- F. Where insulation is indicated, install extended-stem valves, arranged in proper manner to receive insulation.
- G. Install valves with bodies of metal other than cast iron where thermal or mechanical shock is indicated or can be expected to occur.
- H. Do not install bronze valves and valve components in direct contact with steel, unless bronze and steel are separated by dielectric insulator. Install bronze valves in steam and condensate service and in other services where corrosion is indicated or can be expected to occur.
- I. Except as otherwise indicated, install gate, ball, globe, and butterfly valves to comply with ANSI B31.1. Where throttling is indicated or recognized as principal reason for valve, install globe or butterfly valves.
- J. Limit selection and installation of valves with non-metallic discs to locations indicated and where foreign material in piping system can be expected to prevent tight shut-off of metal seated valves.
- K. Select and install valves with replaceable seats, except where otherwise indicated.

END OF SECTION 15120

SECTION 15130
HANGERS AND SUPPORTS FOR PLUMBING WORK

PART 1 - GENERAL**1.01 DESCRIPTION**

- A. This Section is coordinate with and complementary to the General Conditions and Special Conditions of the Work wherever applicable to Mechanical and Electrical Work.
- B. Section 15000 - Special Requirements for Mechanical and Electrical Work shall apply.
- C. Section 15100 - General Provisions for Plumbing Work shall apply.

1.02 SCOPE OF WORK

- A. The work of this Contract includes providing all labor, materials, accessories, services and tests necessary to install complete and make ready for operation by the Owner, all Hangers and Supports for Plumbing System as shown on the Drawings and as specified hereinafter.

1.03 SPECIFIC REQUIREMENTS

- A. Provide products which are Underwriters Laboratories listed and Factory Mutual approved.
- B. Provide pipe hangers and supports of which materials, design, and manufacture comply with ANSI/MSS SP-58.
- C. Select and apply pipe hangers and supports, complying with MSS SP-69.
- D. Fabricate and install pipe hangers and supports complying with MSS SP-89.
- E. Assume the responsibility for the proper transfer of the loads of the piping system to the structure. No additional cost to the Owner should be expected for any corrective work during construction.
- F. Supports and hangers shall be provided for all horizontal and vertical piping. The hanger design shall conform to the ASA Code for Pressure Piping. Hangers shall be kept outside of pipe insulation.

- G. All bracket clamps and rod sizes indicated in these Specifications are minimum size only. This Contractor shall be responsible for structural integrity of all supports. All structural hanging material shall have a safety factor of five (5) built in.
- H. All horizontal cast iron pipe shall be supported every five (5) feet and at each hub and/or "no-hub" clamping assembly. When a concentration of fittings occur, additional support shall be installed consistent with good trade practices. "No-hub" system must be supported in accordance with Standard CISPI-310-78.

PART 2 - PRODUCTS

2.01 HANGERS AND SUPPORTS

- A. Pipe supports shall be of the following type and figure number, manufactured by C&P, B-Line, Grinnell, or equal as approved:
- B. Pipe Hanger Schedule

	<u>C&P</u>	<u>Michigan</u>	<u>Grinnel</u>	<u>B-Line</u>
Beam Clamp	268	364	-	B-3055
Clevis Hanger	100	400	260	B-3100
180 Degree Shield	265P	125	-	B-3151
Pipe Saddle	351	630	180	B-3160
Rigid Trapeze	371	MTO	Std. 45	M.T.O.
U-Bolt	283	150	137	B-3188
Riser Clamp	89 or 126	510	261	B-3373
Double Bolt Pipe Clamp	304	452	295	B-3144
Welding Beam Attachment	113B	320	66	B-3083
Insert	650	355	280	B-2500
Continuous Slotted Insert	1480	-	-	B-322/522

C. Insulation Protection

1. For all insulated pipe furnish clevis hangers with welded shields and equal to C&P, Inc., Fig. 100-SH.

D. Pipe Supports in Pipe Chases

1. Supports shall securely hold piping, prevent vibration, etc. Provide pipe supports and channels as required. Use Grade KJA Cycolac DH self-extinguishing ABS as manufactured by the Sumner Corporation or approved equal.

PART 3 - EXECUTION**3.01 INSTALLATION REQUIREMENTS**

- A. Provide necessary structural members, hangers and supports of approved design to keep piping in proper alignment and prevent transmission of injurious thrusts and vibrations. In all cases where hangers, brackets, etc., are supported from concrete construction, care shall be taken not to weaken concrete or penetrate waterproofing. All hangers and supports shall be capable of screw adjustment after piping is erected. Hangers supporting piping expanding into loops, bends and offsets shall be secured to the building structure in such a manner that horizontal adjustment perpendicular to the run of piping supported may be made to accommodate displacement due to expansion. All such hangers shall be finally adjusted, both in the vertical and horizontal direction. Hangers in contact with copper or brass pipe shall be copper plated steel.
- B. Pipe hangers shall be of the clevis and pipe roller types, except where otherwise noted.
- C. Where piping is run near the floor and not hung from the ceiling construction but is supported from the floor, such supports shall be of pipe standards with base flange and adjustable top yoke similar to C&P Fig. 101 or equal.
- D. Except where otherwise noted, piping shall be supported from structural steel only. Provide supplementary steel where required.
- E. Piping shall not be hung from other piping, ducts, conduits or from equipment of other trades.

- F. All water piping connected to rotating equipment within all mechanical spaces shall be isolated from the building structure by means of vibration hangers inserted in the hanger rods. The vibration hangers shall consist of a steel spring in combination with a double deflection neoprene element within a rectangular steel housing. Combined static deflection shall be 1.375" minimum. Hangers shall have capability of supporting the piping at a fixed elevation during installation and shall incorporate an adjusting device to transfer the load to the spring. Deflection shall be indicated by means of scale. Vibration hangers shall be Fig. No. 360 or type PCDNHS as made by Mason Industries, as specified under another Section of these Specifications.
- G. Where additional steel is required for the support of hangers, furnish and install same subject to the approval of the Architect. Piping shall not be supported from the metal deck slab construction.
- H. All piping running on walls shall be supported by means of hanger suspended from heavy angle iron wall brackets. No wall hooks will be permitted.
- I. Lateral bracing of horizontal pipe shall be provided where required to prevent side sway or vibration. The lateral bracing shall be of a type approved by the Architect and shall be installed where directed by the Architect.
- J. All anchors shall be separate and independent of all hangers, guides and supports. Anchors shall be of heavy blacksmith construction suitable in every way for the work approved by the Architect. Anchors shall be welded to the pipe and fastened to the structure with anchor type bolts.
- K. Anchors shall be fabricated and assembled in such a form as to secure the piping in a fixed position. They shall permit the line to take up its expansion and contraction freely in opposite directions away from the anchored points; and shall be so arranged as to be structurally suitable for particular location and line loading. Submit details for approval.
- L. All horizontal steel and copper pipe shall be supported at maximum intervals as follows: Steel pipe - up to 1½" - 8'-0"; 1½" to 2½" - 10'-0"; 3" and larger - 12'-0". Copper tube and Brass Pipe - up to 1½" - 6'-0"; 1½" to

2½" - 8'-0"; 3" and larger - 10'-0". There shall be no metal-to-metal contact at supports for non-ferrous pipes. Provide 1/8" thick lead strips or Summer Inc. pipe clamps under uninsulated piping at supports. Hangers and supports shall be installed outside of insulation or insulated piping.

- M. Trapeze type hangers shall be made up of angles bolted back-to-back or channels for supporting parallel lines of piping. Trapeze type hangers shall be supported with suspension rods having double nuts, and securely attached to construction with inserts, beam clamps, steel fishplates, cantilever brackets, lag screws or other approved means. Use approved type brackets for supporting piping attached along walls. Non-insulated piping (compressed air, gas, etc.) supported by trapeze hangers shall be provided with hold down clamps at the trapeze hangers. If only non-ferrous piping (copper, etc.) is supported on the trapeze hangers, the trapeze and hold down clamps shall be copper clad.
- N. Maximum weights on hanger rods shall be such that stress in tension shall not exceed 9,000 psi, using root area of threaded portion. In no case shall hanger sizes be less than 3/8" for pipe up to 2", ½" for pipe 1½" to 3½", 5/8" for pipe 4" to 5", ¾" for pipe 6", 7/8" for pipe 8" to 12".
- O. Supports for vertical piping shall be double bolt riser clamps, with each end having equal bearing on the building structure located at alternate floors. Cast iron soil pipe shall be supported at every floor and at its base.
- P. All auxiliary steel for pipe supports shall be furnished and installed under this Section.
- Q. All hangers, rods, inserts, clamps, stanchions, brackets, etc., shall be dipped in zinc chromate primer before installation and provided with one (1) coat of approved type paint after installation. (Refer to Section 15000.)
- R. Chains, straps, perforated iron or wire hangers are not permitted.
- S. The Architect must approve method of supporting pipes from building structure before work is started. The Contractor shall bear all responsibility for materials and workmanship as described in this Section, and shall

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

make sure that all hangers and supports are properly and permanently connected to building structure. No piping shall be hung from metal deck; auxiliary steel shall be provided.

- T. All pipe support shall be installed to avoid interference with other piping, hangers, electrical conduits and supports, building structures and equipment.

END OF SECTION 15130

SECTION 15150
INSULATION FOR PLUMBING WORK

PART 1 - GENERAL

1.01 DESCRIPTION

- A. This Section is coordinated with and complementary to the General Conditions and Special Conditions of the work, wherever applicable to Mechanical and Electrical Work.
- B. Section 15000 Special Requirements for Mechanical and Electrical Work shall apply.
- C. Section 15100 - General Provisions for Plumbing and Fire Protection Work shall apply.

1.02 SCOPE OF WORK

- A. The Work of this Contract includes providing all labor, materials, accessories, services and tests necessary to install complete and make ready for operation by the Owner, all work as shown on Drawings and as specified hereinafter.
- B. The piping systems and equipment to be insulated shall include, but not be limited to the following:
 - 1. Domestic cold water piping.
 - 2. Interior storm/water drainage piping as indicated.

PART 2 - PRODUCTS

2.01 INSULATING MATERIALS

- A. All insulation shall have a composite (insulation, jacket facing and adhesive used to adhere jacket or facing to the insulation) fire and smoke hazard ratings as tested by Procedure ASTM E-84, NFPA 255 and UL 73, not exceeding flame spread of 25, fuel contributed of 50, and smoke developed of 50. Accessories such as adhesives, mastics, cements, tapes and cloths for fittings shall have component ratings as listed above. Insulation shall be glass fiber with a maximum K factor 0.23 at 75°F. mean temperature. Density shall not be not less than 3 lbs. per cu. ft.

- B. The materials as specified below have been selected from the catalog of Owens-Corning Fiberglass Corp. and are representative of the quality, design and finish desired. Insulation as manufactured by other manufacturers may be submitted for approval, provided the products meet fully in all respects (such as density, moisture absorption, alkalinity, thermal-conductivity, jacket, etc.) the materials as designated below.
1. Fiberglass Pipe Insulation: FS HH-I-558B, Form D, Type III, Class as indicated.
 - a. Provide Class 12 for plumbing piping.
 2. Fiberglass Pipe Fitting Insulation: FS HH-I-558, Form E, Class as indicated.
 - a. Provide Class 16 for use with Class 12 pipe insulation, where temperature does not exceed 450oF.

2.02 RELATED MATERIALS AND REQUIREMENTS

- A. At pipe supports Insul-Shield pipe saddles and matching hanger shall be used. Joints of insulation abutting Insul-Shielding pipe saddles shall be butted with IC-405, and the joints firmly pressed together.
- B. All concealed and exposed piping shall be provided with factory ASJ (Owens/Corning Fiberglass) secured in place with vapor barrier adhesive IC-225. Provide ½" aluminum bands spaced 18" on centers.

2.03 INSULATION REQUIREMENTS

- A. Cold Water Piping
 1. Cold Water - all sizes - ½" insulation, A.S. jacket.
 2. Storm drainage piping and drain body - minimum ½" insulation, A.S. jacket.

PART 3 - EXECUTION**3.01 GENERAL REQUIREMENTS**

- A. Maintain integrity of vapor-barrier jackets on pipe insulation, and protect to prevent puncture or other damage. Staples shall not be used on vapor barrier.
- B. Cover valves, flanges, fittings and similar items in each piping system with equivalent thickness and composition of insulation as applied to adjoining pipe run. Install factory, precut or job fabricated units (at Installer's option) except where a specific form or type is indicated.
- C. Extend piping insulation without interruption through walls, floors and similar piping penetrations, except where otherwise indicated.
- D. Install protective metal shields and insulated inserts at each hanger and support to prevent compression of insulation.
- E. Do not apply insulation to hot equipment.
- F. Apply insulation using the staggered joint method for both single and double layer construction, where feasible. Apply each layer of insulation separately.
- G. Coat insulated surfaces of equipment with layer of insulating cement, troweled in a workmanlike manner, leaving a smooth continuous surface. Fill in scored block, seams, chopped edges and depressions, and cover wire netting and joints with cement of sufficient thickness to remove surface irregularities.
- H. Cover insulated equipment surface with jacketing neatly fitted and firmly secured. Lap seams at least two inches. Apply over vapor barrier where applicable.
- I. All horizontal storm drainage piping (except in service/utility corridor) under roofs, exposed and above hung ceiling, and roof drain bodies shall be insulated (sweat-proofing) as specified for water piping, but nested larger diameter covering over hubs and drain bodies.
- J. Direct contact between pipe and hanger shall be avoided. Hanger shall pass outside of metal saddle which cover a

section of high density insulation (such as calcium silicate) of sufficient length to support pipe without crushing insulation. Hangers or saddles shall not pierce insulation and vapor barriers.

3.02 INSTALLATION REQUIREMENTS

- A. Install insulation products in accordance with the manufacturer's written instructions, and in accordance with recognized industry practices to ensure that the insulation serves its intended purpose.
- B. Install insulation on pipe systems subsequent to testing and acceptance of tests.
- C. Install insulation materials with smooth and even surfaces. Insulate each continuous run of piping with full-length units of insulation, with a single cut piece to complete the run. Do not use cut pieces of scraps abutting each other.
- D. Clean and dry pipe surfaces prior to insulating. Butt insulation joints firmly together to ensure a complete and tight fit over surfaces to be covered.
- E. The Contractor shall take every precaution necessary to ensure that the covering material is in satisfactory condition to receive painting.
- F. Penetration of walls and floors by piping connection to rotating equipment shall be provided with a fiberglass sleeve, the full depth of pipe penetration.
- G. In all cases where new piping connects to existing piping that is insulated, the existing insulation that is removed to make the new connection shall be replaced with new insulation as hereinafter specified.
- H. Do not insulate hand holes, cleanouts, ASME stamp, or the manufacturer's nameplate. Provide neatly beveled edge at interruptions of insulation.
- I. Replace damaged insulation which cannot be repaired satisfactorily, including units with vapor barrier damage and moisture saturated units.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

- J. The installer of the piping insulation shall advise this Contractor of required protection for the insulation work during the remainder of the construction period, to avoid damage and deterioration.

END OF SECTION 15150

SECTION 15160
PLUMBING EQUIPMENT, SPECIALTIES AND ACCESSORIES

PART 1 - GENERAL**1.01 DESCRIPTION**

- A. This Section is coordinate with and complementary to the General Conditions and Special Conditions of the Work, wherever applicable to Mechanical and Electrical Work.
- B. Section 15000 - Special Requirements for Mechanical and Electrical Work shall apply.
- C. Section 15100 - General Provisions for Plumbing and Fire Protection Work shall apply.

1.02 SCOPE OF WORK

- A. The Work of this Contract includes providing all labor, material, equipment, accessories, services, and tests necessary to complete and make ready for operation by the Owner, all work as shown on the Drawings and hereinafter specified.

PART 2 - PRODUCTS**2.01 PIPE EXPANSION COMPENSATORS**

- A. Any breaks or damage to the piping system or to the Work of other Sections within the period of the guarantee due to improper provision for expansion and contraction must be replaced at this Contractor's expense.
- B. This Contractor is to provide for expansion of pipes by providing expansion compensators and/or expansion loops and shall provide anchors at pump discharge and suction lines. All expansion loops shall be prestressed.
- C. Make adequate provisions for proper expansion and contraction of piping. At connections of branches to water mains, risers and at connections to heaters, coolers and other equipment, provide sufficient number of elbow swings to allow for proper expansion and contraction of piping. Provide adequate elbow swings, expansion compensators, expansion loops or approved type expansion joints, wherever noted, indicated, or required to allow for proper expansion and contraction of mains and risers.

- D. This Contractor shall provide, where necessary to absorb expansion and contraction, in hot water recirculation pipe lines (except at building expansion joints) 3 inches and smaller and for systems with pressures less than 51 psi, Flexonics Model HP expansion compensators having two-ply phosphor bronze elbows and brass shrouds and end fittings as manufactured by U.O.P. Flexonics Division, Bartlett, Illinois. All internal parts shall be of non-ferrous metals. Service pressure shall be external to the bellows. Compensators shall have integral guides extending the full length of the bellows travel. Compensators shall have external positive anti-torque devices to prevent twist.
- E. This Contractor shall provide, as shown on the plans and/or where necessary to absorb expansion and contraction in hot water recirculation piping, except at building expansion joints, etc., pipe lines 4 inches and larger and for system pressures exceeding 50 psi, Flexonics controlled-flexing expansion joints as manufactured by U.O.P. Flexonics Division, Bartlett, Illinois, or approved equal, with plate steel flanges having ANSI drilling, pipe nipple ends beveled for welding or forged steel ANSI flanges to suit the installation. The bellows shall be hydraulically formed from a stainless steel reinforcing neck ring and control rings shall be of a design to limit movement of each corrugation, as well as to carry hoop stresses caused by internal pressures. Where required, the bellows shall be annealed and/or stress relieved. Before assembly, the corrugated bellows must be pickled to remove all scale formed by annealing and passivated to provide the maximum corrosion resistance.
- F. All lines in which expansion joints are installed must be securely anchored and guided in accordance with manufacturer's recommendations.

2.02 ESCUTCHEONS

- A. This Contractor shall provide escutcheons on all exposed pipe wherever they pass through floors, ceilings, walls or partitions.
- B. Escutcheons for pipes passing through outside walls and floors shall be Ritter Pattern and Casting Co., No. 1, solid, cast brass, flat type secured to pipe with set screws.

- C. Escutcheons for pipes passing through interior walls, partitions, and ceilings shall be Ritter Pattern and Casting Co., No. 1, solid, cast brass chromium plated type, secured to pipe with set screws.
- D. Escutcheons for pipes in unfinished areas shall be cast iron, secured with set screws.

2.03 TRAPS

- A. Each fixture and piece of equipment requiring connection to the drainage system shall be separately trapped by means of a water seal trap placed as close to the fixture as possible.
- B. All running traps on drains, etc., shall have inlet handhole cleanouts and brass plug cleanouts in bottom. Cast iron traps below grade shall have bottom plug omitted. All exposed P traps shall have bottom cleanouts and shall be chromium plated brass.

2.04 DISSIMILAR METALS

- A. Connections between pipe, fittings, hangers and equipment of dissimilar metals shall be avoided.
- B. Dielectric unions or insulated couplings shall be installed between copper or brass piping material and steel piping material or steel tanks. Unions or insulated couplings shall be used for pipe sizes 2" and smaller, and use dielectric gaskets on flanges and sleeves for pipes 2½" and larger.
- C. Pipes, fittings, hangers, etc., of dissimilar metals shall be insulated against direct contact with each other by using a high quality or grade of dielectric insulating material.

2.05 PIPE SLEEVES

- A. Any pipe required in walls and floors shall be provided with a pipe sleeve.
- B. Provide watertight sleeves for all pipes penetrating exterior foundation walls and waterproof floor areas and where other waterproof areas are noted on the Architectural and Structural Drawings.

- C. Except where indicated or specified otherwise, provide and install Schedule 40 galvanized steel sleeves for all piping passing through concrete walls or floor slabs. Sleeves shall be securely set in the framework and where not specified otherwise shall be of such length as to extend flush with each face of the wall in which they are installed. Sleeves shall be securely set in floors 3" above unfinished floor and 2" above the finished floor or tile, as applicable. Sleeves in kitchen and laundry areas shall be chrome plated.
- D. Sleeves shall have an internal diameter of at least 1" larger than the outside pipe size diameter of the pipe passing through them. Sleeves in exterior foundation walls shall be James B. Clow and Sons, No. F-1430 or F-1435, or approved equal, extra-heavy cast iron wall sleeves with intermediate integral flange. Cast iron sleeves shall be set with ends flush with wall faces.
- E. Where sleeves penetrate waterproofing, install caulking between pipes and pipe sleeves as follows:
 - 1. Pack oakum to a depth of 1" between pipe and pipe sleeve at a location permitting 3" of sealant to be installed above the oakum.
 - 2. Fill space above oakum to a depth of 3" with sealant similar and equal to Igas Joint Sealer as manufactured by Silka Chemical Corporation.
- F. Sleeves for gas piping shall extend 4 inches beyond exterior face of wall and 1 inch beyond inner face.
- G. Sleeves in waterproof floors shall be as manufactured by Zurn Inc. or equal, cast iron sleeve with integrally cast flange and flashing device.

2.06 STACK SLEEVES

- A. Stack sleeves for pipes passing through roof shall be equal to Zurn Z-195-10, with cast iron body, adjustable flashing ring, rust resistant bolts, and under deck clamp. The adjustable flashing ring shall be caulked after it is in the proper position. The space between the flashing sleeve and the pipe passing through same shall be caulked watertight.

2.07 UNIONS**A. Where Required**

1. On inlet and outlet of all apparatus and equipment having connections 2" and smaller. Where valves are adjacent to equipment, unions shall be on equipment side of valves.

B. Type

1. Steel piping: Malleable iron, WOG female pattern, brass seat, ground joint, 300 lb.
2. Copper tubing: Ground joint, cast iron, 150 lb. WOG pattern.

2.08 HOSE BIBBS

- A. Hose bibbs shall be Chicago Faucets #952 or approved equal, with vacuum breaker and loose key except as specified herein. Combination hot and cold hose bibbs shall be Chicago #305-VBC.P. or approved equal; modify for piped mounting less loose flange.

2.09 DRAINS

- A. Drains shall have heavy cast iron, with double drainage flange and weep holes, with outlet connections as indicated and of sizes indicated on Drawings. Drains (except as noted) shall be furnished with high polished brass tops consisting of a one-piece rim secured to the body and vandal-proof spanner type screws, and a solid brass grate with reinforcing members on underside. Removable sediment basket shall be of heavy duty one-piece construction as specified hereinafter. All strainers or grates shall be secured with vandal-proof spanner type screws, unless otherwise specified.
- B. All drains in floors with a waterproof membrane shall be equipped with 6 lb. lead flashing or 20 oz. soft rolled sheet copper and secured to the flashing flange with brass bolts and cast iron clamping device. Flashings shall bond not less than 1'-0" on all sides into membrane waterproofing.

- C. On roofs furnish and set in conjunction with the roofer and when directed by the General Construction Contractor, approved roof drains of cast iron unless otherwise indicated.
- D. Flashing of 6 lb. lead or 20 oz. soft rolled sheet copper, 34" x 34", shall be furnished and installed at each roof drain by means of non-puncturing type flashing clamping device.
- E. Set all drains in such a way that the floor finish and top of the drain will be plumb and flush with finish floor without requirements for future additional extension, modifications, etc.
- F. When Dex-O-Tex and/or vinyl waterproof floor is indicated on the Architectural Drawings, all drains must be provide with required flanges.
- G. All drains, except as noted, shall be similar to or equal to Zurn Mfg. Co. and shall be as follows:
 - 1. Roof Drains R.D. Type A - Similar and equal to No. Z-100-ERC Duracoated cast iron body with combination flashing collar and gravel stop, cast iron dome, underdeck clamp and sump receiver and perforated extension collar to accommodate roof insulation. Drain must be applicable for each roof construction.
 - 2. Floor Drains F.D. Type A (Mechanical and Concealed Equipment Rooms) - Similar and equal to Jay R. Smith Fig. 2233 cast iron body and flashing collar with cast iron tractor grate, flat bottom strainer and sediment bucket No. 3591 cast iron funnel attached to grate, where indicated on the Drawings.

2.10 CLEANOUTS

- A. Provide easily accessible cleanouts where indicated; at base of vertical stacks and leaders, at ends of horizontal drainage lines and at intervals not exceeding 50 ft., at each change of direction, on hand holes of running traps, and where indicated to make entire drainage system accessible for rodding. Provide at least 18 inch clearance to permit access to cleanout plugs.
- B. Cleanouts for cast iron pipe shall consist of tapped extra heavy cast iron ferrule caulked into cast iron

fittings, and extra heavy brass screw plug with solid hexagonal nut.

- C. Cleanouts turning out through walls and up through floors shall be made by long sweep ells of "Y" and $\frac{1}{8}$ bends with plugs and face or deck plates to conform to architectural finish in room. Where no definite finish is indicated on the Architectural and/or Mechanical Drawings, wall plates shall be chrome plated cast brass and floor plates shall be nickel bronze. Screws in cleanouts in finished areas shall be vandal-proof.
- D. Cleanouts shall be full size at the pipe up to and including 6 inch pipe. On larger size piping, 6 inch size plugs shall be used.
- E. The following schedule indicates the various types of cleanouts desired at various locations indicated on the Drawings. These cleanouts have been selected from the catalog of Zurn and are representative of quality design and finish desired. Cleanouts of Josam Mfg. Co., or J.R. Smith may be submitted provided they meet Specifications fully in every respect (such as material, weight, clamping features, finish, etc.). The characteristics and quality of the cleanout shall be as follows.
 - 1. Cleanout fitting in vertical stacks shall consist of tapped tees, capable of receiving a rough brass raised head cleanout plug; Zurn 1460-8.
 - 2. Cleanouts in Mechanical Equipment Rooms shall be Zurn 1420-25.
 - 3. Cleanouts in finished areas shall be Zurn Z-1420-3 or Z-1420-7 with recess for tile floors.
 - 4. Cleanouts in Dex-O-Tex waterproof floors shall be Zurn No. Z-1405-18 with extra heavy duty top.
 - 5. Cleanouts for 3 or more fixtures piped horizontally shall be extended to wall cleanouts, and shall be Zurn No. Z-1470.
 - 6. All cleanout plugs shall be brass and lubricated with graphite before installation.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

PART 3 - EXECUTION

(NOT USED)

END OF SECTION 15160

SECTION 15380
TESTING AND ADJUSTMENTS

PART 1 - GENERAL**1.01 DESCRIPTION**

- A. This Section is coordinated with and complementary to the General Conditions and Special Conditions of the Work, wherever applicable to Mechanical and Electrical Work.
- B. Section 15000 - Special Requirements for Mechanical and Electrical Work shall apply.
- C. Section 15100 - General Provisions for Plumbing Work shall apply.

1.02 SCOPE OF WORK

- A. The Work of this Contract includes providing all labor, materials, accessories, services and tests necessary to install, complete and make ready for operation by the Owner, all work as shown on the Drawings and as specified hereinafter.

1.03 REQUIREMENTS

- A. All tests shall be made in the presence of the Architect or their representatives, and the local authorities having jurisdiction of the work to be tested, as may be directed; and at least 72 hours notice shall be given in advance of all tests.
- B. The Work of this Contractor shall include the furnishing of all testing instruments, gauges, pumps, smoke machines, and other equipment required or necessary for tests, required by laws, rules and regulations and as specified.
- C. Provide all other tests required by local inspectors and all other authorities having jurisdiction.
- D. All appurtenances shall be operated after installation to determine whether or not they meet the requirements of the Specifications.

- E. All defects disclosed in the work by tests and otherwise shall be made good or the Work replaced without additional cost to the Owner. No caulking on screwed joints, cracks or holes will be acceptable.
- F. Tests shall be repeated after any defects disclosed thereby have been made good or the work replaced if it is deemed necessary.
- G. All tests shall be made at the expense of the Contractor.
- H. Tests are not permitted to be made with air except as noted.
- I. Contractor to provide required test plug tee fittings during erection of pipe system.
- J. If the pipe installation fails to meet testing requirements, the Contractor shall determine at his own expense the source or sources of leakage, and he shall repair or replace all defective materials or workmanship. The completed pipe installation shall meet the requirements of the tests after the leaks have been corrected.
- K. All piping which is to be enclosed in partitions or hung ceilings shall be tested and made tight when directed by the Construction Supervisor and in adequate time to permit the installation of partitions and ceilings. When necessary, the Contractor shall drain the piping and/or take over such precautions as required to prevent damage by freezing.
- L. The Contractor shall also be responsible for the Work of other trades that may be damaged or disturbed by the tests, or the repair or replacement of his Work, and he shall, without extra charges, restore to its original condition any Work so damaged or disturbed.

PART 2 - PRODUCTS

(NOT USED)

PART 3 - EXECUTION**3.01 INTERIOR DOMESTIC WATER SYSTEMS**

- A. Domestic cold system: The entire water supply system shall be tested to a hydrostatic pressure of 150 pounds per square inch or 1½ times the system pressure,

whichever is greater, at lowest point of the water system in the building, and proved tight at this pressure before fixtures are installed. Water supply piping, if in any way concealed by structural work, shall be tested to the aforesaid pressure and proved tight before pipes are concealed.

- B. The test pressure shall be held for a period of not less than two (2) hours. The piping system shall be considered tight if the drop in pressure does not exceed 2 pounds per square inch during the test period. If the pressure drop exceeds 2 pounds, all repairs and alterations in the piping system necessary to meet the test shall be made.

3.02 INTERIOR SANITARY WASTE AND STORM WATER SYSTEMS

- A. The entire piping of the sanitary system and of the storm water system shall be tested with water in accordance with New York City Plumbing Code and the Local Plumbing Inspector's requirements and proved tight before the trenches are backfilled or fixtures connected.
- B. The water tests of the piping of the sanitary system and the piping of the storm water system shall comply with the requirements of the New York City Plumbing Code and all Local Authorities.
- C. All drainage and vent systems shall be filled with water and proven tight under a 10'-0" head over new building roof for a minimum of two (2) hours. Water level must remain constant throughout test without adding water.
- D. After all fixtures have been permanently connected to the sanitary system and the system is completed, a smoke test shall be applied to the sanitary system, and the entire system proved tight to the satisfaction of the Architect, when filled with smoke under pressure equal to 1" column of water. The smoke shall be produced by a smoke generating machine and not be chemical mixtures.

3.03 NATURAL GAS SYSTEM

- A. Test in accordance with State and Local Standards, and NFPA.
- B. Test of low pressure system for 10 minutes without drip with approved mercury gauge. Set air at 6 to 10 inches of mercury.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

- C. Test on site, at high and/or low pressure system shall be made as required by the Architect.

END OF SECTION 15380

SECTION 15390
APPROVED MANUFACTURERS FOR PLUMBING WORK

PART 1 - GENERAL

1.01 DESCRIPTION

- A. This Section is coordinated with and complementary to the General Conditions and Special Conditions of the Work, wherever applicable to Mechanical and Electrical Work.
- B. Section 15000 - Special Requirements for Mechanical and Electrical Work shall apply.
- C. Section 15100 - General Provisions for Plumbing Work shall apply.

PART 2 - PRODUCTS

2.01 APPROVED MANUFACTURERS

- A. The manufacturers' names and models hereinafter specified represent a standard of materials, appearance, finishes, performance, etc.
- B. The Contractor has the option of submitting other manufacturers for approval in lieu of the manufacturers hereafter specified, provided their respective products conform in all respects to the manufacturers hereafter specified.
- C. The following is a list of approved manufacturers:
 - 1. Trim for Hose Bibbs
Chicago Faucet
T&S Brass
Speakman
 - 2. Hangers and Supports
Carpenter & Paterson, Inc.
B-Line
Grinnell
Michigan
 - 3. Escutcheons
Ritter Pattern and Casting Co.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

4. Insulation
Owens-Corning Fiberglass Co.
Gustin-Bacon Mfg. Co.
John Mansville

5. Valves
Milwaukee Valve Co.
NIBCO
Crane Co.
Nordstrom Gas Valves
Wallworth Gas Valves

6. Drains, Carriers and Specialties
Wade
J.R. Smith
Josam
Zurn
MIFAB

7. Piping and Fittings (Cast Iron)
American Cast Iron Pipe Co.
Tyler Pipe Co.
Charlotte Foundry Co.
United States Pipe and Foundry

8. Pipe (Steel)
Youngstown Sheet and Tube Co.
Republic Steel Co.

9. Pipe and Fittings (Copper)
Bridgeport Brass
Mueller Brass Co.
Anaconda American Brass Co.
Chase Brass and Copper Co.
Stanley Flagg Co.
Grinnell

END OF TABLE OF CONTENTS

PART 1 - GENERAL**1.01 RELATED DOCUMENTS**

- A. This Section is coordinate with and complementary to the General Conditions, wherever applicable to Mechanical and Electrical Work.
- B. Where items of the General Conditions are repeated in this Section of the Specifications, it is intended to qualify or to call particular attention to them; it is not intended that any other parts of the General Conditions shall be assumed to be omitted if not repeated herein.
- C. This Section applies equally and specifically to all Contractors and Subcontractors supplying labor and/or equipment and/or materials as required under the Heating, Ventilating and Air Conditioning, Plumbing, Sprinkler and Electrical Sections of the Specifications.

1.02 DEFINITIONS

- A. "The Contractor" or "Each Contractor" means specifically, the Contractor or Subcontractor working under his respective Section (Heating, Ventilating and Air Conditioning, Plumbing, Sprinkler or Electrical) of this Specification.
- B. "Provide" means to supply, erect, install, and connect up in complete readiness for regular operation, the particular work referred to.
- C. "Furnish" means to supply and deliver to the job.
- D. "Piping" includes, in addition to pipe, all fittings, valves, hangers, and other accessories related to such piping.
- E. "Concealed" means hidden from sight as in chases, furred spaces, shafts, hung ceilings, or embedded in construction.
- F. "Exposed" means "not concealed" as defined above. Work in trenches, crawl spaces, and tunnels shall be considered "exposed" unless otherwise specifically noted.
- G. "Approved equal" means any equipment or material which, in the opinion of the Architect, is equal in quality,

durability, appearance, strength, design, performance, physical dimensions, and arrangement to the equipment or material specified, and will function adequately in accordance with the general design.

- H. "Governmental" means all municipal, state and federal governmental agencies.
- I. Where any device or part of equipment is herein referred to in the singular number (such as "the pump"), such reference shall be deemed to apply to as many such devices as are required to complete the installation as shown on the Drawings.
- J. "HVAC" means Heating, Ventilating and Air Conditioning.
- K. "Plumbing Contractor" means the Contractor doing Plumbing and Fire Protection Work including Sprinkler Work.

1.03 CODES AND STANDARDS

- A. Building Code of New York State
- B. NFPA National Fire Protection Association
- C. ASME American Society of Mechanical Engineers
- D. ANSI American National Standards Institute
- E. ASTM American Society for Testing Materials
- F. NEMA National Electrical Manufacturers Association
- G. ASHRAE American Society of Heating, Refrigeration and Air Conditioning Engineers
- H. SMACNA Sheet Metal and Air Conditioning Contractors National Association, Inc.
- I. ARI Air Conditioning and Refrigeration Institute
- J. UL Underwriters' Laboratories
- K. AMCA Air Moving and Conditioning Association
- L. ADC Air Diffusion Council
- M. AABC Associated Air Balance Council

- N. New York City Building Code.
- O. Local Water Company Rules and Regulations
- P. NFPA-90A Air Conditioning and Ventilation Systems
- Q. National Electric Code, New York City Electrical Code
- R. Plumbing, Mechanical and Fuel Gas Code of New York State.
- S. Energy Conservation Construction Code of New York State.
- T. Local laws, rules, regulations of all authorities having jurisdiction.
- U. Utility companies standards, procedures, requirements.

1.04 INTENT

- A. It is the intention of the Specifications and Drawings to call for finished work, tested, and ready for operation. All materials, equipment, and apparatus shall be new and of first-class quality.
- B. Any apparatus, appliance, material, or work not shown on Drawings, but mentioned in the Specifications, or vice versa, or any incidental accessories, or minor details not shown but necessary to make the work complete and perfect in all respects and ready for operation, even if not particularly specified, shall be provided without additional expense to the Owner.

1.05 DRAWINGS

- A. The Drawings are generally diagrammatic and are intended to convey the scope of work and indicate general arrangement of equipment; ducts, conduits, piping, and fixtures.
- B. The locations of all items shown on the Drawings or called for in the Specifications that are not definitely fixed by dimensions are approximate only. The exact locations necessary to secure the best conditions and results must be determined at the project and shall have the approval of the Architect before being installed. Do not scale Drawings.
- C. Follow Drawings in laying out work and check Drawings of other trades to verify spaces in which work will be

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

installed. Maintain maximum headroom and space conditions at all points. Where headroom and space conditions appear inadequate, Architect shall be notified before proceeding with installation.

- D. If directed by the Architect, without extra charge, make reasonable modifications in the layout as needed to prevent conflict with work of other trades or for proper execution of the work.
- E. Piping or ductwork connected to equipment may require different size connection than indicated on the Drawings. The Contractor shall provide transition pieces as required at the equipment.

1.06 INTERPRETATION OF DRAWINGS AND SPECIFICATIONS

- A. Any questions or disagreements arising as to the true intent of this Specification or the Drawings or the kind and quality of work required thereby shall be decided by the Architect, whose interpretations thereof shall be final, conclusive, and binding on all parties.
- B. In case of disagreement between Drawings and Specifications, or within either document itself, the better quality, greater quantity or more costly work shall be included in the Contract Price and the matter referred to the Architect's attention for decision and/or adjustment.
- C. Maintain an awareness to avoid space conflict with other trades.
- D. Purchase the equipment and material required in accordance with field measurements taken at the proper time during the construction progress.

1.07 VISITING THE SITE

- A. Before submitting the final proposal, examine the site of the proposed work to determine the existing conditions that may affect the work, as this Section will be held responsible for any assumptions in regard.

1.08 EQUIPMENT AND MATERIALS

- A. The proposal and bid must cover all items on the Drawings and in the Specifications exactly as drawn and specified.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

- B. All proposed substitutions of equipment of other manufacturers than those specified shall be attached to the base bid in an itemized list. Directly opposite each item indicate the amount to be added to or deducted from the base bid if the proposal is accepted. Failure to furnish such an itemized list will be interpreted to mean that it is agreed to provide all items exactly as drawn and specified. The information given in the above itemized list will in no way affect the determination of low bidder.
- C. Substitutions of material and equipment of makes other than specifically named on the Drawings and in the Specifications and as provided for in the above paragraph will be approved for the following reasons only:
- D. The material or equipment proposed for substitution is equal to or superior to that specified; and that the material or equipment called for on the Drawings or in the Specifications cannot be delivered to the job in time to complete the work in proper sequence to the work of other trades, due to conditions beyond control.
- E. All pipe, fittings and valves shall be manufactured in the United States of America.
- F. The proposal and bid must cover all items on the Drawings and in the Specifications exactly as drawn and specified.
- G. The words "or approved equal" shall be understood to apply only to those items of equipment and material listed under the paragraph "List of Approved Manufacturers" or as otherwise indicated on the Drawings or in the Specifications.
- H. Within twenty (20) working days after the acceptance of the proposal, and prior to the submission of any shop drawings for review, a complete list of manufacturers shall be submitted to the Architect of all equipment and materials proposed for the work. No reviews will be rendered on shop drawings submitted before the complete list of manufacturers is reviewed.
- I. If material or equipment is installed before the Contractor obtained "No Objections" comment from Architect, and/or in the opinion of the Architect the material or equipment does not meet the intent of the Drawings and Specifications, the removal and replacement shall be made at no extra cost to the Owner.

- J. If material or equipment is installed before the Contractor obtained "No Objections" comment from the Architect, trade installing same shall be liable for the removal and replacement at no extra charge to the Owner if, in the opinion of the Architect, the material or equipment does not meet the intent of the Drawings and Specifications.
- K. The words "or approved equal" are understood to follow:
1. The name of any manufacturer, vendor, equipment or materials;
 2. Any trade name, plate number, or catalog number;
 3. Any detailed description used to define equipment or material; except where otherwise indicated on the Drawings or in the Specifications.
 4. It is the intent of these Specifications that wherever a manufacturer of a product is specified, and the terms "other approved" or "or approved equal" are used, the substituted item must conform in all respects to the specified item. Consideration will not be given to claim that the substituted item meets the performance requirements with lesser construction (such as lesser heat exchange surface, etc.) Performance as delineated in schedules and in the Specifications shall be interpreted as minimum performance.
- L. All equipment and materials required for installation under these Specifications shall be new and without blemish or defect. All electrical equipment shall bear labels attesting to Underwriters' Laboratories approval. Where no specific indication as to the type or quality of the material or equipment is indicated, a first class standard article shall be furnished.
- M. Where it is proposed to use an item of equipment other than that specified or detailed on the Drawings which requires any redesign of the structure, partitions, foundations, piping, wiring, or of any other part of the mechanical, electrical, or architectural layout, all such redesign, and all new drawings and detailing required therefore shall, with the review of the Architect and subsequent comments by the Architect "No Exception" or "Exception as Noted" on the shop drawings, be prepared at no additional cost to the Owner.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

- N. Where such deviation from contract documents requires a different quantity and arrangement of ductwork, piping, wiring, conduit, and equipment from that specified or indicated on the Drawings, furnish and install any such ductwork, piping, structural supports, insulation, controllers, motors, starters, electrical wiring, and conduit, and any other additional equipment required by the system, at no additional cost to the Owner.
- O. All equipment of one type (such as fan, coils, etc.) shall be the product of the same manufacturer.
- P. Note that the comments "No Exception" or "Exception as Noted" marked on the shop drawings or other information submitted in accordance with the requirements herein before specified does not assure that the Engineer, Architect, or any other Owner's representative attests to the dimensional accuracy or dimensional suitability of the material or equipment involved or the mechanical performance of equipment. Comments on the shop drawings does not invalidate the Plans and Specifications if the shop drawings are in conflict with the Plans and Specifications.

1.09 SHOP DRAWINGS

- A. Prior to delivery to job site, but sufficiently in advance of requirements necessary to allow Architect ample time for review, submit copies (as stated in "General Conditions") of shop drawings of all equipment, materials, piping, sleeves, conduit, ductwork, and wiring diagrams, and further obtain written comments "No Exception" or "Exception as Noted" for same from the Architect, before installing any of these items.
- B. For piping, sheet metal, sleeve layout, and reflected ceiling plan shop drawings, submit a sepia transparency. After the transparency is notated and corrected by the Architect, it will be returned. Then the required number of corrected prints will be prepared.
- C. Shop drawings shall consist of manufacturer's certified scale drawings, cuts, or catalogs, including descriptive literature and complete certified characteristics of equipment, showing dimensions, capacity, code requirements, motor and drive testing, as indicated on the Drawings or Specifications.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

- D. Certified performance curves for all pumping and fan equipment shall be submitted for review.
- E. Samples of materials or equipment, when requested by the Architect, shall be submitted for review.
- F. Samples, drawings, specifications, catalogs, etc., submitted for review, shall be properly labeled indicating project name, specific service for which material or equipment is to be used, Section and Article number of Specifications.
- G. Catalogs, pamphlets, or other documents submitted to describe items on which review is being requested, shall be specific and identification in catalog, pamphlet, etc., of item submitted shall be clearly made in ink. Data of a general nature will not be accepted.
- H. The comments "No Exception" or "Exceptions as Noted" rendered on shop drawings shall not be considered as a guarantee of measurements or building conditions. Where drawings are reviewed, said review does not in any way relieve responsibility, or necessity, of furnishing material or performing work as required by the Contract Drawings and Specifications.
- I. "EXCEPTIONS, AS NOTED" means, unless otherwise noted on the drawings to approved for construction, fabrication and/or manufacture subject the provision that the work shall be carried out in compliance with all annotations and/or corrections indicated on the shop drawings and in accordance with the requirements of the Contract Documents. If also marked "RESUBMIT", "EXCEPTIONS AS NOTED" is invalid and a corrected submittal of the drawing is required.
- J. Failure to submit shop drawings in ample time for checking shall not entitle an extension of Contract time, and no claim for extension by reason of such default will be allowed.
- K. Prior to submission of shop drawings, thoroughly check each shop drawing, reject those not conforming to the Specifications, and indicate (by signature) that the shop drawings submitted meet Contract requirements. Deviations and/or exceptions to the contract documents should be clearly noted as being deviations and/or exceptions. The contractor will later be required to correct such deviations and/or exception at his own

expense, if they have not been noted and approved on the shop drawing.

- L. All shop drawings showing routing of ductwork, piping and conduit, shall be not less than $\frac{3}{8}$ " = 1'-0" scale.
- M. Incorporate a numbering system to help keep track of shop drawing submittals as follows:
 - 1. H.....HVAC shop drawings
 - 2. P.....Plumbing shop drawings
 - 3. E.....Electrical shop drawings
- N. Concurrent numbers shall follow the prefix letter. Example: H-1, H-2, etc. In addition, shop drawings requiring resubmission should bear the number of the original submission and bear a suffix as follows: H-1A (second submission), H-1B (third submission), etc.
- O. Label resubmitted shop drawings with a stamp indicating the submittal number, for example: SECOND SUBMISSION; THIRD SUBMISSION, etc. and send separate transmittals for each item being submitted so that one transmittal does not cover more than one specific item or group of items from one manufacturer.
- P. Before request for acceptance and final payment for the work, write a letter to the Architect stating that all shop drawings are brought to a condition "No Exception" or "Exception as Noted". Any outstanding shop drawings must be cleared with the Engineer.

1.10 RECORD DRAWINGS

- A. Furnish the Architect's Mechanical and Electrical Field Representative, at the first visit to the field, two (2) sets of reduced size photo reproductions (15½" x 23" maximum drawing size) at no additional cost to the Owner. The drawings shall be Xerox reproduced and bound.
- B. During construction keep an accurate record of all deviations between the work as shown on the Drawings and that which is actually installed.
- C. Secure from the Architect, a complete set of Mylar transparencies of the Drawings and note thereon all changes. Make a complete record of all changes and

revisions in the original design which exist in the complete work. The cost for the Mylar transparencies shall be paid for by each trade.

- D. Furnishing above transparencies and preparing these Record Drawings shall be at no additional cost to the Owner. When all revisions showing the work as finally installed are made, the corrected Mylar transparencies shall be submitted for review by the Architect.
- E. After review of the "Record Drawings" transparencies by the Architect, provide the Owner with one set of black-line prints and Mylar transparencies, and a disc copy of as-built record drawings on the latest release of AutoCAD at no additional cost to the Owner.

1.11 LAWS, ORDINANCES, PERMITS AND FEES

- A. Give all necessary notices, obtain all permits and pay all governmental taxes, fees, and other costs in connection with the work; file all necessary plans, prepare all documents, and obtain all necessary approvals of all governmental departments having jurisdiction; obtain all required equipment use permits, Certificates of Inspection for the work and deliver to the Architect before request for acceptance and final payment for the work.
- B. Include in the work, without extra cost to the Owner, any labor, materials, services, apparatus, drawings, (in addition to Contract Drawings and Documents) in order to comply with all applicable laws, ordinances, rules and regulations, whether or not shown on Drawings and/or specified.
- C. All materials furnished and all work installed shall comply with the rules and recommendations of the National Fire Protection Association, with all requirements of local utility companies, with the recommendations of the fire insurance rating organization having jurisdiction, and with the requirements of all governmental departments having jurisdiction.

1.12 INDEMNIFICATION

- A. Pay all royalties and defend all suits or claims for infringement of any patent rights and save the Owner harmless from loss on account thereof.

- B. If process or article specified is an infringement of a patent, promptly notify the Architect in writing, and any necessary changes shall be as provided in the Contract for changes in the work. If the Contractor performs any work specified knowing it to be an infringement of patent, he shall bear all costs arising therefrom.
- C. Take out all necessary insurance, free of extra charge, and agree to indemnify and save harmless the party contracting for services against loss or expense, by reason of the liability imposed by law upon such party for damages because of bodily injuries, including death at any time resulting therefrom, accidentally sustained by any person or persons or on account of damage to property arising out of or in consequence of the performance of this Contract, whether such injuries to persons or damage to property are due or claimed to be due to any negligence in the performance of the Contract, the party contracting for services, employees or agents, or any other person.

1.13 ORGANIZATION OF WORK

- A. The work throughout shall be executed in the best and most thorough manner under the direction of and to the satisfaction of the Engineers, Owners and Architects, who will jointly interpret the meaning of the Drawings and Specifications, and shall have the power to reject any work and materials which, in their judgement, are not in full accordance therewith.
 - 1. Coordinate with phasing of work. Each trade shall work in phase to keep disturbance to spaces to minimal, shall work in harmony to maintain progress of work, finish work in spaces within prescribed time, shall keep spaces occupied and systems in operation.
- B. The work called for under this Contract shall be carried on simultaneously with the work of other trades in a manner such as not to delay the overall progress of the work. Furnish promptly to other trades involved at the project, all information and measurements relating to the work which they may require. Cooperate with them in order to secure the harmony necessary in the interest of the project as a whole.
- C. Furnish and install all work as fast as possible to meet all construction schedules.

- D. Keep a competent superintendent in charge of the work at all times. Such superintendent shall be replaced if unsatisfactory to the Owner.
- E. Upon award of contract, consult with the Architect and negotiate with subcontractors and manufacturers, and within thirty (30) days submit five (5) copies of a preliminary list of major equipment, for approval, complete with name of manufacturer, dates of purchase orders, and delivery dates to the site. Also submit within thirty (30) days, five (5) copies of a preliminary schedule of installation of the various systems. This list shall be revised monthly and five (5) copies shall be submitted. The second submittal shall contain the names of manufacturers of scheduled equipment (with names, addresses, and telephone numbers of local representatives).
- F. Maintain a complete file of shop drawings at all times available to the Owner's representative.
- G. Every facility shall be provided to permit inspection of the work by the Owner's representative during the course of construction.
- H. Where items of equipment and/or materials are indicated in the Specifications as being furnished by other trades for installation, assume responsibility for the unloading of such equipment and/or materials from the delivery trucks, and for providing safe storage for same as required pending installation.
- I. Where the work is to be installed in close proximity to work of other trades, or where there is evidence that the work is to interfere with work of other trades, assist in working out space conditions to make a satisfactory adjustment.
- J. If so directed by the Architect, prepare composite working drawings and sections at a suitable scale not less than $\frac{3}{8}$ " = 1'-0" clearly showing how the work is to be installed in relation to the work of other trades. If the installation is made before coordinating with other trades, make all necessary changes in the work without extra charge to the Owner.
- K. Before submitting shop drawings for sleeves, piping and ductwork, the Heating, Ventilating and Air Conditioning Subcontractor shall prepare a combined $\frac{3}{8}$ " = 1'-0" scale

shop drawing for piping and ductwork indicating location of piping and ductwork with dimensions for each floor and Mechanical Rooms. A transparent copy of these shop drawings shall be given to the Electrical Contractor.

- L. The Electrical Contractor shall indicate the location of all lighting fixtures and conduit runs on these shop drawings. The Electrical Contractor shall give the transparent copy of these shop drawings, with lighting fixtures and conduit runs indicated to the Plumbing Contractor. The Plumbing and Sprinkler Contractor shall indicate his piping on these shop drawings. Each Contractor shall keep each transparent copy not more than three (3) working days.
- M. The Heating, Ventilating and Air Conditioning Contractor shall arrange a Coordination Meeting for each floor and Mechanical Equipment Room with Plumbing and Electrical Contractors under the supervision of the General Contractor. After coordination, each Contractor shall sign the transparent copy. The Heating, Ventilating and Air Conditioning Contractor shall submit these drawings to the Architect for review and he shall call any conflicts that could not be resolved in the coordination meetings, and/or deviation from original design, to the Architect's attention. After receiving written review from the Architect, each Contractor shall prepare the shop drawings as required under the paragraph "Shop Drawings" in the Specifications.

1.14 PROTECTION OF WORK AND PROPERTY

- A. Maintain and protect all equipment, materials and tools from loss or damage from all causes until final acceptance by the Owner.
- B. Assume responsibility for the protection of any finished work or other trades from damage or defacement by the operations and remedy any such injury or damages.

1.15 TEMPORARY OPENINGS

- A. Ascertain from examination of the Architectural Drawings whether any special temporary openings in the building will be required for the admission of apparatus provided under the Contract and notify the Architect accordingly. In the event of failure to give sufficient notice to the Architect in time to arrange for these openings during

construction, assume all costs of providing such openings thereafter.

1.16 SHUTDOWNS

- A. When installation of a new system requires the temporary shutdown of an existing operating system, the connection of the new system shall be performed at such regular time or at overtime when designated by the Owner.
- B. The Owner shall be notified of the estimated duration of the shutdown period at least ten (10) days in advance of the date the work is to be performed. Obtain owner's written permission for shutdown, prior to any shutdowns. Repair any damage to existing systems and services immediately in approved manner.
- C. Work shall be arranged for continuous performance, including overtime, when approved by the Owner, if required, to assure that existing operating services will be shut down only during the time actually required to make necessary connections.

1.17 ACCESS DOORS IN FINISHED CONSTRUCTION

- A. Install all work so that all parts required are readily accessible for inspection, operation, maintenance and repair. Minor deviations from the Drawings may be made to accomplish this, but changes of magnitude shall not be made without prior written review from the Architect.
- B. Wherever mechanisms requiring access for maintenance, reading of instruments, or for operation are concealed in the structure and wherever else indicated on the Drawings, supply access doors of sizes necessary to provide ready access to the concealed items. Group together valves, controls, dampers, traps, expansion joints, cleanouts, gauges, switches, and other equipment requiring access in walls and furred spaces to reduce the number of access doors.
- C. Access doors shall be Milcor Style A, B or K, L or M, as manufactured by Inland Steel Products Co. or approved equal. Minimum access door shall be 12" x 12". For installation in plastered wall or ceiling, provide Style "K" or "L" as required. For installation in masonry walls, provide Style "M". For installation in acoustical tile surfaces, provide Style "AT". For installation in acoustical plaster surfaces provide Style "AP". Fire

resistive access doors for suspended dry wall ceiling shall be Style ATR's. Provide fire rated access doors at fire rated shafts, stairwells, corridors and at all other walls with Fire Rating.

- D. Access doors shall be installed in building structure under a separate Section.
- E. All plumbing, electric and heating and ventilating access doors etc., shall be provided with Corbin #2722-1/2 master keyed cylinder locks. These locks shall be supplied and installed by the respective Contractor. These cylinder locks shall be purchased through the General Contractor's subcontractor for hardware after submission and review of the panel schedule as hereinafter specified.
- F. Prepare a schedule showing location of all panels, cabinets, etc. to receive the Corbin lock. This schedule shall designate, by building and room number, the panel or cabinet location and shall be submitted to the Architect. This schedule is required for use in preparation of keying information. Locks shall not be purchased prior to review of this schedule.

1.18 PIPE EXPANSION

- A. All pipe connections shall be installed to allow for freedom of movement of the pipe during the expansion and contraction; anchors and guides shall be provided where necessary and/or when shown on the Drawings. Anchors and guides shall be subject to the review of the Architect.

1.19 SCAFFOLDING, RIGGING, HOISTING

- A. Provide all scaffolding, rigging, hoisting and services necessary for erection and delivery into the premises of all equipment and materials furnished under this Section of the Specifications, and remove same from premises when no longer required.
- B. In the event that supplementary bracing of the basic building structure is required to assure a secure rigging procedure and a secure route for the equipment being handled, assume full responsibility for such supplementary bracing.

1.20 BASES AND SUPPORTS

- A. Provide all bases and supports not part of the building structure of required size, type and strength, as approved by the Architect, for all equipment and materials furnished by him. All equipment, bases, and supports shall be adequately anchored to the building structure to prevent shifting of position under operating conditions.
- B. The Section furnishing the equipment shall provide not less than six-inch high concrete bases for all pumps, refrigeration machines, compressors, and rotating machinery. Bases shall extend six inches beyond machinery base in all directions, with top edge chamfered. Provide $\frac{1}{2}$ " x 6" steel dowels into floors to anchor bases. Provide anchor bolts set in pipe sleeves, two sizes larger than anchor bolts for securing machinery. After anchor bolts are aligned with equipment bases, fill sleeves with concrete and allow to set.
- C. Concrete bases are specified under other Sections of the Specification. Each Contractor shall furnish dimensioned drawings to the General Contractor. Steel dowels, sleeves and anchor bolts shall be furnished and set by the Contractor.

1.21 SLEEVES, PIPE AND CONDUIT INSERTS AND ANCHOR BOLTS

- A. Provide and assume responsibility for the location and maintenance in proper position of all sleeves, inserts, and anchor bolts required for the work. In the event that failure to do so requires cutting and patching of finished work, it shall be done without additional cost to the Owner.
- B. All pipes and conduits passing through masonry walls or partitions shall be provided with sleeves having an internal diameter larger than the outside diameter of the pipe or insulation enclosing the pipe or conduit. Sleeves shall be Schedule 40 black steel pipe.
- C. Sleeves through foundation walls shall be James B. Clow & Sons No. F-1430 or F-1435 cast iron wall sleeve with intermediate integral flange. Sleeves shall be set with ends flush with each face of wall. The space between sleeve and pipe shall be packed with a mechanical rubber seal, such as "Link Seal" manufactured by Thunderline Corp., and then with oakum to within 2" of each face of

the wall. The remaining space shall be packed and made watertight with a waterproof compound.

- D. Sleeves through concrete floors or interior masonry walls shall be Schedule 40 black steel pipe, set flush with finished wall surfaces, but extending $\frac{1}{2}$ " above finished floors. The open sleeve space shall be packed with non-combustible materials.
- E. Sleeves through non-masonry partitions shall be 22 gauge galvanized sheet steel, set flush with finished surfaces of partitions.
- F. Inserts shall be preset concrete inserts with steel reinforced rods through the insert and both ends hooked over the reinforced mesh. Inserts shall be of individual type of malleable iron construction with accommodation for removable nuts and threaded rods up to $\frac{3}{4}$ " diameter, permitting lateral adjustment, except as otherwise noted. Individual inserts shall be Grinnell Fig. 279 up to 5" pipe and conduit, Fig. 282, 6" and up to 8" pipe and conduit, Fig. 152 above 8" and up to 12" pipe and conduit. For figures 282 and 152, they shall come with an opening at the tip to allow reinforcing rods up to $\frac{1}{2}$ " diameter to be passed through the insert body. Rods shall extend a minimum of 4" on either side of the insert. Pipes larger than 12" shall be suspended from steel members only.
- G. In general, all piping and conduit shall be supported from structural steel building members only or approved malleable steel inserts imbedded in concrete pours. All loads shall be hung from steel building members. Inserts shall not be located in the same deck flute as ceiling tabs nor within 2 feet in any direction from ceiling tabs. Inserts shall not be spaced closer than 4 feet on center in all directions.
- H. Where layout revisions are required, and are approved after concrete deck is poured, piping conduit 3" and smaller may be supported at Intermediate Points by Phillips' $\frac{3}{4}$ " expansion bolts with lead shields, provided main supports are welded to structural steel and are not more than twenty feet on centers.
- I. The Contractor shall have the option of providing 18 gauge sheet metal sleeves in lieu of Schedule 40 steel pipe.

- J. Provide sleeves for pipes passing through roofs. Sleeves passing through roofs shall be as detailed on drawings extending min. 12" above finished roof. All pipes passing through roof shall be minimum of 10" from walls or other construction to permit proper flashing. Provide counter flashing.
- K. Where sleeves pass through waterproofed floors, they shall be IPS brass pipe sleeves of the required diameter, brazed at the bottom to 18" x 18", 16-ounce copper flashing for bond with waterproofing. The tops of the sleeves shall extend ½" above finished floor.
- L. No ductwork, piping, conduit or equipment shall be supported from corrugated decking construction. For this area provide supplementary steel to support ductwork, piping, conduit or equipment. Supplemental steel members shall be welded to building structural steel.
- M. All hangers, rods and supports shall be installed prior to construction fireproofing.
- N. The required fire resistance rating of floor or floor/ceiling assemblies and walls shall be maintained where a penetration is made for electrical, mechanical, plumbing pipes, conduits, ducts and systems. Fire stopping shall be provided at openings around vents, pipes, ducts, conduits at floor levels and walls with non-combustible materials, such as rockwool or equal.
- O. For openings around pipes and conduits and/or sleeves, 3M product Caulk CP 25 and Putty 303 is approved equal.

1.22 ESCUTCHEONS

- A. Provide escutcheons on pipes wherever they pass through ceilings, walls, or partitions.
- B. Escutcheons on pipes passing through outside walls shall be Ritter Pattern and Casting Co., No. 1, solid, cast brass, flat type secured to pipe with set screw.
- C. Escutcheons for pipes passing through floors shall be Ritter Pattern and Casting Co., No. 36A, split-hinged, cast brass type, designed to fit pipe on one end and cover sleeve projecting through floor on the other end.
- D. Escutcheons for pipes passing through interior walls, partitions, and ceilings shall be Ritter Pattern and

Casting Co., No. 3A, split-hinged, cast brass chromium plated type.

1.23 MANUFACTURERS' IDENTIFICATION

- A. Manufacturer's nameplate, name or trademark, shall be permanently affixed to all equipment and material furnished under this Specification. Where such equipment is in a finished occupied space, the nameplate shall be in a concealed but accessible location. The nameplate of a Subcontractor or Distributor will not be acceptable.

1.24 EQUIPMENT NAMEPLATES

- A. Provide for each item of equipment, including panelboards, disconnects, breakers, starters, switches, and all control devices, pumps, fans, compressors, boilers, etc., a permanently attached nameplate made of black surface, white core laminated bakelite with incised letters. Subcontractor furnishing equipment shall provide nameplate. Pneumatic, electric and mechanically actuated gauges shall have a brief, but complete description of their function. Stating the air pressure or voltage range alone is not acceptable. Nameplates shall be a minimum of 3" long by 1½" wide and shall bear the equipment name and item number in ½" high white letters as designated in the equipment schedule. Mounting screws shall have chrome plated acorn headed screws.

1.25 TAGS AND CHARTS

- A. Furnish and attach to each valve as hereinafter specified, a 1½" diameter brass tag with ½" indented numerals filled with durable black compound. Tags shall be securely attached to stems of valves with copper wire and "S" hooks.
- B. Valve charts shall consist of schematic drawings of piping layouts, showing and identifying each valve and describing the function. Upon completion of the work, one (1) copy of each chart, sealed to rigid backboard with clear lacquer placed under glass and framed, shall be hung in a conspicuous location in the main equipment room, unless otherwise directed by the Architect. Two (2) additional unmounted copies in 8½" x 11" leather ring binders shall be delivered to the Architect. Also furnish three (3) copies of schematic flow chart with corresponding valve numbers noted on chart.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

- C. Provide tags for the following valves:
 - 1. Zone control, bypass, shut-off, check and balancing valves.
 - 2. Building and area shut-off and balancing valves.
 - 3. Control, by-pass, shut-off, balancing and drain valves for major pieces of equipment such as domestic hot water heaters, heat exchangers, refrigeration machines, pumps, heating, ventilating and air conditioning units, etc.
 - 4. System drain valves, safety and relief valves. Vacuum breakers.

1.26 IDENTIFICATION

- A. Identification shall be in accordance with "Scheme for Identification of Piping System ANSI A13.1" and OSHA safety color regulation.
- B. Markers shall be snap-on type as manufactured by Seton Nameplate Corp., New Haven, Conn. (Setmark System), Bunting Stamp Co. Inc., Pittsburgh, P.A. or approved equal. Markers shall completely encircle the pipe with a substantial overlap. No adhesive shall be used. They shall be manufactured of U.L. approved, self-extinguishing plastic. When the pipe including insulation (if any) is larger than 6 inches diameter, markers shall be strap-on type.
- C. Provide identification for piping, ductwork and conduit for electrical work.
- D. Pipe shall be lettered and valves tagged in accordance with the schedule below. Lettering shall be located near each valve and branch connection and at intervals of not over 40 feet (10 feet on fire lines) on straight runs of pipe. Provide flow arrows for all piping at each marker. Adjacent to the legend, stencil the size of the pipe, conduit or ductwork. Letter Colors are as follows: Yellow with black letters, green with white letters, blue with white letters and red with white letters.

STENCIL AND VALVE TAG SCHEDULE

<u>Service</u>	<u>Stencil Designation</u>	<u>Color</u>	<u>Tag Designation</u>
Cold Water	Cold Water	Green	C.W.
Hot Water (Plumbing)	Hot Water-Deg. F.	Yellow	H.W.-Deg. F.
Hot Water Circulating	Hot Water Cir.	Yellow	H.W.C.
Chilled Water Supply	Chilled Water	Green	CHWS
Chilled Water Ret.	Chilled Water Return	Green	CHWR
Gas	Gas	Yellow	G
Vent Piping	Vent	Green	----
Air Conditioning Drain	Air Conditioning Drain	Green	----
Pumped Condensate Return	Pumped Cond. Ret.	Green	P.C.R.
Heating Water Supply	Heat. Water Sup.	Green	H.W.S.
Heating Water Return	Heat. Water Ret.	Green	H.W.R.
Chemical Water Treatment	Chemical W.T.	Green	C.W.T.
Air Conditioned Supply Air	A.C. Supply Air	Green	----
Return Air	R.A.	Green	----
Exhaust Air	E.A.	Yellow	----
Outside Air	O.A.	Green	----
Mixed Air	M.A.	Green	----

E. Tanks, pumps, fans and other equipment shall be stenciled to show the number, if any, and service.

F. Exposed conduits for alarm and communication systems shall be banded at intervals of not over 10 feet. Bands shall be of the following colors:

Fire Alarm System Red

- G. Except where other means of identification are specified, electric cabinets, switchboards, motor control centers, transformers, system control boards, disconnecting switches, remote control switches, individual motor starters and motor control pushbutton stations shall be stenciled to show the service and number, if any, of the equipment controlled, as appropriate. Panelboards and other electrical equipment located in finished areas, such as offices, shall have the identification placed on the inside of the cabinet doors.
- H. Cabinet housing emergency lighting panelboards shall have the word "EMERGENCY" stenciled in 2-inch high red letters on the outside of the cabinet, in addition to other lettering required above.
- I. The bolted covers of housings for disconnecting switches or links in bus ducts between network transformers and switchboards shall be lettered to identify the equipment within.
- J. Serial numbers shall be stenciled on the tanks and covers of transformers having their nameplates attached to the high voltage switch chamber covers.

1.27 DRIP PANS

- A. Examine the drawings, and in cooperation with the Electrical Work confirm the final location of all electrical equipment to be installed in the vicinity of piping. Plan and arrange all overhead piping no closer than three feet from a vertical line to electric switchboards, panelboards, or similar equipment.
- B. Where the installation of piping does not comply with the requirements of foregoing paragraph, where feasible the piping shall be relocated.
- C. Provide copper gutters as follows:
 - 1. Provide a gutter of 16 ounce cold rolled copper under every pipe which is within 2'-0" (two feet) of being vertically over any motor, electrical controllers, switchboards, panelboards, or the like.

2. Each gutter shall be soldered and made watertight, properly suspended; and carefully pitched to a convenient point for draining. Provide a $\frac{3}{4}$ inch drain, to nearest floor drain or slopsink.
3. In lieu of such separate gutters, a continuous protecting sheet of similar construction, adequately supported and braced, properly rimmed, pitched and drained, may be provided over any such motor, and extending 3'-0" in all directions beyond the motor, over which such piping has to run.

1.28 TOOLS

- A. All special tools for proper operation and maintenance of the equipment shall be delivered to the Owner's representative and a receipt requested for same at no additional cost to the Owner.

1.29 QUIET OPERATION

- A. All equipment and material shall operate under all conditions of load without any sound or vibration which in the opinion of the Architect is objectionable. Where sound or vibration conditions arise which are considered objectionable by the Architect, eliminate same in a manner reviewed by the Architect.

1.30 RUBBISH REMOVAL

- A. See to it that the project is at all times maintained free of all rubbish, rubble, waste material, packaging materials, etc. accumulating as a result of his work.

1.31 CLEANING, PIPING, DUCTS AND EQUIPMENT

- A. Clean all piping, ducts, and equipment of all foreign substances inside and out before being placed in operation.
- B. If any part of a system should be stopped by foreign matter after being placed in operation, the system shall be disconnected, cleaned, and reconnected wherever necessary to locate and remove obstructions. Any work damaged in the course of removing obstructions shall be repaired when the system is reconnected at no additional cost to the Owner.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

- C. During construction, properly cap all pipes and equipment nozzles so as to prevent the entrance of sand, dirt, etc.

1.32 DELIVERY OF MATERIAL

- A. Deliver the material and store same in spaces indicated by the Architect and assume full responsibility for damage to structure caused by any overloading of the material.

1.33 CUTTING AND PATCHING (IN EXISTING CONSTRUCTION)

- A. All cutting and patching shall be done under another Section. Furnish the sizes and locations of all chases and openings required for the installation for his work before the walls, floors and partitions are built.
- B. As a general rule, chases, shafts and wall openings as shown on the Drawings will be provided for most of the ducts and pipings, but promptly arrange with the Construction Supervisor for additional openings should any be required for the work.
- C. Provide the labor and materials for all work included under the Contract or Subcontract in ample time and sufficient quantities so that all of the work of the Contract or Subcontract may be installed in proper sequence to avoid unnecessary cutting of the floors and walls.
- D. Any cutting and patching required due to the failure to comply with the above provisions, shall be done at no extra cost to Owner. Such cutting and patching shall be done under Division One, as approved by the Architect.
- E. Where existing piping or ductwork insulation are damaged by the requirements of the work, replace all damaged insulation to match existing.
- F. Refer to Paragraph: "Sleeves, Inserts and Anchor Bolts" for additional requirements.

1.34 ALTERATIONS

- A. When new work and alterations render equipment, piping and ductwork useless, such equipment, piping and ductwork shall be removed and connections thereof to lines or ducts remaining shall be properly capped or plugged and left in construction. If construction, such as hung

ceiling, furred beam, chase, etc., is opened up and removed during the course of the construction, the useless pipe and ducts therein shall be treated as though exposed to view. When required to accommodate new work, useless piping and ductwork concealed in construction shall be treated as though exposed to view.

- B. When existing piping and duct systems, at points of connection to new work or in rerouting are found defective, such defective portions shall be removed and replaced with new materials without cost to the Owner.
- C. Provide temporary supports where required.
- D. Where alterations reveal piping, ductwork, conduit circuits, wiring, and accessories that must necessarily remain in service, same shall be rerouted, replaced or altered as required to make same completely concealed in the new work at no additional cost to the Owner.
- E. Where existing piping or ductwork insulation is damaged by the requirements of the work, replace all damaged insulation to match existing.
- F. Cutting in existing building shall be done by each Contractor as reviewed by the Architect. Rough patching shall be done by each Contractor. Finish patching, ceiling construction removal, new ceiling in existing building will be done under another Section.

1.35 EXCAVATION AND BACKFILL

- A. All excavation trenching, backfilling and compaction required for each Section shall be done by the respective contractor for that Section.
- B. Each Contractor shall provide all labor, materials, equipment and appliances required to complete the excavating, backfill and pumping required for his work, to the extent specified hereinafter.
- C. Unclassified excavation shall include the excavation of all materials encountered in the work, such as earth, boulders, rock, shale, rubble, masonry or timber foundations, stumps and all materials without classification. Do all excavation, trenching and backfilling necessary to construct and complete the utility and all its appurtenances. All excavation shall be made by open cut from the surface. No tunneling will

be allowed except by written consent of the Architect. Provide all necessary shoring and bracing. Care shall be taken to avoid undermining of all existing utilities, footings or foundations. Take full responsibility for any additional work resulting from his excavating and trenching.

- D. Locations and elevations of pipe lines, conduits, cables, etc., shown are not to be used as final for installation of work; however, they are to be followed as closely as possible, ground conditions permitting. Exact locations of grade shall be determined on job.
- E. Under no circumstances, lay pipe or conduit or install appurtenances in water. Keep trenches free from water. Perform all necessary pumping as required to keep trenches free from water at no additional cost to the Owner.
- F. Before starting the excavation work, strip all existing sod and soil within entire limits of this Contract, which is suitable for top soil and stockpile in location approved by the Architect.
- G. Take precaution by frequently spraying excavation area during excavation with water, in order to prevent dust being blown. Stockpiles of fill and topsoil shall also be kept moist by water spray.
- H. Where existing utilities are encountered, support, shore and protect said existing utilities and allow ample time for such measures as may be necessary for continuances of such services.
- I. Notch under pipe bells to provide solid bearing for the entire body of pipe.
- J. Excavation for utilities, and appurtenances (such as manholes, etc.), shall be to required depths below existing or finished grades. Note areas of cut and/or fill and schedule and perform work accordingly. Where utilities are installed in filled areas, fill shall be compacted to 95% of its maximum density, by the Contractor, who is installing the particular utility, before installing in the utility line, manhole or other appurtenances.
- K. Excavations shall be sheeted and braced where necessary. Assume responsibility for all damage to persons,

structures, and property resulting from the quality, strength, placing, maintaining and removing or lack of sheeting. Repair or replace any existing underground piping or conduit disturbed or damaged.

- L. Width of trenches shall be adequate for work required to be done in trench for proper installation of the utility system.
- M. All steel sheeting ordered left in place shall be cut off at least 6" below the bottom of the pavement foundation or 2 feet below natural ground in unpaved areas. Provide and maintain all such safeguards necessary for the protection of persons, the safety of cell traffic movement and the protection of all the structures encountered. No trench shall be opened more than 200 feet in advance of the completed work without permission of the Architect.
- N. As soon as the joints are inspected and tested for acceptance, backfill material consisting of sand or approved earth shall be evenly and carefully placed and tamped around and over the pipe in layers not exceeding six (6) inches in thickness to one (1) foot over the top of the pipe. Backfill for the remainder of the trench shall be approved material and shall contain no stone more than six (6) inches in its largest dimensions. From a point one (1) foot over the top of the pipe, the backfill shall be deposited in thoroughly rammed and compacted layers not over twelve (12) inches thick. No backfilling shall be done with frozen earth. The trench shall be brought to an elevation so as to allow the placement of the temporary pavement in paved areas and to the surface of the ground as it existed prior to the work in non-paved areas. Should there be a deficiency of proper material for this purpose, furnish and place such additional material as may be directed by the Architect. When so directed, the backfill shall be trench backfill to a depth to be determined by the Architect. Generally, backfilling shall be to final grade, or subgrade to receive other Section's work. Compaction shall be to 95% maximum density under pavement and 92% under grass areas.
- O. All backfill shall be tamped and shall be done so far as practicable by suitable mechanical means. The machine used shall be of a type satisfactory to the Architect, as to power of blows and area of rammer and shall be used in such a manner as to thoroughly compact the backfill to a degree which will insure against later settlement. The Architect reserves the right to require flushing of

trench, in addition to tamping, where, in his opinion, same will further settle the backfill.

- P. Excavated material suitable and required for backfilling shall be stockpiled in the area selected by the Architect. All excavated material in excess of that required for backfilling shall be immediately removed to location directed by Architect. The Contractor shall leave clear and in good order all roadways and sidewalks affected by the construction. Where unstable or backfilled ground is encountered, the Contractor shall furnish and install suitable concrete or brick pier supports at each joint and on ten (10) foot centers maximum.

1.36 GRADING

- A. Grade the excavated area to its original grade and restore the area to its original position. The entire area in the vicinity of construction where excavation, filling and backfilling has been done shall be raked clean of all trash and other debris. After completion of this work all trash and debris shall be removed from the premises. Cleaning of the premises shall be done at intervals, sufficiently often to maintain an orderly appearance of the construction area and as directed by the Architect.
- B. Final grading shall be done under other Sections of the Specifications.

1.37 PAINING

- A. All finish painting is specified under other Sections of the Specifications.
- B. Paint all unpainted, non-insulated, non-galvanized, ferrous metal surfaces of pipes, conduits, ducts, equipment, fixtures, hangers, supports and accessories as follows:
1. Exposed - One prime coat of oil-varnish based paint.
 2. Concealed - One coat of black asphaltum paint. (not normally required)
 3. Underground - Two coats of black asphaltum paint.

- C. Nameplates on all equipment shall be cleaned and left free of paint.

1.38 LUBRICATION

- A. Assume responsibility that all rotating equipment is properly lubricated as soon as it is connected by the Electrical Subcontractor before operation of this equipment is started. Assume responsibility for any damage to any equipment that is turned on without previously having been oiled or greased when connected up.

1.39 TESTS

- A. All piping, wiring, and equipment shall be tested as specified under the various sections of the work. Labor, materials, instruments and power required for testing shall be furnished under the particular Section of the Specifications.
- B. Tests shall be performed satisfaction of the Architect. The Architect will be present at such test, when he deems necessary and such other parties as may have legal jurisdiction.
- C. Pressure tests shall be applied to piping only before connection of equipment and installation of insulation. In no case shall piping, equipment, or accessories be subjected to pressure exceeding their rating.
- D. All defective work shall be promptly repaired or replaced and the tests shall be repeated until the particular system and component parts thereof receive the review of the Architect.
- E. Any damages resulting from tests shall be repaired or replaced and the tests shall be repeated until the particular system and component parts thereof receive the approval of the Architect.
- F. The duration of tests shall be as determined by all authorities having jurisdiction, but in no case less than the time prescribed in each Section of the Specifications.
- G. Equipment and systems which normally operate during certain seasons of the year shall be tested during the appropriate season. Tests shall be performed on individual

equipment, systems, and their controls. Whenever the equipment or system under test is interrelated with and depends upon the operation of other equipment, systems and controls for proper operation, functioning, and performance, the latter shall be operated simultaneously with the equipment or system being tested.

- H. The electrical work shall include providing any assistance (such as removal of switchboard and panelboard trims and covers, pull and junction box covers, etc.) deemed necessary by the Architect to check compliance with the Drawings and Specifications.

1.40 OPERATING INSTRUCTIONS

- A. Two months prior to the completion of all work and the final inspection of the installation by the Owner, five (5) copies of a complete Instruction Manual, bound in booklet form and suitably indexed, shall be submitted to the Architect for review. All written material contained in the manual shall be typewritten or printed.

- B. The Manual shall contain the following items:

Table of Contents (Plumbing, HVAC and Electrical)

- I. Introduction - Explanation of Manual and its use.

II. Description of Systems

1. Complete schematic drawings of all systems.
2. Functional and sequential description of all systems.
3. Relationship of system where applicable to the supervisory data system.

III. Systems Operation

1. Start-up procedures.
2. Shut-down procedures.
3. Reset and adjustment and balancing procedures.
4. Seasonal operation.
5. All posted instruction charts.

IV. Maintenance

1. Cleaning and replacement - lines, components, filters, strainers, ducts, fans, etc.
2. Lubrication.

3. Charging and filling.
4. Purging and draining.
5. Systems trouble shooting charts.
6. Instruments checking and calibration.
7. Procedures for checking out functions with remote (Supervisory Data Console) indication and control.
8. Recommended list of spare parts.

V. Listing of Manufacturers

VI. Manufacturer's Data (Where multiple model, type and size listings are included, clearly and conspicuously indicate those that are pertinent to this installation).

1. Description - Literature, drawings, illustrations, certified performance charts, technical data, etc.
2. Operation.
3. Maintenance - including complete trouble-shooting charts.
4. Parts List.
5. Names, addresses and telephone numbers of local recommended repair and service companies.
6. Guarantee data.
7. Model No. and Serial No. of all equipment.

1.41 INSTRUCTION OF OWNER'S PERSONNEL

- A. After completion of all work and all tests and at such time as designated by the Architect, provide the necessary skilled personnel to operate the entire installation for a period of five (5) consecutive days eight (8) hours each.
- B. During the operating period, fully instruct the Owner's representative in the complete operation, adjustment and maintenance of the entire installation including chillers, air conditioning units, heating system, unit ventilators, fan coils, boilers, and overall system. Include minimum of (10) consecutive days of eight (8) hours each to instruct owner's designated representatives for operation of systems.

1.42 GUARANTEE

- A. The Contractor guarantees by his acceptance of the Contract that all work installed will be free from any and all defects and that all apparatus will develop capacities and characteristics specified, and that if during a period of one year from date of completion and acceptance of work any such defects in workmanship, material or performance appear, he shall immediately replace, repair, or otherwise correct the defect or deficiency without cost to the Owner within a reasonable time. Notify the Architect in writing of the time required to do work. For heating systems the guarantee period must include one continuous heating season from November 1st to April 1st. For cooling systems the guarantee period must include one continuous cooling season from May 1st to October 1st.
- B. Replace or repair to the satisfaction of the Owner any and all damage done to the building or its contents or to the work of other trades in consequence of work performed in fulfilling guarantee.
- C. This Article is general in nature and will not waive stipulations of other claims which specify guarantee periods in excess of one (1) year.
- D. In the event default on this Guarantee, the Owner may have such work done as required & charge the cost to the Contractor.
- E. The date of acceptance shall be the date of final payment by the Owner or notice of acceptance by the Owner, whichever is later.

1.43 OPERATION PRIOR TO COMPLETION

- A. The Owner may require operation of parts or all of the installation for the beneficial occupancy prior to final completion and acceptance of the building.
- B. The operation shall not be construed to mean acceptance of the work by the Engineer for the Owner. The Owner will furnish supervisory personnel to direct operation of the entire system and the Contractor shall continue to assume this responsibility until final acceptance.

1.44 INSTALLATION OF MOTORS AND CONTROL EQUIPMENT

- A. The Electrical Contractor shall furnish and install power wiring for all electrical devices, individual motor starters, furnished to him at the job site by other trades.
- B. The HVAC Contractor shall provide all wiring for the Automatic Temperature Controls, Chilled Water System Control, Hot Water System and Boiler Control, and air conditioning systems, except as otherwise specified herein.
- C. The Electrical Contractor shall, except where otherwise noted, provide wiring for all Plumbing and and Fire Alarm Systems.
- D. For single phase motors which are not interlocked with other motors and which have temperature control or motor control devices in the power circuit, furnishing of control devices, installation and wiring shall be by the Electrical Contractor.
- E. For all HVAC 3-phase motors or HVAC equipment, temperature control wiring, motor control wiring and associated interlocks shall be provided by the HVAC Contractor, including the installation of all control devices. For all plumbing equipment control, wiring motor control, wiring and associated interlocks shall be provided by the electrical contractor, including the installation of all control devices.
- F. Electrically operated equipment supplied by other trades, which are to be installed and wired by the Electrical Contractor, shall be delivered with detailed instructions for their installation and wiring in sufficient time and proper sequence to meet the work schedule.
- G. Each contractor shall furnish all electrical motors, starters and other motor control devices for motor driven equipment required for the work. In his work, the Electrical Contractor shall provide the code required disconnect switches for all motors, except where otherwise noted. The setting of all motors, required for mechanical equipment, including unmounted motors, shall be done as part of the mechanical work.
- H. If a motor is replaced (even with the same horsepower) a new starter shall be provided for that motor.

- I. Equipment which includes a group of electrical control devices mounted in a single enclosure or on a common base with equipment, shall be supplied completely wired as a unit with terminal boxes or leads ready for external wiring.
- J. All electrical items furnished and/or installed as part of the mechanical work shall conform to NEMA Standards, to the requirements of the National Fire Protection Association, and to the requirements of any local authority having jurisdiction. Any field modifications required to insure such conformance shall be included as part of the mechanical work.
- K. The furnishing of floor mounted motor starting equipment shall include the purchase and delivery of channel sills for mounting.
- L. Whether or not shown on the drawings, the Electrical Contractor shall furnish and install a local disconnect switch at each motor which is not in sight from the controller location.
- M. The supplying of any and all "field instruction" diagrams deemed necessary by the Architect for the complete delineation of electrical wiring for mechanical equipment shall be included as part of the mechanical work.
- N. The drawings describing the electrical or the mechanical work may include explanatory wiring diagrams indicating the function intended for the motor control circuits of certain motors. The "field instructions" wiring diagrams required as part of the mechanical work shall conform to these intended functions.

1.45 ELECTRIC MOTORS

- A. Each Contractor shall provide all electric motors required for driving all motor driven equipment required to be furnished under his Section of the Specification.
- B. All motors shall be designed for 3 phase, 60 cycle alternating current operation with 200 volts across the motor terminals, except that, unless otherwise specified herein, all motors ½ HP and smaller shall be designed for single phase, 60 cycle alternating current at 120 volts across the terminals. Before ordering motors, ascertain the actual voltages and other current characteristics that will be available and permissible for each motor.

Report the same in writing to the Architect and obtain approval before ordering motors. The designation of current characteristics in these Specifications does not relieve the responsibility for ascertaining the actual conditions of electric service available for each motor or for the proper operation of all motors under the actual conditions.

- C. The speed, horsepower, type and other essential data for each motor, if not given under paragraphs describing the various motor driven apparatus, or in schedules on the drawings shall be obtained from the manufacturer of the respective apparatus and shall be submitted to the Architect for his review. All two speed motors shall be single winding type.
- D. Provide oversized motor junction box for 2 speed motors.
- E. All motors shall be built in accordance with the latest rules of the National Electrical Manufacturers Assn., and of the Institute of Electrical and Electronic Engineers and also as hereinafter specified.
- F. Motors $\frac{1}{2}$ HP and larger shall have Class B insulation. All motors shall be rated for continuous duty and shall be designed for temperature rises not to exceed 55°C. for fully enclosed type, 55°C. for splashproof types and 40 °C. for all other motors excepting as otherwise specified herein. Motors shall be capable of withstanding momentary overloads of fifty (50%) without injurious heating. They shall operate without excessive heating, flashing or sparking under any conditions within the specified capacity of load and speed. All motors shall operate quietly and shall be replaced if, in the Architect's opinion, they do not do so. All motors which are in the airstream of air conditioning units, shall be totally enclosed type.
- G. Motors $\frac{1}{2}$ HP and larger shall have ball or roller bearings with pressure grease lubrication, except where otherwise noted.
- H. Direct connected motors shall be furnished without an adjustable base. All motors connected to driven equipment by belt shall be furnished with adjustable sliding bases, except fractional motors with slotted mounting holes.
- I. All motor leads shall be permanently identified and supplied with connectors.

- J. Motors shall have nameplates giving manufacturer's name, serial number, horsepower, speed, voltage, phase power factor, service factor and current characteristics.
- K. The insulation resistance between stator conductors and frames of motors at the time of final inspection shall be not less than one-half megohm.
- L. All motors shall be of the proper type for the duty and shall have sufficient torque to start and run the equipment to which they are connected and starting currents and running currents shall not exceed the limits imposed by the laws or rules and regulations of the public authorities having jurisdiction or of the electrical utility company. All motors shall have sufficient horsepower capacity and rated duty to operate the apparatus to which they are connected so as to give the speeds and performances specified, but the horsepower shall be in no case less than that started herein or shown on the drawings. A schedule giving the characteristics of the motors proposed for each type of service shall be submitted to the Architect for approval.
- M. The maximum full load speed of each direct connected motor shall be suitable for the equipment it drives.
- N. Except where V-belt drive is specified, the fan wheels for ventilating fans shall be mounted on the motor shafts, which shall be designed for this duty.
- O. All motors except motors furnished as an integral part of equipment and factory installed on the equipment, shall be of same manufacture.
- P. Polyphase motors shall be squirrel cage induction high efficiency energy saver type, suitable for the starting torque and current requirements.
- Q. Single phase motors shall be of the capacitor start induction run or split phase type as required for proper operation of the driven equipment.
- R. All motors shall be high efficiency type, shall meet all applicable codes. Minimum acceptable efficiency shall be as follows:

OPEN DRIP-PROOF (ODP)				TOTALLY ENCLOSED FAN-COOLED (TEFC)			
Motor Size (HP)	Speed (RPM)			Motor Size (HP)	Speed (RPM)		
	1200	1800	3600		1200	1800	3600
	NEMA Nomial Efficiency				NEMA Nomial Efficiency		
1	82.5%	85.5%	77.0%	1	82.5%	85.5%	77.0%
1.5	86.5%	86.5%	84.0%	1.5	87.5%	86.5%	84.0%
2	87.5%	86.5%	85.5%	2	88.5%	86.5%	85.5%
3	88.5%	89.5%	85.5%	3	89.5%	89.5%	86.5%

150	95.4%	95.8%	94.1%	150	95.8%	95.8%	95.0%
200	95.4%	95.8%	95.0%	200	95.8%	96.2%	95.4%

1.46 INDIVIDUAL MOTOR STARTERS

- A. For single-phase motors $\frac{1}{2}$ HP or smaller, starters shall be manual, 120 volts, single-pole or 240 volts, 2-pole with thermal overload protection and pilot light. Where interlocking or automatic control (other than for unit and cabinet heaters) is required, starters shall be combination circuit breaker and magnetic starter with pilot light.
- B. For 3-phase motors $\frac{1}{2}$ HP and over, starters shall be full-voltage combination circuit breaker and magnetic across-the-line contactor, rated 208 volts, 3-phase. All magnetic starters shall have three thermal overloads.
- C. For motors requiring electric interlocks, or automatic control features, starters shall be equipped with the necessary auxiliary relays and contacts to provide the control features desired. Such starters shall be also provided with "hand-off-auto" pushbuttons mounted in cover. For two-speed motors, provide "high-low-off-auto" four position selector switch. Furnish adjustable 20-second time delay between high and low speeds for motors 10 HP and above.

- D. In addition to any auxiliary contacts required for interlocking purposes, each magnetic starter shall be equipped with one normally open auxiliary control circuit contact either for "sealing in" or as a spare for future use.
- E. Indicating lights shall be transformer or series resistor type. There shall be one red light for each single speed motor to indicate when motor is running. For multiple speed motors one indicating light for each speed shall be provided.
- F. The starter disconnecting means shall be circuit breakers. The external operating handle shall clearly indicate "ON" or "OFF" position of the switch and shall be interlocked with the door to require throwing the handle to the "OFF" position to open the door. The handle shall be arranged for locking both the door closed and the disconnect in the "OFF" position with up to 3 padlocks. Provide defeat device in cover to permit opening door in "ON" position.
- G. Circuit breakers in combination starter units shall be of the magnetic trip type with an adjustable trip setting for selecting instantaneous trip points of fault protection (motor circuit protector). Field adjustment of the instantaneous trip shall be performed by the Electrical Contractor. Select the trip setting at approximately 10 times the motor nameplate full-load current. If the circuit breaker trips on starting, incrementally increase the settings. In no case shall the trip setting exceed 13 times the motor full-load current.
- H. Overload heaters shall be furnished for all starters and shall be sized in range of 115 to 125 percent of full load current. The motor starters shall be shipped with the overload heaters inside the compartment but not installed. The Electrical Contractor shall verify the ratings of the heater coils based on the motor nameplate data before installing the overloads. The Contractor supplying the starter shall replace any improperly selected heaters.
- I. A transformer shall be supplied in each starter unit for 120 volt control voltage. Transformer capacity shall be adequate to supply the holding coil requirements plus the solenoids, relays and other devices required to be controlled from the starter. A fuse shall be supplied in one secondary terminal of the control transformer. The other terminal shall be grounded to the housing of the

starter. Fuses shall be also provided in the transformer primary leads per the National Electrical Code.

- J. All enclosures shall be NEMA Type I sheet steel with hinged cover for general purpose indoor application, unless otherwise indicated. Enclosures shall be arranged for equipment or wall mounting. Weatherproof NEMA Type 4 enclosures shall be provided for all outdoor starters.
- K. Each starters shall be clearly identified by engraved nameplates after installation. The nameplates shall be bakelite black plates with $\frac{1}{2}$ " high white letters and shall be securely fastened to starter with mounting screws made of non-corrosive metals.
- L. Stainless steel flush mounted starter and enclosures shall be provided for all starters located in the kitchen and dishwasher areas.
- M. All starters, except those furnished as an integral part of equipment and factory installed on the equipment, shall be of the same manufacturer.
- N. Starters shall be as manufactured by Westinghouse, General Electric, Square D, Eaton/Cutler-Hammer, or Allen-Bradley.
- O. Shop drawings shall be provided with dimensions, ratings, wiring diagrams and schedule of nameplates for approval prior to fabrication.

1.47 MOTOR CONTROLLERS

- A. Motor controllers shall be defined as control devices such as pushbuttons, switches, etc. which are not mounted in starter cover, required for remote control of motors.
- B. Unless otherwise noted, motor controllers shall be housed in NEMA Type 1 general purpose enclosures. Outdoor controllers shall be provided with weather proof NEMA Type 4 enclosures. Provide nameplate to indicate the motor with which they are associated.
- C. The controllers to be installed in finished area shall be flush mounted.
- D. The Electrical Contractor shall install and provide wiring for motor controllers. The contractor providing the motor shall furnish the controllers.

- E. Unless otherwise noted, pushbuttons shall be of the normal duty, spring return momentary type.
- F. Selector switches and pushbuttons shall be equipped with nameplates indicating the function of each of their positions as noted in the list of electric motors and motor controls or shown on the drawings.
- G. Pilot light shall be transformer or series resistor type for operation at 120 V.
- H. Pilot lights shall be equipped with nameplates indicating the operating conditions they annunciate as noted in the list of electric motors and motor controls or shown on the drawings.

1.48 SEMI-FINAL AND FINAL SITE VISITS FOR OBSERVATION

- A. As the project approaches completion, the Engineer and Architect, at their discretion shall determine a period of time in which they shall perform a Semi-Final Site Visit to observe the Mechanical and Electrical installation. At the conclusion of this Semi-Final Site Visit, a Semi-Final Punchlist shall be issued to the appropriate contractor for the deficiencies in the work of his trade. Complete all work and perform all corrective measures as required by the Semi-Final Punchlist. After this corrective and completion work has been accomplished, in writing, advise the Architect and the Engineer that every item on the Semi-Final Punchlist has been completed. After the Architect and Engineer make a Final Site Visit to observe the Mechanical and Electrical installation and make a Punchlist, a similar letter of Compliance shall be forwarded through channels.

PART 2 - PRODUCTS - (NOT USED)

PART 3 - EXECUTION - (NOT USED)

END OF SECTION 15000

SECTION 15600
GENERAL PROVISIONS FOR HVAC WORK

PART 1 - GENERAL

1.01 GENERAL REQUIREMENTS

- A. This Section is coordinated with and complementary to the General Conditions and Supplementary General Conditions of the Work, wherever applicable to Mechanical Work.
- B. Section 15000 Special Requirements for Mechanical and Electrical Work shall apply.

1.02 DESCRIPTION OF WORK INCLUDED

- A. Work Included:
 - 1. The work includes providing all labor, materials, equipment, accessories, services and tests necessary to complete and make ready for operation by the Owner, all Heating, Ventilating and Air Conditioning Work as shown on the Drawings and hereinafter specified, including, but not limited to the following:
 - a. Provide an air cooled chilled water refrigeration plant consisting of electrical chillers, outdoor mounting, on grade, glycol chilled water treatment, underground piping, chilled water pumps, and all associated power and control wiring, all as hereinafter specified.
 - b. All motor starters and controllers for equipment furnished by this Contractor. Packaged type units shall be furnished completely prewired with panels mounted on the units as specified. All other motor starters and controllers will be turned over to the Electrical Contractor for installation and wiring.
 - c. Rooftop packaged medium pressure air handling units used for single duct systems, air cooled electric DX system, gas fired furnace and economizer outside air controls.
 - d. Filters.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

- e. Fans.
- f. Unit heaters and convectors.
- g. Hot water-to-hot water heat exchangers to generate hot water and be pumped to unit ventilators and heaters hot water pumps.
- h. Four pipe unit ventilator, fan coil air conditioning units with chilled and hot water heating coils, packaged controls including enclosures, drain piping.
- i. Condensate pumps for cold condensate, split systems.
- j. Hot and chilled water specialties such as expansion tanks, air vents, air separators, reducing and safety valves, etc.
- k. Accessories such as V-belt drives, flow measuring devices, draft gauges, machinery guards, thermostats, pressure gauges.
- l. Water treatment for chilled and hot water systems including 40% polypropylene glycol.
- m. Inertia blocks and vibration isolation equipment.
- n. Piping, fittings, and valves.
- o. Sheet metal ductwork and accessories such as dampers, access doors, etc.
- p. Registers, grilles and diffusers.
- q. Fire dampers and smoke dampers.
- r. Installation of smoke detectors in ductwork.
- s. Acoustical duct lining and sound traps.
- t. Pipe, duct and equipment insulation.
- u. Roof curbs and flashing.
- v. Temperature Control: A complete, integrated electronic-DDC system of temperature control shall be installed in connection with the HVAC

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

systems, including workstation, DDC panels, unitary controls, all thermostats, diaphragm valves, damper motors and dampers for the outdoor air intakes and fan discharges. All control wiring for automatic temperature controls, including interlocking wiring for fans, chillers, pumps, etc. by this Contractor.

- w. Excavation and backfill as specified under "Special Requirements for Mechanical and Electrical Work".
- x. Painting, pipe and equipment identification for all work by this Contractor is previously specified under "Special Requirements for Mechanical and Electrical Work".
- y. Test and balancing of equipment, air and water systems.
- z. Sleeves, pipe inserts and anchor bolts, escutcheons, prefabricated roof curbs, etc., as hereinafter specified. Supports, hangers for equipment, ducts, piping.
- aa. Identification, name plates, tags and charts.
- bb. Cutting and rough patching. Patching of all unused opening. Fire-stop all openings for ducts, pipes, conduits.
- cc. Furnishing and setting of electric motors.
- dd. Furnishing of starters, motor control centers and motor control devices as specified under "Special Requirements for Mechanical and Electrical Work".
- ee. Templates and anchor bolts for equipment bases.
- ff. Cap flashing or pipe and duct passing through roof.
- gg. Removal, relocation and/or demolition of existing HVAC work in conjunction with the existing buildings as indicated on the Contract Drawings and as required for installation of new work. Temporary work

- including valved pipe connections, ducts, dampers, fans, wiring to keep existing systems in operations and spaces occupied.
- hh. Energy management (building automation) system.
 - ii. Concrete pads for all HVAC work.
 - jj. Tie-in new piping with the existing boiler plant hot water lines to existing building as indicated on Drawings.
 - kk. New chiller plant provide new chilled water lines to fan coils, unit ventilators as indicated on Drawings.
 - ll. Installation of fire and smoke dampers in the existing and new ductwork and fan systems.
 - mm. Modification, calibration, removal, reinstallation, wiring of controls related to existing building heating system controls, boiler controls, existing valves, temperature reset controls, heat timer controls. Relocate panels, controls, reconnect.
 - nn. Provide controls, valves, fittings, accessories, piping for existing heaters, convectors, radiator which will remain in operation. Test, balance water flows.
 - oo. Fill, drain, refill, vent, cut, cap existing hot water system as many times as required to install new work. Fill, drain, refill, vent chilled water system as many times as required.
 - pp. Provide new support, insulation on existing piping. Reinsulate existing piping where insulation is removed and/or disturbed.

1.03 WORK INCLUDED UNDER OTHER SECTIONS OF THE SPECIFICATIONS

- A. The following work is included under other Sections of the Specifications:
 - 1. Framed openings as shown on the Drawings.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

2. Trenches and covers.
3. Final connections to HVAC equipment shall be made by this Contractor. Gas supply shall be within 5'-0" of equipment.
4. Floor and funnel drains adjacent to equipment requiring same will be furnished and installed by the Plumbing Contractor.
5. Outside air inlets, exhaust outlets, louvers and screens through walls, and elsewhere as noted on the Drawings. Motorized dampers furnished and installed under this Contract.
6. Base flashing of curbs and sleeves at roofs.
7. Power wiring for all motors except where otherwise noted.
8. Temporary heat.
9. Setting of access doors furnished by this Contractor.
10. Undercutting of doors or louvers in doors.
11. All motor disconnect switches, except where in combination starters and where otherwise noted.
12. Dunnage beams for air handling equipment supports.
13. Finish painting.
14. Access doors in ceiling and walls.
15. Finish patching.
16. Ventilating hoods - kitchen, labs, etc.
17. Wiring of switches, aquastats, pressure controls in power circuit of cabinet and unit heaters.
18. Fan shutdown system.
19. Mounting of all starters, motor control centers, starter panelboards, and motor control devices: Division 16.
20. Unit ventilator piping enclosures.

1.04 QUALITY ASSURANCE

- A. Perform work in accordance with quality established in Section 15000 "Special Requirements for Mechanical and Electrical Work", and hereinafter specified. All work performed shall comply with local codes.

1.05 SUBMITTALS

- A. Submit shop drawings covering the following items:
1. Coordination drawings.
 2. Duplex condensate pumps, including pump curves.
 3. Internal cleaning and treating of piping.
 4. Sleeve and ductwork penetration drawings.
 5. Identification schedule and samples.
 6. Air handling units (packaged rooftop type).
 7. Air filters and draft gauges.
 8. Coils.
 9. Heat exchangers.
 10. Expansion joints, anchors and guides, including details of installation.
 11. Air diffusers, registers and grilles.
 12. Unit ventilators, fan coil units including sound data.
 13. Schedule of ductwork, joints, gauges, supports, flexible connections, fire dampers, access doors, etc.
 14. Utility fans, centrifugal fans, and power roof ventilators and propeller fans, curbs.
 15. Sheet metal fabrication drawings, duct layouts.
 16. HVAC specialties.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

17. Machinery guards and V-belt drives, curbs, supports.
18. Sheet metal shop standards, details.
19. Schedule of piping and fitting materials.
20. Piping shop drawings, piping layouts, details of pipe risers, details of pipes in pipe enclosures, equipment piping details.
21. Schedule of valves, strainers, vacuum breakers.
22. Flow metering device and systems.
23. Thermometers and pressure gauges.
24. Expansion tanks.
25. Underground conduit for chilled water piping.
26. Schedule of pipe and ductwork supports, including inserts, escutcheons, etc.
27. Heating systems, including unit heaters, cabinet heaters, unit ventilators, etc., as specified.
28. Water pumps including pump curves.
29. All motor starters, and motor control devices.
30. Air cooled chillers including sound criteria.
31. Water treatment equipment and systems.
32. Schedule of insulation types and samples of each type.
33. Vibration isolation schedule including inertia block details.
34. Templates for equipment bases.
35. Acoustic material, sound traps.
36. Integrated controls and energy management system for all equipment, system including but not limited to chillers, air handling units, unit ventilators, fan coil units, fans, pumps, boilers, heat

exchangers, heaters, etc. for local and centralized monitoring, controls, alarm functions.

37. Air vents, air separators, water strainers, reducing and safety valves for water systems.
 38. Automatic temperature controls.
 39. Concrete pad location and size.
 40. Testing and balancing reports.
 41. Supports, hangers.
 42. Operating and maintenance manuals.
- B. All shop drawings being submitted that include electrical work shall be submitted with all internal and external wiring diagrams.
- C. The previously listed items are major equipment and do not limit this Division's responsibility to submit shop drawings for all equipment and accessories which are to be provided under this Division of the Specifications.

PART 2 - PRODUCTS

2.01 SPARE PARTS

- A. Chilled water, condensate return pumps and hot water pumps - For each pump listed, unless otherwise specified:
1. One set of wearing rings.
 2. One set of bearings.
 3. One set of packing glands complete with rings, nuts and bolts.
 4. Three gaskets for casing joint.
 5. Sufficient stuffing box packing for four packings.
- B. Where pump specifications do not require packing glands of stuffing boxes, spares listed may be omitted.

C. Filters:

1. The Contractor shall furnish a minimum of two complete spare filter sets for the filters for all units.

D. Miscellaneous Spare Parts:

1. Water column glasses shall be provided for each tank utilizing one.
2. One complete set of gaskets shall be provided for each of the following pieces of equipment:
 - a. Converters (hot water).
3. Furnish one complete set of V-belts for each belt driven unit installed.

2.02 LIST OF MANUFACTURERS

- A. The manufacturer's name appearing first on this list is the manufacturer the project design was based upon. However, the additional manufacturers listed herein are also acceptable with the provision that they meet the requirements of these Specifications, ratings, and/or space allocations listed in the Specifications or shown on the Drawings.

1. Duplex Condensate Pump

- a. Federal Pump Corp.
- b. Domestic Pumps
- c. Little Giant Company
- d. or approved equal

2. Air Cooled Chillers (Modular)

- a. Arctichill
- b. Airstack

3. Water Pumps (Base Mounted)

- a. Bell & Gosset
- b. Peerless
- c. Weiman
- d. Taco

4. Air Conditioning Units
 - a. Trane
 - b. York
 - c. Carrier
5. Water Coils
 - a. American Air Filter
 - b. Trane
 - c. Bohn
 - d. Carrier
 - e. or approved equal
6. Air Filters
 - a. American Air Filter Farr
 - b. Cambridge
 - c. National
 - d. or approved equal
7. Draft Gauges
 - a. Dwyer
 - b. or approved equal
8. Centrifugal Fans and Utility Sets
 - a. Greenheck
 - b. Peerless
 - c. Trane
 - d. Twin City
 - e. Buffalo
 - f. ACME
 - g. or approved equal
9. Propeller Fans
 - a. Greenheck
 - b. Peerless
 - c. Buffalo Forge
 - d. ACME
 - e. American Cool Air
 - f. or approved equal
10. Heat Exchangers
 - a. Bell and Gossett
 - b. Patterson - Kelley
 - c. Yula Corp.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

- d. approved equal
- 11. Cabinet & Unit Heaters
 - a. Vulcan
 - b. Trane
 - c. Sterling
 - d. Dunham-Bush
 - e. or approved equal
- 12. Finned Tube Radiation & Convectors
 - a. Vulcan
 - b. Trane
 - c. Sterling
 - d. or approved equal
- 13. Unit Ventilators, Fan Coil Units
 - a. Trane
 - b. Carrier
- 14. Expansion Tanks & Flash Tanks
 - a. Bell & Gossett
 - b. Amtrol
 - c. Buffalo
 - d. or approved equal
- 15. Water Specialties
 - a. Bell & Gossett
 - b. Taco
 - c. or approved equal
- 16. Expansion Joints
 - a. Zallea
 - b. Flexonics
 - c. or approved equal
- 17. Thermometers & Pressure Gauges
 - a. Ashcroft
 - b. U.S. Gauge
 - c. Trerice
 - d. Weiss Instruments

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

18. Motors
 - a. General Electric
 - b. Westinghouse
 - c. Allis Chalmers
 - d. or approved equal

19. Starters, Motor Control Centers, Switches
 - a. General Electric
 - b. Westinghouse
 - c. Cutler-Hammer
 - d. or approved equal

20. Diffusers, Registers & Grilles
 - a. Anemostat
 - b. Titus
 - c. Carnes

21. Valves
 - a. Jenkins
 - b. Crane
 - c. Walworth
 - d. Stockham
 - e. or as specified under paragraph on "Valves".

22. Insulation and Acoustic Lining
 - a. Owens-Corning Fiberglas Corp.
 - b. CSG Snap-on
 - c. Johns Manville
 - d. or approved equal

23. Vibration Isolation
 - a. Vibration Eliminator Co.
 - b. Mason Industries
 - c. Korfund Corp
 - d. or approved equal

24. Automatic Temperature Controls
 - a. Johnson Service Co.
 - b. Honeywell
 - c. Siemens
 - d. Trane Co.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

25. Water Treatment
 - a. Heating Economy Services, Co., Inc.
 - b. Astro Pak Corp.
 - c. Okite Chemical Corp.
 - d. Drew Chemical Corp.

26. Underground Conduit
 - a. Ric-Wil Co.
 - b. Permapipe
 - c. Kaiser Co., E.B. (EBKO)

27. Internal Cleaning & Treating of Piping
 - a. Heating Economy Services Co., Inc.
 - b. Astro Pak Corp.
 - c. Okite Chemical Corp.
 - d. Drew Chemical Co.

PART 3 - EXECUTION

(NOT USED)

END OF SECTION 15600

SECTION 15681
PACKAGED AIR COOLED CHILLER (ON GRADE)

PART 1 - GENERAL

1.01 GENERAL REQUIREMENTS

- A. This Section is coordinate with and complementary to the General Conditions and Supplementary General Conditions of the Work, wherever applicable to Mechanical Work.
- B. Section 15000 - Special Requirements for Mechanical and Electrical Work shall apply.

1.02 DESCRIPTION OF WORK

- A. The work includes the providing of all labor, materials, equipment, accessories, services and tests necessary to complete and made ready for operation by the Owner, all high pressure air handling units as shown on the drawings and hereinafter specified.

1.03 QUALITY ASSURANCE

- A. Firms regularly engaged in manufacture of this material with characteristics and capacities required whose products have been in satisfactory use in similar service for not less than 10 years.
- B. Provide product produced by the manufacturers, which are listed in Section "Approved Manufacturer's List".
- C. Provide equipment whose performance, under specified conditions, is certified by the manufacturer.
- D. Codes and Standards
 - 1. Capacity ratings shall be in accordance with ARI Standard.
 - 2. Refrigeration system shall be constructed in accordance with ASHRAE 15: Safety Code for Mechanical Refrigeration.
 - 3. Air-cooled Condensers shall meet or exceed the minimum COP/Efficiency levels as prescribed in ASHRAE 90A: Energy Conservation in New Building Design.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

4. All electrical components shall be UL listed and labeled.
 5. Comply with the 1990 Clean Air Act and all other Federal, State and City Codes and Regulations.
- E. Packaged Water Chiller - Air Cooled Condenser shall have an energy efficiency ratio (EER) not less than 10.0 EER as per ARI 590-86.
- F. Permits necessary for work in connection with the installation of the refrigeration equipment and the operation thereof shall be obtained by the Contractor. Refrigeration equipment such as chillers, condensers and condensing units shall have been accepted by the Materials and Equipment Acceptance Division of the Department of Buildings, and the MEA acceptance number shall be indicated on the Shop Drawings.

1.04 SUBMITTALS

- A. Refer to Section - Special Requirements for Mechanical and Electrical Work and submit shop drawings.

1.05 COORDINATION

- A. Refer to Section - Special Requirements for Mechanical and Electrical Work.

1.06 GUARANTEE

- A. Refer to Section - Special Requirements for Mechanical and Electrical Work.

PART 2 - GENERAL

2.01 DESCRIPTION

- A. Furnish and install as shown on plans and schedule, Arctichill or approved equal, outdoor, modular, air cooled liquid chillers, as scheduled on drawings.
- B. Chiller shall have scroll type compressors and consist of multiple independent refrigerant circuits. Each refrigerant circuit shall consist of an individual compressor set, evaporator, thermal expansion valve, liquid line solenoid valve, filter drier, fin and tube condenser, and control system. Each circuit shall be constructed to be independent of other circuits from a

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

refrigeration and electrical stand-point. The multi-circuit chiller must be able to produce chilled water even in the event of a failure of one or more refrigerant circuits.

- C. Each module shall be individually serviceable. Upon failure of a compressor or module(s), remaining compressors and modules shall function.
- D. General
 1. Chiller Modules shall be ETL listed in accordance with UL Standard 1995, and have MEA approval. Casing shall be corrosion resistant painted, mill finish aluminum.
 2. Modules shall ship wired and charged with refrigerant. All modules shall be factory run tested prior to shipment.
 3. Compressors, heat exchangers, condenser fans, piping and controls shall be mounted on a heavy gauge steel frame. Electrical controls, contactors, and relays for each module shall be mounted within that module. Module shall be provided within a steel enclosure suitable for outdoor use. Exposed steel surfaces shall be provided with a powder coat paint finish.
 4. Chiller noise shall not exceed 77 dBA at 5 feet from chiller in all directions.
 5. Chiller shall not require licensed refrigeration engineer for operation of chiller in New York City.
- E. Chilled Water Mains: Each module shall include supply and return mains for chilled water. Grooved and connections shall be provided for interconnection to piping with Victaulic type couplings.
- F. Evaporators: Each evaporator shall be non-clogging and shall be shell and tube type, not requiring strainer in main headers in side the chiller. Evaporator heat exchanger shall not be mounted above the compressor to prevent the effect of migration of refrigerant to the cold evaporator with consequent liquid slugging on start-up. Each module shall have built-in isolation valves to isolate water side from main headers. Hot gas bypass built-in per compressor circuit shall be provided.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

G. Compressor: Each module shall contain two hermetic scroll compressors mounted to the module with rubber-in-shear isolators. Each system also includes high discharge pressure and low suction pressure safety cut-outs.

H. Condenser Fans: Each module shall contain dual condenser fans for each refrigerant circuit. These fans shall be multi-blade vane-axial type made of plastic composite material for quiet operation. Fans shall be direct drive. Fan motors shall all be pressure controlled and suitable for outdoor use, protective discharge metal guard on top.

I. Local Controls System:

1. Scheduling of the various compressors shall be performed by a microprocessor based control system (Master Controller). A new lead compressor shall be selected every 24 hours to assure even distribution of compressor run time.

If this Master Controller fails each module shall continue to operate independently with its own temperature sensors. Master Controller shall have RS communication port (RS-232). Protocol by Arctichill. Software and interface modem and networking devices by BAS.

2. The Master Controller shall monitor and report the following on each refrigeration system:

- a. Discharge Pressure Fault
- b. Suction Pressure Fault
- c. Compressor Winding Temperature
- d. Suction Temperature
- e. Evaporator Leaving Chilled Water Temperature
- f. Reset Chilled Water Temperature based on outdoor air temperature

3. The Master Controller shall monitor and report the following system parameters"

- a. Chilled Water Entering and Leaving Temperature
- b. Discharge Refrigerant Temperature
- c. Chilled Water Flow
- d. Provide Scheduled Inputs/Outputs to BAS via RS communication port.

4. An out of tolerance indication from these controls or sensor shall cause "fault" indication at the

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

Master Controller and shutdown of that compressor with the transfer of load requirements to the next available compressor. In the case of a System Fault, the entire chiller will be shutdown. When a fault occurs, the Master Controller shall record conditions at the time of the fault and store the data for recall. This information shall be capable of being recalled through the keypad of the Master Controller and displayed on the Master Controller's LCD. A history of faults shall be maintained including date and time of day of each fault (up to the last 20 occurrences).

5. Individual monitoring of leaving chilled water temperatures from each refrigeration system shall be programmed to protect against freeze-up.
6. The control system shall monitor entering and leaving chilled water temperatures to determine system load and select the number of compressor circuits required to operate. Response times and set points shall be adjustable. The system shall provide for variable time between compressor sequencing and temperature sensing so as to fine tune the chiller to different loads and building conditions.
7. Flow switches shall be provided by chiller manufacturer for field installation and wiring.
8. Chiller/compressor shall have anti-short cycle timer to prevent excessive cycling.
9. Condenser fan cycling shall be based on head pressure with fan speed control.
- J. Chiller shall have external inputs and outputs to be compatible with the building management system to include Remote Start/Stop capability and Cooling Alarm output, monitoring chilled water temperature, failure alarms.
- K. Each refrigerant circuit shall include all refrigerant specialties such as dryer, filter, sight glass, suction and discharge isolation valves, charge valve, noise suppressors, solenoid valves, by-pass valves to provide reliable operation down to 0°F ambient.

L. SINGLE POINT POWER CONNECTION

1. Chiller shall be provided with a single point power connection. This will include pre-engineered wiring for field installation and connection to a factory mounted chiller junction box. Junction box shall include individual fusing for each Module Set and provide a single point of connection to building power.
2. Each module shall be complete with its built-in disconnect.
3. Starter for modules shall be built-in, accessible from outside.
4. Integral control transformer for controls shall be provided from unit single point power connection.
5. Contractor shall provide outdoor, weather-proof master disconnect.

2.02 SAFETIES, CONTROLS AND OPERATION

- A. The chiller safety controls shall be provided (minimum) as follows:
 1. Low evaporator refrigerant pressure
 2. Loss of water flow through the evaporator
 3. High condenser refrigerant pressure
 4. High compressor motor temperature
 5. Low suction gas temperature
 6. Low leaving evaporator water temperature
- B. Failure of chiller to start or chiller shutdown due to any of the above safety cutouts shall be annunciated by display of appropriate diagnostic description at the unit control panel. This annunciation will be in plain English. Alphanumeric codes shall be unacceptable.
- C. The chiller shall be furnished with a Master Controller as an integral portion of the chiller control circuitry to provide the following functions:
 1. Provisions for connection to automatically enable the chiller from a remote energy management system.
 2. The control panel shall provide alphanumeric display showing all system parameters in the

English language with numeric data in English units.

D. Normal Chiller Operation

1. When chiller is enabled, the factory supplied Master Controller modulates the chiller capacity from minimum to maximum as required by building load. Compressor(s) shall be sequenced to start/stop to maintain water temperature.
2. The chiller control system shall respond to Entering Water Temperature and will have an integral reset based on entering water temperature to provide for efficient operation at part-load conditions.
3. Chilled water temperature shall be reset based on outdoor air temperature.
4. Safeties shall prevent chiller operation when such conditions occur.

2.03 CONTRACTOR RESPONSIBILITY

- A. Assemble and install chiller on channels (channels by Contractor, provide vibration isolators under the channels, mechanical and electrical assembly of chiller, disconnect, power and control wiring, mount and wire water flow switch; temperature sensors (return and discharge chilled glycol). Provide and wire outside air temperature sensors, connect BAS control wirings, create software with protocol provided. Provide interface, modem and integration for required remote functions. Coordinate with controls section. Provide flexible pipes.
- B. Contractor shall field assemble and connect cables to modules and wiring within modules.

2.04 START-UP AND GUARANTEES

- A. Provide factory trained technician's services, minimum of (3) days, (8) hours each, start-up and include all such costs in bid price. Include additional (3) days, (8) hours each day time for troubleshooting, controls coordination.

- B. Provide minimum of 12 months guarantee from date of start-up for labor and material. Provide extended 5 year guarantee for compressors replacement.

PART 3 - EXECUTION

3.01 PIPING SYTEM FLUSHING PROCEDURE

- A. Prior to connecting the chiller to the building chilled water loop, the piping shall be flushed with a detergent and hot water (110-130°F) mixture to remove previously accumulated dirt and other organic residue. In old piping systems with heavy encrustation of inorganic materials consult a water treatment specialist for proper passivation and/or removal of these contaminants.
- B. During the flushing a 30 mesh (max.) Y-strainers (or acceptable equivalent) shall be in place in the system piping and examined periodically as necessary to remove collected residue. The flushing process shall take no less than 6 hours or until the strainers, when examined after each flushing, are clean. Old systems with heavy encrustation shall be flushed for a minimum of 24 hours and may take as long as 48 hours before the filters run clean. Detergent and acid concentrations shall be used strict accordance with the respective chemical manufacturers instructions. After flushing with the detergent and/or dilute acid concentrations the system loop shall be purged with clean water for at least one hour to ensure that all residual cleaning chemicals have been flushed out.
- C. Prior to supplying water to the chiller the Water Treatment Specification shall be consulted for requirements regarding the water quality during chiller operation. The appropriate chiller manufacturer's service literature shall be available to the operator and/or service contractor and consulted for guidelines concerning preventative maintenance and off-season shutdown procedures.

3.02 WATER TREATMENT REQUIREMENTS

- A. Supply water for the chilled water circuit shall be analyzed and treated by a professional water treatment specialist who is familiar with the operating conditions and materials of construction specified for the chiller's heat exchangers, headers and associated piping. Cycles of concentration shall be controlled such that recirculated water quality for modular chillers using 316

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

stainless steel brazed plate heat exchangers and carbon steel headers is maintained within the following parameters:

1. pH..... Greater than 7 and less than 9
2. Total Dissolved Solids (TDS) ... Less than 1000 ppm
3. Hardness as CaCO3 30 to 500 ppm
4. Alkalinity as Ca CO3 30 to 500 ppm
5. Chlorides Less than 200 ppm
6. Sulfates Less than 200 ppm

3.03 FIELD QUALITY CONTROL

- A. Upon completion of installation of equipment, energized with normal power source, test equipment to demonstrate compliance with requirement. When possible, field correct malfunctioning units, then retest to demonstrate compliance. Replace units which cannot be satisfactorily corrected. Refer to Section - Testing and Balancing.

END OF SECTION 15681

SECTION 15735
PUMPS FOR HVAC

PART 1 - GENERAL**1.01 GENERAL REQUIREMENTS**

- A. This Section is coordinate with and complementary to the General Conditions and Supplementary General Conditions of the Work, wherever applicable to Mechanical Work.
- B. Section 15000 - Special Requirements for Mechanical and Electrical Work shall apply.

1.02 DESCRIPTION OF WORK

- A. The Work includes providing of all labor, materials, equipment, accessories, services and tests necessary to complete and make ready for operation by the Owner, all pumps as shown on the Drawings and hereinafter specified.

1.03 QUALITY ASSURANCE

- A. Manufacturing firms regularly engaged in manufacture of this equipment with characteristics and capacities required, whose products have been in satisfactory use in similar service for not less than ten (10) years.
- B. Provide product produced by the manufacturers, which are listed in Section "Approved Manufacturer's List".
- C. Provide equipment whose performance, under specified conditions, is certified by the manufacturer.

1.04 SUBMITTALS

- A. Refer to Section, "Special Requirements for Mechanical and Electrical Work", and submit shop drawings.

1.05 COORDINATION

- A. Refer to Section, "Special Requirements for Mechanical and Electrical Work".

1.06 GUARANTEE

- A. Refer to Section, "Special Requirements for Mechanical and Electrical Work".

PART 2 - PRODUCTS**2.01 END SUCTION PUMPS**

- A. The casing and suction head of the pump shall be of cast iron material and end suction, vertical split type. Casing and suction head shall be equipped with 125# ANSI flanges. Pumps shall be assembled on heavy duty fabricated structural steel base plates, which bases must include drip rim with tapped drain connections, which shall be piped to nearest floor drain. The impeller shall be of the enclosed type and shall be bronze. The impeller shall be statically and hydraulically balanced and keyed to the shaft. Efficiency and unit maximum BHP shall be quoted and guaranteed. Maximum head shall occur at and only at the no flow condition. The shaft shall be of steel material and removable shaft and shall be stainless steel. Bearings shall be single row, ball type and oil lubricated.
- B. Pumps shall have replaceable case wear rings.
- C. Stuffing box housing shall be deep enough to allow for a single John Crane type (1) mechanical seal. Each pump shall be flexibly coupled to a motor, Class B, DP enclosure. A flexible coupling with coupling guard shall be used. Except where otherwise noted, bearings shall be grease lubricated. Seals to be capable to withstand system condition for water temperature chemical treatment content as hereinafter specified under "Water Treatment". Provide John Crane cyclone separator to insure clear water flushing of the seal faces.
- D. Pumps shall have capacities as scheduled on the Drawings. Pumps shall be selected to operate at or near their point of peak efficiency thus allowing for operation at capacities of approximately 25% beyond design capacity. In addition, the design impeller diameter shall be selected so that the design capacity of each pump (GPM and TDH) shall not exceed 90% of the capacity obtainable with maximum impeller diameter at the design speed for that model or as approved.
- E. Casings shall be provided with suitable steel lifting lugs.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

- F. Pump shall be drawn down slightly on the foundation bolt nuts. Provide a form or dam around the contour of the bed plate. Pour grout through holes, provided for this purpose, in sufficient quantity to reach a level of 3/4" to 1" above the bottom of the bed plate. Allow grouting to set thoroughly, then proceed with pipe connections.
- G. Install pumps on housekeeping pad and inertia pad with spring isolators in between.

PART 3 - EXECUTION

3.01 INSPECTION

- A. Contractor shall examine location where pumps are to be installed and determine space conditions and notify Architect in writing of conditions detrimental to proper and timely completion of the work.
- B. Do not proceed with the work until unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Install equipment where shown, in accordance with manufacturer's written instructions, and with recognized industry practices, to ensure that equipment comply with requirements and serve intended purposes.
- B. Add concrete under structural members of pump base and grout around the base as required by manufacturer's written instruction.
- C. Coordinate with other work as necessary to interfere installation of equipment with other components of systems.

3.03 FIELD QUALITY CONTROL

- A. Upon completion of installation of equipment and after motor has been energized with normal power source, test equipment to demonstrate compliance with requirement. When possible, field correct malfunctioning units, then retest to demonstrate compliance. Replace units which cannot be satisfactory corrected. Refer to Section Test and Balancing.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

- B. All pump casings shall be hydrostatically tested at 1½" times design working pressure. The pump manufacturer shall be responsible for his service department aligning in the field prior to start-up of all flexibly coupled units. Alignment shall be with dial indicator with accuracy of plus or minus .002 inches. The pump manufacturer must submit a written report certifying that the alignment work had been performed by his personnel and that the pumps are ready for operation.

END OF SECTION 15735

SECTION 15736
DUPLEX CONDENSATE PUMPS

PART 1 - GENERAL

1.01 GENERAL REQUIREMENTS

- A. This Section is coordinate with and complementary to the General Conditions and Supplementary General Conditions of the Work, wherever applicable to Mechanical Work.
- B. Section 15000 - Special Requirements for Mechanical and Electrical Work shall apply.

1.02 DESCRIPTION OF WORK

- A. The work includes the providing of all labor, materials, equipment, accessories, services and tests necessary to complete and made ready for operation by the Owner, all duplex condensate pumps as shown on the drawings and hereinafter specified.

1.03 QUALITY ASSURANCE

- A. Manufacturing firms regularly engaged in manufacture of this material with characteristics and capacities required, whose products have been in satisfactory use in similar service for not less than 10 years.
- B. Provide product produced by the manufacturers, which are listed in Section "Approved Manufacturer's List".
- C. Provide equipment whose performance, under specified conditions, is certified by the manufacturer.

1.04 SUBMITTALS

- A. Refer to Section 15000 - Special Requirements for Mechanical and Electrical Work and submit shop drawings.

1.05 COORDINATION

- A. Refer to Section 15000 - Special Requirements for Mechanical and Electrical Work.

1.06 GUARANTEE

- A. Refer to Section 15000 - Special Requirements for Mechanical and Electrical Work.

PART 2 - PRODUCTS

2.01 DUPLEX CONDENSATE PUMPS (Low Inlet Type)

- A. Furnish and install where shown on Drawings, horizontal duplex condensate pumps, each consisting of two pumps, two motors, two starters with pilot lights and a single receiver per pump set. Units shall be as scheduled on the Drawings.
- B. The condensate receiver shall be manufactured of cast iron or copper bearing steel over 70 gallons. The receiver shall be equipped with an externally adjustable mechanical alternators, water level gauge, dial thermometer, (2) pressure gauges for pump discharge.
- C. A cast iron inlet strainer with vertical self-cleaning bronze screen and large dirt pocket shall be mounted in the inlet line to the receiver. The screen shall be easily removable for cleaning, requiring no additional space for servicing.
- D. Pumps shall be close coupled vertical design, permanently aligned, bronze fitted and be equipped with stainless steel shaft, enclosed bronze impeller, renewable bronze case ring, and mechanical shaft seal. Each pump shall be close coupled to a vertical drip proof motor. Motor shall have 3500 RPM.
- E. The pump manufacturer shall furnish, mount on the pump unit, and wire a NEMA I sheet metal (plastic not approved) control cabinet with piano hinged door, containing:
 - 1. 2 Combination magnetic starters (each having 3 overload relays) with circuit breakers and cover interlock.
 - 2. 2 "Hand-Off-Automatic" selector switches.
 - 3. 1 Numbered terminal strip
 - 4. 1 Removable control mounting plate
- F. Each pump control circuit shall be completely independent of the other. The mechanical alternator shall (1) change the operating sequence automatically after each cycle, (2) provide simultaneous operation under peak load conditions, and (3) operate the second pump

automatically, should the active pump or its control fail.

1. A control circuit transformer for each circuit shall be provided when the motor voltage exceeds 250 volts. All factory installed wiring shall be numbered for easy identification and the numbers shall coincide with those shown on the wiring diagrams.
2. Pump manufacturer must verify that terminal head sizes are adequate for wire sizes specified.
3. The unit shall be factory tested as a complete unit. The pump manufacturer shall furnish complete elementary and connection wiring diagrams, piping diagrams, installation and operating instructions.
4. Pumps shall be low inlet type as scheduled, suitable for cold condensate.
5. Insulate receiver, pumps, accessories to prevent condensation.

PART 3 - EXECUTION

3.01 INSPECTION

- A. Contractor shall examine location where this equipment is to be installed and determine space conditions and notify architect in writing of conditions detrimental to proper and timely completion of the work.
- B. Do not proceed with the work until unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Install equipment where shown, in accordance with manufacturer's written instructions, and with recognized industry practices, to ensure that equipment comply with requirements and serve intended purposes.
- B. Coordinate with other work as necessary to interface installation of equipment with other components of systems.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

- C. Check alignment and, where necessary (and possible), realign shafts of motors and equipment within tolerances recommended by manufacturer.

3.03 FIELD QUALITY CONTROL

- A. Upon completion of installation of equipment, energized with normal power source, test equipment to demonstrate compliance with requirement. When possible, field correct malfunctioning units, then retest to demonstrate compliance. Replace units which cannot be satisfactorily corrected. Refer to Section - Testing and Balancing.

END OF SECTION 15736

SECTION 15740
WATER TO WATER HEAT EXCHANGERS

PART 1 - GENERAL**1.01 GENERAL REQUIREMENTS**

- A. This Section is coordinate with and complementary to the General Conditions and Supplementary General Conditions of the Work, wherever applicable to Mechanical Work.
- B. Section 15000 - Special Requirements for Mechanical and Electrical Work shall apply.

1.02 DESCRIPTION OF WORK

- A. The work includes the providing of all labor, materials, equipment, accessories, services and tests necessary to complete and made ready for operation by the Owner, all steam to water heat exchangers as shown on the drawings and hereinafter specified.

1.03 QUALITY ASSURANCE

- A. Manufacturing firms regularly engaged in manufacture of this material with characteristics and capacities required, whose products have been in satisfactory use in similar service for not less than 10 years.
- B. Provide product produced by the manufacturers, which are listed in Section "Approved Manufacturer's List".

1.06 GUARANTEE

- A. Refer to Section 15000 - Special Requirements for Mechanical and Electrical Work.

PART 2 - PRODUCTS

2.01 WATER TO WATER HEAT EXCHANGERS

- A. Furnish and install, where shown on the Drawings, a water to water heat exchanger(s).
- B. Type: Shell and tube, U-bend removable tube bundle, primary water in shell, water to be heated water in tubes.
- C. Materials:
 - 1. Shell - steel
 - 2. Tubes - $\frac{3}{4}$ " O.D. copper
 - 3. Heads - Steel or cast iron
 - 4. Tube Sheets - Steel
 - 5. Tube Supports - Steel
- D. Construction: A manufacturer's data report for unfired pressure vessels, form No. U-1, as required by the provisions of the ASME Code Rules, is to be furnished to the Architect. This form must be signed by a qualified inspector holding a National Board commission certifying that construction conforms to the latest ASME Code for Unfired Pressure Vessels for:
 - 1. 125 psig working pressures
 - 2. 240°F. temperatureas detailed in form No. U-1. The ASME "U" symbol should also be stamped on the converter.
- E. Fouling factor shall be 0.0005.
- F. Capacity of heat exchanger shall be as scheduled on the Drawings.
- G. All gaskets shall be able to withstand Glycol solution.
- H. Heat exchanger shall be Bell & Gossett, Patterson Kelley Yula, or approved equal.
- I. Provide vent, drain, with related piping, valves.
- J. Provide saddles, supports, angles, rods.

PART 3 - EXECUTION

3.01 INSPECTION

- A. Contractor shall examine location where this equipment is to be installed and determine space conditions and notify architect in writing of conditions detrimental to proper and timely completion of the work.
- B. Do not proceed with the work until unsatisfactory conditions have been corrected.

1.06 GUARANTEE

- A. Refer to Section 15000 - Special Requirements for Mechanical and Electrical Work.

PART 2 - PRODUCTS**2.01 ROOF TOP AIR CONDITIONING UNITS (COMBINATION GAS HEATING /ELECTRIC COOLING)****A. General**

The unit shall be UL listed, designed for outdoor roof top installation. Completely factory assembled and tested, piped, internally wired, fully charged with R-22, compressor oil and shipped in one piece. Filters, outside air system, gas-fired heating section and all operating and safety controls furnished factory installed and factory tested. Cooling capacity shall be rated in accordance with ARI standard 360, with U.L. approval. All units shall have decals and tags to aid in service and indicate caution areas. Electrical diagrams shall be printed on long life water resistant material ship attached to control panel door.

1. Units shall be complete with 0% to 100% outside air economizer cycles with outside air, return air, relief air dampers, enthalpy controls, outside and return air temperature and humidity sensors, controllers, power exhaust.
2. Units shall be suitable for horizontal side discharge with duct collars.
3. Units shall provide night set back, morning warm-ups, occupied/unoccupied modes, controls.
4. Install units on structural steel with neoprene isolators between steel and unit. Provide supplemental steel as required.
5. Noise levels shall not exceed specified unit noise levels.

B. Casing

Exterior panels shall have a minimum of 1.25 oz. zinc coated per sq.ft. of steel phosphatized and finished with painted finish; screws shall be coated with zinc-plus-zinc chromate. Access panels shall be 18 gauge, screw fastened. Removable access panels with handles shall be for access to control box, provided filter, outside air dampers, evaporator, supply fan sections, gas-fired section and compressor compartment. All access doors

shall have neoprene gaskets. Interior surfaces or exterior casing members in contact with air stream shall have 1" mat-faced fiberglass insulation. One-piece roof assembly curved for natural drainage shall have modified lock seam joints filled with sealant over all but condenser section.

1. Access doors for filter section and fan shall be hinged.

C. Refrigeration System

a. Compressors

Scroll compressors shall have a simple mechanical design with only three major moving parts. Compressors shall be direct-drive, 3600 rpm, with suction gas-cooled hermetic motor. Compressor shall include centrifugal oil pump, oil level sightglass and oil charging valve. Each compressor shall be provided with crankcase heaters installed, properly sized to minimize the amount of liquid refrigerant present in the oil sump during off cycles. Factory installed discharge and liquid line service valves refrigerant line filter drier and thermostatic expansion valve shall be provided for each refrigerant circuit. Lead/lag controls for compressors shall be provided for equal run time of compressors.

D. Evaporator Coil

Seamless copper tubing of 1/2", OD mechanically bonded to heavy-duty aluminum fins of configured design. All coils shall be dual circuited with independent thermal expansion valves and factory pressure and leak tested at 300 psi.

E. Condenser Coil

Configured aluminum fin secondary surface mechanically bonded to primary surface of 3/8". OD seamless copper tubing. Sub-cooling circuit with liquid accumulator shall be standard. Factory tested at 450 psig air pressure. Vacuum dehydrated.

F. Condenser fans and Motors

All condenser fans shall be vertical discharge, direct-drive fans, statically and dynamically balanced with steel blades and zinc-plated steel hubs. Three phase

motors with permanently lubricated ball bearings, built-in current and thermal overload protection, and weathertight slingers over bearings.

1. Provide condenser coil vinyl coated wire mesh screen guards.

G. Supply Fan

All fans shall be statically and dynamically balanced and tested at rated speed after being installed in the factory-assembled units. Fan ratings shall be certified as per ARI 410-72. Supply fans shall be double inlet forward curve fans on a common shaft.

Bearings are to be connected through aluminum tubing to external lubrication fittings located at the drive end of the fan section. The bearings are to be mounted on heavy gauge channel reinforced steel panels which shall form an integral part of the fan section frame. Fan sheels and scrolls are to be protected against corrosion by a two coat baked-on epoxy enamel finish. Bearings shall be self-aligning, grease-lubricated ball bearings sized to provide minimum average bearing life of 200,000 hours. Lubrication fittings shall be provided on exterior of cabinet. Fan shaft shall be continuous diameter, cold finished steel, ground and polished to insure trouble-free operation and tolerances within the recommendations of bearing manufacturers. Adjustable pitch shall be furnished with all motors. Entire assembly shall be completely isolated from unit by two inch deflection spring isolation.

H. Filters

Filters shall be factory installed 2" throw-away filters high efficiency filters. Provide four (4) inch thick high efficiency filters also.

I. Gas Fired Heating Section

Completely assembled and tested factory installed natural gas fired, pilotless, forced combustion type power burner, with corrosion resistant aluminized steel and stainless steel components. Complete gas train with two stage gas heating, shut-off valve, regulating valve shall be provided.

Provide safety controls for the proving of combustion air prior to ignition, and continuous flame supervision. On

initial call for heat the combustion blower shall purge the heat exchanger 45 seconds before ignition. After three unsuccessful ignition attempts, the entire heating system shall be locked out until manually reset from thermostat. Extended heat exchanger warranty of five years.

J. 0 to 100% outside air shall be introduced through horizontal louvered intake hood complete with rain lip and bird screen. Provide unit mounted outside air intake motorized damper.

K. Electrical System & Controls

Each roof top AC unit shall be furnished with an electrical disconnect switch. Provide horizontal economizer system and microprocessor controls.

Unit shall be completely factory wired with necessary control and contractor pressure lugs or terminal block for power wiring. Units shall provide an internal location for a non-fused disconnect with external handle for safety. Unit mounted microprocessor controls shall provide anti-short cycle timing for compressors to provide a high level of machine protection.

1. System shall be complete with transformer.
2. Integral microprocessor based controls shall make all heating, cooling, and/or ventilation decisions based on outside air, space air temperature, humidity, safety controls and shall maintain space temperature, ventilation.
3. Communication interface shall be provided to allow all controls, monitoring and alarm function through integrated remote system and communication link, to Trane Co. tracer system. Refer to controls section of specifications and coordinate, integrate all controls for operation, monitoring from central system.
4. Timed override and scheduled start/stop time clock functions shall be provided.
5. Zone sensors with night set back, electronic time clock shall be provided for each unit and integrated in central system.

L. Remote monitoring/control

All controls, monitoring function for system status, temperature controls, resets, temperature controls, resets, failures shall be provided at remote central location. See controls section of these specifications for details and coordinate.

- M. Provide liquid, suction line shutoff valves, factory installed 15 amp GFI outlet, powered from integral transformer. Provide communication interface.

PART 3 - EXECUTION**3.01 INSPECTION**

- A. Contractor shall examine location where this equipment is to be installed and determine space conditions and notify architect in writing of conditions detrimental to proper and timely completion of the work.
- B. Do not proceed with the work until unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Install equipment where shown, in accordance with manufacturer's written instructions, and with recognized industry practices, to ensure that equipment comply with requirements and serve intended purposes.
- B. Coordinate with other work as necessary to interface installation of equipment with other components of systems.
- C. Check alignment and, where necessary (and possible), realign shafts of motors and equipment within tolerances recommended by manufacturer.

3.03 FIELD QUALITY CONTROL

- A. Upon completion of installation of equipment, energized with normal power source, test equipment to demonstrate compliance with requirement. When possible, field correct malfunctioning units, then retest to demonstrate compliance. Replace units which cannot be satisfactorily corrected. Refer to Section - Testing and Balancing.

END OF SECTION 15745

FANS AND GRAVITY VENTILATORS

PART 1 - GENERAL**1.01 GENERAL REQUIREMENTS**

- A. This Section is coordinate with and complementary to the General Conditions and Supplementary General Conditions of the Work, wherever applicable to Mechanical Work.
- B. Section 15000 - Special Requirements for Mechanical and Electrical Work shall apply.

1.02 DESCRIPTION OF WORK

- A. The work includes the providing of all labor, materials, equipment, accessories, services and tests necessary to complete and made ready for operation by the Owner, all fans and ventilators as shown on the drawings and hereinafter specified.

1.03 QUALITY ASSURANCE

- A. Firms regularly engaged in manufacture of this material with characteristics and capacities required, whose products have been in satisfactory use in similar service for not less than 10 years.
- B. Provide product produced by the manufacturers, which are listed in Section "Approved Manufacturer's List".
- C. Provide equipment whose performance, under specified conditions, is certified by the manufacturer.

1.04 SUBMITTALS

- A. Refer to Section 15000 - Special Requirements for Mechanical and Electrical Work and submit shop drawings.

1.05 COORDINATION

- A. Refer to Section 15000 - Special Requirements for Mechanical and Electrical Work.

1.06 GUARANTEE

- A. Refer to Section 15000 - Special Requirements for Mechanical and Electrical Work.

PART 2 - PRODUCTS**2.01 UTILITY FANS**

- A. Furnish and install utility type centrifugal fans of the sizes and types called for in the equipment schedule and as shown on the plans. All fans shall be rated and tested in accordance with the AMCA test code and shall bear the certified rating label of AMCA.
- B. Fan and motor housings (weatherproof hood) shall be constructed of heavy gauge steel of lockseam construction with Bonderite finish and shall be constructed to permit rotation on the job to any discharge position, in 45 deg. increments. Fan wheels are to be of the type as scheduled on the drawings, except as noted below, with blades riveted to the back plate and inlet shroud. Wheels shall be locked in position on cold rolled steel shaft with a tapered key. Fan bearings shall be of the heavy duty cast iron pillow block grease lubricated type, supported independent of the fan housings. Wheels shall be dynamically balanced at the factory.
- C. Where belt driven fans are indicated in the equipment schedule "V" belt drive shall be of the high capacity type. Fan sheave shall be located outboard of the two bearings supported fan shaft to permit replacement of drives without removing bearings or disturbing position of wheel and shaft. Motor base shall be fully adjustable in all directions to provide for proper drive alignment and to allow for adjustment of belt tension.
- D. All fans shall have integral gravity damper or discharge dampers and damper motors interlocked with fan. Fans 200 cfm and above shall have motorized dampers.
- E. Lab exhaust fans shall be furnished with spark resistant construction, explosion-proof motor, heresite coating on all portions of fan in contact with air stream.
- F. Kitchen hood exhaust fans shall have aluminum wheels, grease tray, shall have angle discharge minimum 40 inches above roof.
- G. All roof-mounted fans shall be completely weatherproof. Provide outdoor covers on motor and drive. Unit to be hot-dip galvanized and painted with an extra coat of zinc chromate iron oxide paint.

2.02 ROOF FANS

- A. Furnish and install the roof fans where indicated on the Drawings.
- B. The fans shall have spun aluminum housings, or sectionalized aluminum housing, nonoverloading sparkproof blades, air cooled motor out of the air stream, sheaves and V-belt drives, electrically operated aluminum draft dampers, and motor disconnect switch, and aluminum bird screen. Damper motors shall have inherent overload protection.
- C. The fans shall have the capacities indicated on the drawings.
- D. Each roof fan shall be furnished with a prefabricated roof curb as hereinafter specified.
- E. Curbs shall be Greenheck, Fiber-Aire as manufactured by Swartwout, Inc. shall be approved equal.

2.03 PROPELLER FANS

- A. The propeller fans shall have the capacities in the schedule on the Drawings. Provide OSHA protective screens for motor and fan.
- B. The propeller fans shall be as manufactured by Clarage Co., Buffalo Forge, American Air Filter, or equal as approved by the Architect.
- C. Provide electrically operated dampers and motors. Damper motor voltage shall be 120 V. Provide transformer if fan motor is 200 or 460 V.

2.04 PREFABRICATED ROOF CURBS

- A. Furnish and install a roof curb for each roof exhaust fan, as indicated on the Drawings. The curbs shall be all aluminum curbs. Insta-Curb as manufactured by Swartwout Fabricators, Inc. shall be approved equal.
- B. All roof curbs for roof exhaust fans shall have fiberglass linings.
- C. All roof curbs shall be insulated, aluminum.
- D. Roof curbs shall be of same manufacturer as roof fans.

2.05 IN-LINE FANS

- A. Furnish and install In-line Centrifugal Fans (direct or belt drive) of size and capacities as indicated on Drawings.
- B. The fans shall be the square shaped and of heavy gauge formed steel. One of the sides shall be hinged and shall support the entire drive assembly (motor only for direct drive fans) and wheel allowing the assembly to swing out for cleaning, inspection or service without dismantling the unit in any way.
- C. For direct drive fans, the motor shall be isolated from the air stream by a motor enclosure and shall draw cooling air from outside the fan housing.
- D. For belt drive fans, the motor shall be mounted on the hinged side exterior isolated from air stream. The belt and pillow block ball bearings shall be protected from air stream by an enclosure. The shaft shall be keyed to both the wheel and pulley.
- E. The fan inlet shall be spun Venturi throat overlapped by a backward curved centrifugal wheel with spun cone for maximum performance.
- F. Air and sound shall be A.M.C.A. certified.

PART 3 - EXECUTION**3.01 INSPECTION**

- A. Contractor shall examine location where this equipment is to be installed and determine space conditions and notify architect in writing of conditions detrimental to proper and timely completion of the work.
- B. Do not proceed with the work until unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Install equipment where shown, in accordance with manufacturer's written instructions, and with recognized industry practices, to ensure that equipment comply with requirements and serve intended purposes.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

- B. Coordinate with other work as necessary to interface installation of equipment with other components of systems.
- C. Check alignment and, where necessary (and possible), realign shafts or motors and equipment within tolerances recommended by manufacturer.

3.03 FIELD QUALITY CONTROL

- A. Upon completion of installation of equipment, test equipment to demonstrate compliance with requirement. When possible, field correct malfunctioning units, then retest to demonstrate compliance. Replace units which cannot be satisfactorily corrected. Refer to Section - Testing and Balancing.

END OF SECTION 15760

SECTION 15765
UNIT VENTILATORS

PART 1 - GENERAL

1.01 GENERAL REQUIREMENTS

- A. This Section is coordinate with and complementary to the General Conditions and Supplementary General Conditions of the Work, wherever applicable to Mechanical Work.
- B. Section 15000 - Special Requirements for Mechanical and Electrical Work shall apply.

1.02 DESCRIPTION OF WORK

- A. The work includes the providing of all labor, materials, equipment, accessories, services and tests necessary to complete and made ready for operation by the Owner, all room terminal units as shown on the drawings and hereinafter specified.

1.03 QUALITY ASSURANCE

- A. Manufacturing firms regularly engaged in manufacture of this material with characteristics and capacities required, whose products have been in satisfactory use in similar service for not less than 10 years.
- B. Provide product produced by the manufacturers, which are listed in Section "Approved Manufacturer's List".
- C. Provide equipment whose performance, under specified conditions, is certified by the manufacturer.

1.04 SUBMITTALS

- A. Refer to Section 15000 - Special Requirements for Mechanical and Electrical Work and submit shop drawings.

1.05 COORDINATION

- A. Refer to Section 15000 - Special Requirements for Mechanical and Electrical Work.

1.06 GUARANTEE

- A. Refer to Section 15000 - Special Requirements for Mechanical and Electrical Work.

PART 2 - PRODUCTS**2.01 UNIT VENTILATORS****A. General**

Unit ventilator shall be ARI certified or tested by an independent testing and balancing lab witnessed by owner's representative. Non-ARI manufacturers must be within 10 percent of catalog airflow and capacities, or removal of these units from the jobsite will be required at the expense of the manufacturer or contractor.

1. Each ventilator shall be blow-through air configuration.
2. Sound ratings of unit ventilators shall not exceed scheduled unit sound ratings. Noise data shall be submitted for approval.
3. For each vertical unit, 6 inch deep false-back shall be provided by unit ventilator manufacturer for installation of sound attenuator by general construction trade. Construction finish, paintings shall match unit.
4. Each unit shall be single point power connection with transformers for controls, valves, damper wiring, terminal strip.
5. Horizontal unit ventilators shall be supported from building structure with angles, rods, spring isolators.

B. Cabinet

1. Cabinets shall be 16-gauge furniture quality steel, with exposed edges rounded. Provide 14-gauge removable front panels with tamper-proof camlocks. Provide steel bar discharge grilles welded in place as an integral part of unit structure. Insulate internal parts and surfaces exposed to conditioned air stream with moisture resistant insulation. Where ducted inlets or front discharge are shown or required, provide same and coordinate.

10/31/03

Soundproofing of Msg. McClancy Mem. H.S.

- a. For exposed, horizontal units, integral double deflecting supply air grille and return grille shall be provided.
2. End pockets shall be a minimum of 12-inches wide, 15 inch deep to facilitate piping, conduits and service. If standard end pocket is less than 12-inches wide, an extended cabinet unit shall be provided.
3. Cabinet insulation shall be 1/2-inch thick dual density bonded glass fiber. The exposed side shall be a high density erosion proof material suitable for use in airstreams up to 4500 feet per minute (FPM). Insulation shall meet the following Underwriters Laboratories Fire Hazard Classification:
 - Flame Spread = 20
 - Fuel Contributed = 15
 - Smoke Developed = 0
4. Cabinet accessories shall include a matching steel construction, reinforced for use with unit ventilators. Steel alignment pins, adjustable leveling bolts, kick-plate, and wall filler sections as required.
5. Access for inspection and cleaning of the unit drain pan, coils and fan section shall be provided. The unit shall be installed for proper access. Procedures for proper access, inspection and cleaning of the unit shall be included in the maintenance manual.
6. All steel surfaces shall be phosphatized, cleaned and finish painted of color as selected by Architect. Final finish shall be applied by an electrostatic powder spray system, with a minimum thickness of 1.5 mil with no visible run marks. Each unit shall be supplied in one of seven decorator colors as selected by the architect.

C. Fan Board Assembly

The unit ventilator fan board assembly shall be a single, rigid assembly and includes the fans, fan housings, bearings, fan shaft and motor. The fan motor

shall be mounted on the fan board constructed of 14 gauge galvanized steel.

D. Motors

The motors shall be a single speed permanent split capacitor with thermal overload protection. A multiple tap auto transformer shall be wired to the motor to provide different rpm settings and to ensure rated capacity with all coil combinations. The motor shall also be provided with a quick-disconnect plug and permanently lubricated bearing.

E. Fans

Fans shall be centrifugal forward-curved double width, double-inlet corrosion resistant galvanized wheels, statically and dynamically balanced, direct driven. Fans shall be in the blow-through configuration.

F. Hydronic Coil and Drain Pans

1. Separate, independent heating and cooling coils shall be provided for four pipe systems. All hydronic coils shall be plate fin type and manufactured by the unit ventilator manufacturer. All coils are to be proof and leak tested. The proof test must be performed at 1.5 times the maximum operating pressure and the leak test at the maximum operating pressure. Standard four pipe heating coil shall be in the preheat location. A drain pan shall be provided under the cooling coil, with drain connection. Drain pan shall be easily removable for cleaning.
2. The drain pan shall be constructed of galvanized steel and insulated to prevent sweating. The bottom of the drain pan shall be sloped in two planes which pitches the condensate to the drain connection. The drain pan, when the unit is installed and trapped per the manufacturers installation manual, shall be designed to leave puddles no more than 2-inch in diameter and no more than 1/8-inch deep no longer than 3 minutes following step 3 of the following test. The test steps are:
 - a. Temporarily plug the drain pan.

- b. Fill the drain pan with 1/2" of water or the maximum allowed by the drain pan depth, whichever is smaller.
- c. Remove the temporary plug.

G. Filters

Each unit shall be equipped with a single 1-inch thick, throwaway or permanent, filter accessible without removal of the unit front panel.

H. Fresh Air / Return Air Dampers

1. Units shall use dual blade with a compressible seal, capable of varying proportion of mixed air from 100 percent room air to 100 percent outside air. On floor mounted units, Ultra low leak damper seal made of closed cell EPDM material shall be provided. Leakage shall be less than 1 percent against 0.5 inches external static pressure.
2. Damper shall contain a continuous divider placed between the damper blades to separate the fresh air and return air compartments to prevent blow-through.
3. Units with outside air shall have minimum and maximum outside air set points.
4. All dampers shall be complete with motors, linkages, shall have minimum outside air, maximum outside air stops.
5. Modulating ASHRAE-II controls shall be provided.

I. Direct Digital Controls

This system shall utilize factory furnished and mounted DDC controls for operation of the unit ventilators. Each unit shall be connected to Tracer system for remote start/stop, temperature, timed operation, monitoring, alarm and controls functions, through communication wiring. The unit shall be UL listed. The following options shall be provided with DDC control:

- Valve control
- Damper controls
- Economizer

- Night setback
- Morning warm-up
- Low limit thermostat
- Mixed air and discharge sensing
- Fan, filter status switch
- Timed override
- Integrated Comfort™ system capabilities

J. Wallboxes

1. Wallboxes shall provide year-around moisture free, outdoor air intake directly to the unit ventilator through the exterior wall. Contractor shall provide ductwork, sleeves, extension as required for air intake.
2. Wallboxes shall be constructed of extremely heavy gauge material and designed to last the life of the building. Internal parts shall be interlocked in addition to being held securely in place by the frame-within-a-frame design for proper louver alignment. Wallboxes shall contain a 1/2-inch square mesh galvanized screen in back of the louver.

K. Each unit shall have DDC, modulating valve package with shut-off valve, circuit setters, control valves, P/T ports for each coil. Valves shall be wired from unit power.

L. Integrate unit ventilators with central control system for start/stop, controls, monitoring functions as described under controls sections and provide devices, wiring as required.

M. Sound Ratings

1. Sound ratings of unit ventilators shall not exceed following. Certified, factory generated sounds ratings shall be provided for review.

Vertical Unit Ventilator Sound Ratings

Octave Band	1	2	3	4	5	6	7	8
Center of Frequency	63	125	250	500	1000	2000	4000	8000
100 Low Speed	52	65	57	52	47	43	35	25
125 Low Speed	55	64	60	56	50	47	40	31

150 Low Speed	54	70	60	56	49	44	37	29
---------------	----	----	----	----	----	----	----	----

Horizontal Unit Ventilator Sound Ratings

Octave Band	1	2	3	4	5	6	7	8
Center of Frequency	63	125	250	500	1000	2000	4000	8000
100 Low Speed	59	61	55	54	43	45	38	29
125 Low Speed	65	67	61	62	55	50	44	36

2. Additional attenuation shall be provided by sound attenuators for unit ventilators, fan coils as per sound attenuators in false-back per general construction trade.

