 9' thick concrete deck supported by six steel plate girders. The substructure consists of reinforced concrete high abutments and a hammer head center pier resting on spread footings.

Pennsylvania Department of Transportation, District 5-0, E12613, SR 0061 Section 11S Design Build, Schuylkill County, Pennsylvania. Structural project engineer. Mr. Hernandez was responsible for the design and development of plans for five structures (three single span bridges, one retaining wall, and one culvert) associated with safety and capacity improvements along a 4.6 mile segment of SR 0061. Design services include the replacement of the SR 0061 structure across Pine Creek, a new structure for the SR 2024 jug handle over Pine Creek, and replacement of the Municipal Road bridge over Pine Creek.

Penn DOT, District 5, S.R. 412 over Saucon Creek, Northampton County, Bethlehem Pennsylvania. Structural project engineer. Mr. Hernandez was responsible for the replacement of the existing bridge over the Saucon Creek in Bethlehem, PA, Northampton County. The existing 120 feet long, three-span concrete T-beam Bridge is being replaced with a 181 feet long four span continuous structure consisting of an 8" deck slab supported by 13 prestressed spread box beams.

Penn DOT, District 4, S.R. 106 over East Branch of Tunkhannock Creek, Susquehanna County, Clifford, Pennsylvania. Structural project engineer. Mr. Hernandez was responsible for the replacement of the existing bridge over the East Branch of Tunkhannock Creek in Clifford, PA, Susquehanna County. The existing 105 feet long, three-span concrete T-beam Bridge is being replaced with a 129 feet long two span continuous structure consisting of an 8" deck slab supported by four prestressed spread box beams.

Penn DOT, S.R. 1008 over Skippack Creek, Lower Salford, Pennsylvania. Structural project engineer. Mr. Hernandez was responsible for the replacement of the existing bridge over the Skippack Creek in Montgomery County. The existing 3 span concrete T-beam bridge was replaced with a single span multiple adjacent prestressed concrete box girder superstructure. The total length of the bridge is 83 feet.

SJTA, Leipzig Avenue Bridge over ACE, Bridge Rehabilitation, Atlantic City, New Jersey. Project manager. Mr. Hernandez was responsible for the coordination, inspection and rehabilitation design/specifications for the Leipzig Avenue Bridge over the Atlantic City Expressway. The bridge rehabilitation design for this structure, which measures a total of 203 and consist of four simple spans, included the removal and replacement of the existing concrete deck slab.

SJTA, Atlantic City Expressway over Beach Thorofare, Bridge Repairs, Atlantic City, New Jersey. Project manager. Mr. Hernandez was responsible for the coordination, inspection and rehabilitation design/specifications for the ACE over Beach Thorofare Bridge. The bridge rehabilitation for this structure, which measures a total of 825 feet and consist of nine simple spans, included substructure concrete repairs, painting the steel center span over the waterway and repairing the existing timber fendering system.

Julius Arief PE

CIVIL/ STRUCTURAL ENGINEER

Firm: Louis Berger
Years' Experience: 36

Education:
MA, History
BS, Civil Engineering
BA, History

Registration/Certifications:
Professional Engineer (NJ)

Professional Summary

Mr. Arief has more than 36 years of experience in the design and construction of transportation improvement projects. His design projects include experience in highways, railways, utilities, and facilities. His responsibilities have included preparing concept development reports, preliminary engineering reports, utility agreement plans, ROW acquisition documents, plans, specifications estimates, and bid documents. Mr. Arief also has experience as resident engineer of construction projects. Responsibilities include studies, preliminary and final design and plan preparation of various projects including horizontal and vertical geometry, drainage design, utility relocation, maintenance of traffic studies, striping and signing, traffic engineering, final quantities and estimates, final plan submission reviews, specifications, shop drawings and supervision of drafting personnel. His involvement has spanned all project phases from conceptual design to final design and construction.

Selected Experience

Port Authority of New York and New Jersey, Expert Professional Civil Engineering Services as Requested on a "Call-In" Basis during 2008 for New Employee Parking Lot at Stewart International Airport, Newburgh, New York. Design engineer. Mr. Arief worked on the design of a $1 million new parking lot including design of the grading and drainage, pavement design, roadway lighting, signing and striping design.

Port Authority of New York and New Jersey, Expert Professional Civil Engineering Services as Requested on a "Call-In" Basis during 2009 for Expansion of Parking Lot "D" at Stewart International Airport, Newburgh, New York. Design engineer. Mr. Arief worked on the design of the rehabilitation of a section of land side airport roadway utilized by Federal Express to access a hanger. The project also entailed all aspects of roadway design, preparation of Maintenance and Protection of Traffic Plans, and Pavement Marking Plans.

Port Authority of New York and New Jersey, Expert Professional Civil Engineering Services as Requested on a "Call-In" Basis during 2009 for JFK – High Pressure Fire Protection System Critical Valve Replacement, Queens, New York. Design engineer. Mr. Arief worked on the replacement of eight High Pressure Fire Protection System Critical Valves. Responsible for Stage III (Final Design) drawings, specifications and estimates.

Port Authority of New York and New Jersey, Expert Professional Civil Engineering Services as Requested on a "Call-In" Basis during 2009 for Stewart International Airport - Rehabilitation of Cargo Road and Parking Area for Building 2290, Newburg, New York. Design engineer. Mr. Arief worked on the $1 million expansion of an existing parking lot including design of the grading and drainage, pavement design, signing and striping design, etc. Responsible for preparation of Stage III (Final Design) drawings, specifications and estimates.

Port Authority of New York and New Jersey, Expert Professional Civil Engineering Services as Requested on a "Call-In" Basis during 2009 for Stewart International Airport – Rehabilitation of R/W 9 Approach Lighting and Cables, Newburg, New York. Design engineer. Mr. Arief worked on the replacement of runway approach lighting and cables.

Port Authority of New York and New Jersey, Expert Professional Civil Engineering Services as Requested on a "Call-In" Basis during 2009 for Stewart International Airport – Rehabilitation of Taxiway Edge Lighting and Installation of Flashing Runway Guard Lights, Newburg, New York. Design engineer. Mr. Arief worked on the preparation of Stage III (Final Design) drawings, specifications and estimates.

Port Authority of New York and New Jersey, – Reconstruction of North Service Road of Newark International Airport, Mr. Arief worked on the preparation of Stage III (Final Design) drawings, specifications and estimates and provided engineering support during construction.

NYC Public Development Corporation, - Reconstruction of East New York Industrial Park, Brooklyn, NY. Mr. Arief was Project Manager design and construction management for the reconstruction of two miles of streets in the industrial park, the replacement of existing water mains, and improvements to sewers. Responsibilities also involved utility company coordination, implementation of traffic control and approval of contractor payments, change orders, materials and schedules.

NYC Public Development Corporation, - Gun Hill Road Street Improvements, The Bronx, NY. Mr. Arief was Project Manager design and construction management for improvements to one mile of sidewalk for a commercial area. Responsibilities also involved utility company coordination, implementation of traffic control and approval of contractor payments, change orders, materials and schedules.

New Jersey Turnpike Authority, GSP Interchange 9, 10, 11 Improvements, Cape May County, New Jersey. Project engineer. Mr. Arief was responsible for $122 million in civil engineering tasks related to the final design roadway improvements to the GSP at exits 9, 10, and 11. The three exits are the only roadway crossings along the 173-mile length of the GSP that are not grade separated. The design effort developed full interchange configurations to eliminate three traffic signals and widen GSP from four to six lanes. The project includes six bridges, relocation of high voltage transmission lines as well as sanitary sewer, water, and telecommunication lines. Traffic control and staging plans included temporary walls and a diversionary road. Provided construction engineering services answering Contractor requests for information and reviewing shop drawings.

Passaic County, Crooks Avenue and Wabash Avenue Drainage Project, Cities of Paterson and Clifton. Mr. Arief was responsible for the final design and construction support of 1 mile of large diameter storm sewers 72" RCCP and 9'x5' Box Culverts in urban environment. The project included jacking of pipe under the Norfork Southern Railroad and the Garden State Parkway and resurfacing of Wabash Avenue.

Muzamil Husain PE

CIVIL/ STRUCTURAL ENGINEER

Firm: Louis Berger
Years' Experience: 16

Education:
MS, Civil Engineering - Structural
BS, Civil Engineering

Registration/Certifications:
Professional Engineer (NY)

Professional Summary

Mr. Husain has more than 16 years of experience as a project manager and structural engineer for the planning, design, inspection and management of complex, multi-task projects. He has diverse experience including design of transportation and facility structures, bridges, retaining walls, sign structures, precast, prestressed and post tensioned concrete, timber and steel structures. He has thorough knowledge of design requirements, specifications and procedures manuals of state and local agencies, and experience with federal as well as private development facilities.

Selected Experience

NJTA, GSP MP 35 to MP 38 Widening and Interchange Improvements. Structural task leader. Mr. Husain was in charge of the design for three Mainline bridges over Washinton Avenue and Delilah Road. Responsible for the complete contract documents including staging plans, utility coordination These bridges are designed as jointless structure using integral abutment concept.

NJTA, GSP Interchange 9, 10 and 11 Improvements. Structural project engineer. Mr. Husain worked for the design of three dual GSP bridges over Shell Bay Avenue, Stone Harbor Boulevard and Crest Haven Road. He was responsible for the structural design and coordination with the locals for the ramps and access road impacts and utilities. These bridges are designed as jointless structure using integral abutment concept.

New Jersey Turnpike Authority, Interchange 6-9 Widening Program Section 4 Interchange 7A, Mercer County, New Jersey. Project engineer. Mr. Husain was responsible for the $200 million design of four ramp bridge structures with complex geometry connecting Toll Plaza and Inner and Outer Turnpike Roadways. Responsible for the design, development of plans and specifications, along with interdepartmental coordination. Helped in the preparation of overall staging schemes and plan development for the whole project including I-195 Bridge over the Turnpike. Lead the construction support services for the designed bridges.

New Jersey Turnpike Authority, Interchange 6-9 Widening Program Section 2 Interchange 7, Mercer County, New Jersey. Project engineer. Mr. Husain was in charge for the design of two U-turn bridges including structural design, plans, specifications and construction estimation development, along with coordination with Prime and sub consultants. Lead the construction support services for the entire project.

NJDOT, Three-Year Term Agreement for Orphan Bridges, City, New Jersey. Project manager. Mr. Husain was in charge for developing rehabilitation plans for 27 Orphan bridges. He was responsible for onsite inspection and preparation of rehabilitation reports for the bridges. Responsible for complete design for the replacement of superstructure and rehabilitation of the substructure of Historic Bridges Hillsboro Road and Homestead Road over Trenton Line.

DRJTBC, Rehabilitation of the Trenton Morrisville Toll Bridge Facility, Trenton, New Jersey and Morrisville, Pennsylvania. Structural project engineer. Mr. Husain was responsible for this $84 million project involving rehabilitation and widening of 1300 foot long bridge for Route 1 over Delaware River and 10 bridges and ramps at both New Jersey and Pennsylvania approaches. Responsibilities included preparation of rehabilitation report with innovative widening techniques, design and details of bridges along with providing construction support services and checking structural shop drawings. Extensive agency coordination work was involved with NJDOT, NJDEP, Penn DOT, PADEP, City of Trenton, City of Morrisville, County of Mercer, County of Bucks, Conrail, NJ Transit, PUC and various utility companies.

NJDOT, U.S. Route 9 Edison Bridge Over Raritan River Project (Section 25K and 1F), Middlesex County, New Jersey. Structural project engineer. Mr. Husain worked on the construction engineering services and design of a new $45 million, 29-span, 4,390-foot-long bridge for the design-build contract for the new southbound roadway between the existing bridge and the Driscoll Bridge. Prepared the design-build procurement documents (30 percent design) and coordinated design review and extensive project coordination with field staff during construction. This D-B project for the State finished ahead of schedule. Responsibilities for this project were the design of bridge abutments and layout of piles. Utilized spreadsheets, STAAD/Pro model and Florida pier program. Also responsible for design, layout and reinforcement detailing of median retaining wall, two outlet structures and three sign support structures.

NJDOT, Sussex County Bridge K-07 Replacement, Hopatcong, Stanhope and Byram, Hopatcong, Stanhope and Byram, New Jersey. Structural project engineer. This $6.7 million project involved construction of a new 60 foot span arch bridge for Route 605 over Lackawanna Cutoff and rehabilitation of existing parallel bridge as a historical filled spandrel, reinforced concrete arch bridge structure to be maintained as a pedestrian and bicycle access to a hiking route adjacent to the railroad track. Responsibilities included inspection and preparation of rehabilitation details for the existing bridge and design the substructure and retaining walls for the proposed bridge. Supervised the geotechnical exploration and prepared the quantity and cost estimates for the project. Also responsible for preparing and coordinating the intricate architectural details for the precast arch, spandrels and parapet. Also responsible for providing the construction engineering services with the Department's Resident Engineer.

NJDOT, Rockaway Road Bridge Replacement, Townships of Rockaway and Randolph, New Jersey. Structural Project engineer. Mr. Husain was responsible for the replacement of the existing bridge over the NJ Transit Morristown Line and The Rockaway River. The seven-span concrete encased steel-beam floor system bridge which was structurally deficient and functionally obsolete, was replaced with a five-span multiple adjacent prestressed concrete box girder superstructure. The total length of the bridge is 317 feet. Responsible for the design of prestressed box beam superstructure, abutments and piers. Also responsible for preparing quantity and cost estimates for the project.

Michael Dunn PE

CIVIL/ STRUCTURAL ENGINEER

Firm: Louis Berger
Years' Experience: 16

Education:
MS, Civil Engineering

Registration/Certifications:
Professional Engineer (NJ, NY)

Professional Summary

Mr. Dunn is manager of civil engineering with more than 16 years of technical experience on a wide variety of civil and environmental engineering projects. Work experience includes stormwater management and water quality design and analysis, planning and design of local roads and state highways, hydrologic and hydraulic (H&H) design, Soil Erosion and Sediment Control, and plan review of related projects. He has completed construction documentation including plans, technical specifications, and quantity and cost estimates for various highway and roadway, and stormwater management projects.

Selected Experience

PANYNJ, JFK Airport, Cargo Service Road and North Service Road, Queens, New York. Project manager. Mr. Dunn was responsible for Phase III and IV services for the design and modifications to the Cargo Service Road and North Service Road from the southern limits of the Rental Car Site Roadway Improvements - Phase II Access Road project to and including the North Service Road ramp extending to the limits of the previous JFK Expressway contract. The project included intersection improvements, roadway resurfacing, drainage improvements, construction of a crosswalk at Rental Car Drive, and a Rental Car Pullout.

PANYNJ, Perimeter Intrusion Detection Systems, Design-Build Project, Queens, New York. Civil/structural engineer. Mr. Dunn was responsible for being the engineer of record for the engineering services for civil/utilities and environmental/permitting aspects as well mechanical and electrical engineering support services within the command and control rooms for this confidential security PIDS Design-Build project for all major New York airports.

PANYNJ, Teterboro Airport, West Side Ramp Improvements, Borough of Teterboro, Bergen County, New Jersey. This project entailed the construction of a new paved ramp area, new electrical conduits and taxiway lighting, a subsurface detention basin, installation of two mechanical treatment devices and associated drainage improvements. Responsible for developing plans, calculations, specifications and reports to secure soil erosion, stream encroachment and Port Authority permits and approvals. Due to the high groundwater table on this site, which is located within the FEMA 100-year floodplain, a subsurface detention basin was designed with watertight joints to prevent groundwater intrusion into the basin while also being designed to withstand the loading of aircraft parked on the ramp above the basin. All drainage structures were designed to withstand aircraft loading in accordance with FAA and Port Authority standards. The project was designed to be constructed in a manner which

allowed adjacent taxiways which border the site to remain active during construction operations.

Red Bull New York, Inc., Engineering and Design Services, Red Bull Training Facility, Harrison, New Jersey. Mr. Dunn was responsible for providing engineering and drainage design services to Red Bull NY for their new training facility encompassing site-civil and drainage design of practice fields and parking facilities, civil/structural design of support facilities and ancillary structures, including tension fabric structures, electrical engineering and design of sports and security lighting. Louis Berger has also been providing traffic engineering services and environmental and construction management support for this project. This is a fast track project for which Louis Berger has been meeting all schedule requirements for project deliverables.

New Jersey Department of Transportation, Main Street (C.R. 543) Over Route 206, From Vicinity of Railroad Avenue to New York Avenue (C.R. 690), Township of Mansfield, New Jersey. Hydrologic and hydraulic task leader. Mr. Dunn was responsible for the roadway drainage design for the design The project is located in the Township of Mansfield, Burlington County. Main Street (C.R. 543) is an urban collector road. The existing Main Street (C.R. 543) Bridge over Route 206 is a two span simply supported, multiple steel beam structure constructed in 1958. It carried one12-foot traffic lane, one 12-foot shoulder and one 6 foot sidewalk in each direction with a roadway width of 48 feet curb-to-curb. Site inspection also indicated that the west abutment backwall exhibited extensive structural damage due to local roadway ponding. Roadway ponding was found to be located at the southwest and northwest corners of the structure. Damage to the backwall appears to be the result of this drainage issue. Responsible for the analyses of the existing and proposed roadway drainage systems, designed in accordance with the NJDOT Drainage Design Manual criteria and the Procedures Manual requirements for placement of inlets, minimum pipe sizes, cover, etc. Coordinated with the highway engineers to modify the roadway profile to shift the profile lowpoint away from the bridge joint. Highway drainage design included water spread calculations performed in accordance with NJDOT design criteria. Also responsible for the design and preparation of the soil erosion and sediment control plans and received approval from the NJDOT.

City of Newark, Newark Liberty International Airport, Peddie Ditch Culvert Inspection and Rehabilitation, City of Newark, Essex County, New Jersey. Mr. Dunn inspected and developed rehabilitation alternatives for this series of seven parallel 120-inch diameter culverts which carry the flow of Peddie Ditch under Runway 11. Supervised the entry of inspection personnel into this OSHA permit-required confined space. The purpose of this study was to determine the expected remaining service life of the culvert system, summarize what channel improvements were necessary to improve channel function and stability and determine the suitability of the site for the installation of an Engineered Materials Arresting System (EMAS) at the end of Runway 11, directly above this system of culverts. The installation of the EMAS over this system of culverts will allow this runway to satisfy Federal Aviation Administration Part 139 safety rules by preventing aircraft overruns.

Luis Correia PE

ELECTRICAL ENGINEER

Firm: Louis Berger
Years' Experience: 20

Education:
BS, Electrical Engineering

Registration/Certifications:
Professional Engineer (NY, NJ, NV, DC)

Professional Summary

Mr. Correia is a manager of electrical engineering with 20 years of technical experience on a wide variety of electrical engineering projects. Mr. Correia leads the development of conceptual and final design and detailed specifications for normal and emergency power, lighting, fire safety, communications, CCTV, and various security (exit lane screening) systems.

Selected Experience

Port Authority of New York and New Jersey (PANYNJ), Marine Terminals, New York and New Jersey. Principal electrical engineer. Mr. Correia was responsible for the development of contract documents for the replacement of the existing access control card readers with TWIC compatible card readers and integration with existing head end equipment. The installation of the thirty five access control points at New York marine terminals and the one hundred and five control access points at New Jersey marine terminals will require expansion and modification of existing fiber infrastructure.

PANYNJ, Staten Island Bridges, Staten Island, New York. Design engineer. Mr. Correia was responsible for the development of construction contract documents to rehabilitate roadway lighting, power, CCTV, aviation obstruction, and navigable channel lighting for three bridges. The project entailed field survey of all existing systems, verification of code compliance and ramifications of same, coordination with civil and structural engineering teams.

PANYNJ, Newark Liberty International Airport (EWR), Design-Build Project, Newark, New Jersey. Principal electrical engineer. Mr. Correia was responsible for the development of contract documents for the installation of digital CCTV at terminal B checkpoints and consolidation of viewing and storage locations for the whole airport. Project requires expansion and modification of existing fiber infrastructure to allow for the consolidation.

PANYNJ, John F. Kennedy International Airport (JFK), Design-Build Project, Location. Principal electrical engineer. Mr. Correia was responsible for the development of contract documents for the consolidation of viewing and storage locations for the whole airport. Project requires expansion and modification of existing fiber infrastructure to allow for the consolidation.

PANYNJ, LaGuardia Airport (LGA), Design-Build Project, Location. Principal electrical engineer. Mr. Correia was responsible for the development of contract documents for the upgrade of the existing storage solution and integration of two distinct digital CCTV systems. Project requires upgrading of the existing storage solution in-place while not disrupting operation of existing CCTV and all other system in existing data center.

PANYNJ, Biometrics for EWR, JFK, and LGA, Design-Build Project, New York and New Jersey. Principal electrical engineer. Mr. Correia was responsible for the development of contract documents for the upgrade of the existing access control. Project requires evaluation of existing

conditions and multiple recommendations based on construction schedule, capital investment, and operating cost.

U.S. Army Corps of Engineers (USACE), New York District, Picatinny Arsenal, Armament Integration (AIF) Facility, Picatinny, New Jersey Principal electrical engineer. Mr. Correia was responsible for the electrical engineering design for the single-story laboratory building and 100-meter indoor firing range for large caliber automatic weapons testing. Laboratory building design documents included natural gas forced-air heating and cooling systems in addition to dedicated split system air conditioning systems for special rooms. A pre-action dry sprinkler fire protection system and smoke detection was designed. Utility plumbing systems included services for toilet rooms and compressed air for the shop and simulation areas. Design included a corridor from Building 7 to the new range with controlled pressurization heating and ventilation. Range building design included a gas fired makeup air unit that provides laminar flow at operators breathing zone. Smoke and lead exhausted from the range is removed through adjustable grills embedded in the walls and filtered through a 99 percent removable cartridge filter and a final HEPA filter. Silica dust from the bullet sand trap exhausted from the range is removed through adjustable grills embedded in the walls and filtered through a 99 percent removable cartridge filter and a final HEPA filter.

USACE, New York District, Picatinny Arsenal, Area 600 Water Main Extension, Picatinny, New Jersey. Manager-Electrical engineering. Mr. Correia was responsible for overview of the electrical design analysis, design documents, technical specifications, and cost estimate. Conducted field inspections and coordinated with various in-house and outside consultants. Project entailed design and preparation of construction documents for new underground potable water, and fire service lines in the 600 Area of Picatinny Arsenal. The design provided water mains beneath the roadway with T-connections in the shoulder to serve existing ranges and facilities and also to serve future facilities, new service pump stations, a new empty four-inch PVC ductbank (for communications), a new diesel-fired pump(s), and standard size fire hydrants. The design also provided interconnection of new piping with existing fills and discharge systems, demolition and replacement of all pump systems and pump houses, installation of telemetry at Pump House 623, and evaluation of additional pumps to bring the entire system within current codes.

USACE, New York District, Picatinny Arsenal, Building 7 and Firing Range Upgrades, Picatinny, New Jersey. Manager-Electrical engineering. Mr. Correia was responsible for the electrical design associated with the renovation of the existing ranges. The project comprises the design of an exhaust system in the 100 meter and 300 meter ranges and critical architectural and structural upgrades warranted by operations, safety improvements, and noise attenuation. Electrical work for the project consisted of the removal and relocation of electrical devices and/or systems components which had been abandoned, were not optimally located for operations as directed by the building user, or as required by the renovation. Detailed field investigations were required to create demolition and relocation drawings from which a not to exceed lump sum demolition budget was derived. The electrical scope also included providing the electrical transformation and distribution, interior and exterior lighting, fire alarm, specifications, and cost estimate. Identification of a point of connection for the contract loads was challenging since the building was served by multiple sources, each individually inadequate to accommodate the contract loads and those of other on-going projects.

Sudhir Chheda, PE

ELECTRICAL ENGINEER

Firm: Naik Consulting Group, P.C.
Years' Experience: 35

Education:
BS, Electrical Engineering

Registration/Certifications:
Professional Engineer (NJ, DE)

Professional Summary

Mr. Chheda has more than 35 years of electrical experience in transportation design, estimation, specifications, construction documentation for infrastructure projects, industrial plants, commercial buildings and retail spaces. His specific experience in the transportation industry has included lighting for roadways, interchanges, bridges and tunnels and electrical system design for traffic signals, sign lighting, and variable message signs (VMS) and ITS systems. Overall electrical expertise has included designing of switchgear, electrical service design; electrical feeder & branch circuit design, indoor/outdoor and emergency lighting, emergency power systems, fire protection systems, security systems including CCTV, infra-red, microwave; lightning protection systems, motor control centers, under floor duct systems, UPS system, and ATS for industrial plants and commercial buildings. He has performed field investigations to check field conditions, prepared reports, photometric calculations, wiring diagrams, voltage drop calculations, quantity calculation, cost estimates, electrical service inquiry letters for various utility companies and construction plans. Mr. Chheda is very proficient in Microstation and Visual Lighting software and knowledgeable in, NJDOT Lighting Design guidelines and Procedure Manual, NJTA Design Guide, IES Lighting handbook, Roadway Guide by AASHTO, Tunnel Lighting Guide RP-22 and National Electric Code (NEC).

Experience

PANYNJ Newark and JFK International Airports. Newark, New Jersey and Jamaica, Queens, New York. Electrical engineer for remodeling of Newark and JFK airports. Surveyed and designed many projects for PANYNJ. Designed and rearranged cable system at Newark airport. Identified and capped utilities for demolition of a warehouse. Surveyed international building at JFK airport for demolition work. 1994-1995.

MTA Design and Construction Support Services for Reconstruction and Rehabilitation of Manhattan Approach Ramps to RFK Bridge, New York. Electrical engineer for the evaluation of the existing ramp/lighting and the preparation of designs for the new lighting system as part of the rehabilitation of the RFK Bridge approach ramps. 2014

MTA Bronx-Whitestone Bridge. Bronx & Queens, New York. Electrical engineer responsible for an electrical system for garage doors and controls. Rearranged various conduits and cables. Prepared construction drawings. 2014

NJDOT Route 38, in Burlington County, New jersey. Project involves designing and upgrading lighting and traffic signals for 20 intersections from route 295 to route 206. Responsible for preparing photometric calculations, designing interchange lighting, and the electrical design for traffic signal for 10 intersections. New electrical system conforms to NJDOT Design Manual, AASHTO Guidelines and NEC 2013

NJDOT Route 130, Over Crafts Creek, Township of Florence and Mansfield, Burlington New Jersey. Electrical engineer for lighting and traffic signal design for intersection improvement, bridge replacement and modifications to the approaches. Responsible for preparing photometric calculations, designing interchange lighting, and the electrical design for traffic signal. Additionally responsible for conduit fill calculations and preparation of lighting report and voltage drop calculations. New electrical system conforms to NJDOT Design Manual, AASHTO Guidelines and NEC. 2012

NJDOT Route 27. Metuchen, New Jersey. Electrical engineer for lighting design for bridge replacement and roadway improvements project. Responsible for designing roadway and under arch lighting system using conventional and underdeck luminaries. He also prepared photometric calculations; voltage drop calculations and conduit fill calculations and designed the electrical system and wiring diagram. New electrical system conforms to NJDOT Design Manual, AASHTO Guidelines & NEC. 2011

NJTA VMS on the Garden State Parkway. Various Locations, New Jersey. Electrical engineer for variable message signing (VMS) improvements for the Garden State Parkway. Responsible for designing electrical systems for VMS signs, wireless access point, CCTV camera & radio antenna. Sizing conduit and doing conduit fill calculations. Prepared mounting details for ITS items. Design conforms to NEC and NJTA standards. 2010

NJTA Interchange 6 – 9 Widening, Section 7, MP 68.3 – MP 70.6. Burlington to Middlesex Counties, New Jersey. Electrical engineer for tunnel lighting on Hightstown Cranberry Road as part of the widening of the Turnpike between Interchange 6 in Mansfield Township, Burlington County and Interchange 9 in East Brunswick Township, Middlesex County. The roadway will be widened to 12 lanes with major modifications constructed at four interchanges. Responsible for designing Tunnel lighting as per RP-22 design guide. Designed electrical distribution system, conduit and cable layout. Prepared lighting plans, wiring diagrams, lighting report, voltage drop calculations and conduit fill calculations. 2011

Mario Perez Associate AIA, LEED AP BD+C

ARCHITECT

Firm: Louis Berger	**Education:**	**Registration/Certifications:**
Years' Experience: 14	Bachelors of Architecture	LEED Accredited Professional

Professional Summary

With more than 14 years of extensive experience in architectural design, programming, planning, construction documents and project management, Mr. Perez has effectively managed teams engaged in providing full concept through delivery of architectural design and construction administration services. His commitment to design excellence and professional experience is best associated with my current and completed projects throughout North America, Eastern and Western Europe, the Middle East, Africa and Asia for PANYNJ, USACE, U.S. Department of State Overseas Building Operations (DOS-OBO), U.S. Agency for International Development (USAID) and other private and government agencies. As a project manager, Mr. Perez delivers effective solutions and exceeds client's expectations. He has advanced knowledge of architectural practices, principles, procedures, concepts, building codes, state and local regulations, and construction practices, and is adept at taking projects from conception to completion. Mr. Perez is additionally experienced in coordinating and leveraging all personnel, staff, consultants, subcontractors, senior management, clients, and has extensive experience in project management, contracts, client presentations, public hearings, budgets, and schedules. He takes charge professional: effectively managing staff, overseeing operations and is consistent in developing high performing teams through outstanding leadership, ultimately resulting in teams performing at a level exceeding their expectations.

Selected Experience

PANYNJ, Newark (EWR) Terminal B – Stage I. Project architect. Mr. Perez was responsible for providing design services to address findings contained in the Port Authority's physical protection of terminal building glass security risk assessment and contributed in developing workable mitigation strategies to reduce overall risks associated with the existing building glass facades for airport passenger terminals.

Monroe County Justice Center, Monroe County, Wisconsin. Project architect. Mr. Perez was responsible for providing planning and architecture services for the design and construction for a new, $25 million Justice Center in downtown Sparta, Wisconsin. This new facility includes a 180-bed jail, a law enforcement center and expanded county courts facilities.

USAID, Sudan Infrastructure Services Project, Juba, South Sudan. Project manager and team leader. Mr. Perez was responsible for the design, space programming and construction administration services for a new, $22 million two-story addition to an existing office building, medical clinic, pedestrian access control entry point, dining facility, site and building security upgrades and renovation of an existing office building. Scope of work involved site visits to perform design charrettes, conduct site assessments and develop design concepts with project stakeholders.

USACE Middle East District, U.S. Central Command Charrettes. Project architect. Mr. Perez was responsible for $51 million development and production of DD 1391 reports on counter narcotics facilities in Uzbekistan. Project involved traveling to Uzbekistan, and other central Asian countries, to conduct site surveys and facility condition assessments to evaluate

customs/border complex operations, refine project scope, establish project budgets and prepare designs and conduct charrettes with project stakeholders while in-country. Facility assessments and design recommendations were performed for vehicular, and pedestrian check points, intensive customs inspection facilities, administrative screening facilities and improvements to site security.

USACE Baltimore District, Pentagon Secure Access Lane and Remote Screening Facility, Arlington, Virginia. Project quality assurance manager. Mr. Perez performed quality control reviews of construction documents for a new, $4.9 million state of the art vehicle screening facility located on a 2.75 acre site at the southwest corner of The Pentagon, headquarters of the U.S. Department of Defense.

USACE Middle East District, USFOR-A/Afghanistan Standard Designs for Ministry of Education, Kabul, Afghanistan. Project manager. Mr. Perez was responsible for effectively managing and supervising all related activities associated with project technical reviews and code compliant recommendations for austere, site-adapt level designs for (1) 16 Classroom, (1) 20 Classroom, (1) 24 Classroom, (1) 30 Classroom and (1) 40 Classroom school buildings for USFOR-A/Afghanistan Ministry of Education standard designs.

USACE Middle East District, Director General for Intelligence & Security (DGIS), Phase II, Baghdad, Iraq. Project manager. Mr. Perez was responsible for fully managing and leading a multi-disciplinary design team with an emphasis on design and construction administration services for a new military training compound for the $50 million Iraqi Director General for Intelligence and Security Headquarters Campus. Project involved traveling to the site to conduct site surveys and facility condition assessments, prepare designs and conduct space planning charrettes with project stakeholders while in-country. Scope of work includes housing barracks, office buildings, medical clinic, dining facility and compound access control entry points totaling approximately one million square feet in facility and site development.

Steve Weekes

COST ENGINEER

Firm: Louis Berger
Years' Experience: 26

Education:
BS, Facilities Management

Registration/Certifications:
Quantity Surveying Exams Part 1 & Part 2
Construction Management Diploma
Quantity Surveying Diploma

Professional Summary

Mr. Weekes possesses more than 26 years of experience in the construction industry specializing in cost management, project controls, estimating, and procurement. He has the ability to manage staff, organize, plan and coordinate tasks both on a construction site and in the office. Other experience includes planning, accounts, procurement / shipping, site management, and inventory/stocks.

Selected Experience

Construction of One World Trade Center, New York, New York. Cost engineer. Mr. Weekes is responsible for monthly reports of the estimate at completion on the One World Trade Center Project. He compiled, tracked, and analyzed data to forecast all cost elements. He reviewed cost loaded schedule for earned value calculations; prepared cost shares for contracts after award; prepared stakeholder allocation statements based on monthly contractors requisitions; and created journal voucher breakdown of allocation statements with charge codes for accounts department. He prepared change order allocations based on base allocations cost shares and track allocations against the extra work allowance in the base allocations; met with program managers to review and sign off on all allocations in and or allocations out; served as liaison with schedulers to provide cash flows and forecast for quarterly capital budgets. He oversaw the cost estimating team review of change orders. Prepared and maintained logs for all owner generated cost instruments (e.g. scope change orders). He performed monthly assessment of cost risks and negative trends as required. Mr. Weekes ensured project current budgets and the estimated total cost at completion were updated accurately and reported in a timely manner and prepared standard and special (ad hoc) cost control reports and analyses as requested.

Various Projects, Brooklyn, New York. Estimator/assistant project manager/purchaser. Mr. Weekes provided project management services for in-house projects. He performed construction management duties at pre-construction meetings with clients and developers. He developed conceptual budgets, and was responsible for value engineering and planning. He prepared take offs for estimates as well as estimates for general contractor bids; sourced suitable sub-contractors for bidding and analyzed and qualified bids received. Prepared major change order estimates for ongoing projects; and managed daily responsibilities of junior estimators and plan clerk. He prepared and sent out requests for quotations for sub-contract work; analyzed and reviewed sub-contractors bids and scopes of work in the preparation of purchase orders; and prepared scopes of work for subcontract buyouts in consultation with project managers. He met with sub-contractors and vendors to review scopes of work for

award of sub-contracts. Mr. Weekes interviewed and procured new sub-contractors and vendors. He utilized "Digitizer" to take off quantities. He reviewed architects drawings for value engineering and practicality as part of the construction management team. He met with prospective clients to market construction management capability of the firm. He also provided dispute resolution with respect to sub-contractors claims for change orders.

Various Projects, Mt. Vernon, New York. Assistant estimator/project manager. Mr. Weekes prepared loaded schedules from drawings for gypsum boards and framing and submittals for materials to be used on projects. He also prepared and sent out requests for quotations for sub-contract work. He provided project management services for small jobs: attended site meetings; prepared submittals and change orders; prepared monthly payment requests; scheduled material orders for projects; and scheduled and requested labor as needed on projects. He updated job schedules. He also utilized "on screen take off" to take off quantities.

Various Projects, Mt. Vernon, New York. Quantity surveyor/senior estimator. Mr. Weekes prepared take offs from drawings and compiled documents for estimating services. He researched material and equipment prices from suppliers and Internet sites. He prepared and sent out bid inquiries. He prepared Bill of Quantities in accordance with the CSI coding system. Updated job schedules. Mr. Weekes utilized take-off hardware and software tools to perform duties, i.e. Quest for Earthworks, on screen take off coupled with the use of the digitizer and stylus.

Various Projects, Lange Park, Chaguanas, Trinidad. Cost analyst. Mr. Weekes performed general quantity surveying duties such as: take off quantities for material purchases and for subcontract bid packages; preparing Bills of Quantities; estimating project costs; preparing and monitoring budgets; preparing subcontract bid packages and analyzing bids to award subcontracts; preparing interim valuations; measuring and pricing change orders; and attending site meetings. He tracked and reported income and expenditure and project profit or loss on projects ranging from $500,000 to $25 Million.

Various Projects, Lange Park, Chaguanas, Trinidad. Procurement officer. Mr. Weekes was responsible for specialist materials sourcing bid preparation and analyses. He prepared and monitored materials flow charts from inception to delivery to site. He managed all material and equipment importation and export including procurement. He prepared all Caricom Invoices to mobilize regional projects, sourced transport barges, and liaised with custom brokers and private ports for export and import purposes.

Various Projects, Lange Park, Chaguanas, Trinidad. Site quantity surveyor. Mr. Weekes performed take off quantities from drawings for material purchases and for subcontract bid packages. He prepared Bills of Quantities; prepared and monitored budgets; prepared subcontract bid packages and analyzed bids to award subcontracts; prepared interim valuations; measured and priced variations; and attended site meetings. Managed all imports and exports including procurement. He was responsible for hiring and interviewing staff. Supervised preparation and processing of payroll for up to 500 employees.

Mike Ramzi

COST ESTIMATOR

Firm: Louis Berger
Years' Experience: 28

Education:
MS, Civil Engineering
BS, Construction Engineering

Registration/Certifications:
10 Hour OSHA

Professional Summary

Mr. Ramzi is a seasoned professional with 28 years of program and construction management experience in construction, pre-construction and the associated business development efforts. His experience spans a wide range of projects including educational facilities, commuter rail systems, energy, residential, commercial, public buildings, schools and colleges, cultural institutions, airports, manufacturing facilities and courthouses. Mr. Ramzi has managed to reduce the labor costs of pre-construction, project controls and estimating in projects while increasing work efficiency and deliverables' quality on several projects. His success is attributed to augmenting full time controls and estimating staff with field staff and then stream lining the information exchange between both while slowly providing training on and off the job. Moreover, Mr. Ramzi has managed and completed a number of private and public projects within scheduled completion time, quality, and budget to the satisfactory of all parties involved.

Selected Experience

World Trade Center Redevelopment Program, New York, New York. Senior estimator. Mr. Ramzi developed engineer estimates for both WTC Transportation Hub and Oculus construction. Perform price comparisons and development of quantity take-offs. Oversees estimate reviews and validations; negotiating and resolution of contractors claims. Coordinates with design entities and vendors on change order works and costs. Supports value engineering activities as well as other cost/budget management activities.

Structure Tone, Inc., Lyndhurst, New Jersey. Senior estimator/project cost engineer. Mr. Ramzi developed cost data for contract changes; monitored and reported project plan, cost, forecast, trends, commitment and contingency. He calculated and evaluated cost variances for corrective actions. He prepared and issued bid packages for various trades; developed and managed cost databases and benchmarking; and provided ongoing evaluations of alternative designs, materials and construction methods, and projected impacts on progress and performance. He prepared project cash flow reports and budgets for management reviews. Mr. Ramzi analyzed and negotiated change orders and claims, and reviewed and reconciled payment applications. He provided CPM schedule control analysis and resource management. Interfaced with clients, owner's representatives, public officials, account executives and contractors, and provided engineering and cost data. He performed performance and determined scope definition mandates for trades in coordination with Engineering for compliance with contract documents and agreements. He also prepared various bid proposals for private and public projects. Performed computerized and manual take-offs and pricing for required materials, manpower, and equipment.

Hill International, Inc., New York, New York. Project cost engineer. Mr. Ramzi developed cost data for contract changes, monitored and reported project plan, cost, forecast, trends, commitment and contingency. Calculated and evaluated cost variances for corrective actions.

He performed routine interface with engineers, procurement, contract administrators, accounting, project managers, and consultants to verify costs, commitments, changes, progress, and performance. He performed performance monitoring and determined scope definition mandates for trades in coordination with engineering for compliance with contract documents and agreements. He collected and tabulated quantity data for summary comparisons and reconciliations or verified quantities provided by others; compiled and coordinated estimate data and processing of approved scope and non-scope changes; and developed cost recording, reporting, and analyzing standards, programs, and reports.

Brockwell & Carrington Cont., Inc., Wayne, New Jersey. Chief estimator / senior project manager. Mr. Ramzi managed and controlled the construction of a number of various public projects; collected and compiled project data resources and pricings for producing the CPM schedule; and processed RFI's, RFA's, purchase orders, and AIA contract agreements. He reviewed and approved shop drawings, scope and non-scope change orders and claims, and certified payrolls. He prepared project cost controls information system to forecast performance and progress; and produced monthly summary cost report to determine the cost status of the project and to pinpoint work classifications where expenses were excessive. Mr. Ramzi procured subcontractors and suppliers, coordinated among subcontractors to avoid conflicts and delays and prepared various bid proposals for private and public projects. Performed computerized and manual take-offs to estimate the value of overall utilized resources.

Jos. L. Muscarelle, Inc., Maywood, New Jersey. Chief estimator / project manager. Mr. Ramzi managed and controlled the construction of a number of public projects. He processed RFI's, RFA's, purchase orders, and AIA contract agreements. He reviewed and approved shop drawings, scope and non-scope change orders and claims, and certified payroll; prepared project cost controls information system to forecast performance and progress, and collected and compiled project resources and pricings data to assist in the provision of the CPM schedule. He procured subcontractors and suppliers, coordinated among subcontractors to avoid conflicts and delays. Mr. Ramzi prepared various bid proposals for private and public projects. Performed computerized and manual take-offs to estimate the value of overall utilized resources.

Serenity Contracting Group, Inc., Riverdale, New Jersey. Project manager/ estimator. Mr. Ramzi managed and controlled the construction of numerous public projects. He processed RFI's, RFA's, purchase orders, and AIA contract agreements. He reviewed and approved shop drawings, scope and non-scope change orders and claims, and certified payrolls; prepared project cost controls information system to forecast performance and progress, and collected and compiled project resources and pricings data to assist in the provision of the CPM schedule; and produced monthly summary cost reports to determine the cost status of the project and to pinpoint work classifications where expenses were excessive. He procured subcontractors and suppliers, coordinated among subcontractors to avoid conflicts and delays. Mr. Ramzi prepared various bid proposals for private and public projects. Performed computerized and manual take-offs to estimate the value of overall utilized resources.

Morgan Starke

COST ESTIMATOR

Firm: Louis Berger
Years' Experience: 20

Education:
BS, Electrical Engineering

Professional Summary

Mr. Starke is a cost estimator with more than 20 years of experience. He has served in manger roles throughout construction management to be an effective cost estimator. He has served on similar role throughout the NYC area.

Selected Experience

MEPS Solutions Consulting LLC, Long Island, New York. Consultant. As a MEPS Solutions consultant, Mr. Starke advised clients on all aspects of MEPS design and installation, from inception to completion of a project. He has extensive knowledge of permits, codes, and ordinances that the city requires as well as a long standing relationship with the various trade unions.

Pav-Lak Construction, New York, New York. Senior project manager. As a MEPS senior project manager on a $60 million ground up project, Mr. Starke's responsibilities included but were not limited to assisting the engineering and architectural firms with overall design aspects, equipment purchasing and procurement, long range scheduling, monthly budget reviews, overall cost analysis, coordination of utility services, subcontractor oversight, and consultation and daily owners group interaction. Notable project included 250 East 49th street design and build 25 story residential towers, Sweden National Bank.

Hudson Meridian Inc, New York, New York. Senior project. Manager. As the senior MEPS project manager for a 35-story design-build condominium tower in Brooklyn New York, Mr. Starke's duties included daily interaction with the design team, writing and awarding all mechanical contracts, overall budget oversight, daily superintendent job oversight, weekly updated for the ownership group, overall production and cost analysis, monthly billing, procurement of equipment and materials for the site, overall review of submitted shop drawings, review and dissemination of submitted equipment submittals, understanding and implementation of all applicable local and city codes, final sign of and submission of as-built drawings. Notable project included 164 Kent Avenue, Brooklyn. Design and build 30 story residential towers. Toll Brothers and L and M Equities. $125 million.

Plaza Construction Corp., New York, New York. Senior project manager and supervisor. As a senior project manager/MEPS supervisor, Mr. Starke's responsibilities included but were not limited to coordination of all subcontractors, architects and engineers involved in an estimated seven year, billion-dollar interior renovation in midtown Manhattan. Working in accordance with multiple unions and with an understanding of all local labor requirements, he developed, implemented, and maintained a short and long-term schedule, conducted daily briefings of job progress to the client rep, monitored job-site activity and provided technical assistance and support to all members of the project team to ensure a timely completion of each phase of the project. Notable project included 1 East 78th Street (New York University) Duke Mansion complete mechanical and interior renovation project, $20 million; and 270 Park Avenue (JPMC) Complete structure interior renovation project, $500 million.

Peeples Mechanical, Inc., Long Island City, New York. Project manager. For this commercial/industrial mechanical company, Mr. Starke's work included the coordination of multiple jobs ranging from 20,000 to upwards of $1 million. He was responsible for submitting equipment specs and purchase recommendations, liaison between clients, architects and engineers, producing daily and weekly project cost analyses, and job closeout procedures. Notable projects included:

- United Nations Plaza (Secretariat Building) 16th, 34th floors mechanical replacement. 1st floor and 15th floor interior renovation project, $2.5 million
- 140 East 61st Street (Andrew J Mellon Foundation). Eight-story complete interior renovation project., $8 million
- 148 East 62nd Street (Andrew J Mellon Foundation). Six story complete renovation project, $3.5 million
- Port Authority Bus Terminal Complete mechanical replacement, and selective retail interior renovation project. (Rite Aid, Staples, U.S. Post Office, Port Authority Police, various bars and eateries), $6 million
- 113 West 60th Street (Fordham Law School) emergency generator systems with selective interior renovation work (Lobby, 2nd floor, 3rd floor, 14th floor), $3.5 million

Air Ideal, Inc. Mineola, New York. Project manager. Mr. Starke reported directly to the President for this residential and small business mechanical company. His responsibilities included daily management of all operations, procurement of inventory, sales, estimates, layout and design of multiple projects, supervision of work crews, cost budget oversight, screening of new hires, and all other on-site personnel decision-making. Notable projects included:

- 210 Riverside Drive two floor apartment renovation project, $250,000
- 180 Riverside Drive three floor apartment renovation project, $400,000
- 150 East 56th Street six story condo renovation project, $500,000
- 160 Spring Street two story condo renovation project, $200,000
- 100 Vestry Street two story condo renovation project, $200,000
- 241 Erie Street Hoboken, NJ six story arts studio interior renovation project, $5 million

Education

- MS, Construction Management (Project Management)
- BS, Civil Engineering

Professional Qualifications and Certifications

- Graduate Member of Institution of Civil Engineers United Kingdom (Membership Number: [redacted] with option for eventual progression to Member (Chartered Engineer).
- CITB certificate course in Advanced Surveying & Setting-out from National Construction College, Kings Lynn, United Kingdom
- Spill Prevention and Response Training Certificate from New York City Department of Environmental Protection (DEP)
- Occupational Safety and Health Administration (OSHA) - Construction Industry Outreach Certificate

Summary

Mr. Mahmood has proven successfully that he has the extensive knowledge needed to perform multi-tasking in the field of heavy construction projects. Such tasks included estimating, scheduling and management systems using a variety of project management and information system software such as Primavera, Prolog and Expedition. He also managed quality control, budget control, and conducted field inspections.

Experience

Techno Consult, Inc., Princeton, New Jersey. Project: Hunts Point Phase 4 – Carbon Addition (WPCP), New York City Department of Environmental Protection (DEP), the Borough of the Bronx, New York. Office engineer/scheduler. The purpose of this facility is to add a supplemental carbon source, glycerol, to the waste water flow to enhance de-nitrification, as required under the BNR Consent Order Schedule. Duties are detailed below:

Schedule: Update review every month; Prepare Schedule Analysis Report for DEP; Conduct CPM Meeting every month; Schedule reply to Contractor every month

Payment: Negotiate Pencil payment with the contractor; Prepare Partial payment package; Prepare Partial payment backup for Engineer's Audit *Office (EAO) DEP*: Answer any EAO DEP's concerns as and when they arrive; Provide Additional backups from contractor by following up; Reply to US Census bureau questions on the monthly partial payments

Progress meeting: Prepare Progress meeting agenda
and minutes of meeting; Send out minutes of meeting through prolog; Monitor the project closely during meeting using through knowledge of project schedule

Monthly I&T Report: Help Resident Engineer prepare the monthly progress report; Ensuring that all the current and potential project issues are addressed in the monthly report; Final Review of Monthly I&T Report prior to being sent.

Issues & Concern through email: This phases involves interaction with the other construction phases of the plant and therefore there are questions through email every day which requires a quite thoughtful reply. My job involves guiding the project team in drafting the email responses for these critical questions on time and accurate.

Delay letters

I&T Meeting: Preparing the slides for the I&T Meeting
Guiding the project team before the meeting about critical issues to discuss in the meeting

Change order: Involved in helping the project team send out the scope of the change order; Involved in negotiating the change order with the contractor; Involved in sending the final package to the DEP

Project: Contract WI-270, (Approx. $14 Million) Wards Island Water Pollution Control Plant (WPCP), New York City Department of Environmental Protection (DEP). Manhattan, New York. Scheduler/office engineer. Responsible for technical and administrative duties pursuant to the Office Engineer's scope of work, including preparation of monthly schedule updates. The scope of construction work under this contract includes the upgrading of chemical bulk storage tanks, temporary fuel oil storage tank and construction of chemical bulk storage tanks, temporary fuel oil storage tank and construction of chemical transfer pads, installation of emergency vents, vents, cathodic protection system, inventory control system, pipe signs and petroleum transfer pads.

- Checking the contractor's monthly schedule updates, including reporting any deviation to the resident engineer.
- Preparing schedules for the balance of all work in the project using Primavera Project Planner.
- Material clearances (coordinating with materials engineer regarding status of materials approvals).
- Maintaining and organizing contract records, current plan sets and all tracking logs for the resident engineer and staff.
- Maintaining project correspondences, Non-Conformance Notices (NCN), change orders, and their corresponding logs.
- Assisting the Resident Engineer in processing the contractor's monthly payment requisitions.
- Maintaining payment records including the verification of the contractor's time and material sheet
- Preparing change orders, facilitating RFI's and writing meeting minutes.
- Performing construction inspection for conformance with the plans and specifications, and reporting any deviations to the resident engineer, including compliance with its approved SSHSP.
- Preparing and maintaining the daily construction inspection reports, which shall indicate the contractor's work activities, progress of the work, crew size and composition, weather, equipment utilization and all other information relative to the execution of the work.
- Assisting the Resident Engineer in overseeing that the contractor conducts the waste characterization transportation and disposal process, erosion control process, dewatering process, and lead and asbestos remediation process as required by the NYCDEP, New York State and federal agencies.
- Provide updated information and keep DEP informed of all special case and issues.

Ian Baldwin

SENIOR SCHEDULER

Firm: Louis Berger	**Education:**	**Registration/Certifications:**
Years Experience: 35	BS, Construction Management	Certificates, AutoCAD Design, New York University, New York, New York

Professional Summary

Mr. Baldwin has an impressive 30-year career highlighted by exceptional growth and outstanding performance with a positive "can-do" attitude. A results-driven manager with consistent track record demonstrating self-motivation, creativity and initiative to achieve or exceed personal as well as corporate goals. An integral member of a cohesive management team, contributing broad-based perspective to achieve outstanding results. Remains on the cutting edge of technology; experienced in conducting presentations and training seminars utilizing computerized visual aids. Demonstrates broad-based strengths and accomplishments in:

- Change management
- Cash flow projection
- Time impact analysis
- Risk management
- Development training
- Presentation graphics
- Claims analysis
- Site safety/logistics

Selected Experience

PANYNJ, Technical Center, Jersey City, New Jersey. Senior schedule. Mr. Baldwin's responsibilities include the development and maintenance of CPM schedules, as well as the review and approval of all contractor schedules. His assigned projects include George Washington Bridge, Bayonne Bridge, Goethals Bridge, Lincoln Tunnel, Holland Tunnel, LaGuardia Airport, Newark Airport, Port Authority Bus Terminal and the George Washington Bridge Bus Station.

High-Rise Residential Projects, Bovis Lend Lease. Senior scheduler. Mr. Baldwin was responsible for developing and maintaining CPM schedules for several high-rise residential projects in the Miami area. His responsibilities included the development and implementation of schedule comparisons and narratives, as well as Time Impact Analysis and Delay Claims Analysis. He performed on-site status updates and conducted schedule meetings with entire field staff to ensure the on-time completion of all projects.

Various Projects, Turner Construction. Senior scheduling engineer. Mr. Baldwin was responsible for creating and maintaining CPM schedules, time impact analysis and monthly progress reports as well as analyzing delay claims. He hired and trained junior schedulers for project assignments, in-house scheduling, and technical support. Coordinated all scheduling meetings with field staff to ensure all projects were completed on time and as per contract

documents. He implemented company-wide tracking and reporting system to enable executive management to assess productivity and project progress, simultaneously anticipating and averting project delays and claims. He monitored accuracy and diligence of scheduled maintenance through on-site visits to job sites. He assessed needs and developed company-wide training seminars on CPM scheduling and software integration; designed and created detailed training manuals and PowerPoint presentations.

Various Projects, HRH Construction. Assistant project manager/scheduling engineer. Mr. Baldwin was responsible for all project planning and scheduling as well as site safety and logistics utilizing a variety of scheduling and computer graphics software. He tracked and maintained change management and budget revision system as well as assisted in the contractor payment review, negotiation and approval process. He created custom designed cost and data entry and tracking templates using Lotus 1-2-3, macro-programming language; generated CAD graphics for site safety and logistics planning as well as stacking plans. He successfully fostered collaboration between project management and sales personnel to create outstanding presentation materials instrumental in acquiring several major projects.

Various Projects, Structure Tone Inc. Assistant project manager/scheduler. Mr. Baldwin produced CPM logic generated schedules for new as well as periodical updating of ongoing projects using Primavera software. He created custom designed change management and scheduling program using spreadsheet application utilized by both office staff and project managers in the field. He created computer graphics and CADD drawings for site safety and logistics planning.

Various Projects, Tishman Construction. Assistant project manager.

- **St. Regis Hotel, New York, New York.** Created and implemented change order / purchase order tracking system. Tracked and managed project shop drawings, submittals, materials delivery, manpower and request for information (RFI) logs.
- **U.S. Trust Headquarters, New York, New York.** Performed management responsibilities for 36-story interior construction and base building upgrade of newly constructed building at 114 West 47th Street. Coordinated activities of all contractors and field management staff; tracked performance and approved subcontractor payments and change orders. Reviewed and approved contractor payment requisitions and change orders.
- **Barclays Bank Plaza, New York, New York.** Provided overall management responsibilities for demolition of 14-story building and construction of new three-level public plaza.
- **The Astor Terrace Apartments, New York, New York. Assistant superintendent.** Managed construction of 35-story condominiums with 12 townhouses at 93rd Street and 3rd Avenue.
- **Trump Hotel & Casino. Assistant superintendent.** Supervised and coordinated construction of all administrative space for this $350-million hotel project.
- **1155 Avenue of the Americas, New York, New York. Assistant superintendent.** Coordinated and managed sub-contractor trades in construction of this 35-story office building.