PART 3 - EXECUTION**3.01 INSPECTION**

- A. Contractor shall examine location where this equipment is to be installed and determine space conditions and notify architect in writing of conditions detrimental to proper and timely completion of the work.
- B. Do not proceed with the work until unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Install equipment where shown, in accordance with manufacturer's written instructions, and with recognized industry practices, to ensure that equipment comply with requirements and serve intended purposes.
- B. Coordinate with other work as necessary to interface installation of equipment with other components of systems.
- C. Check alignment and, where necessary (and possible), realign shafts of motors and equipment within tolerances recommended by manufacturer.

3.03 FIELD QUALITY CONTROL

- A. Upon completion of installation of equipment, energized with normal power source, test equipment to demonstrate compliance with requirement. When possible, field

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

correct malfunctioning units, then retest to demonstrate compliance. Replace units which cannot be satisfactorily corrected. Refer to Section - Testing and Balancing.

END OF SECTION 15765

SECTION 15767
FAN COIL UNITS

PART 1 - GENERAL

1.01 GENERAL REQUIREMENTS

- A. This Section is coordinate with and complementary to the General Conditions and Supplementary General Conditions of the Work, wherever applicable to Mechanical Work.

1.02 DESCRIPTION OF WORK

- A. The work includes the providing of all labor, materials, equipment, accessories, services and tests necessary to complete and made ready for operation by the Owner, all room terminal units as shown on the drawings and hereinafter specified.

1.03 QUALITY ASSURANCE

- A. Manufacturing firms regularly engaged in manufacture of this material with characteristics and capacities required, whose products have been in satisfactory use in similar service for not less than 10 years.
- B. Provide product produced by the manufacturers, which are listed in Section "Approved Manufacturer's List".
- C. Provide equipment whose performance, under specified conditions, is certified by the manufacturer.

1.04 SUBMITTALS

- A. Refer to Section - Special Requirements for Mechanical and Electrical Work and submit shop drawings.

1.05 COORDINATION

- A. Refer to Section - Special Requirements for Mechanical and Electrical Work.

1.06 GUARANTEE

- A. Refer to Section - Special Requirements for Mechanical and Electrical Work.

PART 2 - PRODUCTS**2.01 FAN COIL UNITS**

- A. Units: Basic unit shall include chassis, cooling coil, hot water heating coil, heavy density faced glass fiber insulation, air blockoffs around coils, removable fan board/drain pas assembly, auxiliary drain pan, fans housings, motor and filter. Chassis shall be of 18 gauge galvanized steel with flanged edges. Unit capacity shall be as scheduled on the Drawings. Unit shall be phosphatized, finish painted with baked on powder paint of color as selected by Architect. Unit shall be thermally and acoustically insulated with closed-cell insulation. Front panels shall be 16 gauge. Integral discharge grille shall be recessed in cabinet to resist condensate for vertical units. Flush, hinged top access door, 20 gauge galvanized steel shall be provided.
- B. Water Coils: Separate Hot Water and chilled water coils for four (4) pipe systems shall have 3/4" O.D. seamless copper tubes mechanically bonded to configured aluminum fins with continuous fin collars and sleeved coil end supports. Maximum working pressure 300 psig, factory burst test 450 psi (air) and leak test 300 psi (air under water). Coils shall have female sweat connections to accept 3/8" copper tubing.
- C. Drip Pans: Horizontal main drain pans shall be galvanized steel. Drain pan insulation shall be one-piece, self-extinguishing polystyrene foam insulating liner. Auxiliary drainpan shall be provided.
- D. Fans: Fan wheels shall be aluminum, centrifugal, forward curved, double width thermoplastic material. Fan housings shall be of sheet metal. Wheels and housings shall be non-corrosive.
- E. Motor: The motor shall have integral thermal overload protection and start at 78% of rated voltage. The motor shall operate satisfactorily at 90% of rated voltage of all speed settings and at 10% overvoltage without undue magnetic noise. Temperature rise by winding resistance method shall not exceed 55°C. (PSC). Motor shall be 3-speed permanent split capacitor type. The motor shall be factory run tested in assembly unit prior to shipping. The motor cord shall be quickly detachable at switch box by locking pronged connector.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

- F. Filter: The filter shall be concealed from sight and removable without displacing front panel. The filter shall be throwaway type of woven glass fiber.
- G. Fresh Air Dampers: Fresh air damper in fresh air opening shall be factory installed. Dampers shall be 18 gauge. Fresh air opening shall be sealed off with gasket. Damper shall allow 0% to 100% outside air, with minimum, maximum set points, adjustable, motorized type.
- H. Controls: The fan coil manufacturer shall furnish a factory wired unit mounted control system that includes a manually-operated fan motor three speed plus off switch, combined with a 4-pipe automatic changeover thermostat in a common junction box and electronic control valves. The speed switch and thermostat shall be unit mounted below discharge grille access door.
- I. For each unit, fan coil unit manufacturer shall provide 6-inch deep false-back for installation of sound attenuator by general construction trade. Construction, finish, painting shall match units.
- J. Direct Digital Controls

This system shall utilize factory furnished and mounted DDC controls for operation of the fan coil units. Each unit shall be connected to Tracer system for remote start/stop, temperature, timed operation, monitoring, alarm and controls functions, through communication wiring. The unit shall be UL listed. The following options shall be provided with DDC control:

- Valve control
- Damper controls
- Economizer
- Night setback
- Morning warm-up
- Low limit thermostat
- Mixed air and discharge sensing
- Fan, filter status switch
- Timed override
- Integrated Comfort™ system capabilities

K. Wallboxes

- 1. Wallboxes shall provide year-around moisture free, outdoor air intake directly to the unit ventilator through the exterior wall. Contractor shall

provide ductwork, sleeves, extension as required for air intake.

2. Wallboxes shall be constructed of extremely heavy gauge material and designed to last the life of the building. Internal parts shall be interlocked in addition to being held securely in place by the frame-within-a-frame design for proper louver alignment. Wallboxes shall contain a 1/2-inch square mesh galvanized screen in back of the louver.

- L. Each unit shall have DDC, modulating valve package with shut-off valve, circuit setters, control valves, P/T ports for each coil. Valves shall be wired from unit power.
- M. Integrate fan coil units with central control system for start/stop, controls, monitoring functions as detailed under controls section and provide devices, wiring as required.
- N. Sound Data

Fan coil unit sound shall not exceed following sound ratings:

1. Medium Speed

	63 Hz	125 Hz	250 Hz	500 Hz	1000 Hz	2000 Hz	4000 Hz	8000 Hz
Total Noise	55 dB	58 dB	38 dB	54 dB	50 dB	45 dB	38 dB	31 dB

2. Low Speed Sound

	63 Hz	125 Hz	250 Hz	500 Hz	1000 Hz	2000 Hz	4000 Hz	8000 Hz
Total Noise	50 dB	52 dB	51 dB	48 dB	42 dB	36 dB	26 dB	22 dB

3. Contractor shall submit sound data at low and medium speeds.

PART 3 - EXECUTION

3.01 INSPECTION

- A. Contractor shall examine location where this equipment is to be installed and determine space conditions and

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

notify architect in writing of conditions detrimental to proper and timely completion of the work.

- B. Do not proceed with the work until unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Install equipment where shown, in accordance with manufacturer's written instructions, and with recognized industry practices, to ensure that equipment comply with requirements and serve intended purposes.
- B. Coordinate with other work as necessary to interface installation of equipment with other components of systems.
- C. Check alignment and, where necessary (and possible), realign shafts of motors and equipment within tolerances recommended by manufacturer.

3.03 FIELD QUALITY CONTROL

- A. Upon completion of installation of equipment, energized with normal power source, test equipment to demonstrate compliance with requirement. When possible, field correct malfunctioning units, then retest to demonstrate compliance. Replace units which cannot be satisfactorily corrected. Refer to Section - Testing and Balancing.

PART 2 - PRODUCTS**2.01 UNIT HEATERS**

- A. Furnish and install, where shown on the plans, propeller type unit heaters of size and type as indicated on the plans. All ratings shall be based on tests in accordance with the Standard Test code adopted jointly by the Industrial Unit Heater Association and the American Society of Heating and Ventilating Engineers.
- B. The casing shall be made of die formed steel parts, phosphatized for rust resistance, and finish with baked enamel. All hardware, both internal and external, shall be cadmium plated for rust resistance.
- C. The fan blades shall be specially designed for unit heater application, and quiet operation, and shall operate in a die formed steamlined inlet. Wheels shall consist of die formed aluminum blades riveted to die formed steel spiders. Small sizes may be one piece aluminum construction. Unit heater shall have adjustable discharge louvers.
- D. Unit heaters shall be properly supported from building construction with $\frac{1}{2}$ " diameter hanger rods and braced as required to prevent sidesway.
- E. Motors used on either horizontal or projection type unit heaters shall not exceed 1750 RPM, and shall be designed for continuous operation at a temperature rise of not more than 55 deg. C. above the ambient temperature. Motor bearings where difficult to reach, shall be provided with extended oil or grease tubing.
- F. Provide on-off switch with thermal overload for single phase motors. Provide remote line voltage thermostat, transformer.

2.02 HOT WATER UNIT HEATERS

- A. Coil shall be constructed of nonferrous fins mechanically bonded to copper tubes. Suitable means for tube expansion shall be provided by tube bends or by provision for entire coil to move inside casing. All coils shall be given 500 pound hydrostatic and 100 pound air tests by the manufacturer before assembly.

PART 2 - PRODUCTS

2.01 UNDERGROUND CHILLED WATER LINES

PREFABRICATED, PREINSULATED PIPING SYSTEM

- A. Provide piping system of the prefabricated type. Installation, maintenance, testing, and repair requirements shall be in accordance with the manufacturer's instructions, supplemented and amended as specified herein and as indicated on the Contract Drawings.
1. Piping shall be "Ferro-Therm PTS" as manufactured by Perma-Pipe.
 2. Piping shall comply with ANSI Standards.
- B. The prefabricated piping system shall be structurally strong, sufficient to withstand Highway H-20 Loading, completely waterproof, and entirely resistant to attack by salts, water, and all ground chemicals normally encountered in underground environments.
- C. Product Pipe
1. Chilled Water Service
 - a. Pipe up to and including 10 inch:
ASTM A53B, sch 40, ERW black steel with ends prepared for butt-welding in the field.
 - b. Fittings:
Fittings shall match pipe in wall thickness.
- D. Outer Jacket:
- The outer protective insulation jacket shall be seamless high-density polyethylene (HDPE) in accordance with ASTM D1248, Type 3, Class C. PVC or tape materials are not allowed. The minimum thickness of the HDPE jacket shall be as follows:

<u>Jacket OD (in)</u>	<u>Minimum Jacket Thickness (in)</u>
OD < 12	0.125

- E. Insulation: Insulation shall fill the annular space between the pipe and the jacket with rigid polyurethane conforming to ASTM C591, with a nominal 2 lbs/ft³ density. 'K' factory shall not be greater than 0.13 BTU/hr/'F/ft³ @ 73°F. Insulation shall have a closed cell content of 90-95%, and sufficient compressive load characteristics to enable entire system to withstand Highway H-20 Loading with 2'0" depth of cover, minimum, unless otherwise indicated. Insulation shall be factory applied to the piping via automatic dispensing equipment having all temperature, humidity and volume factors per unit integrated into its application calculation. Insulation thickness shall be 2-inches.
- F. Fittings shall be factory-fabricated assemblies shipped to the jobsite as a unit consisting of steel fitting, insulation and outer jacket. Jacket for fittings shall match the jacket for unit lengths. The molded jacket for fittings shall be seamless and no mitering, taping, gluing, or shrink-wraps shall be allowed.
- G. The field joints shall be sealed with the provision of the pressure testable joint closure. The closure shall be an electro-fused split sleeve HDPE joint. The completed joint shall be air tested at 5 psi for 5 minutes while simultaneously soap testing the joint closure seams for possible leaks. All joint closures and insulation shall occur in straight sections. No field insulation and jacketing of fittings will be allowed. Field joint air-testable closure will be applied only after hydrostatic testing of product pipe and application of the insulation.
- H. Terminal ends of the system piping shall be provided with factory installed end seals sealed to the jacket and the pipe. End seals shall be certified as having passed a 20-foot head pressure test.
- I. Buried Utility Warning and Identification Tape: Provide plastic tape manufactured specifically for warning and identification of buried piping.
1. Warning and identification shall be CAUTION-BURIED PREINSULATED WATER PIPING BELOW or similar.
 2. Use permanent code and letter coloring unaffected by moisture and other substances contained in trench backfill material.

3. Bury tape with the printed side up at a depth of 12 inches below the top surface of earth or the top surface of the subgrade under pavements.

PART 3 - EXECUTION

3.01 INSTALLATION

- A. Piping Systems: Installation of piping systems includes equipment, materials, installation, workmanship, examination, inspection and testing. Provide proper facilities for lowering sections of pipe into trenches. Do not, under any circumstances, drop or dump pipe, pipe fittings, valves, or any other water piping material into trenches.
1. Field assembly shall be in accordance with the manufacturer's written instructions and installation procedures, as approved.
 2. Deviations will not be permitted except as specifically authorized in writing by the Engineer.
 3. Install piping straight and true to bear evenly on sand bedding material. Cut pipe accurately to measurements established at the site. Work into place without spring or forcing.
 4. Minimum depth of cover shall be 2 feet, unless otherwise indicated. Grade the pipeline in straight lines, taking care to avoid the formation of dips or low points. Support pipe at its proper elevation and grade, taking care to secure firm and uniform support. Wood support blocking will not be permitted. Lay pipe so that the full length of each section of pipe and each fitting rests solidly on the pipe bedding.
 5. Keep trenches free of water until joints have been properly made. Do not lay pipe when conditions of trench or weather are unsuitable.
- B. Cleaning of Piping: Keep the interior and ends of new piping and existing piping affected by the Contractor's operations thoroughly cleaned of water and foreign matter. Clean pipe, fittings, valves and accessories before placing in position. Keep piping systems clean during installation by means of plugs or other approved methods. When work is not in progress, securely close

open ends of pipe and fittings to prevent water and foreign matter from entering the pipes and fittings.

- C. Inspection of Piping Systems: Inspect piping before placing into position. Pipe, pipe fittings, valves and accessories will be carefully inspected before and after installation.
- D. Demolition: Carefully remove materials so as not to damage material which is to remain. Replace existing work damaged by the Contractor's operations with new work on the same construction.
- E. Field Supervision: A qualified factory trained supervisor, employed by the prefabricated, preinsulated piping manufacturer, shall be present to instruct Contractor's Tradesmen in the correct installation technique of the prefabricated piping.

3.02 EXCAVATING, BACKFILLING, AND COMPACTING

- A. Provide all required excavation, backfilling, and compacting under this Section and as designated on the Contract Drawings.
- B. All concrete, roadway and other surfaces (including the foundations thereof) either adjacent to or not adjacent to the line of the Project that may have become damaged, directly or indirectly, as a result of the Contractor's operations, shall be restored by the Contractor at his own cost and expense to a condition similar to an equally as good as that existing previous to the commencement of construction.
- C. Coordinate with existing utilities, piping, conduits, manholes, oil tanks. Be extra cautious during excavation, not to damage existing work. Any damage shall be repaired immediately by Contractor at his own expense.

3.03 DELIVERY, STORAGE, AND HANDLING

- A. Inspect materials delivered to site for damage. Unload and store with minimum handling. Store materials on site in enclosures or under protective covering. Do not store materials directly on the ground. Keep inside or pipes and fittings free of dirt, water and debris.
- B. Handle pipe, fittings, and other accessories in such manner as to ensure delivery to the trench in sound

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

undamaged condition. Avoid contact with water, keep preinsulated pipe clean and dry at all times during the storage and installation of the pipe. Pipe exposure to water inside the trench and/or during storage shall be avoided. Take special care to avoid injury to coatings and linings on pipe and fittings; make satisfactory repairs if coatings or linings are damaged. Carry pipe to the trench; do not drag it.

END OF SECTION 15790

SECTION 15801
HVAC SPECIALTIES

PART 1 - GENERAL

1.01 GENERAL REQUIREMENTS

- A. This Section is coordinate with and complementary to the General Conditions and Supplementary General Conditions of the Work, wherever applicable to Mechanical Work.
- B. Section 15000 - Special Requirements for Mechanical and Electrical Work shall apply.

1.02 DESCRIPTION OF WORK

- A. The work includes the providing of all labor, materials, equipment, accessories, services and tests necessary to complete and make ready for operation by the Owner, all HVAC Specialties as shown on the Drawings and hereinafter specified.

1.03 QUALITY ASSURANCE

- A. Firms regularly engaged in manufacturer of this equipment with characteristics and capacities required, whose products have been in satisfactory use in similar service for not less than ten (10) years.
- B. Provide products produced by the manufacturers, which are listed in Section entitled "Approved Manufacturers List".
- C. Provide equipment whose performance under specified conditions is certified by the manufacturer.

1.04 SUBMITTALS

- A. Refer to Section entitled "Special Requirements" for mechanical and electrical work and submit shop drawings.

1.05 COORDINATION

- A. Refer to Section "Special Requirements" for mechanical and electrical work.

1.06 GUARANTEE

- A. Refer to Section "Special Requirements" for mechanical and electrical work.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

PART 2 - PRODUCTS

2.01 THERMOMETERS

- A. Furnish and install, where indicated on the Drawings, at inlet and outlet piping to boilers, chillers, heat exchangers and elsewhere as shown, and where specified herein, separable well-type dial or 9" mercury adjustable angle type in glass stem, thermometers as manufactured by American, Trerice, Weksler, Weiss or approved equal.
- B. All thermometers shall be installed in such a manner as to cause a minimum of restriction to flow in the pipes and so that they can easily be read from the floor.
- C. Dial thermometers shall be 5 inch hermetically sealed, bimetal with stainless steel cases, antiparallax dials with raised jet black figures, stainless steel stems, and brass separable sockets unless otherwise specified. Thermometers for duct mounting shall have union connections in lieu of separable sockets. Separable wells shall be stainless steel for steel pipe and brass for copper pipe. Separable wells shall be standard type for uninsulated pipe and logging extension type of proper length for insulated pipe. Stem shall extend a minimum of 2½" into the fluid.
- D. The accuracy of all thermometers shall be within 1% of the scale range.
- E. All instrument wells for controls and indicators furnished by the temperature control manufacturer shall be installed under this Section.
- F. Where conditions are such that thermometers would not be readable from the floor, remote bulb dial thermometers shall be mounted on panelboards. The thermometers shall be 5 inch dials and shall be vapor actuated. The thermometers shall have separable wells. Panel mounted thermometers shall be provided with an engraved nameplate mounted below each thermometer to identify its service. The nameplates shall be chrome plated with black filled letters.
- G. A thermometer shall be installed in the hot water inlet and outlet of each heat exchanger. A thermometer shall be installed in the chilled water inlet and outlet of each refrigerator machine. Additional thermometers shall be installed where indicated on the Drawings.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

H. The scale range for the thermometers shall be as follows:

<u>Service</u>	<u>Temperature Range</u>	<u>Remarks</u>
Hot Water	30° to 300° F	
Chilled Water	0° to 120° F	

2.02 PRESSURE GAUGES

- A. Furnish and install where indicated on the Drawings in inlet and outlet piping to boilers, chillers, heat exchangers and elsewhere as shown, and where specified herein, Bourdon spring type pressure gauges as manufactured by U.S. Gauge, Weksler, Trerice, Marsh, Ashcroft, or approved equal.
- B. All gauges shall be installed so as to be easily readable from the floor. Where conditions are such that gauges on piping would not be readable from the floor, the gauges shall be installed on panelboards.
- C. The gauges shall have dull, black enamel cast aluminum casings with chrome plated bezels or rims. The gauges shall have white faces with black filled engraved numerals and adjustable pointer. The diameter of the dial shall be not less than 4½ inches. Gauges shall have brass bronzed brushed rotary type movement.
- D. Panel mounted gauges shall be designed for flush mounting with back connections and shall be provided with an engraved nameplate mounted below each gauge to identify its service. The nameplates shall be chrome plated with black filled letters.
- E. Differential pressure switches, pressure sensing pipe taps, furnished by temperature control manufacturers shall be installed under this Section.
- F. The accuracy of all gauges shall be within 1% of the scale range.
- G. All gauges on water lines shall be fitted with filter type pressure snubbers consisting of ¾" dia. x ¼" thick, micro metallic stainless steel filter, as manufactured by Operating and Maintenance Specialties or approved equal.
- H. A pressure gauge shall be installed in the suction and discharge of each hot water, and chilled water pump. A pressure gauge shall be installed in the chilled water inlet and outlet of each refrigerating machine. A pressure gauge shall be installed in the inlet and outlet

of each heat exchanger. Additional pressure gauges shall be installed where indicated on the Drawings.

I. The scale range of pressure gauges shall be as follows:

<u>J. Service</u>	<u>Pressure Range</u>
Chilled Water	0 to 100 psig.
Hot Water	0 to 100 psig.
Discharge side of Water Pressure Reducing Valve	0 to 100 psig.

K. All other pressure gauges shall have a range at least twice the working pressure, but in no case less than 0 to 30 lbs. A ball valve shall be installed on the water side of each gauge.

2.03 MACHINERY GUARDS

- A. Moving parts of machinery exposed to contact by personnel shall be guarded by barrier to a type which complies with OSHA Code.
- B. Exposed moving parts such as belts and couplings shall have not less than $\frac{3}{4}$ " No. 16 gauge metal guards with all edges rounded and gauge, material and construction shall be in accordance with OSHA standards - paragraphs 7173.3, 7173.5 and 7174.1. Guards shall have $1\frac{1}{4}$ " x $1\frac{1}{4}$ " x $\frac{1}{8}$ " angle iron frame properly supported.
- C. All machinery guards covering the ends of motor or equipment shafts shall have openings for the insertion of a tachometer. Machinery guards shall be painted with two coats of machinery gray enamel.

2.04 EXPANSION TANKS

- A. Furnish and install as shown on the Drawings, EX-TROL Pressurized Diagram Type Expansion Tanks as manufactured by AMTROL INC. It shall be air precharged to the initial fill pressure of the system. It shall be suitable for a maximum working pressure of 125 psi and shall be furnished with ASME stamp and certification papers. It shall have a sealed-in elastomer diaphragm suitable for an operating temperature of 240° F. (EX-TROL to be furnished with saddles for horizontal installation).

2.05 EXPANSION LOOPS, ANCHORS AND GUIDES

- A. Provisions for expansion in piping mains, branches, and risers shall be made by the installation of offsets, expansion loops, as indicated on the Drawings and as required. Every 100'-0" horizontal hot water piping shall have expansion loop and anchors. Minimum loop shall be 8'-0" by 6'-0" if not indicated on the Drawings.
- B. All piping with loops shall be anchored so as to throw all expansion toward the loops.
- C. Guides shall be installed on both sides of each expansion loop. Guides shall be Flexonics pipe alignment guides or approved equal. Anchors and guides shall be secured to beams, columns or concrete slabs.
- D. Pipe hangers and rollers are not considered guides.
- E. Provide 12" long guides for each expansion joint. Guides shall be located 3'-0" on each side of the expansion joints.
- F. Furnish and install as shown on plans, or where necessary to absorb max. 1 $\frac{3}{4}$ " expansion and max. $\frac{1}{4}$ " contraction between two anchor points in copper lines, up to and including 2 $\frac{1}{2}$ ", Flexonics Model HB Expansion Compensators having two-ply phosphor bronze bellows and brass shrouds and end fittings, as manufactured by Flexonics Division of Calumet and Heela, Inc., Bartlett, Illinois. All internal parts shall be of non-ferrous metals. Service pressure shall be external to the bellows. Compensators shall have internal guides extending the full length of the bellows travel. Compensators shall have internal positive anti-torque devices to prevent twist or torque on installation and shall have properly located positioning clip to insure installation of correct end-to-end dimension to allow full rated traverse. Compensator shall be for max. 125 psig. working pressure. Test pressure shall not exceed 175 psig.
- G. Furnish and install as shown on plans, or where necessary to absorb max. 1 $\frac{3}{4}$ " expansion and max. $\frac{1}{4}$ " contraction between two anchor points in iron and steel pipe lines up to and including 2 $\frac{1}{2}$ ", Flexonics Model II Expansion Compensators having two-ply stainless steel bellows and carbon steel shrouds and end fittings, as manufactured by Flexonics Division of Calumet & Heela, Inc., Bartlett, Illinois. Service pressure shall be external to the bellows. Compensators shall have properly located positioning clip to insure installation at correct

end-to-end dimension to allow full rated traverse. Compensator shall be for Max. 150 psig. working pressure. Test pressure shall not exceed 200 psig.

- H. Manufacturer shall note on all submittal forms the resultant anchor loads due to pressure thrust and compressive forces at design conditions. Expansion joints shall be as manufactured by ADSCO, Zallea, Flexonic, or approved equal.

2.06 DRAFT GAUGES

- A. Furnish and install at each filter, draft gauges for measuring the resistance of the air through the filters.
- B. Each draft gauge shall be an inclined tube differential type for indoor units, equipped with a shut-off cock opening to atmosphere for checking zero setting, and with a shut-off cock in the lines to points where the draft is measured. The scale shall have a white background with heavy black divisions and figures; shall not be less than 8" long, and shall be graduated to read by hundredths of an inch up to resistances to be encountered. Each gauge shall be provided with a bubble level gauge and with screw adjustment for zero settings.
- C. Draft gauge for rooftop units and outdoor units shall be 2000 Series Magnehelic as made by Dwyer or approved equal. Gauges shall be provided complete with two static pressure tips case, fittings and means of mounting. Scale shall be as required. Set gauges to be easily readable from floor level. Gauges shall be of Dwyer make or approved equal.

2.07 AUTOMATIC FLOW-CONTROL VALVES

- A. The Contractor shall provide and install for each unit ventilator, one "Autoflow" model FVT or Griswold compact pressure compensating flow control valves in one piece configuration consisting of ground joint union and flow control valve and Petes plugs. Petes plugs shall be provided on both sides of condensor flow heat pumps only.
- B. All valves are to be factory set to control the flow rate within 4% of the selected rating over an operating pressure differential of at least ten times the minimum required for full flow conditions.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

- C. The valves shall be all metal with threaded or sweat connections. Metallurgy shall be all brass and stainless steel.
- D. Performance certification of valves by an independent laboratory shall be furnished.
- E. All valves shall have unions to allow field-exchange of internal components without removing the valve body from the pipeline.
- F. All valves shall be permanently marked to show direction of flow and flow rates.

2.08 AIR VENTS, DRAINS

- A. In installing water piping systems and all equipment, carefully plan the actual installation in such a manner that high pints and air pockets are kept to a minimum and are properly vented where they are unavoidable. All air elimination devices called for on the Drawings and in these Specifications shall be provided and properly installed. In addition, furnish and install all other air elimination devices which may be required due to job conditions. Assume responsibility for a proper, continuous and automatic air elimination to assure even and balanced distribution of water to all equipment.
 - 1. Provide air vents at all high points in closed chilled water, hot water system piping, in piping to each coil, equipment.
- B. Furnish and install an Armstrong No. 1 AV or Sarco 13W automatic air vent with test petcock at each high point in the water piping mains and where indicated on the Drawings. Furnish and install a 125 psig rated valve on the system side of each automatic air vent. Vents on hot water, dual temperature water and chilled water lines shall have Hoke Fig. No. PY-271 valves or approved equal. Vents on all other waterlines shall have Hoke Fig. No. RB-271 valves or approved equal.
- C. Furnish and install manual air vents Hoffman No. 500 or approved equal, for all upfed radiation. Furnish and install a 125 psig rated ball valve on the system side of each manual air vent. Provide access to all air vents.
- D. Provide valved drains with caps and hose-bibb adapters at all low points in closed hot water and chilled water system piping and at all equipment, coils.

2.09 AIR SEPARATORS

- A. Furnish and install full line size, air separators for water system where indicated on the Drawings. The separators shall be Rolairtrol, as manufactured by Bell and Gossett or equal as approved by the Architect.
- B. The units shall be of ASME construction and shall be stamped 125 psig W.P.
- C. The units shall be furnished without integral strainers.
- D. The units shall be installed in strict accordance with the manufacturer's recommendations.
- E. The units shall be supported on 2" pipe legs and shall be provided with a ¾" drain gate or ball valve with hose end and cap.

2.10 COMBINATION BALANCING AND SHUT-OFF VALVES (CIRCUIT SETTERS)

- A. Valves shall be circuit setter/circuit setter-plus as manufactured by Bell & Gossett.
- B. Valves shall be bronze body (up to 3") with brass ball or cast iron body (4" and above) with bronze disc with EPDM insert. Valves shall be precisely calibrated for balancing and shut-off service, complete with retainable memory stop. Readout port with valves shall be provided as integral part of valve assembly.
- C. Valves shall be rated for minimum of 200 PSIG pressure, 250°F temperature and shall be used for water service.
- D. Provide readout kits, suitable for flow, temperature and pressure of system it is installed and turn over to owner for owner's use.

2.11 TRIPLE DUTY VALVES

- A. Valves shall be heavy duty type, minimum 175 PSI working pressure and rated for 250°F temperature, as manufactured by Bell & Gossett.
- B. Seats shall be bronze with replaceable bronze disc, EPDM seat.
- C. Valves shall perform functions of non-slam check valve, balancing valve and shut-off valve.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

- D. Valves shall be calibrated, with retainable memory stop for balancing, equipped with brass read-out valve. Read-out kits shall be provided.

2.12 SUCTION DIFFUSER

- A. Furnish and install suction diffuser at inlets of pumps. Suction diffusers shall be angle pattern with flow straightening fittings and combination diffuser-strainer cylinder and adjustable support foot.
- B. Suction diffusers cylinders shall have free areas equal to five times cross-section area of pump suction opening.
- C. Suction diffusers shall be cast iron body, minimum 175 PSI rated, stainless steel strainer mesh.

2.13 V-BELT DRIVES

- A. All V-belt drives furnished under this Section shall be Gates Rubber Co., Woods, or approved equal. Drives shall be designed with an overload factor of twice the fan brake horsepower but in no case less than 125% of motor horsepower rating. Machined cast iron pulleys shall be used. Manufacturer's shop drawings shall state actual transmission capacity of each drive. Provide companion sheaves for adjustable sheave drives. Companion sheaves shall be selected such that the individual belts shall not exceed a two degree misalignment of the groove centerlines between the driving and driven sheaves. Sheaves shall be complete with flanges and locking devices. All sheaves shall be selected with a 1.5 minimum service factor.
- B. Provide matching belts.
- C. All motors up to 3 HP shall have variable speed drives.
- D. All motors 10 HP to 25 HP for speeds below 1000 RPM shall have variable speed drives.
- E. Provide fixed drives above 1000 RPM for 10 to 25 HP and for all units above 25 HP.

2.14 STRAINERS FOR WATER SYSTEM

- A. Furnish and install a full size Y-pattern strainer on the inlet of each control valve and each water pump, where indicated on the Drawings.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

- B. The strainers shall be as manufactured by Spence, Sarco, Barnes and Jones, Elliott, Crane or Mueller.
- C. All strainers, except where otherwise noted, shall have bronze body up to 2½", semi-steel above 2½", rated at 125 psig for all systems with 50 psig max. pressure and 250 psig for all others. Strainers 2 inch diameter and smaller shall have screwed ends. Strainers 2½ inch diameter and larger shall have flanged ends.
- D. All strainers shall have removable cylindrical or conical screens of brass construction. They shall be designed to allow blowing out of accumulated sediment and to facilitate removal and replacement of the screen without disconnecting the main piping.
- E. Screens for water 1/16" for 3" inclusive, 1/8" for 4" and above.
- F. An approved blow-out connection with gate valve shall be made to each strainer. The valves shall be located not higher than 8 feet above the floor. All drain connections shall be piped to floor drains.

2.15 REDUCING AND SAFETY VALVES FOR WATER SYSTEM

- A. Furnish and install pressure reducing and safety valves for makeup water systems and where indicated on the drawings.
- B. The reducing valve shall be Model 7 pressure reducing valve with field adjustable setting as manufactured by Bell & Gossett or equal as approved by the Architect.
- C. The safety valves shall be of size and capacity as indicated on the Drawings. The valves shall be made by Bell and Gossett or approved equal and shall have 150 pound raised face flange on the inlet and discharge for all sizes 2½" and above 2" and below shall be screwed.
- D. The safety valves shall be steel valves with stainless steel trim. The bonnet shall be enclosed and equipped with a packed lifting lever. The spring shall be carbon steel rated for 450° F.
- E. The vertical discharge line from the safety valves shall be installed as close to the safety valves as possible and piped to drain.

2.16 PRESSURE AND TEMPERATURE TEST STATIONS

- A. Furnish and install in each supply and return runout to each coil and where indicated on the Drawings, a ¼" MPT fitting to receive either a temperature or pressure probe ⅜" OD. Fitting shall be solid brass with valve core of Nordel (Max. 275°F.), fitted with a color coded and marked cap with gasket, and shall be rated at 1000 psig.
- B. In addition, the installing contractor shall supply the Owner with six pressure gauge adapters with ⅜" OD probe and 6 five inch stem pocket testing thermometers; 25-125°F for chilled water and six 50-500°F for hot water.
- C. Provide two pressure and temperature test kit consisting of one 0-150 PSI, water pressure gauge and one 0-30 psi water pressure gauge each with No. 500 gauge adapter attached, a 25-125°F. pocket testing thermometer, a 0 to 220°F. pocket test thermometer, a No. 500 gauge adapter, and a protective carrying case. Provide one additional 0-60 psi pressure gauge and one additional 0 to 30 psi pressure gauge.
- D. Test kit shall be used by the Balancing Contractor to balance the systems and then it shall be turned over to the Owner.
- E. Test stations and test kit shall be manufactured by Paterson Engineering Company, Inc. or approved equal.

2.17 FLOW MEASURING DEVICES

- A. Provide complete Venturi flow measuring system as manufactured by Barco Division, Aeroquip Corp., or approved equal.
- B. This shall be a coordinated system, including Venturi flow stations and portable master meter, supplied by one manufacturer. Each Venturi station shall be complete with pressure tap nipples, quick disconnect valves and safety shut-off valves, indented metal identification tag on chain, giving pipe size, Venturi series, station identification, and meter reading at specified flow rate. Venturi stations shall be one piece brass screwed ½" through 2". Sizes 2½" through 8" shall consist of plated cast iron Venturi insert held between specially machined self-centering 150# steel weld neck units. Sizes 10" and larger shall be fabricated steel plated, with welding ends. Venturi size and series shall be selected so that

design flow rate shall be between 10" and 40 inches of water pressure differential on a 0-50" meter with permanent pressure loss of not more than 10% indicated flow rate differential pressure. Minimum flow rates of 2½ FPS are permissible. Venturi stations shall be compatible with temperatures and pressure of the system.

- C. Master meter shall consist of 6" round dial, dry type meter supplied with scale reading zero to 50 inches of water differential pressure and shall be mounted in a portable water and rot-proof fiberglass carrying case complete with 10 ft. lengths of ¼" high pressure high temperature connecting hose, quick disconnect socket valves, venting valves, installation and operating instructions and capacity curves. Master meter shall become property of the Owner.
- D. Upstream pipe diameters of straight pipe shall be five (5) minimum and downstream pipe diameters shall be two (2) minimum as recommended by manufacturer.
- E. For location of Venturi flow stations refer to the Drawings.

2.18 REFRIGERATION ACCESSORIES

- A. Refrigerant Filter-Dryer: Provide, refrigerant filter-dryers. Refrigerant filter-dryers shall be replaceable core "Catch All" type, as manufactured by Sporlan Valve Company.
- B. Moisture and Liquid Indicator: Provide combination liquid and moisture indicators type "See All", as manufactured by Sporland Valve Company.
- C. Refrigerant Strainers: Provide Refrigerant Strainers. Strainers shall be as manufactured by Henry Valve Company, Type 895.
- D. Thermal Expansion Valves: Provide Thermal Expansion Valves. Thermal expansion valves shall be Type "MVE-G", as manufactured by Sporlan Valve Company, or approved equal, with external equalizer and remote bulb with refrigerant 22 charge.
 - a. The Contractor shall submit manufacturer rating tables and/or selection charts for approval.
- E. Liquid Line Solenoid Valves: Provide Liquid Line Solenoid Valves. Valves to have stainless steel diaphragm-welded and lead-proof construction, replaceable

thermostatic element and tight seating. Valve shall be as manufactured by Sporlan Valve Company or approved equal.

- F. Flexible Pipe Connections: Provide flexible pipe connections. Flexible pipe connectors to be all bronze construction, metal braided type suitable for Refrigerant 22.

2.19 EVACUATION OF REFRIGERATION PIPING

- A. When testing of refrigerant piping is completed as specified hereinafter, blow off the pressure in the system to atmosphere and provide final evacuation. Provide a vacuum pump capable of pulling vacuum of at least 1 mm Hg. absolute. Use a Zimmerli gauge to read vacuum. Remove all moisture from the system. Operate the vacuum pump until a vacuum of 2.5 mm Hg. is achieved.
- B. When the system is evacuated, break the vacuum with oil pumped, dry nitrogen, open the compressor suction and discharge service valves and re-evacuate the system to 2.5 mm Hg. absolute. Stop vacuum pump and allow system to stand under a vacuum a minimum of 12 hours. If no noticeable rise in pressure has taken place after 12 hours, the system shall be charged.

PART 3 - EXECUTION

3.01 INSPECTION

- A. Contractor shall examine location where these specialties are to be installed and determine space conditions and notify Architect in writing of conditions detrimental to proper and timely completion of the work.
- B. Do not proceed with the work until unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Install HVAC Specialties where shown, in accordance with manufacturer's written instructions and with recognized industry practices, to ensure that HVAC Specialties comply with requirements and serve intended purposes.
- B. Coordinate with other work as necessary to interface installation of HVAC Specialties with other components of systems.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

3.03 FIELD QUALITY CONTROL

- A. Upon completion of installation of HVAC Specialties, test HVAC Specialties to demonstrate compliance with requirements. When possible, field correct malfunctioning units, then retest to demonstrate compliance. Replace units which cannot be satisfactorily corrected.

END OF SECTION 15801

SECTION 15810
VIBRATION ISOLATION

PART 1 - GENERAL**1.01 GENERAL REQUIREMENTS**

- A. This Section is coordinate with and complementary to the General Conditions and Supplementary General Conditions of the Work, wherever applicable to Mechanical Work.
- B. Section 15000 - Special Requirements for Mechanical and Electrical Work shall apply.
- C. Section 15050 - Seismic Restraint for Isolated and Unisolated Equipment, Piping Ductwork, Tanks and Stacks shall apply.

1.02 DESCRIPTION OF WORK

- A. The Work includes providing all labor, materials, equipment, accessories, services and tests to complete and make ready for operation by the Owner, all vibration isolations as shown on the Drawings and hereinafter specified.

1.03 QUALITY ASSURANCE

- A. Firms regularly engaged in manufacture of this equipment with characteristics and capacities required, whose products have been in satisfactory use in similar service for not less than ten (10) years.
- B. Provide products produced by the manufacturers which are listed in Section "Approved Manufacturer's List".
- C. Provide equipment whose performance under specified conditions is certified by the manufacturer.

1.04 SUBMITTALS

- A. Refer to Section 15000 - "Special Requirements for Mechanical and Electrical Work" and submit shop drawings.

1.05 COORDINATION

- A. Refer to Section 15000 - "Special Requirements for Mechanical and Electrical Work".

1.06 GUARANTEE

- A. Refer to Section 15000 - "Special Requirements for Mechanical and Electrical Work".

1.07 TECHNICAL REQUIREMENTS

- A. All mechanical equipment shall be mounted in accordance with the specifications below and for the specific requirements shown in the equipment schedule.
- B. The isolation manufacturer shall supply all unit isolators, complete rails, fan and motor bases and structural steel forms for concrete inertia blocks, where called for and shall be responsible for the selection of all vibration eliminators and shall guarantee to meet the requirements of these Specifications.
- C. Wherever rotational speed is mentioned as the disturbing frequency, the lowest such speed in the system shall be used. All isolation devices shall be selected for uniform static deflections according to distribution of weight. Lateral motion of all isolators shall be $\frac{1}{4}$ " maximum during start-up and shut-down.
- D. "Outdoor" isolators, steel parts other than galvanized springs and cadmium plated springs shall be suitably coated to resist corrosion. Isolators shall be equipped with limit stops to resist wind velocity.
- E. All fan units and air handling units (except fans with wheels under 27") shall be isolated as follows:
1. Up to 450 RPM: 75% efficiency ($3\frac{1}{2}$ " maximum deflection)
 2. 450 RPM to 850 RPM: 90%
 3. 850 RPM and over: 95%
- F. Submittals shall show disturbing frequency, required efficiency, designed deflection and outside diameter of springs, when pertinent.
- G. All horizontal pipe runs within the mechanical equipment room area, but not less than 50 feet from connected equipment shall be isolated from building structure by means of units designed for insertion in rods.

PART 2 - PRODUCTS

2.01 VIBRATION ISOLATION

A. Mountings:

1. Type A:

- a. Double deflection neoprene mountings shall have a minimum static deflection of 0.35. All metal surfaces shall be neoprene covered to avoid corrosion and have friction pads both top and bottom, so they need not be bolted to the floor.
- b. Bolt holes shall be provided for those areas where bolting is required. On equipment such as small vent sets and close coupled pumps, steel rails shall be used above the mounts to compensate for the overhang.
- c. Manufacturer/Type:

Mason Industries, Inc.: ND or Rails RND
Vibration Eliminator Co.:T44 or D-Rails

2. Type B:

- a. Spring isolators shall be free-standing and laterally stable without any housing and complete with ¼" neoprene acoustical friction pads between the base plate and the support. All mountings shall have leveling bolts that must be rigidly bolted to the equipment.
- b. Spring diameters shall be no less than 0.8 of the compressed height of the spring at rated load. Springs shall have a minimum additional travel to solid equal to 50% of the rated deflection.
- c. Submittals shall include spring diameters, deflections, compressed spring height and solid spring height.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

d. Manufacturer/Type:

Mason Industries, Inc.: SLFH, on rails type
ICS

Vibration Eliminator Co. OSK

3. Type C:

a. Equipment with operating weight different from the installed weight such as chillers, boilers, etc., and equipment exposed to the wind such as cooling towers, shall be mounted on spring mountings as described under Type "B" of this paragraph, but a housing shall be used that includes vertical resilient limit stops to prevent spring extension when weight is removed. The housings shall serve as blocking during erection and cooling tower mounts shall be located between the supporting steel and roof or the grillage and dunnage. The installed and operating heights shall be the same. A minimum clearance of $\frac{1}{2}$ " shall be maintained around restraining bolts and between the housing and the spring so as not to interfere with the spring action. Limit stops shall be out of contact during normal operation. Mountings used out of doors shall be hot dipped galvanized.

b. Manufacturer/Type:

Mason Industries, Inc. SLR
Vibration Eliminator Co. KW

4. Type D:

a. Vibration hangers shall contain a steel spring and a double deflection neoprene element in series. Neoprene elements shall have a minimum deflection 0.35". The neoprene element shall be molded with a rod isolation bushing that passes through the hanger box. Springs shall have a minimum additional travel to solid equal to 50% of the rated deflection and be seated in a neoprene cup with an integral molded bushing that passes through the lower hanger box.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

b. Manufacturer/Type:

Mason Industries, Inc. DNHS - 30N
Vibration Eliminator Co. SNRC

5. Type F:

a. Vibration hangers shall contain a double deflection neoprene element manufactured as an integral part of the element design to prevent short circuiting of the rod as it penetrates the housing body. Minimum static deflection shall be .35".

b. Manufacturer/Type:

Mason Industries, Inc. W30
Vibration Eliminator Co. SNC

6. Type DE:

a. Elastomer hanger rod isolators shall incorporate the following:

- 1) Molded unit type neoprene elements with projecting bushing, lining rod clearance hole.
- 2) Neoprene element to be minimum 1 $\frac{1}{4}$ " thick.
- 3) Steel retainer box encasing neoprene mounting.
- 4) Clearance between mounting hanger rod and neoprene bushing shall be minimum of $\frac{1}{8}$ ".
- 5) Minimum static deflection of 0.35".

b. Mason Type HD or approved equal.

B. Bases:

1. Type G:

a. Vibration isolator manufacturer shall furnish integral structural steel bases for both driver and driven machines.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

- b. Bases shall be rectangular in shape for all equipment other than centrifugal refrigeration machines and pump bases which may be "tee" or "L" shaped. Pump bases for split case pumps shall include supports for suction and discharge base ells. All perimeter members shall be WF beams with a minimum depth equal to 1/10th of the longest dimension of the base. Beam depth need not exceed 14" provided that the deflection and misalignment is kept within acceptable limits as determined by the manufacturer. Height saving brackets shall be employed in all mounting locations to provide a base clearance of one inch.
 - c. Bases shall be WF bases as manufactured by Mason Industries, Inc. or approved equal.
2. Type H:
- a. Vibration isolator manufacturer shall provide steel members welded to height-saving brackets to cradle machines having legs or bases that do not require a complete supplementary base.
 - b. Members shall be sufficiently rigid to prevent strains in the equipment.
 - c. Inverted saddles shall be ICS as manufactured by Mason Industries, Inc. or approved equal.
3. Type J:
- a. Vibration isolator manufacturer shall furnish structural channel concrete forms for floating foundations.
 - b. Bases for split case pumps shall be large enough to provide support for suction and discharge base ells. The base depth shall be a minimum of $\frac{1}{10}$ of the longest span, but not less than 6" or greater than 14". Forms shall include minimum concrete reinforcement consisting of $\frac{1}{2}$ " on 6" centers running both ways and a layer 1 $\frac{1}{2}$ " above the bottom and a top layer of reinforcing steel as above for all bases exceeding 120" in one direction. Isolators shall be set into pocket housings which are an integral part of the base construction and set at the proper height to maintain a 1"

clearance below the base. Bases shall be furnished with templates and anchor bolt sleeves as part of this system.

c. Manufacturer/Type:

Mason Industries, Inc. KIPWF
Vibration Eliminator Co. SN Frames

4. Type Y:

a. Rooftop packaged air handling units shall be installed on a spring supported isolation curb which shall combine the manufacturer's curb and the isolation base into one assembly. The system shall be designed with 1", 2" or 3" static deflection steel springs which are both adjustable, removable and interchangeable after the rooftop unit has been installed. The system shall maintain the same operating and installed height both with and without the equipment load and shall be fully restrained during wind load conditions allowing no more than $\frac{1}{4}$ " motion in any direction. The isolation curb shall be designed to accept and utilize outer placement of standard 2" roof insulation to act as a sound attenuation system for the inside of the curb. The entire unit shall become an integral part of the membrane waterproofing. The entire assembly shall be dry galvanized or PVC coated. The isolation curb shall be model P-6000 as manufactured by Mason Berger East. Options for the system include an elevation kit model EK-1 and a sound barrier pack framing kit complete with offset plenum for lightweight roof deck areas model SBC-3. Note: Where this option is utilized, General Contractor is to furnish and install sound barrier material.

b. Manufacturer/Type:

Mason Industries, Inc.: Model P-6000
Vibration Eliminator Co.:

5. Type R:

a. Rooftop fans, condensing units, exterior ducted air handling units, etc. shall be installed on continuous equipment support piers which

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

shall combine a regular equipment support and an isolation system into one assembly. The system shall be designed with 1", 2" or 3" static deflection steel springs which are both adjustable, removable and interchangeable after equipment has been installed. The system shall maintain the same operating and installed height both with and without the equipment load and shall be fully restrained during wind load conditions allowing no more than ¼" motion in any direction. The isolation pier shall be designed to accept 2" rigid insulation and to be an integral part of the membrane waterproofing. The entire assembly shall be dry galvanized or plastic coated. The isolation rail pier system shall be model R-7000 as manufactured by Mason Berger East, Inc.

b. Manufacturer/Type:

Mason Industries, Inc. R-7000
Vibration Eliminator Co.

c. ISOLATION SCHEDULE:

Vibration Eliminator Specification
Type for Equipment Location:

Type of Equipment	With No Occupied or Unoccupied Spaces Below	Above Occupied or Unoccupied Spaces
Packaged Air Cooled Chillers	2" thick neoprene pad Outdoor type, weatherproof	
Self-Contained Air Conditioning Units	Type B (1.0" deflection)	Type B (1.0" deflection)
Pumps: Through 15 HP	Type B (Rail Type) (1.0" deflection), Type G base	Type B (Rail Type) (1.0" deflection); Type G base
Factory Assembled, Air Handling Equipment:		
Suspended Units	Type D (1.5" deflection)	Type D (2.0" deflection above 600 rpm)

Utility Fans:	Type C	Type C (1.0" deflection)
Piping in Boiler or Mechanical Equipment Rms.	See Spec. Text	See Spec. Text

- D. For internally spring isolated air handling units, provide 1 1/2" neoprene pads with steel plate in middle, minimum of 4" x 4" size, every 2 feet on center all around perimeter of units, between structural steel and bottom of air handling units.

2.02 FLEXIBLE CONNECTIONS

- A. Provide a flexible pipe connector at pumps, chillers and other vibrating equipment.
- B. Flexible connector shall be:
 - 1. Flexible stainless steel braided hoses, minimum 14 inch long.
 - 2. Straight connectors to have two spheres reinforced with a mold-in external ductile iron ring between spheres.
 - 3. Elbow shall be long radius reducing type.
 - 4. Rated 250 psi at 170°F. Dropping in straight line to 170 psi at 250°F. for sizes 1½" to 12". Elbows shall be rated no less than 90% of straight connections.
 - 5. Sizes 10" and 12" to employ control cables with neoprene end fittings isolated from anchor plates by means of ½" bridge bearing neoprene bushings.
 - 6. Minimum safety factor, 4 to 1 at maximum pressure ratings.
 - 7. Submittals to include test reports.
 - 8. Mason Type MFTNC Superflex, or approved equal.

PART 3 - EXECUTION**3.01 INSPECTION AND COORDINATION**

- A. Contractor shall examine location where this equipment is to be installed and determine space conditions and notify Architect in writing of conditions detrimental to proper and timely completion of the Work.
- B. Do not proceed with the work until unsatisfactory conditions have been corrected.
- C. Coordinate work with other trades to avoid rigid contact with the building. Inform other trades following work, such as plastering or electrical, to avoid any contact which would reduce the vibration isolation.

- D. Bring to the Architect's attention, prior to installation, any conflicts with other trades which may result in unavoidable rigid contact with equipment or piping as described herein, due to inadequate space or other unforeseen conditions. Corrective work necessitated by conflicts after installation shall be at the responsible Contractor's expense.
- E. Bring to the Architect's attention, any discrepancies between the Specifications and field conditions or changes required due to specific equipment selection, prior to installation. Corrective work necessitated by discrepancies after installation shall be at the Contractor's expense.

3.02 INSTALLATION

- A. Mount floor-mounted equipment on minimum 4" thick concrete housekeeping pads over complete floor area of equipment. Mount vibration isolating devices and related inertia blocks on concrete pad.
- B. Each fan and motor assembly shall be supported on a single structural steel frame. Flexible duct connections shall be provided at inlet and discharge ducts.
- C. The machine to be isolated shall be supported by a structural steel frame or concrete inertial base.
- D. Brackets shall be provided to accommodate the isolator. The vertical position and size of the bracket shall be specified by the isolator manufacturer.
- E. The minimum operating clearance between the equipment frame or rigid steel base frame and the housekeeping pad or floor shall be 1". Minimum operating clearance between concrete inertia base and housekeeping pad or floor shall be 2".
- F. The equipment structural steel or concrete inertia base shall be placed in position and supported temporarily by blocks or shims, as appropriate, prior to the installation of the machine or isolators.
- G. The isolators shall be installed without raising the machine and frame assembly.
- H. After the entire installation is complete and under full

operational load, the isolators shall be adjusted so that the load is transferred from the blocks to the isolators. When all isolators are properly adjusted, the blocks or shims shall be barely free and shall be removed.

- I. Isolation mounting deflection shall be (minimum) as specified or scheduled.
- J. Install equipment with flexibility in wiring connection.
- K. Verify that all installed isolator and mounting systems permit equipment motion in all directions. Adjust or provide additional resilient restraints to flexibly limit start-up equipment lateral motion to $\frac{1}{4}$ ".
- L. Prior to start-up, clean out all foreign matter between bases and equipment. Verify that there are no isolation short circuits in the base isolators or seismic restraints.
- M. All piping and ductwork to be isolated shall freely pass through walls and floors without rigid connections. Penetration points shall be sleeved or otherwise formed to allow passage of piping or ductwork and maintain $\frac{1}{4}$ " to $1\frac{1}{4}$ " clearance around the outside surfaces. This clearance space shall be tightly packed with firestopping or fiberglass and caulked airtight after installation of piping or duct ductwork.
- N. No rigid connections between equipment and building structure shall be made that degrades the noise and vibration isolation system herein specified.
- O. The contractor shall not install any equipment, piping or conduit which makes rigid contact with the "building" unless permitted in this Specification. Building includes, but is not limited to, slabs, beams, columns, studs and walls.
- P. Obtain inspection and approval of any installation to be covered or enclosed, prior to such closure.
- Q. Diagonal thrust restraint shall be as described for Type D hanger with the same deflection as specified for the spring mountings. The spring element shall be designed so it can be pre-set for thrust and adjusted to allow for maximum of $\frac{1}{4}$ " movement at start and stop. Diagonal restraints shall be attached at the centerline of thrust. Restraint shall be Mason Type WB or approved equal.

3.03 PIPING ISOLATOR INSTALLATION

- A. The isolators shall be installed with the isolator hanger box attached to, or hung as close as possible to, the structure.
- B. The isolators shall be suspended from substantial structural members, not from slab diaphragm unless specifically permitted.
- C. Hanger rods shall be aligned to clear the hanger box.
- D. Horizontal suspended pipe 2" and smaller piping shall be suspended by Type DE isolator with a minimum 3/8" deflection. water pipe larger than 2" shall be supported by Type F isolator with minimum 1" or same static deflection as isolated equipment to which pipe connects, whichever is greater.
- E. Horizontal pipe floor supported at slab shall be supported via Type B, with a minimum static deflection of 1" or same deflection as isolated equipment to which pipe connects, whichever is greater.
- F. Vertical riser pipe supports shall utilize neoprene elements.
- G. Vertical riser guides, if required, shall avoid direct contact of piping with building.
- H. Pipe sway braces, where required shall utilize two (2) neoprene elements.

3.04 FIELD QUALITY CONTROL

- A. Obtain inspection and approval of any installation to be covered or enclosed, prior to such closure.
- B. Upon completion of installation of all vibration isolation devices herein specified, the local representative of the isolation materials manufacturer shall inspect the completed system and report, in writing, "any installation error, improperly selected isolation devices, or other faults in the system that could affect the performance of the system. Contractor shall submit a report to the Architect, including the manufacturer's representatives final report, indicating all isolation reported as im-

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

properly installed or requiring correction, and include a report by the Contractor on steps taken to properly complete the isolation work.

END OF SECTION 15810

SECTION 15815
WATER TREATMENT AND CLEANING

PART 1 - GENERAL**1.01 GENERAL REQUIREMENTS**

- A. This Section is coordinated with and complementary to the General Conditions and Supplementary General Conditions of the Work, wherever applicable to Mechanical Work.
- B. Section 15000 - Special Requirements for Mechanical and Electrical Work shall apply.

1.02 DESCRIPTION OF WORK

- A. The work includes the providing of all labor, materials, equipment, accessories, services and tests necessary to complete and make ready for operation by the Owner, all water treatment and cleaning as shown on the drawings and hereinafter specified.
- B. The Contractor shall engage the services of a water treatment contractor who shall provide a complete water treatment service. The service shall include furnishing and application of all chemicals, at least one visit a month to collect samples for chemical analysis at the water treatment company's laboratory, and all necessary inspection, adjustment, and maintenance of the chemical treating devices. Complete chemical control of the treatment shall be included. Reports shall be furnished to Architect after each visit.
- C. Water treatment shall be applied concurrently with the operation of each circulating water system for a period of one year. An initial dose of treatment chemical shall also be applied immediately after each system is initially filled with water if operation is to be delayed after filling.
- D. In addition to the chemicals indicated, slimicides and algaecides shall be provided as necessary. Chromate and phosphate will not be acceptable. All chemicals shall be approved by local and state agencies having jurisdiction.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

- E. The firm's water treatment laboratory shall be equipped to analyze water in accordance with the statement methods of the American Public Health Association.
- F. Water treatment contractor shall provide chemical feeding devices during the period of this contract. At the termination of the contract, the treatment equipment shall belong to the Owner.
- G. Provide a water treatment program for the following systems:
 - 1. Hot water closed heating systems.
 - 2. Chilled water closed systems.

1.03 QUALITY ASSURANCE

- A. Firms regularly engaged in manufacture of this material with characteristics and capacities required, whose products have been in satisfactory use in similar service for not less than 10 years.
- B. Provide product produced by the manufacturers, which are listed in Section "Approved Manufacturer's List".
- C. Provide equipment whose performance, under specified conditions, is certified by the manufacturer.

1.04 SUBMITTALS

- A. Refer to Section 15000 - Special Requirements for Mechanical and Electrical Work and submit shop drawings.

1.05 COORDINATION

- A. Refer to Section 15000 - Special Requirements for Mechanical and Electrical Work.

1.06 GUARANTEE

- A. Refer to Section 15000 - Special Requirements for Mechanical and Electrical Work.

PART 2 - PRODUCTS**2.01 CHEMICAL TREATMENT CLOSED HOT WATER AND CHILLED WATER SYSTEM**

- A. Provide a Nitrite based material to maintain the following conditions in each closed water system.

	<u>Hot Water</u> (180°F. max.)	<u>Chilled Water</u>	<u>Hot Water</u> (250°F. max)
pH7.5	9.5 - 20.5	7.5 - 9.0	7.5 - 9.0
Nitrite	800 - 1200ppm		
Molybdate		100 - 200ppm	300 - 400ppm

2.02 CHEMICAL TREATMENT - CLEANING - DEGREASING

- A. Provide a supervised program of cleaning and degreasing chemicals used in the specified systems prior to start-up. Sufficient chemicals shall be added to each system to establish a concentration of 120 ppm degreasing chemicals containing 20% dioctylsulfocuccinate and a concentration of 240 ppm of cleaning chemical containing 15% polyacrilate and 25% diphosphonate in the water. Systems shall then be circulated for a minimum of 8 hours, dumped, flushed, and refilled, with the correct corrosion inhibitors added for operation. Strainers are to be hand cleaned after flushing.

2.03 CHEMICAL FEED EQUIPMENT - CHILLED & HOT WATER SYSTEM

- A. Provide a 5 gallon bypass feeder with 3" opening on top for intermittent feed of corrosion inhibitor across a suitable pressure drop in each closed system as manufactured by NFC - or equal.

2.04 CHEMICAL FEED EQUIPMENT FOR HOT WATER AND CHILLED WATER (40% GLYCOL) SYSTEM

- A. Glycol Water Treatment Units (one each for hot water and chilled water systems)

Provide 40% Propylene Glycol water treatment unit of capacity and constructed as specified and shown on the Drawings for introducing chemicals into the hot water and chilled water systems.

1. Tank: 50 gallon polyethylene tank with a steel hinge cover. Tank is fully supported and

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

restrained by a carbon steel bottom mounted stand. Stand and cover shall be painted with water based enamel.

2. Gear Pumps: Duplex gear pumps (one as a standby) shall be provided factory mounted piping and valves.

Pump suction shall include PVC drain valve, Y-strainer and flexible tubing. Pump discharge tubing shall include PVC ball valve, check valve, piping and 1/4" NPT back up pressure gauges.

Provide combination starter with disconnect switch, alternate switch, Hand-off-Auto.

Pump is rated at 3.5 GPM 60 psi discharge pressure, 1/3 HP motor, 120 V/ 1-phase/60.

3. Control Panel: Built-in combination starter with disconnect switch, 115 V/1-phase control power, indication of pump running light and low level light.
4. Low Level Controller: Complete solid state, all plastic low level controller is mounted on tank top for low level glycol water indication in make-up tank. The low level controller shall shut down pump control and sound alarm.
5. Pressure Switch: Built-in 1/4 NPT pressure switches at the discharge side of pump (low pressure/high pressure).
6. Provide strobe light on low level control.
7. Model "GL50-D" glycol feed package manufactured by J.L. Wingert Co. or approved equal.

B. Glycol

40% Propylene Glycol.

C. pH Comparator

Suitable range to conform to the chemical treatment furnished.

D. Metal test cabinet complete with sufficient glassware

and reagents to make each of the following determinations once a day, for the period of the contract and the guarantee:

1. pH by color comparator.
2. Chemicals used by color comparator and titration.
3. Total dissolved solids by concentration hydrometer.

2.05 WATER TREATMENT CONTROL TESTING EQUIPMENT

- A. Provide a test set complete with apparatus and chemical reagents for the determination of Molybdate, ph (7.5 - 9.2), Nitrite and any additional test as required by water treatment company.

2.06 CLEANING OF PIPING SYSTEMS

- A. Preliminary Cleaning:

1. Clean new piping internally by flushing prior to the application of pressure tests and before the chemical clean out procedures specified herein. Provide temporary strainers at the inlet to the chilled water and hot water pumps before the start of cleaning procedures.
2. Block off and isolate circulating pumps, cooling coils and heating coils during the preliminary flushing and draining process.
3. Thoroughly flush piping clear of foreign matter with City water under pressure, and then drain before proceeding with pressure testing. Blow down accumulations of grit, dirt and sediment at each strainer and each low point in the piping systems.

- B. Chemical Clean out:

1. After completion of pressure testing, chemically clean internally each recirculating water system (including chilled water, hot water, and condenser water).
2. Provide temporary connections with valves to fill the piping and remaining equipment with water for

the purpose of draining piping and equipment after completion of the chemical clean out procedure. Provide temporary blind flanges and/or caps to isolate the piping and equipment noted herein.

3. Provide temporary piping connections, valves, strainers, bypasses, and blank connections where required to clean out systems. Line each strainer basket with a fine mesh nylon screen and replace the screens at the end of each day's circulation until each system is thoroughly cleaned.
- C. Hot Water Heating System: Fill each system with City water; start circulation pump and vent high points manually until all air is released from the system.
1. All new and portions of the remaining recirculating water systems, both open and closed, to be filled and flushed with a solution of a non-foaming chemical detergent, to remove all foreign matter. Circulate the solution for a minimum of 8 hours and drain as rapidly as possible to remove suspended matter. Flush the system with fresh water, drain a second time and refill. After final filling, the pH of the water must not exceed the pH of the fresh raw water by more than 0.5 pH.
 2. Introduce the chemical solution into the system gradually by injecting into the suction side of the circulating pump, or by means of a bypass chemical feeder located on the discharge side of the permanent hot water secondary system circulating pump. Slowly raise and then maintain the temperature of the circulating water at 150°F by circulating through the hot water converter.
 3. While the water is being heated and circulated, open each drain connection for a short flow. Repeat at hourly intervals. Replace any water drained during blowdown with chemical solution as required until air is eliminated from the system. The chemical clean out procedure to be continuous in this manner for two (2) 8-hour periods.
 4. At the conclusion of the chemical clean out period, completely drain the entire system and allow to cool. Flush out with fresh City water prior to final activation of the system. Remove

temporary equipment and strainers, reconnect permanent pump and replace items previously removed.

D. Chilled Water Systems:

1. Clean these system as described for the hot water heating system with the following exception:
2. Circulate the chemically treated water at ambient temperature. For additional requirements for chiller, refer to Section 15681.
3. Accomplish the chemical cleanout during a minimum of three (3) - 8 hour periods.

E. Filling of Water Systems:

1. After completion of the chemical clean out, fill each water system with air vent, and add chemical treatment.
2. If the outdoor ambient temperature drops to 32°F., and the danger of freeze-up exists, drain water systems.

2.07 INTERNAL TREATING OF PIPING

- A. This work shall include the internal protective coating of all distribution systems on this construction such as, but not limited to, steam piping, hot water heating and cooling, chilled water and condenser water systems and components. The Rid-Sludge treatment shall be applied by Heating Economy Services Co., Pelham, NY; Sound Water Treatment Center, Mamaroneck, NY; Drew Chemical, NJ; or as approved equal.
- B. This method of treating is to be applied to all piping supply and return and then back to the source of the equipment.
- C. The Contractor shall clean the piping for the purpose of removing lime, oil, grease, oxides and other wastes therefrom. After removal of these impurities, a protective coating shall be applied to all inner surfaces, which will inhibit oxidation as well as protect the metals against impurities that may be present in the water. This coating shall be guaranteed

for five years from the date of completion at no cost to the Owner covering labor and materials. Valve off Heat Exchangers to avoid coating surfaces.

- D. The treating materials used for this purpose must have been in use successfully for at least five years in comparable systems.
- E. It shall be compounded of non-corrosive, non-toxic, non-alkaline and non-injurious ingredients that have been investigated and reported as a "Neutral Compound" by a recognized engineering firm or laboratory, other than the submitting company's own laboratory. Brochures and unbiased test reports shall be submitted to the Architects within ninety (90) days from job acceptance for approval. This treating firm shall show proof that said firm has been established and accepted for this work, for a minimum of ten (10) years. The ingredients used shall have no deleterious effects on seals, "O" rings, glands, packing, etc.
- F. It shall be the sole responsibility of the approved firm for the application of this process. It shall supply all labor, materials, and equipment for this purpose. A competent supervisor and/or equipment operator shall be kept at the site for commencement of his work until completion. None but experienced personnel shall provide treating of piping. Any repairs or servicing of components of these systems shall be done by the Contractor.

PART 3 - EXECUTION

3.01 INSPECTION

- A. Contractor shall examine location where this equipment is to be installed and determine space conditions and notify architect in writing of conditions detrimental to proper and timely completion of the work.
- B. Do not proceed with the work until unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Install water treatment equipment where shown or specified, in accordance with manufacturer's written instructions, and with recognized industry practices, to ensure that water treatment systems comply with

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

- requirements and serve intended purposes.
- B. Coordinate with other work as necessary to interface installation of water treatment equipment with other components of systems.
 - C. Check alignment and, where necessary, realign shafts of motors and equipment within tolerances recommended by manufacturer.

3.03 FIELD QUALITY CONTROL

- A. Upon completion of installation of equipment, and after motors have been energized with normal power source, test equipment to demonstrate compliance with requirements. When possible, field correct malfunctioning units, then retest to demonstrate compliance. Replace units which cannot be satisfactorily corrected.

END OF SECTION 15815

SECTION 15820
PIPING FOR HVAC

PART 1 - GENERAL**1.01 GENERAL REQUIREMENTS**

- A. This Section is coordinate with and complementary to the General Conditions and Supplementary General Conditions of the Work, wherever applicable to Mechanical Work.
- B. Section 15000 - Special Requirements for Mechanical and Electrical Work shall apply.

1.02 DESCRIPTION OF WORK

- A. The Work includes providing of all labor, materials, equipment, accessories, services and tests necessary to complete and make ready for operation by the Owner, all piping as shown on the Drawings and hereinafter specified.

1.03 QUALITY ASSURANCE

- A. "Manufacturers"-Firms regularly engaged in manufacture of pipe whose products have been in satisfactory use in similar service for not less than ten (10) years.
- B. Provide pipe whose performance, under specified conditions, is certified by the manufacturer.

1.04 SUBMITTALS

- A. Refer to Section 15000, "Special Requirements for Mechanical and Electrical Work", and submit shop drawings.

1.05 COORDINATION

- A. Refer to Section 15000, "Special Requirements for Mechanical and Electrical Work".

1.06 WARRANTY

- A. Refer to Section 15000, "Special Requirements for Mechanical and Electrical Work".

PART 2 - PRODUCTS**2.01 PIPE**

- A. All pipe shall be new, free from scale or rust, of the material and weight specified under the various services. Each length of pipe shall be properly marked at the mill for proper identification with name or symbol of manufacturer.
- B. All steel piping, except where otherwise rated, shall be standard or extra strong weight, in conformance with the ASTM A-53 Grade A seamless, for piping 2" and larger, as manufactured by National Tube Division, Republic Steel Corp., or approved equal. Piping shall be ASTM A-120 continuous butt weld, for piping less than 2".
- C. All brass piping shall be standard or extra heavy weight 85% red brass semi-annealed seamless-drawn, in conformance with the ASTM B-43, as manufactured by Anaconda, American Brass Co., Chase Brass and Copper Co., or Revere Copper and Brass, Inc.
- D. All copper tubing shall be of weight as required for service specified, with conformance with ASTM B-88 for Types "L" and "K" tubing, as manufactured by Chase, Anaconda, Revere, or approved equal. Tubing and fittings shall be thoroughly cleaned with sand cloth and treated with an approved non-corrosive flux before solder is applied.
- E. All galvanized steel piping shall be standard or extra strong weight, as specified, in conformance with the ASTM A-53 Grade B. Pipe shall be hot-dripped zinc-coated with Prime Western smelter and not wiped.
- F. Generally, unless otherwise specified, joints in steel piping of sizes 2 1/2 inches and under shall be screwed, and all sized 3 inches and over shall be welded or flanged. Piping for 3" sizes may be screwed or welded. Brass pipe shall be screwed 2 inches and smaller and flanged 2 1/2 inches and over. Copper tubing shall be silver-soldered or 95-5 solder as herein specified.
- G. Threaded joints in glycol filled systems shall be made by Radiator Specialty Co. Submit sample and obtain approval.

H. Welding Piping

1. All fittings for welded piping shall be as manufactured by Tube Turn, Grinnell, Bonney Forge or equal as approved by the Architect. The fittings shall be of the same weight and material as the piping to which they are attached.
 2. For piping 2½" or 4" and larger, full size branch connection shall be made with manufactured welding tees, branch connections for less than full size, shall be made with welding tees or with Weldolet forged branch outlet fittings. Fishmounting, shaped nipples, and stubbing not permitted.
- I. Welding outlet fittings shall be Weldolets as manufactured by Bonney Forge, Inc., or approved equal 2 or 3 and smaller branches shall be made with thredolets as made by Bonney Forge or approved equal.
- J. Weld ells shall have a center line radius not less than diameter of the pipes.
- K. All flanges shall be welding neck flanges ANSI B16.5 ASTM 181 Grade I. all systems, except where otherwise noted - 150 lbs. Class, forged steel.
- L. Instrumentation connections ¾" and smaller on all systems shall be provided by welding threaded 2000# forged steel half couplings to the pipe.
- M. All pipe to be welded shall be cut off clean and beveled. All welding shot shall be removed.
- N. Composition of welding electrodes shall be in accordance with manufacturer's recommendations.
- O. Pipe welding shall comply with the provisions of the latest revision of the applicable code, whether ASME Boiler and Pressure Vessel Code, ANSI Code for Pressure Piping B31, or such state or local requirements as may supersede codes mentioned above.
- P. Before any pipe welding is performed, submit a copy of the welding procedure specifications together with proof of its qualification as outlined and required by the most recent issue of the code having jurisdiction.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

- Q. Before any operator shall perform any pipe welding, also submit the operator's qualification record in conformance with provisions of the code having jurisdiction, showing that the operator was tested and certified under the Procedure Specification as before mentioned.
- R. Assume responsibility for the quality of welding done and repair or replace any work not in accordance with these specifications.
- S. In addition, all pipe welding procedures and procedures for qualification of pipe welding operators shall comply with the requirements of the American Welding Society.
- T. Dissimilar Pipe Joints: Provide bronze body gate/ball valve where dissimilar (cooper to steel, etc.) pipes join to prevent galvanic action. Provide di-electric fittings in addition to bronze valves.
- U. Pipe Schedule: Pipe for the various services shall be as follows:

<u>Service</u>	<u>Material</u>	<u>Schedule</u>
Pumped Condensate Returns Above Ground	Steel Copper	40 or standard Type K
Overflow and Drain	Copper	Type K
Cold Water (NYC)	Copper	Type "TP"
Hot Water (Heating)	Steel Copper	40 or standard Type K
Branch runouts to radiation	Steel	40
Gas	Steel	40 or standard
Refrigeration	Copper	Type ACR tubing
Chilled Water	Steel Copper	40 or standard Type K
Hot Water (Heating) Risers, runouts	Copper	Type K
Chilled Water Risers Runouts, Drain Piping	Copper	Type K

2.02 FITTINGS

- A. Fittings shall be specified under "Fitting Schedule" for various services.
- B. Welding fittings shall be of the same material and schedule as the pipe to which they are welded. Welding elbows shall be long radius pattern unless clearance conditions necessitate the use of standard radius pattern. Welding fittings shall be as made by Tube-Turn.
- C. Fittings shall be of material conforming to the following schedule:
- | | |
|-------------------------|------------|
| Steel Welding Fittings | ASTM A-106 |
| Malleable Iron Fittings | ASTM A-197 |
| Cast-Iron Fittings | ASTM A-126 |
| Brass Fittings | ASTM B-62 |
| Solder Fittings | ASTM B-88 |
- D. All fittings used at expansion loops or bends shall be extra heavy.
- E. Cast-iron, malleable-iron and bronze fittings shall be of Crane manufacturer or approved equal.
- F. Flanges shall be raised face, of the same weight as the fittings in each service category. All flanges shall be drilled to "US Standard" hex nuts and washers. Bolting shall conform to ASTM 193 Grade B-7, threads Class 7 fit. Nuts shall be semi-finished hexagonal, ANSI B18.2 ASTM A194 Grade 2H.
- G. Unions - Unions 2 inches and smaller shall be screwed. Unions 2-1/2 inches and larger shall be flanged. Screwed unions on steel pipe, unless otherwise specified, shall be of malleable iron with bronze ground seats suitable for 300 pounds W.S.P. Screwed unions on copper or brass pipe shall be brass, ground joint suitable for 300 pounds W.S.P. Flanged unions shall be malleable iron for steel pipe, and brass for copper or brass pipe, gasket type suitable for 150 pounds W.S.P. Unions shall be as manufactured by Crane or approved equal.
- H. Brass pipe threads shall be cut with special brass threading dies, and the joints shall be made up with lubricant. Strap wrenches, or equivalent, shall be used in making up brass pipe. Wrenches which gouge or scar the pipe will not be used.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

- I. Solder for each solder-type fitting shall be of 95% tin and 5% antimony or silver solder, as specified herein.
- J. Unless otherwise specified, all flanged joints shall be fitted with Manville or equal ring gaskets designed for the intended service.
- K. Fitting Schedule: Fittings for the various services shall be as follows:

<u>Service</u>	<u>Size</u>	<u>Material</u>	<u>Weight</u>	<u>Type</u>
Pumped Condensate Returns (discharge)	ALL	C.I. Wrought Copper	250# 125#	Screwed Solder
Overflow and Drain	ALL	Wrought Copper	125#	Solder
Cold Water	ALL	Wrought Copper	125#	Solder
Refrigeration	ALL	Wrought Copper	125#	Solder
Gas	ALL	Galv. M.I.	150#	Screwed
Hot Water (heating)	2" & below 2 1/2" & above	C.I. Steel	125# Sch. 40	Screwed Welding
Chilled Water	2" & below 2 1/2" & above	C.I. Steel	125# Sch. 40	Screwed Welding
	All Sizes	Wrought Copper	125#	Solder
Vent (water discharge)	ALL	Wrought Copper	125#	Solder
Hot Water, Chilled Water, Drain Riser and Runouts	ALL	Wrought Copper	125#	Solder

2.03 PIPE HANGERS AND SUPPORTS

- A. Provide necessary structural members, hangers and supports of approved design to keep piping in proper alignment and prevent transmission of injurious thrusts and vibrations. In all cases where hangers, brackets, etc., are supported from metal decking and/or concrete

construction, care shall be taken not to weaken decking and/or concrete or penetrate waterproofing. All hangers and supports shall be capable of screw adjustment after piping is erected. Hangers supporting piping expanding into loops, bends and offsets shall be secured to the building structure in such a manner that horizontal adjustment perpendicular to the run of piping supported may be made to accommodate displacement due to expansion. All such hangers shall be finally adjusted, both in the vertical and horizontal direction, when the supported piping is hot, or chilled, as required. Hangers in contact with copper or brass pipe shall be copper plated steel.

- B. Pipe hangers shall be the clevis and pipe roll types, except where otherwise noted.

PIPE HANGER SCHEDULE

<u>Pipe</u>	<u>Type of Hanger</u>	<u>MAKE AND MODEL</u>		
		<u>Grinnell Fig. No.</u>	<u>F & M Fig. No.</u>	<u>Carpenter & Paterson Fig. No.</u>
2" & smaller (steel)	Clevis Hanger	260	239	100
2" & smaller (copper)	Adjustable Wrought Iron	CT-65	364	100 CT
2½" to 4" (steel)	Adjustable Swivel Pipe Roll 16		174	2729
2½" to 4" (copper)	Adjustable Wrought Ring	CT-269		
5" & above	Two Rod Roller Hanger	171	170	142

- C. Beam clamps - Hangers supported from floor steel shall be approved I beam clamps. I beam clamps for hangers supporting piping 2 inches and smaller shall be C & P Fig. No. 148 adjustable beam clamps. For piping 2½ inches and larger, I beam clamps shall be wrought steel. C & P Fig. No. 268 or equal.
- D. Where piping is run near the floor and not hung from the ceiling construction but is supported from the floor, such supports shall be of pipe standards with base flange

and adjustable top yoke similar to C & P Fig. 247 or equal.

- E. All vertical piping shall be anchored by means of heavy steel clamps securely bolted or welded to the piping, and with end extension bearing on the building.
- F. All vertical piping shall be guided at each floor by use of clamps fastened to building structure. Provide 360° protective saddle at guides. Saddles shall be fastened to pipe or insulation.
- G. Vertical runs of pipe not over 15 feet long shall be supported by hangers placed not over one foot from the elbows on the connecting horizontal runs.
- H. Vertical runs of pipe over 15 feet long but not over 60 feet long and not over 6 inches in size, or not over 30 feet long and not over 12 inches in size, shall be supported on heavy steel clamps. Clamps shall be bolted tightly around the pipes and shall reset securely on the building structure without blocking. Clamps shall be welded to the pipes or placed below couplings. Clamps shall be type 8, Federal Specification WW-H-171C, unless other types are approved.
- I. For all chilled water and makeup water and insulated refrigerant piping, provide "Insulshield" as made by Insulcoustic Corp. or pipe covering protection shield C & P Fig. 265P with steel shield min. 9 inches long, with vapor barrier jacket. For hot-water heating piping 2 inches and smaller, same as above. For steam, condensate and hot-water heating piping 2½ inches and larger, provide steel pipe covering protection saddles C & P Fig. 353 series.
- J. Piping in trenches shall reset or hang from angle iron cross supports provided by the Contractor with two coatings of red lead primer and final coat for black asphaltum paint.
- K. Hanger rods shall be of the following diameters:

<u>Pipe Size</u>	<u>Rod Diameter</u>	<u>Max. Spacing</u>
1½ inch & below	¾ inch	6'-0"
1½ and 2 inch	¾ inch	10'-0" (copper 8'-0")

<u>Pipe Size</u>	<u>Rod Diameter</u>	<u>Max. Spacing</u>
2½ inch		10'-0"
3 inch	½ inch	(copper 8'-0")
4 inch		
5 inch	¾ inch	12'-0")
6 inch	¾ inch	14'-0"

- L. Hanger rods shall be attached to preset concrete inserts with steel reinforcing rod through the insert and both ends hooked over the reinforcing mesh. For pipes 4 inches and larger, rods shall extend through concrete slab above where they shall be attached to steel bearing plates 6" x 6" x ¼".
- M. Piping shall not be hung from other piping ducts, conduits or from equipment of other trades and no vertical expansion shields will be permitted. Hanger rods shall not pierce ducts.
- N. All water piping connected to rotating equipment within all mechanical spaces shall be isolated from the building structure by means of vibration hangers inserted in the hanger rods. The vibration hangers shall consist of a steel spring in combination with a double deflection neoprene element within a rectangular steel housing. Combined static deflection shall be 1.375" minimum. Hangers shall have capability of supporting the piping at a fixed elevation during installation and shall incorporate an adjusting device to transfer the load to the spring. Deflection shall be indicated by means of scale. Vibration hangers shall be type PCDNHS made by Mason Industries.
- O. Where additional steel is required for the support of hangers, furnish and install same subject to the approval of the Architect. Piping and ductwork shall not be supported from concrete slab construction at ceiling.
- P. All piping running on walls shall be supported by means of hanger suspended from heavy angle iron wall brackets. No wall hooks will be permitted.
- Q. Lateral bracing of horizontal pipe shall be provided where required to prevent side sway or vibration. The lateral bracing shall be of a type approved by the Architect and shall be installed where directed by the Architect.

- R. All heavy piping, such as:
1. Individual pipes having a nom. dia. greater than 12 inches.
 2. Groups of pipes consisting of more than three 8 inch, or more than two 10 inch nom. 1 dia. pipes,
 3. Any combination of closely spaced pipes weighing more than the equivalent of above or 15 lb. per lin. ft., shall be supported at all cross points with overhead floor beams by fastening to the flange of such beams with steel clamps or other suitable means.
- S. Where such heavy piping runs parallel with the floor beams properly designed auxiliary steel must be provided. The spacing of such auxiliary steel supports shall in no case be greater than the spacing of the floor beams running perpendicular to the corrugations of the permanent slab steel forms.
- T. Assume the responsibility for the proper transfer of the loads of the piping systems to the structure. No additional cost to the owner should be expected for any corrective work during construction.

2.04 ANCHORS

- A. All anchors shall be separate and independent of all hangers, guides, and supports. Anchors shall be of heavy blacksmith construction suitable in every way for the work approved by the Architect. Anchors shall be welded to the pipe and fastened to the structure with bolts.
- B. Anchors shall be fabricated and assembled in such a form as to secure the piping in a fixed position. They shall permit the line to take up its expansion and contraction freely in opposite directions away from the anchored points; and shall be so arranged as to be structurally suitable for particular location, and line loading. Submit details for approval.

PART 3 - EXECUTION

3.01 INSPECTION

- A. Contractor shall examine location where the piping is to be installed and determine space conditions and notify architect in writing of conditions detrimental to proper

and timely completion of the work. Do not proceed with the work until unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Coordinate with other work as necessary to interface installation of piping with other components of systems.
- B. Provide and erect in a workmanlike manner, according to the best practices of the trade, all piping shown on the Drawings or required to complete the installation intended by these Specifications.
- C. The Drawings indicate schematically the size and location of piping. Piping shall be set up and down and offset to meet field conditions and to provide adequate maintenance room and headroom in the Mechanical Rooms.
- D. Study the General Construction Specifications and Plans, of the exact dimension of finished work and of the height of finished ceilings in all rooms where radiation, units, equipment or pipes are to be placed and arrange the work in accordance with the Schedule of Interior Finishes, as indicated on the Architectural Drawings.
- E. All exposed piping shall be run perpendicular and/or parallel to floors, interior walls, etc. Piping and valves shall be grouped neatly and shall be run so as to avoid reducing headroom or passage clearance. Provide min. 7'-6" headroom under passageway in mech. equip. room. All valves, controls and accessories concealed in furred spaces and requiring access for operation and maintenance shall be arranged to assure the use of a minimum number of access doors.
- F. All pipe lines made with screwed fittings must be provided with sufficient number of flanges or unions to make possible any taking down of the pipes without breakage of fittings.
- G. All piping shall be erected as to insure a perfect and noiseless circulation throughout the system. No bull head tees will be permitted.
- H. All valves and specialties shall be so placed as to permit easy operation and access.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

- I. Provide proper provision for expansion and contraction in all portions of pipework, to prevent undue strains on piping or apparatus connected therewith. Provide double swings at riser transfers and other offsets wherever possible, to take up expansion. Arrange riser branches to take up motion of riser.
- J. Approved bolted, gasketed, flanges (screwed or welded) shall be installed at all apparatus and appurtenances, and wherever else required to permit easy connection and disconnection. Screwed unions shall be used on piping 2" or less.
- K. All piping connections to coils and equipment shall be made with offsets provided with screwed or welded bolted flanges so arranged that the equipment can be serviced or removed without dismantling the piping.
- L. If, after plant is in operation, any coils or other apparatus are stratified or air bound (by vacuum or pressure), they shall be repiped with new approved and necessary fittings, air vents, or vacuum breakers at no extra cost. If connections are concealed in furring, floors, or ceilings, bear all expenses of tearing up and refinishing construction and finish, leaving same in as good condition as before it was disturbed.
- M. Fittings shall be of the eccentric reducing type, where changes of size occur in horizontal piping to provide for proper drainage or venting. Steel pipe bends shall be made of the very best grade open hearth, low carbon steel, leaving a smooth uniform exterior and interior surface. Pipe bends shall be made with seamless steel pipe, having a minimum radius of not less than five (5) pipe diameters.
- N. Tubing shall be erected neatly in a workmanlike manner. Bends in soft copper tubing benders to prevent deformation of the tubing in the bends. Approved seat-to-pipe threaded adapters shall be provided for junctions with valves and other equipment having threaded connections.
- O. Vertical sections of main risers shall be constructed of pipe lengths welded together. No couplings shall be used.

- P. The ends of all pipe and nipples shall be thoroughly reamed to the full inside diameter of the pipe and all burrs formed in the cutting of the pipes shall be removed.
- Q. Piping shall be installed in accordance with the latest edition of the ASME Code for Pressure Piping.
- R. All piping shall be concealed above furred ceilings in rooms where such ceilings are provided (except where specifically indicated otherwise on the drawings, or in walls or partitions, except as otherwise indicated.
- S. Dissimilar piping shall be connected with bronze body valves and dielectric connector as made by Ebco Company or approved equal.
- T. Piping at all equipment and control valves shall be supported to prevent strains or distortions in the connected equipment and control valves. Piping shall be supported to allow for removal of equipment, valves and accessories with a minimum of dismantling and without requiring additional supports after these items are removed.
- U. Pipe nipples - Any piece of pipe 3" in length and less shall be considered a nipple. All nipples with unthreaded portion 1½" and less shall be extra heavy. Only shoulder nipples shall be used. No close nipples will be permitted.
- V. Screw threads shall be cut clean and true; screw joints made tight without caulking. No caulking will be permitted. A non-hardening lubricant shall be used. No bushings shall be used. Reductions, otherwise causing objectionable water or air pockets, to be made with eccentric reducers or eccentric fittings.
- W. Pitch water piping upward one inch per 100 feet in direction of flow to ensure adequate flow without air binding, and to prevent noise and water hammer. Pitch drain piping ¼ inch per foot in the direction of flow. Branch connections to mains are to be made in such a manner as to prevent air trapping and permit free passage of air. To meet job conditions, mains shall set up to maintain headroom, and clear other trades. Provide oversized float operated automatic air vent (with valve). Avoid 90 deg. lift set-ups in supply lines by using 45 degree ells. Where 90 deg. lifts exceed 12" install automatic air vent in supply lines. All lifts in return

lines shall be installed with automatic air vents. Pipe outlet of all automatic air vents to an open sight drain if the vent is concealed, or to within two feet of the floor within machine rooms. All water piping shall pitch back to low points for drainage. Low points shall be provided with 3/4 inch hose cocks.

- X. Provide drain valves at the heel of all interior main water risers. Provide drain valves at the heel of all perimeter water risers.
- Y. Miscellaneous drains, vents, reliefs, and overflows from tanks, equipment, piping, relief valves, pumps, etc., shall be run to the nearest open sight drain or roof drain. Provide drain valves whenever required for complete drainage of piping, including the system side of all pumps.
- Z. Provide domestic water connections from valved outlets to any equipment requiring same.
- AA. All drain piping from condensate drain pans shall be properly trapped in accordance with the static pressures involved. Condensate drain piping sizes shall be not less than 1½".

3.03 FIELD QUALITY CONTROL

- A. Upon completion of installation of piping (partial or complete) test piping to demonstrate compliance with requirements. Where possible, field correct malfunctioning piping, then retest to demonstrate compliance. Replace piping which cannot be satisfactorily corrected. Refer to Section - Testing and Balancing.

END OF SECTION 15820

SECTION 15830
VALVES FOR HVAC

PART 1 - GENERAL

1.01 GENERAL REQUIREMENTS

- A. This Section is coordinate with and complementary to the General Conditions and Supplementary General Conditions of the Work, wherever applicable to Mechanical Work.
- B. Section 15000 - Special Requirements for Mechanical and Electrical Work shall apply.

1.02 DESCRIPTION OF WORK

- A. The work includes the providing of all labor, materials, equipment, accessories, services and tests necessary to complete and make ready for operation by the Owner, all Valves as shown on the drawings and hereinafter specified.

1.03 QUALITY ASSURANCE

- A. "Manufacturers" - Firms regularly engaged in manufacture of valves, whose products have been in satisfactory use in similar service for not less than 10 years.
- B. Provide valves produced by the manufacturers, which are listed in Section "Approved Manufacturer's List".
- C. Provide valves whose performance under specified conditions, is certified by the manufacturer.

1.04 SUBMITTALS

- A. Refer to Section 15000 - Special Requirements for Mechanical and Electrical Work and submit shop drawings.

1.05 GUARANTEE

- A. Refer to Section 15000 - Special Requirements for Mechanical and Electrical Work.

PART 2 - PRODUCTS**2.01 VALVES**

- A. Valves- General: All valves shall be of a design which the manufacturer lists for the service and shall be of materials allowed by the latest edition of the ASME Code for pressure piping for the pressure and temperature contemplated, unless a higher grade or quality is herein specified. All valves shall be of the same manufacturer, except for special applications.
- B. The system shall be supplied with valves in all branch mains and risers, at all pumps, tanks, reducing and control valves, heating and cooling surfaces and at all apparatus; so located, arranged and operated as to give complete shut-off. Except where flanged valves are used, each connection to equipment shall be made with screwed or flanged unions on the equipment or discharge side of the valve.
- C. All valves shall be installed with the best workmanship and are to have neat appearance and be arranged so that they are easily accessible.
- D. Each valve shall have the maker's name or brand, the figure or list number and the guaranteed working pressure cast on the body or stamped on the bonnet, or shall be provided with other means of easy identification.
- E. Check valves installed in the horizontal position shall be swing checks; valves installed in the vertical position shall be silent checks for 2½" and above, and lift check for 2" and smaller, except that all check valves in pump discharges shall be silent checks.
- F. Provide blow-off valves at all strainers, and where shown on the Drawings.
- G. Provide valve operating chain on all gate, globe, butterfly and plug valves in Mechanical Equipment Rooms - 4" and larger, which are more than 7'-0" above the operating floor. Unit shall be complete with adjustable sprocket, chain and guide (Crane "Babbit" type). Provide hook to keep chain out of the way.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

- H. Generally, all valves are to be of the gate type, except that globe valves shall be used for throttling services and on traps, and pressure reducing and control valve bypasses. Globe valves used on bypasses shall have monel metal mountings. Pumps shall have lubricating plug valves on discharge piping.
- I. All valves 2 inches in diameter and smaller shall be all bronze with bronze bodies. Valves 2½ inches in diameter and larger shall have iron bodies with bronze mountings (except where otherwise noted).
- J. All flanged-end valves shall have renewable metal seat rings and discs. On gate valves these parts shall be of bronze, on all globe valves they shall be of bronze and suitable for throttling service.
- K. All screwed-end globe valves shall be of the union bonnet type with renewable teflon discs.
- L. All valves shall have their bonnets back-seated to provide for packing under pressure. All gate valves shall be of the solid tapered wedge type.
- M. Drain valves shall be provided on coils, chillers, heat exchangers, boilers, unit ventilators, tanks, receivers, risers and at all points in water system; where they may be required or necessary, for draining the lines and equipment. Drain valves or plug cocks shall be provided at the low points for proper drainage. Cocks and valves shall be provided with threaded ends for those connections.
- N. All valves up to 2 1/2 inches in diameter shall have screw ends, 4 inches in diameter and over shall have flanged ends. Valves 2½" and larger which are non-rising stem, shall have position indicators.
- O. All bronze and iron valves shall be furnished with Teflon impregnated packing.
- P. All handwheels shall be of malleable iron.
- Q. No Asbestos shall be used in construction of valves including the gaskets.
- R. All valves shall be of type and number as specified below: For all services, except as otherwise noted.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

<u>TYPE</u>	<u>SIZE</u>	<u>CRANE NO.</u>	<u>JENKINS NO.</u>	<u>WALWORTH NO.</u>	<u>REMARKS</u>

	2½" & Larger	34	----		
Balan- cing Valves	All sizes				See Balancing Cocks

2.03 LUBRICATED PLUG VALVES

A. Full port opening tapered plug suitable for lubrication under service pressure with plug in any position.

B. Lubricating Guns:

1. One for every 10 valves.
2. Extra heavy, lever type, hydraulic hand gun.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

3. 15,000 psi gauge and 12" long connection hose.
 4. Similar to Walworth #1699 or approved equal.
- C. Lubricant:
1. Manufacturer's recommendations.
 2. One year supply, each valve.
- D. Operators:
1. 4" to 6", wrench, except as noted.
 2. Wrench set for each size valve.
 3. Wrench for every 10 valves, each size
 4. Permanently installed handwheel.

2.04 VALVE CONSTRUCTION

- A. Piping less than 100 psi: 200# WOG Class, cast iron body.
- B. Piping 100 psi to 250 psi: 500# WOG Class, cast iron body.
1. 4" and larger: flanged, USAS 250#.

2.05 BALANCING COCKS

- A. Square head, similar to Walworth Co.
1. Up to 2"
 - a. Bronze
 - b. Screwed
 - c. 125 psi WSP Class; similar to Fig. 554.
 - d. 250 psi WSP Class; similar to Fig. 576.
 2. 2½" and 3"
 - a. Iron body similar to Walworth Co.
 - b. Screwed
 - c. 125 psi WSP Class; similar to Fig. 651.
 - d. 250 psi WSP Class; similar to Fig. 671.
 3. 4" and above: provide flanged lubricated plug valves.

2.06 BALL VALVES

- A. Ball Valves up to 4" may be used for all water services as an alternate to gate valves, globe valves and balancing cocks.
- B. Ball valves shall be bronze body, chrome plated bronze ball, Teflon seats stainless steel stem, and seals threaded ends, 400 psig cold W.O.G. "APOLLO" 70 - 100 Series, vinyl clad handles, full open port design.
- C. All valves used for throttling, balance shall have retainable memory stop.

2.07 BUTTERFLY VALVES

- A. Butterfly valves may be used for as an alternative to gate valves and balancing valves for sizes 2½" and above for chilled water only.
- B. Valves shall be similar to Keystone Fig. 222 lug type body or approved equal. Butterfly valves shall not be directly connected to equipment without a spool piece. All valves shall be suitable for dead end service. Lug body shall be drilled and tapped for isolation and removal of downstream piping meets ANSI Class 125/150 flange standards.
- C. Design working pressure: 175 psi.
- D. Valves in insulated piping: necks to extend 2 inches above outside diameter of flanges to accommodate full thickness of insulation.
- E. Operators:
 - 1. Valves to 8": handles wiht spring loaded lever, with minimum of 10 locking positions and adjustable memory stop.
- F. Body: Cast iron or malleable iron.
- G. Flanges: Wafer type bodies are not acceptable.
- H. Valves in piping that may be removed up to valve: bodies flanged.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

- I. Stems: 304, 316 or 17-4PH stainless steel with EPDM ring slabs or V-packing: Phosphate coated alloy steel accepted if stem does not come in contact with water.
- J. Discs: aluminum bronze
- K. Seats: replaceable EPDM
- L. Design working pressure: 175 psi.
- M. Factory test: bubble tight at 190 psi.
- N. Dead end test: 100 psi.

PART 3 - EXECUTION

3.01 INSPECTION

- A. Contractor shall examine location where valves are to be installed and determine space conditions and notify architect in writing of conditions determined to proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Install valves where shown, in accordance with manufacturer's written instructions, and with recognized industry practices, to ensure that valves comply with requirements and serve intended purposes.
- B. Coordinate with other work as necessary to interfere installation of valves other components of systems.

3.03 FIELD QUALITY CONTROL

- A. Upon completion of installation of valves, test valves to demonstrate compliance with requirements. When possible, field correct malfunctioning valves, then retest to demonstrate compliance. Replace units which cannot be satisfactorily corrected.

END OF SECTION 15830

SECTION 15840
SHEET METAL DUCTWORK

PART 1 - GENERAL**1.01 GENERAL REQUIREMENTS**

- A. This Section is coordinate with and complementary to the General Conditions and Supplementary General Conditions of the work, wherever applicable to Mechanical Work.
- B. Section 15000 - Special Requirements for Mechanical and Electrical work shall apply.

1.02 DESCRIPTION OF WORK

- A. The work includes the providing of all labor, materials, equipment, accessories, services and tests necessary to complete and make ready for operation by the Owner, all Sheet Metal Ductwork as shown on the drawings and hereinafter specified.

1.03 QUALITY ASSURANCE

- A. Fabrication and installation shall be by a single firm specializing and experience in metal ductwork for not less than 10 years.
- B. Comply with SMACNA (Sheet Metal and Air Conditioning Contractors National Association) recommendations for fabrication, construction and details and installation procedures, except as otherwise indicated.
- C. Comply with ASHRAE (American Society of Heating Refrigeration and Air Conditioning Engineers) recommendations, except as otherwise indicated.
- D. Compliance to SMACNA and ASHRAE is a minimum requirement. In case of disagreement between sheet metal work described in this Section and SMACNA or ASHRAE, the specification shall govern.

1.04 SUBMITTALS

- A. Refer to Section 15000 - Special Requirements for Mechanical and Electrical work and submit shop drawings and coordinate drawings.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

1.05 COORDINATION

- A. Refer to Section 15000 - Special Requirements for Mechanical and Electrical work.

1.06 GUARANTEE

- A. Refer to Section 15000 - Special Requirements for Mechanical and Electrical work.

1.07 PRODUCT HANDLING

- A. Protect shop fabricated ductwork, accessories and purchased products from damage during shipping, storage and handling. Protect ends of ductwork and prevent dirt and moisture from entering ducts and fittings.
- B. Where possible, store ductwork inside and protect from weather. Where necessary to store outside, store above grade and enclosed with waterproof wrapping.

PART 2 - PRODUCTS

2.01 GENERAL REQUIREMENTS FOR DUCTWORK

- A. Furnish and install the size, connections and run of ducts as indicated on the drawings.
- B. While the Drawings shall be adhered to as closely as possible, the Architect's right is reserved to vary the run and size of ducts during the progress of the work if required to meet structural conditions.
- C. Install all ductwork in strict adherence to the ceiling height schedule indicated on the Architect's Drawings. Consult with the Electric and Plumbing Contractors, and in conjunction with the above Contractors, establish the necessary space requirements for each trade.
- D. The sheet metal ductwork shall, whether indicated or not, rise and/or drop and/or change in shape to clear any and all conduits, lighting fixtures, plumbing and heating mains to maintain the desired ceiling heights. And to provide adequate maintenance room and headroom in mechanical equipment rooms.
- E. The ductwork shall be continuous, with airtight joints and seams presenting a smooth surface on the inside and neatly finished on the outside. Ducts shall be

constructed with curves and bends so as to effect an easy flow of air. Unless otherwise shown on the Drawings, the inside radius of all curves and bends shall be not less than width of ducts in plane of bend.

- F. All rectangular ductwork, unless otherwise noted, shall be built from galvanized sheet steel and thoroughly braced and stiffened.
- G. All air ducts exposed to the weather and not insulated shall be constructed of aluminum and shall be properly braced and supported and secured to the building construction. (Aluminum) All seams shall be sealed with 3M EC-800 sealer. All exhaust ducts on roof shall be aluminum with 1 inch thick acoustic lining.
 - 1. The construction of ductwork shall be same as conventional ductwork except where transverse reinforcing angles not required, provide 1" x 1" x 1/8" black iron bracing angles matched angles at joint and 1" x 1" x 1/8" black iron between joints 4'-0" from joints.
 - 2. Provide 1/8" thick gasket (3M EC-1202 or equal) for all matched angles.
 - 3. Edge of ducts shall be bent 1/2" over matched angles to obtain watertight seal.
 - 4. (Aluminum) Rivet angles to duct and seal with 3M EC-800 sealer.
 - 5. Paint black iron angles after installation.

2.02 DUCT PENETRATION THRU FLOOR

- A. Provide 4" high and 4" wide concrete pad all around opening at duct penetration thru floors. Fill in space between duct and floor construction with mineral wool.

2.03 DRIP PANS

- A. Provide copper pans and gutters under all equipment subject to leaks mounted above electrical equipment. Each copper pan shall be properly pitched and a drain outlet provided and piped to drain. See "Drip Pans" under Section Special Requirements for Mechanical and Electrical Work.

2.04 KITCHEN HOOD EXHAUST DUCTWORK

- A. All kitchen hood exhaust ductwork shall be constructed of 10 gauge in black iron with continuously welded seams and continuously welded joint connections as per NFPA Bul. 96. The exterior of all kitchen hood exhaust ducts shall have 1½" x 1½" x ⅛" welded angles, punched for securing block insulation. Where kitchen hood exhaust duct risers pass vertically through floors of the building, provide angle clips welded to the duct of required sizes to support the weight of the riser sections on the building's structure at each of the floor levels. Provide and install all supplementary structural steel in shafts to properly support exhaust ductwork from building construction. Provide 18" x 12" insulated double wall access doors on side of duct at 15' spacing and at each change in direction and elevation. Pitch ductwork down to hood. The portion for ductwork exposed to view in the kitchen shall be of same gauge and material as the hood. Hood ducts shall conform to NFPA #96.
- B. Kitchen exhaust duct shall be insulated throughout including exterior ductwork.

2.05 MISCELLANEOUS DUCTWORK

- A. All ductwork from all laboratory fume hoods shall be stainless steel 18 gage type 316 construction. All joints shall be sealed tight with 3M EC-800 or approved equal sealer. Connections from fume hood ductwork to fans shall be thru acid resistant rubber, not less than 6" long, fume tight and securely fastened with copper metal bands.
- 8
B. All supply, return air ductwork, exposed on roof shall be solid, double wall, aluminum or stainless steel, welded, air and water tight, with 2 inch thick, 3 pound density insulation in between, braced and reinforced, minimum 18 gauge thick. Support on curbs. Prime and paint of color as directed by Architect.
- C. All uninsulated ducts, outdoors shall be aluminum unless otherwise specified.

2.06 INSTALLATION OF HVAC DEVICES

- A. Installation of Smoke Detectors: Smoke detectors shall be furnished by the Electrical Sub-Contractor and shall

be installed in ductwork under this Section. Provide access door to each smoke detector.

- B. Installation of Dampers: Refer to Drawings and temperature control specification for smoke dampers and other automatic dampers and install them in ductwork.

2.07 DUCT FABRICATION

- A. Ducts shall be neatly finished on the outside with all sharp edges removed.
- B. Inside surfaces shall be smooth with no projections into the air stream except where otherwise indicated.
- C. Longitudinal joints shall be Pittsburgh lock at corners or Acme lock on flat surfaces double seams hammered tight and shall be located above the horizontal axis of the duct. A snap lock seam shall not be permitted as a substitute for the Pittsburgh lock at corners of ducts.
- D. Transverse joints shall be made airtight with all laps in the directions of air flow.
- E. All fasteners and attachments shall be made of the same material as the ducts.
- F. Furnish test wells 12" on the center horizontally and vertically in the suction and discharge duct of each fan. Test wells shall consist of a 1" x $\frac{3}{4}$ ", 125 lb., bronze, screwed hex bushing, secured to the duct with a bronze hex locknut on the inside of the duct. A $\frac{3}{4}$ " x 2" long standard weight bronze, screwed nipple and cap shall be fitted to the housing on the outside of the duct. Test wells shall be No. 699 as made by Ventlok or approved equal.
- G. All radius elbows shall have a minimum centerline radius of $1\frac{1}{2}$ times the width of the duct.
- H. All square elbows shall have factory-designed and built single thick turning vanes. Shop fabrication vanes will not be approved. Where turning vanes are in conflict with the access doors to fire dampers. They shall be made movable, so that fire dampers, shall be accessible.
- I. Dissimilar metals shall be connected with flanged joints made up with fiber or neoprene gaskets to prevent contact between dissimilar metals. Flanges shall be fastened

with bolts protected by ferrules and washers made of the same materials as the gaskets. Where an aluminum duct is to be connected to a galvanized steel duct, the end of the galvanized steel duct shall be coated with heavy black asphaltum paint before connecting it to the aluminum duct.

- J. Changes in shape and dimension shall conform to the following: Except where otherwise noted, for increases in cross-sectional area, the shape of the transformation shall not exceed 1" in 7". Except where otherwise noted, for reductions in area, the slope shall not be less than 1" in 4" but 1" in 7" preferred.
- K. Wherever it may be necessary to make provisions for vertical hangers of the ceiling construction passing through ducts, provide streamlined shaped sleeves around such ceiling construction hangers as to fully protect the duct from being punched with holes for the passage of such hangers. Any such streamlined sleeves shall be made air tight at top and bottom of ducts. In no case shall there be more than two rods in any 9 sq. ft. area. No rods shall pierce ducts smaller than 12" in horizontal area.
- L. The construction for low pressure rectangular sheet metal ducts shall be made in accordance with recommendations of ASHRAE Guide, Latest Edition, or as per SMACNA Manual but not less than the following weights and construction:
1. Minimum duct gauge shall be 24. Ducts constructed of 26 gauges are not acceptable.
 2. All duct joints, seams shall be sealed airtight with approved mastic regardless of pressure classifications or duct.

LOW PRESSURE - RECTANGULAR DUCTWORK (2 inch S.P.)

Dimension Longest Side, Inches	Sheet Metal Gauge (All Four Sides)			Transverse Reinforcing At Joints and Between Joints
	Steel Gauge	Aluminum Thickness In.	Copper Oz. Per Sq. Ft.	
Up thru 12	24	0.020	16	1" pocket lock 24 gauge, standing seam joint 24 gauge, 1" standing S slip 24 gauge. Joint max. on 8 ft. centers.
13 thru 18	24	0.025	24	Same as for up thru 12.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

19 thru 30	24	0.025	24	1" pocket lock 22 gauge. Joints max, on 8 ft. centers with 1 x 1 x 1/8 in. angles 4 feet from joint.
31 thru 42	22	0.032	32	Same as for 19 thru 30.
43 thru 54	22	0.032	32	1" standing S slip 22 gauge with 1 1/2" x 1 1/2" x 1/8 in. angles, 1 1/2" standing seam joint, 1 1/2" pocket lock 22 gauge. Joints on 8 ft. centers with 1 1/2 x 1 1/2 x 1/8 in. angles max. 4 feet from joint.
55 thru 60	20	0.040	36	Same as for 43 thru 54.
61 thru 84	20	0.040	36	1" standing S slip gauge with 1 1/2 x 1 1/2 x 1/8 in. angles, 1 1/2 standing seam joint, with 1 1/2 x 1 1/2 x 1/8 in. angles, 1 1/2 in. pocket lock 22 gauge with 1 1/2 x 1 1/2 x 1/8 in. angles. Joints max. on 8 ft. centers with 1 1/2 x 1 1/2 x 1/8 in. angles max on 2 ft. centers.
85 thru 96	18	0.050	48	Same as for 61 thru 84 except all angles shall be 1 1/2 x 1 1/2 x 3/16 in.
over 96	18	0.050	48	Same as for 61 thru 84 except all angles shall be 2 x 2 x 1/4 in.

3. Flat areas of duct over 18 in. wide shall be stiffened by cross breaking of beading.
4. All joints to have corner closures.
5. All joints shall be sealed with 3M EC-800 mastic.

M. The construction for low pressure round sheet metal ducts and fittings shall be as follows:

Duct Diameter Inches	Steel-Galv. Sheet Gage	Girth Reinforcing		Girth Joints (Continuously Welded or as Below)
		Minimum Reinforcing Angle Size and Maximum Longitudinal Spacing		
Up thru 8	26	None required		Crimped and beaded joint
9 thru 13	26	None required		Crimped and beaded joint
14 thru 22	24	None required		Crimped and beaded joint
23 thru 36	22	None required		--
37 thru 50	20	1 1/4 x 1 1/4 x 1/8 @ 72 in.		--
51 thru 60	18	1 1/4 x 1 1/4 x 1/8 @ 72 in.		--

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

61 thru 84

16

1½ x 1½ x ¼
Ø 72 in.

--

NOTE: Flanged joints may be considered as girth reinforcing.

1. Ductwork up to 36 in. diameter shall be spiral lockseam construction and it shall be assembled with prefabricated fittings made up of 20 gauge galvanized iron.
2. All joints shall be sealed tight with EC-800. Joints shall, in addition, be fastened with selftapping screws.

2.08 DAMPERS

- A. At each main branch take-off and in such other locations where required to properly balance the low pressure system, furnish and install volume dampers of the opposed blade, multi-louvered type, which shall be operated by indicating quadrants and set screws, for adjusting the system.
- B. Volume dampers shall be constructed as follows: Damper blades shall not be wider than 12", shall be complete with heavy angle iron frames, connecting and operating links, brass trunnions, and bronze bearings. Dampers, unless otherwise noted, shall be fabricated with not less than No. 16 gauge sheet steel. Blades shall overlap and shall be provided with continuous stops on all four sides of dampers to prevent leakage. Blades shall be galvanized. Blades of dampers shall be set into a flat steel frame with frame securely bolted to the duct. All dampers shall be fitted with a hexagonal brass spindle which shall extend through the exterior of duct and be fitted with an indicating self-locking regulator. Regulator shall be similar to Ventlok 641 or approved equal. All hardware shall be Ventlock or approved equal. For insulated ductwork provide No. 644 self-locking regulator as made by Ventlok or approved equal.
- C. All automatic dampers shall be furnished as a part of the automatic temperature control system by the automatic temperature control manufacturer. Install dampers and provide safing in ductwork for automatic dampers smaller than duct size.
- D. For stainless steel and aluminum ductwork provide dampers of same material as ductwork.

- E. All dampers shall be made accessible from building construction. Access doors in building structure shall be furnished or provided as herein before specified.
- F. Smoke dampers shall be installed at all smoke barriers within 2 ft. of the barrier and between any branch take off or duct outlet or inlet and the barrier.

2.09 FIRE DAMPERS

- A. Fire dampers and sleeve installation shall be in accordance with NFPA-90A recommendations and shall bear U.L. Label in compliance with U.L. 555.
- B. Clearly indicate fire damper location on shop drawings. Provide access doors in the ducts and furnish access doors or panels at building construction at each damper of sufficient size and type to permit inspection and replacement of linkage. Assume responsibility to coordinate all locations of duct access doors with the General Contractor to conform with whatever architectural access openings may be necessary and furnish access doors or panels in building construction. Provide shop drawings indicating location of access panels or doors for Architect's approval.
- C. It is the intention of these plans and specifications to be complete. However, it is the responsibility of this Section, as being completely cognizant of local regulations, to determine where fire dampers are required and to advise the Architect prior to construction as to any discrepancies or questions in the plans or specifications.
- D. Fire dampers shall be enclosed in sleeve of twelve gage metal set and grouted into fire partitions. Sleeve shall be secured at both sides of fire partitions with 1½ x 1½ x ¼ ga. mounting angles secured to sleeves only. Provide duct breakaway connections, see detail on drawings.
 - 1. Fire dampers shall be "Fire Seal" as made by Air Balance, Inc. or approved equal, U.L. labeled, linkage out of air stream. Provide duct transitions, access doors at each damper.

Used For

Rectangular Square

Fire Damper

Type B

Low Pressure Ductwork	Model 119BL Model 119ML*
Medium Pressure Rectangular or Square Ductwork	Type C Model 119-CL or as detailed on the drawings
Low, Medium Pressure Round Duct.	Typc C Model 119-CL or as detailed on the drawings.

In aluminum, stainless steel ductwork, provide stainless steel construction fire dampers similar to Fire Seal Model 119D.

2.10 AUTOMATIC DAMPERS, AND SMOKE DAMPERS

- A. Dampers shall have 16 gauge galvanized frames of not less than 3" in width and blades of 16 gauge, or double 22 gauge, galvanized steel, and shall be adequately braced to form a rigid assembly, where required in galvanized ductwork. Dampers shall have blades not more than 8" wide. Linkage and hardware shall be zinc plated steel. Damper blades and rods shall be installed in horizontal position.
- B. In aluminum and stainless steel ductwork, damper material shall match the ductwork, with 16 gauge aluminum, or 16 gauge stainless steel.
- C. All dampers shall be of the proportioning or opposed blade type and shall be motor operated. Dampers shall have continuous elastomer or stainless steel stops to avoid leakage. Bearings shall be oilite nonferrous sleeve type. All dampers shall be provided with continuous $\frac{3}{16}$ " x $\frac{1}{2}$ " closed cell neoprene gasketing around perimeter of the frame and at interlocking blade edges, to form an airtight seal.
- D. All dampers shall be constructed to provide a maximum leakage of 3%, with an approach velocity of 1500 fpm flow, when closed against 4 inches of water. Submit leakage and flow characteristic data for all dampers.
- E. All outside air dampers shall automatically return to closed position in the event of loss of electricity or air.

- F. All smoke dampers shall be UL-555S listed, Class I leakage, complete with sleeves, linkage, motor, Ruskin SD-60 or approved equal.

2.11 ACCESS DOORS IN SHEET METAL WORK

- A. Wherever necessary in ductwork, casings or sheet metal partitions, provide suitable access doors and frames to permit inspections, operation and maintenance of all valves, coils, humidifiers, controls, smoke dampers, smoke detectors, fire dampers, filters, bearings, traps, or other apparatus concealed behind the sheet metal work. All such doors shall be of double construction of not less than No. 20 gauge sheet metal and shall have sponge rubbergaskets around their entire perimeter. Doors in insulated ducts of insulated casings shall have rigid fiberglass insulation between the metal panels.
- B. All access doors in sheet metal ducts shall be hung on heavy flat hinges and shall be secured in the closed position by means of cast zinc clinching type latches. Where space conditions preclude hinges, use four heavy window type latches. Doors into ducts shall in general not be smaller than 18" x 18" except for access door to fire dampers which will depend on size of fire damper.
- C. In no case shall access to any items of equipment requiring inspection, adjustment, or servicing require the removal of nuts, bolts, screws, wing nuts, wedges, or any other screwed or loose device.
- D. Each sheet metal chamber shall have access doors for access to all parts of the system. Doors shall be fitted with cast zinc door latches, two per door. Latches shall be operable from both sides of casing. Hinges shall be extra heavy, zinc plated hinges, minimum of two per door. The doors shall be felted or provided with rubber gaskets so as to make them airtight. The doors shall be made with inner and outer shells 2 inches apart so that they may be properly insulated and properly operated. Doors shall be a minimum size of 20" x 48".
- E. Hinges shall be Ventlok No. 150 or 260 with or without screw holes or approved equal. Latch for walk-in access doors shall be No. 260 as made by Ventolk Co. or approved equal. Latch for access door in ductwork shall be Ventlok No. 100 or approved equal.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

- F. Where reheat coils installed in ductwork, provide access doors on upstream side of coils within 3'-0" of coil.
- G. Access doors at humidifier locations shall be provided on both sides of duct.

2.12 FLEXIBLE CONNECTIONS

- A. All fan and air supply unit connections, both at inlet and discharge shall be made with material as hereinafter specified, so as to prohibit the transfer of vibration from fans to ductwork connecting thereto.
- B. The flexible connections shall be a minimum of 12" long including bands using extra wide fabric as specified and held in place with heavy metal bands, securely attached, to prevent any leakage at the connection points.
- C. Flexible connections shall be fabricated from the following materials unless otherwise required by Local Authorities.
 - 1. Low Pressure Systems - neoprene coated glass fabric
- 30 ounce/sq. yd.
 - 2. Medium & High Pressure Systems - neoprene coated glass fabric
- 30 ounce/sq. yd.
- D. Flexible connections shall not be painted.

2.13 AIR INTAKE AND DISCHARGES

- A. Air intake and discharge louvers and screens in the facade of the building shall be furnished and installed under another contract.

2.14 GRILLES, REGISTERS AND DIFFUSERS

- A. Furnish and install where shown on the drawings all metal diffusers, grilles and registers of the sizes and capacities indicated.
- B. Ceiling diffusers shall be selected to diffuse the air uniformly throughout the occupied space. The air shall be introduced at a temperature differential of 20°F and shall be diffused at the five (5) foot level to a velocity of not greater than 50 FPM and a temperature differential of not greater than 2°F when compared with

mean room temperature. The sound power level of air distribution equipment devices shall not exceed ratings as shown by Anemostat Corp. data.

- C. Equipment manufacturer shall submit engineering data in a manner to facilitate convenient review of the following factors:
 - 1. Aspiration ability, including temperature and velocity traverses, throw and drop of each unit, noise criteria ratings for each unit, sizes, free area and quality of construction.
- D. All air distribution equipment shall be as manufactured by Anemostat Corp., or approved, as scheduled on plans. Outlets shall have fire-dampers, where fire dampers are required or indicated.
- E. All ceiling diffusers shall be furnished with a device or devices equalize the air flow and control the volume.
- F. Location of ceiling diffusers and registers shown on the drawings are approximate. Coordinate with the acoustic tile ceiling Sub-Contractor for exact locations of ceiling diffusers and registers. They shall be in accordance with approved ceiling layout shop drawings.
- G. Return grilles shall match return registers with the damper omitted. Anemostat Corp. Type SS-3HD or approved equal.
- H. All registers, grilles and diffusers shall be coated with baked aluminum enamel, baked flat white (W-1), or baked gloss white (W-4) as supplied by Anemostat Corp. unless otherwise indicated. All supply registers and grilles shall have a 1/4" sponge rubber gasket around the grille frame.
- I. Exceptions to foregoing types of grilles, registers and diffusers shall be as indicated on the plans.
- J. Each air supply outlet shall have the required capacity and shall be guaranteed to give the required draft with draftless diffusion. Where manufacturer's recommendations require duct sizes differing from those on the drawings, the same shall be provided at no additional cost to the Owner.
- K. All grilles, registers and diffusers must be tested under ADC standards and carry and ADC seal of approval.

- L. All registers and grilles located at face of partitions or plaster line of ceilings or soffits, etc. shall have plaster frames, Anemostat or approved equal.
- M. Relocations of ceiling diffusers or registers in order to match the ceiling tile layout shall be made at no additional cost to Owner.
- N. All linear grilles shall be Anemostat, type AL, with minimum 12" x 12" plenum extending length of grilles.

2.15 SOUND REDUCTION

- A. Furnish and install all soundproofing material specified, indicated or necessary to that all systems will comply with requirement of quiet operation. In general, noise level in any part of building (except in machinery rooms), due to air conditioning or ventilating equipment, ducts, and outlets, shall not exceed 40 decibels at 1200-2400 cycles per second, except as otherwise hereinafter specified.
- B. Furnish and install sound-absorptive lining in ductwork for locations and lengths as indicated and/or hereinafter specified. All soundproofing material, installation and arrangement, shall be as approved. Where ducts are acoustically lined, insulation shall be omitted for extent of acoustic lining inside building. Dimensions noted for lined ducts are inside clear dimensions. Duct sizes shall be increased for liner.
- C. Sound Absorbent Duct Lining for Low Pressure Ductwork - Furnish and install as herein specified and/or shown on the drawings (except where otherwise noted) 1" thick, 1½ lb. density, fibrous glass duct lining meeting the requirements of NFPA 90A.
- D. Liner shall be adhered to all interior sides of duct with minimum 100% coverage of fire-retardant adhesive and with weld pins and washers or equivalent mechanical fastening starting 3" from edges and sides, 12" on center all sides. Minimum one row per side for duct size of 12" or less. Mechanical fasteners shall cause quilting of surface. Neoprene coated surface shall be toward air stream. Before installing liner, seal all butting edges and final edges with heavy coat of adhesive to seal off air between lining and duct. All exposed edges of lining shall be installed with sheet metal nosing 1½" wide, two gauges heavier than duct. Installation shall be suitable

for duct velocities up to 3,000 fpm. Low pressure duct lining shall be provided where specified and/or where shown and noted on the drawings.

- E. Duct sizes indicated on drawings are clear inside dimensions. Increase sheet metal sizes as required to install acoustic lining.
- F. The following ductwork shall be acoustically lined whether or not shown on Drawings.
 - 1. Exhaust ductwork on suction side of all exhaust fans (except kitchen exhaust, MER exhaust) for minimum of 50 feet distance from fan inlet in all directions, this insulation shall be in addition to sound traps.

2.16 SOUND TRAPS

- A. Furnish and install sound traps for each supply, return, exhaust duct (except kitchen exhaust and MER exhaust systems) penetrating exterior wall or roof, at locations of penetrations into building.
- B. Outer casings of rectangular sound traps shall be made of heavy, 20 gauge steel in accordance with ASHRAE Guide recommended construction for high pressure rectangular ductwork. Sound traps in aluminum or stainless steel ducts shall be stainless steel. Seams shall be lock formed and mastic filled.
 - 1. Provide 18 gauge, "elbow" silences, where shown and where constraints and field conditions do not permit installation of conventional, straight sound trap.
 - 2. Support, insulate each sound trap similar to sound trap. Weatherproof exterior, exposed sound trap.
 - 3. Sound traps shall be in addition to acoustic lining.
- C. Interior partitions for rectangular sound traps shall be made of 24 gauge galvanized perforated steel or stainless steel.
- D. Packless type to be provided for exhaust. "Hospital grade" for supply fans.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

- E. Combustion rating for the sound trap acoustic fill shall be not less than the following, when tested in accordance with ASTM E84, NFPA Standard 255 or UL NO. 723:
- | | |
|---------------------------|---------|
| Flamspread Classification | 20 |
| Smoke Development Rating | 20 |
| Fuel Contributed | 15 - 30 |
- F. Airtight construction shall be used, and sound traps shall be leakproof when subjected to a differential air pressure of 8" w.g. inside to outside of the sound trap casing.
- G. Sound trap ratings shall be determined in a duct-to-reverberant room test facility which provides for air flow through the sound trap during rating. The test setup and procedure shall be such that all effects due to end reflection, directivity, flanking transmission, standing waves, and test chamber sound absorption are eliminated. Acoustic ratings shall include dynamic insertion loss and self-noise power levels both at 2,000 fpm face velocity as per schedule on the Drawings.
- H. Static pressure loss of sound traps shall not exceed those listed in the schedule at the air flow indicated. Air flow measurements shall be made in accordance with applicable portions of ASME, AMCA and ADC air flow test codes.
- I. The manufacturer shall supply with submittals certified test data on dynamic insertion loss, self-noise power levels, and aerodynamic performance. Test data shall be for a standard product having not less than 24" x 24" cross section. All rating tests shall be conducted in the same facility, shall utilize the same sound traps and shall be conducted sequentially. The certifying laboratory shall be open to inspection upon request from the architect. Provide flanges at both ends of sound traps 1½" x 1½" x ½" thick.
- J. Sound traps lining shall meet with erosion test method described in U.L. No. 181 and shall be suitable for Hospital use.

2.17 ACOUSTICAL PERFORMANCE SPECIFICATIONS - GENERAL

- A. It is the intent of this Specification that noise levels due to air conditioning and/or ventilating equipment, ducts, grilles and registers, diffusers and air light

fixtures, will permit attaining sound pressure levels in occupied spaces conforming to the following NC curves as explained in the ASHRAE Guide and Data Book.

Office and Class Rooms	NC-35
Labs, Multi-Purpose Room	NC-40
Corridors, Halls	NC-45

B. Grilles, Registers, Diffusers

1. Grilles, registers and diffusers to be selected for maximum 5 NC points below space NC criteria.

2.18 ACOUSTICAL PERFORMANCE WITHIN EQUIPMENT SPACES

- A. Equipment room noise levels and noise transmission to adjacent buildings shall comply with all Federal, State, and City Noise Ordinances.
- B. Motor Acoustical Performance:
 1. Motor drives for pumps and refrigerator machine when installed per plans and specifications shall operate with noise levels not to exceed 80 dbA.
 2. Noise levels shall be determined in accordance with IEEE Standard #85 test "procedure for Air-Borne Noise Measurements on Rotating Electric Equipment".

2.19 COMBINATION FIRE/SMOKE DAMPERS

- A. Smoke and fire/smoke dampers shall be construed in accordance with NFPA-90A, UL labeled in accordance with the most current edition of UL555 & UL555S, and BSA approved.
- B. Combination fire and smoke dampers shall be 1½ hour rated as a primary fire damper. They shall be UL Class I Leakage Rated (maximum leakage of 4 CFM/sq. ft. at 1" w.g.) as manufactured by Ruskin Mfg. Co., Imperial Damper and Louver, or approved equal.
 1. Combination fire and smoke dampers shall be Ruskin Mfg. Co. Model FSD60 (BSA #176-82-SM) with factory standard sleeve for installation in two hour building structure as required. For three hour rating provide Ruskin combination damper FSD 60-3.

2. Provide electric operator Model MA-418 (120V) and 24 volt transformer (if required).
3. Provide UL listed firestat with temperature rating not greater than 212°F or 50°F above highest air temperature in duct.

PART 3 - EXECUTION

3.01 INSPECTION

- A. Contractor shall examine location where ductwork is to be installed and determine space conditions and notify Architect in writing of conditions detrimental to proper and timely completion of the work.
- B. Do not proceed with the work until unsatisfactory conditions have been corrected.

3.02 INSTALLATION OF DUCTWORK

- A. Install ductwork in accordance with recognized industry practices, to ensure that ductwork complies with requirements and serve intended purposes.
- B. Coordinate with other work as necessary to interface installation or ductwork with other components of systems.
- C. Duct sizes shown on the drawings at connection to fans or other equipment may vary in actual installation. Contractor shall provide transition pieces as required.
- D. Ducts, casings and hangers shall be installed straight and level and shall be free of vibration and noise when fans are operating.
- E. Ducts at ceilings shall be suspended from inserts in concrete slabs except where otherwise indicated. Inserts shall be Grinnel Fig. 279, 282, or 152 as required. Ducts at floor shall be supported by steel angles suitably anchored to floor construction. Each duct shall be independently supported and shall not be hung from or supported by another duct, pipe, conduit or equipment of any trade.
- F. Supports shall be placed at each joint and change in direction up to a maximum spacing of 8 feet on centers. Prevent buckling of ductwork.

- G. All fastenings to building structure shall be adequate to insure permanent stability of sheet metal work and shall be capable of resisting all applied forces.
- H. Vertical ducts in shafts or passing through floors shall be supported by steel angles or channels, welded, riveted, screwed or bolted to ducts and fastened to building structural members at each floor level. Provide safing to close all floor openings around ductwork - pack annular space with rockwool and 18 gauge sheet metal safing. Floor openings in plenums shall have ½ inch diameter steel bars.
- I. Rigid connections between ductwork and non-rotating equipment shall be made with flanged joints, sealed with fireproof material (Fiber or Neoprene gaskets).
- J. It is the intent to obtain low pressure ductwork construction with minimum leakage. The construction noted in Specifications can produce low or high leakage rates, depending upon the workmanship, particularly with regard to the connection at the top of the ducts. Guarantee that total diffuser volume, measured by means of velometer, shall be at least 95% of actual fan supply (measured by means of a duct traverse taken with a Pitot tube and water manometer). Seal the ductwork at joints with suitable sealers 3M EC-800 and tape. Use of "HARDCAST" or any other material is subject to Architect's approval.

3.03 DUCT HANGERS

- A. Low pressure ducts up to 24" on a side or up to 20" diameter shall be suspended with 16 gauge, galvanized strap hangers, 1" wide.
- B. Low pressure ducts 25" to 40" on a side or 21" to 40" diameter shall be suspended with galvanized strap hangers 1" wide by ⅛" thick.
- C. Strap hangers shall be bent 90°, extended down sides of ducts and turned under bottom of ducts a minimum of 2". Strap hangers shall be fastened at ceiling with nuts, bolts and lock washers and to sides and bottom of ducts with sheet metal screws.
- D. All medium and high pressure ductwork and low pressure. Ducts 41" and larger on a side or diameter shall be

suspended with eighter rod or angle type hangers. No screws shall penetrate medium and high pressure ductwork.

- E. Rod type hangers shall be 3/8" diameter black steel rods threaded at both ends and bottom bracing angles on ducts, with nuts and lock washers.
- F. Angle type hangers shall be extensions of side bracing angles on ducts, bent 90° at ceiling and fastened with nuts, bolts and lock washers.
- G. Hangers for vertical ducts shall be as per SMACNA Duct Manual.
- H. Stainless steel ductwork shall be supported with aluminum rod or aluminum angle type hangers, so that there will be no penetration of the stainless steel ducts.
- I. Hangers for multi-purpose room (Gymnasium) shall be with vibration isolators. Coordinate with details.

3.04 CLEANING AND PROTECTION

- A. Clean ductwork internally, unit by unit as it is installed of dust and debris. Clean external surfaces of foreign substances, which might cause corrosion, deterioration of metal or interfere with painting.
- B. At end of ducts which are not connected to equipment or air distribution devices at the time of ductwork installation, provide temporary closure of polyethylene film or other covering.
- C. Cleaning of new and existing supply ductwork in existing buildings. After completion of ductwork installation clean ductwork as follows:
 - 1. Cover all supply registers and diffusers with oil cheese cloth.
 - 2. Use supply fan or install temporary fan to provide air to the system for four (4) hours.
 - 3. Remove oil cheese cloth.

END OF SECTION 15840

SECTION 15850
INSULATION FOR HVAC WORK

PART 1 - GENERAL**1.01 GENERAL REQUIREMENTS**

- A. This Section is coordinate with and complementary to the General Conditions and Supplementary General Conditions of the Work, wherever applicable to Mechanical Work.
- B. Section 15000 - Special Requirements for Mechanical and Electrical Work shall apply.

1.02 DESCRIPTION OF WORK

- A. The work includes furnishing and installing all labor, materials, equipment, accessories and services necessary to provide Piping, Ductwork and Equipment Insulation installation, which is complete in every respect and of the composition and quality as shown on the Drawings and hereinafter specified.

1.03 PIPE INSULATION

- A. The following pipes shall not be insulated. Insulate all other piping:
 - 1. Automatic air vent drain pipes.
 - 2. Gas and gas vent piping.
 - 3. Drain pipes embedded in concrete.
 - 4. Vent piping from duplex condensate pumps.
 - 5. Piping under radiation cover.

1.04 DUCTWORK INSULATION

- A. Insulate all ductwork except the following portions of ductwork:
 - 1. Ducts and casings internally insulated or provided with sound absorptive lining inside building.

1.05 QUALITY ASSURANCE

- A. "Installer": A firm with at least ten 10 years successful installation experience on projects with piping and ductwork insulation similar to that required for this project.
- B. All insulation shall have composite (including insulation jacket or facing and adhesive) fire and smoke hazard ratings as tested by procedure ASTM E-84, NFPA 255 and UL 723 not exceeding:
 - 1. Flame Spread 25
 - 2. Smoke Developed 50
 - 3. Fuel Contributed 50
- C. Accessories such as adhesives, mastics, cements, tapes and cloths for fittings shall have component ratings as listed above. All products shall bear UL labels indicating the above are not exceeded.
- D. Provide certifications or other data as necessary to show compliance with these Specifications and governing regulations. Include proof of compliance for test of products for fire rating, corrosiveness, and compressive strength.
- E. Provide products produced by the manufacturers which are listed in Section "Approved Manufacturers List".

1.06 SUBMITTALS

- A. Refer to Section 15000 - "Special Requirements for Mechanical and Electrical Work", and submit shop drawings and samples.

1.07 GUARANTEE

- A. Refer to Section 15000 - "Special Requirements for Mechanical and Electrical Work".

1.08 PRODUCT DELIVERY, STORAGE AND HANDLING

- A. Protect insulation against dirt, water, chemical and mechanical damage. Do not install damaged insulation; remove from project site.
- B. Deliver insulation, coverings, cements, adhesives and coatings to the site in factory-fabricated containers

with the manufacturer's stamp, or label, affixed showing fire hazard ratings of the products.

- C. Store insulation in original wrappings and protect from weather and construction traffic.

PART 2 - PRODUCTS

2.01 COLD TEMPERATURE PIPING INSULATION

- A. The following piping shall be covered with fiberglass insulation with vapor barrier of following thickness:

<u>Service</u>	<u>Thickness</u>
Chilled Water Supply & Return	
Up to 4"	1½"
5" and above	1½"
Chemical Treatment (Hot Water, Chilled Water)	1"
Cold Water Make-Up and Air Conditioning Unit Drains, Pumped Drains	
Up to 2" pipe	½"
Above 2½"	1"

- B. Insulation shall be glass fiber with a maximum K factor of 0.23 at 75°F mean temperature with factory-applied all service vapor barrier jacket. Density shall be not less than 3 lbs. per cubic foot.
- C. Insulation shall be heavy density fiberglass sectional pipe insulation as made by Owens-Corning Fiberglas Corp. or CSG's "Snap-On" or Manville "Flame-Safe" fiberglass insulation.
- D. ASJ longitudinal lap and 4 inch wide vapor barrier joint sealing strips shall be adhered with Benjamin Foster fire-resistant vapor barrier lap adhesive BF 85-75, or equal. Ends of pipe insulation shall be sealed off at all flanges, fittings, valves and at intervals of 21 feet on continuous runs of pipe, with Benjamin Foster fire-resistant vapor barrier coating BF-30-35 or equal.
- E. All fittings, valves and flanges for pipe sizes smaller than 4" shall be insulated with molded fiberglass fittings of same thickness as the adjoining pipe

- insulation, finished with Zeston 25/50 PVC outer jacketing as made by Manville.
- F. All fittings, valves and flanges for pipe sizes 4" and larger shall be insulated with fabricated mitered segments of pipe insulation of same thickness as the adjoining pipe insulation, finished with Zeston 25/50 PVC fitting covers as made by Manville.
- G. All coated molded fittings and mitered segments shall be vapor sealed with a layer of J-M Duramesh 207, or equal, open weave glass fabric embedded between two $\frac{1}{16}$ " thick coats of Benjamin Foster 30-35 and lap seal at least 1" for molded type and 2" for mitered type on itself and adjoining insulation.
- H. All fittings, valves and flanges exposed to view shall be additionally finished with J-M A-2070 fitting cloth or equal, smoothly adhered and coated with Benjamin Foster 30-36 and lap as described above.
- I. Direct contact between pipe and hanger shall be avoided. Hanger shall pass outside of a metal saddle which shall cover a section of high density insulation (such as calcium silicate) of sufficient length to support pipe without crushing insulation. Hangers shall not pierce insulation and all vapor barriers shall be unbroken and continuous.
- J. At pipe supports insulation shield protection saddles and matching hanger shall be used.
- K. All strainers for chilled water piping shall be insulated and boxed in with galvanized sheet metal cover, and insulation shall be made removable.

2.02 HOT PIPE INSULATION

- A. The following piping shall be covered with fiberglass insulation:

<u>Service</u>	<u>Thickness</u>
Hot Water Supply and Return (Below 249°F)	
Up to 2"	1½"
2½" and above	2"

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

- B. Insulation shall be glass fiber with a maximum K factor of 0.23 at 75° F mean temperature. Density shall be not less than 3 lbs. per cubic foot. Insulation shall be suitable for 650°F (2" minimum thickness above 450°F).
- C. Insulation shall be heavy density sectional pipe insulation as made by Owens-Corning Fiberglas Corp., or CSG's "Snap-On" or Manville "Flame-Safe" Fiberglass insulation.
- D. Longitudinal jacket laps and butt strips shall be smoothly secured with Benjamin Foster 25-20 adhesive or equal.
- E. All fittings, valves and flanges for pipe sizes smaller than 4" shall be insulated with molded fiberglass fittings of same thickness as the adjoining pipe insulation, finished with Zeston 25/50 PVC fittings as made by Manville.
- F. All fittings, valves and flanges for pipe sizes 4" and larger shall be insulated with fabricated mitered segments of pipe insulation of same thickness as the adjoining pipe insulation, finished with Zeston 25/50 PVC jacketing.
- G. All fittings, valves and flanges exposed to view shall be additionally finished with J-M A-2070 insulating fitting cloth or equal smoothly adhered and coated with Benjamin Foster 30-36. Lap to be at least 1" on pipe insulation below 4" and 2" on sizes 4" and above.
- H. Insulation shall be protected by saddles from hangers, guides and rollers.
- I. Strainers on hot pipes shall not be insulated.

2.03 PVC INSULATED FITTING COVERS

- A. The Contractor shall provide Zeston 25/50 rated PVC covers as made by Manville or approved equal.
- B. Hot Systems: Fittings shall be insulated by applying the proper factory precut Hi-Lo Temp insulation insert to the pipe fitting. The ends of the Hi-Lo Temp insulation insert shall be tucked snugly into the throat of the fitting and the edges adjacent to the pipe covering tufted and tucked in, fully insulating the pipe fitting. PVC fitting cover is then applied and shall be

- secured by tack fastening, banding or taping the ends to the adjacent pipe covering.
- C. On fittings where the operating temperature exceeds 250°, 2 or more layers of the Hi-Lo Temp insulation inserts shall be applied prior to the installation of the PVC fitting cover. The first layer shall be applied with a few wrappings of fiber glass yarn to eliminate voids or hot spots.
 - D. Cold Systems: Fittings shall be insulated by applying the proper factory precut Hi-Lo Temp insulation insert to the pipe fitting. The ends of the Hi-Lo Temp insulation insert shall be tucked snugly into the throat of the fitting and the edges adjacent to the pipe covering tufted and tucked in, fully insulating the pipe fitting.
 - E. A vapor barrier mastic compatible with the PVC shall be applied around the edges of the adjoining pipe insulation and on the fitting cover throat overlap seam. The PVC fitting cover is then applied and shall be secured with pressure sensitive pearl gray Z-Tape along the circumferential edges. The tape shall extend over the adjacent pipe insulation and have an overlap on itself at least 2" on the downward side.
 - F. 2 or more layers of the Hi-Lo Temp insulation inserts shall be applied with the first layer being secured with a few wrappings of fiberglass yarn.
 - G. Refrigerant systems and cold systems in severe ambient conditions: Fittings shall be insulated to a full thickness the same as the adjacent pipe insulation, with insulation which has been mitered to conform to the PVC fitting cover. An intermediate vapor barrier compatible with the PVC shall be applied, completely sealing the insulation and on the fitting cover overlap seam. The PVC fitting cover is then applied and shall be secured with pressure sensitive pearl gray Z-Tape along the throat seam and the circumferential edges overlapping itself 2" on the downward side.
 - H. Qualifications for Using Insulation: When the pipe insulation thickness is greater than 1½" or the pipe temperature is greater than 250°F or less than 45°F, additional insulation inserts should be used. Use one Hi-Lo Temp insert for each additional 1" of pipe insulation.

- I. Fitting cover: The temperature of the PVC fitting cover must be kept below 150°F by the use of proper thickness of insulation and by keeping the PVC cover away from contact with, or exposure to, sources of direct or radiant heat.

2.04 INSULATION OF PIPING IN UNIT VENTILATOR UNITS

- A. The Contractor shall have the option to use ¾" thick Armaflex II as made by Armstrong Co. pipe insulation in lieu of fiberglass hereinbefore specified for chilled and hot water piping insulation in unit ventilator and fan coil units cabinets. Pipe insulation shall meet flame spread index of 25 and smoke density of 100 when tested in accordance with ASTM-E-84.

2.05 PIPING EXPOSED TO FREEZING

- A. Insulation on any piping, fitting, flange and valve located in areas exposed to freezing (in unheated areas, and where noted on the Drawings as to provide "Frost Insulation") shall, in addition to above covering, be increased by one inch with the same finish as specified for the particular service when not subject to freezing. Insulation shall always be a minimum of 2½" inches in thickness.
- B. Weatherproofing of Piping:
1. Weatherproofing all insulated outdoor piping.
 2. Where weatherproofing is required, in addition to insulation and finishes specified for frostproofing, cover with Tedlar Film Jackets as made by ALPHA Assoc, Inc. (Woodbridge N.J.).
 3. Fittings insulation shall be heavily coat with weatherproof mastic. Embed into the wet coat a layer of open weave glass cloth and finish with a second coat of same mastic over entire surface.
 4. Where weatherproofing is required, in addition to insulation and finishes specified for frostproof, cover with crimped aluminum sheet .016 inch thick with lock seams at longitudinal seams, and preformed straps at transverse joints. Joints and jacket shall provide complete weatherproof protection either by mechanical contact or by use of a permanently plastic weatherproof sealant.

2.06 FIRE STOPPING

- A. Packing of openings, where ducts and pipes penetrate fire barriers, shall be done with Rockwool insulation as made by United States Gypsum, Co.
- B. Insulation shall comply with Fed. Spec. HH-1-558, Form A, Class 4, K=0.24, melting point 2000°F.

2.07 DUCTWORK INSULATION

- A. Insulation for Concealed Duct
 - 1. Except where otherwise noted, all concealed rectangular and round ductwork shall be covered with flexible duct insulation with or without vapor barrier and of the thickness indicated below.

<u>Service</u>	<u>Thickness</u>	<u>With</u>
Cold and Hot Air Supply Ducts	1½"	Vapor Barrier
Return Air Ducts	1½"	Vapor Barrier
Hot Supply Ducts	1½"	Vapor Barrier
Outside Air Duct	1½"	Vapor Barrier
Sound traps	1½"	Vapor Barrier

- B. Flexible duct insulation with vapor barrier shall be 1 lb. per cu. ft. density glass fiber with a maximum K factor of 0.29 at 75°F mean temperature, with reinforced foil-faced, flame resistant reinforced aluminum foil vapor barrier.
- C. Insulation with vapor barrier shall be duct wrap insulation FRK-25, type 100 as made by Owens-Corning or Manville Microlite with FRK vapor barrier facing or standard duct insulation as made by CGG with FRK facing.
- D. Flexible duct insulation without vapor barrier shall be 1lb. per cu. ft. density glass fiber with a maximum K factor of 0.29 at 75°F mean temperature and shall be Owens Corning Fiberglass Type 75P, Manville Microlite or approved equal.
- E. Adhere insulation to duct with Foster fire resistant adhesive 30-20 or equal, applied in 4 inch wide transverse strips at 8 inch intervals. Insulation shall be butted with facing overlapping all joints at least 2 inches and sealed with Foster fire resistant adhesive 30-20 or equal. For insulation with vapor barrier use

Foster fire resistant vapor barrier adhesive or approved equal and joints without tabs shall be firmly sealed with aluminum foil tape adhered with same adhesive. Secure insulation with 18 gauge corrosion resistant annealed wire spaced not more than 18 inches on center.

F. Additionally, secure insulation to bottom of rectangular ducts over 24" wide with welded pins or stick clips on 18" centers.

G. Insulation for Exposed Rectangular Duct (exposed to view)

1. Except where otherwise noted, all exposed rectangular ductwork including supply, return air ducts for Gymnasium/Multi-purpose room, shall be covered with rigid duct insulation with and of the thickness indicated below.

<u>Service</u>	<u>Thickness</u>	<u>With</u>
Cold and Hot Air Supply Ducts in Mechanical Equipment Rooms	1½"	Vapor Barrier
Return Air Ducts in Mechanical Equipment Room	1½"	Vapor Barrier
Cold and Hot Air Supply Ducts Except where otherwise noted	1½"	Vapor Barrier
Cold and Hot Air Return Air Ducts Except where otherwise noted	1½"	Vapor Barrier
Outside Air Intake Ducts	2"	Vapor Barrier
Sound Traps	1½"	Vapor Barrier
Outside and Return Mixed Air Duct	1½"	Vapor Barrier
Hot Supply Duct	1½"	Vapor Barrier
Exhaust Air Plenum or Duct Behind Louver up to Automatic damper	1½"	Vapor Barrier
Exhaust Ducts connected to penthouse louvers or goosenecks up to damper	1½"	Vapor Barrier

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

Unused portion of Louvers

2" in 20 gauge sheetmetal sandwich.

2. Rigid duct insulation with vapor barrier shall be 6 lbs. per cu. ft. density glass fiber with maximum K factor of 0.22 at 75°F mean temperature with fire retardant vapor barrier facing with reinforced aluminum foil and all service jacket (white finish).
3. Rigid duct insulation with vapor barrier shall be Fiberglass Type 705 by Owens-Corning or Manville, No. 817 w/ASJ or approved equal.
4. Rigid duct insulation without vapor barrier shall be 6 lbs. per. cu. ft. density glass fiber with maximum K factor of 0.22 at 75°F mean temperature. With fire retardant facing foil reinforced draft. (all service jacket).
5. Rigid duct insulation without vapor barrier shall be Fiberglass type 705 by Owens-Corning, Manville, No. 817 w/ASJ or approved equal.
6. Insulation shall be fastened to duct with 12 gauge welded pins and washers, or equivalent as approved. Fasteners shall be spaced 12 to 18 inches on center, a minimum of two rows per side of duct. Secure insulation in place with washers firmly embedded in insulation, or push a self-locking cap over pin after coating with fitting mastic type C by Owens-Corning or approved equal.
7. Seal all joints, breaks and impressions with Foster fire resistant vapor barrier adhesive Benjamin Foster 82-07, or equal, and apply 5" wide joint sealing tape to all joints. All surface must be clean and dry before applying tape.

H. Insulation for Exposed Round Duct

1. Insulation for exposed round ductwork shall be of material as specified for concealed ductwork and shall be covered with glass cloth or all service jacket smoothly adhered with Benjamin Foster 85-20 adhesive. Seal joints with 5" wide tape.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

<u>Service</u>	<u>Thickness</u>
Cold and Hot Air Supply Ducts in Mechanical Equipment Rooms	1½" with vapor barrier
Air Conditioning Return Air Ducts in Mechanical Equipment Rooms	1½" with vapor barrier
Cold and Hot Air Supply Ducts Except where otherwise noted	1" with vapor barrier
Hot Supply Duct	1"
Return Air Fan for Air Conditioning Units.	1½" with vapor barrier

2. The Contractor shall have the option to use the following material: Insulation for round ducts shall be of thickness noted above and shall be fiberglass Bend-a-Board having a factory applied ASJ vapor barrier jacket secured with staples and ASJ pressure sensitive tape. Bend-a-Board is a 3.00 p.c.f. board cut into strips, adhered to jacketing it must have a UL label.
3. Transition ductwork at sound traps shall be insulated with 1" thickness, 6 lb. density, fibrous glass board with reinforced aluminum vapor barrier, Owens-Corning Series 705, or approved equal. Fasten insulation in place with welded pins and washers or equivalent mechanical fastening method, as approved. Seal all joints with vapor barrier adhesive to provide continuous vapor barrier. All edges, corners and joints, reinforced with 4" wide tape. Tape, of type, and applied in strict conformance with manufacturer's recommendations. Over the insulation apply a flood coat of Benjamin Foster 30-36 or equal vapor seal coating. Provide fiberglass fitting tape or glass cloth smoothly adhered with Benjamin Foster 85-20 adhesive.

I. Weatherproofing Finishes for Outdoor Insulation

1. Outdoor round duct shall be finished with Aluminum Jacketing with factory applied moisture barrier as manufactured by the Premetco Aluminum Jacket, or approved.

2. Jacketing shall be applied with minimum 2 inch overlaps facing down from the weather and the jacketing shall be secured with aluminum bands $\frac{1}{2}$ inch by 0.020 inches and aluminum wing seals applied on 12 inch centers, with bands applied directly over butt overlaps or with Pli-Grip Rivets. Where jacketing is cut out or aduts an uninsulated surfaces, the joint shall be sealed with Insul-Cooustic Sure-Joint 405.
3. Fittings, valves and other irregular surfaces shall be protected with two coats of Marathon Vi-AC Mastic, I-C 551, with Vi-AC open weave glass cloth membrane between the coats. The total thickness of the coats shall be $\frac{1}{8}$ inch when dry.
4. Outdoor rectangular ductwork shall be finished with Marathon Vi-AC Mastic, I-C 551, Gray (or color as selected by Architect). Over the insulated surface apply a tack coat of Vi-AC Mastic and embed in it a layer of Vi-AC, glass cloth. A smooth finish coat of Vi-AC Mastic shall be applied to the entire area so that the total film thickness is a minimum of $\frac{1}{8}$ inch. Provide high point at center, so that no water accumulation will occur. Insulation shall be minimum 3 inch thick, in two overlapping layers; shall extend beyond support angles.

2.08 EQUIPMENT INSULATION

- A. Heating and cooling system expansion tanks, chemical treatment tanks, accessories, in-line air separators, heat exchangers, condensate return unit receivers, accessories shall be insulated with 2" thick calcium silicate, 85% magnesium or Kaylo blocks or N-1200 Block as made by Forty-Eight Insulations Inc., laid with staggered joints and secured in place with No. 16 gauge galvanized annealed steel wire for small areas and No. 12 gauge galvanized annealed steel wire or $\frac{1}{2}$ " x 0.015" galvanized steel bands on 12" maximum centers for large areas. Where required, welded studs, clips or angles shall be provided as anchors for wires and bands.
- B. Over the insulation, 2" hexagonal mesh wire shall be tightly stretched in place and secured by wiring to anchors with edges tied together.
- C. Finish shall be insulating and finishing cement J-M NO. 301 or approved equal applied $\frac{1}{2}$ " thick in one coat,

troweled to a smooth finish. Provide presized glass cloth, smoothly adhered with B-F 85-20 adhesive over cement. Provide 18 gauge jacketing all around.

- D. Heat exchanger insulation shall be finished with .016" aluminum jacketing banded in place with ½" aluminum bands 12" on center.
- E. Hot water and chilled water pump casings shall be encased in 20 oz. copper casings, gasketed and bolted together with brass bolts, washers and nuts, removable in two sections and packed with 3" thick dry granulated cork, or 2" thick 1 lb. density fiberglass blanket insulation.
- F. The Contractor shall have the option to use 2" thick fiberglass Bend-a-Board insulation with ASJ. Vapor barrier for expansion tank and air separator insulation.
- G. Sound traps shall be insulated same as the connecting ductwork.
- H. Kitchen hood exhaust ductwork: Insulate with calcium silicate 2" thick, wired on, finished with ¼" hard coat of fire retardant cement applied over 1 inch hexagonal mesh wire. Provide 0.016" gauge aluminum jacketing and secure watertight. Insulated ductwork throughout including exterior ductwork. Exterior insulation to be weatherproofed, with mastic, jacketed, watertight with 16 gauge aluminum jacketing and stainless steel bands every 12 inches center.

PART 3 - EXECUTION

3.01 INSPECTION

- A. Contractor shall examine location where this insulation is to be installed and determine space conditions and notify Architect in writing of conditions detrimental to proper and timely completion of the work.
- B. Do not proceed with the work until unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Install insulation in accordance with manufacturer's written instructions, and with recognized industry practices, to ensure that insulation complies with requirements and serves intended purposes.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

- B. Coordinate with other work as necessary to interface installation of insulation with other components of systems.
- C. All insulating materials shall be applied only by experienced workmen, in accordance with the best covering practice. All piping, duct or equipment shall be blown out, cleaned, tested and painted prior to the application of any covering. Adhesives, sealers and mastics shall not be applied, when the ambient temperature is below 40°F., or surfaces are wet.
- D. Insulation for factory-fabricated air handling units, furnished as part of units.
- E. At all openings in insulation, insulate edges neatly and protect with sheet metal frames.
- F. All items described in general indicate the type of covering required, however, all piping, ductwork or equipment that transmits heat or will form condensation shall be insulated.
 - 1. All piping and ductwork insulation shall be continuous through non-fire rated ceiling openings and sleeves passing through non-fire rated walls or floors. Sleeves shall be packed with mineral wool or thermofiber. Discontinue insulation as it passes through fire-rated wall or floor and use mineral wool or thermofiber packing instead. Specific mastics, adhesives and coating shall be applied in strict accordance with Manufacturer's instruction, including recommended coverages.
 - 2. Where packaged type units are called for in the Specifications, or as scheduled on the Drawings, the insulation shall be as herein specified for the specific system.
 - 3. All valved and capped outlets left for future work shall be insulated as herein specified for the specific systems with a removable section of insulation over caps.
 - 4. Where insulation on existing piping, equipment, etc., has been cut, removed or damaged, this Contractor shall reinsulate as herein specified.
 - 5. All insulation of access doors shall be set in sheet metal double-pan construction.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

3.03 PROTECTION

- A. The installer of the ductwork insulation shall advise the Contractor of required protection for the insulation work during the remainder of the construction period, to avoid damage and deterioration.

END OF SECTION 15850

SECTION 15900
TESTING AND BALANCING

PART 1 - GENERAL**1.01 GENERAL REQUIREMENTS**

- A. This Section is coordinate with and complementary to the General Conditions and Supplementary General Conditions of the Work, wherever applicable to Mechanical Work.
- B. Section 15000 - Special Requirements for Mechanical and Electrical Work shall apply.

1.02 DESCRIPTION OF WORK

- A. All piping and equipment shall be tested. Labor including standby electrician, materials, instruments and power required for testing shall be furnished unless otherwise indicated under the particular Section of the Specification.
- B. Tests shall be performed in the presence of and to the satisfaction of the Architect and such other parties as may have legal jurisdiction.
- C. In no case shall piping, equipment, or accessories be subjected to pressure exceeding their ratings.
- D. All defective work shall be promptly repaired or replaced and the tests shall be repeated until the particular system and component parts thereof receive the approval of the Architects.
- E. Any damage resulting from tests to any and all trades shall be repaired and damaged materials replaced, all to the satisfaction of the Architect.
- F. The duration of tests shall be as determined by all authorities having jurisdiction, but in no case less than the time prescribed below.
- G. Equipment and systems which normally operate during certain seasons of the year shall be tested during the appropriate season. Tests shall be performed on individual equipment, systems, and their controls. Whenever the equipment or system under test is interrelated and depends upon the operation of other equipment, systems and controls for proper operation,

functioning and performance, the latter shall be operated simultaneously with the equipment or system being tested.