Ramesh Patel

SCHEDULER

Firm: Louis Berger	**Education:**	**Registration/Certifications:**
Years' Experience: 10	ME, Civil Engineering	See below
	BE, Civil Engineering	

Registrations/Certifications

Oracle Primavera P6/P3
AutoCAD, AutoCAD Land Development Desktop
Primavera P6
Microsoft Project
IBM Cognos
SharePoint
MicroStation
Civil 3d
MS Office

Professional Summary

Mr. Patel is a professional with 10 years' experience in project management, engineering design, and construction. His expertise includes performing design functions, supervising construction forces, preparation and maintenance of project schedules, estimating change orders, review of payment requisitions, and performance of document control functions. With a core base of understanding in the metropolitan New York and New Jersey area, he possesses a strong understanding of PANYNJ requirements. As an extension-of-staff for PANYNJ, he has been on site at Newark Liberty International Airport performing project control functions for the Physical Plant & Redevelopment Division of NJ Airports, and working very closely with every project manager and program manager to help deliver the capital plan on time and within budget.

Selected Experience

MCSS, Inc. (PANYNJ), Aviation – Newark International Airport, New Jersey. Senior project control engineer. Mr. Patel executed project management methodologies and project controls to ensure the projects/programs objectives are completed within schedule, scope, and budget. Total cost range from $5 million to $325 million in value for projects/programs at the Newark Liberty International Airport and Teterboro Airport. He provided support to the PMO (Project Management Office) on process of developing standards, project management manual, capital planning, testing and implementation of multiple enterprise wide reporting tools and systems. He worked alongside senior airport management providing technical support for effective communication and demonstration of the Newark Liberty International Airport and Teterboro Airport (EWR & TEB) Capital Plan (5-years and 10-years). In this role, he also developed detailed construction schedules, which were submitted to FAA and utilized during major airside improvement projects. Provide assistance to project manager in managing projects from initiation to close out process, creating CPM schedules, WBS, ad-hoc reports to highlight project performance, and cost analysis by using Primavera P6, MS Office, SAP and Port Authority's

internal applications. He implemented base line and critical path method to measure project performance. He worked as a team player and effectively communicate to mid-level and senior level managers by providing technical supports, training and presentation to manage and measure enterprise portfolio. He developed capital plan and budget to identify future needs and goal. Additional responsibilities include development and maintenance of integrated design and construction schedules, resource loaded schedule, cost estimates (+/- 10 percent), coordination of schedule interfaces, analysis of project performance using earned value analysis as well as analyzing and monitoring progress, trends, variances and impacts against baselines, budgets and estimates. He worked on risk assessment and matrix to identify risk using Monte Carlo method.

AB Abhishek Enterprises Pvt., Ltd., India. Design engineer. Mr. Patel prepared design for various projects like storm water management, soil erosion and sediment control measures and applications, storm sewers, detention basin and outlet structure, striping and grading using Autodesk Land Desktop, MicroStation v8, Civil 3d, Storm CAD and TR-55. He prepared contract documents (drawings and specifications). He prepared cost estimates; provided support to project engineer to deliver design task on time; and organized various meetings and training to understand design task. He also prepared design schedule to monitor the design tasks complete in time and given budget using Primavera Project Planner (P3).

Water and Power Consultancy Services (I) Ltd., Ahmedabad, India. Junior engineer. Mr. Patel worked on project "design of macro and micro Canal Network Planning of Distribution System up to 4-6 ha subchak command area of Saurastra Branch Canal for Sardar Sarovar Narmada Nigam Limited (SSNNL), Gujarat, India". He prepared design and estimates for small structures such as Canal Syphon, Aqueduct, Head Regulator, Cross Regulator, Escape, and Culvert using AutoCAD and estimation application. He participated in design review meetings with engineers from Government of Gujarat Irrigation Department and other local agencies. He prepared cost estimates based on preliminary design and final design for bid packages, and the development of land acquisition plan.

Backbone Projects, Ltd., Ahmedabad, India. Junior construction engineer. Mr. Patel was hired to work on highway project "Widening of National Highway from Chiloda to Himmatnagar (52 Kilometers)". He was responsible for site supervision, document control, invoices and labor payouts. He prepared project schedule, progress reports, and cost estimates.

Farai Chinyerere

SCHEDULER

Firm: Louis Berger
Years' Experience: 3

Education:
MS, Industrial Technology; Construction Management
BS, Construction Management Technology

Professional Summary

Mr. Chinyerere has a Master of Science Degree in Industrial Technology, Construction Management from North Carolina A and T State University. Some of his most recent responsibilities have included scheduling, cost control, updating budgets and actuals, site safety inspections and reporting, assisting in development of project management plan.

Selected Experience

Port Authority Trans-Hudson Corporation, Jersey City, New Jersey. Scheduler. Mr. Chinyerere's assists in development of project management plan and sub-plans. He develops and maintains resource loaded schedules. He assists in the development of work break down structures and baseline schedules for monitoring and evaluating project progress; collects progress data and update schedules; identifies and alerts potential schedule delays and develop recovery plans when necessary; works closely with engineering leads in monitoring progress; and collects project data, analyze performance, and produce reports. He assists with project document control.

Louis Berger Group. Morristown, New Jersey. Project controls specialist. Mr. Chinyerere responsibilities developing, updating, and maintaining SharePoint sites. He developed, updated, and maintained project schedules. He collected project data, analyzes, and produces reports; and analyzed and created project performance (EVM) reports.

URS – Nuclear Energy, Fort Mill, South Carolina. Cost analyst. Mr. Chinyerere developed, updated, and maintained resource loaded EPC project schedules. He conducted regular schedule updates with participation of Project Managers and incorporated status into the schedule; monitored weekly progress against the baseline and reported any variances to the project manager; and alerted the project manager of resulting schedule slips to milestones and took corrective action as directed. He imported and linked P6 schedule activities to respective prism control accounts. He worked with cost control of engineering, procurement, and construction projects. He analyzed project data and created project performance reports (EVM). He assisted in Prism database maintenance. Mr. Chinyerere created control accounts and loaded budgets and hours for authorized work; updated budgets and actuals and ran cost summary reports, PQMRs; and maintained change order management log – tracked potential scope change. He prepared estimates for approved scope change. He also calculated, updated, and reported manpower forecasts (RMT).

Depot Street Construction, Winston Salem, California. Assistant field engineer. Mr. Chinyerere reviewed and interpreted plans and specifications. He coordinated and supervised work site activities. He reviewed and coordinated submittals; reviewed and processed requests for information (RFIs); and reviewed and processed change order requests (CORs).

Shields Incorporated, Winston Salem, North Carolina. Onsite safety coordinator. Mr. Chinyerere ensured compliance with OSHA regulations. He provided training to company employees on Occupational Safety & Health issues. He prepared daily pre-task safety plan (JSA). He conducted and documented scheduled work site safety inspections and reports. He inspected job site and took corrective measures as needed. He also conducted accident, incident, and near miss investigations.

Bar Construction Inc., Greensboro, North Carolina. Field engineer. Mr. Chinyerere reviewed and interpreted blueprints. He also coordinated and supervised work activities. He provided insight into quality control and document control, submittals, and RFIs.

Landmark Builders Inc., Brown Summit, North Carolina. Field engineer. Mr. Chinyerere interpreted blueprints and supervised work activities. He oversaw quality control and document control, reviewed submittals, RFIs, and CORs.

Brendan Faherty

SCHEDULER

Firm: Louis Berger
Years' Experience: 3

Education:
BS, Mechanical Engineering

Professional Summary

Mr. Faherty has a bachelor of science degree in mechanical engineering from Rensselaer Polytechnic Institute. He is currently developing SharePoint websites and providing project tracking services including scheduling and earned value analysis for various projects.

Selected Experience

Project Controls Specialist, Project Management Information System (PMIS). Program management / construction management business unit. Mr. Faherty's responsibilities include Developing SharePoint websites for project collaboration and document management. Creating and maintaining project schedules using P6 and MS Project. Monitoring and tracking the performance of various projects across the company.

Jamaica N/S Highway Project, Jamaica, Kingston, Jamaica. Project controls specialist. Mr. Faherty developed and implemented a SharePoint compatible electronic inspection document system consisting of several interactive quality related forms with built in logic and custom workflows. He met with the client to develop requirements and provided onsite training

Project Monitoring, Various Locations-Based in Morristown, New Jersey. Project controls specialist. Mr. Faherty tracked and monitored the performance of projects across the company using earned value analysis. Developed and maintained project schedules, conducted monthly status meetings with project managers, tracked the budgeted and actual hours to date and forecasted future performance using a variety of metrics.

Trust for the National Mall, Washington DC. Project controls specialist. Mr. Faherty developed SharePoint websites and created custom web parts and workflows for enhanced project collaboration and document control. He developed and maintained a project schedule using P6 software. He created schedule layouts and displayed them on SharePoint websites.

Riyadh Metro, Riyadh, Saudi Arabia. Project controls specialist. Mr. Faherty assisted with the development and customization of SharePoint websites. He built sub-sites for the Riyadh Bus Program and Program Wide Projects. Built custom lists and libraries and added web parts to best organize and display project documents. He added and edited navigation tabs and site graphics to meet client requirements. He created dashboard with interactive charts connected to live data. He uploaded and maintained project documents on SharePoint site.

Design Build, Various Locations and Projects-Based in Morristown, New Jersey. Project controls specialist. Mr. Faherty developed SharePoint sites as needed for new projects. He customized site navigation and structure to meet project needs. He communicated with project managers and provided technical support for the organization and management of all SharePoint site content. He worked with project managers and Accountants to track project progress and perform project earned value analysis.

New York State Community Reconstruction Program, New York. Project controls specialist. Mr. Faherty assisted with the development and customization of SharePoint websites. Communicated with Project Manager and provided technical support for the organization and management of SharePoint site content.

Prakash Saha

NACE COATING INSPECTOR

Firm: Louis Berger
Years' Experience: 19

Education:
AAS, Applied Science

Registration/Certifications:
See below

Registrations/Certifications

NACE Certified Coating Inspection Technician
New York State Asbestos Inspector, Air Sampling Technician, Project Monitor, Project Designer
New York City Asbestos Investigator
NJ Asbestos Safety Technician (AST) - State of New Jersey
NIOSH 582 Sampling and Evaluating Airborne Asbestos
EPA, HUD Lead Inspector and Risk Assessor - State of New York & New Jersey
(XRF) Certified Technician (RMD, Niton)
OSHA 40-hour HAZWOPER
OSHA Confined Space
SSPC C-3/5 Supervisor/Competent Person for De-leading of Industrial Structures – State of New Jersey

Professional Summary

Mr. Saha is a manager with Louis Berger with more than 19 years of environmental engineering and consulting experience. Mr. Saha specializes in conducting investigations of environmental hazards including lead and asbestos containing materials surveys, design and management; including schools and commercial buildings per Industrial Code Rule 56 and NYCDEP Title 15. Also managed services associated with oversight and implementation of environmental site assessments including Phase Is and IIs, subsurface investigations, geotechnical services, wetlands services, noise, radiation and worker health and safety.

Selected Experience

NY City Department of Design and Construction Environmental/IH Services and Geotechnical Contracts (2 consecutive) for Infrastructure and Facility Projects City-wide. Contract/ client manager. Mr. Saha managed Louis Berger's services associated with oversight and implementation of more than 200 projects to date involving lead and asbestos containing materials surveys, design and management, environmental site assessments including Phase Is and IIs, subsurface investigations, geotechnical services, wetlands services, noise, radiation and worker health and safety..

New York City School Construction Authority, Capital Improvement Program. Contract manager for SCA program. Mr. Saha's specific responsibilities included senior technical reviewer on asbestos, lead-based paint. mold and PCBs identification surveys and abatement design including specifications and cost estimates. As well as managed Louis Berger's services associated with asbestos air monitoring and industrial hygiene services for many schools throughout the five boroughs.

Environmental Support Services, Government Services Administration. Project manager. Mr. Saha provided engineering conditions assessments and regulatory compliance support for program development study at Byron Rogers federal building in Denver, Colorado. Addressed all engineering and compliance related issues including but not limited to lead/asbestos,

chemical/ biohazard protection, building demolition and abatement, PCBs, waste management and health and environmental safety.

Port Authority of NY/NJ, Asbestos and Lead Paint Survey and Design Contract. Project manager. Mr. Saha has more than 10 assignments to date in New York state, New York City, and New Jersey providing comprehensive asbestos services for capital projects, with primary emphasis on air and contractor monitoring and inspections.

TriBorough Bridge and Tunnel (aka MTA Bridges and Tunnels) Asbestos Survey/Design Contract and Asbestos Monitoring Services Contract (2 consecutive). Manager. Mr. Saha has completed more than 20 task orders to date throughout NY City providing comprehensive asbestos services for bridge and tunnel projects.

U.S. Army Corps of Engineers, New York District Multiple Projects at Fort Hamilton, New York. Task manager. Mr. Saha served as task manager and senior technical reviewer on asbestos and lead-based paint identification surveys, and abatement design including specifications cost estimates. Projects include renovation/upgrades of Buildings 207 and 230 project; 135, 136, 137, and 138 project; 209 and 210 project.

NYSOGS, Asbestos/Lead Materials Survey and Design for Many Architectural and Engineering Projects, New York. Task manager. Mr. Saha was directly responsible for managing the day-to-day operations, including the following: pre-inspection and document review, site inspections, bulk sampling, laboratory analysis, sample analysis and review, analytical quality assurance plan, final survey report preparation, cost estimation, preparation of schematic plans, drawings and specifications and pre-bid coordination. More than 100 such projects have been completed.

Westchester County School Districts, New York. Task leader. Mr. Saha worked with asbestos identification surveys, prepared asbestos abatement specifications for removal asbestos containing materials (ACM), and provided oversight of abatement of ACM. Project included weekly progress meetings with architect and Board of Education officials. Services provided to various school district throughout Westchester County.

New York City Transit, CM-1182 Services of an Environmental Engineering Consultant, New York, New York. Mr. Saha participated in survey and design aspects of QA/QC of CADD drawings for functionality and scales. Performed data collection for abatement projects in order to compile final reports.

NYPA, Asbestos Planning and Environmental Consulting Services, New York, New York. Mr. Saha performed several surveys and designs associated with energy upgrade projects throughout New York State.

Asbestos and Lead Paint abatement, New York and New Jersey. Field asbestos safety technician. Mr. Saha monitored high rise structures, health care facilities (including UMDNJ Facility), public schools, etc.

Rafaél Melendez

MECHANICAL ENGINEER

Firm: Naik Consulting Group, PC
Years' Experience: 20

Education:
BS, Mechanical Engineering

Registration/Certifications:
Certified Sustainable Building Advisor Candidate
Certified Energy Management Candidate

Professional Summary

Mr. Melendez has 20 years of increasingly responsible experience in MEP Services. Mr. Melendez has extensive experience in the project management of MEP projects involving Design-Build, LEED Analysis, Zero Carbon Energy Codes (Passive House, Zofnass Sustainable Infrastructure, Living Building Challenge) BIM, Renewable Energy, Commissioning, Sustainability, Historic Preservation, Resilience, Mitigation and Construction Management. Clients Mr. Melendez has provided services for include FEMA (Sandy Storm NJ Relief), transportation agencies including the NYC Transit Authority, Port Authority of NY&NJ, South Jersey Transportation Authority, telecommunication companies including AT&T and Verizon, and Pharmaceutical Companies. He is currently completing his CSBA –Sustainable Building Advisor certification, part of the longest running and most effective green building education. This is a nationally recognized, intensive four-month program focusing on both local and national green sustainable building.

Experience

PANYNJ JFK International Arrivals Building, JFK International Airport, Queens, New York. Mechanical engineer/CAD draftsperson. Designed and drafted HVAC / Fire Protection systems.

NYCTA, 2nd Avenue Subway, New York, New York. Mechanical task team leader. Provided chiller plant design for mission critical (data center) spaces including equipment selection, layout, CAD and specifications. Systems designed included: N+1 plant consisting of water-cooled chillers, induced-draft cooling towers, series-connected plate and frame heat exchangers, remote sump pits, sump sweeping systems, condenser water filtration systems, condenser water pumps, primary/secondary chilled water pumping system, computer room air conditioning (CRAC) units, pipe distribution, instrumentation and controls, and sequence of operations.

Buffalo Airport International Terminal Building, Buffalo, New York. Mechanical engineer/CAD draftsperson. Designed and drafted HVAC/ Fire Protection Systems.

FDR Harlem River Drive, New York, New York. Mechanical engineer/CAD draftsperson. Designed and drafted HVAC/ Fire protection Systems.

IBM, Canada Chiller Plant, Bruns Pak, Inc., Edison, New Jersey. Mechanical project engineer. Provided chiller plant design for mission critical (data center) spaces including equipment selection, layout, CAD and specifications. Systems designed included: N+1 plant consisting of water-cooled chillers, induced-draft cooling towers, series-connected plate and frame heat exchangers, remote sump pits, sump sweeping systems, condenser water filtration systems, condenser water pumps, primary/secondary chilled water pumping system, computer room air

conditioning (CRAC) units, pipe distribution, instrumentation and controls, and sequence of operations.

AT&T, Multiple Corporate Facilities, Bedminster, Bridgewater and Basking Ridge, New Jersey. Senior mechanical designer. Designed HVAC, Plumbing, and Fire Protection systems for company owned commercial real estate, including: AT&T World Headquarters, AT&T World Network Operating Center, AT&T Labs, AT&T Business Services Group, and AT&T Consumer Services Group. Systems designed included, but were not limited to, air-cooled liquid chillers, centrifugal chillers, computer room air conditioning units, rooftop air handling units, air-cooled condensing units, emergency exhaust systems, variable volume systems, constant volume systems, primary/secondary chilled water loop systems, cooling towers, humidification, web-based modular control systems, domestic water and sanitary systems, light hazard occupancy fire protection, lawn sprinkler systems and in-rack sprinkler systems.

FEMA Sandy Storm Relief/ Fluor Government Group, Middletown, New Jersey. Project specialist/technical action committee. Providing expert advice in MEP discipline for the Sandy Storm relief in New Jersey under FEMA management as part of the Federal public assistance program. Surveyed disaster sites, developed project worksheets, estimated project costs, assessed applicant expert reports, advised on reconstruction mitigation measures [as per FEMA standards], and investigated environmental and historical preservation impacts.

Residential Towers of the 21st Century Completion (CSBA Certification Requirement), New York, New York. Project lead. Leading the design team consisting of engineers, architects, renderers to design the residential tower of the future for the city of New York. This is a design competition sponsored by Metropolis Magazine. The building will consist of a steel structure and the services will allow it to be completely self-sustaining while providing fringe services to the community at large. The building will create all of its energy and water requirements as well as recycle all of its waste. The design will be developed to encompass a complete ecosystem that will also aid in reducing the carbon footprint of the community thereby going beyond carbon neutrality capability and into carbon negative status.

John A. Carbone

NACE COATING INSPECTOR

Firm: Naik Consulting Group, PC

Years' Experience: 15

Registration/Certifications:
NACE Level I Recertification
TCCP

Professional Summary

Mr. Carbone has more than 15 years combined experience in the construction inspection, management, and bridge repainting fields. His work includes the management of multiple project phases including scoping, design, estimating, procurement, materials management, construction, maintenance operations, shut-downs, coordination of industry requirements with federal and state regulatory demands as well as quasi-government institutions. He has completed projects in Lead Abatement for steel structures/heavy industry with related environmental issues. His advancement from field operations, through front-line supervision to senior staff management and administrative positions has given him a broad perspective of overall project requirements. His administrative experience includes proposal compilation, scheduling, program tracking (cost, utilization, etc.), customer relations and reporting.

Experience

NJTA Dr Driscoll Bridge Repainting & Structural Repairs, Middlesex County, New Jersey. Chief painting inspector. For abrasive blasting, lead abatement, caulking and repainting of this structural steel. Performed the painting inspection tasks, inspected the containment procedures; tested the paint, inspected the various coatings, and prepared the inspector reports. Maintains and updates monthly quantities using the CapEx System. Also performed the painting inspection tasks for the Fireproofing for the Basilone Bridge during this time period.

NJTA Hackensack River Lewandowski Memorial Bridge, Secaucus, New Jersey. Painting inspector. For construction management and inspection services for the painting portion of the $149 million rehabilitation project which included lead abatement and painting of 1.2 million square feet of weathering structural steel. Performed the painting inspection tasks and reports in accordance with the NJ Turnpike CapEx system. Also responsible for the inspection of the repainting of the structural steel consisting of the painting inspection tasks, containment barriers, supervision of the inspectors and contractor's painting crews, analyses of the paint, preparing reports and monthly estimates. Project Details Include: Construction Staging Details; FHWA Testing at Penn State; Crash Test and Barrier Foundation; Substructure Spall Repairs; Fender System Repairs; Rock Excavation at Laurel Hill; Access Road & Wet Land Protection; GRES Wall/South Temporary Access Road Construction; Shoulder Resurfacing and HICC Deck Spall Repairs.

NJTA Repainting of Basilone Memorial Bridge, Somerset, County, New Jersey. Painting inspector. For painting inspection and close-out for this $5.5 million New Jersey Turnpike Authority bridge painting contract. Inspected abrasive blasting and repainting structural steel of Basilone Memorial Bridge over the Raritan River, Structure Nos. 82.24N and 82.24S. The project

involved blast cleaning and painting of structural steel and zone painting of weathering steel, replacement of open grid deck systems, repairs to deteriorated/damaged trusses and sidewalks, and repaving roads on either side of bridge approaches. Responsibilities included performing painting inspections tasks, including inspection of abrasive blasting, lead abatement and repainting of the bridge, and preparation of the inspector reports in accordance with the CapEx System. Also monitored the negative pressure enclosure with a suspended work platform to contain blast abrasives, dust and debris.

Delaware River Joint Toll Bridge Commission, Route 80 Delaware Water Gap Bridge Rehabilitation and Repainting. Warren County, New Jersey/Monroe County, Pennsylvania. Painting inspector. For this $17 million bridge rehabilitation project, including a multi-faceted rehabilitation of the bridge's superstructure as well as corresponding work on the bridge's approaches. The project included bearing and deck joint replacement, cleaning and painting of the superstructure of the bridge, repairs to the bridge substructure, replacement of under-bridge lighting and portions of the bridge drainage system, seal coating of the bridge deck and other elements. Responsible for the inspection of all core drilling and epoxy grout to set anchor bolts for new pedestals; deck seal coat: confirming concrete preparation and application of methacrylate sealer to roadway; blast clean and painting the bridge Superstructure- Preforming all inspections for preparation and application for for 3-coat paint system. (Total of 360,000 sq. ft. of steel); Overseeing construction and maintenace of Class 1A Negative Pressure Containments for each span; Monitoring blast operations to confirm negative pressure condition; Overseeing repairs if any emmissions from containment occurred before allowing blast ops to continue; Monitoring storage of hazardous waste while on site; and Generating punch list for contractor and overseeing completion of all listed items.

DRJTBC Riegelsville Bridge Rehabilitation and Painting. Warren County, New Jersey/Monroe County, Pennsylvania. Painting inspector. For the $6 million abrasive blasting, lead abatement, caulking and repainting of this structural steel, 585-foot suspension bridge crossing the Delaware River. Performed the painting inspection tasks, inspected the containment procedures; tested the paint, inspected the various coatings, and prepared the inspector reports. Responsible for the inspection of the structural repairs, bridge deck repairs, and painting inspection. Work included inspection for abrasive blasting, lead abatement, caulking and repainting of this structural steel, 585 foot suspension bridge crossing the Delaware River. Also monitored negative pressure containment with a suspended work deck to inhibit paint chips, rust and debris from entering waterway and environment, and monitored ambient conditions, employee health exposure and hazardous waste disposal, and prepared the inspector reports.

NJDOT Route 295, Exits 4-21 Lead Abatement. Painting inspector for abrasive blasting and repainting structural steel of 11 overpass bridges. Construct negative pressure enclosures to contain blast abrasives, dust and debris for environmental protection. Ambient controlled ventilation to maintain conditions for continuous blast/paint operations. Monitored employee health exposure, hazardous waste disposal, and traffic control.

John Waldorf

NACE COATING INSPECTOR

Firm: Naik Consulting Group, PC
Years' Experience: 15

Education:
BS Ocean Engineering, Florida Atlantic University, 1982

Registration/Certifications:
NACE CIP Level I
NACE Cathodic Protection Specialist
NACE Senior Corrosion Technologist
Texas Professional Engineer
Louisiana Municipal Contractor License
TCCP

Professional Summary

Mr. Waldorf has more than 15 years' experience in the heavy civil, residential, commercial, water and waste water markets. As a manager, he has extensive proficiency with large-scale design build contracts, P&L and risk assessment.

Selected Experience

NJTA Easterly Hackensack Bridge, Essex and Hudson Counties, New Jersey. Senior inspector. The New Jersey Turnpike Authority required bridge deck reconstruction, miscellaneous structural repairs, roadway improvements and repainting of structural steel on the Hackensack River Lewandowski Memorial Bridge, on the Easterly Roadway of the New Jersey Turnpike. As Resident Painting Engineer, performed the painting inspection tasks and reports in accordance with the NJ Turnpike CapEx system and standards. Also responsible for the inspection of the repainting of the structural steel consisting of the painting inspection tasks, containment barriers, supervision of the inspectors and contractor's painting crews, analyses of the paint, preparing reports and monthly estimates. Project Details Include: construction staging details; FHWA testing at Penn State; crash test and barrier foundation; substructure spall repairs; fender system repairs; rock excavation at laurel hill; access road & wet land protection; GRES Wall/South temporary access road construction; shoulder resurfacing and HICC deck spall repairs.

Additional Experience

PANYNJ Goethals Bridge Rehabilitation. New York/New Jersey. Senior inspector. Managed and inspected bi-annual emergent steel repairs; painting of entire bridge structure; erection of bridge platform and containment. responsibilities included onsite contract/construction manager, preparation of estimates/cost proposals, management of worker health and safety, coordination of environmental monitoring, manage on site quality assurance, management of third party design engineers, coordination of hazardous waste disposal, coordination of all project submittals and RFI's, develop quality assurance plan, manage marine equipment; barges & tugs, contractor coordinator with resident engineer.

MTA Bridges & Tunnels Bronx Whitestone Bridge Rehabilitation. New York. Senior inspector. Managed and inspected rehabilitation of main suspension cables & suspenders, bi-annual

emergent steel repairs, painting of entire bridge structure including stiffening truss and floor beams, painting of bridge towers, containments erection, and replacement of side walk deck. responsibilities included: onsite contract construction management, managed onsite quality assurance and inspection team.

MTA Bridges & Tunnels, Verrazano Narrows Bridge, New York. Senior inspector. For bi-annual emergent steel repairs, painting of entire bridge structure, installation of man-ways, installation of containment platform. responsibilities included: onsite contract and construction management.

NYSTA Tappan-Zee Bridge Rehabilitation /Painting & Pier Replacement. Senior inspector. Rehabilitation of New York Tower marine pier structures, installation of new pipe piles/ H-piles and crib structure, painting of entire bridge sub-structure, painting of New York tower structure, erection of bridge platform and containment, build marine load out facility. responsibilities included: onsite contract/construction manager, manage on site quality assurance and inspection team.

DRJTBC Riegelsville Bridge Rehabilitation and Painting. New Jersey/Pennsylvania. Senior inspector. For abrasive blasting, lead abatement, caulking and repainting of this structural steel, 585 foot suspension bridge crossing the Delaware River. Performed the painting inspection tasks, inspected the containment procedures; tested the paint, inspected the various coatings, and prepared the inspector reports. Responsible for the inspection of the structural repairs, bridge deck repairs, and painting inspection. Work included inspection for abrasive blasting, lead abatement, caulking and repainting of this structural steel, 585-foot suspension bridge crossing the Delaware River. Also monitored negative pressure containment with a suspended work deck to inhibit paint chips, rust and debris from entering waterway and environment, and monitored ambient conditions, employee health exposure and hazardous waste disposal, and prepared the inspector reports.

DRJTBC, Route 80 Delaware Water Gap Bridge Rehabilitation and Repainting. New Jersey/Pennsylvania. Senior inspector. The bridge rehabilitation project included a multi-faceted rehabilitation of the bridge's superstructure as well as corresponding work on the bridge's approaches. As resident painting engineer, responsible for the inspection of all core drilling and epoxy grout to set anchor bolts for new pedestals; deck seal coat: confirming concrete preparation and application of methacrylate sealer to roadway; blast clean and painting the bridge superstructure- preforming all inspections for preparation and application for for 3-coat paint system. (Total of 360,000 sq. ft. of steel); overseeing construction and maintenace of class 1a negative pressure containments for each span; monitoring blast operations to confirm negative pressure condition; overseeing repairs if any emmissions from containment occurred before allowing blast ops to continue; monitoring storage of hazardous waste while on site; and generating punch list for contractor and overseeing completion of all listed items.

Ainul Abedeen

CIVIL INSPECTOR

Firm: Techno	**Education:**	**Registration/Certifications:**
Years' Experience: 25+	BS, Civil Engineering	See below

Registrations/Certifications

- NICET Certified Level II - Highway Inspector
- NICET Certified Level I - Water Main
- Level I – ACI Certified
- OSHA 10 Hours Course

Professional Summary

Mr. Abedeen has more than 30 years of experience in the construction industry. He is an NICET Certified Level II - Highway Inspector and NICET Certified Level I - Water Main. He has extensive experience in highway construction, construction management, and design. His project experience includes highways, bridges, roadways, and tunnels projects. Currently, Mr. Abedeen is the inspector for NYSDOT "Route 9A West Street Promenade Contract Number D260298" in Lower Manhattan, New York through Haider Engineering. Previously, he worked as a project / field engineer and site inspector for various construction projects. Computer Skills: Microsoft OS-Microsoft Window NT/98/XP, Auto CAD, Micro Station Power Point, Microsoft Office, AS/400 Operating System, Certified Cisco Network Associate, and Certified Microsoft System Engineer.

Selected Experience

Techno, Princeton, NJ, PANYNJ, LaGuardia Airport Redevelopment Program - Construction inspector. The program also includes supporting projects undertaken concurrently, by the Authority, to support the New CTB include: (a) demolition of Hangers 2 and 4; (b) Improvements to the public airport roads (excluding New CTB frontage Roads) and utilities; (c) Construction of new East End Substation (EES) serving the New CTB and terminal C and D; 9d) Construction of airfield modifications to support the New CTB ramp configuration; and (e) Construction of a new East Garage serving Terminals C and D, and a new West Garage serving the New CTB. As an Inspector, duties include: coordinating with the field and the design team to resolve conflicts in the drawings; coordinating with the contractor and the maintain as-built drawings of the work; performing all other inspection and field duties as required by the resident engineer; preparing and maintained daily construction inspection and activities reports.

NYSDOT, Route 9A West Street Promenade Contract Number D260298. Lower Manhattan, New York. Construction inspector. Duties included the inspection of all phases of construction and collecting field samples for conformance with NYSDOT specifications, performing of field test of concrete and compaction test for backfilled material. He was also responsible for the electronic recording of daily reports, digital pipe notes/sketches of water main for its submission to DEP and recording of quantities for completed works on a daily basis.

As an inspector for the "project, he is responsible for the following aspects of the project: Planting median and buffer, colored at grade crosswalk and pedestrian refuge at intersections, landscape and Irrigation work for the Construction of West Thames 8"Park, Playground and Garden. This project also includes 90 West, Verizon, 9-11 Memorial and WFC (#1 to #3) Frontage; the Construction of 7.0 Ft high embankment by replacing soil with Light Weight Fill material because of elevated grade of Memorial Frontage; Reconstruction of roof of existing sewer chambers and altering of utilities structure due to change in grade of new PCC Pavement - driving piles to support concrete cradle for 24" – 48" concrete pipe; Installation of sewer manholes and Catch Basin (Type 2 & 3) and laying of 12"/18" DI pipe for storm sewer; Installation of 6" – 20" MJ Valves and fittings for new water main; Installation of 12" polyethylene pipe for high pressure and 16" steel for low pressure gas main; Installation of chain link fence with decorative screen fabric mounted on temporary concrete barrier to establish barricaded work zone; Installation of roadway structure, 12" sub base, 4" permeable base and 11" thick PCC pavement on finished embankment; Installation of Granite Stone paver on 5" thick concrete slab for construction of sidewalk/frontage; Installation of reinforced bollard foundation for bollards in front of Memorial Frontage; Removal and installation of sign structures and footing, painting and paint removal; and Removal of Temporary Pedestrian Bridge at Vesey Street intersection

Estimating, Cost Control and Project Management for various projects. Project engineer Responsibilities included: preparing cost proposals, change orders and time extensions, updating contract drawings on monthly basis featuring as-built condition at site using AUTOCAD and Micro Station. He also updated the construction schedule on a monthly basis monitoring progress at site. He also prepared and reviewed re-bar/structure shop drawing, preparation of submittals for the projects below:

- Yonkers Station Historic Building Rehab, C-9496 (3.4 M)-Metro North.
- Construction of Communication Room, C-43015 (7.1 M)-MTA.
- Brooklyn Battery Tunnel BB-24 (3.4 M) - TBTA.
- Queens Midtown Tunnel QM-10 (4.9 M) - TBTA.
- Rehabilitation of Clifton Maintenance Buildings C-80248 (4.1 M) - MTA.

Jeddah Port Authority, Field Engineer. As a field engineer, Mr. Abedeen was responsible for the inspection of all phases of construction and ensuring that work done as per plan and specifications including installation of catch basins, inlets, storm sewer, placement of concrete and pavement overlay, striping, landscaping, relocation of lightning, overhead signs and junction boxes. His duties also included but not limited to report writing, record keeping of contract documents, quantity take off. He also prepared monthly estimates, change orders, and time extension. He attended the progress meeting as well. This project included the reconstruction of 16 mile highway and widening of two bridges costing $65 million. It consisted of the Fabrication and Erection of various components of bridges, Resurfacing sub-base, base concrete, asphalt, installation catch basin, connection, sewer pipe, manhole, water main and pavement marking including installation of street lights, traffic lights and traffic signs.

Hau (Joe) Nguyen

ELECTRICAL INSPECTOR

Firm: Techno
Years' Experience: 10+

Education:
BS, Electrical Engineering

Registration/Certifications:
AutoCAD Certified
Confined Space Certified
OSHA 10-Hr Construction
Industry Outreach Training

Professional Summary

Mr. Nguyen is an electrical inspector/engineer with more than 10 years of experience working in various projects. His experience combines both electrical systems design and inspection. He has worked on many buildings facilities, including, airports, bridges controls, waste water treatment facilities and residential. In addition, he has worked on trains electrical power stations upgrade for Connecticut DOT, where he drafted electrical distribution and lighting systems. He had also provided electrical inspection services to the Port Authority of New York and New Jersey for the Cristopher Street Substation.

Selected Experience

Techno Consult Inc., Princeton, New Jersey, PANYNJ, Holland Tunnel Electrical and Mechanical Rehabilitation of Ventilation System. Electrical inspector. The project consists of replacement of all 84 huge ventilations fans installed since 87 years including all related accessories. It also includes repairs of supply/exhaust dampers and their ancillaries. Rehabilitate complete instrumentation, sensors and building automation system including revision of software and networking meeting extreme emergency situations modifying firefighting and alarm system. Work also includes replacing VFD (variable frequency drive) meeting varying speeds (frequency) and compatible with the new ventilation fan electric motors.

NYCDEP, $322 million 26th Ward Wastewater Treatment Plant. Brooklyn, New York. Electrical inspector. Mr. Nguyen was responsible for technical review of engineering packages comprised of following systems: power distribution and equipment, illumination, fire alarm and protection, lightning protection and grounding, monitoring and security, data/voice communication and cathodic protection system. Performed engineering and commissioning using PANELBUILDERS 32, QUANTUM, FAUNC, WONDERWARER, MATH CAD, RSVIEW32, CIMPLICITY, PMCS, and VERSAPRO and performed construction inspection for conformance with design and contract specification. Prepared and implemented directives for corrective actions. Evaluated modifications, change orders and prepared recommendations for negotiations and approvals. Coordinated and reviewed the CPM schedule and perform all other inspections and evaluations.

Clove Road facility Upgrade Staten Island, New York

- Researched and designed telephone system, network system, fire alarm system and security system in compliance to all codes regulations. Prepared specification and recommendations write ups of each system. Prepared riser and floor plan drawings for all systems.
- Supervised an electrical team performing new installations, wiring, and electric equipment such as power distribution, transformers, motors, motor controllers, and motor disconnects.
- Supervised field construction activities at the site. Assisted the resident engineer running the facility over the project the owner at the conclusion of the project.

- Responsible for the inspection of the division quality assurance and quality control program. Directed all source inspection activities including resolution of related code requirements and related problems.

Manhattan Bridge Roadway Upgrades, NYCDEP, New York. Researched and calculated dampers for electrical power panels. Field Inspections on vibration effects and CCTV operations on Manhattan Bridge. Revise and draft AutoCAD drawings of current contract. Calculate best illumination for roadway lighting with Micro-Lumens software for illumination layout.

Emergency Rehabilitation for Coney Island Wastewater Treatment Plant, Brooklyn, NYDEP Inspected parts and equipment to be installed and examine laborers work. Supervise drawings with Malcolm Pirnie's Resident Engineer for correct layout and designs. Worked with DEP, Malcolm Pirnie, and FMMC to ensure all specifications comply with Contract 105. Report all work and discrepancy during the project.

Westchester County Airport Perimeter Security Upgrade. Westchester, New York. Researched on security intrusion sensors and CCTV systems. AutoCAD, draft and design security surveillance system, in accordance with TSA and FAA regulations

Cosmos/Kabar, Long Island, New York. Built and assembled RF welding machine, trouble shoot and wire electrical controls, and thoroughly test and inspect welding machines.

Ironton-Russel Bridge Lighting Replacement, Columbus, Ohio Department of Transportation. Researched lighting designs and lighting fixtures. Operate Micro-Lumens software for illumination layout

Brooklyn Shaft Reconstruction, Brooklyn, New York – NYCDEP. Researched on security systems and CCTV cameras for security monitoring. AutoCAD designer and drafter of security and CCTV systems for shaft facility. Prepare specification and recommendations write ups of each system.

Illard Johnson

CIVIL INSPECTOR

Firm: Techno
Years' Experience: 15+

Education:
AAS, Civil Engineering

Registration/Certifications:
NICET II - Highway Construction
NICET III - Highway Construction
ACI CCSJ Concrete Construction Special Inspector
ACI Concrete Field Testing Technician – Grade I
Site Manager Trained

Professional Summary

Mr. Johnson has more than 15 years of experience in Construction Inspection of Highways and Bridges, as well as experienced in performing Bridge Inspections for NYSDOT. He has served as an Assistant Team Leader for four years independently and two years as a Trainee. He has operated NYSDOT's Global Positioning System (GPS) to map and chart bridges for input into the NYSDOT Bridge Inspection Information System. He was also a part of one of the first teams to learn and operate the NYSDOT's Bridge Inspection Program and Pen Interface (BIPPI). He electronically filed bridge reports, attended nysdot meetings, conferences and courses on bridge and highway construction and inspection.

Selected Experience

Techno Consult Inc., Princeton, NJ, PANYNJ, LaGuardia Airport Redevelopment Program. Senior inspector. The program also includes supporting projects undertaken concurrently, by the Authority, to support the New CTB include: (a) demolition of Hangers 2 and 4; (b) Improvements to the public airport roads (excluding New CTB frontage Roads) and utilities; (c) Construction of new East End Substation (EES) serving the New CTB and terminal C and D; 9d) Construction of airfield modifications to support the New CTB ramp configuration; and (e) Construction of a new East Garage serving Terminals C and D, and a new West Garage serving the New CTB. As a Senior Inspector, duties include: coordinating with the field and the design team to resolve conflicts in the drawings; coordinating with the contractor and the maintain as-built drawings of the work; performing all other inspection and field duties as required by the resident engineer; preparing and maintained daily construction inspection and activities reports.

NYSDOT D261997, Bridge Parapet Rehabilitation, Nassau County, New York, New York. Construction inspector. Worked on overseeing the replacement of bridge parapets identified by biennial and interim bridge inspections. The repairs included but were not limited to the replacement of parapet stone masonry walls, which included, scaffolding construction, rebar and dowel placement with ashlar stone form interior walls, coping stones, expansion joints, sidewalk replacement, curb replacement, asphalt roadway sawcutting and partial replacement, guiderail replacement, pedestrian and approach chainlink fence replacement; anti-graffiti spraying and construction support with WZTC inspection.

NYSDOT D261971, D261696, Bridge Rehabilitation, New York, New York. NYSDOT D262044, Sprain Brook Parkway over Route 119, Westchester County, New York. Construction inspector. Worked on overseeing the repair of the deficiencies of bridge components identified by biennial and interim bridge inspections. The repairs included but were not limited to the replacement of expansion joints, retrofitting of web over bearing areas by adding steel angles and plates bolted to the web to counter the effect of web crippling. Scour and undermining repairs under abutments and piers, and bridge replacement inspection including sub and superstructure replacement inspections and construction support inspection.

NYSDOT D262210, Route 9A Westside Highway Emergency Repairs. New York, New York. Construction inspector. Worked on emergency repairs and construction permit work on Route 9A. Duties included identifying structurally deficient highway components for emergency repairs and replacement. Inspected highway components including 15" thick concrete roadway, asphalt pavements, cast iron bollards, traffic signs and signal's footing, concrete barriers, curbs consisting of granite, steel face, and concrete, as well as sidewalks, guard rails, pipe rail fences, fire hydrants, concrete filled fenders, water mains including concrete access chambers, roadway striping, work zone traffic control (WZTC), and the interpretation and communication of construction plans and work orders. Specific duties included ensuring contractor build structures according to contract and emergency repair plans, addendums and safety procedures, along with proper and safe engineering practices. Other responsibilities included inspection and testing of materials (i.e. concrete delivered for construction to work site), as well as office work, including but not limited to the preparation of "daily work reports", sketching and photographing before and after field construction conditions, and creations of current and future "work orders."

NYSDOT D030508, Williamsburg Biennial Bridge Inspection. New York, New York. ATL – inspector. Served as an assistant team leader on the Williamsburg Bridge Biennial Inspection Project. Duties included bridge inspections of roadways, towers, chords, diagonals, verticals, gusset plates, cables and suspension cables. Conducted inspection for missing rivets and bolts. Inspected the bridge with harness and lanyards and monitored expanding and contracting and main load carrying components of the bridge. Provided calculations and measurements for section loss using calipers and other engineering tools. Data was inputted in BIPPI from the field and office.

NYSDOT, Reconstruction of Robert Moses Causeway Bridge. Construction inspector. Supervised bridge rehabilitation and reconstruction for the Robert Moses Causeway Bridge. Responsibilities consisted of super and substructure reconstruction inspection. Inspection Duties include; bridge deck, concrete repairs, steel repairs, guide rail, mill and fill and maintenance and protection of traffic. Compiled and submitted a work log and bridge rehabilitation progress report on a daily basis.

Michael Blackwell

CIVIL INSPECTOR

Firm: Techno
Years' Experience: 25+

Education:
BS, Mechanical Engineering

Registration/Certifications:
OSHA 10 Hour & 30 Hour Training
Scaffolding Certificate - 4 Hour

Professional Summary

Mr. Blackwell is an MEP Inspector with more than 25 years' of experience. He has worked on various projects with many public agencies. He is experienced with HVAC systems inspections, LEED projects, MEP coordination, plumbing and electrical systems.

Selected Experience

New York State University Construction Fund. Duties include review, inspection and (static and dynamic) testing of HVAC, Plumbing, Electrical and Mechanical Systems for the new Computer Science Building being constructed on the campus of Stony Brook University, New York. Additional duties include review of RFI's. Payment requisition, subcontractor review for approval, negotiating change orders, conduct project and coordination meetings and representing the owner/client. The cost of construction is $35 million.

National Park Service, New Building Project, Construction Manager - National Park Service. Assigned to represent the National Park Service to monitor the construction and renovation of the Immigration Building, Ellis Island, New York. Responsibilities include maintaining quality control, estimating, negotiating change orders, conducting project meetings and coordinating work with the contractors. The cost of construction was $5.6 million. This is a LEED project substantial completed in February, 2012.

NYC School Construction Authority. Assigned as the project officer for the new construction of The Early Childhood Center (ECC361) located in the Bronx, New York. Assisting in close-out for the project. Additional responsibilities included negotiating change orders, conducting project meetings, ensuring quality control and assurance for construction regarding mechanical, electrical, HVAC and plumbing systems. This facility was designed as a "LEEDS" project in conjunction with the "Green" requirements for energy and environmental standards. Substantial completion for this project was September 8, 2010. Final close-out was completed for May of 2011.

The construction of a 2.5 million Community Health Center in Port Richmond, Staten Island. Responsible for acting as the Owner's Representative, reviewing contract agreements, negotiating change orders, conducting inspections, ensuring that construction met the standards as prescribed by The New York State Department of Health. Design features included construction of medical examination suites, HVAC and electrical upgrades, plumbing and structural renovations to the existing building. The client was The New York City Health & Hospitals Corporation.

The construction of new Church located in Brooklyn, New York. Responsible for acting on the behalf of Paradise Construction Company for the construction of new church located in Brooklyn, New York. Duties include project administration, supervision, buy-outs, and meetings

with the Owner/Architect/Engineers, estimating and negotiating change orders. Project cost is $ 11 million.

The Cannon Design Group/Signal Construction. Duties included inspection of existing mechanical, electrical and plumbing systems for The Roosevelt Union Free School District, Roosevelt, New York. Prepared reports, cost estimates and evaluations. Monitored and inspected installation of mechanical equipment (heating, ventilation and air conditioning) within the district's five schools. Review contract documents for construction, conformance and design. Solicited and qualified bids submitted by mechanical contractors. Attended school board and community meetings. Prepared monthly reports.

William Grooms

CONSTRUCTION MANAGER

Firm: JCMS	**Education:**	**Registration/Certifications:**
Years' Experience: 25+	AS, Architecture/Construction Technology	See below

Registrations/Certifications

ACI Concrete Construction Special Inspector - ID# [redacted] Exp. Date: 8.11.2017
NICET Level I Highway Construction License No. [redacted] Exp. Date 05.01.2017
Structural Steel Inspection Steel Structures Technology Center, Inc.
ACI/PCA 318-05 Building Code Seminar
Masonry Training Courses NYC Brickwork Design Center
OSHA HAZWOPER 40 Hour Certified
NYC DOB 16 hr. User Course (Suspended Scaffolding) ID# [redacted]
OSHA Confined Space Entry License No. [redacted]
OSHA 10hr Safety Course ID# [redacted]

Professional Summary

Mr. Grooms is NICET certified inspector with more than 29 years of experience in construction management and inspection. His project experience includes inspections of building projects, environmental projects as well as highway construction. He has also performed technical special inspections as and when the projects required. Mr. Grooms is an experienced project manager and inspector of public works projects and is capable of reviewing NYC Building and Zoning Codes, NYS Building Codes, NYSDOT Specifications, ASTM and ACI codes, and is able to work with MURK record keeping. He is a member of ASTM, ASCET, NICET and ICC. Mr. Grooms' software experience includes several project management applications such as: Primeravera, Constructware, Skire and Ibuild.

Selected Experience

Columbia University - Manhattanville Campus. Project manager for special inspections of construction of new 450,000 square foot Jerome L. Greene Science Building Mr. Grooms' responsibilities were to oversee construction from foundation through superstructure for compliance with NYCDOB 2008 Building Code in compliance with Special Inspection Requirements, review project plans and specifications, review inspection reports, prepare summary reports, non-conformance reports and report findings to client. He also directed a team of up to 18 special inspectors, kept inspection logs and records for client on Skire.

Columbia University – Term Agreement Projects. Project manager. Mr. Grooms was a project manager for special inspection for Columbia University building renovation of various buildings on the Columbia University Campuses (16 locations at this time). His duties were to oversee construction for compliance with NYCDOB 2008 Building Code, compliance with Special Inspection Requirements, review project plans and specifications, review inspection reports, prepare summary reports, non-conformance reports and report findings to client. Supervise special inspection teams.

NYCDDC - New York City Department of Design and Construction projects. Project manager. As project manager Mr. Grooms oversaw major municipal construction projects for compliance

with NYCDOB 2008 Building Code for compliance with Special Inspection Requirements, review project plans and specifications, review inspection reports, prepare summary reports, non-conformance reports and report findings to client. Two of the larger projects were PSAC II in the Bronx and new Police Academy in College Point

QA/QC Supervisor. Mr. Grooms responsibilities were to visit construction sites to verify quality of inspectors work, verify compliance with correct inspection procedures and standards, verify inspection compliance with project plans and specifications, verify inspector documentation of testing results and report findings to testing laboratory director.

DASNY – Term Agreement for Construction Inspection and Materials Testing Services. Construction inspector. Mr. Grooms performed construction inspections and materials testing for concrete, rebar, fireproofing and fire stopping. He led several projects to completion, reported findings to appropriate parties, communicated with on-site personnel to ensure compliance and worked together with various trades.

NYC School Construction Authority, Various Boroughs, Consultant Services for Controlled Inspection. Mr. Grooms responsibilities included performing Controlled Inspection and testing inspections of Concrete placed on-site, rebar, masonry, curtain walls, fire proofing and fire stopping at various project locations, reporting circumstances of field activity to Project officers and maintaining supportive documentation of field activities and Contractor operations.

Domani Consulting, Inc., New York. Director of technical services. Mr. Grooms provided technical assistance to all divisions of CRSG, Inc., conducted special inspections of various buildings during construction, reviewed all construction inspection reports for conformance to plans, specifications and NYC Building Department requirements, provided interpretation of NYC Building and Zoning codes as required. He started vibration monitoring programs for subway tunnels and landmark buildings per NYCTA requirements; NYC regulation 10/88 for landmark buildings, designed and recommended various training programs for technical staff and also created a technical division with 12 inspectors, on 46 projects in various stages of construction and implemented a full record keeping system.

Town of Smithtown, New York. Assistant civil engineer. Duties and Responsibilities: Public works construction project management and inspection (concrete, rebar, fire stops, fire proofing, masonry, soils, curtain walls, piles driven and drilled, excavation, shoring, sheeting, major steel retaining wall w/grouted tie back system, pile design, timber bulkheads, storm water system design and inspection, project design from inception through construction; prepared specifications and bid documents, building inspections, material testing, estimating, environmental projects and waste management groundwater monitoring, methane monitoring/recovery, and landfill construction. Designed and implemented storm water runoff control projects to protect local rivers and Long Island Sound. Reviewed all commercial site plans for compliance with town engineering requirements. Was clerk of the works on landfill capping project and clerk of works for the reconstruction of town swimming pool complex at Smithtown Landing Country Club.

Alexander Jimenez, EIT

CIVIL ENGINEER

Firm: JCMS	**Education:**	**Registration/Certifications:**
Years' Experience: 12+	BS, Civil Engineering	See below

Registrations/Certifications

EIT Florida Board of Engineering, since April 2005 Florida Board of Engineering
ACI -1 Field testing technician
ACI - 2 Concrete Construction Special Inspector
ICC Structural Steel and Bolting Special Inspector
OSHA. – 10 Hrs. Construction Safety and Health
ICC Structural Masonry Special Inspector
4 Hrs Scaffold

Professional Summary

Mr. Jimenez is certified Structural Steel and Bolting Special Inspector and has more than 12 years of experience in civil engineering, construction inspection, and management. On a daily basis, he has inspected various facets of work on construction sites and monitored construction activities to ensure compliance with all applicable codes, standards, and specifications. He is very proficient in reading and interpreting plans, specifications, and shop drawings. He is an experienced construction management professional with experience in construction of buildings, foundation rebar, concrete, steel bolting, steel erection, and masonry. He is well versed in computers and various software programs in MS Windows environment.

Selected Experience

WSP USA Corp. Structural engineer/structural field inspector. Structural inspector for high rise building construction. Deep foundation systems and superstructure.

Universal Testing Lab, Queens, New York. Special inspector, ICC. Inspector on construction of buildings, foundation rebar, concrete, steel bolting, steel erection, masonry, fire proofing and fire stopping by NYC SCA, DASNY. Provide inspection (building structures, facades, roofing, structural rehabilitation, concrete etc.) of all work in place. Review and approve construction check-off lists to insure that work performed is in accordance with the contract specifications and applicable codes.

City Wide Testing Lab. Queens, New York. Construction inspector. TR 1 Inspector on construction of buildings from shoring, foundation rebar, concrete, Steel bolting, steel erection, masonry, mechanical ventilation, fire proofing and fire stopping.

Approved Testing Lab. Queens, New York. Construction inspector. Supervised and inspected construction works on different size of buildings. Steel, masonry, concrete and fireproofing inspection.

Ceron Associates. Newark, New Jersey. Estimator. Prepared construction quantities and pricing for commercial projects, including material and labor (union, no union) by a general contractor company, with value around $ 5 million. Oversaw project budget, and schedule for a building, with a value of $2.2 million.

Jorge T. Lozano University. Bogotá, Columbia. Chief engineer. Supervised construction of three buildings, one 8-story metallic structures for classroom and two concrete structure classroom spaces and one combination library/gymnasium, with a total area of 150,000 sf and value of approximately $20 million. Designed, scheduled, and inspected maintenance work, with a value of 1.3 million for each year. Designed, scheduled, and inspected electric, hydraulic, and gas network changes with a value of $2 million.

Ketul Gandhi

COST ESTIMATOR

Firm: JCMS
Years' Experience: 5

Education:
MS - Construction Management
BE - Civil Engineer

Research Assistantship

Registration/Certifications:
OSHA 30 hours
NJ TRANSIT Construction Management

Professional Summary

Mr. Gandhi has more than five years of experience working with USMA (U.S. Military Academy), PANYNJ, NYCSCA (New York School Construction Authority), NAVFAC (Naval Air Base), GSA (General Service Administration), NYC Housing Authority as estimator, project scheduler, and project engineer and involved in a variety of projects that include infrastructure, industrial, institutional, commercial and residential building projects. He prepared change order, negotiated with clients, implemented activities related to change order without delaying/disturbing any existing activities. Mr. Gandhi has expertise in preparing quantity take-off and costing of projects including vendor verification of costs for specialty items. He has a keen understanding of market prices of material and equipment as it relates to various types of projects. His software skills include Win Estimator software, OST (On-Screen Takeoff), Primavera Project Planner P5 & P6 and Microsoft Project in addition to AutoCAD and MS Office products such as Word, Excel etc.

Selected Experience

PANYNJ - Newark Aviation Fuel System Modification, Newark, New Jersey. Cost estimator. The $90 million Newark Liberty International Airport Fuel Systems Modifications project will install nearly 30,000 linear feet of underground double walled aviation fuel piping. The project will also add two new 47,600 bbl above ground tanks, two new truck fueling racks, a contact water treatment facility, fuel selection area manifold, modifications to four pump stations including new PLCs and controls. Mr. Gandhi is responsible for providing cost estimating services.

MTA- Penn Station Visioning Study, New York, New York. Cost estimator. The Penn Station Visioning Study is a "blank slate" planning study intended to optimize customer circulation and way finding, customer service amenities and station real estate utilization through 2035. The study is also tasked with creating a street presence for the station and a unifying vision for the station's three railroads. His responsibilities include performing construction cost analyses to score the different concepts.

TBTA - Substructure and Underwater Work at the Marine Parkway Bridge, New York, New York. Cost estimator. The project consists of detailed design services and supporting design services during construction for the scour protection restoration at Piers #2 (7) through #11 (18); rehabilitation of damaged bridge pier protection steel plates, rehabilitation of unsound concrete on all substructure elements such as North and South abutments, pier caps and pier stems above high water, within the tidal zone and underwater, and upgrade of the ancillary electrical system at the Marine Parkway Bridge. Mr. Gandhi is responsible for reviewing the

detailed Construction Cost Estimate to ensure that the cost estimate reflects all the final revisions and comments incorporated in the 100% design document.