- H. All fans and duct systems shall be completely balanced by the adjustment of sheaves, dampers, registers and other volume and diverting control devices, to obtain the air quantities indicated on the design drawings. Replace sheaves if required to meet design conditions.
- I. All pumps and piping systems shall be completely balanced by the adjustment of plug cocks, globe valves or other control devices, to obtain flow quantities indicated on the design drawings.
- J. Tests shall be performed in presence and to satisfaction of Architect, and such other parties as may have legal jurisdiction. Submit completed reports for approval.

1.03 QUALITY ASSURANCE

- A. Prior to installation of the mechanical systems, engage the services of an independent air and water balancing firm that shall be subject to the approval of the Architect. The firm shall have no affiliation with a mechanical contracting or sheetmetal company. Balancing and testing company shall be a member of the Associated Air Balance Council. The balancing firm shall have at least one member of its full time staff who is a licensed professional engineer who shall supervise the balancing work. Prior to balancing, a list of instruments to be used shall be submitted to the Architect. All instruments shall be calibrated within six months before tests.

1.04 SUBMITTALS

- A. Refer to Section 15000 "Special Requirements for Mechanical and Electrical Work". Submit all test and balancing reports as described hereinafter.

PART 2 - PRODUCTS (NOT APPLICABLE)

PART 3 - EXECUTION

3.01 FIELD TEST OF PIPING

- A. During construction properly cap or plug all lines to prevent the entrance of sand, dirt, etc. The system of piping shall be blown through wherever necessary after

completion (for the purpose of removing grit, dirt, sand, etc., from all equipment and piping), for as long a time as is required to thoroughly clean the apparatus.

- B. Use anti-freeze solution for piping to be tested in winter.
- C. All piping shall be tested as hereinafter specified. Tests shall be made after erection and before covering is applied or piping painted or concealed, and as sections of mains and groups of risers are completed. The extent of the work completed before pressure tests are made shall be determined by the Architect. Test existing and new hot water piping throughout.
- D. All piping, unless otherwise specified, shall be tested to a hydrostatic pressure at least 1-1/2 times the maximum designed working pressure (but not less than 50 lbs. per square inch) for a sufficiently long time to detect all leaks and defects; and after testing shall be made tight in the most approved manner. Tests shall be repeated once after leaks and defects have been repaired. When automatic control valves, equipment and similar devices which are incapable of withstanding test pressures applied to piping, such devices shall be removed, or otherwise protected during tests. After approval of such tests, devices shall be installed and tested with medium operating pressures. The following shall be tested for four consecutive hours and proved tight. Leaks shall be remedied by replacing defective work.

Hydrostatic Item	Field Test
Overflow and drain	50 psi
Cold Water (domestic)	100 psi
Hot water heating	100 psi
Gas	50 psi
Gas Vent	50 psi
Chilled water	100 psi
Chemical Treatment -Chilled water	100 psi
-Hot water	100 psi
Vent -Water discharge	100 psi

- E. Leaks appearing during the various pressure tests shall be corrected by replacing all defective materials or welds and subsequent tests shall be made until the piping is found perfect. Caulking of screwed joints or pending of welds is prohibited. Wherever it is necessary to cut out a weld and the ends of the pipe cannot be

conveniently brought together, then a short piece of pipe shall be fitted in and welded as approved by the Architect.

- F. Provide all other tests required by the Building Department, Fire Department and all other authorities having jurisdiction.

3.02 RUNNING TEST OF PIPING SYSTEMS

- A. When directed, any section of the work, after it has been completed and otherwise satisfactorily tested, shall be put in actual operation and operated for a period of one (1) day of 24 hours each, during which time any defects which may appear shall be remedied and any adjustment which may be necessary shall be made.
- B. During the time of the tests, repack all valves, make all adjustments and otherwise put the apparatus in perfect condition for operation, and instruct the Owner's representative in the use and management of the apparatus.

3.03 RUNNING TEST OF AIR COOLED CHILLER

- A. After the refrigeration equipment, piping and accessories have been tested and insulation applied, run the entire system for an 8-hour period. During this time, introduce upsets in all control devices to check their operation. After all devices have been tested and control system proved to function satisfactorily, reset the controls to the proper settings as directed by the Architect. The test of the overall performance shall be done in the presence of the chiller manufacturer and the Owner's representatives. After the controls have been tested and proved satisfactory, the system shall be run under automatic control and the following data shall be logged:
 - 1. Outside wet bulb temperature.
 - 2. Chilled water supply and return temperatures set points.
 - 3. Ampere nameplate rating of each motor.
 - 4. Actual ampere reading and voltage for each motor.
 - 5. Actual Chilled water supply and return temperatures.
 - 6. Compressor suction pressure and temperatures.
 - 7. Compressor discharge pressure and temperatures.
 - 8. Suction and discharge pressure at each pump.
 - 9. Water pressure drop across chiller.

10. Water pressure drop across water strainers when the strainers are clean.

3.04 EQUIPMENT TEST

- A. Demonstrate that all equipment and apparatus fulfill the requirements of the Specifications and that all equipment shall be operated and tested for rated capacities and specified characteristics. Voltage and amperage readings shall be taken on all electric motors.
- B. Set the system up to operate with maximum return air and minimum outside air.
- C. The following preliminary data should be obtained and recorded at the supply and return fans:
 1. Fan and motor RPM.
 2. Motor and current voltage.
 3. Fan, coils and filter statics.
 4. Nameplate data on the fans and motors.
 5. Motor sheave, fan pulley and belt sizes.
- D. Traverse the main supply ducts and return ducts to determine CFM deliveries of the fans.
- E. Set the system to operate at 100% outside air and check the motor amperage. The motor amperage should remain relatively constant indicating no change in total air flow. If a change in flow does occur, adjust outside air, return air, and relief air dampers accordingly.
- F. Measure the system duct static pressure at selected points throughout the system. Monitoring points shall be in those duct runs which are of the longest equivalent length (greatest friction loss). Monitor these points during the adjusting and balancing procedures to assure proper inlet static pressure is being maintained.
- G. Adjust the return fan to approximately 5% above design CFM and the supply fan to either 5% above design or to the point where the static pressure at the end of each branch is at required static pressure, whichever condition is reached first.
 1. If the fan is adjusted to obtain the minimum static pressure, then it may be necessary to readjust the fan during the balancing as the static pressure

will decrease as the constant volume controller deliveries are increased.

- H. Make preliminary outlet readings and balance the outlets to design CFM and record all readings.
- I. Provide two sets of belts, pulley, drives for each fan. One set for initial balancing, second set for final balancing.
- J. Adjust the damper minimum position so the outlet total CFM is at the design minimum delivery. At the minimum delivery rate, the balance between the outlets may not hold, but no outlet adjustments should be made.
- K. Adjust the outlets for design delivery.
- L. The following final data should be obtained and recorded at the supply and return fans:
 - 1. Fan and motor RPM.
 - 2. Motor current and voltage.
 - 3. Fans, coils and filter statics
 - 4. Approximate motor sheave setting
- M. Check the following controls:
 - 1. Economizer system function, calibration, etc. All improperly operating items shall be promptly repaired or replaced and the tests shall be repeated until the particular system and component parts thereof receive the approval of the Architects.
- N. Test heat exchangers for capacity required, GPM, water temperature in and out and provide reports recording all data, test, adjust, balance water for existing boilers. Test existing boilers to provide required GPM flow, water temperature, proper firing in sequence. Adjust controls for proper operation.

3.05 TEST PREPARATION AND PROCEDURE

- A. On initial startup, prior to any tests, check the rotation and running amperage of all fan and pump motors to prevent damage to equipment by overload.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

- B. Final balancing must be done with all systems completely installed and operating, and after the automatic temperature controls have had their final adjustment.
- C. New, clean filters must be installed in all supply systems prior to balancing.
- D. All water systems shall be completely filled and vented, and all strainers cleaned prior to balancing. Inspect expansion tanks for proper water level and operating of makeup water valves.
- E. All main supply air ducts shall be traversed, using a pitot tube and manometer. The manometer shall be calibrated to read two significant figures in all velocity pressure ranges.
- F. A main duct is defined as either of the following:
 - 1. A duct serving five or more outlets.
 - 2. A duct serving two or more branch ducts.
 - 3. A duct serving a reheat coil.
 - 4. A zone duct from a multizone unit.
 - 5. A duct emanating from a fan discharge or plenum and terminating at one or more outlets.
- G. The intent of this operation is to measure by traverse the total air quantity supplied by the fan and to verify the distribution of air to zones.
- H. Submit data in support of all supply fan deliveries by the following four methods:
 - 1. By summation of the air quantity readings at all outlets.
 - 2. By duct traverse of main supply ducts.
 - 3. By a rotating vane traverse across a filter or coil bank.
 - 4. By plotting RPM and static pressure readings on the fan curve. Air density corrections must be indicated.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

- I. For return air and exhaust fans, summation and duct traversing shall be sufficient.
- J. Inspect all fan scrolls and remove objects or debris. Inspect all coils and remove debris or obstructions. Verify that all fire dampers are open.
- K. The supply air systems shall be completely balanced prior to the final balancing of the water systems.
- L. Upon completion of all air and water balancing, all duct dampers, plug valves and other throttling devices shall be marked in the final adjusted position.

3.06 AIR BALANCE

- A. Record the following design requirements for all fans and fan motors from the approved shop drawings.
 - 1. Air quantities - CFM
 - 2. Approximate fan speed - RPM
 - 3. Fan static pressure (total or external) - inches of water.
 - 4. Maximum tip speed - FPM
 - 5. Outlet velocity - FPM
 - 6. Fan brake horsepower
 - 7. Motor horsepower
 - 8. Volts, phases, cycles and amps at design conditions.
- B. Record the following data from all fans and fan motors installed at the project:
 - 1. Manufacturer, model and size
 - 2. Motor horsepower, service factor and RPM
 - 3. Volts, phases, cycles and full load amps
 - 4. Motor starter and heaters size
 - 5. Equipment location
- C. All fans and duct systems shall be completely balanced by the adjustment of sheaves, dampers, registers and other volume and diverting control devices, to obtain the air quantities indicated on the Drawings. Outside air and return air modulating dampers shall be adjusted to admit the specified quantities of air under all cycles of operation. All final adjusted air quantities shall be within 10% of the design requirements. Replace sheaves, belts, drives if required to meet design conditions.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

- D. Record the following test data for all fans and motors installed at the Project at final balanced conditions:
 - 1. Fan speed RPM.
 - 2. Fan static pressure (external and total) inches of water.
 - 3. Static pressure drop across all filters, dampers, coils and other items in the supply fan casings.
 - 4. Motor operating amps.
 - 5. Actual voltage
 - 6. Fan CFM
 - 7. Calculated brake horsepower.
- E. Submit single line diagrams of all duct systems indicating all terminal outlets identified by number. Data sheets shall list all such outlets denoted by the same numbers, including the outlet's size, "K" factor, location, CFM and jet velocity.
- F. Submit this data for all supply, return and exhaust air systems.
- G. Adjust the outside air and return air dampers to admit the required amounts of air under both summer and winter cycles. Record and submit the outside, return and mixed air temperatures for both cycles after final adjustments.
- H. Air balancing shall be performed with filters partially blocked to simulate a pressure drop across the filters equal to that midway between the clean and the dirty condition.
- I. Operate air conditioning systems in summer, winter mode of operations, economizer operations. Calibrate, adjust minimum, maximum positions of dampers. Calibrate, adjust valves, sensors for proper operations. Verify noise. Correct all deficiencies.
- J. Test, adjust each fan coil, unit ventilator. Verify operation of valves, dampers. Verify noise. Correct all deficiencies.

3.07 WATER BALANCE

- A. Record the following design requirements for all pumps and pump motors from the approved shop drawings:
1. Water quantity - GPM
 2. Total head - feet of water
 3. Pump speed - RPM
 4. Impeller size
 5. NPSH (if required)
 6. Motor horsepower
 7. Volts, phases, cycles and amps at design conditions
- B. Record the following data from all pumps motors installed at the project:
1. Manufacturer, model and size.
 2. Impeller size
 3. Motor horsepower, service factor and RPM
 4. Volts, phases, cycles and full load amps
 5. Motor starter and heaters size
 6. Equipment location
- C. All pumps and piping systems shall be completely balanced by the adjustment of plug cocks, globe valves or other control devices, to obtain the flow quantities indicated on the Drawings. Balancing shall be done with all controls set for full flow through coils. All automatic throttling valves shall be in the full-open position. All automatic three-way valves shall have the bypass port closed.
- D. Record the following test data for all pumps and pump motors installed at the Project:
1. Pump speed - RPM
 2. Total head at shut-off or dead-end discharge - feet of water. (Plot this value on pump curve as a verification of impeller size.)
 3. Suction, discharge and total head at final adjusted flow - feet of water.
 4. Volts, phase, amps at test conditions.
- E. Balance the water flow through all chillers, coils, convertors, cabinet heaters, heat exchangers, unit

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

heaters, unit ventilators, etc., in accordance with design requirements.

- F. For all calibrated type balancing valves, or other flow measuring devices record the pipe size, manufacturer and size of device, and the direct reading or the differential pressure, and calculated final flow.
- G. Upon completion of the water balance, reconcile the total heat transfer through all coils by recording the entering and leaving water temperatures and the entering and leaving air dry bulb and wet bulb temperatures.
- H. Upon completion of balancing adjust all differential bypasses and three-way valve bypasses for the same pressure drop or full bypass as on full flow.

END OF SECTION 15900

SECTION 15950
AUTOMATIC TEMPERATURE CONTROLS

PART 1 - GENERAL**1.01 GENERAL REQUIREMENTS**

- A. This Section is coordinated with and complementary to the General Conditions and Supplementary General Conditions of the Work, wherever applicable to Mechanical Work.
- B. Section 15000 - Special Requirements for Mechanical and Electrical work shall apply.

1.02 DESCRIPTION OF WORK

- A. The work includes the providing of all labor, materials, equipment, accessories, services and tests necessary to complete and place into satisfactory operation a complete system of DDC automatic temperature controls and Building Automation System (BAS) as shown on the drawings and hereinafter specified. Word DDC and BAS means same for this project.
- B. The control system shall be of the "electric/electronic", microprocessor based, unless otherwise indicated, all as hereinafter specified. Control equipment shall be as manufactured by Trane Co., Johnson Controls, Siemens. All controls shall be the product of one manufacturer. The temperature control manufacturer shall be responsible for the quality and satisfactory operation of material provided but not actually manufactured by him.
- C. The control system shall include all control and interlock wiring to and from devices, valves, panels, controllers, dampers, sensors, relays, to motor controllers, contactors, etc. All control circuits shall be 120 volts.
- D. Provide nameplates on all devices, whether or not mounted on the face of local control panels. In occupied areas, nameplates shall be concealed beneath covers of room type instruments, to describe functions.
- E. System shall be DDC unless noted otherwise, complete with local controllers, master panels, software, workstation, system graphics, communication loop.

- F. Any deviations and/or substitutions to this specification shall be identified in writing prior to field installation and shall be identified sufficiently early enough in the submittal process to allow the Engineer to properly review and act upon such a deviation/substitution from the specification. Any incidental or consequential costs arising out of the proposed deviation or substitution, including engineer's review costs, schedule impacts, or additional installation expense to any of the project team shall be borne solely by the contractor initiating such a deviation.
- G. The DDC system shall be a BacNet compliant system, which shall communicate to all primary level DDC controllers. This contractor shall be fully responsible for the implementation of this BacNet interface, which shall include the software, gateways, routers, repeaters, vendor specific devices and technical support labor from the equipment manufacturer. Non-BacNet compliant DDC systems or systems which fail to implement this interface, shall have all the specified DDC points hardwired to the DDC system at no additional cost to the owner.
- H. Direct Digital Control (DDC) technology shall be used to provide the functions necessary for control of mechanical systems on this project.
- I. The control system shall accommodate simultaneous multiple user operation. Access to the control system data should be limited only by operator password. Multiple users shall have access to all valid system data. An operator shall be able to log onto any workstation on the control system and have access to all appropriate data.
- J. The control system shall be designed such that each mechanical system will be able to operate under stand-alone control. As such, in the event of a network communication failure, or the loss of any other controller, the control system shall continue to independently operate under control.
- K. Communication between the control panels and all workstations shall be over a high-speed network. All nodes on this network shall be peers. The operator shall not have to know the panel identifier or location to view or control an object. Application Specific Controllers

shall be constantly scanned by the network controllers to update point information and alarm information.

- L. Provide all points as listed on the equipment specifications, sequence of operation and DDC Point List. These points lists shall define the minimum point requirements of the DDC system. The DDC system shall be capable of displaying each point and controlling each point from the associated system graphics on the PCWS.
- M. The documentation is schematic in nature. The Contractor shall provide hardware and software necessary to implement the functions and sequences shown.

1.03 QUALITY ASSURANCE

- A. Only firms regularly engaged in manufacture and installation of this equipment with characteristics and capacities required and whose products have been installed by them and are in satisfactory use in similar service for not less than 10 years will be acceptable.
- B. All control equipment used in this project shall have been successfully proven in actual field installations for a period of two (2) years prior to the date of submittal of said equipment to the Architect for approval.
- C. The control system shall be installed, integrated, commissioned, complete in all respects by competent factory trained mechanics, regularly employed by the manufacturer of the control system.
- D. Provide system flow diagrams with devices, valves, dampers, with tag for each equipment, system, operating points, min./max. set points, limits. Provide system architecture with all component panels, controllers.

1.04 SUBMITTALS

- A. Refer to Section 15000 - Special Requirements for Mechanical and Electrical Work and submit shop drawings.
- B. Complete shop drawings shall be submitted to the Architect for approval before any field installation is started. Such drawings shall give a complete description of all control elements and shall show completed schematic piping and wiring diagrams, including

functional description. Valve and damper schedules shall be included.

- C. Floor plans indicating all room thermostat locations not shown on the Drawings, and samples of each type, shall be prepared and submitted to the Architect for approval before installation. Samples of unitary controls shall also be submitted for approval, and a typical assembly shall be field erected, before installation. All room controls shall be mounted five feet above finished floor.

1.05 RELATED WORK UNDER ELECTRICAL WORK

- A. All power wiring for pumps, fans, unit heaters, clocks, air compressors, aftercooler, etc. See Special Requirements for Mechanical and Electrical Work.

1.06 COORDINATION

- A. Refer to Section 15000 - Special Requirements for Mechanical and Electrical Work.

1.07 GUARANTEE

- A. Refer to Section 15000 - Special Requirements for Mechanical and Electrical Work.
- B. The control system herein specified shall be free from defects in workmanship and material under normal use and service. If, within one year from date of acceptance by the Architect, any equipment herein described is proved to be defective in workmanship or material, it shall be adjusted, repaired or replaced, free of charge, during the guarantee period.

1.08 OWNER'S MANUALS

- A. General

- 1. Submit two (2) draft copies of owner's manuals for review. After review by authorized representative, the contractor shall incorporate review comments and submit four (4) interim final copies. Upon completion of project, acceptance of project by the owner, submit six (6) copies of final "as built" manuals and one (1) reproducible copy (3-mil sepia mylar).

2. Update manuals with modifications made to system during guarantee period. Provide replacement pages or supplements in quantity stated above for "as built" manuals.
- B. Operating manual to serve as training and reference manual for all aspects of day-to-day operation of the system. As a minimum include the following:
1. Control flow diagrams for all building systems.
 2. Sequence of operation for automatic and manual operating modes for all building systems. The sequences shall cross reference the system point names.
 3. Description of manual override operation of all control points in system.
 4. BAS/DDC system manufacturer's complete operating manuals.
- C. Provide maintenance manual to serve as training and reference manual for all aspects of day-to-day maintenance and major system repairs. As a minimum include the following:
1. Complete as-built installation drawings for each building system.
 2. Overall system electrical power supply scheme indicating source of electrical power for each system component. Indicate all battery backup provisions.
 3. Overall system shielding and grounding scheme indicating all major components and ground paths.
- D. Provide Programming Manual to serve as training and reference manual for all aspects of system programming. As a minimum include the following:
1. Complete programming manuals, and reference guides.
 2. Details of any special software packages and compilers supplied with system.
 3. Information required for independent programming of system.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

4. Point schedule; include all points, real and virtual.
5. Software troubleshooting procedures.

PART 2 - PRODUCTS

2.01 AUTOMATIC CONTROL VALVES AND DAMPERS

- A. All automatic control valves shall be furnished by the temperature control manufacturer and shall be installed by the Contractor for Heating, Ventilating and Air Conditioning Work under the control manufacturer's supervision.
- B. Unless specified otherwise, automatic damper shall be furnished by the control manufacturer and shall be set in place by the Sub-Contractor for Heating, Ventilating and Air Conditioning Work under the supervision of the control manufacturer. HVAC Sub-Contractor shall supply damper dimensions to the control manufacturer and shall be responsible for the damper sizing.

2.02 ELECTRIC WIRING

- A. All electric wiring, materials and installation shall be in accordance with the latest revision of the National Electric Code, and applicable Local Code, and shall carry the UL label where applicable. All wiring shall be installed in EMT conduit, $\frac{3}{4}$ " minimum, and shall be a minimum of #14 AWG. No bare cables or plenum rated cables, no bare wiring. All specials, such as junction boxes and connectors, shall be of type designed for use with conduit.
- B. All wiring exposed, outside of building shall be in rigid galvanized conduits.
- C. Wiring below grade shall be in weathertight, plastic coated rigid galvanized conduits.
- D. All 120 Volts, 24 Volts, control wiring shall be provided by this Contractor.
- E. Source of power for controls shall be provided under electrical section. This Contractor shall extend wiring from power source to controls and devices.

2.03 AUTOMATIC DAMPERS, AND SMOKE DAMPERS

- A. Dampers shall have 16 gauge galvanized frames of not less than 3" in width and blades of 16 gauge, or double 22 gauge, galvanized steel, and shall be adequately braced to form a rigid assembly, where required in galvanized ductwork. Dampers shall have blades not more than 8" wide. Linkage and hardware shall be zinc plated steel. Damper blades and rods shall be installed in horizontal position.
- B. All dampers shall be of the proportioning or opposed blade type and shall be motor operated. Dampers shall have continuous elastomer or stainless steel stops to avoid leakage. Bearings shall be oilite nonferrous sleeve type. All dampers shall be provided with continuous $\frac{3}{16}$ " x $\frac{1}{2}$ " closed cell neoprene gasketing around perimeter of the frame and at interlocking blade edges, to form an airtight seal.
- C. All dampers shall be constructed to provide a maximum leakage of 3%, with an approach velocity of 1500 fpm flow, when closed against 4 inches of water. Submit leakage and flow characteristic data for all dampers.
- D. All outside air dampers shall automatically return to closed position in the event of loss of electricity or air.

2.04 AUTOMATIC AND SMOKE DAMPER OPERATORS

- A. Damper operators shall be motorized electronic actuators, with reinforced synthetic rubber diaphragm, and with bracket arrangement for location outside the airstream wherever possible. All damper operators shall be of sufficient size and number to operate their respective dampers smoothly against friction and air flow. Damper operators shall have external adjustable stops to limit the stroke in either direction, if required for proper operation. See positioning relays for additional requirements. Smoke damper at unit, outside air, return air and relief air dampers for systems in excess of 15000 CFM shall close, when fan is off. Smoke damper shall have 60 second delay in closing and 20 second rapid start.

2.05 VALVES

- A. All valves shall be fully proportioning globe type, with throttling plugs, renewable composition discs, bronze trim, and of the spring return type, except as otherwise noted. Valves shall be sized by the control manufacturer and guaranteed to be of sufficient size to meet the heating and cooling requirements. Two position valves shall be line size. Valves shall be furnished with actuators having reinforced synthetic rubber diaphragms. Valves shall have equal percentage or linear flow characteristics. All valves bodies shall have pressure rating and connection type construction to conform with the pipe fitting schedule in these Specifications.
- B. All throttling 2-way water valves shall be sized for pressure drop equal to respective coil pressure drop at flow rates indicated on the drawings with a maximum pressure drop of maximum 3 PSI at full design flow. All 3-way water valves shall be sized for a maximum pressure drop of 5 feet. All water valves shall be single seated, except where water pressure and flow require double seated valves.

2.06 ROOM THERMOSTATS

- A. All thermostats shall have adjustable and shall be of the fully proportioning type. The thermostats shall be of the relay type and shall be provided with an adjustable range of 55° - 85°F., key operated, non-indicating, lock type. Finish and final locations shall be approved by the Architect.
 - 1. Thermostats in public spaces, gym shall have 16 gauge slotted metal guard with key and lock.

2.07 OPERATOR INTERFACE

- A. Operator Interface. Furnish PC based workstation as shown on the system drawings. Workstation shall be able to access all information in the system. Workstation shall reside on the same high-speed network as the building controllers, and also be able to dial into the system.
- B. Workstation information access shall use the BACnet Protocol. Communication shall use the ISO 8802-3 (Ethernet) or ARCNET (ASTM 878.1) Physical/Data Link

layer protocol. Remote communications shall use the BACnet Point to Point Physical/Data Link Layer Protocol.

1. Workstation shall be located in custodian office or a designated space selected by Owner.

C. Hardware. Operator workstation shall consist of the following:

1. Personal Computer: Furnish IBM compatible PCs as shown on the drawings. The CPU shall be a minimum of an Intel Pentium IV and operate at a minimum of 2.4 GHz. A minimum of 512 Megabytes of RAM, one 1.44 Megabyte 3.5 inch diskette drive, 48X CD ROM drive, and a 40 Gigabyte hard disk shall be provided. A two-button mouse will also be provided. Furnish all required serial, parallel, and network communication ports, and all cables for proper system operation. The PC shall have a minimum of a 17" SVGA monitor.
2. Modems: Furnish auto-dial telephone modems.
3. Printers: Each workstation shall have 1 printer, with tractor feed, and associated cables. Each printer shall be capable of a minimum 160 characters per second operation and be compatible with standard parallel or serial communications.
4. BACnet: The PCWS shall use the Read (Initiate) and Write (Execute) Services as defined in Clauses 15.5 and 15.8, respectively, of ASHRAE Standard 135-95, to communicate with BACnet objects in the internetwork. Objects supported shall include: Analog input, analog output, analog value, binary input, binary output, binary value, device.

D. System Software

1. Operating System: Furnish a commercially available, concurrent multi-tasking operating system. The operating system shall also support the use of other common software applications that operate under DOS or Microsoft Windows. Acceptable operating systems are Windows XP Professional, and Windows 2000.
2. System Color Graphics: The Operator Workstation software shall be graphically oriented. The system shall allow display of up to 10 graphic screens at

once for comparison and monitoring of system status. Provide a method for the operator to easily move between graphic displays and change the size and location of graphic displays on the screen. The system graphics shall be able to be modified while on line. An operator with the proper password level shall be able to add, delete, or change dynamic points on a graphic. Dynamic points shall include analog and binary values, dynamic text, static text, and animation files. Graphics shall have the ability to show animation of equipment.

- a. Custom Graphics: Custom graphic files shall be created with the use of commonly available graphics packages such as PC Paint. The graphics generation package shall create and modify graphics that are saved in industry standard formats such as PCX, BMP, GIF and JPEG. The graphics generation package shall also provide the capability of capturing or converting graphics from other programs such as Designer, or AutoCAD.
 - b. Graphics Library: Furnish a complete library of standard HVAC equipment such as cooling system, chillers, heating system, air handlers, terminals, unit ventilators, fan coils, heat exchangers, pumps, fans. This library shall also include standard symbols for other equipment including fans, pumps, coils, valves, piping, dampers, and ductwork. The library shall be furnished in a file format compatible with the graphics generation package program. Provide each equipment, system color graphics with flow diagram, valves, dampers, set points, adjustments, alarms, points, components, variables, modes.
 - c. Engineering Units: Allow for selection of the desired engineering units (i.e. Inch pound) in the system. Unit selection shall be able to be customized by locality to select the desired units for each measurement.
- E. System Applications: Each workstation shall provide operator interface and off-line storage of system information. Provide the following applications at each workstation.

10/31/03

Soundproofing of Msg. McClancy Mem. H.S.

1. Automatic System Database Save and Restore. Each workstation shall store on the hard disk a copy of the current database of each building controller. This database shall be updated whenever a change is made in any panel in the system.
2. Manual Database Save and Restore: A system operator with the proper password clearance shall be able to archive the database from any system panel and store on magnetic media.
3. System Configuration: The workstation software shall provide a graphical method of configuring the system. The user with proper security shall be able to add new devices, and assign modems to devices.
4. On-Line Help: Provide a context sensitive, on-line help system to assist the operator in operation and editing of the system.
5. Security: Each operator shall be required to log on to the system with a user name and password in order to view, edit, add, or delete data. System security shall be selectable for each operator. The system supervisor shall have the ability to set passwords and security levels for all other operators. Each operator password shall be able to restrict the operator's access for viewing and/or changing each system application, full screen editor, and object.
6. System Diagnostics: The system shall automatically monitor the operation of all workstations, printers, modems, network connections, building management panels, and controllers. The failure of any device shall be annunciated to the operator.
7. Alarm Processing: Any object in the system shall be configurable to alarm in and out of normal state. The operator shall be able to configure the alarm limits, warning limits, states, and reactions for each object in the system. The operator shall be able to determine what actions, if any, are to be taken, by object (or point), during an alarm. Actions shall include logging, printing, starting programs, displaying messages, dialing out to remote stations, paging, providing audible annunciation or displaying specific system

graphics. Each of these actions shall be configurable by workstation and time of day.

8. Trend Logs: The operator shall be able to define a custom trend log for any data in the system. This definition shall include interval, start-time, and stop-time. Trend intervals of 1, 5, 15, 30, and 60 minutes as well as once a shift (8 hours), once a day, once a week, and once a month shall be selectable. All trends shall start based on the hour. Each trend shall accommodate up to 64 system objects. The system operator with proper password shall be able to determine how many samples are stored in each trend. Trend data shall be sampled and stored on the Building Controller panel and be archived on the hard disk. Trend data shall be able to be viewed and printed from the operator interface software. Trends must be viewable in a text-based format or graphically. They shall also be storable in a tab delimited ASCII format for use by other industry standard word processing and spreadsheet packages.
9. Dynamic Graphical Charting: The operator shall be able to select system values to be charted in real time. Up to three values at one time can be selected for each chart. The type of chart (bar, line, 3-D, etc.) shall be selectable.
10. Alarms and Event Log: The operator shall be able to view all logged system alarms and events from any location in the system. Events shall be listed chronologically. All that have not been cleared by the operator shall be archived to the hard disk on the workstation.
11. Objects and Property Status and Control: Provide a method for the operator with proper password protection to view, and edit if applicable, the status of any object and property in the system.
12. Clock Synchronization: The real time clocks in all building control panels and workstations shall be synchronized on command of an operator. The system shall also be able to automatically synchronize all system clocks, daily from any operator-designated device in the system. The system shall automatically adjust for daylight savings and standard time if applicable.

13. Reports and Logs: Provide a reporting package that allows the operator to select, modify, or create reports. Each report shall be definable as to data content, format, interval, and date. Report data shall be archived on the hard disk for historical reporting. Provide the ability for the operator to obtain real time logs of designated lists of objects. Reports and logs shall be stored on the PC hard disk in a format that is readily accessible by other standard software applications including spreadsheets and word processing. Reports and logs shall be readily printed to the system printer. The operator shall be able to designate reports that shall be printed or stored to disk at selectable intervals.
 - a. Custom Reports: Provide the capability for the operator to easily define any system data into a daily, weekly, monthly, or annual report. These reports shall be time and date stamped and shall contain a report title and the name of the facility.
 - b. Standard Reports. The following standard system reports shall be provided for this project. The owner shall readily customize these reports to the project.
 - 1) Chilled Water System Report
 - 2) Heating System Report
- F. Workstation Applications Editors: Each PC workstation shall support full screen editing of all system applications.
 1. Controller: Provide a full screen editor for each type controller and application, that shall allow the operator with proper password to view and change the configuration, name, control parameters, and system set-points.
 2. Scheduling: An editor for the scheduling application shall be provided at each workstation. Provide a monthly calendar for each schedule. Exception schedules and holidays shall be shown clearly on the calendar. Provide a method for allowing several related objects to follow a schedule. The advance and delay time for each object shall be adjustable from this master schedule.

3. Equipment Coordination: Provide a full screen editor that allows equipment to be grouped for proper operation as specified in the sequence of operations. This shall include the coordination of UV, fan coils, rooftop AHU, with their associated scheduled starts, heating/cooling systems.
4. Custom Application Programming: Provide the tools to create, modify, and debug custom application programming. The operator shall be able to create, edit, and download custom programs at the same time that all other system applications are operating. The system shall be fully operable while custom routines are edited, compiled, and downloaded.
5. Portable Operator's Terminal: Furnish a Portable Operator's Terminal that shall be capable of accessing all system data. This device may be connected to any point on the system inter-network or may be connected directly to any controller for programming, set-up, and troubleshooting. The Portable Operators Terminal shall use the Read (Initiate) and Write (Execute) Services as defined in Clauses 15.5 and 15.8, respectively, of ASHRAE Standard 135-95, to communicate with BACnet objects in the internetwork. Objects supported shall include: Analog input, analog output, analog value, binary input, binary output, binary value, device.

The Portable Operator's Terminal shall be an IBM compatible notebook-style PC including all software and hardware required with:

- a. 1.7 GHz Intel Pentium 4M Processor
- b. 256 MB RAM
- c. 30 Gbyte Hard Drive
- d. 3.5" 1.44 MB Floppy Disk Drive
- e. 40X CD ROM Drive

2.08 SYSTEM SOFTWARE

- A. System Security: User access shall be secured using individual security passwords and user names that restrict the user to only the objects, applications, and system functions as assigned by the system manager.
- B. Scheduling: Provide the capability to schedule each object or group of objects in the system. Each of these

schedules shall include the capability for start, stop, optimal start, optimal stop, and night economizer actions. Each schedule may consist of up to [10] events. When a group of objects are scheduled together, provide the capability to define advances and delays for each member. Each schedule shall consist of weekly schedules, exception schedules, holiday schedules and optimal start/stop.

- C. Alarm Reporting: Alarms shall be routed to the appropriate workstations based on time and other conditions. An alarm shall be able to start programs, be logged in the event log, printed, generate custom messages graphics.
- D. Remote Communications: The system shall have the ability to dial out in the event of an alarm. Receivers shall include PC Workstations, and Alphanumeric pagers. The alarm message shall include the name of the calling location, the device that generated the alarm, and the alarm message itself.
- E. PID Control: A PID (proportional-integral-derivative) algorithm with direct or reverse action and anti-wind-up shall be supplied. The algorithm shall calculate a time-varying analog value used to position an output or stage a series of outputs.
- F. Staggered Start: This application shall prevent all controlled equipment from simultaneously restarting after a power outage. The order in which equipment (or groups of equipment) is started, along with the time delay between starts shall be user-selectable.
- G. Anti-Short Cycling: All binary output points shall be protected from short cycling. This feature shall allow minimum on time and off time to be selected.

2.09 BUILDING CONTROLLERS

- A. General: Provide Building Controllers to provide the performance specified in section 1 of this division. Each of these panels shall meet the following requirements.
 - 1. The Building Automation System shall be composed of one or more independent, stand-alone, microprocessor based Building Controllers to manage

the global strategies described in System software section.

2. The controller shall provide a communications port for connection of the Portable Operators Terminal using Point-to-Point BACnet physical/data link layer protocol or a connection to the inter-network.
 3. The operating system of the Controller shall manage the input and output communications signals to allow distributed controllers to share real and virtual point information and allow central monitoring and alarms.
 4. BACnet: The Building Controller shall use the Read (Initiate) and Write (Execute) Services as defined in Clauses 15.5 and 15.8, respectively, of ASHRAE Standard 135-95, to communicate with BACnet objects in the internetwork. Objects supported shall include: Analog input, analog output, binary input, binary output, and device.
- B. Communications: Each Building Controller shall reside on a BACnet inter-network using the ISO 8802-3 (Ethernet) or ARCNET (ASTM 878.1) Physical/Data Link layer protocol. Each Building Controller shall also perform routing to a network of Custom Application and Application Specific Controllers.] C. Memory. The Building Controller shall maintain all BIOS and programming information in the event of a power loss for at least 72 hours.

2.10 CUSTOM APPLICATION CONTROLLERS

- A. General - The Building Automation System shall be composed of one or more independent, stand-alone, microprocessor based Building Controllers to manage the local strategies described in System Software section. The operating system of the Controller shall manage the input and output communications signals to allow distributed controllers to share real and virtual point information and allow central monitoring and alarms.
- B. Environment - Controllers used outdoors and/or in wet ambient shall be mounted within NEMA 4 Type waterproof enclosures, and shall be rated for operation at -40 C to 65 C [-40 F to 150 F]. Controller used in conditioned

ambient shall be mounted in NEMA 1 Type rated enclosures, and shall be rated for operation at 0 C to 50 C [32 F to 120 F].

- C. Keypad: A local keypad and display shall be provided for each panel/controller. Keypad shall be provided for interrogating and editing data. An optional system security password shall be available to prevent unauthorized use of the keypad and display.

2.11 APPLICATION SPECIFIC CONTROLLERS

- A. General: Application specific controllers (ASC) are microprocessor-based DDC controllers, which through hardware or firmware design are dedicated to control a specific piece of equipment. They are not fully user programmable, but are customized for operation within the confines of the equipment they are designed to serve. Each ASC shall be capable of stand-alone operation and shall continue to provide control functions without being connected to the network.
- B. Environment - Controllers used outdoors and/or in wet ambient shall be mounted within NEMA 4 Type waterproof enclosures, and shall be rated for operation at -40 C to 65 C [-40 F to 150 F].
- C. Controller used in conditioned ambient shall be mounted in NEMA 1 Type rated enclosures, and shall be rated for operation at 0 C to 50 C [32 F to 120 F].

2.12 COMMUNICATIONS

- A. This project shall comprise a BACnet inter-network. All PC Workstations and Building Controller components shall meet ASHRAE / ANSI Standard 135-1995, BACnet. Each BACnet device shall operate on the BACnet physical/data link protocols specified for that device as defined earlier in this section.
- B. All Building Controllers shall have a communications port for connections with the operator interfaces. This may be either an RS-232 port for Point-to-Point connection or a network interface node for connection to the Ethernet or ARCNET network.
- C. The controls Contractor shall provide all communication media, connectors, repeaters, hubs, and routers necessary for the inter-network.

PART 3 - EXECUTION**3.01 INSPECTION**

- A. Examine location where controls and equipment are to be installed and determine space conditions and notify architect in writing of conditions detrimental to proper and timely completion of the work.
- B. Do not proceed with the work until unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Install in accordance with manufacturer's written instructions, and with recognized industry practices, to ensure that equipment comply with requirements and serve intended purposes.
- B. Coordinated with other work as necessary to interface installation of equipment with other components of systems.

3.03 FIELD QUALITY CONTROL

- A. Upon completion of installation of the automatic temperature control system and after motors have been energized with normal power source, test system to demonstrate compliance with requirement. When possible, field correct malfunctioning controls then retest to demonstrate compliance. Replace controls which cannot be satisfactorily corrected. Refer to Section - Test and Balancing.

3.04 SERVICE AND TRAINING

- A. After completion of the control system installation, the control manufacturer shall regulate and adjust all thermostats, control valves, damper motors, etc., and place in complete operating condition, subject to the approval of the Architect. Complete instructions shall be given to the operating personnel. There shall be two day's instruction given for Winter cycle and two day's instruction for Summer cycle operation.

3.05 INSTALLATION REQUIREMENTS

- A. Install equipment, piping, wiring/conduit parallel to building lines (i.e. horizontal, vertical, and parallel

to walls) wherever possible. Provide sufficient slack and flexible connections to allow for vibration of piping and equipment.

- B. Install all equipment in readily accessible location. Control panels shall be attached to structural walls unless mounted in equipment enclosure specifically designed for that purpose.

3.06 SEQUENCE OF OPERATION FOR CONSTANT VOLUME AHU(s) WITH SPACE TEMPERATURE CONTROL (AC-1, AC-2)

A. OCCUPIED MODE

When the AHU is in the Occupied Mode, the Supply Fan will operate continuously, and the Compressors shall cycle, Gas Heating Valve shall be staged in sequence, and Economizer Dampers will modulate in sequence to maintain Space Air Temperature as sensed by space sensor/stat. The Discharge Air Temperature set point will be automatically reset by the space temperature sensor.

B. UNOCCUPIED MODE

When the AHU is in the Unoccupied Mode, the Supply Fan will be OFF, Outdoor Air Damper and related duct smoke/fire-smoke dampers will be closed, DX cooling will be de-energized and the Gas Heating will be off.

- 1. Air handling unit fan will cycle and gas heating shall be staged with outside air damper closed, return air and smoke damper open to maintain minimum of 60°F temperature in space, at all times.

C. NIGHT SETBACK / MORNING WARMUP HEATING MODE

When the AHU is in the Night Setback / Morning Warm-up Heating Mode, the Supply Fan will operate continuously, the Outdoor Air Damper will be closed and DX Cooling will be off, the Return Air and Smoke Damper will be fully open, and the Gas Heat will be staged to maintain the maximum heating Discharge Air Temperature set point.

D. SUPPLY FAN CONTROL

The Supply Fan will operate continuously whenever the AHU is in either the Occupied Cooling Mode or the Night Setback / Morning Warm-up Heating Mode. The Supply Fan will cycle whenever the AHU is in the Unoccupied Mode, or

the Stop / Auto interlock is open. When supply fan in on, related fire-smoke dampers shall open. Reverse shall occur when fan stops.

E. ECONOMIZER CONTROL

Enthalpy type economizer controls including outdoor air temperature and humidity sensors, return air temperature and humidity and humidity sensors, totalizers and shall calculate outdoor air enthalpy and return air enthalpy. When outdoor enthalpy is lower than return air enthalpy and ambient temperature above 50°F, economizer cycle shall be initiated. During economizer cycle, the outdoor air, return and relief air damper will modulate between the adjustable minimum position and full open position to maintain the space temperature. If economizer damper operation cannot maintain space temperature, mechanical cooling shall be utilized. Economizer fan, damper shall be activated during economizer mode operation.

The Outdoor Air Damper will be set to its adjustable minimum position if the Economizer function is disabled. If the AHU is in the Morning Warm-up mode, the Supply Fan is OFF or the Mixed Air Temperature Sensor has failed, the Outdoor Air Damper will be closed.

F. GAS HEATING CONTROL

The Gas Heating shall be staged in sequence and cycle to maintain the Space Temperature Control set point. The Gas Heating will be off when cooling is on and viceversa. Minimum, maximum discharge air temperature shall be maintained and alarm shall be sent to BMS.

G. DX COOLING CONTROL

During occupied cooling mode of operation the economizer, if available and mechanical cooling shall be used to control the zone temperature. If the enthalpy of the outside air is less than return air enthalpy as sensed by outdoor air and return air temperature and humidity sensors, free cooling by economizer shall be used to satisfy the zone/space temperature set-point. If more cooling is necessary, mechanical cooling shall be staged in sequence as needed. Minimum On/Off timing shall prevent rapid cycling.

H. SAFETIES

1. When smoke is detected by duct smoke detector(s) in supply or return duct, air handling unit supply fan stop, send smoke condition alarm to BAS.
 2. When supply air temperature below 40°F as sensed by a low limit stat/controller is sensed, air handling unit supply fan shall stop, send low temperature alarm to BAS.
 3. When supply air temperature risers above 115°F, as sensed by high limit stat/controller, supply fan shall stop and high temperature alarm shall be signaled at BAS.
 4. When pressure drop through filters exceed its set point, dirty filter alarm shall be annunciated at BAS.
- I. Air handling unit shall start locally at starter or per pre-program routine through BAS. Heating, cooling modes shall be selected manually at BAS.
- J. Existing hot water heating system valves, controls serving Gym shall be reset. Air handling unit heat shall be energized to maintain scheduled space temperature. Existing hot water heat for Gym shall turn-on only if air handling unit and gas heat cannot maintain space temperature. Operation of existing heaters and air handling shall be coordinated. Thermostats shall be set accordingly.

K. BUILDING AUTOMATION SYSTEM INTERFACE

The Building Automation System (BAS) shall send the AHU Space Heating, and Cooling Temperature Set points. The BAS shall also send Start-up, Occupied, Unoccupied, Morning Warm-up, and Heating / Cooling, Economizer enable, Timed Override, Startup, Night Setback. Provide devices, wiring, interface as required. If communication with the BAS is lost, the AHU shall use its default set points and shall operate in the Occupied mode. The Economizer function shall be enabled based on the AHU Outdoor Air Temperature Sensor.

- L. The following points will be monitored and alarmed at the AHU controller and at remote BAS:

1. Supply air temp
2. Mixed air temp
3. Outside air temp, humidity
4. Space temp
5. Fan status
6. Heat/cool and economizer mode
7. Sensors Norm/Fail statuses
8. Filter Norm/Dirty
9. Smoke condition alarm
10. Low discharge temperature alarm
11. High discharge air temperature alarm
12. Return air temperature, humidity

M. The following points will be operator adjustable and/or automatically reset by a BAS program.

1. Space Heating set point
2. Space Cooling set point
3. Economizer set point-OA changeover
4. Cool/Heat disable

3.07 HEATING SYSTEM

- A. Existing boilers shall be enabled and disabled manually or automatically thru the Building Automation System and shall cycle to maintain supply hot water temperature in header as reset based on outside air temperature reset schedule. The boilers shall fire in sequence based on their own operating controls to maintain a primary loop water temperature as scheduled. The Building Automation System shall also enable and disable the existing and new Hot Water Pumps.
- B. School heating system boiler side and school side Hot Water Pumps shall be started and stopped by the Building Automation System by daily schedule and shall be energized when outdoor temperature is 65°F or below (adjustable). These pumps shall be controlled in a Lead/Lag scenario and if lead pump should fail, the lag pump shall start immediately. Heat Exchanger temperature set point shall be maintained through the use of a hot water reset schedule. A sensor in outside air and hot water discharge shall sense temperatures and modulate Heat Exchanger 1/3rd or 2/3rd control valves in sequence to maintain set point according to a pre arranged temperature schedule. 2/3rd valve shall not start to open until 1/3rd valve is completely open. Reverse shall occur when valves close in sequence.

- C. Differential pressure sensors shall modulate open differential pressure control valve(s), when differential pressure in mains exceed its set point.
- D. High discharge water temperature sensor shall close hot water control valve(s) for heat exchanger, when supply water temperature to school exceeds 210°F.
- E. Existing boiler, heating system, pumps, valves, space temperature controls functions shall be verified, modified as required.
- F. The following points will be controlled, monitored and alarmed at the BAS:
 - 1. Hot water Supply temperature (boiler)
 - 2. Sensor Failure
 - 3. Temperature Set Point adjust
 - 4. Hot water Supply Temperature High Alarm
 - 5. Hot water pump status on/off, each pump
 - 6. Supply and return hot water temperature in and out at each heat exchangers.
 - 7. Boiler on/off status
 - 8. Differential pressure control valve status.
 - 9. North zone return water temperature
 - 10. South zone return water temperature
 - 11. Outside air temperature
 - 12. Remote start/stop, each hot wate pump (typical for 4)
 - 13. Return water temperature (boilers)

3.08 UNIT VENTILATOR AND FAN COIL WITH APPLICATION SPECIFIC CONTROLLER

- A. Space Temperature Control - The application specific controller (ASC) shall maintain space comfort by modulating the discharge air temperature of the unit. The ASC shall continuously monitor the error between the return temperature and set point and adjust the discharge air temperature accordingly. This shall be accomplished through the use of PID logic along with modulating valves.
 - 1. Unit ventilators are to be 4 pipe with separate heating and cooling control valves.
 - 2. For unit ventilators with outside air provision, dampers shall be modulating type and shall be modulated for economizer ASHRAE-II cycle.

3. Unit ventilators shall start/stop from BAS, shall have temperature reset through BAS.

Start/stop shall be set based on occupancy schedules or pre-program routine.

- B. Fan Operation - The supply fan shall start and run at scheduled speed and run continuously, while in the occupied mode.

1. The return sensor shall run the unit at scheduled speed for normal operation to maintain space temperature control.

- C. Occupancy Modes - The ASC shall offer the following occupancy modes based on a communicated request or a hard-wired input from a local time clock.

1. Unoccupied Operation - In the unoccupied mode, the supply fan shall be indexed off, the outside air damper shall modulate closed, and the return air damper shall modulate open. If the return temperature moves beyond the unoccupied heating (65', adjustable) or cooling set points, the ASC shall bring on 100% of unit capacity while keeping the outside air damper closed. If the space temperature rises above the adjustable unoccupied cooling set point (80°F, adjustable) and the outside air temperature is less than the space temperature, the fan shall be cycled on, the outside air damper shall be opened and the heating valve shall be closed.
2. Transition from Unoccupied to Occupied - When the unit transitions from the unoccupied mode to occupied mode, morning warm-up/cool down and random start routines shall be activated.

- a. Morning Warm-up - When there is a call for heating and the zone temperature is two degrees or more below set point, a morning warm-up sequence shall be initiated. During morning warm-up the fan shall be turned on, the outside air damper shall remain closed and the heating valve shall open. When the zone temperature comes within two degrees of the heating set point the outside air damper shall go to minimum and the ASC shall operate in the occupied mode. In general, morning warm-up

cycle shall be initiated well ahead of occupancy and shall be staggered.

- b. Morning Cool-down - When a morning cool-down is initiated the unit shall operate in the airside economizing mode if possible, and fan shall be indexed on. If economizing mode is not available, the cooling valve shall open and the outside air damper shall remain closed. When the zone temperature reaches the cooling set point the ASC shall operate in the occupied mode.
 - c. Random Start - A randomly generated 3-32 second delay shall be activated when electric power is applied to the ASC or after receiving an occupied command from the BAS.
3. Occupied Operation - The ASC shall open the outside air damper to minimum position and modulate the heating and cooling control valves in sequence to maintain space ventilation and temperature set point. When heating valve is open, cooling coil control valve shall be closed to coil and vice-versa.
- a. Heat/Cool Set point - The return temperature set point shall be determined either by a local set point adjustment knob, the ASC default set point, or building automation system control. The local set point adjustment knob shall determine the set point if the ASC is configured in the standalone mode. If the ASC is in the ICS mode or if the local set point knob fails, the ASC shall use the BAS communicated set point. If the BAS is not communicating, the ASC shall use defaults or local set points. Adjustment for set point shall be concealed, not easily accessible, behind front cover inside enclosure.
- D. Ventilation Control - The ASC shall have the ability to modulate the outside air damper to multiple positions depending on the current routine to provide ASHRAE-II economizer cycle for free cooling. For units with air side economizer, dampers shall modulate between minimum and maximum position for economizer mode operation, when ambient temperature is above 55°F (adjustable).

1. ASHRAE Cycle II - The outside air damper shall remain closed during the unoccupied mode, morning warm-up and cool-down, or when the space temperature exceeds the set point by 3 degrees F. During the occupied mode, the outside air damper shall be at the minimum position (configurable) unless the economizer is active.
- E. For units without outside air, heating and cooling coil control valves shall be modulated in sequence to maintain its sensor setpoint.
- F. For rooms with multiple units and mix of units with and without outdoor air provision, program shall be provided for simultaneous, staggered and master/slave operation of units as may be selected by operator.
- G. SAFETIES AND ALARMS
1. Reset - All diagnostics shall be capable of being reset through the, BAS, or by cycling power to the unit.
 2. Freeze stat - A binary signal shall shut the unit down, close the outside air damper, and open heating control valves when the discharge air temperature falls below 35 degrees F.
 3. Unoccupied Freeze Avoidance - The ASC shall open heating valve when the outside air temperature drops below 35 degrees F (configurable) during the unoccupied mode.
 4. Filter Status - A maintenance timer shall be incorporated into the ASC to signal a filter change after a configurable number of fan run hours.
 5. Fan Status - The ASC shall monitor the fan outputs to determine fan status and report it to a BAS.
- H. COMMUNICATIONS
1. Data Sharing - All ASCs shall be able to communicate in a peer-to-peer environment over a twisted pair of communications wire. All information, monitoring, start/stop, alarm shall be available at BAS.
 2. Master/Slave - Master/Slave shall be used for operating multiple units from a single zone sensor.

The Master unit shall share space temperature, setpoint, heat/cool mode, occupancy, fan speed, entering water temperature, economizer, and capacity control algorithm data over a twisted pair of communication wire to insure seamless cooperation between the units.

3. BAS shall be able to start/stop each unit, indicate space temperature, reset temperature, initiate occupied/unoccupied/warm-up/set back/economizer cycles, monitor on/off status, monitor failure, alarm functions; schedule timed start/stop, maintain minimum space temperature at all times. Provide wiring, devices, interface as required and integrate.

3.09 CHILLED WATER SYSTEM CONTROL

- A. General - The standalone microprocessor based chiller control panel provided by chiller manufacturer shall monitor and control the chiller(s) in a standalone mode or as directed by the chiller sequencing software. System shall consist of chiller(s), chilled water pumps and serve chilled water to unit ventilators, fan coil unit coils.

The chiller sequencing software shall perform the following control strategies.

- B. System Scheduling - Chilled water system shall start manually at starters or through chiller sequencing software will start the chiller system based upon a time of day schedule and/or based on ambient temperature schedule.

The system shall also start in response to a binary contact signal from an external source such as the building control system.

- C. Chiller modules, compressors shall cycle in sequence to maintain supply chilled water temperature set point as reset by outdoor air temperature; per integral controls.
 1. Chillers shall not start until chilled water flow is established through respective flow switch(es) in piping.
 2. Time delay and/or hot gas by-pass shall prevent compressor frequent start/stop and short-cycling.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

3. If lead/designated compressor or module fails to maintain desired chilled water temperature, lag compressor and/or next module shall be activated.
 4. Automatic rotation of compressor and modules shall equalize run-time and wear and tear.
 5. Chiller shall stop when safeties are tripped. An alarm shall be annunciated at BAS when chiller fails or trips.
 6. Each chiller shall have integral communication port (RS-232 or similar) to communicate with BAS via open protocol. Interlock and communication interface related wiring shall be provided by BAS Contractor.
- D. Chilled water pump shall be started manually at starter or automatically through pre-programmed routines at BAS.
1. Chilled water pump shall start first and after chilled water flow is proven by flow switch, chiller shall start.
 2. If lead chilled water pump fails, an alarm shall be signaled at BAS.
 3. Stand-by or lag pump shall start manually at starter or automatically through BAS.
- E. BAS system shall monitor, control chilled water system via open protocol communication with the chiller central control panel. As a minimum, following points, alarm, functions shall be provided at remote BAS. Provide additional devices, sensors, interface, wiring as required.
1. Chilled water supply temperature indication
 2. Chilled water return temperature indication
 3. Reset chilled water supply temperature
 4. On/off status, each module, compressors
 5. Flow switch status
 6. Remote start/stop
 7. High temperature failure alarm
 8. Low temperature failure alarm
 9. System high pressure failure alarm
 10. System low pressure failure alarm
 11. Volts, current Amperes
 12. Demand limit
 13. Chilled water pump status (each pump)

14. Lead pump failure alarm
15. Remote pump start/stop (each pump)
16. Ambient temperature
17. Chiller common failure alarm
18. Sensor failure alarm

3.10 EXHAUST FAN CONTROL

- A. Classroom Exhaust Fans (GX-1, GX-2) shall be started and stopped at starter or by the BAS time schedule. Exhaust Fans shall be two speed. Upon a command to start, interlocked damper shall open and fan shall operate at low speed. When unit ventilator system is in economizer mode, fans shall be switched to high speed through command from BAS. When fan starts, respective fire-smoke dampers shall open. Reverse shall occur when fan stops.
- B. Kitchen hood exhaust fan shall start manually through a local switch in kitchen.
- C. Laboratory exhaust fans shall start when respective laboratory is in "occupied mode" through DDC system interlock or manually through local switch or at starter.
- D. Platform exhaust fans, mall exhaust fan and Gym locker/shower shall be manually started through local switch.
- E. Gym offices exhaust fans shall start through interlock, when respective fan coil unit starts.
- F. Provide on/off status indication and remote start/stop for each fan at BAS. Status shall be through current sensors.
- G. When any fan starts, its motorized damper, respective smoke damper shall open. Reverse shall occur when fan stops.
- H. When smoke is sensed by smoke detector, fan shall shut down.

3.11 MECHANICAL/ELECTRICAL VENTILATION

- A. Mechanical/electrical room exhaust fan and related air intake dampers shall be interlocked and shall operate through remote thermostat to maintain thermostat set point at 80°F (adjustable).

3.12 UNIT HEATERS

- A. Remote thermostat shall cycle heater fan on and off to maintain its setpoint.
- B. Strap on aquastat shall prevent heater operation when water temperature below 100°F is sensed by aquastat.

3.13 DIFFERENTIAL PRESSURE BY-PASS VALVE ASSEMBLIES

- A. Differential by-pass valve shall be modulated open when differential pressure across main supply and return piping exceeds its set point.

3.14 FIRE-SMOKE DAMPERS

- A. All fire-smoke dampers associated with duct system shall open when fan starts and shall close when respective fan is off.

3.15 CONDENSATE RETURN PUMP UNITS

- A. Integral float shall activate lead pump when water level above its set point is sensed. Lag pump shall automatically start if lead pump cannot maintain water level.
- B. Failure alarm shall be annunciated at BAS when high water level is sensed.

3.16 TESTING AND ACCEPTANCE

- A. Perform a three-phase commissioning procedure consisting of field I/O calibration and commissioning, system commissioning and integrated system program commissioning. Document all commissioning information on commissioning data sheets which shall be submitted prior to acceptance testing. Commissioning work which requires shutdown of system or deviation from normal function shall be performed when the operation of the system is not required. The commissioning must be coordinated with the owner and construction manager to ensure systems are available when needed. Notify the operating personal in writing of the testing schedule so that authorized personnel from the owner and construction manager are present throughout the commissioning procedure.
 - 1. Prior to system program commissioning, verify that each control panel has been installed according to

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

plans, specifications and approved shop drawings. Test, calibrate and bring on line each control sensor and device. Commissioning to include, but not be limited to:

- a. Sensor accuracy at 10, 50 and 90% of range.
 - b. Sensor range.
 - c. Verify analog limit and binary alarm reporting.
 - d. Point value reporting.
 - e. Binary alarm and switch settings.
 - f. Actuator and positioner spring ranges.
 - g. Fail safe operation on loss of control signal, pneumatic air, electric power, network communications, etc.
- B. After control devices have been commissioned (i.e. calibrated, tested and signed off), each DDC program shall be put on line and commissioned. The contractor shall, in the presence of the owner and construction manager, demonstrate each programmed sequence of operation and compare the results in writing. In addition, each control loop shall be tested to verify proper response and stable control, within specified accuracy's. System program test results shall be recorded on commissioning data sheets and submitted for record. Any discrepancies between the specification and the actual performance will be immediately rectified and retested.
- C. After all DDC programs have been commissioned, the contractor shall verify the overall system performance as specified. Tests shall include, but not be limited to:
1. Data communication, both normal and failure modes.
 2. Fully loaded system response time.
 3. Impact of component failures on system performance and system operation.
 4. Time/Date changes.
 5. End of month/ end of year operation.

6. Season changeover.
 7. Global application programs and point sharing.
 8. System backup and reloading.
 9. System status displays.
 10. Diagnostic functions.
 11. Power failure routines.
 12. Battery backup.
- D. Submit for approval, a detailed acceptance test procedure designed to demonstrate compliance with contractual requirements. This Acceptance test procedure will take place after the commissioning procedure but before final acceptance, to verify that sensors and control devices maintain specified accuracy's and the system performance does not degrade over time.
- E. Using the commissioning test data sheets, the contractor shall demonstrate a minimum of 15 percent of each point type, as randomly selected by the owner. The contractor shall also demonstrate 15 percent of the system functions, as randomly selected by the owner. Based on the above samples, the owner may accept the entire system or require the contractor to demonstrate all points and system functions until all devices and functions meet specification.
- F. The contractor shall supply all instruments for testing and turn over same to the owner after acceptance testing.
1. All test instruments shall be submitted for approval.

Test Instrument Accuracy:

Temperature:	1/4F or 1/2% full scale, whichever is less.
Pressure: High Pressure (psi):	1/2 psi or 1/2% full scale, whichever is less.
Low Pressure:	1/2% of full scale (in w.c.)

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

Humidity: 2% RH
Electrical: 1/4% full scale

- G. After the above tests are complete and the system is demonstrated to be functioning as specified, a thirty day performance test period shall begin. If the system performs as specified throughout the test period, requiring only routine maintenance, the system shall be accepted. If the system fails during the test, and cannot be fully corrected within eight hours, the owner may request that performance tests be repeated.
- H. Move In Checkout
1. Each floor shall be re-tested 24 hours prior to move in. The test shall ensure all corrective work is complete and all systems are 100% operational.
 2. Provide all overtime required for all BMS trades as required.
- I. Additional testing, debugging and fine tuning
1. Provide an additional 40 hours of appropriate highest labor cost category to be used at the owner's discretion to test, debug and fine tune the system after occupancy.

END OF SECTION 15950

END OF TABLE OF CONTENTS

SECTION 16000
GENERAL PROVISIONS FOR ELECTRICAL WORK

PART 1 - GENERAL**1.01 GENERAL REQUIREMENTS**

- A. This Section is to coordinate with and be complementary to the General Conditions and Supplementary General Conditions of the work, wherever applicable to Mechanical and Electrical Work.
- B. Section 15000 - Special Requirements for Mechanical and Electrical Work shall apply.
- C. Drawings are diagrammatic and are a graphic representation of contract requirements to the best available standards at the scale required.
- D. Light and power and miscellaneous systems riser diagrams, as well as schematic diagrams, generally indicate connections to be used for various systems and equipment. Systems conduit and wiring shall be as required for the actual systems installed on this Project. Provide all work shown on diagrams whether or not it is duplicated on the plans.

1.02 SCOPE OF WORK

- A. The Specifications and the accompanying drawings are intended to secure the provisions of all material, labor, equipment, and services necessary to install complete, tested, and ready for operation the Electrical Systems in accordance with the Specifications and Drawings. All systems shall be complete with all necessary appurtenances and minor auxiliaries, including pull boxes, offsets to clear interferences, and supports which are not shown but are needed to make each system complete in every respect. All work described in the Specifications and not shown on the Drawings, or vice versa, shall be furnished in complete working order. If mention has been omitted of any item of work or material, necessary for completion of the system, then such items must be and are hereby included.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

1. Secondary service installation in coordination with Utility Company.
2. Power and light distribution system.
3. Panelboards - lighting, power and distribution.
4. Fuses and/or circuit breakers.
5. Installation and wiring of individual controllers. Erecting starter racks, where required.
6. Control devices, only where specifically called for.
7. Safety and disconnect switches, unless furnished with starters or on equipment. Weatherproof devices for outdoor equipment. Six (6) pole switches for two-speed, three-phase motors.
8. Motor power wiring.
9. Raceways and installation components.
10. Wire and Cable.
11. Electrical work in connection with equipment specified and furnished under other Sections of the Specifications, or furnished by the Owner under separate contracts or direct purchase.
12. Grounding system in conformance with applicable codes.
13. Wiring devices.
14. Lighting fixtures, including lamps, as described in these Specifications.
15. Power wiring for unit ventilators.
16. Power and control wiring for unit and cabinet heaters.
17. 120 Volt supply to EP switches and temperature control and/or data gathering panels.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

18. Breakglass stations for mechanical equipment.
19. Furnishing of access doors.
20. Furnishing and setting of all sleeves through the floors, roof and wall, where required including waterproofing and fireproof sealing and cap flashing.
21. Excavation and backfill (excavation in rock shall be included). All concrete work for pads (including housekeeping pads).
22. Hardware, such as inserts, bolts, etc., associated with concrete pads.
23. Cutting and core drilling associated with electrical work including penetrations of foundation. Provide all framing and waterproofing per structural engineer's approval.
24. Prime painting, where required for electrical equipment and installation.
25. Provision for temporary light and power.
26. Paying all fees and performing all testing and adjusting and furnishing all certificates of approval, and those of Underwriters.
27. Communications, alarm and signaling systems, including the following:
 - a. Modification of existing fire alarm system.
 - b. Furnishing, installing and connecting of all alarm initiating and signaling devices, except as noted hereinafter:
 - 1) Installation of duct smoke detectors.
 - c. All fan shutdown wiring and furnishing, installing and connecting relay cabinets required for fan shutdown.
 - d. Wiring and control of fire/smoke dampers.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

- e. Electrical provision for building automation system.

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. The following items of materials and labor will be furnished under other Sections of the Specifications and shall be excluded from the work to be furnished by this Contractor:

1. Furnishing of metering current transformers and metering equipment.
2. Furnishing and setting of motors, adjusting thermal elements and replacing thermal overloads if necessary. Supplying individual starters and control devices, unless specifically indicated otherwise. This Contractor shall ascertain that combination starters are obtained and installed where so identified on the Electrical Drawings.
3. Installation of electric valves, float switches and pressure and pneumatic- electric switches, stats and related control devices.
4. Furnishing and installing HVAC temperature control boards, supervisory temperature control and energy management systems.
5. Base flashing for conduits passing through roof.
6. Setting of access doors in walls and ceilings.
7. Rough and finish patching.
8. Finish painting of exposed conduits, boxes, hangers, apparatus, etc.
9. Openings for sleeves in foundation walls below grade and floor slabs when noted on Foundation Drawings or in Foundation Specifications.
10. Dewatering of trenches inside and outside of Building.

1.04 QUALITY ASSURANCE AND STANDARDS

- A. The complete installation shall be in accordance with the applicable requirements and standards of National Electrical Manufacturers Association (NEMA), National Fire Protection Association (NFPA), New York City Electrical Code (NYCEC), National Electrical Code (NEC), Institute of Electrical and Electronic Engineers (IEEE), American National Standard Institute (ANSI), Occupational Safety and Health Administration (OSHA), National Electrical Safety Code, Insulated Cable Engineers Association (ICEA), Underwriters' Laboratories (UL), Factory Mutual (FM), Factory Insurance Association (FIA), National Electrical Contractors Association (NECA) "Standard of Installation", Local Inspection Agency, Local Power Company, along with state and local municipal codes and all applicable codes and authorities having jurisdiction. Any items or requirements noted in the Specifications or on Drawings, which conflict with these shall be referred to the Architect for decision. All work necessary to comply with these requirements shall be performed by the Contractor at no extra cost to the Owner.
- B. Where reference is made to the National Electrical Code only, without mention of the New York City Electrical Code, the requirements of the latter, where they differ from the former, shall take precedence, where applicable.
- C. All electrical equipment, materials and appliances shall have the listing of the Underwriters' Laboratories, Inc., and shall bear labels attesting to UL listing, and types approved by Municipal Departments having jurisdiction.

1.05 SUBMITTALS

- A. Refer to Section 16000 - Special Requirements for Mechanical and Electrical Work and submit shop drawings.
- B. The Contractor shall submit shop drawings with such promptness as to cause no delay in his own work or that of another contractor.

- C. Submit shop drawings complete in every detail for items as described in the Contract Documents, or as may be required by the Architect.
- D. Submit shop drawings as indicated in subsequent Sections of this Specification.

1.06 EXAMINATION OF EXISTING CONDITIONS ON PREMISES

- A. Before submitting his bid, this Contractor shall visit the site of the work and shall thoroughly familiarize himself with the observable existing conditions affecting the work. No additional compensation will be granted on account of extra work made necessary by the Contractor's failure to investigate such existing conditions. Verify all grades, elevations, dimensions and clearances at the site.
- B. Examine all work prepared by others to receive the work of this Section and report any discrepancies and/or defects affecting installation to the General Contractor for correction. Commencement of work will be construed as complete acceptance of preparatory work by others.

1.07 COORDINATION OF WORK WITH OTHER TRADES

- A. The work of this Section shall be coordinated with the work of all other Contracts, the Utility Company, and shall be so arranged that there will be no delay in the proper installation and completion of any part or parts of each respective work wherein it may be interrelated with that of this Contract so that generally all construction work can proceed in its natural sequence without unnecessary delay. All communications of a coordinating nature to the Architect shall be via the Construction Manager or General Contractor.
- B. Examine all Architectural, Structural, Heating, Ventilating and Air Conditioning, Sprinkler and Plumbing Drawings relating to this Project, and verify all governing conditions at the site and become fully informed as to the extent and character of the work required and its relation to other work in the building. No consideration will be granted for any

alleged misunderstanding of the materials to be furnished for work to be done.

- C. Scaled and figured dimensions with respect to the items are approximate only; sizes of equipment have been taken from typical equipment items of the class indicated. Before proceeding with work, the Contractor shall care-fully check all dimensions and sizes and shall assume full responsibility for the fitting-in of equipment and materials to the building and to meet architectural and structural conditions.
- D. Coordinate work with other disciplines. Confer with other contractors whose work might affect this installation; and arrange all parts of this work and equipment in proper relation to the work and equipment of others, with the building construction and with architectural finish so that this work will harmonize in service, appearance, and function.
- E. Exposed piping shall be installed to provide the maximum amount of headroom but in no case shall piping be installed less than seven feet (7'-0") above the finished floor. Piping installed in areas where hung ceilings or other furred spaces are indicated shall be installed concealed.
- F. The Contractor is referred to the Architectural Drawings for locations and types of hung ceilings and furred spaces.

1.08 INSPECTION AND TESTS

- A. At the time of the final inspection and tests, all connections at the panels and all splices, etc., must have been completed. All fuses must be in place and the circuits continuous from service switches to all receptacles, outlets, motors, etc. Each entire wiring system must test free from short circuits and grounds. When wiring systems are "megger" tested, the insulation resistance between conductors and between conductors and grounds, based on maximum load, shall not be less than that required by National Electrical Code and local authorities having jurisdiction. A written record of all test data shall be supplied to the Architect (five copies). The tests shall cover but not be limited to the following:

1. Secondary service and distribution system.
 2. Fire alarm and smoke detection system.
 3. All communications, signaling and alarm systems.
 4. Power installations and motor controls.
 5. Light installations and circuit switching.
 6. Any part of the work called for in the Specifications, or Drawings and as designated by the Architect or Engineers.
- B. Provide all necessary testing equipment, instruments, and skilled personnel for the tests. If in the opinion of the Architect, the results of such tests show that the work has not complied with the requirements of the Specifications or Drawings, the Contractor shall make all additions or changes necessary to put the system in proper working condition and shall pay for all the expenses and for all subsequent tests which are necessary to determine whether the work is satisfactory. Any additional work or subsequent tests shall be carried out at the convenience of the Owner, prior to final payment.

1.09 PERMITS, CERTIFICATES AND FEES

- A. Obtain and deliver a final Certificate of Approval from the applicable inspection authority having jurisdiction. Make delivery to the Architect for transmittal to the Owner upon completion of the work and before final payment. Pay all charges made by the inspection authority and include their cost in the bid.
- B. This work shall include the procurement of and payment for all permits, certificates and fees for the performance of the electrical work in compliance with codes, applicable laws and municipal regulations including those from local utilities for services.

1.10 PROTECTION, MAINTENANCE AND PRODUCT HANDLING OF ELECTRICAL EQUIPMENT

- A. Electrical equipment shall be delivered and stored at the site, properly packed and crated until finally installed. Store materials in spaces as designated by the General Contractor. Investigate each space through which equipment must be moved. If necessary, equipment shall be shipped from manufacturer in crated sections of size suitable for moving through restricted spaces.
- B. Uninstalled and installed equipment and materials shall be adequately protected against loss or stealing; damage caused by water, paint, fire, plaster, moisture, acids, fumes, dust or other environmental conditions; or physical damage, during delivery, storage, installation and shutdown conditions. This Contractor shall replace any damage or stolen material without extra cost to the Owner.
- C. Provide effective protection for all material and equipment against damage that may be caused by environmental conditions. Do no work when conditions of temperature in area or moisture on materials or substrates are not in accordance with material manufacturer's recommended conditions for installation.
- D. This Contractor shall be responsible for the maintenance of all equipment and systems installed, until final acceptance by the Architect and the Owner. The Operation of the equipment by the Owner does not constitute an acceptance of the work. Work will be accepted only after the Contractor has adjusted his equipment, demonstrated that it fulfills the requirements of the Drawings and Specifications, and has furnished all required certificates.
- E. This Contractor shall guarantee in writing to the Owner that all work installed by him shall be free of defects in workmanship and materials and that all apparatus will develop the capacities and characteristics as indicated, and that, if during a period of one year from date of final approval of work by the Architect, any defects in workmanship, materials or performance appear, he will remedy them without any cost to the Owner. Guarantee requirements

shall consist of the aforesated and other requirements, as established under applicable Contract Documents.

- F. Provide effective protection against damage for all material and equipment during shipment, and storage at the Project Site. Cover all stored equipment to exclude dust and moisture. Place stored conduit on dunnage with appropriate weather cover and caps on exposed ends.
- G. After cabinets and boxes are installed, cover openings to prevent entrance of water and foreign materials. Close conduit openings with temporary metal or plastic caps, including those terminated in cabinets.
- H. Protect all rough and finished floors and other finished surfaces from damage which may be caused by construction materials and methods. Protect floors with tarpaulins, chip pans and oil-proof floor covering. Protect finished surfaces from welding and cutting splatters with baffles and asbestos splatter blankets. Protect finished surfaces from paint droppings, adhesive and other marring agents with drop cloths. Protect other surfaces with appropriate protective measures.
- I. Have materials delivered to site. Unload and store materials in designated location, and protect from damage. Deliver materials to their point of installation.
- J. Deliver materials to Project site in manufacturer's original unopened containers with manufacturer's name and product identification clearly marked thereon.

1.11 DELIVERY AND RECEIVING

- A. Owner-furnished equipment will be delivered, crated or otherwise packaged to the Site delivery point selected by the Construction Manager. This Contractor shall accept delivery of all Owner-furnished items which are under his trade jurisdiction and place them in their final location.

- B. Where items cannot be immediately placed in their final position, this Contractor shall store and protect all Owner-furnished items until the time of their final installation. He shall be responsible for the care and protection of the items until acceptance by the Owner. Delivery of Utility Company furnished equipment shall be coordinated with the delivery policy of that company.

1.12 ACCESSIBILITY AND MEASUREMENTS

- A. All work shall be installed so as to be readily accessible for operation, maintenance and repair. Minor deviations from the plans may be made to accomplish this, subject to the approval of the Architect or Engineers.
- B. Before ordering any material or doing any work, the Contractor shall verify all measurements at the Building, and shall be responsible for the correctness of same as related to the work under this Contract.

1.13 TEMPORARY LIGHT AND POWER

- A. Electric services for temporary light and power shall be obtained from the utility company and extended as required. Consult the Owner prior to making any connections.
- B. The Electrical Contractor shall furnish, install and maintain the temporary lighting and power system for all Contractors. The use of electricity shall be kept to a minimum.
- C. The Owner or Owner's Representative will pay for all energy required by the temporary lighting and power system.
- D. Provide all wiring, supports, lamp sockets, receptacle sockets and any other materials, supplies or equipment necessary for temporary light and power system.
- E. Ground fault protection required by OSHA for temporary receptacle circuits shall be accomplished by providing branch circuit panels containing ground fault protection branch circuit breakers.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

- F. Provide a grounding conductor connection to each receptacle grounding terminal. Minimum size branch circuit and grounding conductors shall be No. 12 AWG.
- G. Install separate stringer circuits for lighting and receptacles. Provide one lamp socket and one duplex receptacle (or two single receptacles) for every 400 square feet of new general construction area. (Approximately 20 feet on centers). Furthermore, provide one lamp socket and one duplex receptacle every 20 feet along the peripheral walls of the construction areas for temporary conditions. Each lamp socket shall be provided with a 100 watt lamp. Replace burned out lamps as required for as long as the temporary lighting system is maintained in operation.
- H. Provide sufficient supplementary temporary lighting to permit proper execution of the work. This supplementary lighting shall consist of but not be limited to the following:
 - 1. Construction hoist landings.
 - 2. Stairways and stairway landings where existing illumination is inadequate due to alterations or construction.
 - 3. Interior rooms not covered with general construction area lighting.
- I. Provide power wiring to operate construction hoist. Provide fused disconnect switch at hoist location. Fuse size, wiring size and disconnect shall be as required.
- J. Provide 50 trailer extension cords, each 25 feet long. Cords shall be 16-3, Type SJ. 25 of the trailer cord sets shall be receptacle type ITT No. 6112 and 25 of the trailer cord sets shall be trouble light type with receptacle ITT No. J-3270. Distribution of these cord sets to Mechanical and other contractors shall be as directed by the Owner's Representative.
- K. Keep the temporary lighting and power system operational commencing fifteen (15) minutes before the established starting time of that trade which starts

work earliest in the morning and ending fifteen (15) minutes after the established quitting time of that trade which stops work latest in the evening. This applies to all weekdays, Monday through Friday inclusive, which are established as regular working days for any trade engaged in the work, and shall continue until Final Acceptance of the work or until these services are ordered terminated by the Owner or the Owner's Representative.

1.14 NAMEPLATES

- A. Furnish a nameplate for each separately installed feeder switch and circuit breaker, each individual panel, disconnect switch, power conditioners, starter push-button station and equipment enclosure.
- B. Unless otherwise noted, nameplates shall be black laminate with white letters of uniform size consisting of reasonably large caps, easily visible.
- C. Inscriptions shall consist of name and number of equipment as shown on the Drawings and as approved by the Architect.

1.15 NAMES AND TRADE NAMES

- A. Where trade and manufacturers' names are specified or indicated on the Drawings, they are intended to indicate the standard of material or articles required. This shall not remove the responsibility of the Contractor from verifying the equipment's compliance with all rules and regulations governing the use of such equipment. No purchase of any equipment shall be done without written authorization, if such equipment will not abide with all rules and regulations, covering its intended use.

1.16 MATERIAL AND WORKMANSHIP

- A. All material shall be new and of the best quality and shall have the Underwriters Laboratories label attached. The label shall be of the type for the intended application. The work throughout shall be executed in the best and most thorough manner under the direction of, and to the satisfaction of the Architect who will interpret the meaning of the

Drawings and Specifications. The Architect shall have the power to reject any work and materials which, in his opinion, is not in full accordance therewith.

- B. If, after installation, operation of the equipment proves to be unsatisfactory to the Owner by reason of defects, errors or omissions, the Owner reserves the right to operate equipment until it can be removed from service for correction by Contractor. Contractor shall pay for damages to work of other trades caused by this defective equipment and its replacement.

1.17 OPERATING INSTRUCTIONS (SYSTEMS AND EQUIPMENT FURNISHED UNDER CONTRACT FOR ELECTRICAL WORK)

- A. Two months prior to the completion of all work and the final inspection of the installation by the Owner, five copies of a complete Instruction Manual, bound in booklet form and suitably indexed, shall be submitted to the Architect for approval. All written material contained in the Manual shall be typewritten or printed.
- B. The Manual shall contain the following items:
 - 1. Table of Contents
 - 2. Introduction - Explanation of manual and its use.
 - 3. Description of system or equipment.
 - a. Complete schematic drawings of all systems.
 - b. Functional and sequential description of all systems.
 - 4. Systems Operation
 - a. Operation procedures.
 - b. All posted instruction charts.
 - 5. Maintenance
 - a. Systems trouble-shooting charts
 - b. Procedures for checking out functions.
 - c. Recommended list of spare parts.
 - 6. Listing of Manufacturers

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

7. Manufacturer's Data (where multiple model, type and size listings are included, clearly and conspicuously indicate those that are pertinent to this installation.
 - a. Description - literature, drawings, illustrations, certified performance charts, technical data, etc.
 - b. Operation
 - c. Maintenance - including complete trouble-shooting charts
 - d. Parts list
 - e. Names, addresses and telephone numbers of recommended repair and service companies.
 - f. Guarantee data.

END OF SECTION 16000

SECTION 16111
RACEWAYS AND INSTALLATION COMPONENTS

PART 1 - GENERAL**1.01 GENERAL REQUIREMENTS**

- A. This Section is to coordinate with and be complementary to the General Conditions and Supplementary General Conditions of the Work, wherever applicable to Mechanical and Electrical Work.
- B. Section 15000 - Special Requirements for Mechanical and Electrical Work shall apply.
- C. Section 16000 - General Provisions for Electrical Work shall apply.

1.02 DESCRIPTION OF WORK

- A. The requirements of this section apply to raceway work required for the protection of electrical conductors. Raceways are required for all wiring unless otherwise specified.
- B. The work includes the furnishing and installation of completely coordinated, effectively grounded raceway systems complete with boxes, fittings, flexible connections to vibrating equipment and other accessories, as required. Conduit or tubing sizes referred to in the Specifications and on the Drawings are nominal trade sizes.

1.03 QUALITY ASSURANCE

- A. Manufacturers - Firm regularly engaged in manufacture of raceways and accessories of the types required and whose products have been in satisfactory use in similar service for not less than 5 years. Refer to PART 4 of this section for "Approved Manufacturers".
- B. Raceways and installation components shall be listed and labeled by Underwriters Laboratories and comply with applicable sections of National Electrical Manufacturers Association standards.
- C. All outdoor installations shall be weatherproof.

1.04 SUBMITTALS

- A. Refer to Section 15000, Special Requirements for Mechanical and Electrical Work.

10/31/03

Soundproofing of Msgr. McClancy Mem. B.S.

- B. Submit a list of proposed manufacturers for all raceways and components.

1.05 GUARANTEE

- A. Refer to Section 15000, Special Requirements for Mechanical and Electrical Work.

PART 2 - PRODUCTS

2.01 RACEWAYS AND FITTINGS

A. Raceways:

1. All conduit shall be 3/4-inch minimum.
2. Rigid steel conduit: Shall be full weight steel pipe, hot dipped galvanized inside and outside, threaded.
3. Conduit for direct burial: Shall be galvanized rigid steel with PVC jacket.
4. Electric metallic tubing (EMT) shall be steel thin wall pipe, galvanized, threadless.
5. Flexible steel conduit (Greenfield): Shall be continuous single strip, galvanized.
6. Liquid-tight, flexible steel conduit: Shall be zinc coated and consist of flexible galvanized steel tubing over which is extruded a liquid-tight jacket of polyvinyl chloride (PVC).
7. Wiring troughs: Refer to Section 16141, 2.2 B.

B. Conduit Fittings:

1. Thread compounds shall be UL approved conductive type to insure low resistance ground continuity through conduit.
2. Metallic conduit fittings shall be corrosion resistant.
3. Bushings shall be of the metallic insulated type.
4. For weatherproof and dusttight installations provide liquid-tight fittings with sealing rings and insulated throat.

5. Rigid steel conduit fittings:
 - a. Fittings shall be standard threaded couplings, locknuts, bushings, and elbows.
 - b. Sealing fittings shall be of the threaded cast iron type. Sealing fittings used to prevent passage of water vapor shall be of the continuous drain type. In concealed work, each fitting shall be installed in a flush steel box with blank coverplate having the same finish as that of other electrical plates in the room.
6. Electrical metallic tubing fittings:
 - a. Couplings and connectors shall be steel body-malleable iron nut, "concrete tight". They shall be compression type, afford raintight integrity, and provide positive ground. Connectors shall have insulated throats.
7. Flexible steel conduit (Greenfield) fittings:
 - a. Shall be pressure clamp type with insulated throat and UL approved for ground continuity.
8. Liquid-tight flexible metal conduit fittings:
 - a. Shall be of a type incorporating a threaded grounding cone, a steel or plastic compression ring, and a gland for tightening. Connectors shall have insulated throats. Shall be UL approved for ground continuity.
9. Expansion and deflection couplings:
 - a. Shall accommodate 0.75 inch deflection, expansion, or contraction in any direction and allow 30 degree angular deflections. Couplings shall comply with UL 467 and 514 and shall qualify seismically.
 - b. Shall include internal flexible metal braid sized to guarantee conduit ground continuity and fault currents in accordance with UL 467, and the NEC tables for ground conductors.

2.02 INSTALLATION COMPONENTS

A. Sleeves:

1. Provide and assume responsibility for locating and maintaining in proper position all sleeves

required for the work. See Section 15000 - General Requirements for Mechanical and Electrical Work for sleeves specification.

2. For raceways through sleeves, provide seals of oakum packing and lead or O.Z. Type WSC compound on both sides.
3. For cables in raceways through sleeves, provide seals similar to O.Z. Type WSC compound or Type C series terminators.
4. Through floors, exterior masonry walls, roof, and underground, sleeves shall be schedule 40 galvanized steel pipe. For other areas, sleeves shall be 18 gauge galvanized sheet steel.

B. Fire sealants:

1. Openings through floors and walls in which cables, conduits, or pipe pass shall be sealed by U.L. classified smoke and fire stop fittings, and have an hourly rating equal to the fire rating of the floor or wall. Fittings shall be similar to O-Z Gedney Type "CFS" or CAFS".
2. Penetrations through fire-rated floors in which wiring for floor service outlets is routed shall be sealed by U.L. classified smoke and fire-stop fittings, and shall have an hourly rating equal to the floor rating. Fittings shall be similar to O-Z Gedney Type "PTFS".

2.03 SUPPORTS

A. Conduit Supports:

1. All parts and hardware shall be zinc-coated or have equivalent corrosion protection.
2. Individual conduit hangers, shall be designed for the purpose, have pre-assembled closure bolt and nut, and provisions for receiving hanger rod.
3. Multiple conduit (trapeze) hangers shall be not less than 1 ½ by 1 ½ inch, 12 gauge steel, cold formed, lipped channels. Hanger rods shall be not less than 3/8-inch diameter steel.
4. Solid masonry and concrete anchors shall be a type approved for the purpose.

B. Fasteners:

1. Furnish all fasteners and hardware compatible with the materials and methods required for attachment of supporting devices.
 - a. Slotted-Type Concrete Inserts: Galvanized pressured steel plate complying with ASTM A 283; box-typed welded construction with slot designed to receive steel nut and with knockout cover; hot-dipped galvanized in compliance with ASTM A 386.
 - b. Masonry Anchorage Devices: Expansion shields complying with Federal Specification FF-S-325, as follows:
 - 1) Furnish lead expansion shields for machine screws and bolts $\frac{1}{4}$ " and smaller; head-out embedded nut type, single unit class, Group I, Type 1, Class 1.
 - 2) Furnish lead expansion shields for machine screws and bolts larger than $\frac{1}{4}$ " in size; head-out embedded nut type, multiple unit class, Group I, Type 1, Class 2.
 - 3) Furnish bolt anchor expansion shields for lag bolts, zinc alloy, long-shield anchors class, Group II, Type 1, Class 1.
 - 4) Furnish bolt anchor expansion shields for bolts, closed-end bottom bearing class, Group II, Type 2, Class 1.
 - c. Toggle Bolts:
 - 1) Tumble-wing type, complying with Federal Specification FF-B-588, type, class and style as required.
 - d. Nuts, Bolts, Screws, Washers:
 - 1) General: Furnish zinc-coated fasteners, with galvanized complying with ASTM A 153 for exterior use or where built into exterior walls. Furnish fasteners for the type, grade and class required for the particular installation.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

- 2) Standard Nuts and Bolts: Regular hexagon head type, complying with ASTM A 307, Grade A.
- 3) Lag Bolts: Square head type, complying with Federal Specification FF-B-561.
- 4) Machine Screws: Cadmium plated steel, complying with Federal Specification FF-S-92.
- 5) Wood Screws: Flat head carbon steel, complying with Federal Specification FF-W-92.
- 6) Plain Washers: Round, general assembly grade carbon steel, complying with Federal Specification FF-W-92.
- 7) Lock Washers: Helical spring type carbon steel, complying with Federal Specification FF-W-84.

C. "C" Beam Clamps:

- a. For 1" Conduit Maximum: Caddy Fastner Div./Erico Products Inc. BC-8P and BC-8PSM Series, HIT Spring Steel Fasteners, Inc. CH Series.
- b. For 3" Conduit Maximum: Kindorf Elec. Prod. Div./Midland Ross Corp. 500 Series hanger; Gedney Electric Co. IS-500 Series beam clamp with H50WB Series hangers; Appleton Electric Co. BH-500 Series beam clamp with H50W/B Series hanger.
- c. For 4" Conduit Maximum: Kindorf Elec. Prod. Div./Midland Ross Corp. E-231 beam clamp and E-234 anchor clip and C-149 Series lay-in hanger; Unistrut Corp. P2676 beam clamp and P-1659 Series anchor clip with J1-205 Series lay-in hanger.
- d. For Threaded Rods (100 lbs. load max.): Caddy Fastner Div./ Erico Products Inc. Cat. No. BC-4A; HIT Spring Steel Fasteners Inc. master clamp MC.
- e. For Threaded Rods (200 lbs. load max.): Kindorf Elec. Prod. Div./Midland Ross Corp. 500 Series; Gedney Electric Co. IS-500 Series; Appleton Electric Co. BH-500 Series.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

- f. For Threaded Rods (300 lbs. load max.): Kindorf Elec. Prod. Div./Midland Ross Corp. E-231 beam clamp and E-234 anchor clip; Unistrut Corp. P2676 beam clamp and P-1659A Series anchor clip.

D. Pipe Straps:

- 1. Two hole steel conduit straps with Galv-Krom finish, Kindorf Elec. Prod. Div./Midland Ross Corp. C-144 or C-280 Series.

E. Pipe Clamps:

- 1. One hole malleable iron type clamps, Kindorf Elec. Prod. Div./ Midland Ross Corp. HS-400 Series; Gedney Electric Co., 14-50 Series.

F. Deck Clamps:

- 1. Caddy Fasteners Div./Erico Products Inc. DH-4-T1 Series. HIT Spring Steel Fasteners, Inc. RD Series.

G. Fixture Stud and Strap:

- 1. Steel Electrical Products Div. FE-431; Gedney Electric Co. SL-134.

H. Channel Support System and Accessories:

- 1. Furnish 12 gauge galvanized steel channel and accessories as manufactured by:
 - a. Kindorf Elec. Prod. Div./Midland Ross Corp.; B-9000 (1 1/2" x 1 1/2"), B-901 (1 1/2" x 1 7/8"), B-902 (1 1/2" x 3").
 - b. Unistrut Corp.; P-3000 (1 3/8" x 1 5/8"), P-5500 (1 5/8" x 2-7/16"), P-5500 (1 5/8" x 3 1/4").
 - c. B-Line Division - The Brinkley Co.; B-22 (1 5/8" x 1 5/8"), B-12 (1 5/8" x 2-7/16"), B-11 (1 5/8" x 3 1/4").
 - d. Versabar Corp.; VA-1 (1 5/8" x 1 5/8"), VA-3 (1 5/8" x 2 1/2").

I. Support Fittings for Industrial Fluorescent Fixtures on Exposed Conduit System:

- 1. Ball Hanger: Crouse-Hinds Co. ALC, Appleton Electric Co. AL Series.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

2. Flexible Fixture Hanger: Crouse-Hinds Co. UNJ115, Appleton Electric Co. UNJ-50 or UNJ-75.
3. Flexible (Hook Type) Fixture Hanger: Crouse-Hinds Co. UNH-1, Appleton Electric Co. FHHF.
4. Eyelet: Steel City Electrical Products Div. H-263, Unistrut Corp. M2250.
5. Eyelet with Stud: Steel City Electrical Products Div. H262, Unistrut M2250.
6. Conduit Hook: Crouse-Hinds Co. UNH-13, Appleton Electric Co. FHSN.

2.04 BOXES

A. Outlet boxes:

1. Outlet boxes for concealed work shall be galvanized steel, 4 in. square or octagonal, or as required by construction, devices or wiring, and shall conform to UL's "Standard for Outlet Boxes and Fittings." Outlet boxes shall be provided with a galvanized steel cover or extension ring depth as required. As a minimum, boxes shall be of the following depths and as described for specific applications hereinafter:

Above ceiling, 1 ½ in. deep.

In ceiling or slab, 3 in. deep.

In wall for fixture, 2 ¾ in. deep.

In wall for receptacles and switches, 1 ½ in. deep.

With raised covers and fixtures studs where required.

Through-the-wall type are not permitted.

Receiving 1 ¼" conduit, 2 ½" deep min.

2. Ceiling fixture outlet boxes, except as noted, shall be 4" octagonal and 1 5/8" deep and with 3/8" fixture stud. Where cast in slab, boxes shall be open back concrete type.
3. Wall bracket outlets shall be 4" square and 1 5/8" deep with cover having 2 7/8" round openings and except for lampholders shall be furnished with fixture stud.

4. All outlet boxes for concealed convenience receptacles or local switches shall be 4" square and 1 5/8" deep with regular deep switch extension cover, except where installed on columns they shall be of sufficient depth so that conduits may be installed into these boxes in back of fireproofing. Outlet boxes for gang receptacles and switches shall suit space conditions.
5. Outlet boxes for exposed work shall be galvanized cast iron or aluminum with threaded hubs. Except as otherwise required by construction, devices or wiring, the outlet boxes shall be 4 in. round x 2 in. deep for mounting on ceilings and 4 in. square x 2 in. deep for mounting on walls.
6. Boxes shall be of the cast type for switches and receptacles when installed on the exterior of the project. Such boxes shall be aluminum or malleable iron of the threaded hub type, with covers without projecting edges or corners and with openings suitable for the devices to be contained therein. Outlet boxes and covers shall be galvanized or anodized and shall be gasketed.
7. Outlet boxes located outdoors and damp locations shall be weatherproof.
8. Outlet boxes without fixture or device, shall have blank cover.
9. Offset back-to-back outlets, shall have minimum 6 in. separation between them.
10. Extension rings shall be provided as required to suit various conditions.
11. Grounding screw and cable wiring connector shall be provided as required by wiring method.
12. Boxes for use with surface mounted raceways shall be of the same construction and manufacture as the raceway.
13. Except where special outlets are required, wall outlets for signaling systems shall be 4" square with single gang raised cover and bushed plate.
14. Junction outlets shall be the same as bracket outlets but without stud, furnished with covers to suit each condition and as directed. Where number of conductors exceed capacity of standard box, provide special size box.

B. Junction and Pull Boxes:

1. Junction and pull boxes shall be made of galvanized sheet steel and with screw-on covers, except as noted, and will include insulated supports for cables.
2. Provide junction and/or pull boxes as noted or as required. All junction and pull boxes shall be accessible.
3. Junction and pull boxes located outdoors and in damp locations shall be galvanized cast iron with threaded hubs and gaskets.
 - a. Provide barriers in junction boxes or pull boxes between:
 - 1) Emergency and normal wiring.

PART 3 - EXECUTION**3.01 INSPECTION**

- A. Contractor shall examine locations where raceways and installation components are to be installed, determine space conditions and notify Architect in writing of conditions detrimental to proper and timely completion of the work.
- B. Do not proceed with the work until unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Raceways:

1. Install raceways in accordance with applicable requirements of NEC and National Electrical Contractors Association's "Standard of Installation", and in accordance with recognized industry practices.
2. The routing and location of conduit runs are generally not dimensional on the drawings but shall be determined in the field to suit the locations of equipment, to conform to structural features and to avoid interferences. Where exposed conduits are dimensional on drawings, they shall be installed to a tolerance of $\frac{3}{4}$ inch. Coordinate with equipment configuration and exact location prior to connection.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

3. Support by means of ceiling trapeze, strap hangers, or wall brackets, structural steel angles or channels. Secure raceways to supports with pipe straps or U-bolts. Spacing of support shall be as per NEC. Provide U-bolts at each floor level for riser raceways and connect to acceptable supports.
4. Mount supports to structure with toggle bolts on hollow masonry, expansion shields or inserts on concrete and brick, machine screws on metal, wood screws on wood.
5. Allow a 6 in. minimum separation between raceways and steam and hot water pipes. Provide approved thermal insulation for electric lines where this separation cannot be maintained.
6. Keep raceways clear of motor foundations and from underside of boilers. Also, install raceway so that they will not obstruct headroom, doorways, or walkways.
7. For outlets located in hung ceilings, run raceways in hung ceilings and connect to main ceiling support channels.
8. Run raceways concealed, except as noted. Exposed raceways shall be run parallel with or at right angles to walls. In walls, run raceways vertically only.
9. Mechanically join all metal raceways, enclosures and junction boxes to form a continuous electrical conductor. Connect all electrical boxes, fittings and cabinets so as to provide effective electrical continuity and firm mechanical assembly. Maintain grounding continuity of interrupted metallic raceways with ground conductor, sized in accordance with the NEC.
10. Provide long radius bends for empty raceway system where required to satisfy the system cabling requirements.
11. Install complete conduit runs before pulling in wire or cable. Install raceways so that required conductors may be drawn in without injury or excessive strain to raceway or cable. Where raceway size is not indicated, follow applicable code.
12. Do not cross pipe shafts or ventilation duct openings. Route raceway to avoid present or

- future openings in floor, wall or ceiling construction, when so indicated on the drawings.
13. Keep end of raceways plugged or capped during construction.
 14. For empty raceways over 10 ft. long, provide fish or pull wire. Pull wire shall consist of nylon or polypropylene cord.
 15. Damaged or deformed raceway shall be removed and replaced.
 16. Branch circuit conduits shall not be supported by lighting fixtures, piping, or air conditioning ducts.
 17. For conduits entering the building, perform the following:
 - a. Plug all empty raceways.
 - b. Enter through floor or wall entrance fittings. The entrance fittings shall have a gland assembly which shall be capable of providing a seal around the conduit or cable to withstand 50 foot head of water without leakage. The sealing assembly shall be similar to O-Z Gedney Type "FSK" or "FSCS".
 18. Work with extreme care near existing ducts, conduits, cables and other utilities to avoid damaging them.
 19. For conduit installation in or under concrete.
 - a. Where located in slabs, the maximum outside diameter of the conduit shall be 1/3 the slab thickness. When locating in the slab, place conduits in a manner so as not to interfere with the placement of reinforcing bars or cause damage to structural members or structural support.
 - b. Where located in concrete fill, the conduit shall have a minimum of 1 in. cover.
 - c. In terrazzo floor finish, rigid steel conduit is not permitted.
 - d. Where located under the building, conduit shall be concrete encased or PVC coated rigid steel.

20. Permitted Uses:

a. Rigid Galvanized Steel Conduit (RGS):

- 1) RGS shall be used under slab, for underground installation (PVC coated if direct burial) for risers and branch feeders, in wet or damp locations, for exposed runs on the exterior of the building, in concrete slabs, in mechanical equipment spaces, hazardous locations, where subject to physical damage, and as noted.

b. Electric Metallic Tubing (EMT):

- 1) EMT shall be used for branch circuit wiring installed in dry locations (hung ceilings, hollow block walls and furred spaces).
- 2) EMT shall be used for low voltage system wiring, (communications, signaling, alarm; remote controls, etc.) installed in dry locations (hung ceilings, hollow block walls, riser shafts, and furred spaces).

c. Flexible steel conduit:

- 1) Flexible steel conduit "Greenfield", shall be used for the following applications: for short connections where rigid conduit or tubing is impracticable, from outlet box to recessed lighting fixture with minimum length of 4 ft. and a maximum length of 6 ft., and for final connections to vibrating equipment other than motors and transformers in dry locations only.
- 2) For final connections to motor terminal boxes, transformers and other vibrating equipment, the flexible steel conduit shall have polyvinyl sheathing "Sealtite" and a ground conductor. The minimum length of the flexible conduit shall be 18 in. with slack. Connect the ground conductor to the enclosure or raceway at each end.

19. Provide expansion-deflection fittings with bonding jumper at expansion joints and on length of runs in accordance with manufacturer's recommendations.

20. For Wet, Damp, or Moist Locations:

- a. Provide sealing fittings, to prevent passage of water vapors, where conduits pass from warm to cold locations, such as refrigerated spaces, air conditioned spaces, or similar areas.

B. Sleeves:

1. Sleeves shall be provided in accordance with the following guidelines:
 - a. Set required sleeves and inserts in place during progress of construction to avoid cutting of completed work.
 - b. Provide sleeves for raceway passing through floors and foundations. Determine exact location of sleeves in field to avoid interference with structural members or equipment of other trades.

C. Fire-Stops:

1. Where wiring, conduits, cable trays, wireways, and other electrical raceways pass through fire partitions, fire walls, or floors, install an approved fire-stop that provides an effective barrier against the spread of fire, smoke and gases. Firestop material (Heat activated putty and a high temperature fiber material) shall be packed tight and shall completely fill clearances between raceways and openings. It shall be applied concurrently with the installation of the wiring. The fire stop fittings shall have a U.L. classified hourly rating equal to the fire rating of the floor or wall.
2. Floor, exterior wall, and roof seals shall also be made watertight. Mineral wool, oakum, grout or duct seal stuffed into or around penetrations shall not be used.

D. Outlet Boxes:

1. Set boxes square and true with the building finish. Boxes shall be secured to the building structure by adjustable strap irons.
2. Verify outlet locations in finished spaces with Architectural Drawings of interior details and finishes. In locating outlets, allow for overhead pipes, ducts, and variations in arrangement,

thickness in finish, window trim and other architectural construction details. Correct any inaccuracy resulting from failure to do so without any additional expense to the Owner.

3. Refer to Architect any condition that would place an outlet box in an unsuitable location, such as a molding, break glass in wall finish, or behind a radiator.
4. Mount outlet boxes for similar equipment at uniform heights. Where mounting height or location of outlets is not shown or specified, mount outlet as best suited for equipment connected thereto, or as directed.
5. Close all unused openings in outlet boxes with knockout closers manufactured for this purpose. Provide blank plates on outlet boxes in which no device is installed or device installed does not provide a suitable cover.
6. Provide barriers between switches connected to different phases for voltages exceeding 150 volts to ground.
7. Outlet boxes for fixtures recessed in hung ceilings, shall be accessible through the opening created by the removal of the fixture.
8. Securely fasten exposed outlet boxes by attaching to permanent inserts or lead anchors with machine screws. Adequately support all boxes during construction to prevent movement.

E. Panelboard, Junction and Pull Boxes:

1. Panelboard, junction and pull boxes shall be located clear of other trades equipment, accessible, supported from the building structure, and independent of the conduits.
2. Conceal junction and pull boxes in finished spaces.
3. Coordinate size of motor terminal boxes with motor branch circuit conduit and wiring.

PART 4 - APPROVED MANUFACTURERS

4.01 RACEWAYS

- A. Metallic:
 - 1. Allied Tube & Conduit Corp.
Triangle PWC, Inc.
Western Tube & Conduit Corp.
Wheatland Tube Co.
- B. Metallic, Plastic Coated
 - 1. Robroy Industries, Inc.
Electri-Flex Co.
Perma-Cote Industries
- C. Wireways:
 - 1. Panduit Corp.
Square "D" Company
Hoffman Engineering Co.

4.02 RACEWAY FITTINGS

- A. . Appleton Electric Co.
Crouse-Hinds Co.
O.Z. Electrical Mfg. Co., Inc.
Thomas and Betts Co.

4.03 BOXES

- A. Crouse-Hinds Co.
O.Z./Gedney
Raco Inc.
Russell & Stoll Co.
Steel City Electric Co.
Thomas & Betts Co.

END OF SECTION 16111

SECTION 16123
WIRE AND CABLE (600 VOLTS)

PART 1 - GENERAL

1.01 GENERAL REQUIREMENTS

- A. This Section is to coordinate with and be complementary to the General Conditions and Supplementary General Conditions of the Work, wherever applicable to Mechanical and Electrical Work.
- B. Section 15000 - Special Requirements for Mechanical and Electrical Work shall apply.
- C. Section 16000 - General Provisions for Electrical Work shall apply.

1.02 DESCRIPTION OF WORK

- A. The requirements of this Section apply to wire and cable work specified elsewhere in these Specifications.
- B. The work includes providing wire and cable complete with all accessories in accordance with Drawings and Specifications and as required for a complete system. Wiring size referenced in this Section shall be AWG, except as noted. For special wiring for individual systems refer to respective Sections of these Specifications.

1.03 QUALITY ASSURANCE

- A. "Manufacturers" - Firms regularly engaged in the manufacture of wire and cable of specified types and ratings, whose products have been in satisfactory use in similar service for not less than 5 years. Refer to PART 4 of this Section for "APPROVED MANUFACTURERS".
- B. Provide wire and cable which has been listed and labeled by Underwriters' Laboratories, and comply with applicable portions of National Electrical Manufacturers Association Standards.
- C. Comply with National Electrical Code (NFPA No. 70) and local electrical codes which apply for construction and installation of wire and cable. Where discrepancies arise between codes, the most restrictive code shall apply.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

1.04 SUBMITTALS

- A. Refer to Section 15000, Special Requirements for Mechanical and Electrical Work, and submit shop drawings.

1.05 GUARANTEE

- A. Refer to Section 15000, Special Requirements for Mechanical and Electrical Work.

PART 2 - PRODUCTS

2.01 600 VOLT WIRE AND CABLE

A. Conductors:

1. All conductors shall be copper.
2. No. 10 and smaller conductors shall be ASTM Standard, solid, copper. No. 8 and larger conductors shall be ASTM standard, stranded copper.
3. Communications and signal wiring shall conform to the recommendations of the system manufacturers and shall be as specified in respective Sections of these Specifications.

B. Insulation:

1. Rubber and thermoplastic insulation shall comply with ASTM and IPCEA standards.
2. Minimum insulation shall be UL rated for 75°C. Types THHN and USE.
3. Conductor ampacity rating shall be based on 75°C insulation.
4. Types and application:
 - a. THHN shall be used for interior branch circuit and feeder wiring.
 - b. Conductors with insulation rated 90°C shall be provided in high ambient temperature areas and for branch circuit wiring connecting the fluorescent fixtures.
 - c. Types USE and UF cable shall be provided for direct burial feeders and branch circuits.

- d. Bare conductors shall be permitted for grounding where so indicated in GROUNDING Section of Specifications.
- e. Type SFF-2 conductors shall be provided in wiring channels at continuous fluorescent fixtures and in ambient temperatures over 90°C.
- f. For low voltage system wiring (Communications, signaling alarm, remote controls, etc.) installed above suspended ceilings, approved signaling cable without conduit shall be permitted. When installed in air handling plenums signaling cable shall have flame retardant insulation UL classified as low smoke/low flame, with fluoropolymer resin jacket approved for installation in air handling plenums without conduit. Signaling cable installed without conduit shall be adequately harnessed, bundled and tied at 4 foot intervals by individual system and marked with identification tags.

C. Wire Sizes

- 1. For General Use:
 - a. No. 12 minimum copper wire shall be used for lighting and power.
 - b. No. 10 minimum copper wire shall be used for 15 Ampere circuits, at 120 Volts, over 90 ft. in length, and for 20 Ampere circuit, at 120 Volts, over 60 ft. in length.
- 2. For Control and Alarm Wiring, unless otherwise noted:
 - a. No. 14 minimum copper wire.
 - b. No. 12 minimum copper wire for 120 Volt circuits over 60 ft. in length.
- 3. For Other Voltages and Phases and for Longer Circuit Lengths:
 - a. Size wire as required to maintain NEC (NYCEC) permissible voltage drop.
- 4. Raceways:
 - a. Increase raceway sizes for larger wire sizes in conformance with NEC requirements.

D. Color Coding

1. Phase wires shall be color-coded as follows:
 - a. 120/208 Volt system:

Black	- A phase
Red	- B phase
Blue	- C phase
2. Neutral conductors shall be white for 120/208 Volts.
3. Equipment ground wire shall have a green outer covering throughout.
4. Where color-coded cable is not available, certify in writing and request permission for overlap color taping conductors (minimum length 6 in.) in accessible locations.
5. Conductors for control circuits and signal systems shall also be consistently color coded to avoid confusion and permit easy identification of conductors. The IPCEA color code shall be used wherever possible. No two wires in the same raceway shall be the same color, unless provided with flameproof linen identification tags on each end.

PART 3 - EXECUTION**3.01 GENERAL**

- A. Install wire and cable in accordance with the NEC, The National Electrical Contractors Association's "Standard of Installation", and in accordance with recognized industry practices to ensure that products serve the intended functions.
- B. 600 Volt Wire and Cable:
 1. Wire and cable shall not be drawn into conduit and raceways until all conduit work is complete, joints made up tightly and the entire run secured in place.
 2. The inside of conduits and raceways shall be dry and clean before conductors are pulled.
 3. Care shall be exercised in pulling to avoid damage to the wire or cable. Lubricants shall be used for pulling wire or cable if the character of the pull might otherwise damage the conductors, insulation or jacket. No thermoplastic wires shall be pulled at temperatures lower than 0°C.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

4. Cables shall be supported at the upper end of all risers and at intermediate points as required by the NEC. Supports shall be O.Z. Type "R", insulation wedges or Kellens grips, or approved equal.
5. Seal conduit with a non hardening compound approved for the purpose, where cable or wire enter building from underground.
6. Cable spacers shall be installed where required. Spacers shall consist of galvanized or cadmium plates, steel or malleable iron threaded conduit and fittings and inserts of non-metallic insulating material with openings adequate to accommodate cables being spaced. Cable spacers shall be O.Z. Mfg. Co., Inc. Type E or Type EL, with grounding lug, or approved equal.
7. Not more than 3 lighting or convenience receptacle circuits shall be installed in one (1) conduit, unless otherwise indicated on Drawings.
8. The Contractor installed service cables containing four (4) or more parallel conductors per phase shall have cable limiters at both ends of each conductor. Limiters shall be rated 600 Volts, 200,000 Amperes RMS interrupting capacity and shall have waterproof sleeves. The requirements for cable limiters shall be coordinated with the Utility Company prior to installation.
9. Provide individual raceways for two pole ungrounded circuits.
10. In certain systems, equipment furnished by an approved manufacturer may require a different number and arrangement of conductors from those indicated on the Drawings. In such cases, the Contractor for the work under this Division shall comply with such requirements at no additional cost to the Owner.
11. In the event the Contractor for the work under this Division or Section chooses to furnish and install a system or item of equipment of different arrangement from that shown or specified, he shall furnish and install any additional wiring and conduit

required by the system at no additional cost to the Owner.

12. In wireways and large pull boxes, lace and tie off conductors in groups of 3 phases and neutral (if used) to limit conductor unbalanced loading. Conductor group shall be as installed in conduit.
13. Tag all feeders and risers in all pull boxes and in all gutter spaces through which they pass. Tags shall be engraved white core nameplates identifying feeders as shown on the Drawings or the circuit protective device from which they originate.
14. Leave all wires with sufficient slack at terminals ends for convenient connections and fixtures and for convenient servicing. Stow loose ends neatly in outlet box.

C. Terminations, Splices and Connections:

1. Splices and taps shall be made in accessible boxes, panelboard fittings, gutters, terminal panels, etc. only. Materials shall be compatible with the conductors, insulations and protective jackets on the cables and wires.
2. All copper conductors No. 8 & larger shall be terminated, spliced, and tapped with color-keyed compression connectors, as manufactured by Thomas & Betts Co., Series 54000, Ideal Industries Series 87000, or approved equal. The manufacturers recommended tooling shall be used. Mechanical type connectors shall not be used.
3. All copper conductors No. 10 AWG & smaller shall be terminated and spliced with Ideal Industries wing-nut wire connectors, or approved equal compression connectors. The flame-retardant, thermoplastic insulated type shall be used to isolate the terminal from other metal parts and equipment.
4. Splices and joints shall be insulated with materials approved for the particular use, location, voltage, and temperature. Insulation shall be not less than that of the conductors being joined.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

5. Plastic electrical insulating tape shall be flame retardant, cold and weather resistant.

D. Cable Tying:

1. All circuit and control wiring in cabinets, panels, pullboxes, wireways, and junction boxes shall be tied and held with nylon Ty-Rap cable ties as manufactured by Thomas & Betts Co., or approved equal.
2. Wire identification ties fastened to conductors at the point of attachment to terminal blocks and equipment components shall be nylon, self-locking Ty-Raps as manufactured by Thomas & Betts Co., and Ideal Industries Series Ty-51M, 53M, or approved equal.

E. Tags:

1. Cables shall be tagged in all pull boxes, wireways and wiring gutters of panels. Where two or more circuits run to or through a control device, outlet box or junction box, each circuit shall be tagged as a guide in making connections.
2. Tags for feeders shall indicate feeder number, size, phase, voltage, origin and termination. Feeder tags shall identify all phases individually.
3. Tags for control and alarm wiring shall indicate type of control or alarm, size of wire and origin and termination.
4. Tags shall be Thomas Betts Co., Ideal Industries, wire-marker dispenser type, self laminated wire markers.

F. Lubrication:

1. Wire lubricating compound shall be suitable for the wire insulation and conduit with which it is used, and shall not harden or become adhesive. Lubricating compound shall be Ideal Industries Yellow 77 Type, or approved equal. Lubricating compound shall not be used on wire for isolated type electrical power systems.

G. Inspection:

1. Contractor shall examine the areas and conditions under which wire and cable are to be installed, and notify Architect in writing of conditions detrimental to proper and timely completion of the work.
2. Do not proceed with the work until unsatisfactory conditions have been corrected.

H. Installation:

1. Coordinate cable and wire installation work with electrical raceway and equipment installation work, as necessary for proper interface.

3.02 FIELD QUALITY CONTROL

A. Visual and Mechanical Inspection:

1. Inspect for physical damage and proper connection in accordance with single line diagram.
2. Cable connections shall be tightened using a calibrated torque wrench.

B. Electrical Test:

1. Megger conductors phase-to-phase and phase-to-ground for continuity and insulation tests before connection to utilization devices for the following:
 - a. 100 percent of feeders.
 - b. 10 percent of branch circuits
 - c. 100 percent of 3-phase motor branch circuits.
2. Verify phase rotation for all 3-phase motor circuits.

C. Perform tests prior to connecting equipment and in presence of authorized representatives.

D. Exercise suitable and adequate safety measures prior to, during, and after the high potential tests, including placing warning signals and preventing people and equipment from being exposed to the test voltages.

E. Submit certified written report of test results to Architect.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

- F. Correct installation of or replace cable testing below manufacturer's standards.
- G. Subsequent to wire hook-ups, energize circuit and demonstrate functioning in accordance with requirements.

PART 4 - APPROVED MANUFACTURERS

4.01 WIRE AND CABLE UNDER 600 VOLTS

- A. For Wire and Cable:
 - 1. Pirelli Cable Corp.
 - 2. Basic Wire & Cable Corp.
 - 3. Triangle
 - 4. Okonite
- B. For Wire and Cable Termination and Connections:
 - 1. Thomas and Betts Corp.
 - 2. Burndy Corp.
 - 3. Elastimold
 - 4. G&W Electric Co.

END OF SECTION 16123

SECTION 16141
WIRING DEVICES AND INSTALLATION COMPONENTS

PART 1 - GENERAL

1.01 GENERAL REQUIREMENTS

- A. This Section is to coordinate with and be complementary to the General Conditions and Supplementary General Conditions of the Work, wherever applicable to Mechanical Work.
- B. Section 15000 - Special Requirements for Mechanical and Electrical Work shall apply.
- C. Section 16000 - General Provisions for Electrical Work shall apply.

- 1. Generally, the location of devices and outlet boxes in finished rooms or spaces shall be where indicated. In the case of special rooms and areas, locations shall be obtained from Architect and from his scaled drawings of interior details and finish. All local switches near doors shall be located at strike side of door as finally hung, whether so indicated on the plans or not, unless specifically indicated otherwise.
- 2. Except as otherwise indicated or where shown on Architect's details, the following dimensions from finish floor to center of outlet shall be established.

a. Receptacle outlets, unless otherwise noted	1'-6"
b. Wall switch outlet	4'-0"
c. Fire alarm station	4'-0"
d. Fire alarm speakers and strobe lights	6'-8"
e. Motor controllers	5'-0"
f. Safety and disconnect switches	5'-0"
g. Panelboards (lighting and power)	6'-6" above finished floor to top.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

- D. In centering outlets allow for overhead pipes, ducts, etc., and for variation in thickness of fireproofing and plastering. Allowances shall also be made for window trims, paneling, counters, casework, etc. Any inaccuracies resulting from failure to comply with the above must be corrected without additional expense to the Owner.
- E. Receptacles listed in this Section of the Specification shall be of the type indicated, or approved equal to the Manufacturers listed. Where furnished under this Section of the Specification, provide matching plugs for each receptacle.
- F. Where indicated, switch and receptacle shall be combined.

1.02 DESCRIPTION OF WORK

- A. The work includes the providing of all labor, materials, equipment, accessories, services and tests necessary to complete and made ready for operation by the Owner, all wiring devices in accordance with Drawings and Specifications.

1.03 QUALITY ASSURANCE

- A. "Manufacturers" - Firms regularly engaged in manufacture of wiring devices and installation components, whose products have been in satisfactory use in similar service for not less than 5 years.
- B. Provide wiring devices and installation components produced by a manufacturer listed as an Approved Manufacturer in this Section.
- C. Provide equipment whose performance, under specified conditions, is certified by the manufacturer.

1.04 SUBMITTALS

- A. Refer to Section 15000, Special Requirements for Mechanical and Electrical Work and submit shop drawings. Shop drawings shall include manual motor starters, wireways, receptacles and local wall switches.

1.05 GUARANTEE

- A. Refer to Section 15000, Special Requirements for Mechanical and Electrical Work.

PART 2 - PRODUCTS

2.01 WIRING DEVICES (color as selected by Architect)

A. Local Wall Switches:

1. Switches shall be heavy duty, toggle, quiet type, fully enclosed in composition cases.
2. Switches shall be rated 20 amp, 120/277 volt, AC.
3. Switches shall be as indicated below, or approved equal:
 - a. Single Pole: Hubbell No. 1221
 - b. 3 Way: Hubbell No. 1223
4. Key switches of equivalent rating and grade to above switches shall be provided where indicated on Drawings.
5. Where it is not possible to set the switch box flush with the wall, furnish raised edge plates.
6. Where more than one switch is being installed, provide multiple gang switch plates for number of switches as indicated.
7. Gang switch plates for five or more switches (or receptacles) shall be engraved with titles as directed by Architect.

B. Receptacles:

1. Receptacles shall be the grounding type, (except as otherwise noted) composition base, meeting NEMA standards, publication WD-1-1971.
2. Where it is not possible to set the outlet box flush into the wall, furnish raised edge plates. Convenience receptacle shall be mounted with ground pole up, except those mounted above counter levels.
3. Receptacles shall be as indicated below or approved equal:
 - a. Duplex Convenience Receptacles: 125 Volts, 2-Pole, 3-Wire, U ground slot type.
 - 1) 20 Amp. Hubbell No. 5362 (20 Amp circuits).

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

- 2) 15 Amp. Hubbell No. 5262 (15 Amp circuits).
 - b. Single Receptacles: 20 Amp, 125 Volts, 2-Pole, 3-Wire, twist-lock type, Hubbell No. 2310.
 - c. Duplex Receptacles: 20 Amp, 125 Volts, 2-Pole, 3-Wire, grounded, twist-lock type, Hubbell No. 7580-G.
 - d. Outdoor Receptacles: 20 Amps, 125 Volts, 2-Pole, 3-Wire, U ground slot type, duplex convenience receptacle, with weatherproof cover, Hubbell No. 5221.
 - e. Ground Fault Interrupter Duplex Receptacles, 20 Amp.: Hubbell No. GF-5262.
 - f. Ground Fault Interrupter Duplex Receptacles, 15 Amp.: Hubbell No. GF-5362.
- C. Floor boxes shall be flush type unless otherwise noted.
- D. Switch, Receptacle, and Signaling Outlet Plates:
1. Plates shall be beveled metal stainless steel Type 302.
 2. Surface mounted wiring devices and blank outlet plates shall be cadmium plated. Interior outlet plates shall be pressed steel. Outlets exposed to weather or corrosive conditions shall be of the cast-metal type.
 3. Plates for weatherproof receptacles shall consist of cast-aluminum gasketed plate with spring-loaded lift covers providing access to the outlet. Lift cover to correspond to number of outlets to be gasketed. Plates for weatherproof switches shall consist of a cast plate with flexible bubble for activating a push type switch. Plates shall be for corrosion-resistant devices, as manufactured by Hubbell, Inc., or approved equal.
 4. Coordinate all finishes and colors as selected by Architect.

2.02 INSTALLATION COMPONENTS

A. Wiring Troughs:

1. Wiring troughs shall be 4" x 4" or 6" x 6", brake-formed of code gauge (No. 16 gauge minimum)

steel, furnished in standard 10-foot sections with knockouts, as required. Wiring troughs shall be of the screw-on cover type and shall have a high grade enamel finish baked on a chemically-cleaned and zinc-phosphatized surface providing maximum resistance to corrosion.

2. Wiring troughs shall be furnished with all the required components, such as square junction boxes, 90-degree elbows, T-shaped pull boxes, crossover pull boxes, box-connecting couplings, fittings and screw-on cover plates. Lengths of individual sections shall be provided in accordance with installation requirements.

B. Manual Motor Starters:

1. Manual motor starters shall be horsepower rated, and voltage rated for the motor load.
2. The operating mechanism shall be a snap switch with one pole per phase.
3. Overload protection shall be provided with one thermal overload relay with replaceable tripping element for each pole, manually reset from the operating handle. The heater for each tripping element shall be coordinated with the nameplate rating of the motor.

PART 3 - EXECUTION

3.01 INSPECTION

- A. Contractor shall examine location where wiring devices and installation components are to be installed, determine space conditions and notify Architect in writing of conditions detrimental to proper and timely completion of the work.
- B. Do not proceed with the work until unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Install wiring devices and installation components where shown, in accordance with manufacturer's written instructions, and with recognized industry practices, to ensure that installation complies with requirements and serves intended purposes.
- B. Coordinate with other work as necessary to interface installation of wiring devices and installation components.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

- C. Installation shall comply with the requirements of NEC and NECA, "Standard of Installation".
- D. Install devices only after wiring is completed.
- E. Install receptacles and switches only in electrical outlet boxes which are clean, free from debris, excess building materials, etc.
- F. At time of completion, replace items which have been damaged, including those burned and scorched by faulty plugs.

3.03 FIELD QUALITY CONTROL

- A. Upon completion of installation of wiring devices and installation components, and after connection to power source, test wiring devices and installation components to demonstrate compliance with requirements. When possible, field correct malfunctioning units, then retest to demonstrate compliance. Replace units which cannot be satisfactorily corrected.
- B. Test wiring devices and installation components to ensure electrical continuity of grounding connections.

PART 4 - APPROVED MANUFACTURERS

4.01 WIRING DEVICES

- A. Harvey Hubbell Incorporated
- B. General Electric Co.
- C. Leviton
- D. Pass & Seymour

4.02 MISCELLANEOUS INSTALLATION COMPONENTS

- A. Refer to Respective Articles.

END OF SECTION 16141

SECTION 16165
250 VOLT FUSES

PART 1 - GENERAL

1.01 GENERAL REQUIREMENTS

- A. This Section is to coordinate with and be complementary to the General Conditions and Supplementary General Conditions of the Work, wherever applicable to Mechanical and Electrical Work.
- B. Section 15000 - Special Requirements for Electrical Work shall apply.
- C. Section 16000 - General Provisions for Electrical Work shall apply.

1.02 DESCRIPTION OF WORK

- A. The work includes the providing of all labor, materials, equipment, accessories, services and tests necessary to complete and make ready for operation by the Owner, the fuses as shown in accordance with Drawings and Specifications.

1.03 QUALITY ASSURANCE

- A. "Manufacturers" - Firms regularly engaged in manufacture of fuses whose products have been in satisfactory use in similar service for not less than 5 years.
- B. Provide fuses produced by a manufacturer listed as an Approved Manufacturer in this Section.
- C. Provide equipment whose performance under specified conditions is certified by the manufacturer.

1.04 SUBMITTALS

- A. Refer to Section 15000, Special Requirements for Mechanical and Electrical Work and submit shop drawings.

1.05 GUARANTEE

- A. Refer to Section 15000, Special Requirements for Mechanical and Electrical Work. Shop drawings shall include cuts and time current curves.

PART 2 - PRODUCTS

2.01 250 VOLT FUSES

- A. All fuses shall be of the same manufacturer. Fuses shall not be installed until equipment is to be energized. All fuses shall have a 200,000 ampere RMS symmetrical interrupting rating unless specified otherwise. Fuse symbols in parentheses are those of Bussmann.
- B. Fuses: 601 to 6000 Amperes shall be U.L. Class L (KRP-C), with time-delay characteristics of 10 seconds or more, at 500% of current rating.
- C. Fuses: Up to 600 Amperes shall be UL Class "J", (JKS fast acting), for non-inductive loads and UL Class "J" (LPJ time delay) for inductive loads.
- D. Spare Fuses:
 - 1. A complete set of spare fuses shall be purchased at the same time the initial fuses are purchased. Spare fuses shall consist of a standard carton for 0 to 60 amperes rating. For above 60 amperes rating provide 10% of each type and rating, or a set of three, whichever is greater.
 - 2. Spare fuses shall be placed in one or more spare fuse cabinets as required. The spare fuse cabinet shall be 30 in. H x 24 in. W x 12 in. D with key lock door, center shelf and fuse index holder. Include one set of fuse bulletins in the fuse cabinet.

PART 3 - EXECUTION

3.01 INSPECTION

- A. Contractor shall examine location where fuses are to be installed and notify Architect/Engineer in writing of conditions detrimental to proper and timely completion of the work.
- B. Do not proceed with the work until unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Install fuses where shown or required, in accordance with manufacturer's written instructions, and with

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

recognized industry practices, to ensure that installation complies with requirements and serves intended purposes.

- B. Installation shall comply with the requirements of NEC and applicable portions of NECA's "Standard of Installation".
- C. Contractor shall install Class R fuse rejection kits on all heavy duty safety switches not already fitted for Class R fuses.

3.03 FIELD QUALITY CONTROL

- A. Upon completion of installation of fuses, test and inspect system to ensure compliance with requirements.
- B. Final tests and inspections shall be made prior to energization of the equipment. This shall include a thorough cleaning, tightening and review of all electrical connections and inspection of all grounding conductors.

PART 4 - APPROVED MANUFACTURERS

4.01 250 VOLT FUSES

- A. Bussmann
- B. Shawmut

END OF SECTION 16165

SECTION 16170
GROUNDING AND BONDING

PART 1 - GENERAL**1.01 GENERAL REQUIREMENTS**

- A. This Section is to coordinate with and be complementary to the General Conditions and Supplementary General Conditions of the Work, wherever applicable to Mechanical and Electrical Work.
- B. Section 15000 - Special Requirements for Mechanical and Electrical Work shall apply.
- C. Section 16000 - General Provisions for Electrical Work shall apply.

1.02 DESCRIPTION OF WORK

- A. The work includes the providing of all labor, materials, equipment, accessories, services and tests necessary to complete and make ready for operation by the Owner, all grounding in accordance with Drawings and Specifications and as required for a complete system.

1.03 QUALITY ASSURANCE

- A. "Manufacturers" - Firms regularly engaged in manufacture of the type of equipment required for the application, whose products have been in satisfactory use in similar service for not less than 10 years. Refer to Approved Manufacturers in this Section.
- B. Provide equipment whose performance under specified conditions is certified by the manufacturer and comply with applicable publications of NFPA and UL.
- C. Grounding shall comply with National Electrical Code (NFPA 70) for construction and installation.

1.04 SUBMITTALS

- A. Refer to Section 15000 - Special Requirements for Mechanical and Electrical Work and submit shop drawings. Shop drawings shall include manufacturer's catalog cuts of splice kits, ground rods and ground wire.

1.05 GUARANTEE

- A. Refer to Section 15000 - Special Requirements for Mechanical and Electrical Work.

PART 2 - PRODUCTS**2.01 GROUNDING**

- A. Ground clamps shall be bronze, solderless type with bronze screws suitable for receiving required or specified conductors.
- B. Grounding conductors shall be UL and NEC approved types, copper, with insulation color identified green, except where otherwise shown on the Drawings, or specified.

PART 3 - EXECUTION**3.01 INSPECTION**

- A. Contractor shall examine locations where grounding is to be installed and notify Architect/Engineer in writing of conditions detrimental to proper and timely completion of work.
- B. Do not proceed with work until unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. The complete electrical installation shall be permanently and effectively grounded ahead (street side) of the cold water meter in accordance with all code requirements, whether or not such connections are specifically shown or specified. Measured resistance to ground shall be 5 ohms, maximum.
- B. Parts of the electrical installation to be grounded shall include, but not be limited to, the following: underground distribution, electric service system neutral, raceway system for light and power distribution systems, switchgear housings, cabinets, housings, motor frames, housings of ALL communications, alarm, and control panels and associated devices and conduits, lighting fixtures, busway enclosures, individual starters and other non-current carrying metal parts of electrical equipment. The interconnecting of the service ground, system neutral, and equipment ground conductors shall be made within the service equipment assembly.
- C. All copper bars for grounding shall be medium hard drawn. After installation, the copper bar shall be painted with one coat of an approved lacquer.
- D. Ground conductors shall be of sizes and material in accordance with the requirements of the National Electrical Code. Cable for grounding connections shall

be bare in accordance with the latest revisions of ASTM Designations B3 and B8. All open bare grounding cable shall be secured in place with cast one hole malleable clamps and clamp backs, and 1/4 inch bolts.

- E. Ground wires shall be continuous without splices. There shall be no soldered joints in any ground connection. Connectors, clamps, etc. shall be solderless type.
- F. Unless otherwise shown or required, conduit shall provide grounding for motors and electrical equipment.
- G. Ground interrupted metallic raceways with ground conductors connected to metallic raceway at each end.
- H. Bond all conductive piping systems in the buildings to the electrical system ground. Bonding connections shall be made as close as practical to the water pipe or service equipment ground bay.
- I. Where ground connections will be permanently concealed, make the connections by the exothermic process to form solid metal joints. Make accessible ground connections with mechanical pressure type ground connections.
- J. Services at power company interface points shall comply with the power company ground resistance requirements.

3.03 FIELD QUALITY CONTROL

- A. Upon completion of grounding system, test system for continuity and resistance to demonstrate compliance with requirements and submit certification to Architect that material and installation has been properly installed.
- B. Inspect all connections prior to concealing same.

PART 4 - APPROVED MANUFACTURERS

4.01 GROUND RODS

- A. Carolina Galvanizing
- B. Weaver Electric

END OF SECTION 16170

SECTION 16180
POWER, CONTROL AND ALARM WIRING SYSTEMS

PART 1 - GENERAL**1.01 GENERAL REQUIREMENTS**

- A. This Section is to coordinate with and be complementary to the General Conditions and Supplementary General Conditions of the Work, wherever applicable to Mechanical and Electrical Work.
- B. Section 15000 - Special Requirements for Mechanical and Electrical Work shall apply.
- C. Section 16000 - General Provisions for Electrical Work shall apply.

1.02 DESCRIPTION OF WORK

- A. The work includes the providing of all labor, materials, equipment, accessories, services and tests necessary to complete and make ready for operation by the Owner, all power wiring from service equipment to distribution and utilization equipment, and control and alarm wiring for equipment and systems within the building, except as noted, in accordance with Drawings and Specifications.

1.03 QUALITY ASSURANCE

- A. Power, control, and alarm wiring systems (NFPA 70) for construction and installation.

1.04 SUBMITTALS

- A. Refer to Section 15000 - Special Requirements for Mechanical and Electrical Work, and submit shop drawings.

1.05 GUARANTEE

- A. Refer to Section 15000 - Special Requirements for Mechanical and Electrical Work.

PART 2 - PRODUCTS**2.01 RACEWAYS**

- A. Raceways and installation components shall be as specified in Section Raceway and Installation Components.

2.02 CONDUCTORS

- A. Conductors shall be as specified in Section Wire and Cable.

2.03 DISCONNECT SWITCHES AND MANUAL MOTOR STARTERS

- A. Disconnect switches and manual motor starters shall be as specified in another Section of the Specification.

PART 3 - EXECUTION**3.01 INSPECTION**

- A. Contractor shall examine locations where power, control and alarm wiring is to be installed and notify Architect/Engineer in writing of conditions detrimental to proper and timely completion of the work.
- B. Do not proceed with the work until unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Install wiring, in accordance with manufacturer's written instructions, and with recognized industry practice to ensure that equipment complies with requirements and serves intended purpose.
- B. Coordinate with other work as necessary to coordinate installation of wiring with other components of system.
- C. Installation shall comply with the requirements of NEC and applicable portions of NECA's "Standard of Installations".
- D. Install distribution system for light and power.
 - 1. Furnish and install all necessary conduit and wire, fittings, apparatus, etc., from the service locations to each and every outlet as herein detailed, or shown on the Drawings. The entire system shall be left ready for operation.
 - 2. The interior distribution system, in general, shall consist of 3-Phase, 4-Wire mains at 120/208 Volts.
 - 3. Pull and Splice Boxes
 - a. Pull and splice boxes shall be constructed of code gauge galvanized steel, or aluminum, reinforced, where required, and with removable covers fastened with brass machine

screws. Where size of box is not indicated, it shall be of sufficient size to pull, rack and splice the conductors to be contained therein. Box dimensions shall conform to requirements of NEC and N.Y.C.E.C.

- b. Pull and/or splice boxes shall be accessible and located where indicated on the Drawings or required to facilitate pulling of conductors or in raceway runs that have more than four (4) 90-degree turns.
- c. Boxes shall have a prime coat of zinc chromate paint and a finish coat of gray enamel. Surfaces to be field painted shall be finished in flat gray.

4. Distribution of Feeders and Branch Circuits

- a. Branch circuits shall be concentrated at the panelboards indicated and the circuits must be so connected that the load on each side of the system will balance within ten percent with all lamps operating.
- b. The sizes of all cables and wires and the minimum size of conduit in which they shall be pulled shall in all cases conform to N.Y.C. Electrical Code as a minimum requirement.
- c. The general arrangement of feeders and mains is shown on the Light and Power Riser Diagrams and associated panel Schedules on the Drawings.
- d. The Contractor, in providing this installation, shall balance all loads as evenly as possible on all phases at each panel, if necessary, he shall reconnect branch circuits as required to provide equal phase balance. As-built drawings and panel schedules shall reflect circuiting as actually connected to each panel.

5. Cable Support Boxes

- a. Cable support boxes shall be installed at locations and of dimensions as required by the NEC. These boxes shall be built of steel, or aluminum, with removable cover secured by brass machine screws and shall be stiffened with heavy angle irons. Cable supports shall be OZ type "S". Boxes must in

all ways be satisfactory to the Architect and subject to his approval. Provide ground lug in box, secured by welding or brazing. Submit shop drawings for approval.

6. Painting

a. Panel boxes, support boxes and pull boxes not hot dip galvanized shall be given two shop coats of gray enamel both inside and out. Similarly, concealed iron work shall be given two coats of asphaltum paint. All finish painting of exposed work will be done under another Section of the Specifications.

7. Submit for approval, working drawings showing section and elevation of horizontal and vertical runs of the riser shaft at foot of shaft and at each critical location at which a support box occurs on a scale of 3 inches to the foot, and showing routing of all conduits, cable support boxes, pull boxes, hangers, panelboards and supports. These drawings shall be prepared from dimensions obtained at the building.

E. Motor Power Wiring

1. Run all power feeds and connections from power panels to all motor starters or control panel locations. Where shown on Drawings connect the motor starting devices for motors, supplying and installing all necessary connections between starters and control devices and motors, in conduit, and leave motors ready to start. The power supply leads to the motors from the starters or control panels shall be of the same size and number of the other leads required for the proper operation of each motor.
2. Examine motors for presence of moisture prior to installation. Install, properly align and check rotation of motors that are not part of a completely assembled unit. Lubricate all motors according to the manufacturer's instructions prior to being placed into service.
3. Check motor nameplates for full-load current rating and allowable temperature rise to determine overload heater elements. Install correct heater element in the corresponding starter.
4. Furnish motor safety disconnect switches for all motors, except where such switches are specified to be furnished under other Sections, or are

included in the equipment control panel. Install all motor safety disconnect switches furnished under this Section or Section 15000 of the Specification. Provide (6) wires from starters to two speed, three-phase motors. Switches shall be as specified elsewhere in these Specifications. Install manually-operated devices, such as push-buttons and manual starters to permit convenient operation and be readily accessible.

5. Under no circumstances install rigid conduit terminated in or fastened to motor frame or base, and connecting conduits shall not be used to support starters or control enclosures. Install flexible conduit, Anaconda "Sealtite", at all motor connections to prevent transmission of noise or vibration. Length and radius of flexible conduit shall be sufficient to permit bending of feeder cables without damaging the conductor or its insulation. Allow sufficient slack for movement of the motor over the entire slide rail length.
6. The starters will be furnished to the site under Section 15000 and shall be received and erected under this Section. Where indicated on plan, starters shall be individually or group mounted, plumb and level, on free-standing angle iron frames, supplied under this Section. Frame shall be set as close to the motors as possible. Where indicated mounted on walls or columns, this Contractor shall install flat or angle iron supports for the starters.
7. Provide manual motor starters for all fractional horsepower motors as shown on the Drawings, or otherwise required.
8. Electrical contractor shall provide motor suppliers with the minimum size of motor terminal blocks required for the wiring of the motors.

F. For Control and Alarm Wiring

1. Make connections to the following as specified hereinafter, and indicated on the Drawings.
 - a. Connection of 120V supply to EP and PE switches and motorized dampers furnished under other Sections of the Specifications.
 - b. Shutdown wiring for HVAC systems as shown on Drawings.

- c. Heating and air conditioning temperature control and data gathering panels with alarms, pilots, etc., will be furnished and installed under Section 15000 of the Specifications. 120 Volt supply to control panels shall be furnished under this Section of the Specifications.
 - d. Control and alarm wiring for sump pumps, and air compressors, furnished under other Sections of the Specifications, and setting of all devices in connection with same shall be done under this Section of the Specifications.
2. All control conductors shall be copper, minimum #14 AWG type THHN, 600 volt insulated, installed in conduit. All conductors shall be tagged with brass or aluminum tags, permanently attached, giving the system designation and terminal number, or other such designation as approved.
 3. Control wiring shall be based on schematic control diagrams shown on Drawings and/or on the description of control requirements in other Division of these Specifications describing the Mechanical Work, or on control diagrams submitted by Equipment Manufacturers.
 4. Actual wiring between equipment and devices shall be done from point-to-point wiring diagrams showing the terminal connections on each piece of equipment. Obtain the individual equipment wiring diagrams from the Contractor who supplies the mechanical systems and equipment to be wired, and prepare neat point-to-point diagrams showing the actual wire and conduit and interconnections between the various equipment and control devices. After installation, correct these diagrams to show the "As-Installed" conditions for the Record.

3.03 FIELD QUALITY CONTROL

- A. Upon completion of power, control and alarm wiring, and after associated systems have been energized, test power, control and alarm wiring to demonstrate compliance with requirements. Field correct or replace defective wiring, and retest.

END OF SECTION 16180

SECTION 16421
UTILITY SERVICE ENTRANCE

PART 1 - GENERAL**1.01 GENERAL REQUIREMENTS**

- A. This Section is to coordinate with and be complementary to the General Conditions and Supplementary General Conditions of the Work, wherever applicable to Mechanical and Electrical Work.
- B. Section 15000 - Special Requirements for Mechanical and Electrical Work shall apply.
- C. Section 16000 - General Provisions for Electrical Work shall apply.

1.02 DESCRIPTION OF WORK

- A. The work includes the providing of all labor, materials, equipment, accessories, services and tests necessary to complete and make ready for operation by the Owner, electric service as shown on the Drawings and hereinafter specified.
- B. Equipment and wiring shall be provided and installed in part by Con Edison referred to as Utility Company and in part under this contract.

1.03 QUALITY ASSURANCE

- A. All work shall be performed in accordance with all rules, regulations, and standards of Utility Company, and all applicable codes.
- B. Where deemed necessary, perform all work under the supervision of the Utility Company representative.

1.04 SUBMITTALS

- A. Refer to Section 15000 - Special Requirements for Mechanical and Electrical Work and submit shop drawings.

1.05 GUARANTEE

- A. Refer to Section 15000 - Special Requirements for Mechanical and Electrical Work.

PART 2 - PRODUCTS**2.01 ELECTRIC SERVICE**

- A. The following work shall be performed by the Utility Company:
1. Service wiring as noted
 2. Supplying metering transformers
 3. Supplying and installing watthour and demand meters.
 4. Final connections to metering equipment.
- B. The following work shall be performed by the Contractor.
1. Arrange with the Utility Company for service facilities and pay all charges.
 2. Extend service from Utility Company termination.
 3. Remove existing service entrance raceways and remove existing manhole for Con Edison feeders and for service entrance feeders to switchboards.
 4. Provide property line box complete with all crabs, splices, details, etc. to connect Con Edison feeder to service entrance feeders, in accordance with all Con Edison requirements.
 5. Provide sleeves for service entrance raceways.
 6. Provide wiring and raceways from manhole to service equipment.
 7. Provide limiter lugs on both ends of service entrance cable.
 8. Metering transformer enclosures and meter pans.
 9. Install metering transformers.
 10. Meter wiring except final connections.
 11. Obtain Utility Company and NYC Advisory Board approval for all electric service work and service equipment shop drawings. Submit drawings to NYC Advisory Board and pay all charges.
 12. Provide all associated installation components and accessories.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

PART 3 - EXECUTION

3.01 INSPECTION

- A. Contractor shall examine location where electric service equipment and raceways are to be installed, determine space conditions and notify Architect/Engineer in writing of conditions detrimental to proper and timely completion of the work.

3.02 INSTALLATION

- A. Install equipment and components where shown or as directed, in accordance with Utility Company's instructions (where applicable), and with recognized industry practices, to ensure that installation complies with requirements and serves intended purposes.
- B. Coordinate with other work as necessary to coordinate installation of equipment with other components of systems.

END OF SECTION 16421

SECTION 16426
DISTRIBUTION SWITCHBOARDS

PART 1 - GENERAL**1.01 GENERAL REQUIREMENTS**

- A. This Section is to coordinate with and be complementary to the General Conditions and Supplementary General Conditions of the work, wherever applicable to Mechanical and Electrical Work.
- B. Section 15000 - Special Requirements for Mechanical and Electrical Work shall apply.
- C. Section 16000 - General Provisions for Electrical Work shall apply.

1.02 DESCRIPTION OF WORK

- A. The work includes the providing of all labor, materials, equipment, accessories, services and tests necessary to complete and make ready for operation by the owner, distribution switchboards in accordance with Drawings and Specifications.

1.03 QUALITY ASSURANCE

- A. **Manufacturers:** Firms regularly engaged in the manufacturer of distribution equipment of the types and capacities required, whose products have been in satisfactory use in similar service for not less than 5 years. Refer to list of Approved Manufacturers in this Section.
- B. The distribution switchboards shall be designed, assembled and tested in accordance with applicable standards of NEMA, IEEE and ANSI, and shall be listed and labeled by Underwriters Laboratories.
- C. Comply with the NEC and New York City Electrical Code for construction and installation of (NFPA 70) distribution equipment as applicable.
- D. Provide distribution equipment whose performance under specified conditions is certified by the manufacturer.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

1.04 SUBMITTALS

- A. Refer to Section 15000 - Special Requirements for Mechanical and Electrical Work and submit shop drawings. Shop drawings shall include:
1. Dimensional layout on Architectural background drawings.
 2. Single line diagram and outline drawing.
 3. Manufacturer's catalog cuts.

1.05 GUARANTEE

- A. Refer to Section 15000 - Special Requirements for Mechanical and Electrical Work.

PART 2 - PRODUCTS

2.01 SWITCHBOARDS

- A. Furnish and install where indicated a dead front type, completely metal enclosed, self-supporting structural switchboard independent of wall supports. Voltage rating shall be as indicated on the Drawings. It shall consist of the required number of vertical sections bolted together to form one rigid switchboard 90 3/8" high. The sides and rear shall be covered with removable screw-on plates. All edges of front covers or hinged front panels shall be formed.
- B. Equipment shall comply with the latest applicable standards of NEMA, ANSI, U.L. and NYC Electric Code.
- C. All wiring, necessary fuse blocks and terminal blocks within the switchboard shall be furnished as required. All groups of control wires leaving the switchboard shall be provided with terminal blocks with suitable numbering strips and sleeve type marking label on all wires and switchboard wiring diagram shall show terminal block numbering and wiring markings.
- D. Switchboard shall be provided with adequate lifting means and shall be capable of being rolled or moved into installation position and bolted directly to the floor without the use of floor sills.

- E. All exterior and interior steel surfaces of the switchboard shall be properly cleaned and finished with gray enamel over a rust-inhibiting phosphatized coating. Color shall be ANSI 61 gray or manufacturer's standard ANSI color so that all equipment has matching color.
- F. Engraved nameplates shall be furnished for all main and feeder circuits including control fuses and also for all indicating lights and instruments. Nameplates shall give item designation and circuit number as well as frame ampere size and appropriate trip rating. Furnish Master Nameplate giving switchboard designation, voltage ampere rating, short circuit rating, manufacturer's name, general order number and item number. Nameplates shall comply to NYC Electric Code, NEMA and utility requirements.
- G. All bus bars shall be copper. All bus work shall be rated to withstand maximum short-circuit stresses when connected to a supply system having fault capacity of 200,000 at rated voltage. Main horizontal bus bars shall be mounted with all three phases arranged in the same vertical plane. Provide full capacity neutral where a neutral is indicated on the drawings. A ground bus and lug shall be furnished firmly secured to each vertical section structure and shall extend the entire length of the switchboard. All hardware used on conductors shall be high-tensile strength and zinc plated. All terminals shall be of the anti-turn solderless type suitable for Cu cable of sizes indicated. For 4 inch wide and larger buses, 2 inch bolts with double locking washer shall be used.
- H. Furnish cable pull sections or top cable pull boxes where shown on the drawings, or where otherwise required, complete with cable tie down supports. Where cable pull section or pull boxes contain utility service cables provide utility acceptable sealing means.
- I. Switchboards shall have a minimum integrated equipment rating equal to the available fault capacity as shown on the Drawings.

2.02 FUSIBLE SWITCHES

- A. Main and Feeder protective devices shall be quick make quick break fusible switches. Fusible switches 30 ampere through 600 ampere frame shall be furnished with NEMA Class R fuse clips and U.L. labeled for 200,000 A.I.C. All other switches over 800A shall be Bolt-Switch or

Pringle Bolted Pressure type. Refer to drawings for additional accessories. Switches shall incorporate safety cover interlocks to prevent opening the cover with the switch in the 'on' position or prevent placing the switch in the 'on' position with the cover open - provide defeater for authorized personnel. Handles shall have provisions for padlocking and shall clearly indicate the "on" or "off" position.

2.03 UTILITY METERING

- A. Furnish a separate barriered-off Utility Metering Compartment complete with hinged sealable door that complies with Utility Company Specifications. Bus work shall include provisions for mounting Utility Co. current transformers as required by Utility Company. Provide Service Entrance Label and provide necessary applicable service entrance features per National Electrical Code and New York City Electrical Code requirements.

2.04 CUSTOMER METERING

- A. For all service switches, provide:

- Current transformers.

1 - Indicating ammeter, 1% accuracy, 250-degree scale, 0-4000 amperes.

1 - Ammeter switch.

1 - Indicating voltmeter, 1% accuracy, 250-degree scale, 0-600 Volts).

1 - Voltmeter switch

Remark: Meter scale shall provide a minimum of half scale deflection.

2.05 TVSS

- A. These specifications describe the electrical and mechanical requirements for an electrical transient surge suppression filter system integrating both transient voltage surge suppression (TVSS) and electrical high frequency noise filtering for high exposure locations as defined in ANSI/IEEE C62.41-1991.

- B. The unit shall be designed for parallel connection to the facility's wiring system. The suppression filter system shall be designed and manufactured in the USA by a qualified manufacturer of suppression filter system equipment. The qualified manufacturer shall have been engaged in the commercial design and manufacture of such products for a minimum of five (5) years.
- C. These specifications are based on Current Technology's selenium-enhanced Plus suppression filter systems. System shall be provided in NEMA 3R surface mounted panel.
- D. Comply with UL1449, UL1283, CUL, NEMA LS1 and provide ten year warranty.
- E. Provide integral fused disconnect.

PART 3 - EXECUTION

3.01 INSPECTION

- A. Contractor shall examine location where this equipment is to be installed, determine space conditions and notify Architect/Engineer in writing of conditions detrimental to proper and timely completion of the work.
- B. Do not proceed with the work until unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Install equipment where shown, in accordance with manufacturer's written instructions, and with recognized industry practices, to ensure that equipment complies with requirements and serves intended purposes.
- B. Coordinate with other work as necessary to interface installation of equipment with other components of systems.
- C. Installation shall comply with the requirements of NEMA standard, NEC, New York City Electrical Code and applicable portions of NECA's "Standard of Installation".
- D. Tighten all connections and mechanical fasteners prior to energization in accordance with manufacturer's instructions.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

- E. Provide 24-inch wide insulation mat in front of distribution equipment.
- F. Touch-up damaged or scratched surfaces to match original finish.
- G. Coordinate installation of distribution equipment with cable and raceway installation work.
- H. Provide fuses of the ratings indicated. Provide one complete set of spare fuses for each rating.
- I. Adjust operating mechanism for free mechanical movement.
- J. Coordinate with and obtain approval of Utility Company for distribution equipment requirements including all metering prior to installation.

3.03 FIELD QUALITY CONTROL

- A. Upon completion of installation of equipment, and after connection to power source, test equipment to demonstrate compliance with requirements. When possible, field-correct malfunctioning units, then retest to demonstrate compliance. Replace equipment which cannot be satisfactory corrected.
- B. Prior to energization of distribution equipment:
 - 1. Megger check phase-to-phase and phase-to-ground insulating resistance levels of conductors.
 - 2. Check distribution equipment for continuity, and for short circuits.
- C. Subsequent to wire and cable hook-ups, energize distribution equipment and demonstrate functioning in accordance with requirements.
- D. Open and close load break switching devices under load.

PART 4 - APPROVED MANUFACTURERS

- A. For Distribution Equipment
 - 1. Metropolitan Electric
 - 2. Lincoln Electric
 - 3. Electro Tech
 - 4. Atlas

END OF SECTION 16426

SECTION 16440
SAFETY AND DISCONNECT SWITCHES

PART 1 - GENERAL**1.01 GENERAL REQUIREMENTS**

- A. This Section is to coordinate with and be complementary to the General Conditions and Supplementary General Conditions of the Work, wherever applicable to Mechanical and Electrical Work.
- B. Section 15000 - Special Requirements for Mechanical and Electrical Work shall apply.
- C. Section 16000 - General Provisions for Electrical Work shall apply.

1.02 DESCRIPTION OF WORK

- A. The work includes the providing of all labor, materials, equipment, accessories, services and tests necessary to complete and make ready for operation by the Owner, all heavy duty safety and disconnect switches (fused and unfused) in accordance with Drawings and Specifications.

1.03 QUALITY ASSURANCE

- A. "Manufacturers" - Firms regularly engaged in manufacture of the type of equipment required for the application, whose products have been in satisfactory use in similar service for not less than 5 years.
- B. Safety and disconnect switches shall comply with applicable standards of NEMA and shall be listed and labeled by Underwriters' Laboratories, Inc. Switches shall be approved for service where required, and approved for use in New York City in accordance with NYCEC.
- C. Comply with NEC (NFPA 70) for construction and installation of safety and disconnect switches.
- D. Provide safety and disconnect switches produced by a manufacturer listed as an Approved Manufacturer in this Section.
- E. Provide equipment whose performance under specified conditions is certified by the Manufacturer.

1.04 SUBMITTALS

- A. Refer to Section 15000 Special Requirements for Mechanical and Electrical Work and submit shop drawings. Shop drawings shall include switch dimensions, ratings and NEMA enclosure types.

1.05 GUARANTEE

- A. Refer to Section 15000 - Special Requirements for Mechanical and Electrical Work.

PART 2 - PRODUCTS**2.01 SWITCH INTERIOR**

- A. All switches shall have switch blades which are fully visible in the OFF position when the door is open. Switches shall have removable arc suppressors, where necessary to permit easy access to line-side lugs. Lugs shall be UL listed for aluminum and/or copper cables and front removable. All current carrying parts shall be plated. 30A thru 100A switches shall have provisions for field installed fuse pullers. Switches shall include solid neutral where required.

2.02 SWITCH MECHANISM

- A. Switches shall have a quick-make and quick-break operating handle and mechanism which shall be an integral part of the box, not the cover. Switches shall have a defeatable dual cover interlock to prevent inadvertent opening of the switch door in the ON position or closing of the switch mechanism with the door open. Handle position shall indicate if switch is ON or OFF. Handle shall have provision for padlock.

2.03 ENCLOSURES

- A. Enclosures shall be NEMA 1 enclosure heavy duty type except as otherwise noted or required with multiple knockouts on all sides and back, hinged door, and cover interlock which prevents door from opening when switch is in ON position. Enclosure shall have provisions for positive padlocking in ON and OFF positions.
- B. For exterior installations, the enclosures shall be NEMA 3R (raintight).
- C. All enclosures shall be the NEMA types which are most suitable for the environmental conditions of the area.

2.04 RATINGS

- A. Switches shall be rated for voltage, poles, amperes, and horsepower, as required or shown on Drawings. All switches shall be rated for maximum available fault current as required and/or as noted.

2.05 FUSES

- A. Fused safety and disconnect switches shall be provided with fuses of class, type, and rating as required or shown on Drawings.

PART 3 - EXECUTION**3.01 INSPECTION**

- A. Contractor shall examine locations where safety and disconnect switches are to be installed and notify Architect/Engineer in writing of conditions detrimental to proper and timely completion of work.
- B. Do not proceed with work until unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Install safety and disconnect switches as required by all applicable codes and as shown on Drawings. Install safety and disconnect switches in accordance with manufacturer's written instructions, the applicable requirements of NEC, New York City Electrical Code recognized industry practices, and applicable portions of NECA's "Standard of Installation".
- B. Coordinate with other work as necessary to interface installation of safety and disconnect switches with other equipment in the area.
- C. Coordinate safety and disconnect switch installation work with electrical raceway and cable work as necessary for proper interface.
- D. Install disconnect switches within sight of motor-driven appliances, and motors and controllers, unless otherwise indicated.
- E. Provide nameplate on switch, indicating equipment served.

3.03 FIELD QUALITY CONTROL

- A. Upon completion of installation of safety and disconnect switches, test and inspect system to ensure

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

compliance with requirements. When possible, field correct malfunctioning equipment, then retest to demonstrate compliance. Replace equipment which cannot be satisfactorily corrected.

- B. Close all switches to check for proper energization of all loads.

1.05 GUARANTEE

- A. Refer to Section 15000 - Special Requirements for Mechanical and Electrical Work.

PART 2 - PRODUCTS

2.01 PANELBOARDS

A. Construction:

1. Electrical panels shall be dead-front type construction equipped with overcurrent protective devices as scheduled on the Drawings. They shall be complete with cabinet, trim, hinged door, lock directory and such additional features and components as herein specified or shown on the Drawings. Construction of panelboards shall be in all respects satisfactory to the Architect and/or Engineer and subject to his approval.
2. Design panels for 3-Phase, 4-Wire, 120/208 Volt service as scheduled on the Drawings, unless otherwise noted.
3. Panel interior shall be factory-assembled complete with overcurrent protective devices as shown on the Drawings. Interiors shall be designed and assembled so that any individual overcurrent protective device can be replaced without disturbing adjacent units or removing main bus. No additional drilling or tapping of bus work shall be required to change or add branch circuit overcurrent devices. Spaces scheduled on the Drawings shall have all required busing provided for the installation of future circuit breakers.
4. Branch circuits shall be arranged using double row construction. A nameplate shall be provided listing panel designation, type, and ratings.
5. Unless otherwise noted, full size insulated neutral bars shall be included. Bus bar taps for panels with single pole branches shall be arranged for sequence phasing of the branch circuit devices. The Electrical Contractor shall balance the load on all three phases. Neutral bussing shall have a suitable lug for each outgoing feeder requiring a neutral connection. A ground bus shall be included in all panels. An isolated ground bus shall be

provided where indicated on the drawing panel schedules.

6. In multi-section panels provide thru-feed lugs to permit the termination of the incoming feeder conductors as well as the extension of jumpers between panels. Wire size of jumpers shall match that of the incoming feeder size. In the case of multiple-conductor feeders, reduce the size of jumpers in compliance with the NYCEC tap rules.
7. Panelboards shall be multi-section panels where required to comply with NEC Article 384, whether or not indicated on the drawings.

B. Bus:

1. All main bus bars shall be copper sized in accordance with UL standards to limit the temperature rise on any current carrying part to a maximum of 50°C above an ambient of 40°C maximum.

C. Circuit Breakers:

1. Panel circuit breaker overcurrent protective devices shall be as scheduled on the Drawings and as specified. All breakers shall be bolted-on thermal magnetic type unless otherwise indicated, carrying the Underwriters' Laboratories label. Plug-in breakers are not acceptable. Each breaker shall have the following features:
 - a. Magnetic blow-out or other approved arc-quenching devices.
 - b. Two and three-pole breakers shall have non-conductive barriers between poles with separate tripping element in each leg, and with common trip operation.
 - c. A single-operating handle shall open all poles. Two and three pole breakers with handle ties are not acceptable. All handles shall have clearly marked "ON" and "OFF" positions. It shall be impossible to maintain breakers in closed position under overload condition.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

2. Where called for in Schedules on Drawings, provide combination circuit breakers and ground fault interrupters. Such units shall be single-pole, 120V molded case breakers with UL label or listing.
3. Where circuit breakers are used as switches for 120-volt fluorescent lighting circuits, circuit breakers shall be approved for switching duty and shall be marked SWD.
4. Panel circuit breakers shall be bolted-type rated for 20,000 RMS symmetrical amperes minimum interrupting rating at 120/208 volts. Provide higher interrupting ratings where scheduled on the Drawings. For these breakers, provide higher rated frame to meet the duty indicated.
5. Panelboards shall be provided with a main circuit breaker, wherever panel feeder exceeds 200 amperes or more than one panel is served by the same feeder. All multi-section panels shall be provided with a main circuit breaker for each section.
6. Tandem circuit breakers shall not be utilized.
7. Series rated circuit breakers shall be utilized.

D. Cabinets:

1. Cabinets shall be flush or surface-mounted, as shown or scheduled on the Drawings. Back box shall be of sufficient size to provide minimum gutter space in accordance with National Electrical Code New York City Electrical Code. Where feeder cables supplying the mains of a panel are carried through its box to supply other electrical equipment, the box shall be sized to include the additional required wiring space and provided with separate barrier for feeder cable passing through cabinet. At least four interior mounting studs with adjustable nuts shall be provided.
2. The rigidity and gauge of steel shall be as specified by Underwriters' Laboratories and approved for use in New York City.
3. Trim shall be fabricated of code gauge steel, hot-dip galvanized with hinged door, lock and catch and directory pocket covered with clear plastic shield over directory. Metal shall be chemically cleaned,

prime-painted, and finish-coat painted with the manufacturer's standard paint for the application. Trim shall be of door-in-door construction. Inner door shall be provided with lock and outer door shall be fastened with screws. All locks shall be common-keyed. Provide two keys per lock. Locks shall be Yale S511, each provided with two #47 keys.

4. A directory shall be provided inside each cabinet door. Furnish and install a typewritten circuit directory, not less than 5" x 8" with metal retainer and glass or substantial plastic cover. Ink, pencil, or handwritten directory will not be accepted. Note on each directory, the panel number or designation, the panel feeder size, and the following data for each circuit: Description of load, fuse or breaker size, conduit size and wire size.
5. Align, level and secure panelboards to the building structure. Provide framework of galvanized structural iron when required for installation or indicated on Drawings. Mounting height shall be in accordance with National Electrical Code or as shown on the Drawings.

2.02 FUSIBLE SWITCH POWER PANELS

- A. Protective devices shall be quick-make, quick-break fusible switches. Fusible switches rated 30 to 600 amperes shall have fuse clips suitable for Class (R) (J) fuses and shall be UL listed at 100,000 AIC. Fusible switches 800 amperes through 1200 amperes shall be furnished with Class L fuse clips and UL labels for 200,000 AIC. Switches shall incorporate safety cover interlocks to prevent opening of the cover with a switch in the "on" position or prevent placing the switch in the "on" position with a cover open-provide defeater for authorized personnel. Handles shall have provisions for padlocking and shall clearly indicate the "on" or "off" position.

PART 3 - EXECUTION

3.01 INSPECTION

- A. Contractor shall examine location where this equipment is to be installed, determine space conditions and notify

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

Architect/Engineer in writing of conditions detrimental to proper and timely completion of the Work.

- B. Do not proceed with the work until unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Install equipment where shown in accordance with Manufacturer's written instructions and with recognized industry practices to ensure that equipment complies with requirements and serves intended purposes.
- B. Coordinate with other work as necessary to interface installation of panelboard with other equipment in the area.
- C. Installation shall comply with the requirements of the NEC, NYCEC and applicable portion of NECA's "Standard of Installation".
- D. Coordinate installation of panelboards and enclosures with cable and raceways installation work.
- E. Anchor panels and enclosures firmly to walls and structural surfaces, ensuring panels and enclosures are permanently and mechanically secured. Provide all angle unit and accessories for proper mountings.
- F. Complete typewritten circuit directory card upon completion of work.
- G. For all recessed panelboards, provide two (2) one-inch conduits stubbed up and capped 6 inches above ceiling.

3.03 FIELD QUALITY CONTROL

- A. Upon completion of installation of panelboards, and after connection to power source, test equipment to demonstrate compliance with requirements. When possible, field-correct malfunctioning equipment then retest to demonstrate compliance. Replace equipment which cannot be satisfactorily corrected.
- B. Close all breakers (and switches) to check for proper energization of all loads.

END OF SECTION 16470

SECTION 16510
LIGHTING FIXTURES

PART 1 - GENERAL**1.01 GENERAL REQUIREMENTS**

- A. This Section is to coordinate with and be complementary to the General Conditions and Supplementary General Conditions of the Work, wherever applicable to Mechanical and Electrical Work.
- B. Section 15000 - Special Requirements for Mechanical and Electrical Work shall apply.
- C. Section 16000 - General Provisions for Electrical Work shall apply.

1.02 DESCRIPTION OF WORK

- A. The work includes the furnishing of all labor, materials, equipment, accessories, services and tests necessary to complete and make ready for operation by the Owner, all lighting fixtures in accordance with Drawings, lighting fixture schedule and Specifications.

1.03 QUALITY ASSURANCE

- A. Manufacturers - Firms regularly engaged in manufacturer of lighting fixtures whose products have been in satisfactory use in similar service for not less than 5 years.
- B. Lighting fixtures shall be listed and labeled by Underwriters Laboratories, Inc. and shall comply with standards of NEMA, ANSI, OSHA, and National Electrical Code (NFPA 70) for construction and installation.
- C. Ballasts shall comply with Certified Ballasts Manufacturers Association standards and shall carry the CBM mark on the label.
- D. Provide lighting fixtures whose performance under specified conditions is certified by the manufacturer.
- E. Provide lighting fixtures, ballasts, and lamps produced by a manufacturer listed as an Approved Manufacturers in this Section, or as scheduled on the Drawings.
- F. Alternate or substitute manufacturers may be included with the bid with separate adds or deducts from the base bid for each fixture type, subject to approval by the Architect. Substitute manufacturers must be

identified by name and may not be changed by the bidder after the bids are submitted.

- G. Special designs and/or unique applications of standard units may require samples and mock-ups and other developmental work which, is to be specifically provided for in the Contractors bid.

1.04 SUBMITTALS

- A. Refer to Section 15000 - Special Requirements for Mechanical and Electrical Work, and submit shop drawings. Shop drawings for each lighting fixture type shall include:
1. Details of construction and finishes.
 2. Drawings to scale.
 3. Catalog cuts (without required details not acceptable).
 4. Electrical ratings, mounting, ballasts, lenses, and lamps.
 5. Certified photometric data.
 6. Clear indication of assigned fixture type.
 7. Installation instruction where required.
 8. Air conditioning data

1.05 GUARANTEE

- A. Refer to Section 15000 - Special Requirements for Mechanical and Electrical Work.

PART 2 - PRODUCTS

2.01 LIGHTING FIXTURES - GENERAL

- A. Furnish, install and connect interior and exterior lighting fixtures as scheduled on the Drawings, and as required for a complete and satisfactory operating system.
- B. Actual location of fixtures shall be as shown on the architectural reflected ceiling plans, or as directed by the Architect. Spaces for fixture insertion will be provided under the Section that covers the ceiling installation. Plaster and other frames shall be turned over to the Section for General Construction for setting and installation. Contractor shall be

responsible for obtaining the latest architectural plans, and field verification. The Contractor's attention is directed to the requirements of the acoustical ceiling, particularly to the need for close coordination between the ceiling construction details and lighting fixture design. The Electrical Contractor shall be responsible for coordinating mounting hardware to match ceiling type.

- C. Lighting fixture catalog numbers shall be considered only as a guide. All fixtures must incorporate the general and particular requirements included in the Contract Documents. It may be necessary to modify the manufacturer's standard fixture corresponding to the designated type or catalog number.
- D. All methods of construction and details of workmanship, where not specifically described or shown on the Drawings, shall be satisfactory to the Architect and shall be subject to his approval.

2.02 LIGHTING FIXTURES - FABRICATION

- A. Provide required thickness of metal, plastic and composite materials so that all fixtures are rigid, stable, and will resist deflection, twisting, warping under normal installation, and relamping procedures.
 - 1. All luminaire housings minimum 20 gauge cold rolled steel, unless a heavier gauge is specified or required by NEC or Local Codes.
 - 2. All aluminum extrusion housing minimum $\frac{3}{16}$ " thick.
 - 3. All spun, hydroformed, or sheet aluminum reflectors fabricated from #12 aluminum sheets minimum, 15 gauge (.057") or heavier.
 - 4. All acrylic & polycarbonate lenses and/or diffusers minimum $\frac{1}{8}$ " thick.
 - 5. All glass lenses and diffusers, unless specifically noted otherwise, shall be water white borosilicate or Corning Pyrex #7740 finished as described in the Lighting Fixtures Schedule on Drawings. Greenish tint lenses and diffusers are not acceptable.
- B. Provide positive, durable, means of connection at all joints as required. No hollow rivets, unless specifically approved, are acceptable.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

- C. Provide neoprene, silicone, rubber, or other appropriate gasketing, stops, and barriers where required to prevent light leak, control sound and vibration, prevent water leaks and, if pertinent, water vapor penetration.
- D. Provide finished product with the following minimum qualities:
 - 1. Ground and/or burr free metal edges.
 - 2. Tight fitting connections, hinges and closures.
 - 3. Clean neat corners, edges, trims and frames.
- E. All cast parts, including die-cast members, shall be of uniform quality; free from blow holes, pores, hard spots, shrinkage defects, cracks or other imperfections that affect strength and appearance, or are indicative of inferior metals or alloys.

2.03 FINISHES

- A. Fixture finishes shall be applied in a manner that will assure a durable wear resistant surface.
 - 1. Prior to finishing, all surfaces must be free from foreign materials such as dirt, rust, oil, polishing compounds and mold release agents.
 - 2. Where necessary surface cleaned by accepted chemical means shall receive corrosion inhibiting (phosphating) treatment assuring positive paint adhesion.
 - 3. All castings and extrusions machined, sanded or similarly treated, and given minimum one coat of baked-on clear methacrylate lacquer, unless a painted finish is specified.
 - 4. Aluminum surfaces exposed to weather (other than anodized reflectors covered elsewhere) shall receive a duronodic or polyester powder paint finish as specified for corrosion resistance.
 - 5. Sheet steel fixture housings, iron and steel parts, which have not received phosphating treatment ("Bonderizing" or similar process) or are to be utilized in exterior applications, shall be made corrosion resistant by zinc or cadmium plating or hot-dip galvanizing.
 - 6. All exterior (visible) finishes must be approved by the Architect.

2.04 FIXTURE TRIMS

- A. Fixtures shall have finish trim designed as specified in the Lighting Fixture schedule. Reference Architect Specifications.
- B. Provide trim details as shown on the Drawings or as specified. The trim finish and dimensions are subject to the approval by the Architect.
 - 1. Mitered corners shall be smoothed before shop finish is applied. No lapping of trim metal for all flush mounted ceiling trims for rectangular or square recessed fixtures.
 - 2. All exposed ceiling trim and inside reveals on all fixtures shall be painted in a color to match the Architect's sample.

2.05 MARKING OF FIXTURES

- A. Fixtures designed for voltages other than 110-125 volt circuits shall be clearly marked. The furnishing of lighting fixtures with the appropriate ballast voltage shall remain the Contractors responsibility.

2.06 LAMP HOLDERS

- A. Screw base sockets for incandescent and high intensity discharge lamps shall be of heavy duty heat resistant porcelain with spring center contacts and plated screw shells. Incandescent base sockets shall be rated 600 Watts at 250 Volts.

2.07 LAMPS

- A. Provide new lamps for all luminaries specified and shown in Light Fixture Schedule on the Drawings.
- B. Fluorescent lamps shall have a correlated color temperature of 3500°K and a minimum CRI of 75 and initial lumen output per watt input of 90. Lamps shall have a T8 bulb and medium bipin bases. Fluorescent lamps shall be energy saving, similar to Sylvania Octron FO32/35K, or approved equal, for 48" long lamps, and of equivalent performance for lamps of other standard lengths.
- C. Incandescent lamps shall be rated at 130 volts, unless otherwise specified in Lighting Fixture Schedule.

2.08 ELECTRONIC BALLASTS

- A. Fluorescent lamp ballasts shall be high frequency electronic type, operating lamps at a frequency of 20 KHZ or higher with no detectable flicker. They shall conform to the following:
1. Ballasts shall be approved and listed by Underwriters Laboratories, Inc., shall comply with all applicable state and federal efficiency standards and with FCC and NEMA limits governing electromagnetic and radio frequency interference and shall not interfere with operation of other normal electrical equipment. Ballasts shall meet all applicable ANSI and IEEE standards regarding harmonic distortion and surge protection and shall not be affected by lamp failure and shall yield normal lamp life. Lamp current crest factor shall not exceed 1.6. 'THD' less than 20%.
 2. Ballasts shall operate at an input frequency of 60 HZ and an input voltage of 108 to 132 (120V units) and shall have power factor above 90%. Ballasts must be compatible with the fluorescent lamps used.
 3. Ballasts that operate as parallel circuits shall allow remaining lamp(s) to maintain full output if companion lamp(s) fail.
 4. All ballasts Class "P" indicating approved integral ballast protection.
 5. Fixture design, fabrication and assembly shall be designed to prevent overheating or cycling of lamps and ballasts under all conditions.
 6. Dimmer type ballasts shall be of design recognized and approved under the U.L. component program. These ballasts must coordinate with the dimming control devices specified for the particular application. Contractor to provide and install control wiring per manufacturer's specifications.
 7. Ballasts intended for outdoor uses shall be capable of lamp-starting under any temperature down to 0°F. At conclusion of the work, deliver to Owner a written certificate guaranteeing all fluorescent lamp ballasts for a full three (3) years after acceptance date. Guarantee shall also cover all material and installation costs of replacing the defective ballast with new.

8. Ballasts for three-lamp operation are acceptable where no dual switching is required.

2.09 EMERGENCY BATTERY PACKS

- A. Fluorescent fixtures designated for emergency use shall be equipped with self-contained emergency battery packs designed to light one lamp upon loss of normal power for 90 minutes unless otherwise noted. Batteries shall be sealed, maintenance-free nickel cadmium. Pack shall include fully automatic solid state charger, test switch and pilot light for remote mounting.

2.10 WIRING

- A. All wiring shall comply with the following standards:
 1. All wiring within lighting fixtures, or from the connection to the building wiring system, shall be as specified under Section 16123, "WIRE AND CABLE".
 2. Wire leads to the receptacle or connector of any side prong incandescent lamp or any "cool-beam" lamp, or any lamp 200 watts and over shall be SF-2 (silicone rubber insulated) stranded wire.
 3. Wiring within fixture housing is to be concealed, except where the fixture design or mounting dictates otherwise.
 4. Wiring channels and wireways shall be free from projections and rough or sharp edges throughout, and at points or edges over which conductors must pass and may be subject to injury or wear.
 5. Insulated bushings shall be installed at points of entrance and exit of flexible wiring.
 6. All joints between fixture wiring shall be made with Buchanan #2008S or Thomas and Betts solderless connectors.

PART 3 - EXECUTION

3.01 INSTALLATION

- A. Provide and install all lighting equipment described in the Contract Documents and/or as modified by approved shop drawings. Installation shall be carried out in accordance with N.E.C. and N.Y.C. Electrical Code requirements, manufacturer's instructions, and with recognized industry practices. Comply with, NEMA

standards and with applicable portions of NEMCA's "Standard of Installation".

1. Verify fixture locations with architectural plans, reflected ceiling plans and other references prior to installation.
 2. Check for adequate headroom and non-interference with other equipment, such as ducts, pipes, openings, etc.
 3. In Mechanical Equipment Rooms modify locations and mounting to suit conditions as directed.
 4. Install rows of fixtures in straight lines, except as noted. Install fixtures so that fixture doors open from same side.
 5. Notify Architect in writing of conditions detrimental to proper and timely completion of the work.
- B. The housing of recessed lighting fixtures shall be adequately protected during installation.
1. Provide internal blocking or framing to provide perfect linear alignment and to prevent distortion of sides or dislocation of matching parts.
- C. Housing installed directly in concrete shall be fabricated of hot dip galvanized steel or cast aluminum. Where cast aluminum housings are used, give two coats of asphaltum paint prior to installation. To prevent direct contact of housing to concrete, 3/4" thick x 2" diameter solid neoprene grommets shall be furnished at every point light fixture surfaces are mounted to concrete structure.

3.02 SUPPORTS

- A. Provide mounting frames (plaster frames for example) to other trades as required for installation and as called for under other sections of these Contract Documents. Frames are to be finished matte white baked enamel, unless otherwise noted.
- B. Provide bars, angles or other attachment devices for all recessed fixtures. Fixtures shall be securely attached so there is minimum possible movement up, down, or sideways. Fixtures shall be mounted to permit access of wiring. Fastening devices shall be of a positive, locking type, and will not require the use of special tools to apply or remove. Tie shall cannot be used in place of fastening devices.

- C. Fluorescent fixtures three feet in length or greater, or heavy incandescent fixtures shall not be supported directly from a suspended ceiling or the immediate hardware of a suspended ceiling (furring strips, inverted tees, Z-bar clips, etc.) from which the ceiling itself hangs. These fixtures shall be supported from the intermediate structural support system for the ceiling.
- D. Additional running bars, shall be furnished by the Contractor for support of recessed fixtures and shall be utilized by the Contractor for that support. Where additional running bars can be furnished, the Contractor shall support weight of the fixture from the main running bars (black iron) or from the structural steel, or concrete, by means of inserts, hanging rods, Kindorf or Unistrut channels.
- E. Surface mounted or pendant fixtures mounted on suspended ceilings shall be supported by approved running straps, bars or channels from the top of the ceiling outlet box to the black iron where it exists or to the structural steel or concrete. Surface mounted or pendant fixtures installed on an existing suspended ceiling shall be supported in conformance with existing conditions or as shown on the Drawings.
- F. Where necessary to meet Code requirements, enclosure housing shall be constructed to provide a one-hour fire rating.
- G. Contractor shall be responsible only for the necessary adjustments in ceiling required to install lighting fixtures. Contractor shall verify all ceiling conditions from the Architectural plans and furnish appropriate mounting details for each lighting fixture.
- H. Provide pendant or surface mounted fixtures with required mounting devices and accessories. Coordinate locations of fixtures in mechanical areas, and if required, modify locations and mounting to suit conditions as directed. Provide mounting stems on pendant fixtures of the correct length to uniformly maintain the fixture heights shown on the Drawings, or established in the field.

3.03 TWO-LEVEL LIGHTING

- A. Where branch circuit wiring calls for two-level lighting, four-lamp fixtures shall be circuited in a manner so that outer lamps can be switched separately from inner lamp(s), unless otherwise indicated on Drawings. Provide 2-2-lamp ballasts per fixture.

3.04 ADJUSTMENT

- A. After the installation of lighting fixtures is completed, fixtures so requiring (both interior and exterior units) shall be adjusted after dark under supervision of the Architect and/or Owner.

3.05 CLEANING

- A. Lighting fixture mounting frames, plaster rings, etc. are required to be installed prior to the finishing assembly which shall not be installed until the project is "broom clean". When the fixture location or construction cannot permit sequential installation, the Contractor shall carefully protect all reflectors, lenses, flanges, and other visible surfaces.
- B. Before final acceptance by the Architect, all protective (strippable) coatings, dust, finger marks, paint spots and any other materials deleterious to the appearance or functioning of the lighting fixtures must be removed. Abrasive cleaners are not permitted.

3.06 INSPECTION

- A. Contractor shall examine location where the lighting fixtures are to be installed, determine space conditions and notify Architect/ Engineer in writing of conditions detrimental to proper and timely completion of the work.
- B. Do not proceed with the work until unsatisfactory conditions have been corrected.
- C. Upon completion of the installation, lighting equipment must be in first class operating order and free from defects in condition and finish.
1. At time of final inspection, all fixtures and equipment must be installed and lamped with new lamps and side panels, louvers or other necessary components.
 2. Fixtures shall be completely clean and free from finger marks, dust, plaster or paint spots.
 3. Any reflectors, lenses, diffusers, side panels or other parts damaged prior to the final inspection shall be replaced at no expense to the Owner.
 4. Exterior fixtures shall be painted to match factory color where finish is scratched or damaged.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

5. Housings shall be rigidly installed and adjusted to a neat flush fit with the ceiling.
6. No light leaks shall be permitted at the ceiling line or from any visible part or joints.

3.07 FIELD QUALITY CONTROL

- A. Upon completion of installation of lighting fixtures, and after energization, test system to demonstrate compliance with the contract requirements. When possible, correct malfunctioning units at the site and retest. Otherwise, remove and replace with new units.

PART 4 - APPROVED MANUFACTURERS

4.01 LIGHTING FIXTURES

- A. For lighting fixtures
 1. As indicated in Lighting Fixture Schedule.
- B. For ballasts
 1. Advance Transformer Company
 2. Electronic Ballast Co.
 3. Magnetek Universal Manufacturing
 4. Motorola
- C. For lamps
 1. General Electric Company
 2. Philips Lighting Company
 3. Osram/Sylvania Electric Products
 4. Venture Lighting (H.I.D.)

Remark: The above listed lamp manufacturers are acceptable unless specified otherwise in the Lighting Fixture Schedule on Drawings.

END OF SECTION 16510

SECTION 16721
FIRE ALARM SYSTEM MODIFICATION

PART 1 - GENERAL**1.01 GENERAL REQUIREMENTS**

- A. This Section is to coordinate with and be complementary to the General Conditions and Supplementary General Conditions of work, wherever applicable to Mechanical and Electrical Work.
- B. Section 15000 - General Provisions for Mechanical and Electrical Work shall apply.
- C. Drawings are diagrammatic and are a graphic representation of contract requirements to the best available standards at the scale required.

1.02 SCOPE

- A. The work covered by this Section of the Specifications shall include all labor, equipment, materials, services, hardware and software programming to furnish and install a complete fire alarm system addition:
 - 1. Conduit and wire per New York City Building Code, NFPA, local codes and all applicable standards and regulations.
 - 2. Duct smoke detectors (supplied and wired by this contractor).
 - 3. Shutdown of local air handling fans.
 - 4. Alarm bells.
 - 5. Visual alarm strobe lights.
 - 6. All modification, modules, accessories, etc. to the existing fire alarm system as required to accommodate all devices.
 - 7. For connection to and integration with the existing fire alarm system, the following shall be provided:
 - a. All necessary conduit, wiring and connections.

- b. All necessary physical modifications and module additions to the existing Fire Alarm System.
 - c. All programming and testing of the existing fire alarm system. It is the responsibility of this contractor to retain the company servicing the base-building system (Firecom-Case/Acme 718-899-6100) for all necessary equipment, services and modifications conducted.
- 7. All fire watches as required.
 - 8. All equipment shall be new and latest state of the art product of a single manufacturer.
 - 9. Testing and certification.
- B. In addition to any items specified in Part 'A' above, the existing fire alarm system modifications shall include but not limited to: equipment added as required for strobe power, strobes, interface with the existing Fire Alarm Control Panel, hardware and software, all modifications to existing fire alarm system.

1.03 APPLICABLE LISTINGS, CODES AND STANDARDS

- A. All raceways and wiring shall be installed in compliance with all codes and regulations. All applicable portions of the Code shall be explicitly followed, in particular with regard to material type and quality, circuitry extensions from and connections to outlet and junction boxes, panel boards and similar appurtenances.
- B. All installation shall comply with all applicable requirements of the latest edition of the NYC Building Code, the applicable Rules and Regulations and Reference Standards, and all local authorities.
- C. All equipment and its installation shall comply with all other local codes and authorities having jurisdiction.
- D. The contractor is responsible for coordinating with the building fire alarm system and providing all work as required to interface with the existing system.

1.04 RELATED DOCUMENTS

- A. Prior to the commencement of work, the Electrical Trade shall obtain all required permits and be responsible for filing/expediting the forms and drawings necessary for installation of the work. All permit and filing costs and inspections fees shall be included as part of the required work.
- B. Local requirements shall be adhered to with regard to submitting riser diagrams, with sequence of operation for all related equipment. Responsibility for furnishing the quantities of copies of the related equipment drawings shall be included as part of the electrical work.
- C. The Electrical Trade shall submit a letter of approval of the installation, to the authority, before requesting final acceptance of the system.

1.05 RELATED WORK

- A. The Electrical Trade shall coordinate work in this Section with all related trades. Work and/or equipment provided in other Sections and related to the tenant fire alarm system shall include, but not be limited to:
 - 1. Duct smoke detectors to be installed by the Mechanical Trade. See Division 15. They shall be furnished, wired and connected to the fire alarm system by the Electrical Trade.
 - 2. Air handling system, fan and damper control and terminal points to be provided by the fan systems control equipment. See Division 15. They shall be wired and connected to the fire alarm system by the Electrical Trade.
 - 3. Existing Conditions:
 - a. The Contractor shall visit the site to determine and verify all existing conditions. Existing conditions that would, in the Contractor's opinion, prohibit or greatly delay construction progress shall be brought to the Owner's and Architect's attention in writing.

- b. The Contractor shall test the existing fire alarm system equipment in the work areas to verify their proper operation. Any failures discovered during such testing shall be brought to the Owner's and Engineer's attention in writing. All necessary repairs shall be the responsibility of the Owner. No connections between the existing building fire alarm system and any new devices/equipment shall be made until all failures have been repaired and re-tested as acceptable.
- c. The Contractor shall provide for all necessary connections between new and existing fire alarm equipment.
- d. The Contractor shall retain the services of a technician, trained by the manufacturer of the existing fire alarm system, to provide services including, but not limited, to the following:
 - 1) Define and supervise all connections between the existing fire alarm system all new devices/equipment.
 - 2) Provide all necessary modifications of the existing system, including all hardware and software changes.
 - 3) Define and supervise the connection of all new devices to the existing fire alarm system.
 - 4) Define and supervise the relocation of any existing fire alarm equipment and/or wiring in the renovation space. The Contractor shall tag all wires and record the panel and terminal from which the equipment or wire was removed. Re-connections shall be in accordance with the directions of said technician.
- e. Under no circumstances shall the existing fire alarm system be rendered inoperative for any period of time, without prior notification and approval of the Owner, at

least twenty-four (24) hours in advance of shutdown. Phasing of the work involving shutdowns shall be planned in close consultation with the school and local authorities having jurisdiction.

1.06 QUALITY ASSURANCE

- A. It is the intent of these Specifications to modify the existing fire alarm system and to comply in all respects with the requirements of all applicable codes and standards. Equipment, material, installation practices, etc. that do not meet these requirements or codes or do not meet the performance standards herein specified shall not be acceptable.
- B. All equipment furnished under this Specification shall be UL listed and FM approved, under the appropriate category.
- C. Numbers and types of fire alarm system devices or circuits shall be as shown on the Drawings and as herein described in this Section. Should any conflicts arise between any Drawings and/or this Section, regarding the quantities of devices or circuits, the higher quantity or more stringent application shall apply.
- D. The installer shall have NICET Level II (or higher) certified fire alarm or special hazard associate engineering technician.
- E. The adjustment of the fire alarm system addition equipment to be performed by a fire alarm system maintenance contractor licensed by New York State to install and service fire alarm systems.

1.07 SUBMITTAL REQUIREMENTS

- A. Prior to the start of work, provide a complete and comprehensive submittal for review by the Engineer, describing the proposed system and its equipment. Failure to provide a complete submittal shall be grounds for summary rejection of any incomplete submittal documentation. The complete submittal shall include, but not be limited to, all of the following material:
 - 1. Provide a list (bill of materials) of all types of equipment and components provided. Each type

of system panel and equipment shall have its New York City Board of Standards and Appeals (B.S.A.) and/or the New York City Building Department Materials and Equipment Acceptance (M.E.A.). Approval Calendar Numbers shall be clearly indicated.

2. Provide description of operation of the system, similar to that provided in Part 2 of this Section, to include any and all departures (exceptions, variances or substitutions) listed at the time of bid. Failure to submit all such departures from these specifications at the time of bid shall be cause for summary rejection of any submittal documents where additional departures are discovered.
3. Provide schedule of active (utilized) and spare addresses provided on each installed addressable circuit to substantiate compliance with circuit usage/spare requirements, described elsewhere in this section. A separate schedule shall be provided for each addressable circuit provided as part of the fire alarm system.
4. Provide system ampere load (during both normal and alarm conditions) and time calculations to substantiate compliance with battery back-up power requirements (battery Ampere-Hour capacity), described elsewhere in this section.
5. Provide manufacturer's printed product data, catalog pages and descriptions of any special installation procedures.
6. Provide the address and telephone number of the manufacturer's local service facility.
7. Provide shop drawings as follows:
 - a. Drawing or catalog page showing actual dimensions of the FACP.
 - b. Drawing or catalog page showing actual dimensions of any auxiliary panels and/or battery cabinet(s).
 - c. Single line riser diagram showing all equipment and type, all connections and number and size of all conductors.

8. Provide a schedule, for review and approval, of the proposed individual label for each alarm or supervisory point to be displayed at the FACP, prior to fabrication and installation.
9. Provide samples of various items when so requested.
10. Certification of compatibility of new devices to match existing system.

1.08 GUARANTEE

- A. The equipment supplier shall guarantee the fire alarm system addition equipment to the Owner for a period of one (1) year from the date of final acceptance of the system addition.
- B. The Contractor shall guarantee all installed fire alarm system addition wiring and raceways to be free from inherent mechanical or electrical defects for one (1) year from the date of final acceptance of the system addition.

PART 2 - PRODUCTS

2.01 SYSTEM ADDITION DESCRIPTION

- A. The fire alarm system addition shall be integrated into the existing fire alarm system so as to provide a sequence of operations that matches the existing fire alarm system.
- B. The fire alarm control sub-panel (FACP) central processing unit (CPU) shall provide an individual multiplex data address for each addressable device connected to the fire alarm system addition.
- C. Addressable data communications between the new FACP and the addressable devices shall be digital and shall be wired NFPA Standard 72 Style 4, two-wire (Class B). Connect no more than 100 devices or 80% of maximum addressable devices on any addressable loop.
- D. The system addition addressable data communications circuits shall support one hundred percent (100%) of the addressable devices in alarm or operated at the same time, during both primary (AC) and secondary (battery) power conditions.

- E. The fire alarm system addition panel(s) shall provide alarm bells and strobe lights with NFPA Standard 72 Style 4, two-wire (Class B) circuits, typically as follows:
1. New alarm bells: Provide a minimum of two (2) alarm bell circuits for each floor with said devices. No more than ten (10) alarm bells shall be connected to any single circuit.
 2. New alarm strobe lights: Provide a minimum of two (2) alarm strobe light circuits for each floor with said devices. No more than fourteen (14) alarm strobe lights shall be connected to any single circuit.

2.02 SYSTEM ADDITION OPERATION

A. System Addition Alarm Operation

1. Alarm activation of any new manual fire alarm station shall automatically:
 - a. Sound a pulsing audible signal and flash the general alarm LED indicator at the fire alarm control sub-panel (FACP). Pressing the alarm acknowledge key on the FACP shall silence the audible signal and continuously light the LED indicator, during the alarm condition. Subsequent alarm conditions shall resound the audible signal and again flash the LED. Each alarm condition must be individually acknowledged.
 - b. Display the custom label for the device reporting the alarm condition on the FACP alphanumeric display.
 - c. Enter the custom label for the device reporting the alarm condition with the time and date of alarm activation into the FACP historical alarm log for future recall/review.
 - d. Sound four (4) rounds of the alarm code for the device reporting the alarm condition on all alarm bells, both new and existing; throughout the building. Subsequent alarm conditions from other alarm initiating devices shall sound the appropriate alarm codes on the alarm bells.

- e. Flash all alarm strobe lights, both new and existing, throughout the building. The alarm strobe lights may be turned off during the alarm condition by operation of the FACP alarm silence switch or shall automatically be turned off after five (5) minutes of operation. Subsequent alarm conditions shall again turn on the alarm strobe lights.
 - f. All other existing automatic control functions activated by a manual fire alarm station alarm shall occur.
2. Alarm activation of any area or duct smoke detector or heat detector shall automatically:
 - a. Provide those operations as above listed in 2.02 A. 1.
 - b. Sound the smoke/heat alarm bell at the FACP. Pressing the alarm acknowledge key on the FACP shall silence the audible signal.
 - c. Shutdown all air handling systems or fan units shown on drawing E6.02, which are connected to the fire alarm system addition.
 - d. Close any fire/smoke dampers associated with the air handling systems.
- B. System Supervision For Trouble Conditions
1. The fire alarm system addition wiring (except control wiring to fans, door holders, security door unlock, etc.) shall be electrically supervised to automatically detect and report trouble conditions to the fire alarm control sub-panel (FACP).
 2. Any opens or grounds on alarm initiating or supervisory circuit wiring and any opens, grounds or shorts across addressable data communications, remote annunciator panel data communications, alarm signal, alarm horn or alarm strobe light circuit wiring shall initiate a sub-system trouble condition.
 3. Sub-system addressable devices shall be supervised for placement and normal operation. Removal of an

addressable device or the failure of its internal electronic circuitry shall initiate a sub-system trouble condition.

4. The following fire alarm system addition states shall initiate a system trouble condition:
 - a. Primary 120 VAC power loss.
 - b. Battery disconnect.
 - c. Battery low voltage.
5. Trouble conditions shall automatically:
 - a. Sound a pulsing audible signal and flash the general system trouble LED indicator at the fire alarm control sub-panel (FACP) and sound the trouble bell. Pressing the trouble acknowledge key on the FACP shall silence the audible signals and continuously light the LED indicator, until the trouble condition is repaired. Subsequent trouble conditions shall resound the audible signals and again flash the LED. Each trouble condition must be individually acknowledged.
 - b. Display a general trouble indication and system status summary (numbers of alarm, supervisory and/or trouble conditions) on the FACP alphanumeric display.
 - c. Enter the circuit/device custom label with time and date of trouble condition occurrence into the FACP historical trouble log for future recall/review.
 - d. Activate system relay to initiate the transmission of a trouble signal to the Central Station Agency transmitter (Provided by others).

2.03 SYSTEM ADDITION EQUIPMENT

A. Fire Alarm Control Sub-Panel (FACP):

The FACP shall be Firecom Model FC-610. The FACP shall be capable of annunciating a system minimum of 126 addressable points, expandable in 126 point increments to 504 points. The operating control switches and status indicators shall be located behind locked with New York City Fire Department Key #2642 steel door and

Plexiglas window assemblies. The keys shall be made available only to the New York City Fire Department and other authorized operating personnel. All control switches and LED indicators shall be labeled. All zone locations shall be identified, and the panel shall be provided with a set of permanently mounted operating instructions. The panel door and frame assembly shall be steel, with red finish and suitable for flush mounting. The panel shall contain necessary power supplies, data bus conductors, battery charger and all necessary function modules and components, including but not necessarily limited to the following:

1. A master control module shall be provided to act as a central processing unit for the control of the fire alarm system. The master control module shall provide the following indicators and controls:
 - a. Eighty (80) character alphanumeric display.
 - b. Alarm acknowledge button with "activated" LED indicator.
 - c. Trouble acknowledge button with "activated" LED indicator.
 - d. Supervisory acknowledge button with "activated" LED indicator.
 - e. Alarm silence button with "activated" LED indicator.
 - f. System reset button with "activated" LED indicator.
 - g. Device disable button with "activated" LED indicator.
 - h. Fifteen (15) key system control keypad.
 - i. Power "ON" LED indicator.
2. A manual fan systems restart keyswitch.
3. Battery Standby: The FACP shall be provided with adequate battery back-up capability to operate in the standby mode for at least twenty-four (24) hours and to operate in normal alarm mode for at least fifteen (15) minutes at the end of the twenty-four (24) hour standby period.

B. Signal Circuit Extender Panel(s):

1. The Signal Circuit Extender panel(s) shall be Firecom Model FPS-12/24-8. The panel door and frame assembly shall be steel, with red finish. The panel shall contain necessary motherboard, power supplies, battery charger and all necessary function modules and components. It shall provide signal circuits for alarm bells and alarm strobe lights and shall provide four (4) controllable alarm signal circuits rated at two amperes (2.0 A) @ 24 VDC. Each circuit shall be configured for NFPA Standard 72, Style 4, two-wire (Class B) supervised operation monitoring for opens, shorts or ground faults. Each signal circuit shall be protected by an individual over-current device.
2. Battery Standby: The panel shall be provided with adequate battery back-up capability to operate in the standby mode for at least twenty-four (24) hours and to operate in normal alarm mode for at least fifteen (15) minutes at the end of the twenty-four (24) hour standby period.

C. Existing Code Cards

All existing code cards shall be replaced with updated code cards that list new alarm initiating devices and their associated new alarm codes.

D. Manual Fire Alarm Stations

Shall be Firecom Model FCMS-95 double action manual station with built-in addressable monitor module. The station shall be of cast metal construction with normally open, single-pole, single-throw (SPST) general alarm contact. The station shall be supplied with a red trim plate painted with a one inch (1") wide white stripe running diagonally from the upper left corner to the lower right corner. The station shall be furnished for semi-flush mounting in finished areas or surface mounting with matching backbox in unfinished areas (where shown on drawings).

E. Code Cards and Holders

Provide a code card and holder at each new manual fire alarm station. The code card and its holder shall be sized to accommodate all fire alarm system alarm codes and locator descriptions. The holder shall be of metal construction with Plexiglas window to protect the code card from damage.

F. Photoelectric Area Smoke Sensors

Shall be Firecom Model F900-650 addressable, two-wire, 24VDC, photoelectric type. Each sensor shall utilize solid state components and shall be equipped with a fully regulated LED light source for long life reliability, a thirty (30) mesh insect screen and remote alarm LED output and shall obtain its operating power from the addressable data communications circuit wiring. Sensors shall be two part, base and head, with replaceable smoke sensor head for ease of maintenance and cleaning. Sensors shall provide four (4) levels of sensitivity, which shall be set at the FACP. The sensors shall indicate the need for cleaning at the FACP via a "Dirty" indication with audible signal. Sensors shall be provided with power-on/alarm led indicator and a surface mount, addressable base assembly. Smoke sensor trouble conditions shall also be reported to the FACP. Base assemblies shall provide for sensor twist-in capability.

G. Duct Smoke Sensors

Shall be Firecom Model F900-AA addressable, two-wire, 24VDC, photoelectric type. Each sensor shall utilize solid state components and shall be equipped with a fully regulated LED light source for long life reliability, a thirty (30) mesh insect screen and remote alarm LED output and shall obtain its operating power from the addressable data communications circuit wiring. Sensors shall be two part, base and head, with replaceable smoke sensor head for ease of maintenance and cleaning. Sensors shall be provided with power-on/alarm led indicator and addressable base assembly. Base assemblies shall provide for sensor twist-in capability. The sensor head/base shall be provided in a steel housing backbox with clear plastic cover, reference tube and sampling tube, sized according to duct width. Duct housings shall permit the sensor to sample duct air velocities of from 500 to 4,000 feet per minute. Sensors shall provide four (4) levels of sensitivity, which shall be set at the FACP. The sensors shall indicate the need for cleaning at the FACP via a "Dirty" indication with audible signal. Smoke sensor trouble conditions shall also be reported to the FACP. Duct sensors shall be provided with Firecom Model FMS-RA Remote red alarm LED on a single gang plate (surface or flush mounted).

H. Heat Detectors

Shall be Firecom Model F900-450 two-wire, 24VDC, 135° F fixed temperature detector. Heat detector shall utilize an electronic thermistor heat sensing element to sense its rated fixed alarm temperature. Heat detector shall be resettable after reporting an alarm condition with an alarm LED indicator. Heat detector shall utilize solid state components and shall be U.L. Standard 521 listed for a coverage of up to 3,600 square feet, installed 60 feet on center. Heat detectors shall be provided with, low profile, surface mount, base assembly and screw terminals for all connections. Base assemblies shall provide for detector head twist-in mounting.

I. Addressable Monitor Modules (Dry contact only)

Shall be Firecom Model FCPID-95 and shall consist of printed circuit board with discrete circuitry for monitoring normally-open dry contacts using NFPA Standard 72 Style B, two-wire (Class B) circuit supervision. The module shall respond to polling signals from the FACP and shall report alarm initiating/supervisory circuit status changes to it. The addressable monitor module shall draw its power from the addressable data communications circuit. The monitor module shall be mounted on a four inch (4") standard backbox and shall be provided for flush mounting in finished areas or surface mounting in unfinished areas (where shown on the drawings).

J. Addressable Control Modules

Shall be Firecom Model FCRCE-95 and shall consist of printed circuit board with discrete circuitry for controlling one (1) individually addressable control relay with single-pole, double-throw (SPDT) contacts rated at six-tenths Amperes (.6A) @120VAC and two Amperes (2.0) @ 30 VDC. The control relay module shall respond to control signals from the FACP. The control relay module shall draw its power from the FACP via a separate 24VDC power circuit. The control module shall be mounted on a four and eleven sixteenths inch (4-11/16") standard backbox and shall be provided for flush mounting in finished areas or surface mounting in unfinished areas (where shown on the drawings).

K. Addressable Signal Control Modules

Shall be Firecom Model FCSCE-95 and shall consist of printed circuit board with discrete circuitry for

controlling one (1) individually addressable, 24 VDC, signal circuit with circuit rated at two Amperes (2.0) @ 24 VDC. The signal control module shall respond to On/Off control signals from the FACP. The signal control module shall draw its power from the FACP via a separate 24VDC power circuit. The control module shall be mounted on a four and eleven sixteenths inch (4-11/16") inch (4-11/16") standard backbox and shall be provided for flush mounting in finished areas or surface mounting in unfinished areas (where shown on the drawings).

L. Load Interface Relays

Shall be Firecom Model FMR-201C and shall consist of multi-voltage coil (24 VDC, 24 VAC, 115 VAC and 230 VAC) relay with double-pole, double throw (DPDT) control contacts rated at ten Amperes (10 A.) @ 115 VAC. The load interface relay shall be provided in a surface mounted, metal enclosure and an "activated" LED indicator visible through the enclosure.

M. Alarm Bells

The alarm bell shall be red in color, have a ten inch (10") diameter gong shell. It shall operate at 24 VDC with a current draw of .100 Ampere and shall provide a minimum sound output of ninety-one decibels (85 Db).

N. Alarm Strobe Lights

Shall be Firecom FRS/FRSS Series. The alarm strobe light shall be rated at 24 VDC, 1.0 Hertz, strobe light with a clear, polycarbonate lens mounted in a red housing. The word "FIRE" shall be imprinted in one-half inch (1/2") high letters on the alarm strobe light housing. The strobe light shall have a minimum candela rating of 15 Candela for UL Standard 1971 and 75 Candela on axis for ADA compliance. The alarm strobe light shall be furnished for semi-flush mounting in finished areas or surface mounting in unfinished areas (where shown on the drawings). Synchronized strobes shall be provided.

O. Smoke/Heat Alarm Bell at the FACP

Shall be Model MBA-8-24 vibrating bell. The alarm bell shall be red in color, have an eight inch (8") diameter gong shell. It shall operate at 24 VDC with a current draw of .025 Ampere and shall provide a minimum sound output of eighty-seven decibels (87 Db). It shall be surface or semi-flush mounted so as to match

the mounting style of the FACP and be provided with a label, acceptable to the NYC Fire Department, indicating "Smoke/Heat Alarm".

P. Sub-System Trouble Bell at the FACP

Shall be Model MBA-6-24 vibrating bell. The alarm bell shall be red in color, have a six inch (6") diameter gong shell. It shall operate at 24 VDC with a current draw of .012 Ampere and shall provide a minimum sound output of eighty-seven decibels (87 Db). It shall be surface or semi-flush mounted so as to match the mounting style of the FACP and be provided with a label, acceptable to the NYC Fire Department, indicating "System Trouble".

Q. Fire Alarm System Fused Cut-out(s)

1. The Contractor shall provide an individual cartridge fused cut-out panel with a minimum of two (2) poles and a removable, solid copper, neutral bar in fuse gap for the FACP.
2. Fused cut-outs shall be provided with silver sand fuses, current limiting type with an interrupting capacity rating of 200,000 amps (r.m.s. symmetrical). The size of the fuses shall be a minimum of twenty amperes (20.0A).
3. The fused cut-out panel shall bear an engraved white-core phenolic or bakelite identification nameplate stating in minimum one-quarter inch (1/4") high white letters on a red background "FIRE ALARM FUSED CUT-OUT".
4. A three (3) wire feeder shall bring two phase 120/208 volt service to the fused cut-out. The feeder shall be tapped off the main building service ahead of the main service switch but after the Current Transformers (Metering Transformers).

PART 3 - EXECUTION

3.01 DELIVERY, STORAGE AND HANDLING

- A. The Contractor shall receive and store all material and equipment necessary for the completion of the Project.

3.02 INSTALLATION

- A. The entire ~~system~~ shall be installed in a workmanlike manner, in accordance with approved manufacturer's wiring diagrams and all applicable codes and regulations. The Contractor shall furnish all conduit, wiring, outlet boxes, junction boxes, cabinets and similar devices necessary for the complete installation.
- B. Area Type ~~Smoke~~ Detectors.
1. The Contractor shall furnish and install area smoke detectors at locations where shown on the Drawings or called for in the Specifications.
 2. The Contractor shall furnish and install suitable flush or semi-flush backboxes to which the detector will be mounted.
 3. Do not install smoke detector heads until the Work (including cleaning) of all trades in the building has been completed. Protect all installed smoke sensor heads from airborne dust and debris, with plastic bags, until the final acceptance test. Any detector cleaning costs, necessitated by failure to protect the smoke detector, shall be the responsibility of the Contractor.
- C. Duct Smoke Detectors
1. The Contractor shall furnish and wire the duct smoke detectors.
 2. The Contractor shall co-ordinate with the Mechanical Trade (sheet metal tradesman) for the installation of the duct smoke sensor housings.
 3. The Mechanical Trade (sheet metal tradesman) is to provide holes in the ductwork for duct smoke detector sampling and reference tubes, where shown on the Drawings.
 4. The Mechanical Trade (sheet metal tradesman) is to provide the actual installation of the duct smoke detector housings and sampling and reference tubes on and into the ductwork, where shown on the Drawings.

5. The Electrical Trade shall consult the HVAC Drawings for locations of the duct smoke detectors, in order to provide adequate conduit, wiring and connections.
6. Do not install duct smoke detectors until the Work (including cleaning) of all trades in the building has been completed and the air handling systems have been run for a minimum of four (4) hours. Protect all installed duct smoke sensor heads from duct airborne dust and debris, with plastic bags, until the final acceptance test. Any sensor cleaning costs, necessitated by failure to protect the duct smoke sensor heads, shall be the responsibility of the Trade.

D. Visual Alarm Indicating Devices

1. The Contractor shall furnish and install visual alarm indicating devices, where shown on the Drawings.
2. The horizontal center line of an alarm strobe light and/or the horizontal center line of the alarm strobe light component of an audio/visual combination assembly shall be located eighty inches above the finished floor (80" AFF).

E. Wiring

1. All wiring shall be fire rated and as follows:
 - a. Of the size and configuration type recommended by the manufacturer for each type of circuit in the system and meet the requirements below.
 - b. Solid copper conductors only. Aluminum conductors or copper clad, plated or coated aluminum conductors shall not be acceptable.
 - c. Color coded throughout.
 - d. In conformance with the applicable Building Codes, and standards.
 - e. Approved by the local fire department having jurisdiction.

- f. A minimum of No. 16 AWG., unless otherwise noted.
 - g. Fire rated Teflon insulation.
 - h. Run in conduit.
- 2. All wires shall test free from grounds and crosses between conductors.
 - 3. Circuit wiring from the existing fire alarm control wiring to the new fire alarm control sub-panel shall be as indicated by the fire alarm system addition supplier, but a minimum of five (5) pairs of No. 14 AWG., copper conductors. Contractor is responsible for verifying and providing actual wiring requirements with manufacturer.
 - 3. Circuit wiring from the new fire alarm control sub-panel to the fire alarm system addition devices installed in the space shall be a minimum of as follows. Contractor is responsible for verifying and providing actual wiring requirements with manufacturer.
 - a. Each addressable device data circuit: Two (2) No. 16 AWG., twisted, copper conductors.
 - b. Each auxiliary 24 VDC power circuit: Two (2) No. 14 AWG., copper conductors.
 - c. Each alarm bell circuit: Two (2) No. 14 AWG., copper conductors.
 - d. Each alarm strobe light circuit: Two (2) No. 14 AWG., copper conductors.
- F. Conduit And Raceways
- 1. All penetrations of floor slabs and fire walls shall be fire stopped in accordance with all local fire codes.
 - 2. Fire alarm system terminal and junction locations shall be identified in accordance with NFPA Standard 70, Section 760-3. Terminal and junction boxes shall be painted red, preventing unintentional interference with the fire alarm

system addition wiring during testing, servicing and additional modifications to the system.

- G. End of line devices (resistors, diodes, capacitors, etc.) shall be furnished as required for mounting as directed by the manufacturer.
- H. System's Programming Requirements
 - 1. Addressable device description to be displayed on the fire alarm control sub-panel shall utilize room/space designations and numbers to be used by the facility after occupancy. Descriptors to be approved by Engineer.
- I. All final connections between system addition control equipment and the field circuit wiring shall be made under the supervision of a trained manufacturer's technical representative.

3.03 CLEAN UP

- A. Upon completion of the installation, all debris created by the installation shall be removed from the premises or disposed of as directed by the Owner.

3.04 TESTS

- A. Prior to the final acceptance test, the Contractor and a trained manufacturer's technical representative shall test the completed system addition for proper operation. The system addition shall be demonstrated to perform all of the functions as listed below. Any system addition equipment or wiring failures discovered during said test shall be repaired or replaced before requesting scheduling of the final acceptance test.
- B. The system shall be tested for final acceptance in the presence of the Owner's representative, Architect's representative, Engineer's representative, the local Code enforcement official, Contractor's representative and the Manufacturer's representative.
- C. During the final acceptance test:
 - 1. Every new manual fire alarm station shall be tested.

2. Every new smoke detector shall be tested.
 3. Every new audible alarm signaling device shall be sounded.
 4. Every new visual alarm signaling device shall be flashed.
 5. Every system control and monitor function shall be tested for its proper operation.
 6. All new supervised circuits shall be opened at two (2) locations to test for proper supervision.
 7. Correct or adjust items not found acceptable by authorized representative.
 8. Repeat tests to indicate corrected items.
- D. Upon successful completion of all final acceptance tests, the Contractor's and Manufacturer's representatives shall each author and sign a letter confirming the successful completion of testing. Two (2) copies of each letter shall be forwarded to the Owner's representative, the Architect's representative, the Engineer's representative and the local Code enforcement official.
- E. All final acceptance testing shall be done at a time convenient to the local Code enforcement official and the Owner's representatives and all testing costs shall be born by the Contractor as part of this Contract.
- F. Install fire alarm devices, wiring and equipment as indicated and in accordance with manufacturer's written instructions, requirements of applicable Standards, and NECA's "Standard of Installation," and in accordance with recognized industry practices to ensure that installation complies with requirements and serves intended function.
- G. Protect all equipment from dirt, moisture and construction debris, subsequent and during installation until project is accepted by Owner.
- H. Contractor to furnish all conduit, wiring, outlet boxes, junction boxes, cabinets and similar devices

necessary for a complete installation. All wiring types as recommended by the manufacturer.

- I. A factory trained technician to supervise the final connections, tests and adjustments of all equipment upon completion. Each device to be tested by the manufacturer's representative in the presence of the Owner's representative; a test report completed in triplicate, and signed by the Owner's representative to indicate that he witnessed the testing of the system. A copy of the test report shall be posted adjacent to the emergency control equipment and enclosed in a glass directory frame with metal frame.
- J. This Contractor to provide and install visual fire alarm strobe devices in the locations shown on the drawings for indication of the activation of the building fire alarm system. Wire the devices to the new fire alarm control sub-panel. Provide all equipment and materials necessary to provide this operation.
- K. Guarantee
 - 1. All components, parts and assemblies supplied by the manufacturer to be guaranteed against defects in materials and workmanship for a period of twelve (12) months from Owner and Fire Department acceptance.
- L. Contractor to guarantee all wiring to be free from inherent mechanical and electrical defects for one year. The manufacturer to furnish a one-year maintenance contract, free of charge to the Owner effective from the date of installation for maintenance and inspections of the manufacturer's equipment; with a minimum of two inspections during the contract year. A local manufacturer's service department which stock standard parts to be available to the Owner. If required, maintenance is to be performed during normal working hours at no cost to the Owner for a period of twelve (12) months from the completion date of the installation, unless damage is caused by misuse, abuse or accident.

3.05 DOCUMENTATION AND TRAINING

- A. The Contractor shall, with the assistance of the manufacturer, compile and provide to the Owner, six

(6) complete manuals on the finished system addition to include:

1. Operating instructions for this specific system addition to include operator instructions for each required mode of operation and routine troubleshooting procedures.
 2. Preventive and required maintenance schedules for each type of system addition equipment and/or accessory.
 3. Manufacturer's catalog pages of all equipment and components provided.
 4. Manufacturer's suggested spare parts list.
 5. All as-built, floor wiring and conduit diagrams. Floor plan diagrams shall indicate actual locations of each item of fixed equipment, and show interconnecting wiring.
- B. In addition to the above manuals, the Contractor shall provide the services of a trained manufacturer's employee for two (2) periods of four (4) hours each, during normal business hours, to instruct the building's designated personnel on the operation and maintenance of the entire system.
- E. System documentation shall be furnished to the Owner and shall include but not be limited to the following:
1. System record drawings and wiring details including one set of reproducible masters and drawings on 3-1/2" floppy disks in a DXF format suitable for use in a CAD drafting program.
 2. System operation, installation and maintenance manuals.
 3. Written documentation for all logic modules as programmed for system operation with a matrix showing interaction of all input signals with output commands.
 4. Documentation of system voltage, current and resistance readings taken during the installation, testing and ATP phases of the system installation.

09/07/04

Soundproofing of Msgr. McClancy Mem. H.S.

5. System program showing system functions, controls and labeling of equipment and devices. Also provide a 3.5" floppy diskette with system file.

3.06 SERVICE AND MAINTENANCE

- A. The equipment manufacturer shall make available a fully equipped service organization, capable of guaranteeing an on-site service response time within eight (8) hours to a service request call. Said service shall be available twenty-four (24) hours per day and seven (7) days per week.
- B. The equipment manufacturer shall make available, to the Owner, a price quotation for a one (1) year maintenance and testing agreement for the system addition, to take effect on the date of final acceptance.

SECTION 16902
ELECTRIC CONTROLS AND RELAYS

PART 1 - GENERAL

1.01 GENERAL REQUIREMENTS

- A. This Section is to coordinate with and be complementary to the General Conditions and Special Conditions of the work, wherever applicable to Mechanical and Electrical Work.
- B. Section 15000 - Special Requirements for Mechanical and Electrical Work shall apply.
- C. Section 16000 - General Provisions for Electrical Work shall apply.

1.02 DESCRIPTION OF WORK

- A. The work includes providing of all labor, materials, equipment, accessories, services, and tests necessary to complete and make ready for operation by the Owner, control equipment as required, as shown on the Drawings, and hereinafter specified.
- B. The work includes, but is not limited to, remote control switches, contactors, relays, low voltage control power transformers, timers, photocells, and breakglass switches.

1.03 QUALITY ASSURANCE

- A. "Manufacturers" - Firms regularly engaged in manufacture of type of equipment required for the application, whose products have been in satisfactory use in similar service for not less than 5 years.
- B. Provide equipment whose performance under specified conditions is certified by the Manufacturer.
- C. Control equipment shall comply with applicable standards of NEMA, and shall be listed and labeled by Underwriters Laboratories.
- D. Comply with NEC (NFPA 70) and New York City Electrical Code for construction and installation of remote control equipment.
- E. Provide remote control equipment produced by a manufacturer listed as an approved Manufacturer in this Section.

1.04 SUBMITTALS

- A. Refer to Section 15000, Special Requirements for Mechanical and Electrical Work and submit shop drawings.

1.05 GUARANTEE

- A. Refer to Section 15000, Special Requirements for Mechanical and Electrical Work.

PART 2 - PRODUCTS**2.01 RELAYS**

- A. Relays, unless otherwise noted or required, shall be magnetically held, A.C. solenoid type, with operating voltage 120V., 60 Hz.
- B. Contacts shall be double-break, total enclosed, silver alloy, rated 20 amp. at 600 V.A.C. and capable of easy conversion or replacement in field to normally open or normally close. Number of contacts as shown on Drawings, and as required.
- C. Enclosures shall be indoors, NEMA 1A; outdoors, NEMA 4, with black and white laminated nameplates screwed to enclosure with engraved identification.
- D. Fusing, low voltage transformers, and additional accessories shall be provided as required for relays to perform their intended function, and in accordance with the NEC.

2.02 LOW VOLTAGE CONTROL POWER TRANSFORMER

- A. Provide transformers as required for low voltage power used to actuate remote control equipment. Transformers shall be rated as required for voltage, momentary volt-amp. load, continuous volt-amp. load, and shall be suitable for the intended application.
- B. Provide primary and secondary overcurrent protection with fused switches in accordance with the NEC.

2.03 TIMERS

- A. Time switch shall be synchronous motor type. The switch shall be of the single or multi-circuit type as shown on the Drawings and as required, with "on" and "off" times of each circuit separately adjustable. The circuits may be controlled by either one time element or by separate time elements. Time switch shall be installed adjacent to associated panel, unless shown

otherwise on drawings, and provided with locks. The switch contacts shall be of at least 30-ampere capacity. Time switches controlling exterior lighting circuits shall have astronomical dials. Voltage and rating shall be as required.

- B. Time switches shall be for operation on 120 volts, 60 cycles, unless otherwise required, and shall be furnished with by-pass devices.

PART 3 - EXECUTION

3.01 INSPECTION

- A. Contractor shall examine location where control equipment is to be installed and notify Architect/Engineer in writing of conditions detrimental to proper and timely completion of the work.
- B. Do not proceed with the work until unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Install control equipment as shown on Drawings or otherwise required, in accordance with manufacturer's written instructions, and with recognized industry practices, to ensure that the installation complies with requirements and serve intended purposes.
- B. Coordinate with other work as necessary to harmonize installation of remote control equipment with other equipment in the area.
- C. Installation shall comply with the requirements of NEC, applicable portions of NECA's "Standard of Installation", and NEMA standards.
- D. All components shall be mounted in cabinets suitable for installation with all necessary bus bars and terminal strips. Steel barrier shall separate low and high voltage sections, in accordance with NEC.
- E. Installation shall comply with NEMA standards, the requirements of NEC, and applicable portions of NECA's "Standard of Installation".
- F. This Contractor shall provide all accessories, wiring, and conduit, required to provide a complete system. Accessories shall include, but not be limited to, terminal strips, rectifiers, switches, and fuses, for systems to perform their intended function, and in accordance with the NEC.

10/31/03

Soundproofing of Msgr. McClancy Mem. H.S.

3.03 FIELD QUALITY CONTROL

- A. Upon completion of installation of control equipment and after control equipment has been energized, test equipment to demonstrate compliance with requirements. When possible, correct malfunctioning equipment at the site, then retest to demonstrate compliance; otherwise, remove and replace with new equipment and proceed with retesting.

3.04 APPROVED MANUFACTURERS

- A. Remote Control Switches and Contactors, Relays:

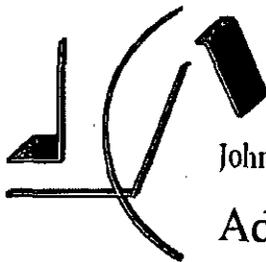

1. ASCO
2. General Electric
3. Square 'D'
4. As indicated on Drawings.

- B. Timers and Photocells:

1. Tork Time Controls, Inc.
2. Paragon Electric Co.
3. Intermatic

re: Monsignor McClancy Memorial High School Soundproofing - Asbestos Removal

This is to inform you that the following dates have been changed for the above project.

The Bid Due Date: Changed from 02/17/05 to **Thursday March 31, 2005.**

The Pre-Bid Conference Date : Changed from 01/19/05 to **Wednesday February 23, 2005.**

Questions submitted to architect by: Changed from 01/28/05 to **Friday March 4, 2005.**

The above date changes comprise Addendum #1 and are hereby amended to and made part of the construction documents.

Please sign and date below and fax this letter to us at (212) 245-0020 to confirm receipt of this notice

Please call if you have any questions.

Nelson Parra

**Asbestos Removal - Monsignor McClancy Memorial High School
REQUEST FOR BID PROPOSALS**

**MONSIGNOR McCLANCY MEMORIAL HIGH SCHOOL
71-06 31ST AVENUE
EAST ELMHURST, NY 11370**

Public notice is hereby given that sealed Bid Proposals for Asbestos Removal work as prescribed by the Plans and Specifications Bid Documents for the Soundproofing of Monsignor McClancy Memorial High School, East Elmhurst, New York will be received at the Monsignor McClancy Memorial High School 71-06 31st Avenue East Elmhurst, New York 11370, in the General Office before 10:30 AM on *February 17, 2005* when Bidding will be closed and the packages publicly opened and read aloud. No late Bid Proposals will be accepted and incomplete or non-compliant Bid Proposals will be rejected.

Bids shall be for Asbestos Removal work on the basis of a Stipulated Lump Sum Contract.

Complete sets of Bid Documents, prepared by the Architect, John Ciardullo Associates, 221 West 57 Street, New York, N. Y. 10019, 212/245-0010 will be available to General Contractors at the Architect's office on or after *January 10, 2005* upon receipt of a non-refundable payment of \$25.00 per set. Only cash or certified checks payable to the order of John Ciardullo Associates will be accepted. When purchasing Bid Documents, all General Contractors must be prepared to provide the following information: Complete company name, mailing and street address, telephone numbers, facsimile number and responsible contact person.

Complete sets or parts of sets of Bid Documents will not be issued to Subcontractors, material suppliers, or manufacturers. They are requested to arrange for copies with their respective General Contract Bidders. A list of Bidders will be made available through the Architect's office upon request.

All Bids must be submitted in accordance with the INFORMATION TO BIDDERS section of the Specification. The Bid Proposal, with all other required information must be submitted in a sealed opaque inner envelope marked "ASBESTOS REMOVAL, SOUNDPROOFING OF MONSIGNOR McCLANCY MEMORIAL HIGH SCHOOL - A.I.P. PROJECT NO. NY-LGA 80-02 and NY-LGA 98-03" A larger outer envelope containing the Bid Proposal shall be addressed to Monsignor McClancy Memorial High School, Attention Brother Robert Connolly, 71-06 31st Avenue East Elmhurst, New York 11370 with the Contractor's return address and project name indicated on the outer envelope.

The Bidder must submit with his Bid Proposal a notarized affidavit including the firm's legal status, a list itemizing projects that are currently under contract, contract amounts and the name and telephone numbers of project contacts on the attached Current Contract Form and that there have been no material adverse changes in his qualification information or the total amount of uncompleted work on contracts at this time.

Bidders are alerted to the Information for Bidders Section 11 - F.A.A. Requirements, 14.3% DBE Participation Goal.

Bidders are required to comply with the requirements of P.L. 1975, C 127-Affirmative Action Regulation and Executive Order #11246 for Federal Equal Employment Opportunity.

The successful Bidder shall be required to pay at least the US Department of Labor Davis Bacon Prevailing Wage Rates or The City of NY Office of the Comptroller Prevailing Wage Schedule Rates whichever is greater. (See appendix 3 & 4).

According to Public Law, Chapter 15, Title 40 and Chapters 32 and 33, Title 52, the Contractor shall agree that in the performance of construction, only domestic materials and manufacturers will be used when available.

Bidders are alerted that "Approval of Subcontractors" is required for all subcontract work. The work under this

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School

solicitation requires Asbestos Removal work. Therefore Subcontractor Approval Application forms and Request for Subcontractor Approval forms are required for each of the above referenced trades or portions of trades. If the bidder intends to perform any of the above work with its own forces, it must complete the subject forms using its company name and related information.

Each Bid Proposal must be accompanied by a certified check, or Bid Bond in the amount of 10% of the Bid amount. Additionally each Bidder shall include as part of his Bid Proposal the cost of a Performance and Labor and Material Payment Bond in the amount of 100% of the Contract Price. The Bid must also be accompanied by a certificate from a Surety Company authorized to do business in the State of New York, certifying that said Surety Company will be providing the Bidder with a Performance Bond and Labor and Material Payment Bond which shall remain in force to cover the three year guarantee period after the completion of construction.

A Pre-Bid Conference will be held at 11:00 AM on *January 19, 2005* in the Second Floor Office of Monsignor McClancy Memorial High School to review the existing conditions. This invitation is extended to Bidders only and their associated subcontractors. Participation is strongly advised. Bidders are to confirm their attendance by facsimile to the Architect's office. All questions regarding this Request for Bid Proposals must be submitted in writing and transmitted by facsimile to the Architect no later than *4:00 PM January 28, 2005*.

The Owner reserves the right to reject any and all bids or to waive any immaterial defects or informality in any bid should it be deemed to the best interest or discretion of the Owner to do so.

Any inquiries or questions relating to this Request for Bid Proposals should be directed, in writing, to Mr. Richard Piacentini and faxed to John Ciardullo Associates, 221 West 57 Street - 9th Floor, New York, N.Y. 10019, telephone (212) 245-0010, facsimile (212) 245-0020.

January 10, 2005

**Asbestos Removal - Monsignor McClancy Memorial High School
INFORMATION FOR BIDDERS**

1. FORM AND SUBMISSION OF BIDS

The Monsignor McClancy Memorial High School, hereinafter called the "Owner", invites Proposals in the annexed form. Proposals will be received until the time and date indicated on the attached Addendum in the General Office, at the Monsignor McClancy Memorial High School, East Elmhurst, New York. Each proposal must be sealed in an envelope which shall conspicuously endorsed with the Bidder name and the Title of this Contract on the front.

The proposal must be submitted upon the blank forms bound herewith and must give all information required. The proposal must be signed and the acknowledgment taken on the appropriate form following the Proposal.

Submission of the completed forms and required supplemental documents shall signify complete agreement and acceptance of the terms and conditions contained, described or required in the complete set of bid documents including both contract specification books, contract drawings and addenda by the bidder.

No effort is made to emphasize any particular provision of the Contract, but bidders must familiarize themselves with every provision and its effect.

The Owner, in accordance with Title VI of the Civil Rights Act of 1964, 78 Stat. 252, 42 U.S.C. 2000d to 2000d-4 and Title 49, Code of Federal Regulations, Department of Transportation, Subtitle A, Office of the Secretary, Part 21, Non discrimination in Federally-Assisted programs of the Department of Transportation issued pursuant to such Act, hereby notifies all bidders that it will affirmatively insure that any contract entered into pursuant to this advertisement, minority business enterprise will be afforded full opportunity to submit bids in response to this invitation and will not be discriminated against on the grounds of sex, race, color, or national origin in consideration for an award.

In addition, this Contract is subject to the requirements of Part 23 of Title 49 of the Code of Federal Regulations, Participation by Minority Business Enterprise in Department of Transportation programs, Part 60-4 of Title 41 of the Code of Federal Regulations, (Department of Labor) Construction Contractors, Affirmative Action Requirements.

Bids shall not contain any recapitulation of the work to be done. No oral, telegraphic or telephonic bids or modifications shall be considered.

Bids that are illegible or that contain omissions, alterations, additions or items not called for in the bidding documents may be rejected as not responsive. Any bid which modifies, limits, or restricts all or any part of such bid, other than as expressly provided for in the Contract Documents, may be rejected as not responsive.

The Owner may reject any bid not made, prepared and submitted in accordance with the provisions of the Contract Documents. The Owner also reserves the right to reject any and all bids or to waive any immaterial defects or informality in any bid should it be deemed in his best interest to do so.

Any bid may be withdrawn prior to the scheduled time for the opening of bids or authorized postponement thereof and any bid received after such time and date shall not be considered.

No Bidder may withdraw a bid for sixty (90) days after the actual date of the opening thereof.

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School

2. PAPERS ACCOMPANYING PROPOSALS

Each Proposal must be accompanied by the following papers, which, unless otherwise indicated, should be enclosed with the Proposal:

(1) Bid and Contract Agreement (with Acknowledgment)

The Form of Contract bound herewith, including the bidder's prices inserted in the clause thereof entitled "Contract Sums". The amount must be given both in figures and in writing, and in the case of discrepancy, the writing shall control. The Contractor shall complete the correct acknowledgment form for the entity or individual submitting the proposal.

If the bidder be a corporation: (a) a statement of the name and residence of its president or chief executive officer, which may be on the last page of the agreement.

If the bidder be a partnership, a statement of the name and residence of a partner, which may be on the last page of the agreement.

If the bidder be an individual, a statement of his residence, which may be on the last page of the agreement.

(2) Bid Bond and Surety Co. Certification

Either the Bid Bond bound herewith, duly executed by the bidder as a principal and by one or more surety companies duly authorized to carry on the business of surety ship in the state of New York, whose names appears on the current list of the Treasury Department of the United States as acceptable as sureties upon federal contracts; or in lieu of a Bid Bond:

A certified check payable to the order of the Owner, in the amount of 10 % of the Base Bid Amount appearing in the Bid and Contract Agreement, which check shall be separately delivered, prior to the time of bid opening, to the Monsignor McClancy Memorial High School, 71-06 31ST Avenue, East Elmhurst, New York 11370; Attention Brother Robert Connolly . The bidder will be given proper receipt for his check.

Bid bond shall stipulate and certify that the Surety will issue upon award of contract, a performance and material payment bond in the full amount of the contract price as stipulated therein.

(3) Bidder's Net Worth

A balance sheet showing the net worth of the bidder as of a date not earlier than forty-five days prior to the opening of the Proposals; or in lieu thereof, a balance sheet showing the net worth of the bidder not earlier than the end of a preceding fiscal year, together with a statement in writing, signed by a duly authorized representative of the bidder, that the present financial condition of the bidder is at least as good as that shown on the balance of the sheet submitted and that the net worth of the bidder is in excess of 10% of the current cumulative project value. The balance sheet or statement shall also note the name and address of the bidder's chief bank with the name of the representative handling the account.

***(4) Contractor's Qualifications**

Bidders current Contracts shall be certified and itemized noting contract date, contract amount, anticipated project completion date, project contact individual and the individual's telephone number. Provide all information and certifications indicated on the form provided.

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School

- a. Submit evidence that the bidder has acted as the General Contractor for a minimum of 7 years. The documentation shall include a list of projects on the attached form indicating Project Cost, Location, Architect of Record, Owner, Owner's contact person, phone number and Date of Substantial Completion on the attached Data Sheet.
- b. Submit evidence that the bidder has successfully completed at least 5 projects of comparable size and scope within the last 5 years. The documentation shall include a list of projects on the attached form indicating Project Cost, Location, Architect of Record, Owner, Owner's contact person, phone number and Date of Substantial Completion.
- c. The Bidder shall certify that there has been no unsatisfactory evaluation filed on any of the work performed by the bidder on any past or present projects by any client or agency.

***(5) Addenda**

One copy of each addendum, if any, issued during the bidding period shall be initialed and attached to the proposal, but any Proposal submitted without such addendum installed and attached will nevertheless be construed as though such addendum had been initialed and attached.

(6) Request for subcontractor approval form.

On the form provided, indicate all proposed subcontractors to be used on all phases of the work

(7) Subcontractor approval applications.

On the form provided, submit data for each proposed subcontractors to be used on any phase of the work.

***(8) Progress Schedule**

The bidder's progress schedule and analysis of the bid filled in on the form furnished herewith. The Contractor will be required to furnish a more detailed progress schedule and analysis of the bid at a later date in accordance with the requirements of the Clause entitled "Progress Schedule and Analysis of Bid".

***(9) Certificate of Non-Segregated Facilities**

A Certification of Non-Segregated Facilities filled in on the form provided herein.

***(10) Asbestos Acknowledgment**

***(11) DBE participation form**

Asbestos acknowledgment form provided, and attached hereto, shall be submitted by Contractor and all subcontractors performing Work of any type whatsoever, prior to commencement of that Work.

* Items noted with an asterisk (*) shall be submitted within 72 hours of a request for this information by the owner.

3. QUALIFICATION INFORMATION

Contractor and Subcontractors shall and will certify that they are Reputable Contractors in good standing and provide tradesmen licensed offer the services required by and contracted for under this Contract. The Owner may make any investigation as the Owner may deem necessary to determine the responsibility of any Bidder

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School

or to determine the ability of any Bidder to perform the Work. The Bidders shall furnish to the Owner all information and data required by the Owner, including complete financial data, within the time and in the form and manner required by the Owner. The Owner reserves the right to reject any bid if the information required by the Owner is not submitted as required or if the information submitted by or the investigation of any bidder fails to satisfy the Owner that the Bidder is responsible, or is able or qualified to carry out the obligations of the Contract or to complete the work as contemplated. The owner shall be the sole judge of the Qualifications of the contractor to perform the work in a manner consistent with contract requirements. Unqualified bids will be judged defective.

4. SUBCONTRACTOR INFORMATION REQUIREMENTS

- A. These provisions are in addition to the provisions of the General Conditions under which the Owner reserves the rights of approval and acceptance of the use of any subcontractors that the contractor proposes to use on the project.
- B. Each Bidder shall within 72 Hrs. of a request by owner a separately sealed envelope containing , completed Subcontractor Approval Application forms (form attached) for the proposed plumbing, VAC. and electrical subcontractors. In the same envelope which contains the Subcontractor Approval Application, the Bidder shall submit a completed Request for Subcontractor Approval Form (form attached) indicating the names of the above-proposed subcontractors and the estimated value of the work to be performed.

5. ACCEPTANCE OR REJECTION OF PROPOSAL

Within sixty (60) days after the opening of the proposals, the Owner will accept one of the Proposals, if it accepts any. The acceptance of a Proposal will be only by mailing to or delivering at the office designated in the Proposal, a notice in writing specifically indicating acceptance signed by an authorized representative on behalf of the Owner. No other act of the Owner, its agents, or employees shall constitute acceptance of a Proposal. Such notice will state whether or not the Owner elects to require the bidder to furnish a Performance and Payment Bond. Rejection of a proposal will be by only either (a) a notice specifically stating that the Proposal is rejected, signed by an authorized representative on behalf of the Owner and mailed to or delivered at the office designated in the Proposal or (b) omission of the Owner to accept a Proposal within 60 days after the opening of Proposals; and no other act of the Owner, its agents or employees shall constitute rejection of a Proposal, including any counter offer or other act of the Owner its agents or employees.

In the selection of the successful bid, the owner shall select the combined Base Bid and Item 1 Bid most advantageous to the owner.

The Owner reserves the unqualified right, in its sole and absolute discretion, to reject any bid proposal and/or to waive minor defects in any Proposal.

In the event that a successful bidder defaults upon the Contract by failing to furnish a satisfactory Performance and Payment Bond, or failing to adequately demonstrate through submitted documentation or subsequent investigation, adequate Qualifications of the bidder's capacity or experience to perform the work of the contract and the Owner terminates the Contract, the Owner reserves the option to subject the Proposal of the each of the next lowest bids in turn to the same tests and accept the next lowest bid within sixty (60) days after the opening of Proposals, in which case such acceptance shall have the same effect as to such other bidder as though he were the original lowest bidder.

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School

6. RETURN OF CERTIFIED CHECKS

Within ten (10) days after the opening of the Proposals, the Owner will return all certified checks deposited by the bidders, except those deposited by three bidders to be selected by the Owner, which will be returned within three (3) days after the satisfactory Performance and Payment Bond is furnished to the Owner; or if all Proposals are rejected, not later than three (3) days after such rejection. The return of a bidder's check shall not however, be deemed to be a rejection of his Proposal.

7. INSPECTION OF SITE AND CONTRACT DOCUMENTS

Prospective bidders shall examine the contract documents carefully, before bidding. A pre-bid walk-through is scheduled for the date included in the cover letter attached at Monsignor McClancy Memorial High School, 71-06 31st Avenue East Elmhurst, New York 11370 The bidder shall, at the time of bid opening, be presumed to have read and to be familiar with all the Contract Documents and to have inspected the site and be familiar with field conditions.

For site visits other than the pre-bid walk-through each bidder or his authorized representative must make proper arrangements with the Architect before inspecting the construction site. (Richard Piacentini of John Ciardullo Associates, 221 West 57 Street - 9th Floor, New York, N.Y. 10019, telephone 212/245-0010, facsimile 212/245-0020.

8. QUESTIONS BY BIDDERS

Prospective Bidders shall examine the Contract Documents carefully and, before bidding, shall make a written request to the MMMHS's Representative for clarification of any ambiguity, or correction of any inconsistency or error therein. Every request for such clarification must be received at least ten (10) days prior to the date fixed for the opening of the bid. Such clarifications or corrections as well as any additional Contract Provisions as the Owner shall decide to include shall be issued in writing by the Owner or the Owner's representative as an addendum, which shall be sent by certified or registered mail or by telegraph or delivered to each prospective Bidder recorded as having received a copy of the Contract Documents from the Architect's office, and shall be available at the places where the Contract Documents are available for inspection by prospective bidders. Upon such mailing or delivery and making available for inspection, such addendum shall become a part of the Contract Documents and shall be binding on all bidders whether or not the Bidder receives or acknowledges the actual notice of such addendum. The requirements contained in all the contract documents shall apply to all addenda.

Questions may be addressed to Mr. Richard Piacentini of John Ciardullo Associates, (212) 245-0010). Neither he nor any employee of the Architect or owner is authorized to give interpretations of any portion of the Contract. Accordingly, nothing contained herein and no representation, statement or promise, oral or in writing, of the Owner, its representatives, agents or employees shall impair or limit the effect of the warranties and guarantees of the bidder. The provisions of this clause shall apply to questions addressed by prospective bidders both before and after their receipt of Contract Documents.

9. NON-COLLUSIVE BIDDING CERTIFICATION

By bidding on this Contract, each bidder and each person signing on behalf of any bidder certifies, and in case of a joint bid each party thereto certifies as to its own organization that: (a) the prices in his bid have been arrived at independently without collusion, consultation, communication or agreement, for the purpose of restricting completion, as to any matter relating to such prices with any other bidder or with any competitor; (b) the prices quoted in his bid have not been and will not be knowingly disclosed, directly or indirectly by the bidder prior to the official opening of such bid to any other bidder or to any competitor; (c) no attempt has been

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School

made and none will be made by the bidder to induce any other person, partnership or corporation to submit or not to submit a bid for the purpose of restricting competition.

The foregoing certification, if made by a corporate bidder, shall be deemed to have been authorized by the Board of Directors of the bidder, and such authorization shall be deemed to include the signing and submission of the certificate as to non-collusion and Code of Ethics as the act and deed of the corporation.

In any case where the bidder cannot make the foregoing certification, the bidder shall so state and shall furnish with the bid a signed statement which sets forth in detail the reasons therefor.

10. CERTIFICATION OF NO INDICTMENT, CONVICTION, SUSPENSION, DEBARMENT OR TERMINATION

By bidding on this Contract, each bidder and each person signing on behalf of any bidder certifies, and in the case of a joint bid each party thereto certifies as to its own organization, that the bidder has not (a) been indicted or convicted in any jurisdiction; (b) been suspended, debarred or otherwise disqualified from entering into contracts with any governmental agency; and (c) had a contract terminated by any governmental agency for breach of contract or for any cause related directly or indirectly to an indictment or conviction.

In any case where the bidder cannot make the foregoing certification, the bidder shall so state and shall furnish with the signed bid a signed statement which sets forth in detail the reasons therefore.

11. F.A.A. REQUIREMENTS

The contractor shall include the terms and conditions of this section in every subcontract entered for performance of contract work on this project. The Attachments titled "FAA REQUIREMENTS" and "49 CFR PART 23" apply to all contract and subcontract work on this project and are furnished in their entirety for the purpose of inclusion in all subcontracts.

A. D.B.E. PROGRAM

This Contract is subject to the United States Department of Transportation regulations on Disadvantaged Business Enterprise ("DBE'S") contained in Part 23 of Title 49 of the Code of Federal Regulations. The following goal for D.B.E. participation has been set for this Contract:

Seventeen percent (17%) of the value of the Contract for firms owned and controlled by socially and economically disadvantaged individuals.¹

By bidding on this Contract, the bidder assures that it will meet the foregoing goal. If the bidder determines that he cannot make this assurance, he may nevertheless submit a bid but in such event he shall submit with the bid a separate writing which contains a statement of the percentage of DBE participation he anticipates.

In order to facilitate identifying DBE's the Port Authority of New York and New Jersey has a list of certified firms which is available on request.

Within Three (3) working days of the opening of bids, the bidder shall submit to the Owner the names and

¹ Individuals who are rebuttably presumed to be socially and economically disadvantaged include women, Blacks, Hispanics, Native Americans, Asian-Pacific Americans, and Asian-Indian Americans. A bidder may meet the DBE goal by using any combination of disadvantaged businesses.

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School

addresses of DBE firms, a description of the work each is to perform, and the dollar value of each proposed DBE subcontract. The bidder shall also submit the completed form labeled "Schedule A" and "Schedule B" (if appropriate) for any firm he proposes as a DBE.

If a bidder proposes to use the services of a subcontractor who has not been previously certified, then it must submit the name of the proposed DBE and the other information required by the Office, to the Port Authority's Office of Business and Job Opportunity for certification.

In the event that the bidder for this solicitation qualifies as a DBE, the contract goal shall be deemed to have been met.

A bidder who fails to meet the DBE goal for this Contract and fails to demonstrate to the Board that the Bidder has made good faith efforts to meet same shall not be eligible to be awarded the Contract. The following are illustrative of good faith efforts:

- (i) Attendance at a pre-bid meeting, if any, scheduled to inform DBE's of subcontracting opportunities under a solicitation;
- (ii) Advertisement in a general circulation media, trade association publications and minority focused media for at least 20 days before bids or proposals are due. If 20 days are not available, publication for a shorter reasonable time is acceptable;
- (iii) Written notification to DBE's that their interest in the Contract is solicited;
- (iv) Efforts made to select portions of the work proposed to be performed by DBE's in order to increase the likelihood of achieving the stated goal;
- (v) Efforts to negotiate with DBE's for specific sub-bids including at a minimum;
 - (a) The names, addresses and telephone numbers of DBE's that were contacted;
 - (b) A description of the information provided to DBE's regarding the plans and specifications for the portions of the work to be performed; and
 - (c) A statement of why additional agreements with DBE's were not reached;
- (vi) Concerning each DBE, the bidder contacted but rejected as unqualified, and the reason for the rejection;
- (vii) Efforts made to assist the DBE's contacted that needed assistance in obtaining bonding or insurance required by the bidder or Owner.

B. STANDARD EEO SPECIFICATION

The following constitutes Standard Federal Equal Opportunity Construction Contract Specifications (Executive Order 11246, as amended). These specifications should be included in all AIP assisted construction contracts or subcontracts (including the Solicitations for Bids) in excess of \$10,000.00 in geographical areas designated by the Director.

Standard Federal Equal Opportunity Construction Contract Specifications (Executive Order 11246, as amended).

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School

A.

As used in these specifications:

- (1) "Covered Area" means the geographical area described in the solicitation from which this contract resulted;
- (2) "Director" means Director, office of Federal Contract Compliance Programs (OFCCP), U.S. Department of Labor, or any person to whom the Director delegates authority;
- (3) "Employer identification number" means the Federal Social Security Number used on the Employers's Quarterly Federal Tax Return, U.S. Treasury Department Form 941;
- (4) "Minority" includes:
 - (a) Black (all persons having origins in any of the Black African racial groups not of Hispanic Origin);
 - (b) Hispanic (all persons of Mexican, Puerto Rican, Cuban, Central or South America, or other Spanish culture regardless of race);
 - (c) Asian or Pacific Islander (all persons having origins in any of the original peoples of the Far East, Southeast, Asia, the Indian Subcontinent, or the Pacific Islands); and
 - (d) American Indian or Alaskan native (all persons having origins in any of the original peoples of North America and maintaining identifiable tribal affiliations through membership and participation of community identification.

B. Whenever the contractor, or any subcontractor at any tier, subcontracts a portion of the work involving any construction trade, it shall physically include in each subcontract in excess of \$10,000 the provisions of these specifications and the notice which contains the applicable goals for minority and the female participation which is set forth in the solicitations from which this contract resulted.

C. If the contractor is participating (pursuant to 41 CFR 60-4.5) in the Hometown Plan approved by the U.S. Department of Labor in the covered area either individually or through association, in its affirmative action obligations on all work in the plan area (including goals and timetables) shall be in accordance with the plan for those trades which have unions participating in the plan. Contractors must be able to demonstrate their participation in the compliance with the provisions of any such Hometown Plan. Each contractor or subcontractor participating in an approved plan is individually required to comply with its obligations under the EEO clause and to make a good faith effort to achieve each goal under the plan in each trade in which it has employees. The overall good faith performance by other contractors or subcontractors toward a goal in an approved plan does not excuse any covered contractor's or subcontractor's failure to take good faith efforts to achieve the plan goals and timetables.

D. the Contractor shall implement the specific affirmative action standards provided in paragraphs G (1) through (16) to these specifications. The goal set forth in the solicitation

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School

from which this contract resulted are expressed as percentages of the total hours of employment and training of minority and female utilizations that the contractor should reasonably be able to achieve in each construction trade in which it has employees in the covered area. The Contractor is expected to make substantially uniform progress towards its goals in each craft during the period specified.

- E. Neither the provisions of any collective bargaining agreement nor the failure by a union with whom the contractor has a collective bargaining agreement to refer either minorities or women shall excuse the contractor's obligations under these specifications, Executive Order 11246, as amended, or the regulations promulgated pursuant thereto.
- F. In order for the non-working training hours of apprentices and trainees to be counted in meeting the goals, such apprentices and trainees must be employed by the contractor must have made a commitment to employ the apprentices and trainees at the completion of their training, subject to the availability of employment opportunities. Trainees must be trained pursuant to training programs approved by the U.S. Department of Labor.
- G. The Contractor shall take specific affirmative actions to ensure EEO. The evaluation of the contractor's compliance with these specifications shall be based upon its effort to achieve maximum results from its actions. The contractor shall document these efforts fully and shall implement affirmative action steps at least as extensive as the following:
 - (1) Ensure and maintain a working environment free of harassment, intimidation and coercion at all sites, and in all facilities at which the contractor's employees are assigned to work. The Contractor, where possible, will assign two or more women to each construction project. The contractor shall specifically ensure that all foremen, superintendents, and other on site supervisory personnel are aware of and carry out the contractor's obligation to maintain such a working environment, with specific attention to minority or female individuals working at such sites or in such facilities.
 - (2) Establish and maintain a current list of minority and female recruitment sources, provide written notification to minority and female recruitment sources and to community organizations when the contractor or its unions have employment opportunities available, and maintain a record of the organization's responses.
 - (3) Maintain a current file of the names, addresses, and telephone numbers of each minority and female off the street applicant and minority or female referral from a union, a recruitment source, or community organization and of what action was taken with respect to each such individual. If such individual was sent to the union hiring hall for referral and was not referred back to the contractor by the union, or, if referred, not employed by the contractor, this shall be documented in the file with the reason, therefore, along with whatever additional actions the contractor may have taken.
 - (4) Provide immediate written notification to the Director when the union or unions with which the contractor has a collective bargaining agreement has not referred to the contractor a minority person or woman sent by the contractor, or when the contractor has other information that the union referral process has impeded the contractor's efforts to meet its obligations.

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School

- (5) Develop on-the-job training opportunities and/or participate in training programs for the area which expressly include minorities and women, including upgrading programs and apprenticeship and trainee programs relevant to the contractor's employment needs, especially those programs funded or approved by the Department of Labor. The Contractor shall provide notice of these programs to the sources compiled under G(2) above.
- (6) Disseminate the contractor's EEO policy by providing notice of the policy to unions and training programs and requesting their cooperation in assisting the contractor in meeting its EEO obligations; by including it in any policy manual and collective bargaining agreement; by publicizing it in the company newspaper, annual report, etc.; by specific review of the policy with all management personnel and with all minority and female employees at least once a year; and by posting the company EEO policy on bulletin boards accessible to all employees at each location where construction work is performed.
- (7) Review, at least annually, the company's EEO policy and affirmative action obligations under these specifications with all employees having any responsibility for hiring, assignment lay-off, termination, or other employment decisions including specific review of these items with on-site supervisory personnel such as superintendents, general foreman, etc. prior to the initiation of construction work at any job sites. A written record shall be made and maintained identifying the time and place of these meetings, persons attending, subject matter discussed, and disposition of the subject matter.
- (8) Disseminate the contractor's EEO policy externally by including it in any advertising in the news media, specifically including minority and female news media, and providing written notification to and the contractor's EEO policy with other contractors and subcontractors with whom the contractor does or anticipates doing business.
- (9) Direct its recruitment efforts, both oral and written, to minority, female, and community organizations, schools with minority and female students; and to minority and female recruitment and training organizations serving the contractor's recruitment area and employment needs. No later than one month prior to the date for the acceptance of applications for apprenticeship or other training by any recruitment source, the contractor shall send written notification to organizations, such as the above, describing the openings, screening procedures, and tests to be used in the selection process.
- (10) Encourage present minority and female employees to recruit other minority persons and women and, where reasonable, provide after school, summer, and vacation employment to minority and female youth both on site and in other areas of the contractor's workforce.
- (11) Validate all tests and other selection requirements where there is an obligation to do so under 41 CFR Part 60-3.

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School

- (12) Conduct, at least annually, an inventory and evaluation, at least of all minority and female personnel, for promotional opportunities and encourage these employees to seek or to prepare for, through appropriate training, etc, such opportunities.
 - (13) Ensure the seniority practices, job classifications, work assignments, and other personnel practices do not have a discriminatory effect by continually monitoring all personnel and employment related activities to ensure that the EEO policy and the contractors obligations under these specifications are being carried out.
 - (14) Ensure that all facilities and company activities are nonsegregated except that separate or single-user access toilet and necessary changing facilities shall be provided to assure privacy between the sexes.
 - (15) Document and maintain a record of all solicitations of offers for subcontracts from minority and female construction contractors and suppliers, including circulation of solicitations to minority and female contractor associations and other business associations.
 - (16) Conduct a review, at least annually, of all supervisor's adherence to and performance under the contractor's EEO policies and affirmative action obligations.
- H. Contractors are encouraged to participate in voluntary associations which assist in fulfilling one or more of their affirmative action obligations under G(1) through G(16). The efforts of a contractor association, joint contractor-union, contractor-community, or other similar groups of which the contractor is a member and participant, may be asserted as fulfilling any one or more of its obligations under G(1) through G(16) of these specifications provided that the contractor actively participates in the group, makes every effort to assure that the group has a positive impact on the employment of minorities and women in the industry, ensures that the concrete benefits of the program are reflected in the contractor's minority and female work force participation, makes a good faith effort to meet its individual goals and timetables, and can provide access to documentation which demonstrates the effectiveness of actions taken on behalf of the contractor. The obligation to comply, however is the contractor's and failure of such a group to fulfill an obligation shall not be a defense for the contractor's non-compliance.
- I. A single goal for minorities and a separate goal for women have been established. The contractor, however, is required to provide EEO and to make affirmative action for all minority groups, both male and female, and all women, both minority and non-minority. Consequently, the contractor may be in violation of the Executive Order if a particular group is employed in a substantially disparate manner (for example, even though the contractor has achieved its goals for women generally, the contractor may be in violation of the Executive Order if a specific minority group of women is under utilized).
- J. The contractor shall not use the goals and timetables or affirmative action standards to discriminate against any person because of race, color, religion, sex or national origin.
- K. The contractor shall not enter into any subcontract with any person or firm debarred from government contracts pursuant to Executive Order 11246, as amended.
- L. The contractor shall carry out such sanctions and penalties for violation of these specifications and of the Equal Opportunity Clause, including suspension, termination and cancellation of existing subcontracts as may be imposed or ordered pursuant to Executive

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School Order 11246, as amended, and its implementing regulations, by the OFCCP. Any contractor who fails to carry out such sanctions and penalties shall be in violation of these specifications and Executive Order 11246, as amended.

- M. The contractor shall designate a responsible official to monitor all employment related activity to ensure that the company EEO policy is being carried out, to submit reports relating to the provisions hereof as may be required by the Government, and to keep records. Records shall at least include for each employee, the name, address, telephone number, construction grade, union affiliation if any, employee identification number when assigned, social security number, race, sex status (e.g., mechanic, apprentice, trainee, helper, or laborer), dates of changes in status (e.g. worked per week in the indicated trade), rate of pay, and locations the work was performed. Records shall be maintained in an easily understandable and retrievable form; however, to the degree that the existing records satisfy this requirement, contractors shall not be required to maintain separate records.
- N. Nothing herein provided shall be construed as a limitation upon the application of other laws which establish different standards of compliance or upon the application of requirements for the hiring of local or other area residents (e.g., those under the Public Works Employment Act of 1977 and the Community Development Block Grant Program).

REQUIRED NOTICE FOR CONTRACTS FOR 50 OR MORE EMPLOYEES AND A CONTRACT OF \$50,000 OR MORE

The prime contractor and each of his subcontractors who have 50 or more employees and a contract of \$50,000 or more shall, within 120 days from contract commencement, be required to develop and maintain a written affirmative action compliance program for each of its establishments.

In addition, the following will be required:

- A. Compliance Reports. Within 30 days after award of this contract, the contractor shall file a compliance report (Standard Form (SF) 100) with the Joint Reporting Committee if:
- (1) The contractor has not submitted a complete compliance report within 12 months preceding the date of award, and
 - (2) The contractor is within definition of "employer" in paragraph 2e (3) of the instructions included in SF 100.
- B. The contractor shall require the subcontractor on any first tier subcontracts, irrespective of dollar amount, to file SF 100 within 30 days after award of the subcontract if the above two conditions apply. SF 100 is normally furnished contractors annually, based upon a mailing list currently maintained by the Joint Reporting Committee. In the event a contractor has not received the form, he may obtain it by writing to the following address:
- Joint Reporting Committee
1800 G Street
Washington, D.C. 20506
- C. The contractor shall after commencement of contract work submit the Monthly Manpower Utilization Report (SF 257) to the OFCCP regional office, on or before the fifth working day of each month, reporting the activity of the previous month. If no work was accomplished, the form should be submitted stating that fact. A form is to be submitted for the last month of activity stating that the work has been completed.

SPECIAL PROVISIONS, NOTICES AND CERTIFICATIONS CONCERNING NONSEGREGATED FACILITIES

SPECIAL PROVISIONS RELATING TO AIP ASSISTED CONSTRUCTION PROJECTS IN EXCESS OF \$10,000

The sponsor hereby agrees that it will incorporate or cause to be incorporated into any contract for construction work, or modification thereof, as defined in the regulations of the Secretary of Labor at 41 CFR Chapter 60, which is paid for in whole or part with funds obtained from the Federal Government or borrowed on the credit of the Federal Government pursuant to a grant contract, loan insurance, or guarantee, or undertaken pursuant to any Federal program involving such grant, contract, loan insurance, or guarantee the following equal opportunity clause.

During the performance of this contract, the contractor agrees as follows:

- A. The contractor will not discriminate against any employee or applicant for employment because of race, color, religion, sex or national origin. The contractor will take affirmative action to ensure that applicants are employed, and the employees are treated during employment without regard to their race, color, sex or national origin. Such action shall include, but not be limited to the following: Employment, upgrading, demotion, or transfer; recruitment or recruitment advertising, layoff or termination, rate of pay or other forms of compensations; and selection for training, including apprenticeship. The contractor agrees to post in conspicuous places, available to employees and applicants for employment, notices (to be provided) setting forth the provisions of this non-discrimination clause.
- B. The contractor will, in all solicitations or advertisements for employees placed by or on behalf of the contractor, state that all qualified applicants will receive consideration for employment without regard to race, color, religion, sex or national origin.
- C. The contractor will send to each labor union or representative of workers with which he has a collective bargaining agreement or other contract or understanding, a notice (to be provided) advising the said labor union or worker's representatives of the contractor's commitments under this section, and shall post copies of the notice in conspicuous places available to employees and applicants for employment.
- D. The contractor will comply with all provisions of Executive Order 11246, as amended, of 24 September 1965, and of the rules, regulations, and relevant orders of the Secretary of Labor.
- E. The contractor will furnish all information and reports required by Executive Order 11246, as amended, of 24 September 1965, and by rules, regulations, and orders of the Secretary of Labor, or pursuant thereto, and will permit access to his books, records, and accounts by the Secretary of Labor for purposes of investigation to ascertain compliance with such rule, regulations, and orders.
- F. In the event of the contractor's noncompliance with the nondiscrimination clauses of this contract or with any of the said rules, regulations, or orders, this contract may be canceled, terminated, or suspended in whole or in part and the contractor may be declared ineligible for further government contracts in accordance with procedures authorized in Executive Order 11246, as amended, of 24 September 1965, and such other sanctions may be imposed as remedies invoked as provided in Executive Order 11246, as amended, of 24 September 1965, or by rule, regulation, or order of the Secretary of Labor, or as otherwise provided by law.
- G. The Contractor will include the portion of the sentence immediately preceding paragraph A and the provisions of paragraphs A through G in every subcontract or purchase order unless exempted by rules, regulations or orders of the Secretary of Labor issued pursuant to section 204 of Executive Order 11246, as amended, of 24 September 1965, so that such provisions will be binding upon each subcontractor or vendor. the contractor will take such action with respect to any subcontract or purchase order as the administering agency may direct as a means of enforcing such provisions, including sanctions for noncompliance. Provided, however that in the

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School

event a contractor becomes involved in, or is threatened with, litigation with a subcontractor or vendor as a result of such direction by the administering agency, the contractor may request the United States to enter into such litigation to protect the interests of the United States.

CERTIFICATION OF BIDDER REGARDING EQUAL EMPLOYMENT OPPORTUNITY (FOR CONSTRUCTION CONTRACTS EXCEEDING \$10,000).

BIDDERS NAME

ADDRESS

INTERNAL REVENUE SERVICE EMPLOYER IDENTIFICATION NUMBER
NONSEGREGATED FACILITIES

NOTICE TO PROSPECTIVE FEDERALLY-ASSISTED CONSTRUCTION CONTRACTORS:

- a. A certification of Nonsegregated Facilities must be submitted prior to the award of a Federally-assisted construction contract exceeding \$10,000 which is not exempt from the provisions of the equal opportunity clause.
- b. Contractors receiving Federally-assisted construction contract awards exceeding \$10,000 which are not exempt from the provisions of the equal opportunity clause will be required to provide for the forwarding of the notice to prospective subcontractors for supplies and construction contracts where the subcontracts exceed \$10,000 and are not exempt from the provisions of the equal opportunity clause. NOTE: The penalty for making false statements in offers is prescribed in 18 U.S.C. 1001.

CERTIFICATION OF NONSEGREGATED FACILITIES

The Federally-assisted construction contractor certifies that he does not maintain or provide for his employees any *segregated facilities at any of his establishments, and that he does not permit his employees to perform their services at any location, under his control, where segregated facilities are maintained.* The Federally-assisted construction contractor certifies further that he will not maintain or provide for his employees any segregated facilities at any of his establishments, and that he will not allow his employees to perform their services at any location, under his control, where segregated facilities are maintained. The Federally-assisted construction contractor agrees that a breach of his certification is a violation of the equal opportunity clause in his contract. As used in this certification, the term "segregated facilities" means any waiting rooms, work areas, restrooms, and washrooms, restaurants and other eating areas, time clocks, locker rooms and any other storage or dressing areas, parking lots, drinking fountains, recreation or entertainment areas, transportation, and housing facilities provided for employees which are segregated by explicit directive or are in fact segregated on the basis of race, color, religion, sex, or national origin, because of habit, local custom, or any other reason. The Federally assisted construction contractor agrees that (except where he has obtained identical certifications from proposed subcontractors for specific time periods) he will obtain identical certifications from proposed subcontractors prior to the award of subcontracts exceeding \$10,000 which are not exempt from the provisions of the equal opportunity clause, and that he will retain such certifications in his files.

NOTICE TO PROSPECTIVE CONTRACTORS OF REQUIREMENT FOR CERTIFICATION FOR NON SEGREGATED FACILITIES

A Certification of Nonsegregated Facilities must be submitted prior to the award of a contract or subcontract exceeding

NOTE: The penalty for making false statements in offers is prescribed in 18 U.S.C. 1001.

NOTICE TO PROSPECTIVE SUBCONTRACTORS OF REQUIREMENTS FOR CERTIFICATION ON NONSEGREGATED FACILITIES

- a. A Certification of Nonsegregated Facilities must be submitted prior to the award of a contract or subcontract exceeding \$10,000 which is not exempt from the provisions of the equal opportunity clause.
- b. Contractors receiving Federally-assisted construction contract awards exceeding \$10,000 which are not exempt from the provisions of the equal opportunity clause will be required to provide for the forwarding of the notice to prospective subcontractors for supplies and construction contracts where the subcontracts exceed \$10,000 and are not exempt from the provisions of the equal opportunity clause. NOTE: The penalty for making false statements in offers is prescribed in 18 U.S.C. 1001.

C. A.I.P. REQUIREMENTS

REQUIRED LANGUAGE IN AIP CONSTRUCTION CONTRACTS, WAGE, LABOR, EEO AND SAFETY REQUIREMENTS

SECTION A. LABOR, EQUAL EMPLOYMENT OPPORTUNITY AND SAFETY REQUIREMENTS FOR ALL CONSTRUCTION CONTRACTS AND SUBCONTRACTS

- A-1 AIP PROJECT - The work in this contract is included in AIP Project No. NY-LGA 80-02 and NY-LGA 98-03, which is being undertaken and accomplished by The Port Authority of New York and New Jersey and the United States, under the Airport and Airway Improvement Act of 1982 (AAIA)(P.L. 97-248, 49 U.S.C. 2201 et seq.) and Part 152 of the Federal Aviation Regulations (FAR) 14 CFR part 152, pursuant to which the United States has agreed to pay a certain percentage of the costs of the projects that are determined to be allowable project costs under that Act. The United States is not a party to this contract and no reference in this contract to the FAA or any representative thereof, or to any rights granted to the FAA or any representative thereof, or the United States, by the contract, makes the United States a party to this contract.
- A-2 CONSENT TO ASSIGNMENT - The Contractor shall obtain prior written consent of the and the Monsignor McClancy Memorial High School to any proposed assignment of any interest in or part of this contract.
- A-3 VETERAN'S PREFERENCE - In the employment of labor (except in executive, administrative, and supervisory positions), preference shall be given to veterans of the Vietnam era and disabled veterans. However, this preference shall apply only where the individuals are available and qualified to perform the work to which the employment relates.

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School

- A-4 FAA INSPECTION AND REVIEW - The contractor shall allow any authorized representative of the FAA to inspect and review any work or materials used in the performance of this contract.
- A-5 HEALTH AND SAFETY REQUIREMENTS - It is a condition of this Contract, and shall be made a condition of each subcontract entered into pursuant to this Contract, that the Contractor and any subcontractor shall not require any laborer or mechanic employed in the performance of the Contract to work in surroundings or under working conditions which are unsanitary, hazardous, or dangerous to his health or safety, as determined under Construction Safety and Health Standards Title 29 CFR Part 1926 and other occupational and health standards (29 CFR Part 1910) promulgated by the United States Secretary of Labor, in accordance with Section 107 of the Contract Work Hours and Safety Standards Act (CWHSSA).
- A-6 CONTRACT TERMINATION - A breach of paragraph A-4 may be grounds for termination of the contract.

SECTION B. SECRETARY OF LABOR REQUIREMENTS

B-1 MINIMUM WAGES

1. All laborers and mechanics employed or working upon the site of the work will be paid unconditionally and not less often than once a week, and without subsequent deduction or rebate of any account (except such payroll deductions as are permitted by the Secretary of Labor under the Copeland Act (29 CFR Part 3), the full amount of wages and bona fide fringe benefits (or cash equivalents therefore) due at time of payment computed at rates not less than those contained in the wage determination of the Secretary of Labor which is attached hereto and made a part hereof, regardless of any contractual relationship which may be alleged to exist between the contractor and such laborers and mechanics. Contributions made or costs reasonably anticipated for bona fide fringe benefits under section 1 (b) (2) of the Davis-Bacon Act on behalf of laborers or mechanics are considered wages paid to laborers and mechanics, subject to the provisions of subparagraph a. (4) below; also, regular contributions made or costs incurred for more than a weekly period (but not less often than quarterly) under plans, funds, or programs which cover the particular weekly period. Such laborers and mechanics shall be paid the appropriate wage rate and fringe benefits on the wage determination for the classification of work actually performed, without regard to skill, except as provided in 29 CFR Part 5.5 (a)(4). Laborers or mechanics performing work in more than one classification may be compensated at the rate specified for each classification for the time actually worked therein: Provided, that the employer's payroll records accurately set forth the time spent in each classification in which work is performed. The wage determination (including any additional classification and wage rates conformed under a. (2) of the section) and the Davis-Bacon poster (WH-1321) shall be posted at all times by the contractor and its subcontractors at the site of the work in a prominent and accessible place where it can easily be seen by the workers.
2. (a) The contracting officer shall require that any class of laborers or mechanics which is not listed in the wage determination and which is to be employed under the contract shall be classified in conformance with the wage determination. The contracting officer shall approve an additional classification and wage rate and fringe benefits therefore only when the following criteria have been met:
 1. The work to be performed by the classification requested is not performed by a classification in the wage determination; and

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School

- 2 The classification is utilized in the area by the construction industry; and
- 3 The proposed wage rate, including any bona fide fringe benefits, bears a reasonable relationship to the wage rates contained in the wage determination.

(b) If the contractor and the laborers or mechanics to be employed in the classification (if known), or their representatives, and the contracting officer agree on the classification and wage rate (including the amount designated for fringe benefits where appropriate), a report of the action taken shall be sent by the contracting officer to the Administrator of the Wage and Hour Division, Employment Standards Administration, US Department of Labor, Washington, DC 20210. The Administrator or an authorized representative, will approve, modify, or disapprove every additional classification action within 30 days of receipt and so advise the contracting officer or will notify the contracting officer within the 30-day period that additional time is necessary.

(c) In the event the contractor, the laborers or mechanics to be employed in the classification or their representatives and the contracting officer do not agree on the proposed classification and wage rate (including the amount designated for fringe benefits where appropriate), the contracting officer shall refer the questions, including the view of all interested parties and the recommendation of the contracting officer, to the Administrator for determination. The Administrator or an authorized representative, will issue a determination within 30 days of receipt and so advise the contracting officer or will notify the contracting officer within the 30 day period that additional time is necessary.

(d) The wage rate (including fringe benefits where appropriate) determined pursuant to subparagraphs (2)(b) or (c) of this paragraph, shall be paid to all workers performing work in the classification under the this contract from the first day on which is performed in the classification.

3. Whenever the minimum wage rate prescribed in the contract for a class of laborers or mechanics includes a fringe benefit which is not expressed as an hourly wage rate, the contractor shall either pay the benefit as stated in the wage determination or shall pay another bona fide fringe benefit or an hourly cash equivalent thereof.
4. If the contractor does not make payments to a trustee or other third person, the contractor may consider as part of the wages of any laborer or mechanic the amount of any costs reasonably anticipated in providing bona fide fringe benefits under a plan or program, provided, that the Secretary of Labor has found, upon the written request of the contractor, that the applicable standards of the Davis-Bacon Act have been met. The Secretary of Labor may require the contractor to set aside in a separate account assets for the meeting of obligations under the plan or program.

B-2 WITHHOLDING - The Federal Aviation Administration shall upon its own action or upon written request of any authorized representative of Department of Labor withhold or cause to be withheld from the contractor under this contract or any other Federal contract with the same prime contractor, or any other Federally-assisted contract subject to Davis-Bacon prevailing wage requirements, which is held by the same prime contractor, so much of the accrued payments or advances as may be considered necessary to pay laborers and mechanics, including apprentices, trainees, and helpers, employed by the contractor or any subcontractor the full amount of wages required by the contract. In the event of failure to pay any laborer or mechanic, including any apprentice, trainee, or helper, employed or working on the site of work, all or part of the wages required by the contract, the Federal Aviation

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School

Administration may, after written notice to the contractor, sponsor, applicant, or owner, take such action as may be necessary to cause the suspension of any further payment, advance, or guarantee of funds until such violations have ceased.

B-3 PAYROLLS AND BASIC RECORDS

1. *Payrolls and basic records relating thereto will be maintained by the contractor during the course of the work and preserved for a period of three years thereafter for all laborers and mechanics working at the site of the work. Such records will contain the name, address, and social security number of each such worker, his or her correct classification, hourly rates of wages paid (including rates of contributions or costs anticipated for bona fide fringe benefits or cash equivalents thereof of the types described in Section 1 (b)(2)(B) of the Davis-Bacon Act), daily and weekly number of hours worked, deductions made and actual wages paid. Whenever the Secretary of Labor has found, under 29 CFR 5.5 (a)(1) (iv) that the wages of any laborer or mechanic include the amount of any costs reasonably anticipated providing benefits under a plan or program described in Section 1 (b) (2) (B) of the Davis-Bacon Act, the contractor shall maintain records which show that the commitment to provide such benefits is enforceable, that the plan or program is financially responsible, and that the plan or program has been communicated in writing to the laborers or mechanics affected, and records which show the costs anticipated or the actual costs incurred in providing such benefits. Contractors employing apprentices or trainees under approved programs shall maintain written evidence of the registration of apprenticeship programs and certification or trainee programs, the registration of the apprentices and trainees, and the rates and wage rates prescribed in the applicable programs.*

2. (a) The contractor shall submit weekly for each week in which any contract work is performed, a copy of all payrolls to the Sponsors. The payrolls submitted shall set out accurately and completely all of the information required to be maintained under paragraph 5.5 (a)(3) (I) of Regulations, 29 CFR Part 5. This information may be submitted in any form desired. Optional Form WH-347 is available for this purpose and may be purchased from the Superintendent of Documents (Federal Stock Number 029-005-00014-1), US Government Printing Office, Washington, DC 20402. The prime contractor is responsible for the submission of copies of payrolls by all subcontractors.

(b) Each payroll submitted shall be accompanied by a "Statement of Compliance", signed by the contractor or subcontractor or his or her agent who pays or supervises the payment of the persons employed under the contract and shall certify the following:

- 1 That the payroll for the payroll period contains the information required to be maintained under paragraph 5.5 (a)(3) (I) of Regulations, 29 CFR Part 5 and that such information is correct and complete;
- 2 That each laborer and mechanic (including each helper, apprentice and trainee) employed on the contract during the payroll period has been paid the full weekly wages earned, without rebate, either directly or indirectly, and that not deductions have been made either directly or indirectly from the full wages earned, other than permissible deductions as set forth in Regulations 29 CFR Part 3;
- 3 That each laborer or mechanic has been paid not less than the applicable wage rates and fringe benefits or cash equivalents for the classification of

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School
work performed, as specified in the applicable wage determination.

(c) The weekly submission of a properly executed certification set forth on the reverse side of Optional Form WH-347 shall satisfy the requirement for submission on the "Statement of Compliance" required by paragraph B-3 (2)(b) of this section.

(d) The falsification of any of the above certifications may subject the contractor or subcontractor to civil or criminal prosecution under Section 1001 of Title 18 and Section 231 of Title 31 of the United States Code.

3. The contractor and subcontractor shall make the records required under paragraph B-3 (2) (b) of this section available for inspection, copying or transcription by authorized representatives of the Federal Aviation Administration or the Department of Labor, and shall permit such representatives to interview employees during working hours on the job. If the contractor or subcontractor fails to submit the required records or to make them available, the Federal agency may, after written notice to the contractor, sponsor, applicant, or any further payment, advance, or guarantee of funds. Furthermore, failure to submit the required records upon request or to make such records available may be grounds for debarment action pursuant to 29 CFR 5.12.

B-4 APPRENTICES AND TRAINEES

1. Apprentices - Apprentices will be permitted to work at less than the predetermined rate for the work they performed when they are employed pursuant to and individually registered in a bona fide apprenticeship program registered with the US Department of Labor, Employment and Training Administration, Bureau of Apprenticeship and Training, or with a State Apprenticeship Agency recognized by the Bureau, or if a person is employed in his or her first 90 days of probationary employment as an apprentice in such an apprenticeship program, who is not individually registered in the program, but who has been certified by the Bureau of Apprenticeship and Training or a State Apprenticeship (where appropriate) to be eligible for probationary employment as an apprentice. The allowable ratio of apprentices to journeymen on the job site in any craft classification shall not be greater than the ratio permitted to the contractor as to the entire work force under the registered program. Any worker listed on a payroll at an apprentice wage rate, who is not registered or otherwise employed as stated above, shall be paid not less than the applicable wage rate on the wage determination for the work actually performed. Where a contractor is performing construction on a project in a locality other than that in which its program is registered, the ratios and wage rates (expressed in percentages of the journeyman hourly rate) specified in the contractor's or subcontractor's registered program shall be observed. Every apprentice must be paid not less than the rate specified in registered program for the apprentice's level of progress, expressed as a percentage of the journeymen hourly rate specified in the applicable wage determination. Apprentices shall be paid fringe benefits in accordance with the provisions of the apprenticeship program. The apprenticeship program does not specify fringe benefits, apprentices must be paid the full amount of fringe benefits listed on the wage determination for the applicable classification. If the Administrator determines that a different practice prevails for the applicable apprentice classification, fringes shall be paid in accordance with that determination. In the event the Bureau of Apprenticeship and Training or a State Apprenticeship Agency recognized by the Bureau, withdraws approval of an apprenticeship program, the contractor will no longer be permitted to utilize apprentices at least than the applicable predetermined rate for the work performed until an acceptable program is approved.

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School

2. **Trainees** - Except as provided in 29 CFR 5.16, trainees will not be permitted to work at less than the predetermined rate for the work performed unless they are employed pursuant to and individually registered in a program which has received prior approval, evidenced by formal certification, by the United States Department of Labor, Employment and Training Administration. The ratio of trainees to journeymen on the job site shall not be greater than permitted under the plan approved by the Employment and Training Administration. Every trainee must be paid at not less than the rate specified in the approved program for the trainee's level of progress, expressed as a percentage of the journeyman hourly rate specified in the applicable wage determination. Trainees shall be paid fringe benefits in accordance with the provisions of trainee program. If the trainee does not mention fringe benefits, trainees shall be paid the full amount of fringe benefits listed on the wage determination unless the Administrator of the Wage and Hour Division determines that there is an apprenticeship program associated with the corresponding journeyman wage rate on the wage determination which provides for less than full fringe benefits for apprentices. Any employee listed on the payroll at a trainee rate who is not registered and participating in a training plan approved by the employment and Training Administration shall be paid not less than the applicable wage rate on the wage determination for the classification of work actually performed. In addition, any trainee performing work on the job site in excess of the ratio permitted under the registered program shall be paid not less than the applicable wage rate on the wage determination for the work actually performed. In the event the Employment and Training Administration withdraws approval of a training program, the contractor will no longer be permitted to utilize trainees at less than the applicable predetermined rate for the work performed until an acceptable program is approved.
3. **Equal Employment Opportunity** - The utilization of apprentices, trainees and journeymen under this part shall be in conformity with the equal employment opportunity requirements of Executive Order 11246, as amended, and 29 CFR Part 30.

- B-5 **COMPLIANCE WITH COPELAND ACT REQUIREMENTS** - The contractor shall comply with the requirements of 29 CFR Part 3, which are incorporated by reference in its contract.
- B-6 **SUBCONTRACTS** - The contractor or subcontractor shall insert in any subcontracts the clauses contained in 29 CFR Part 5.5 (a) (1) through (10) and such other clauses as the Federal Aviation Administration may by appropriate instructions require, and also a clause requiring the subcontractors to include these clauses in any lower tier subcontractor or lower tier subcontractor with all the contract clauses in 29 CFR Part 5.5.
- B-7 **CONTRACT TERMINATION DEBARMENT** - A breach of contract clauses in 29 CFR 5.5 may be grounds for termination of the contract, and for the debarment as a contractor and a subcontractor as provided in 29 CFR 5.12.
- B-8 **COMPLIANCE WITH DAVIS-BACON AND RELATED ACT REQUIREMENTS** All rulings and interpretations of the Davis-Bacon and Related Acts contained in 29 CFR Parts 1, 3, and 5 are herein incorporated by reference in this contract.
- B-9 **DISPUTES CONCERNING LABOR STANDARDS** - Disputes arising out of labor standards provisions of this contract (sponsor) shall not be subject to the general disputes clause of this contract (sponsor). Such disputes shall be resolved in accordance with the procedures of the Department of Labor set forth in 29 CFR Parts 5, 6 and 7. Disputes within the meaning of this clause includes disputes between the contractor (or any of its subcontractors) and the contracting agency, the US Department of Labor, or the employees or their representatives.

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School

B-10 CERTIFICATION OF ELIGIBILITY

1. By entering into this contract, the contractor certifies that neither it (nor he or she) nor any person or firm who has an interest in the contractor's firm is ineligible to be awarded Government contracts by virtue of Section 3 (a) of the Davis-Bacon Act or 29 CFR 5.12 (a)(1).
2. No part of this contract shall be subcontracted to any person or firm ineligible for award of a Government contract by virtue of Section 3 (a) of the Davis-Bacon Act or 29 CFR 5.12 (a)(1).
3. The penalty for making false statements is prescribed in the US Criminal Code, 18 U.S.C. 1001.

C-1 CONTRACT WORK HOURS AND SAFETY STANDARD ACT - Note: As used in the following, the terms "laborers" and "mechanics" include watchmen and guards.

1. Overtime Requirements - No contractor or subcontractor contracting for any part of the contract work which may require or involve the employment of laborers or mechanics shall require or permit any such laborer or mechanic in any work week in which he or she is employed on such work to work in excess of eight hours in any calendar day or in excess of 40 hours in such work week unless such laborer or mechanic receives compensation at a rate not less than 1 1/4 times his basic rate of pay for all hours worked in excess of eight hours in any calendar day or in excess of 40 hours in such work week, whichever is greater.
2. Violations, Liability for Unpaid Wages, Liquidated Damages - In the event of any violation of the clause set forth in subparagraph (1) of the paragraph, the contractor and any subcontractor responsible therefore shall be liable for the unpaid wages. In addition, such contractor and subcontractor shall be liable to the United States (in the case of work done under contract for the District of Columbia or a territory, to such District or to such territory) for liquidated damages. Such liquidated damages shall be computed, with respect to each individual laborer or mechanic, including watchmen and guards, employed in violation of the clause set forth in subparagraph (1) of this paragraph, in the sum of \$10.00 for each calendar day on which such individual was required or permitted to work in excess of eight hours or in excess of the standard work week of 40 hours without payment of the overtime wages required by the clause set forth in paragraph (10) of this paragraph.
3. Withholding for Unpaid Wages and Liquidated Damages The FAA shall upon its own action or upon written request of an authorized representative of the Department of Labor withhold or cause to be withheld, from any moneys payable on account of work performed by the contractor or subcontractor under any such contract or any other Federal contract with the same prime contractor, or any other federally assisted contract subject to the Contract Work Hours and Safety Standards Act, which is held by the same prime contractor, such sums as may be determined to be necessary to satisfy and liabilities of such contractor or subcontractor for unpaid wages and liquidated damages as provided in the clause set forth in subparagraph (2) of this paragraph.
4. Subcontracts - The contractor or subcontractor shall insert in any subcontracts the clauses set forth in subparagraph (1) through (4) of this paragraph and also a clause requiring the subcontractors to include these clauses in any lower tier subcontracts. The prime contractor shall be responsible for compliance by any subcontractor or lower tier contractor with the

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School
clauses set forth in subparagraph (1) through (4) of this paragraph.

C-2 CONTRACTS SUBJECT ONLY TO CONTRACT WORK HOURS AND SAFETY STANDARDS ACT

1. The contractor or subcontractor shall maintain payrolls and basic payroll records during the course of the work and shall preserve them for a period of three years from the completion of the contract for all laborers and mechanics, including guards and watchmen, working on the contract. Such records shall contain the name and address of each such employee, social security number, correct classifications, hourly rates of wages paid, daily and weekly number of hours worked, deductions made, and actual wages paid.
2. The records to be maintained under paragraph (1) above shall be made available by the contractor or subcontractor for inspection, copying, or transcription by authorized representatives of the Department of Transportation, Federal Aviation Administration and the Department of Labor, and the contractor or subcontractor will permit such representatives to interview employees during working hours on the job.

SECTION D - (HEALTH AND SAFETY REQUIREMENTS) CONTRACTS EXCEEDING \$2,000

- D-1 It is a condition of this contract, and shall be made a condition of each subcontract entered into pursuant to this contract, that the contractor and any subcontractor shall not require any laborer or mechanic employed in performance of the contract to work in surroundings or under working conditions which are unsanitary, hazardous, or dangerous to his health or safety, as determined under Construction Safety and Health Standards Title 29 CFR Part 1926 and other occupational and health standards (29 CFR Part 1910) promulgated by the United States Secretary of Labor, in accordance with Section 107 of the OWHSSA.

SECTION E - CLEAN AIR AND WATER POLLUTION CONTROL REQUIREMENTS FOR CONSTRUCTION CONTRACTS AND SUBCONTRACTS

- E-1 Contractors and subcontractors agree (for any contract/ subcontract exceeding \$100,000):
- a. That any facility to be used in the performance of the contract or to benefit from the contract is not listed on the Environmental Protection Agency (EPA) List of Violating Facilities.
 - b. To comply with all the requirements of Section 114 of the Clean Air Act and Section 308 of the Federal Water Pollution Control Act and all regulations issued thereunder.
 - c. That as a condition for award of a contract he will notify the awarding official of the receipt of any communication from the EPA indicating that a facility to be utilized for performance of or benefit from the contract is under consideration to listed on the EPA List of Violating Facilities.
 - d. To include or cause to be included in any contract or subcontract which exceeds \$100,000 the aforementioned criteria and requirements.
- E-2 For all projects, contractors and subcontractors agree:

That in the performance of this contract agrees that he will adhere to all state and local regulations concerning air and water pollution controls (unless contrary to Federal requirements), secure necessary

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School

permits, inspections, and conduct his operations so as to minimize affects on the surrounding environment.

BID GUARANTEE AND BONDING/INSURANCE CLAUSES (FOR BID AND/PR CONTRACTS IN EXCESS OF \$100,000.)

For all bid documents for contracts include:

The requirements for a bid guarantee from each bidder equivalent to five percent of the bid price. The "bid guarantee" shall consist of a firm commitment such as a bid bond, certified check, or other negotiable instrument accompanying a bid as assurance that the bidders will, upon acceptance of his bid, execute contractual documents as may be required within the time specified.

For contracts include:

- A. The contractor agrees to furnish a performance bond for 100 percent of the contract price. This bond is one that is executed in connection with a contract to secure fulfillment of all the contractor's obligations under such contract.
- B. The contractor agrees to furnish a payment bond for 100 percent of the contract price. This bond is one that is executed in connection with a contract to assure payment as required by law of all persons supplying labor and material in the execution of work provided for in the contract.

NONDISCRIMINATION IN FEDERALLY-ASSISTED PROGRAMS OF THE DEPARTMENT OF TRANSPORTATION

During the performance of this contract, the contractor for itself, its assignees and successors in interest (hereinafter referred to as the "contractor") agrees as follows:

- A. Compliance with Regulations. The contractor shall comply with the Regulations relative to nondiscrimination in Federally-assisted programs of the Department of Transportation (hereinafter, "DOT") Title 49, Code of Federal Regulations), Part 21, as they may be amended from time to time, (hereinafter referred to as the Regulations); which are herein incorporated by reference and made part of this contract.
- B. Nondiscrimination. The contractor, with regard to the work performed by it during the contract, shall not discriminate on the grounds of race, color, or national origin in the selection and retention of subcontractors, including procurement of materials and leases of equipment. The contractor shall not participate either directly or indirectly in the discrimination prohibited by Section 21.5 of the Regulations, including employment practices when the contract covers a program set forth in Appendix B of the Regulations.
- C. Solicitations for Subcontracts, Including Procurement of Materials and Equipment. In all solicitations either by competitive bidding or negotiation made by the contractor for work to be performed under a subcontract, including procurement of materials or leases of equipment, each potential subcontractor or supplier shall be notified by the contractor of the contractor's obligations under this contract and the Regulations relative to nondiscrimination on the grounds of race, color, or national origin.
- D. Information and Reports. The contractor shall provide all information and reports required by the Regulations or directives issued pursuant thereto, and shall permit access to its books, records, accounts, other sources of information, and its facilities as may be determined by the sponsor or the

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School

Federal Aviation Administration to be pertinent information required of a contractor is in the exclusive possession of one another who fails or refuses to furnish this information, the contractor shall so certify to the sponsor or the Federal Aviation Administration as appropriate, and shall set forth what efforts it has made to obtain the information.

- E. Sanctions for Noncompliance. In the event of the contractor's noncompliance with nondiscrimination provisions of this contract, the sponsor shall impose such contract sanctions as it or the Federal Aviation Administration may determine to be appropriate, including but not limited to:
- (1) withholding of payments to the contractor under the contract until the contractor complies, and/or
 - (2) cancellation, termination, or suspension of the contract, in whole or in part.
- F. Incorporation of Provisions. The contractor shall include in provisions paragraph 1 through 5 in every subcontract, including procurement of materials and leases of equipment, unless exempt by the Regulations or directives issues pursuant thereto: The contractor shall take such action with respect to any subcontract or procurement as the sponsor or the Federal Aviation Administration may direct as a means of enforcing such provisions including sections for noncompliance. Provided, however, that, in the event a contractor becomes involved in, or is threatened with litigation with a sponsor to enter into such litigation to protect the interests of the sponsor and, in addition, the contractor may request the United States to enter into such litigation to protect the interests of the United States.
- G. Breach of Contract Terms - Sanctions. Any violation or breach of the terms of this contract on the part of the contractor/subcontractor may result in the suspension or termination of this contract or such other action which may be necessary to enforce the rights of the parties of this agreement.
- H. Certification - Foreign Trade Restrictions

The Contractor by submitting a proposal on this Contract certifies that it:

- a. is not owned or controlled by one or more citizens or nationals of a foreign country included in the list of countries that discriminate against the U.S. firms published by the Office of the United States Trade Representative (USTR);
- b. has not knowingly entered into any contract or subcontract for this project that is a citizen or national of a foreign country on said list, or is owned or controlled directly or indirectly by one or more citizens or nationals of a foreign country said list.
- c. has not procured any product nor subcontracted for the supply of any product that is produced in a foreign country said list.

Unless the restrictions of this clause are waived by the Secretary of Transportation in accordance with 59 CFR 30.17, no contract shall be awarded to a Contractor who is unable to certify the above. Thereafter, if the Contractor knowingly procures or subcontracts for the supply of any product or service of a foreign country on the said list for use on the project, the Federal Aviation Administration may direct, through the MMMHS, cancellation of the Contract at no cost to the Government or the MMMHS.

Further, the Contractor agrees that, it will incorporate this provision for certification without modification in each contract and in all lower tier subcontracts. The Contractor may rely upon the certification of a prospective subcontractor unless is has knowledge that the certification is erroneous.

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School

The Contractor shall provide immediate written notice to the MMMHS if the Contractor learns that its certification or that of a subcontractor was erroneous when submitted or has become erroneous by reason of changed circumstances. The subcontractor agrees to provide immediate notice to the Contractor, if at any time it learns that its certification was erroneous by reason of changed circumstances.

This certification is a material representation of fact upon which reliance was placed when making the award. If it is later determined that the Contractor or Subcontractor knowingly rendered an erroneous certification, the Federal Aviation Administration may direct, through the Monsignor McClancy Memorial High School cancellation of the Contract or Subcontract for default at no cost to the Government or the Monsignor McClancy Memorial High School.

Nothing contained in the foregoing shall be construed to require establishment of a system of records in order to render, in good faith, the certification required by this provision. The knowledge and information of a contractor is not required to exceed that which is normally possessed by a prudent person in the ordinary course of business dealings.

POLICY OF THE DEPARTMENT OF TRANSPORTATION (DOT) REGARDING MINORITY BUSINESS ENTERPRISE

Minority business enterprises shall have the fullest possible participation in the performance of this contract.

Policy - The policy of the Department of Transportation (DOT) that minority business enterprises as defined in 49 CFR Part 23 shall have the maximum opportunity to participate in performance or contracts financed in whole or in part with Federal funds under this agreement. Consequently, the MBE requirements of 49 CFR Part 23 are made part of this agreement.

Objective - The contractor agrees to ensure that minority business enterprises as defined in 49 CFR Part 23 have the maximum opportunity to participate in the performance of contracts and subcontracts financed in whole or in part with Federal funds provided under this agreement. In this regard, all contractors shall take all necessary and reasonable steps in accordance with 49 CFR Part 23 to ensure that minority business enterprises have the maximum opportunity to compete for and perform contracts. Contractors shall not discriminate on the basis of race, color, national origin or sex in the award and performance of DOT assisted contracts.

All bidders*, potential contractors*, or subcontractors* for this DOT assisted contract are hereby notified that failure to carry out the DOT policy and DBE obligation, as set forth in the above, shall constitute a breach of contract which may result in termination of the contract or such other remedy as deemed appropriate by the Monsignor McClancy Memorial High School (recipient) *Includes firms owned and controlled by minorities and firms owned and controlled by women.

Sub-Contract Clauses. All bidders and potential contractors hereby assure that they will include the clauses in all sub-contracts which offer further sub-contracting opportunities.

The apparent successful bidder will be required to submit, at a time before award of the contract designated by Monsignor McClancy Memorial High School (recipient) concerning the Minority Business Enterprise participation in the contract:

- (A) The names and addresses of DBE firms that will participate in the contract:
- (B) A description of the work of each named DBE firm will perform;
- (c) The dollar amount of participation by each named DBE firm.

If the Disadvantaged Business Enterprise participation submitted in response to (A) above does not meet Disadvantaged

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School

Business Enterprise goals, information to satisfy the Monsignor McClancy Memorial High School that the bidders made good faith to meet these goals. The successful bidder shall establish and maintain records and submit reports, as required, which will identify and assess the efforts made to achieve DBE subcontract goals and other DBE affirmative action efforts.

Meeting Minority Business Enterprise goals or making good faith efforts to do so is a condition of being awarded a DOT assisted contract for which contract goals have been established.

D. ORIGIN OF MATERIALS AND EQUIPMENT

The parties agree that the following provision shall be incorporated into all Construction Contracts for the project:

That contractor and subcontractors shall include the clause "BUY AMERICAN - STEEL AND MANUFACTURED PRODUCTS FOR CONSTRUCTION CONTRACTS" in all solicitations for contractors and subcontractors in accordance with the "BUY AMERICAN CLAUSE" in APPENDIX A.

January 10, 2005

**Asbestos Removal - Monsignor McClancy Memorial High School
CHAPTER I
GENERAL PROVISIONS**

1. DEFINITIONS

To avoid undue repetition, the following terms whenever they occur in this Form of Contract or any of the other papers forming a part of the Contract shall be construed as follows:

"Contract" and "Contract Documents" shall mean, in addition to the Contract Form, the Information for Bidders, the Owner's acceptance, the General Conditions, the Specifications and the Contract Drawings (including written Addenda issued over the name of the Architect), all of which are made part hereof as though herein set forth in full. The Contract as so defined shall constitute the complete and exclusive statement of the terms of the agreement between the parties and the Contract may not be explained or supplemented by course of dealing, usage of trade or course of performance.

"Bidder" and "Contractor" shall mean the person, persons, corporation or other entities submitting this proposal for bidding and contract.

The term "days" or "calendar days" in reference to a period of time shall mean consecutive calendar days, Saturdays, Sundays and holidays, included.

The term "construction site" or words of similar import shall mean the Owner's Monsignor McClancy Memorial High School, for the Monsignor McClancy Memorial High, East Elmhurst, New York 11370 and the vicinity thereof.

"Work" shall mean all structures, equipment, plant, labor, materials (including materials and equipment, if any, furnished by the Owner) and other facilities and all other things necessary or proper for or incidental to furnishing and installing noise suppression materials, systems and components at Monsignor McClancy Memorial High School, the Monsignor McClancy Memorial High, East Elmhurst, New York 113; and "performance of Work" and words of similar import shall mean the furnishing of such facilities and the doing of such things.

"Work required by the Contract Drawings and Specifications in their present form" or words of similar import shall include all Work required by the Specifications in their present form (whether or not mentioned in the Specifications) and all the Work involved in or incidental to the accomplishment of the results intended by the Specifications and Contract Drawings in their present form (whether or not mentioned therein or shown thereon).

"Extra Work" shall mean Work required by the Owner which is in addition to that required by the Contract Drawings and Specifications in their present form.

"Contract Drawings" shall mean the Contract Drawings designated in the clause of the Specifications entitled "Contract Drawings" and except as used in the phrase "Contract Drawings in their present form" shall include any future alterations and revisions of said drawings.

"Owner", "MMMHS" and "Monsignor McClancy Memorial High School" shall mean the Monsignor McClancy Memorial High Chief executive officer or his successor in duties acting personally or through one of his authorized representatives for the purposes of this Contract.

"MMMHS Representative" and "Monsignor McClancy Memorial High Representative" are used interchangeably in the contract documents and shall mean the supervising and design Architects, John Ciardullo Associates, for the administration of this contract in all matters concerning the work.

"Architect" shall mean the Architect, John Ciardullo Associates, John Ciardullo, President, acting personally or his representative acting within the scope of the particular authority vested in him.

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School

The term "Permanent Construction" shall include all construction, installation, structures, equipment and materials (including materials and equipment, if any, existing or furnished by the Owner) to be constructed, installed or left by the Contractor at or about the construction site (or elsewhere in the possession of the Owner) after the completion of the Work (whether or not they are yet delivered or installed), even though they are subsequently to be removed by others. The terms, "permanent installation", "permanent structure", "permanent materials", and words or similar import shall have the same meaning as the term "permanent construction".

"Subcontractor" shall mean anyone who performs Work (other than or in addition to the furnishing of materials, plant or equipment) at or about the construction site, directly or indirectly for or in behalf of the Contractor (and whether or not in privity of contract with the Contractor), but shall not include any person who furnishes his own personal labor or his own personal services or who performs Work which consists only of the operation of construction equipment of which he is the lessor.

"Materialman" shall mean anyone who furnishes materials, plant, or equipment to the Contractor or any subcontractor for use at or about the construction site in the performance of Work.

"Materialman" or "subcontractor", however, shall exclude the Contractor or any subsidiary or parent of the Contractor or any person, firm or corporation which has a substantial interest in the Contractor or in which the Contractor or the parent or the subsidiary of the Contractor, or an officer or principal of the Contractor of the parent or of the subsidiary of the Contractor has a substantial interest, provided however, that for the purpose of the clause hereof entitled "Assignments And Subcontracts" the exclusion in this paragraph shall not apply to anyone but the Contractor himself.

"Workingman" or "worker" or "workman" shall mean any employee of the Contractor or of a subcontractor who performs personal labor or personal services at the construction site.

"Lump Sum" shall mean the amount stipulated in the clause hereof entitled "General Agreement".

"Notice" shall mean a written notice.

Whenever they refer to the Work or its performance, "directed", "required", "permitted", "ordered", "designated", "prescribed" and words of similar import shall mean directed, required, permitted, ordered, designated, or prescribed by the MMMHS Representative; and "approved", "acceptable", "satisfactory" and words of similar import shall mean approved by, acceptable or satisfactory to the MMMHS Representative; and "necessary", "reasonable", "proper", "correct" and words of similar import shall mean necessary, reasonable, proper or correct in the judgement of the MMMHS Representative.

Whenever "including", "such as", or words of similar import are used, the specific things thereafter enumerated shall not limit the generality of things preceding such words.

"Owner" and "Monsignor McClancy Memorial High" shall mean the Monsignor McClancy Memorial High Inc., 71-06 31ST Avenue, East Elmhurst, New York 11370 "Custodian" shall mean the Principal of Monsignor McClancy Memorial High School or his designed.

Asbestos Removal in Connection With the Soundproofing of Monsignor McClancy Memorial High School.

Description: Aircraft Noise Abatement Project

Pursuant to and in compliance with the invitation for bids dated January 10, 2005 and the Contract Documents relating hereto, the undersigned hereby submits a binding offer to furnish all plant, labor, materials, supplies, equipment and all other facilities things, matters, and work necessary, proper or incidental to all work required by and in strict accordance with the applicable provisions of the referenced solicitation documents which include, but are not limited to, the plans, specification and all of the addenda thereto issued by the MMMHS and sent to the undersigned by U.S. mail, electronic transmission or other appropriate means or delivered to the Bidder prior to the date of opening the bids, whether received by the undersigned or not; for the total sum indicated on page 3 of this document in the "Base Bid Amount" blocks.

Notice of Award will be mailed, telegraphed or delivered to the successful bidder at its address listed on page three (3):

The Contractor shall commence Work under this Contract at a date to be specified in a Notice to Proceed letter issued by the MMMHS and shall complete Work on the Project, on or before 740 Consecutive Calendar Days, as indicated in Section 00900 - Milestone Schedule of the Specification, from the date in the above referenced Notice to Proceed letter.

Liquidated damages in the amount of five hundred dollars (\$500.00) per day shall be assessed against the Contractor for every calendar day exceeding the calendar days allowed in Section 00900 - Milestone Schedule or times as extended in accordance with the clause entitled "Extensions of Time" of the Specification.

Non-Collusive Bidding Certification:

By submission of this bid, each bidder and each person signing on behalf of any bidder certifies, and in the case of a joint bid each party thereto certifies on behalf of its own organization, under penalty of perjury, that to the best of his/her knowledge and belief:

- A. The prices in the bid have been arrived at independently without collusion, consultation, communication or agreement, for the purpose of restricting competition, as to any matter relating to such prices with any other bidder or with any competitor;
- B. Unless otherwise required by law, the prices which have been quoted in the bid have not been knowingly disclosed by the bidder prior to opening, directly or indirectly, to any other bidder to any competitor; and
- C. No attempt has been made or will be made by the bidder to induce any other person, partnership or corporation to submit or not to submit a bid for the purpose of restricting competition.

Representations of the Bidder:

The Bidder represents and certifies that:

- A. The Bidder is financially solvent and competent to perform the Work;
- B. That the Bidder is familiar with all Federal, State, or other laws, ordinances, orders, rules and regulations, which may in any way affect the Work;

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School

- C. That the Bidder has carefully examined the Contract documents and the Site of the Work and is satisfied as to the nature and location of the Work, the character quality and quantity of surface and subsurface materials likely to be encountered, the character or type of equipment and other facilities needed for the performance of the Work, the general and local conditions, and all other materials or items which may affect the Work;
- D. That the Bidder is an independent contractor and not an employee of the MMMHS. Unless the Contract specifically provides otherwise, the conduct and control of the Work shall be entirely the Bidder's responsibility at all times; and
- E. That Fair and Ethical Business Practices will be strictly adhered to during the life of this contract. During the term of this Contract, neither the Bidder nor any director, partner, principal, officer or employee shall:
1. File with a government office or employee, a written instrument which intentionally contains a false statement or false information;
 2. Intentionally falsify business records;
 3. Give, or offer to give, money or any other benefit to a labor official with intent to influence that labor official with respect to any of his or her acts, duties or decisions as a public servant; and
 4. Give, or offer to give, money or any other benefit to a public servant with intent to influence that public servant with respect to any of his or her acts, duties or decisions as a public servant; and
 5. Knowingly participate in the criminal activities of any organized crime group, syndicate or "family", nor shall any person employed by or associated with any such organized crime "family", syndicate or group participate through criminal means in any of the business affairs of the Bidder.
- F. If it becomes known that any director, partner, officer, employee of the Bidder, or any shareholder owning 5% or more of the Bidder's stock:
1. is subject of investigation involving any violation of criminal law or other federal, state or local law or regulation by any governmental agency; or
 2. is arrested, indicted or named as an unindicted coconspirator in any indictment or other accusatory instrument; or
 3. is convicted of any felony under state or federal law and/or any misdemeanor involving a business related crime.
- the bidder shall immediately notify the MMMHS of any such event.**
- G. That any Subcontract executed pursuant to this Contract will include the representations above as part of the Subcontract Agreement.

CERTIFICATION BY CONTRACTOR

I certify that, to the best of my knowledge, information and belief, I have supplied full, complete and truthful information and answers to each question in this application. I acknowledge and recognize that this application is being submitted for the purpose of inducing the MMMHS to approve me/my firm as contractor. I further acknowledge that the MMMHS may, by means of its own choosing, determine the truth and accuracy of all statements made.

A MATERIAL FALSE STATEMENTS OR OMISSION MADE IN CONNECTION WITH THIS APPLICATION WILL RESULT IN DISAPPROVAL OF THE APPLICANT, THEREBY PRECLUDING IT FROM PERFORMING WORK AS THE SUBCONTRACTOR. IN ADDITION, SUCH FALSE SUBMISSION MAY SUBJECT THE PERSON AND/OR ENTITY MAKING THE FALSE STATEMENT TO CRIMINAL CHARGES, INCLUDING NEW YORK STATE PENAL LAW SECTION 175.35 (OFFERING A FALSE STATEMENT FOR FILING) AND 210.40 (SWORN FALSE STATEMENT) AND/OR TITLE 18 U.S.C. SECTIONS 1001 (FALSE OR FRAUDULENT STATEMENT AND 1341 (MAIL FRAUD).

NONSEGREGATED FACILITIES

NOTICE TO PROSPECTIVE FEDERALLY-ASSISTED CONSTRUCTION CONTRACTORS:

- a. A certification of Nonsegregated Facilities must be submitted prior to the award of a Federally-assisted construction contract exceeding \$10,000 which is not exempt from the provisions of the equal opportunity clause.
- b. Contractors receiving Federally-assisted construction contract awards exceeding \$10,000 which are not exempt from the provisions of the equal opportunity clause will be required to provide for the forwarding of the notice to prospective subcontractors for supplies and construction contracts where the subcontracts exceed \$10,000 and are not exempt from the provisions of the equal opportunity clause. NOTE: The penalty for making false statements in offers is prescribed in 18 U.S.C. 1001.

**MONSIGNOR McCLANCY MEMORIAL HIGH SCHOOL
CERTIFICATION OF NONSEGREGATED FACILITIES**

The Federally-assisted construction contractor certifies that he does not maintain or provide for his employees any segregated facilities at any of his establishments, and that he does not permit his employees to perform their services at any location, under his control, where segregated facilities are maintained. The Federally-assisted construction contractor certifies further that he will not maintain or provide for his employees any segregated facilities at any of his establishments, and that he will not allow his employees to perform their services at any location, under his control, where segregated facilities are maintained. The Federally-assisted construction contractor agrees that a breach of his certification is a violation of the equal opportunity clause in his contract. As used in this certification, the term "segregated facilities" means any waiting rooms, work areas, restrooms, and washrooms, restaurants and other eating areas, time clocks, locker rooms and any other storage or dressing areas, parking lots, drinking fountains, recreation or entertainment areas, transportation, and housing facilities provided for employees which are segregated by explicit directive or are in fact segregated on the basis of race, color, religion, sex, or national origin, because of habit, local custom, or any other reason. The Federally assisted construction contractor agrees that (except where he has obtained identical certifications from proposed subcontractors for specific time periods) he will obtain identical certifications from proposed subcontractors prior to the award of subcontracts exceeding \$10,000 which are not exempt from the provisions of the equal opportunity clause, and that he will retain such certifications in his files.

**NOTICE TO PROSPECTIVE CONTRACTORS OF REQUIREMENT FOR CERTIFICATION FOR NON
SEGREGATED FACILITIES**

A Certification of Nonsegregated Facilities must be submitted prior to the award of a contract or subcontract exceeding \$10,000 which is not exempt from the provisions of the equal opportunity clause.

Certification - The information above is true and complete to the best of my knowledge and belief.

STATEMENT FOR WORK PERMIT

Asbestos Removal in Connection With the Soundproofing of Monsignor McClancy Memorial High School.

I understand that there are asbestos containing materials at Monsignor McClancy Memorial High School in East Elmhurst, N.Y. where I am about to perform work. I have toured the Facility with the building Administrator and have been shown all areas known to have asbestos containing materials present.

I fully understand and agree that at any time during the course of my work, if I or persons or personnel under my direction discover a material which is known or suspected to contain asbestos which is not in my contract and interferes with the performance of contract work, I will cease all such work immediately and report this condition to the building administrator. At no time will I in any way disturb, damage, attempt to clean up, or repair materials which are known or suspected to contain asbestos.

I further understand that any disturbance of asbestos containing material which I, or persons under my direction, cause could result in contamination of the building and asbestos exposure to building occupants. Any disturbance of asbestos containing materials or asbestos contamination which occurs due to an action taken by myself, or persons under my direction, is fully and solely my responsibility and I will be directly responsible for the cost of repairing the disturbed asbestos containing material and associated building decontamination to the satisfaction of the building owner.

Asbestos Removal - Monsignor McClancy Memorial High School
CHAPTER II

ADJUSTMENTS AND PAYMENTS

1. ADJUSTMENTS TO LUMP SUM.

If any Work required by the Contract Drawings and Specifications in their present form shall be countermanded or reduced, the Architect shall have full authority on behalf of both parties to make such adjustment by way of reduction in the Lump Sum as he may in his sole discretion deem equitable and reasonable, and in making such adjustment, no allowance to the Contractor shall be made for anticipated profits.

The MMMHS Chief Executive Officer shall have authority to agree in writing with the Contractor for adjustments by way of reduction in the Lump Sum in lieu of those for which provision is heretofore made in this numbered clause.

2. COMPENSATION FOR EXTRA WORK.

The MMMHS Chief Executive Officer shall have the authority to agree in writing with the Contractor upon lump sum or other compensation for Extra Work in lieu of the compensation for which provision is hereinafter made in this numbered clause.

If such agreement on compensation is not made, and Extra Work be performed, the Contractor's compensation shall be increased by the following amounts and such amounts only:

- (a) In the case of Extra Work performed by the Contractor personally, an amount equal to the actual net cost in money of the labor and materials required for such Extra Work, plus such rental for equipment (other than small tools) required for such Extra Work with such overhead and profit as the Architect deems reasonable.
- (b) In the case of Extra Work performed by a subcontractor, an amount equal to the actual net cost in money of the labor and materials required for such net cost plus such rental for equipment (other than small tools) required for such Extra Work as the Architect deems reasonable, plus 5% of the sum of the foregoing cost, percentage of cost, and rental.

As used in this numbered clause (and in this clause only):

"Labor" means foremen, surveyors, laborers, mechanics and other employees below the rank of superintendent, exclusive of timekeepers, directly employed at the construction site, whether employed by the Contractor or by the subcontractors, subject to the Owner's representative's authority to determine what employees of any category are "required for Extra Work and as to the portion of their time allotted to Extra Work: and "cost of labor" means the wages actually paid to and received by such employees plus a proper proportion of (a) vacation allowances and union dues and assessments which the employer actually pays pursuant to contractual obligation upon the basis of such wages, and (b) taxes actually paid by the employer pursuant to law upon the basis of such wages. "Employees" as used above means only the employees of one employer.

"Materials" means temporary and consumable materials as well as permanent materials; and "cost of materials" means the price (including taxes actually paid by the contractor pursuant to law upon the basis of such materials) for which such materials are sold for cash by the manufacturers or producers thereof, or by regular dealers therein, whether or not such materials are purchased directly from the manufacturer, producer or dealer (or if the Contractor is the manufacturer or producer thereof, the reasonable cost to the Contractor of the manufacture and production), plus the reasonable cost of delivering such materials to the construction site in the event that the price paid to the manufacturer, producer or dealer does not include delivery and in case of temporary materials, less their salvage value, if any.

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School

"Work day" in reference to an item of equipment, means a day other than a Saturday, Sunday or legal holiday except that if the particular item of equipment is actually utilized at the construction site by the Contractor or subcontractors under this or any other Contract with the Owner on a Saturday, Sunday or legal holiday said day shall be deemed a work day.

The rental for equipment, whether owned by the Contractor or subcontractors or rented from others and notwithstanding the actual price of any rental or actual costs associated with such equipment, shall be computed by the Architect on the basis of the following, and to all such payments shall be added ten percent (10%) of such rental costs;

- (1) (a) Hourly rental for those items of equipment listed in the "Green Book" (the publication of the Associated Equipment Distributors of 615 West 22nd Street, Oakbrook, Illinois 60523) shall be 100% of the applicable rates as listed in said book, reduced to an hourly basis (see formula below).
- (b) Hourly rental for those items of equipment not listed in the "Green Book" shall be 100% of the applicable rates given in the "Blue Book" (published by Equipment Guide Book Co., 3980 Fabian Way, Palo Alto, California 94303), reduced to an hourly basis (see formula below). The editions of these publications to be used shall be those in effect on the date of the actual rental of the equipment. None of the provisions of the "Green Book" or the "Blue Book" shall be deemed referred to or included in this Contract excepting only the aforesaid rates.
- (c) If no listing of rates for the item of equipment is made in either of the foregoing publications, the Architect shall determine the reasonable rate of rental of the particular item of equipment by such other means as he finds appropriate.
- (2) (a) In instances where the rate appearing in the "Green Book" or the "Blue Book" are utilized, the Architect shall determine the applicable rate and the hourly rental determined therefrom by applying the following criteria:
 - (b) The rate to be applied for an item of equipment used on a particular Extra Work Order shall be the daily, weekly or monthly rates from the foregoing publications based on the total number of workdays or portions thereof that a particular item of equipment is at the construction site for use by the Contractor or subcontractor. The number of work days in the period for each rate shall be as indicated below:

Three work days or less - daily rate.