LIRR - Jamaica Stations Expansion Project, New York, New York. Cost estimator. The "Jamaica Capacity Improvements – Phase I Design" provides the Cross-Borough Scoot and the infrastructure improvements needed to increase capacity required for ESA operations. The creation of Platform F will permit the separation of Brooklyn service from the main station platforms to accommodate the projected needs of ESA. Phase I will also include modification of the existing microprocessor-based signal system, with respect to added switches and other modifications required for Phase I construction. Mr. Gandhi is responsible for providing estimating services at 30, 60, 90 and 100 percent.

NJ Transit - Newark Penn Station Raymond Plaza East Architectural Improvements, Newark, New Jersey. Cost estimator. The project consists of removal of existing ADA ramp, construction of new ADA ramp, glass canopy with structural steel-concrete footing, new screen wall, new concrete sidewalk, electrical modification including new light fixtures. Mr. Gandhi has provided estimating services at 30 and 90 percent.

NJ Transit Sandy Recovery: Initial Flood Assessment and Initial Near-Term Recommendations. Worked with PB World and Tran Systems in developing cost estimate for identified portions of NJ transit system which requires "near-term" flood mitigation and resiliency measures based on interim draft report. Estimate includes cost for Flood Mitigation, Backup Generator & Electrical hook-up-conduits-wire-transfer switch, Sump Pump, Trash Pump, On call implementation cost for contractor before and after storm for NJ Transit facility: Newark Penn Station, Secaucus junction, NLR Bloomfield Station, NLR Broad Street Station.

NJ Turnpike Authority- Garden State Parkway Miscellaneous Repairs. Worked with Tran Systems in developing cost estimates for Substructure (Abutment & Pier-Under Water & above Grade) located at Swimming River, Matawan Creek, Cheesequake Creek. Estimate included cost for Substructure Concrete Spalled repair, Bridge repair, Concrete Collar installation-Underwater, Embankment-Slope protection, Membrane Waterproofing.

Amtrak/NJ Transit - Portal Bridge Capacity Enhancement – North River Bridge, New Jersey. The $1 billion project is to replace the existing Yr-1910 built, swing span structure bridge with a new 3-span network tied arch bridge to ensure uninterrupted NE Corridor service as well as navigation through Hackensack river. Mr. Gandhi was responsible for quantity take-off thru 100 percent CD drawings. Performed take-off for Structural and Reinforcement Steel, Concrete for following bridges and retaining wall:

- Tracks 2 and 3 over Newark-Jersey City Turnpike
- Tracks 2 and 3 over West Lagoon and Belleville Turnpike
- Duck under Structure carrying Tracks 2 and 3 over future Track 4
- West Approach Spans (carrying Tracks 2 and 3) to the River Bridge
- Tracks 2 and 3 over the Hackensack River (River Bridge)
- East Approach Spans (carrying Tracks A, 2 and 3) to the River Bridge and over Norfolk Southern.

Kevin Meehan

SENIOR COST ESTIMATOR

Firm: JCMS
Years' Experience: 14+

Education:
BS, Civil and Environmental Engineering

Professional Summary

Mr. Meehan has more than 14 years of experience in the field of construction cost estimating. His diverse experience comprises a wide variety of projects that includes estimation of transit / industrial / commercial/ institutional/ high-rise / educational, etc. Mr. Meehan has been responsible for developing budgetary and final construction cost estimates, contract pricing and change orders, contract negotiations, interface and coordination with contractors, owners and A/E consultants on project issues, assisting owners on construction phasing and scheduling, coordinating with the A/E of record regarding change orders, interpretation of contract documents, submittal and approvals and related technical matters, review of contractors claims of disputed work, providing detailed takeoff and pricing for sitework, foundations and recommending appropriate action to owner.

Selected Experience

NJ Transit - Sandy Recovery and Long Term Flood Mitigation and Resiliency. Secaucus Junction and Newark Penn Station. Flood barriers, electrical redundancy, Sandy repairs.

The Secaucus Junction Platform Extensions. Project is a $1.5 million effort to extend two island platforms an additional 120 feet each on the four tracks NJ Transit Main Line.

NJ Transit - Hoboken Terminal and Yard: Sandy Repairs and Remediation, Flood Mitigation and Resiliency. The project is to restore the terminal and yard operations, while at the same time increasing the system's resiliency - its ability to withstand and recover quickly from future storms. Mr. Meehan is responsible for providing cost estimating services.

Mr. Meehan is responsible for providing cost estimating services on the three above mentioned projects.

PANYNJ – Newark Aviation Fuel System Modification, Newark, New Jersey. The $90 million Newark Liberty International Airport Fuel Systems Modifications project will install nearly 30,000 linear feet of underground double walled aviation fuel piping. The project will also add two new 47,600 bbl above ground tanks, two new truck fueling racks, a contact water treatment facility, fuel selection area manifold, modifications to four pump stations including new PLCs and controls. Mr. Meehan is responsible for providing cost estimating services.

NJ Transit- Sandy Recovery: Initial Flood Assessment. Estimate includes cost for flood mitigation, backup generator and electrical hook-up-conduits-wire-transfer switch, sump pump, trash pump, on call implementation cost for contractor before and after storm for NJ Transit facility: Newark Penn Station, Secaucus junction, NLR Bloomfield Station, NLR Broad St. Station.

NJ Transit - Capital Asset Replacement Program (HBLR &SNLRT), New Jersey. Senior cost estimator. The CARP program consists of projects including Resurfacing of the Plank Interlocking and the Lackawanna Curve, Harborside track replacement, Replacement of light fixtures, the UPS system and fire protection piping at the LRV Maintenance Facility, bollard replacement at the Newport Viaduct and replacement of various equipment and furniture. Mr.

Meehan is responsible for providing capital cost estimates for NJ Transit's Hudson-Bergen Light Rail and River Line system infrastructure and facilities.

CATS Charlotte Area Transit System, Lynx Blue Line Extension. The Charlotte Area Transit System Blue Line Extension is a $1 billion, 9.3 mile extension of the Charlotte, NC light rail system. The extension will service 11 new stations, including seven walk-up stations and four stations with park and ride facilities. Mr. Meehan's responsibility as the Cost Estimation Manager for the Project Management Oversight Contractor (PMOC) team was to perform a Risk Management and Contingency Review related to project cost.

Columbia Pike Streetcar, Arlington County, Virginia. Mr. Meehan was the cost estimating manager for the Hill International Project Management Oversight Contractor contract, which provided a Readiness Review for Entry into Project Development. The Columbia Pike Streetcar project is a 4.93 mile electrically powered modern streetcar system that originates in the Pentagon City area of Arlington County, Virginia and terminates in the Skyline area of Fairfax County, Virginia. $310 Million

NJ Transit TOC - Secaucus Junction Platform Extension. Secaucus, New Jersey. Senior cost estimator. The Secaucus Junction Platform Extensions project is a $1.5 million effort to extend two island platforms an additional 120 feet each on the four track NJ Transit Main Line. Mr. Meehan was responsible for providing cost estimating services.

NJ Transit TOC - Frank R. Lautenberg Station Intermodal Facility - Soil Improvement Contract. Secaucus, New Jersey. Senior cost estimator. The Soil Improvement Contract is a $3.5 million project to improve the bearing capacity of the swamp adjoining the station in order to build a bus station at the facility. Mr. Meehan was responsible for providing cost estimating services.

LIRR - Station Master's Office Renovation. New York, New York. The renovation of Station Master's Office (SMO) on the concourse level of New York's Penn Station was a $2.5 million project to update the nexus of the railroad's station monitoring and information network. Mr. Meehan provided preconstruction management and estimating services.

LIRR - Jamaica Stations Expansion Project. New York, New York. The Jamaica Capacity Improvements – Phase I Design, provides the Cross-Borough Scoot and the infrastructure improvements needed to increase capacity required for ESA operations. Mr. Meehan provided estimating services at 30, 60, 90 and 100 percent.

MNR - Grand Central Terminal Leak Remediation. New York, New York. Grand Central Terminal in midtown Manhattan is planning a $20 million leak remediation project to repair and prevent damage from water intrusion. Mr. Meehan provided preconstruction management and estimating services.

PANYNJ - National September 11th Memorial & Museum, New York, New York. Mr. Meehan provided detailed cost estimates for bid packages relating to the $530 Million museum/memorial portion of the reconstruction of the World Trade Center site. Provided detailed takeoff and pricing for sitework, foundations, super-structure and architectural building elements. Analyzed and tracked cost impact of revisions, changes, addenda, etc. Negotiated contract pricing and change orders with subcontractors and general contractors.

Murali Nambiar

SCHEDULER

Firm: JCMS
Years' Experience: 24+

Education:
BS, Civil Engineering
MBA

Registration/Certifications:
Primavera Certified P6 Trainer
Project Risk Management in Primavera Pertmaster – Oracle University

Professional Summary

Mr. Nambiar is an engineering professional with more than 24 years of experience on diverse construction projects including mass transit, commercial, industrial and institutional buildings, and defense department projects. Areas of experience include project management, construction management and project control providing planning, scheduling, resource/cost control, delay claims analysis and schedule risk analysis on a variety of engineering, procurement and construction projects from bidding to design, construction and closeout. Mr. Nambiar is a Primavera Certified Trainer. He has incorporated change orders with associated logic changes, prepared recovery schedules and performed time impact/delay analysis to determine the impact of changes on project completion.

Selected Experience

NJT / Amtrak - Portal Bridge Capacity Enhancement – North River Bridge, New Jersey (2013-Ongoing) The $1 billion project is to replace the existing Yr-1910 built, swing span structure bridge with a new 3-span network tied arch bridge to ensure uninterrupted NE Corridor service as well as navigation through Hackensack river. Mr. Nambiar developed program master schedule including detailed staging to ensure uninterrupted NE Corridor operations during construction and cut-overs based on 60 percent design documents.

PANYNJ - World Trade Center Transit Hub Project, New York (2012- Ongoing) Mr. Nambiar is responsible for developing and maintaining two master schedules – West Bath Tub & East Bath Tub. Both master schedules are level 5 detailed schedules with over 6,000 activities each.

PANYNJ - PATH Capital Program Management Services (2012) Mr. Nambiar developed integrated resource loaded schedule and optimized resource requirements for proposed $2.5 billion, 10 year capital program projects for PANYNJ's PATH Rail System. Mr. Nambiar's responsibilities included preparation of questionnaire for interviews, understanding the scope, duration and resource requirements.

LIRR Jamaica Capacity Improvement, New York (2013) Mr. Nambiar developed detailed resource loaded schedule for LIRR for construction of new platform at Jamaica and signal and track modifications necessary to connect Long Island with Grand Central in Manhattan.

NJ Transit - The Trans-Hudson Express Tunnel, NJ-NY (2010) The Trans-Hudson Express Tunnel is a railroad tunnel that was to be built under the Hudson River, connecting New Jersey and New York. Mr. Nambiar was involved in the early stages of the project for developing the Master Schedule for the construction phase of the project.

NYCT - Rehabilitation of Culver Line Viaduct, Signal & Communication Upgrades (2010) The project consisted of removing all track, repairing and waterproofing the concrete deck, setting

new low-vibration track in place and installing all-new track drains. The project also comprised of signal and power work to the third rail and communications work. Mr. Nambiar was responsible for developing the resource loaded baseline schedule and performing resource analysis.

MSDC Moynihan Station Phase I, New York (2013 – Ongoing) The $220 million projects will double the width and length of West-end Concourse at the New York Penn Station. Mr. Nambiar developed program master schedule, and resource and cost loaded it to develop budget and annual cashflow. Also, incorporated Amtrak and LIRR force account work in the schedule to develop force-account budget and schedule.

MTA - East Side Access Harold Interlocking VE & Peer Review (2012)

MTA - East Side Access Manhattan Peer Review

Houston Metro North & Southeast Corridor. The $1.6 billion Houston light-rail expansion of North (Red) line by 5.3 miles and Southeast (Purple) line by 6.6 miles is part of Houston's strategic development program. Mr. Nambiar participated in risk workshop; reviewed & ascertained potential schedule impacts; carried out risk analysis; and prepared reports.

SANDAG Mid-Coast Corridor Transit Project, San Diego, CA (2013) The $1.2 billion Mid-Coast Corridor Transit Project proposes to construct an 11-mile line between Downtown and University City, linking the two regions via a light rail. As part of PMOC team member, Mr. P participated in risk workshop; reviewed and ascertained potential schedule impacts; carried out risk analysis; and prepared reports.

LIRR – Power & Track Project Control/ Scheduling Services for LIRR Force Account Projects, New York, NY (2009) Mr. Nambiar provided Project Control/CPM Scheduling services to the Engineering Department at LIRR where he was responsible for power and track projects

MNR – Hudson Line Station, Phase 2C – Tarrytown, New York (2010) The Metro North Line Tarrytown Station Project involves the reconstruction of platforms #2, #3 and #4 and the installation of new overpasses. Mr. Nambiar is responsible for reviewing the contractor prepared CPM Schedule for accuracy and reasonableness of schedule duration, logic and critical path.

DRPA- Ben Franklin Bridge- Deck Truss Rehabilitation, Philadelphia, Pennsylvania (2011) DRPA – Betsy Ross Bridge, Philadelphia, Pennsylvania: Mr. Nambiar is responsible for developing baseline schedules and preparing monthly updates.

NJ Transit – Morrisville Train Storage Yard, Morrisville, New Jersey (2006) The $100 million Phase II work includes expansion of the Morrisville Yard to double train storage capacity, including additional electrified tracks to accommodate 120 rail cars, two elevated inspection tracks in a fully enclosed service & inspection (S&I) facility, a wheel truing facility, and expansion of the crew quarter building and employee parking area. Mr. Nambiar was responsible for reviewing and analyzing contractor's CPM baseline schedule, monthly updates and comment on schedule integrity and progress. He was also responsible for reviewing and analyzing contractor's time impact analysis requesting time extension.

Robert Vincent PE

ENGINEER

Firm: Naik Consulting Group
Years' Experience: 13

Education:
BS, Civil Engineering

Registration/Certifications:
Professional Engineer(NY, NJ)
American Society of Civil Engineers

Professional Summary

Mr. Vincent has 13 years of experience in civil engineering. His experience includes extensive roadway design work for production of contract documents for private clients and public agencies. He is skilled in using AutoCAD Civil 3D Design software, Microstation Inroads, Microsoft Office, Microsoft Project, Horizontal and Vertical Roadway design, design and construction cost estimation, contract plan production, roadway grading, maintenance and protection of traffic (MPT),right of way, access design, earthwork calculations, traffic signal design, and shop drawing review. Mr. Vincent also had the opportunity to direct, schedule, mentor and supervise entry-level junior engineers and share his experience.

Selected Experience

NJTA Improvements to Garden State Parkway Interchanges 41 and 44. Galloway Township, New Jersey. Project engineer with the responsibilities which included the review of grading, horizontal and vertical alignment, utility relocation design, roadside design, construction sequencing, and MPT for multiple phase submissions by the NJTA's design consultant. This design project was prepared and delivered in accordance with the NJTA's Procedures Manual, Design Manual, Road User Cost Manual, Manual for Traffic Control in Work Zones, and Standard and Supplemental Specifications.

NJTA Improvements to Garden State Parkway Interchange 105. Tinton Falls, New Jersey. Project engineer for the widening of the northbound and southbound GSP local roadways to accommodate two deceleration lanes for exiting traffic, construction of a new exit ramp from the southbound local roadway to Wayside Road and construction of a new southbound exit ramp structure over Pink Brook Road and the NJ Transit/Conrail tracks in the Borough of Tinton Falls, Monmouth County, NJ. His responsibilities included the review of grading, horizontal and vertical alignment, utility relocation design, roadside design, construction sequencing, and MPT for multiple phase submissions by the NJTA's design consultant. This design project was prepared and delivered in accordance with the NJTA's procedures manual, design manual, road user cost manual, manual for traffic control in work zones, and standard and supplemental specifications.

NJTA Improvements to Garden State Parkway Interchanges 9,10,&11. Middle Township, New Jersey. Project engineer with the responsibilities which included the review of grading, horizontal and vertical alignment, utility relocation design, roadside design, construction sequencing, and MPT for multiple phase submissions by the NJTA's design consultant. This design project was prepared and delivered in accordance with the NJTA's procedures manual, design manual, road user cost manual, manual for traffic control in work zones, and standard and supplemental specifications.

NJTA Garden State Parkway Milepost 83 to Milepost 100 Shoulder Widening Program. Various Locations, New Jersey. Project engineer responsible for the review of grading, horizontal and vertical alignment, utility relocation design, roadside design, construction sequencing, and MPT for multiple phase submissions by the NJTA's design consultant. This design project was prepared and delivered in accordance with the NJTA's procedures manual, design manual, road user cost manual, manual for traffic control in work zones, and standard and supplemental specifications.

NJTA Garden State Parkway Milepost 30 to Milepost 63 Widening Program. Various Locations, New Jersey. Project engineer responsible for the review of grading, horizontal and vertical alignment, utility relocation design, roadside design, construction sequencing, and MPT for multiple phase submissions by the NJTA's design consultant. This design project was prepared and delivered in accordance with the NJTA's procedures manual, design manual, road user cost manual, manual for traffic control in work zones, and standard and supplemental specifications.

NJTA Improvements to Garden State Parkway Interchange 163. Paramus Borough, New Jersey. Project engineer responsible for the review of grading, horizontal and vertical alignment, utility relocation design, roadside design, construction sequencing, and MPT for multiple phase submissions by the NJTA's design consultant. This design project was prepared and delivered in accordance with the NJTA's Procedures manual, design manual, road user cost manual, manual for traffic control in work zones, and standard and supplemental specifications.

NJTA Interchange 18W Ramp Improvements. Meadowlands Sports Complex, New Jersey. Design engineer for the final design of the improvements to NJT exit ramps into the sports complex. A two-lane exit ramp separated by concrete median barrier was added to the southbound roadway leading into the complex. Responsibilities included providing direction to two junior-level engineers and one CADD Technician as well as oversight of the production of construction plans, grading plans, profiles, MPT, typical section, cross section, etc.

NJDOT U.S. Route 9 Widening and Improvements. North Bergen, New Jersey. Design engineer for the widening and inter improvements of approximately ¾ mile of US Route 9 in association with the construction of a Walmart retail shopping center. Responsibilities included incorporating improvements required as a result of the shopping center construction into an existing NJDOT construction contract in the immediate vicinity. Extensive coordination with the NJDOT and their consultant was required to achieve project success. Other responsibilities included providing direction to two junior-level engineers as well as oversight of the production of construction plans, grading plans, profiles MPT, typical section, cross section, etc.

Samir Mody PE

ENGINEER

Firm: Naik Consulting Group
Years' Experience: 31

Education:
MS, Civil Engineering
BS, Civil Engineering

Registration/Certifications:
Professional Engineer(NJ, PA, DE)
American Society of Highway Engineers (ASHE)
American Council of Engineering Companies (ACECNJ)

Professional Summary

Mr. Mody possesses more than 31 years of experience in the administration, management, design and construction of complex civil / transportation engineering projects. His technical experience is balanced equally between design and construction during his career while serving both the public and private industries.

Selected Experience

PANYNJ Goethals Bridge Replacement. Elizabeth, New Jersey to Staten Island, New York. Constructability reviewer for the structural design services performed by Naik as part of the replacement of the 80 plus year old Goethals Bridge. Oversaw the structural efforts which included final design for several structures including bridges, retaining walls, deep foundations and substructures for the NY and NJ Approaches. Bridge structures include the Old Place Creek Trestle, a 4-span continuous structure (4x 40 = 160 feet) consisting of prestressed voided slabs, integral abutments, and precast pile caps over steel pipe piles (24 inches in diameter), which forms a portion of the at-grade construction and maintenance access roadway between the NY approach spans and the abutments at the Staten Island Terminus as well as precast modular retaining walls (up to 25' high T-walls, totaling more than 1,000' in length) including those along the approaches to the NY and NJ abutments.

Constructability Consultant Services were performed on several in-house bridge design projects in advance of advertisement to mitigate potential delays and claims during construction. Designs were thoroughly reviewed to address: availability of adequate staging areas; construction staging/sequencing; constructability of MSE walls & foundation systems; utility relocations; location & turning angles of equipment; primavera schedule, and cost estimates reflective of market conditions. 1991-2001**NYSDOT Gowanus Expressway Emergency Repair of Route I-278 Viaduct, Brooklyn, New York, PIN 10 (Bents 54 thru 247). Constructability reviewer** of the rehabilitation of a 3.8-mile elevated section of Interstate 278 in southwest Brooklyn. This project was part of NYSDOT's ongoing Deck Replacement Program for the Gowanus Expressway. The project is a Joint Venture between Bechtel, Chas Sells and URS Corporation. Each firm was assigned a stretch along the Gowanus Expressway designated for deck replacement. Due to the high traffic flow demands on the structure, an elaborate MPT construction sequence was developed which includes five eastbound construction stages and four westbound construction stages. Portions of the deck replacement were designated to be replaced using accelerated concrete in areas near ramps where staging requirements are

typically difficult to implement. ProjectWise software was utilized so that all project team members have instant access via internet to the latest current design drawings. Responsibilities included review of the contract plans and design details for the concrete CIP deck replacement and associated steel repairs through coordination with the joint venture team.

NJDOT Region North Term Agreement (2010-2013) / Region North Deck Replacement term Agreement (2009-2013), Various Locations. Project manager responsible for staffing the project with competent construction engineering inspection (CEI) personnel to provide sufficient coverage of the contractor's work force; oversaw the quality of work provided by the CEI staff; attended job progress meetings; assisted the NJDOT RE with administrative functions, as requested; and prepared monthly invoices, Goal Compliance Forms and other administrative functions, as requested by the Region's consultant coordinator.

NJDOT Route 1&9T (25) St. Paul's Ave. Viaduct & Catenary Tower Construction, Jersey City, New Jersey. Project manager on the replacement of Routes 1&9T St. Paul's Avenue Viaduct, Catenary Tower Construction and the reconstruction of the Tonnele Avenue Circle and Charlotte Avenue in Jersey City. This is a multi-disciplinary project consisting of 11 new bridges, 45 retaining walls, 20 overhead and cantilever sign structures, two catenary structures, MSE wall construction, demolition of existing bridges and walls and miscellaneous structural steel repairs to the Viaduct and Pulaski Skyway. In addition, this contract included the reconstruction of the Tonnele Avenue Circle and Charlotte Avenue, milling, HMA paving, traffic control and safety, extensive utility relocation, traffic signal installation, ITS installation at 19 sites, landscape work and new electrical and communication infrastructure, including point to point wireless antennas (11 locations); travel time systems (seven locations); dynamic message signs (five locations) and CCTV cameras (nine locations), linked to the Statewide Traffic Management Center (STMC). The project was constructed in multiple stages with complex maintenance and protection of traffic (MPT), tight work zones and active traffic on high-volume roadways and railroads.

NJTA Interchange 8, East Windsor Township, Mercer County, New Jersey. Project manager for providing contract administration and management services, including providing appropriate support staffing; regular interface with the Authority's project field liaison engineer; preparing/monitoring project reports, budgets and invoices; attending and recording minutes from pre-construction conference and bi-weekly progress meetings; performing reviews of contractor's master and monthly updated primavera schedules; the construction of a new Milford Road Bridge and a maintenance U- administering the Authority's OCIP program; and reviewing the contractor's RFIs and value engineering requests. This reconstruction project is part of the Authority's Interchange 6-9 Widening Program.

Franco George PE, AVS, CSSM

LEAD ESTIMATOR/ EARNED VALUE SPECIALIST

Firm: JCMS, Inc.
Years' Experience: 30

Education:
MS, Construction Management
BE, Civil Engineering
Postgraduate Diploma, Highway and Transportation Engineering

Registration/Certifications:
Licensed Professional Engineer - State of New York (PE)
Certified Site Safety Manager in the State of New York (CSSM)
Associated Value Specialist (AVS) - Board of SAVE International
NYCDOB Site Safety Manager

Professional Summary

Mr. George has more than 30 years of experience in the field of construction management and project management in various capacities as chief estimator, project officer, construction manager, project manager, project coordinator, and construction engineer. He has a wide variety of experience including developing budgetary and final construction cost estimates, value engineering, contract negotiations, review of design development drawings, management of A/E consultant during design process, interface and coordinate with contractors, owners and A/E consultants on project issues, assisting owners on construction phasing and CPM scheduling using Oracle Primavera, coordinating with A/E for change orders, interpretation of contract documents, submittal and approvals, reviewing contractors' claims of disputed work and recommending appropriate action. Mr. George has also been responsible for developing detailed hard bid cost estimates, reviewing and commenting on contractor prepared CPM schedules and construction delay claims for large and complex projects in metropolitan New York area and for United States Army Corps of Engineers. Mr. George is proficient in the use of Oracle Primavera, Expedition document control software, E=MC2 Estimating software, Timberline Estimating, MS Office Suite and Auto Cad.

Selected Experience

TA PMO Maryland Transit Administration - Department of Transportation, Baltimore Red Line Project, Maryland, Chief Estimator. Cost Estimate of the project is $ 2,575 Million. The Baltimore Red Line is a proposed 14.1mile rail transit line construction that will provide connections between the Woodlawn areas of Baltimore County, West Baltimore communities, downtown Baltimore, Inner Harbor East, Fells Point, Canton, the Johns Hopkins Bayview Medical Center. The proposed Red Line will connect directly to the already existing Light Rail, Metro Subway and MARC Train – making a more comprehensive transit system for public transit users. Mr. George is responsible for developing and updating the capital cost estimate through the Preliminary Engineering and Final Design phases of the project development process. The purpose of documenting the estimating methodology is to assure consistent and uniform estimates; provide tracking of cost estimate revisions; expedient cost estimate adjustments, due to new or revised alternative variations; provide an adequate foundation for

further development of cost estimates in subsequent development phases and facilitate the advancement of the project through FTA's New Starts process

FTA PMO SANDAG Mid-Coast Corridor Transit Project, San Diego, California, Chief Estimator. The $1.2B Mid-Coast Corridor Transit Project proposes to construct an 11-mile line between Downtown and University City, linking the two regions via a light rail. As part of PMOC team member, Mr. George is responsible for developing & updating the capital cost estimate through the Preliminary Engineering and Final Design phases of the project development process.

Port Authority of New York & New Jersey (PANYNJ) - World Trade Center Reconstruction Project, New York, Lead Estimator and Earned Value Specialist. Project Cost $ 4.5 Billion. Responsible for review of design documents for constructability, value engineering, and cost estimations for multiple, multi-million dollar construction work packages including the Memorial, Pavilion, World Trade Center Transportation Hub integrating NY City Subway Lines and PATH subway lines, Performing Arts Center, Landmark Oculus and five high rise office buildings. As Lead Estimator, Mr. George was responsible for estimating cost of various Bid packages and making presentations/recommendations to Port Authority Board; Analyzing contractors estimate for best and final offer; Preparing and negotiating change orders with all contractors; preparing monthly and ad-hoc cost and schedule reports to Port Authority of NY & NJ.

SEPTA - Walnut-Locust Station Rehabilitation, Philadelphia, Pennsylvania, Chief Estimator. Improvements at the station included the rehabilitation and/or replacement of stairs, new elevators and escalators, lighting, passenger facilities, head house rehabilitation, signage/graphics and fare line modifications. All improvements at this station were focused upon providing a fully ADA compliant Key Station facility. Mr. George was responsible for the development of final estimate and work program for the project.

New Jersey Transit - MMC Facility Expansion, Kearny, New Jersey, Senior Estimator. This project involved major additions including a new train washer facility, expansion to several buildings in the complex including the services and inspection building for all levels of inspection of new Comet V coaches, installation of new track, catenary and additional rail vehicle maintenance equipment. Mr. George was responsible for developing project estimate and work program at various stages of the project.