More than three work days but not more than fifteen workdays - weekly rate.

More than fifteen work days.

The pro rata portion which one hour bears to the applicable rate shall be determined in accordance with the following formula:

Hourly rate based on daily rental	1/8 (100% x daily rental from "Green Book") or 1/8 (100% x daily rental from "Blue Book") or
Hourly Rate based on weekly rate based	1/40 (100% x weekly rental from "Green Book") or 1/40 (100% x weekly rental from "Blue Book") or
Hourly rate based on monthly rental	1/176 (100% x monthly rental from Green Book) or 1/176 (100% x monthly rental from Blue Book)

- (c) If the Architect should determine that the nature or size of the equipment used by the Contractor in connection with Extra Work is larger or more elaborate, as the case may be, than the size

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School

or nature of the minimum equipment determined by the Architect to be suitable for the Extra Work, the reasonable rental will not be based upon the equipment used by the Contractor but will be based upon the smallest or least elaborate equipment determined by the Architect to have been suitable for the performance of the Extra Work.

- (3) If the case of the equipment utilized only for Extra Work: (a) in addition to amounts determined as provided in subparagraphs (1) and (2) above, there will be added to the rental as computed above the taxes on the rental actually paid by the Contractor or subcontractor and the reasonable cost of transporting such equipment to and from the construction site, and (b) notwithstanding the number of hours during which such equipment is utilized, the minimum rental therefore will be for a period of eight hours.

In computing the Contractor's compensation insofar as it is based upon Extra Work, and notwithstanding any provision to the contrary appearing in the Green Book and the Blue Book, no consideration shall be given to any items of cost or expense not expressly set forth above, it being expressly agreed that the costs and percentage additions hereinbefore provided to cover items of cost and expense to the Contractor of any type whatsoever, including administration, overhead, taxes (other than those enumerated above), clean-up, consumable including gas and oil, drafting including printing or other reproduction), coordination, field measurements, maintenance, repairs, insurance, profit to the Contractor and small tools.

Whenever any Extra Work is performed (whether by the Contractor directly or through a subcontractor), the Contractor shall, at the end of each day submit to the Monsignor McClancy Memorial High School Representative (a) daily time slips showing the name and social security number of each workman employed on such Work the number of hours which he is employed thereon, the character of his' duties, and the wages to be paid to him, (b) a memorandum showing the State and Federal taxes based on such wages, and vacation allowances and union dues and assessments which the employer actually pays pursuant to contractual obligation upon the basis of such wages (c) a memorandum showing the amount and character of the materials furnished for such Work, from whom they were purchased and the amount to be paid therefor, and (d) a memorandum of equipment used in the performance of such Work, together with the rental claimed therefor. Such memoranda and time slips are for the purpose of enabling the Monsignor McClancy Memorial High School Representative to determine the amounts to be paid by the Owner under this numbered clause; and accordingly, they shall constitute a condition precedent to such payment and the failure of the Contractor to furnish them with respect to any Work shall constitute a conclusive and binding determination on his part that such Work is not Extra Work and shall constitute a waiver by the Contractor of claims for payment for such Work. In the event that the Director and the Contractor shall agree in writing upon a lump sum or other compensation for Extra Work in lieu of compensation as provided in the second paragraph of this clause, the daily time slips and memoranda required by this paragraph shall not be required subsequent to the date on which such agreement has been reached.

3. FINAL PAYMENT

After the rendition of the Certificate of Final Completion and upon receipt from the Contractor of such information as may be required, the Architect shall certify in writing to the Owner and to the Contractor the total compensation earned by the Contractor.

If so required, the Contractor shall thereupon (i) certify to the Owner in writing that he has paid and caused his subcontractors to pay at least the prevailing rate of wage and supplements required by the clause hereunder entitled "Prevailing Rate of Wage" and(ii) furnish to the Owner a detailed sworn statement of all claims, just or unjust, of subcontractors, materialmen and other third persons then outstanding and which he has reason to believe thereafter be made on account of the Work.

Within sixty days after issuance of such certificate of total compensation earned (or within sixty days after receipt of the documents required), the Owner shall pay to the Contractor by check the amount stated in said certificate, less all other

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School

payments and advances whatsoever to or for the account of the Contractor. All prior estimates and payments shall be subject to correction in this payment, which is throughout this Contract called the Final Payment.

The acceptance by the Contractor, or by anyone claiming by or through him, of Final Payment shall be and shall operate as a release to the Owner of all claims and of all liability to the Contractor for all things done or furnished in connection with the Contract and for every act and neglect of the Owner and others relating to or arising out of the Contract, including claims arising out of breach of contract and claims based on claims of third persons, excepting only his claims for reimbursement for certain sales taxes as hereinbefore provided. No payment, however, final or otherwise, shall operate to release the Contractor or his sureties from any obligations in connection with this Contract or the Performance or Payment Bond.

The Contractor's agreement as provided in the immediately preceding paragraph above shall be deemed to be based upon the consideration forming part of this Contract as a whole and not to be gratuitous: but in any event even if deemed gratuitous and without consideration, such agreement as provided in the immediately preceding paragraph above shall nevertheless be effective. Such release shall include all claims, whether or not in litigation and even though still under consideration by the Owner or the Architect. Such release shall be effective notwithstanding any purported reservation of right by the Contractor to preserve such claim. The acceptance of any check designated as "Final Payment" or bearing similar designation shall be conclusively presumed to demonstrate the intent of the Contractor that such payment was intended to be accepted as final, with the consequences provided in this numbered clause, notwithstanding any purported reservation of rights.

The Contractor agrees that he shall not be entitled to, and hereby waives any right he might otherwise have to, and shall not seek any judgement whether under this Contract or otherwise for any such Final Payment or for an amount equivalent thereto or based thereon, or for any part thereof, if such judgement would have the effect of varying, setting aside, disregarding or making inapplicable the terms of this numbered clause or have the effect in any way of entitling the Contractor to accept such Final Payment or an amount equivalent thereto or based thereon or any part thereof other than in the same fashion as a voluntary acceptance of a Final Payment subject to all the terms of this Contract including this numbered clause, unless and until the Contractor should obtain a judgement on any claim arising out of or in connection with this Contract (including a claim based on breach of contract) for an amount not included in said Final Payment. In any case in which interest is allowable on the amount of the Final Payment, such interest shall be at the rate of 2% per annum for the period, if any, in which such interest is due.

4. WITHHOLDING OF PAYMENTS.

If (1) the Contractor fails to perform any of his obligations under this contract or any other agreement between the Owner and the Contractor (including his obligation to the Owner to pay any claim lawfully made against him by any materialman, subcontractor or workman or other person which arises out of or in connection with the performance of this Contract or any other agreement with the Owner, or (2) any claim (just or unjust) which arises out of or in connection with this Contract or any other agreement between the Owner and the Contractor is made against the Owner or (3) any subcontractor under this Contract or any other agreement between the Owner and the Contractor fails to pay any claims lawfully made against him by any materialman, subcontractor, workman or other third person which arises out of or in connection with this Contract or any other agreement between the Owner and the Contractor or if in the opinion of the Director any of the aforesaid contingencies is likely to arise, then the Owner shall have the right, in its discretion, to withhold out of any payment (final or otherwise and even though such payment has already been certified as due) such sums as the Director may deem ample to protect it against delay or loss or to assure the payment of just claims of third persons, and to apply such sums in such manner as the Director may deem proper to secure such protection or satisfy such claims. All sums so applied shall be deducted from the Contractor's compensation. Omission by the Owner to withhold out of any payment, final or otherwise, a sum for any of the above contingencies, even though such contingency has occurred at the time of such payment, shall not be deemed to indicate that the Owner does not intend to exercise its right to such contingency. Neither the above provisions for the rights of the Owner to withhold and apply monies nor any exercise or attempted exercise of, or omission to exercise, such rights by the Owner shall create any obligation of

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School
any kind to such materialman, subcontractors, workmen or other third persons.

Until actual payment to the Contractor, his right to any amount to be paid under this Contract (even though such amount has already been certified as due) shall be subordinate to the Rights of the Owner under this numbered clause. If, however, the payment of any amount due to the Contractor shall be improperly delayed by the fault of the Owner, the Owner shall pay the Contractor interest thereon at the rate of 2% per annum for the period of delay, it being agreed that such interest shall be in lieu of and in liquidation of any damages to the Contractor because of such delay.

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School
CHAPTER III

PROVISIONS RELATING TO TIME

1. TIME FOR COMPLETION.

The Contractor shall complete the performance of all Work under this Contract as follows:

Monsignor McClancy Memorial High School complex - Complete all Work required within 740 calendar days after receipt of the Notice to Proceed.

The Contractor shall not commence the performance of the Work until the later of the following dates:

- (a) If a Performance and Payment Bond is required, the date of receipt by him or notice from the Owner that the Performance and Payment Bond furnished by him is satisfactory;
- (b) The date of receipt by him of notice from the Owner that the insurance procured by him pursuant to the insurance clause is satisfactory, as evidenced by the certificate to be furnished in accordance with said insurance clause.

The time for completion shall not be extended on account of the time required to furnish the documents referred to in subparagraphs (a) and (b) above, but the Owner shall give notice to the Contractor within ten days after receipt of the Performance and Payment Bond or certificate of insurance as to whether or not such bond or insurance is satisfactory.

The Contractor's obligations for the performance and completion of the Work within the time or times provided for in this Contract are of the essence of this Contract. The Contractor guarantees that he can and will complete the performance of the Work within the time hereinbefore stipulated or within the time as extended in accordance with the clause hereof entitled "Extensions of Time".

2. EXTENSIONS OF TIME.

The time above provided for the completion of any part of the Contract shall be extended (subject, however, to the provisions of this numbered clause) only if in the opinion of the Architect the Contractor is necessarily delayed in completing such part by such time solely and directly by a cause which meets all the following conditions:

1. Such cause is beyond the Contractor's control and arises without his fault;
2. Such cause comes into existence after the opening of Proposals on this Contract and neither was nor could have been anticipated by investigation before such opening.

Variations in temperature and precipitation shall be conclusively deemed to have been anticipated before the opening of such Proposals on this Contract except to the extent that the actual monthly average temperature varies from a temperature and except to the extent that the actual number of days of precipitation (of 0.1 inch or more) per month exceeds a number equal to two plus the normal number of precipitation per month.

In any case, the variations in temperature and precipitation described in the immediately preceding sentence will be cause for an extension of time only if occurring between the actual time of commencement of the Work at the construction site and the time for completion stipulated in the clause hereof entitled "Time for Completion" (or such time as extended as provided for herein). In the case of portions of months the number of days will be pro-rated by the Architect. Temperature and precipitation shall be as recorded by the U.S. Weather Bureau in its publications, including that entitled

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School

"Local Climatological Data with Comparative Data", which is applicable to the area in which the Work is to be performed, and in the case of precipitation, the normal number of days of precipitation (of 0.1 inch or more) per month as abstracted from the aforementioned publications are as follows:

<u>Month</u>	<u>Normal Number of days per month on which precipitation exceeds 0.1"</u>
January	7
February	7
March	8
April	7
May	6
June	6
July	5
August	7
September	6
October	6
November	7
December	7

In any event, even though a cause of delay meets all the above conditions, an extension shall be granted only to the extent that (i) the performance of the Work is actually and necessarily delayed and (ii) the effect of such cause cannot be anticipated and avoided or mitigated by the exercise of all reasonable precautions, efforts and measures (including planning, scheduling and rescheduling), whether before or after the occurrence of the cause of delay, and an extension shall not be granted for a cause of delay which would not have affected the performance of the Contract were it not for the fault of the Contractor is not entitled to an extension of time.

Any reference herein to the Contractor shall be deemed to include subcontractors and materialmen, whether or not in privity of contract with the Contractor, and employees and others performing any part of the Contract and all the foregoing shall be considered as agents of the Contractor.

The period of any extension of time shall be that necessary to make up the time actually lost, subject to the provisions of this numbered clause, and shall be only for the portion of the Contract actually delayed. The Architect may defer all or part of his decision on an extension may be rescinded or shortened if it subsequently is found that delays can be overcome or reduced by the exercise of reasonable precautions, efforts and measures.

As a condition precedent to an extension of time, the Contractor shall give written notice to the Architect within 48 hours after the time when he knows or should know of any cause which might under any circumstances result in delay for which he claims or may claim an extension of time (including those causes which the Owner is responsible for or has knowledge of), specifically stating that an extension is or may be claimed, identifying such cause and describing, as fully as practicable at the time, the nature and expected duration of the delay and its effect on the various portions of the Contract. Since the possible necessity for an extension of time may materially alter the scheduling, plans and other actions of the Owner, and since, with sufficient opportunity, the Owner might if it so elects attempt to mitigate the effect of a delay for which an extension of time might be claimed, and since merely oral notice may cause disputes as to the existence or substance thereof, the giving of written notice as above required shall be of the essence of the Contractor's obligations and failure of the Contractor to give written notice as above required shall be a conclusive waiver of an extension of time. It shall in all cases be presumed that no extension, or further extension, of time is due unless the Contractor shall affirmatively demonstrate to the satisfaction of the Architect that it is. To this end the Contractor shall maintain adequate records supporting any claim for an extension of time, and in the absence of such records, the foregoing presumption shall be deemed conclusive.

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School

3. DELAYS TO CONTRACTOR.

As between the Contractor and the Owner, the Contractor assumes the risk of all suspensions of, or delays in performance of the Contract, regardless of the length thereof, arising from all causes whatsoever, whether or not relating to this Contract, including wrongful actions or omissions of the Owner, its Chief executive officer, agents, employees and contractors, except only to the extent, if any, that compensation or an extension of time may be due as expressly provided for elsewhere in this Contract for such suspension or delays, and, subject only to such exception, the Contractor shall bear the burden of all costs, expenses and liabilities which he may incur in connection with such suspensions or delays, and all such suspensions, delays, costs, expenses and liabilities of any nature whatsoever, whether or not provided for in this contract, shall conclusively be deemed to have been within the contemplation of the parties.

Notwithstanding any provisions of this Contract, whether relating to time of performance or otherwise, the Owner makes no representation or guaranty as to when the construction site or any part thereof will be available for the performance of the Contract or as to whether conditions at the construction site will be such as to permit the Contract to be performed thereon without interruption or by any particular sequence or method or as to whether the performance of the Contract can be completed by the time required under this Contract or by any other time.

Wherever in connection with this Contract it is required, expressly or otherwise, that the Owner shall perform any act relating to the Contract, including making available or furnishing any real property, materials, or other things, no guaranty is made by the Owner as to the time of such performance and the delay of the Owner in fulfilling such requirement shall not result in liability of any kind on the part of the Owner except only to the extent, if any, that an extension of time or compensation may be due as expressly provided for elsewhere in this Contract.

4. CANCELLATION FOR DELAY.

If in the performance of the Contract or any portion of it shall, in the opinion of the Monsignor McClancy Memorial High School, be materially delayed, whether or not through the fault of the Contractor, by any cause which affects the Contractor's ability to perform the Contract without affecting to the same degree the Owner's own ability to perform it, either directly or through others, the Owner shall have the right at any time during the existence of such delay to cancel this Contract as to any portion not yet performed, without prejudice to the rights, liabilities and obligations of the parties under this Contract arising out of portions already performed, provided, however, that such right of cancellation shall not exist if the delay be due to any wrongful act or omission of the Owner. In the event of such cancellation, no allowance shall be made for anticipated profits.

5. LIQUIDATED DAMAGES.

Liquidated damages in the amount of five hundred dollars (\$500.00) per day shall be assessed against the Contractor for every calendar day exceeding the calendar days allowed in Section 00900 - Milestone Schedule or times as extended in accordance with the clause entitled "Extensions of Time" of the Specification.

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School
CHAPTER IV

CONDUCT OF CONTRACT

1A. AUTHORITY OF THE MMMHS

Inasmuch as the public interest requires that the project to which this Contract relates shall be performed in the manner in which the Owner acting through the Monsignor McClancy Memorial High School chief executive officer, deems best, the MMMHS shall have absolute authority to determine what is or is not necessary or proper for or incidental to the portion thereof specified in the clause hereof entitled "General Agreement" and the Contract Drawings and Specifications shall be deemed merely his present determination on this point. In the exercise of his authority, he shall have power to alter the Contract Drawings and Specifications; to require the performance of Work not required of them in their present form, even though of a totally different character from that now required; and to vary, increase and diminish the character, quantity and quality of, or to countermand any Work now or hereafter required. Such variation, increase, diminution or countermanding need not be based on necessity but may be based on convenience.

If at any time it shall be, from the viewpoint of the Owner impractical or undesirable in the judgement of the MMMHS chief executive officer to proceed with or continue the performance of the Contract or any part thereof, whether or not for reasons beyond the control of the Owner, he shall have authority to suspend performance of any part or all of the Contract until such time as he may deem it practicable or desirable to proceed. Moreover, if at any time it shall be, from the viewpoint of the Owner, impracticable or undesirable in the judgement of the MMMHS chief executive officer to proceed with or continue the performance of the Contract or any part thereof for reasons beyond the control of the Owner, he shall have authority to cancel this Contract as to any or all portions not yet performed and as to any materials not yet installed even though delivered. Such cancellation shall be without prejudice to the rights and obligations arising out of portions already performed, but no allowance shall be made for anticipated profits.

1. AUTHORITY OF THE MMMHS REPRESENTATIVE.

To resolve all disputes and to prevent litigation the parties to this Contract authorize John Ciardullo, acting personally, to decide all questions of any nature whatsoever arising out of, under, or in connection with, or in any way related to or on account of, this Contract (including claims in the nature of breach of Contract or fraud or misrepresentation before or subsequent to acceptance of the Contractor's Proposal and Claims of a type which are barred by the provisions of this Contract) and his decision shall be conclusive, final and binding on the parties. His decision may be based on such assistance as he may find desirable. The effect of his decision shall not be impaired or waived by any negotiations or settlement offers in connection with the question decided, whether or not he participated therein himself, or by any prior decision of others, which prior decisions shall be deemed subject to review, or by any termination or cancellation of this Contract.

All such questions shall be submitted in writing by the Contractor to the MMMHS Representative, acting personally, for his decision, together with all evidence and other pertinent information in regard to such questions, in order that a fair and impartial decision may be made. In any action against the Owner relating to any such questions the Contractor must allege his complaint and prove such submission, which shall be a condition precedent to any such action. No evidence or information may be introduced or relied upon in such an action that has not been so presented to the MMMHS Representative personally. Neither the requirements of this paragraph nor the time necessary for compliance therewith, however, shall affect the time when the Contractor's cause of action shall be deemed to have accrued for the purposes of any statute controlling actions against the Owner, and the time of such accrual shall be determined without reference to this paragraph.

In performance of the Contract, the Contractor shall conform to all orders, directions and requirements of the MMMHS Representative and shall perform the Contract to the satisfaction of the MMMHS Representative at such times and places, by such methods and in such manner and sequence as he may require, and the Contract shall at all stages be subject to

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School

his inspection. The MMMHS Representative shall determine the amount, quality, acceptability and fitness of all parts of the Work and shall interpret the Contract Drawings, Specifications and any orders for Extra Work. The Contractor shall employ no equipment, materials, methods or workers to which the MMMHS Representative objects, and shall remove no materials, equipment, or other facilities from the construction site without permission. Upon request, the MMMHS Representative shall confirm in writing any oral order, direction, requirements or determination.

The enumeration herein or in the Specifications of particular instances in which the opinion, judgement, discretion or determination of the MMMHS Representative shall control or in which the Contractor shall be performed to his satisfaction or subject to his inspection, shall not imply that only the matters of a nature similar to those enumerated shall be so governed and performed.

2. NOTICE REQUIREMENTS.

No claim against the Owner shall be made or asserted in any action or proceeding at law or in equity, and the Contractor shall not be entitled to allowance of such claim, unless the Contractor shall have complied with all requirements relating to the giving of written notice of the information with respect to such claim as provided in this numbered clause. The failure of the Contractor to give such written notice and information as to any claim shall be conclusively deemed to be a waiver by the Contractor of such claim, such written notice and information being conditions precedent to such claim. As used herein "claim" shall include any claim arising out of, under or in connection with, or in any way related to or on account of, this Contract (including claims in the nature of breach of Contract or fraud or misrepresentation before or subsequent to acceptance of the Contractor's Proposal and claims of a type which are barred by the provisions of this Contract) for damages, payment or compensation of any nature or for extension of any time for performance of any part of this Contract.

The requirements as to the giving of written notice and information with respect to claims shall be as follows:

1. In the case of any claims for extra work, extension of time for completion, idle salaried workers and equipment, or any other matter for which requirements are set forth elsewhere in this Contract as to notice and information, such requirements shall apply.
2. In the case of all other types of claim, notice shall have been given to the MMMHS Representative, personally, as soon as practicable, and in any case, within 48 hours, after occurrence of the act, omission, or other circumstance upon which the claim is or will be based, stating as fully as practicable at the time all information relating thereto. Such information shall be supplemented with further information as soon as practicable after it becomes or should become known to the Contractor, including daily records showing all costs which the Contractor may be incurring or all other circumstances which will affect any claim to be made, which records shall be submitted to the MMMHS Representative, personally.

The above requirements for notices and information are for the purpose of enabling the Owner to avoid waste of funds by affording it promptly the opportunity to cancel or revise any order, change its plans, mitigate or remedy the effects of circumstances giving rise to a claim or take such other action as may seem desirable and to verify any claimed expense or circumstances as they occur, and the requirements herein for such notice and information are essential to this Contract and are in addition to any notice required by statute with respect to suits against the Owner.

The above referred to notices and information are required whether or not the Owner is aware of the existence of any circumstances which might constitute a basis for a claim and whether or not the MMMHS Representative has indicated it will consider a claim.

No act, omission, or statement of any kind shall be regarded as a waiver of any of the provisions of this numbered clause or may be relied upon as such waiver except only a written statement signed by the chief executive officer of the MMMHS expressly stating that a waiver is intended as to any particular provision of this numbered clause, and more

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School

particularly no discussion, negotiations, considerations, correspondence, or requests for information with respect to a claim by any officer, employee or agent of the Owner shall be construed as a waiver of any provision of this numbered clause or as authority or apparent authority to effect such a waiver.

Since merely oral notice or information may cause disputes as to the existence or substance thereof, and since notice, even if written, to other than the Owner's representative above designated to receive it may not be sufficient to come to the attention of the representative of the Owner with the knowledge and responsibility of dealing with the situation only notice and information complying with the express provisions of this numbered clause shall be deemed to fulfill the Contractor's obligation under this Contract.

3. EXTRA WORK ORDERS.

No Extra Work shall be performed except pursuant to written orders of the MMMHS expressly and unmistakably indicating his intention to treat the Work described therein as Extra Work; and, exclusive of Extra Work expressly authorized by the chief executive officer of the MMMHS, the chief executive officer of the MMMHS shall have authority to order any item of Extra Work, if the cost thereof to the Owner together with the cost of all other Extra Work previously ordered and not expressly authorized as aforesaid will not be in the aggregate in excess of the sum specified in the letter of acceptance of the Contractor's Proposal as the limit on such authority to order extra work; provided, however, that Extra Work in excess of such aggregate amount may be ordered by the MMMHS as above provided to the extent expressly authorized in a writing signed by the MMMHS indicating the approval of funds for the Extra Work is available and approved by the MMMHS.

In the absence of such an order signed by the MMMHS, if the MMMHS Representative shall direct, order or require any Work whether orally or in writing, which the Contractor deems to be Extra Work, the Contractor shall nevertheless comply therewith, but shall within 24 hours give written notice thereof to the MMMHS and MMMHS Representative, stating why he deemed it to be Extra Work, and shall moreover furnish to the MMMHS Representative time slips and memoranda as required by the clause hereof entitled "Compensation for Extra Work". Said notice, time slips and memoranda are for the purpose of affording to the MMMHS an opportunity to verify the Contractor's claim at the time and (if he desires so to do) to cancel promptly such order, direction or requirement of the MMMHS Representative, of affording the MMMHS Representative an opportunity of keeping an accurate record of the materials, labor and other items involved, and generally of affording to the Owner an opportunity to take such action as it may deem desirable in light of the Contractor's claims. Accordingly, the failure of the Contractor to serve such notice or to furnish such time slips and memoranda shall be deemed to be a conclusive and binding determination on his part that the direction, order or requirement of the MMMHS Representative does not involve the performance of Extra Work, and shall be deemed to be a waiver by the Contractor of all claims for additional compensation or damages by reason thereof, such written notice, time slips and memoranda being a condition precedent to such claims.

4. PERFORMANCE OF EXTRA WORK.

The provisions of this Form of Contract relating generally to Work and its performance shall apply without exception to any Extra Work required and to the performance thereof. Moreover, the provisions of the Specifications relating generally to the Work and its performance shall also apply to any Extra Work required and to the performance thereof, except to the extent that a written order in connection with any particular item of Extra Work may expressly provide otherwise.

5. TITLE TO MATERIALS

All materials to become part of the permanent construction shall be and become the property of the Owner upon delivery at the construction site or upon being especially adapted for use in or as a part of the permanent construction, whichever may first occur, subject however to the Contractor's assumption of risk under the clause hereof entitled "Risks Assumed by Contractor", subparagraph (a).

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School

The Contractor shall promptly furnish to the Owner such bills of sale and other instruments as may be required by it, properly executed, acknowledged and delivered, assuring to it title to such materials, free of encumbrances and shall mark or otherwise identify all such materials as the property of the Owner.

6. ASSIGNMENTS AND SUBCONTRACTS.

Any assignment or other transfer by the Contractor of this Contract or any part hereof or of any of his rights hereunder or of any monies due or to become due hereunder and any delegation of any of his duties hereunder without express consent in writing of the Owner shall be void and of no effect as to the Owner, provided, however, that the Contractor may subcontract portions of the Work to such persons as the MMMHS Representative may, from time to time, expressly approve in writing. For each individual, partnership or corporation proposed by the Contractor as a subcontractor, the Contractor shall submit to the Owner a certification or, if a certification cannot be made, a statement by such a person, partnership or corporation to the same effect as a certification or statement required from the Contractor pursuant to the clauses of the "Information For Bidders" entitled "Certification of No Indictment, Conviction, Suspension, Debarment or Termination" and "Non-Collusive Bidding and Code of Ethics Certification; Certification of No Solicitation Based on Commission, Percentage, Brokerage, Contingent Fee or Other Fee". All further subcontracting by any subcontractor shall also be subject to such approval of the MMMHS Representative. Approval of a subcontractor may be conditioned on (among other things) the furnishing, without cost to the Owner, of a surety bond guaranteeing payment by the subcontractors of claims of materialmen, subcontractors, workmen and other third persons arising out of the subcontractor's performance of any part of the Work.

No consent to any assignment or other transfer, and no approval of any subcontractor, shall under any circumstances operate to relieve the Contractor of any of his obligations; no subcontract, no approval of any subcontractor and no act or omission of the Owner or the MMMHS Representative shall create any rights in favor of such subcontractor and against the Owner; and as between the Owner and the Contractor, all assignees, subcontractors, and other transferees shall for all purposes be deemed to be agents of the Contractor. Moreover, all subcontracts and all approvals of subcontractors shall be and, regardless of their form, shall be deemed to be conditioned upon performance by the subcontractor in accordance with this Contract; and if any subcontractor shall fail to perform the Contract to the satisfaction of the MMMHS Representative, the MMMHS Representative shall have the absolute right to rescind his approval forthwith and to require the performance of the Contract by the Contractor personally or through other approved subcontractors.

7. CLAIMS OF THIRD PERSONS.

The Contractor undertakes to pay all claims lawfully made against him by subcontractor, materialmen and workmen, and all claims lawfully made against him by other third persons arising out of or in connection with or because of the performance of this Contract and to Cause all subcontractors to pay all such claims lawfully made against them.

8. CERTIFICATES OF PARTIAL COMPLETION.

If at any time prior to the rendition of the Certificate of Final Completion, any portion of the permanent construction has been satisfactorily completed, and if in the judgement of the MMMHS Representative such portion of the permanent construction is not necessary for the operations of the Contractor but will be immediately useful to and is needed by the Owner for other purposes, the MMMHS Representative may render to the Owner and to the Contractor a certificate in writing to that effect (herein called a Certificate of Partial Completion), and thereupon or at any time thereafter the Owner may take over and use the portion of the permanent construction described in such Certificate and exclude the Contractor therefrom.

The rendition of a Certificate of Partial Completion shall not be construed to constitute an extension of the Contractor's time to complete the portion of the permanent construction to which it relates in the event that he has failed to complete the same in accordance with the terms of this Contract. Moreover, the acceptance of a Certificate of Partial Completion

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School

by the Owner shall not operate to release the Contractor or his sureties from any obligations under or upon this Contract or the Performance and Payment Bond.

9. CERTIFICATE OF FINAL COMPLETION.

After the satisfactory completion of all Work whatsoever required and the making of such tests and inspections as may be necessary or desirable, the Architect shall render to the Owner and to the Contractor a certificate in writing (herein called the Certificate of Final Completion) certifying that in his opinion all work under this Contract, including Extra Work, has been completed in accordance with the Contract Drawings and Specifications and the requirements of the Architect, and certifying the date as of which it was so completed.

The rendition of the Certificate of final completion shall not be construed to constitute an extension of the Contractor's time for performance in the event that he has failed to complete the Work in accordance with the terms of this Contract. Moreover, the acceptance of the Certificate of Final Completion by the Owner shall not operate to release the Contractor or his sureties from any obligations under or upon this Contract or the Performance and Payment Bond.

10. AFFIRMATIVE ACTION PROGRAMS.

The Contractor assures that it will undertake an affirmative action program as required by 14 CRF Part 152, Subpart E, to insure that no person shall on the grounds of race, creed, color, national origin, or sex be excluded from participating in any employment activities covered in 14 CRF Part 152, Subpart E. The Contractor assures that no person shall be excluded on these grounds from participating in or receiving the services or benefits of any program or activity covered by this Subpart. The Contractor assures that it will require that its covered sub-organizations provide assurances to the Contractor that they will undertake affirmative action programs and that they will require assurances from their sub-organizations, as required by 14 CRF Part 152, Subpart E, to the same effect.

11. PREVAILING RATE OF WAGE.

The Contractor shall pay or provide (and shall cause all subcontractors to pay or provide) to his or their workmen, laborers and mechanics (who are employed by him or them to work on an hourly or daily basis at any trade or occupation at or about the construction site) at least the prevailing rate of Wage and supplements for others engaged in the same trade or occupation in the minimum Federal Wage Rates.

The provision of this numbered clause are inserted in this Contract for the benefit of such workmen, laborers and mechanics as well as for the benefit of the Owner; and if the Contractor or any subcontractor shall pay or provide any such workmen, laborer or mechanic less than the rates of wages and supplements above described, such workman, laborer or mechanic shall have a direct right of action against the Contractor or such subcontractor for the difference between the wages and supplements actually paid or provided and those to which he is entitled under this clause. If such workmen, laborer or mechanic is employed by any subcontractor whose subcontract does not contain a provision substantially similar to the provisions of this clause (requiring the payment or provision of at least the above minimum, and providing for a cause of action in the event of the subcontractor's failure to pay or provide such wages and supplements) such workman, laborer or mechanic shall have a direct right of action against the Contractor. The Owner shall not be a necessary party to any action brought by the any workman, laborer or mechanic to obtain a money judgement against the Contractor or any subcontractor pursuant to this numbered clause.

Nothing herein contained shall be construed to prevent the Contractor or any subcontractor from paying higher rates of wages or providing higher supplements than the minimum hereinbefore prescribed; and nothing herein contained shall be construed to constitute a representation or guarantee that the Contractor or any subcontractor can obtain workmen, laborers and mechanics for the minimum hereinbefore prescribed.

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School

12. MINIMUM WAGE RATES.

At the direction of the Federal Aviation Administration, the attention of bidders is directed particularly to the Schedule of Minimum Wage Rates attached to the Contract and made a part hereof.

The minimum wage rates as established by the Secretary of Labor are subject to change at any time before the award of the Contract except that if the change is made within 30 days after the bids are opened, or ninety days after the date of the wage decisions, whichever is earlier, the change is not effective. Such a change is necessary in order to comply with a decision of the U.S. Department of Labor.

13. EQUAL EMPLOYMENT OPPORTUNITY

During the performance of this Contract, the Contractor agrees as follows:

- (a) The Contractor will not discriminate against any employee or applicant for employment because of race, creed, sex, color or national origin, and will take affirmative action to insure that they are afforded equal employment opportunities without discrimination because of race, creed, sex, color or national origin. Such action shall be taken with reference, but not be limited to: recruitment, employment, job assignment, promotion, upgrading, demotion, transfer, layoff, or termination, rates of pay or other forms of compensation, and selection for training or retraining, including apprenticeship and on-the-job training.
- (b) The Contractor shall send to each labor union or representative of workers with which he has or is bound by a collective bargaining or other agreement or understanding, a notice, to be provided by the State Commission for Human Rights, advising such labor union or representative of the Contractor's agreement under clauses (a) through (h) (hereinafter called "non-discrimination clauses"). If the Contractor was directed to do so by the Owner as part of the bid or negotiation of the Contract, the Contractor shall request such labor union or representative to furnish him with a written statement that such labor union or representative will not discriminate because of race, creed, sex, color or national origin and that such labor union or representative either will affirmatively cooperate, within the limits of its legal and contractual authority, in the implementation of the policy and provisions of these non-discrimination clauses or that it consents and agrees that recruitment, employment, and the terms and conditions of employment under this Contract, shall be in accordance with the purposes and provisions of these non-discrimination clauses. If such labor union or representative fails or refuses to comply with such a request that it furnish such a statement, the Contractor shall promptly notify the State Commission on Human Rights of such failure or refusal.
- (c) The Contractor shall post and keep posted in conspicuous places, available to employees and applicants for employment, notices to be provided by the State Commission for Human Rights setting forth the substance of the provisions of clauses (a) and (b) and such provisions of the States laws against discrimination as the State Commission for Human Rights shall determine.
- (d) The Contractor shall state, in all solicitations or advertisements for employees placed by or on behalf of the Contractor, that all qualified applicants will be afforded equal employment opportunities without discrimination because of race, creed, sex, color or national origin.
- (e) The Contractor shall comply with the provisions of Sections 291-299 of the Executive law and Civil Rights Law, shall furnish all information and reports deemed necessary by the State Commission for Human Rights under these non-discrimination clauses and such sections of the Executive law, and shall permit access to his books, records and accounts by the State Commission For Human Rights,

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School

the Attorney General and the Industrial Commissioner for the purposes of investigation to ascertain compliance with these non-discrimination clauses and such sections of the Executive Law and Civil Rights Law.

- (f) This Contract may be forthwith canceled, terminated or suspended, in whole or in part, by the Owner upon the basis of a finding made by the State Commission for Human Rights that the Contractor has not complied with these non-discrimination clauses, and the Contractor may be declared ineligible for future contracts made by or on behalf of the State, the Port Authority, or other public authority or agency of the State, as well as the Owner, until he has satisfied the State Commission for Human Rights that he has established and is carrying out a program in conformity with the provisions of these non-discrimination clauses. Such finding shall be made by the State Commission for Human Rights after conciliation efforts by the Commission have failed to achieve compliance with these non-discrimination clauses and after a verified complaint has been filed with the Commission, notice thereof has been given to the Contractor by the Commission and an opportunity has been afforded him to be heard publicly before the State Commissioner of Human Rights or his designed. Such Sanctions may be imposed and remedies invoked independently of or in addition to sanctions and remedies otherwise provided by law.
- (g) The Contractor shall include the provision of clauses (a) through (f) in every subcontract or purchase order in such a manner that such provisions will be binding upon each subcontractor or vendor as to operations to be performed within the State of New York. The Contractor shall take such action in enforcing such provisions of such subcontract or purchase order as the Owner may direct including sanctions or remedies for non-compliance. If the Contractor becomes involved in or is threatened with litigation with a subcontractor or vendor as a result of such direction of the Owner, the Contractor shall promptly notify the chief executive officer of the Owner, requesting him to intervene and protect the interests of the Owner.
- (h) The provisions of this numbered clause which refer to the "State Commission for Human Rights", the "Attorney General" and the "Industrial Commissioner" are inserted in this Contract for illustrative purposes only, for the benefit of the Owner, the Contractor shall substitute the applicable State of New York commissions and authorities who shall have a direct right of action against the Contractor to effectuate the intent of this clause.

Asbestos Removal - Monsignor McClancy Memorial High School
CHAPTER V

WARRANTIES MADE AND LIABILITY ASSUMED
BY THE CONTRACTOR

1. CONTRACTOR'S WARRANTIES.

The Contractor represents and warrants:

- (a) That he is financially solvent, that he is licensed by the State of New York, experienced in and competent to perform the type of services contemplated by this Contract, that the facts stated or shown in any papers submitted or referred to in connection with his Proposal are true, and if the Contractor be a corporation, that it is authorized to perform this Contract;
- (b) That he has carefully examined and analyzed the provisions and requirements of this Contract and inspected the construction site, that from his own investigations he has satisfied himself as to the nature of all things needed for the performance of this Contract, the general and local conditions and all other matters which in any way affect this Contract or its performance, and that the time available to him for such examination, analysis, inspection and investigations was adequate;
- (c) That the Contract is feasible of performance in accordance with all its provisions and requirements and that he can and will perform it in strict accordance with such provisions and requirements;
- (d) That no officer, agent, consultant or employee of the Owner is personally interested directly or indirectly in this Contract or the compensation to be paid hereunder;
- (e) That, except only for those representations, statements or promises expressly contained in this Contract, no representation, statement or promise, oral or in writing, of any kind whatsoever by the Owner, its officers, agents, employees or consultants has induced the Contractor to enter into this Contract or has been relied upon by the Contractor, including any with reference to: (1) the meaning, correctness, suitability, or completeness of any provisions or requirements of this Contract; (2) the nature, existence or location of materials, structures, obstructions, utilities or conditions, surface or subsurface, which may be encountered at the construction site; (3) the nature, quantity, quality or size of the materials, equipment, labor and other facilities needed for the performance of this Contract; (4) the general or local conditions which may in any way affect this Contract or its performance; (5) the price of the Contract; or (6) any other matters, whether similar to or different from those referred to in (1) through (5) immediately above, affecting or having any connection with this Contract, the bidding thereon, any discussions thereof, the performance thereof or those employed therein or connected or concerned therewith; and

Moreover, the Contractor accepts the conditions at the Construction site as they may eventually be found to exist and warrants and represents that he can and will perform the Contract under such conditions and that all materials, equipment, labor and other facilities required because of any unforeseen conditions (physical or otherwise) shall be wholly at his own cost and expense, anything in this Contract to the contrary notwithstanding.

Nothing in the Contract Drawings or Specifications or any other part of the Contract is intended as or shall constitute a representation by the Owner as to the feasibility of performance of this Contractor any part thereof. Moreover, the Owner does not warrant or represent either by issuance of the Contract Drawings and Specifications or by any provision of this Contract as to time for performance or completion or otherwise that the Contract may be performed or completed by the times required herein or by any other times.

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School

The Contractor further represents and warrants that he was given ample opportunity and time and by means of this paragraph was requested by the Owner to review thoroughly all documents forming this Contract prior to opening of Proposals on this Contract in order that he might request inclusion in this Contract of any statement, representation, promise or provision which he desired or on which he wished to place reliance; that he did so review said documents, that either every such statement, representation, promise or provision has been included in this Contract or else, if omitted, that he expressly relinquishes the benefit of any such omitted statement, representation, promise or provision and is willing to perform this Contract without claiming reliance thereon or making any other claim on account of such omission.

The Contractor further recognizes that the provisions of this numbered clause (though not only such provisions) are essential to the Owner consent to enter into this Contract and without such provisions, the Owner would not have entered into this Contract.

2. RISKS ASSUMED BY THE CONTRACTOR.

The Contractor assumes the following distinct and several risks, whether they arise from acts or omissions (whether negligent or not) of the Contractor, the Owner, or of third persons, or from any other cause, and whether such risks are within or beyond the control of the Contractor, excepting only risks which arise solely from affirmative acts done by the Owner subsequent to the opening of Proposals on this Contract with actual and wilful intent to cause the loss, damage and injuries described in subparagraphs (a) through (c) below:

- (a) The risk of loss or damage to the permanent construction prior to the rendition of the Certificate of Final Completion (other than loss or damage to the portions of the permanent construction with respect to which Certificates of Partial Completion have been issued), and the Contractor shall forthwith repair, replace and make good any such loss or damage to the permanent construction without cost to the Owner;
- (b) The risk of claims, fines or penalties, just or unjust, made by third persons or assessed by courts or governmental agencies or entities against the Contractor or the Owner on account injuries (including wrongful death), loss, damage or liability of any kind whatsoever arising or alleged to arise out of or in connection with the performance of the Work (whether or not actually caused by or resulting from the performance of the Work) or out of or in connection with the Contractor's operations or presence at or in the vicinity of the construction site or Owner premises, including claims against the Contractor or the Owner for the payment of workers' compensation, whether such claims, fines or penalties are made or assessed and whether such injuries, damage, loss and liability are sustained at any time both before and after the rendition of the Certificate of Final Completion;
- (c) The risk of loss or damage to any property of the Contractor, and of any claims made against the Contractor or the Owner for loss or damage to any property of subcontractors, materialmen, workmen and others performing the Work, occurring at any time prior to completion of removal of such property from the construction site or Owner premises or the vicinity thereof.

The Contractor shall indemnify the Owner against all claims described in sub-paragraphs (b) and (c) above and for all expense incurred by it in the defense, settlement or satisfaction thereof, including expenses of attorneys, except where indemnity would be precluded by New York State Laws, or any other applicable law. Unless a claim is one which the Contractor is not required to indemnify the Owner against as described in the first sentence of this paragraph, such defense shall be at the Contractor's cost.

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School

The provisions of this numbered clause shall also be for the benefit of the MMMHS's, officers, agents, employees and consultants of the Owner so that they shall have all the rights that they would have under this numbered clause if they were named at each place above at which the Owner is named, including a direct right of action against the Contractor to enforce the foregoing indemnity, except, however, that the Owner may at any time in its sole discretion and without liability on its part cancel the benefit conferred on any of them by this numbered clause, whether or not the occasion for invoking such benefit has already arisen at the time of such cancellation.

Neither the issuance of a Certificate of Completion nor the making of Final Payment shall release the Contractor from his obligations under this numbered clause. Moreover, neither the enumeration in this numbered clause nor the enumeration elsewhere in this Contract of particular risks assumed by the Contractor or of particular claims for which he is responsible shall be deemed (a) to limit the effect of the provisions of this numbered clause or of any other clause of this Contract relating to such risks or claims, (b) to imply that he assumes or is responsible for risks or claims only of the type enumerated in this clause or in any other clause of this Contract, or (c) to limit the risks which he would assume or the claims for which he would be responsible in the absence of such enumerations.

3. NO THIRD PARTY RIGHTS.

Nothing contained in this Contract is intended for the benefit of third persons, except to the extent that the Contract specifically provides otherwise by the use of the words "Benefit" or "direct right of action".

CHAPTER VI

RIGHTS AND REMEDIES

1. RIGHTS AND REMEDIES OF THE OWNER.

The Owner shall have the following rights in the event the chief executive officer shall deem the Contractor guilty of a breach of any term whatsoever of this Contract

- (a) The right to take over and complete the Work or any part thereof as agent for and at the expense of the Contractor, either directly or through other contractors.
- (b) The right to cancel this Contract as to any or all of the Work yet to be performed.
- (c) The right to specific performance, an injunction or any other appropriate remedy.
- (d) The right to money damages.

For the purpose of this Contract, breach shall include but not be limited to the following, whether or not the time has yet arrived for performance of an obligation under this Contract: a statement by the Contractor to any representative of the Owner indicating that he cannot or will not perform any one or more of his obligations under this Contract; any act or omission of the Contractor or any other occurrence which makes it improbable at the time that he will be able to perform any one or more of his obligations under this Contract; any suspension of or failure to proceed with any part of the Work by the Contractor which makes it improbable at the time that he will be able to perform any one or more of his obligations under this Contract.

Inasmuch as this Contract is made in reliance upon the Contractor's personal qualifications, the Owner shall also have the rights set forth above in the event the Contractor shall become insolvent or bankrupt or if his affairs are placed in the hands of a receiver, trustee or assignee for the benefit of creditors.

The enumeration in this numbered clause or elsewhere in this Contract of specific rights and remedies of the Owner shall not be deemed to limit any other rights or remedies which the Owner would have in the absence of such enumeration; and no exercise by the Owner of any right or remedy shall operate as a waiver of any other of its rights or remedies not inconsistent therewith or to estop it from exercising such other rights or remedies.

2. RIGHTS AND REMEDIES OF THE CONTRACTOR.

Inasmuch as the Contractor can be adequately compensated by money damages for any breach of this Contract which may be committed by the Owner, the Contractor expressly agrees that no default, act or omission of the Owner shall constitute a material breach of this Contract, entitling him to cancel or rescind it or (unless the MMMHS Representative shall so direct) to suspend or abandon performance.

3. PERFORMANCE OF WORK AS AGENT FOR CONTRACTOR.

In the exercise of its right to take over and complete Work as agent for the Contractor, for which provision is made in the clause hereof entitled "Rights and Remedies of Owner, the Owner shall have the right to take possession of and use or permit the use of any and all plant, materials, equipment and other facilities provided by the Contractor for the purpose of the Work and the Contractor shall not remove any of the same from the site of the Work without express permission. Unless expressly directed to discontinue the performance of all Work, the Contractor shall continue to perform the remainder thereof in such manner as in no way will hinder or interfere with the portions taken over by the Owner.

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School

In the certificate of total compensation earned, for which provision is made in the clause hereof entitled "Final Payment", the MMMHS Representative shall separately state the amount of Work performed by the Owner as agent for the Contractor, shall credit the Owner the cost thereof, and shall credit to the Contractor the compensation earned thereby; and the difference between them shall be payable by the Contractor to the Owner, or vice versa as the case may be. If such difference is in its favor, the Owner may deduct it from the monies due the Contractor, and if such monies be insufficient, the balance thereof shall be payable to it on demand; if in the Contractor's favor, it shall be constitute part of the Final Payment.

The exercise by the Owner of its right to take over the work shall not release the Contractor or his sureties from any of his or their obligations or liabilities under this Contract or the Performance or Payment Bond.

4. NO ESTOPPEL OR WAIVER.

The Owner shall not be precluded or estopped by an acceptance, certificate or payment, final or otherwise, issued or made under this Contract or otherwise issued or made by it, the Architect, or any officer, agent or employee of the Owner, from showing at any time the true amount and character of Work performed, or from showing that any such acceptance, certificate or payment is incorrect or was improperly issued or made; and the Owner shall not be precluded or estopped notwithstanding any such acceptance, certificate or payment, from recovering from the Contractor any damages which it may sustain by reason of any failure on its part to comply strictly with this Contract, and any monies which may be paid to him or for his account in excess of those to which he is lawfully entitled.

Neither the acceptance of the Work or any part thereof, nor any payment therefor, nor any order or certificate issued under this Contract or otherwise issued by the Owner, the Architect, or any officer, agent, or employee of the Owner nor any permission or direction to continue with the performance of the Work, nor any performance by the Owner of any of the Contractor's duties or obligations, nor any aid lent to the Contractor by the Owner in his performance of such duties or obligations, nor any other thing done or omitted to be done by the Owner in his performance of such duties or obligations, nor any other thing done or omitted to be done by the MMMHS, its officers, agents, or employees shall be deemed to be a waiver of any provision of this Contract or of any rights or remedies to which the Owner may be entitled because of any breach thereof, excepting only a resolution of its Officer's, providing expressly for such waiver. No cancellation rescission or annulment hereof, in whole or as to any part of the Work, because of any breach hereof, shall be deemed a waiver of any damages to which the Owner may be entitled because of such breach. Moreover, no waiver by the Owner of any breach of this Contract shall be deemed to be a waiver of any other or any subsequent breach.

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School

CHAPTER VII

MISCELLANEOUS

1. PROVISIONS OF LAW DEEMED INSERTED.

Each and every provision of law and clause required by law to be inserted in this Contract shall be deemed to be inserted herein and the Contract shall be read and enforced as though it were included therein, and if through mistake or otherwise any such provision is not inserted, or is not correctly inserted, then upon application of either party, the Contract shall forthwith be physically amended to make such insertion.

2. INVALID CLAUSES.

If any provision of this Contract shall be such as to destroy its mutuality or to render it invalid or illegal, then, if it shall not appear to have been so material that without it the Contract would not have been made by the parties, it shall not be deemed to form part thereof but the balance of the Contract shall remain in full force and effect.

3. NON-LIABILITY OF THE OWNER REPRESENTATIVES.

Neither the MMMHS nor any officer, representative, agent, or employee thereof shall be charged personally by the Contractor with any liability or held liable to him under any term or provision of this Contract, or because of its execution or attempted execution, or because of any breach hereof.

4. SERVICE OF NOTICES ON THE CONTRACTOR.

Whenever provision is made in this Contract for the giving of any notice to the Contractor, its deposit in any post office or post office box, enclosed in a postpaid wrapper addressed to the Contractor at his office, or its delivery to his office, shall be sufficient service thereof as of the date of such deposit or delivery. Until further notice to the Owner the Contractor's office will be that stated in his Proposal. Notices may also be served personally upon the Contractor; or if a corporation, upon any officer, director, or managing or general agent; or if a partnership upon any partner.

5. MODIFICATION OF CONTRACT.

No change in or modification, termination or discharge of this Contract, in any form whatsoever, shall be valid or enforceable unless it is in writing and signed by the party to be changed therewith or his duly authorized representative, provided, however, that any change in or modification, termination or discharge of this Contract expressly provided for in this Contract shall be effective as so provided.

The authority of any person to order Extra Work or to alter the Contract Drawings and Specifications does not include the power cancel, modify or waive any provision of the Form of Contract.

6. TAX EXEMPTION.

A. The MMMHS is exempt from payment of state, local taxes, and sales and compensating use taxes of the State of New York and of cities and counties on all materials and supplies incorporated into completed Work. These taxes are not to be included in bids. This exception does not apply to tools, machinery, equipment or other property leased by or to the Contractor or to supplies and materials which, even though they are consumed, are not incorporated into the completed Work, and the Contractor and Subcontractors shall be responsible for and pay any and all applicable taxes, including sales and compensation use taxes, on said leased tools, machinery equipment or other property and upon all said unincorporated supplies and materials.

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School

B. The Contractor shall obtain any and all necessary certificates or other documentation from the appropriate governmental agency or agencies, and use said certificates or other documentation as required by law, rule or regulation.

7. INSURANCE

A. The insurance required shall be written on a per occurrence basis with a company licensed to do business in the State of New York and otherwise acceptable to the MMMHS for not less than the limits of liability set forth below, and shall include contractual liability endorsements and business interruption insurance. All policies of insurance shall be submitted to the MMMHS, for approval prior to the start of any work.

B. Contractor and its subcontractors for work on this project shall obtain and carry the following insurance:

1. **Workers Compensation:**
Statutory Employer's Liability: \$500,000.
2. **Comprehensive General Liability Insurance:**
including contractual liability endorsement and claims for damages because of bodily injury including personal injury, sickness or disease, or death of any of the Contractor's or Subcontractor's employees or any other person and specifically covering all claims. Bodily and Personal Injury: \$1,000,000 Per Occurrence.
3. **Automobile Insurance:** covering all contractor's and employees vehicles on site and off site on company business in the amount of 1,000,000 per occurrence.
4. **Excess Umbrella Liability Insurance:** covering all of the foregoing in the amount of \$5,000,000.

C. Contractor shall furnish original or duplicate original policies of insurance to the MMMHS and one copy of insurance certificates for each policy required herein to the MMMHS and any additional insured; specifically set forth evidence of all coverage required to the satisfaction of the MMMHS; and furnish to the MMMHS and all additional insured copies of any endorsements that are subsequently issued. The Monsignor McClancy Memorial High School, shall be additional insured as well as the Architect and the PA/FAA by the endorsements of Contractor's public liability, property damage and automobile liability insurance policies.

D. All insurance required hereby shall be written, without the inclusion of any defense costs within the limits of liability, without deductible, and shall name the MMMHS its officers, principals, partners agents, officers and employees, the Architect, Engineers, and any additional person or entity having an interest in the site as an additional insured thereunder. If by the terms of an insurance coverage required hereunder, a mandatory deductible is required, in the event of a paid claim, Contractor shall be responsible for the deductible amount.

E. Contractor shall bear and be liable for all loss or damage which may happen to said Work or materials at any time prior to the to the completion and acceptance by the MMMHS except for loss or damage caused by the negligence of the MMMHS. The responsibility of Contractor for damage to the Work caused by vandalism shall cease on the date of final completion. Contractor shall and will during the progress of the Work protect and secure said Work from damage and injury, and shall and will repair all such damage and injury, if any, and fully complete and deliver said Work and materials to the MMMHS within the time herein provided and according to the terms and provisions of this contract.

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School

F. Contractor shall ensure that all Subcontractors comply with the insurance provisions provided herein for Contractor. Contractor shall be responsible to determine and enforce extent of insurance required of its Subcontractors.

G. Contractor shall maintain insurance that will include coverage for Builder's Risk as well as all insurance required by law to maintain including but not limited to Automobile Liability, Worker's Compensation and Disability Insurance.

H. Contractor shall by its actions or inactions cause any insurance policies to be canceled or permit them to lapse prior to the issuance of the final Certificate of Completion for the Work at the last Project, and all insurance policies shall include clauses to the effect that

1. the policy shall not be canceled, changed or non-renewed or coverage thereunder reduced until (30) thirty days after the MMMHS and all additional insured have received written notice thereof. Written notice shall be sent by registered mail to Contractor and the MMMHS
2. the act or omission of the named insured or additional insured will not invalidate the policy as to the other additional insured, and
3. such insurance shall be primary and non-contributory.

I. Compliance with the foregoing requirements as to insurance shall not relieve Contractor for liability set forth in other provisions of this contract.

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School
CHAPTER VIII

SPECIAL PROVISIONS

1. CONSTRUCTION REQUIRED BY THE SPECIFICATIONS.

These Specifications relate generally to furnishing and installing noise suppression materials including but not limited to windows, glazing, insulation, weather stripping, trim, and accessories required or necessary for a complete installation, as well as all the necessary ventilating equipment, pipe, ducts, duct insulation, gypsum board components or accessories indicated for the Noise Abatement Work at Monsignor McClancy Memorial High School in East Elmhurst, New York.

These Specifications require the doing of all things necessary or proper for or incidental to the matter referred to in the immediately preceding paragraph, as shown on the Contract Drawings in their present form. In addition, all things shown on the Contract Drawings even though not expressly mentioned in these Specifications, all things mentioned in these Specifications even though not shown on the Contract Drawings, and all things not specified either on the Contract Drawings, or in the Specifications but involved in the carrying out of their intent and in complete and proper execution of the matter referred to in the immediately preceding paragraph are required by these Specifications; and the Contractor shall perform the same as though they were specifically delineated, described and mentioned.

In case of a conflict between a requirement contained in the Specifications and a requirement of the Contract Drawings, the MMMHS Representative shall be the sole arbiter of the requirements of the Contract which shall control.

Some Sections of the Specifications make cross references to construction specified in other Sections of the Specifications, including cross references intended to avoid duplication by the bidders in quoting prices and to point out some of the necessity for coordination. Such cross references are not intended to be complete or all inclusive, and the Contractor shall ascertain for himself both the nature and extent of all construction which may be related to that under each Section of the Specifications whether or not expressly referred to.

Some Sections of the Specifications contain a general description of the construction under such Sections. Such description is merely a very general one and is not intended to outline the construction required by the Specifications and Contract Drawings. Accordingly, such description shall be construed as in aid of and supplemental to, but in no case limiting, impairing or decreasing, the requirements elsewhere set forth with respect to the construction to be performed.

The Contractor's compensation for all construction whatsoever referred to in the Specifications and Contract Drawings in their present form, even though the need for certain items of such construction may be contingent upon future occurrences or determinations or upon other circumstances, shall be deemed to be included in the Lump Sum contained in the Form of Contract unless the Specifications or Contract Drawings expressly state that compensation in addition to such price shall be payable for such items of construction. The express statement in some cases to the effect that certain construction shall be without additional cost to the MMMHS not impair the application of this paragraph in other cases.

The distribution of various parts of the construction among the Divisions and Sections of the Specifications or among the Contract Drawings is not intended as a representation of the most effective or logical method of organizing, scheduling or subcontracting the construction, and the Contractor shall ascertain for himself how to do so unless expressly prescribed in this Contract.

In all cases the provisions of the second paragraph of this numbered Section shall control.

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School

2. AVAILABLE PROPERTY.

Subject to the conditions elsewhere herein, those areas to be occupied by the permanent construction will be made available to the Contractor upon the commencement of his first operations at the construction site, together with the areas indicated on Contract Drawings.

The Contractor shall daily clean up the areas made available to him so that they are free at all times of refuse, rubbish, scrap material or debris.

3. OPERATIONS OF OTHERS.

During the time that the Contractor is performing the Contract, other persons will be engaged in other operations on or about the construction site including operations of the MMMHS, as well as vehicular traffic and pedestrians around the perimeter of the school, all of which shall remain uninterrupted.

The Contractor shall so plan and conduct his operations as to work in harmony with others engaged at the construction site and not to delay, endanger or interfere with the operations of others (whether or not specifically mentioned above), all to the best interests of Monsignor McClancy Memorial High School, the MMMHS, and the public and as may be directed by the MMMHS Representative.

4. CONTRACTOR'S MEETINGS.

The Contractor shall conduct job progress and coordination meetings with subcontractors in his field office every two weeks, or frequently as job conditions require or the MMMHS Representative may request. The MMMHS Representative shall be notified and, at his option, may attend these meetings. The Contractor shall prepare and distribute minutes to the MMMHS Representative and the subcontractors within forty-eight (48) hours of the day following the meetings.

The Contractor shall attend separate job progress and coordination meetings with the MMMHS Representative every two weeks, or at times otherwise requested by the MMMHS Representative.

5. DELIVERY OF MATERIALS AND RUBBISH REMOVALS.

Delivery of materials and removal of materials or rubbish from the school building shall be made during the hours of 2:30 p.m. to 5:00 p.m. and only through the locations specified below, except as otherwise permitted by the MMMHS Representative.

6. ORDER OF WORK

Work in storerooms, mechanical spaces, and other such spaces not occupied by students or faculty during the hours of Work specified elsewhere, and not limited to restrictions specified in the Order of Work, shall be accomplished at the earliest possible date consistent with the normal progress of the Work.

The Contractor shall take into consideration the fact that the sessions of the school must be continued as usual during progress of the Work. All construction operations affecting normal school operations shall be coordinated with the MMMHS Representative.

The Contractor is responsible for all damage to the existing buildings and adjacent property due to his operations and shall provide and maintain adequate protection against such damage.

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School

The premises shall not be used as a work shop to the detriment of the portion thereof.

Desks, tables, benches and other furniture and equipment shall not be used as workbenches; neither shall materials and furniture be piled thereon without proper protection.

Provide decking on floors, steps, platforms, pavements and roofs where subject to damage from heavy traffic.
Protect doors and door jambs when conveying rubbish and materials.

The Contractor is responsible for all injury to persons due to his operations and shall provide and maintain adequate protection against such injury.

Provide guards, rails, barricades, fences, sidewalk sheds, catch platforms, decking, night lighting and other devices as required by B.O.C.A. Building Code and OSHA as further required to provide adequate protection.

Protect sidewalks and curbs around the premises so that they may be safely used by the public at all times.

Provide barricades around Work areas as required to prevent students and other unauthorized persons from entering therein.

Exterior openings in the buildings' envelopes relating to the Work shall not be left unprotected. The Contractor shall construct weatherproof barriers to prevent infiltration of water and illegal entry.

When the moving of furniture, shades, clocks, pictures, maps, plaster casts and other articles or fixtures is made necessary in the performance of the Work the removing, resetting and relocating together with the necessary repairing, shall be carefully done as a part of the Work of this contract. All removed work shall be protected.

There shall be no interruptions to normal building services during the occupancy of the building by students or faculty, unless otherwise permitted by the High School Principal.

7. CONDITIONS AND PRECAUTIONS.

No vehicles of the Contractor, his subcontractors nor his employees will be permitted to park in or on School property, except for construction vehicles which will be permitted to park at the construction site during the times when the Work is being performed.

Material or construction which must be left in place between working periods shall be securely fastened in a manner approved by the MMMHS Representative so as not to be a hazard.

The Contractor shall take all precautions necessary for protection of persons, traffic, and property resulting from concrete or plaster fragments, dust and debris from concrete or plaster removal, abrasive blasting or other operations, and shall erect tarpaulins or other protective enclosures as required and approved by the MMMHS Representative.

The Contractor shall provide sound suppression devices on gasoline and diesel powered construction equipment and on pneumatic tools as required to maintain noise exposures below the limits specified in Section 1926.52 of the Safety and Health Standards of the U.S. Department of Labor, Occupational Safety and Health Administration, as approved by the MMMHS Representative. The Contractor shall maintain the sound suppression devices in good working condition throughout the length of their use and adjustments and repairs shall be made by him as required to maintain the noise level, as approved by the MMMHS Representative.

No requirement of or omission to require any precautions under this Contract shall be deemed to limit or impair any responsibility or obligation assumed by the Contractor under or in connection with this Contract and the Contractor shall at all times maintain adequate protection to safeguard the public and all persons engaged in the Work and shall take such

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School precautions as will accomplish such end, without undue interference with the public or the operations of the Schools.

8. CONTRACT DRAWINGS.

The Contract Drawings which accompany and form a part of these Specifications bear the general title "The Soundproofing - Monsignor McClancy Memorial High School Complex, East Elmhurst, New York" and are separately numbered and entitled as follows:

MONSIGNOR McCLANCY MEMORIAL HIGH SCHOOL DRAWING LIST

March 12, 2004

ASBESTOS REMOVAL

ASBESTOS REMOVAL TITLE SHEET

- ASB-1 BASEMENT FLOOR ABATEMENT PLAN
- ASB-2 FIRST FLOOR ABATEMENT PLAN
- ASB-3 SECOND FLOOR ABATEMENT PLAN
- ASB-4 THIRD FLOOR ABATEMENT PLAN
- ASB-5 ROOF ABATEMENT PLAN

The Contract Drawings do not show all of the details of the Work and are intended only to illustrate the character and extent of the work to be performed. Accordingly, they may be supplemented during the performance of the Work by the MMMHS Representative or by the Contractor subject to the approval of the MMMHS Representative, to the extent necessary to further illustrate the Work.

An indication on the Contract Drawings of the existence, nature or location of any utilities, structures, obstructions, conditions, or materials does not constitute a representation as to the conclusions to be drawn therefrom nor a representation that no others exist in addition to those shown, even in the same location: nor does the absence of any indication on said drawings of the existence, nature or location of any utilities, structures, obstructions, conditions or materials constitute a representation that none exist.

After the Contract has been executed, the Contractor will be furnished six copies of the Specifications and Contract Drawings without charge.

9. SHOP DRAWINGS, CATALOG CUTS AND SAMPLES.

The Contractor shall make all working drawings or shop drawings which may be required in addition to the Contract Drawings or in addition to any other drawings which the MMMHS Representative may issue in supplementing the Contract Drawings. As used in this Contract, the terms "working drawings" and "shop drawings" are used interchangeably.

The specific requirements elsewhere set forth in the Specifications for furnishing working drawings for any particular portion of the Contract shall not limit the obligation of the Contractor to furnish working drawings for any other portion when so required by the MMMHS Representative.

In preparing the working drawings, the Contractor shall adopt a sheet of any reasonable size which best suits his needs, but having adopted such size, all sheets thereafter of a similar nature be of the same size as that adopted. Each drawing shall have a margin on the top, bottom and right hand-side of one-half inch and on the left-hand side of one and one-half inches.

Approval of drawings or catalogue cuts which are inconsistent with the requirements of the Contract Drawings and Specifications shall not be deemed to waive or change such requirements or to relieve the Contractor of his obligations

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School

to perform such requirements, unless the MMMHS Representative shall expressly and specifically state that he is waiving or changing such requirements, such statements to be effective only if in a writing separate from the approval, identifying the requirements being waived or changed.

The Contractor shall submit a schedule of the dates on which he will furnish such working drawings and catalog cuts in accordance with instructions transmitted with the MMMHS's acceptance of the Proposal. The completed schedule shall be delivered to the MMMHS Representative for his approval within ten days after receipt by the Contractor of the acceptance of the Proposal.

All drawings, data, and other papers of any type whatsoever, whether in the form of writing, figures, or delineations, which are prepared in connection with this Contract and submitted to the MMMHS shall become the property of the MMMHS.

10. SUBSTITUTIONS.

Where a brand name is specified or mentioned herein or called for or mentioned on the Contract Drawings and the phrases "similar and equal to" or "approved equal" are used in connection therewith, substitutions for the brands or makes specifically named may nevertheless be made only in accordance with the Section hereof entitled "Materials and Labor" and Section 01630 of the Contract Specifications.

11. MATERIALS AND LABOR.

Materials and labor (workmanship) shall in every respect be in accordance with the best modern practice and whenever the Contract Drawings, Specifications or directions of the MMMHS Representative admit of a doubt as to what is permissible or fail to note the quality of any construction, the interpretation which calls for the best quality is to be followed. Materials to be installed as part of the permanent construction shall be new materials except as may be otherwise herein specifically required. Materials and workmanship shall be free from defects of any kind.

Wherever on the Contract Drawings or in the Specifications a particular brand or make of material or equipment is shown or specified (and whether or not with the words "or approved equal", "similar and equal to" or words of similar import), any other brand or make which, in the sole opinion of the MMMHS Representative, is equal to that shown or specified may be substituted (except where specifically stated otherwise), but only after being submitted to and expressly approved by the MMMHS Representative. Notwithstanding such approval, however, the Contractor assumes the risk such other brand or make is not equal to that shown or specified and if at any time the substitute shall appear not to be so equal he shall replace the substitute and reimburse the MMMHS for any loss occurring on account of the substitute failing to be so equal. Such submission to the MMMHS Representative shall be made only by including the requested substitution in the list of materials required to be submitted to the MMMHS Representative in accordance with the Section hereof entitled "Inspections and Rejections" within forty five calendar days after the receipt of the acceptance of the Contractor's Proposal. After the approval of said list, no substitutions will be permitted, except that a brand or make named in the Specifications may be submitted for approval in lieu of a brand or make on said list. Any such submission shall not imply or impose on the MMMHS Representative, any obligation whatsoever to discuss, disclose or justify the reasons for his opinion, approval or rejection. Furthermore, the approval of any other brand or make shall not in any way entitle the Contractor to additional compensation therefore, but the MMMHS Representative may make such reduction in the Contractor's compensation as may be equitably warranted because of such approval in lieu of the standard.

The construction called for by the Contract Drawings and Specifications may be adapted for a particular brand or make of material or equipment. Therefore, if any construction not required by the Contract Drawings or Specifications in their present form is necessary or desirable because of the use of another brand or make of material or equipment (even though such other brand or make is approved by the MMMHS Representative or is mentioned in the Contract Drawings or the Specifications and stated to be acceptable), such construction shall be furnished or performed by the Contractor at his expense and subject to the approval of the MMMHS Representative.

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School

In case of a discrepancy between a description or requirement in the Contract Drawings and Specifications for any material or equipment and a catalogue number or other designation for the same material or equipment (even though stated to be acceptable), the description or requirements shall control.

In various paragraphs of these specifications, references may be made to certain standard or tentative specifications or requirements of various organizations. Unless otherwise stated, these references are to be construed as referring to the specifications and requirements in effect on the date set for opening bids upon the present Contract.

The right to use all patented materials, compositions of matter, manufactures, apparatus, appliances, processes of manufacture or types of construction required in connection with this Contract shall be obtained by the Contractor without separate compensation whether the same is patented before, during or after the performance of the Contract.

The Contractor shall indemnify the MMMHS, the architect, Port Authority and FAA against and save it harmless from all loss and expense incurred in the defense, settlement or satisfaction of any claims in the nature of patent infringement arising out of or in connection with the MMMHS use, in accordance with the preceding paragraph of this numbered clause, of such patentable subject matter or patented material, compositions of matter, manufactures, apparatus, appliances, processes of manufacture or types of construction. If requested by the MMMHS and if notified promptly in writing of any such claim, the Contractor shall conduct all negotiations with respect to and defend such claim without expense to the MMMHS.

12. INSPECTIONS AND REJECTIONS.

All work and all construction, processes of manufacture and methods of construction involved in or related to the performance of the Work shall be at all times and places subject to the inspection of the MMMHS Representative, acting personally or through his Inspectors, and the enumeration in these Specifications of particular portions of such Work, construction, processes of manufacture or methods of construction which will or may be inspected by the MMMHS Representative or such Inspectors shall not be deemed to imply that only such Work, construction, processes of manufacture or methods of construction will or may be so inspected. The MMMHS Representative shall be the judge of the quality and suitability of the Work, construction, processes of manufacture or methods of construction for the purposes for which they are used or to be used. Should they fail to meet his approval they shall be forthwith reconstructed, made good, replaced or corrected, as the case may be, by the Contractor at his own expense. Rejected material shall be removed immediately from the site. The fact that the Inspectors have approved the materials and workmanship shall not relieve the Contractor from his obligation to supply other material and workmanship when so ordered by the MMMHS Representative.

The Contractor, at his own expense, shall furnish such facilities and give such assistance for inspection as the MMMHS Representative may direct. In the case of materials required by the Specifications to be inspected in the factory or plant, and in the case of any other items which the MMMHS Representative may designate, the Contractor shall secure for the MMMHS Representative and his Inspectors free access to all parts of such factories or plants and shall furnish to the MMMHS Representative three copies of purchase orders, two copies of mill shipping statements, and four copies of shipping statements. Moreover, in the case of such materials to be factory or plant inspected, the Contractor shall give at least ten days notice to the MMMHS Representative of his intention to commence the manufacture or preparation of such materials.

Other than the materials and equipment specifically required to be inspected at the manufacturer's factory or plant, all materials will be inspected at the construction site and any portions thereof which are rejected by the MMMHS Representative shall be immediately removed from the construction site by the Contractor and shall be replaced with new materials by the Contractor at his own expense.

Should materials or equipment be delivered to the construction site without having been placed on the aforementioned list and approved, it shall be immediately removed from the construction site by the Contractor at his own expense.

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School

13. MANUFACTURER'S CERTIFICATIONS.

Where materials and equipment are required by these Specifications to conform to certain standard or tentative specifications or requirements of any organizations, including American Society for Testing and Materials, American National Standards Institute, Association Rules for Grading Lumber, Federal Specifications, National Electrical Manufacturers Association, American Association of State Highway and Transportation Officials, American Water Works Association and the International Municipal Signal Association, the Contractor shall furnish to the MMMHS Representative the manufacturer's written certification that each of the materials or equipment conforms to the foregoing standard or tentative specifications. The certification shall be delivered to the MMMHS Representative prior to the installation of the materials to which it refers. Such certifications shall not be binding on or conclusive on the MMMHS and may be rejected at any time by the MMMHS Representative if incorrect, improper or otherwise unsatisfactory in his opinion.

14. NO RELEASE OF CONTRACTOR.

Any provision of this Contract for testing, inspection or approval, and any actual testing, inspection or approval, of any materials, workmanship, plant, equipment, drawings, program, methods of procedure, or of any other thing done or furnished or proposed by the Contractor to be done or furnished in connection with the Contract is for the benefit of the Owner not the Contractor. Any approval of such things shall be construed merely to mean that at that time the MMMHS Representative knows of no good reason for objecting thereto. No such provision for testing or inspection, no omission of testing or inspection, and no approval shall release the Contractor from his full responsibility for the accurate and complete performance of the Contract in accordance with the Contract Drawings and Specifications or from any duty, obligation or liability imposed upon him by the Contract or from responsibility for injuries to persons or damage to property.

15. ERRORS AND DISCREPANCIES.

If, in the performance of the Contract, the Contractor discovers any errors or omissions in the Contract Drawings or Specifications, or in the marks, lines and elevations furnished by the Owner in the construction undertaken and executed by him, he shall immediately notify the MMMHS Representative and the MMMHS Representative shall promptly verify the same.

If with the Knowledge of such error or omission prior to the correction thereof, the Contractor proceeds with any construction affected thereby, he shall do so at his own risk and the construction so done shall not be considered construction done under and in performance of this Contract unless and until approved and accepted.

16. ACCIDENT AND FIRST AID PROVISIONS.

The Contractor shall promptly report in writing to the MMMHS Representative and to the Owner all accidents whatsoever arising out of or in connection with the performance of the Contract, whether on or adjacent to the construction site, which result in death, injuries, or property damage, giving full details and statements of witnesses. In addition, if death or serious injuries or serious damage is caused, the accident shall be reported immediately by telephone to both the Owner and MMMHS Representative or their respective representatives.

The Contractor shall provide at the construction site such equipment and medical facilities as are necessary to supply first aid service in case of accident, to any who may be injured in the progress of the Contract. He shall have standing arrangements for the removal and hospital treatment of any person who may be injured while engaged in the performance of the Contract.

If any claim is made by a third person against the Contractor or any subcontractor on account of any accident, the Contractor shall promptly report the fact in writing to the Owner and the MMMHS Representative, giving full details

January 10, 2005
of the claim.

Asbestos Removal - Monsignor McClancy Memorial High School

17. SAFETY AND SANITARY PROVISIONS.

In the performance of the Contract, the Contractor shall exercise every precaution to prevent injury to persons or damage to property.

He shall, at his own expense, place such watchmen, design such barricades, fences and railings, give such warnings, display such lights, signals and signs, exercise such precaution against fire, adopt and enforce such rules and regulations, and take such other precautions as may be necessary, desirable or proper, or as may be directed.

The Contractor shall employ only such persons as are physically fit and are free from contagious or communicable diseases.

The Contractor shall provide and maintain all necessary toilet and washroom facilities for the use of his workers and those of his subcontractors. Such facility shall be located as directed by the MMMHS Representative within the Contractor's area as indicated on the Contract Drawings. No other toilet or washroom shall be used. The toilet and washroom facility shall be cleaned and maintained by the Contractor as follows:

1. Clean Daily.
2. Wash when required, at least once every week.
3. Replace burned out light bulbs.
4. Furnish and maintain toilet paper and towels as directed.
5. Should any damage or defacement occur, make repairs and take corrective measures promptly as directed by the MMMHS Representative.

He shall use only machinery and equipment adapted to operate with the least possible noise, and shall so conduct his operations that annoyances to occupants of the school, nearby property and the general public will be reduced to a minimum.

The bringing of intoxicating substances onto the construction site and the use and consumption of intoxicating substances at the construction site are prohibited. It shall be the responsibility of the Contractor to insure that all employees of the Contractor and of all sub-contractors, materialmen and any other persons under contract to or under the control of the Contractor shall comply with the provisions of this paragraph.

The Contractor shall daily clean up all refuse, rubbish, scrap materials and debris caused by his operations, to the end that at all times the construction site shall present a neat, orderly and workmanlike appearance. Before the Certificate of Final Completion of Work will be issued, the Contractor shall remove all surplus materials, falsework, temporary fences and other temporary structures, including foundations thereof, plant of any description and debris of every nature resulting from his operations and shall put the construction site in a neat, orderly condition.

In the event the Contractor encounters at the construction site, material reasonably believed to be asbestos, polychlorinated biphenyl (PCB) or any other hazardous material, the Contractor shall immediately stop work in the area affected and report the condition in writing to the MMMHS Representative. Work in the affected area shall not thereafter be resumed by the Contractor except upon written order to that effect from the MMMHS Representative.

Within 15 days of the acceptance of his Proposal, the Contractor shall submit to the MMMHS Representative, for his review and approval, the Contractor's Safety Program which shall comply with all applicable Federal, State, Municipal, local and departmental laws and shall include, among other things, the designation by the Contractor of a qualified person to administer such Safety Program.

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School

18. FIRE PROTECTION.

All reasonable precautions for fire protection shall be exercised during the performance of the Contract. An adequate approved system for promptly extinguishing fires shall be provided at all times. Smoking is not permitted within the school buildings at any time.

Fire alarm signals, equipment and water lines shall be continually inspected, accessible and ready for instant use. The operation of each school's fire alarm telegraph, interior fire alarm system, gongs, bells and telephones shall not be interfered with. When these systems are taken off line, the contractor shall pay for restarting, resetting, and or any other charges resulting from the shut down.

East Elmhurst Fire Department Regulations shall govern the storage and use of flammable materials. Flammable materials and fire producing equipment shall not be left about the premises in locations accessible to students.

Except where the MMMHS Representative permits the storage of flammable materials in approved containers, the Contractor is not permitted to store any petroleum products or any other flammable materials on the construction site. During interruptions of the Work flammable mixtures shall be stored in designated locations only or removed entirely from the site:

Contractors using open flame or spark producing tools or equipment such as heating kettles on roofs, blow torches and welding rods shall provide fire guards to maintain a fire watch over the operation of these items at all times when in use.

19. DAILY PROGRESS, EQUIPMENT AND LABOR REPORTS.

The Contractor shall furnish to the MMMHS Representative at the end of each day, a memorandum showing for that day (a) the construction performed, (b) The equipment used, (c) a statement of any unusual happening that occurred, and (d) the number of workers in each trade classification that were employed. Such memorandum shall not be deemed to be a substitute for the notices, time slips, memoranda or other data required under the clauses of the Form of Contract relating to compensation for Extra Work.

20. LAWS AND ORDINANCES.

The Contractor shall comply with all the provisions of Federal, State, City, local and departmental laws, ordinances, rules, regulations and orders which would affect the Contract and the performance thereof. The Contractor shall apply for and pay for all and any permits required by law or by the preceding sentence.

21. IDENTIFICATION.

No person will be permitted on or about the construction site without a pass, permit, or identification badge as required in the provisions of the Division 1 of these specifications and as approved by the MMMHS Representative. The Contractor shall provide such passes, permits or identification badges for his employees, sub-contractors and material persons whenever necessary. Identification badges shall be worn in a conspicuous and clearly visible position by all employees of the Contractor whenever they are working at the construction site.

22. SIGNS.

No advertisement or sign, other than the name and address of the Contractor, will be permitted on any fences, temporary structures or elsewhere on the construction site and such advertisement will be permitted only upon the condition that it is first approved by the MMMHS Representative. In any event, the advertisement shall not exceed two feet by four feet in overall dimensions.

23. CONTRACTOR'S FIELD OFFICE AND REPRESENTATIVE.

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School

At a readily accessible point on or near the construction site, the Contractor shall maintain a field office provided with a telephone.

During the performance of any Work at the construction site, the Contractor shall have a representative thereat who shall be authorized by the Contractor to receive and put into effect promptly all orders, directions and instructions from the MMMHS Representative. The Contractor's representative shall be provided, at all times, with a conformed copy of this Contract and a set of the Contract Drawings.

Orders and directions may be given orally by the MMMHS Representative and shall be received and promptly obeyed by the Contractor or his representative or any superintendent, foreman or other employee of the Contractor who may have charge of the particular part of the Work in relation to which the orders or directions are given. A confirmation in writing of such orders or directions will be given by the MMMHS Representative when so requested by the Contractor.

24. SURVEYS.

The Contractor shall furnish to the MMMHS Representative without additional compensation therefor, any and all information and data regarding points, lines, grades, elevations and other survey information established by the Contractor or required by the MMMHS Representative during the performance of the Contract.

25. TEMPORARY STRUCTURES.

The Contractor shall design, furnish and construct all barricades, fences, staging, falsework, scaffolding and other temporary structures required in the performance of the Contract, whether or not of the type enumerated. All such temporary structures shall be of adequate strength for the purposes for which they are constructed and the Contractor shall maintain them in satisfactory condition. Although the designs for such structures are to be prepared by the Contractor, they shall nevertheless be submitted to the MMMHS Representative for his approval before being used. Neither such approval, however, nor any requirements of the MMMHS Representative, the Specifications or the Contract Drawings shall relieve the Contractor of his responsibility for the design, construction and use of the temporary structures or from any obligations and risks imposed on him under this Contract, and any such approval or requirements shall be deemed merely to relate to minimum standards and not to indicate that the temporary structures are adequate or that they meet the Contractor's obligations under this Contract. Where required such structures shall be painted either an approved dark color paint and shall be repainted whenever necessary during the period that the Contract is being performed.

Upon completion of all other Work, under this Contract, the temporary structures shall be removed from the construction site and disposed of by the Contractor.

26. UTILITY SERVICES.

Except for water and electricity usage as described elsewhere in Division 1 the Contractor shall make arrangements for securing at his own expense any other services which may be required for the performance of the Contract.

27. FINAL INSPECTION.

When, in the opinion of the Contractor, the Construction is completed and ready for Final Inspection, he shall so notify the MMMHS Representative in writing and the MMMHS Representative will give said construction (including any portions with respect to which Certificates of Partial Completion have been issued) a minute and thorough inspection. Before any Certificate of Completion will be issued, any defects or omissions noted on this inspection must be corrected by the Contractor.

January 10, 2005

Asbestos Removal - Monsignor McClancy Memorial High School

28. GUARANTEES.

The Specifications may provide for certain guarantees of portions of the permanent construction. These guarantees are intended for the greater assurance of the Owner and not as a substitute for rights which the Owner might otherwise have. Although such guarantees shall be enforceable as provided, neither any requirement of this Contract with respect to guarantees by the Contractor nor any guarantee given to the Contractor or Owner by any manufacturer shall be deemed to be a limitation upon any rights which the Owner would have, either expressed or implied, in the absence of such guarantees.

All work on this project shall be guaranteed by the Contractor for a period of not less than three years from the date of final completion except for items specifically stated otherwise elsewhere in the Contract Documents

29. PROGRESS SCHEDULE AND ANALYSIS OF BID.

Within fifteen calendar days after acceptance of the Proposal, the Contractor shall prepare a progress schedule for the approval of the MMMHS Representative. The progress schedule shall show the dates for the commencement and completion of the different portions of the Contract. After the approval of the Schedule the Contractor shall maintain and periodically update it at intervals determined by the MMMHS Representative. No changes shall be made therein without the written approval of the MMMHS Representative. Approval of any progress schedule shall not limit, affect or impair the Contractor of his obligation to complete the Contract by the time(s) required in the Form of Contract, even though the schedule approved may be inconsistent with such completion, and in accordance with all other provisions of the Contract, nor shall it constitute a representation by the Owner that the Contractor will be able to proceed or complete in accordance with the schedule.

The MMMHS Representative shall have the right at any time when in his judgement the Work is not proceeding in accordance with the approved progress schedule, or at any time it is likely that the Work may not be completed by the time(s) required in the Form of Contract even though the Contractor is proceeding in accordance with the approved progress schedule, to order the Contractor, without additional compensation, to employ additional shifts, to increase the number of workers employed, to use additional plant or equipment, or to take such other steps as may be required to assure the completion of the various operations within the times allotted therefor in the approved schedule or by the aforesaid completion time(s).

Within fifteen calendar days after acceptance of the Proposal, the Contractor shall prepare a detailed analysis of the bid including a trade payment breakdown of all items included in the Work and required time and material costs including overhead and profit for payment purposes. This breakdown shall be submitted to the MMMHS Representative for approval. The Contractor shall revise the breakdown as directed by the MMMHS Representative and accept it as approved for payment purposes only.

Disadvantaged Business Enterprises

- (1.) The requirements for the Disadvantaged Business Enterprises (DBE) program are set forth in Department of Transportation Regulation, 49 CFR Parts 23 and 26, "Participation by Disadvantaged Business Enterprises in Department of Transportation Programs: Final Rule" which is attached as Exhibit B and is incorporated into this contract by reference.
- (2.) The current PA overall goal for DBE participation in federally assisted contracts is 14.3%. This goal is to be met by use of two strategies: 2% through Race-neutral means and 12.3% through Race-conscious means. These goals are in effect until September 30, 2000 and are subject to annual review and adjustment as appropriate. Therefore the MMMHS must contact the PA to obtain the pertinent DBE goals before executing any consultant and/or construction contracts after that date.
- (3.) This regulation applies to all contracts that include any federal funds. Therefore the MMMHS agrees to include these clauses in all contracts for this project and to enforce such clauses. With regard to paragraph (4.)(b.) (below) the MMMHS agrees to pay each contractor within 7 days of receipt of payment from the Port Authority and to pay over retainage as also specified in paragraph (4.) (b.).
- (4.) The MMMHS agrees to include the following clauses (printed in *Italics*) in all contracts and subcontracts:
 - (a.) *The contractor or subcontractor shall not discriminate on the basis of race, color, national origin, or sex in the performance of this contract and shall carry out the applicable requirements of Department of Transportation Regulation, 49 CFR Parts 23 and 26, "Participation by Disadvantaged Business Enterprises in Department of Transportation Programs: Final Rule" (49 CFR Part 26) in the award and administration of DOT assisted contracts. This regulation is incorporated into this contract by reference. Failure by the contractor to carry out these requirements is a material breach of this contract, which may result in the termination of this contract or such other remedy as The Port Authority deems appropriate. This provision shall likewise apply to each subcontractor at each tier.*
 - (b.) *The contractor agrees to pay each subcontractor on this project for satisfactory performance of its subcontract no later than seven (7) days from the receipt of each payment received from the MMMHS or within such later period as is provided in the subcontract.. The contractor agrees further to pay over retainage payments to each subcontractor within fourteen (14) days, or within such later period as is provided in the subcontract, after the subcontractor's work is satisfactorily completed. Any delay or postponement of payment from the above referenced time frame may occur only for good cause following written approval of the Port Authority of New York and New Jersey (PAJ).*
 - (c.) *The Department of Transportation Regulation, (49 CFR parts 23 and 26) Participation by Disadvantaged Business Enterprises in Department of Transportation Programs: Final Rule, (CFR 49Part 26) is incorporated into this contract by reference.*
 - (d.) *The current PA overall goal for DBE participation in federally assisted contracts is 14.3%. This goal is to be met by use of two strategies: 2% through Race-*

neutral means and 12.3% through Race-conscious means. Race-neutral means are described in CFR 49 Part 23 & 26, Paragraph 26.51. The Race-conscious goal is a contract goal. These goals are in effect until revised notification and are subject to annual review and adjustment as appropriate. Therefore the pertinent DBE goals must be obtained from the PA before executing any consultant and/or construction contracts.

- (e.) The obligation of the contractor is to make good faith efforts to meet the Race-conscious or contract goal. The contractor can demonstrate that it has done so by meeting the contract goal or documenting good faith efforts. See Exhibit B, CFR 49 Part 26, Paragraph 26.53 and Appendix A of for descriptions and discussions of good faith efforts. The PA is responsible for determining whether a contractor that has not met the contract goals has documented sufficient good faith efforts to be regarded as responsible.*
- (f.) Assistance is available from the PA Office of Business and Job Opportunity (OBJO) to identify DBE firms and to answer any questions related to the preparation and submission of the DBE Participation Plan. In addition, the PA maintains a computerized directory identifying all firms certified as DBEs. The directory lists the firm's name, certification status, address, responsible officer/owner, telephone number and specialty trade. This Directory is revised annually to ensure data accuracy and integrity. Information pertaining to this directory can be obtained through telephone requests to The Port Authority of NY & NJ, Office of Business and Job Opportunity, Newark Legal and Communications Center, One Riverfront Plaza, Newark, NJ 0719 (973) 565-5527. An Internet version of this Directory is currently under development. When completed it will be integrated into the PA web page for easy access.*
- (g.) Contractors are directed to CFR 49 Part 23 & 26, Paragraph 26.55 "How is DBE participation counted toward goals?" Sub-paragraph (e) which states that 100% of the cost of materials or supplies obtained from a DBE manufacturer may be counted toward the DBE goals but only 60% of the cost of materials or supplies purchased from a DBE regular dealer may be counted toward the goals. More detailed information may be found in the regulation.*

A Unified Certification Program for each state will be put into effect by March 4, 2002. This program is described in CFR 49 Part 23 & 26, Paragraph 26.81.

FEDERAL LAW REQUIREMENTS FOR BID SOLICITATIONS

SECTION 100

100-01 NOTICE OF REQUIREMENT FOR AFFIRMATIVE ACTION TO ENSURE EQUAL EMPLOYMENT OPPORTUNITY (EXECUTIVE ORDER 11246, AS AMENDED).

A. The following is to be made a part of all solicitations for bids on all federally assisted construction contracts or subcontracts in excess of \$10,000.00.

B. The offeror's or bidder's attention is called to the "Equal Opportunity Clause" (Section 100-04) and the "Standard Federal Equal Employment Opportunity Construction Contract Specifications" (Section 100-06) set forth herein.

C. The goals for minority and female participation, expressed in percentage terms FOR THE CONTRACTOR'S WORKFORCE on all construction work in a covered area, are as follows:

Goals for minority participation
(INSERT APPROPRIATE GOAL FROM PAGES 40 to 42)

Goals for female participation
6.9%

1. These goals are applicable to all the contractor's CONSTRUCTION WORKFORCE (whether or not it is Federal or federally assisted) performed in the covered area. If the contractor performs construction work in a geographical area located outside of the covered area, it shall apply the goals established for such geographical area where the contractor also is subject to the goals for both its federally involved and nonfederally involved construction.

2. The contractor's compliance with the executive order and the regulations in 41 CFR Part 60-4 shall be based on its implementation of the Equal Opportunity Clause, specific affirmative action obligations required by the specifications set forth in 41 CFR 60-4.3(a), and its efforts to meet the goals established for the geographical area where the contract resulting from this solicitation is to be performed. The hours of minority and female employment and training must be substantially uniform throughout the length of the contract, and the contractor shall make a good faith effort to employ minorities and women evenly on each of its projects. The transfer of minority or female employees or trainees from contractor to contractor or from project to project, for the sole purpose of meeting the contractor goals shall be a violation of

ATTACHMENT IV-6 (2)

the contract, the executive order, and the regulations in 41 CFR Part 60-4. Compliance with the goals will be measured against the total work hours performed.

D. The contractor shall provide written notification to the Director, OFCCP, within 10 working days of award of any construction subcontract in excess of \$10,000.00 at any tier for construction work under the contract resulting from this solicitation. The notification shall list the name, address, and telephone number of the subcontractor, employer identification number, estimated dollar amount of the subcontract, estimated starting and completion dates of the subcontract, and the geographical area in which the contract is to be performed.

E. As used in this notice and in the contract resulting from this solicitation, the "covered area" is (insert description of the geographical areas, where the contract is to be performed giving the state, county and city, if any).

F. The Department of Labor has eliminated all imposed EEO plans and the Philadelphia Plan as a means of complying with Executive Order 11246. Hometown Plans can still be used; however, signatories are required to submit goals and timetables for the utilization of women to the Director, Office of Federal Contract Compliance Programs, Department of Labor, Washington, D.C.

100-02 CERTIFICATION OF NONSEGREGATED FACILITIES. All bidders will be required to submit with their bids a Certification of Nonsegregated Employee Facilities, including an agreement to get a similar certification from proposed subcontractors. These certifications will be required prior to award of contract.

(SEE CERTIFICATION FORM ON NEXT PAGE)

CONTRACTOR'S CERTIFICATION OF NONSEGREGATED FACILITIES

The federally assisted construction contractor certifies that it does not maintain or provide, for its employees, any segregated facilities at any of its establishments and that it does not permit employees to perform services at any location, under its control, where segregated facilities are maintained. The federally assisted construction contractor certifies that it will not maintain or provide, for its employees, segregated facilities at any of its establishments and that it will not permit its employees to perform services at any location, under its control where segregated facilities are maintained. The federally assisted construction contractor agrees that a breach of this certification is a violation of the equal opportunity clause in this contract. As used in this certification, the term "segregated facilities" means any waiting rooms, work areas, restrooms and washrooms, restaurants and other eating areas, timeclocks, locker rooms and other storage or dressing areas, parking lots, drinking fountains, recreation or entertainment areas, transportation and housing facilities provided for employees which are segregated by explicit directives or are in fact segregated on the basis of race, color, religion or national origin because of habit, local custom, or any other reason. The federally assisted construction contractor agrees that (except where he has obtained identical certifications from proposed subcontractors for specific time periods) he will obtain identical certifications from proposed subcontractors prior to the award of subcontracts exceeding \$10,000.00 which are not exempt from the provisions of the equal opportunity clause and that he will retain such certifications in his files.

The information above is true and complete to the best of my knowledge.

Name and Title (Please type)

Date

Signature

Note: The penalty for making false statements in offers is prescribed in 18 U.S.C. 1001.

100-03 REPORTS.

A. Contractors/Subcontractors with 50 or more employees and Contracts over \$50,000.00. All contractors and subcontractors performing on federally assisted projects are required to file annually (on or before March 31) complete and accurate reports on SF 100 (Employee Information Report, EEO-1) to the Joint Reporting Committee. The first report is due within 30 days after award unless such report was filed within the preceding 12-month period.

Standard Form 100 is normally furnished based on a mailing list, but can be obtained from the Joint Reporting Committee, P.O. Box 2236, Norfolk, Virginia 20501.

B. Contractors/Subcontractors with Contracts over \$10,000.00.

As indicated in paragraph E of the EEO Clause, monthly Employment Utilization Reports, CC 257 (previously SF 257) will be submitted to the OFCCP, at the following addresses:

For downstate New York and New Jersey:

Mr. Harold M. Busch
District Director, OFCCP/ESA
U.S. Department of Labor
26 Federal Plaza, Rm. 36-116
New York, N.Y. 10278

For Upstate New York:

Mr. Garland Sweeney
District Director, OFCCP/ESA
U.S. Department of Labor
Jackson Building, Rm. 609
220 Delaware Avenue
Buffalo, N.Y. 14202

100-04 EQUAL EMPLOYMENT OPPORTUNITY CLAUSE: The following is included IN ENTIRETY in all federally funded construction contracts over \$10,000:

During the performance of this contract, the contractor agrees as follows:

A. The contractor will not discriminate against any employee or applicant for employment because of race, color, religion, sex, or national origin. The contractor will take affirmative action to insure that applicants are employed and that employees are treated during employment without regard to their race, color, religion, sex or nation origin. Such action shall include, but not be limited to the following: employment, upgrading, demotion, or transfer; recruitment or recruitment advertising; layoff or

ATTACHMENT IV-6 (5)

termination, rates of pay or other compensation; and selection for training, including apprenticeship. The contractor agrees to post, in conspicuous places available to employees and applicants for employment, notices (Attached as 100-05) setting forth the provisions of this nondiscrimination clause.

B. The contractor will, in all solicitations or advertisements for employees placed by or on behalf of the contractor, state that all qualified applicants will receive consideration for employment without regard to race, color, religion, sex, or national origin.

C. The contractor will send, to each labor union or representative of workers with which he has a collective bargaining agreement or other contract or understanding, a notice (Attached as 100-05) advising the said labor union or workers' representatives of the contractor's commitments under this section and shall post copies of the notice in conspicuous places available to employees and applicants for employment.

D. The contractor will comply with all provisions of Executive Order 11246, as amended, of September 24, 1965, and the rules, regulations, and relevant orders of the Secretary of Labor.

E. The contractor will furnish all information and reports required by Executive Order 11246, as amended, of September 24, 1965, and by rules, regulations, and orders of the Secretary of Labor, or pursuant thereto, and will permit access to his books, records, and accounts by the Comptroller General of the United States, Department of Transportation, FAA and the Secretary of Labor for purposes of investigation to ascertain compliance with such rules, regulations and orders.

F. In the event of the contractor's noncompliance with the nondiscrimination clauses of this contract or with any of the said rules, regulations, or orders, this contract may be canceled, terminated, or suspended in whole or in part and the contractor may be declared ineligible for further Government contracts or federally assisted construction contracts in accordance with procedures authorized in Executive Order 11246, as amended, of September 24, 1965, and such other sanctions may be imposed and remedies invoked as provided in Executive Order 11246, as amended, September 24, 1965, or by rule, regulation, or order of the Secretary of Labor, or as otherwise provide by law.

G. The contractor will include the portion of the sentence immediately preceding paragraph A and the provisions of

ATTACHMENT IV-6 (6)

paragraphs A through C in every subcontract or purchase order unless exempted by rules, regulations, or orders of the Secretary of Labor issued pursuant to section 204 of Executive Order 11246, as amended, September 24, 1965, so that such provisions will be binding upon each subcontractor or vendor. The contractor will take such action with respect to any subcontract or purchase order as the FAA may direct as a means of enforcing such provisions, including sanctions for noncompliance; provided, however, that in the event a contractor becomes involved in, or is threatened with litigation with a subcontractor or vendor as a result of such direction by the FAA, the contractor may request the United States to enter into such litigation to protect the interests of the United States.

H. Contractors and subcontractors may satisfy the requirements of Paragraph B of the referenced EEO clause by complying with any of the following:

1. Stating in the Invitations for Bids that all qualified applicants will receive consideration for employment without regard to race, color, religion, sex, or national origin, or
2. Including appropriate insignia in display or other advertising as prescribed by the Department of Labor, or
3. Using a single advertisement grouped with other advertisements under a caption which clearly states that all employers in the group assure all qualified applicants will have equal consideration for employment without regard to race, color, religion, sex, or national origin, or
4. Using the phrase "an equal opportunity employer" in a single advertisement in clearly distinguishable type.

SECTION 100-05 NOTICES TO BE POSTED
PER PARAGRAPHS A AND C OF THE EEO CLAUSE.

EQUAL EMPLOYMENT OPPORTUNITY IS THE LAW - DISCRIMINATION IS
PROHIBITED BY THE CIVIL RIGHTS ACT OF 1964 AND BY EXECUTIVE
ORDER NO. 11246

Title VI of the Civil Rights Act of 1964 - Administered by:

THE EQUAL EMPLOYMENT OPPORTUNITY COMMISSION

Prohibits discrimination because of Race, Color, Religion,
Sex, or National Origin by Employers with 75 or more
employees, by Labor Organizations with a hiring hall of 75
or more members, by Employment Agencies, and by Joint Labor-
Management Committees for Apprenticeship or Training. After
July 1, 1967, employees and labor organizations with 50 or
more employees or members will be covered; after July 1,
1968, those with 25 or more will be covered.

ANY PERSON

Who believes he or she has been discriminated against

SHOULD CONTACT

THE EQUAL EMPLOYMENT OPPORTUNITY COMMISSION
1800 G Street NW. Washington, D.C. 20506

Executive Order No. 11246 - Administered by:

THE OFFICE OF FEDERAL CONTRACT COMPLIANCE

Prohibits discrimination because of Race, Color, Religion,
Sex or National Origin, and requires affirmative action to
ensure equality of opportunity in all aspects of employment.

By all Federal Government Contractors and Subcontractors,
and by Contractors Performing Work Under a Federally
Assisted Construction Contract, regardless of the number of
employees in either case.

ANY PERSON

Who believes he or she has been discriminated against

SHOULD CONTACT

THE OFFICE OF FEDERAL CONTRACT COMPLIANCE
U.S. Department of Labor, Washington, D.C. 20210

100-06 STANDARD FEDERAL EQUAL EMPLOYMENT OPPORTUNITY
CONSTRUCTION CONTRACT SPECIFICATIONS (EXECUTIVE ORDER 11246,
AS AMENDED)

The following specifications are made a part of all federally assisted construction contracts or subcontracts over \$10,000.00 AND included in all invitations for bids:

A. As used in these specifications:

1. "Covered area" means the geographical area described in the solicitation from which this contract resulted;
2. "Director" means Director, Office of Federal Contract Compliance Programs (OFCCP), U.S. Department of Labor, or any person to whom the Director delegates authority;
3. "Employer identification number" means the Federal social security number used on the Employer's Quarterly Federal Tax Return, U.S. Treasury Department Form 941;
4. "Minority" includes:
 - (a) Black (all persons having origins in any of the Black African racial groups not of Hispanic origin);
 - (b) Hispanic (all persons of Mexican, Puerto Rican, Cuban, Central or South American, or other Spanish culture or origin regardless of race);
 - (c) Asian and Pacific Islander (all persons having origins in any of the original peoples of the Far East, Southeast, Asia, and the Indian subcontinent, or the Pacific Islands); and
 - (d) American Indian or Alaskan native (all persons having origins in any of the original peoples of North America and maintaining identifiable tribal affiliations through membership and participation or community identification).

B. Whenever the contractor, or any subcontractor at any tier, subcontracts a portion of the work involving any construction trade, it shall physically include in each subcontract in excess of \$10,000 the provisions of these specifications and the notice which contains the applicable goals for minority and female participation and which is set

forth in the solicitations from which this contract resulted.

C. If the contractor is participating (pursuant to 41 CFR 60-4.5) in a Hometown Plan approved by the U.S. Department of Labor in the covered area either individually or through an association, its affirmative action obligations on all work in the plan area (including goals and timetables) shall be in accordance with that plan for those trades which have unions participating in the plan. Contractors must be able to demonstrate their participation in and compliance with the provisions of any such Hometown Plan. Each contractor or subcontractor participating in an approved plan is individually required to comply with its obligations under the EEO clause and to make a good faith effort to achieve each goal under the plan in each trade in which it has employees. The overall good faith performance by other contractors or subcontractors toward a goal in an approved plan does not excuse any covered contractor's or subcontractor's failure to take good faith efforts to achieve the plan goals and timetables.

D. The contractor shall implement the specific affirmative action standards provided in paragraphs G.1 to G.16 of these specifications. The goals set forth in the solicitation from which this contract resulted are expressed as percentages of the total hours of employment and training of minority and female utilization the contractor should reasonably be able to achieve in each construction trade in which it has employees in the covered area. Covered construction contractors performing construction work in a geographical area where they do not have a Federal or federally assisted construction contract shall apply to the minority and female goals established for the geographical area where the work is being performed. Goals are published periodically in the Federal Register in notice form, and such notices may be obtained from any OFCCP office or from Federal procurement contracting officers. The contractor is expected to make substantially uniform progress in meeting its goals in each craft during the period specified.

E. Neither the provisions of any collective bargaining agreement nor the failure by a union with whom the contractor has a collective bargaining agreement to refer either minorities or women shall excuse the contractor's obligations under these specifications, Executive Order 11246, as amended, or the regulations promulgated pursuant thereto.

F. In order for the nonworking training hours of apprenticeship and trainees to be counted in meeting the goals, such apprentices and trainees must be employed by the

contractor during the training period and the contractor must have made a commitment to employ the apprentices and trainees at the completion of their training, subject to the availability of employment opportunities. Trainees must be trained pursuant to training programs approved by the U.S. Department of Labor.

G. The contractor shall take specific affirmative actions to ensure EEO. The evaluation of the contractor's compliance with these specifications shall be based upon its effort to achieve maximum results from its actions. The contractor shall document these efforts fully and shall implement affirmative action steps at least as extensive as the following:

1. Ensure and maintain in a working environment free of harassment, intimidation, and coercion at all sites, and in all facilities at which the contractor's employees are assigned to work. The contractor, where possible, will assign two or more women to each construction project. The contractor shall specifically ensure that all foremen, superintendents, and other onsite supervisory personnel are aware of and carry out the contractor's obligation to maintain such a working environment, with specific attention to minority or female individuals working at such sites or in such facilities.

2. Establish and maintain a current list of minority and female recruitment sources, provide written notification to minority and female recruitment sources and to community organizations when the contractor or its unions have employment opportunities available, and maintain a record of the organizations' responses.

3. Maintain a current file of the names, addresses, and telephone numbers of each minority and female off-the-street applicant and minority or female referral from a union, a recruitment source, or community organization and of what action was taken with respect to each such individual. If such individual was sent to the union hiring hall for referral and was not referred back to the contractor by the union or, if referred, not employed by the contractor, this shall be documented in the file with the reason therefore along with whatever additional actions the contractor may have taken.

4. Provide immediate written notification to the Director when the union or unions with which the contractor has a collective bargaining agreement has not referred to the contractor a minority person or

ATTACHMENT IV-6 (11)

woman sent by the contractor, or when the contractor has other information that the union referral process has impeded the contractor's efforts to meet its obligations.

5. Develop on-the-job training opportunities and/or participate in training programs for the areas which expressly include minorities and women, including upgrading programs and apprenticeship and trainee programs relevant to the contractor's employment needs, especially those programs funded or approved by the Department of Labor. The contractor shall provide notice of these programs to the sources compiled under G.2 above.

6. Disseminate the contractor's EEO policy by providing notice of the policy to unions and training programs and requesting their cooperation in assisting the contractor in meeting its EEO obligations; by including it in any policy manual and collective bargaining agreement; by publicizing it in the company newspaper, annual report, etc.; by specific review of the policy with all management personnel and with all minority and female employees at least once a year; and by posting the company EEO policy on bulletin boards accessible to all employees at each location where construction work is performed.

7. Review, at least annually, the company's EEO policy and affirmative action obligations under these specifications with all employees having any responsibility for hiring, assignment, layoff, termination, or other employment decisions including specific review of these items with onsite supervisory personnel such as superintendents, general foremen, etc., prior to the initiation of construction work at any job site. A written record shall be made and maintained identifying the time and place of these meetings, persons attending, subject matter discussed, and disposition of the subject matter.

8. Disseminate the contractor's EEO policy externally by including it in any advertising in the news media, specifically including minority and female news media, and providing written notification to and discussing the contractors and subcontractors with whom the contractor does or anticipates doing business.

9. Direct its recruitment efforts, both oral and written, to minority, female, and community organizations, to schools with minority and female students; and to minority and female recruitment and

training organizations serving the contractor's recruitment area and employment needs. Not later than one month prior to the date for the acceptance of applications for apprenticeship or other training by any recruitment source, the contractor shall send written notification to organizations, such as the above, describing the openings, screening procedures, and test to be used in the selection process.

10. Encourage present minority and female employees to recruit other minority persons and women and, where reasonable, provide after school, summer, and vacation employment to minority and female youth both on the site and in other areas of a contractor's workforce.

11. Validate all test and other selection requirements where there is an obligation to do so under 41 CFR PART 60-3.

12. Conduct, at least annually, an inventory and evaluation, at least of all minority and female personnel, for promotional opportunities and encourage these employees to seek or to prepare for, through appropriate training, etc., such opportunities.

13. Ensure that seniority practices, job classifications, work assignments, and other personnel practices do not have a discriminatory effect by continually monitoring all personnel and employment related activities to ensure that the EEO policy and the contractor's obligations under these specifications are being carried out.

14. Ensure that all facilities and company activities are nonsegregated except that separate or single-user toilet and necessary changing facilities shall be provided to assure privacy between the sexes.

15. Document and maintain a record of all solicitations of offers for subcontracts from minority and female construction contractors and suppliers, including circulation of solicitations to minority and female contractor associations and other business associations.

16. Conduct a review, at least annually, of all supervisors' adherence to and performance under the contractor's EEO policies and affirmative action obligations.

H. Contractors are encouraged to participate in voluntary associations which assist in fulfilling one or more of their

affirmative action obligations (G.1 to G.16). The efforts of a contractor association, joint contractor-union, contractor-community, or other similar groups of which the contractor is a member and participant, may be asserted as fulfilling any one or more of its obligations under G.1 to G.16 of these specifications provided that the contractor actively participates in the group, makes every effort to assure that the group has a positive impact on the employment of minorities and women in the industry, ensures that the concrete benefits of the program are reflected in the contractor's minority and female workforce participation, makes good faith effort to meet its individual goals and timetables, and can provide access to documentation which demonstrates the effectiveness of actions taken on behalf of the contractor. The obligation to comply, however, is the contractor's and failure of such a group to fulfill an obligation shall not be a defense for the contractor's noncompliance.

I. A single goal for minorities and a separate single goal for women have been established. The contractor, however, is required to provide EEO and to take affirmative action for all minority groups, both male and female, and all women, both minority and nonminority. Consequently, the contractor may be in violation of the executive order if a particular group is employed in a substantially disparate number (for example, even though the contractor has achieved its goals for women generally, the contractor may be in violation of the executive order if a specific minority group of women is underutilized).

J. The contractor shall not use the goals and timetables or affirmative action standards to discriminate against any person because of race, color, religion, sex, or national origin.

K. The contractor shall not enter into any subcontract with any person or firm debarred from Government contracts pursuant to Executive Order 11246, as amended.

L. The contractor shall carry out such sanctions and penalties for violation of these specifications and of the Equal Opportunity Clause, including suspension, termination, and cancellation of existing subcontracts as may be imposed or ordered pursuant to Executive Order 11246, as amended, and in its implementing regulations, by the OFCCP. Any contractor who fails to carry out such sanctions and penalties shall be in violation of these specifications and Executive Order 11246, as amended.

M. The contractor, in fulfilling its obligations under these specifications, shall implement specific affirmative

action steps, at least as extensive as those standards prescribed in paragraph G of these specifications so as to achieve maximum results from its efforts to ensure equal employment opportunity. If the contractor fails to comply with the requirements of the executive order, the implementing regulations, or these specifications, the Director shall proceed in accordance with 41 CFR 60-4.8.

N. The contractor shall designate a responsible official to monitor all employment related activity to ensure that the company EEO policy is being carried out, to submit reports relating to the provisions hereof as may be required by the Government, and to keep records. Records shall at least include for each employee, the name, address, telephone number, construction trade, union affiliation if any, employee identification number when assigned, social security number, race, sex, status (e.g., mechanic, apprentice, trainee, helper, or laborer), dates of changes in status, hours worked per week in the indicated trade, rate of pay, and locations at which the work was performed. Records shall be maintained in an easily understandable and retrievable form; however, to the degree that existing records satisfy this requirement, contractors shall not be required to maintain separate records.

O. Nothing herein provided shall be construed as a limitation upon the application of other laws which establish different standards of compliance or upon the application of requirements for the hiring of local or other area residents (e.g., those under the Public Works Employment Act of 1977 and the Community Development Block Grant Program).

100-07 TITLE VI OF THE CIVIL RIGHTS ACT OF 1964 NONDISCRIMINATION IN FEDERALLY ASSISTED PROGRAMS OF THE DEPARTMENT OF TRANSPORTATION. During the performance of this contract, the contractor, for itself, its assigns and successors in interest (hereinafter referred to as the contractor) agrees as follows:

A. Compliance with Regulations. The contractor shall comply with the Regulations relative to nondiscrimination in federally assisted programs of the Department of Transportation (hereinafter, DOT) Title 49, Code of Federal Regulations, Part 21, as they may be amended from time to time (hereafter, Regulations), which are herein incorporated by reference and made a part of this contract.

B. Nondiscrimination. The contractor, with regard to the work performed by it during the contract, shall not discriminate on the grounds of race, color, or national origin in the selection and retention of subcontractors,

including procurements of materials and leases of equipment. The contractor shall not participate either directly or indirectly in the discrimination prohibited by Section 21.5 of the Regulations including employment practices when the contract covers a program set forth in Appendix B of the Regulations.

C. Solicitations for Subcontracts, Including Procurement of Materials and Equipment. In all solicitations either by competitive bidding or negotiation made by the contractor for work to be performed under a subcontract, including procurements of materials or leases of equipment, each potential subcontractor or supplier shall be notified by the contractor of the contractor's obligations under this contract and the Regulations relative to nondiscrimination on the grounds of race, color, or national origin.

D. Information and Reports. The contractor shall provide all information and reports required by the Regulations or directives issued pursuant thereto, and shall permit access to its books, records, accounts, other sources of information, and its facilities as may be determined by the sponsor or the Federal Aviation Administration to be pertinent to ascertain compliance with such Regulations, orders, and instructions. Where any information required of a contractor is in the exclusive possession of another who fails or refuses to furnish this information the contractor shall so certify to the sponsor or the FAA as appropriate, and shall set forth what efforts it has made to obtain the information.

E. Sanctions for Noncompliance. In the event of the contractor's noncompliance with the nondiscrimination provisions of this contract, the sponsor shall impose such contract sanctions as it or the Federal Aviation Administration may determine to be appropriate, including, but not limited to:

1. Withholding of payments to the contractor under the contract until the contractor complies, and/or
2. Cancellation, termination, or suspension of the contract, in whole or in part.

F. Incorporation of Provisions. The contractor shall include the provisions of paragraphs A and E in every subcontract, including procurements of materials and leases of equipment, unless exempt by the Regulations or directives issued pursuant thereto. The contractor shall take such action with respect to any subcontract or procurement as the sponsor or the Federal Aviation Administration may direct as a means of enforcing such provisions including sanctions for

noncompliance. Provided, however, that, in the event a contractor becomes involved in, or is threatened with, litigation with a subcontractor or supplier as a result of such direction, the contractor may request the sponsor to enter into such litigation to protect the interests of the sponsor and, in addition, the contractor may request the United States to enter into such litigation to protect the interests of the United States.

G. Breach of Contract Terms - Sanctions. Any violation or breach of the terms of this contract on the part of the contractor/ subcontractor may result in the suspension or termination of this contract or such other action which may be necessary to enforce the rights of the parties of this agreement.

100-08 STANDARD REQUIREMENTS FOR AIRPORT IMPROVEMENT PROGRAM CONTRACTS. The following is included in all federally assisted construction contracts:

A. AIP Project. The work in this contract is included in AIP Grant Nos. _____ which is being undertaken and accomplished by (Sponsor's Name) in accordance with the terms and conditions of a grant agreement between the (Sponsor's Name), hereinafter referred to as the Sponsor, and the United States, under the Airport and Airway Improvement Act of 1982 (AAIA) (P.L. 97-248, 49 U.S.C. 2201 et seq) and Part 152 of the Federal Aviation Regulations (FAR) (14 CFR Part 152), or its successor regulation, pursuant to which the United States has agreed to pay a certain percentage of that Act. The United States is not a party to this contract and no reference in this contract to the FAA or any representative thereof, or to any rights granted to the FAA or any representative thereof, or the United States, by the contract, makes the United States a party to this contract.

B. Consent to Assignment. The contractor shall obtain the prior written consent of the sponsor to any proposed assignment of any interest in or part of this contract.

C. Veteran's Preference. In the employment of labor (except in executive, administrative, and supervisory positions), preference shall be given to veterans of the Viet Nam era and disabled veterans. However, this preference may be given only where the individuals are available and qualified to perform the work to which the employment relates.

D. FAA Inspection and Review. The contractor shall allow any authorized representative of the FAA to inspect

and review any work or materials used in the performance of this contract.

E. Inspection Records. The contractor shall maintain an acceptable cost accounting system. The sponsor, the FAA, and the Comptroller General of the United States shall have access to any books, documents, papers, and records of the contractor which are directly pertinent to the specific contract for the purpose of making audit, examination, excerpts, and transcriptions. The contractor shall maintain all required records for three years after the sponsor makes final payment and all other pending matters are closed.

F. Rights to Inventions - Materials. All rights to inventions and materials generated under this contract are subject to regulations issued by the FAA and the recipient of the Federal grant under which this contract is executed.

G. Disadvantaged Business Enterprises. It is the policy of the Department of Transportation that disadvantaged business enterprises shall have the maximum opportunity to participate in the performance of this contract.

1. The contractor agrees to ensure that disadvantaged business enterprises have the maximum opportunity to participate in the performance of subcontracts. In this regard the contractor shall take all necessary and reasonable steps in accordance with 49 CFR Part 23 to ensure that disadvantaged business enterprises have the maximum opportunity to compete for and perform subcontracts. Contractors shall not discriminate on the basis of race, color, national origin, or sex in the award and performance of this contract.

100-09 CLEAN AIR AND WATER POLLUTION CONTROL REQUIREMENTS.

Contractors and subcontractors must agree for any contract or subcontract exceeding \$100,000.00:

A. That any facility to be used in the performance of the contract or to benefit from the contract is not listed on the Environmental Protection Agency (EPA) List of Violating Facilities;

B. That it will comply with all the requirements of Section 306 of the Clean Air Act, Section 508 of the Clean Water Act, Executive Order 11738, Environmental Protection Agency Regulation (40 CFR Part 15) and all regulations issued thereunder;

C. That it will notify the awarding official of the receipt of any communication from the EPA indicating that a facility to be utilized for performance of or benefit from the contract is under consideration to be listed on the EPA List of Violating Facilities; and

D. That it will include or cause to be included in any contract or subcontract which exceeds \$100,000.00 the aforementioned criteria and requirements.

100-10 BONDING/INSURANCE. The following clauses are included in all federally assisted construction contracts for bids and/or contracts in excess of \$100,000.00:

A. The contractor agrees to furnish a performance bond for 100 percent of the contract price. This bond is one that is executed in connection with a contract to secure fulfillment of all contractor's obligations under such contract.

B. The contractor agrees to furnish a payment bond for 100 percent of the contract price. This bond is one that is executed in connection with a contract to assure payment as required by law of all persons supplying labor and materials in the execution of the work provided for in the contract.

100-11 DISADVANTAGED BUSINESS ENTERPRISE REQUIREMENTS.

Disadvantaged Business Enterprises (DBE) requirements are applicable to each general aviation airport sponsor receiving grant funds in excess of \$250,000; each non-hub airport sponsor (including commuters) receiving grant funds in excess of \$400,000; each large, medium, small hub airport sponsor receiving a grant in excess of \$500,000.

Since the contract to be awarded under this advertised bid falls into the above category, the bid is subject to the following DBE requirements:

A. The successful bidder shall make a good faith effort to use DBE subcontractors and to replace a DBE subcontractor that is unable to perform successfully with another DBE subcontractor. There shall be no substitution of any subcontractors without the prior approval of the sponsor in order to ensure that the substitute firm is an eligible DBE.

B. Definitions

1. A disadvantaged business enterprise is a small business concern:

(a) Which is at least 51% owned by one or more

socially or economically disadvantaged individuals, or, in the case of any publicly owned business, at least 51% of the stock of which is owned by one or more socially and economically disadvantaged individuals; and

(b) Whose management and daily business operations are controlled by one or more socially and economically disadvantaged individuals who own it.

2. Small business concern means a small business as defined pursuant to section 3 of the Small Business Act and relevant regulations promulgated pursuant thereto except that a small business concern shall not include any concern or group of concerns controlled by the same socially and economically disadvantaged individual or individuals which has annual average gross receipts in excess of \$14 million over the previous three fiscal years.

3. Socially and economically disadvantaged individuals means those individuals who are citizens of the United States (or lawfully admitted permanent residents) and who are Women, Black Americans, Hispanic Americans, Native Americans, Asian-Pacific Americans, or Asian-Indian Americans and any other minorities or individuals found to be disadvantaged by the Small Business Administration pursuant to Section 8(a) of the Small Business Act. Recipients shall make a rebuttable presumption that individuals in the following groups are socially and economically disadvantaged. Recipients also may determine, on a case-by-case basis, that individuals who are not a member of one of the following groups are socially and economically disadvantaged:

(a) "Black Americans," which includes persons having origins in any of the Black racial groups of Africa;

(b) "Hispanic Americans," which includes persons of Mexican, Puerto Rican, Cuban, Central or South American, or other Spanish or Portuguese culture or origin, regardless of race;

(c) "Native Americans," which includes persons who are American Indians, Eskimos, Aleuts, or Native Hawaiians;

ATTACHMENT IV-6 (20)

- (d) "Asian-Pacific Americans," which includes persons whose origins are from Japan, China, Taiwan, Korea, Vietnam, Laos, Cambodia, the Philippines, Samoa, Guam, the U.S. Trust Territories of the Pacific, and the Northern Marianas; and
- (e) "Asian-Indian Americans," which includes persons whose origins are from India, Pakistan, and Bangladesh.

C. Bidding Requirements. Each Bidder is required to submit DBE participation information and, as a condition of contract award, must meet the DBE goal or demonstrate to the Airport Sponsor that it made good faith efforts to reach the goal.

The bidder shall make good faith efforts, as defined in Appendix A of 49 CFR Part 23, Regulations of the Office of the Secretary of Transportation, to subcontract _____ (%) of the dollar value of the prime contract to small business concerns owned and controlled by socially and economically disadvantaged individuals (DBE). In the event that the bidder for this solicitation qualifies as a DBE, the contract goal shall be deemed to have been met. Individuals who are rebuttably presumed to be socially and economically disadvantaged include Women, Black Americans, Hispanic Americans, Native Americans, Asian-Pacific Americans, and Asian-Indian Americans. Each Bidder will be required to submit within the bid information concerning the DBE's that will participate in this contract. The information will include: (1) the name and address of each DBE; (2) a description of the work to be performed by each named firm; (3) the dollar value of the contract; and (4) a copy of the DBE Certificate. If the bidder fails to achieve the contract goal stated herein, it shall provide documentation with the bid demonstrating that it made good faith efforts in attempting to do so. A bid that fails to meet these requirements will be considered non-responsive.

D. Procedures to Confirm Good Faith Efforts. If the apparent low bidder, who is otherwise responsive and responsible, cannot meet the goal, he must show that he has made good faith efforts to this end through:

1. Attendance at the pre-bid meeting;
2. Copies of advertisement(s) in trade association newsletters and minority-owned media;
3. A report with a detailed statement of efforts made to locate and negotiate with DBE's, including

information on:

- (a) Efforts made to select portions of the work proposed to be performed by DBE's in order to increase the likelihood of achieving the stated goal;
- (b) Each DBE contacted, but which the bidder considers to be unqualified to perform the work;
- (c) Each DBE contacted, but which the bidder considers to be unavailable; and
- (d) Which organizations that represent or provide assistance to subcontractors were contacted.

The stated percentage goal may be waived if the aforementioned good faith efforts to reach the goal have been made. However, a bidder or proposer's failure to meet the goal or to show meaningful good faith efforts to reach the goal may be grounds for finding the bid non-responsive.

E. To insure that any substitute firm is an eligible DBE, the Contractor shall not substitute subcontractors without the prior approval of the Owner.

F. The Contractor shall establish and maintain records and submit reports, as required and requested, which will identify the efforts and achievements made to meet DBE subcontract goals and other DBE affirmative action efforts.

100-12 FOREIGN TRADE RESTRICTIONS.

This clause is included in all solicitations, contracts, and subcontracts resulting from projects funded under the AIP.

The contractor or subcontractor, by submission of a bid and/or execution of a contract, certifies that it:

- a. Is not owned or controlled by one or more citizens or nationals of a foreign country included in the list of countries that discriminate against U.S. firms published by the Office of the United States Trade Representative (USTR);
- b. Has not knowingly entered into any contract or subcontract for this project with a contractor that is a citizen or national of a foreign country on said list, or is owned or controlled directly or indirectly by one or more citizens or nationals of a foreign country on said list.

c. Has not procured any product nor subcontracted for the supply of any product for use on the project that is produced in a foreign country on said list.

Unless the restrictions of this clause are waived by the Secretary of Transportation in accordance with 49 CFR 30.17, no contract shall be awarded to a contractor or subcontractor who is unable to certify to the above. If the Contractor knowingly procures or subcontracts for the supply of any product or service of a foreign country on the said list for use on the project, the Federal Aviation Administration may direct, through the sponsor, cancellation of the contract at no cost to the Government.

Further, the contractor agrees that, if awarded a contract resulting from this solicitation, it will incorporate this provision for certification without modification in each contract and in all lower tier subcontracts. The contractor may rely upon the certification of a prospective subcontractor unless it has knowledge that the certification is erroneous.

The contractor shall provide immediate written notice to the sponsor if the contractor learns that its certification or that of a subcontractor was erroneous when submitted or has become erroneous by reason of changed circumstances. The subcontractor agrees to provide immediate written notice to the contractor, if at any time it learns that its certification was erroneous by reason of changed circumstances.

This certification is a material representation of fact upon which reliance was placed when making the award. If it is later determined that the contractor or subcontractor knowingly rendered an erroneous certification, the Federal Aviation Administration may direct, through the sponsor, cancellation of the contract or subcontract for default at no cost to the Government.

Nothing contained in the foregoing shall be construed to require establishment of a system of records in order to render, in good faith, the certification required by this provision. The knowledge and information of a contractor is not required to exceed that which is normally possessed by a prudent person in the ordinary course of business dealings.

This certification concerns a matter within the jurisdiction of an agency of the United States of America and the making of a false, fictitious, or fraudulent certification may render the maker subject to prosecution under Title 18, United States Code, Section 1001.

100-13 SECRETARY OF LABOR REQUIREMENTS.

A(1) Minimum Wages

(i) All laborers and mechanics employed or working upon the site of the work will be paid unconditionally and not less often than once a week, and without subsequent deduction or rebate on any account (except such payroll deductions as are permitted by regulations issued by the Secretary of Labor under the Copeland Act, the full amount of wages and bona fide fringe benefits (or cash equivalents thereof) due at time of payment computed at rates not less than those contained in the wage determination of the Secretary of Labor which is attached hereto and made a part hereof, regardless of any contractual relationship which may be alleged to exist between the contractor and such laborers and mechanics. Contributions made or costs reasonably anticipated for bona fide fringe benefits under section 1(b)(2) of the Davis-Bacon Act on behalf of laborers or mechanics are considered wages to such laborers or mechanics, subject to the provisions of paragraph (a)(1)(iv) of this section; also, regular contributions made or costs incurred for more than a weekly period (but not less often than quarterly) under plans, funds, or programs which cover the particular weekly period are deemed to be constructively made or incurred during such weekly period. Such laborers and mechanics shall be paid the appropriate wage rate and fringe benefits on the wage determination for the classification of work actually performed, without regard to skill, except as provided in subparagraphs 5.5(a)(4). Laborers or mechanics performing work in more than one classification may be compensated at the rate specified for each classification for the time actually worked therein: Provided, that the employers payroll records accurately set forth the time spent in each classification in which the work is performed. The wage determination (including any additional classification and wage rates conformed under paragraph (a)(1)(ii) of this section) and the Davis-Bacon poster (WH-1321) shall be posted at all times by the contractor and its subcontractors at the site of the work in a prominent and accessible place where it can be easily seen by the workers.

(ii)(A) The contracting officer shall require that any class of laborers or mechanics, including helpers, which is not listed in the wage determination and which is to be employed under the contract shall be classified in conformance with the wage determination. The contracting officer shall approve an additional classification and wage rate and fringe benefits therefore only when the following criteria have been met:

ATTACHMENT IV-6 (24)

(1) Except with respect to helpers as defined in 29 CFR 5.2(n)(4), the work to be performed by the classification requested is not performed by a classification in the wage determination; and

(2) The classification is utilized in the area by the construction industry; and

(3) The proposed wage rate, including any bona fide fringe benefits, bears a reasonable relationship to the wage rates contained in the wage determination; and

(4) With respect to helpers as defined in 29 CFR 5.2(n)(4), such a classification prevails in the area in which the work is performed.

(ii)(B) If the contractor and the laborers and mechanics to be employed in the classification (if known), or their representatives, and the contracting officer agree on the classification and wage rate (including the amount designated for fringe benefits where appropriate), a report of the action taken shall be sent by the contracting officer to the Administrator of the Wage and Hour Division, Employment Standards Administration, U.S. Department of Labor, Washington, D.C. 20210. The Administrator, or an authorized representative, will approve, modify, or disapprove every additional classification action within 30 days of receipt and so advise the contracting officer or will notify the contracting officer within the 30-day period that additional time is necessary.

(ii)(C) In the event the contractor, the laborers or mechanics to be employed in the classification or their representatives, and the contracting officer do not agree on the proposed classification and wage rate (including the amount designated for fringe benefits, where appropriate), the contracting officer shall refer the questions, including the views of all interested parties and the recommendation of the contracting officer, to the Administrator for determination. The Administrator, or an authorized representative, will issue a determination within 30 days of receipt and so advise the contracting officer within the 30-day period that additional time is necessary.

(ii)(D) The wage rate (including fringe benefits where appropriate) determined pursuant to subparagraphs (1)(B) or (C) of this paragraph shall be paid to all workers performing work in the classification under this contract from the first day on which work is performed in the classification.

(iii) Whenever the minimum wage rate prescribed in the

contract for a class of laborers or mechanics includes a fringe benefit which is not expressed as an hourly rate, the contractor shall either pay the benefit as stated in the wage determination or shall pay another bona fide fringe benefit or an hourly cash equivalent thereof.

(iv) If the contractor does not make payments to a trustee or other third person, the contractor may consider as part of the wages of any laborer or mechanic the amount of any costs reasonably anticipated in providing bona fide fringe benefits under a plan or program, Provided, that the Secretary of Labor has found, upon the written request of the contractor, that the applicable standards of the Davis-Bacon Act have been met. The Secretary of Labor may require the contractor to set aside in a separate account assets for the meeting of obligations under the plan or program.

A(2) Withholding. The Federal Aviation Administration shall upon its own action or upon written request of an authorized representative of the Department of Labor withhold or cause to be withheld from the contractor under this contract or any other Federal contract with the same prime contractor, or any other federally assisted contract subject to Davis-Bacon prevailing wage requirements, which is held by the same prime contractor, so much of the accrued payments or advances as may be considered necessary to pay laborers and mechanics, including apprentices, trainees, and helpers employed by the contractor or any subcontractor for the full amount of wages required by the contracts. In the event of failure to pay any laborer or mechanic, including any apprentice, trainee, or helper, employed or working on the site of the work all or part of the wages required by the contract, the Federal Aviation Administration may, after written notice to the contractor, sponsor, applicant, or owner, take such action as may be necessary to cause the suspension of any further payment, advance, or guarantee of funds until such violations have ceased.

A(3) Payrolls and Basic Records.

(i) Payrolls and basic records relating thereto shall be maintained by the contractor during the course of the work and preserved for a period of three years thereafter for all laborers and mechanics working at the site of the work. Such records shall contain the name, address, and social security number of each such worker, his or her correct classification, hourly rates of wages paid (including rates of contributions or costs anticipated for bona fide fringe benefits or cash equivalents thereof of the types described in section 1(b)(2)(B) of the Davis-Bacon Act), daily and weekly number of hours worked, deductions made and actual wages paid. Whenever the Secretary of Labor

has found under 29 CFR 5.5(a)(1)(iv) that the wages of any laborer or mechanic include the amount of any costs reasonably anticipated in providing benefits under a plan or program described in section 1(b)(2)(CB) of the Davis-Bacon Act, the contractor shall maintain records which show that the commitment to provide such benefits is enforceable, that the plan or program is financially responsible, and that the plan or program has been communicated in writing to the laborers or mechanics affected, and records which show the costs anticipated or the actual cost incurred in providing such benefits. Contractors employing apprentices or trainees under approved programs shall maintain written evidence of the registration of apprenticeship programs and certification of trainee programs, the registration of the apprentices and trainees, and the ratios and wage rates prescribed in the applicable programs.

(ii)(A) The contractor shall submit weekly for each week in which any contract work is performed a copy of all payrolls to the (Sponsor's Name). The payrolls submitted shall set out accurately and completely all of the information required to be maintained under subparagraph 5.5(a)(3)(i) of Regulations, 29 CFR Part 5. This information may be submitted in any form desired. Optional Form WH-347 is available for this purpose and may be purchased from the Superintendent of Documents (Federal Stock Number 029-005-00014-1), U.S. Government Printing Office, Washington, D.C. 20402. The prime contractor is responsible for the submission of copies of payrolls by all subcontractors.

(ii)(B) Each payroll submitted shall be accompanied by a "Statement of Compliance" signed by the contractor or subcontractor or his or her agent who pays or supervises the payment of the persons employed under the contract and shall certify the following:

(1) That the payroll for the payroll period contains the information required to be maintained under subparagraph 5.5(2)(3)(i) of Regulations, 29 CFR Part 5 and that such information is correct and complete;

(2) That each laborer or mechanic (including each helper, apprentice, and trainee) employed on the contract during the payroll period had been paid the full weekly wages earned, without rebate, either directly or indirectly, and that no deductions have been made either directly or indirectly from the full wages earned, other than permissible deductions as set forth in Regulations, 29 CFR Part 3;

(3) That each laborer or mechanic has been paid not

less than the applicable wage rates and fringe benefits or case equivalents for the classification of work performed, as specified in the applicable wage determination.

(ii)(C) The weekly submission of a properly executed certification set forth on the reverse side of Optional Form WH-347 shall satisfy the requirement for submission of the "Statement of Compliance required by paragraph (a)(3)(ii)(B) of this section.

(ii)(D) The falsification of any of the above certifications may subject the contractor or subcontractor to civil or criminal prosecution under Section 1001 of the United States Code.

(iii) The contractor or subcontractor shall make the records required under paragraph (a)(3)(i) of this section available for inspection, copying or transcription by authorized representatives of the Department of Transportation, Federal Aviation Administration, or the Department of Labor, and shall permit such representatives to interview employees during working hours on the job. If the contractor or subcontractor fails to submit the required records or to make them available, the Federal Aviation Administration may, after written notice to the contractor, sponsor, or owner, take such action as may be necessary to cause the suspension of any further payment, advance, or guarantee of funds. Furthermore, failure to submit the required records upon request or to make such records available may be grounds for debarment action pursuant to 29 CFR 5.12.

A(4) Apprentices, Trainees and Helpers.

(i) Apprentices will be permitted to work at less than the predetermined rate for the work they perform when they are employed pursuant to and individually registered in a bona fide apprenticeship program registered with the U.S. Department of Labor, Employment and Training Administration, Bureau of Apprenticeship and Training, or with a State Apprenticeship Agency recognized by the Bureau, or if a person is employed in his or her first 90 days of probationary employment as an apprentice in such an apprenticeship program, who is not individually registered in the program, but who has been certified by the Bureau of Apprenticeship and Training or a State Apprenticeship Agency (where appropriate) to be eligible for probationary employment as an apprentice. The allowable ratio of apprentices to journeymen on the job site in any craft classification shall not be greater than the ratio permitted to the contractor as to the entire work force under the

registered program. Any worker listed on a payroll at an apprentice wage rate, who is not registered or otherwise employed as stated above, shall be paid not less than the applicable wage rate on the wage determination for the classification of work actually performed. In addition, any apprentice performing work on the job site in excess of the ratio permitted under the registered program shall be paid not less than the applicable wage rate on the wage determination for the work actually performed. Where a contractor is performing construction on a project in a locality other than that in which its program is registered, the ratios and wage rates (expressed in percentages of the journeyman's hourly rate) specified in the contractor's or subcontractor's registered program shall be observed. Every apprentice must be paid at not less than the rate specified in the registered program for the apprentice's level of progress, expressed as a percentage of the journeyman hourly rate specified in the applicable wage determination.

Apprentices shall be paid fringe benefits in accordance with the provisions of the apprenticeship program. If the apprenticeship program does not specify fringe benefits, apprentices must be paid the full amount of fringe benefits listed on the wage determination for applicable classification. If the Administrator determines that a different practice prevails for the applicable apprentice classification, fringes shall be paid in accordance with that determination.

In the event the Bureau of Apprenticeship and Training or a State Apprenticeship Agency recognized by the Bureau, withdraws approval, the contractor will no longer be permitted to utilize apprentices at less than the applicable predetermined rate for the work performed until an acceptable program is approved.

(ii) Trainees, except as provided in 29 CFR 5:16, will not be permitted to work at less than the predetermined rate for the work performed unless they are employed pursuant to and individually registered in a program which has received prior approval, evidenced by formal certification by the U.S. Department of Labor, Employment and Training Administration. The ratio of trainees to journeymen on the job site shall not be greater than permitted under the plan approved by the Employment and Training Administration. Every trainee must be paid at not less than the rate specified in the approved program for the trainee's level of progress, expressed as a percentage of the journeyman hourly rate specified in the applicable wage determination. Trainees shall be paid fringe benefits in accordance with the provisions of the trainee program. If the trainee program does not mention fringe benefits, trainees shall be

paid the full amount of fringe benefits listed on the wage determination unless the Administrator of the Wage and Hour Division determines that there is an apprenticeship program associated with the corresponding journeyman wage rate on the wage determination which provides for less than full fringe benefits for apprentices. Any employee listed on the payroll at a trainee rate who is not registered and participating in a training plan approved by the Employment and Training Administration shall be paid not less than the applicable wage rate on the wage determination for the classification of work actually performed. In addition, any trainee performing work on the job site in excess of the ratio permitted under the registered program shall be paid not less than the applicable wage rate on the wage determination for the work actually performed. In the event the Employment and Training Administration withdraws approval of a training program, the contractor will no longer be permitted to utilize trainees at less than the applicable predetermined rate for the work performed until an acceptable program is approved.

(iii) Equal employment opportunity. The utilization of apprentices, trainees and journeymen under this part shall be in conformity with the equal employment opportunity requirements of Executive Order 11246, as amended, and 29 CFR Part 30.

(iv) Helpers. Helpers will be permitted to work on a project if the helper classification is specified on an applicable wage determination or is approved pursuant to the conformance procedure set forth in subparagraph 5.5(a)(1)(ii). The allowable ratio of helpers to journeymen employed by the contractor or subcontractor on the job site shall not be greater than two helpers for every three journeymen (in other words, not more than 40 percent of the total number of journeymen and helpers in each contractor's or in each subcontractor's own work force employed on the job site). Any worker listed on a payroll at a helper wage rate, who is not a helper as defined in 29 CFR 2.5(n)(4), shall be paid not less than the applicable wage rate on the wage determination for classification of work actually performed. In addition, any helper performing work on the job site in excess of the ratio permitted shall be paid not less than the applicable journeyman's (or laborer's, where appropriate) wage rate on the wage determination for the work actually performed.

A(5) Compliance with Copeland Act Requirements. The contractor shall comply with the requirements of 29 CFR Part 3, which are incorporated by reference in this contract.

A(6) Subcontracts. The contractor or subcontractor shall

insert in any subcontracts the clauses contained in 29 CFR 5.5(a)(1) through (10) and such other clauses as the Federal Aviation Administration may by appropriate instructions require, and also a clause requiring the subcontractors to include these clauses in any lower tier subcontracts. The prime contractor shall be responsible for the compliance by any subcontractor or lower tier subcontractor with all the contract clauses in 29 CFR 5.5.

A(7) Contract Termination: debarment. A breach of the contract clauses in 29 CFR 5.5 may be grounds for termination of the contract, and for debarment as a contractor and a subcontractor as provided in 29 CFR 5.12.

A(8) Compliance with Davis-Bacon and Related Act Requirements. All rulings and interpretations of the Davis-Bacon and related acts contained in 29 CFR Parts 1, 3, and 5 are herein incorporated by reference in this contract.

A(9) Disputes Concerning Labor Standards: Disputes arising out of the labor standards provisions of this contract shall not be subject to the general disputes clause of this contract. Such disputes shall be resolved in accordance with the procedures of the Department of Labor set forth in 29 CFR Parts 5, 6, and 7. Disputes within the meaning of this clause include disputes between the contractor (or any of its subcontractors) and the contracting agency, the U.S. Department of Labor, or the employees or their representatives.

A(10) Certification of Eligibility.

(i) By entering into this contract, the contractor certifies that neither it (nor he or she) nor any person or firm who has an interest in the contractor's firm is a person or firm ineligible to be awarded Government contracts by virtue of Section 3(a) of the Davis-Bacon Act or 29 CFR 5.12(A)(1).

(ii) No part of this contract shall be subcontracted to any person or firm ineligible for award of a Government contract by virtue of section 3(a) of the Davis-Bacon Act or 29 CFR 5.12(a)(1).

(iii) The penalty for making false statements is prescribed in the U.S. Criminal Code, 18 U.S.C. 1001.

See Certification Form Next Page

CONTRACTOR'S CERTIFICATION OF ELIGIBILITY

The bidder certifies, by submission of this proposal or acceptance of this contract, that neither it nor its principals is presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from participation in this transaction by any Federal department or agency. It further agrees by submitting this bid that it will include this clause without modification in all lower tier transactions, solicitations, bids, proposals, contracts, and subcontracts. Where the bidder/offer/contractor or any lower tier participant is unable to certify to this statement, it shall attach an explanation to this solicitation/proposal.

That, the information above is true and complete to the best of my knowledge.

Name and Title (please print)

Signature

Date

NOTE: The penalty for making false statements in offers is prescribed in 18 U.S.C. 1001.

B(1) Contract Work Hours and Safety Standards Act.

(i) Overtime Requirements. No contractor or subcontractor contracting for any part of the contract work which may require or involve the employment of laborers or mechanics shall require or permit any such laborer or mechanic in any workweek in which he or she is employed on such work to work in excess of forty hours in such workweek unless such laborer or mechanic receives compensation at a rate not less than one and one-half times the basic rate of pay for all hours worked in excess of forty hours in such workweek.

(ii) Violation; Liability for unpaid wages; liquidated damages. In the event of any violation of the clause set forth in subparagraph (i) of this clause, the contractor and any subcontractor responsible therefore shall be liable for the unpaid wages. In addition, such contractor and subcontractor shall be liable to the United States (in the case of work done under contract for the District of Columbia or a territory, to such District or to such territory) for liquidated damages. Such liquidated damages shall be computed with respect to each individual laborer or mechanic, including watchmen and guards, employed in violation of the clause set forth in subparagraph (i) of this paragraph, in the sum of \$10 for each calendar day for which such individual was required or permitted to work in excess of the standard workweek of forty hours without payment of overtime wages required by the clause set forth in subparagraph (i) of this clause.

(iii) Withholding for unpaid wages and liquidated damages. The (Sponsor's Name) shall upon its own action or upon written request of an authorized representative of the Department of Labor withhold or cause to be withheld, from any moneys payable on account of work performed by the contractor or subcontractor under any such contract or any other Federal contract with the same prime contractor, or any other federally assisted contract subject to the Contract Work Hours and Safety Standards Act, which is held by the same prime contractor, such sums as may be determined to be necessary to satisfy any liabilities of such contractor or subcontractor for unpaid wages and liquidated damages as provided in the clause set forth in subparagraph (ii) of this paragraph.

(iv) Subcontracts. The contractor or subcontractor shall insert in any subcontracts the clauses set forth in subparagraph (i) through (iv) of this paragraph and also a clause requiring the subcontractors to include these clauses in any lower tier contracts. The prime contractor shall be responsible for compliance by any subcontractor or lower

tier subcontractor with the clauses set forth in subparagraphs (i) through (iv) of this paragraph.

B(2) Contracts subject only to Contract Work Hours and Safety Standards Act.

(i) The contractor or subcontractor shall maintain payrolls and basic payroll records during the course of the work and shall preserve them for a period of three years from the completion of the contract for all laborers and mechanics, including guards and watchmen, working on the contract. Such records shall contain the name and address of each such employee, social security number, correct classifications, hourly rates of wages paid, daily and weekly number of hours worked, deductions made, and actual wages paid.

(ii) The records to be maintained under paragraph (i) above shall be made available by the contractor or subcontractor for inspection, copying, or transcription by authorized representatives of the Department of Transportation, Federal Aviation Administration and the Department of Labor, and the contractor or subcontractor will permit such representatives to interview employees during working hours on the job.

100-14 BUY AMERICAN - STEEL AND MANUFACTURED PRODUCTS FOR CONSTRUCTION CONTRACTS (JAN 1991).

A. The Aviation Safety and Capacity Expansion Act of 1990 provides that preference be given to steel and manufactured products produced in the United States when funds are expended pursuant to a grant issued under the Airport Improvement Program. The following terms apply:

1. Steel and manufactured products. As used in this clause, steel and manufactured products include (1) steel produced in the United States or (2) a manufactured product produced in the United States, if the cost of its components mined, produced or manufactured in the United States exceeds 60 percent of the cost of all its components and final assembly has taken place in the United States. Components of foreign origin of the same class or kind as the products referred to in subparagraphs B.1 or B.2 shall be treated as domestic.

2. Components. As used in this clause, components means those articles, materials, and supplies incorporated directly into steel and manufactured products.

3. Cost of Components. This means the costs for production of the components, exclusive of final assembly labor costs.

B. The successful bidder will be required to assure that only domestic steel manufactured products will be used by the Contractor, subcontractors, materialmen, and suppliers in the performance of this contract, except those:

1. That the U.S. Department of Transportation has determined, under the Aviation Safety and Capacity Expansion Act of 1990, are not produced in the United States in sufficient and reasonably available quantities and of a satisfactory quality;

2. That the U.S. Department of Transportation has determined, under the Aviation Safety and Capacity Expansion Act of 1990, that domestic preference would be inconsistent with the public interest; or

3. That inclusion of domestic material will increase the cost of the overall project contract by more than 25 percent.

C. The Contractor shall deliver only domestic steel and manufactured products under this contract as defined below:

1. Steel and manufactured products. As used in this clause, steel and manufactured products include (1) those produced in the United States or (2) a manufactured product produced in the United States, if the cost of its components mined, produced or manufactured in the United States exceeds 60 percent of the cost of all its components and final assembly has taken place in the United States.

2. Components. As used in this clause, components means those articles, materials, and supplies incorporated directly into steel and manufactured products.

3. Cost of Components. This means the costs for production of the components, exclusive of final assembly labor costs.

D. The Contractor agrees that only domestic steel and manufactured products will be used by the Contractor, subcontractors, materialmen, and suppliers in the performance of this contract, as defined below:

1. Steel and manufactured products. As used in this clause, steel and manufactured products include (1)

those produced in the United States or (2) a manufactured product produced in the United States, if the cost of its components mined, produced or manufactured in the United States exceeds 60 percent of the cost of all its components and final assembly has taken place in the United States.

2. Components. As used in this clause, components means those articles, materials, and supplies incorporated directly into steel and manufactured products.

3. Cost of components. This means the costs of production of the components, exclusive of final assembly labor costs.

E. List of Supplies/Materials that the U.S. Government Has Determined Are Not Produced In the United States In Sufficient and Reasonably Available Quantities And of Sufficient Quality (Jan. 1991)

Acetylene, black.	Diamonds, industrial, stones and abrasives.
Agar, bulk.	Emetine, bulk.
Anise.	Ergot, crude.
Antimony, as metal or oxide.	Erthrityl tetranitrate.
Asbestos, amosite, chrysolite, and crocidolite.	Fair linen, altar.
Bananas.	Fibers of the following types: abaca, abace, agave, coir, flax, jute, jute burlaps, palmyra and sisal.
Bauxite.	Goat and kidskins.
Beef, corned, canned.	Graphic, natural, crystalline, crucible grade.
Beef extract.	Handsewing needles.
Bephenium Hydroxynapthoate.	Hemp yarn.
Bismuth.	Hog bristles for brushes.
Books, trade, text, technical, or scientific; newspapers, pamphlets; magazines; periodicals; printed briefs and films; not printed in the United States and for which domestic editions are not available.	Hyoscine, bulk.
Brazil nuts, unroasted.	Ipecac, root.
Cadmium, ores and flue dust.	Iodine, crude.
Calcium Cyanamide.	Kaurigum.
Capers.	Lac.
Cashew nuts.	Leather, sheepskin, hair type.
Castor beans and castor oil.	Lavender oil.
	Manganese.
	Menthol, natural bulk.
	Mica.

ATTACHMENT IV-6 (36)

Chalk, English
 Chestnuts.
 Chicle.
 Chrome ore or chromite.
 Cinchona bark.
 Cobalt, in cathodes,
 rondelles, or other primary
 ore and metal forms.
 Cocoa beans.
 Coconut and coconut meat,
 unsweetened, in shredded
 desiccated or similarly
 prepared form.
 Coffee, raw or green bean.
 Colchicine alkaloid, raw.
 Copra.
 Cork, wood or bark and waste.
 Cover glass, microscope
 slide.
 Cryolite, natural.
 Dammar gum.

Olives (green), pitted or
 unpitted, or stuffed, in
 bulk.
 Opium, crude.
 Oranges, mandarin; canned
 Petroleum, crude oil,
 unfinished oils, and finished
 products (see definitions
 below)
 Pine needle oil.
 Platinum and related group
 metals, refined, as sponge,
 powder, ingots, or cast
 bars.
 Pyrethrum flowers.
 Quartz crystals.
 Quebracho.
 Quinidine.
 Quinine.
 Rabbit fur felt.
 Radium salts, source and
 special nuclear materials.
 Rosettes.
 Rubber, crude and latex.
 Rutile.
 Santonin, crude.
 Secretin.
 Shellac.
 Silk, raw and unmanufactured.

Microprocessor chips (brought
 onto a construction site as
 separate units for
 incorporation into building
 systems during construction
 or repair and alteration of
 real property.)
 Nickel, primary, in ingots,
 pigs, shots, cathodes, or
 similar forms; nickel oxide
 and nickel salts.
 Nitroguanidine (also known as
 picrite).
 Nux vomica crude.
 Oiticica o l.
 Olive oil.

Tungsten.
 Vanilla beans.
 Venom, cobra.
 Wax, canauba.
 Woods; logs, veneer, and
 lumber of the following
 species: Alaskan yellow
 cedar, angelique, balsa,
 ekki, greenhart, lignum
 vitae, mahogany, and teak.
 Yarn, 50 Denier rayon.

Spare and replacement parts for equipment of foreign manufacture, and for which domestic parts are not available.

Spices and herbs, in bulk.

Sugars, raw.

Swords and scabbards.

Talc, block, steatite.

Tantalum.

Tapioca flour and cassava.

Tartar, crude; tartaric acid and cream of tartar in bulk.

Tea in bulk.

Thread, metallic (gold).

Thyme oil.

Tin in bars, blocks, and pigs.

Triprolidine hydrochloride.

Petroleum terms are used as follows:

"Crude oil" means crude petroleum, as it is produced at the wellhead, and liquids (under atmospheric conditions) that have been recovered from mixtures of hydrocarbons that existed in a vaporous phase in a reservoir and that are not natural gas products.

"Finished products" means any one or more of the following petroleum oils, or a mixture or combination of these oils, to be used without further processing except blending by mechanical means:

(A) "Asphalt" - a solid or semi-solid cementitious material that (1) gradually liquefies when heated, (2) has bitumens as its predominating constituents, and (3) is obtained in refining crude oil.

(B) "Fuel oil" - a liquid or liquefiable petroleum product burned for lighting or for the generation of heat or power and derived directly or indirectly from crude oil, such as kerosene, range oil, distillate fuel oils, gas oil, diesel fuel, topped crude oil, or residues.

(C) "Gasoline" - a refined petroleum distillate that, by its consumption, is suitable for use as a carburant in internal combustion engines.

(D) "Jet fuel" - a refined petroleum distillate used to fuel jet propulsion engines.

(E) "Liquefied gases" - hydrocarbon gases recovered from natural gas or produced from petroleum refining and kept under pressure to maintain a liquid state at ambient temperatures.

(F) "Lubricating oil" - a refined petroleum distillate or specially treated petroleum residue used to lessen friction between surfaces.

(G) "Naphtha" - a refined petroleum distillate falling within a distillation range overlapping the higher gasoline and the lower kerosenes.

(H) "Natural gas products" - liquids (under atmospheric conditions) including natural gasoline, that -

(1) are recovered by a process of absorption, adsorption, compression, refrigeration, cycling, or a combination of these processes, from mixtures of hydrocarbons that existed in a vaporous phase in a reservoir, and

(2) when recovered and without processing in a refinery, definitions of products contained in subdivision (B), (C), and (G) above.

(I) "Residual fuel oil" - a topped crude oil or viscous residuum that, as obtained in refining or after blending with other fuel oil, meets or is the equivalent of MILSPEC Mil-F-859 for Navy Special Fuel Oil and any more viscous fuel oil, such as No. 5 or Bunker C.

"Unfinished Oils" means one or more of the petroleum oils listed under "Finished products" above, or a mixture or combination of these oils, that are to be further processed other than by blending by mechanical means.

BUY AMERICAN CERTIFICATE (JAN 1991)

By submitting a bid under this solicitation, except for those items listed by the offeror below or on a separate and clearly identified attachment to this bid, the offeror certifies that steel and each manufactured product, is produced in the United States (as defined in the clause Buy American - Steel and Manufactured Products or Buy American - Steel and Manufactured Products for Construction Contracts) and that components of unknown origin are considered to have been produced or manufactured outside the United States.

Lists of articles, materials, and supplies excepted from this provision are included in Section 100-14 E.

49 CFR Parts 23 and 26

[Docket OST-97-2550; Notice 97-5]

RIN 2105-AB92

Participation by Disadvantaged Business Enterprises in Department of Transportation Programs

AGENCY: Office of the Secretary, DOT.

ACTION: Final rule.

SUMMARY: This final rule revises the Department of Transportation's regulations for its disadvantaged business enterprise (DBE) program. The DBE program is intended to remedy past and current discrimination against disadvantaged business enterprises, ensure a "level playing field" and foster equal opportunity in DOT-assisted contracts, improve the flexibility and efficiency of the DBE program, and reduce burdens on small businesses. This final rule replaces the former DBE regulation, which now contains only the rules for the separate DBE program for airport concessions, with a new regulation. The new regulation reflects President Clinton's policy to mend, not end, affirmative action programs. It modifies the Department's DBE program in light of developments in case law requiring "narrow tailoring" of such programs and last year's Congressional debate concerning the continuation of the DBE program. It responds to comments on the Department's December 1992 notice of proposed rulemaking (NPRM) and its May 1997 supplemental notice of proposed rulemaking (SNPRM).

DATES: This rule is effective March 4, 1999. Comments on Paperwork Reduction Act matters should be received by April 5, 1999; however, late-filed comments will be considered to the extent practicable.