SEPTA - Norristown Transportation Center Intermodal Parking Facility, Norristown, Pennsylvania, Senior Estimator. Mullti-deck, 540 car parking garage and a bus terminal. Mr. George was responsible for construction cost estimate at 50% & 100% design phases and work program.

SEPTA - Warminster Station Parking Lot Expansion and Repair, Warminster, Pennsylvania, Senior Estimator. The project involved expansion of the existing parking lot including new and relocation of existing utility services, street and parking lot lighting, construction of culverts. Mr. George was responsible for developing project estimate and schedule (work program) at various stages of the project.

DRPA-Passenger Loading Bridge Platform, Philadelphia Cruise Terminal, Philadelphia, Pennsylvania. Cruise Ship Terminal with an open air Head house, elevator and escalators. Responsibilities were same as above.

Chris O'Malley PE

ENGINEER

Firm: AELNY
Years' Experience: 20+

Education:
BS, Civil Engineering

Registration/Certifications:
Professional Engineer (NJ, NY, PA)

Professional Summary

Mr. O'Malley is the Vice President and Principal at Atlantic engineering Laboratories, Inc. He supervises technical services; trains field and laboratory stuff; prepares geotechnical and forensic proposals; directs geotechnical and forensic services; and prepares reports. He reviews and certifies test reports; procures equipment and subcontractors; and maintains qualify programming. His recent project includes:

- Madison Square Garden - Manhattan, New York
- Astoria II Power Plant - Astoria Queens, New York
- 250 W 55t11 Street - Manhattan, New York
- DSNY Garage - Drilled Piers and driven piles-load tests on both
- Brooklyn Bridge Park-micropiles and loads

Selected Experience

U.S. Engineering Laboratories, Inc. Division of U.S. Laboratories - Rahway, New Jersey. President – Northeast Region. Mr. O'Malley was responsible for four regional offices in New Jersey and Pennsylvania performing construction materials testing and geotechnical engineering. The work includes annual volume of $8.2 million with 120 employees. He was instrumental in growing annual revenues an average of 30 percent per year. He served as the primary client contact for sales and technical operations in New Jersey. He reviewed, negotiated, and executed all contracts with clients. He managed administrative staff. He also directed sales and marketing efforts; supervised technical services; implemented and maintained active risk management and loss prevention programs; and supervised receivables efforts. From 1994-2000, Mr. O'Malley managed the New Jersey operation of the Northeast Region. The work includes annual volume of $5 million with 70 employees. He served as the client contact for sales and technical operations in New Jersey. He negotiated and reviewed all client contacts. He was responsible for sales and marketing efforts in New Jersey he also served as director of technical services. He interviewed, hired and trained technical and administrative personnel; and performed formal evaluations of all employees. He served as project manager for New Jersey projects and served as radiation safety officer for entire company.

Professional Services Industries, Inc., Edison, New Jersey. Division Manager - Construction Services. Mr. O'Malley established a construction services division office. He was responsible for all facets of the operation including but not limited to; personnel, financial viability, cost control, administration, client relations, and marketing of services. He acted as project manager for all projects and served as radiation safety officer for Edison office.

Professional Services Industries, Inc., Sharon Hill, Pennsylvania. Staff Engineer – Field Quality Control Engineer. Mr. O'Malley served as field quality control engineer on various projects including: high-rise, hospitals, water treatment plants, highways, and schools. He provided

construction inspection and materials testing and inspection of soils, concrete, asphalt, and structural steel.

Jorge Arteaga PE

ENGINEER

Firm: AELNY
Years' Experience: 20+

Education:
BS, Civil Engineering – Structural Engineering

Registration/Certifications:
Professional Engineer (NY, CA)
ICC Structural Steel and Bolting Special Inspector 118107115
ICC Structural Welding Special Inspector
10 Hour OSHA Certification

Selected Experience

Atlantic Engineering Laboratories, Inc., Rahway, New Jersey. Vice president/Field operations manager. Mr. Arteaga supervises special inspectors in the field. He performs post tensioning and pre-stressing inspections; and performs structural stability and structural safety inspections. He served as the technical project manager for NYC Inspection Services; and performs pile driving, mechanical, shoring, welding and bolting inspections. He attends project meetings; and supervises inspection staff and provides employee training. He serves as AELNY project manager on selected projects. Relevant projects:

- Manhattan West Platform
- North Shore Marine Transfer Station - Flushing, NY (Pile Driving)
- Hamilton Avenue Transfer Station - Brooklyn, New York (Pile Driving)
- Mercer County Courthouse - Trenton, New Jersey
- Marlboro Commons Retail Center - Marlboro, New Jersey
- Madison Square Garden, New York, New York
- Metropolitan Museum of Art - New York, New York
- 200 Hudson Street - New York, New York
- 205 Hudson Street - New York, New York
- DSNY Garage - Drilled Piers and driven piles-load test on both
- 170 Broadway – Micropiles

Muss Development, LLC, Forest Hills, New York. Senior project manager. Mr. Arteaga coordinated architectural, structural, MEP, civil, and landscaping drawing for construction. He managed, supervised, and coordinated on-site structural elements. He was responsible for the management and supervision of controlled inspections for concrete, steel, masonry to obtain TCO approval. He managed the building bulletin 2009-014 technical procedure required by NYC DOB; verified and coordinated field conditions and prepared detailed sketches to complete Request for Information (RFI's); and provided on-site visual observation and approval for all construction work to ensure compliance.

Additional Professional Experience

- Desimone Consulting Engineers, PLLC, New York, New York. Structural Engineer
- Galsanz Murray Steficek, LLP, New York, New York. Structural Engineer.

- The Cantor Seinuk Group, P.C., New York, New York. Structural Engineer.
- R & R Engineers, Caracas, Venezuela. Structural Engineer.

Fawzy Salib PE

ENGINEER

Firm: AELNY	**Education:**	**Registration/Certifications:**
Years' Experience: 25+	BS, Mechanical Engineering	Professional Engineer (NY, NJ)

Professional Summary

Mr. Salib has 29 years of experience in project management, construction, engineering design and inspections. He successfully managed multimillion dollar construction projects, including engineering design. He performed more than 15,000 structural, mechanical, and electrical systems engineering inspection for industrial, commercial, and residential projects. He managed and handled the daily affairs of commercial and residential buildings construction including design, cost estimates, biddings, scheduling, purchasing materials, managing contractors and subcontractors and inspections. He performed field inspections for construction of bus depots and subway stations which included new construction and renovations for multimillion dollar projects throughout the five boroughs.

Selected Experience

Atlantic Engineering Laboratories, Inc., Rahway, New Jersey. Professional engineer. Mr. Salib serves as technical project manager for energy code, fire protection and mechanical inspections. He performs energy code sprinkler and mechanical special inspections; performs final and progress inspections; coordinates special inspection services; attends client meetings; and manages specific projects. Representative projects:

- Barclays Arena - New York, New York
- North Shore Marine Transfer Station- Flushing, New York
- Hamilton Avenue Transfer Station - Brooklyn, New York
- Madison Square Garden - New York, New York

Additional Professional Experience

- Alpha Home Inspections Inc., Matawan, New Jersey. President
- FAWKAM Construction, LLC, Matawan, New Jersey. President
- New York City Transit Authority, Brooklyn, New York. Project Engineer
- American Electric Power, Columbus, Ohio. Design Engineer

Mansukh Savalia PE

ENGINEER

Firm: AELNY	**Education:**	**Registration/Certifications:**
Years' Experience: 25+	BS, Civil Engineering	See below
	MS, University (India)	

Registration/Certifications

- Professional Engineer (NY, NJ, PA)
- Licensed Home Inspector
- Certified Municipal Engineer (CME)
- Certified Quality Manager
- Certified SSPC's C3 Supervisor Training for Deleading of Industrial Structures
- Certified Rutgers CAIT Traffic Control Coordinator
- Certified Asphalt Technician
- Certified Concrete Technician
- Certified Laboratory Testing Technician
- Certified Aggregate Testing Technician

Selected Experience

Atlantic Engineering Laboratories, Inc., Rahway, New Jersey. Professional engineer/ project manager. Mr. Savalia performs post tensioning and pre-stressing inspections. He performed pile driving, mechanical, shoring, welding and bolting inspections. He attends project meetings; supervises inspection staff and provides employee training; and serves as AELNY project manager on selected projects.

Additional Professional Experience

- Atlantic Engineering Laboratories. Project Engineer
- Triple B Fabrication. Project Engineer
- McGimpsey & Associates. Structural Engineer
- Savin Engineers. Structural Engineer
- Maitra Associates, PC. Senior Structural Engineer
- Dominick R. Pilla Associates, PC. Structural Engineer
- Tourgee Associates Inc. (TAI). Structural Engineer
- Bay State Design, Inc. Project Engineer
- Hanington Engineering Consultants. Structural Project Engineer
- Paphian Enterprises, Inc. Project Manager
- Port Authority of NY & NJ. Project Engineer
- Atometrics. Project Engineer
- Raytheon/Holmes & Narver (Federal Building JFI< Airport). Senior Civil Engineer
- Port Authority of NY & NJ. Construction Inspector
- Benjamin Moore & Co. Project Engineer
- New York Power Authority. Civil Engineer
- Morrison Knudson Corp. Design Engineer
- Federal Electric Corp. Civil Engineer
- Federal Aviation Administration. Civil Engineer

- JFK International Airport. Civil Engineer
- Newark International Airport. General Engineer

Ramon See PE

ENGINEER

Firm: AELNY	**Education:**	**Registration/Certifications:**
Years' Experience: 20+	BS, Civil Engineering	Professional Engineer (NJ, DE)

Professional Summary

Mr. See is a certified quality control/quality assurance technician. He serves as a structural design engineer. He has experience in Microsoft Office, Internet on screen Take Off, AUTOCAD, Steel CAD, RAM Structure, ENERCAL, and RISA.

Selected Experience

Atlantic Engineering Laboratories, Inc., Rahway, New Jersey. Project/ Structural engineer. Mr. See performs special inspection for post tensioning, pre-stressing, driven piles, drilled piers and structural stability. He performs structural stability and structural safety inspections. He also performs pile driving, mechanical, shoring, welding, and bolting inspections; and special inspection for sprinklers, standpipes, mechanical systems, heating systems, energy code compliance and final inspections. Representative projects:

- 45 East 22"d Street, New York, New York
- 155 West 18th Street, New York, New York

Additional Professional Experience

- Kipcon, Inc. Senior Project Manager
- R.L. Engineering, Inc. Structural Engineer
- U.S. Forensic. Structural Forensic Engineer
- CT. Male Associates, P.C. Structural Engineer
- U.N.I. Engineering, Inc. Structural Engineer
- Structure Studio/NK Architects. Staff Engineer
- Industrial Services Enterprises. Structural Steel Detailer
- Materials Testing Inc. Engineering Technician
- Testwell Craig laboratories Engineering Technician

Hani Wissa

ENGINEER

Firm: AELNY
Years' Experience: 20+

Education:
BS, Mechanical Engineering (Egypt)
Certificate in Semitic Languages and Cultures
Retraining for engineers in building engineering systems: HVAC, Heating Boilers, Fires Safety Systems, Auto CAD 2D, 3D and Revit.

Selected Experience

Atlantic Engineering Laboratories, Inc., Rahway, New Jersey. Professional engineer - mechanical. Mr. Wissa performs special inspection for mechanical and fire sprinkler systems according to NYC Building Code, hydrostatic pressure testing for primary and secondary condenser water loops, fuel tanks, stand pipes and fire sprinkler systems. He works with the inspection of pneumatic pre-action sprinkler systems, emergency light testing, and recording of progress inspection reports.

Vlaams Patat Pasje Amsterdam, Holland. Operations supervisor. Mr. Wissa worked with inventory and supplies requirements; quality control evaluations; customer service resolution; and shift schedules and personnel supervision.

Cefeteria Triumph Amsterdam, Holland. Shift leader. Mr. Wissa provided supervision of crew; scheduling of personnel and human resource management; and overview of supplies inventory.

Fabulous Textile Factory Cairo, Egypt. Maintenance engineer. Mr. Wissa worked with preventive maintenance of textile and sewing machines; performed estimates and ordered spare and replacement parts for machines; and managed maintenance crew (technicians).

Maher Awad

CONCRETE INSPECTOR

Firm: AELNY
Years' Experience: 15+

Education:
BS, Mathematics

Registration/Certifications:
Troxler Electronic Laboratories Certified Nuclear Gauge Operator
ACI Certified Grade I Concrete Testing Technician
NIDCA Cel1ified - Concrete Placement & Reinforced Concrete Special Inspector

Selected Experience

Atlantic Engineering Laboratories, Inc., Rahway, New Jersey. Senior Inspector. Mr. Awad is responsible for performing field inspection and testing of footing bottoms, earthwork, reinforcing steel, concrete (field and plant) and masonry systems on a wide array of construction projects. Representative projects:

- The Whitney Museum, New York, New York
- BJ's Canarsie Plaza, Brooklyn, New York
- NJPHEAl – West Trenton, New Jersey
- Target Store, Union, New Jersey
- KTR 800,000 sf Warehouse Washington Township, New Jersey
- Wesley Grove, Asbury Park, New Jersey

U.S. Engineering Laboratories, Inc. Senior Inspector. Mr. Awad was responsible for performing field inspection and testing of footing bottoms, earthwork, reinforcing steel, concrete (field and plant) and masonry systems on a wide array of construction projects. Representative projects:

- Lucent Technologies, Allentown, Pennsylvania
- New Middle School, New City, New Jersey

Roberto Benitez-Villalta

INSPECTOR

Firm: AELNY	**Education:**	**Registration/Certifications:**
Years' Experience: 10+	BS, Mathematics	See below.

Registration/Certifications

- ACI Associate Concrete Construction Special Inspector - ACI#: [redacted]
- ACI Concrete Strength Testing Technician - ACI#: [redacted]
- ACI Concrete Field Testing Technician - Grade I - ACI#: [redacted]
- Hercules Cement School Mix Design Technology
- TSC Certified - NYC DOB 16 hr Scaffolding
- ACI Seminar for Cold Weather Concrete
- ACI Seminar for Hot Weather Concrete
- ACI Seminar for Concrete Permeability
- Norlite Workshop for Structural Lightweight Concrete
- ICC Certified Structural Steel and Bolting Special Inspector

Selected Experience

Atlantic Engineering Laboratories, Inc., Rahway, New Jersey. Senior Inspector. Mr. Benitez-Villalta is responsible for performing field inspection and testing of pile driving, and drilled piers. He performs inspection of reinforcing steel and concrete placement. He also performs tensile testing of embedded anchors, concrete and asphalt core drilling, Windsor probe and Swiss hammer testing. Representative projects:

- DSNY Garage - New York, New York
- 500 Hamilton Avenue - Brooklyn, New York
- North Shore Marine Transfer Station - Queens, New York

Ralph Clayton & Son, Northern, New Jersey. Quality Control/Quality Assurance Manager. Mr. Benitez-Villalta worked with the creation of concrete mix designs. He managed all NY/NJ Port Authority and DOT projects. He tested all raw material used in design mixes; all cementicious material used in design mix; and all admixtures used in mix designs. He oversaw all QA/QC operations in the field as well as in the plant.

Loizeaux Builders Supply, Elizabeth, New Jersey. Quality Control/Quality Assurance Manager. Mr. Benitez-Villalta worked with the creation of concrete mix designs. He managed all NY/NJ Port Authority and DOT projects. He oversaw all QA/QC operations in the field as well as in the plant.

Sherif Elsabaawi

CONCRETE INSPECTOR

Firm: AELNY

Years' Experience: 15+

Registration/Certifications

- ACI Certified Level 1 Concrete Field Testing Technician
- ACI Certified Concrete Construction Special Inspector
- NJDCA Certified Concrete Placement Special Inspector
- NJDCA Certified Reinforced Concrete Special Inspector

Selected Experience

Atlantic Engineering Laboratories, Inc., Rahway, New Jersey. Inspector. Mr. Mosaad is responsible for performing field inspection and quality control testing of concrete perform slump, air and temperature tests on fresh concrete. Fabricate test cylinders. He inspected reinforcing steel for conformance to approved project and shop drawings. Inspect footing subgrades using penetrometer. He tested soil density and moisture using a nuclear densometer; and prepared technical reports.

International Embroidery Center, Alex, Egypt. General Manager. Mr. Elsabaawi worked with Payroll, taxation, annual budgeting, sales management, and accounting. He purchased ray materials and machinery parts from overseas suppliers.

Naiem Mosaad

CONCRETE INSPECTOR

Firm: AELNY

Years' Experience: 15+

Registration/Certifications

- ACI Certified Field Concrete Inspector Grade I
- ACI Certified Concrete Construction Inspector
- 10 HR OSHA Certification
- Troxler Electronic Laboratory Certified Nuclear Gauge Operator

Selected Experience

Atlantic Engineering Laboratories, Inc., Rahway, New Jersey. Field Inspector. Mr. Elsabaawi is responsible for performing field inspection and quality control testing of concrete, performing slump, air and temperature tests on fresh concrete. He fabricated test cylinders; tested soil density and moisture using nuclear densometer; and prepares technical reports. Representative projects:

- The Beacon - Jersey City, New Jersey
- Jersey City DPW - Jersey City, New Jersey
- New Parking Garage - Elizabeth, New Jersey
- Wakefern Foods - Keasbey, New Jersey

Nacamuli Associates, Elizabeth, New Jersey. Inspector. Mr. Mosaad was responsible for conformance of all structural and foundation work with contract documents. He performed inspection for concrete placement and reinforcing steel for high rise buildings. He inspected CMU walls, monitored preparation of sub grade to receive slab.

Raul Mora

CONCRETE INSPECTOR

Firm: AELNY

Years' Experience: 8

Registration/Certifications

- Troxler Electronic Laboratories Certified Nuclear Gauge Operator
- ACI Certified Level 1 Concrete Placement Inspector
- NJDCA Certified Concrete Placement Inspector

Selected Experience

Atlantic Engineering Laboratories, Inc., Rahway, New Jersey. Inspector. Mr. Mora is responsible for performing field inspection and quality control testing of concrete perform slump, air, temperature tests on fresh concrete. He fabricated test cylinders. He inspected reinforcing steel for conformance to approved project and ship drawings. He inspected footing subgrades using penetrometer. He tested soil density and moisture using a nuclear desometer. He prepared technical reports. Representative projects:

- Cedar Gate, Livingston, New Jersey
- Noecker Elementary School, Rose land, New Jersey
- Alovats, Monroe Township, New Jersey

Samuel Saweeres

CONCRETE INSPECTOR

Firm: AELNY

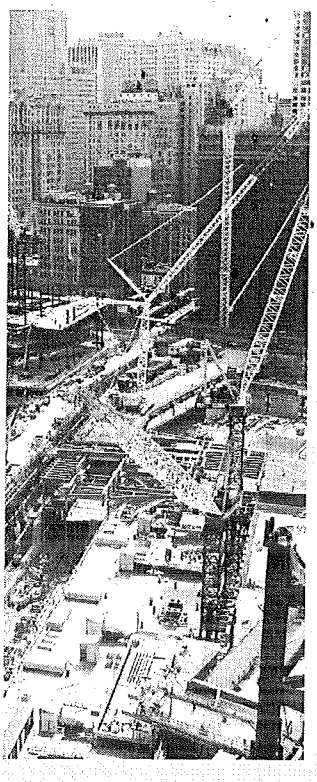
Years' Experience: 8

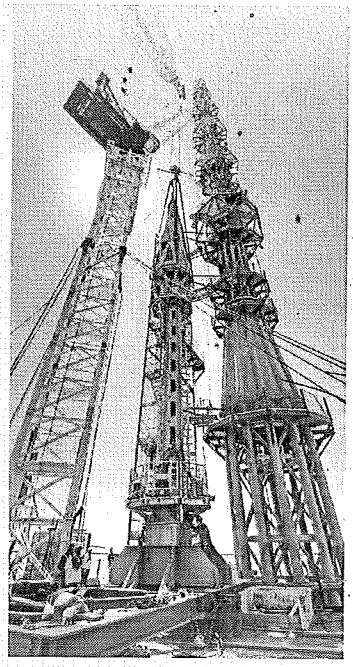
Registration/Certifications

- Troxler Electronic Laboratories Certified Nuclear Gauge Operator
- ACI Certified Concrete Field Testing Inspector
- ACI Associate Concrete Construction Special Inspector

Selected Experience

Atlantic Engineering Laboratories, Inc., Rahway, New Jersey. Inspector. Mr. Saweeres performed various nuclear gauge densities, dynamic cone penetrometer test, compressive and air content test for concrete, soil, rock, and asphalt according to established standards. He worked on geotechnical inspections including pile driving, geo-piers, and caissons.



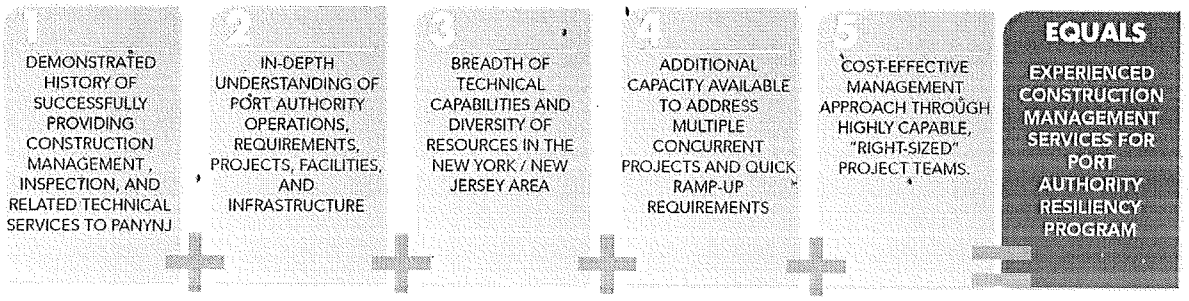


F.

Firm Experience

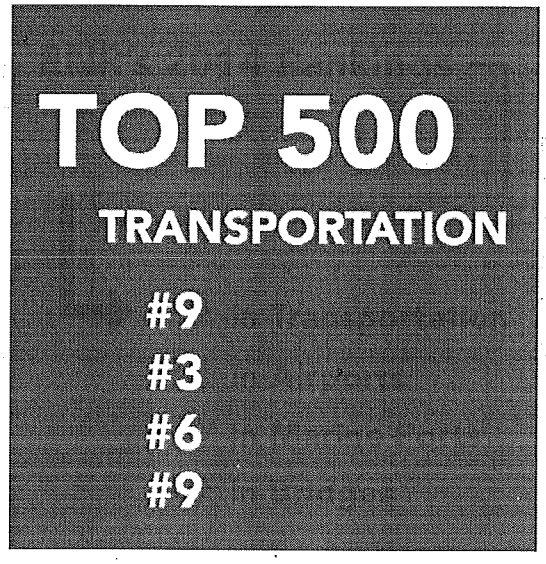
THE LOUIS BERGER TEAM - DELIVERING SERVICE AND VALUE

The Louis Berger Team is qualified to provide program management services to PANYNJ because it offers the following:



INTRODUCTION

Louis Berger is one of the largest multidisciplinary consulting engineering firms in the United States. The firm specializes in the areas of program/ construction management, transportation engineering, facility engineering, environmental studies, and economics. Louis Berger is consistently rated by the *Engineering News-Record (ENR)* as one of the top consulting engineering firms in the nation in several categories.



Louis Berger understands the Port Authority of New York and New Jersey's requirements and procedures, and has demonstrated its ability to meet these requirements and effectively complement these procedures in support of a successful capital program. The breadth of this capital program requires a well-rounded project team. With a resource base of more than 6,000 professionals and affiliate employees, Louis Berger is able to respond to local conditions while providing clients with world-class industry experts.

Louis Berger and its partners offer very capable construction managers and inspectors, almost all of whom have provided services directly to the Port Authority in the past. The depth of this pool of resources allows Louis Berger to put together teams which have the specific skills required for a given project or task; are right-sized to deliver services in a cost-effective manner; and can be immediately mobilized as needed by the Port Authority in support of timely project delivery.

Through construction management and inspection engagements such as the Red Bull Stadium in Harrison, New Jersey and multiple "call-in" IDQ contracts with agencies such as the Port Authority, Louis Berger has successfully demonstrated its ability to lead experienced and qualified teams. Louis Berger has successfully delivered a range of services for these efforts which mirrors the services sought by the Port Authority at this time. Through previous contracts, Louis Berger has provided

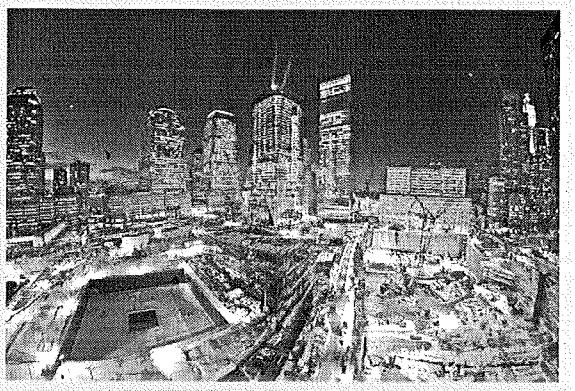
several key construction management professionals on Port Authority assignments including **Ian Baldwin**, construction scheduler serving Tunnels, Bridges, and Terminals Department; **Ken Favaro**, senior inspector serving Ports and Commerce; and **Quinton "David" Hapke** senior civil and environmental inspector serving Stewart Airport.

The team offered by Louis Berger includes these, and other professionals with long-standing relationships with the Port Authority. This is a team that has delivered successful programs for the Port Authority for many years, and we are committed to using this past success as the minimum benchmark against which to measure the quality of these future call-in services.

Louis Berger has engaged the following subconsultants to provide critical resources and assistance for the delivery of services for this agreement:

- Techno Consult, Inc. (Techno)
- Jois Construction Management System, Inc. (JCMS)
- NAIK Consulting Group, PC (NAIK)
- Atlantic Engineering Laboratories of NY, Inc. (AELNY)

Louis Berger understands that a fully integrated team approach and execution is critical, and we have therefore hand-picked this team of firms with whom Louis Berger has successfully collaborated before on similar assignments in the NY/NJ area. Louis Berger is therefore offering not only a deep and well-rounded team, but also one that is already accustomed to operating as a seamless unit to support project success. Both jointly and individually, these team members have a long history of successful engagements with the Port Authority.



"The Louis Berger Group has provided exceptional program management support services that have been critical to the successful $20 billion redevelopment of the World Trade Center site in New York City. This redevelopment effort is one of the largest, most complex and challenging programs in the world and Louis Berger has effectively worked hand-in-hand as a superb consultant to the Port Authority of New York and New Jersey in all phases of the life-cycle development of this highly visible program."

Lucy Foster,

FIRM'S QUALIFICATIONS AND EXPERIENCE

The Louis Berger Team is a uniquely qualified partnership for the performance of services for the Port Authority's IQC proposal request for construction management and inspection services. This partnership provides the following benefits:

- In-depth understanding of the Port Authority: Since the 1980s, Louis Berger has served as program management consultant on several major programs, including Redevelopment of the World Trade Center, Newark Liberty International Airport (EWR), and the George Washington Bridge Bus Station

Redevelopment. Louis Berger was part of the initial team assigned to the World Trade Center "Downtown Restoration Program" that included restoration of Port Authority Trans-Hudson (PATH).

- A successful history of "call-in" engagements with the Port Authority: In addition to the program management oversight contracts, Louis Berger and the members of this team have held on-call contracts with the Authority for construction management and inspection services for several years, and have successfully delivered quality performance on repeated assignments on the full array of facilities and systems managed by the Port Authority.
- Knowledge of Port Authority assets: Through Louis Berger's involvement on multiple "call-in" contracts, the Louis Berger Team has familiarity with a wide range of Authority facilities and systems, as well as a thorough understanding PANYNJ operational and management requirements.
- Extensive history of successful construction management and inspection services: The Louis Berger Team has provided a full array of construction management and inspection services for similar programs nationally and internationally that combine a breadth of technical expertise; design-phase management including constructability studies, document technical reviews, and logistics and staging plans; master project schedule development and analysis; change management, cost engineering, and cost estimating; pre-planned and carefully managed document management; targeted data collection and reporting; site-based quality assurance and special inspections; and meticulous contract administration.

Louis Berger **Louis Berger** is an internationally recognized professional services firm providing program and construction management; engineering; architectural; economic development; environmental science; and planning services, among others. Headquartered in Morristown, New Jersey with offices around the New York metropolitan area, Louis Berger is a devoted and trusted partner to federal, state, and local government agencies, as well as multilateral institutions and the commercial industry. To this diverse client base, Louis Berger brings strategic vision and an entrepreneurial spirit, developing innovative solutions to some of the world's most challenging problems.

Louis Berger and its partners foster collaborative relationships with clients to tackle large-scale, complex, highly visible programs that require significant stakeholder coordination and facilitation. Louis Berger has an extensive portfolio of domestic and international clients for whom it has provided program, project, and construction management; program controls; and a wide array of technical services. The team proposed for this program has provided these services to the Port Authority; New York City Economic Development Corporation; Dormitory Authority of the State of New York; New York Metropolitan Transportation Authority; New York State Department of Transportation; GSA; USACE; Department of

Defense; USPS; Federal Bureau of Prisons; New York City Department of Environmental Protection (NYCDEP); New York City Office of Management and Budget; New York City School Construction Authority; and New York City Department of Education; as well as numerous state departments of transportation, international airport authorities, and city governmental agencies.

Although the World Trade Center Redevelopment program is the most visible of Louis Berger's contracts in New York City, it is just one of its many engagements with New York City and state-based programs. Louis Berger has maintained long-standing relationships with agencies throughout the New York metropolitan area; these engagements include a range of approaches, including:

- The project model, whereby project-specific teams provide a full complement of construction management and inspection for a project or a series of related projects through all phases.
- The embedded staff model, in which Louis Berger provides full-time personnel that execute a specified range of construction management services – including scheduling, cost estimating, constructability reviews, risk management, inspection, staging and coordination – across a broad program for a single or multiple locations.
- The task-focused model, which enables Louis Berger to draw upon its diversity of technical resources to provide issue-specific advice related to the execution of its capital program.

Louis Berger has operated under each of these scenarios for the Port Authority, and our history of successful performance in these areas for the Port Authority is central to this regional experience.

Louis Berger has assembled its highly skilled and experienced team by drawing upon existing professional relationships with firms that share a depth of experience with the Port Authority and add a breadth and depth of expertise that will ensure successful delivery of services for this contract.

TECHNO ENGINEERS & CONSTRUCTION MANAGERS **Techno Consult, Inc. (Techno)**, a certified Minority Business Enterprise (MBE) and Disadvantaged Business Enterprise (DBE) founded in 1998, provides engineering, construction management (CM) and resident engineering inspection (REI) services for clients that include the Port Authority of New York and New Jersey, NYCDEP, the New York City Department of Design and Construction (NYCDDC), and the City of Newark, New Jersey, among numerous others. Techno's principal and associates have proven accomplishments in mass transit, transportation, infrastructure, heavy civil construction, facilities, water and wastewater treatment, and municipal projects for both public agencies and private clients.

The scope of Techno's engineering services includes preliminary and final design, contract document preparation, procurement support, and construction management services. As a reputable full-service provider of comprehensive construction management services, Techno's typical CM services include: project and construction management; program management; construction contract administration and

supervision; construction inspection and quality control services; project controls, scheduling, and cost control; pre-construction planning and post-construction services; and technical support .

JCMS, Inc.

JCMS has been providing program management and project management services to the rail industry for more than 28 years. During this period, JCMS has provided services on more than 200 mass transit projects, ranging in size from $1 million to more than $6 billion. These encompass a wide variety of projects for various transportation agencies such as the Port Authority, Federal Transit Administration (FTA), New York City Transit, Long Island Rail Road (LIRR), Metro-North Railroad, New Jersey Transit, Southeastern Pennsylvania Transportation Authority (SEPTA), Massachusetts Bay Transportation Authority (MBTA), Delaware River Port Authority (DRPA), Port Authority of Allegheny County, and Valley Metro in Phoenix, Arizona.

JCMS's significant strength and experience in all areas of construction project management is complemented by their significant mass transit experience. The firm has rovided construction management and related services on more than 200 infrastructure projects over a period of 28 years, both as prime and subconsultant. The firm has knowledgeable staff with strong transit experience. JCMS has experience in all areas of mass transit construction, including stations, track work, bus and rail maintenance shops, tunnels, bridges and structures, signal and communication, catenary and traction power, right-of-way improvements, and Americans with Disabilities Act accessibility improvements.

JCMS employs more than 85 full time staff in various disciplines. They include cost and scheduling engineers, cost estimators, document control specialists, office engineers, resident engineers, and construction inspectors.

In addition to an extensive inspection staff, JCMS has offers a range of construction management-related services, including quality control, cost estimating, CPM scheduling, document control systems, cost control, and risk analysis.

Naik GROUP

NAIK Consulting Group has a successful history in providing quality construction inspection and administration services for major transportation agencies for complex projects throughout the tri-state area. NAIK is currently providing construction inspection services for ongoing projects with an aggregate value of $500 million.

In performing resident engineering services and construction inspection services, NAIK understands that the construction phase represents the most visible and costly phase in the project delivery process. Proactive construction monitoring is NAIK'S highest priority. NAIK'S inspection personnel are well-trained and well-versed in their project-specific inspection assignments. Their training is regularly supplemented on a broad range of issues including personal and public safety issues on public works projects, as well as the impact and importance of the contractor's timeline and work schedules on a construction project.

During construction of any project, the primary function of the resident engineering and inspection force is to ensure conformance of the workmanship and the materials with the plans and specifications. This includes keeping construction activities on schedule, controlling project cost, minimizing contract change orders through proactive and cooperative interaction with the contractor, attending all progress meetings, and providing close-out services to include preparation of as-built drawings.

NAIK'S highly skilled staff is trained and certified in current construction industry technologies and methodologies. NAIK prides itself in making sure its construction personnel are well prepared and well versed in the latest construction requirements and innovations specializing in OSHA and safety, asphalt, traffic control and safety, and concrete technologies.

Atlantic Engineering Laboratories of NY, Inc. (AELNY), is a full service testing laboratory, inspection agency and geotechnical engineering firm. We provide independent third-party testing and inspection services on projects throughout New York, New Jersey and eastern Pennsylvania. We are capable of providing all required quality control inspections and testing with our own forces.

All of our services are provided under the direction of Mr. Christopher T. O'Malley, P.E. a registered professional Engineer licensed in New Jersey, New York and Pennsylvania. Inspection/testing personnel are cross-trained to provide multiple inspection activities during the course of their visit.

AELNY meets all requirements outlined in the American Society of Testing Material (ASTM) standard E329 "Standard Specification for Agencies Engaged in the Testing and/or Inspection of Materials used in Construction". AELNY's laboratory facilities have been inspected by the National Bureau of Standard's Cement and Concrete Reference Laboratory (CCRL). AELNY also voluntarily participates in proficiency sample testing programs offered by CCRL and AMRL.

Collectively, the Louis Berger Team has performed the Port Authority's requested scope of services on hundreds of applicable projects, including extensive experience on major transportation projects and throughout the NY/NJ metropolitan area. This proposal highlights the following projects:

- World Trade Center Reconstruction
- George Washington Bridge Bus Station Modernization
- Performance of Expert Professional Construction Management and Related Technical Services on a "Call-In" Basis for 2011-2014; Purchase Orders #4900007404 through #4900007406

PORT AUTHORITY OF NEW YORK & NEW JERSEY WORLD TRADE CENTER RECONSTRUCTION

PATH: The PATH Commuter Rail System was a key component of the transportation infrastructure of the New York Metropolitan Area, and particularly important to the economy of Lower Manhattan. One of its two terminus points in Lower Manhattan was eliminated by the events of September 11, 2001. In an effort to restore this service, the Authority embarked on an extremely "fast track" program to: construct a Temporary PATH Station at the site of the former World Trade Center (WTC); restore the

two miles of tunnels beneath the Hudson River connecting this terminal with New Jersey; and improve the first station in New Jersey, Exchange Place Station, to operate as an interim terminal and handle the size trains needed to provide the level of service required by this key rail artery.

Louis Berger provided program management support; program and project level cost, schedule and scope control; program definition; management of in-house staff; coordination of PEER review by national rail experts; validation review of the signal technology with heavy rail signal experts; system integration; development of work breakdown and charge code structures; coordination with FEMA, FTA, and other state and federal agencies; program and project level CPM scheduling and earned value analysis; actual expenditure and accruals monitoring and audit; problem resolution analysis; database application development; public relations, including a program animation and public website; management presentation, technical paper, and press release preparation; status/progress report preparation; constructability reviews, including 4D construction schedule analysis; schedule risk analysis; submittal and RFI tracking/monitoring using expedition; electronic records/information management; and implementation of engineering technologies for information management and team communication/collaboration.

Louis Berger also provided diverse management and technical support of concurrent projects involving the WTC site, including: WTC site master planning; Lower Manhattan transportation studies; environmental analysis and documentation; WTC site management (street, sidewalk and pedestrian bridge improvements); and general WTC site works (on-site structural work, slurry wall repair, etc.). Louis Berger Projects at WTC include:

Alan Reiss, Deputy Director, WTC Construction

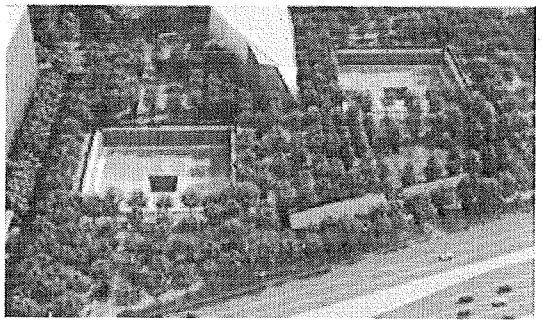
Rehabilitation of Tunnels E and F: Due to flooding following the September 11th attacks, the project required the demolition and removal of the entire infrastructure, track work, and systems within the tunnels, as well as the restoration of all cables and wires, tracks, lighting, drainage, fire protection, and signal and communication systems. Nearly 20 miles of cables (including high voltage, traction power, communications, and signal) and more than four miles of track were replaced.

Exchange Place Station Improvements: Project scope included construction of several cross-tunnels to connect the existing five tunnels and allow installation of track crossovers to connect the tracks serving Exchange Place Station and the replacement of an existing signal relay room in the way of the proposed connecting tracks. In addition to the new tunnel crossovers, the Exchange Place Station platforms were lengthened to accommodate 10-car trains, increasing commuter capacity from its previous 8-car train design. Additionally, the station was completely refurbished, including vertical circulation, lighting, wayfaring signage, floors and finishes, and utilities and systems.



Temporary WTC PATH Station: The design and construction of a temporary WTC PATH Station, including a track and platform configuration similar to the former WTC station, was planned to ensure restoration of PATH service to Lower Manhattan within 24 months. The station has a mezzanine (with a fare control area) above the platforms, with stair and elevator access connecting the two levels. From the mezzanine, passengers follow the previous circulation route to escalators, elevators, and stairs which provide access up to street level under a new canopied plaza on the west side of Church Street.

Through an "open-to-air" design with minimal exterior walls, the temporary station was constructed with semi-opaque fabric enclosures to provide protection from both inclement weather and the anticipated construction at the surrounding site.

Ongoing Program and Construction Management: In conjunction with the critical support to the PATH system within the 16-acre World Trade Center site, Louis Berger has been providing program management services for the reconstruction of more than 10 million gross square feet of facilities and transportation infrastructure — one of the largest redevelopment programs and the most visible and politically sensitive construction project in the United States.

Louis Berger has integrated and controlled the schedule, costs, and scope of more than 20 ongoing projects that comprise the $20 billion WTC Redevelopment. Programs within the site include a diverse range of structures including multi-story commercial and retail space, a major transportation hub, a memorial and museum, streets and infrastructure modifications, below-grade vehicle security center, storage, parking, and a central chiller plant. The program is funded by various public and private sources and involves more than 25 federal, state, and local interest groups and stakeholders.

Louis Berger is proud to provide a broad range of construction and program management services, which have been integral to this iconic redevelopment – from constructability reviews and value engineering that reduced cost and construction time to the establishment of a comprehensive and robust integrated master schedule, along with customized management reports and web-based applications, project and program performance measures, and cost control reports.

Louis Berger provides a broad range of internal and external communication services at the WTC site, including: developing and maintaining the website for the program; providing weekly project updates, distributed electronically to senior Port Authority managers and executives; and the development of fact sheets and related technical materials for use internally and for distribution to the media. Louis Berger also provides the photography depicting the program's history and current status. The Louis Berger team successfully works hand-in-hand with the Port Authority's Public Affairs Office on all matters related to this monumental program.

GEORGE WASHINGTON BRIDGE BUS TEMINAL

Louis Berger was selected by the Port Authority of New York and New Jersey as the program manager for the George Washington Bridge Bus Station Redevelopment. The station, originally designed by Pietro Nervi and constructed in the 1950s, now serves 20,000 commuters daily as a connection point for trips from New Jersey to Manhattan. This project is being designed and constructed within the Port Authority-owned facility where the Authority is leasing the space, exclusive of the bus operations, to a private New York City developer. In this public-private partnership, the Port Authority has contracted the developer to modernize the bus station and incorporate a

retail shopping complex to serve the local Washington Heights community. The developer is responsible for design and construction of the new bus pavilion and concourse for 30 buses. This new bus platform and pavilion will improve operations and passenger comfort.

Services performed by Louis Berger as program manager include assisting with the program definition, permitting, historic preservation analysis, design management, cost control, scheduling, document control, and project management. Louis Berger is providing program management support to three construction packages for 120,000 square feet of mixed-use multi-story space for Port Authority bus operations and tenant commercial areas. These services also include quality control for compliance with tenant-lease agreement for space and utility allocation, design intent, construction quality, and compliance with NYC Building Code. Construction is being staged and phased to allow for continued operation of the station during construction.

PERFORMANCE OF EXPERT PROFESSIONAL CONSTRUCTION MANAGEMENT AND RELATED TECHNICAL SERVICES ON A "CALL-IN" BASIS FOR 2011-2014; PURCHASE ORDERS #4900007404 THROUGH #4900007406

Louis Berger was awarded a "call-in" contract for construction management and related services for the Port Authority of New York and New Jersey for 2011-2014. Services were provided on a number of projects through this contract. A representative sample of services includes:

Senior Scheduling Services: Louis Berger developed and maintained CPM schedules, including review and approval of contractor schedules for projects including the George

Washington Bridge, Bayonne Bridge, Goethals Bridge, Lincoln Tunnel, Holland Tunnel, LaGuardia Airport (LGA), Newark Liberty International Airport, Port Authority Bus Terminal, and George Washington Bridge Bus Station.

Brooklyn Marine Terminals, Piers 7, 8 & 9B: Louis Berger provided quality assurance and construction management services for multiple marine terminal rehabilitation projects. Services included: ensuring that materials and the contractor's means and methods would result in repairs called for on the contract drawings and specifications; daily job supervision and performance of detailed work inspections resulting in daily job reports; scheduling and witnessing underwater inspections by the Port Authority's Diver/Engineer Contractor; assuring that OSHA safety regulations are being adhered to at all times, including daily review of job conditions, weekly safety/toolbox talks with the Contractor, and scheduling site inspections with Risk Management and Insurance Representatives; attending job meetings to discuss project status, open RFIs, and means and methods to address special situations during construction; and reviewing and approving Contractor's financial documents, including job status reports (monthly percentage completion documents) and monthly payment requests. Projects on which these services were provided by Louis Berger were as follows:

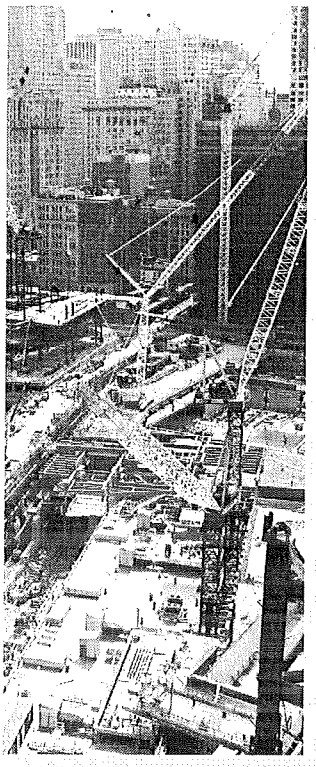
- $2.8 million marine terminal rehabilitation project including 354 pile jacket repairs (of 7 various types) to eliminate further pile deterioration from marine borers; removal and replacement of 650 linear feet of deteriorated steel walers supporting existing steel bulkheads; preparation and welding of 30 large steel plates along the existing bulkheads to prevent upland wash-out; and removal and replacement of the timber fendering pile system in order to replace steel walers. (Contractor: Trevcon Construction Company)
- $2 million marine terminal rehabilitation project including 258 pile jacket repairs (of 16 different types) on the structural piles supporting Piers 9A, 9B and 10; preparation of two steel sheet pile bulkheads (770 linear feet total) and coating of same with marine epoxy; welding 80+ steel repair plates over holes in the bulkheads; and concrete spall repairs on the piers' under-deck structural girders. (Contractor: Coastal Environmental Group)
- $750,000 marine terminal rehabilitation project including the removal and replacement of 800 linear feet of timber fendering systems and the removal and replacement of 1000+ linear feet of pier deck backing log. (Contractor: R.B. Conway).

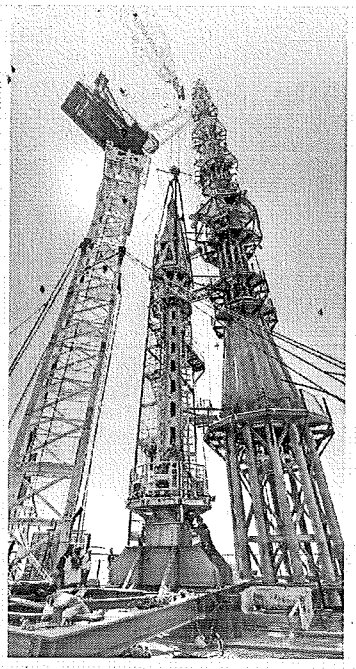
Stewart International Airport, New Windsor, New York: Louis Berger has provided inspection and management services for a variety of construction projects at Stewart International Airport including but not limited to civil, structural, electrical, life safety systems, and tenant alterations on Port Authority property. Louis Berger's on-site representative works closely with the Resident Engineer on submittal reviews and payment applications, as well as all other documentation necessary for successful project performance and closeout. Current projects include but are not limited to:

- Rehabilitation of Weather Instrument Power (WIP) Circuit: Louis Berger was responsible for coordinating with the Stewart Airport Operations group on the issuance of Notices to Airmen (NOTAMs) relative to the work location in critical areas on the airfield. Because the project

required closures of runways and taxiways to facilitate duct bank crossings, the work was compressed into 48 hour schedules to complete the work on each duct. This scope of work also included installation of manholes outside of safety areas but between taxiways and runways.

- Rehabilitation of Taxiway Edge Lighting: Louis Berger coordinated with Airport Operations to manage the closing of numerous crossings and manage the work that was being done on the taxiway edges. Scope of work included circuit shut downs for edge lights, trenching to accommodate new conduits, and new wiring for high efficiency LED edge lights.
- Rehabilitation of Runway 9 Approach Lighting and Cables: In order to maintain Stewart's CAT II airport status, the FAA required an upgrade and insurance of a fully functioning system. Elements of this project included displacing the main runway (9-27), which is 11,817 feet long. Light cans were replaced and new light can locations were cored and installed for conformance to appropriate Advisory Circular requirements. New power lines were fed from the airfield electrical vault and four new manholes were added over the NYC Aqueduct that runs underground, perpendicular to the runway. Timing was also of the essence in this task due to multiple closures to vital areas of the runway.
- Airside Pavement Repairs and Markings: Under this work order Louis Berger oversaw concrete and pavement repairs, landside paving, airside trench drains, airfield restriping, airfield slab repairs, and paving of fuel pad ramp airside.
- Runway Weather Information System: Louis Berger provided inspection services on this project to install all new sensors into the runways at Stewart Airport. Due to the sensitivity of the locations, work was performed at night.
- Terminal Building Roof Replacement: Louis Berger oversaw the removal of the old terminal roof and reinstallation of the new thermoplastic polyolefin (TPO) roof and associated equipment.
- Sewer Rehabilitation Project: 6,000 feet of outdated and damaged clay pipe was replaced by means of pipe bursting. Louis Berger was involved in all phases of this project. The firm inspected the maintenance and protection of traffic daily, as well as the installation of the new HDPE piping.
- Building 2290 Roof Replacement: Louis Berger is overseeing not only the asbestos abatement, but also the new roofing installation for the 40,000 square-foot roof over Building 2290. The flexibility afforded by the qualifications of Louis Berger's on-site inspector allows this inspector to "switch hats" and manage the project from the submittal process to the final closeout for both the construction and environmental fields.





G.

Management Approach

MANAGEMENT APPROACH

CAPABILITY FOR THE WORK

Louis Berger is presently performing or has recently performed on-call construction management and construction inspection services for a number of clients in the NY/NJ metropolitan area, including the Port Authority, the GSA, NP, and USPS. As a result of this experience, the Louis Berger team has a well-established approach for staffing and managing the planning, design, and construction work required for the projects anticipated under this contract. Not only does the Louis Berger team bring a staff with experience and expertise in a broad range of project types, Louis Berger brings well-established procedures and its long track record of successfully delivering projects on time and within budget.

The Port Authority is well aware of Louis Berger's approach to construction management from Louis Berger's multiple engagements supporting the Authority spanning almost decades. This history includes Louis Berger's work at the World Trade Center Reconstruction Program, where the firm has served the Port Authority since the 9/11 attacks. In this capacity, Louis Berger assisted the Port Authority on projects ranging from emergency infrastructure repairs to major station construction to fit-out work at 115 Broadway for the WTC Construction Department. It also includes a series of IQC contracts for the Port Authority with engagements including a variety of full-time construction management services.

For each assignment, it is Louis Berger's intention to maintain quality, schedule, and budget, ensuring first that the plans and specifications reflect the needs of the Port Authority and that the project is, in turn, constructed in accordance with those requirements. The team will again approach projects under this contract with the same level of integrity and unwavering commitment to providing superior services as Louis Berger has always brought to projects for the Port Authority. The project manager, Wayne Valentine, PE, will bring his years of experience with the Port Authority, Red Bull Stadium, and other related construction management engagements. Michael Regan, CCM, will perform the overall quality assurance role, applying years of project leadership experience to ensure that all services meet or exceed the authority's requirements. Both will meet with the field staff on a regular basis to discuss job progress and quality of work, and will assist in the review and approval of the progress schedule.

STAFFING PLAN

The pool of inspectors, managers, and technical experts offered for this program has a diversity of experience that enables Louis Berger to construct project-specific teams based on the nature of each assignment, including type and size of construction, staging complexity, and specialty concerns to include unique systems and security considerations. Louis Berger will assign personnel with experience on Port Authority facilities and with an understanding of the technical challenges associated with each project. The personnel will also bring design and construction expertise in HVAC systems, electrical distribution, plumbing, communication and data systems, fire protection, architectural finishes, door and window systems, and vertical transportation systems.

In response to opportunities issued by the Port Authority, Louis Berger will assemble right-sized teams to fully address the Authority's needs while remaining mindful of the Authority's budget. These teams will be

assembled from the individuals proposed herein, in accordance with Port Authority requirements; on an as-needed basis, Louis Berger also offers the capability to add resources or engage in-house subject-matter experts (SMEs) to address specific Port Authority needs.

CONSULTANT TASKS

Throughout the years, the team has continuously demonstrated the ability to deliver quality CM services to the Port Authority. Louis Berger has provided expert professional assistance for all the tasks listed in this RFP. Capabilities in these areas follow:

Task A - Constructability/Biddability and General Engineering Review

As a consulting engineering and project management company, Louis Berger has performed services for all phases of major transportation and facility projects. Louis Berger has planning, design, program management and construction management staffs that have served the Port Authority and other NY/NJ-based clients for more than 60 years, and therefore have an extensive knowledge of the construction market in this region. The Louis Berger Team leverages this technical and market knowledge to optimize a document technical review process that will focus on a number of critical, high-value areas at key points during the preconstruction phase of each project. Document reviews for constructability, biddability, and general engineering review are best conducted as formal processes, including comment-specific reviews inclusive of the design professionals and key members of the owner's team.

The assigned team professionals bring extensive and diverse experience to this process and have the ability to assess the content of the documents from multiple viewpoints. The team members proposed by Louis Berger represent experience as planners, designers, procurement professionals, field personnel, inspectors, construction managers, facility managers, and owners. The ability to apply these perspectives to a document technical review optimizes the value of these reviews and ultimately reduces change orders, disputes, and project costs. In addition to the added value offered by the diversity of Louis Berger's team, the professionals providing these services know the Port Authority and have the ability to add this perspective to their review, ensuring that all aspects of the project are designed to proceed in accordance with Port Authority requirements.

The Louis Berger Team has previously performed this service for the Port Authority on major projects, including the World Trade Center and at Newark Liberty International Airport, as well as for various NY/NJ agencies. Louis Berger knows the obstacles to construction in the areas where Port Authority projects are executed, as well as the limitations and resources of the local contracting and labor communities.

To ensure that the value of technical reviews – including a focus on constructability, biddability, and general engineering review – is realized, Louis Berger can also organize a backcheck process by which the final disposition of all comments is reviewed and documented. Through this formal backcheck, the Louis Berger team provides additional value and protection to the Port Authority by ensuring that all comments are incorporated and that final contract documents reflect the best outcome from this iterative review and comment process.

- ☑ Breadth of local experience with agencies and operations likely to interface with Port Authority construction projects
- ☑ Diversity of technical disciplines to contribute to staging analysis towards the goal of developing optimal solutions
- ☑ Extensive CM experience on Port Authority and other metro area projects, including knowledge of preferences and requirements of the PANYNJ
- ☑ Globally-developed best practices from complex projects around the world
- ☑ Management experience to coordinate multiple efforts and oversee successful implementation of final staging plans
- ☑ Professional expertise that supports agile management in response to unforeseeable conditions or changing external factors

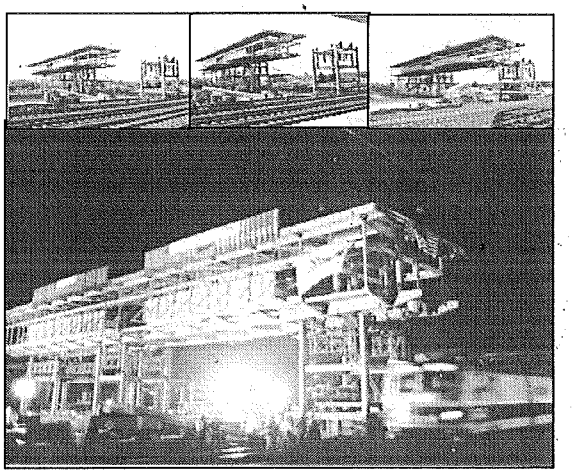
Louis Berger's Benefits of Successfully Developing and Implementing Construction Phasing Plans

Task B - Construction Staging

Louis Berger has been instrumental in providing construction staging plans for many Port Authority projects. This capability has perhaps been best demonstrated at the World Trade Center, when Louis Berger construction managers assisted with the restoration of PATH service and at Newark Airport during construction of the Monorail. The staging required coordination with NJ Transit, NJDOT and the Airport Land/Airside operations. The staging efforts for each of these two endeavors were remarkably complex. Louis Berger helped lead the successful efforts, actively soliciting multiple inputs, requiring open communication, and analyzing multiple scenarios with iterative stakeholder feedback to lead the team to an optimal solution.