ADDRESSES: Persons wishing to comment on Paperwork Reduction Act matters (see discussion at end of preamble) should send comments to Docket Clerk, Docket No. OST-97-2550, Department of Transportation, 400 7th Street, SW., Room 4107, Washington, DC 20590. We emphasize that the docket is open only with respect to Paperwork Reduction Act matters, and the Department is not accepting comments on other aspects of the regulation. We request that, in order to minimize burdens on the docket clerk's staff, commenters send three copies of their comments to the docket. Commenters wishing to have their

submissions acknowledged should include a stamped, self-addressed postcard with their comments. The docket clerk will date stamp the postcard and return it to the commenter. Comments will be available for inspection at the above address from 10 a.m. to 5:00 p.m., Monday through Friday.

FOR FURTHER INFORMATION CONTACT: Robert C. Ashby, Deputy Assistant General Counsel for Regulation and Enforcement, Department of Transportation, 400 7th Street, SW., Room 10424, Washington, DC 20590, phone numbers (202) 366-9306 (voice), (202) 366-9313 (fax), (202) 755-7687 (TDD), bob.ashby@ost.dot.gov (email); or David J. Goldberg, Office of Environmental, Civil Rights and General Law, Department of Transportation, 400 7th Street, SW., Room 5432, Washington, DC 20590, phone number (202) 366-8023 (voice), (202) 366-8536 (fax).

SUPPLEMENTARY INFORMATION:**Background**

The Department has the important responsibility of ensuring that firms competing for DOT-assisted contracts are not disadvantaged by unlawful discrimination. For eighteen years, the Department's most important tool for meeting this responsibility has been its Disadvantaged Business Enterprise (DBE) program. This program began in 1980. Originally, the program was a minority/women's business enterprise program established by regulation under the authority of Title VI of the Civil Rights Act of 1964 and other nondiscrimination statutes that apply to DOT financial assistance programs. See 49 CFR part 23.

In 1983, Congress enacted, and President Reagan signed, the first statutory DBE provision. This statute applied primarily to small firms owned and controlled by minorities in the Department's highway and transit programs. Firms owned and controlled by women, and the Department's airport program, remained under the original 1980 regulatory provisions. In 1987, Congress enacted, and President Reagan signed, statutes expanding the program to airports and to women-owned firms. In 1991 (for highway and transit programs) and 1992 (for airport programs), Congress enacted, and President Bush signed, statutes reauthorizing the expanded DBE program.

After each statutory amendment, and at other times to resolve program issues, the Department amended part 23. The result has been that part 23 has become

a patchwork quilt of a regulation. In addition, years of interpretation by various grantees and different DOT offices has created confusion and inconsistency in program administration. These problems, particularly in the area of certification, were criticized in General Accounting Office reports. The Department's desire to improve program administration and make the rule a more unified whole led to our publication of a December 1992 notice of proposed rulemaking (NPRM). The Department received about 600 comments on this NPRM. The Department carefully reviewed these comments and, by early 1995, had prepared a draft final rule responding to them. However, in light of the Supreme Court's June 1995 decision in *Adarand v. Peña* and the Administration's review of affirmative action programs, the Department conducted further review of the DBE program. As a result, rather than issuing a final rule, we issued a supplemental notice of proposed rulemaking (SNPRM) in May 1997. This SNPRM incorporated responses to the comments on the 1992 NPRM and proposed further changes in the program, primarily in response to the "narrow tailoring" requirements of *Adarand*. We received about 300 comments on the SNPRM. The Department has carefully considered these comments, and the final rule responds to them. The final rule also specifically complies with the requirements that the courts have established for a narrowly tailored affirmative action program.

At the same time that the Department was working on this final rule, Congress once again considered reauthorization of the DBE program. In both the House and the Senate, opponents of affirmative action sponsored amendments that would have effectively ended the program. In both cases, bipartisan majorities defeated the amendments. The final highway/transit authorization legislation, known as the Transportation Equity Act for the 21st Century (TEA-21), retains the DBE program. In shaping this final rule, the Department has listened carefully to what both supporters and opponents of the program have said in Congressional debates.

Key Points of the Final Rule

This discussion reviews and responds to the SNPRM comments and the Congressional debates on certain key issues. Congressional debate references are to the Congressional Record for March 5 and 6, 1998, for the Senate debate and April 1, 1998, for the House debate, unless otherwise noted.

1. Quotas and Set-Asides

SNPRM Comments: Most comments on this issue came from non-DBE contractors, who argued that the program was a *de facto* quota program. Many of these contractors said that recipients insisted that they meet numerical goals regardless of other considerations, and that the recipients did not take showings of good faith efforts seriously. Some non-DBE contractor organizations argued, in addition, that the program was a quota program because it was based on a statute that had a 10 percent target for the use of businesses defined by a racial classification.

Congressional Debate: Opponents of the DBE program generally asserted that it created quotas or set-asides. Senator McConnell described the entire program, particularly the provision that "not less than 10 percent" of authorized funds go to DBEs, as

• • • a \$17.3 billion quota. In other words, if the government decides that you are the preferred race and gender, then you are able to compete for \$17.3 billion of taxpayer-funded highway contracts. But, if you are the wrong race and gender, then—too bad—you can't compete for that \$17 billion pot. (S1936).

The "not less than 10 percent" language also led opponents, such as Senator Ashcroft, to label the program a "set-aside," (S1405), a term also employed in testimony provided by a law professor from California who said that the statute "imposes a set-aside that's required regardless of the availability of race-neutral solutions." (S1407). Senator Gorton said that the DBE statute provides that "those not defined as disadvantaged in our society are absolutely barred and prohibited from getting certain governmental contracts." (S1415).

On the other hand, supporters of the program were adamant that it was not a quota program. Senator Baucus argued that the program, as implemented by DOT, allows substantial flexibility to recipients and contractors. Recipients could have an overall goal other than 10 percent under current rules, he pointed out. Senator Kerry of Massachusetts added that what the statute does is to "set a national goal. And it is appropriate in this country to set national goals for what we will do to try to break down the walls of discrimination." • • • (S1408). He also alluded to the flexibility of the Secretary to permit overall goals of less than 10 percent. Senator Robb stated:

I want to stress at the outset that this program is not a "quota program," as some have suggested. There is a great difference

[between] an aspirational goal and a rigid numerical requirement. Quotas utilize rigid numerical requirements as a means of implementing a program. The DBE program uses aspirational goals. (S1425).

With respect to individual contract goals, Senator Baucus said, "once a goal is established for a contract, each contractor must make a good-faith effort to meet the goal—not mathematically required, not quota required, but a good faith effort to meet it." (S1402). Senator Baucus pointed to provisions of the SNPRM concerning overall goals, means of meeting them, and good-faith efforts as further narrowly tailoring the program. The SNPRM confirms, he said, that "contract goals are not binding. If a contractor makes good faith efforts to find qualified women or minority-owned subcontractors, but fails to meet the goal, there is no penalty." (S1403). Senator Robb added that "Contract goals are not operated as quotas because they require that the prime contractor make 'good faith efforts' to find DBEs. If a prime contractor cannot find qualified and competitive DBEs, the goal can be waived." (S1425).

One of the Senators who addressed the quota/set-aside issue in the most detail was Senator Domenici. He concluded that "I do not agree that this minority business program we have in this ISTEA bill before us is a program that mandates quotas and mandates set-asides." (S1426). He made this statement, in part, on the basis of March 5, 1998, letter to him signed by Secretary of Transportation Rodney Slater and Attorney General Janet Reno. In relevant part, this letter (which Senator Domenici inserted into the record) read as follows:

The 10 percent figure contained in the statute is not a mandatory set aside or rigid quota. First, the statute explicitly provides that the Secretary of Transportation may waive the goal for any reason • • • Second, in no way is the 10 percent figure imposed on any state or locality • • • Moreover, state agencies are permitted to waive goals when achievement on a particular contract or even for a specific year is not possible. The DBE program does not set aside a certain percentage of contracts or dollars for a specific set of contractors. Nor does the DBE program require recipients to use set-asides. The DBE program is a goals program which encourages participation without imposing rigid requirements of any type. Neither the Department's current nor proposed regulations permit the use of quotas. The DBE program does not use any rigid numerical requirements that would mandate a fixed number of dollars or contracts for DBEs. (S1427).

The debate in the House proceeded in similar terms. Opponents of the DBE program, such as Representative

Roukema (H2000), Representative Cox (H2004) and Speaker Gingrich (H2009) said the legislation constituted a quota, while proponents, such as Representatives Tauscher (H2001), Poshard (H2003), Bonior (H2004) and Menendez (H2004) said the program did not involve quotas or set-asides.

DOT Response: The DOT DBE program is not a quota or set-aside program, and it is not intended to operate as one. To make this point unmistakably clear, the Department has added explicitly worded new or amended provisions to the rule.

Section 26.41 makes clear that the 10 percent statutory goal contained in ISTEA and TEA-21 is an aspirational goal at the national level. It does not set any funds aside for any person or group. It does not require any recipient or contractor to have 10 percent (or any other percentage) DBE goals or participation. Unlike former part 23, it does not require recipients to take any special administrative steps (e.g., providing a special justification to DOT) if their annual overall goal is less than 10 percent. Recipients must set goals consistent with their own circumstances (see § 26.45). There is no direct link between the national 10 percent aspirational goal and the way a recipient operates its program. The Department will use the 10 percent goal as a means of evaluating the overall performance of the DBE program nationwide. For example, if nationwide DBE participation were to drop precipitously, the Department would reevaluate its efforts to ensure nondiscriminatory access to DOT-assisted contracting opportunities.

Section 26.43 states flatly that recipients are prohibited from using quotas under any circumstances. The section also prohibits set-asides except in the most extreme circumstances where no other approach could be expected to redress egregious discrimination. Section 26.45 makes clear that in setting overall goals, recipients aspire to achieving only the amount of DBE participation that would be obtained in a nondiscriminatory market. Recipients are not to simply pick a number representing a policy objective or responding to any particular constituency.

Section 26.53 also outlines what bidders must do to be responsive and responsible on DOT-assisted contracts having contract goals. They must make good faith efforts to meet these goals. Bidders can meet this requirement either by having enough DBE participation to meet the goal or by documenting good faith efforts, even if those efforts did not actually achieve the

goal. These means of meeting contract goal requirements are fully equivalent. Recipients are prohibited from denying a contract to a bidder simply because it did not obtain enough DBE participation to meet the goal. Recipients must seriously consider bidders' documentation of good faith efforts. To make certain that bidders' showings are taken seriously, the rule requires recipients to offer administrative reconsideration to bidders whose good faith efforts showings are initially rejected.

These provisions leave no room for doubt: there is no place for quotas in the DOT DBE program. In the Department's oversight, we will take care to ensure that recipients implement the program consistent with the intent of Congress and these regulatory prohibitions.

2. Sanctions for Recipients Who Fail To Meet Overall Goals

SNPRM Comments: The issue of sanctions for recipients who fail to meet overall goals was not a subject of comments on the SNPRM. Since the Department has never imposed such sanctions, this absence of comment is not surprising.

Congressional Debate: DBE program opponents asserted, in connection with their argument that the DBE program is a quota program, that the Department could impose sanctions for failure to meet goals. "The goals have requirements and the real threat of sanctions," Senator McConnell said. (S1488). Citing a provision of a Federal Highway Administration (FHWA) manual saying that if "a state has violated or failed to comply with Federal laws or * * * regulations," FHWA could withhold Federal funding, Senator McConnell said,

In other words, there are sanctions. The same threats appear in * * * the Federal transportation regulations * * * When the Federal government is wielding that kind of weapon from on high, it does not have to punish them. A 10 percent quota is still a quota, even if the States always comply and no one is formally punished. (Id.)

Defenders of the DBE program pointed out that the Department had never punished a recipient for failing to meet an overall goal (e.g., Rep. Tauscher, H2001; Senator Boxer, S1433). Senator Domenici asked Secretary Slater and Attorney General Reno whether there are sanctions, penalties, or fines that may be (or ever have been) imposed on a recipient who does not meet DBE program goals. He entered the following reply in the record:

No state has ever been sanctioned by DOT for not meeting its goals. Nothing in the

statute or regulations imposes sanctions on any state recipient that has attempted in good faith, but failed, to meet its self-imposed goals. (S1427).

Senator Lieberman added that if states fail to meet their own goals, "there is no Federal sanction or enforcement mechanism." (S1493).

DOT Response: The Department has never sanctioned a recipient for failing to meet an overall goal. We do not intend to do so. To eliminate any confusion, we have added a new provision (§ 26.47) that explicitly states that a recipient cannot be penalized, or treated by the Department as being in noncompliance with the rule, simply because its DBE participation falls short of its overall goal. For example, if a recipient's overall goal is 12 percent, and its participation is 8 percent, the Department cannot and will not penalize the recipient simply because its actual DBE participation rate was less than its goal.

Overall goals are not quotas, and the Department does not sanction recipients because their participation levels fall short of their overall goals. Of course, if a recipient does not have a DBE program, does not set a DBE goal, does not implement its DBE program in good faith, or discriminates in the way it operates its program, it can be found in noncompliance. But its noncompliance would never be having failed to "make a number."

3. Economic Disadvantage

SNPRM Comments: Some commenters favored eliminating the presumption of economic disadvantage, saying that applicants should have to prove their economic disadvantage. Other commenters favored obtaining additional financial information from applicants so that, even if the presumption remained in force, recipients would have a better idea of whether applicants really were disadvantaged. The question of the standard for determining disadvantage generated substantial comment, with some commenters favoring, and others objecting to, the proposed use of a personal net worth standard to assist recipients in determining whether an applicant was economically disadvantaged. There was also disagreement among commenters concerning the level at which such a standard should be set (e.g., \$750,000, or something higher or lower). These comments, and the Department's response to them, are further discussed in the section-by-section analysis for § 26.67.

Congressional Debate: The Congress debated the topic of who is regarded as

economically disadvantaged under the statute. DBE opponents, including Senators Ashcroft (S1405) and McConnell (S1418) and Representative Cox (H2004), asserted that outrageously rich people could be eligible to participate as DBEs, frequently using the Sultan of Brunei as an example. The basic thrust of their argument was that if the program does not exclude wealthy members of the designated groups—meaning those who are not, in fact, disadvantaged—then it is "overinclusive" and therefore not narrowly tailored. Senator McConnell added that, because the Department's SNPRM did not include a specific dollar amount for a cap on personal net worth, it would not be effective. (S1486). On the other hand, DBE program supporters cited the SNPRM's proposed net worth cap as an effective device to stop wealthy people from participating in the program. These included Minority Leader Daschle (with a reference to a letter from the Associate Attorney General, S1413), Senator Baucus (S1414, S1423), Senator Lieberman (S1493), Senator Boxer (S1433), and Senator Moseley-Braun, who responded to the Sultan of Brunei example by noting that the program was directed primarily at U.S. citizens (S1420).

DOT Response: The final rule (§ 26.67) specifically imposes a personal net worth cap of \$750,000. This means that, regardless of race, gender or the size of their business, any individual whose personal net worth exceeds \$750,000 is not considered economically disadvantaged and is not eligible for the DBE program. The provision also makes it much easier for recipients to determine whether an individual's net worth exceeds the cap. Applicants will have to submit a statement of personal net worth and supporting documentation to the recipient with their applications. If the information shows net worth above the cap, the recipient would rebut the presumption based on the information in the application itself and the individual would not be eligible for the program. In such a case, it would not be necessary for a third party to challenge the economic disadvantage of an applicant in order to rebut the presumption. While there have been very few documented cases of wealthy individuals seeking to take advantage of the Department's program, the revised provisions of part 26 virtually eliminate even the possibility of this type of abuse.

4. Social Disadvantage

SNPRM Comments: A few commenters suggested that the

presumption of social disadvantage, as well as that of economic disadvantage, be eliminated, so that applicants would have to demonstrate both elements of disadvantage. Any presumption of disadvantage tied to a racial classification, in the view of some of these commenters, undermined the constitutionality of the program. Other commenters noted that persons who are not members of the presumptively disadvantaged groups can be eligible and, in some cases, suggested that the criteria for evaluating such applications be clarified.

Congressional Debate: The presumption of social disadvantage drew fire from DBE program opponents because it was allegedly overinclusive. For example, Senator McConnell produced a map illustrating the over 100 countries of origin leading to inclusion in one of the presumed socially disadvantaged groups, pointing out that people from some countries (e.g., Pakistan) are presumed to be socially disadvantaged while those from other countries (e.g., Poland) are not. (S1418). Senator McConnell said that there was no basis for selecting this definition over any other. (Id.) Senator Hatch also listed the countries from which Asian-Pacific Americans and Subcontinent Asian-Americans can originate, suggesting that it was inappropriate to create "all kinds of special interest groups who are vying for these programs." (S1411).

DBE proponents responded that discrimination against minorities and women in general, and against specific minorities in particular (e.g., African Americans) was very real and formed a basis for the presumption of social disadvantage (see discussion below concerning the existence of discrimination). Senator Baucus also noted that this presumption could be overcome. (S1402).

Opponents also charged that the presumption of social disadvantage was underinclusive; that is, "you underinclude people who have a right to be included in the bid process." (Senator McConnell, S1399). The people who are not included who have a right to be, in the view of opponents, are white males (e.g., Senator Sessions' reference to testimony from Adarand Constructors' owner, S1400). Senator Kennedy disagreed with this assertion, saying

Of course, this program doesn't just help women and minorities. It extends a helping hand to firms owned by white males, as well. They can be certified to [participate] if they prove that they have been disadvantaged. Just ask Randy Pech—owner of the Adarand

Construction Firm—because he is currently seeking certification. (S1482).

Senator Domenici was interested in the same question, and entered into the record the following response from Secretary Slater and Attorney General Reno:

Any individual owning a business may demonstrate that he is socially and economically disadvantaged, even if that individual is not a woman or a minority. Both the current and proposed regulations provide detailed guidance to recipients to assist them in making individual determinations of disadvantaged status. And, in fact, businesses owned by white males have qualified for DBE status. (S1427).

DOT Response: By having passed the DBE statutory provision, after lengthy and specific debate, Congress has once again determined that members of the designated groups should be presumed socially disadvantaged. All of these groups are specifically incorporated by reference in the legislation that Congress debated and approved. This presumption (i.e., a determination that it is not necessary for group members to prove individually that they have been the subject of discrimination or disadvantage) is based on the understanding of Members of Congress about the discrimination that members of these groups have faced. The presumption is rebuttable in the DOT program. If a recipient or third party determines that there is a reasonable basis for concluding that an individual from one of the designated groups is not socially disadvantaged, it can pursue a proceeding under § 26.87 to remove the presumption. Likewise, a white male, or anyone else who is not presumed to be disadvantaged, can make an individual showing of social and economic disadvantage and participate in the program on the same basis as any other disadvantaged individual (see § 26.67).

5. The "Low-Bid System"

SNPRM Comments: Non-DBE contractors expressed concern that a variety of provisions under the program and the SNPRM adversely affected the low-bid system, including contract goals, evaluation credits, and good faith efforts guidance concerning prime contractors' handling of subcontractor prices and consideration of other bidders' success in meeting goals.

Congressional Debate: Opponents of the DBE program assert that the program results in white male contractors not receiving contracts they would otherwise expect to receive. Senator Sessions cited the statement of the Adarand company to this effect. (S1400). Senator Ashcroft said that "if two bids come in from two

subcontractors, one owned by a white male and the other by a racial minority, and the bids are the same, or even close, the job will go to the minority-owned company, not the low bidder." (S1405). Senator Gorton inserted into the record letters from a Spokane subcontractor asserting that, in a number of cases, it had lost subcontracts to DBE firms despite having a lower quote. (S1415-16). Representative Roukema also cited examples of firms who made similar assertions. (H2000).

In contrast, DBE program proponents argued that the program was about leveling the playing field for DBEs. Senator Moseley-Braun cited letters from her constituents for the point that

* * * the DBE program is not about taking away contracts from qualified male-owned businesses and handing them over to unqualified female-owned firms. The program is not about denying contracts to Caucasian low bidders in favor of higher bids that happen to have been submitted by Hispanics or African Americans or Asians or women. (S1420).

Without such a program, her constituents' letters said, they would lose the chance to compete. (Id.) Citing testimony from a Judiciary Committee hearing, Senator Kennedy noted that it was the experience of some DBEs that white male prime contractors had accepted higher bids from other firms to avoid working with DBEs. (S1430).

Why would a general contractor accept a higher bid? It doesn't make sense unless you remember that the traditional business network doesn't include women or minorities * * * [A woman business owner testified] that some general contractors would rather lose money than deal with female contractors. (Id.)

DOT Response: For the most part, statutory low-bid requirements exist only at the prime contracting level. That is, state and local governments, in awarding prime contracts, must select the low bidder in many procurements (there may be exceptions in some types of purchases). Nothing in this regulation requires, under any circumstances, a recipient to accept a higher bid for a prime contract from a DBE when a non-DBE has presented a lower bid. This rule does not interfere with recipients' implementation of state and local low-bid legislation.

The selection of subcontractors by a prime contractor is typically not subject to any low-bid requirements under state or local law. Prime contractors have unfettered discretion to select any subcontractor they wish. Price is clearly a key factor, but nothing legally compels a prime contractor to hire the subcontractor who makes the lowest quote. Other factors, such as the prime

contractor's familiarity and experience with a subcontractor, the quality of a subcontractor's work, the word-of-mouth reputation of the subcontractor in the prime contracting community, or the prime's comfort or discomfort with dealing with a particular subcontractor can be as or more important than price in some situations. It is in this context that § 26.53 requires that prime contractors make good faith efforts to achieve DBE contract goals. The rule does not require that recipients ignore price or quality, let alone obtain a certain amount of DBE participation without regard to other considerations. The good faith efforts requirements are intended to ensure that prime contractors cannot simply refuse to consider qualified, competitive DBE subcontractors. At the same time, the good faith efforts waiver of contract goals serves as a safeguard to ensure that prime contractors will not be forced into accepting an unreasonable or excessive quote from a DBE subcontractor.

6. Constitutionality

SNPRM Comments: Non-DBE contractors and their groups argued that the SNPRM proposals, particularly with respect to overall goals and the use of race-conscious measures, failed to meet the *Adarand* narrow tailoring test. Many of these commenters said that the overall goals were suspect because they did not adequately consider the capacity of DBEs to perform contracts and *Adarand* requires that race-conscious measures may be used only after a recipient has demonstrated that race-neutral means have failed. The use of presumptions based on racial classifications was viewed as intrinsically unconstitutional by these commenters, many of whom cited the language of Judge Kane's decision in the *Adarand* remand to this effect. Some commenters also contended that, absent recipient-specific findings of compelling need, the program could not be constitutional. They said that existing information alleging compelling interest—such as various disparity studies or information compiled by the Department of Justice—was inadequate to meet the compelling interest test. DBEs and recipients who commented defended the constitutionality of the program, often citing experience with discrimination in the marketplace and contending that the SNPRM succeeded in narrowly tailoring the program.

Congressional Debate: Proponents and opponents of the DBE program extensively debated the constitutionality of the DBE statutory provision and the entire DBE program. Generally, opponents argued that the

Supreme Court and District Court decisions in *Adarand* rendered the program unconstitutional, while proponents said that the decisions did not have that effect.

Proponents and opponents of the DBE program agreed that the Supreme Court's *Adarand* decision established a two-part test for the constitutionality of a program that uses a racial classification. The program must be based on a compelling governmental interest and be narrowly tailored to further that interest (e.g., Senator McConnell, S1396; Senator Baucus, S1403). Opponents relied on the finding of a Colorado district court on remand that the program was not narrowly tailored and was thus unconstitutional (Senator McConnell, S 1396; Senator Ashcroft, S1405). Proponents replied that the remand decision represented the views of only one district court (Senator Baucus, S1403), that it failed to properly apply the reasoning of the Supreme Court decision with respect to narrow tailoring (Senator Domenici, S1425), and that the Department's forthcoming regulations would ensure that the program was narrowly tailored (see discussion below).

A. Compelling Interest

(1) Existence of Discrimination.

Proponents (and some opponents) of the DBE provision said that discrimination and/or disadvantage with respect to minorities and/or women persists. In the House, these included Representative Roukema (H2000-01), Representative Norton (H2003), Representative Poshard (H2003), Representative Menendez (H2004), Representative Davis of Illinois (H2005), Representative Boswell (H2005), Representative Lampson (H2006), Representative Kennedy (H2006), Representative Jackson-Lee (H2006), Representative Edwards (H2007), Representative Andrews (H2007), Representative Rodriguez (H2008), Representative Towns (H2010), Representative Dixon (H2010), and Representative Millender-McDonald (H2011). DBE opponents typically remained silent on this point, neither affirming nor denying the existence of discrimination against women and minorities.

There was a similar pattern in the Senate debates. Opponents typically did not address the present existence of discrimination or disadvantage with respect to minorities and women or its continuing effects, spoke of such discrimination as something that existed in the past (Senator Sessions, S1399; Senator Hatch, S1411), or asserted that race-based disadvantage or

discrimination no longer exists (Senator Ashcroft, S1406).

The Senators who said that such discrimination persists included Senator Baucus (S1403, S1413, S1496), Senator Warner (S1403), Senator Kerry (S1408), Senator Wellstone (S1410), Senator Moseley-Braun (S1419-20), Senator Robb (S1422); Senator Brownback (S1423-24), Senator Domenici (S1425-26), Senator Kennedy (S1429-30, S1482), Senator Specter (S1485), Senator McCain (S1489), Senator Lautenberg (S1490), Senator Durbin (S1491), Senator Daschle (S1492), Senator Lieberman (S1493), Senator Bingaman (S1494), Senator Murray (S1495), and Senator Dorgan (S1495).

(2) *Evidence of discrimination or disadvantage.* In comments on the passage of the TEA-21 conference report in the Senate, Senator Chafee noted a Colorado Department of Transportation disparity study that found a disproportionately small number of women- and minority-owned contractors participating in that state's highway construction industry. More than 99 percent of contracts went to firms owned by white men.

(Congressional Record, May 22, 1998; S5413). In the House discussion of the conference report, Representative Norton presented an extensive summary of relevant evidence of discrimination forming the basis for a compelling need for the DBE program. (H3957).

Throughout the debate, the Members who affirmed the existence of discrimination and/or disadvantage asserted a number of factual bases for concluding that the DBE program was necessary. This information is largely drawn from the Senate debate; the briefer House debate contains less detail.

Senator Baucus cited disparities between the earnings of women and men and between the percentage of small businesses women own and the percentage of Federal procurement dollars they receive. He also noted that minorities make up 20 percent of the population, own 9 percent of construction businesses, and get only 4 percent of construction receipts. (S1403). Finally, Senator Baucus, via a letter from the Associate Attorney General, cited to numerous Congressional findings concerning the effects of discrimination in the construction industry and in DOT-assisted programs. (S1413).

Senator Kerry added that women own 9.2 percent of the nation's construction firms but their companies earn only about half of what is earned by male-owned firms. (S1409). Senator Robb

commented that the evidence of racially based disadvantage is "compelling and disturbing." He continued, stating that, "White-owned construction firms receive 50 times as many loan dollars as African-American owned firms that have identical equity." (S1422). Senator Kennedy said that the playing field for women and minorities and other victims of discrimination was still not level. Job discrimination against minorities and the "glass ceiling" for women still persisted, he said, adding that "Nowhere is the deck stacked more heavily against women and minorities than in the construction industry." (S1429). He cited a number of instances in which minority or female contractors encountered overt discrimination in trying to get work. (S1429-30).

Senator Lautenberg said that, for transportation-related contracts, minority-owned firms get only 61 cents for every dollar of work that white male-owned businesses receive. The comparable figure for women-owned firms was 48 cents. He also mentioned that "women-owned businesses have a lower rate of loan delinquency, yet still have far greater difficulty in obtaining loans." (S1490). He then spoke of the continuing effects of past discrimination:

Jim Crow laws were wiped off the books over 30 years ago. However, their pernicious effects on the construction industry remain. Transportation construction has historically relied on the old boy network which, until the last decade, was almost exclusively a white, old boy network. . . . This is an industry that relies heavily on business friendships and relationships established decades, sometimes generations, ago—years before minority-owned firms were even allowed to compete. (id.)

Senator Durbin referred to recent studies concerning job bias against minorities and women. (S1491). Senator Lieberman referred generally to previous Congressional committee findings and testimony concerning still-existing barriers to full participation for minorities and women. (S1493). He also cited the May 1996 Department of Justice survey of discrimination and its effects in business and contracting. He referred to a recent study in Denver showing that African Americans were 3 times, and Hispanics 1.5 times, more likely than whites to be rejected for business loans. Senator Daschle summed up by saying, "[t]here is clearly a compelling interest in addressing the pervasive discrimination that has characterized the highway construction industry." (S1492).

Throughout the portion of the debate described above, many of the Members stressed that goal-based programs like

the DBE program were the only effective way to combat the continuing effects of discrimination.

Senator Baucus cited the experience of Michigan, in which DBE participation in the state-funded portion of the highway program fell to zero in a nine-month period after the state terminated its DBE program, while the Federal DBE program in Michigan was able to maintain 12.7 percent participation. (S1404). Senator Kerry also raised the Michigan example, and went on to cite similar sharp decreases in DBE participation when Louisiana, Hillsborough County, Florida, and San Jose, California, eliminated affirmative action programs covering state- and locally-funded programs. Senator Kerry asked rhetorically:

. . . Is that just the economy of our country speaking, an economy at one moment that is capable of having 12 percent and at another moment, where they lose the incentive to do so, to drop down to zero, to drop down by 99 percent, to drop down by 80 percent, to have .4 at the State level while at the Federal level there are 12 percent? You could not have a more compelling interest if you tried. . . . (S1409-10).

Senator Moseley-Braun added the examples of Arizona, Arkansas, Rhode Island, and Delaware to the jurisdictions cited by other members where state-funded projects without a DBE program have significantly less DBE participation than Federally funded projects subject to the DBE program. She added, "Where there are no DBE programs, women- and minority-owned small businesses are shut out of highway construction." (S1420-21). Senator Kennedy added Nebraska, Missouri, Tampa and Philadelphia to the list of jurisdictions that experienced precipitous drops in DBE participation after goals programs ended. (S1429-30; S1482). He also cited comments from DBE companies that goal programs were needed to surmount discrimination-related barriers. (S1482). Senator Domenici repeated many of the same points as previous DBE proponents concerning the basis for concluding that the program was needed (S1426), as did Senator Kempthorne. (S1494).

Senator Robb emphasized that the DBE program was essential to combating discrimination and ensuring economic opportunity, explicitly linking the fall-off in DBE participation to continuing discrimination:

Where DBE programs at the State level have been eliminated, participation by qualified women and qualified minorities in government transportation contracts has plummeted. There is no way to know whether this discrimination is intentional or subconscious, but the effect is the same. This

experience demonstrates the sad but inescapable truth that, when it comes to providing economic opportunities to women and minorities, passivity equals inequality. (S1422).

3. *Narrow tailoring.*—DBE proponents cited the Department's proposed DBE rule as the vehicle that would ensure that the DBE program would be narrowly tailored. They cited features of the SNPRM including a new mechanism for calculation of overall goals, giving priority to race-neutral measures in meeting goals, a greater emphasis on good faith efforts, DBE diversification, added flexibility for recipients, net worth provisions, ability to challenge presumptions of social and economic disadvantage, and flexibility in goal-setting. In comments on the Senate consideration of the TEA-21 conference report, Senator Baucus concluded by saying:

As I explained in my statements during the debate on the McConnell amendment . . . the program is narrowly tailored, both under the current and the new regulations, which emphasize flexible goals tied to the capacity of firms in the local market, the use of race-neutral measures, and the appropriate use of waivers for good faith efforts. (Congressional Record, May 22, 1998; S5414).

Following Senator Baucus' remarks, Senator Chafee, Chairman of the committee of jurisdiction, requested that he be associated with Senator Baucus' remarks on constitutionality. (S5414).

DBE opponents denied that regulatory change could result in a narrowly tailored program. Senator Smith said "The administration's attempt to comply with the Court's decision by fiddling around with the DOT regulations does not meet the constitutional litmus test." (S1398). The most frequent argument against the efficacy of regulatory change was that a racial classification is inherently unable to be narrowly tailored. (Senator Sessions, S1399-1400; Senator Ashcroft, S1407).

DOT Response: The 1998 debate over DBE legislation was the most thorough in which Congress has engaged since the beginning of the program. The record of this debate clearly supports the Department's view that there is a compelling governmental interest in remedying discrimination and its effects in DOT-assisted contracting. Congress clearly determined that real, pervasive, and injurious discrimination exists. Congress backed up that determination with reference to a wide range of factual material, including private and public contracting, DOT-assisted and state- and locally-funded programs and the financing of the contracting industry. By retaining the DBE statutory provisions

against this factual background, Congress clearly found that there was a compelling governmental interest in having the program.

The courts, including the court in the *Adarand Constructors Inc. v. Peña*, 965 F.Supp. 1556 (D. Colo., 1997) and the court in *In re: Sherbrooke Sodding*, 6-96-CV-41 (D. Minn. 1998), agree that Congress has the power to legislate on a nationwide basis to address nationwide problems. Congress has a unique role as the national legislature to look at the whole of the United States for the basis to find a compelling governmental interest supporting the use of race-based remedies. Congress is not required to make particularized findings of discrimination in individual localities to which a nationwide program may apply. Nor is Congress required to find that the Federal government itself has discriminated before applying a race-conscious remedy. (Id. at 1573).

Having reviewed the extensive evidence of discrimination and its relationship to DOT-assisted contracting, the District Court in *Adarand* determined that current and previous DBE provisions were a "considered response by Congress to the effects of discrimination on the ability of minorities to participate in the mainstream of federal contracting." (Id. at 1576). The court stated that "Congress has a strong basis in evidence for enacting the challenged statutes, which thus serve a 'compelling governmental interest.'" (Id. at 1577). The extensive Congressional debate and information supporting the enactment of the 1998 DBE provision significantly strengthens the existing basis for declaring that this program serves a compelling governmental interest.

The basis for District Court's view that the program at issue in *Adarand* is unconstitutional is stated most clearly in the following passage:

Contrary to the [Supreme] Court's pronouncement that strict scrutiny is not 'fatal in fact,' I find it difficult to envisage a race-based classification that is narrowly tailored. By its very nature, such [a] program is both underinclusive and overinclusive. (Id. at 1580).

By underinclusive, the court said it meant that caucasians and members of non-designated minority groups are excluded. By overinclusive, it said it meant that all the members of the designated groups are presumed to be economically and/or socially disadvantaged, without Congress having inquired whether a particular entity seeking a racial preference has suffered from the effects of past discrimination (citing the Supreme Court's *Croson*

decision, which concerned the powers of state and local governments to use race-based remedies). (Id.)

As Senator Domenici pointed out (S1425), the key words in the District Court's opinion are "Contrary to the [Supreme] Court's pronouncement. * * * The District Court's analysis departs markedly from the controlling decision of the Supreme Court on this issue (*Adarand v. Peña*, 515 U.S. 200 (1995)). The Supreme Court's language with which the District Court disagreed is the following:

Finally, we wish to dispel the notion that strict scrutiny is "strict in theory, but fatal in fact." [citation omitted] The unhappy persistence of both the practice and the lingering effects of racial discrimination against minority groups in this country is an unfortunate reality, and government is not disqualified from acting in response to it * * * When race-based action is necessary to further a compelling interest, such action is within constitutional constraints if it satisfies the "narrow tailoring" test this Court has set out in previous cases. (515 U.S. at 237).

The Supreme Court evidently considers the "not fatal in fact" language to have continuing vitality, having cited it in a subsequent case (*U.S. v. Virginia*, 518 U.S. 515, note 6 (1996)).

Under the District Court's analysis, Congress could never use a race-based classification, no matter how compelling the need, because any such classification would intrinsically fail to be narrowly tailored. This approach effectively moots the determination of whether there is a compelling governmental interest. The Supreme Court's approach, by contrast, permits a racial classification to be used, given the existence of a compelling interest, if it is narrowly tailored.

What is the test for narrow tailoring? As set forth in *United States v. Paradise*, 480 U.S. 149, 171 (1987), the test includes several factors: "the necessity for relief and the efficacy of alternative remedies; the flexibility and duration of the relief, including the availability of waiver provisions; the relationship of the goals to the relevant labor market; and the impact of the relief on the rights of third parties." In *Adarand*, the Supreme Court specifically invited inquiry into whether there was any consideration of the use of race-neutral means to increase minority business participation (related to the efficacy of alternative remedies) and whether the program was appropriately limited so that it will not last longer than the discrimination it is designed to eliminate (related to the duration of relief). (515 U.S. at 238).

This final rule successfully addresses each element of this test:

- *The necessity of relief.* Throughout the debate on the compelling governmental interest, the bipartisan majority of both houses of Congress repeatedly described the necessity of the DBE program's goal-based approach to remedying the effects of discrimination in DOT-assisted contracting. The most significant evidence demonstrating the necessity of a goal-oriented program is the evidence cited of the fall-off in DBE participation in state contracting when goal-oriented programs end, compared to participation rates in the Federal DBE program.

- *Efficacy of alternative remedies.* This element of the narrow tailoring standard is related to the Supreme Court's inquiry concerning race-neutral programs. Under § 26.51 of this rule, recipients are required to meet the maximum feasible portion of their overall goals by using race-neutral measures. Recipients are not required to have contract goals on each contract. Instead, they are instructed to use contract goals only for any portion of their overall goal they cannot meet through race-neutral measures. Contract goals are intended as a safety net to be used when race-neutral means are not effective to ensure that a recipient can achieve "level playing field." Moreover, the regulations provide that recipients must reduce the use of contract goals when other means are sufficient to meet their overall goals. This ensures that race-conscious relief is used only to the extent necessary and is replaced by race-neutral as quickly as possible.

- *Flexibility of relief.* Flexibility is built into the program in a variety of ways. Recipients set their own goals, based on local market conditions; their goals are not imposed by the federal government nor do recipients have to tie them to any uniform national percentage. (§ 26.45). Recipients also choose their own method for goal setting and can choose to base the goal on the evidence that they believe best reflects their market conditions. (§ 26.45). Recipients have broad discretion to choose whether or not to use a goal on any given contract, and if they do choose to use a contract goal, they are free to set it at any level they believe is appropriate for the type and location of the specific work involved. (§ 26.51). The rule also ensures flexibility for contractors by requiring that any contract goal be waived entirely for a prime contractor that demonstrates that it made good faith efforts but was still unable to meet the goal. (§ 26.53). The rule also allows recipients that believe they can achieve equal opportunity for DBEs through different approaches to get waivers releasing

them from almost any of the specific requirements of the rule. (§ 26.103). Recipients can also get exemptions from the rule if they have unique circumstances that make complying with the rule impractical. (§ 26.103).

- *Duration of relief.* The TEA-21 DBE program will end in 2004 unless reauthorized by the Congress. In each successive reauthorization bill for the surface transportation and airport programs, Congress will have the opportunity to examine the current state of transportation contracting and determine whether the DBE program statutes are still necessary to remedy the continuing effects of discrimination. In addition, the duration of relief for individuals and firms are limited by the personal net worth threshold and business size caps. When an individual's personal wealth grows beyond the threshold, he or she will lose the presumption of disadvantage. (§ 26.67). Similarly, when a firm's receipts grows beyond the small business size standards, it loses its eligibility to participate in the program. (§ 26.65). Finally, to ensure that race-conscious remedies are not used any longer than absolutely necessary, § 26.51 requires recipients to reduce the use of contract goals and rely on race-neutral measures to the extent that they are effective.

- *Relationship of goals to the relevant market.* The overall goal setting provisions of § 26.45 require that recipient set overall goals based on demonstrable evidence of the relative availability of ready, willing and able DBEs in the areas from which each recipient obtains contractors. These provisions ensure that there is as close a fit as possible between the goals set by each recipient and the realities of its relevant market. When a recipient sets contract goals, § 26.51 provides that these goals are to be set realistically in relation to the availability of DBEs for the type and location of work involved.

- *Impact of relief on the rights of third parties.* The legitimate interests of third parties (e.g., prime contractors, non-DBE subcontractors) are only minimally impacted by the DBE program, since the program is aimed at replicating a market in which there are no effects of discrimination and the program affects only a relatively small percentage of total federal-aid funds. The design of the overall and contract goal provisions ensures that the use of race-conscious remedies having the potential to affect the interests of third parties is limited to the extent necessary to counter the effects of discrimination. Individual prime contractors are further protected from suffering any undue

burdens by § 26.51, which prevents a prime contractor from losing a contract if it made good faith efforts but was still unable to meet a goal. Non-DBE firms are also protected by § 26.33, which directs recipients to take appropriate steps to address areas of overconcentration of DBE firms in certain types of work that could unduly burden non-DBE firms seeking the same type of work.

- *Inclusion of appropriate beneficiaries.* The certification provisions of Subparts D and E, and particularly the social and economic disadvantage provisions of § 26.67, ensure that only firms owned and controlled by individuals who are in fact socially and economically disadvantaged can participate in the program. Eligibility provisions guard against overinclusiveness by ensuring that individuals with too great net worth are not presumed disadvantaged and by permitting the recipient—on its own initiative or as the result of a complaint—to follow procedures to rebut the presumption of social and/or economic disadvantage. They guard against underinclusiveness by permitting any business owner, including a white male, to demonstrate social and economic disadvantage on an individual basis.

Section-by-Section Analysis

Section 26.1 What Are the Objectives of This Part?

There were relatively few comments on this section of the SNPRM, most of which agreed with the proposed language. We have adopted the suggestion of some commenters that specific reference be made to the role of the DBE program in helping DBEs overcome barriers (e.g., access to capital and bonding) to equal participation. We have also added a specific reference to the role of the program in creating a level playing field on which DBEs can compete fairly for DOT-assisted contracts. Some non-DBE contractors urged that language be added to explicitly oppose "reverse discrimination." The rule clearly states that nondiscrimination is the program's first objective and the Department reiterates here that it opposes unlawful discrimination of any kind.

Section 26.3 To Whom Does This Part Apply?

This provision is unchanged from the SNPRM, except for references to the new TEA-21 statutory provisions. A few commenters wanted this provision to apply to Federal Railroad Administration (FRA) programs, as did

the original version of former part 23. However, FRA does not have specific statutory authority for a DBE program parallel to the TEA-21 language. One commenter asked if the language saying that DBE requirements do not apply to contracts without any DOT funding is inconsistent with Federal Transit Administration (FTA) guidance on applicability. While the structure of the FTA program is such that FTA funds are commingled with local funds in many transit authority contracts (e.g., any contract involving FTA operating assistance funds), to which DBE requirements would apply, a contract which is funded entirely with local funds—and without any Federal funds—would not be subject to requirements under this rule.

Section 26.5 What Do The Terms Used in This Part Mean?

There were relatively few comments on the definitions proposed in the SNPRM. One commenter wanted to substitute the term "historically underutilized business" for DBE. Given the continued use of the DBE term in Congressional consideration of the program, the continued use of the "socially and economically disadvantaged individuals" language in the statute, and the familiarity of concerned parties with the DBE term, we do not believe changing the term would be a good idea.

A few commenters asked for additional definitions or elaboration of existing definitions (e.g., "form of arrangement," "financial assistance program," "commercially useful function"). These terms are either already defined sufficiently or are best understood in context of the operational sections in which they are embedded, and abstract definitions in this section would not add much to anyone's ability to make the program work well. Consequently, we are not adding them. Otherwise the final rule adopts the SNPRM proposals for definitions with only minor editorial changes.

The Department has added, for the sake of clarity and consistency with other Federal programs, definitions of the terms Alaskan native, Alaskan native corporation (ANC), Indian tribe, immediate family member, Native Hawaiian, Native Hawaiian organization, principal place of business, primary industry classification, and tribally-owned concern. These definitions are taken from the SBA's new small disadvantaged business program regulation (13 CFR § 124.3). The definitions of the designated groups included in the definition of "socially

and economically disadvantaged individual" also derive from the SBA regulations, as the Department's DBE statutes require. We believe these will be useful terms of art in implementing the DBE program.

A few commenters requested definitions for the terms "race-conscious" and "race-neutral," and we have provided definitions. A race-conscious program is one that focuses on, and provides benefits only for, DBEs. The use of contract goals is the primary example of a race-conscious measure in the DBE program. A race-neutral program is one that, while benefiting DBEs, is not solely focused on DBE firms. For example, small business outreach programs, technical assistance programs, and prompt payment clauses can assist a wide variety of small businesses, not just DBEs.

Section 26.7 What Discriminatory Actions Are Forbidden?

One commenter wanted to add prohibitions of discrimination based on age, disability and religion. The Department is not doing so, because discrimination on these grounds is already prohibited by other statutes (e.g., the Americans with Disabilities Act with respect to disability). Also, statutes which form the basis for this rule focus on race, color, national origin, and sex. Congress determined that remedial action focused on these areas is necessary. These grounds for discrimination are also most relevant to problems in the DBE program that have been alleged to exist (e.g., disparate treatment of DBE certification applicants by race or sex). Some opponents of the program said that the DBE program discriminates against non-DBEs. However, the Department believes that the program is constitutional and does not violate equal protection requirements. A reference to DOT Title VI regulations has been deleted as unnecessary; otherwise, this provision is the same as in the SNPRM.

Section 26.9 How Does the Department Issue Guidance and Interpretations Under This Part?

Commenters, most of whom were recipients, focused on two issues in this section. First, a majority of the comments favored the "coordination mechanism" concept for ensuring consistent DOT guidance and interpretations. The few that disagreed with this approach did so out of a concern that the mechanism would add delays to the process. These commenters favored additional training

or an 800 number hot line to speed up the process.

We believe that proper coordination of interpretations and guidance is vital to the successful implementation of this rule. As the preambles to the 1992 and 1997 proposed rules mentioned, inconsistent implementation of part 23 has been a continuing problem, which has been criticized by a General Accounting Office report and which has created unnecessary difficulty for recipients, contractors, and the Department itself. A process for ensuring that the Department speaks with one voice on DBE implementation matters, and for letting the public know when DOT has spoken, will greatly improve the service we give our customers.

We do not believe this coordination process will result in significant delays in providing guidance. Nor will it inhibit the ability of DOT staff and customers to communicate with one another. For example, the process does not apply to informal advice provided by staff to recipients or contractors over the phone or in a letter or e-mail. It does maintain, however, the important distinction between informal staff assistance on one hand and a binding institutional position on the other.

For clarity in the process, we have modified the language of the rule text to make clear that interpretations and guidance are binding, official Departmental positions if the Secretary signs them or if the document includes a statement that they have been reviewed and approved by the General Counsel. The General Counsel will consult fully with all concerned offices as part of this review process.

We intend to post significant guidance documents and interpretations on the Department's web site to make them widely and quickly available. As some commenters suggested, we are also continuing to consider forming an advisory committee (or working group of an existing committee) to facilitate customer input into DBE program matters. This is separate from the coordination mechanism, however, which is an internal DOT process.

The rule's provisions regarding exemptions and waivers, previously found in the SNPRM's § 26.9 (c) and (d), are now included as a separate section at § 26.15.

Section 26.11 What Records do Recipients Keep and Report?

The Department asked, in the SNPRM, whether it would be advisable to have one standard reporting form for information about the DBE program. Currently, each operating

administration (OA) has its own reporting form and requirements. Virtually all the commenters that addressed this issue favored a single, DOT-wide reporting form. Commenters also had a wide variety of suggestions for what data should be reported, formats, and retention periods.

The Department is adopting the suggestion of having a single reporting form, which we believe will reduce administrative burdens for recipients, particularly those who receive funds from more than one OA. Because we do not want to delay the issuance of this rule while a form is being developed, we are reserving the date on which this single form requirement will go into effect. We will take comments on the specifics of reporting into account and consult with interested parties as we devise the form, which will be published subsequently in Appendix B to this rule. The Appendix will also address the issues of reporting frequency and record retention periods. Meanwhile, recipients will continue to report as directed by the concerned OA(s), using existing reporting forms.

The rule is also adding a requirement that recipients develop and maintain a "bidders" list. The bidders list is intended to be a count of all firms that are participating, or attempting to participate, on DOT-assisted contracts. The list must include all firms that bid on prime contracts or bid or quote subcontracts on DOT-assisted projects, including both DBEs and non-DBEs. Bidders lists appear to be a promising method for accurately determining the availability of DBE and non-DBE firms and the Department believes that developing bidders data will be useful for recipients. Creating and maintaining a bidders list will give recipients another valuable way to measure the relative availability of ready, willing and able DBEs when setting their overall goals. (See § 26.45). We realize that identifying subcontractors, particularly non-DBEs and all subcontractors that were unsuccessful in their attempts to obtain contracts, may well be a difficult task for many recipients. Mindful of that potential burden, the rule will not impose any procedural requirements for how the data is collected. Recipients are free to choose whether or not they wish to gather this data through their existing bidding and reporting processes. Recipients are encouraged to make use of all of the data already available to them and all methods of reporting and communication with their contracting community that they already have in place. In addition, the Department suggests that recipients consider using a widely publicized public notice or a

widely disseminated survey to encourage all firms that have bid or quoted contracts to make themselves known to recipients.

Once recipients have created the list of bidders, they will have to supplement that information with the age of each firm (since establishment) and the annual gross receipts of the firm (or an average of its annual gross receipts). Recipients can gather this additional information by sending a questionnaire to the firms on the list, or by any other means that the recipient believes will yield reliable information. The recipient's plan for how to create and maintain the list and gather the required information must be included in its DBE program.

Section 26.13 What Assurances Must Recipients and Contractors Make?

There were few comments on this section. Most of these supported the proposal. One comment suggested specific mention of prompt payment, but in view of the substantive requirements on this subject, we do not believe such a mention is needed. Some commenters favored requiring additional public participation as part of the assurance for recipients. Again, given substantive provisions of this rule concerning public participation, we do not believe that repetition here is needed. One commenter said that incorporating the requirements of part 26 in the contract was confusing, since many provisions of part 26 apply only to recipients. We have rewritten the assurance for contractors in response to this concern, specifying that contractors are responsible only for carrying out the requirements of part 26 that apply to them.

Section 26.15 How Can Recipients Apply for Exemptions or Waivers?

There has been some confusion as to this rule's distinction between exemption and waiver. Put simply, exemptions are for unique situations that are most likely not to be either generally applicable to all recipients or to have been contemplated in the rulemaking process. If such a situation occurs and it makes it impractical for a particular recipient to comply with a provision of part 26, the recipient should apply for an exemption from that provision. The waiver provision, by contrast, is not designed for extraordinary circumstances where a recipient may not be able to comply with part 26. Waiver is for a situation where a recipient believes that it can better accomplish the objectives of the DBE program through means other than the specific provisions of part 26.

There were a number of comments about the proposed program waiver provision. Most commenters on this issue favored the proposal, believing it could add flexibility to the way recipients implement the DBE program. A few commenters were concerned that too liberal use of the waiver provision might undermine the goals of the rule.

The Department believes that the waiver provision is an important aspect of the DBE program. The provision ensures that the Department and a recipient can work together to respond to any unique local circumstances. Recipients are encouraged to carefully review the circumstances in their own jurisdictions to determine what mechanisms are best suited to achieving compliance with the overall objectives of the DBE program. If a recipient believes it is appropriate to operate its program differently from the way that a provision of Subpart B or C provides, including, but not limited to, any provisions regarding administrative requirements, overall or contract goals, good faith efforts or counting provisions, it can apply for a waiver. For example, waiver requests could pertain to such subjects as the use of a race-conscious measure other than a contract goal, different ways of counting DBE participation in certain industries, use of separate overall or contract goals to address demonstrated discrimination against specific categories of socially and economically disadvantaged individuals, the use or wording of assurances, differences in information collection requirements and methods, etc.

The Department will, of course, carefully review any applications for waivers to make sure that innovative state or local programs are able to meet the objectives of the statutes and regulation. Decisions on waiver requests are made by the Secretary. This authority has not been delegated to other officials. The waiver provision, which the Department believes will help assist recipients to "narrowly tailor" the program to state and local circumstances and ensure nondiscrimination, remains in the final rule.

Section 26.21 Who Must Have a DBE Program?

The only substantive comment concerning this provision asked that Federal Railroad Administration (FRA) programs be included. The Department is not including FRA programs under this rule because FRA does not have a specific DBE program statute parallel to those covering the Federal Aviation Administration (FAA), FTA, and

FHWA. FRA could consider issuing a rule similar to part 26 under its own, separate statutory authority. The Department shortened paragraph (b)(1) to make it easier to understand. Within 180 days of the effective date of this rule, all recipients with existing programs must submit revised programs to the relevant OA for approval. The only changes from existing programs that recipients would have to make are changes needed to accommodate differences between former part 23 and part 26. Future new recipients would, of course, submit a DBE program as part of the approval process for financial assistance.

Section 26.23 What is the Requirement for a Policy Statement?

Section 26.25 What is the Requirement for a Liaison Officer?

Section 26.27 What Efforts Must Recipients Make Concerning DBE Financial Institutions?

There were no substantive comments concerning §§ 26.23–26.27, and the Department is adopting them as proposed.

Section 26.29 What Prompt Payment Mechanisms Must Recipients Have?

There was substantial comment on the issue of prompt payment. A majority of commenters supported the concept of prompt payment provisions. Some recipients pointed out that they already had prompt payment provisions on the books. DBEs generally supported mandating prompt payment provisions though they, as well as other commenters, recognized that slow payment is a problem affecting many subcontractors, not just DBEs. Some of these comments suggested making prompt payment requirements applicable to subcontracts in general, not just DBE subcontracts. Some recipients were concerned about getting in the middle of disputes between prime contractors and subcontractors. Some commenters wanted the Department to mandate prompt payment provisions, while others preferred that their use by recipients remain optional.

Having considered the variety of views expressed on this subject, the Department believes that prompt payment provisions are an important race-neutral mechanism that can benefit DBEs and all other small businesses. Under part 26, all recipients must include a provision in their contracts requiring prime contractors to make prompt payments to their subcontractors, DBE and non-DBE alike. It is clear that DBE subcontractors are significantly—and, to the extent that

they tend to be smaller than non-DBEs, disproportionately—affected by late payments from prime contractors. Lack of prompt payment constitutes a very real barrier to the ability of DBEs to compete in the marketplace. It is appropriate for the Department to require recipients to take reasonable steps to deal with this barrier. We recognize that delayed payments do not affect only DBE contractors; a prompt payment requirement applying to all subcontracts is an excellent example of a race-neutral measure that will assist DBEs, and we are therefore requiring that recipients' prompt payment mechanisms apply to all subcontracts on Federally-assisted contracts.

Paragraph (a) of this section requires recipients to put into their DBE programs a requirement for a prompt payment contract clause. This clause would appear in every prime contract on which there are subcontracting possibilities, and it would obligate the prime contractor to pay subcontractors within a given number of days from the receipt of each payment the recipient makes to the prime contractor. Payment is required only for satisfactory completion of the subcontractor's work. The clause would also apply to the return of retainage from the prime to the subcontractor. Retainage would have to be returned within a given number of days from the time the subcontractor's work had been satisfactorily completed, even if the prime contract had not yet been completed. A majority of commenters on the retainage issue favored a requirement of this kind.

The number of days involved would be selected by the recipient, subject to OA approval as part of the recipient's DBE program. In approving these time frames, the OAs will consider whether they are realistic and sufficiently brief to ensure genuinely prompt payment. Recipients who already operate under prompt payment statutes may use their existing authority in implementing this requirement. It may be necessary to add to existing contract clauses in some cases (e.g., if existing prompt payment requirements do not cover retainage).

Paragraph (b) lists a series of additional measures that the regulation authorizes, but does not require, recipients to use. These include alternative dispute resolution, holding of payments to primes until subcontractors are paid, and other mechanisms that the recipient may devise. All these mechanisms could be made part of the recipient's DBE programs.

Section 26.31 What Requirements Pertain to the DBE Directory?

Recipients maintain directories listing certified DBEs. The issue most discussed by commenters on this section was whether the directory should include material concerning the qualifications of the firm to do various sorts of work. For example, has the firm been pre-qualified by the recipient? Can it do creditable work? What kinds of work does the firm prefer to do? Some commenters also asked that the directory should list the geographical areas in which the firm is willing to work. Other commenters opposed the idea of including this kind of information in the directory.

The Department believes that the directory and the certification process are closely intertwined. The primary purpose of the directory is to show the results of the certification process. Consequently, the directory should list all firms that the recipient has certified, along with basic identifying information for the firm. Since certification under this rule pertains to the various kinds of work a firm's disadvantaged owners can control, it is important to list those kinds of work in the directory. For example, if a firm seeks to work in fields A, B, and C, but the recipient has determined that its disadvantaged owners can control its operations only with respect to A and B, then the directory would recite that the firm is certified to perform work as a DBE in fields A and B.

The focus of the directory is intended to be eligibility. A directory is a list of firms that have been certified as eligible DBEs, with sufficient identifying information to permit interested firms to contact the DBEs. We do not intend to turn a recipient's directory into a comprehensive business resource manual. For example, information about firms' qualifications, geographical preferences for work, performance track record, capitalization, etc. are not required to be part of the directory. Some commenters favored including one or more of these elements, but we are concerned that other business information—however useful in its own right—could clutter up the directory and dilute its focus on certification.

Section 26.33 What Steps Must a Recipient Take to Address Overconcentration of DBEs in Certain Types of Work?

For some time, the Department has heard allegations that DBEs are overconcentrated in certain fields of highway construction work (e.g., guardrail, fencing, landscaping, traffic

control, striping). The concern expressed is that there are so many DBEs in these areas that non-DBEs are frozen out of the opportunity to work. In an attempt to respond to these concerns, the SNPRM asked for comment on a series of options for "diversification" mechanisms, various incentives and disincentives designed to shift DBE participation to other types of work.

The Department received a great deal of comment on these proposals, almost all of it negative. There were few comments suggesting that overconcentration was a serious problem, and many comments said that the alleged problem was not real. Some FTA and FAA recipients said that if there was a problem with overconcentration, it was limited to the highway construction program. As a general matter, recipients said that the proposed mechanisms were costly, cumbersome, and too prescriptive.

Prime contractors opposed the provisions because they would make it more difficult for them to find DBEs with which to meet their goals, while DBEs opposed them because they felt the provisions would penalize success and force them out of areas of business in which they were experienced. Many commenters suggested using outreach or business development plans as ways of assisting DBEs to move into additional areas of work.

The Department does not have data from commenters or other sources to support a finding that "overconcentration" is a serious, nationwide problem. However, as part of the narrow tailoring of the DBE program, we believe it would be useful to give recipients the authority to address overconcentration problems where they may occur. In keeping with the increased flexibility that this rule provides recipients, we give recipients discretion to identify situations where overconcentration is unduly burdening non-DBE firms. If a recipient finds an area of overconcentration, it would have to devise means of addressing the problem that work in their local situations. Possible means of dealing with the problem could include assisting prime contractors to find DBEs in non-traditional fields or varying the use of contract goals to lessen any burden on particular types of non-DBE specialty contractors. While recipients would have to obtain DOT approval of determinations of overconcentration and measures for dealing with them, the Department is not prescribing any specific mechanisms for doing so.

Section 26.35 What Role do Business Development and Mentor-Protégé Programs Have in the DBE Program?

In the SNPRM, both mentor-protégé programs and business development programs (BDPs) were cast as tools to use for diversification. They still may be used for that purpose, as noted in § 26.33. However, the Department believes that they may have a broader application, and their use in the final rule is not limited to diversification purposes. BDPs, in particular, are good examples of race-neutral methods recipients can use to promote the participation of DBEs and other small businesses in their contracting programs.

There were few comments on these provisions. Recipients wanted flexibility, and suggested that these kinds of programs should be optional. Their comments said that such programs were resource-intensive, and that Federal financial assistance for them would be welcome. One contractor's organization offered its own mentor-protégé plan as a model. A few comments voiced suspicion of mentor-protégé plans, on the basis that they allowed fronts and frauds into the program.

The final rule makes the use of BDPs and mentor-protégé programs optional for recipients. An operating administration can direct a particular recipient to institute a BDP, but BDPs are not mandatory across the board. The operating administration would negotiate with the recipient before mandating a BDP.

One feature added to this provision allows recipients to establish a kind of mini-graduation requirement for firms that voluntarily participate in BDPs. One of the purposes of a BDP is to equip DBE firms to compete in the market outside the DBE program. Therefore, a recipient could ask BDP participants to agree—as a condition of receiving BDP assistance—to agree to leave the DBE program after a certain number of years, or after certain business development objectives had been achieved.

Standing alone, mentor-protégé programs are not an adequate substitute for the DBE program. While they can be an important tool to help selected firms, they cannot be counted on to level the playing field for DBEs in general. An effective mentor-protégé program requires close monitoring to guard against abuse, which further limits the number of DBEs they can assist. Even with these limits, a mentor-protégé program that has safeguards to prevent large non-DBE firms from circumventing the DBE program can be a useful

component of a recipient's overall strategy to ensure equal opportunities for DBEs.

The final rule includes safeguards intended to prevent the misuse of mentor-protégé programs. Only firms that a recipient has already certified as DBEs (necessarily including a determination that they are independent firms) can participate as protégés. This is intended to preclude non-DBE firms from creating captive DBE firms to serve as protégés. A non-DBE mentor firm cannot get credit for more than half its goal on any contract by using its own protégé. Moreover, a non-DBE mentor firm cannot get DBE credit for using its own protégé on more than every other contract performed by the protégé. That is, if Mentor Firm X uses Protégé Firm Y to perform a subcontract, X cannot get DBE credit for using Y on another subcontract until Y had first worked on an intervening prime contract or subcontract with a different prime contractor.

To make mentor-protégé relationships feasible, the rule provides that mentors and protégés are not treated as affiliates of one another for size determination purposes. Mentor-protégé programs and BDPs must be approved by the concerned operating administration before they take effect. Recipients who already have such programs in place would make them part of their revised DBE programs sent to the concerned OA within 180 days of the effective date of part 26.

Section 26.37 What Are a Recipient's Responsibilities for Monitoring the Performance of Other Program Participants?

The few comments on this section asked for more detail and clarification. In the interest of flexibility, the Department is reluctant to be prescriptive in the matter of monitoring and enforcement mechanisms. What we are looking for is a strong and effective set of monitoring and compliance provisions in each recipient's DBE program. These mechanisms could be most anything available to the recipient under Federal, state, or local law (e.g., liquidated damages provisions, responsibility determinations, suspension and debarment rules, etc.)

One of the main purposes of these provisions is to make sure that DBEs actually perform work committed to them at contract award. The results that recipients must measure consist of payments actually made to DBEs, not just promises at the award stage. Credit toward goals can be awarded only when payments (including, for example, the return of retainage payments) are

actually made to DBEs. Under the final rule, recipients would keep a running tally of the extent to which, on each contract, performance had matched promises. Prime contractors whose performance fell short of original commitments would be subject to the compliance mechanisms the recipient had made applicable.

Section 26.41 What Is the Role of the Statutory 10 Percent Goal in This Program?

This is a new section, intended to explain what role the 10 percent statutory goal plays in the DBE program. Under former part 23, the 10 percent figure derived from the statute had a role in the setting of overall goals by recipients. For example, if recipients had a goal of less than 10 percent, the rule required them to make a special justification.

This section makes clear that the 10 percent goal is an aspirational goal that applies to the Department of Transportation on a national level, not to individual recipients. It is a goal that the Department can use to evaluate its overall national success in achieving the objectives that Congress has established for this program. However, the national 10 percent goal is not tied to recipients' goal-setting decisions. Recipients set goals based on what will achieve a level playing field for DBEs in their own programs, without regard to the national goal. Recipients are not required to set their overall or contract goals at 10 percent or any other particular level. Recipients are no longer required to make a special justification if their overall goals are less than 10 percent.

As discussed in connection with the Congressional debate on the TEA-21 DBE provision, Congress viewed flexibility concerning the statutory 10 percent goal as an important feature of narrow tailoring and made clear that it was setting a national goal, not a goal for any individual recipient. The Department wants to ensure that state and local programs have sufficient flexibility to implement their programs in a narrowly tailored way. This section is part of the Department's effort toward that end.

Section 26.43 Can Recipients Use Quotas or Set-Asides as Part of This Program?

The DBE program has often been labeled as a "quota" or "set-aside" program, especially, though not exclusively, by its opponents. This label is, and always has been, incorrect. Fifteen years ago, in the preamble to the Department's first rule implementing a DBE statute, the Department carefully

specified that neither quotas nor set-asides were required (see 48 FR 33437-38; July 21, 1983). This remains true today. However, in light of *Adarand* and this year's Congressional debates on the DBE statutes, we believe this point deserves additional emphasis. This regulation prohibits quotas under any circumstances and makes clear that set-asides can only be used as a means of last resort for redressing egregious discrimination.

A number of non-DBE contractors and their organizations continued to assert, in comments on the SNPRM, that the DBE program operates as a quota program. This section makes clear that recipients cannot use quotas on DOT-assisted contracts under any circumstances. A quota is a simple numerical requirement that a recipient or contractor must meet, without consideration of other factors. For example, if a recipient sets a 12 percent goal on a particular contract and refuses to award the contract to any bidder who does not have 12 percent DBE participation, either refusing to look at showings of good faith efforts or arbitrarily disregarding them, then the recipient has used a quota. The Department's regulations have never endorsed this practice. The issue of good faith efforts is discussed further below in connection with § 26.51.

A set-aside is a very specific tool. A contracting agency sets a contract aside for DBEs if it permits no one but DBEs to compete for the contract. Firms other than DBEs are not eligible to bid. The Department's DBE program has never required the use of set-asides and has allowed recipients to use set-asides only under very limited circumstances.

Under the SNPRM, a recipient could use a set-aside on a DOT-assisted contract only if other methods of meeting overall goals were demonstrated to be unavailing and the recipient had legal authority independent of part 26. Comments were divided concerning the use of set-asides. A number of non-DBE contractors opposed the use of set-asides, some of them saying that set-asides might be something they could live with if their use were balanced by the elimination of DBE contract goals on other contracts in the same field. Some recipients and DBEs said, however, that set-asides were a useful tool to achieve goals, particularly for start-up contractors or small contracts.

The Department has carefully reviewed these comments and continues to believe that set-asides should not be used in the DBE program unless they are absolutely necessary to address a specific problem when no other means

would suffice. If a recipient has been unable to remedy the effects of egregious discrimination through other means, it may, as a last resort, make limited use of set-asides to the extent necessary to resolve the problem.

Section 26.45 How Do Recipients Set Overall Goals?

Since its inception, the recipient's overall goal has been the heart of the DBE program. Responding to *Adarand*, DOT clarified the theory and purpose of the overall goal in the SNPRM. In the proposed rule, the Department made clear that the purpose of the overall goal—and, in fact, the DBE program as a whole—is to achieve a "level playing field" for DBEs seeking to participate in federal-aid transportation contracting. To reach a level playing field, recipients need to examine their programs and their markets and determine the amount of participation they would expect DBEs to achieve in the absence of discrimination and the effects of past discrimination. The focus of the goal section of the SNPRM was to propose ways to measure what a level playing field would look like and to seek input on the availability of data to make such a measurement.

The Proposed Rule and Comments

The Department proposed several options that recipients might use for setting overall goals, including three alternative formulas for measuring the availability of ready, willing and able DBEs in local markets. The specific formulas will be discussed below, but generally, they each called for setting a goal that reflected the percentage of locally available firms that were DBEs (i.e. dividing the number of DBEs by the number of all businesses). On all of the alternatives, the SNPRM sought comments on both the feasibility and practical value of the options, as well as the prospects for combining any of the approaches and the question of whether to mandate a single approach or allow each recipient to choose amongst the options. We invited commenters to propose changes to any of the details of the options or to devise entirely new ones. Finally, we asked commenters for their input on the availability of reliable data for use with each of the options.

Hundreds of commenters of all types—including DBEs and non-DBEs, prime and subcontractors, state and local recipients, industry and interest groups and private individuals—responded with a wealth of feedback, opinions and data. It is an understatement to say that there was no consensus among commenters as to the best way to set overall goals. Support for

the proposed options was almost evenly spread over the choices presented, with many commenters firmly against all of the options. Still more suggested that the current, non-formulaic method was the best way to ensure the flexibility to respond to local market conditions. Similarly, among those who expressed an opinion, commenters were split between the propriety of choosing a single "best" method and imposing it on all recipients and allowing recipients to choose amongst all the options. One of the few universal themes in the goal-setting comments was the problem of the availability of reliable data on the number of DBE and non-DBE contractors.

There were a few common threads that different groups of commenters tended to apply to all of the formulas. Among recipients, many comments focused on the lack of data about non-DBE contractors, especially subcontractors. Recipients often noted that they would not have the information needed for the denominator of any of the formulas (i.e. the total number of available businesses). Non-DBE contractors—and industry groups representing them—generally believed that there should be a capacity measure built into any goal setting mechanism. Finally, DBEs—and their industry associations—were concerned that all of the formulas would create goals based only on the current number of DBEs, locking in the effects of past discrimination by ignoring the fact that the lack of opportunities in the past has suppressed the number of DBE firms available today.

Under the proposed rule's Alternative 1, recipients would calculate the percentage of DBE firms in their directories among all firms available to work on their DOT-assisted contracts. Under Alternative 2, recipients would calculate the percentage of all minority- and women-owned firms in certain SIC codes in their areas among all firms in these SIC codes in the same areas. Under Alternative 3, recipients would calculate a percentage based on the average number of DBE firms that had worked on their DOT-assisted contracts in recent years divided by the average number of all firms that had worked on their DOT-assisted contracts in the same period. The SNPRM also proposed that recipients could use other means, such as disparity studies or goals developed by other recipients serving the same area, as a basis for their goals.

Each of the three proposed alternatives received some support, though this was often the rather tepid endorsement of commenters who felt that one or another alternative was the

best of a bad lot. Non-DBE contractors often claimed that the alternatives would unfairly increase goals, while DBE contractors often claimed that the same proposals would unfairly decrease goals.

Commenters said that data for determining the denominators of the equations in Alternatives 1 and 2, as well as the numerator in Alternative 2, did not exist and that it would be a major, time-consuming job to begin to obtain the data. Adaptation of existing information from other sources (e.g., Census data) was said to have significant statistical difficulties. The difficulty of getting data on out-of-state firms was emphasized in some comments.

Commenters looked on the alternatives as cumbersome, creating unreasonable administrative burdens, and as producing statistical results that were skewed in various ways. The use of DBE directories as the source of the numerator in Alternative 1 was criticized on the basis that directories may contain firms that never actually participate in DOT-assisted contracts. It was suggested that the number of firms bidding rather than the number of firms certified would be a more reliable guide, but it was also pointed out that, because subcontractors seldom formally bid for work, this data would be hard to obtain. Some commenters proposed adding overall population statistics to the mix.

A significant number of commenters—primarily non-DBE contractors, but including some recipients and other commenters as well—emphasized the need to take "capacity" into account. Most popular among these comments was using a capacity version of Alternative 3. These comments did not propose a method of determining the capacity of the firms contracting with the recipient.

The Final Rule

In view of the complexity and importance of the goal setting process and the many issues raised by commenters, the Department has decided to adopt a two step process for goal setting. The process is intended to provide the maximum flexibility for recipients while ensuring that goals are based on the availability of ready, willing and able DBEs in each recipient's relevant market. The Department believes that this approach is critical to meeting our constitutional obligation to ensure that the program is narrowly tailored to remedy the effects of discrimination. The first step of the process will be to create a baseline figure for the relative availability of ready, willing and able DBEs in each

recipient's market. The second step will be to make adjustments from the base figure, relying on an examination of additional evidence, past experience, local expertise and anticipated changes in DOT-assisted contracting over the coming year.

Step 1: Determining a Base Figure for the Overall Goal

The base figure is intended to be a measurement of the current percentage of ready, willing and able businesses that are DBEs. Ensuring that this figure is based on demonstrable evidence of each recipient's relevant market conditions will help to ensure that the program remains narrowly tailored. To be explicit, recipients cannot simply use the 10 percent national goal, their goal from the previous year, or their DBE participation level from the previous year as their base figure. Instead, all recipients must take an actual measurement of their marketplace, using the best evidence they have available, and derive a base figure that is as fair and accurate a representation as possible of the percentage of available businesses that are DBEs.

There are many different ways to measure the contracting market and assess the relative availability of DBEs. As discussed above, the SNPRM proposed three alternate formulas to measure relative availability, none of which were particularly popular with commenters. In this final rule, the Department is placing primary emphasis on the principles underlying the measurement, mandating only that a measurement of the relative availability of DBEs be made on the basis of demonstrable evidence of relevant market conditions, rather than requiring that any particular procedure or formula be used. The final rule contains a number of examples of how to create a base figure which recipients are free to adopt in their entirety or to use as guidelines for how to devise their own measurement.

There are several reasons we have taken this approach. First, the Department is aware of the differences in available data in various markets across the nation. The flexibility inherent in this approach will ensure that all recipients can use the procedure to set a reasonable goal and allow each recipient to use the best data available to it. As discussed in another section, this rule will also provide for the development of more standard data for future goal setting. Second, for many recipients, setting goals in this way will be a new exercise. By fixing only the basic principle, but allowing the methodology to change, recipients will

have the opportunity to fine tune the process each year as their experience grows and the data available to them improve. Finally, the rule makes sure that every recipient will have at least one reasonable and practical goal setting method available to them.

The first example for setting a base figure relies on data sources that are immediately available to all recipients: their DBE directories, and a Census Bureau database that DOT and the Census Bureau will make available to all recipients that wish to use it. This example has its roots in the first two goal setting formulas proposed in the SNPRM. Recipients would first assess the number of ready, willing and able DBEs based on their own directories. For some recipients this will be as simple as counting the number of firms in their directory. For others, particularly those using directories maintained by other agencies, the directories will have to be "filtered" for firms involved in transportation contracting. The resulting number of DBEs would become the numerator. The denominator would then be derived from the Census Bureau's County Business Pattern (CBP) database. We will provide user-friendly electronic access to the database via the internet to allow recipients to input the geographic area and SIC codes in which they contract and receive a number for the availability of all businesses.

There are several issues that must be addressed when comparing numbers derived from two different data sources, some of which were raised in the comments on the SNPRM. Recipients will need to ensure that the scope of businesses included in the numerator is as close as possible to the scope included in the denominator. Using as close as possible to the same SIC codes and geographic base is very important. A recipient using its own DBE directory, particularly one that contains only firms in the fields in which it contracts, will still need to determine what fields it will use for the denominator when sorting through the CBP database. The best way to do this would be to examine their contracting program and determine the SIC codes in which they let the substantial majority of their contracts and subcontracts. The geographic area used for both the numerator and the denominator should cover the area from which the recipient draws the substantial majority of its contractors. While it may be sufficient for some state recipients to use their state borders as their contracting area, local transit and airport recipients will rarely have such an obvious choice. Those recipients will need to more carefully examine the

geographic area from which they draw contractors and base their calculation of both the numerator and denominator of the equation on the same area.

The Department and the Census Bureau will make the CBP data available in a format that gives recipients as much flexibility as possible to tailor the data to their contracting programs. Recipients will be able to extract the data in one block for all of the SIC codes they expect to contract in, or by individual SIC codes, allowing them to

weight the relative availability of DBEs in various fields, giving more weight to the fields in which they spend more money. For example, let us assume a recipient estimates that it will expend 10% of its federal aid funds within SIC code 15, 40% in SIC code 16, 25% in SIC code 17, and the remaining 25% on contracting spread over SIC codes 07, 42 and 87. The recipient could separately determine the relative availability of DBEs for each of the three major construction SIC codes (i.e., 15, 16 and

17) and the relative availability of DBEs in the other three SIC codes grouped together and weight each according to the amount of money to be spent in each area. In this example, the recipient could calculate its weighted base figure by first determining the number of DBEs in its directory for each of the groups, then extracting the availability of CBP businesses for the same groups. It would then perform the following calculation to arrive at a base figure for step one of the goal setting process:

$$\text{Base Figure} = \left[.10 \frac{(\text{DBEs in SIC 15})}{\text{CBPs in SIC 15}} + .40 \frac{(\text{DBEs in 16})}{\text{CBPs in 16}} + .25 \frac{(\text{DBEs in 17})}{\text{CBPs in 17}} + .25 \frac{(\text{DBEs in 07,42,87})}{\text{CBPs in 07,42,87}} \right] \times 100$$

As has been stated generally, this formula is offered only as an example of a way that a recipient could choose to use the CBP database. Recipients using the CBP data should choose whether to weight their calculation, and whether to do so by individual SIC codes or by groups of SIC codes, based on their own assessment of what method will best fit their spending pattern.¹

Finally, there is still the question of the propriety of comparing data from two sources as different as DBE directories and the CBP. As mentioned above, some commenters asserted that the directories may contain firms that do not normally perform DOT-assisted contracts. This problem is greatest, of course, for directories maintained by other agencies for purposes beyond DOT-assisted contracting. We believe that the recipient's knowledge of its contracting needs and the contents of its DBE directory will allow it to solve this problem by sorting the directories by SIC code to extract only the firms likely to be interested in DOT-assisted contracting. Any remaining effect from DBEs that are certified in the relevant SIC codes but still do not intend to compete for DOT-assisted contracts will be more than offset by the hurdles involved in actually becoming a DBE. It is important to note here that the certification process itself, with its paperwork, review and on-site inspection, create a filter on the number of existing firms that will be counted in the numerator without there being any equivalent filter culling firms out of the denominator. Ultimately, the Department chose these two data sources for the example because, while they may not be perfect, they represent

the best universally available current data on both the presence of DBEs and the presence of all businesses in local markets. Any recipient that believes it has available to it better sources of local data from which to make a similar calculation for its base figure is encouraged to use them.

The second example for calculating a base figure is using a bidders list to determine the relative availability of DBEs. The concept is similar to the one described above. The recipient would divide the number of available ready, willing and able DBEs by the number for all firms. The difference is that instead of measuring availability by DBE certifications and Census data, the recipient would measure availability by the number of firms that have directly participated in, or attempted to participate in, DOT-assisted contracting in the recent past. This approach has its roots in Alternative 3 from the SNPRM. Of fundamental importance to this approach is that the recipient would need to include all firms that have sought DOT-assisted contracts, regardless of whether they did so by bidding on a prime contract or quoting a job as a subcontractor. Because most DOT recipients derive the substantial majority of their DBE participation through subcontracting, it is absolutely essential that all DBE and non-DBE firms that quote subcontracts be included in the bidders list.² Bidders lists are a very focussed measure of ready, willing and able firms because they filter the pool of available firms by requiring a demonstration of their ability to participate in the process through tracking and identifying

contracting opportunities, understanding the requirements of a particular job and assembling a bid for it. Another attractive feature of the bidding "filter" is that it applies equally to both DBEs and non-DBEs.

The third example included in the final rule for setting a base figure is using data derived from a disparity study. As was discussed in the SNPRM, the Department is not requiring recipients to do a disparity study, but is only making clear that use of disparity study data by recipients that have them or choose to conduct them is a valid means of setting a goal. Disparity studies generally contain a wide array of statistical data, as well as anecdotal data and analysis that can be particularly useful in the goal setting process. We list disparity studies here, not because they are needed to justify operating the DBE program—Congress has already established the compelling need for the DBE program—but because the data a good disparity study provides can be an excellent guide for a recipient to use to set a narrowly tailored goal.

The Department will not set out specific requirements for what data or analysis is required before a disparity study can be used for setting a goal, because we believe that the design and conduct of the study is best left to the local officials and the professional organizations with which they contract to conduct the studies. Instead, we again offer simple general principles that should apply to all studies used for goal setting. Any study data relied on in the goal setting process should be as recent as possible and be focussed on the transportation contracting industry. When setting the goal, first use the study's statistical evidence to set a base figure for the relative availability of DBEs. Other study information, whether it is anecdotal data, analysis or statistical information about related

¹ While it is not statistically necessary to account for 100% of program dollars when performing this type of weighting, the greater the percentage accounted for, the more accurate the resulting calculation will be.

² To prevent any confusion, it is important to note that the DBE program does not use the so-called "benchmarking" system employed in direct Federal procurement. The benchmarking system relies on a unique database created specifically for use in the federal procurement program.

fields, should be included when making adjustments to the base figure (discussed in more detail below), but not included in the base figure for the relative availability of DBEs.

The last specific example included in the rule is using the goal of another recipient as the base figure for goal setting. This option was also included in the SNPRM. It is intended to avoid duplicative work and to lighten the burden the goal setting process might put on smaller recipients. It is important to note that a recipient could only use another recipient's goal if it was set in accordance with this rule and the other recipient performed similar contracting in a similar market area. Using another recipient's approved goal would only satisfy the first step of the goal setting process. It would serve as the base figure, and could not be used to skip over step two of the process. The recipient would need to examine the same additional evidence it would otherwise use to determine whether to adjust its goal from the base figure, as well as being required to make adjustments to account for differences in its local market or contracting program.

The final rule also maintains the option of devising an alternative method of calculating a base figure for the goal setting process. Explicitly listing this option serves to emphasize the point that the options in the rule are examples meant as guidelines intended to ensure maximum flexibility for recipients. Recipients can use this option to take advantage of their unique expertise or any unique source of data that they have that may not be available to other recipients. The concerned operating administration will review and approve the proposals of recipients that believe they can calculate a base figure that will better reflect their relevant market than any of the examples provided in this rule. Approval will be contingent on the proposals following the same principles that apply to any recipient: the methodology must be based on demonstrable data of relevant market conditions and be designed to reach a goal that the recipient would expect DBEs to achieve in the absence of discrimination.

Step 2: Adjusting the Base Figure

As alluded to above, measuring the relative availability of DBEs to derive a base figure is only the first step of the goal setting process. To ensure that they arrive at goals that truly and accurately reflect the participation they would expect absent the effects of discrimination, recipients must go beyond the formulaic measurement of

current availability to account for other evidence of conditions affecting DBEs. To accomplish this second step, recipients must first survey their jurisdiction to determine what types of relevant evidence is available to them. Then, relying on their own knowledge of their contracting markets they must review the evidence to determine whether either an up or down adjustment from the base figure is needed.

One universally available form of evidence that all recipients should consider is the proven capacity of DBEs to perform work on DOT-assisted contracts. All recipients have been tracking and reporting the dollar volume of work that is contracted and subcontracted to DBEs each year. Viewed in isolation, the past achievements of DBEs do not reflect the availability of DBEs relative to all available businesses, but it is an important and current measure of the ability of DBEs to perform on DOT-assisted contracts.

Though not universally available, there are hundreds of existing disparity studies that contain a wealth of statistical and anecdotal evidence on the utilization of disadvantaged businesses. In addition to being a possible source of data for Step 1 of the goal setting process, disparity studies should be considered during Step 2 of the process. The base figure from Step 1 is intended to determine the relative availability of DBEs. The data and analysis in a disparity study can help a recipient determine whether those existing businesses are under- or over-utilized. If a recipient has a study with disparity ratios showing that existing DBEs are receiving significantly less work than expected, an upward adjustment from the base figure is called for. Similarly, if the disparity ratio shows overutilization, a downward adjustment to the base figure would be warranted. The anecdotal evidence and analysis of contracting requirements and conditions that may have a discriminatory impact on DBEs are also important sources that should be examined when determining what adjustment to make to the base figure.³ Finally, disparity studies that are conducted within a recipient's jurisdiction should be examined even if they were not done specifically for the recipient. For example, a state highway agency may find useful data and

³ It is important to note that adjusting the goal is only part of the response a recipient should make to evidence of discriminatory barriers for DBEs. All recipients have a primary responsibility to ensure non-discrimination in their programs and should act aggressively to remove any discriminatory barriers in their programs.

analysis in either a statewide disparity study covering other agencies or in a disparity study examining contracting in a county or city within the state.

If a recipient uses another recipient's goal as its base figure under Step 1 of the goal setting process, it will have to make additional adjustments to ensure that its final goal is narrowly tailored to its market and contracting program. For example, if a local transit or airport authority adopts a statewide goal as its base figure, it must determine the extent that local relative availability of DBEs differs from the relative availability of DBEs in the contracting area relied on by the state. The local recipient would also need to examine the differences in the type of contracting work in its program and determine whether there are significant differences in the relative availability of DBEs in any fields that are unique to its program—or unique to the program of the other recipient. Similarly, if one local recipient used the goal of another local recipient in the same market as its base figure, it would also need to adjust for differences in the contracting fields used by the two programs.

Finally, the rule contains a brief list of other types of data a recipient could consider when adjusting its base figure to arrive at an overall goal. The list is by no means intended to be exhaustive. Instead, it is meant as a guide to the types of information a recipient should look for in Step 2 of the goal setting process. There is a wide array of relevant local, regional and national information about the utilization of disadvantaged businesses. Recipients are encouraged to cast as wide a net as they can to carefully examine their contracting programs and the public and private markets in which they operate.

Additional Goal Setting Issues

The Department proposed, in both the 1992 NPRM and the 1997 SNPRM, that overall goals be calculated as a percentage of DOT funds a recipient expects to expend in DOT-assisted contracts. This is different from the existing part 23 rule, which asked recipients to set overall goals on the basis of all funds, including state and local funds, to be expended in DOT-assisted contracts. This change is for accounting and administrative convenience and is not intended to have a substantive effect on the program. While not the subject of many comments, those who did comment on the proposal favored the change. The final rule adopts this approach.

A few recipients commented that public participation concerning goal setting was bothersome. Nevertheless,

we view it as an essential part of the goal setting process. There are many stakeholders involved in setting goals, and it is reasonable that they should be involved in the process and have an opportunity for comment. The part 23 provision requiring getting a state governor's approval of a goal of less than 10 percent has been eliminated, both because overall goals are no longer tied to the national 10 percent goal and to reduce administrative burdens.

The goal setting provision of the final rule continues to direct recipients to set one annual overall goal for DBEs, rather than group-specific goals separating minority and women-owned businesses.

Section 26.47 Can Recipients Be Penalized for Failing To Meet Overall Goals?

This is a new section of the regulation, the purpose of which is to clarify the Department's views on the situations in which it is appropriate to impose sanctions on recipients with respect to goals. The provision states explicitly what has long been the Department's policy: no recipient is sanctioned, or found in noncompliance, simply because it fails to meet its overall goal. In fact, through the history of the DBE program, the Department never has sanctioned a recipient for failing to obtain a particular amount of DBE participation.

On the other hand, if a recipient fails to set an overall goal which the concerned operating administration approves, or fails to operate its program in good faith toward the objective of meeting the goal, it is subject to a finding of noncompliance and possible sanctions. For example, if a recipient refuses to establish a goal or, having established one, does little or nothing to work toward attaining it, it would be reasonable for the Department to find the recipient in noncompliance. Like all compliance provisions of the rule, this provision is subject to the "court order" exception recently created by statute (see § 26.101(b)).

Section 26.49 How Are Overall Goals Established for Transit Vehicle Manufacturers?

This provision basically continues in effect the existing transit vehicle manufacturer (TVM) provisions of the rule. The SNPRM proposed to change the existing rule in two respects. FHWA or FAA recipients could avail themselves of similar provisions, if they chose. The final rule retains this flexibility. Also, it was proposed that FTA, rather than manufacturers, would set TVM goals. The few comments we received on this section objected to the

latter change. Consequently, we will not adopt the proposed change and will continue to require the TVMs themselves to set their own goals based on the principles outlined in § 26.45 of this rule.

Section 26.51 What Means Do Recipients Use To Meet Overall Goals?

One of the key points of both the SNPRM and this final rule is that, in meeting overall goals, recipients have to give priority to race-neutral means. By race-neutral means (a term which, for purposes of this rule, includes gender neutrality), we mean outreach, technical assistance, procurement process modification, etc.—measures which can be used to increase opportunities for all small businesses, not just DBEs, and do not involve setting specific goals for the use of DBEs on individual contracts. Contract goals, on the other hand, are race-conscious measures.

In the context of these definitions, it is important to note that awards of contracts to DBEs are not necessarily race-conscious actions. Whenever a DBE receives a prime contract because it is the lowest responsible bidder, the resulting DBE participation was achieved through race-neutral means. Similarly, when a DBE receives a subcontract on a project that does not have a contract goal, its participation was also achieved through race-neutral means. Finally, even on projects that do carry contract goals, when a prime awards a particular subcontract to a DBE because it has proven in the past that it does the best or quickest work, or because it submitted the lowest quote, the resulting DBE participation has, in fact, been achieved through race-neutral means. We also note that the use of race-neutral measures (e.g., outreach, technical assistance) specifically to increase the participation of DBEs does not convert these measures into race-conscious measures.

A number of non-DBE contractors commented that race-neutral measures should not only be given priority, but must be tried and fail before any use of contract goals can occur. This, they asserted, is essential for a program to be narrowly tailored. The law on this point is fairly clear, and does not support the commenters' contention. The extent to which race-neutral alternatives were considered and deemed inadequate to remedy the problem is the relevant narrow tailoring question. Both in past legislation and when considering TEA-21, Congress did consider race-neutral alternatives. In fact, as described above, throughout the debate, Member after Member gave examples of how state and local race-neutral programs without

goals fail to overcome the discriminatory barriers that face DBEs. Congress' careful consideration and conclusion that race-neutral means are insufficient, buttressed by this rule's emphasis on achieving as much of the goal as possible through race-neutral means, satisfies this part of the narrow tailoring requirement.

No one opposed the use of race-neutral means, though a number of DBEs and recipients stressed that these means, standing alone, were insufficient to address discrimination and its effects. Most recipients and non-DBE contractors supported the use of race-neutral measures, though some recipients said that increased use of these measures would require additional resources.

The relationship between race-conscious and race-neutral measures in the final rule is very important. The recipient establishes an overall goal. The recipient estimates, in advance, what part of that goal it can meet through the use of race-neutral means. This projection, and the basis for it, would be provided to the concerned operating administration at the same time as the overall goal, and is subject to OA approval.

The requirement of the rule is that the recipient get the maximum feasible DBE participation through race-neutral means. The recipient uses race-conscious measures (e.g., sets contract goals) to get the remainder of the DBE participation it needs to meet the overall goal. If the recipient expects to be able to meet its entire overall goal through race-neutral means, it could, with OA approval, implement its program without any use of contract goals.

For example, suppose Recipient X establishes an 11 percent overall goal for Fiscal Year 2000. This is the amount of DBE participation that X has determined it would have if the playing field were level. Recipient X projects that, using a combination of race-neutral means, it can achieve 5 percent DBE participation. Recipient X then sets contract goals on some of its contracts throughout the year to bring in an additional 6 percent DBE participation. Recipients would keep data separately on the DBE participation obtained through those contracts that either did or did not involve the use of contract goals. Recipients would use this and other data to adjust their use of race-neutral means and contract goals during the remainder of the year and in future years. For example, if Recipient X projected being able to attain 5 percent DBE participation through race-neutral measures, but was only able to obtain 1 percent from the race-neutral measures

it used, Recipient X would increase its future use of contract goals. On the other hand, if Recipient X exceeded its prediction that it would get 5 percent DBE participation from race-neutral measures and actually obtained 10 percent DBE participation from the contracts on which there were no contract goals, it would reduce its future use of contract goals. A recipient that was consistently able to meet its overall goal using only race-neutral measures would never need to use contract goals.

Most recipients and non-DBE contractors agreed with the SNPRM's proposal that (contrary to the part 23 provision on this subject) contract goals not be required on all contracts. This provision is retained in the final rule. We believe that this provision provides recipients the ability to achieve the objective of a narrowly tailored program. The rule also reiterates that the contract goal need not be set at the same level as the overall goal. To express this more clearly, let us return to the above example of Recipient X. Just because Recipient X has an overall goal of 11 percent, it does not have to set a contract goal on each contract. Nor does it have to establish an 11 percent goal on each contract on which it does set a contract goal. Indeed, since X has projected that it can achieve almost half of its overall goal through race-neutral means, it would most likely set contract goals on some contracts but not on others. On contracts with a contract goal, the goal might be 4 percent one time, 18 percent another time, 9 percent another time, depending on the actual work involved in each contract, the location of the work and the subcontracting opportunities available. The idea is for X to set contract goals that, cumulatively over the year, bring in 6 percent DBE participation, which, added to the 5 percent participation X projects achieving from race-neutral measures, ends up meeting the 11 percent overall goal.

The SNPRM asked for comment on evaluation credits as an additional race-conscious measure that recipients could use to meet overall goals. The vast majority of the many comments on this subject opposed the use of evaluation credits, on both legal (e.g., as contrary to narrow tailoring) and policy (e.g., as confusing and subjective) grounds. A smaller number of commenters favored at least giving recipients discretion to use this tool. While the Department does not agree with the contention that evaluation credits are legally suspect, we do agree with much of the sentiment against using them in the DBE program, particularly the practical difficulties they might involve when applied to

subcontracting (which constitutes the main source of DBE participation in the program). As a result, the final rule does not contain an evaluation credits provision.

The SNPRM proposed certain mechanisms for determining when it was appropriate to ratchet back the use of contract goals. Most commenters said they found these particular mechanisms complicated and confusing. The Department believes that, as a matter of narrow tailoring, it is important to have concrete mechanisms in place to ensure that race-conscious measures like contract goals are used only to the extent necessary to ensure a level playing field. The final rule contains examples of four such mechanisms.

The first mechanism applies to a situation in which a recipient estimates that it can meet its overall goal exclusively through the use of race-neutral goals. In this case, the recipient simply does not set contract goals during the year. The second mechanism takes this approach one step further. If the recipient meets its overall goal two years in a row using only race-neutral measures, the recipient continues to use only race-neutral measures in future years, without having to project each year how much of its overall goal it anticipates meeting through race-neutral and race-conscious means, respectively. However, if in any year the recipient does not meet its overall goal, the recipient must make the projection for the following year, using race-conscious means as needed to meet the goal.

The third mechanism applies to recipients who exceed their overall goals for two years in a row while using contract goals. In the third year, when setting their overall goal and making their projection of the amount of DBE participation they will achieve through race-neutral means, they would determine the average percentage by which they exceeded their overall goals in the two previous years. They would then use that percentage to reduce their reliance on contract goals in the coming year, as noted in the regulatory text example. The rationale for this reduction is that the recipient's overall goal represents its best estimation of the participation level expected for DBEs in the absence of discrimination. By exceeding that goal consistently, the recipient may be relying too heavily on race-conscious measures. Scaling back the use of contract goals—while keeping careful track of DBE participation rates on projects without contract goals—will ensure that the recipient's DBE program remains narrowly tailored to overcoming the continuing effects of discrimination.

The fourth mechanism operates within a given year. If a recipient determines part way through the year that it will exceed (or fall short of) its overall goal, and it is using contract goals during that year, it would scale back its use of contract goals (or increase its use of race-neutral means and/or contract goals) during the remainder of the year to ensure that it is using an appropriate balance of means to meet its "level playing field" objectives.

There were also a number of comments on how contract goals should be expressed. Most favored continuing the existing practice of adding together the Federal and local shares of a contract and expressing the contract goal as a percentage of the sum because it works well and avoids confusion. A few comments favored expressing contract goals as a percentage of only the Federal share of a contract. Ultimately, we believe that it is not necessary for the Department to dictate which method to use. Recipients may continue to use whichever method they feel works best and allows them to accurately track the participation of DBEs in their program. Recipients need only ensure that they are consistent and clearly express the method they are using, and report to the Department the total federal aid dollars spent and the federal aid dollars spent with DBEs.

As a last note on this topic, FAA recipients are reminded that funds derived from passenger facility charges (PFCs) are not covered by this part and should not be counted as part of the Federal share in any goal calculation. If a recipient chooses to express its contract goals as a percentage of the combined Federal and local share, it may include the PFC funds as part of the local share.

Section 26.53 What Are the Good Faith Efforts Procedures Recipients Follow in Situations Where There Are Contract Goals?

There was little disagreement about the main point of this section. When a recipient sets a contract goal, the basic obligation of bidders is to make good faith efforts (GFE) to meet it. They can demonstrate these efforts in either of two ways, which are equally valid. First, they can meet the goal, by documenting that they have obtained commitments for enough DBE participation to meet the goal. Second, even though they have not met the goal, they can document that they have made good faith efforts to do so. The Department emphasizes strongly that this requirement is an important and serious one. A refusal by a recipient to accept valid showings of

good faith is not acceptable under this rule.

Appendix A discusses in greater detail the kinds of good faith efforts bidders are expected to make. There was a good deal of comment concerning its contents. Non-minority contractors recited that good faith efforts standards should be "objective, measurable, realistically achievable, and standardized." Not one of these comments provided any examples or suggestions of what "objective, measurable, realistically achievable, and standardized" standards would look like, however. Certainly a one-size-fits-all checklist is neither desirable nor possible. What constitutes a showing of adequate good faith efforts in a particular procurement is an intrinsically fact-specific judgment that recipients must make. Circumstances of procurements vary widely, and GFE determinations must fit each individual situation as closely as possible.

The proposed good faith efforts appendix suggested that one of the factors recipients could take into account is the behavior of bidders other than the apparent successful bidder. For example, if the latter failed to meet the contract goal, but other bidders did, that could suggest that the apparent successful bidder had not exerted sufficient efforts to get DBE participation. Recipients who commented on this issue favored the concept; non-DBE contractors opposed it. The final rule's Appendix A makes clear that recipients are not to use a "conclusive presumption" approach, in which the apparent successful bidder is summarily found to have failed to make good faith efforts simply because another bidder was able to meet the goal. However, the track record of other bidders can be a relevant factor in a GFE determination, in more than one way. If other bidders have met the goal, and the apparent successful bidder has not, this at least raises the question of whether the apparent successful bidder's efforts were adequate. It does not, by itself, prove that the apparent successful bidder did not make a good faith effort to get DBE participation, however. On the other hand, if the apparent successful bidder—even if it failed to meet the goal—got as much or more DBE participation than other bidders, then this fact would support the apparent successful bidder's showing of GFE. The revised Appendix makes these points.

The proposed good faith efforts appendix also expanded on language in part 23 concerning price-based decisions by prime contractors. The existing language provides that a

recipient can use, as evidence of a bidder's failure to make good faith efforts, the recipient's rejection of a DBE subcontractor's "reasonable price" offer. The SNPRM added that a recipient could set a price differential from 1-10 percent to evaluate bidders' efforts. If a bidder did not meet the goal and rejected a DBE offer within the range, the recipient could view the bidder as not making good faith efforts. This was an attempt to provide additional, quantified, guidance to recipients on this issue.

Comment was mixed on this issue. Non-DBE prime contractors generally opposed the price differential idea, saying that it encouraged deviations from the traditional low bid system. It should be noted, however, that subcontracts are typically awarded outside any formal low bid system. Some recipients thought that it was a bad idea to designate a range, because it would limit their discretion, while others liked the additional definiteness of the range. Most recipients supported the "reasonable price" concept in general, even if they had their doubts about the value of a range. Some DBE organizations favored the range approach.

Taking all the comments into consideration, the Department has decided to retain language similar to that of part 23, without reference to any specific range. Appendix A now provides that the fact that some additional costs may be involved in finding and using DBEs is not in itself sufficient reason for a bidder's failure to meet a DBE contract goal, as long as such costs are reasonable. Along with this emphasis on the reasonableness of the cost necessarily comes the fact that prime contractors are not expected to bear unreasonable costs. The availability of a good faith efforts waiver of the contract goal helps to ensure that a prime contractor will not be in a position where it has to accept an excessive or unreasonable bid from a DBE subcontractor. At the same time, any burden that a non-DBE subcontractor might face is also limited by the reasonableness of competing bids. This approach retains flexibility for recipients while avoiding the concerns commenters expressed about a particular range.

The SNPRM proposed that recipients would have to provide for an administrative review of decisions that a bidder's GFE showing was inadequate. The purpose of the provision was to ensure that recipients did not arbitrarily dismiss bidders' attempts to show that they made good faith efforts. The provision was meant to emphasize the

seriousness with which the Department takes the GFE requirement and to help respond to allegations that some recipients administered the program in a quota-like fashion. The SNPRM also asked whether such a mechanism should be operated entirely by the recipient or whether a committee, including representatives of DBE and non-DBE contractors should be involved.

A number of recipients, and a few contractors, opposed the idea on the basis of concern about administrative burdens on recipients and potential delays in the procurement process. A greater number of commenters, largely non-DBE contractors but also including recipients and DBEs, supported the proposal as ensuring greater fairness in the process. A significant majority of all commenters said that the recipient should operate the system on its own, because a committee would make the process more cumbersome and raise conflict of interest issues.

The Department will adopt this proposal, which should add to the fairness of the system and make allegations of *de facto* quota operations less likely. The Department intends that reconsideration be administered by recipients. The regulation does not call for a committee involving non-recipient personnel. The Department intends that the process be informal and timely. The recipient could ensure that the process be completed within a brief period (e.g., 5-10 days) to minimize any potential delay in procurements. The bidder would have an opportunity to meet with the reconsideration official, but a formal hearing is not required. To ensure fairness, the reconsideration official must be someone who did not participate in the original decision to reject the bidder's showing. The recipient would have to provide a written decision on reconsideration, but there would be no provision for administrative appeals to DOT.

A point raised by several non-DBE commenters was that DBEs should have to make good faith efforts (even when they were not acting as prime contractors). The commenters suggested things like providing capacity statements and documenting that they have bid on contracts. This point is unrelated to the subject of this section, which has to do with what efforts bidders for prime contracts have to make to show that they have made to obtain DBE subcontractors. It is difficult to see what purpose the additional paperwork burdens these commenters' requests would serve.

One of the most hotly debated issues among commenters was whether DBE

firms bidding on prime contracts should have to meet goals and make good faith efforts to employ DBE subcontractors. Under part 23, DBE prime contractors did not have to meet goals or make good faith efforts. The rationale for this position was that, as DBEs, 100 percent of the work of these contractors counted toward recipients' contract goals, which the firms automatically met.

A significant majority of commenters on this issue—particularly non-DBE contractors but also including some recipients and a few DBEs—argued that DBE primes should meet goals and make GFE the same as other contractors. Failing to do so, they said, went beyond providing a level playing field to the point of providing an unfair advantage for DBE bidders for prime contracts. This change would also increase opportunities for DBE subcontractors, they said. One comment suggested requiring DBE prime contractors to meet goals or make GFE, but stressed that work they performed with their own forces as well as work awarded to DBE subcontractors should count toward goals.

Supporters of the current system said that many prime contracts performed by DBEs are too small to permit subcontracting (of course, goals need be set only on contracts with subcontracting possibilities). Moreover, these commenters—mostly DBEs and recipients—said that there was already inequity as between DBEs and non-DBEs, and requiring DBEs to meet the same requirements simply maintained the inequity. There was also some support for a third option the Department included in the SNPRM, in which DBEs would have to meet goals and make GFE to the extent that work they proposed to perform with their own forces was insufficient to meet goals.

The Department believes that, in a rule aimed at providing a level playing field for DBEs, it is appropriate to impose the same requirements on all bidders for prime contracts. Consequently, part 26 will depart from the part 23 approach and require DBE prime contractors to meet goals and make good faith efforts on the same basis as other prime contractors. However, in recognition of the DBE bidders' status as DBEs, we will permit them to count toward goals the work that they commit to performing with their own forces, as well as the work that they commit to be performed by DBE subcontractors. DBE bidders on prime contracts will be expected to make the same outreach efforts as other bidders and to document good faith

efforts in situations where they do not fully meet contract goals.

Under part 23 and the SNPRM, recipients have a choice between handling bidder compliance with contract goals and good faith efforts requirements as a matter of responsiveness or responsibility. Some recipients and other contractors recounted successful experience with one approach or the other, and suggested reasons why everyone should follow each approach (e.g., responsiveness as a deterrent to bid-shopping; responsibility as a more flexible and cost-effective approach). Both approaches have their merits, and the Department believes the best course is to maintain the existing recipient discretion on this issue.

Some recipients use so-called "design-build" or "turnkey" contracts, in which the design and construction of an entire project is contracted out to a master contractor. The master contractor then lets subcontracts, which are often equivalent to the prime contracts that the recipient would let if it were designing and building the project directly. In a sense, the master contractor stands in the shoes of the recipient.

On design-build contracts, the normal process for setting contract goals does not fit the contract award process well. At the time of the award of the master contract, neither the recipient nor the master contractor knows in detail what the project will look like or exactly what contracting opportunities there will be, let alone the identity of DBEs who may subsequently be involved. In these situations, the recipient may alter the normal process, setting a project goal to which the master contractor commits. Later, when the master contractor is letting subcontracts, it will set contract goals as appropriate, standing in the shoes of the recipient. The recipient will exercise oversight of this process.

The final issue in this section has to do with replacement of DBEs that drop out of a contract. What actions, if any, should a prime contractor have to take when a DBE is unable to complete a subcontract, for whatever reason? Should it matter whether or not the DBE's participation is needed to achieve the prime contractor's goal?

Comment on this issue came mostly from recipients, with some non-DBE contractors and a few DBEs providing their views. A majority of the commenters believed that replacement of a fallen-away DBE with another DBE (or making a good faith effort toward that end) should be required only when needed to ensure that the prime contractor continued to meet its contract

goal. Others said that, since using DBEs to which the prime had committed at the time of award was a contractual requirement, replacement or good faith efforts should be required regardless of the prime's ability to meet the goal without the lost DBE's participation.

The Department believes that, in a narrowly tailored rule, it is not appropriate to require DBE participation at a level exceeding that needed to ensure a level playing field.

Consequently, we will require a prime contractor to replace a fallen-away DBE (or to demonstrate that it has made good faith efforts toward that end) only to the extent needed to ensure that the prime contractor is able to achieve the contract goal established by the recipient for the procurement. The Department will also retain the SNPRM provision—supported by most commenters who mentioned it—that a prime contractor may not terminate a DBE firm for convenience and then perform the work with its own forces without the recipient's written consent. This provision is intended to prevent abuse of the program by a prime contractor who would commit to using a DBE and then bump the DBE off the project in favor of doing the work itself.

Section 26.55 How Is DBE Participation Counted Toward Goals?

In a narrowly tailored program, it is important that DBE credit be awarded only for work actually being performed by DBEs themselves. The necessary implication of this principle is that when a DBE prime contractor or subcontractor subcontracts work to another firm, the work counts toward DBE goals only if the other firm is itself a DBE. This represents a change from the existing rule and the SNPRM, which said that all the work of a DBE's contract (implicitly including work subcontracted to non-DBEs) counts toward goals. A few comments urged such a change. The new language is also consistent with the way that the final rule treats goals for DBE prime contractors.

The value of work performed by DBEs themselves is deemed to include the cost of materials and supplies purchased, and equipment leased, by the DBE from non-DBE sources. For example, if a DBE steel erection firm buys steel from a non-DBE manufacturer, or leases a crane from a non-DBE construction firm, these costs count toward DBE goals. There is one exception: if a DBE subcontractor buys supplies or leases equipment from the prime contractor on its contract, these costs do not count toward DBE goals. Several comments from prime contractors suggested these costs should

count, but this situation is too problematic, in our view, from an independence and commercially useful function (CUF) point of view to permit DBE credit.

One of the most difficult issues in this section concerns how to count DBE credit for the services of DBE trucking firms. The SNPRM proposed that, to be performing a CUF, a DBE trucking firm had to own 50 percent of the trucks it used in connection with a contract. A number of comments said that this requirement was out of step with industry practice, which commonly involves companies leasing trucks from owner-operators and other sources for purposes of a project. In response to these comments, the Department revisited this issue and reviewed the trucking CUF policies of a number of states. The resulting provision requires DBEs to have overall control of trucking operations and own at least one truck, but permits leasing from a variety of sources under controlled conditions, with varying consequences for DBE credit awarded.

A DBE need not provide all the trucks on a contract to receive credit for transportation services, but it must control the trucking operations for which it seeks credit. It must have at least one truck and driver of its own, but it can lease the trucks of others, both DBEs and non-DBEs, including owner operators. For work done with its own trucks and drivers, and for work with DBE lessees, the firm receives credit for all transportation services provided. For work done with non-DBE lessees, the firm gets credit only for the fees or commissions it receives for arranging the transportation services, since the services themselves are being performed by non-DBEs.

When we say that a DBE firm must own at least one of the trucks it uses on a contract, we intend for recipients to have a certain amount of discretion for handling unexpected circumstances, beyond the control of the firm. For example, suppose firm X starts the contract with one truck it owns. The truck is disabled by an accident or mechanical problem part way through the contract. Recipients need not conclude that the firm has ceased to perform a commercially useful function.

Most commenters who addressed the issue agreed with the SNPRM proposal that a DBE does not perform a CUF unless it performs at least 30 percent of the work of a contract with its own forces (a few commenters suggested 50 percent). This provision has been retained. A commenter suggested that the use of two-party checks by a DBE and another firm should not

automatically preclude there being a CUF. While we do not believe it is necessary to include rule text language on this point, we agree with the commenter. As long as the other party acts solely as a guarantor, and the funds do not come from the other party, we do not object to this practice where it is a commonly-recognized way of doing business. Recipients who accept this practice should monitor its use closely to avoid abuse.

One commenter noted an apparent inconsistency between counting 100 percent of the value of materials and supplies used by a DBE construction contractor (e.g., in the context of a furnish and install contract) and counting only 60 percent of the value of goods obtained by a non-DBE contractor from a DBE regular dealer. The two situations are treated differently, but there is a policy reason for the difference. There is a continuing concern in the program that, if non-DBEs are able to meet DBE goals readily by doing nothing more than obtaining supplies made by non-DBE manufacturers through DBE regular dealers, the non-DBEs will be less likely to hire DBE subcontractors for other purposes. As a policy matter, the Department does not want to reduce incentives to use DBE subcontractors, so we have not permitted 100 percent credit for supplies in this situation. Giving 100 percent credit for materials and supplies when a DBE contractor performs a furnish and install contract does not create the same type of disincentive, so the policy concern does not apply. In our experience, the 60 percent credit has been an effective incentive for the use of DBE regular dealers, so those firms are not unduly burdened.

Section 26.61 How Are Burdens of Proof Allocated in the Certification Process?

This section, which states a "preponderance of evidence" standard for applicants' demonstration to recipients concerning group membership, ownership, control, and business size, received favorable comment from all commenters who addressed it. We are retaining it with only one change, a reference to the fact that, in the final rule, recipients will collect information concerning the economic status of prospective DBE owners.

Section 26.63 What Rules Govern Group Membership Determinations?

There were several comments on details of this provision. One commenter suggested that tribal

registration be used as an identifier for Native Americans. The suggestion is consistent with long-standing DOT guidance; however this section of the regulation is meant to set out general rules applicable to all determinations of group membership, not to enumerate means of making the determination for specific groups. The same commenter suggested that if someone knowingly misrepresents himself as a group member, he should not be given further consideration for eligibility.

Misrepresentation of any kind on an application is a serious matter. Indeed, misrepresentation of material facts in an application can be grounds for debarment or even criminal prosecution. While it would certainly be appropriate for recipients to take action against someone who so misrepresented himself, the regulatory text on group membership is not the place to make a general point about the consequences of misrepresentation.

Some commenters wanted further definition of what "a long period of time" means. We believe it would be counterproductive to designate a number of years that would apply in all cases, since circumstances are likely to differ. The point is to avoid "certification conversions" in which an individual suddenly discovers, not long before the application process, ancestry or culture with which he previously has had little involvement.

We are adopting the SNPRM provision without substantive change.

Section 26.65 What Rules Govern Business Size Determinations?

By statute, the Department is mandated to apply SBA small business size standards to determining whether a firm is a small business. The Department is also mandated to apply the statutory size cap (\$16.6 million in the current legislation, which the Department adjusts for inflation from time to time). Consequently, the Department cannot adopt the variety of comments we received to adjust size standards or the gross receipts cap to take differences among industries or regions into account. We are adopting the proposed language, using the new statutory gross receipts cap. As under part 23, a firm must fit under both the relevant SBA size standard and the generally applicable DOT statutory cap to be eligible for certification.

A few commenters asked for additional guidance for situations in which a firm is working in more than one SIC code, and the SBA size standards for the different SIC codes are different. First, size determinations are made for the firm as a whole, not for one

division or another. Second, suppose the size of Firm X (e.g., determined through looking at the firm's gross receipts) is \$5 million, and X is seeking certification as a DBE in SIC code yyyy and zzzz, whose SBA small business size standards are \$3.5 and \$7 million, respectively. Firm X would be a small business that could be certified as a DBE, and that could receive DBE credit toward goals, in SIC code zzzz but not in SIC code yyyy. This approach to the issue of differing standards being involved with the same firm fits in well with the general requirement of part 26 that certification be for work in particular SIC codes.

Section 26.67 What Rules Determine Social and Economic Disadvantage?

The statutes governing the DBE program continue to state that members of certain designated groups are presumed to be both socially and economically disadvantaged. Therefore, the Department is not adopting comments suggesting that one or both of the presumptions be eliminated from the DBE rule. While the rule does specify that applicants who are members of the designated groups do have to submit a signed certification that they are, in fact, socially and economically disadvantaged, this requirement should not be read as making simple "self-certification" sufficient to establish disadvantage. As has been the case since the beginning of the DBE program, the presumptions of social and economic disadvantage are rebuttable.

The Department is making an important change in this provision in response to comments about how to rebut the presumption of economic disadvantage. Recipient comments unanimously said that recipients should collect financial information, such as statements of personal net worth (PNW) and income tax returns, in order to determine whether the presumption of economic disadvantage really applies to individual applicants. Particularly in the context of a narrowly tailored program, in which it is important to ensure that the benefits are focussed on genuinely disadvantaged people (not just anyone who is a member of a designated group), we believe that these comments have merit. While charges by opponents of the program that fabulously wealthy persons could readily participate under part 23 have been exceedingly hyperbolic and inaccurate (e.g., references to the Sultan of Brunel as a potential DBE), it is appropriate to give recipients this tool to make sure that non-disadvantaged persons do not participate.

For this reason, part 26 requires recipients to obtain a signed and notarized statement of personal net worth from all persons who claim to own and control a firm applying for DBE certification and whose ownership and control are relied upon for DBE certification. These statements must be accompanied by appropriate supporting documentation (e.g., tax returns, where relevant). The rule does not prescribe the exact supporting documentation that should be provided, and recipients should strive for a good balance between the need for thorough examination of applicants' PNW and the need to limit paperwork burdens on applicants. For reasons of avoiding a retroactive paperwork burden on firms that are now certified, the rule does not require recipients to obtain this information from currently certified firms. These firms would submit the information the next time they apply for renewal or recertification. The final rule's provisions on calculating personal net worth are derived directly from SBA regulations on this subject (see 13 CFR § 124.104(c)(2), as amended on June 30, 1998).

One of the primary concerns of DBE firms commenting about submitting personal financial information is ensuring that the information remains confidential. In response to this concern, the rule explicitly requires that this material be kept confidential. It may be provided to a third party only with the written consent of the individual to whom the information pertains. This provision is specifically intended to preempt any contrary application of state or local law (e.g., a state freedom of information act that might be interpreted to require a state transportation agency to provide to a requesting party the personal income tax return of a DBE applicant who had provided the return as supporting documentation for his PNW statement). There is one exception to this confidentiality requirement. If there is a certification appeal in which the economic disadvantage of an individual is at issue (e.g., the recipient has determined that he or she is not economically disadvantaged and the individual seeks DOT review of the decision), the personal financial information would have to be provided to DOT as part of the administrative record. The Department would treat the information as confidential.

Creating a clear and definitive standard for determining when an individual has overcome the economic disadvantage that the DBE program is meant to remedy has long been a contentious issue. In 1992, the

Department proposed to use a personal net worth standard of \$750,000 to rebut the presumption of disadvantage for members of the designated groups. In 1997, the Department proposed a similar idea, though rather than use the \$750,000 figure, the SNPRM asked the public for input on what the specific amount should be. Finally, as discussed in detail above, the issue of ensuring that wealthy individuals do not participate in the DBE program was a central part of the 1998 Congressional debate.

Public comment on both proposals was sharply divided. Roughly equal numbers of commenters thought \$750,000 was too high as thought it was too low. Commenters proposed figures ranging from \$250,000 to \$2 million. Others supported the \$750,000 level, which is based on the SBA's threshold for participation in the SDB program (it is also the retention level for the 8(a) program). One theme running through a number of comments was that recipients should have discretion to vary the threshold depending on such factors as the local economy or the type of firms involved. Some comments opposed the idea of a PNW threshold altogether or suggested an alternative approach (e.g., based on Census data about the distribution of wealth).

Others commented that rebutting the presumption did not go far enough, pointing out that the only way to ensure that wealthy people did not participate in the program was for the threshold to act as a complete bar on the eligibility of an individual to participate in the program. Congress appears to share this concern. While they differed on the effectiveness of past DOT efforts, both proponents and opponents of the program agreed that preventing the participation of wealthy individuals was central to ensuring the constitutionality of the DBE program.

The Department agrees and, in light of the comments and the intervening TEA-21 debate, is adopting the clearest and most effective standard available: when an individual's personal net worth exceeds the \$750,000 threshold, the presumption of economic disadvantage is conclusively rebutted and the individual is no longer eligible to participate in the DBE program. The Department is using the \$750,000 figure because it is a well established and effective part of the SBA programs and is a reasonable middle ground in view of the wide range of comments calling for higher or lower thresholds. Using a figure any lower, as some commenters noted, could penalize success and make growth for DBEs difficult (since, for example, banks and insurers frequently

look to the personal assets of small business owners in making lending and bonding decisions). Operating the threshold as a cap on eligibility for all applicants also serves to treat men and women, minorities and non-minorities equally.

When a recipient determines, from the PNW statement and supporting information, that an individual's personal net worth exceeds \$750,000, the recipient must deem the individual's presumption of economic disadvantage to have been conclusively rebutted. No hearing or other proceeding is called for in this case. When this happens in the course of an application for DBE eligibility, the certification process for the applicant firm stops, unless other socially and economically disadvantaged owners can account for the required 51 percent ownership and control. A recipient cannot count the participation of the owner whose presumption of economic disadvantage has been conclusively rebutted toward the ownership and control requirements for DBE eligibility.

There may be other situations in which a recipient has a reasonable basis (e.g., from information in its own files, as the result of a complaint from a third party) for believing that an individual who benefits from the statutory presumptions is not really socially and/or economically disadvantaged. In these cases, the recipient may begin a proceeding to rebut the presumptions. For example, if a recipient had reason to believe that the owner of a currently-certified firm had accumulated personal assets well in excess of \$750,000, it might begin such a proceeding. The recipient has the burden of proving, by a preponderance of evidence, that the individual is not disadvantaged. However, the recipient may require the individual to produce relevant information.

It is possible that, at some time in the future, SBA may consider changing the \$750,000 cap amount. The Department anticipates working closely with SBA on any such matter and seeking comment on any potential changes to this rule that would be coordinated with changes SBA proposes for Federal procurement programs in this area.

Under part 23, recipients had to accept 8(a)-certified firms (except for those who exceeded the statutory gross receipts cap). The SNPRM proposed some modifications of this requirement. Recipients were concerned that in some situations information used for 8(a) certification could be inaccurate or out of date. They noted differences between 8(a) and DBE certification standards and procedures. They asked for the ability to

look behind 8(a) certifications and make their own certification decisions.

In response to these comments, the Department is providing greater discretion to recipients. Under part 26, recipients can treat 8(a) certifications as they do certifications made by other DOT recipients. A recipient can accept such a certification in lieu of conducting its own certification process or it can require the firm to go through part or all of its own application process. Because SBA is beginning a certification process for firms participating in the small and disadvantaged business (SDB) program, we will treat certified SDB firms in the same way. If an SDB firm is certified by SBA or an organization recognized by SBA as a certifying authority, a recipient may accept this certification instead of doing its own certification. (This does not apply to firms whose participation in the SDB program is based on a self-certification.) We note that this way of handling SBA program certifications is in the context of the development by DOT recipients of uniform certification programs. If a unified certification program (UCP) accepts a firm's 8(a) or 8(d) certification, then the firm will be certified for all DOT recipients in the state.

People who are not presumed socially and economically disadvantaged can still apply for DBE certification. To do so, they must demonstrate to the recipient that they are disadvantaged as individuals. Using the guidance provided in Appendix E, recipients must make case-by-case decisions concerning such applications. It should be emphasized that the DBE program is a disadvantage-based program, not one limited to members of certain designated groups. For this reason, recipients must take these applications seriously and consider them fairly. The applicant has the burden of proof concerning disadvantage, however.

Section 26.69 What Rules Govern Determinations of Ownership?

Commenters on the ownership provisions of the SNPRM addressed a variety of points. Most commenters agreed that the general burden of proof on applicants should be the preponderance of the evidence. A few commenters thought that this burden should also apply in situations where a firm was formerly owned by a non-disadvantaged individual. For some of these situations, the SNPRM proposed the higher "clear and convincing evidence" standard, because of the heightened opportunities for abuse involved. The Department believes this safeguard is necessary, and we will

retain the higher standard in these situations.

Commenters asked for more guidance in evaluating claims that a contribution of expertise from disadvantaged owners should count toward the required 51 percent ownership. They cited the potential for abuse. The Department believes that there may be circumstances in which expertise can be legitimately counted toward the ownership requirement. For example, suppose someone with a great deal of expertise in a computer-related field, without whom the success of his or her high-tech start-up business would not be feasible, receives substantial capital from a non-disadvantaged source.

We have modified the final rule provision to reflect a number of considerations. Situations in which expertise must be recognized for this purpose are limited. The expertise must be outstanding and in a specialized field: everyday experience in administration, construction, or a professional field is unlikely to meet this test. (This is not a "sweat equity" provision.) We believe that it is fair that the critical expertise of this individual be recognized in terms of the ownership determination. At the same time, the individual must have a significant financial stake in the company. This program focuses on entrepreneurial activity, not simply expertise. While we will not designate a specific percentage of ownership that such an individual must have, entrepreneurship without a reasonable degree of financial risk is inconceivable.

The SNPRM's proposals on how to treat assets obtained through inheritance, divorce, and gifts were somewhat controversial. Most comments agreed with the proposal that assets acquired through death or divorce be counted. One commenter objected to the provision that such assets always be counted, saying that the owner should have to make an additional demonstration that it truly owned the assets before the recipient counted them. We do not see the point of such an additional showing. If a white male business owner dies, and his widow inherits the business, the assets are clearly hers, and the deceased husband will play no further role in operating the firm. Likewise, assets a woman obtains through a divorce settlement are unquestionably hers. Absent a term of a divorce settlement or decree that limits the customary incidents of ownership of the assets or business (a contingency for which the proposed provision provided), there is no problem for which an additional showing of some

sort by the owner would be a useful remedy.

A majority of comments on the issue of gifts opposed the SNPRM proposal, saying that gifts should not be counted toward ownership at all. The main reason was that allowing gifts would make it easier for fronts to infiltrate the program. Some comments also had a flavor of opposition to counting what commenters saw as unearned assets. The Department understands these concerns. If a non-disadvantaged individual who provides a gift is no longer connected with the business, or a disadvantaged individual makes the gift, the issue of the firm being a potential front is much reduced. Where a non-disadvantaged individual makes a gift and remains involved with the business, the concern about potential fronts is greater.

For this reason, the SNPRM erected a presumption that assets acquired by gift in this situation would not count. The applicant could overcome this presumption only by showing, through clear and convincing evidence—a high standard of proof—that the transfer was not for the purpose of gaining DBE certification and that the disadvantaged owner really controls the company. This provides effective safeguards against fraud, without going to the unfair extreme of creating a conclusive presumption that all gifts are illegitimate. Also, for purposes of ownership, all assets are created equal. If the money that one invests in a company is really one's own, it does not matter whether it comes from the sweat of one's brow, a bank loan, a gift or inheritance, or hitting the lottery. As long as there are sufficient safeguards in place to protect against fronts—and we believe the rule provides them—the origin of the assets is unimportant. We are adopting the proposed provisions without change.

Commenters were divided about how to handle marital property, especially in community property states. Some commenters believed that such assets should not be counted at all. This was based, in part, on the concern that allowing such assets to be counted could make it difficult to screen out interspousal gifts designed to set up fronts, even if irrevocable transfers of assets were made. Other commenters said they thought the proposal was appropriate, and some of these thought the requirement for irrevocable transfers was unfair.

The Department is adopting the proposed language. In a community property state, or elsewhere where property is jointly held between spouses, the wife has a legal interest in

a portion of the property. It is really hers. It would be inappropriate to treat this genuine property interest as if it did not exist for purposes of DBE ownership.

To ensure the integrity of the program, it is necessary to put safeguards in place. The regulation does so. First, recipients would not count more assets toward DBE ownership than state law treats as belonging to the wife (the final rule provision adds language to this effect). Second, the irrevocable transfer requirement prevents the husband from being in a position to continue to claim any ownership rights in the assets. If an irrevocable transfer of assets constitutes a gift from a non-disadvantaged spouse who remains involved in the business, then the presumption/clear and convincing evidence mechanism discussed above for gifts would apply to the transaction. If recipients in community property states wanted to establish a mechanism for allocating assets between spouses that was consistent with state law, but did not require court involvement or other more formal procedures, they could propose doing so as part of their DBE programs, subject to operating administration approval.

Most commenters supported the SNPRM's proposal concerning trusts, particularly the distinction drawn between revocable living and irrevocable trusts. One commenter favored counting revocable living trusts when the same disadvantaged individual is both the grantor and beneficiary. The Department believes there is merit in making this exception. If the same disadvantaged individual is grantor, beneficiary, and trustee (i.e., an individual puts his own money in a revocable living trust for tax planning or other legitimate purposes and he alone plays the roles of grantor, beneficiary, and trustee), the situation seems indistinguishable for DBE program purposes from the situation of the same individual controlling his assets without the trust. In all other situations, revocable living trusts would not count.

Some comments asked for clarification of the 51 percent ownership requirement, a subject on which the Department has received a number of questions over the years. The Department has clarified this requirement, with respect to corporations, by stating that socially and economically disadvantaged individuals must own 51 percent of each class of voting stock of a corporation, as well as 51 percent of the aggregate stock. A similar point applies to partnerships and limited liability companies. This latter type of company was not

mentioned in the SNPRM, but a commenter specifically requested clarification concerning it. (We have also noted, in § 26.83, that limited liability companies must report changes in management responsibility to recipients. This is intended to include situations where management responsibility is rotated among members.) These clarifications are consistent with SBA regulations.

There are some ownership issues (e.g., concerning stock options and distribution of dividends) that SBA addresses in some detail in its regulations (see 13 CFR § 124.105 (c), (e), (f)) that were not the subject of comments to the DOT SNPRM. These issues have not been prominent in DOT certification practice, to the best of our knowledge, so we are not adding them to the rule. However, we would use the SBA provisions as guidance in the event such issues arise.

Section 26.71 What Rules Govern Determinations Concerning Control?

Commenters generally agreed with the proposed provisions concerning expertise and delegation of responsibilities, 51 percent control of voting stock, and differences in remuneration. A few commenters expressed concern about having to make judgments concerning expertise. However, this expertise standard, as a matter of interpretation, has been part of the DBE program since the mid-1980s. We do not believe that articulating it in the regulatory text should cause problems, and we believe it is a very reasonable and understandable approach to expertise issues. The provision concerning 51 percent ownership of voting stock, as discussed above, has been relocated in the ownership section of the rule. The Department has added three useful clarifications of the general requirement that disadvantaged owners must control the firm (e.g., by serving as president or CEO, controlling a corporate board). These clarifications are based on SBA's regulations (see 13 CFR § 124.106(a)(2), (b), (d)(1)). The Department intends to use other material in 13 CFR § 124.106 as guidance on control matters, when applicable. Otherwise, the Department is adopting these provisions as proposed.

There was some concern about the proposal concerning licensing. Some recipients thought that it would be better to require a license as proof of control in the case of all licensed occupations. We do not think it is justifiable for the DBE program to require more than state law does. If state law allows someone to run a certain

type of business (e.g., electrical contractors, engineers) without personally having a license in that occupation, then we do not think it is appropriate for the recipient to refuse to consider that someone without a license may be able to control the business. The rule is very explicit in saying that the recipient can consider the presence or absence of a license in determining whether someone really has sufficient ability to control a firm.

Family-owned firms have long been a concern in the program. The SNPRM provided explicitly that if the threads of control in a family-run business cannot be disentangled, such that the recipient can specifically find that a woman or other disadvantaged individual independently controls the business, the recipient may not certify the firm. A business that is controlled by the family as a group, as distinct from controlled individually by disadvantaged individuals, is not eligible.

Notwithstanding this provision, a few recipients commented that certifying any businesses in which non-disadvantaged family members participate would open the program to fronts. We do not agree. Non-disadvantaged individuals can participate in any DBE firm, as long as disadvantaged individuals control the firm. It is not fair and does not achieve any reasonable program objective to say that an unrelated white male may perform functions in a DBE while the owner's brother may never do so.

Commenters generally supported the provision calling for recipients to certify firms only for types of work in which disadvantaged owners had the ability to control the firm's operations. One commenter suggested that recipients, while not requiring recertification of firms seeking to perform additional types of work as DBEs (e.g., work in other than their primary industrial classification), should have to approve a written request from firms in this position. We do believe it is necessary for recipients to verify that disadvantaged owners can control work in an additional area, and we have added language to this effect. Recipients will have discretion about how to administer this verification process.

Commenters asked for additional clarification about the eligibility of people who work only part-time in a firm. We have done so by adding examples of situations that do not lead to eligibility (part-time involvement in a full-time firm and absentee ownership) and a situation that may, depending on circumstances, be compatible with eligibility (running a part-time firm all the time it is operating). It should be

noted that this provision does not preclude someone running a full-time firm from having outside employment. Outside employment is incompatible with eligibility only when it interferes with the individual's ability to control the DBE firm on a full-time basis.

One commenter brought to the Department's attention the situation of DBEs who use "employee leasing companies." According to the commenter, employee leasing companies fill a number of administrative functions for employers, such as payroll, personnel, forwarding of taxes to governmental entities, and drug testing. Typically, the employees of the underlying firm are transferred to the payroll of the employee leasing firm, which in turn leases them back to the underlying employer. The underlying employer continues to hire, fire, train, assign, direct, control etc. the employees with respect to their on-the-job duties. While the employee leasing firm sends payments to the IRS, Social Security, and state tax authorities on behalf of the underlying employer, it is the latter who is remains responsible for paying the taxes.

For practical and legal purposes, the underlying employer retains an employer-employee relationship with the leased employees. The employee leasing company does not get involved in the operations of the underlying employer. In this situation, the use of an employee leasing company by a DBE does not preclude the DBE from meeting the control requirements of this rule. Nor does the employee leasing company become an affiliate of the DBE for business size purposes. Case-by-case judgement, of course, remains necessary. Should an employee leasing company in fact exercise control over the on-the-job activities of employees of the DBE, then the ability of the DBE to meet control requirements would be compromised.

One commenter said, as a general matter, that independence and control should be considered separately. We view independence as an aspect of control: If a firm is not independent of some other business, then the other firm, not the disadvantaged owners, exercise control. While independence is an aspect of control that recipients must review, we do not see any benefit in separating consideration of the two concepts.

A recent court decision (*Jack Wood Construction Co., Inc. v. U.S. Department of Transportation*, 12 F. Supp. 2d 25 (D.D.C., 1998)) overturned a DOT Office of Civil Rights certification appeal decision that upheld a denial of certification based on lack of control.

The court, reading existing part 23 closely, said that a non-disadvantaged individual who was an employee, but not an owner, of a firm could disproportionately control the affairs of a firm without making it ineligible. The court also said that the existing rule language did not make it necessary for a disadvantaged owner to have both technical and managerial competence to control a firm. Part 26 solves both problems that the court found to exist in part 23's control provisions (see § 26.71(e)-(g)).

Section 26.73 What Are Other Rules Affecting Certification?

There were relatively few comments on this section. One commenter disagreed with the proposal to continue the provision that a firm owned by a DBE firm, rather than by socially and economically disadvantaged individuals, was not eligible. The argument against this provision, as we understand it, is that precluding a DBE firm from being owned by, for example, a holding company that is in turn owned by disadvantaged individuals would deny those individuals a financing and tax planning tool available to other businesses.

This argument has merit in some circumstances. The purpose of the DBE program is to help create a level playing field for DBEs. It would be inconsistent with the program's intent to deny DBEs a financial tool that is generally available to other businesses. The Department will allow this exception. Recipients must be careful, however, to ensure that certifying a firm under this exception does not have the effect of allowing the firm, or its parent company, to evade any of the requirements or restrictions of the certification process. The arrangement must be consistent with local business practices and must not have the effect of diluting actual ownership by disadvantaged individuals below the 51 percent requirement. All other certification requirements, including control by disadvantaged individuals and size limits, would continue to apply.

Another commenter suggested a firm should not be certified as a DBE if its owners have interests in non-DBE businesses. We believe that a *per se* rule to this effect would be too draconian. If owners of a DBE—whether disadvantaged individuals or not—also have interests in other businesses, the recipient can look at the relationships among the businesses to determine if the DBE is really independent.

One commenter opposed basing certification on the present status of

firms, seeking discretion to deny certification based on the history of the firm. We believe there is no rational or legal basis for denying certification to a firm on the basis of what it was in the past. Is it a small business presently owned and controlled by socially and economically disadvantaged individuals? If so, it would be contrary to the statute, and to the intent of the program, to deny certification because at some time—perhaps years—in the past, it was not owned and controlled by such individuals. The rule specifies that recipients may consider whether a firm has engaged in a pattern of conduct evincing an intent to evade or subvert the program.

The final provision of this section concerns firms owned by Alaska Native Corporations (ANCs), Indian tribes, and Native Hawaiian Organizations. Like the NPRM, it provides that firms owned by these entities can be eligible DBEs, even though their ownership does not reside, as such, in disadvantaged individuals. These firms must meet the size standards applicable to other firms, including affiliation (lest large combinations of tribal or ANC-owned corporations put other DBEs at a strong competitive disadvantage). Also, they must be controlled by socially and economically disadvantaged individuals. For example, if a tribe or ANC owns a company, but its daily business operations are controlled by a non-disadvantaged white male, the firm would not be eligible.

Commenters pointed us to the following provision of the Alaska Native Claims Settlement Act (ANCSA):

(e) Minority and economically disadvantaged status—

(1) For all purposes of Federal law, a Native Corporation shall be considered to be a corporation owned and controlled by Natives and a minority and economically disadvantaged business enterprise if the Settlement Common Stock of the corporation and other stock of the corporation held by holders of Settlement Common Stock and by Natives and descendants of Natives, represents a majority of both the total equity of the corporation and the total voting power of the corporation for the purposes of electing directors.

(2) For all purposes of Federal law, direct and indirect subsidiary corporations, joint ventures, and partnerships of a Native Corporation qualifying pursuant to paragraph (1) shall be considered to be entities owned and controlled by Natives and a minority and economically disadvantaged business enterprise if the shares of stock or other units of ownership interest in any such entity held by such Native Corporation and by the holders of its Settlement Common Stock represent a majority of both—

(A) The total equity of the subsidiary corporation, joint venture, or partnership; and

(B) The total voting power of the subsidiary corporation, joint venture, or partnership for the purpose of electing directors, the general partner, or principal officers. (43 U.S.C. 1626(e)).

The question for the Department is whether, reading this language together with the language of the Department's DBE statutes, DOT must alter these provisions.

The DOT DBE statute (TEA-21 version) provides as follows:

(b) Disadvantaged Business Enterprises.—

(1) General rule.—Except to the extent that the Secretary determines otherwise, not less than 10 percent of the amounts made available for any program under titles I, III, and V of this Act shall be expended with small business concerns owned and controlled by socially and economically disadvantaged individuals.

(2) Definitions.—In this subsection, the following definitions apply:

(A) Small business concern.—The term "small business concern" has the meaning such term has under section 3 of the Small Business Act (15 U.S.C. 632); except that such term shall not include any concern or group of concerns controlled by the same socially and economically disadvantaged individual or individuals which has average annual gross receipts over the preceding 3 fiscal years in excess of \$16,600,000, as adjusted by the Secretary for inflation.

(B) Socially and economically disadvantaged individuals.—The term "socially and economically disadvantaged individuals" has the meaning such term has under section 8(d) of the Small Business Act (15 U.S.C. 637(d)) and relevant subcontracting regulations promulgated pursuant thereto; except that women shall be presumed to be socially and economically disadvantaged individuals for purposes of this subsection.

(4) Uniform certification.—The Secretary shall establish minimum uniform criteria for State governments to use in certifying whether a concern qualifies for purposes of this subsection. Such minimum uniform criteria shall include but not be limited to on-site visits, personal interviews, licenses, analysis of stock ownership, listing of equipment, analysis of bonding capacity, listing of work completed, resume of principal owners, financial capacity, and type of work preferred.

While the language § 1626(e) is broad, the terms used in the two statutes are not identical. Section 1626(e) refers to "minority and economically disadvantaged business enterprise[s]", while the Department's statutes refer to "small business concerns owned and controlled by socially and economically disadvantaged individuals." Requirements applicable to the former need not necessarily apply to the latter.

The legislative history of § 1626(e) lends support to distinguishing the two statutes. The following excerpt from House Report 102-673 suggests that the intent of Congress in enacting this provision was to focus on direct Federal procurement programs:

[The statute] amends section [1626(e)] of ANCSA to clarify that Alaska Native Corporations are minority and economically disadvantaged business enterprises for the purposes of implementing the SBA programs . . . This section would further clarify that Alaska Native Corporations and their subsidiary companies are minority and economically disadvantaged business enterprises for purposes of qualifying for participation in federal contracting and subcontracting programs, the largest of which include the SBA 8(a) program and the Department of Defense Small and Disadvantaged Business Program. These programs were established to increase the participation of certain segments of the population that have historically been denied access to Federal procurement activities. While this section eliminates the need for Alaska Native Corporations or their subsidiaries to prove their "economic" disadvantage the corporations would still be required to meet size requirements as small businesses. This will continue to be determined on a case-by-case basis. (Id. at 19.)

This statute, in other words, was meant to apply to direct Federal procurement programs like the 8(a) program or the DOD SBD program, rather than a program involving state and local procurements reimbursed by DOT financial assistance.

The TEA-21 program is a more recent, more specific statute governing DOT recipients' programs. In contrast, the older, more general section 1626(e) evinces no specific intent to govern the DOT DBE program. There is no evidence that Congress, in enacting section 1626(e), had any awareness of or intent to alter the DOT DBE program.

A number of provisions of the TEA-21 statute suggest that Congress intended to impose specific requirements for the DOT program, without regard to other more general statutory references. For example, the \$16.6 million size cap and the uniform certification requirements suggest that Congress wanted the eligibility for the DOT program to be determined in very specific ways, giving no hint that they intended these specific requirements to be overridden in the case of ANCs.

The Department concludes that section 1626(e) is distinguishable from the DOT DBE statutes, and that the latter govern the implementation of the DBE program. The Department is not compelled to alter its approach to certification in the case of ANCs.

Section 26.81 What Are the Requirements for Unified Certification Programs?

As was the case following the 1992 NPRM, a significant majority of the large number of commenters addressing the issue favored implementing the proposed UCP requirement, which the final rule retains largely as proposed. A few commenters suggested that airports be included in UCPs for concession purposes as well as for FAA-assisted contracting, because there are not any significant differences between the certification standards for concessionaires and contractors (the only exception is size standards, which are easy to apply). We agree, and the final rule does not make an exception for concessions (regardless of the CFR part in which the concessions provisions appear). Some commenters wanted either a longer or shorter implementation period than the SNPRM proposed, but we believe the proposal is a good middle ground between the goal of establishing UCPs as soon as possible and the time recipients will need to resolve organizational, operational, and funding issues.

There were a number of comments and questions about details of the UCP provision. One recipient wondered whether a UCP may or must be separate from a recipient and what the legal liability implications of various arrangements might be. As far as the rule is concerned, a UCP can either be situated within a recipient's organization or elsewhere. Recipients can take state law concerning liability into account in determining how best to structure a UCP in their state. Another recipient asked if existing UCPs could be exempted from submitting plans for approval. Rather than being exempted, we believe that it would be appropriate for such UCPs to submit their existing plans. They would have to change them only to the extent needed to conform to the requirements of the rule.

Some commenters asked about the relationship of UCPs to recipients. For example, should a recipient be able to certify a firm that the UCP had not certified (or whose application the UCP had not yet acted on) or refuse to recognize the UCP certification of a firm the recipient did not think should be eligible? In both cases, the answer is no. Allowing this kind of discretion would fatally undermine the "one-stop shopping" rationale of UCPs. However, a recipient could, like any other party, initiate a third-party challenge to a UCP certification action, the result of which could be appealed to DOT.

We would emphasize that the form of the UCP is a matter for negotiation among DOT recipients in a state, and this regulation does not prescribe its organization. A number of models are available, including single state agencies, consortia of recipients that hire a contractor or share the workload among themselves, mandatory reciprocity among recipients, etc. It might be conceivable for a UCP to be a "virtual entity" that is not resident in any particular location. What matters is that the UCP meet the functional requirements of this rule and actually provide one-stop shopping service to applicants. The final rule adds a provision to clarify that UCPs—even when not part of a recipient's own organization—must comply with all provisions of this rule concerning certification and nondiscrimination. Recipients cannot use a UCP that does not do so. For example, if a UCP fails to comply with part 26 certification standards and procedures, or discriminates against certain applicants, the Secretary reserves the right to direct recipients not to use the UCP, effectively "decertifying" the UCP for purposes of DOT-assisted programs. In this case, which we hope will never happen, the Department would work with recipients in the state on interim measures and replacement of the erring UCP.

The SNPRM proposed "pre-certification." That is, the UCP would have to certify a firm before the firm became eligible to participate as a DBE in a contract. The application could not be submitted as a last-minute request in connection with a procurement action, which could lead to hasty and inaccurate certification decisions. Commenters were divided on this issue, with most expressing doubts about the concept. The Department believes that avoiding last-minute (and especially post-bid opening) applications is important to an orderly and accurate certification process, so we are retaining this requirement. However, we are modifying the timing of the requirement, by requiring that certification take place before the bid/offer due date, rather than before the issuance of the solicitation. The certification action must be completed by this date in order for the firm's proposed work on the particular contract to be credited toward DBE goals. It is not enough for the application to have been submitted by the deadline.

The SNPRM proposed that, once UCPs were up and running, a UCP in State A would not have to process an application from a firm whose principal

place of business was in State B unless State B had first certified the firm. Most commenters supported this proposal, one noting that it would help eliminate problems of having to make costly out-of-state site visits. It would also potentially reduce confusion caused by multiple, and potentially conflicting, outcomes in certification decisions. One commenter was concerned that this provision would lead to "free-rider" problems among recipients. The Department will be alert to this possibility, but we do not see it as precluding going forward with this provision. We have added a provision making explicit that when State B has certified a firm, it would have an obligation to send copies of the information and documents it had on the firm to State A when the firm applied there.

All save one of the comments on mandatory reciprocity opposed the concept. That is, commenters favored UCPs being able to choose whether or not to accept certification decisions made by other UCPs. The Department urges UCPs to band together in multi-state or regional alliances, but we believe that it is best to leave reciprocity discretionary. Mandatory reciprocity, even among UCPs, could lead to forum shopping problems.

UCPs will have a common directory, which will have to be maintained in electronic form (i.e., on the internet). One commenter suggested that this electronic directory be updated daily. We think this comment has merit, and the final rule will require recipients to keep a running update of the electronic directory, making changes as they occur.

Section 26.83 What Procedures Do Recipients Follow in Making Certification Decisions?

Commenters generally supported this certification process section, and we are adopting it with only minor changes. Commenters suggested that provision for electronic filing of applications be discretionary rather than mandatory. We agree, and the final rule does not mandate development of electronic filing systems. Some commenters remained concerned about site visits and asked for more guidance on the subject. We intend to provide future guidance on this subject.

Most commenters who addressed the subject favored the development of a mandatory, nationwide, standard DOT application form for DBE eligibility. A number of commenters supplied the forms they use as examples. We believe that this is a good idea, which will help avoid confusion among applicants in a nationwide program. However, we have

not yet developed a form for this purpose. The final rule reserves a requirement for recipients to use a uniform form. We intend to work on developing such a form during the next year, in consultation with recipients and applicants. Meanwhile, recipients can continue to use existing forms, modified as necessary to conform to the requirements of this part.

The SNPRM said recipients could charge a reasonable fee to applicants. A majority of commenters, both recipients and DBEs, opposed the idea of a fee or said it should be capped at a low figure. Fees are not mandatory, and they would be limited, under the final rule, to modest application fees (not intended to recover the cost of the certification process). However, if a recipient wants to charge a modest application fee, we do not see that it is inconsistent with the nature of the program to allow it to do so. Fee waivers would be required if necessary (i.e., a firm who showed they could not afford it). All fees would have to be approved by the concerned OA as part of the DBE program approval process, which would preclude excessive fees.

Given that reciprocity is discretionary among recipients, we thought it would be useful to spell out the options a recipient has when presented by an applicant with the information that another recipient has certified the firm. The recipient may accept the other recipient's certification without any additional procedures. The recipient can make an independent decision based, in whole or in part, on the information developed by the first recipient (e.g., application forms, supporting documents, reports of site visits). The recipient may make the applicant start an entire new application process. The choice among these options is up to the recipient. (As noted above, UCPs will have these same options.)

Most commenters on the subject supported the three-year term for certifications. Some wanted a shorter or longer period. We believe the three-year term is appropriate, particularly given the safeguards of annual and update affidavits that the rule provides. In response to a few comments that recipients should have longer than the proposed 21 days after a change in circumstances to submit an update affidavit, we have extended the period to 30 days. If recipients want to have a longer term in their DBE programs than the three years provided in the rule, they can do so, with the Department's approval, as part of their DBE programs.

A few recipients said that the 90-day period for making decisions on

applications (with the possibility of a 60-day extension) was too short. Particularly since this clock does not begin ticking until a complete application, including necessary supporting documentation, is received from the applicant, we do not think this time frame is unreasonable. We would urge recipients and applicants to work together to resolve minor errors or data gaps during the assembly of the package, before this time period begins to run.

Section 26.85 What Rules Govern Recipients' Denials of Initial Requests for Certification?

A modest number of commenters addressed this section, most of whom supported it as proposed. One commenter noted that it was appropriate to permit minor errors to be corrected in an application without invoking the 12-month reapplication waiting period. We agree, and we urge recipients to follow such a policy. Most commenters thought 12 months was a good length for a reapplication period. A few opposed the idea of a waiting period or thought a shorter period was appropriate. The rule keeps 12 months, but permits recipients to seek DOT approval, through the DBE program review process, for shorter periods.

Section 26.87 What Procedures Does a Recipient Use To Remove a DBE's Eligibility?

As long ago as 1983, the Department (in the preamble to the first DBE rule) strongly urged recipients to use appropriate due process procedures for decertification actions. Recipient procedures are still inconsistent and, in some cases, inadequate, in this respect. Quite recently, for example, litigation forced one recipient to rescind a decertification of an apparently ineligible firm because it had failed to provide administrative due process. We believe that proper due process procedures are crucial to maintaining the integrity of this program. The majority of commenters agreed, though a number of commenters had concerns about particular provisions of the SNPRM proposal.

Some recipients, for example, thought separation of functions was an unnecessary requirement, or too burdensome, particularly for small recipients. We believe separation of functions is essential: there cannot be a fair proceeding if the same party acts as prosecutor and judge. We believe that the burdens are modest, particularly in the context of state DOTs and statewide UCPs. We acknowledge that for small recipients, like small airports and transit

authorities, small staffs may create problems in establishing separation of functions (e.g., if there is only one person in the organization who is knowledgeable about the DBE program). For this reason, the rule will permit small recipients to comply with this requirement to the extent feasible until UCPs are in operation (at which time the UCPs would have to ensure separation of functions in all such cases). The organizational scheme for providing separation of functions will be part of each recipient's DBE program. In the case of a small recipient, if the DBE program showed that other alternatives (e.g., the airport using the transit authority's DBE officer as the decisionmaker in decertification actions, and vice-versa) were unavailable, the Department could approve something less than ideal separation of functions for the short term before the UCP becomes operational. In reviewing certification appeals from such recipients, the Department would take into account the absence of separation of functions.

It is very important that the decisionmaker be someone who is familiar with the DBE certification requirements of this part. The decisionmaker need not be an administrative law judge or some similar official; a knowledgeable program official is preferable to an ALJ who lacks familiarity with the program.

Another aspect of the due process requirements that commenters addressed was the requirement for a record of the hearing, which some commenters found to be burdensome. We want to emphasize that, while recipients have to keep a hearing record (including a verbatim record of the hearing), they do not need to produce a transcript unless there is an appeal. A hearing record is essential, because DOT appellate review is a review of the administrative record.

Some commenters suggested deleting two provisions. One of these allowed recipients to impose a sort of administrative temporary restraining order on firms pending a final decertification decision. The other allowed the effect of a decertification decision to be retroactive to the date of the complaint. The Department agrees that these two provisions could lead to unfairness, and so we have deleted them.

Section 26.89 What Is the Process for Certification Appeals to the Department of Transportation?

Several commenters addressed this section, supporting it with a few requests for modification. Some

commenters wanted a time limit for DOT consideration of appeals. We have added a provision saying that if DOT takes longer than 180 days from the time we receive a complete package, we will write everyone concerned with an explanation of the delay and a new target date for completion. Some commenters thought a different time limit for appeals to the Department (e.g., 180 days) would be beneficial. We believe that 90 days is enough time for someone to decide whether a decision of a recipient or UCP should be appealed and write a letter to DOT. This time period starts to run from the date of the final recipient decision on the matter. DOT can accept late-filed appeals on the basis of a showing of good cause (e.g., factors beyond the control of the appellant). Some recipients thought that more time might be necessary to compile an administrative record, so we have permitted DOT to grant extensions for good cause. Generally, however, the Department will adhere to the 90-day time period in order to prevent delays in the appeals process. As a clarification, we have added a provision that all recipients involved must provide administrative record material to DOT when there is an appeal. For example, State A has relied on the information gathered by State B to certify Firm X. A competitor files an ineligibility complaint with State A, which decertifies the firm. Firm X appeals to the Department. Both State A and State B must provide their administrative record materials to DOT for purposes of the appeal. (The material would be provided to the Departmental Office of Civil Rights.)

Section 26.91 What Actions Do Recipients Take Following DOT Certification Appeal Decisions?

There were few comments concerning this section. Some comments suggested DOT appeal decisions should have mandatory nationwide effect. That is if DOT upheld the decertification action of Recipient A, Recipients B, C, D, E, etc. should automatically decertify the firm. This approach is inconsistent with the administrative review of the record approach this rule takes for appeals to DOT.

A DOT decision that A's decertification was supported by substantial evidence is not a DOT decision that the firm is ineligible. It is only a finding that A had enough evidence to decertify the firm. Other results might also be supported by substantial evidence. Nevertheless, when the Department takes action on an appeal, other recipients would be well

advised to review their own decisions to see if any new proceedings are appropriate. One comment suggested the Department should explain a refusal to accept a complaint. This is already the Department's practice.

The SNPRM included a proposal to permit direct third-party complaints to the Department. There were few comments on this proposal, which would have continued an existing DOT practice. Some of these comments suggested dropping this provision, saying it made more sense to have all certification matters handled at the recipient level in the first instance. Others raised procedural issues (e.g., the possibility of the Department holding *de novo* hearings). The Department has reconsidered this proposal, and we have decided to delete it. We believe it will avoid administrative confusion and simplify procedures for everyone if all certification actions begin at the recipient level, with DOT appellate review on the administrative record.

Subpart F—Compliance and Enforcement

There were very few comments concerning this subpart, which we are adopting as proposed. One section has been added to reflect language in TEA-21 that prohibits sanctions against recipients for noncompliance in situations where compliance is precluded by a final Federal court order finding the program unconstitutional.

DBE Participation in Airport Concessions

The Department proposed a number of changes to its airport concessions DBE program rule in the 1997 SNPRM. We received a substantial number of comments on these proposals. The Department is continuing to work on its responses to these comments, as well as on refinements of the rule to ensure that it is narrowly tailored. This work is not complete. Rather than postpone issuance of the rest of the rule pending completion of this work, we are not issuing final concessions provisions at this time. The existing concessions provisions of 49 CFR part 23 will remain in place pending completion of the revised rule.

Regulatory Analyses and Notices

Executive Order 12866

This rule is a significant rule under Executive Order 12866, because of the substantial public interest concerning and policy importance of programs to ensure nondiscrimination in Federally-assisted contracting. It also affects a wide variety of parties, including

recipients in three important DOT financial assistance programs and the DBE and non-DBE contractors that work for them. It has been reviewed by the Office of Management and Budget. It is also a significant rule for purposes of the Department's Regulatory Policies and Procedures.

We do not believe that the rule will have significant economic impacts, however. In evaluating the potential economic impact of this rule, we begin by noting that it does not create a new program. It simply revises the rule governing an existing program. The economic impacts of the DBE program are created by the existing regulation and the statutes that mandate it, not by these revisions. The changes that we propose in this program are likely to have some positive economic impacts. For example, "one-stop shopping" and clearer standards in certification are likely to reduce costs for small businesses applying for DBE certification, as well as reducing administrative burdens on recipients.

The rule's "narrow tailoring" changes are likely to be neutral in terms of their overall economic impact. These could have some distributive impacts (e.g., if the proposed goal-setting mechanism results in changes in DBE goals, a different mix of firms may work on recipients' contracts), but there would probably not be net gains or losses to the economy. There could be some short-term costs to recipients owing to changes in program administration resulting from "narrow tailoring," however.

In any event, the economic impacts are quite speculative and appear nearly impossible to quantify. Comments did not provide, and the Department does not have, any significant information that would allow the Department to estimate any such impacts.

Regulatory Flexibility Act Analysis

The DBE program is aimed at improving contracting opportunities for small businesses owned and controlled by socially and economically disadvantaged individuals. Virtually all the businesses it affects are small entities. There is no doubt that a DBE rule always affects a substantial number of small entities.

This rule, while improving program administration and facilitating DBE participation (e.g., by making the certification process clearer) and responding to legal developments, appears essentially cost-neutral with respect to small entities in general (as noted above, the one-stop shopping feature is intended to benefit small entities seeking to participate). It does

not impose new burdens or costs on small entities, compared to the existing rule. It does not affect the total funds or business opportunities available to small businesses that seek to work in DOT financial assistance programs. To the extent that the proposals in this rule (e.g., with respect to changes in the methods used to set overall goals) lead to different goals than the existing rule, some small firms may gain, and others lose, business.

There is no data of which the Department is aware that would permit us, at this time, to measure the distributive effects of the revisions on various types of small entities. It is likely that any attempt to gauge these effects would be highly speculative. For this reason, we are not able to make a quantitative, or even a precise qualitative, estimate of these effects.

Paperwork Reduction Act

A number of provisions of this rule involve information collection requirements subject to the Paperwork Reduction Act of 1995 (PRA). One of these provisions, concerning a report of DBE achievements that recipients make to the Department, is the subject of an existing OMB approval under the PRA.

With one exception, the other information collection requirements of the rule continue existing part 23 requirements, major elements of the DBE program that recipients and contractors have been implementing since 1980 or 1983. While the final rule modifies these requirements in some ways, the Department believes the overall burden of these requirements will remain the same or shrink. These requirements are the following:

- Firms applying for DBE certification must provide information to recipients to allow them to make eligibility decisions. Currently certified firms must provide information to recipients to allow them to review the firms' continuing eligibility. (After the UCP requirements of the rule are implemented, the burdens of the certification provisions should be substantially reduced.)

- When contractors bid on prime contracts that have contract goals, they must document their DBE participation and/or the good faith efforts they have made to meet the contract goals. (Given the final rule's emphasis on race-neutral measures, it is likely the burden in this area will be reduced.)

- Recipients must maintain a directory of certified DBE firms. (Once UCPs are implemented, there will be 52 consolidated directories rather than the hundreds now required, reducing burdens substantially.)

- Recipients must calculate overall goals and transmit them to the Department for approval. (The process of setting overall goals is more flexible, but may also be more complex, than under part 23. As they make their transition to the final rule's goal-setting process during the first years of implementation, recipients may temporarily expend more hours than in the past on information-related tasks.)

- Recipients must have a DBE program approved by the Department. (The final rule includes a one-time requirement to submit a revised program document making changes to conform to the new regulation.)

The Department estimates that these program elements will result in a total of approximately 1.58 million burden hours to recipients and contractors combined during the first year of implementation and approximately 1.47 million annual burden hours thereafter.

The final rule also includes one new information collection element. It calls for recipients to collect and maintain data concerning both DBE and non-DBE bidders on DOT-assisted contracts. This information is intended to assist recipients in making more precise determinations of the availability of DBEs and the shape of the "level playing field" the maintenance of which is a major objective of the rule. The Department estimates that this requirement will add 254,595 burden hours in the first year of implementation. This figure is projected to decline to 193,261 hours in the second year and to 161,218 hours in the third and subsequent years.

Both as the result of comments and what the Department learns as it implements the DBE program under part 26, it is possible for the Department's information needs and the way we meet them to change. Sometimes the way we collect information can be changed informally (e.g., by guidance telling recipients they need not repeat information that does not change significantly from year to year). In other circumstances, a technical amendment to the regulation may be needed. In any case, the Department will remain sensitive to situations in which modifying information collection requirements becomes appropriate.

As required by the PRA, the Department has submitted an information collection approval request to OMB. Organizations and individuals desiring to submit comments on information collection requirements should direct them to the Department's docket for this rulemaking. You may also submit copies of your comments to

the Office of Information and Regulatory Affairs (OIRA), OMB, Room 10235, New Executive Office Building, Washington, DC, 20503; Attention: Desk Officer for U.S. Department of Transportation.

The Department considers comments by the public on information collections for several purposes:

- Evaluating the necessity of information collections for the proper performance of the Department's functions, including whether the information has practical utility.
- Evaluating the accuracy of the Department's estimate of the burden of the information collections, including the validity of the methods and assumptions used.

- Enhancing the quality, usefulness, and clarity of the information to be collected.

- Minimizing the burden of the collection of information on respondents, including through the use of electronic and other methods.

The Department points out that, with the exception of the bid data collection, all the information collection elements discussed in this section of the preamble have not only been part of the Department's DBE program for many years, but have also been the subject of extensive public comment following the 1992 NPRM and 1997 SNPRM. Among the over 900 comments received in response to these notices were a number addressing administrative burden issues surrounding these program elements. In this final rule, the Department has responded to these comments.

OMB is required to make a decision concerning information collections within 30-60 days of the publication of this notice. Therefore, for best effect, comments should be received by DOT/OMB within 30 days of publication. Following receipt of OMB approval, the Department will publish a Federal Register notice containing the applicable OMB approval numbers.

Federalism

The rule does not have sufficient Federalism impacts to warrant the preparation of a Federalism assessment. While the rule concerns the activities of state and local governments in DOT financial assistance programs, the rule does not significantly alter the role of state and local governments vis-a-vis DOT from the present part 23. The availability of program waivers could allow greater flexibility for state and local participants, however.

List of Subjects

49 CFR Part 23

Administrative practice and procedure, Airports, Civil rights,

Concessions, Government contracts, Grant programs—transportation, Minority businesses, Reporting and recordkeeping requirements.

49 CFR Part 26

Administrative practice and procedure, Airports, Civil rights, Government contracts, Grant programs—transportation, Highways and roads, Mass transportation, Minority businesses, Reporting and recordkeeping requirements. Issued this 8th day of January, 1999, at Washington, DC.

Rodney E. Slater,

Secretary of Transportation.

For the reasons set forth in the preamble, the Department amends 49 CFR subtitle A as follows:

PART 23—PARTICIPATION BY DISADVANTAGED BUSINESS ENTERPRISE IN AIRPORT CONCESSIONS

1. Revise the heading of 49 CFR part 23 as set forth above.
2. Revise the authority citation for 49 CFR part 23 to read as follows:
Authority: 42 U.S.C. 200d et seq.; 49 U.S.C. 47107 and 47123; Executive Order 12138, 3 CFR, 1979 Comp., p. 393.

Revision 1: Authority for Part 23 is restated.

Subparts A, C, D, and E—[Removed and Reserved]

3. Remove and reserve subparts A, C, D, and E of part 23.
 - § 23.89 [Amended]
 4. Amend § 23.89 as follows:
 - a. In the definition of "disadvantaged business," remove the words "§ 23.61 of subpart D of this part" and add the words "49 CFR part 26"; and remove the words "§ 23.61" in the last line of the definition and add the words "49 CFR part 26".
 - b. In the definition of "small business concern," paragraph (b), remove the words "§ 23.43(d)" and add the words "§ 23.43(d) in effect prior to March 4, 1999 (See 49 CFR Parts 1 to 99 revised as of October 1, 1998.)".
 - c. In the definition of "socially and economically disadvantaged individuals," remove the words "§ 23.61 of subpart D of this part" and add "49 CFR part 26".
 - § 23.93 [Amended]
 5. Amend § 23.93(a) introductory text by removing the words "§ 23.7" and adding the words "§ 26.7".
 - § 23.95 [Amended]
 6. Amend § 23.95(a)(1) by removing the words "based on the factors listed in § 23.45(g)(5)" and adding the words "consistent with the process for setting overall goals set forth in 49 CFR 26.45".
- Revision 2: In §
7. In addition, amend § 23.95 as follows:
 - a. In paragraph (f)(1), remove the words "§ 23.51" and add the words "49 CFR part 26, subpart E";

b. In paragraph (f)(2), remove the words "Except as provided in § 23.51(c), each" and add "Each";

c. Remove paragraph (f)(5); d. In paragraph (g)(1), remove the words "§ 23.53" and add the words "49 CFR part 26, subpart D".

Revision 2. In §23.95 remove and reserve paragraphs (f)(2) and (f)(3).

§ 23.97 [Amended]

8. Amend § 23.97 by removing the words "§ 23.55" and adding the words "49 CFR 26.89".

§ 23.11 [Removed]

9. Remove § 23.111.

10. Add a new 49 CFR part 26, to read as follows:

PART 26—PARTICIPATION BY DISADVANTAGED BUSINESS ENTERPRISES IN DEPARTMENT OF TRANSPORTATION FINANCIAL ASSISTANCE PROGRAMS

Subpart A—General

- Sec. 26.1 What are the objectives of this part?
- 26.3 To whom does this part apply?
- 26.5 What do the terms used in this part mean?
- 26.7 What discriminatory actions are forbidden?
- 26.9 How does the Department issue guidance and interpretations under this part?
- 26.11 What records do recipients keep and report?

26.13 What assurances must recipients and contractors make?

26.15 How can recipients apply for exemptions or waivers?

Subpart B—Administrative Requirements for DBE Programs for Federally-Assisted Contracting

- 26.21 Who must have a DBE program?
- 26.23 What is the requirement for a policy statement?
- 26.25 What is the requirement for a liaison officer?
- 26.27 What efforts must recipients make concerning DBE financial institutions?
- 26.29 What prompt payment mechanisms may recipients have?
- 26.31 What requirements pertain to the DBE directory?
- 26.33 What steps must a recipient take to address overconcentration of DBEs in certain types of work?
- 26.35 What role do business development and mentor-protégé programs have in the DBE program?
- 26.37 What are a recipient's responsibilities for monitoring the performance of other program participants?

Subpart C—Goals, Good Faith Efforts, and Counting

- 26.41 What is the role of the statutory 10 percent goal in this program?
- 26.43 Can recipients use set-asides or quotas as part of this program?
- 26.45 How do recipients set overall goals?
- 26.47 Can recipients be penalized for failing to meet overall goals?
- 26.49 How are overall goals established for transit vehicle manufacturers?

26.51 What means do recipients use to meet overall goals?

26.53 What are the good faith efforts procedures recipients follow in situations where there are contract goals?

26.55 How is DBE participation counted toward goals?

Subpart D—Certification Standards

- 26.61 How are burdens of proof allocated in the certification process?
- 26.63 What rules govern group membership determinations?
- 26.65 What rules govern business size determinations?
- 26.67 What rules govern determinations of social and economic disadvantage?
- 26.69 What rules govern determinations of ownership?
- 26.71 What rules govern determinations concerning control?
- 26.73 What are other rules affecting certification?

Subpart E—Certification Procedures

- 26.81 What are the requirements for Unified Certification Programs?
- 26.83 What procedures do recipients follow in making certification decisions?
- 26.85 What rules govern recipients' denials of initial requests for certification?
- 26.87 What procedures does a recipient use to remove a DBE's eligibility?
- 26.89 What is the process for certification appeals to the Department of Transportation?
- 26.91 What actions do recipients take following DOT certification appeal decisions?

Subpart F—Compliance and Enforcement

- 26.101 What compliance procedures apply to recipients?
- 26.103 What enforcement actions apply in FHWA and FTA programs?
- 26.105 What enforcement actions apply in FAA Programs?
- 26.107 What enforcement actions apply to firms participating in the DBE program?
- 26.109 What are the rules governing information, confidentiality, cooperation, and intimidation or retaliation?

Revision 3. Authority is revised by adding: Sec. 1101(b), Pub. L. 105-178, 112 Stat. 107, 113

Sec. 1101(b), Pub. L. 105-178, 112 Stat. 107, 113.

Subpart A—General

§ 26.1 What are the objectives of this part?

This part seeks to achieve several objectives:

- (a) To ensure nondiscrimination in the award and administration of DOT-assisted contracts in the Department's highway, transit, and airport financial assistance programs;
 - (b) To create a level playing field on which DBEs can compete fairly for DOT-assisted contracts;
 - (c) To ensure that the Department's DBE program is narrowly tailored in accordance with applicable law;
 - (d) To ensure that only firms that fully meet this part's eligibility standards are permitted to participate as DBEs;
 - (e) To help remove barriers to the participation of DBEs in DOT-assisted contracts;
 - (f) To assist the development of firms that can compete successfully in the marketplace outside the DBE program;
- and

(g) To provide appropriate flexibility to recipients of Federal financial assistance in establishing and providing opportunities for DBEs.

§ 26.3 To whom does this part apply?

(a) If you are a recipient of any of the following types of funds, this part applies to you:

(1) Federal-aid highway funds authorized under Titles I (other than Part B) and V of the Intermodal Surface Transportation Efficiency Act of 1991 (ISTEA), Pub. L. 102-240, 105 Stat. 1914, or Titles I, III, and V of the Transportation Equity Act for the 21st Century (TEA-21), Pub. L. 105-178, 112 Stat. 107.

(2) Federal transit funds authorized by Titles I, III, V and VI of ISTEA, Pub. L. 102-240 or by Federal transit laws in Title 49, U.S. Code, or Titles I, III, and V of the TEA-21, Pub. L. 105-178.

(3) Airport funds authorized by 49 U.S.C. 47101, et seq.

(b) [Reserved]

(c) If you are letting a contract, and that contract is to be performed entirely outside the United States, its territories and possessions, Puerto Rico, Guam, or the Northern Marianas Islands, this part does not apply to the contract.

(d) If you are letting a contract in which DOT financial assistance does not participate, this part does not apply to the contract.

26.5 What do the terms used in this part mean?

Affiliation has the same meaning the term has in the Small Business Administration (SBA) regulations, 13 CFR part 121.

(1) Except as otherwise provided in 13 CFR part 121, concerns are affiliates of each other when, either directly or indirectly:

- (i) One concern controls or has the power to control the other; or
- (ii) A third party or parties controls or has the power to control both; or
- (iii) An identity of interest between or among parties exists such that affiliation may be found.

(2) In determining whether affiliation exists, it is necessary to consider all appropriate factors, including common ownership, common management, and contractual relationships. Affiliates must be considered together in determining whether a concern meets small business size criteria and the statutory cap on the participation of firms in the DBE program.

Alaska Native means a citizen of the United States who is a person of one-fourth degree or more Alaskan Indian (including Tsimshian Indians not enrolled in the Metlakla Indian Community), Eskimo, or Aleut blood, or a combination of those bloodlines. The term includes, in the absence of proof of a minimum blood quantum, any citizen whom a Native village or Native group regards as an Alaska Native if their father or mother is regarded as an Alaska Native.

Alaska Native Corporation (ANC) means any Regional Corporation, Village Corporation, Urban Corporation, or Group Corporation organized under the laws of the State of Alaska in accordance with the Alaska Native Claims Settlement Act, as amended (43 U.S.C. 1601, et seq.).

Compliance means that a recipient has correctly implemented the requirements of this part.

Rev 4. Add: to Contract definition: For purposes of this part, a lease is considered to be a contract.

Contract means a legally binding relationship obligating a seller to furnish supplies or services (including, but not limited to, construction and professional services) and the buyer to pay for them. For purposes of this part, a lease is considered to be a contract.

Contractor means one who participates, through a contract or subcontract (at any tier), in a DOT-assisted highway, transit, or airport program.

Department or DOT means the U.S. Department of Transportation, including the Office of the Secretary, the Federal Highway Administration (FHWA), the Federal Transit Administration (FTA), and the Federal Aviation Administration (FAA).

Disadvantaged business enterprise or DBE means a for-profit small business concern—

- (1) That is at least 51 percent owned by one or more individuals who are both socially and economically disadvantaged or, in the case of a corporation, in which 51 percent of the stock is owned by one or more such individuals; and
- (2) Whose management and daily business operations are controlled by one or more of the socially and economically disadvantaged individuals who own it.

DOT-assisted contract means any contract between a recipient and a contractor (at any tier) funded in whole or in part with DOT financial assistance, including letters of credit or loan guarantees, except a contract solely for the purchase of land.

Good faith efforts means efforts to achieve a DBE goal or other requirement of this part which, by their scope, intensity, and appropriateness to the objective, can reasonably be expected to fulfill the program requirement.

Immediate family member means father, mother, husband, wife, son, daughter, brother, sister, grandmother, grandfather, grandson, granddaughter, mother-in-law, or father-in-law.

Indian tribe means any Indian tribe, band, nation, or other organized group or community of Indians, including any ANC, which is recognized as eligible for the special programs and services provided by the United States to Indians because of their status as Indians, or is recognized as such by the State in which the tribe, band, nation, group, or community resides. See definition of "tribally-owned concern" in this section.

Joint venture means an association of a DBE firm and one or more other firms to carry out a single, for-profit business enterprise, for which the parties combine their property, capital, efforts, skills and knowledge, and in which the DBE is responsible for a distinct, clearly defined portion of the work of the contract and whose share in the capital contribution, control, management, risks, and profits of the joint venture are commensurate with its ownership interest.

Native Hawaiian means any individual whose ancestors were natives, prior to 1778, of the area which now comprises the State of Hawaii.

Native Hawaiian Organization means any community service organization serving Native Hawaiians in the State of Hawaii which is a not-for-profit organization chartered by the State of Hawaii, is controlled by Native Hawaiians, and whose business activities will principally benefit such Native Hawaiians.

Noncompliance means that a recipient has not correctly implemented the requirements of this part.

Operating Administration or OA means any of the following parts of DOT: the Federal Aviation Administration (FAA), Federal Highway Administration (FHWA), and Federal Transit Administration (FTA). The "Administrator" of an operating administration includes his or her designees.

Personal net worth means the net value of the assets of an individual remaining after total liabilities are deducted. An individual's personal net worth does not include: The individual's ownership interest in an applicant or participating DBE firm; or the individual's equity in his or her primary place of residence. An individual's personal net worth includes only his or her own share of assets held jointly or as community property with the individual's spouse.

Primary industry classification means the four digit Standard Industrial Classification (SIC) code designation which best describes the primary business of a firm. The SIC code designations are described in the Standard Industry Classification Manual. As the North American Industrial Classification System (NAICS) replaces the SIC system, references to SIC codes and the SIC Manual are deemed to refer to the NAICS manual and applicable codes. The SIC Manual and the NAICS Manual are available through the National Technical Information Service (NTIS) of the U.S. Department of Commerce (Springfield, VA, 22261). NTIS also makes materials available through its web site (www.ntis.gov/naics).

Primary recipient means a recipient which receives DOT financial assistance and passes some or all of it on to another recipient.

Principal place of business means the business location where the individuals who manage the firm's day-to-day operations spend most working hours and where top management's business records are kept. If the offices from which management is directed and where business records are kept are in different locations, the recipient will determine the principal place of business for DBE program purposes.

Program means any undertaking on a recipient's part to use DOT financial assistance, authorized by the laws to which this part applies.

Race-conscious measure or program is one that is focused specifically on assisting only DBEs, including women-owned DBEs.

Race-neutral measure or program is one that is, or can be, used to assist all small businesses. For the purposes of this part, race-neutral includes gender-neutrality.

Recipient is any entity, public or private, to which DOT financial assistance is extended, whether directly or through another recipient, through the programs of the FAA, FHWA, or FTA, or who has applied for such assistance.

Secretary means the Secretary of Transportation or his/her designee.

Set-aside means a contracting practice restricting eligibility for the competitive award of a contract solely to DBE firms.

Small Business Administration or SBA means the United States Small Business Administration.

Small business concern means, with respect to firms seeking to participate as DBEs in DOT-assisted contracts, a small business concern as defined pursuant to section 3 of the Small Business Act and Small Business Administration regulations implementing it (13 CFR part 121) that also does not exceed the cap on average annual gross receipts specified in § 26.65(b).

Socially and economically disadvantaged individual means any individual who is a citizen (or lawfully admitted permanent resident) of the United States and who is—

(1) Any individual who a recipient finds to be a socially and economically disadvantaged individual on a case-by-case basis.

(2) Any individual in the following groups, members of which are rebuttably presumed to be socially and economically disadvantaged:

(i) "Black Americans," which includes persons having origins in any of the Black racial groups of Africa;

(ii) "Hispanic Americans," which includes persons of Mexican, Puerto Rican, Cuban, Dominican, Central or South American, or other Spanish or Portuguese culture or origin, regardless of race;

(iii) "Native Americans," which includes persons who are American Indians, Eskimos, Aleuts, or Native Hawaiians;

(iv) "Asian-Pacific Americans," which includes persons whose origins are from Japan, China, Taiwan, Korea, Burma (Myanmar), Vietnam, Laos, Cambodia (Kampuchea), Thailand, Malaysia, Indonesia, the Philippines, Brunel, Samoa, Guam, the U.S. Trust Territories of the Pacific Islands (Republic of Palau), the Commonwealth of the Northern Marianas Islands, Macao, Fiji, Tonga, Kiribati, Tuvalu, Nauru, Federated States of Micronesia, or Hong Kong;

(v) "Subcontinent Asian Americans," which includes persons whose origins are from India, Pakistan, Bangladesh, Bhutan, the Maldives Islands, Nepal or Sri Lanka;

(vi) Women;

(vii) Any additional groups whose members are designated as socially and economically disadvantaged by the SBA, at such time as the SBA designation becomes effective.

Tribally-owned concern means any concern at least 51 percent owned by an Indian tribe as defined in this section.

You refers to a recipient, unless a statement in the text of this part or the context requires otherwise (i.e., "You must do XYZ" means that recipients must do XYZ).

§ 26.7 What discriminatory actions are forbidden?

(a) You must never exclude any person from participation in, deny any person the benefits of, or otherwise discriminate against anyone in connection with the award and performance of any contract covered by this part on the basis of race, color, sex, or national origin.

(b) In administering your DBE program, you must not, directly or through contractual or other arrangements, use criteria or methods of administration that have the effect of defeating or substantially impairing accomplishment of the objectives of the program with respect to individuals of a particular race, color, sex, or national origin.

§ 26.9 How does the Department issue guidance and interpretations under this part?

(a) This part applies instead of subparts A and C through E of 49 CFR part 23 in effect prior to March 4, 1999. (See 49 CFR Parts 1 to 99, revised as of October 1, 1998.) Only guidance and interpretations (including interpretations set forth in certification appeal decisions) consistent with this part 26 and issued after March 4, 1999 have definitive, binding effect in implementing the provisions of this part and constitute the official position of the Department of Transportation.

(b) The Secretary of Transportation, Office of the Secretary of Transportation, FHWA, FTA, and FAA may issue written interpretations of or written guidance concerning this part. Written interpretations and guidance are valid and binding, and constitute the official position of the Department of Transportation, only if they are issued over the signature of the Secretary of Transportation or if they contain the following statement:

The General Counsel of the Department of Transportation has reviewed this document and approved it as consistent with the language and intent of 49 CFR part 26.

§ 26.11 What records do recipients keep and report?

(a) [Reserved]

(b) You must continue to provide data about your DBE program to the Department as directed by DOT operating administrations.

(c) You must create and maintain a bidders list, consisting of all firms bidding on prime contracts and bidding or quoting subcontracts on DOT-assisted projects. For every firm, the following information must be included:

- (1) Firm name;
- (2) Firm address;
- (3) Firm's status as a DBE or non-

DBE;

- (4) The age of the firm; and
- (5) The annual gross receipts of the

firm.

§ Section 26.13 What assurances must recipients and contractors make?

(a) Each financial assistance agreement you sign with a DOT operating administration (or a primary recipient) must include the following assurance: The recipient shall not discriminate on the basis of race, color, national origin, or sex in the award and performance of any DOT-assisted contract or in the administration of its DBE program or the requirements of 49 CFR part 26. The recipient shall take all necessary and reasonable steps under 49 CFR part 26 to ensure nondiscrimination in the award and administration of DOT-assisted contracts. The recipient's DBE program, as required by 49 CFR part 26 and as approved by DOT, is incorporated by reference in this agreement. Implementation of this program is a legal obligation and failure to carry out its terms shall be treated as a violation of this agreement. Upon notification to the recipient of its failure to carry out its approved program, the Department may impose sanctions as provided for under part 26 and may, in appropriate cases, refer the matter for enforcement under 18 U.S.C. 1001 and/or the Program Fraud Civil Remedies Act of 1986 (31 U.S.C. 3801 et seq.).

(b) Each contract you sign with a contractor (and each subcontract the prime contractor signs with a subcontractor) must include the following assurance: The contractor, sub recipient or subcontractor shall not discriminate on the basis of race, color, national origin, or sex in the performance of this contract. The contractor shall carry out applicable requirements of 49 CFR part 26 in the award and administration of DOT-assisted contracts. Failure by the contractor to carry out these requirements is a material breach of this contract, which may result in the termination of this contract

or such other remedy as the recipient deems appropriate.

§ 26.15 How can recipients apply for exemptions or waivers?

(a) You can apply for an exemption from any provision of this part. To apply, you must request the exemption in writing from the Office of the Secretary of Transportation, FHWA, FTA, or FAA. The Secretary will grant the request only if it documents special or exceptional circumstances, not likely to be generally applicable, and not contemplated in connection with the rulemaking that established this part, that make your compliance with a specific provision of this part impractical. You must agree to take any steps that the Department specifies to comply with the intent of the provision from which an exemption is granted. The Secretary will issue a written response to all exemption requests.

(b) You can apply for a waiver of any provision of Subpart B or C of this part including, but not limited to, any provisions regarding administrative requirements, overall goals, contract goals or good faith efforts. Program waivers are for the purpose of authorizing you to operate a DBE program that achieves the objectives of this part by means that may differ from one or more of the requirements of Subpart B or C of this part. To receive a program waiver, you must follow these procedures:

(1) You must apply through the concerned operating administration. The application must include a specific program proposal and address how you will meet the criteria of paragraph (b)(2) of this section. Before submitting your application, you must have had public participation in developing your proposal, including consultation with the DBE community and at least one public hearing. Your application must include a summary of the public participation process and the information gathered through it.

(2) Your application must show that—

(i) There is a reasonable basis to conclude that you could achieve a level of DBE participation consistent with the objectives of this part using different or innovative means other than those that are provided in subpart B or C of this part;

(ii) Conditions in your jurisdiction are appropriate for implementing the proposal;

(iii) Your proposal would prevent discrimination against any individual or group in access to contracting opportunities or other benefits of the program; and

(iv) Your proposal is consistent with applicable law and program requirements of the concerned operating administration's financial assistance program.

(3) The Secretary has the authority to approve your application. If the Secretary grants your application, you may administer your DBE program as provided in your proposal, subject to the following conditions:

(i) DBE eligibility is determined as provided in subparts D and E of this part, and DBE participation is counted as provided in § 26.49;

(ii) Your level of DBE participation continues to be consistent with the objectives of this part;

(iii) There is a reasonable limitation on the duration of your modified program; and

(iv) Any other conditions the Secretary makes on the grant of the waiver.

(4) The Secretary may end a program waiver at any time and require you to comply with this part's provisions. The Secretary may also extend the waiver, if he or she determines that all requirements of paragraphs (b)(2) and

(3) of this section continue to be met.

Any such extension shall be for no longer than period originally set for the duration of the program.

Subpart B—Administrative Requirements for DBE Programs for Federally-Assisted Contracting § 26.21 Who must have a DBE program?

(a) If you are in one of these categories and let DOT-assisted contracts, you must have a DBE program meeting the requirements of this part:

- (1) All FHWA recipients receiving funds authorized by a statute to which this part applies;

Revision 5: Revise § 26.21(a)(2) to read:

(2) FTA recipients that receive \$250,000 in FTA planning, capital or operating assistance in a Federal fiscal year, exclusive of transit vehicle purchases, and transit vehicle manufacturers who must submit an overall goal under § 26.49.

~~(2) FTA recipients that receive \$250,000 or more in FTA planning, capital, and/or operating assistance in a Federal fiscal year;~~

(2) FTA recipients that receive \$250,000 in FTA planning, capital or operating assistance in a Federal fiscal year, exclusive of transit vehicle purchases, and transit vehicle manufacturers who must submit an overall goal under § 26.49.

(3) FAA recipients that receive a grant of \$250,000 or more for airport planning or development.

(b)(1) You must submit a DBE program conforming to this part by August 31, 1999 to the concerned operating administration (OA). Once the OA has approved your program, the approval counts for all of your DOT-assisted programs (except that goals are reviewed and approved by the particular operating administration that provides funding for your DOT-assisted contracts).

Revision 6 in §
(2) You do not have to submit regular updates of your DBE programs, as long as you remain in compliance. However, you must submit significant changes in the program for approval.

(c) You are not eligible to receive DOT financial assistance unless DOT has

approved your DBE program and you are in compliance with it and this part. You must continue to carry out your program until all funds from DOT financial assistance have been expended.

§ 26.23 What is the requirement for a policy statement?

You must issue a signed and dated policy statement that expresses your commitment to your DBE program, states its objectives, and outlines responsibilities for its implementation. You must circulate the statement throughout your organization and to the DBE and non-DBE business communities that perform work on your DOT-assisted contracts.

§ 26.25 What is the requirement for a liaison officer?

You must have a DBE liaison officer, who shall have direct, independent access to your Chief Executive Officer concerning DBE program matters. The liaison officer shall be responsible for implementing all aspects of your DBE program. You must also have adequate staff to administer the program in compliance with this part.

26.27 What efforts must recipients make concerning DBE financial institutions?

You must thoroughly investigate the full extent of services offered by financial institutions owned and controlled by socially and economically disadvantaged individuals in your community and make reasonable efforts to use these institutions. You must also encourage prime contractors to use such institutions.

§ 26.29 What prompt payment mechanisms must recipients have?

(a) You must establish, as part of your DBE program, a contract clause to require prime contractors to pay subcontractors for satisfactory performance of their contracts no later than a specific number of days from receipt of each payment you make to the prime contractor. This clause must also require the prompt return of retainage payments from the prime contractor to the subcontractor within a specific number of days after the subcontractor's work is satisfactorily completed.

(1) This clause may provide for appropriate penalties for failure to comply, the terms and conditions of which you set.

(2) This clause may also provide that any delay or postponement of payment among the parties may take place only for good cause, with your prior written approval.

(b) You may also establish, as part of your DBE program, any of the following

additional mechanisms to ensure prompt payment:

(1) A contract clause that requires prime contractors to include in their subcontracts language providing that prime contractors and subcontractors will use appropriate alternative dispute resolution mechanisms to resolve payment disputes. You may specify the nature of such mechanisms.

(2) A contract clause providing that the prime contractor will not be reimbursed for work performed by subcontractors unless and until the prime contractor ensures that the subcontractors are promptly paid for the work they have performed.

(3) Other mechanisms, consistent with this part and applicable state and local law, to ensure that DBEs and other contractors are fully and promptly paid.

§ 26.31 What requirements pertain to the DBE directory?

You must maintain and make available to interested persons a directory identifying all firms eligible to participate as DBEs in your program. In the listing for each firm, you must include its address, phone number, and the types of work the firm has been certified to perform as a DBE. You must revise your directory at least annually and make updated information available to contractors and the public on request.

§ 26.33 What steps must a recipient take to address overconcentration of DBEs in certain types of work?

(a) If you determine that DBE firms are so overconcentrated in a certain type of work as to unduly burden the opportunity of non-DBE firms to participate in this type of work, you must devise appropriate measures to address this overconcentration.

(b) These measures may include the use of incentives, technical assistance, business development programs, mentor-protégé programs, and other appropriate measures designed to assist DBEs in performing work outside of the specific field in which you have determined that non-DBEs are unduly burdened. You may also consider varying your use of contract goals, to the extent consistent with § 26.51, to ensure that non-DBEs are not unfairly prevented from competing for subcontracts.

(c) You must obtain the approval of the concerned DOT operating administration for your determination of overconcentration and the measures you devise to address it. Once approved, the measures become part of your DBE program.

§ 26.35 What role do business development and mentor-protégé programs have in the DBE program?

(a) You may or, if an operating administration directs you to, you must establish a DBE business development program (BDP) to assist firms in gaining the ability to compete successfully in the marketplace outside the DBE program. You may require a DBE firm, as a condition of receiving assistance through the BDP, to agree to terminate its participation in the DBE program after a certain time has passed or certain objectives have been reached. See Appendix C of this part for guidance on administering BDP programs.

(b) As part of a BDP or separately, you may establish a "mentor-protégé" program, in which another DBE or non-DBE firm is the principal source of business development assistance to a DBE firm.

(1) Only firms you have certified as DBEs before they are proposed for participation in a mentor-protégé program are eligible to participate in the mentor-protégé program.

(2) During the course of the mentor-protégé relationship, you must:

(i) Not award DBE credit to a non-DBE mentor firm for using its own protégé firm for more than one half of its goal on any contract let by the recipient; and

(ii) Not award DBE credit to a non-DBE mentor firm for using its own protégé firm for more than every other contract performed by the protégé firm.

(3) For purposes of making determinations of business size under this part, you must not treat protégé firms as affiliates of mentor firms, when both firms are participating under an approved mentor-protégé program. See Appendix D of this part for guidance concerning the operation of mentor-protégé programs.

(c) Your BDPs and mentor-protégé programs must be approved by the concerned operating administration before you implement them. Once approved, they become part of your DBE program.

§ 26.37 What are a recipient's responsibilities for monitoring the performance of other program participants?

(a) You must implement appropriate mechanisms to ensure compliance with the part's requirements by all program participants (e.g., applying legal and contract remedies available under Federal, state and local law). You must set forth these mechanisms in your DBE program.

(b) Your DBE program must also include a monitoring and enforcement mechanism to verify that the work committed to DBEs at contract award is

actually performed by the DBEs. This mechanism must provide for a running tally of actual DBE attainments (e.g., payments actually made to DBE firms) and include a provision ensuring that DBE participation is credited toward overall or contract goals only when payments are actually made to DBE firms.

Subpart C—Goals, Good Faith Efforts, and Counting

§ 26.41 What is the role of the statutory 10 percent goal in this program?

(a) The statutes authorizing this program provide that, except to the extent the Secretary determines otherwise, not less than 10 percent of the authorized funds are to be expended with DBEs.

(b) This 10 percent goal is an aspirational goal at the national level, which the Department uses as a tool in evaluating and monitoring DBEs' opportunities to participate in DOT-assisted contracts.

(c) The national 10 percent goal does not authorize or require recipients to set overall or contract goals at the 10 percent level, or any other particular level, or to take any special administrative steps if their goals are above or below 10 percent.

§ 26.43 Can recipients use set-asides or quotas as part of this program?

(a) You are not permitted to use quotas for DBEs on DOT-assisted contracts subject to this part.

(b) You may not set-aside contracts for DBEs on DOT-assisted contracts subject to this part, except that, in limited and extreme circumstances, you may use set-asides when no other method could be reasonably expected to redress egregious instances of discrimination.

§ 26.45 How do recipients set overall goals?

(a) You must set an overall goal for DBE participation in your DOT-assisted contracts.

(b) Your overall goal must be based on demonstrable evidence of the availability of ready, willing and able DBEs relative to all businesses ready, willing and able to participate on your DOT-assisted contracts (hereafter, the "relative availability of DBEs"). The goal must reflect your determination of the level of DBE participation you would expect absent the effects of discrimination. You cannot simply rely on either the 10 percent national goal, your previous overall goal or past DBE participation rates in your program without reference to the relative availability of DBEs in your market.

(c) Step 1. You must begin your goal setting process by determining a base figure

for the relative availability of DBEs. The following are examples of approaches that you may take toward determining a base figure. These examples are provided as a starting point for your goal setting process. Any percentage figure derived from one of these examples should be considered a basis from which you begin when examining all evidence available in your jurisdiction. These examples are not intended as an exhaustive list. Other methods or combinations of methods to determine a base figure may be used, subject to approval by the concerned operating administration.

(1) Use DBE Directories and Census Bureau Data. Determine the number of ready, willing and able DBEs in your market from your DBE directory. Using the Census Bureau's County Business

Pattern (CBP) data base, determine the number of all ready, willing and able businesses available in your market that perform work in the same SIC codes. (Information about the CBP data base may be obtained from the Census Bureau at their web site, www.census.gov/epcd/cbp/view/cbpview.html.) Divide the number of DBEs by the number of all businesses to derive a base figure for the relative availability of DBEs in your market.

(2) Use a bidders list. Determine the number of DBEs that have bid or quoted on your DOT-assisted prime contracts or subcontracts in the previous year. Determine the number of all businesses that have bid or quoted on prime or subcontracts in the same time period. Divide the number of DBE bidders and quoters by the number for all businesses to derive a base figure for the relative availability of DBEs in your market.

(3) Use data from a disparity study. Use a percentage figure derived from data in a valid, applicable disparity study.

(4) Use the goal of another DOT recipient. If another DOT recipient in the same, or substantially similar, market has set an overall goal in compliance with this rule, you may use that goal as a base figure for your goal.

Revision 8: In §26.45(c)(5) Remove the words "Subject to the approval of the DOT operating administration, you" and add "You" in its place.

(5) Alternative methods. Subject to the approval of the DOT operating administration, you may use other methods to determine a base figure for your overall goal. Any methodology you choose must be based on demonstrable evidence of local market conditions and be designed to ultimately attain a goal that is rationally related to the relative availability of DBEs in your market.

(d) Step 2. Once you have calculated a base figure, you must examine all of the evidence

available in your jurisdiction to determine what adjustment, if any, is needed to the base figure in order to arrive at your overall goal.

(i) There are many types of evidence that must be considered when adjusting the base figure. These include:

(i) The current capacity of DBEs to perform work in your DOT-assisted contracting program, as measured by the volume of work DBEs have performed in recent years;

(ii) Evidence from disparity studies conducted anywhere within your jurisdiction, to the extent it is not already accounted for in your base figure; and

(iii) If your base figure is the goal of another recipient, you must adjust it for differences in your local market and your contracting program.

(2) You may also consider available evidence from related fields that affect the opportunities for DBEs to form, grow and compete. These include, but are not limited to:

(i) Statistical disparities in the ability of DBEs to get the financing, bonding and insurance required to participate in your program;

(ii) Data on employment, self-employment, education, training and union apprenticeship programs, to the extent you can relate it to the opportunities for DBEs to perform in your program.

(3) If you attempt to make an adjustment to your base figure to account for the continuing effects of past discrimination (often called the "but for" factor) or the effects of an ongoing DBE program, the adjustment must be based on demonstrable evidence that is logically and directly related to the effect for which the adjustment is sought.

(e) Once you have determined a percentage figure in accordance with paragraphs (c) and (d) of this section, you should express your overall goal as follows:

(1) If you are an FHWA recipient, as a percentage of all Federal-aid highway funds you will expend in FHWA-assisted contract in the forthcoming fiscal year;

(2) If you are an FTA or FAA recipient as a percentage of all FTA or FAA funds (exclusive of FTA funds to be used for the purchase of transit vehicles) that you will expend in FTA or FAA-assisted contracts in the forthcoming fiscal year. In appropriate cases, the FTA or FAA Administrator may permit you to express your overall goal as a percentage of funds for a particular grant or project or group of grants and/or projects.

(f)(1) If you set overall goals on a fiscal year basis, you must submit them to the applicable DOT operating administration for review on August 1 of each year, unless the Administrator of the concerned operating administration establishes a different submission date.

(2) If you are an FTA or FAA recipient and set your overall goal on a project or grant basis, you must submit the goal for review at a time determined by the FTA or FAA Administrator.

(3) You must include with your overall goal submission a description of the methodology you used to establish the goal, including your base figure and the evidence with which it was calculated, and the adjustments you made to the base figure and the evidence relied on for the adjustments. You should also include a summary listing of the relevant available evidence in your jurisdiction and, where applicable, an explanation of why you did not use that evidence to adjust your base figure. You must also include your projection of the portions of the overall goal you expect to meet through race-neutral and race-conscious measures, respectively (see § 26.51 (c)).

(4) You are not required to obtain prior operating administration concurrence with the your overall goal. However, if the operating administration's review suggests that your overall goal has not been correctly calculated, or that your method for calculating goals is inadequate, the operating administration may, after consulting with you, adjust your overall goal or require that you do so. The adjusted overall goal is binding on you.

(5) If you need additional time to collect data or take other steps to develop an approach to setting overall goals, you may request the approval of the concerned operating administration for an interim goal and/or goal-setting mechanism. Such a mechanism must:

(i) Reflect the relative availability of DBEs in your local market to the maximum extent feasible given the data available to you; and

(ii) Avoid imposing undue burdens on non-DBEs.

(g) In establishing an overall goal, you must provide for public participation. This public participation must include:

(1) Consultation with minority, women's and general contractor groups, community organizations, and other officials or organizations which could be expected to have information concerning the availability of disadvantaged and non-disadvantaged businesses, the effects of discrimination on opportunities for DBEs, and your efforts to establish a level playing field for the participation of DBEs.

(2) A published notice announcing your proposed overall goal, informing the public that the proposed goal and its rationale are available for inspection during normal business hours at your principal office for 30 days following the date of the notice, and informing the public that you and the Department will accept comments on the goals for 45 days from the date of the notice. The notice must include addresses to which comments may be sent, and you must publish it in general circulation media and available minority-focused media and trade association publications.

(h) Your overall goals must provide for participation by all certified DBEs and must not be subdivided into group-specific goals.

§ 26.47 Can recipients be penalized for failing to meet overall goals?

(a) You cannot be penalized, or treated by the Department as being in noncompliance with this rule, because your DBE participation falls short of your overall goal, unless you have failed to administer your program in good faith.

(b) If you do not have an approved DBE program or overall goal, or if you fail to implement your program in good faith, you are in noncompliance with this part.

§ 26.49 How are overall goals established for transit vehicle manufacturers?

(a) If you are an FTA recipient, you must require in your DBE program that each transit vehicle manufacturer, as a condition of being authorized to bid or propose on FTA-assisted transit vehicle procurements, certify that it has complied with the requirements of this section. You do not include FTA assistance used in transit vehicle procurements in the base amount from which your overall goal is calculated.

(b) If you are a transit vehicle manufacturer, you must establish and submit for FTA's approval an annual overall percentage goal. In setting your overall goal, you should be guided, to the extent applicable, by the principles underlying § 26.45. The base from which you calculate this goal is the amount of FTA financial assistance included in transit vehicle contracts you will perform during the fiscal year in question. You must exclude from this base funds attributable to work performed outside the United States and its territories, possessions, and commonwealths. The requirements and procedures of this part with respect to submission and approval of overall goals apply to you as they do to recipients.

(c) As a transit vehicle manufacturer, you may make the certification required by this section if you have submitted the goal this section requires and FTA has approved it or not disapproved it.

(d) As a recipient, you may, with FTA approval, establish project-specific goals for DBE participation in the procurement of transit vehicles in lieu of complying through the procedures of this section.

(e) If you are an FHWA or FAA recipient, you may, with FHWA or FAA approval, use the procedures of this section with respect to procurements of vehicles or specialized equipment. If you choose to do so, then the manufacturers of this equipment must meet the same requirements (including goal approval by FHWA or FAA) as transit vehicle manufacturers must meet in FTA-assisted procurements.

§ 26.51 What means do recipients use to meet overall goals?

(a) You must meet the maximum feasible portion of your overall goal by using race-neutral means of facilitating DBE participation. Race-neutral DBE participation includes any time a DBE wins a prime contract through customary competitive procurement procedures, is awarded a subcontract on a prime contract that does not carry a DBE goal, or even if there is a DBE goal, wins a subcontract from a prime contractor that did not consider its DBE status in making the award (e.g., a prime contractor that uses a strict low bid system to award subcontracts).

(b) Race-neutral means include, but are not limited to, the following:

(1) Arranging solicitations, times for the presentation of bids, quantities, specifications, and delivery schedules in ways that facilitate DBE, and other small businesses, participation (e.g., unbundling large contracts to make them more accessible to small businesses, requiring or encouraging prime contractors to subcontract portions of work that they might otherwise perform with their own forces);

(2) Providing assistance in overcoming limitations such as inability to obtain bonding or financing (e.g., by such means as simplifying the bonding process, reducing bonding requirements, eliminating the impact of surety costs from bids, and providing services to help DBEs, and other small businesses, obtain bonding and financing);

(3) Providing technical assistance and other services;

(4) Carrying out information and communications programs on contracting procedures and specific

contract opportunities (e.g., ensuring the inclusion of DBEs, and other small businesses, on recipient mailing lists for bidders; ensuring the dissemination to bidders on prime contracts of lists of potential subcontractors; provision of information in languages other than English, where appropriate);

(5) Implementing a supportive services program to develop and improve immediate and long-term business management, record keeping, and financial and accounting capability for DBEs and other small businesses;

(6) Providing services to help DBEs, and other small businesses, improve long-term development, increase opportunities to participate in a variety of kinds of work, handle increasingly significant projects, and achieve eventual self-sufficiency;

(7) Establishing a program to assist new, start-up firms, particularly in fields in which DBE participation has historically been low;

(8) Ensuring distribution of your DBE directory, through print and electronic means, to the widest feasible universe of potential prime contractors; and

(9) Assisting DBEs, and other small businesses, to develop their capability to utilize emerging technology and conduct business through electronic media.

(c) Each time you submit your overall goal for review by the concerned operating administration, you must also submit your projection of the portion of the goal that you expect to meet through race-neutral means and your basis for that projection. This projection is subject to approval by the concerned operating administration, in conjunction with its review of your overall goal.

(d) You must establish contract goals to meet any portion of your overall goal you do not project being able to meet using race-neutral means.

(e) The following provisions apply to the use of contract goals:

(1) You may use contract goals only on those DOT-assisted contracts that have subcontracting possibilities.

(2) You are not required to set a contract goal on every DOT-assisted contract. You are not required to set each contract goal at the same percentage level as the overall goal. The goal for a specific contract may be higher or lower than that percentage level of the overall goal, depending on such factors as the type of work involved, the location of the work, and the availability of DBEs for the work of the particular contract. However, over the period covered by your overall goal, you must set contract goals so that they will cumulatively result in meeting any portion of your overall goal you do not

project being able to meet through the use of race-neutral means.

(3) Operating administration approval of each contract goal is not necessarily required. However, operating administrations may review and approve or disapprove any contract goal you establish.

(4) Your contract goals must provide for participation by all certified DBEs and must not be subdivided into group-specific goals.

(f) To ensure that your DBE program continues to be narrowly tailored to overcome the effects of discrimination, you must adjust your use of contract goals as follows:

(1) If your approved projection under paragraph (c) of this section estimates that you can meet your entire overall goal for a given year through race-neutral means, you must implement your program without setting contract goals during that year.

Example to Paragraph (f)(1): Your overall goal for Year I is 12 percent. You estimate that you can obtain 12 percent or more DBE participation through the use of race-neutral measures, without any use of contract goals. In this case, you do not set any contract goals for the contracts that will be performed in Year I.

(2) If, during the course of any year in which you are using contract goals, you determine that you will exceed your overall goal, you must reduce or eliminate the use of contract goals to the extent necessary to ensure that the use of contract goals does not result in exceeding the overall goal. If you determine that you will fall short of your overall goal, then you must make appropriate modifications in your use of race-neutral and/or race-conscious measures to allow you to meet the overall goal.

Example to Paragraph (f)(2): In Year II, your overall goal is 12 percent. You have estimated that you can obtain 5 percent DBE participation through use of race-neutral measures. You therefore plan to obtain the remaining 7 percent participation through use of DBE goals. By September, you have already obtained 11 percent DBE participation for the year. For contracts let during the remainder of the year, you use contract goals only to the extent necessary to obtain an additional one percent DBE participation. However, if you determine in September that your participation for the year is likely to be only 8 percent total, then you would increase your use of race-neutral and/or race-conscious means during the remainder of the year in order to achieve your overall goal.

(3) If the DBE participation you have obtained by race-neutral means alone meets or exceeds your overall goals for two consecutive years, you are not required to make a projection of the

amount of your goal you can meet using such means in the next year. You do not set contract goals on any contracts in the next year. You continue using only race-neutral means to meet your overall goals unless and until you do not meet your overall goal for a year.

Example to Paragraph (f)(3): Your overall goal for Years I and Year II is 10 percent. The DBE participation you obtain through race-neutral means alone is 10 percent or more in each year. (For this purpose, it does not matter whether you obtained additional DBE participation through using contract goals in these years.) In Year III and following years, you do not need to make a projection under paragraph (c) of this section of the portion of your overall goal you expect to meet using race-neutral means. You simply use race-neutral means to achieve your overall goals. However, if in Year VI your DBE participation falls short of your overall goal, then you must make a paragraph (c) projection for Year VII and, if necessary, resume use of contract goals in that year.

(4) If you obtain DBE participation that exceeds your overall goal in two consecutive years through the use of contract goals (i.e., not through the use of race-neutral means alone), you must reduce your use of contract goals proportionately in the following year.

Example to Paragraph (f)(4): In Years I and II, your overall goal is 12 percent, and you obtain 14 and 16 percent DBE participation, respectively. You have exceeded your goals over the two-year period by an average of 25 percent. In Year III, your overall goal is again 12 percent, and your paragraph (c) projection estimates that you will obtain 4 percent DBE participation through race-neutral means and 8 percent through contract goals. You then reduce the contract goal projection by 25 percent (i.e., from 8 to 6 percent) and set contract goals accordingly during the year. If in Year III you obtain 11 percent participation, you do not use this contract goal adjustment mechanism for Year IV, because there have not been two consecutive years of exceeding overall goals.

(g) In any year in which you project meeting part of your goal through race-neutral means and the remainder through contract goals, you must maintain data separately on DBE achievements in those contracts with and without contract goals, respectively. You must report this data to the concerned operating administration as provided in § 26.11.

§ 26.53 What are the good faith efforts procedures recipients follow in situations where there are contract goals?

(a) When you have established a DBE contract goal, you must award the contract only to a bidder/offeror who makes good faith efforts to meet it. You must determine that a bidder/offeror has made good faith efforts if the bidder/

offeror does either of the following things:

(1) Documents that it has obtained enough DBE participation to meet the goal; or

(2) Documents that it made adequate good faith efforts to meet the goal, even though it did not succeed in obtaining enough DBE participation to do so. If the bidder/offeror does document adequate good faith efforts, you must not deny award of the contract on the basis that the bidder/offeror failed to meet the goal. See Appendix A of this part for guidance in determining the adequacy of a bidder/offeror's good faith efforts.

(b) In your solicitations for DOT-assisted contracts for which a contract goal has been established, you must require the following:

(1) Award of the contract will be conditioned on meeting the requirements of this section;

(2) All bidders/offerors will be required to submit the following information to the recipient, at the time provided in paragraph (b)(3) of this section:

(i) The names and addresses of DBE firms that will participate in the contract;

(ii) A description of the work that each DBE will perform;

(iii) The dollar amount of the participation of each DBE firm participating;

(iv) Written documentation of the bidder/offeror's commitment to use a DBE subcontractor whose participation it submits to meet a contract goal;

(v) Written confirmation from the DBE that it is participating in the contract as provided in the prime contractor's commitment; and

(vi) If the contract goal is not met, evidence of good faith efforts (see Appendix A of this part); and

(3) At your discretion, the bidder/offeror must present the information required by paragraph (b)(2) of this section—

(i) Under sealed bid procedures, as a matter of responsiveness, or with initial proposals, under contract negotiation procedures; or

(ii) At any time before you commit yourself to the performance of the contract by the bidder/offeror, as a matter of responsibility.

(c) You must make sure all information is complete and accurate and adequately documents the bidder/offeror's good faith efforts before committing yourself to the performance of the contract by the bidder/offeror.

(d) If you determine that the apparent successful bidder/offeror has failed to meet the requirements of paragraph (a)

of this section, you must, before awarding the contract, provide the bidder/offeror an opportunity for administrative reconsideration.

(1) As part of this reconsideration, the bidder/offeror must have the opportunity to provide written documentation or argument concerning the issue of whether it met the goal or made adequate good faith efforts to do so.

(2) Your decision on reconsideration must be made by an official who did not take part in the original determination that the bidder/offeror failed to meet the goal or make adequate good faith efforts to do so.

(3) The bidder/offeror must have the opportunity to meet in person with your reconsideration official to discuss the issue of whether it met the goal or made adequate good faith efforts to do so.

(4) You must send the bidder/offeror a written decision on reconsideration, explaining the basis for finding that the bidder did or did not meet the goal or make adequate good faith efforts to do so.

(5) The result of the reconsideration process is not administratively appealable to the Department of Transportation.

(e) In a "design-build" or "turnkey" contracting situation, in which the recipient lets a master contract to a contractor, who in turn lets subsequent subcontracts for the work of the project, a recipient may establish a goal for the project. The master contractor then establishes contract goals, as appropriate, for the subcontracts it lets. Recipients must maintain oversight of the master contractor's activities to ensure that they are conducted consistent with the requirements of this part.

(f)(1) You must require that a prime contractor not terminate for convenience a DBE subcontractor listed in response to paragraph (b)(2) of this section (or an approved substitute DBE firm) and then perform the work of the terminated subcontract with its own forces or those of an affiliate, without your prior written consent.

(2) When a DBE subcontractor is terminated, or fails to complete its work on the contract for any reason, you must require the prime contractor to make good faith efforts to find another DBE subcontractor to substitute for the original DBE. These good faith efforts shall be directed at finding another DBE to perform at least the same amount of work under the contract as the DBE that was terminated, to the extent needed to meet the contract goal you established for the procurement.

(3) You must include in each prime contract a provision for appropriate administrative remedies that you will invoke if the prime contractor fails to comply with the requirements of this section.

(g) You must apply the requirements of this section to DBE bidders/offerors for prime contracts. In determining whether a DBE bidder/offeror for a prime contract has met a contract goal, you count the work the DBE has committed to performing with its own forces as well as the work that it has committed to be performed by DBE subcontractors and DBE suppliers.

§ 26.55 How is DBE participation counted toward goals?

(a) When a DBE participates in a contract, you count only the value of the work actually performed by the DBE toward DBE goals.

(1) Count the entire amount of that portion of a construction contract (or other contract not covered by paragraph (a)(2) of this section) that is performed by the DBE's own forces. Include the cost of supplies and materials obtained by the DBE for the work of the contract, including supplies purchased or equipment leased by the DBE (except supplies and equipment the DBE subcontractor purchases or leases from the prime contractor or its affiliate).

(2) Count the entire amount of fees or commissions charged by a DBE firm for providing a bona fide service, such as professional, technical, consultant, or managerial services, or for providing bonds or insurance specifically required for the performance of a DOT-assisted contract, toward DBE goals, provided you determine the fee to be reasonable and not excessive as compared with fees customarily allowed for similar services.

(3) When a DBE subcontracts part of the work of its contract to another firm, the value of the subcontracted work may be counted toward DBE goals only if the DBE's subcontractor is itself a DBE. Work that a DBE subcontracts to a non-DBE firm does not count toward DBE goals.

(b) When a DBE performs as a participant in a joint venture, count a portion of the total dollar value of the contract equal to the distinct, clearly defined portion of the work of the contract that the DBE performs with its own forces toward DBE goals.

(c) Count expenditures to a DBE contractor toward DBE goals only if the DBE is performing a commercially useful function on that contract.

(1) A DBE performs a commercially useful function when it is responsible for execution of the work of the contract and is carrying out its responsibilities

by actually performing, managing, and supervising the work involved. To perform a commercially useful function, the DBE must also be responsible, with respect to materials and supplies used on the contract, for negotiating price, determining quality and quantity, ordering the material, and installing (where applicable) and paying for the material itself. To determine whether a DBE is performing a commercially useful function, you must evaluate the amount of work subcontracted, industry practices, whether the amount the firm is to be paid under the contract is commensurate with the work it is actually performing and the DBE credit claimed for its performance of the work, and other relevant factors.

(2) A DBE does not perform a commercially useful function if its role is limited to that of an extra participant in a transaction, contract, or project through which funds are passed in order to obtain the appearance of DBE participation. In determining whether a DBE is such an extra participant, you must examine similar transactions, particularly those in which DBEs do not participate.

(3) If a DBE does not perform or exercise responsibility for at least 30 percent of the total cost of its contract with its own work force, or the DBE subcontracts a greater portion of the work of a contract than would be expected on the basis of normal industry practice for the type of work involved, you must presume that it is not performing a commercially useful function.

(4) When a DBE is presumed not to be performing a commercially useful function as provided in paragraph (c)(3) of this section, the DBE may present evidence to rebut this presumption. You may determine that the firm is performing a commercially useful function given the type of work involved and normal industry practices.

(5) Your decisions on commercially useful function matters are subject to review by the concerned operating administration, but are not administratively appealable to DOT.

(d) Use the following factors in determining whether a DBE trucking company is performing a commercially useful function:

(1) The DBE must be responsible for the management and supervision of the entire trucking operation for which it is responsible on a particular contract, and there cannot be a contrived arrangement for the purpose of meeting DBE goals.

(2) The DBE must itself own and operate at least one fully licensed, insured, and operational truck used on the contract.

(3) The DBE receives credit for the total value of the transportation services it provides on the contract using trucks it owns, insures, and operates using drivers it employs.

(4) The DBE may lease trucks from another DBE firm, including an owner-operator who is certified as a DBE. The DBE who leases trucks from another DBE receives credit for the total value of the transportation services the lessee DBE provides on the contract.

(5) The DBE may also lease trucks from a non-DBE firm, including an owner-operator. The DBE who leases trucks from a non-DBE is entitled to credit only for the fee or commission it receives as a result of the lease arrangement. The DBE does not receive credit for the total value of the transportation services provided by the lessee, since these services are not provided by a DBE.

(6) For purposes of this paragraph (d), a lease must indicate that the DBE has exclusive use of and control over the truck. This does not preclude the leased truck from working for others during the term of the lease with the consent of the DBE, so long as the lease gives the DBE absolute priority for use of the leased truck. Leased trucks must display the name and identification number of the DBE.

(e) Count expenditures with DBEs for materials or supplies toward DBE goals as provided in the following:

(1)(i) If the materials or supplies are obtained from a DBE manufacturer, count 100 percent of the cost of the materials or supplies toward DBE goals.

(ii) For purposes of this paragraph (e)(1), a manufacturer is a firm that operates or maintains a factory or establishment that produces, on the premises, the materials, supplies, articles, or equipment required under the contract and of the general character described by the specifications.

(2)(i) If the materials or supplies are purchased from a DBE regular dealer, count 60 percent of the cost of the materials or supplies toward DBE goals.

(ii) For purposes of this section, a regular dealer is a firm that owns, operates, or maintains a store, warehouse, or other establishment in which the materials, supplies, articles or equipment of the general character described by the specifications and required under the contract are bought, kept in stock, and regularly sold or leased to the public in the usual course of business.

(A) To be a regular dealer, the firm must be an established, regular business that engages, as its principal business and under its own name, in the

purchase and sale or lease of the products in question.

(B) A person may be a regular dealer in such bulk items as petroleum products, steel, cement, gravel, stone, or asphalt without owning, operating, or maintaining a place of business as provided in this paragraph (e)(2)(ii) if the person both owns and operates distribution equipment for the products. Any supplementing of regular dealers' own distribution equipment shall be by a long-term lease agreement and not on an ad hoc or contract-by-contract basis.

(C) Packagers, brokers, manufacturers' representatives, or other persons who arrange or expedite transactions are not regular dealers within the meaning of this paragraph (e)(2).

(3) With respect to materials or supplies purchased from a DBE which is neither a manufacturer nor a regular dealer, count the entire amount of fees or commissions charged for assistance in the procurement of the materials and supplies, or fees or transportation charges for the delivery of materials or supplies required on a job site, toward DBE goals, provided you determine the fees to be reasonable and not excessive as compared with fees customarily allowed for similar services. Do not count any portion of the cost of the materials and supplies themselves toward DBE goals, however.

(f) If a firm is not currently certified as a DBE in accordance with the standards of subpart D of this part at the time of the execution of the contract, do not count the firm's participation toward any DBE goals, except as provided for in § 26.87(i).

(g) Do not count the dollar value of work performed under a contract with a firm after it has ceased to be certified toward your overall goal.

(h) Do not count the participation of a DBE subcontractor toward the prime contractor's DBE achievements or your overall goal until the amount being counted toward the goal has been paid to the DBE.

Subpart D—Certification Standards

§ 26.81 How are burdens of proof allocated in the certification process?

(a) In determining whether to certify a firm as eligible to participate as a DBE, you must apply the standards of this subpart.

(b) The firm seeking certification has the burden of demonstrating to you, by a preponderance of the evidence, that it meets the requirements of this subpart concerning group membership or individual disadvantage, business size, ownership, and control.

(c) You must rebuttably presume that members of the designated groups

identified in § 26.67(a) are socially and economically disadvantaged. This means that they do not have the burden of proving to you that they are socially and economically disadvantaged. However, applicants have the obligation to provide you information concerning their economic disadvantage (see § 26.67).

(d) Individuals who are not presumed to be socially and economically disadvantaged, and individuals concerning whom the presumption of disadvantage has been rebutted, have the burden of proving to you, by a preponderance of the evidence, that they are socially and economically disadvantaged. (See Appendix E of this part.)

(e) You must make determinations concerning whether individuals and firms have met their burden of demonstrating group membership, ownership, control, and social and economic disadvantage (where disadvantage must be demonstrated on an individual basis) by considering all the facts in the record, viewed as a whole.

§ 26.63 What rules govern group membership determinations?

(a) If you have reason to question whether an individual is a member of a group that is presumed to be socially and economically disadvantaged, you must require the individual to demonstrate, by a preponderance of the evidence, that he or she is a member of the group.

(b) In making such a determination, you must consider whether the person has held himself out to be a member of the group over a long period of time prior to application for certification and whether the person is regarded as a member of the group by the relevant community. You may require the applicant to produce appropriate documentation of group membership.

(1) If you determine that an individual claiming to be a member of a group presumed to be disadvantaged is not a member of a designated disadvantaged group, the individual must demonstrate social and economic disadvantage on an individual basis.

(2) Your decisions concerning membership in a designated group are subject to the certification appeals procedure of § 26.89.

§ 26.65 What rules govern business size determinations?

(a) To be an eligible DBE, a firm (including its affiliates) must be an existing small business, as defined by Small Business Administration (SBA) standards. You must apply current SBA business size standard(s) found in 13 CFR part 121 appropriate to the type (s) of work the firm seeks to perform in DOT-assisted contracts.

(b) Even if it meets the requirements of paragraph (a) of this section, a firm is not an eligible DBE in any Federal fiscal year if the

firm (including its affiliates) has had average annual gross receipts, as defined by SBA regulations (see 13 CFR 121.402), over the firm's previous three fiscal years, in excess of \$16.6 million. The Secretary adjusts this amount for inflation from time to time.

Revision 7: In § 26.67, Revise paragraph (a)(2)(I); redesignate paragraph (a)(2)(II) as (a)(2)(III) and add new paragraph (a)(2)(II)
§ 26.67 What rules determine social and economic disadvantage?

(a) Presumption of disadvantage.

(1) You must rebuttably presume that citizens of the United States (or lawfully admitted permanent residents) who are women, Black Americans, Hispanic Americans, Native Americans, Asian-Pacific Americans, Subcontinent Asian Americans, or other minorities found to be disadvantaged by the SBA, are socially and economically disadvantaged individuals. You must require applicants to submit a signed, notarized certification that each presumptively disadvantaged owner is, in fact, socially and economically disadvantaged.

(2)(i) You must require each individual owner of a firm applying to participate as a DBE (except a firm applying to participate as an airport concessionaire) whose ownership and control are relied upon for DBE certification to submit a signed, notarized statement of personal net worth, with appropriate supporting documentation. This statement and documentation must not be unduly lengthy, burdensome or intrusive.

(ii) Notwithstanding any provision of state law, you must not release an individual's personal net worth statement nor any documentation supporting it to any third party without the written consent of the submitter. *Provided* that you must transmit this information to DOT in any certification appeal proceeding under § 26.89 in which the disadvantaged status of the individual is in question.

In determining net worth, you must exclude an individual's ownership interest in the applicant firm and the individual's equity in his or her primary residence (except any portion of such equity that is attributable to excessive withdrawals from the applicant firm). A contingent liability does not reduce an individual's net worth. The personal net worth of an individual claiming to be an Alaska Native will include assets and income from sources other than an Alaska Native Corporation and exclude any of the following which the individual receives from any Alaska Native Corporation: cash (including cash dividends on stock received from an ANC) to the extent that it does not, in the aggregate, exceed \$2,000 per individual per annum; stock (including stock issued or distributed by an ANC as a dividend or distribution on stock); a partnership interest; land or an interest in land (including land or an interest in land received from an ANC as a dividend or distribution on stock); and an interest in a settlement trust.

(b) Rebuttal of presumption of disadvantage.

(1) If the statement of personal net worth that an individual submits under paragraph (a)(2) of this section shows that the individual's personal net worth exceeds \$750,000, the individual's presumption of economic disadvantage is rebutted. You are not required to have a proceeding under paragraph (b)(2) of this section in order to rebut the presumption of economic disadvantage in this case.

(2) If you have a reasonable basis to believe that an individual who is a member of one of the designated groups is not, in fact, socially and/or economically disadvantaged you may, at any time, start a proceeding to determine whether the presumption should be regarded as rebutted with respect to that individual. Your proceeding must follow the procedures of § 26.87.

(3) In such a proceeding, you have the burden of demonstrating, by a preponderance of the evidence, that the individual is not socially and economically disadvantaged. You may require the individual to produce information relevant to the determination of his or her disadvantage.

(4) When an individual's presumption of social and/or economic disadvantage has been rebutted, his or her ownership and control of the firm in question cannot be used for purposes of DBE eligibility under this subpart unless and until he or she makes an individual showing of social and/or economic disadvantage. If the basis for rebutting the presumption is a determination that the individual's personal net worth exceeds \$750,000, the individual is no longer eligible for participation in the program and cannot regain eligibility by making an individual showing of disadvantage.

(c) 8(a) and SDB Firms. If a firm applying for certification has a current, valid certification from or recognized by the SBA under the 8(a) or small and disadvantaged business (SDB) program (except an SDB certification based on the firm's self-certification as an SDB), you may accept the firm's 8(a) or SDB certification in lieu of conducting your own certification proceeding, just as you may accept the certification of another DOT recipient for this purpose. You are not required to do so, however.

(d) Individual determinations of social and economic disadvantage. Firms owned and controlled by individuals who are not presumed to be socially and economically disadvantaged (including individuals whose presumed disadvantage has been rebutted) may apply for DBE.

certification. You must make a case-by-case determination of whether each individual whose ownership and control are relied upon for DBE certification is socially and economically disadvantaged. In such a proceeding, the applicant firm has the burden of demonstrating to you, by a preponderance of the evidence, that the individuals who own and control it are socially and economically disadvantaged. An individual whose personal net worth exceeds \$750,000 shall not be deemed to be economically disadvantaged. In making these determinations, use the guidance found in Appendix E of this part. You must require that applicants provide sufficient information to permit determinations under the guidance of Appendix E of this part.

§ 26.69 What rules govern determinations of ownership?

(a) In determining whether the socially and economically disadvantaged participants in a firm own the firm, you must consider all the facts in the record, viewed as a whole.

(b) To be an eligible DBE, a firm must be at least 51 percent owned by socially and economically disadvantaged individuals.

(1) In the case of a corporation, such individuals must own at least 51 percent of the each class of voting stock outstanding and 51 percent of the aggregate of all stock outstanding.

(2) In the case of a partnership, 51 percent of each class of partnership interest must be owned by socially and economically disadvantaged individuals. Such ownership must be reflected in the firm's partnership agreement.

(3) In the case of a limited liability company, at least 51 percent of each class of member interest must be owned by socially and economically disadvantaged individuals.

(c) The firm's ownership by socially and economically disadvantaged individuals must be real, substantial, and continuing, going beyond pro forma ownership of the firm as reflected in ownership documents. The disadvantaged owners must enjoy the customary incidents of ownership, and share in the risks and profits commensurate with their ownership interests, as demonstrated by the substance, not merely the form, of arrangements.

(d) All securities that constitute ownership of a firm shall be held directly by disadvantaged persons. Except as provided in this paragraph (d), no securities or assets held in trust, or by any guardian for a minor, are

considered as held by disadvantaged persons in determining the ownership of a firm. However, securities or assets held in trust are regarded as held by a disadvantaged individual for purposes of determining ownership of the firm, if—

(1) The beneficial owner of securities or assets held in trust is a disadvantaged individual, and the trustee is the same or another such individual; or

(2) The beneficial owner of a trust is a disadvantaged individual who, rather than the trustee, exercises effective control over the management, policy-making, and daily operational activities of the firm. Assets held in a revocable living trust may be counted only in the situation where the same disadvantaged individual is the sole grantor, beneficiary, and trustee.

(e) The contributions of capital or expertise by the socially and economically disadvantaged owners to acquire their ownership interests must be real and substantial. Examples of insufficient contributions include a promise to contribute capital, an unsecured note payable to the firm or an owner who is not a disadvantaged individual, or mere participation in a firm's activities as an employee. Debt instruments from financial institutions or other organizations that lend funds in the normal course of their business do not render a firm ineligible, even if the debtor's ownership interest is security for the loan.

(f) The following requirements apply to situations in which expertise is relied upon as part of a disadvantaged owner's contribution to acquire ownership:

(1) The owner's expertise must be—

(i) In a specialized field;

(ii) Of outstanding quality;

(iii) In areas critical to the firm's operations;

(iv) Indispensable to the firm's potential success;

(v) Specific to the type of work the firm performs; and

(vi) Documented in the records of the firm. These records must clearly show the contribution of expertise and its value to the firm.

(2) The individual whose expertise is relied upon must have a significant financial investment in the firm.

(g) You must always deem as held by a socially and economically disadvantaged individual, for purposes of determining ownership, all interests in a business or other assets obtained by the individual—

(1) As the result of a final property settlement or court order in a divorce or legal separation, provided that no term or condition of the agreement or divorce

decree is inconsistent with this section; or

(2) Through inheritance, or otherwise because of the death of the former owner.

(h)(1) You must presume as not being held by a socially and economically disadvantaged individual, for purposes of determining ownership, all interests in a business or other assets obtained by the individual as the result of a gift, or transfer without adequate consideration, from any non-disadvantaged individual or non-DBE firm who is—

(i) Involved in the same firm for which the individual is seeking certification, or an affiliate of that firm;

(ii) Involved in the same or a similar line of business; or

(iii) Engaged in an ongoing business relationship with the firm, or an affiliate of the firm, for which the individual is seeking certification.

(2) To overcome this presumption and permit the interests or assets to be counted, the disadvantaged individual must demonstrate to you, by clear and convincing evidence, that—

(i) The gift or transfer to the disadvantaged individual was made for reasons other than obtaining certification as a DBE; and

(ii) The disadvantaged individual actually controls the management, policy, and operations of the firm, notwithstanding the continuing participation of a non-disadvantaged individual who provided the gift or transfer.

(i) You must apply the following rules in situations in which marital assets form a basis for ownership of a firm:

(1) When marital assets (other than the assets of the business in question), held jointly or as community property by both spouses, are used to acquire the ownership interest asserted by one spouse, you must deem the ownership interest in the firm to have been acquired by that spouse with his or her own individual resources, provided that the other spouse irrevocably renounces and transfers all rights in the ownership interest in the manner sanctioned by the laws of the state in which either spouse or the firm is domiciled. You do not count a greater portion of joint or community property assets toward ownership than state law would recognize as belonging to the socially and economically disadvantaged owner of the applicant firm.

(2) A copy of the document legally transferring and renouncing the other spouse's rights in the jointly owned or community assets used to acquire an ownership interest in the firm must be included as part of the firm's application for DBE certification.

(j) You may consider the following factors in determining the ownership of a firm. However, you must not regard a contribution of capital as failing to be real and substantial, or find a firm ineligible, solely because—

(1) A socially and economically disadvantaged individual acquired his or her ownership interest as the result of a gift, or transfer without adequate consideration, other than the types set forth in paragraph (h) of this section;

(2) There is a provision for the co-signature of a spouse who is not a socially and economically disadvantaged individual on financing agreements, contracts for the purchase or sale of real or personal property, bank signature cards, or other documents; or

(3) Ownership of the firm in question or its assets is transferred for adequate consideration from a spouse who is not a socially and economically disadvantaged individual to a spouse who is such an individual. In this case, you must give particularly close and careful scrutiny to the ownership and control of a firm to ensure that it is owned and controlled, in substance as well as in form, by a socially and economically disadvantaged individual.

§ 26.71 What rules govern determinations concerning control?

(a) In determining whether socially and economically disadvantaged owners control a firm, you must consider all the facts in the record, viewed as a whole.

(b) Only an independent business may be certified as a DBE. An independent business is one the viability of which does not depend on its relationship with another firm or firms.

(1) In determining whether a potential DBE is an independent business, you must scrutinize relationships with non-DBE firms, in such areas as personnel, facilities, equipment, financial and/or bonding support, and other resources.

(2) You must consider whether present or recent employer/employee relationships between the disadvantaged owner(s) of the potential DBE and non-DBE firms or persons associated with non-DBE firms compromise the independence of the potential DBE firm.

(3) You must examine the firm's relationships with prime contractors to determine whether a pattern of exclusive or primary dealings with a prime contractor compromises the independence of the potential DBE firm.

(4) In considering factors related to the independence of a potential DBE firm, you must consider the consistency of relationships between the potential

DBE and non-DBE firms with normal industry practice.

(c) A DBE firm must not be subject to any formal or informal restrictions which limit the customary discretion of the socially and economically disadvantaged owners. There can be no restrictions through corporate charter provisions, by-law provisions, contracts or any other formal or informal devices (e.g., cumulative voting rights, voting powers attached to different classes of stock, employment contracts, requirements for concurrence by non-disadvantaged partners, conditions precedent or subsequent, executory agreements, voting trusts, restrictions on or assignments of voting rights) that prevent the socially and economically disadvantaged owners, without the cooperation or vote of any non-disadvantaged individual, from making any business decision of the firm. This paragraph does not preclude a spousal co-signature on documents as provided for in § 26.69(j)(2).

(d) The socially and economically disadvantaged owners must possess the power to direct or cause the direction of the management and policies of the firm and to make day-to-day as well as long-term decisions on matters of management, policy and operations.

(1) A disadvantaged owner must hold the highest officer position in the company (e.g., chief executive officer or president).

(2) In a corporation, disadvantaged owners must control the board of directors.

(3) In a partnership, one or more disadvantaged owners must serve as general partners, with control over all partnership decisions.

(e) Individuals who are not socially and economically disadvantaged may be involved in a DBE firm as owners, managers, employees, stockholders, officers, and/or directors. Such individuals must not, however, possess or exercise the power to control the firm, or be disproportionately responsible for the operation of the firm.

(f) The socially and economically disadvantaged owners of the firm may delegate various areas of the management, policymaking, or daily operations of the firm to other participants in the firm, regardless of whether these participants are socially and economically disadvantaged individuals. Such delegations of authority must be revocable, and the socially and economically disadvantaged owners must retain the power to hire and fire any person to whom such authority is delegated. The managerial role of the socially and economically disadvantaged owners in

the firm's overall affairs must be such that the recipient can reasonably conclude that the socially and economically disadvantaged owners actually exercise control over the firm's operations, management, and policy.

(g) The socially and economically disadvantaged owners must have an overall understanding of, and managerial and technical competence and experience directly related to, the type of business in which the firm is engaged and the firm's operations. The socially and economically disadvantaged owners are not required to have experience or expertise in every critical area of the firm's operations, or to have greater experience or expertise in a given field than managers or key employees. The socially and economically disadvantaged owners must have the ability to intelligently and critically evaluate information presented by other participants in the firm's activities and to use this information to make independent decisions concerning the firm's daily operations, management, and policymaking. Generally, expertise limited to office management, administration, or bookkeeping functions unrelated to the principal business activities of the firm is insufficient to demonstrate control.

(h) If state or local law requires the persons to have a particular license or other credential in order to own and/or control a certain type of firm, then the socially and economically disadvantaged persons who own and control a potential DBE firm of that type must possess the required license or credential. If state or local law does not require such a person to have such a license or credential to own and/or control a firm, you must not deny certification solely on the ground that the person lacks the license or credential. However, you may take into account the absence of the license or credential as one factor in determining whether the socially and economically disadvantaged owners actually control the firm.

(i)(1) You may consider differences in remuneration between the socially and economically disadvantaged owners and other participants in the firm in determining whether to certify a firm as a DBE. Such consideration shall be in the context of the duties of the persons involved, normal industry practices, the firm's policy and practice concerning reinvestment of income, and any other explanations for the differences proffered by the firm. You may determine that a firm is controlled by its socially and economically disadvantaged owner although that

owner's remuneration is lower than that of some other participants in the firm.

(2) In a case where a non-disadvantaged individual formerly controlled the firm, and a socially and economically disadvantaged individual now controls it, you may consider a difference between the remuneration of the former and current controller of the firm as a factor in determining who controls the firm, particularly when the non-disadvantaged individual remains involved with the firm and continues to receive greater compensation than the disadvantaged individual.

(j) In order to be viewed as controlling a firm, a socially and economically disadvantaged owner cannot engage in outside employment or other business interests that conflict with the management of the firm or prevent the individual from devoting sufficient time and attention to the affairs of the firm to control its activities. For example, absentee ownership of a business and part-time work in a full-time firm are not viewed as constituting control. However, an individual could be viewed as controlling a part-time business that operates only on evenings and/or weekends, if the individual controls it all the time it is operating.

(k)(1) A socially and economically disadvantaged individual may control a firm even though one or more of the individual's immediate family members (who themselves are not socially and economically disadvantaged individuals) participate in the firm as a manager, employee, owner, or in another capacity. Except as otherwise provided in this paragraph, you must make a judgment about the control the socially and economically disadvantaged owner exercises vis-a-vis other persons involved in the business as you do in other situations, without regard to whether or not the other persons are immediate family members.

(2) If you cannot determine that the socially and economically disadvantaged owners—as distinct from the family as a whole—control the firm, then the socially and economically disadvantaged owners have failed to carry their burden of proof concerning control, even though they may participate significantly in the firm's activities.

(l) Where a firm was formerly owned and/or controlled by a non-disadvantaged individual (whether or not an immediate family member), ownership and/or control were transferred to a socially and economically disadvantaged individual, and the non-disadvantaged individual remains involved with the firm in any capacity, the disadvantaged individual

now owning the firm must demonstrate to you, by clear and convincing evidence, that:

(1) The transfer of ownership and/or control to the disadvantaged individual was made for reasons other than obtaining certification as a DBE; and

(2) The disadvantaged individual actually controls the management, policy, and operations of the firm, notwithstanding the continuing participation of a non-disadvantaged individual who formerly owned and/or controlled the firm.

(m) In determining whether a firm is controlled by its socially and economically disadvantaged owners, you may consider whether the firm owns equipment necessary to perform its work. However, you must not determine that a firm is not controlled by socially and economically disadvantaged individuals solely because the firm leases, rather than owns, such equipment, where leasing equipment is a normal industry practice and the lease does not involve a relationship with a prime contractor or other party that compromises the independence of the firm.

(n) You must grant certification to a firm only for specific types of work in which the socially and economically disadvantaged owners have the ability to control the firm. To become certified in an additional type of work, the firm need demonstrate to you only that its socially and economically disadvantaged owners are able to control the firm with respect to that type of work. You may not, in this situation, require that the firm be recertified or submit a new application for certification, but you must verify the disadvantaged owner's control of the firm in the additional type of work.

(o) A business operating under a franchise or license agreement may be certified if it meets the standards in this subpart and the franchiser or licensor is not affiliated with the franchisee or licensee. In determining whether affiliation exists, you should generally not consider the restraints relating to standardized quality, advertising, accounting format, and other provisions imposed on the franchisee or licensee by the franchise agreement or license, provided that the franchisee or licensee has the right to profit from its efforts and bears the risk of loss commensurate with ownership. Alternatively, even though a franchisee or licensee may not be controlled by virtue of such provisions in the franchise agreement or license, affiliation could arise through other means, such as common management or excessive restrictions on

the sale or transfer of the franchise interest or license.

(p) In order for a partnership to be controlled by socially and economically disadvantaged individuals, any non-disadvantaged partners must not have the power, without the specific written concurrence of the socially and economically disadvantaged partner(s), to contractually bind the partnership or subject the partnership to contract or tort liability.

(q) The socially and economically disadvantaged individuals controlling a firm may use an employee leasing company. The use of such a company does not preclude the socially and economically disadvantaged individuals from controlling their firm if they continue to maintain an employer-employee relationship with the leased employees. This includes being responsible for hiring, firing, training, assigning, and otherwise controlling the on-the-job activities of the employees, as well as ultimate responsibility for wage and tax obligations related to the employees.

§ 26.73 What are other rules affecting certification?

(a)(1) Consideration of whether a firm performs a commercially useful function or is a regular dealer pertains solely to counting toward DBE goals the participation of firms that have already been certified as DBEs. Except as provided in paragraph (a)(2) of this section, you must not consider commercially useful function issues in any way in making decisions about whether to certify a firm as a DBE.

(2) You may consider, in making certification decisions, whether a firm has exhibited a pattern of conduct indicating its involvement in attempts to evade or subvert the intent or requirements of the DBE program.

(b) You must evaluate the eligibility of a firm on the basis of present circumstances. You must not refuse to certify a firm based solely on historical information indicating a lack of ownership or control of the firm by socially and economically disadvantaged individuals at some time in the past, if the firm currently meets the ownership and control standards of this part. Nor must you refuse to certify a firm solely on the basis that it is a newly formed firm.

(c) DBE firms and firms seeking DBE certification shall cooperate fully with your requests (and DOT requests) for information relevant to the certification process. Failure or refusal to provide such information is a ground for a denial or removal of certification.

(d) Only firms organized for profit may be eligible DBEs. Not-for-profit organizations, even though controlled by socially and economically disadvantaged individuals, are not eligible to be certified as DBEs.

(e) An eligible DBE firm must be owned by individuals who are socially and economically disadvantaged. Except as provided in this paragraph, a firm that is not owned by such individuals, but instead is owned by another firm—even a DBE firm—cannot be an eligible DBE.

(1) If socially and economically disadvantaged individuals own and control a firm through a parent or holding company, established for tax, capitalization or other purposes consistent with industry practice, and the parent or holding company in turn owns and controls an operating subsidiary, you may certify the subsidiary if it otherwise meets all requirements of this subpart. In this situation, the individual owners and controllers of the parent or holding company are deemed to control the subsidiary through the parent or holding company.

(2) You may certify such a subsidiary only if there is cumulatively 51 percent ownership of the subsidiary by socially and economically disadvantaged individuals. The following examples illustrate how this cumulative ownership provision works:

Example 1: Socially and economically disadvantaged individuals own 100 percent of a holding company, which has a wholly-owned subsidiary. The subsidiary may be certified, if it meets all other requirements.

Example 2: Disadvantaged individuals own 100 percent of the holding company, which owns 51 percent of a subsidiary. The subsidiary may be certified, if all other requirements are met.

Example 3: Disadvantaged individuals own 80 percent of the holding company, which in turn owns 70 percent of a subsidiary. In this case, the cumulative ownership of the subsidiary by disadvantaged individuals is 56 percent (80 percent of the 70 percent). This is more than 51 percent, so you may certify the subsidiary, if all other requirements are met.

Example 4: Same as Example 2 or 3, but someone other than the socially and economically disadvantaged owners of the parent or holding company controls the subsidiary. Even though the subsidiary is owned by disadvantaged individuals, through the holding or parent company, you cannot certify it because it fails to meet control requirements.

Example 5: Disadvantaged individuals own 60 percent of the holding company, which in turn owns 51 percent of a subsidiary. In this case, the cumulative ownership of the subsidiary by disadvantaged individuals is about 31 percent. This is less than 51 percent, so you cannot certify the subsidiary.

Example 6: The holding company, in addition to the subsidiary seeking certification, owns several other companies. The combined gross receipts of the holding companies and its subsidiaries are greater than the size standard for the subsidiary seeking certification and/or the gross receipts cap of § 26.65(b). Under the rules concerning affiliation, the subsidiary fails to meet the size standard and cannot be certified.

(f) Recognition of a business as a separate entity for tax or corporate purposes is not necessarily sufficient to demonstrate that a firm is an independent business, owned and controlled by socially and economically disadvantaged individuals.

(g) You must not require a DBE firm to be prequalified as a condition for certification unless the recipient requires all firms that participate in its contracts and subcontracts to be prequalified.

(h) A firm that is owned by an Indian tribe, Alaska Native Corporation, or Native Hawaiian organization as an entity, rather than by Indians, Alaska Natives, or Native Hawaiians as individuals, may be eligible for certification. Such a firm must meet the size standards of § 26.65. Such a firm must be controlled by socially and economically disadvantaged individuals, as provided in § 26.71.

Subpart E—Certification Procedures

§ 26.81 What are the requirements for Unified Certification Programs?

(a) You and all other DOT recipients in your state must participate in a Unified Certification Program (UCP).

(1) Within three years of March 4, 1999, you and the other recipients in your state must sign an agreement establishing the UCP for that state and submit the agreement to the Secretary for approval. The Secretary may, on the basis of extenuating circumstances shown by the recipients in the state, extend this deadline for no more than one additional year.

(2) The agreement must provide for the establishment of a UCP meeting all the requirements of this section. The agreement must specify that the UCP will follow all certification procedures and standards of this part, on the same basis as recipients; that the UCP shall cooperate fully with oversight, review, and monitoring activities of DOT and its operating administrations; and that the UCP shall implement DOT directives and guidance concerning certification matters. The agreement shall also commit recipients to ensuring that the UCP has sufficient resources and expertise to carry out the requirements of this part. The agreement shall include an implementation schedule ensuring

that the UCP is fully operational no later than 18 months following the approval of the agreement by the Secretary.

(3) Subject to approval by the Secretary, the UCP in each state may take any form acceptable to the recipients in that state.

(4) The Secretary shall review the UCP and approve it, disapprove it, or remand it to the recipients in the state for revisions. A complete agreement which is not disapproved or remanded within 180 days of its receipt is deemed to be accepted.

(5) If you and the other recipients in your state fail to meet the deadlines set forth in this paragraph (a), you shall have the opportunity to make an explanation to the Secretary why a deadline could not be met and why meeting the deadline was beyond your control. If you fail to make such an explanation, or the explanation does not justify the failure to meet the deadline, the Secretary shall direct you to complete the required action by a date certain. If you and the other recipients fail to carry out this direction in a timely manner, you are collectively in noncompliance with this part.

(b) The UCP shall make all certification decisions on behalf of all DOT recipients in the state with respect to participation in the DOT DBE Program.

(1) Certification decisions by the UCP shall be binding on all DOT recipients within the state.

(2) The UCP shall provide "one-stop shopping" to applicants for certification, such that an applicant is required to apply only once for a DBE certification that will be honored by all recipients in the state.

(3) All obligations of recipients with respect to certification and nondiscrimination must be carried out by UCPs, and recipients may use only UCPs that comply with the certification and nondiscrimination requirements of this part.

(c) All certifications by UCPs shall be pre-certifications; i.e., certifications that have been made final before the due date for bids or offers on a contract on which a firm seeks to participate as a DBE.

(d) A UCP is not required to process an application for certification from a firm having its principal place of business outside the state if the firm is not certified by the UCP in the state in which it maintains its principal place of business. The "home state" UCP shall share its information and documents concerning the firm with other UCPs that are considering the firm's application.

(e) Subject to DOT approval as provided in this section, the recipients in two or more states may form a regional UCP. UCPs may also enter into written reciprocity agreements with other UCPs. Such an agreement shall outline the specific responsibilities of each participant. A UCP may accept the certification of any other UCP or DOT recipient.

(f) Pending the establishment of UCPs meeting the requirements of this section, you may enter into agreements with other recipients, on a regional or inter-jurisdictional basis, to perform certification functions required by this part. You may also grant reciprocity to other recipient's certification decisions.

(g) Each UCP shall maintain a unified DBE directory containing, for all firms certified by the UCP (including those from other states certified under the provisions of this section), the information required by § 26.31. The UCP shall make the directory available to the public electronically, on the internet, as well as in print. The UCP shall update the electronic version of the directory by including additions, deletions, and other changes as soon as they are made.

(h) Except as otherwise specified in this section, all provisions of this subpart and subpart D of this part pertaining to recipients also apply to UCPs.

§ 26.83 What procedures do recipients follow in making certification decisions?

(a) You must ensure that only firms certified as eligible DBEs under this section participate as DBEs in your program.

(b) You must determine the eligibility of firms as DBEs consistent with the standards of subpart D of this part. When a UCP is formed, the UCP must meet all the requirements of subpart D of this part and this subpart that recipients are required to meet.

(c) You must take all the following steps in determining whether a DBE firm meets the standards of subpart D of this part:

(1) Perform an on-site visit to the offices of the firm. You must interview the principal officers of the firm and review their résumés and/or work histories. You must also perform an on-site visit to job sites if there are such sites on which the firm is working at the time of the eligibility investigation in your jurisdiction or local area. You may rely upon the site visit report of any other recipient with respect to a firm applying for certification;

(2) If the firm is a corporation, analyze the ownership of stock in the firm;

(3) Analyze the bonding and financial capacity of the firm;

(4) Determine the work history of the firm, including contracts it has received and work it has completed;

(5) Obtain a statement from the firm of the type of work it prefers to perform as part of the DBE program and its preferred locations for performing the work, if any;

(6) Obtain or compile a list of the equipment owned by or available to the firm and the licenses the firm and its key personnel possess to perform the work it seeks to do as part of the DBE program;

(7) Require potential DBEs to complete and submit an appropriate application form.

(i) *Uniform form.* [Reserved]
(ii) You must make sure that the applicant attests to the accuracy and truthfulness of the information on the application form. This shall be done either in the form of an affidavit sworn to by the applicant before a person who is authorized by state law to administer oaths or in the form of an unsworn declaration executed under penalty of perjury of the laws of the United States.

(iii) You must review all information on the form prior to making a decision about the eligibility of the firm.

(d) When another recipient, in connection with its consideration of the eligibility of a firm, makes a written request for certification information you have obtained about that firm (e.g., including application materials or the report of a site visit, if you have made one to the firm), you must promptly make the information available to the other recipient.

(e) When another DOT recipient has certified a firm, you have discretion to take any of the following actions:

(1) Certify the firm in reliance on the certification decision of the other recipient;

(2) Make an independent certification decision based on documentation provided by the other recipient, augmented by any additional information you require the applicant to provide; or

(3) Require the applicant to go through your application process without regard to the action of the other recipient.

(f) Subject to the approval of the concerned operating administration as part of your DBE program, you may impose a reasonable application fee for certification. Fee waivers shall be made in appropriate cases.

(g) You must safeguard from disclosure to unauthorized persons information gathered as part of the certification process that may

reasonably be regarded as proprietary or other confidential business information, consistent with applicable Federal, state, and local law.

(h) Once you have certified a DBE, it shall remain certified for a period of at least three years unless and until its certification has been removed through the procedures of § 26.87. You may not require DBEs to reapply for certification as a condition of continuing to participate in the program during this three-year period, unless the factual basis on which the certification was made changes.

(i) If you are a DBE, you must inform the recipient or UCP in writing of any change in circumstances affecting your ability to meet size, disadvantaged status, ownership, or control requirements of this part or any material change in the information provided in your application form.

(1) Changes in management responsibility among members of a limited liability company are covered by this requirement.

(2) You must attach supporting documentation describing in detail the nature of such changes.

(3) The notice must take the form of an affidavit sworn to by the applicant before a person who is authorized by state law to administer oaths or of an unsworn declaration executed under penalty of perjury of the laws of the United States. You must provide the written notification within 30 days of the occurrence of the change. If you fail to make timely notification of such a change, you will be deemed to have failed to cooperate under § 26.109(c).

(j) If you are a DBE, you must provide to the recipient, every year on the anniversary of the date of your certification, an affidavit sworn to by the firm's owners before a person who is authorized by state law to administer oaths or an unsworn declaration executed under penalty of perjury of the laws of the United States. This affidavit must affirm that there have been no changes in the firm's circumstances affecting its ability to meet size, disadvantaged status, ownership, or control requirements of this part or any material changes in the information provided in its application form, except for changes about which you have notified the recipient under paragraph (i) of this section. The affidavit shall specifically affirm that your firm continues to meet SBA business size criteria and the overall gross receipts cap of this part, documenting this affirmation with supporting documentation of your firm's size and gross receipts. If you fail to provide this affidavit in a timely manner, you will be

deemed to have failed to cooperate under § 26.109(c).

(k) If you are a recipient, you must make decisions on applications for certification within 90 days of receiving from the applicant firm all information required under this part. You may extend this time period once, for no more than an additional 60 days, upon written notice to the firm, explaining fully and specifically the reasons for the extension. You may establish a different time frame in your DBE program, upon a showing that this time frame is not feasible, and subject to the approval of the concerned operating administration. Your failure to make a decision by the applicable deadline under this paragraph is deemed a constructive denial of the application, on the basis of which the firm may appeal to DOT under § 26.89.

§ 26.85 What rules govern recipients' denials of initial requests for certification?

(a) When you deny a request by a firm, which is not currently certified with you, to be certified as a DBE, you must provide the firm a written explanation of the reasons for the denial, specifically referencing the evidence in the record that supports each reason for the denial. All documents and other information on which the denial is based must be made available to the applicant, on request.

(b) When a firm is denied certification, you must establish a time period of no more than twelve months that must elapse before the firm may reapply to the recipient for certification. You may provide, in your DBE program, subject to approval by the concerned operating administration, a shorter waiting period for reapplication. The time period for reapplication begins to run on the date the explanation required by paragraph (a) of this section is received by the firm.

(c) When you make an administratively final denial of certification concerning a firm, the firm may appeal the denial to the Department under § 26.89.

§ 26.87 What procedures does a recipient use to remove a DBE's eligibility?

(a) *Ineligibility complaints.* (1) Any person may file with you a written complaint alleging that a currently-certified firm is ineligible and specifying the alleged reasons why the firm is ineligible. You are not required to accept a general allegation that a firm is ineligible or an anonymous complaint. The complaint may include any information or arguments supporting the complainant's assertion that the firm is ineligible and should not

continue to be certified. Confidentiality of complainants' identities must be protected as provided in § 26.109(b).

(2) You must review your records concerning the firm, any material provided by the firm and the complainant, and other available information. You may request additional information from the firm or conduct any other investigation that you deem necessary.

(3) If you determine, based on this review, that there is reasonable cause to believe that the firm is ineligible, you must provide written notice to the firm that you propose to find the firm ineligible, setting forth the reasons for the proposed determination. If you determine that such reasonable cause does not exist, you must notify the complainant and the firm in writing of this determination and the reasons for it. All statements of reasons for findings on the issue of reasonable cause must specifically reference the evidence in the record on which each reason is based.

(b) *Recipient-initiated proceedings.* If, based on notification by the firm of a change in its circumstances or other information that comes to your attention, you determine that there is reasonable cause to believe that a currently certified firm is ineligible, you must provide written notice to the firm that you propose to find the firm ineligible, setting forth the reasons for the proposed determination. The statement of reasons for the finding of reasonable cause must specifically reference the evidence in the record on which each reason is based.

(c) *DOT directive to initiate proceeding.* (1) If the concerned operating administration determines that information in your certification records, or other information available to the concerned operating administration, provides reasonable cause to believe that a firm you certified does not meet the eligibility criteria of this part, the concerned operating administration may direct you to initiate a proceeding to remove the firm's certification.

(2) The concerned operating administration must provide you and the firm a notice setting forth the reasons for the directive, including any relevant documentation or other information.

(3) You must immediately commence and prosecute a proceeding to remove eligibility as provided by paragraph (b) of this section.

(d) *Hearing.* When you notify a firm that there is reasonable cause to remove its eligibility, as provided in paragraph (a), (b), or (c) of this section, you must

give the firm an opportunity for an informal hearing, at which the firm may respond to the reasons for the proposal to remove its eligibility in person and provide information and arguments concerning why it should remain certified.

(1) In such a proceeding, you bear the burden of proving, by a preponderance of the evidence, that the firm does not meet the certification standards of this part.

(2) You must maintain a complete record of the hearing, by any means acceptable under state law for the retention of a verbatim record of an administrative hearing. If there is an appeal to DOT under § 26.89, you must provide a transcript of the hearing to DOT and, on request, to the firm. You must retain the original record of the hearing. You may charge the firm only for the cost of copying the record.

(3) The firm may elect to present information and arguments in writing, without going to a hearing. In such a situation, you bear the same burden of proving, by a preponderance of the evidence, that the firm does not meet the certification standards, as you would during a hearing.

(e) *Separation of functions.* You must ensure that the decision in a proceeding to remove a firm's eligibility is made by an office and personnel that did not take part in actions leading to or seeking to implement the proposal to remove the firm's eligibility and are not subject, with respect to the matter, to direction from the office or personnel who did take part in these actions.

(1) Your method of implementing this requirement must be made part of your DBE program.

(2) The decisionmaker must be an individual who is knowledgeable about the certification requirements of your DBE program and this part.

(3) Before a UCP is operational in its state, a small airport or small transit authority (i.e., an airport or transit authority serving an area with less than 250,000 population) is required to meet this requirement only to the extent feasible.

(f) *Grounds for decision.* You must not base a decision to remove eligibility on a reinterpretation or changed opinion of information available to the recipient at the time of its certification of the firm. You may base such a decision only on one or more of the following:

(1) Changes in the firm's circumstances since the certification of the firm by the recipient that render the firm unable to meet the eligibility standards of this part;

(2) Information or evidence not available to you at the time the firm was certified;

(3) Information that was concealed or misrepresented by the firm in previous certification actions by a recipient;

(4) A change in the certification standards or requirements of the Department since you certified the firm; or

(5) A documented finding that your determination to certify the firm was factually erroneous.

(g) *Notice of decision.* Following your decision, you must provide the firm written notice of the decision and the reasons for it, including specific references to the evidence in the record that supports each reason for the decision. The notice must inform the firm of the consequences of your decision and of the availability of an appeal to the Department of Transportation under § 26.89. You must send copies of the notice to the complainant in an ineligibility complaint or the concerned operating administration that had directed you to initiate the proceeding.

(h) *Status of firm during proceeding.*

(1) A firm remains an eligible DBE during the pendency of your proceeding to remove its eligibility.

(2) The firm does not become ineligible until the issuance of the notice provided for in paragraph (g) of this section.

(i) *Effects of removal of eligibility.* When you remove a firm's eligibility, you must take the following action:

(1) When a prime contractor has made a commitment to using the ineligible firm, or you have made a commitment to using a DBE prime contractor, but a subcontract or contract has not been executed before you issue the decertification notice provided for in paragraph (g) of this section, the ineligible firm does not count toward the contract goal or overall goal. You must direct the prime contractor to meet the contract goal with an eligible DBE firm or demonstrate to you that it has made a good faith effort to do so.

(2) If a prime contractor has executed a subcontract with the firm before you have notified the firm of its ineligibility, the prime contractor may continue to use the firm on the contract and may continue to receive credit toward its DBE goal for the firm's work. In this case, or in a case where you have let a prime contract to the DBE that was later ruled ineligible, the portion of the ineligible firm's performance on the contract remaining after you issued the notice of its ineligibility shall not count toward your overall goal, but may count toward the contract goal.

(3) *Exception:* If the DBE's ineligibility is caused solely by its having exceeded the size standard during the performance of the contract, you may continue to count its participation on that contract toward overall and contract goals.

(j) *Availability of appeal.* When you make an administratively final removal of a firm's eligibility under this section, the firm may appeal the removal to the Department under § 26.89.

§ 26.89 What is the process for certification appeals to the Department of Transportation?

(a)(1) If you are a firm which is denied certification or whose eligibility is removed by a recipient, you may make an administrative appeal to the Department.

(2) If you are a complainant in an ineligibility complaint to a recipient (including the concerned operating administration in the circumstances provided in § 26.87(c)), you may appeal to the Department if the recipient does not find reasonable cause to propose removing the firm's eligibility or, following a removal of eligibility proceeding, determines that the firm is eligible.

(3) Send appeals to the following address: Department of Transportation, Office of Civil Rights, 400 7th Street, SW, Room 2401, Washington, DC 20590.

(b) Pending the Department's decision in the matter, the recipient's decision remains in effect. The Department does not stay the effect of the recipient's decision while it is considering an appeal.

(c) If you want to file an appeal, you must send a letter to the Department within 90 days of the date of the recipient's final decision, including information and arguments concerning why the recipient's decision should be reversed. The Department may accept an appeal filed later than 90 days after the date of the decision if the Department determines that there was good cause for the late filing of the appeal.

(1) If you are an appellant who is a firm which has been denied certification, whose certification has been removed, whose owner is determined not to be a member of a designated disadvantaged group, or concerning whose owner the presumption of disadvantage has been rebutted, your letter must state the name and address of any other recipient which currently certifies the firm, which has rejected an application for certification from the firm or removed the firm's eligibility within one year prior to the date of the appeal, or before

which an application for certification or a removal of eligibility is pending. Failure to provide this information may be deemed a failure to cooperate under § 26.109(c).

(2) If you are an appellant other than one described in paragraph (c)(1) of this section, the Department will request, and the firm whose certification has been questioned shall promptly provide, the information called for in paragraph (c)(1) of this section. Failure to provide this information may be deemed a failure to cooperate under § 26.109(c).

(d) When it receives an appeal, the Department requests a copy of the recipient's complete administrative record in the matter. If you are the recipient, you must provide the administrative record, including a hearing transcript, within 20 days of the Department's request. The Department may extend this time period on the basis of a recipient's showing of good cause. To facilitate the Department's review of a recipient's decision, you must ensure that such administrative records are well organized, indexed, and paginated. Records that do not comport with these requirements are not acceptable and will be returned to you to be corrected immediately. If an appeal is brought concerning one recipient's certification decision concerning a firm, and that recipient relied on the decision and/or administrative record of another recipient, this requirement applies to both recipients involved.

(e) The Department makes its decision based solely on the entire administrative record. The Department does not make a de novo review of the matter and does not conduct a hearing. The Department may supplement the administrative record by adding relevant information made available by the DOT Office of Inspector General; Federal, state, or local law enforcement authorities; officials of a DOT operating administration or other appropriate DOT office; a recipient; or a firm or other private party.

(f) As a recipient, when you provide supplementary information to the Department, you shall also make this information available to the firm and any third-party complainant involved, consistent with Federal or applicable state laws concerning freedom of information and privacy. The Department makes available, on request by the firm and any third-party complainant involved, any supplementary information it receives from any source.

(1) The Department affirms your decision unless it determines, based on the entire administrative record, that your decision is unsupported by

substantial evidence or inconsistent with the substantive or procedural provisions of this part concerning certification.

(2) If the Department determines, after reviewing the entire administrative record, that your decision was unsupported by substantial evidence or inconsistent with the substantive or procedural provisions of this part concerning certification, the Department reverses your decision and directs you to certify the firm or remove its eligibility, as appropriate. You must take the action directed by the Department's decision immediately upon receiving written notice of it.

(3) The Department is not required to reverse your decision if the Department determines that a procedural error did not result in fundamental unfairness to the appellant or substantially prejudice the opportunity of the appellant to present its case.

(4) If it appears that the record is incomplete or unclear with respect to matters likely to have a significant impact on the outcome of the case, the Department may remand the record to you with instructions seeking clarification or augmentation of the record before making a finding. The Department may also remand a case to you for further proceedings consistent with Department instructions concerning the proper application of the provisions of this part.

(5) The Department does not uphold your decision based on grounds not specified in your decision.

(6) The Department's decision is based on the status and circumstances of the firm as of the date of the decision being appealed.

(7) The Department provides written notice of its decision to you, the firm, and the complainant in an ineligibility complaint. A copy of the notice is also sent to any other recipient whose administrative record or decision has been involved in the proceeding (see paragraph (d) of this section). The notice includes the reasons for the Department's decision, including specific references to the evidence in the record that supports each reason for the decision.

(8) The Department's policy is to make its decision within 180 days of receiving the complete administrative record. If the Department does not make its decision within this period, the Department provides written notice to concerned parties, including a statement of the reason for the delay and a date by which the appeal decision will be made.

(g) All decisions under this section are administratively final, and are not subject to petitions for reconsideration.

§ 26.91 What actions do recipients take following DOT certification appeal decisions?

(a) If you are the recipient from whose action an appeal under § 26.89 is taken, the decision is binding. It is not binding on other recipients.

(b) If you are a recipient to which a DOT determination under § 26.89 is applicable, you must take the following action:

(1) If the Department determines that you erroneously certified a firm, you must remove the firm's eligibility on receipt of the determination, without further proceedings on your part. Effective on the date of your receipt of the Department's determination, the consequences of a removal of eligibility set forth in § 26.87(i) take effect.

(2) If the Department determines that you erroneously failed to find reasonable cause to remove the firm's eligibility, you must expeditiously commence a proceeding to determine whether the firm's eligibility should be removed, as provided in § 26.87.

(3) If the Department determines that you erroneously declined to certify or removed the eligibility of the firm, you must certify the firm, effective on the date of your receipt of the written notice of Department's determination.

(4) If the Department determines that you erroneously determined that the presumption of social and economic disadvantage either should or should not be deemed rebutted, you must take appropriate corrective action as determined by the Department.

(5) If the Department affirms your determination, no further action is necessary.

(c) Where DOT has upheld your denial of certification to or removal of eligibility from a firm, or directed the removal of a firm's eligibility, other recipients with whom the firm is certified may commence a proceeding to remove the firm's eligibility under § 26.87. Such recipients must not remove the firm's eligibility absent such a proceeding. Where DOT has reversed your denial of certification to or removal of eligibility from a firm, other recipients must take the DOT action into account in any certification action involving the firm. However, other recipients are not required to certify the firm based on the DOT decision.

Subpart F—Compliance and Enforcement

§ 26.101 What compliance procedures apply to recipients?

(a) If you fail to comply with any requirement of this part, you may be subject to formal enforcement action

under § 26.103 or § 26.105 or appropriate program sanctions by the concerned operating administration, such as the suspension or termination of Federal funds, or refusal to approve projects, grants or contracts until deficiencies are remedied. Program sanctions may include, in the case of the FHWA program, actions provided for under 23 CFR 1.36; in the case of the FAA program, actions consistent with 49 U.S.C. 47106(d), 47111(d), and 47122; and in the case of the FTA program, any actions permitted under 49 U.S.C. chapter 53 or applicable FTA program requirements.

(b) As provided in statute, you will not be subject to compliance actions or sanctions for failing to carry out any requirement of this part because you have been prevented from complying because a Federal court has issued a final order in which the court found that the requirement is unconstitutional.

§ 26.103 What enforcement actions apply in FHWA and FTA programs?

The provisions of this section apply to enforcement actions under FHWA and FTA programs:

(a) *Noncompliance complaints.* Any person who believes that a recipient has failed to comply with its obligations under this part may file a written complaint with the concerned operating administration's Office of Civil Rights. If you want to file a complaint, you must do so no later than 180 days after the date of the alleged violation or the date on which you learned of a continuing course of conduct in violation of this part. In response to your written request, the Office of Civil Rights may extend the time for filing in the interest of justice, specifying in writing the reason for so doing. The Office of Civil Rights may protect the confidentiality of your identity as provided in § 26.109(b). Complaints under this part are limited to allegations of violation of the provisions of this part.

(b) *Compliance reviews.* The concerned operating administration may review the recipient's compliance with this part at any time, including reviews of paperwork and on-site reviews, as appropriate. The Office of Civil Rights may direct the operating administration to initiate a compliance review based on complaints received.

(c) *Reasonable cause notice.* If it appears, from the investigation of a complaint or the results of a compliance review, that you, as a recipient, are in noncompliance with this part, the appropriate DOT office promptly sends you, return receipt requested, a written notice advising you that there is reasonable cause to find you in

noncompliance. The notice states the reasons for this finding and directs you to reply within 30 days concerning whether you wish to begin conciliation.

(d) *Conciliation.* (1) If you request conciliation, the appropriate DOT office shall pursue conciliation for at least 30, but not more than 120, days from the date of your request. The appropriate DOT office may extend the conciliation period for up to 30 days for good cause, consistent with applicable statutes.

(2) If you and the appropriate DOT office sign a conciliation agreement, then the matter is regarded as closed and you are regarded as being in compliance. The conciliation agreement sets forth the measures you have taken or will take to ensure compliance. While a conciliation agreement is in effect, you remain eligible for FHWA or FTA financial assistance.

(3) The concerned operating administration shall monitor your implementation of the conciliation agreement and ensure that its terms are complied with. If you fail to carry out the terms of a conciliation agreement, you are in noncompliance.

(4) If you do not request conciliation, or a conciliation agreement is not signed within the time provided in paragraph (d)(1) of this section, then enforcement proceedings begin.

(e) *Enforcement actions.* (1) Enforcement actions are taken as provided in this subpart.

(2) Applicable findings in enforcement proceedings are binding on all DOT offices.

§ 26.105 What enforcement actions apply in FAA Programs?

(a) Compliance with all requirements of this part by airport sponsors and other recipients of FAA financial assistance is enforced through the procedures of Title 49 of the United States Code, including 49 U.S.C. 47106(d), 47111(d), and 47122, and regulations implementing them.

(b) The provisions of § 26.103(b) and this section apply to enforcement actions in FAA programs.

(c) Any person who knows of a violation of this part by a recipient of FAA funds may file a complaint under 14 CFR part 16 with the Federal Aviation Administration Office of Chief Counsel.

§ 26.107 What enforcement actions apply to firms participating in the DBE program?

(a) If you are a firm that does not meet the eligibility criteria of subpart D of this part and that attempts to participate in a DOT-assisted program as a DBE on the basis of false, fraudulent, or deceitful statements or representations

or under circumstances indicating a serious lack of business integrity or honesty, the Department may initiate suspension or debarment proceedings against you under 49 CFR part 29.

(b) If you are a firm that, in order to meet DBE contract goals or other DBE program requirements, uses or attempts to use, on the basis of false, fraudulent or deceitful statements or representations or under circumstances indicating a serious lack of business integrity or honesty, another firm that does not meet the eligibility criteria of subpart D of this part, the Department may initiate suspension or debarment proceedings against you under 49 CFR part 29.

(c) In a suspension or debarment proceeding brought under paragraph (a) or (b) of this section, the concerned operating administration may consider the fact that a purported DBE has been certified by a recipient. Such certification does not preclude the Department from determining that the purported DBE, or another firm that has used or attempted to use it to meet DBE goals, should be suspended or debarred.

(d) The Department may take enforcement action under 49 CFR Part 31, Program Fraud and Civil Remedies, against any participant in the DBE program whose conduct is subject to such action under 49 CFR part 31.

(e) The Department may refer to the Department of Justice, for prosecution under 18 U.S.C. 1001 or other applicable provisions of law, any person who makes a false or fraudulent statement in connection with participation of a DBE in any DOT-assisted program or otherwise violates applicable Federal statutes.

§ 26.109 What are the rules governing information, confidentiality, cooperation, and intimidation or retaliation?

(a) *Availability of records.* (1) In responding to requests for information concerning any aspect of the DBE program, the Department complies with provisions of the Federal Freedom of Information and Privacy Acts (5 U.S.C. 552 and 552a). The Department may make available to the public any information concerning the DBE program release of which is not prohibited by Federal law.

(2) If you are a recipient, you shall safeguard from disclosure to unauthorized persons information that may reasonably be considered as confidential business information, consistent with Federal, state, and local law.

(b) *Confidentiality of information on complainants.* Notwithstanding the provisions of paragraph (a) of this

section, the identity of complainants shall be kept confidential, at their election. If such confidentiality will hinder the investigation, proceeding or hearing, or result in a denial of appropriate administrative due process to other parties, the complainant must be advised for the purpose of waiving the privilege. Complainants are advised that, in some circumstances, failure to waive the privilege may result in the closure of the investigation or dismissal of the proceeding or hearing. FAA follows the procedures of 14 CFR part 16 with respect to confidentiality of information in complaints.

(c) *Cooperation.* All participants in the Department's DBE program (including, but not limited to, recipients, DBE firms and applicants for DBE certification, complainants and appellants, and contractors using DBE firms to meet contract goals) are required to cooperate fully and promptly with DOT and recipient compliance reviews, certification reviews, investigations, and other requests for information. Failure to do so shall be a ground for appropriate action against the party involved (e.g., with respect to recipients, a finding of noncompliance; with respect to DBE firms, denial of certification or removal of eligibility and/or suspension and debarment; with respect to a complainant or appellant, dismissal of the complaint or appeal; with respect to a contractor which uses DBE firms to meet goals, findings of non-responsibility for future contracts and/or suspension and debarment).

(d) *Intimidation and retaliation.* If you are a recipient, contractor, or any other participant in the program, you must not intimidate, threaten, coerce, or discriminate against any individual or firm for the purpose of interfering with any right or privilege secured by this part or because the individual or firm has made a complaint, testified, assisted, or participated in any manner in an investigation, proceeding, or hearing under this part. If you violate this prohibition, you are in noncompliance with this part.

Appendix A to Part 26—Guidance Concerning Good Faith Efforts

1. When, as a recipient, you establish a contract goal on a DOT-assisted contract, a bidder must, in order to be responsible and/or responsive, make good faith efforts to meet the goal. The bidder can meet this requirement in either of two ways. First, the bidder can meet the goal, documenting commitments for participation by DBE firms sufficient for this purpose. Second, even if it doesn't meet the goal, the bidder can document adequate good faith efforts. This means that the bidder must show that it took

all necessary and reasonable steps to achieve a DBE goal or other requirement of this part which, by their scope, intensity, and appropriateness to the objective, could reasonably be expected to obtain sufficient DBE participation, even if they were not fully successful.

II. In any situation in which you have established a contract goal, part 26 requires you to use the good faith efforts mechanism of this part. As a recipient, it is up to you to make a fair and reasonable judgment whether a bidder that did not meet the goal made adequate good faith efforts. It is important for you to consider the quality, quantity, and intensity of the different kinds of efforts that the bidder has made. The efforts employed by the bidder should be those that one could reasonably expect a bidder to take if the bidder were actively and aggressively trying to obtain DBE participation sufficient to meet the DBE contract goal. Mere *pro forma* efforts are not good faith efforts to meet the DBE contract requirements. We emphasize, however, that your determination concerning the sufficiency of the firm's good faith efforts is a judgment call: meeting quantitative formulas is not required.

III. The Department also strongly cautions you against requiring that a bidder meet a contract goal (i.e., obtain a specified amount of DBE participation) in order to be awarded a contract, even though the bidder makes an adequate good faith efforts showing. This rule specifically prohibits you from ignoring *bona fide* good faith efforts.

IV. The following is a list of types of actions which you should consider as part of the bidder's good faith efforts to obtain DBE participation. It is not intended to be a mandatory checklist, nor is it intended to be exclusive or exhaustive. Other factors or types of efforts may be relevant in appropriate cases.

A. Soliciting through all reasonable and available means (e.g. attendance at pre-bid meetings, advertising and/or written notices) the interest of all certified DBEs who have the capability to perform the work of the contract. The bidder must solicit this interest within sufficient time to allow the DBEs to respond to the solicitation. The bidder must determine with certainty if the DBEs are interested by taking appropriate steps to follow up initial solicitations.

B. Selecting portions of the work to be performed by DBEs in order to increase the likelihood that the DBE goals will be achieved. This includes, where appropriate, breaking out contract work items into economically feasible units to facilitate DBE participation, even when the prime contractor might otherwise prefer to perform these work items with its own forces.

C. Providing interested DBEs with adequate information about the plans, specifications, and requirements of the contract in a timely manner to assist them in responding to a solicitation.

D. (1) Negotiating in good faith with interested DBEs. It is the bidder's responsibility to make a portion of the work available to DBE subcontractors and suppliers and to select those portions of the work or material needs consistent with the

available DBE subcontractors and suppliers, so as to facilitate DBE participation. Evidence of such negotiation includes the names, addresses, and telephone numbers of DBEs that were considered; a description of the information provided regarding the plans and specifications for the work selected for subcontracting; and evidence as to why additional agreements could not be reached for DBEs to perform the work.

(2) A bidder using good business judgment would consider a number of factors in negotiating with subcontractors, including DBE subcontractors, and would take a firm's price and capabilities as well as contract goals into consideration. However, the fact that there may be some additional costs involved in finding and using DBEs is not in itself sufficient reason for a bidder's failure to meet the contract DBE goal, as long as such costs are reasonable. Also, the ability or desire of a prime contractor to perform the work of a contract with its own organization does not relieve the bidder of the responsibility to make good faith efforts.

Prime contractors are not, however, required to accept higher quotes from DBEs if the price difference is excessive or unreasonable.

E. Not rejecting DBEs as being unqualified without sound reasons based on a thorough investigation of their capabilities. The contractor's standing within its industry, membership in specific groups, organizations, or associations and political or social affiliations (for example union vs. non-union employee status) are not legitimate causes for the rejection or non-solicitation of bids in the contractor's efforts to meet the project goal.

F. Making efforts to assist interested DBEs in obtaining bonding, lines of credit, or insurance as required by the recipient or contractor.

G. Making efforts to assist interested DBEs in obtaining necessary equipment, supplies, materials, or related assistance or services.

H. Effectively using the services of available minority/women community organizations; minority/women contractors' groups; local, state, and Federal minority/women business assistance offices; and other organizations as allowed on a case-by-case basis to provide assistance in the recruitment and placement of DBEs.

V. In determining whether a bidder has made good faith efforts, you may take into account the performance of other bidders in meeting the contract. For example, when the apparent successful bidder fails to meet the contract goal, but others meet it, you may reasonably raise the question of whether, with additional reasonable efforts, the apparent successful bidder could have met the goal. If the apparent successful bidder fails to meet the goal, but meets or exceeds the average DBE participation obtained by other bidders, you may view this, in conjunction with other factors, as evidence of the apparent successful bidder having made good faith efforts.

Appendix B to Part 26—Forms [Reserved]

Appendix C to Part 26—DBE Business Development Program Guidelines

The purpose of this program element is to further the development of DBEs, including but not limited to assisting them to move into non-traditional areas of work and/or compete in the marketplace outside the DBE program, via the provision of training and assistance from the recipient.

(A) Each firm that participates in a recipient's business development program (BDP) program is subject to a program term determined by the recipient. The term should consist of two stages: a developmental stage and a transitional stage.

(B) In order for a firm to remain eligible for program participation, it must continue to meet all eligibility criteria contained in part 26.

(C) By no later than 6 months of program entry, the participant should develop and submit to the recipient a comprehensive business plan setting forth the participant's business targets, objectives and goals. The participant will not be eligible for program benefits until such business plan is submitted and approved by the recipient. The approved business plan will constitute the participant's short and long term goals and the strategy for developmental growth to the point of economic viability in non-traditional areas of work and/or work outside the DBE program.

(D) The business plan should contain at least the following:

(1) An analysis of market potential, competitive environment and other business analyses estimating the program participant's prospects for profitable operation during the term of program participation and after graduation from the program.

(2) An analysis of the firm's strengths and weaknesses, with particular attention paid to the means of correcting any financial, managerial, technical, or labor conditions which could impede the participant from receiving contracts other than those in traditional areas of DBE participation.

(3) Specific targets, objectives, and goals for the business development of the participant during the next two years, utilizing the results of the analysis conducted pursuant to paragraphs (C) and (D)(1) of this appendix:

(4) Estimates of contract awards from the DBE program and from other sources which are needed to meet the objectives and goals for the years covered by the business plan; and

(5) Such other information as the recipient may require.

(E) Each participant should annually review its currently approved business plan with the recipient and modify the plan as may be appropriate to account for any changes in the firm's structure and redefined needs. The currently approved plan should be considered the applicable plan for all program purposes until the recipient approves in writing a modified plan. The recipient should establish an anniversary date for review of the participant's business plan and contract forecasts.

(F) Each participant should annually forecast in writing its need for contract awards for the next program year and the succeeding program year during the review of its business plan conducted under paragraph (E) of this appendix. Such forecast should be included in the participant's business plan. The forecast should include:

(1) The aggregate dollar value of contracts to be sought under the DBE program, reflecting compliance with the business plan;

(2) The aggregate dollar value of contracts to be sought in areas other than traditional areas of DBE participation;

(3) The types of contract opportunities being sought, based on the firm's primary line of business; and

(4) Such other information as may be requested by the recipient to aid in providing effective business development assistance to the participant.

(G) Program participation is divided into two stages: (1) a developmental stage and (2) a transitional stage. The developmental stage is designed to assist participants to overcome their social and economic disadvantage by providing such assistance as may be necessary and appropriate to enable them to access relevant markets and strengthen their financial and managerial skills. The transitional stage of program participation follows the developmental stage and is designed to assist participants to overcome, insofar as practical, their social and economic disadvantage and to prepare the participant for leaving the program.

(H) The length of service in the program term should not be a pre-set time frame for either the developmental or transitional stages but should be figured on the number of years considered necessary in normal progression of achieving the firm's established goals and objectives. The setting of such time could be factored on such items as, but not limited to, the number of contracts, aggregate amount of the contract received, years in business, growth potential, etc.

(I) Beginning in the first year of the transitional stage of program participation, each participant should annually submit for inclusion in its business plan a transition management plan outlining specific steps to promote profitable business operations in areas other than traditional areas of DBE participation after graduation from the program. The transition management plan should be submitted to the recipient at the same time other modifications are submitted pursuant to the annual review under paragraph (E) of this section. The plan should set forth the same information as required under paragraph (F) of steps the participant will take to continue its business development after the expiration of its program term.

(J) When a participant is recognized as successfully completing the program by substantially achieving the targets, objectives and goals set forth in its program term, and has demonstrated the ability to compete in the marketplace, its further participation within the program may be determined by the recipient.

(K) In determining whether a concern has substantially achieved the goals and

objectives of its business plan, the following factors, among others, should be considered by the recipient:

(1) Profitability;

(2) Sales, including improved ratio of non-traditional contracts to traditional-type contracts;

(3) Net worth, financial ratios, working capital, capitalization, access to credit and capital;

(4) Ability to obtain bonding;

(5) A positive comparison of the DBE's business and financial profile with profiles of non-DBE businesses in the same area or similar business category; and

(6) Good management capacity and capability.

(L) Upon determination by the recipient that the participant should be graduated from the developmental program, the recipient should notify the participant in writing of its intent to graduate the firm in a letter of notification. The letter of notification should set forth findings, based on the facts, for every material issue relating to the basis of the program graduation with specific reasons for each finding. The letter of notification should also provide the participant 45 days from the date of service of the letter to submit in writing information that would explain why the proposed basis of graduation is not warranted.

(M) Participation of a DBE firm in the program may be discontinued by the recipient prior to expiration of the firm's program term for good cause due to the failure of the firm to engage in business practices that will promote its competitiveness within a reasonable period of time as evidenced by, among other indicators, a pattern of inadequate performance or unjustified delinquent performance. Also, the recipient can discontinue the participation of a firm that does not actively pursue and bid on contracts, and a firm that, without justification, regularly fails to respond to solicitations in the type of work it is qualified for and in the geographical areas where it has indicated availability under its approved business plan. The recipient should take such action if over a 2-year period a DBE firm exhibits such a pattern.

Appendix D to Part 26—Mentor-Protégé Program Guidelines

(A) The purpose of this program element is to further the development of DBEs, including but not limited to assisting them to move into non-traditional areas of work and/or compete in the marketplace outside the DBE program, via the provision of training and assistance from other firms. To operate a mentor-protégé program, a recipient must obtain the approval of the concerned operating administration.

(B)(1) Any mentor-protégé relationship shall be based on a written development plan, approved by the recipient, which clearly sets forth the objectives of the parties and their respective roles, the duration of the arrangement and the services and resources to be provided by the mentor to the protégé. The formal mentor-protégé agreement may set a fee schedule to cover the direct and indirect cost for such services rendered by

the mentor for specific training and assistance to the protégé through the life of the agreement. Services provided by the mentor may be reimbursable under the FTA, FHWA, and FAA programs.

(2) To be eligible for reimbursement, the mentor's services provided and associated costs must be directly attributable and properly allowable to specific individual contracts. The recipient may establish a line item for the mentor to quote the portion of the fee schedule expected to be provided during the life of the contract. The amount claimed shall be verified by the recipient and paid on an incremental basis representing the time the protégé is working on the contract. The total individual contract figures accumulated over the life of the agreement shall not exceed the amount stipulated in the original mentor/protégé agreement.

(C) DBEs involved in a mentor-protégé agreement must be independent business entities which meet the requirements for certification as defined in subpart D of this part. A protégé firm must be certified before it begins participation in a mentor-protégé arrangement. If the recipient chooses to recognize mentor/protégé agreements, it should establish formal general program guidelines. These guidelines must be submitted to the operating administration for approval prior to the recipient executing an individual contractor/ subcontractor mentor-protégé agreement.

Appendix E to Part 26—Individual Determinations of Social and Economic Disadvantage

The following guidance is adapted, with minor modifications, from SBA regulations concerning social and economic disadvantage determinations (see 13 CFR 124.103(c) and 124.104).

Social Disadvantage

1. Socially disadvantaged individuals are those who have been subjected to racial or ethnic prejudice or cultural bias within American society because of their identities as members of groups and without regard to their individual qualities. Social disadvantage must stem from circumstances beyond their control. Evidence of individual social disadvantage must include the following elements:

(A) At least one objective distinguishing feature that has contributed to social disadvantage, such as race, ethnic origin, gender, disability, long-term residence in an environment isolated from the mainstream of American society, or other similar causes not common to individuals who are not socially disadvantaged;

(B) Personal experiences of substantial and chronic social disadvantage in American society, not in other countries; and

(C) Negative impact on entry into or advancement in the business world because of the disadvantage. Recipients will consider any relevant evidence in assessing this element. In every case, however, recipients will consider education, employment and business history, where applicable, to see if the totality of circumstances shows disadvantage in entering into or advancing in the business world.

(1) *Education.* Recipients will consider such factors as denial of equal access to institutions of higher education and vocational training, exclusion from social and professional association with students or teachers, denial of educational honors rightfully earned, and social patterns or pressures which discouraged the individual from pursuing a professional or business education.

(2) *Employment.* Recipients will consider such factors as unequal treatment in hiring, promotions and other aspects of professional advancement, pay and fringe benefits, and other terms and conditions of employment; retaliatory or discriminatory behavior by an employer or labor union; and social patterns or pressures which have channeled the individual into non-professional or non-business fields.

(3) *Business history.* The recipient will consider such factors as unequal access to credit or capital, acquisition of credit or capital under commercially unfavorable circumstances, unequal treatment in opportunities for government contracts or other work, unequal treatment by potential customers and business associates, and exclusion from business or professional organizations.

II. With respect to paragraph I.(A) of this appendix, the Department notes that people with disabilities have disproportionately low incomes and high rates of unemployment. Many physical and attitudinal barriers remain to their full participation in education, employment, and business opportunities available to the general public. The Americans with Disabilities Act (ADA) was passed in recognition of the discrimination faced by people with disabilities. It is plausible that many individuals with disabilities—especially persons with severe disabilities (e.g., significant mobility, vision, or hearing impairments)—may be socially and economically disadvantaged.

III. Under the laws concerning social and economic disadvantage, people with disabilities are not a group presumed to be disadvantaged. Nevertheless, recipients should look carefully at individual showings of disadvantage by individuals with disabilities, making a case-by-case judgment about whether such an individual meets the criteria of this appendix. As public entities subject to Title II of the ADA, recipients must also ensure their DBE programs are accessible to individuals with disabilities. For example, physical barriers or the lack of application and information materials in accessible formats cannot be permitted to thwart the access of potential applicants to the certification process or other services made available to DBEs and applicants.

Economic Disadvantage

(A) *General.* Economically disadvantaged individuals are socially disadvantaged individuals whose ability to compete in the free enterprise system has been impaired due to diminished capital and credit opportunities as compared to others in the same or similar line of business who are not socially disadvantaged.

(B) *Submission of narrative and financial information.*

(1) Each individual claiming economic disadvantage must describe the conditions which are the basis for the claim in a narrative statement, and must submit personal financial information.

(2) When married, an individual claiming economic disadvantage also must submit separate financial information for his or her spouse, unless the individual and the spouse are legally separated.

(C) *Factors to be considered.* In considering diminished capital and credit opportunities, recipients will examine factors relating to the personal financial condition of any individual claiming disadvantaged status, including personal income for the past two years (including bonuses and the value of company stock given in lieu of cash),

personal net worth, and the fair market value of all assets, whether encumbered or not. Recipients will also consider the financial condition of the applicant compared to the financial profiles of small businesses in the same primary industry classification, or, if not available, in similar lines of business, which are not owned and controlled by socially and economically disadvantaged individuals in evaluating the individual's access to credit and capital. The financial profiles that recipients will compare include total assets, net sales, pre-tax profit, sales/working capital ratio, and net worth.

(D) *Transfers within two years.*

(1) Except as set forth in paragraph (D)(2) of this appendix, recipients will attribute to an individual claiming disadvantaged status any assets which that individual has transferred to an immediate family member, or to a trust, a beneficiary of which is an immediate family member, for less than fair market value, within two years prior to a concern's application for participation in the DBE program, unless the individual claiming disadvantaged status can demonstrate that the transfer is to or on behalf of an immediate family member for that individual's education, medical expenses, or some other form of essential support.

(2) Recipients will not attribute to an individual claiming disadvantaged status any assets transferred by that individual to an immediate family member that are consistent with the customary recognition of special occasions, such as birthdays, graduations, anniversaries, and retirements.

(3) In determining an individual's access to capital and credit, recipients may consider any assets that the individual transferred within such two-year period described by paragraph (D)(1) of this appendix that are not considered in evaluating the individual's assets and net worth (e.g., transfers to charities).

DEPARTMENT OF TRANSPORTATION

Office of the Secretary

49 CFR Parts 23 and 26

[Docket OST-97-2550]

RIN 2105-AB92

Participation by Disadvantaged Business Enterprises in Department of Transportation Programs

AGENCY: Office of the Secretary, DOT.

ACTION: Final rule; correction.

SUMMARY: In its final disadvantaged business enterprise (DBE) rule, the Department intended to ensure the confidentiality of personal financial information submitted to recipients by owners of DBE firms. The Department inadvertently omitted the regulatory text language on this point. This correction document remedies this omission. In addition, this document corrects minor omissions concerning the threshold for Federal Transit Administration recipients to establish DBE programs and a requirement for transit vehicle manufacturers to have DBE programs, removes a potentially confusing word from the rule's provisions concerning DOT review of recipients' overall goals, clarifies language concerning the certification and personal net worth of airport concessionaires and others, and clarifies that a lease is viewed as a contract for purposes of the rule.

DATES: This rule is effective June 28, 1999.

FOR FURTHER INFORMATION CONTACT: Robert C. Ashby, Deputy Assistant General Counsel for Regulation and Enforcement, Department of Transportation, 400 7th Street, SW., Room 10424, Washington, DC 20590, phone numbers (202) 366-9306 (voice), (202) 366-9313 (fax), (202) 755-7687 (TDD), bob.ashby@ost.dot.gov (email).

SUPPLEMENTARY INFORMATION:

Privacy

In discussing the requirement of the DBE final rule that owners of DBE firms submit a statement of personal net worth, with supporting documentation, the Department addressed commenters' concerns about the confidentiality of the information. The preamble to the rule said the following:

One of the primary concerns of DBE firms commenting about submitting personal financial information is ensuring that the information remains confidential. In response to this concern, the rule explicitly requires that this material be kept confidential. It may be provided to a third party only with the written consent of the individual to whom the information pertains. This provision is specifically intended to preempt any contrary application of state or local law (e.g., a state freedom of information act that might be interpreted to require a state transportation agency to provide to a requesting party the personal income tax return of a DBE applicant who had provided the return as supporting documentation for his PNW statement). There is one exception to this confidentiality requirement. If there is a certification appeal in which the economic disadvantage of an individual is at issue (e.g., the recipient has determined that he or she is not economically disadvantaged and the individual seeks DOT review of the decision), the personal financial information would have to be provided to DOT as part of the administrative record. The Department would treat the information as confidential. (64 FR 5117; February 2, 1999).

Unfortunately, through editorial error on the Department's part, the regulatory text provision referred to was omitted from the final rule. We regret any confusion that this omission may have caused, and we are correcting the error by inserting the language in a new paragraph (a)(2)(iii) of § 26.67 of the rule.

FTA Requirements for DBE Programs

In § 26.21(a)(2) of the rule, the Department states that FTA recipients who receive more than \$250,000 in various forms of FTA assistance must have a DBE program. The phrase "exclusive of transit vehicle purchases" was inadvertently omitted from this paragraph. This omission has raised questions from some recipients, and we are reinserting the omitted language to avoid confusion. In addition, this provision did not make explicit that transit vehicle manufacturers must have DBE programs, so we are adding language to make this clear.

Review of Overall Goals

While operating administrations review recipients' overall goal submissions, recipients are not required to obtain prior concurrence by operating administrations with their overall goals (see § 26.45(f)(4)).

However, as the result of an editorial oversight, § 26.21(b)(1) of the rule makes a reference to overall goals being "approved" by operating administrations. Because prior concurrence is not required, this reference is incorrect and could be misleading. Therefore, we are removing it.

Concessionaires

In the February 2, 1999, final DBE rule, the Department removed all of former part 23 except the portion concerning airport concessionaires. The airport concession provisions were modified for consistency with the new 49 CFR part 26. In one respect, however, the amendment of the airport concessions provision failed to delete language concerning certification procedures that referred to the (now deleted) certification provisions of former part 23. While we have provided guidance to airports that they should follow part 26 procedures, we believe it would be useful to delete the language referring to former part 23's procedures. Therefore, this rule eliminates two paragraphs in § 23.95. Recipients should follow part 26 certification procedures for concessionaires as well as for other contractors.

Airports have expressed concern that the rule is unclear concerning the application to concessionaires of the \$750,000 personal net worth (PNW) cap and PNW statement requirements of § 26.67. The Department is currently working to complete a final rule concerning airport concessions. The PNW cap applicable to concessionaires is one of the matters being considered in this rulemaking. The PNW cap amount that the Department applies to concessionaires may or may not be \$750,000. Pending completion of the final rule on airport concessions, the Department believes it best to resolve the current uncertainty by making the \$750,000 cap amount and PNW statement requirement of § 26.67 inapplicable to airport concessionaires.

We are amending § 26.67(a)(2)(i) to specify that disadvantaged owners of airport concessionaires are not required to submit PNW statements. Consequently, the rebuttal of the presumption of economic disadvantage based on a PNW statement an individual is required to submit (see § 26.67(b)(1)) also does not apply to airport concessionaires.

Definition of "Contract"

The 49 CFR part 23 definition of "contract" specified that a lease was

viewed as a contract. The part 26 definition inadvertently omitted this sentence. To avoid any potential confusion on this point, this correction document adds a sentence on leases.

Clarification Concerning Personal Net Worth Documentation

The Department has received a number of questions and expressions of concern about the documentation it is appropriate for recipients to require in ascertaining the personal net worth of owners of DBE firms. The Department believes that it is important to clarify the rule to state that this documentation, and the PNW statement itself, should not be unduly lengthy, burdensome or intrusive.

The Department uses the Small Business Administration's implementation of its PNW requirements as a model for recipients' practices. SBA requires a two-page form, supported by two years' of personal and business tax returns. With respect to the information routinely collected from applicants or owners of currently certified DBEs for purposes of ascertaining PNW, the Department believes that recipients should not exceed the information sought by SBA in its programs. Consequently, while recipients are not required to use the SBA form verbatim, they should use a form of similar length and content. Recipients may appropriately collect and retain copies of two years' of the individuals personal and business tax returns.

On the other hand, the Department regards as unduly lengthy, burdensome, or intrusive such practices as using a form significantly longer or more complex than the SBA form (e.g., a multipage PNW form), requiring inventories of personal property or appraisals of real property. Such practices are contrary to part 26.

Regulatory Analyses and Notices

This set of amendments correcting part 26 is not a significant rule under Executive Order 12866 or the Department's Regulatory Policies and Procedures. The Department certifies that the amendments will not have significant economic impacts on a substantial number of small entities. This is because the amendments are technical corrections that will not impose costs on entities, regardless of their size. They do not have Federalism impacts sufficient to warrant the preparation of a Federalism impact statement. They do not impose information collection requirements.

These amendments relate to regulatory provisions that have already

been the subject of notice and comment (as part of the Department's May 1997 supplemental notice of proposed rulemaking concerning the DBE program).

Because the amendments merely correct accidental omissions from the regulatory text or remove a potentially confusing reference, we do not believe that additional notice and comment would be productive. Therefore, the Department has determined that further notice and comment would be impracticable, unnecessary, and contrary to the public interest. The Department has good cause to make the corrections effective immediately in order to avoid confusion and any adverse effects on DBEs or recipients from the absence of the omitted language.

List of Subjects

49 CFR Part 23

Administrative practice and procedure, Airports, Civil rights, Concessions, Government contracts, Grant programs—transportation, Minority businesses, Reporting and recordkeeping requirements.

49 CFR Part 26

Administrative practice and procedure, Airports, Civil rights, Government contracts, Grant programs—transportation, Highways and roads, Mass transportation, Minority businesses, Reporting and recordkeeping requirements.

Issued this 11th day of June, 1999, at Washington, D.C.

Rodney E. Slater,
Secretary of Transportation.

For the reasons set forth in the preamble, the Department amends 49 CFR parts 23 and 26 as follows:

PART 23—[AMENDED]

1. The authority citation for part 23 continues to read as follows:

Authority: 42 U.S.C. 200d et seq.; 49 U.S.C. 47107 and 47123; Executive Order 12138, 3 CFR, 1979 Comp., p. 383.

§ 23.95 [Amended]

2. In § 23.95, remove and reserve paragraphs (f)(2) and (f)(3).

PART 26—[AMENDED]

3. The authority citation for part 26 is revised to read as follows:

Authority: 23 U.S.C. 324; 42 U.S.C. 2000d, et seq.; 49 U.S.C. 1615, 47107, 47113, 47123; Sec. 1101(b), Pub. L. 105-178, 112 Stat. 107, 113.

4. In the definition of the term "Contract" in § 26.5, add a sentence at

the end of the definition, to read as follows:

§ 26.5 What do the terms used in this part mean?

* * * * *
Contract * * * For purposes of this part, a lease is considered to be a contract.
* * * * *

5. In § 26.21, revise paragraph (a)(2) to read as follows:

§ 26.21 Who must have a DBE program?
(a) * * *
(2) FTA recipients that receive \$250,000 in FTA planning, capital, and/or operating assistance in a Federal fiscal year, exclusive of transit vehicle purchases, and transit vehicle manufacturers who must submit an overall goal under § 26.49;
* * * * *

§ 26.21 [Amended]

5. In § 26.21(b)(1), in the parenthetical phrase, remove the words "and approved" following the word "reviewed".

§ 26.45 [Amended]

6. In § 26.45(c)(5), remove the words "Subject to the approval of the DOT operating administration, you" and add "You" in its place.

7. Amend § 26.67 as follows:
a. Revise paragraph (a)(2)(i); and
b. Redesignate paragraph (a)(2)(ii) as paragraph (a)(2)(iii), and add a new paragraph (a)(2)(ii), to read as follows:

§ 26.67 What rules determine social and economic disadvantage?

(a) * * *
(2)(i) You must require each individual owner of a firm applying to participate as a DBE (except a firm applying to participate as a DBE airport concessionaire) whose ownership and control are relied upon for DBE certification to submit a signed, notarized statement of personal net worth, with appropriate supporting documentation. This statement and documentation must not be unduly lengthy, burdensome, or intrusive.

(ii) Notwithstanding any provision of state law, you must not release an individual's personal net worth statement nor any documentation supporting it to any third party without the written consent of the submitter. Provided, that you must transmit this information to DOT in any certification appeal proceeding under § 26.89 in which the disadvantaged status of the individual is in question.

EFFECTIVE PERIOD: JULY 2, 2004 THROUGH JUNE 30, 2005

LABOR LAW §220 PREVAILING WAGE SCHEDULE

Pursuant to Labor Law §220 (3) the Comptroller of the City of New York has promulgated this schedule solely for Workers, Laborers and Mechanics engaged by private contractors on New York City public work contracts. Contracting agencies anticipating doing work which requires the employment of a trade or classification not included in this schedule must request the Comptroller to establish a proper classification for the work pursuant to Labor Law §220 (3-a) (a). The prevailing rate schedule as promulgated by the Comptroller, must, in compliance with law, be annexed to and form part of the contract.

The appropriate schedule of prevailing wages and benefits must be posted at all public work sites pursuant to Labor Law §220 (3-a) (a).

This schedule is applicable for work performed from July 1, 2004 through June 30, 2005, unless otherwise noted. You will be notified of any changes to this schedule by addenda published on our web site www.comptroller.nyc.gov. The rate of wages and supplemental benefits to be paid or provided are those that prevail at the time the work is being performed. Preliminary schedules for future one-year periods are published annually in the City Record on or about June 1st of each succeeding year. Final schedules are published on or about July 1st in the City Record and on our web site www.comptroller.nyc.gov.

The Comptroller's Office has attempted to include all overtime, shift and night differential, Holiday, Saturday, Sunday or other premium time work. However, this schedule does not set forth every prevailing practice with respect to such rates with which employers must comply. All such rates and practices are nevertheless part of the employer's prevailing wage obligation and contained in the collective bargaining agreements of the prevailing wage unions. These collective bargaining agreements are available for inspection by appointment. Requests for appointments may be made by calling (212) 669-4437, Monday through Friday between the hours of 9 a.m. and 5 p.m.

Answers to questions concerning the application of premium rates and or prevailing trade practices may be found in the collective bargaining agreements of the prevailing union or by requesting such information from the Bureau of Labor Law's Classification and Determination unit by calling William Helfman at (212) 669-4440.

All other inquiries concerning compliance with the Prevailing Wage Law, should be directed to; Bureau of Labor Law, ATT: William Helfman, Office of the Comptroller, 1 Centre Street, Room 1122, New York, N.Y. 10007; Fax (212) 815-8672.

Office of the Comptroller, City of New York

Prevailing rates and ratios for apprentices are attached to this schedule as Appendix #1. Pursuant to Labor Law §220 (3-e), only apprentices who are individually registered in a bona fide program to which the employer contractor is a participant, registered with the New York State Department of Labor, may be employed on a public work project. Trainees, Assistants and Helpers who are not journey persons or not registered apprentices pursuant to Labor Law §220 (3-e) may not be substituted for apprentices and must be paid as journey persons.

Workers, Laborers and Mechanics employed on a public work project must receive not less than the prevailing rate of wage and benefits for the classification of work performed by each upon such public work. Contractors are solely responsible for maintaining original payroll records which delineate, among other things, the hours each employee worked within a given classification. Contractors using rates and/or classifications not promulgated by the Comptroller do so at their own risk. Additionally, prior to bid, Agency Chief Contracting Officers must contact the Bureau of Labor Law when the need arises for a work classification not published in this schedule.

Prevailing Rate Schedule Information: The information below is intended to assist you in meeting your prevailing wage rate obligation.

Covered Workers: Any and all individuals who are engaged, employed or otherwise occupied as Workers, Laborers or Mechanics on the public work site.

Supplemental Benefits: Employers may meet supplemental benefits obligation by paying the hourly supplemental benefits rate to their employees in cash. Such cash payments are considered income to the employee. Employers who elect to provide bona fide supplemental benefits to their employees will be given hourly cash credit for such benefits up to the hourly benefits rate set forth in the applicable schedule for the relevant trade or occupation at issue.

Particular attention should be given to the supplemental benefits requirement. Although in most instances the payment or provision for supplemental benefits is for each hour worked, some classifications require the payment or provision of supplemental benefits for each hour paid. Consequently, some prevailing practices require benefits to be purchased at the overtime, shift differential, Holiday, Saturday, Sunday or other premium time rate.

Office of the Comptroller, City of New York

Contractors are advised to review the applicable Collective Bargaining Agreements and the Comptroller's Prevailing Wage Schedule before bidding on Public Work. If there are any questions concerning prevailing wages, benefits, overtime, Holiday pay, shift differentials or any prevailing practice, please contact this office.

Any error as to compensation under the prevailing wage law or other information as to trade classification made by the contracting agency in the contract documents or in any other communication will not preclude a finding against the contractor of prevailing wage violation.

Legend. # Double time and one half the regular hourly
rate for work performed on these holidays.**

OVERTIME: (2, 5, 8, 13,) See Overtime Legend.

(Local #638B)

EFFECTIVE PERIOD DECEMBER 15, 2004 THROUGH JUNE 30, 2005

This schedule of prevailing wages and supplemental fringe benefits must be posted at the public work site as required by New York State Labor Law § 231 (6).

LABOR LAW § 230 BUILDING SERVICE EMPLOYEES

In accordance with Labor Law §230 et seq. the Comptroller of the City of New York has promulgated this schedule of prevailing wages and supplemental benefits for building service employees engaged on building service contracts in excess of \$1,500.00. Prevailing rates are required to be annexed to and form part of the contract pursuant to §231 (4); however, only rates for trades anticipated by the contracting agency to be required on the work need be annexed to the contract.

Pursuant to §231 (4) contracting agencies that anticipate doing work that may require building service trades or classifications not included in this schedule, must request the Comptroller to establish a proper classification and wage determination for the work. Contractors using trades and/or classifications for which the Comptroller has not promulgated wages and benefits do so at their own risk.

Labor Law § 231 (6) requires contractors to post on the site of the work a current copy of this schedule of wages and supplements.

This schedule is applicable to work performed from July 1, 2004 through June 30, 2005, unless otherwise noted. Changes to this schedule are published on our web site www.comptroller.nyc.gov . Contractors must pay the wages and supplements in effect when the building service employee performs the work. Preliminary schedules for future one-year periods appear in the City Record on or about June 1 each succeeding year. Final schedules appear on or about July 1 in the City Record and on the our web site www.comptroller.nyc.gov .

Building service employees on public contracts must receive not less than the prevailing rate of wage and supplements for the classification of work performed. Contractors are solely responsible for maintaining original payroll records delineating, among other things, the hours worked by each employee within a given classification.

Employers may pay cash supplements; however, cash payments made in lieu of providing bona fide benefits is considered income to the employee. Employers providing bona fide benefits are credited for the cost of such benefits up to the hourly rate for benefits in the schedule for the trade or occupation at issue. Employers may combine cash supplements with in-kind supplements to meet the prevailing rate minimum.

Office of the Comptroller, City of New York

Particular attention should be given to the supplemental benefits requirement. Although in most instances the payment or provision for supplemental benefits is tied to hours worked, some classifications require the payment or provision of supplemental benefits at overtime or premium time rates. Contractors are advised to review the applicable collective bargaining agreements and the Comptroller's Prevailing Wage Schedule before bidding on public work. Any Prevailing Wage Rate error made by the Contracting Agency, whether in a contract document or other communication, will not preclude a finding against the contractor of prevailing-wage violation.

Because this schedule may not list each prevailing wage practice, contractors should familiarize themselves with the prevailing collective bargaining agreements. Please make appointments to inspect such agreements by calling (212) 669-4437, Monday through Friday between the hours of 9:00 A.M. and 5:00 P.M.

Answers to questions concerning premium rates and or prevailing trade practices may also be obtained from the Classification and Determination Unit by calling William Helfman, Director, at (212) 669-4440. Please direct all other compliance issues to; Bureau of Labor Law, Attn: William Helfman, Office of the Comptroller, 1 Centre Street, Room 1122, New York, N.Y. 10007; Fax (212) 815- 8672.

a. PAID HOLIDAYS: New Year's Day, Martin Luther King, Jr.'s Birthday, Presidents' Day, Memorial Day, Independence Day, Labor Day, Columbus Day, Thanksgiving Day, Christmas Day, Employee's Birthday, Two (2) Personal Days, and any holiday or day of mourning proclaimed as such by the State or Federal Government.

TRUCK DRIVER CLASSIFICATIONS

GROUP 1: Closed body trucks with self contained loading unit up to and including 22 yard capacity

GROUP 2: Open trucks, rack body or trucks with no self contained mechanical loading device, up to 22 yard capacity. One-container tractor hoist

GROUP 3: 10 wheel, open trucks, container loaders, dino-master, over-cab loaders, rack body trucks, or any trucks 22 yards to and including 25 yards capacity

GROUP 4: Rubbish and garbage trucks, 26 yards to and including 31 yards

GROUP 5: Single axle working non-compactor containers up to 15 yards capacity on rubbish and garbage removal

GROUP 6: Roll-off trucks up to and including 42 yard capacity

GROUP 7: Roll-off truck with more than 42 yard capacity or any tractor trailer trucks

GROUP 8: One-container tractor hoist on construction and alteration debris removal

WELDERS - Receive rate prescribed for craft performing operation to which welding is incidental.

Unlisted classifications needed for work not included within the scope of the classifications listed may be added after award only as provided in the labor standards contract clauses (29CFR 5.5 (a) (1) (ii)).

In the listing above, the "SU" designation means that rates listed under the identifier do not reflect collectively bargained wage and fringe benefit rates. Other designations indicate unions whose rates have been determined to be prevailing.

WAGE DETERMINATION APPEALS PROCESS

1.) Has there been an initial decision in the matter? This can be:

- * an existing published wage determination
* a survey underlying a wage determination
* a Wage and Hour Division letter setting forth a position on a wage determination matter
* a conformance (additional classification and rate) ruling

On survey related matters, initial contact, including requests for summaries of surveys, should be with the Wage and Hour Regional Office for the area in which the survey was conducted because those Regional Offices have responsibility for the Davis-Bacon survey program. If the response from this initial contact is not satisfactory, then the process described in 2.) and 3.) should be followed.

With regard to any other matter not yet ripe for the formal process described here, initial contact should be with the Branch of Construction Wage Determinations. Write to:

Branch of Construction Wage Determinations
Wage and Hour Division
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

2.) If the answer to the question in 1.) is yes, then an interested party (those affected by the action) can request review and reconsideration from the Wage and Hour Administrator (See 29 CFR Part 1.8 and 29 CFR Part 7). Write to:

Wage and Hour Administrator
U.S. Department of Labor
200 Constitution Avenue, N.W.

Washington, DC 20210

The request should be accompanied by a full statement of the interested party's position and by any information (wage payment data, project description, area practice material, etc.) that the requestor considers relevant to the issue.

3.) If the decision of the Administrator is not favorable, an interested party may appeal directly to the Administrative Review Board (formerly the Wage Appeals Board). Write to:

Administrative Review Board
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

4.) All decisions by the Administrative Review Board are final.

=====

END OF GENERAL DECISION

SECTION 00900
MILESTONE SCHEDULE

1.01 GENERAL

- A. These supplemental requirements only add to the General Requirements. In no case shall the supplemental requirements take precedence over the General Requirements unless specifically noted.

1.02 DEFINITIONS

- A. Percent Complete

Percent complete is used as a guide for providing equitable compensation to the Contractor for work completed and/or material purchased and stored (if approved) in accordance with Contract Documents.

The cost-load CPM should be the basis for the construction cost monitoring. By adding the values in a series, dividing the distribution of the activities in the series into one hundred groups of equal frequency, the percent complete for every activity can be estimated.

- B. Substantial Completion

The project can be used for the purpose it was intended for, and all remaining incomplete work is comprised of relatively minor items that the Contractor agrees to correct while the facility is occupied and/or all systems are operational. Training session shall be complete and all manuals turned over to the SMC Representative.

The date of substantial completion of a project is the date when all construction is sufficiently completed, in accordance with the Contract Documents, as modified by any change orders agreed to by the parties, so that the Owner can occupy all spaces in the project and operate the specified system for the use for which it was intended.

1.03 TIME FOR CLOSE-OUT ACTIVITIES

The following time durations shall be allowed for the close-out activities of this project:

<u>Activity</u>	<u>Consecutive Calendar Days Allowed</u>
Construction start to substantial completion	519
Substantial completion to punch list completion	42
Substantial completion to Administration completion (change order, etc)	56
Substantial completion to Final Acceptance by NYC Building Department	84
Substantial completion to final payment	119

1.04 PHASING SCHEDULE

The following phasing schedule represents the Order of Work, Section 01900, Existing Structures Work, and is not intended to be all-inclusive, but represents specific work that must be completed within a specific time frame.

January 10, 2005

Soundproofing of Monsignor McClancy Memorial High School

ASBESTOS ABATEMENT

PART 1 – GENERAL

1.01 DESCRIPTION

- A. The Contract Documents are as defined in the "Agreement". The General Conditions shall apply to all Work of this Section.
- B. Work specified herein shall be the removal and disposal of asbestos-containing materials (ACM) and asbestos containing roofing materials (ACRM) from designated areas at:

Monsignor McClancy Memorial High School

- C. The phasing and scheduling of work for this project shall be coordinated with and approved by the Owner, Construction Manager, Resident Engineer and Facility Manager. The Owner, Construction Manager, Resident Engineer and Facility Manager will make the final determination on all issues under this Contract covered by this Specification.