In order to assemble an optimal construction staging plan, Louis Berger effectively balances the competing interests of construction progress, internal Port Authority operations, external agency concerns, and public traffic patterns, without compromising on safety for any of these involved parties.

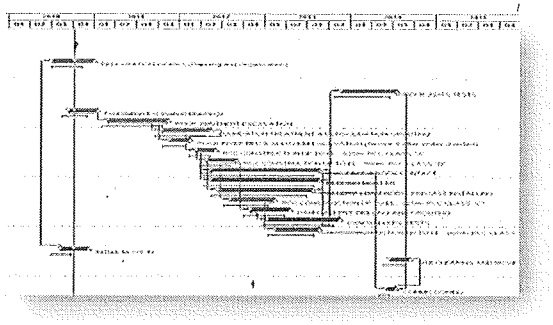
Additional examples where Louis Berger worked collaboratively with Port Authority and contractor staff to develop construction staging plans in challenging environments include the terminal concourse construction adjacent to a new EWR Monorail Station / AMTRAK platform. Louis Berger developed the plan by which the elevated concourse was pushed across the AMTRAK tracks overnight so that service was never in jeopardy. Another example of Louis Berger's ability to realize project value through creative construction staging was the relocation of the original terminal building away from the Runway Object Free Area (ROFA). The current administration building was then established by renovating the relocated structure.



Task C - Schedule Development and Monitoring

The Louis Berger Team has been at the leading edge of the development of project controls for decades. Louis Berger recognizes that a robust and reliable schedule, incorporating multiple inputs corresponding to both internal and external requirements, is the backbone of a successful project controls program. As such, Louis Berger offers a cadre of expert

schedulers with experience on projects including transit, facilities, roads, and bridges. Louis Berger takes a proactive approach to scheduling, identifying and resolving potential issues early and leading the project team in clearing bottlenecks and avoiding obstacles. Louis Berger also incorporates risk management into their scheduling services, developing probabilistic schedule models based on risk analysis conducted collaboratively with the project team. This level of schedule management further supports the early identification of potential delay concerns and creates team-based solutions to support Port Authority schedule goals.



This approach helps the team to develop schedules that can identify issues long before problems arise, so they can be mitigated early. The schedulers are trained and experienced in Primavera P6, including the Cost Module. Louis Berger is capable of building a schedule with resource loading, including cost, labor, materials, and equipment. These schedules will also support earned value analysis, another critical tool that can provide an early indication of potential issues that require attention.

In addition to deploying expert skills and cutting edge tools to manage a project schedule, Louis Berger will also diligently administer the schedule submission and review process to ensure that all Port Authority requirements are being met. Every month, Louis Berger will review the contractor's schedule within 10 days of receipt and either forward to the Port Authority to review or return to the contractor for having failed to meet the contract's criteria. Louis Berger will track this submittal to ensure that the contractor receives comments within 25 days. Louis Berger will forward the schedule to the Port Authority along with comments highlighting and emphasizing key points of critical concern. Further, the team will recommend actions to be taken for any work appearing to be behind schedule and, if need be, will develop a recovery schedule.

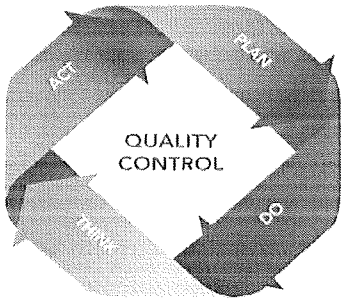
The outcomes of these schedule review processes will include:

- An approved baseline schedule, compliant with contract requirements and best scheduling practices, which is critical to all subsequent schedule activity
- Measurable progress of activities against baseline durations and milestones
- Clear and logical tasks and subtasks
- Identification and detailed tracking of long lead items
- Timely recommendations to the Authority and the contractor
- Cost and resource loading as appropriate to support thorough evaluation of payment applications

The team will utilize the latest version of Primavera (P6) and an experienced scheduler to evaluate the baseline and monthly progress schedules. To support the schedule review and analysis process, Louis Berger will hold regular

meetings as needed to review the CPM in depth with the project team in order to evaluate project challenges, identify impact mitigation opportunities, and review schedule logic sequences.

Task D - Quality Assurance Inspection



Continuous Quality Process Improvement

The Louis Berger Team is committed to quality management. This commitment begins with a thorough understanding of the project and the needs of the Port Authority, and is reinforced by a quality assurance process that has been implemented and utilized for numerous projects of a diverse nature. Louis Berger has an established quality assurance/quality control (QA/QC) program which has been approved by the Port Authority and other clients and has repeatedly been proven to be successful. This QA/QC plan, which has been adapted from the American National Standards for Quality Management Systems (ANSI/ASQC Q90 – Q94) and the International Organization for Standardization for Quality Systems (ISO 9000 – ISO 9004), will be customized and implemented for each specific project.

The primary safeguard for infrastructure work is the on-site construction inspection staff. Louis Berger's focus will be the daily operations of the contractor and his adherence to the contract documents. The inspection staff will observe all operations and file daily reports that will become the detailed history of the project. These reports will be prepared each day and checked by the Resident Engineer (RE) or chief inspector for accuracy. Inspector Daily Reports (IDR) will be the official record of the project. Work performed each day will be documented and payment records will be matched against these reports to ensure the Port Authority is paying for proper work in place.

Resident engineers will meet daily with the inspection staff to discuss planned work, approved materials and shop drawings, job progress, and quality of work. They will monitor project safety of Louis Berger's staff and review the contractor's operations for compliance with their own specific job health and safety plans. Field and office documentation will be reviewed with office engineers. Louis Berger's RE will monitor the project schedules with CPM scheduling specialist. They will perform preliminary review of shop drawings, monitor the status of permit requirements and utility work orders, schedule survey requests, and coordinate laboratory inspection requests to obtain timely test results. They will also give final approval for pay estimates to the contractor for payment processing.

The inspection staff will be responsible for monitoring all the general contractor's operations. Duties include, but are not limited to:

- Quantity measurements and calculations
- Quality verification and control
- Obtaining material delivery slips and certifications
- Verifying materials for acceptance in the work
- Inspecting the contractor's MPT procedures
- Inspecting measures taken for safe

operations on or around rail
- Observing the contractor's adherence to plans and specifications
- Monitoring project safety of the staff (The staff will notify the contractor's representative of any construction safety issues and advise the field office if the safety issue has not been corrected in a timely manner as required. All issues will be recorded on daily reports.)
- Entering data into the payment processing system, coordinated with the Office Engineer

In addition to the on-site processes by which construction quality is monitored and oversight operations are reviewed, Louis Berger will provide independent quality assurance audits for compliance with the QA/QC plan. Louis Berger's QA manager will make periodic site visits to review the inspection staff's procedures for observing the work being performed by the contractor for compliance with the contract documents, safety procedures, traffic control, and environmental aspects. Specifically, he will meet with inspectors in the field and prepare a Field Audit Report covering the following field inspection items:

- Description of contractor's activities being observed
- Quality of work being performed by the contractor
- Verification testing of materials
- Environmental controls for conformance to plans
- Check of inspectors' reports and field books for required information, sketches, and quantity calculations
- Contract items being covered with location of work
- Inspectors' personal protective equipment usage
- Inspectors' knowledge of specifications for the work being covered
- Inspectors' use of the required contract documents for work being covered

Immediate corrective action, if necessary, will be accomplished while the QA manager is on-site. He will meet with the RE to discuss job progress and quality of work. Any issues that can be corrected within 24 hours will be followed-up by the next day and documented on the field audit report.

The QA manager will also visit field offices for review of office records and document control systems for compliance with the QA/QC plan, including:

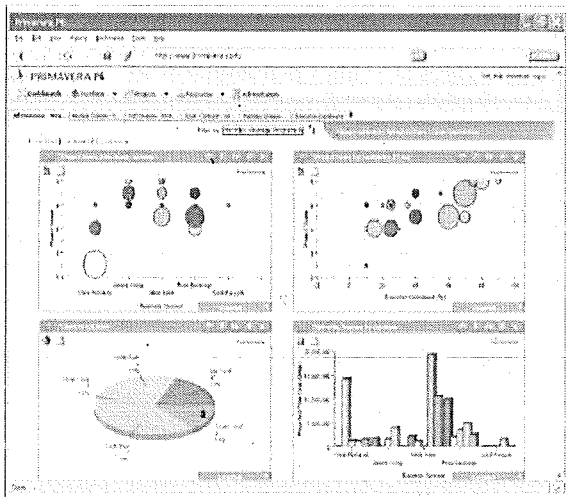
- General correspondence – Indexed logs of incoming/outgoing documents
- Shop drawing submittals/catalog cuts
- Subcontractor and supplier approvals
- Request-for-information logs and follow-up by the staff
- Change-of-plans/drawing modifications/change orders
- Progress schedule review and updates
- Material test results and logs
- Material certifications
- Delivery tickets
- Permits and Utility Orders
- Lane closing requests
- Inspectors' Daily Reports
- Record of Communication – whether in person, by telephone, or electronic
- Monthly certificates for payment
- Preparation of record plans
- All other documentation required by the Port Authority for construction

Any issues for the field documentation effort will be included in the comments section of the Field Audit Report.

Task E - Contract Administration

The core of Louis Berger's approach to contract administration is a combination of well-defined project procedures and a robust document management system. Louis Berger begins with a project management plan (PMP), which is tailored to each project's requirements and includes procedures and assignment of responsibility for their execution. Louis Berger has previously created and implemented PMPs on major capital improvement work for the Port Authority, including the World Trade Center, Newark Liberty International Airport Development Program, National September 11 Memorial and Museum, and WTC Transportation Hub and Vehicular Security Center. These PMPs already reflect the policies, procedures, software platforms, responsibility designations, and forms that are consistent with the needs of the Port Authority.

The processes defined within these plans would include individual administrative elements such as change orders, assessment of claims, requests for information (RFI's), submittals, meetings, reporting, time and material (T&M) records, budget management, payment application requirements, staff organization, schedules, communications plan (internal and external), daily reports, correspondence procedures, QA/QC procedures, safety, security, and closeout procedures. The PMP would also include a comprehensive document management plan, tying each of these elements together into a consistent and thorough project record.



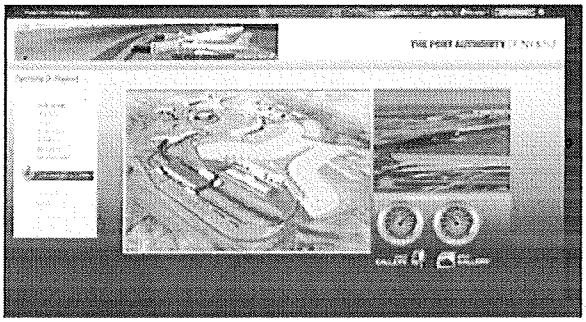
With the existence of the PMP templates based on Port Authority procedures and requirements, these plans are entirely scalable, and can be tailored to each individual project assignment to provide a Project Management Plan that is appropriate for the size, nature, and complexity of each contract. Some specific elements of the project management plan are as follows:

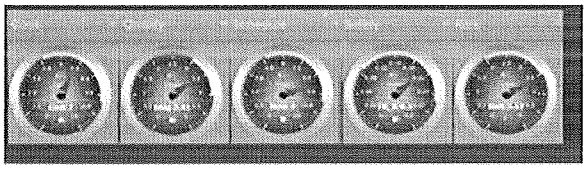
Document Control and Records Management

Louis Berger has established a scalable method of document control that has supported projects of all sizes and is recognized as one of the critical supporting elements of the program management efforts at the World Trade Center. In general, document control involves the management of all project related correspondence both incoming and outgoing. It is the process whereby all data is collected, distributed, and filed both in hard and soft copies. Standard document management software tools are applied and strict processes and procedures are adhered to in order to maintain all project documents.

An active electronic document controls system records and logs all documents received and issued. Metadata is recorded against each document to allow for control and fast retrievable. This metadata,should include but not be limited to the following: documents number, revision, date, title, originator and

organization, status and file locations, if hard copy is stored.





Beyond records management, some documents also require active monitoring. These documents, such as RFIs, submittals, and daily reports, have workflows that need to be tracked. Louis Berger uses project management software such as Primavera Contract Manager for managing and monitoring review performance and the flow of documents such as RFIs and submittals. This tracking includes such things as who has the documents (i.e., ball-in-court) and what is the present status (e.g., completed, overdue). This will allow the project team to identify overdue documents and effectively monitor their completion. Louis Berger also often combines contract manager and other project software with a SharePoint interface, which enables unified exception reports and project-wide dashboard reporting at any desktop.

An electronic document management system (EDMS) serves as an efficient and reliable tool for a project team – regardless of their location- to store, retrieve, and make immediately available from a central database project documents, drawings, construction photographs, graphics, and other project records. The Louis Berger Team has extensive experience in the design, implementation, and operational management of EDMS for diverse management assignments including metro systems, airport redevelopment programs, urban infrastructure programs, and major construction projects around the world. The Louis Berger Team has experience with a wide range of EDMS software including Aconex, LiveLink, ProjectWise, and SharePoint.

Records Management functions include:

- Encompass all records having a bearing on the project's activities including procurement and technical aspects
- Establish policies for standardizing required forms, reports, procedures, and manuals
- Ensure smooth and consistent distribution of information throughout the project organization on a need-to-know basis
- Expedite all required or outstanding information
- Ensure security of vital records
- Provide necessary retention for historical purposes
- Meet legal retention requirements, including those driven by FTA or FEMA programs
- Withdraw and destroy obsolete duplicates

Change Orders

Throughout each project, the Louis Berger Team will work proactively to minimize change orders, and subsequently to mitigate any time and cost impacts when such changes are necessary. In preparation for the reality of changes, however,

the Louis Berger does have a detailed workflow for supporting the change order process to ensure that all technical inputs are realized in scope development and estimating and that the process is administered transparently for establishment of a clear project record. The requirement for thorough documentation is especially noteworthy on federally funded projects, and, for this reason, Louis Berger will ensure that the final procedures governing such activities are defined in the PMP in accordance with these federal requirements.

The first activity after a contractor requests a change order is a determination of entitlement. Louis Berger will review the change order request and the contract documents and determine if the work is actually a contract change. If considered a change order, Louis Berger will work with the Port Authority and the project team to develop an appropriate scope of work and an independent estimate for the work. This team will obtain agreement from the contractor on the scope and provide all paperwork for change orders.

If a time and material change order is required, Louis Berger will convene an ad hoc meeting to confirm the required procedures for administering and documenting the actual work completed. Louis Berger will keep accurate records, sufficient to determine the true cost of the work. The contractor will submit daily time sheets to Louis Berger's inspectors supervising and monitoring the work. Louis Berger's inspectors will review and sign the time sheets and note any disagreements.

Louis Berger will create and maintain a contract change order log and will establish a file for each potential change as soon as the potential change issue is identified. These files will be populated with relevant information including applicable excerpts from contract documents, RFIs, submittals, correspondence, inspection reports, meeting minutes, and any other project documentation that defines each potential or actual change. These files will support the review and determination activities that are triggered by formal change requests or claim submissions.

The administrative procedures that Louis Berger has defined and implemented to include potential change files in the project have a number of benefits to the Port Authority. In addition to creating a robust project record and facilitating change reviews, this exercise also draws proactive management attention to potential claims and supports early mitigation of potential time and cost impacts as a result.

The value of the proactive change file management procedures and the underlying document control system has been recognized at the World Trade Center in a number of ways. For example, the claims management team is largely composed of Louis Berger staff; this team is improving processes and delivering daily actions to better position the Port Authority to eliminate or mitigate major claims. The talent and experience underlying this endeavor will also support the services provided on this IQC contract.

Meeting Management

Louis Berger will conduct meetings on a regular schedule at appropriate intervals, typically every two weeks, to review project status, costs, schedule, issues, upcoming schedule events, detailed coordination, and any other topics which are relevant to the project at that time. Louis Berger will also convene ad hoc meetings for significant project issues requiring resolution. A

typical example of project meeting types would include:

- Preconstruction meeting
- Regular progress meetings (typically bi-weekly but can increase to weekly if driven by critical project issues)
- Pay application review meetings
- QA/QC meetings (before, during, and after key project activities to confirm quality management requirements and procedures)
- Schedule review meetings
- Change order negotiation meetings
- Coordination meetings (to integrate construction activities into Port Authority operations, including temporary shutdowns and final systems start-up events)

Louis Berger will create agendas, lead discussions, and prepare detailed minutes for all meetings. Meeting minutes will be prepared and distributed within 48 hours of the meetings, and comments received will be considered and incorporated into updated minutes as appropriate. These meeting minutes will be structured using PMP best practices, identifying specific action items, responsible parties, and due dates for completion. By implementing this approach to recording the proceedings, Louis Berger incorporates the meeting minutes into the project record as a management document, creating accountability and supporting team progress towards project goals.

Task F - Cost Engineering/Estimating Services

For any project, Louis Berger has the capability and experience to establish a total budgetary control system, tailored to meet the Port Authority's requirements, using a number of cost control software options that will track all costs for the entire project. Louis Berger is very familiar with the Authority's *construction estimating guide* and has been utilizing the Authority's estimating procedures to develop cost estimates for many years.

The ability to accurately estimate costs, including those associated with Port Authority projects, is an essential component of the success of the Authority's capital program. An accurate estimate of facility force support will require a detailed approach that includes an understanding of the factors that affect cost, including schedule coordination, interrelationships between projects, and availability of facility force support resources.

The Louis Berger Team has performed pricing for complex projects in various stages of design, from conceptual to final, with construction costs in the billions of dollars. The team will use the design documents, individual project construction schedules, and the master schedule to develop accurate estimates of total project costs.

The proposed personnel will work closely with Port Authority personnel to prepare cost estimates that accurately incorporate labor productivities, current material prices, and construction equipment rates suited to the project specific site conditions and staging requirements. In addition, the team can utilize its database of historical labor productivities and/or unit prices to develop an order of magnitude preliminary estimate, when limited scope of work or design information is available. Louis Berger develops "real-world" cost estimates based on the understanding of the constraints and cost impacts of performing construction activities in active transit environments.

Other cost management services include:

- Preparation of complete, detailed cost estimates
- Preparation of conceptual, preliminary and pre-bid estimates
- Cash flow modeling and trending
- Preparation of project/program budgets
- Value engineering cost estimates
- Bid packaging and phasing
- Bid analysis, unbalanced bid checks, and schedule of values development
- Progress payment assessments
- Change order estimates and checks
- Cost to complete estimates
- Check estimates
- Cost Engineering
- Quantity take-offs

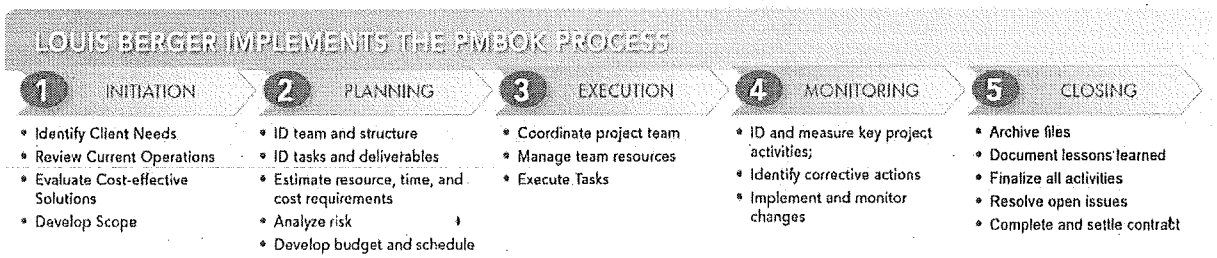
Task G – Resources

Louis Berger is committed to delivering the resources indicated in this proposal, specifically the proposed staff, for the full duration of the project. The team understands that the most important factor in selecting a construction management consultant is the quality of the proposed personnel; therefore, if selected by the Port Authority, as Louis Berger's quality assurance policies require, the firm will deliver the proposed personnel. Louis Berger has a long history of providing quality personnel and services to the Port Authority and values the confidence that the Authority has placed in Louis Berger's ability to continue to do so. Therefore, the firm has carefully selected staff not only on the basis of their technical capabilities but also their availability.

For this project in particular, the team is capable of delivering more than the required number of certified professional as identified in the request for proposal. In addition to the inclusion of certified professionals which exceed the Port Authority's requirements for this contract's staff, Louis Berger offers a cadre of experienced inspectors, construction managers, engineers, schedulers, cost engineers, cost estimators, and other experienced professionals. These individuals constitute a technically well-rounded team with a diversity of experience from which Louis Berger can draw to tailor individual project teams.

Throughout the many years that Louis Berger has provided professional services to the Port Authority, this team has responded to any number of project challenges by identifying and providing strong professional resources to address specific needs. Louis Berger approaches this IQC engagement the same way, and is poised with the available resources to continue that level of response for these important resiliency projects.

Supporting Construction Management and Related Technical Services



In conjunction with these defined tasks to be provided to the Port Authority, the Louis Berger team offers a full complement of program and construction management services, including the following.

Task Order Management

Louis Berger's task order management model is based on industry best practices, principles, and techniques developed by the Project Management Institute (PMI). The project management method shown above, adapted from the PMI Project Management Book of Knowledge (PMBOK), will guide Louis Berger project and task managers throughout contract performance. The method will be tailored for each Port Authority task to incorporate Louis Berger experience performing similar tasks at the Port Authority and elsewhere. Louis Berger will respond to the Port Authority task orders, mindful of this five-step process, employing appropriate management processes, reports, and controls, to ensure the team achieves cost, schedule, and performance objectives.

Louis Berger is well versed in the task order operations for Port Authority contracts and will continue implementing the procedures that have led to the successful management of this process to date. Of utmost importance will be the continued dialogue and open conversation between Louis Berger and the Authority to confirm that the services being provided are responsive to the Authority's needs and aligned with the Authority's expectations for cost and quality.

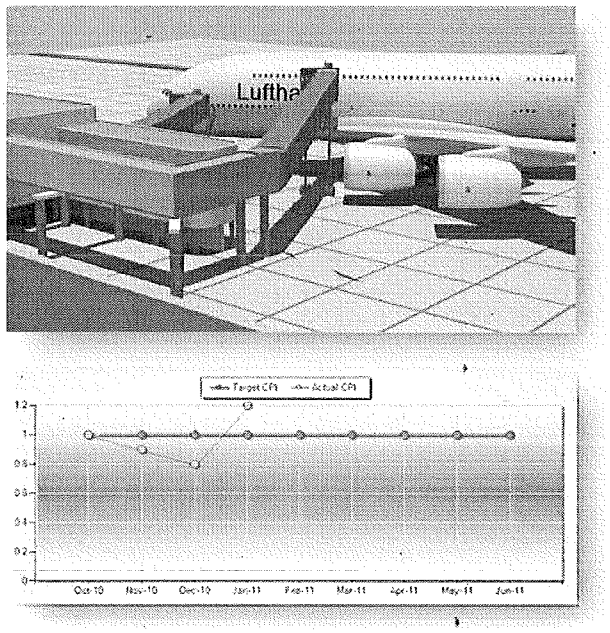
Prevailing Wage Administration

Louis Berger will monitor the prevailing wages paid by the contractor and subcontractors by reviewing verified payroll reports. The reports will be submitted along with the invoices. Louis Berger will follow up with the contractor to obtain missing or corrected payroll reports. The reports will be logged in chronological order to ensure that there are no gaps in reporting.

Louis Berger inspectors will make regular surveys of the construction crews to verify that they are receiving prevailing wages in accordance with the contractor's records

Reporting

The Louis Berger team is engaged on a wide variety of project types for the Port Authority, and tailors the reporting mechanisms to each type. Reporting mechanisms range from the simple straightforward daily reports to complex electronic project management information system (PMIS) based reporting with roll-up dashboards and multiple drill-down functions for varying levels of detail. Louis Berger has provided this full range of reporting for the Port Authority and will again tailor the reporting methods for each assignment.



Regular methods of reporting include:

- Port Authority Daily Reports
- Contractor's Daily Reports
- Contractor's Daily narratives recording manpower, equipment, and notable work day events
- Contractor time and material sheets with construction manager verification of times, equipment used, idle time, operating time, material quantities, and all manpower throughout the day
- Controlled inspection forms for operations such as placement of backfill, asphalt, or concrete
- Completion of any applicable standard forms with citations to the Construction Standards Manual
- Punch List reports and updates, distributed to the Contractor, Quality Assurance Director, and Resident Engineer
- Special Inspection Checklists and Certification Letters at project completion
- Meeting Agendas and Minutes
- Weekly and Monthly Project Reports
- Schedule Reports
- Budget Reports
- Earned Value Management Reports
- Exception Reports (non-conformance, quality, delays, risks)

With the critical nature of effective reporting, Louis Berger will ensure that the reporting for each project provides the most accurate and up-to-date information needed by the Authority to inform further roll-up reporting, highlight project progress and issues, identify required decisions, and inform those decisions.

Project Close-Out

The construction management team will work with the contractor to finalize the project and ensure that all contractual obligations are complete. To verify that the project is substantially complete, the Resident Engineering team will:

- Determine substantial completion through its Construction Manager, in concurrence of the Port Authority PM.
- Prepare a punch list of work remaining to be finished. This list will be documented in the monthly report.
- Monitor the correction or completion of the punch list items and record status in the Monthly Report.
- Determine final completion and recommend acceptance of the work to the Authority.
- Perform final inspection.
- Verify that all final documents have been submitted and are complete and approved, including warranties, guarantees, affidavits, releases, bonds, O&M Manuals, etc.
- Monitor all system start-ups and commissioning of equipment.
- Verify that training of Port Authority personnel for operation of equipment has been performed and training manuals and sessions are available.

In brief, the Louis Berger team provides expert-level construction management and inspection services that span the entire life cycle of any project. The established framework for providing these services has supported the successful completion of billions of dollars of construction efforts worldwide. The individuals proposed herein to deliver these services have the technical expertise, relevant experience, and proven records of successful delivery for the Port Authority of New York and New Jersey.

II.
Conflict of Interest

GENERAL CONFLICT OF INTEREST

In accordance with the terms of the Request for Proposals number 39247, Louis Berger offers the following as it relates to general conflicts of interest:

1. Louis Berger is currently a subcontractor to Jacobs to perform design services for Port Authority resiliency construction projects. To date, no work has been performed through this contract, which is one of nine call-in contracts for such design work. Louis Berger does not view this as a current conflict of interest relative to the IQC Construction Management services requested in the scope of work for the project, but does recognize the potential for design work performed by the Louis Berger portion of the Jacobs team to present the potential for such a conflict of interest in the future. In this event, Louis Berger will institute the following safeguards to avoid the conflict of interest:
    a. Ensure that an effective firewall is in place, separating the design team for a given resiliency project from the team performing IQC CM services for that project.
        i. This firewall would include physical separation, naturally attained as the CM staff will be entirely field based and the design team will be primarily office-based.
        ii. This firewall would also include organizational separation, also naturally attained as the CM staff and the design staff resides within separate business units within Louis Berger.
        iii. The physical and organizational separation will be enhanced, wherever possible, by utilizing non-Louis Berger resources for any CM services on Louis Berger-designed projects that could be construed to create a conflict of interest.
        iv. The firewall would be complete with separate document control and electronic partitioning, ensuring that the design activities and CM activities are isolated from one another.
        v. All affected employees would be thoroughly trained on conflicts of interest – including the appearance thereof – and the purpose of the firewall.
    b. In the event that an effective firewall cannot be implemented to the satisfaction of all involved parties, Louis Berger will recuse itself from performing CM services on projects on which the Berger resources subcontracted to Jacobs performed design services

As always, Louis Berger will work transparently and collaboratively with the Port Authority to avoid any conflicts through proactive management and open communication. Louis Berger and its subcontractors will cooperate fully with the Port Authority's Inspector General and its Integrity Monitor to ensure the fortitude of the mitigation plan and audit its successful implementation should such occasion arise. Louis Berger is fully confident in our ability

to work with the Port Authority to ensure that such issues are avoided.