1.02 SCOPE OF WORK

- A. Contractor is to provide all labor, materials, equipment, services, testing, appurtenances, permits and agreements necessary to perform the work required for the abatement of ACM and ACRM as required by these contract documents. All work shall be performed in accordance with this Specification, EPA regulations, OSHA regulations, New York City Local Law 70, Title 15, Chapter 1 RCNY, New York State Industrial Code 56, NIOSH recommendations, and any other applicable federal, state or local government regulations. Whenever there is a conflict or overlap of the above references the most stringent provisions are applicable.
- B. Contractor is responsible for the confirmation of the actual total quantities of the Work to be performed prior to Bidding. The Contractor shall perform the following work as described below:
 - 1. Basement – Pipe tunnel:
 - a) Removal of approximately 7,000 linear feet of pipe insulation from pipe tunnel as per abatement, mechanical and architectural drawings.
 - 2. 1st Floor – Mall Classroom Entrance:
 - a) Limited removal of approximately 180 square feet of transite panel soffit.
 - 3. 1st Floor – Gymnasium/Weight Room
 - a) Removal of approximately 20 cementitious pipefittings as per abatement, mechanical drawings.
 - b) Removal of approximately 180 square feet of flooring paper under wood floor in weight room to structural slab from the area of floor removal as per abatement, mechanical and architectural drawings.
 - 4. 1st Floor – Classrooms 100, 101, 102, 103, 104, 105 and Cafeteria

- a) Removal of approximately 202 square feet of flooring materials to structural slab from the area of new ventilators and pipe chases as per abatement, mechanical and architectural drawings.
 - b) Removal of approximately 200 linear feet of pipe insulation concealed in wall chases from multiple locations as per abatement, mechanical and architectural drawings.
 - c) Bid alternate 1 - Removal of approximately 80 square feet of flooring materials to structural slab from the area of new ventilators and pipe chases as per abatement, abatement, mechanical and architectural drawings.
5. 2nd Floor – Classrooms 200, 201, 202, 203, 204, 205, 213,214,217, 217A, 218, 222, 223, 224, 225 and 226
- a) Removal of approximately 500 square feet of flooring materials to structural slab from the area of new ventilators and pipe chases as per abatement, mechanical and architectural drawings.
 - b) Removal of approximately 450 linear feet of pipe insulation concealed in wall chases from multiple locations as per abatement, mechanical and architectural drawings.
6. Classrooms 300, 301, 302, 303, 304, 305, 306, 307, 308, 309, 310, 311, 314, 317 and 319
- a) Removal of approximately 504 square feet of flooring materials to structural slab from the area of new ventilators and pipe chases as per abatement, mechanical and architectural drawings.
7. Roof
- a) Main Building - Removal of approximately 128 square feet of roof flashing for additional exhaust fans as per abatement, mechanical and architectural drawings.
 - b) Main Building - Removal of approximately 128 square feet of roof flashing for additional exhaust fans as per abatement, mechanical and architectural drawings.
 - c) Stage - Removal of approximately 250 square feet of roof flashing for additional exhaust fans as per abatement, mechanical and architectural drawings.

The roofing materials may include tar membrane, tar over flashing, flashing, felt paper, mastic, and insulation, shall be removed down to the deck or substrate wherever its disturbance will be affected by the scope of work as described herein. Remove all asbestos-containing roofing and/or roof flashing in the Work Area(s) utilizing "Attachment FR – Procedures for Use of Foam or Similar Viscous Liquid in Removal of Asbestos-Containing Roofing Material (ACRM) in New York City". A variance for utilizing these procedures within the Work Area(s) shall be applied for by the Contractor and approved by NYCDEP prior to the start of abatement activities.

The Contractor shall employ methods as outlined in the latest version of New York City DEP Attachment FR, FT or New York State Applicable Variance 119. The choice of method will not affect the cost (the Bid price) to the Owner for the work.

When applicable, the Contractor may utilize NYS DOL procedures upon prior approval from the Owner. There shall be no additional cost to the Owner if the Contractor elects to utilize NYS DOL procedures.

For roof decks constructed of wood or composition materials, the Contractor must file an ACP-5, with approval from the Owner, along with all appropriate DEP, NYS and DOL filings. For all other deck materials, the Contractor has the option of filing an ACP-5 or ACP-7.

If the Contractor has filed an ACP-5, protection of the windows on the floor beneath the roof is required.

- C. The intent of this Specification section is to ensure that Contractor is responsible for the following:
1. Abatement of all ACM and ACRM,
 2. Cleaning and decontamination of the entire affected area,
 3. Demolition that may be required to access ACM and ACRM in each area, Contractor shall dispose of all debris associated with demolition activities as ACM waste.
 4. Removal and disposal of any other ACM – thermal system insulation (TSI), asbestos coating that will be directly affected by the scope of work.
 5. Provide all scaffolding, platform installation, equipment, tools, transportation and any other equipment required and/or necessary to complete all work described in the Contract Documents.
 6. The Contractor shall be responsible for and shall include in its Bid any and all fees or changes imposed by Local, State or Federal Law, Rule or Regulation applicable to the work specified herein, including fees or charges which may be imposed subsequent to the date of the Bid opening.

The asbestos abatement Contractor shall provide a temporary roof consisting of a 10 mil polyethylene sheathing post abatement over the open roof areas. Strict coordination with the General Contractor, Construction Manager and/or Architect is required and necessary during this phase of the abatement.

Any ACRM removal from any part of temporary or permanent roofing area shall be the sole responsibility of the abatement Contractor as described above in this specification.

These Facilities are under the jurisdiction of the Owner AND provides services from 7:00 a.m. to 5:00 p.m. The phases and hours intended for the scheduling of the work for this asbestos abatement project has to be coordinated with the Owner, Construction Manager, and the Facility Manager (School Custodian). Unless indicated elsewhere in these Specifications, all work shall be accomplished during regular working hours. It is the Contractor's responsibility to plan and schedule the work of this Contract with the approval and consent of the Construction Manager and Facility Manager.

The Contractor shall establish his working schedule in a way that avoids interference or conflict

with the normal functioning of the facility. Working in the evenings and weekends shall be allowed and authorized by the Commissioner and shall be done at no additional cost to the Construction Manager.

Work Hours:

Removal of asbestos containing materials shall be performed after school hours on school days or on Saturdays, Sundays or school holidays, Winter and Spring recess, and Summer vacation. **REMOVAL OF ASBESTOS CONTAINING MATERIALS DURING SCHOOL HOURS IS PROHIBITED.**

Security-Contractor Employee Identification

The Contractor shall provide a photo identification badge for all his employees and in addition require that any and all sub-contractors provide the same for their employees.

- D. ALL WORK SHALL BE DONE IN ACCORDANCE WITH THE APPLICABLE PROVISIONS OF THE RULES AND REGULATIONS OF THE ASBESTOS CONTROL PROGRAM AS PROMULGATED BY TITLE 15, CHAPTER 1 OF RCNY, FEDERAL LAW (INCLUDING OSHA) AND NY STATE DEPARTMENT OF LABOR INDUSTRIAL CODE RULE 56 CITED AS 12 NYCRR PART 56, WHICHEVER IS MORE STRINGENT AS PER LATEST AMENDMENTS TO THESE LAWS AND AS MODIFIED HEREIN BY THESE SPECIFICATIONS.
- E. THE CONTRACTOR'S ATTENTION IS DIRECTED TO THE FACT THAT CERTAIN METHODS OF ASBESTOS ABATEMENT, INDICATED IN THE SPECIFICATIONS, ARE COVERED BY PATENTS. TO DATE, PATENTS HAVE BEEN ISSUED WITH RESPECT TO "NEGATIVE PRESSURE ENCLOSURE" OR "NEGATIVE-AIR" OR "REDUCED PRESSURE" AND "GLOVE BAG".
- F. THE CONTRACTOR SHALL BE SOLELY RESPONSIBLE FOR AND SHALL HOLD THE OWNER HARMLESS FROM, ANY AND ALL DAMAGES, LOSSES AND EXPENSES RESULTING FROM ANY INFRINGEMENT BY THE CONTRACTOR OF ANY PATENT, INCLUDING BUT NOT LIMITED TO THE PATENTS DESCRIBED ABOVE, USED BY THE CONTRACTOR DURING PERFORMANCE OF THIS AGREEMENT.
- G. "Asbestos" shall mean any hydrated mineral silicate separable into commercially usable fibers, including but not limited to chrysotile (serpentine), amosite (cumingtonite-grunerite), crocidolite (riebeckite), tremolite, anthrophyllite and actinolite.
- H. Prior to starting, the Contractor must notify the Owner if he/she anticipates any difficulty in performing the work as directed and required by these Specifications. The Contractor will be required to attend an on-site job meeting with the Owner, Construction Manager, and Facility Manager prior to start of work to examine the conditions of the site for removal and plan the

sequence for removal operations.

In addition, the Contractor is also responsible for preparing, amending and submitting any Asbestos Variances Applications (ACP-9) that may be required for the completion of the Contract or incidental work..

- I. For coordination with other Contractors, see the General Conditions governing all Contracts.

Certain equipment in the Work Area may need to remain operational during removal. Therefore, *the removal of ACM from this equipment shall be performed as the last removal activities within the Work Area.* The Contractor shall coordinate the scheduling for the removal of ACM on functioning equipment with the Construction Manager.

- J. Noise Control:

1. The Contractor is advised that all work shall be performed in compliance with all applicable provisions of Local Law 57, New York City, Noise Control Code effective September 1, 1972.

2. The Contractor's attention is directed to the following specific provisions of the Code which applicable to construction and related work around school buildings:

Section 1403.3-3.01

No person shall make, continue or cause or permit to be made or continued any unnecessary noise.

Section 1403.3-401

Any act in violation of the provisions of this article of the code is deemed to be in violation of Article 111 of the code, without any way limiting the generality of the provisions of Article 111 of the code.

Section 1403.3-411 Construction Activities

Except as otherwise provided by this section, no person shall engage in or permit any person to be engaged in construction activities in any zone other than weekdays between the hours of 7:00 am and 6:00 pm.

Section 1403.3.4.13 Construction Devices

Except as provided in Article V of this code, no person shall operate or use or cause to be operated or use a construction device in such a way as to create a unnecessary noise.

Section 14.3 B-4.19 School, Hospitals, Courts

No person shall cause or permit the creation of any unnecessary noise through the use of any device on any street adjacent to any school or court while the same is in session or adjacent to any hospital.

Section 14.03.3-5.21 Paving Breakers

To be operated only within the allowable sound levels indicated in the code.

The Contractor is required to comply with all registration requirements issued under Section 1403.2.09 for air compressors and/or paving breakers used in the performance of the work.

It shall be the responsibility of each Contractor to obtain a copy of the Noise Control Code and familiarize himself with the applicable provisions and comply therewith the provisions in the performance of the work.

K. The following conditions shall apply to all temporary shutdowns of existing services.

All temporary lighting and temporary electrical services for use in the Work Area shall be in weather proof enclosures and be ground fault protected and:

1. Shall be performed at no additional charge to the Owner.
2. Shall be performed at times not interfering with the other activities in the building.
3. Shall be performed only with written consent from the Facility Manager.
4. Shall be made through written request to the Owner at least 10 days in advance with complete written description of the work to be performed.

L. Stages of Asbestos Removal Work:

The Abatement Contractor will be required to perform the work and it is the intent of this Specification to remove all asbestos containing and asbestos contaminated materials from the Work Area(s). The Contractor is responsible for verifying all quantities of materials listed here and Bid accordingly.

M. Related Asbestos Removal Work Under Other Contracts:

1. Each Contract (General, HVAC, Plumbing, Electrical) shall be responsible for the removal of incidental asbestos not identified in this section and found prior to or during the installation of their work.
2. Incidental asbestos is defined as ACM that is discovered during the course of their work that must be abated to enable them to perform the work of their Contract.

1.03 GUARANTEE

- A. Work performed in compliance with this Contract shall be guaranteed for a period of one year from the date the completed work is accepted by the Owner.
- B. The Contractor shall not be held liable for the guarantee where the repair required under the guarantee is a result of obvious abuse or vandalism, as determined by the Owner.
- C. Owner will notify the Contractor in writing regarding defects in work under the guarantee.

1.04 SPECIAL EXPERIENCE REQUIREMENTS FOR ASBESTOS ABATEMENT

A. PRIOR PROJECT EXPERIENCE:

- 1. The Contractor or Sub Contractor performing the work of this section must have been in the business of performing asbestos abatement work, in schools for the past three years. During that three (3) year period, the Contractor must have successfully completed in a timely fashion at least ten projects similar in scope, size and complexity to the required work (i.e., asbestos abatement projects using the techniques specified in this Contract):

The monetary value of the ten contracts shall be as follows:

- a) Two contracts valued at \$30,000 or more
- b) Three contracts valued at \$20,000 or more
- c) Five contracts valued at \$10,000 or more

At the discretion of the Owner, a combination of the above may be considered experience sufficient for qualification.

A minimum of five of the above contracts must have been performed as the prime contractor. If any of the ten contracts were not performed as the prime contractor, but rather, as a subcontractor, then all pertinent information necessary to make contact with both the prime contractor and the owner of the premises must be provided.

- 2. For each project submitted to meet the experience requirements set forth in item #1 above, the Contractor must provide the information set forth below for each project.
 - a) Name of Contractor
 - b) Name and location of the project
 - c) Name, title and telephone number of the Owner or an Owner's representative who is familiar with the Bidders work on the project
 - d) Brief description of the work completed
 - e) Indicate whether the work was performed as a prime or a Sub Contractor
 - f) Amount of the Contract or sub-Contract
 - g) Date of completion

B. ASBESTOS ABATEMENT LICENSE:

The Contractor or Sub Contractor performing the work of this section must, for the past (3) years have been licensed for asbestos abatement work by the New York State Department of Labor. The Contractor must submit a copy of such valid asbestos abatement license.

C. COMPLIANCE WITH EXPERIENCE REQUIREMENTS:

1. The Contractor is advised that no Sub Contractor will be approved for the performance of asbestos abatement work hereunder unless the Contractor demonstrates compliance with the experience requirements set forth above. Compliance with such experience requirements will be determined by the Owner.
2. In the event the Bidder is a joint venture, at least one firm in the joint venture must meet the above described requirements.

D. Insurance Requirements: The asbestos contractor must provide asbestos liability insurance in the following amount: 1 million dollars per occurrence, 2 million dollar aggregate (combine single limit). The Owner shall be named as an additional insured on such insurance policy.

E. Throughout the Specifications, reference is made to codes and standards which establish qualities and types of workmanship and materials, and which establish methods for testing and reporting on the pertinent characteristics thereof. Where materials or workmanship are required by these Specifications to meet or exceed the specifically named code or standard, it is the Contractor's responsibility to provide materials and workmanship which meet or exceed the specifically named code or standard.

F. Site Investigation: The Contractor will inspect all the Specifications, drawings and will investigate and confirm the conditions affecting the work, including but not limited to:

1. The physical considerations and conditions of both the material and structure. These considerations include any obstacles or obstruction encountered in accessing or removing the material.
2. The handling, storage, transportation and disposal of the material.
3. The availability of qualified and skilled labor.
4. The availability of utilities.
5. The exact quantity of all material to be disturbed.
6. Be familiar and comply with all applicable Local, State, Federal rules and regulations.

1.05 WORK BY OTHERS

The Owner reserves the right during the term of this Contract to have work performed on asbestos abatement projects by other Contractors, as circumstances warrant.

1.06 OCCUPANCY OF SITE NOT EXCLUSIVE

Attention is specifically drawn to the fact that Contractors, performing the work of other Contracts, may be brought upon any of the work sites of this Contract. Therefore, the Contractor shall not have exclusive rights to any site of his work and shall fully cooperate and coordinate his work with the work of other Contractors who may be brought upon any site of the work of this Contract. The preceding paragraph applies to those areas outside the regulated Work Area as defined by Title 15, Chapter 1 of RCNY.

1.07 CANCELLATION

The Owner at its option, may terminate this Contract at any time upon written notice to the Contractor, in which event the Owner shall be liable for payment to the Contractor only for the work satisfactorily completed up to and including the date of termination of the Contract. The Contractor shall perform all work in an expeditious workmanlike manner. Unnecessary delays in completing the work ordered may result in cancellation of this Contract.

1.08 SCAFFOLDING

- A. The Contractor shall furnish all the scaffolding of whatever type is necessary to do the work of this Contract, subject to requirements of the Building Code of the Owner.
- B. Any scaffolding used, erected and later dismantled must be employed in a manner that does not damage the walls or floors of the Work Area. Any damage caused by the Contractor in the course of his operations must be repaired at no cost to the Owner.
- C. The area below the scaffolding shall be cordoned off (with a visible barrier such as asbestos hazard caution tape clearly identifying the work area boundaries) as a restricted area for certified asbestos personnel only. The abatement contractor shall regulate all access to his area.

1.09 LOG

- A. The Contractor shall provide a permanently bound log book of minimum 8-1/2" x 11" size at the entrance to the Worker and Waste Decontamination's enclosure system as hereinafter specified. Log book shall contain on title page the project name, name, address and phone number of Owners; name address and phone number of Environmental Control Representative; name, address and phone number of Abatement Contractor; name, name, address and phone number of the Construction Manager; address and phone number of Contractor's and Construction Manager's air testing entity; emergency numbers including, but not limited to local Fire/Rescue

Department. Log book shall contain a list of personnel approved by the laboratory for entry into the Work Area.

- B. All entries into the log shall be made in non-washable, permanent ink and such pen shall be strung to or otherwise attached to the log to prevent removal from the log-in area. Under no circumstances shall pencil entries be permitted.

Upon completion of the job and as a condition of its acceptance, submit the job log book containing day-to-day record of personnel entering the Work Area and any significant event occurring during the abatement project. Daily log entries shall be countersigned by the Construction Manager everyday.

1.10 TELEPHONE PAGING DEVICE

The Contractor or his authorized representative shall, at all times during the normal workday or during periods of overtime work under this Contract, carry a digital telephone paging device ("Beeper") and/or cellular telephone which can be activated by a telephone number in the 212 or 718 or 917 area code. He shall supply to the Owner with the activation number for the device and he is liable to respond back to the calls from the Owner within the next one (1) hour period after he receives the calls from Owner. The cost to the Contractor for this device and all charges accruing thereto is deemed included in the Bid.

1.11 PROTECTIVE EQUIPMENT FOR CONSTRUCTION MANAGER

In addition to personal protective equipment for workers, the Contractor shall make available at each worksite at least four (4) additional uniforms and required respiratory equipment each day for personnel who are authorized to inspect the work site. He/she shall also provide, for the duration of the work at any site involving a decontamination unit for worksite access, a lockable storage locker for use by the Construction Manager. In addition to respiratory masks for workers, the Contractor must have on hand at the beginning of each work day, at least four (4) masks each with two sets of fresh filters, for use by personnel who are authorized to inspect the worksite. The Contractor shall check for proper fit of the respirators of all City personnel authorized to enter the Work Area.

1.12 PROTECTION OF FURNITURE, EQUIPMENT AND WORK SITE

The Contractor is responsible to cover all furniture and equipment that cannot be removed from Work Areas. Moveable furniture and equipment will be removed from Work Areas by Contractor prior to start of work and returned upon successful completion of the final air testing. At the conclusion of the work (after clearance level of air testing reaches to the acceptable limit), the Contractor will remove all plastic covering from walls, floors, furniture, equipment and reinstall furniture and equipment in the cleaned Work Area. He shall remove all shades, curtains and drapes from Work Area, and reinstall the same following the final clean-up.

- A. Use rubber-tired vehicles that use non-volatile fuels for conveying material inside building and provide temporary covering, as necessary, to protect floors.

- B. No materials or debris shall be thrown from windows or doors of the building. Building waste system shall NOT be used to remove refuse.
- C. Debris shall be removed from the work site daily. Premises shall be left neat and clean after each work shift, so that work may proceed for the next regular workday without interruption. Limited bag storage may take place within the Work Area when approved by the Resident Engineer and Construction Manager.
- D. Protect floors and walls along removal routes from damage, wear and staining with contamination control flooring. All finished surfaces to be protected with masonite or other rigid sheathing material.
- E. A preliminary inspection for pre-existing damage shall be conducted by Contractor, Construction Manager and representative of the Owner before commencement of the project.

1.13 DEFINITIONS

- A. General Explanation: Certain terms used in this Specification Section are defined below. Definitions and explanations of this Specification Section are not necessarily complete or exclusive, but are general for the Work to the extent they are not stated more explicitly in another element of the Contract Documents.
- B. Definitions in General Use:
 - 1. Approve: Where used in conjunction with Engineer's response to submittals, requests, applications, inquiries, reports and claims by Contractor, the meaning of term "approved" will be held to limitations of Engineer's responsibilities and duties as specified in Contract Documents. In no case will "approval" by Engineer be interpreted as a release of Contractor from responsibilities to fulfill requirements of Contract Documents.
 - 2. Directed, Requested, etc.: Where not otherwise explained, terms such as "directed," "requested," "authorized," "selected," "approved," "required," "accepted," and "permitted" mean "directed by Engineer," "requested by Engineer," and similar phrases. However, no such implied meaning will be interpreted to extend Engineer's responsibility into Contractor's responsibility for construction supervision.
 - 3. Furnish: Except as otherwise defined in greater detail, term "furnish" is used to mean supply and deliver to project site, ready for unloading, unpacking, assembly, installation, etc., as applicable in each instance.
 - 4. Indicated: The term "indicated" is a cross-reference to graphic representations, notes or schedules on Drawings, to other paragraphs or schedules in the Specifications, and to similar means of recording requirements in Contract Documents. Where terms such as "shown," "noted," "scheduled," and "specified" are used in lieu of "indicated," it is for purpose of

helping reader locate cross-reference, and no limitation of location is intended except as specifically noted.

5. **Install:** Except as otherwise defined in greater detail, term "install" is used to describe operations at Project site including unloading, unpacking, assembly, erection, placing, anchoring, applying, working to dimension, finishing, curing, protecting, cleaning and similar operations, as applicable in each instance.
6. **Installer:** The term "installer" is defined as the entity (person or firm) engaged by Contractor, or its subcontractor or sub-subcontractor for performance of a particular unit of work at Project site, including installation, erection, application and similar required operations. It is a general requirement that such entities (installers) be expert in operations they are engaged to perform.
7. **Owner:** The term "Owner" is defined as representatives of the Owner authorized to coordinate construction activities at the site relating to the project described in the Contract Documents.
8. **Provide:** Except as otherwise defined in greater detail, term "provide" means furnish and install, complete and ready for intended use, as applicable in each instance.
9. **Testing Laboratory:** The term "Testing Laboratory" is defined as an entity engaged by Owner to perform specific inspections or tests of the work, either at Project site or elsewhere; and to report and (if required) interpret results of those inspections or tests.

C. Definitions Relative to Asbestos Abatement:

1. **Abatement:** Procedures physically taken to control fiber release from ACM. This includes removal, encapsulation, enclosure, and repair.
2. **Aggressive Sampling:** Method of sampling in which the individual collecting the air sample creates activity by the use of mechanical equipment during the sampling period to stir up settled dust and simulate activity in that area of the building.
3. **AIHA:** American Industrial Hygiene Association.
4. **Airlock:** System for permitting entrance and exit while restricting air movement between a contaminated area and an uncontaminated area. It consists of two curtained doorways separated by a distance of at least three feet such that one passes through one doorway into the airlock, allowing the doorway sheeting to overlap and close off the opening before proceeding through the second doorway, thereby preventing flow-through contamination.
5. **Air Sampling:** Process of measuring the fiber content of a known volume of air collected during a specific period. The procedure utilized for asbestos follows the NIOSH Standard

- Analytical Method 7400, or the provisional transmission electron microscopy methods developed by the US EPA which are utilized for lower detection levels and specific fiber identification.
6. **Amended Water:** Water to which a surfactant has been added.
 7. **ANSI:** American National Standards Institute
 8. **Area Air Sampling:** Any form of air sampling or monitoring where the sampling device is placed at some stationary location.
 9. **Asbestos:** Any hydrated mineral silicate separable into commercially usable fibers, including but not limited to chrysotile (serpentine), amosite (cumingtonite-grunerite), crocidolite (riebeckite), tremolite, anthophyllite and actinolite.
 10. **Asbestos-Containing Material (ACM):** Asbestos or any material containing more than one-percent asbestos.
 11. **Asbestos-Containing Waste Material:** ACM or asbestos-contaminated objects requiring disposal.
 12. **Asbestos Handler:** Individual who disturbs, removes, repairs, or encloses friable asbestos material. This individual shall have completed approved training course(s) and be in possession of certification issued by NYCDEP and NYSDOL.
 13. **Asbestos Handler Supervisor:** Individual who supervises the handlers during an asbestos project and ensures that proper asbestos abatement procedures as well as individual safety procedures are being adhered to. This individual shall have completed approved training course(s) and be in possession of certification issued by NYCDEP and NYSDOL.
 14. **Asbestos Handling Certificate:** Certificate(s) issued to individuals who have met the criteria established by NYCDEP and/or NYSDOL.
 15. **Asbestos Inspection Report:** A report on the condition of a building or structure in relation to the presence and condition of asbestos therein.
 16. **Asbestos Investigator:** An individual certified by NYCDEP as having successfully demonstrated his or her ability to identify the presence of and evaluate the condition of asbestos in a building or structure.
 17. **Asbestos Project:** Any form of work performed in connection with the alteration, innovation, modification, or demolition of a building or structure which will disturb (e.g. remove, enclose, encapsulate) more than three linear feet or more than three square feet of friable ACM.

18. **ASTM:** the American Society for Testing and Materials.
19. **Authorized Visitor:** Owner and his/her representative, and any representative of a regulatory or other agency having jurisdiction over the project.
20. **Owner:** Person in whom legal title to the premises is vested unless the premises are held in land trust, in which instance Owner means the person in whom beneficial title is vested.
21. **Certified Industrial Hygienist (CIH):** Individual with a minimum of five years experience as an industrial hygienist and who has successfully completed both levels of the examination administered by the American Board of Industrial Hygiene and who is currently certified by that board.
22. **Certified Safety Professional (CSP):** Individual having a bachelor's degree from an accredited college or university and a minimum of four years experience as a safety professional and who has successfully completed both levels of the examination administered by the Board of Certified Safety Professionals and who is currently certified by that board.
23. **Clean Room:** An uncontaminated area or room that is part of worker decontamination enclosure system with provisions for storage of workers' street clothes and protective equipment.
24. **Clearance Air Monitoring:** Employment of aggressive sampling techniques with a volume of air collected to determine the airborne concentration of residual fibers and shall be performed as the final abatement activity.
25. **Commissioner:** Commissioner of the NYCDEP.
26. **Curtained Doorway:** Device that consists of at least three overlapping sheets of polyethylene over an existing or temporarily framed doorway. One sheet shall be secured at the top and left side, the second sheet at the top and right side, and the third sheet at the top and left side. All sheets shall have weights attached to the bottom to ensure that the sheets hang straight and maintain a seal over the doorway when not in use.
27. **Decontamination Enclosure System:** Series of connected rooms, separated from the Work Area and from each other by air locks, for the decontamination of workers, materials, waste containers, and equipment.
28. **Department:** NYCDEP.
29. **Encapsulant (sealant) or Encapsulating Agent:** Liquid material which can be applied to ACM and which temporarily controls the possible release of asbestos fibers from the material either by creating a membrane over the surface (bridging encapsulant) or by

- penetrating into the material and binding its components together (penetrating encapsulant). This may also be used to seal surfaces from which ACM has been removed.
30. **Encapsulation:** Coating or spraying of ACM with a sealant.
 31. **Enclosure:** Construction of airtight walls and/or ceilings between ACM and the facility environment, or around surfaces coated with ACM, or any other appropriate procedure as determined by the Department which prevents the release of asbestos fibers.
 32. **ELAP:** Environmental Laboratory Approval Program administered by the New York State Department of Health.
 33. **EPA or USEPA:** United States Environmental Protection Agency.
 34. **Equipment Room:** Contaminated area or room that is part of the worker decontamination enclosure system with provisions for the storage of contaminated clothing and equipment.
 35. **Fixed Object:** Unit of equipment or furniture in the Work Area that cannot be removed from the Work Area.
 36. **Friable Asbestos Material:** Asbestos or any ACM that can be crumbled, pulverized, or reduced to powder when dry, by hand or other mechanical pressure.
 37. **Glove-Bag Technique:** Method for removing friable ACM from heating, ventilation, and air conditioning (HVAC) ducts, short piping runs, valves, joints, elbows, and other nonplanar surfaces in a non-contained Work Area. The glove-bag assembly is a manufactured device consisting of a glove-bag (constructed of at least 6-mil transparent polyethylene), two inward-projecting long sleeve gloves, one inward-projecting waterwand sleeve, an internal tool pouch, and an attached, labeled receptacle for asbestos waste. The glove-bag is constructed and installed in such a manner that it surrounds the object or area to be decontaminated and contains all asbestos fibers released during the removal process.
 38. **HEPA-Filter:** High efficiency particulate air filter capable of trapping and retaining 99.97 percent of particles (asbestos fibers) greater than 0.3 micrometers mass median aerodynamic equivalent diameter.
 39. **Holding Area:** Chamber in the equipment decontamination enclosure located between the washroom and an uncontaminated area.
 40. **Homogeneous Work Area:** Portion of the Work Area that contains one type of ACM and/or where one type of abatement is used.
 41. **Industrial Hygiene:** Science and art devoted to the recognition, evaluation, and control of those environmental factors or stresses, arising in or from the work place, which may

- cause sickness, impaired health and well being, or significant discomfort and inefficiency among worker or among the citizens of the community.
42. **Industrial Hygienist:** Individual having a college or university degree or degrees in Engineering, Chemistry, Physics or Medicine, or related Biological Sciences who, by virtue of special studies and training, has acquired competence in industrial hygiene. Such special studies and training must have been sufficient in all of the above cognate sciences to provide the abilities:
 - a. To recognize the environmental factors and to understand their effect on people and their well being; and
 - b. To evaluate, on the basis of experience and with the aid of quantitative measurement techniques, the magnitude of these stresses in terms of ability to impair people's health and well being; and
 - c. To prescribe methods to eliminate, control, or reduce such stresses when necessary to alleviate their efforts.
 43. **Large Asbestos Project:** Asbestos project involving the disturbances (e.g. removal, enclosure, encapsulation) of 260 linear feet or more of friable ACM or 160 square feet or more of friable ACM.
 44. **Major Violation:** Any action, on the job performance or lack of performance that may place any individual at risk other than the worker who commits the violation. A major violation is equivalent to two violation points.
 45. **Minor Asbestos Project:** Project involving the disturbance (e.g. removal, enclosure, encapsulation, repair) of more than three linear feet, but not more than 25 linear feet of friable ACM or more than three square feet, but not more than ten square feet of friable ACM.
 46. **Minor Violation:** Any action, on the job performance or lack of performance that may place the worker at risk. A minor violation is equivalent to one violation point.
 47. **Movable Object:** Unit of equipment or furniture in the Work Area that can be removed from the Work Area.
 48. **Negative Air Pressure Equipment:** Portable local exhaust system equipped with HEPA filtration. The system shall be capable of creating a negative pressure differential between the outside and inside of the Work Area.
 49. **NESHAPS:** National Emission Standards for Hazardous Air Pollutants.
 50. **NIOSH:** National Institute for Occupational Safety and Health.

51. **NYSDOL:** New York State Department of Labor.
52. **Occupied Area:** Area of the work site where abatement is not taking place and where personnel or occupants normally function or where workers are not required to use personal protective equipment.
53. **OSHA:** Occupational Safety and Health Administration.
54. **Person:** Individual, partnership, company, corporation, association, firm, organization, governmental agency, administration, or department, or any other group of individuals, or any officer or employee thereof.
55. **Personal Air Monitoring:** Method used to determine employees' exposure to airborne fibers. The sample is collected outside the respirator in the worker's breathing zone.
56. **Personal Protective Equipment (PPE):** Appropriate protective clothing, gloves, eye protection, footwear, and head gear.
57. **Physician:** Person licensed or otherwise authorized under Article 131 Section 65.22 of the New York State Education Law.
58. **Plasticize:** Cover floors and walls with polyethylene sheeting as herein specified or by using spray plastics as acceptable to the Department.
59. **Professional Engineer (PE):** Individual having, at a minimum, a bachelor's degree in engineering from an accredited college or university with four years acceptable experience as an engineer and who has successfully completed both levels of the professional engineers examination administered by the State of New York Department of Education, Division of Professional Licensing.
60. **Qualitative Fit Test:** Individual test subject's responding (either voluntarily or involuntarily) to a chemical challenge outside the respirator face-piece. Three of the most popular methods include: 1) irritant smoke test; 2) odorous vapor test; and 3) taste test.
61. **Quantitative Fit Test:** Exposing the respiratory wearer to a test atmosphere containing an easily detectable, nontoxic aerosol, vapor or gas as the test agent. Instrumentation, which samples the test atmosphere and the air inside the face-piece of the respirator, is used to measure quantitatively the leakage into the respirator. There are a number of test atmospheres, test agents, and exercises to perform during the test.
62. **Registered Architect (RA):** Individual having, at a minimum, a bachelor's degree in architecture from an accredited college or university with three years acceptable experience as an architect and who has successfully completed both levels of the

architects registration examination administered by the State of New York Department of Education, Division of Professional Licensing.

63. **Removal:** Stripping of any asbestos- containing materials from surfaces or components of a facility or taking out structural components in accordance with 40 CFR 61 Subparts A and M.
64. **Shower Room:** Room between the clean room and the equipment room in the worker decontamination enclosure with hot and cold running water controllable at the tap and arranged for complete showering during decontamination.
65. **Small Asbestos Project:** asbestos project involving the disturbance (e.g. removal, enclosure, encapsulation) of more than 25 and less than 260 linear feet of friable ACM or more than ten and less than 160 square feet of friable ACM.
66. **Staging Area:** Work Area near the waste transfer airlock where containerized asbestos waste has been placed prior to removal from the Work Area.
67. **Structural Member:** Load-supporting member of a facility, such as beams and load-supporting walls, or any nonload-supporting member, such as ceiling and nonload-supporting walls.
68. **Surfactant:** Chemical wetting agent added to water to improve penetration.
69. **Visible Emissions:** Emissions containing particulate material that are visually detectable without the aid of instruments.
70. **Washroom:** Room between the Work Area and the holding area in the equipment decontamination enclosure system where equipment and waste containers are wet cleaned and/or HEPA-vacuumed prior to disposal.
71. **Wet Cleaning:** Removal of asbestos fibers from building surfaces and objects by using cloths, mops, or other cleaning tools which have been dampened with amended water.
72. **Work Area:** Designated rooms, spaces, or areas of the building or structure where asbestos abatement activities take(s) place.
73. **Worker Decontamination Enclosure System:** Portion of a decontamination enclosure system designed for controlled passage of workers and authorized visitors, consisting of a clean room, a shower room, and an equipment room separated from each other and from the Work Area by airlocks and curtained doorways.
74. **Work Site:** Premises where abatement activity is being performed. May be composed of one or more Work Areas.

1.14 SPECIAL PRECAUTIONS

- A. The abatement project shall require a detailed plan of action to be prepared by the Abatement Contractor for acceptance by the Owner prior to commencement of work.

The developed detail plan of action shall contain special preparation, removal and cleanup techniques. The purpose of these special techniques is to intercept removed asbestos containing materials before they settle in nooks and crannies and become difficult to clean.

The detailed plan of action shall also include location(s) of asbestos control area(s), decontamination chamber(s), sequencing of asbestos related work, disposal plan, type of foam and asbestos sealer to be used, air monitoring and a detailed description of the method to be employed in order to control pollution, including but not limited to emergency procedures for fire and medical emergencies and for failure of seals. This plan must be approved by the Owner prior to the start of any asbestos work.

It is the Contractor's sole responsibility to plan and perform the work in such a manner that it is brought to successful completion. This includes Work Area preparation, removals and final cleaning to an acceptable standard.

- B. The Abatement Contractor shall also develop a detailed plan of action to respond to the release of airborne asbestos fibers in the event of an emergency. This plan (which must be accepted by the Construction Manager, Resident Engineer and School Principal) is to include but not limited to; procedures to isolate and eliminate ACM, emergency evacuation procedures, telephone numbers of all relevant parties such as the Construction Manager, Resident Engineer, school principal, school custodian, air monitor, etc.
- C. Prior to start of preparatory work as discussed, the Contractor shall attend a preconstruction conference and walk-through attended by Construction Manager and Testing Lab Environmental Control Representative (ECR).

Agenda for this conference will include but not necessarily be limited to:

1. Contractor's scope of work, work plan and schedule
2. Contractor's safety and health precautions including protective clothing and equipment and decontamination procedures.
3. Testing laboratory's air monitoring plan.
4. Contractor's work procedures including methods of job site preparation and decontamination chamber set-up, biodegradable foam and procedures, and removal methods; respiratory procedures; procedures for decontaminating the objects in the removal work procedures sections, methods of handling removed material and disposal procedures; cleanup procedures and equipment; signs and labels; fire exists and

emergency procedures.

5. Contractor's plan for 24 hours job security both for prevention of theft and for barring entry of curious but unprotected personnel into Work Areas.
6. Temporary utilities.
7. Documentation of compliance with environmental laws and standards.

1.15 STANDARD OPERATING PROCEDURES

- A. Develop and implement a written standard procedure for abatement work to ensure maximum protection and safeguard from asbestos exposure of the workers, the non work areas of the school, visitors, employees, public, and environment.
- B. The standard operating procedure shall ensure:
 1. Tight security from unauthorized entry into the workspace.
 2. Restriction of Contractor's personnel to the immediate Work Area and access/egress routes.
 3. Donning of proper protective clothing and respiratory protection prior to entering the Work Area.
 4. Safe work practices in the work place, including provisions for inter-room communications, exclusion of eating, drinking, smoking, or in any way breaking the respiratory protection.
 5. Proper exit practices from the work space to the outside through the showering and decontamination facilities.
 6. Removing asbestos in ways that minimize release of fibers.
 7. Packing, labeling, loading, transporting, and disposing of contaminated material in a way that minimize exposure and contamination.
 8. Emergency evacuation procedures, for medical or safety situations, to minimize the potential exposure to airborne asbestos fibers for emergency personnel, building occupants, and building environment.
 9. Safety from accidents in the workspace, especially from electrical shocks, fall hazards associated with scaffolding, slippery surfaces, and entanglements in loose hoses and equipment.
 10. Provisions for effective supervision, air monitoring and personnel monitoring for

exposure during the work.

11. Engineering systems that minimize exposure to fibers within the workspace.
 12. Contractor shall provide a 24-hour fire watch throughout the entire term of the project, to protect against fire and unauthorized entry into the workspace. Fire watch shall be performed by an individual who is a certified asbestos worker capable of entering the Work Area for regular inspections.
- C. Provide an Asbestos Handler Supervisor to provide continuous supervision of all work, and to be responsible for the following:
1. Ensure that individuals are using proper personal protective equipment and are trained in its use.
 2. Maintain entry log records and ensure that they are recorded in accordance with the provisions of Title 15, Chapter 1 of RCNY.
 3. Surveillance of the Work Areas at a minimum of once per work shift or as required by Title 15, Chapter 1 of RCNY, to ensure that the workers personal protective equipment is not torn or ripped and that respiratory protection is worn at all times.
 4. Ensure that sufficient personal protective equipment is stored in the clean room.
 5. Take precautions to prevent heat stress. Precautions include, but are not limited to, selecting lightweight protective clothing, reducing the work rate, and providing adequate fluid breaks.
- D. **ENGINEERING CONTROLS**
1. The 8-hour time weighted average airborne concentration of fibers to which any passerby may be exposed shall not exceed 0.01 fibers per cubic centimeter of air when fibers have a physical dimension longer than 5 micrometers as determined by the method prescribed in these Specifications.
 2. All Large asbestos projects shall utilize negative pressure ventilation equipment.
 3. The negative pressure ventilation equipment shall operate continuously, 24 hours a day, from the establishment of isolation barriers through successful clearance air monitoring. If such equipment shuts off, adjacent areas shall be monitored for asbestos fibers.
 4. A static negative air pressure of 0.02 inches (minimum) water column shall be maintained at all times in the work place during abatement to ensure that contaminated air in the Work Area does not filter back to uncontaminated areas.

5. On loss of negative pressure or electric power to the negative pressure ventilating units, abatement shall stop immediately and shall not resume until power is restored and negative pressure ventilation equipment is operating again.
6. Negative pressure ventilation equipment shall be exhausted to the outside of the building away from occupied areas.
 - a. At no time shall the negative pressure ventilation unit exhaust with 40 feet of a receptor or adversely affect the intake ports, louvers, or entrances for the building or adjacent buildings.
 - b. Heavy duty ducting of equivalent, or larger, shape and dimension as that of the negative pressure ventilation exhaust port shall be used to exhaust to the structure.
 - c. All ducting shall be sealed and braced or supported to maintain airtight joints.
7. Where ducting to the outside is not possible, a second negative pressure ventilation unit *compatible with the primary unit's capacity shall be connected in series*. The area receiving the exhaust shall have sufficient, non-recycling exhaust capacity to the outside of the structure.
8. In the event that there is a failure of the containment system or a breach in the Isolation Barriers, all abatement work will cease and the Contractor will immediately correct the condition. Abatement work will not resume until the Work Area has been smoke tested by the third party laboratory and approved by the Construction Manager.

E. LOCKDOWN ENCAPSULATION PROCEDURES

The following procedures shall be followed to seal in nonvisible residue while conducting lockdown encapsulation on all surfaces from which ACM is removed:

1. Only encapsulants rated as acceptable or marginally acceptable on the basis of Battelle Columbus Laboratory test procedures and rating requirements developed under the 1978 USEPA Contract shall be used for lockdown encapsulation.
2. The encapsulant solvent or vehicle shall not contain a volatile hydrocarbon unless reviewed and approved by DEP.
3. Latex paint with solids content greater than 15 percent shall be considered a lockdown sealant for coating all non-metallic surfaces.
4. Encapsulants shall be applied using airless spray equipment. Spraying is to occur at the lowest pressure range possible to minimize fiber release from encapsulant impact at the surface. It shall be applied with a consistent horizontal or vertical motion.

1.16 FEES

The Contractor shall be responsible for and shall include in its Bid any and all fees or charges imposed by Local, State or Federal Law, Rule or Regulation applicable to the work specified herein, including fees or charges which may be imposed subsequent to the date of the Bid opening.

1.17 NOTIFICATIONS, PERMITS, WARNING SIGNS, LABELS, AND POSTERS

- A. Erect bilingual (English-Spanish) warning signs around the work space and at every point of potential entry from the outside and at main entrance to building which can be viewed by the public without obstruction, in accordance with OSHA 29 CFR 1926.1101 (Sign Specifications) and Title 15, Chapter 1 of RCNY. The warning signs shall be a bright color so that they will be easily noticeable. The size of the sign and the size of the lettering shall be no less than OSHA requirements.
- B. Provide the required labels for all polyethylene bags and all drums utilized to transport contaminated material to the landfill in accordance with OSHA 29 CFR 1926.1101 and by 49 CFR Parts 171 and 172 of the Department of Transportation regulations.
- C. Provide any other signs, labels, warnings, and posted instructions that are necessary to protect, inform and warn people of the hazard from asbestos exposure. Post in a prominent and convenient place for the workers a copy of the latest applicable regulations from OSHA, EPA, NIOSH, State of New York and New York City and any additional items mandated for posting by the aforementioned regulations.

- D. Furnish all permits, variances and notices required to perform the Work.

1.18 EMERGENCY PRECAUTIONS

- A. Establish emergency and fire exits from the Work Area. The clean side of all emergency exits shall be equipped with two full sets of protective clothing and respirators at all times.
- B. Notify local medical emergency personnel, both ambulance crews and hospital emergency room staff prior to commencement of abatement operations as to the possibility of having to handle *contaminated or injured workmen, and shall be advised on safe decontamination.*
- C. Prepare to administer first aid to injured personnel after decontamination. Seriously injured personnel shall be treated immediately or evacuated immediately for decontamination. When an injury occurs, precautions shall be taken to reduce airborne fiber concentrations (i.e. misting of the air with water) until the injured person has been removed from the Work Area.
- D. Notify, before actual removal of the asbestos material, the local police and fire departments to the danger of entering the Work Area. Contractor shall make every effort to help these agencies form plans of action should their personnel need to enter the contaminated area.

1.19 SUBMITTALS

A. *Pre-Construction Submittals*

1. Attend a pre-construction meeting scheduled by the Owner. This meeting shall also be attended by designated representative of the third party air monitoring firm (Contractor's and Construction Manager's air testing entity); facility manager, Construction Manager and the Resident Engineer. At this meeting, the Contractor shall present three copies of the following items, bound and indexed. The detailed plan of action must be submitted at least five (5) days prior to the pre-construction meeting.
 - a. Contractor's scope of work, work plan and schedule.
 - b. Notifications to Government Agencies.
 - c. Copies of Permits, clearance and licenses if required.
 - d. Schedules: the Contractor shall provide to the Resident Engineer and Construction manager a copy of the following schedules for approval. Once approved, schedules shall be maintained and updated as received. Contractor shall post a copy of all schedules at the site:
 - (1) A construction schedule stating critical dates of the project including, but not limited to, mobilization, Work Area preparation, demolition, gross removal, fine cleaning, encapsulation, inspections, clearance monitoring,

- and phase of refinishing and final inspections. The schedule shall be updated biweekly, at a minimum.
- (2) A schedule of staffing stating number of workers per shift per activity, name and number of supervisor(s) per shift, shifts per day, and total days to be worked.
 - (3) Submit all changes in schedule or staffing to the Resident Engineer prior to implementation.
 - (4) A schedule of equipment to be used including numbers and types of all major equipment such as HEPA Air Filtration Units, HEPA-vacuums, airless sprayers, Water Atomizing Devices and Type "C" compressors.
- e. A written plan and shop drawings for preparation of work site and decontamination chamber.
 - f. Description of protective clothing and approved respirator to be used, make, model, NIOSH approval numbers.
 - g. Delineation of responsibility of work site supervision, including competent person, with names, resumes, and home telephone numbers.
 - h. Explanation of decontamination sequence and isolation techniques.
 - i. Description of specific equipment to be utilized, including make and model number of air filtration devices, vacuums, sprayers, etc.
 - j. Description of any prepared methods, procedures, techniques, or equipment other than those specified in the Contract Documents.
 - k. Explanation of the handling of contaminated wastes including EPA and NYCDEP identification numbers of Waste Hauler.
 - l. Description of the final clean-up procedures to be used.
 - m. Name and qualifications of Contractor's testing laboratory including AIHA accreditation, and proof of NIOSH PAT and NIST/NVLAP Bulk Quality Assurance Proficiency of OSHA samples for approval by the City of New York Department of Design and Construction.
 - n. Written description of emergency procedures to be followed in case of injury, fire or fiber dispersal. This section must include evacuation procedures, source of medical assistance (name and telephone number) and procedures to be used for access by medical personnel (examples: first aid squad and physician). NOTE:

Necessary Emergency Procedures Shall Take Priority Over All Other Requirements of These Specifications.

- o. **Material Safety Data Sheets (MSDS) for encapsulants, sealants, firestopping foam, cleaners/disinfectants, spray adhesive, and any and all potentially hazardous materials that may be employed on the project. No work involving the aforementioned will be allowed to proceed until MSDS are reviewed and approved by the Resident Engineer.**
 - p. **Worker Training and Medical Surveillance: Contractor shall submit a list of the persons who will be employed by him and his Subcontractors in the removal work. Present evidence that workers have received proper training required by the regulations and the medical examinations required by OSHA 29 CFR 1926.1101.**
 - q. **Logs: Specimen copies of daily progress log, visitor's log, and disposal log.**

 - (1) **The Contractor shall provide a permanently bound log book of minimum 8-1/2" x 11" size at the entrance to the Worker and Waste Decontamination enclosure system as hereinafter specified. Log book shall contain on title page the project name, name, address and phone number of Environmental Control Representative; name, address and phone number of Abatement Contractor; name, address and phone number of Contractor and City's air testing entity; emergency numbers including, but not limited to local Fire/Rescue Department. Log book shall contain a list of personnel approved by the laboratory for entry into the Work Area.**
 - (2) **All entries into the log shall be made in non-washable, permanent ink and such pen shall be strung to or otherwise attached to the log to prevent removal from the log-in area. Under no circumstances shall pencil entries be permitted. Any significant events occurring during the abatement project shall be entered into the log. Upon completion of the job, the Contractor shall submit the log book containing a day-to-day record of personnel log entries counter signed by the Resident Engineer everyday.**
 - r. **Worker's Acknowledgments: Submit statements signed by each employee that the employee has received training in the proper handling of ACM understands the health implications and risks involved; and understands the use and limitations of the respiratory equipment to be used.**
- B. Submit copies of the following items to the Resident Engineer and Construction Manager during the work:**

1. Security and safety logs showing names of person entering work space, date and time of entry and exit, record of any accident, emergency evacuation, and any other safety and/or health incident.
2. Progress logs showing the number of workers, supervisors, hours of work and tasks completed shall be submitted daily to the Resident Engineer and Construction Manager.
3. Floor plans indicating Contractor's current work progress shall be submitted for review by the Resident Engineer and Construction Manager at weekly progress meetings.
4. All Contractor's air monitoring and inspection results.

C. Project Closeout Submittals

1. Upon completion of the project and as a condition of acceptance, the Contractor shall present two copies of the following items, bound and indexed:
 - a. Lien Waivers from Contractor, Sub-Contractors and Suppliers,
 - b. Daily OSHA air monitoring results,
 - c. All Waste Manifests (Asbestos and Construction Debris), seals and disposal logs.
 - d. Field Sign-In/Sign-Out Logs for every shift,
 - e. Copies of all Building Department Forms and Permits,
 - f. A Letter of Compliance stating that all the work on this project was performed in accordance with the Specifications and all applicable Federal, State and Local regulations,
 - g. All Warranties as stated in the Specifications,
 - h. Fully executed disposal certificates and transportation manifest.

1.20 QUALITY ASSURANCE

- A. Notification to EPA: Prior to start of the project, the Contractor shall be require to notify the Regional Federal Environmental Protection Agency Office and must obtain the instructions concerning proper disposal of asbestos waste materials.
- B. All work required for the completion of this project or called for in this Specification must be executed in a workmanlike manner by using the appropriate methods established by regulatory requirements and/or industrial standards. All workmanship or work methods are subject to review and acceptance by the Resident Engineer. Throughout the Specification, reference is

made to codes and standards which establish qualities, levels or types of workmanship which will be considered acceptable. It is the Abatement Contractor's responsibility to comply with these codes and standards during the execution of this work.

- C. All materials and equipment required or consumed during the work of this Contract must meet the minimum acceptable criteria established by codes and standards referenced elsewhere in this Specification. Materials and equipment must be submitted for prior approval as part of the Contractor's "Shop Drawings".
- D. Inspection: The Contractor shall conduct inspections of the work sites as often as the nature of abatement work require. The cleanliness maintained at the worksites shall conform to the requirements of the reference codes and that no visible emissions from worksites shall be evident.
- E. It is the Abatement Contractor's responsibility, when so required by the Specification or upon written request from the Owner or his representative to furnish all required proof that workmanship, materials and/or equipment meet or exceed the codes and standards referenced. Such proof shall be in the form requested, typically a certified report or test conducted by a testing entity approved for that purpose by Owner.
- F. The Contractor shall furnish proof that employees working under his supervision have had instruction on the dangers of asbestos exposure, on respirator use, decontamination, and OSHA regulations. This proof shall be in the form of a notarized affidavit to the effect that the above requirements have been satisfied.
- G. The Contractor will have at all times in his possession and in view at the job site the OSHA regulations 29 CFR 1910.1001, and 1926.1101 Asbestos, and Environmental Protection Agency 40 CFR, Part 61, subpart B: National Emission Standard for asbestos, asbestos stripping, work practices and disposal of asbestos waste. He shall also have one copy of NYC Title 15, Chapter 1 of RCNY and NYS DOL ICR 56 at the job site at all times.
- H. Familiarity with Pertinent Codes and Standards: In procuring all items used in this work, it is the Contractor's responsibility to verify the detailed requirements of the specifically named codes and standards and to verify that the items procured for use in this work meet or exceed the specified requirements, and are suitable for their intended use. In addition to the standards described in this Section, the Contractor shall maintain that all his work complies with requirements of pertinent governmental agencies having jurisdiction.
- I. Storage, transport and disposal of contaminated waste shall be in accordance with all applicable rules and regulations including NYC Local Law 70/85.

Disposal of Asbestos Waste: The Contractor must furnish a properly executed waste manifest.

- J. Rejection of Non Complying Items: The Owner reserves the right to reject items incorporated into the work that fail to meet the specified minimum requirements. The Owner further reserves

the right, and without prejudice to other recourse that maybe taken, to accept non-complying items subject to an adjustment in the Contract amount as approved by the Owner.

K. Applicable Regulations, Codes and Standards: Applicable standards listed in these Specifications include, but are not necessarily limited to, standards promulgated by the following agencies and organizations:

1. United States Environmental Protection Agency (EPA or USEPA)
Region II
Asbestos NESHAPS Contact
Air & Waste Management Division
(Air Compliance Branch) - USEPA
Federal Plaza, Room 500
New York, New York 10278
212-264-6770
2. Occupational Safety and Health Administration (OSHA)
Region II - Regional Office
Federal Plaza, Room 900
New York, New York 10278
212-264-2525
3. National Electrical Code (NEC)
See NFPA
4. National Fire Protection Association (NFPA)
Atlantic Avenue
Boston, Massachusetts 02201
5. National Institute for Occupational Safety and Health (NIOSH)
Robert A. Taft Laboratory
Columbia Pkwy
Cincinnati, Ohio 45226-1998
800-35-NIOSH
6. Department of Health and Human Services (DHHS)
Asbestos Removal
Federal Plaza
New York, New York 10007
212-264-2560
7. Specifications Sales (3F21) Building 197,
Washington Navy Yard, GS
Washington, DC

8. American National Standards Institute (ANSI)
(Successor to USASI and ASA)
Broadway
New York, New York 10018
 9. American Society for Testing and Materials (ASTM)
Race Street
Philadelphia, Pennsylvania 19103
 10. New York City Department of Environmental Protection (NYCDEP)
Bureau of Air Resources
59-17 Junction Boulevard, 8th Floor
Corona, New York 11368
718-595-3682
 11. New York City Department of Sanitation
125 Worth Street, Room 710
New York, New York 10013
212-566-1066
 12. New York State Department of Labor (NYSDOL)
Division of Safety and Health
Engineering Services Unit
State Office Building Campus
Albany, New York 12240-0010
- L. Post all applicable regulations in a conspicuous place at the job site. Assure that the regulations are not altered, defaced or covered by other materials. One copy of each regulation must also be kept at Contractor's office.

1.21 OWNER/CONTRACTOR RESPONSIBILITIES

- A. The normal occupants of the Work Areas will be relocated by the Owner prior to the performance of the abatement work and returned there to at the conclusion of the abatement work, at no cost to the Contractor. However, the Contractor shall protect all furniture and equipment in the Work Areas in a manner as herein specified. In addition, the Contractor shall perform the work of this Contract in a manner that will be least disruptive to the normal use of the non-Work Areas in the building.
- B. The Contractor shall be responsible for cleaning all portable items not specifically addressed by the Facility, in the Work Areas, or dispose of same as contaminated waste.
- C. The facility will provide the Contractor with a list of items that cannot be removed and need special attention.

- D. The facility will stop all deliveries that may be scheduled to the Work Area while work is in progress.
- E. Facilities shall have authorized personnel on site at all times or supply the Contractor with means of contacting such personnel without unreasonable delay. Such personnel shall have access to all areas, have knowledge of electrical, and air handling equipment. Such personnel shall assist the Contractor in case of any power failure or breakdown to shut down air supply systems, to reset and control all protective systems such as alarms, sprinklers, locks, etc. The Facility shall ensure no active air handling systems are operating within the Work Area.
- F. The other trades shall not occupy the portions of the building, in which work is being performed during the entire asbestos removal operation, including completion of clean up.
- G. The Contractor shall provide a plan for 24 hours job security both for prevention of theft and for barring entry of curious but unprotected personnel into Work Areas.
- H. Should the failure of any utility occur, the Owner will not be responsible to the Contractor for loss of time or any other expense incurred.
- I. The facility will be responsible to notify the Contractor of any planned electrical power shutdowns in order to ensure that there are no power interruptions in the negative air pressure systems.

1.22 USE OF BUILDING FACILITIES

- A. The Owner shall make available to the Contractor, from existing outlets and supplies, all reasonably required amounts of water and electric power at no charge.
- B. Electric power to all Work Areas shall be shut down and locked out except for electrical equipment that must remain in service. Safe temporary power and lighting shall be provided by Contractor in accordance with applicable codes. All power to Work Areas shall be brought in from outside the area through ground-fault interrupter circuits installed at the source. Stationary electrical equipment within the Work Area, which must remain in service, shall be adequately protected, enclosed and ventilated. The Facility and Construction Manager will identify all electric lines that must remain in service. Contractor shall protect all lines.
- C. Contractor shall provide, at his own expense, all electrical, water, and waste connections, tie-ins, extensions, and construction materials, supplies, etc. All water tie-ins shall be hard piped with polyethylene or copper piping. At the end of each shift, Contractor shall disconnect all hoses within the work zone and place in equipment room of the worker decontamination unit. Contractor shall ensure positive shutoff of all water to Work Area during non-working hours.

D. Utilities:

1. General:

- a. All temporary facilities required to be installed, shall be subject to the approval of the Owner. Prior to starting the work at any site; specify clearly the temporary locations of facilities preferably with sketches and submit the same to the Resident Engineer and Construction Manager for approval.

2. Water:

- a. The Owner will furnish all water needed for construction, at no cost to the Contractor in buildings under their jurisdiction. All temporary plumbing or adaptations to supply the needs of the Work Area shall be performed and removed by the Contractor and the cost thereof included in the Lump Sum price Bid for abatement work.. Shower water for the decontamination unit shall be provided hot. Heating of water, if necessary, shall be provided by the Contractor.

3. Electricity:

The Owner will furnish all electricity needed for construction, at no cost to the Contractor in buildings under their jurisdiction. All temporary electrical work or adaptations to supply the needs of the Work Area shall be installed and removed by the Contractor and the cost thereof included in the Lump Sum price Bid for abatement work.

All temporary lighting and temporary electrical services for use in the Work Area shall be in weather proof enclosures and be ground fault protected and:

- (1) Shall be performed at no additional charge to the Owner.
- (2) Shall be performed at times not interfering with the other activities in the building.

- E. Contractor shall provide a separate temporary electric panel board to power Contractor's equipment. The Facility and Construction Manager will designate an existing electrical source in proximity to the Work Area. Contractor's licensed electrician shall provide temporary tie-in via cable, outlet boxes, junction boxes, receptacles and lights, all with ground fault interruption. At no time shall extension cords greater than 50-feet in length be allowed. All temporary electrical installation shall be in accordance with OSHA regulations. The electric shut down for power panel tie-in will be on off-hours and must be coordinated with the Facility and Construction Manager. The Contractor shall provide to the Construction Manager a specification and drawing outlining his power requirements at the pre-construction meeting.

- F. Additional electrical equipment (i.e. transformers, etc.) which is necessary due to the lack of existing power on the floor shall be at the Contractor's expense.
- G. Contractor shall provide fire protection in accordance with all State and Local fire codes.
- H. When temporary service lines are no longer required, they shall be removed by the Contractor. Any parts of the permanent service lines, grounds and buildings, disturbed or damaged by the installation and/or removal of the temporary service lines, shall be restored to their original condition by the Contractor. Senior Stationary Engineer will inspect and test all switches, controls, gauges, etc. and shall submit a list to the Resident Engineer and Construction Manager of any equipment damaged by the Contractor.
- I. Contractor shall supply hot shower water necessary for use in the contamination unit.

1.23 USE OF THE PREMISES

- A. Contractor shall confine his apparatus, the storage of materials, and supplies, and the operation of his workmen to limits established by law, ordinances, and the directions of the Resident Engineer, Construction Manager and the Facility. All flammable or combustible materials shall be properly stored to obviate fire and in areas approved by the Facility.
- B. Contractor shall assure that no exits from the building are obstructed, that appropriate safety barriers are established to prevent access, and that Work Areas are kept neat, clean, and safe.
- C. All surrounding work, fixtures, soil lines, drains, water lines, gas pipes, electrical conduit, wires, utilities, duct work railings, shrubbery, landscaping, etc. which are to remain in place shall be carefully protected and, if disturbed or damaged, shall be repaired or replaced as directed by the Owner, at no additional cost.
- D. All routes through the building to be used by the Contractor shall first be approved by the Resident Engineer, Construction Manager and the Facility.
- E. Attention is specifically drawn to the fact that other Contractors, performing the work of other Contracts, may be (or are) brought upon any of the work sites of this Contract. Therefore, the Contractor shall not have exclusive rights to any site of his work and shall fully cooperate and coordinate his work with the work of other Contractors who may be on (or are on) any site of the work of this Contract. Regulated area excepted.
- F. Temporary toilet facilities must be provided by the Contractor on the site. Coordinate location of facilities with the Construction Manager and Resident Engineer. No toilet facilities will be allowed in the Work Area.

1.24 RESPIRATORY PROTECTION REQUIREMENTS

- A. Respiratory protection shall be worn by all individuals who may be exposed to asbestos fibers from the initiation of the asbestos project until all areas have successfully passed clearance air monitoring in accordance with Regulations and these Specifications.
- B. Contractor shall develop and implement a written respiratory protection program with required site-specific procedures and elements. The program shall be administered by a properly trained individual. The written respiratory protection program shall include the requirements set forth in OSHA Standard 29 CFR 1910.134, at a minimum.
- C. The Contractor shall provide workers with individually issued and marked respiratory equipment. Respiratory equipment shall be suitable for the asbestos exposure level(s) in the Work Area(s), as specified in OSHA Standards 29 CFR 1910.134 and 29 CFR 1926.1101, NIOSH Standard 42 CFR 84, or as more stringently specified otherwise, herein.
- D. Where respirators with disposable filter parts are employed, the Contractor will provide sufficient filter parts for replacement as necessary or as required by the applicable regulation.
- E. All respiratory protection shall be OSHA/NIOSH approved. All respiratory protection shall be provided by Contractor, and used by workers in conjunction with the written respiratory protection program.
- F. Contractor shall provide respirators selected by an Industrial Hygienist that meet the following requirements:

Airborne Concentration of Asbestos or Conditions of Use	Required Respirator
Not in excess of 1 fibers per cubic centimeter (f/cc), ten times Permissible Exposure Level (PEL)	Half-mask air purifying respirator, other than a disposable respirator, equipped with high efficiency filters.
Not in excess of 5 f/cc, 50 times PEL	Full facepiece air-purifying respirator equipped with high efficiency filters.
Not in excess of 10 f/cc, 100 times PEL	Powered air purifying respirator equipped with high efficiency filters or any supplied air respirator operated in continuous flow mode.
Not in excess of 100 f/cc, 1,000 times PEL	Full facepiece supplied air respirator operate in pressure demand mode.
Greater than 100 f/cc, 1,000 times PEL, or unknown concentration	Full facepiece supplied air respirator operate in pressure demand mode, equipped with an auxiliary positive pressure self-contained breathing apparatus.

- G. Selection of high efficiency filters:

1. All high efficiency filters shall have a nominal efficiency rating of 100 (99.97-percent effective) when tested against 0.3-micrometer monodisperse diethyl-hexyl phthalate (DOP) particles.
 2. Choose N-, R-, or P-series filters based upon the presence or absence of oil particles.
 - a. N- series filters shall only be used for non-oil solid and water based aerosols or fumes.
 - b. R- and P-series filters shall be used when oil aerosols or fumes (i.e., lubricants, cutting fluids, glycerin, etc.) are present. The R-series filters are oil resistant and the P-series filters are oil proof.
 - c. Follow filter manufacture recommendations.
 3. If a vapor hazard exists, use an organic vapor cartridge in combination with the high efficiency filter.
- H. Historical airborne fiber level data may serve as the basis for selection of the level of respiratory protection to be used for an abatement task. Historical data provided by the Contractor shall be based on personal air monitoring performed during work operations closely resembling the processes, type of material, control methods, work practices, and environmental conditions present at the site. Documentation of aforementioned results may be requested by the City and/or Testing Laboratory for review. This will not relieve the Contractor in providing personal air monitoring to determine the time-weighted average (TWA) for the work under contract. The TWA shall be determined in accordance with 29 CFR 1926.1101.
- I. At no time during actual removal operations shall half-mask air purifying respirators be allowed unless a full 8-hour TWA and ceiling concentration have been conducted, and reviewed by the Resident Engineer and Construction Manager . Use of single use dust respirators is prohibited for the above respiratory protection.
- J. Workers shall be provided with personally issued and individually marked respirators. Respirators shall not be marked with any equipment that will alter the fit of the respirator in any way. Only waterproof identification markers shall be used.
- K. Contractor shall ensure that the workers are qualitatively or quantitatively fit tested by an Industrial Hygienist initially and every 12 months thereafter with the type of respirator he/she will be using.
- L. Whenever the respirator design permits, workers shall perform the positive and negative air pressure fit test each time a respirator is worn. Powered air-purifying respirators shall be tested for adequate flow as specified by the manufacturer.

- M. No facial hairs (beards) shall be permitted to be worn when wearing respiratory protection that requires a mask-to-face seal.
- N. Contact lenses shall not be worn in conjunction with respiratory protection on asbestos projects.
- O. If a worker wears glasses, a spectacle kit to fit their respirator shall be provided by Contractor at Contractor's expense.
- P. Respiratory protection maintenance and decontamination procedures shall meet the following requirements:
 - 1. Respiratory protection shall be inspected and decontaminated on a daily basis in accordance with OSHA 29 CFR 1910.134 (b); and
 - 2. High efficiency filters for negative pressure respirators shall be changed after each shower; and
 - 3. Respiratory protection shall be the last piece of worker protection equipment to be removed. Workers must wear respirators in the shower when going through decontamination procedures as stated in Section 3.03 and/or 3.04.
 - 4. Airline respirators with high efficiency filtered disconnect shall be disconnected in the equipment room and worn into the shower. Powered air-purifying respirator face pieces shall be worn into the shower. Filtered/power pack assemblies shall be decontaminated in accordance with manufacturers recommendations; and
 - 5. Respirators shall be stored in a dry place and in such a manner that the face-piece and exhalation valves are not distorted; and
 - 6. Organic solvents shall not be used for washing of respirators.
- Q. Authorized visitors shall be provided with suitable respirators and instruction on the proper use of respirators whenever entering the Work Area. Qualitative fit test shall be done to ensure proper fit of respirator.

1.25 PROTECTIVE CLOTHING

- A. Provide worker protection as required by the most stringent OSHA and/or EPA standards applicable to the work. Provide to all workers, foremen, superintendents, authorized visitors and inspectors, protective disposable clothing consisting of full-body coveralls, head covers, gloves and 18-inch high boot type covers or reusable footwear.
- B. In addition to personal protective equipment for workers, the Contractor shall make available at each worksite at least four (4) additional uniforms and required respiratory equipment each day for personnel who are authorized to inspect the work site. He/she shall also provide, for the

duration of the work at any site involving a decontamination unit for worksite access, a lockable storage locker for use by the Resident Engineer. In addition to respiratory masks for workers, the Contractor must have on hand at the beginning of each work day, at least four (4) masks each with two sets of fresh filters, for use by personnel who are authorized to inspect the worksite. The Contractor shall check for proper fit of the respirators of all City personnel authorized to enter the Work Area.

- C. Asbestos handlers involved in tent procedures shall wear two (2) disposable suits, including gloves, hood and footwear, and appropriate respiratory equipment. All street clothes shall be removed and stored in a clean room within the work site.. The double layer personal protective equipment shall be used for installation of the tent and throughout the procedure, if a decontamination unit (with shower and clean room) is contiguous to the Work Area, only one (1) layer of disposable personal protective equipment shall be required; in this case, prior to exiting the tent the worker shall HEPA vacuum and wet clean the disposable suit.
 - 1. The outer disposable suit (if 2 suits are worn) shall be removed and remain in the tent upon exiting. Following the tent disposal and work site clean up the workers shall immediately proceed to a shower at the work site. The inner disposal unit and respirator shall be removed in the shower after appropriate wetting. The disposal clothing shall be disposed of as asbestos-containing waste material. The workers shall then fully and vigorously shower with supplied liquid bath soap, shampoo, and clean dry towels.
- D. Coveralls: provide disposable full-body coveralls and disposable head covers. Require that they be worn by all workers in the Work Area. Provide a sufficient number for all required changes for all workers in the Work Area.
- E. Boots: provide work boots with non-skid soles, and where required by OSHA, foot protection, for all workers. Provide boots at no cost to workers. Paint uppers of all boots yellow with waterproof enamel. Do not allow boots to be removed from the Work Area for any reason after being contaminated with ACM and/or dust.
- F. Hard Hats: provide hard hats as required by OSHA for all workers, and provide a minimum of four spares for Inspectors, visitors, etc. Label all hats with same warning label as used on disposal bags. Require hard hats to be worn at all times that work is in progress that may cause potential head injury. Provide hard hats of the type with polyethylene strap suspension. Require hats to remain in the Work Area throughout the work. Thoroughly clean and decontaminate and bag hard hats prior to removing them from the Work Area at the end of the work.
- G. Goggles: provide eye protection (goggles) as required by OSHA for all workers involved in any activity that may potentially cause eye injury. Require them to be worn at all times during these activities. Thoroughly clean and decontaminate goggles before removing them from the Work Area.
- H. Gloves: provide work gloves to all workers, of the type dictated by the Work and OSHA Standards. Do not remove gloves from the Work Area. Dispose of as asbestos-contaminated waste at the end of the work. Gloves shall be worn at all times, except during Work Area

Preparation activities that do not disturb ACM.

- I. Reusable footwear, hard hats and eye protection devices shall be left in the contaminated Equipment Room until the end of the Asbestos Abatement Work.
- J. Disposable protective clothing shall be discarded and disposed of as asbestos waste every time the wearer exits from the workspace to the outside through the decontamination facility.
- K. Respirators, disposable coveralls, headcovers and footcovers shall be provided by Contractor for the Facilities Representative, Resident Engineer and any other authorized representative who may inspect the Work Area. Provide two respirators and six respirator filter changes per day.

1.26 AIR MONITORING

Work Area air monitoring for the pre, during and post abatement (clearance testing) shall be performed in accordance with the most stringent of the Federal, State and City of New York Laws and Regulations and the latest amendments to these laws concerning the asbestos removal. They shall be performed by a third party laboratory employed by the Owner under a separate Contract. The cost of this work is not included in the Bid.

Air Sampling and Analysis requirements under NYS DOL ICR 56 requires that the selected methodology of sampling and analysis of asbestos be the same for all pre-abatement, abatement-and-post-abatement monitoring, however whenever final air clearance is required, AHERA and the New York State Education Department requires public school final air clearance be performed and analyzed using the TEM method, as well as in nonpublic school asbestos projects.

A. Air Sampling and Analysis:

Section 763.90 of AHERA and the New York State Education Department requires that public schools accomplish final air sampling and analysis of all removal, encapsulation, or enclosure projects by using the transmission electron microscopy (TEM) method. Under AHERA, nonpublic schools must also use TEM for final air analysis. Note that no final air clearance is required for small-scale, short-duration O & M projects, unless there is a break in the containment.

B. The TEM Method for Final Air Clearance:

The TEM method involves the collection of at least five samples inside the work area, five samples representative of air outside of the work area collected at the same time as the indoor samples, and three quality control samples. The air samples must be collected using "aggressive" methods of artificially disturbing the air in the work area before sampling, as described in Appendix A, Section III(B)(7)(d) of the AHERA Rule. The volume of air drawn for each of the five samples collected within the functional space must be equal to or greater than 1,199 L of air for a 25mm filter or equal to or greater than 2,799L of air for a 37mm filter. If the average result of the five samples collected inside the work area meets an average of 70

structures per square millimeter ($70s/mm^2$), the response action is considered complete.

The response action may also be considered complete when the average concentration of asbestos of the five air samples collected within the affected work area and analyzed by the TEM method is not statistically significantly different, as determined by the Z-test calculation described in Appendix A of AHERA, from the average asbestos concentration of five air samples collected outside the affected work area and analyzed in the same manner, and the average asbestos concentration of the three quality control samples is below $70s/mm^2$, the test is voided and resampling must be done. If the difference in average asbestos concentration between in and out samples is statistically significant, the contractor must reclean the work area and resampling must be done at the Contractor's expense.

C. PCM Air Monitoring:

The phase contrast microscopy (PCM) method involves collecting at least five samples inside the work area by aggressive methods as described in Appendix A, Section III(B)(7)(d) of the AHERA Rule and having them analyzed on a PCM microscope. Unlike the TEM method, the PCM method does not call for the samples to be averaged; each sample stands on its own.

The clearance standard for PCM is 0.01 fibers per cubic centimeter of air (0.01 f/cc). If all five samples pass this standard, the response action is considered complete. If even one sample fails to pass the standard, the Contractor must reclean the area and resampling must be done.

D. Roof Abatement Not subject to TEM air sampling requirements under AHERA.

E. Air sampling not required when project filed as ACP-5 and conducted under NYS DOL Applicable Variance 119 procedures.

1.27 TESTING LABORATORY SERVICES

A. "Air Sampling" shall mean the process of measuring the fiber content of a known volume of air collected during a specific period of time. The procedure utilized for asbestos follows the NIOSH Standard Analytical Method 7400 or the provisional transmission electron microscopy methods developed by the USEPA and/or National Institute of Standard and Technology which are utilized for lower detectability and specific fiber identification.

B. Air monitoring of Contractor's personnel will be performed in conformance with OSHA requirements. (All costs associated with this work are deemed included in the unit price.)

C. Qualifications of Testing Laboratory:

The Contractor shall employ an Industrial Hygienist or Laboratory to conduct air testing. They shall be selected from the latest list of laboratories compiled by National Institute of Standards and Technology (NIST SRM 1876) as having participated in the NIST Proficiency Analytical

- Testing Program and been identified thereon as "Proficient" (P) in the analysis of samples for the presence of Asbestos.
- D. Contractor shall employ a qualified industrial hygiene laboratory to analyze air samples in accordance with OSHA Regulations, 1926.1101 (Asbestos Standards for Construction), and 1910.134 (Respirator Standard) and New York City regulations. All costs for this work shall be included in the Bid Price.
- E. The industrial hygiene laboratory shall be a current proficient participant in the American Industrial Hygiene Association (AIHA) PAT Program. The laboratory identification number shall be submitted and approved by the City. The laboratory shall be accredited by the AIHA and New York State department of Health Environmental Laboratory Approval Program (ELAP).
- F. Industrial hygiene laboratory shall also be a current proficient participant in the NIST/NVLAP Quality Assurance Program for the identification of bulk samples. Laboratory identification number shall be submitted to and approved by the City.
- G. Contractor shall require a competent person (as defined in OSHA 1926.1101) to perform the following functions and to be on-site continuously for the duration of the project:
1. Monitor the set up of the Work Area enclosure and ensure its integrity.
 2. Control entry and exit into the work enclosure.
 3. Ensure that employees are adequately trained in the use of engineering controls, proper work practices, proper personal protective equipment and in decontamination procedures.
 4. Insure that employees use proper engineering controls, proper work practices, proper personal protective equipment and proper decontamination procedures.
 5. Competent person shall check for rips and tears in work suits, and ensure that they are mended immediately or replaced.
- H. Air monitoring responsibilities, as defined in OSHA regulation 1926.1101, shall be performed by a representative of the testing laboratory retained by the Contractor.
- I. Contractor shall submit to the City all credentials of the designated competent person and industrial hygiene laboratory representative for approval.
- J. Air monitoring and inspection shall be conducted by the Contractor's competent person.
- K. Continuous (daily or per shift) monitoring and inspection will include Work Area samples, personnel samples from the breathing zone of a worker to accurately determine the employees' 8-hour TWA (unless Type C respirators are used) and decontamination unit clean room samples.

- L. Work Area samples and employee personnel samples shall be taken using pumps whose flow rates can be determined to an accuracy of ± 5 -percent, at a minimum of two liters per minute. This must be demonstrated at the job site.
- M. Sampling and analysis methods shall be per NIOSH 7400A.
- N. Test Reports:
 - 1. Promptly process and distribute one copy of the test results, to the Owner.
 - 2. Prompt reports are necessary so that if required, modifications to work methods and/or practices may be implemented as soon as possible.
 - 3. Contractor shall by facsimile, and notify the Owner with 24 hours of the results of each test, followed by written notification within three days.
 - 4. Competent person shall conduct inspections and provide written reports daily. Inspections will include checking the standard operating procedures, engineering control systems, respiratory protection and decontamination systems, packaging and disposal of asbestos waste, and any other aspects of the project which may effect the health and safety of the people and environment.
- O. All costs for required air monitoring by the Contractor's competent person shall be borne by Contractor.
- P. The Owner reserves the right to conduct air and surface dust sampling in conjunction with and separate from the Testing Laboratory for the purposes of Quality Assurance.
- Q. All samples shall be accompanied by a Chain of Custody Record that shall be submitted to the Owner upon completion of analysis.

1.28 WORK AREA CLEARANCE LEVELS

"Clearance Air Monitoring" shall mean the employment of aggressive sampling techniques with a volume of air collected to determine the airborne concentration of residual fibers, and shall be performed as the final abatement activity.

- A. Clearance and/or Reoccupancy Criteria:

The clearance criteria shall be applied to each homogeneous Work Area independently as per section Clearance Testing of Work Areas in this Specification.
- B. For TEM analysis, the clearance monitoring will be considered satisfactory if conducted in accordance with 40 CFR Part 763, Subpart E, Appendix A - Section IV - Mandatory

- C. Interpretation of Transmission Electron Microscopy Results to Determine Completion of Response Actions.

1.29 LOCKDOWN ENCAPSULATION PROCEDURES

- A. The following procedures shall be followed to seal in nonvisible residue while conducting lockdown encapsulation on all surfaces from which ACM removed:
1. Only encapsulants rated as acceptable or marginally acceptable on the basis of Battelle Columbus Laboratory test procedures and rating requirements developed under the 1978 USEPA Contract shall be used for lockdown encapsulation.
 2. The encapsulant solvent or vehicle shall not contain a volatile hydrocarbon unless reviewed and approved by DEP.
 3. Latex paint with solids content greater than 15 percent shall be considered a lockdown sealant for coating all non-metallic surfaces.
 4. Encapsulants shall be applied using airless spray equipment. Spraying is to occur at the lowest pressure range possible to minimize fiber release from encapsulant impact at the surface. It shall be applied with a consistent horizontal or vertical motion.

1.30 CLEARANCE TESTING OF WORK AREAS

- A. **Built-Up Roof and Flashing Removal Clearance Procedure:** Cleaning of the work areas and other contaminated areas shall be conducted in accordance with procedure described below:

Step 1. Clean-up	Visual inspection
Step 2. Final Reoccupancy	Visual inspection and fiber Clearance count of <0.01 fiber/cc of air using NIOSH Method 7400.

1. At the conclusion of each shift, clearance air samples will be collected according to established air clearance criteria.
2. Results of clearance air samples shall be submitted to the Owner twenty-four (24) hours after completion of each shift.
3. Air monitoring not required for projects filed under NYC DEP ACP-5 conducted under NYS DOL Applicable Variance 119 Protocol.

- B. **Clearance Procedure for Areas Prepared Utilizing Tent Enclosure:**

1. Cleaning of the work areas and other contaminated areas shall be conducted in accordance with procedure described below:

Step 1. Clean-up	Visual inspection
Step 2. Final Reoccupancy	Visual Inspection and fiber Clearance count of <0.01 fiber/cc of air using NIOSH Method 7400 and less than 70 structures per mm ² when using Transmission Electron Microscopy.

2. Area air samples will be collected prior, during and after abatement according to established air clearance criteria per New York State ICR 56.
3. To determine final air clearance reoccupancy, the following air samples shall be collected for each tent (provided that the amount of ACM is less than or equal to 160 square feet or 260 linear feet):

Five (5) PCM samples - inside work area
Three (3) TEM samples - inside work area
Three (3) PCM samples - outside work area
Three (3) TEM samples - outside work area

All PCM and TEM results must satisfy the clearance criteria for reoccupancy.

C. Clearance Procedure Utilizing Modified Tent Procedure:

1. Cleaning of the work areas and other contaminated areas shall be conducted in accordance with procedure described below:

Step 1. Clean-up	Visual inspection
Step 2. Final Reoccupancy	Visual Inspection and fiber Clearance count of <0.01 fiber/cc of air using NIOSH Method 7400 and less than 70 structures per mm ² when using Transmission Electron Microscopy.

2. Area air samples will be collected prior, during and after abatement according to established air clearance criteria per New York State ICR 56.
3. To determine final air clearance reoccupancy, the following air samples shall be collected for each tent (provided that the amount of ACM is less than or equal to 160 square feet or 260 linear feet):

Five (5) PCM samples - inside work area
Three (3) TEM samples - inside work area
Three (3) PCM samples - outside work area
Three (3) TEM samples - outside work area

4. All PCM and TEM results must satisfy the clearance criteria for reoccupancy.

5. When volumes greater than or equal to 1,199 liters for a 25 mm filter and/or 2,799 liters for a 37 mm filter have been collected and the

1.31 SUBMITTALS

A. Test Reports:

1. Require immediate submittal of one (1) copy of all test results to the Construction Manager and Commissioner or his representative.
2. Are necessary so that, if required, modifications to work methods and/or practices may be implemented as soon as possible.
3. Shall be transmitted by the Abatement Contractor to the Construction Manager, and Commissioner or his representative within 24 hours of the result of each test by fax, followed by written notification of all the test results within three days.

1.32 PAYMENT FOR FINAL AIR TESTING

A. Final Air Testing Costs:

1. All costs for the initial final air testing of each work area following clean-up and as required by this Contract and Title 15, Chapter 1 of RCNY shall be borne by the Owner.
2. Retesting:

Should air tests (following final clean-up) indicate a fiber count greater than 0.01 fibers per cubic centimeter (PCM) or the average number of asbestos on TEM samples is greater than 70 s/mm³ of filter, in any of the building areas, the Contractor shall re-clean the specific area. The Construction Manager will then arrange for retesting by the third party laboratory. All costs of such retesting will be at the Contractor's expense. Repeated cycles of cleaning and clearance testing will be performed until a fiber count within the Work Area is equal to or less than 0.01 fibers/cubic centimeter (PCM) and the average number of asbestos structures on TEM samples is no greater than 70s/mm² of filter is attained. The repeated cleaning will be done by the Contractor at no cost to the Owner. A permanent deduction equal to the cost of additional clearance air testing including all costs incurred by Owner will be made from the Contractor's payment.

1.33 COOPERATION WITH TESTING LABORATORY

Representatives of all testing laboratories shall have access to the Work Area at all times. The Contractor shall provide facilities for such access so that the laboratories may properly perform its function.

NOTES:

- A. No person involved in asbestos abatement work shall be exposed to greater than 8 hour time weighted average asbestos fiber exposure level or instantaneous ceiling concentrations of asbestos fibers greater than the limits prescribed in OSHA 29 CFR 1926.1101. Where such exposures are discovered during testing appropriate measures as prescribed by OSHA 29 CFR 1926.1101 shall be taken.
- B. The discovery of more than 0.01 asbestos fibers/cc or 70 s/mm² of filter outside of the Work Area shall be cause for ceasing work immediately. In addition, any breach of a temporary enclosure (asbestos containment for Work Area) shall be cause for ceasing work until the breach is repaired, cleaning outside the Work Area is performed as necessary, and air tests demonstrate that there are 0.01 fiber/cc or less present outside the Work Area. If directed to cease work pursuant to this paragraph, the City will be held harmless from any claims arising from a delay in completion of this work experienced by the Contractor.

1.34 TESTING LABORATORY

- A. The Laboratory will perform analysis of air samples utilizing phase contrast microscopy (PCM) and/or transmission electron microscopy (TEM). The Laboratory shall also perform periodic observations of the Work Site.
- B. Observations will include, but not be limited to, checking the standard operating procedures, engineering control systems, respiratory protection, decontamination systems, packaging and disposal of asbestos waste, and any other aspects of the project that may effect the health and safety of the environment, Contractor, and/or facility occupants.
- C. The Testing Laboratory shall have access to all areas of the asbestos removal project at all times and shall continuously inspect and monitor the performance of the Contractor to verify that said performance complies with this Specification. The Testing Laboratory shall be on site throughout the entire abatement operation.
- D. At a minimum, air sampling shall be conducted in accordance with the following schedule:

Abatement Activity	Pre-Abatement	During Abatement	Post-Abatement
Equal to or greater than 10,000 square feet or 10,000 linear feet of ACM	PCM	PCM	TEM
Less than 10,000 square feet or 10,000 linear feet of ACM	PCM	PCM	PCM
Exceptions to the above:			

Abatement Activity	Pre-Abatement	During Abatement	Post-Abatement
Boiler Rooms	---	PCM	PCM
Tent and Glovebag Procedures	---	PCM	PCM
Demolitions	---	PCM	PCM

Note: TEM is acceptable wherever PCM is required.

- E. Prior to commencement of abatement activities, the Testing Laboratory will collect a minimum number of area samples inside each homogeneous work area.
1. Samples will be taken during normal occupancy activities and circumstances at the work site.
 2. Samplers shall be located within the proposed work area and at all proposed isolation barrier locations.
 3. Samples shall be analyzed using PCM.
 4. The number of samples to be collected will be determined by the size of the project and the abatement methods to be utilized.
- F. Frequency and duration of the air sampling during abatement shall be representative of the actual conditions during the abatement. The size of the asbestos project will be a factor in the number of samples required to monitor the abatement activities. The following minimum schedule of samples shall be required daily.
1. Projects Not Solely Employing Glove-Bag and/or Tent Procedures:
 - a. Two area samples outside the work area in uncontaminated areas of the building, remote from the decontamination facilities.
 - b. Primary location selection shall be within 10 feet of isolation barriers.
 - c. Where negative ventilation exhaust runs through uncontaminated building areas, one of the area samples will be required in these areas to monitor any potential fiber release.
 - d. Where adjacent non-work areas do not exist, an exterior area sample shall be taken.
 - e. One area sample within the uncontaminated entrance to each decontamination enclosure system.

- f. One area sample within 5 feet of the unobstructed exhaust from each AFD exhausting indoors.
2. **Projects Solely Employing Glove-Bag and/or Tent Procedures:**
 - a. One Baseline sample shall be taken near each entrance to the Work Area.
 - b. Area air samples shall be taken daily no less than 10 feet nor more than 15 feet from the glove-bag(s) or tent(s) actively being used in the abatement, or a similar appropriate and representative distance, using the following guidelines:
 3. **Glove-Bag Removals:**
 - a. For projects involving more than 25 linear feet and less than 260 linear feet, a minimum of two samples (one baseline and one active abatement area sample) shall be taken in each homogeneous Work Area.
 - b. For projects involving 260 linear feet or more and less than 500 linear feet of insulation to be removed, a minimum of two samples shall be taken concurrently with the abatement.
 - c. For projects involving 500 linear feet or greater of insulation to be removed, a minimum of three samples shall be taken concurrently with the abatement, for each 1,000 linear feet of removal.
 4. **Tent Procedures:**
 - a. For projects involving more than 25 linear feet or 10 square feet, a minimum of three continuous samples shall be taken concurrently throughout abatement.
- G. Post-abatement clearance air monitoring for projects not solely employing glove-bag procedures shall include a minimum number of area samples inside each homogeneous work area and outside each homogeneous work area (five samples inside/five samples outside for Large Projects and three samples inside/three samples outside for Small Projects). In addition to the five sample inside/five sample outside minimum for Large Projects, one additional representative area sample shall be collected inside and outside the work area for every 5,000 square feet above 25,000 square feet of floor space where ACM has been abated.
- H. Post-abatement clearance air monitoring for Small Projects solely employing glove-bag procedures is not required unless one or more of the following events occurs. In such cases, post-abatement clearance air monitoring procedures shall be followed. The events requiring post-abatement clearance air monitoring are:
1. The integrity of the glove-bag was compromised,
 2. Visible emissions are detected outside the glove-bag, and/or

3. Ambient levels exceed 0.01 f/cc during abatement.
- I. Monitoring requirements for other than post-abatement clearance air monitoring are as follows:
 1. The sampling zone for indoor air samples shall be representative of the building occupants' breathing zone.
 2. If possible, outdoor ambient and baseline samplers should be placed about 6 feet above the ground surface in reasonable proximity to the building and away from obstructions and drafts that may unduly affect airflow.
 3. For outdoor samples, if access to electricity and concerns about security dictate a rooftop site, locations near vents and other structures on the roof that would unduly affect airflow shall be avoided.
 4. Air sampling equipment shall not be placed in corners of rooms or near obstructions such as furniture.
 5. Samples shall have a chain of custody record.
 - J. Area air sampling during abatement shall be conducted as specified in the following documents except as restricted or modified herein:
 1. Measuring Airborne Asbestos Following an Abatement Action, US EPA document 600/4-85-049 (Nov., 1985);
 2. Guidance for Controlling Asbestos-Containing Materials in Buildings; US EPA Publication 560/5-85-024 (June, 1984);
 3. Methodology for the Measurement of Airborne Asbestos by Electron Microscopy US EPA Contract No. 68-02-3266;
 4. Mandatory and non-mandatory Electron Microscopy Methods set forth in 40 CFR Part 763, Subpart E, Appendix A.
 5. NIOSH 7400 method using "A" counting rules
 - K. In accordance with the above criteria, area samples (see NYCDEP Asbestos Control Program Regulations) shall conform to the following schedule:

Area Samples for Analysis by	Minimum Volume	Flow Rate
PCM, 25mm cassettes	560 liters	5 to 15 liters/minute
TEM, 25mm cassettes	560 liters	1 to 10 liters/minute
TEM, 37mm cassettes	1,250 liters	1 to 10 liters/minute

L. Post-abatement clearance air monitoring requirements are as follows:

1. Sampling shall not begin until at least one hour after wet cleaning has been completed and no visible pools of water or condensation remain.
2. Samplers shall be placed at random around the work area. If the work area contains the number of rooms equivalent to the number of required samples based on floor area, a sampler shall be placed in each room. When the number of rooms is greater than the required number of samples, a representative sample of rooms shall be selected.
3. The representative samplers placed outside the work area but within the building shall be located to avoid any air that might escape through the isolation barriers and shall be approximately 50 feet from the entrance to the work area, and 25 feet from the isolation barriers.

M. The following aggressive sampling procedures shall be used within the work area during all clearance air monitoring:

1. Before starting the sampling pumps, use forced air equipment (such as a one horsepower leaf blower) to direct exhaust air against all walls, ceilings, floors, ledges and other surfaces in the work area. This pre-sampling procedure shall take at least five minutes per 1,000 square feet of floor area; then
2. Place a 20-inch diameter fan in the center of the room. (Use one fan per 10,000 cubic feet of room space.) Place the fan on slow speed and point it toward the ceiling.
3. Start the sampling pumps and sample for the required time or volume.
4. Turn off the pump and then the fan(s) when sampling is completed.
5. Collect a minimum number of area samples inside and outside each homogeneous work area (5 inside/5 outside samples for Large Projects and 3 inside/3 outside samples for Small Projects). In addition to the minimum for Large Projects, one representative area samples shall be collected inside and outside the work area for every 5,000 square feet above 25,000 square feet of floor space where ACM has been abated.

N. For post-abatement monitoring, area samples shall conform to the following schedule:

Area Samples for Analysis by	Minimum Volume	Flow Rate
---------------------------------	----------------	-----------

PCM	1,800 liters	5 to 15 liters/minute
TEM	1,250 liters	1 to 10 liters/minute

1. Each homogeneous work area that does not meet the clearance criteria shall be thoroughly recleaned using wet methods, with the negative pressure ventilation system in operation. New samples shall be collected in the work area as described above. The process shall be repeated until the work site meets the clearance criteria.
2. For an asbestos project with more than one homogeneous work area, the release criterion shall be applied independently to each work area.
3. Should airborne fiber concentrations exceed the clearance criteria, the Contractor shall reclean the work area utilizing wet wiping and HEPA-vacuuuming techniques. Following completion of recleaning activities, the Testing Laboratory will perform an observation of the Work Area. If the Testing Laboratory determines that the work was performed in accordance with the specifications, the appropriate settling period will be observed and additional air sampling will be performed.
4. All costs resulting from additional air tests and observations shall be borne by the Contractor. These costs may include, but are not limited to, labor, analysis fees, materials, and expenses.
5. After the area has been found to be in compliance, the Contractor may remove Isolation Barriers and perform final cleaning as specified.

O. Clearance and/or Reoccupancy Criteria

1. The clearance criteria shall be applied to each homogeneous work area independently.
2. For PCM analysis, the clearance air monitoring shall be considered satisfactory when each of the 5 inside/5outside samples for Large Projects and/or 3 inside/3outside samples for Small Projects is less than or equal to 0.01 f/cc or the background concentrations, whichever is greater.
3. For TEM analysis, the clearance air monitoring shall be considered satisfactory when the requirements stated in 40 CFR Part 763, Subpart E, Appendix A, Section IV are met.
4. As soon as the air monitoring tests are completed, the Testing Laboratory will send the results of such tests to the City and notify the Contractor.

P. The Contractor shall cooperate fully with all aspects of air monitoring operations.

1.35 TAMPERING WITH TEST EQUIPMENT

- A. All parties to this Contract are hereby notified that any tampering with testing equipment will be considered an attempt at falsifying reports and records to federal and state agencies and each

offense will be prosecuted under applicable state and federal criminal codes to the fullest extent possible.

PART 2 – PRODUCTS

2.01 MATERIAL HANDLING

- A. Deliver all materials to the job site in their manufacturer's original container, with the manufacturer's label intact and legible.
 - 1. Maintain packaged materials with seals unbroken and labels intact until time of use.
 - 2. Store all materials on pallets, away from any damp and/or wet surface. Cover materials in order to prevent damage and/or contamination.
 - 3. Promptly remove damaged materials and unsuitable items from the job site, and promptly replace with material meeting the specified requirements, at no additional cost to the City.
- B. The Construction Manager may reject as non-complying such material and products that do not bear identification satisfactory to the Resident Engineer as to manufacturer, grade, quality and other pertinent information.

2.02 MATERIALS

- A. Wetting agent shall be Astrip Concentrate as manufactured by Hythe Chemicals Limited, Charleston Industrial Estate, Hardley, Hythe, Southampton S04626, Telephone - 0703891806, Telex 47631. BWE 5000 as manufactured by Better Working Environments Inc., of San Diego, CA or approved equivalent.
- B. Acceptable sealants shall be:
 - 1. Sealing material shall be both penetrating and bridging and may be applied by a one or two coat system and shall meet the following criteria:
 - a) ASTM Standard E84-84
 - b) Class A Fire Rating
Flame Spread: 0-25
Fuel Contribution: 10
Smoke Density: 5
 - c) Underwriters Laboratory approval for Class 1A
 - d) Acceptable sealants shall be:

- (1) Tri-Cote AE as manufactured by United Products Corp. of Little Rock, Arkansas.
 - (2) A-B-C Asbestos Binding Compound as manufactured by California Products Corp. of Cambridge, Massachusetts.
 - (3) Fosters protector and Bridging Encapsulants as manufactured by H.B. Fuller Co. of Houston, Texas.
2. Sealing materials to be applied to structural members and decking assemblies scheduled to receive spray-applied fireproofing shall be approved by UL for use with the specified material.
- C. Framing Materials and Doors: As required to construct temporary decontamination facilities and Isolation Barriers. Lumber shall be high grade, new, finished one side and fire retardant.
 - D. Fire Retardant Polyethylene Sheeting: minimum uniform thickness of 6-mil. Provide largest size possible to minimize seams.
 - E. Fire Retardant Reinforced Polyethylene Sheeting: For covering floor of decontamination units, provide translucent, nylon reinforced or woven polyethylene laminated, fire retardant polyethylene sheeting. Provide largest size possible to minimize seams, minimum uniform thickness 6-mil
 - F. Drums: Asbestos transporting drums, sealable and clearly marked with warning labels as required by OSHA and EPA.
 - G. Polyethylene Disposal Bags: Asbestos disposal bags, minimum of 6-mil thick. Bags shall be clearly marked with warning labels as required by OSHA and EPA.
 - H. Signs: Asbestos warning signs for posting at perimeter of Work Area, as required by OSHA and EPA.
 - I. Waste Container Bag Liners and Flexible Trailer Trays: One piece leak-resistant flexible tray with absorbent pad, as manufactured by Packaging Research and Design Corporation, Madison, WS 39130 or equivalent.
 - J. Tape: Provide tape which is of high quality with an adhesive which is formulated to aggressively stick to sheet polyethylene, as manufactured by Kendall Co., NASHUA Tape Products; or approved equivalent.
 - K. Spray Adhesive: Provide spray adhesive in aerosol cans which is specifically formulated to stick tenaciously to sheet polyethylene, as manufactured by 3M; NASHUA Tape Products; or approved or equivalent.
 - L. Flexible Duct: Spiral reinforced flex duct for air filtration devices.

- M. Disposable Coveralls: Dupont "Blockade" as manufactured by Dupont Company of Wilmington Delaware," Kleenguard Limited USE Coveralls" or "Duraguard" coveralls as manufactured by Kimberly Clark Corporation of Rosewell, Georgia, or approved equivalent.

2.03 TOOLS AND EQUIPMENT

- A. Air Filtration Device (AFD): AFDs shall be equipped with High Efficiency Particulate Air (HEPA) filtration systems and shall be approved by and listed with Underwriter's Laboratory. Air filtration devices shall be "Microtrap" as manufactured by Asbestos Control Technology of Maple Shade, New Jersey, or "RAM AIR 2M" as manufactured by Aramsco of Thorofare, New Jersey, or "Environmental Ltd., 300" as manufactured by Torchcross Agency Environmental, Hagerstown, Maryland or approved equivalent.
- B. Scaffolding: All scaffolding shall be designed and constructed in accordance with OSHA (29 CFR 1926/1910), New York City Building Code, and any other applicable federal, state and local government regulations. Whenever there is a conflict or overlap of the above references the most stringent provisions are applicable. All scaffolding and components shall be capable of supporting without failure a minimum of four times the maximum intended load, plus an allowance for impact. All scaffolding and staging must be certified by a Professional Engineer licensed to practice in the State of New York.
1. Equip rungs of all metal ladders, etc., with an abrasive, non-slip surface.
 2. Provide non-skid surface on all scaffold surfaces subject to foot traffic. Scaffold ends and joints shall be sealed with tape to prevent penetration of asbestos fibers.
- C. Transportation Equipment: Transportation Equipment, as required, shall be suitable for loading, temporary storage, transit and unloading of contaminated waste without exposure to persons or property. Any temporary storage containers positioned outside the building for temporary storage shall be metal, closed and locked.
- D. Vacuum Equipment: All vacuum equipment utilized in the Work Area shall utilize HEPA filtration systems. Vacuum equipment shall be as manufactured by Nilfisk of America of Malvern, Pennsylvania (Models. GS 81 or GS 83) or equivalent.
- E. Vacuum Attachments: Soft Brush Attachment, Asbestos Scraper Tool, Drill Dust Control Kit.
- F. Electric Sprayer: An electric airless sprayer suitable for application of encapsulating material and shall be approved by and listed with Underwriters Laboratory.
- G. Water Sprayer: The water sprayer shall be an airless or other low-pressure sprayer for amended water application.
- H. Portable Shower: For personnel decontamination, Enviro-Clean by CRSI; Aero-Porta Shower; or approved equivalent.
- I. Water Atomizer: Powered air-misting device, equipped with a ground fault interrupter and

equipped to operate continuously. Water atomizer device shall be the "Tri-Jet DS", No. 6228, as manufactured by Fogmaster Corp. of Hialeah, Florida, or EM 490 Portable Electrical/Airless Sprayer as manufactured by Graco, Inc., P.O. Box 1441, Minneapolis, MN 55440-1444.

- J. **Brushes:** All brushes shall have nylon bristles. Wire brushes are excluded from use due to their potential to shred asbestos fibers into small, fine fibers. Wire brushes maybe used for cleaning pipe joints within glove-bags upon written approval of the Resident Engineer.
- K. **Hand Power Tools:** shall be equipped with HEPA-filtered local exhaust ventilation if used to drill, cut into or otherwise disturb ACM.
- L. **Other Tools and Equipment:** Contractor shall provide other suitable tools for the stripping, removal, encapsulation, and disposal activities including but not limited to: hand-held scrapers, sponges, rounded-edge shovels, brooms, and carts.
- M. **Fans and Leaf Blower:** Provide Leaf Blower (one leaf blower per floor) and one 20-inch diameter fans for each 10,000 cubic feet of Work Area volume to be used for aggressive sampling technique for clearance air testing.
- N. **Fire Extinguishers:** Provide type "A" fire extinguishers for temporary offices and similar spaces where there is minimal danger of electrical or grease-oil-flammable liquid fires. In other areas, provide type "ABC" dry chemical extinguishers of NFPA recommended types for the exposure in each case. All fire extinguishers shall comply with the applicable recommendations of NFPA Standard 10, "Standard For Portable Extinguishers." Provide a minimum of four fire extinguishers in each Work Area; one in the equipment room of the decontamination unit, one outside the Work Area in the clean room or directly outside same, and two fire extinguishers where they are most effective for their intended purpose. Do not exceed seventy-five feet between fire extinguishers within the Work Area.
- O. **First Aid Kits:** Contractor shall maintain adequately stocked first aid kits in the clean rooms of the decontamination units and within Work Areas. The first aid kit shall be approved by a licensed physician for the work to be performed under this Contract.
- P. **Water Service:**
 - 1. **Temporary Water Service Connection:** All connections to the Facilities water system shall include back flow protection. Valves shall be temperature and pressure rated for operation of the temperature and pressures encountered. After completion of use, connections and fittings shall be removed without damage or alteration to existing water piping, and equipment. Leaking or dripping fittings/valves shall be repaired and or replaced as required.
 - 2. **Water Hoses:** Employ new heavy-duty abrasion-resistant hoses with a pressure rating greater than the maximum pressure of the water distribution system to provide water into each Work Area and to each Decontamination Enclosure Unit. Provide fittings as required for connection to existing wall hydrants or spouts, as well as temporary water

heating equipment, branch piping, showers shut-off nozzles and equipment.

3. **Water Heater:** Provide UL rated 40-gallon electric water heaters to supply hot water for Personal Decontamination Enclosure System Shower. Activate from 30 Amp Circuit breakers located within the Decontamination Enclosure subpanel. Provide relief valve compatible with water heater operations, pipe relief valve down to drip pan at floor level with type 'L' copper piping. Drip pans shall be 6-inch deep and securely fastened to water heater. Wiring of the water heater shall comply with NEMA, NECA, and UL standards.

Q. Electrical Service:

1. **General:** Comply with applicable NEMA, NECA and UL standards and governing regulations for materials and layout of temporary electric service.
2. **Temporary Power:** Provide service to decontamination unit subpanel with minimum 60 AMP, two pole circuit breaker or fused disconnect connected to the building's main distribution panel. Subpanel and disconnect shall be sized and equipped to accommodate all electrical equipment required for completion of the work.
3. **Voltage Differences:** Provide identification warning signs at power outlets that are other than 110-120 volt power. Provide polarized outlets for plug-in type outlets, to prevent insertion of 110-120 volt plugs into higher voltage outlets. Dry type transformers shall be provided where required to provide voltages necessary for work operations.
4. **Ground Fault Protection:** Equip all circuits for any purpose entering Work Area with ground fault circuit interrupters (GFCI). Locate GFCIs exterior to Work Area so that all circuits are protected prior to entry to Work Area. Provide circuit breaker type ground fault circuit interrupters (GFCI) equipped with test button and reset switch for all circuits to be used for any purpose in Work Area, decontamination units, exterior, or as otherwise required by NEC, OSHA or other authority. Locate in panel exterior to Work Area.
5. **Power Distribution System:** Provide circuits of adequate size and proper characteristics for each use. In general run wiring overhead, and rise vertically where wiring will be least subject to damage from operations.
6. **Temporary Wiring:** In the Work Area shall be type UF non-metallic sheathed cable located overhead and exposed for surveillance. Provide liquid tight enclosures or boxes for all wiring devices. Do not wire temporary lighting with plain, exposed (insulated) electrical conductors.
7. **Electrical Power Cords:** Use only grounded extension cords; use hard service cords where exposed to traffic and abrasion. Use single lengths of cords only.
8. **Temporary Lighting:** All lighting within the Work Area shall be liquid and moisture proof and designed for the use intended.

- a) Provide sufficient temporary lighting to ensure proper workmanship everywhere; by combined use of daylight, general lighting, and portable plug-in task lighting.
9. Provide lighting in the Decontamination Unit as required to supply a minimum 50-foot candle light level.

2.04 CLEANING

A. Throughout the construction period, the Contractor shall maintain that the building as described in this Section.

1. The Contractor shall prevent building areas other than the Work Area from becoming contaminated with asbestos-containing dust or debris. Should areas outside the Work Area become contaminated with asbestos-containing dust or debris as a consequence of the Contractor's work practices, the Contractor shall be responsible for cleaning these areas in accordance with the procedures appended in Title 15, Chapter 1 of RCNY and NYSDOL ICR56. All costs incurred in cleaning or otherwise decontaminating non-Work Areas and the contents thereof shall be borne by the Contractor at no additional cost to the City.
2. The Contractor shall provide to all personnel and laborers the required equipment and materials needed to maintain the specified standard of cleanliness.

B. General

1. Waste water from asbestos removal operations, including shower water, may be discharged into the public sewer system only after approved filtration is on operation to remove asbestos fibers.
2. Asbestos wastes shall be double bagged in six mil (.006") polyethylene bags approved for ACM disposal and shall be properly labeled and handled before disposal.
3. The Contractor shall use corrugated cartons or drums for disposal of asbestos-containing waste having sharp edged components (e.g. nails, screws, metal lathe and tin sheeting) that may tear polyethylene bags and sheeting. The waste within the drums or cartons must be double bagged.
4. The Contractor shall transport all bags of waste to disposal site in thirty gallon capacity metal or fiber drums with tight lids, or in locked steel dumpster.
5. Dumping of debris, waste or bagged waste will not be permitted.
6. Cleanup of visible accumulations of loose ACM shall occur whenever there is a sufficient amount to fill a single asbestos bag.

7. ACM shall be collected utilizing rubber dust pans and rubber squeegees.
8. HEPA vacuums shall not be used on wet materials unless specifically designed for that purpose.
9. Metal shovels shall not be used within the work area.
10. Accumulations of dust shall be cleaned off all surfaces of the Work Area daily.
11. Mastic solvent when used will be applied in moderation (e.g. by airless sprayer). Saturation of the concrete floor with mastic solvent must be avoided.
12. The Contractor shall retain all items in the storage area in an orderly arrangement allowing maximum access, not impeding traffic, and providing the required protection of all materials.
13. The Contractor shall not allow accumulation of scrap, debris, waste material, and other items not required for use in this work. When asbestos contaminated waste must be kept on the work site overnight or longer, it shall be double bagged and stored (with permission from the Construction Manager) in tightly closed and sealed fiber drums and placed inside or outside the contaminated area.
14. At least twice a week (more if necessary), the Contractor shall completely remove all scrap, debris and waste material from the job site.
15. The Contractor shall provide adequate storage space for all items awaiting removal from the job site, observing all requirements for fire protection and concerns for the environment.
16. All respiratory protection equipment shall be selected from the latest NIOSH Certified Equipment list.
17. Daily and more often, if necessary, the Contractor shall inspect the Work Areas and adjoining spaces, and pick up all scrap, debris, and waste material. All such items shall be removed to the place designated for their storage.
18. Weekly, and more often, if necessary, the Contractor shall inspect all arrangements of materials stored on the site; re-stack and tidy them or otherwise service them to meet the requirements of these Specifications.
19. The Contractor shall maintain the site in a neat and orderly condition at all times.

C. Initial Cleaning:

1. When double bagging of all removed asbestos material is completed, the Contractor shall label bags as required by Title 15, Chapter 1 of RCNY and NY State DOL Industrial Code Rule 56.
2. Bags shall be wiped with clean damp cloths and if necessary placed in fiber containers prior to transportation to approved disposal site.
3. Plastic barriers shall be HEPA vacuumed and wet wiped. Then the barriers shall be removed, folded inwards and double bagged as ACM waste.
4. *Hard surfaced flooring such as concrete, terrazzo, floor tile and ceramic tile, shall be wet mopped, allowed to dry, and damp mopped a second time with clean mop heads.*
5. Walls, Furniture and equipment (which remained in Work Area during work operations), windows and other surfaces shall be thoroughly cleaned twice with damp cloths.
6. Entire work area surfaces shall appear clean and free from contamination under visual inspection.
7. All mop heads and cleaning cloths shall be discarded in the same manner as described above as asbestos waste materials.

2.05 FINAL CLEAN-UP PROCEDURES:

A. Definition:

1. Except as otherwise defined, "Clean" (for the purpose of this Section) shall mean the level of cleanliness generally provided by skilled cleaners using building maintenance equipment and materials similar to that used in commercial buildings.
2. Should air tests following final clean-up indicate an average result that exceeds 70 structures per square millimeter of filter (70 s/mm^2), the Contractor shall re-clean Work Areas until additional air tests indicate a fiber count less than or equal to 70 s/mm^2 .

B. General:

Prior to completion of the work, all tools, surplus materials, equipment, scrap, debris and waste shall be removed from the job site. Final progress cleaning as described in paragraph 4.6 shall be carried out.

NOTE: The cleaning work shall progress from the point most remote from the negative pressure exhaust units and proceed towards the unit and from the highest point of the surface being cleaned towards the lowest surface point.

C. Interior:

All interior surfaces in and adjacent to Work Area shall be visually inspected and all traces of soil, waste material, smudges and other foreign materials shall be removed. All traces of splashed materials shall be removed from adjacent surfaces. All paint droppings, spots, stains, and dirt from finished surfaces shall be removed. The specified cleaning materials and equipment particularly suitable for the purpose shall only be used.

D. Timing:

The final cleaning time shall be scheduled as per approval of the Commissioner. This will enable the Department of Design and Construction to arrange for inspections of the site and determine if the cleaning performed for the site is up to the level of acceptance.

E. The Construction Manager and the Facility Manager will inspect and test all equipment controls gauges, etc. within the Work Area and submit a list of damaged or non functional items to the Abatement Contractor for repair.

F. First Cleaning:

After removal of all visible accumulations of ACM, the area shall be:

1. HEPA vacuumed on dry surfaces.
2. Wet/dry HEPA vacuums (dedicated to asbestos abatement) may be used to pick up excess water and gross saturated debris.
3. All surfaces will be wet cleaned.

The Contractor will request and pass a visual inspection ("Post-removal Visual") to be performed by the Construction Manager before proceeding to the next step. The Construction Manager will check for visible dust and debris on structures from which ACM has been removed, and on surfaces surrounding these structures. Passing of this inspection shall be recorded in the daily logbook.

4. The Work Area shall be vacated for twelve (12) hours to allow for fibers to settle.

G. Second Cleaning:

After the first waiting period:

1. All surfaces shall be wet cleaned.
2. The exposed, first layer of the plastic surface barriers will be removed from walls, ceiling and floor where present and disposed of as ACW.

3. When a high degree of cleanliness has been achieved, the Contractor will notify the Construction Manager that the Work Area is ready for a pre-encapsulation inspection. During this inspection the Construction Manager will inspect the area for visible dust and debris.
4. After the four (4) hours of this second waiting period, the Contractor will thoroughly encapsulate surfaces from which ACM has been removed and lightly mist all plastic surface barriers.
 - a. The encapsulant shall be EPA approved and be of the penetrating type.
 - b. The encapsulant shall be compatible with the new, non-asbestos insulation material that is to replace the removed material.

H. Third Final Cleaning:

1. The last layer of plastic will be removed from walls, floors and ceiling. The critical barriers will remain in position. The first surface layer of plastic will be removed from objects. Plastic barriers shall be carefully removed, folded inward and double bagged for disposal.

Note: Critical barriers shall not be removed until work of all trades involved in the abatement work is completed. In all respect, the Work Area shall be cleaned, air tests should be completed and the work should be accepted as completed.

2. Hard surfaced flooring such as concrete, terrazzo, floor tile and ceramic tile, shall be wet mopped, allowed to dry, and damped mopped a second time with clean mop heads.
3. Walls, furniture and equipment (which remained in Work Area during work operations), windows and other surfaces shall be thoroughly cleaned twice with damp cloths.
4. All surfaces shall be left visually clean.
5. All mop heads and cleaning cloths shall be discarded in the same manner as applicable as asbestos waste.
6. The Contractor will notify the Construction Manager the Work Area is ready for a final inspection.
7. The Construction Manager will inspect the completeness of the encapsulation. Both parties will check the cleanliness of the Work Area.
8. Passing of the final visual inspection shall be recorded in the daily log book.

- I. Settling periods not required for projects filed under NYC DEP ACP-5 conducted under NYS DOL Applicable Variance 119 Protocol.

2.06 FINAL AIR TESTING

1. One (1) hour after the third final cleaning period, final air testing can commence. Air sampling will be performed utilizing aggressive air sampling methods.
2. Not required for projects filed under NYC DEP ACP-5 conducted under NYS DOL Applicable Variance 119 Procedures.

PART 3 – EXECUTION

3.01 WORKER DECONTAMINATION FACILITY

A. Large Asbestos Projects (Small Project Option):

1. Provide a worker decontamination facility in accordance with, Title 15, Chapter 1, OSHA Standard 29 CFR 1926.1101, 12NYCRR Part 56 and as specified herein. Unless approved by NYCDEP and the City, worker decontamination facilities shall be attached to the Work Areas
 - a) Structure:
 - (1) Use modular systems or build using wood or metal frame studs, joists, and rafters placed at a maximum of 16 inches on-center.
 - (2) When worker decontamination unit is located outdoors, in areas with public access, or in correctional facilities, frame work shall be lined with minimum 3/8" thickness plywood sheathing. Sheathing shall be caulked or taped airtight at all joints and seams.
 - (3) Interior shall be covered with two layers of opaque 6-mil polyethylene sheeting, with a minimum overlap of 16 inches at seams. Seal seams airtight using tape and adhesive. The interior floor shall be covered with two (2) layers of reinforced fire-retardant polyethylene sheeting with a minimum overlap on the walls of sixteen inches.
 - (4) Entrances to the decontamination unit shall be secured with lockable hinged doors. Doors shall be open at all times when abatement operations are in progress. Doors shall be louvered to allow for air movement through the decontamination units into Work Area.
 - b) Curtained Doorways: A device to allow ingress or egress from one room to another while permitting minimal air movement between the rooms.

- c) **Air Locks:** Air locks shall consist of two curtained doorways placed a minimum of three feet apart.
- d) **Decontamination Enclosure System** shall be placed adjacent to the Work Area and shall consist of three totally enclosed chambers, separated from Work Area and each other by airlocks, as follows:
 - (1) **Equipment Room:** The equipment room shall have a curtain doorway to separate it from the Work Area, and share a common airlock with the shower room. The equipment room shall be large enough to accommodate at least one worker (allowing them enough room to remove their protective clothing and footwear), and a 6-mil disposal bag for collection of discarded clothing and equipment. The equipment room shall be utilized for the storage of equipment and tools after decontamination using a HEPA-vacuum and/or wet cleaning. A one-day supply of replacement filters, in sealed containers, for HEPA-vacuums and negative air machines, extra tools, containers of surfactant, and other materials and equipment required for the project shall be stored here. A walk-off pan filled with water shall be placed in the Work Area just outside the equipment room for persons to clean foot coverings when leaving the Work Area. Contaminated footwear and reusable work clothing shall be stored in this room.
 - (2) **Shower Room:** The shower room shall have two airlocks (one that separates it from the equipment room and one that separates it from the clean room). The shower room shall contain at least one shower, with hot and cold water adjustable at the tap, per eight workers. Careful attention shall be given to the shower to ensure against leaking of any kind. Contractor shall supply towels, shampoo and liquid soap in the shower room at all times. Shower water shall be drained collected, and filtered through a system with at least a 5-micron particle size collection capacity. A system containing a series of several filters with progressively smaller pore sizes shall be used to avoid rapid clogging of the filters by large particles. Filtered water shall be discharged in accordance with applicable codes. Contaminated filters shall be disposed of as asbestos waste.
 - (3) **Clean Room:** The clean room shall share a common airlock with the shower room and shall have a curtained doorway to separate it from outside non-contaminated areas. Lockers, for storage of workers' street clothing, and shelves, for storing respirators, shall be provided in this area. Clean disposable clothing, replacement filters for respirators, and clean dry towels shall be provided in the clean room. The clean room shall not used for the storage of tool, equipment or other materials.

B. Small Asbestos Projects

1. Provide a worker decontamination facility in accordance with, Title 15, Chapter 1, OSHA Standard 29 CFR 1926.1101, 12NYCRR Part 56 and as specified herein. Unless approved by NYCDEP and the City, worker decontamination facilities shall be attached to the Work Areas.
 - a) Structure:
 - (1) Use modular systems or build using wood or metal frame studs, joists, and rafters placed at a maximum of 16 inches on-center.
 - (2) When worker decontamination unit is located outdoors, in areas with public access, or in correctional facilities, frame work shall be lined with minimum 3/8" thickness plywood sheathing. Sheathing shall be caulked or taped airtight at all joints and seams.
 - (3) Interior shall be covered with two layers of opaque 6-mil polyethylene sheeting, with a minimum overlap of 16 inches at seams. Seal seams airtight using tape and adhesive. The interior floor shall be covered with two (2) layers of reinforced fire-retardant polyethylene sheeting with a minimum overlap on the walls of sixteen inches.
 - (4) Entrances to the decontamination unit shall be secured with lockable hinged doors. Doors shall be open at all times when abatement operations are in progress. Doors shall be louvered to allow for air movement through the decontamination units into Work Area.
 - b) Curtained Doorways: A device to allow ingress or egress from one room to another while permitting minimal air movement between the rooms.
 - c) Air Locks: Air locks shall consist of two curtained doorways placed a minimum of three feet apart.
 - d) Decontamination Enclosure System shall be placed adjacent to the Work Area and shall consist of three totally enclosed chambers, separated from Work Area and each other by airlocks, as follows:
 - (1) Shower Room: The shower room shall have two airlocks (one that separates it from the work area and one that separates it from the clean room). The shower room shall contain at least one shower, with hot and cold water adjustable at the tap, per eight workers. Careful attention shall be given to the shower to ensure against leaking of any kind. Contractor shall supply towels, shampoo and soap in the shower room at all times. Shower water shall be drained collected, and filtered through a system with at least a 5-micron particle size collection capacity. A system containing a series of several filters with progressively smaller pore sizes

shall be used to avoid rapid clogging of the filters by large particles. Filtered water shall be discharged in accordance with applicable codes. Contaminated filters shall be disposed of as asbestos waste.

- (2) Clean Room: The clean room shall share a common airlock with the shower room and shall have a curtained doorway to separate it from outside non-contaminated areas. Lockers, for storage of workers' street clothing, and shelves, for storing respirators, shall be provided in this area. Clean disposable clothing, replacement filters for respirators, and clean dry towels shall be provided in the clean room. The clean room shall not be used for the storage of tool, equipment or other materials.

- C. Decontamination Enclosure System Utilities: Lighting, heat, and electricity shall be provided as necessary by the Contractor, and as specified herein.

3.02 WASTE DECONTAMINATION FACILITY

A. Large Asbestos Project (Small Project Option)

1. Provide a worker decontamination facility in accordance with, Title 15, Chapter 1, OSHA Standard 29 CFR 1926.1101, 12NYCRR Part 56 and as specified herein. Unless approved by NYCDEP and the City, worker decontamination facilities shall be attached to the Work Areas

a) Structure:

- (1) Use modular systems or build using wood or metal frame studs, joists, and rafters placed at a maximum of 16 inches on-center.
- (2) When worker decontamination unit is located outdoors, in areas with public access, or in correctional facilities, frame work shall be lined with minimum 3/8" thickness plywood sheathing. Sheathing shall be caulked or taped airtight at all joints and seams.
- (3) Interior shall be covered with two layers of opaque 6-mil polyethylene sheeting, with a minimum overlap of 16 inches at seams. Seal seams airtight using tape and adhesive. The interior floor shall be covered with two (2) layers of reinforced fire-retardant polyethylene sheeting with a minimum overlap on the walls of sixteen inches.
- (4) Entrances to the decontamination unit shall be secured with lockable hinged doors. Doors shall be open at all times when abatement operations are in progress. Doors shall be louvered to allow for air movement through the decontamination units into Work Area.

- b) Curtained Doorways: A device to allow ingress or egress from one room to

another while permitting minimal air movement between the rooms.

- c) **Air Locks:** Air locks shall consist of two curtained doorways placed a minimum of three feet apart.
- d) **Decontamination Enclosure System** shall be placed adjacent to the Work Area and shall consist of three totally enclosed chambers, separated from Work Area and each other by airlocks, as follows:
 - (1) **Washroom:** An equipment washroom shall have two air locks (one separating the unit from the Work Area and one common air lock that separates it from the holding area. The washroom shall have facilities for washing material containers and equipment. Gross removal of dust and debris from contaminated material containers and equipment shall be accomplished in the Work Area, prior to moving to the washroom.
 - (2) **Holding Area:** A holding area shall share a common air lock with the equipment washroom and shall have a curtained doorway to outside areas. A hinged, lockable door shall be placed at the holding area entrance to prevent unauthorized access into the Work Area.

B. **Decontamination Enclosure System Utilities:** Lighting, heat, and electricity shall be provided as necessary by the Contractor, and as specified herein.

3.03 PERSONNEL ENTRANCE AND DECONTAMINATION PROCEDURES FOR REMOVAL OPERATIONS UTILIZING REMOTE DECONTAMINATION FACILITIES

- A. All individuals who enter the Work Area shall sign the entry log, located in the clean room, upon each entry and exit. The log shall be permanently bound and shall fully identify the facility, agents, contractor(s), the project, each Work Area, and worker respiratory protection employed. The job supervisor shall be responsible for the maintenance of the log during the abatement activity.
- B. Each worker shall remove street clothes in the clean room; wear two disposable suits, including gloves, hoods and non-skid footwear; and put on a clean respirator (with new filters) before entering the Work Area.
- C. Each worker shall, before leaving the Work Area or tent, shall clean the outside of the respirators and outer layer of protective clothing by wet cleaning and/or HEPA-vacuuming. The outer disposable suit shall be removed in the airlock prior to proceeding to the Worker Decontamination Unit. The inner disposable suit and respirator shall be wet wiped and HEPA vacuumed thoroughly before removing and prior to aggressive shower.
- D. Following showering and drying off, each worker or authorized visitor shall proceed directly to the clean room, dress in street clothes, and exit the decontamination enclosure system immediately.

3.04 PERSONNEL ENTRANCE AND DECONTAMINATION PROCEDURES FOR REMOVAL OPERATIONS UTILIZING ATTACHED DECONTAMINATION FACILITIES

- A. All workers and authorized visitors shall enter the Work Area through the worker decontamination facility.
- B. All individuals who enter the Work Area shall sign the entry log, located in the clean room, upon each entry and exit. The log shall be permanently bound and shall identify fully the facility, agents, contractor(s), the project, each Work Area and worker respiratory protection employed. The site supervisor shall be responsible for the maintenance of the log during the abatement activity.
- C. Each worker or authorized visitor shall, upon entering the job site, remove street clothes in the clean room and put on a clean respirator with filters, and clean protective clothing before entering the Work Area through the shower room and equipment room.
- D. Each worker or authorized visitor shall, each time he leaves the Work Area, remove gross contamination from clothing before leaving the Work Area; proceed to the equipment room and remove clothing except the respirator; still wearing the respirator, proceed to the shower room; clean the outside of the respirator with soap and water while showering; remove filters, wet them, and dispose of them in the container provided for that purpose; wash and rinse the inside of the respirator; and thoroughly shampoo and wash himself/herself.
- E. Following showering and drying off, each worker or authorized visitor shall proceed directly to the clean room, dress in street clothes, and exit the decontamination enclosure system immediately. Disposable clothing of the type worn inside the Work Area is not permitted outside the Work Area.

3.05 MAINTENANCE OF DECONTAMINATION ENCLOSURE FACILITIES AND BARRIERS

- A. The following procedures shall be followed during the conduct of abatement activities.
 - 1. All polyethylene barriers inside the work place and partitions constructed to isolate the Work Area from occupied areas shall be inspected by the asbestos handler supervisor at least twice per shift.
 - 2. Smoke tubes shall be used to test the integrity of the Work Area barriers and the decontamination enclosure systems daily before abatement activity begins and at the end of each shift.
 - 3. Damage and defects in the decontamination enclosure system shall be repaired immediately upon discovery.
 - 4. At any time during the abatement activity, if visible emissions are observed, or elevated asbestos fiber counts outside the Work Area are measured, or if damage occurs to

barriers, abatement shall stop. The source of the contamination shall be located, the integrity of the barriers shall be restored and extended to include the contaminated area, and visible residue shall be cleaned up using appropriate HEPA-vacuuming and wet cleaning.

5. Inspections and observations shall be documented in the daily project log by the asbestos handler supervisor.

3.06 MODIFICATIONS TO HVAC SYSTEMS

- A. Shut down, isolated or seal, all existing HVAC units, fans, exhaust fans, perimeter convection air units, supply and/or return air ducts, etc., situated in, traversing or servicing the work zone.
- B. Seal all seams with duct tap. Wrap entire duct with a minimum of two layers of 6-mil polyethylene sheeting. All shutdowns are to be coordinated with the Facility. Where systems must be maintained, i.e. traversing Work Areas to non-Work Areas, only supply ducts will be maintained, protect as described above. All returns must be blanked off in Work Area and adjacent areas, including floor above and below Work Area. When required Contractor shall apply for a clarification from NYCDEP. The Contractor shall implement the following engineering procedures:
 1. Maintenance of a positive pressure within the HVAC system of 0.01 inch water gauge (or greater) with respect to the ambient pressure outside the Work Area. The conditions for this system shall be maintained and be operational 24 hours per day from the initiation of Work Area preparation until successful final air clearance;
 2. The positive pressurization of the duct shall be tested, inspected and recorded both at the beginning and at the end of each shift;
 3. The positive pressurization shall be monitored using instrumentation which will provide a written record of pressurization and that will trigger an audible alarm, if the static pressure falls below the set value;
 4. The supply air fan and the supply air damper for the active positive-pressurized duct shall be placed in the manual "on" positions to prevent shutdown by fail-safe mechanisms;
 5. The return air fan and the return air dampers shall be shut down and locked-out;
 6. All the seams of the HVAC ducts that pass through the Work Area shall be sealed;
 7. The HVAC ducts that pass through the Work Area shall be covered with two (2) layers of 6-mil polyethylene sheeting, and all seams and edges of both layers shall be sealed airtight;
 8. The supply air fans, return air fans, and all dampers servicing the Work Area itself shall be shut down and locked-out. All openings within the Work Area of supply and return air ducts shall be sealed with 3/8-inch plywood and two layers of 6-mil polyethylene;

9. When abatement occurs during periods while the HVAC system is shut down so that an alternative method of pressurization of the duct passing through the Work Area is used (e.g., by low-pressure “blowers”, etc., directly coupled into the duct). Item #4 above shall be deleted and shall be replaced by the requirement to set the dampers of the HVAC duct in the manual closed positions, in order to effect pressurization.
- C. Contractor to coordinate this item with the Facility and Resident Engineer at the commencement of work.
- D. Where present HVAC systems (ducts) service a area, and that air system cannot be shut down, Contractor shall isolate and seal the ducts, both supply and return, at the boundary of that zone.
1. To isolate, cap, or seal a duct, the Contractor shall remove insulation from duct (if necessary), then disconnect linkage to fold shut all fire dampers. Contractor shall seal all edges and seams with caulk and duct-tape.
 2. Contractor shall then cut existing duct and fold metal in and secure with approved fasteners. Contractor shall caulk and duct-tape all seams and edges.
 3. All ducts shall then be completely wrapped and sealed with duct-tape and three (3) layers of reinforced polyethylene sheeting.
 4. All ducts shall be restored to original working order at the end of the project.
- E. Where present HVAC systems (ducts) service occupied areas (non-Work Areas), the Contractor shall blank off the ducts.
1. To isolate or seal the return duct, the Contractor shall remove any insulation (if necessary) from the duct. Then disconnect linkage to fold shut all fire dampers and insert a fiberglass board within the duct. Contractor shall seal all edges and seams with caulk, duct-tape and three (3) layers of reinforced polyethylene sheeting.
 2. All isolation of return ducts and any other activity that requires removal of ceiling by the Contractor shall be conducted under controls. Work is to be coordinated with the Resident Engineer and the Facility and is described as follows:
 - a) Work shall occur as scheduled.
 - b) Horizontal surfaces near the blanking operations shall be protected with 6-mil polyethylene sheeting.
 - c) Plastic drapes shall be used to enclose the immediate area.
 - d) Contractor to position and operate air filtration devices and HEPA-vacuums in the area to clean space after blanking operations.
 - e) All personnel involved with this work shall receive personal protection (i.e.

respirators and disposable suits).

- F. Upon loss of negative pressure or electric power, all work activities in an area shall cease immediately and shall not resume until negative pressure and/or electric power has been fully restored. When a power failure or loss of negative pressure lasts, or is expected to last, longer than thirty (30) minutes, the following sequence of events shall occur.
1. All make up air inlets shall be sealed airtight.
 2. All decontamination facilities shall be sealed airtight after evacuation of all personnel from the Work Area.
 3. All adjacent areas shall be monitored for potential fiber release upon discovery of and subsequently throughout, power failure.

3.07 LOCKOUT OF HVAC SYSTEMS AND ELECTRIC POWER

- A. Prior to the start of any prep work, the Contractor shall employ skilled tradesmen with limited asbestos licenses for the following work:
1. Disable all ventilating systems or other systems bringing air into, or exhausting air out of, the Work Area. Disable system by disconnecting wires removing circuit breakers, by lockable switch or other positive means to ensure against accidental re-starting of equipment.
 2. Lockout power to the Work Area by switching off all breakers and removing them from panels or by switching and locking entire panel. Label panel with following notation: "DANGER CIRCUIT BEING WORKED ON". Give all keys to Facility.
 3. Lock out power to circuits running through Work Area whenever possible by switching off and removing breakers from panel. If circuits must remain live, the Facility shall notify Contractor in order that he may secure a variance from NYCDEP. Protect all conduit and wires to remain and label all active circuits at intervals not to exceed 3 feet with tags having the following notation: "DANGER LIVE ELECTROCUTION HAZARD". Label all circuits in all locations including hidden locations that may be affected by the work in a similar manner.

PART 4 – PREPARATION OF WORK AREA AND REMOVAL PROCEDURES

4.01 REMOVAL OF ASBESTOS-CONTAINING ROOFING MATERIALS

- A. Contractor shall be responsible for the proper removal of ACM from the Work Area using standard industry techniques. The Testing Laboratory representative shall observe the Work.

1. General Requirements
 - a) Removal of ACM shall be performed using wet methods. Dry removal of ACM is prohibited.
 - b) Spray ACM with amended water with sufficient frequency and quantity to enhance penetration. Sufficient time shall be allowed for amended water to penetrate the material to the substrate prior to removal. All ACM shall thoroughly wetted all sides while work is being conducted.
 - c) Accumulation of standing water on the floor of the Work Area is prohibited.
 - d) Apply removal encapsulants, when used, in accordance with the manufacturer's recommendations and guidelines.
 - e) Containerize ACM immediately upon detachment from the substrate. Alternately, ACM may be dropped in to a flexible catch basin and promptly bagged. Excess air within the bag shall be removed before sealing. ACM shall not be dropped from a height of greater than 10 feet. Above 10 feet, dust free inclined chutes may be used. Maximum inclination from horizontal shall be 60-degrees for all chutes.

- B. Removal of ACM Roofing and Flashing shall be as follows:
 1. For roof decks constructed of wood or composition materials, the Contractor must file an ACP-5 (with prior approval from the Owner) along with all appropriate DEP, NYS and DOL filings. For all other deck materials, the Contractor has the option of filing an ACP-5 or ACP-7. If the Contractor has filed an ACP-5, protection of the windows on the floor beneath the roof is required.
 2. THE CONTRACTOR SHALL BE RESPONSIBLE FOR PROTECTION OF THE INTERIOR SPACES BENEATH THE ROOF.
 3. Removal and disposal of asbestos-containing roofing materials shall be performed under a thick blanket of non-toxic, water based biodegradable foam at least 2' thick. This biodegradable foam shall be produced on site by the Contractor and shall be approved by the Resident Engineer.
 4. The Contractor shall provide temporary roof protection consisting of 10 mil. polyethylene sheathing following abatement over the open roof areas. Strict coordination with the General Contractor, Construction Manager and/or Architect is required and necessary during this phase of abatement.
 5. Preliminary examination shall be conducted and precautions shall be taken to prevent damage to the interior of the building and to ensure no adverse effect on the structural stability of the roof due to the abatement activity.

The Contractor will be required to provide the necessary hoist, chute or elevator for

removing the debris and asbestos bags from the roof. Removal operations must be approved by the Facility and Construction Managers. Whichever method is approved and accepted, the Contractor is responsible to follow all applicable codes, standards and regulations. Hoists shall be constructed according to the Building Code of the City of New York.

Asbestos containing material located more than 10 feet above the floor shall be dropped into inclined chutes or dropped onto scaffolding or contained at that height for eventual disposal. For materials located at heights greater than 40 feet above the floor, a dust-tight, enclosed chute shall be constructed to transport material directly to containers located on the floor.

If an elevator is used to transport ACM, the interior car shall be plasticized with 2 layers of 6 mil polyethylene sheeting. The sheeting shall be removed at the end of each period of use for removing bagged asbestos waste and the car shall also be HEPA vacuumed and wet wiped.

6. Abatement activities shall not be carried out during adverse weather conditions (e.g., precipitation, heavy winds, etc.).
7. The work area on the roof shall be cordoned off, and only authorized persons shall have access to the "designated" work area. The removal shall start with the section(s) furthest away from the decontamination system and working progressively towards it. The Contractor may not remove more roofing material in a Work Area than can be covered by temporary roofing during that work period over the area of removal.
8. Movable objects shall be removed from the work area, or kept in place and wrapped in one sheet of 6-mil plastic sheeting. Fixed objects including perimeter walls, bulkheads, cooling towers, ducts and other rooftop appurtenances shall be covered in one sheet of plastic (minimum height of 6 feet).
9. The worker decontamination unit shall be constructed at an entry/exit from each work area with at least a shower room and a clean room. In addition to the shower head(s), the shower room shall be equipped with a flexible hose for waste decontamination for removal of less than 1,000 square feet. For more than 1,000 square feet of removal, a separate waste decontamination facility shall be located at an entry/exit from each work area.
10. The floor area between the remote decontamination facility and the Work Area must be protected with 2 layers of 6-mil. polyethylene sheeting suitably anchored.

11. Provisions shall be made to ensure a safe and adequate air supply to affected building(s). All vents, skylights, air intakes, windows and doors opening onto the roof, and all other openings are to be sealed with two layers of 6-mil plastic or fitted with HEPA-filters where appropriate. In lieu of sealing vents, air intakes, etc., with two layers of plastic or HEPA-filters, temporary extensions may be installed to a height of 10 feet to ensure adequate air exchange. Drains may be equipped with 5 micron filtering systems in lieu of being sealed.
12. Pre-Removal Inspections
 - a) Prior to removal of any ACRM, the Contractor shall notify the Testing Laboratory and request a pre-removal inspection. Posting of warning signs, building of decontamination enclosure systems, and all other preparatory steps have been taken prior to notification of the Testing Laboratory.
 - b) Contractor shall correct any deficiencies observed by Testing Laboratory at no additional cost to City.
 - c) Following the Testing Laboratory's approval of the Work Area preparations, removal of ACM may commence.
13. Removal of ACM Roofing and Flashing Materials:
 - a) Abatement shall not be performed in adverse weather conditions (e.g., precipitation, heavy winds, etc.)
 - b) Prior to actual removal, the built-up roofing and flashing shall be blanketed and wetted with a minimum two-inch thick coating of the acceptable foam or viscous liquid which shall be maintained for the duration of the removal until the material is bagged. The foam or viscous liquid shall be confined to the work area.
 - c) Manual methods of removal are recommended; however, if hand-held power tools are used to drill, cut into, or otherwise disturb the asbestos-containing roofing material, the power tools shall be equipped with HEPA-filtered local exhaust ventilation and operated to prevent potential fiber release.
 - d) Portable HEPA-vacuum machines shall be available during abatement.

After the ACM removal and bagging, the bagged waste shall be HEPA-vacuumed then wet cleaned and transferred into the shower room for double bagging. The double-bagged waste shall be transferred outside the clean room for its final transfer for storage in an enclosed waste container
14. Following Removal of ACM Roofing and/or Flashing:
 - a) Upon completion of the abatement in roof work area, clean-up procedures shall involve removal and bagging of:

- b) the asbestos containing roofing material
- c) visible accumulations of asbestos containing waste
- d) all excess foam or similar viscous liquid
- e) all debris, and shall be followed by a thorough wet cleaning.
- f) All tools shall be wet cleaned and HEPA-vacuumed, and then removed from the work area upon completion.
- g) The work area shall be allowed to dry completely before the visual inspection is conducted. The inspection shall confirm the absence in the work area of:
- h) ACM, debris, bagged ACM waste,
- i) excess foam or other viscous liquid.
- j) If the work area fails visual inspection, it shall undergo another wet cleaning and/or HEPA vacuuming until it passes the visual inspection.
- k) When the visual inspection and clearance testing is successful, all plastic may be removed.
- l) Encapsulate the entire surface from which ACRM was removed with the approved sealer.

All polyethylene sheets and other barriers shall be sprayed with encapsulant following removal of ACRM as described herein but shall remain in place until successful air clearance has been achieved. All removed material shall be disposed of as asbestos containing waste. This disposal shall be in accordance with the provisions of Title 15, Chapter 1 of RCNY.

Respiratory protection during Work Area preparation and removal operation shall be (at a minimum) half-face respirators with HEPA filter cartridges.

Any modifications to the above procedures (including Air Monitoring) may be made only upon application to and approval of NYC Department of Environmental Protection Asbestos Control Program, Bureau of Air Resources through form ACP-9.

4.02 REMOVAL OF ACM UTILIZING TENT CONTAINMENT PROCEDURES

Removal of ACM Utilizing Tent Containment Procedures shall be as follows:

1. Preparation Procedures:

- a. Ensure that the Testing Laboratory has performed area monitoring and established a background count prior to the preparatory operations for each removal area, as applicable.
- b. Shut down, isolate, and lock out or tag heating, ventilating, and air conditioning (HVAC) systems which serve or which pass through the Work Area. Vents within the Work Area and seams in HVAC components shall be sealed with tape and two layers of polyethylene sheeting. Filters in HVAC systems shall be removed and treated as asbestos-contaminated waste.
- c. Shut down, disconnect, and lock out or tag all electric power to the Work Area so that there is no possibility of its reactivation until after clearance testing of the Work Area.
- d. Provide and install decontamination enclosure systems in accordance with PART 3 - EXECUTION, Articles 3.01 and 3.02 of these Specifications and the NYCDEP Variance. Decontamination facilities may be remote from the Work Areas upon approval from NYCDEP.
- e. Construct rigid framework to support Work Area barriers. Framework shall be constructed using 2-inch by 4-inch wooden or metal studs placed 16 inch on center when existing walls and/or ceiling do not exist.
- f. Seal floor drains, sumps, shower tubs, and other collection devices with two layers of 6-mil plastic and minimum 3/8" plywood, as necessary, and provide a system to collect all water used by the Contractor. Collected water shall be passed through a water filtration system prior to being discharged into the sanitary sewer. Any opening greater than 32 square feet shall be framed with 2-inch by 4-inch studding placed 16 inches on center.
- g. Install and initiate operation of AFDs to provide a negative pressure and a minimum of two air changes per hour within the Work Area relative to surrounding non-Work Areas. Do not shut down AFDs until the Work Area is released to the City following final clearance procedures. The use of HEPA-filtered vacuums to produce a negative air pressure inside the enclosure is prohibited.
- h. Maintain emergency and fire exits from the Work Areas or establish alternative exits satisfactory to the local fire officials. Emergency exits and routes shall be established and clearly marked with florescent paint or other effective designations to permit easy location from anywhere within the Work Area. Emergency exits shall be secured to prevent access from uncontaminated areas and yet permit emergency exiting. Exits shall be checked daily against exterior blockage or impediments to exiting.
- i. Temporary lighting within the Work Area and decontamination system shall be

provided as required to achieve minimum illumination levels.

- j. Hand power tools used to drill, cut into, or otherwise disturb ACM shall be equipped with HEPA filtered local exhaust ventilation.
- k. Prior to being plasticized, the Work Areas shall be cleaned using HEPA-vacuum equipment and/or wet cleaning methods as appropriate. Methods that raise dust, such as dry sweeping or vacuuming with equipment not equipped with HEPA filters, shall not be used.
- l. Plasticize the area after pre-cleaning, using the following procedures. Do not apply polyethylene sheeting wall and ceiling surfaces that will be demolished to access ACM.
 - (1) Cover floor with one layer of 6-mil polyethylene sheeting, turning layer a minimum of 12 inches up wall, and seal layer to wall.
 - (2) Cover walls with one layer of 6-mil polyethylene sheeting, overlapping wall layer a minimum of 12 inches, and seal layer to floor layer.
 - (3) Cover ceilings with one layer of 6-mil polyethylene sheeting, overlapping wall layer a minimum of 12 inches, and seal layer to wall layer.
 - (4) Repeat procedure for second layer. All joints in polyethylene sheeting shall be glued and taped in such a manner as to prohibit air passage. Joints on plastic layers shall be staggered to reduce the potential for water to penetrate.
 - (5) In areas where demolition is required to access ACM, a layer of 6-mil reinforced polyethylene sheeting shall be placed on the floor of the enclosure.
 - (6) Perform demolition required to access ACM. Debris resulting from demolition activities shall be disposed of as ACM as described in this Specification.
 - (7) Repeat preparation of areas accessed by demolition activities as described above.
 - (8) Suspended ceiling tiles and T-grid components shall remain in place until the preparation of the Work Area below the ceiling tiles are completed and personnel and equipment decontamination enclosures have been constructed.
 - (9) Protect non-ACM insulation within the Work Area(s) with two individual layers of 6-mil polyethylene sheeting. Sheeting shall remain in-place until satisfactory clearance air monitoring results are achieved.

m. Pre-Removal Inspections

- (1) Prior to removal of any ACM, the Contractor shall notify the Testing Laboratory and request a pre-removal inspection. Posting of warning signs, building of decontamination enclosure systems, and all other preparatory steps have been taken prior to notification of the Testing Laboratory.
- (2) Contractor shall correct any deficiencies observed by Testing Laboratory at no additional cost to City.
- (3) Following the Testing Laboratory's approval of the Work Area preparations, removal of ACM may commence.

2. Removal of ACM Utilizing Tent Containment Procedure:

- a) Mist material with amended water and/or foam. Allow sufficient time for the amended water to penetrate the material to be removed.
- b) Cut bands, wire or other items placed over insulation or ACM.
- c) Remove the ACM using hand tools such as knives or scrapers.
- d) Exercise caution when removing ACM.
- e) Remove any residual asbestos-containing material from the substrate using wet cleaning methods.
- f) Seal exposed ends of remaining insulation or ACM with a "wettable cloth" and/or encapsulant.
- g) Place the removed material immediately into a properly labeled 6-mil polyethylene bag. All material shall be properly containerized and decontaminated prior to removal from the Work Area.
- h) Following the completion of removal of ACM, all visible residue shall be removed from the substrate.

3. Following Removal of ACM Utilizing Tent Containment Procedure:

- a) Clean all visible accumulations of loose ACM. Metal shovels shall not be used within the Work Area.
- b) Accumulations of dust shall be cleaned continuously until completion of clean up.
- c) Apply a thin coat of an encapsulating agent shall be applied to any surfaces in the Work Area which were not the subject of removal or other remediation activities.

In no event shall encapsulant be applied to any surface that was the subject of removal or other remediation activities prior to obtaining satisfactory clearance air monitoring results.

- d) After removal of all visible accumulations of ACM, the area shall be:
- (1) HEPA-vacuumed on dry surfaces.
 - (2) Wet/dry shop vacuums (dedicated to asbestos abatement) may be used to pick up excess water and gross saturated debris.
 - (3) All surfaces shall be wet cleaned. Contractor shall request and pass a visual inspection performed by the consultant before proceeding to the next step. Documentation of passing this inspection shall be recorded in a daily logbook.
 - (4) The Testing Laboratory will conduct a visual observation of the Work Area to verify the absence of asbestos-containing waste materials.
 - (5) If the Work is accepted by the Testing Laboratory based on the inspection, Contractor shall be notified. Conduct the following activities in accordance with the contract and all applicable laws, codes, rules and regulations.
 - (a) All waste shall be removed from the Work Area and holding areas.
 - (b) All tools and equipment are to be removed and decontaminated in the decontamination enclosure system.
 - (6) If the Work is not approved, the Testing Laboratory will inform Contractor who will then HEPA-vacuum and/or wet-clean the Work Area. The Testing Laboratory will then perform a subsequent visual observation. This process will continue until the Testing Laboratory accepts the Work Area as clean.
 - (7) The Work Area shall be vacated for a minimum of one hour to allow fibers to settle prior to clearance air monitoring, when required.
- e) Final Barrier Removal
- (1) Upon receipt of acceptable clearance testing results polyethylene sheeting (inside layers) and Isolation Barriers shall be removed and disposed accordingly as ACM.
 - (2) The area surrounding the abatement work place shall be cleaned of any visible debris utilizing HEPA-vacuum and wet methods.
- f) The Testing Laboratory will conduct final visual. Approval must be granted prior to break down of decontamination facility and contractor demobilization. Other

Information: Extra time required to clean Work Areas in order to achieve clearance criteria shall not be considered grounds for an extension of time for contract completion.

4.03 REMOVAL OF ACM UTILIZING FULL CONTAINMENT PROCEDURES

A. Removal of ACM Utilizing Full Containment Procedures shall be as follows:

1. Preparation Procedures:

- a) Ensure that the Testing Laboratory has performed area monitoring and established a background count prior to the preparatory operations for each removal area, as applicable.
- b) Shut down, isolate, and lock out or tag heating, ventilating, and air conditioning (HVAC) systems which serve or which pass through the Work Area. Vents within the Work Area and seams in HVAC components shall be sealed with tape and two layers of polyethylene sheeting. Filters in HVAC systems shall be removed and treated as asbestos-contaminated waste.
- c) Shut down, disconnect, and lock out or tag all electric power to the Work Area so that there is no possibility of its reactivation until after clearance testing of the Work Area.
- d) Provide and install decontamination enclosure systems in accordance with Sections 3.01 and 3.02 of this Specifications.
- e) Remove ACM that may be disturbed by the erection of partitions using tent procedures and wet removal methods. Removal shall be limited to a one-foot wide strip running the length/height of the partition.
- f) Pre-clean and remove moveable objects from the Work Area. Pre-cleaning shall be accomplished using HEPA-vacuum and wet-cleaning techniques. Store moveable objects at a location determined by the City.
- g) Protect carpeting that will remain in the Work Area.
 - 1) Pre-clean carpeting utilizing wet-cleaning techniques.
 - 2) Install a minimum of two layers of 6-mil reinforced polyethylene sheeting over carpeting.
 - (10) Place a rigid flooring material, minimum thickness of 3/8-inch, over polyethylene sheeting.
- h) Pre-clean all fixed objects to remain within the Work Area using HEPA-vacuum

and wet-cleaning techniques.

- i) Seal fixed objects with two individual layers, minimum, of 6-mil polyethylene sheeting.
- j) Pre-clean entire Work Area utilizing using HEPA-vacuum and wet-cleaning techniques. Methods of cleaning that raise dust, such as dry sweeping or use of vacuum equipment not equipped with HEPA-filters, is prohibited.
- k) Install isolation barriers (i.e., sealing of all openings, including but not limited to windows, corridors, doorways, skylights, ducts, grills, diffusers, and other penetrations within the Work Area) using two layers of 6-mil polyethylene sheeting and duct-tape.
- l) Construct rigid framework to support Work Area barriers.
 - 1) Framework shall be constructed using 2-inch by 4-inch wooden or metal studs placed 16 inch on center when existing walls and/or ceiling do not exist for all openings greater than 32 square feet. Framework is not required except where one dimension is one foot or less or the opening will be used as an emergency exit.
 - 2) Apply a solid construction material, minimum thickness of 3/8-inch to the Work Area side of the framing. In secure interior areas, not subject to access from the public or building occupants, an additional layer of 6-mil polyethylene sheeting may be substituted for the rigid construction material.
 - 3) Caulk all wall, floor, ceiling, and fixture joints to form a leaktight seal.
- m. Seal floor drains, sumps, shower tubs, and other collection devices with two layers of 6-mil plastic and plywood, as necessary, and provide a system to collect all water used by the Contractor. Collected water shall be passed through a water filtration system prior to being discharged into the sanitary sewer.
- n. Remove ceiling mounted objects not previously sealed that will interfere with removal operations. Mist object and surrounding ACM with amended water prior to removal to minimize fiber dispersal. Clean all moveable objects using HEPA-vacuum and wet-cleaning techniques prior to removal from the Work Area.
- o. Fiberglass insulation with intact coverings shall be protected in place during abatement activities. These materials shall be protected with two layers of 6-mil polyethylene sheeting as isolation barriers and two additional layers of 6-mil polyethylene sheeting serving as primary and secondary surface barriers.
- p. Install and initiate operation of AFDs to provide a negative pressure and a minimum of two air changes per hour within the Work Area relative to

surrounding non-Work Areas. Do not shut down AFDs until the Work Area is released to the City following final clearance procedures. The use of HEPA-filtered vacuum to produce a negative air pressure inside the enclosure is prohibited.

- q. Maintain emergency and fire exits from the Work Areas or establish alternative exits satisfactory to the local fire officials. Emergency exits and routes shall be established and clearly marked with florescent paint or other effective designations to permit easy location from anywhere within the Work Area. Emergency exits shall be secured to prevent access from uncontaminated areas and yet permit emergency exiting. Exits shall be checked daily against exterior blockage or impediments to exiting.
- r. Temporary lighting within the Work Area and decontamination system shall be provided as required to achieve minimum illumination levels.
- s. Hand power tools used to drill, cut into, or otherwise disturb ACM shall be equipped with HEPA filtered local exhaust ventilation.
- t. Prior to being plasticized, the Work Areas shall be cleaned using HEPA vacuum equipment and/or wet cleaning methods as appropriate. Methods that raise dust, such as dry sweeping or vacuuming with equipment not equipped with HEPA filters, shall not be used.
- u. Plasticize the area after pre-cleaning, using the following procedures.
 - (1) Cover floors with one layer of 6-mil polyethylene sheeting, turning layer a minimum of 6 inches up wall, and seal layer to wall.
 - (2) Cover walls with one layer of 6-mil polyethylene sheeting, overlapping wall layer a minimum of 6 inches, and seal layer to floor layer.
 - (3) Cover floors with a second layer of 6-mil polyethylene sheeting, turning layer a minimum of 12 inches up wall, and seal layer to wall.
 - (4) Cover walls with a second layer of 6-mil polyethylene sheeting, overlapping wall layer a minimum of 12 inches, and seal layer to floor layer.
 - (5) In areas where demolition is required to access ACM, a layer of 6-mil reinforced polyethylene sheeting shall be placed on the floor of the enclosure.
 - (6) Perform demolition required to access ACM. Debris resulting from demolition activities shall be disposed of as ACM as described in this Specification.

- (7) Repeat preparation of areas accessed by demolition activities as described above.
- v. Suspended ceiling tiles and T-grid components shall remain in place until the preparation of the Work Area below the ceiling tiles are completed and personnel and equipment decontamination enclosures have been constructed.
- w. Scaffolds shall be provided for workers engaged in work that cannot safely be performed from the ground or other solid Work Area surface.
- x. Pre-Removal Inspections
 - 1) Prior to removal of any ACM, the Contractor shall notify the Testing Laboratory and request a pre-removal inspection. Posting of warning signs, building of decontamination enclosure systems, and all other preparatory steps have been taken prior to notification of the Testing Laboratory.
 - 2) Contractor shall correct any deficiencies observed by Testing Laboratory at no additional cost to City.
 - 3) Following the Testing Laboratory's approval of the Work Area preparations, removal of ACM may commence.
- 2. Removal of ACM Within Full Containment:
 - a. Mist material with amended water. Allow sufficient time for the amended water to penetrate the material to be removed.
 - b. Remove the material using hand tools such as scrapers or putty knives. Wire-mesh or wood lathe reinforcing, when present, shall be cut into manageable pieces and disposed of as ACM.
 - c. Remove any residual material from the substrate using wet cleaning methods and nylon-bristled hand brushes.
 - d. Place the removal material immediately into a properly labeled 6-mil polyethylene bag. All material shall be properly containerized and decontaminated prior to removal from the Work Area.
 - e. Following the completion of removal of insulation, all visible residue shall be removed from the substrate
- 3. Following Removal of ACM utilizing Full Containment Procedures:
 - a. First Cleaning:
 - (1) Remove any visible accumulation of asbestos material and debris. HEPA-

vacuuming and wet cleaning shall be performed on all surfaces inside the Work Area. All sealed drums, plastic bags, and equipment used in the Work Area shall be removed from the Work Area.

- (2) Upon request of the Contractor, the Testing Laboratory will perform a visual inspection. Evidence of asbestos contamination identified during the inspection will necessitate further cleaning as heretofore specified.
- (3) Remove first layer of plastic sheathing inside the Work Area. The isolation barriers and decontamination facility shall remain in place and be utilized.

b. Second Cleaning:

- (1) After the first cleaning, the Work Area shall be vacated for twelve hours to allow fibers to settle.
- (2) All objects and surfaces in the Work Area shall be HEPA - vacuumed and wet cleaned for a second cleaning.
- (3) A thin coat of lockdown encapsulant shall be applied to all plastic covered surfaces in the Work Area.
- (4) When the encapsulant is dry, second layer of polyethylene sheeting on the walls, ceiling and floors shall be removed. Do not remove seals from doors, windows, Isolation Barriers or disconnect the negative pressure equipment.

c. Third Cleaning:

- (1) A minimum of four hours after the second cleanup, all the surfaces in the Work Area shall be HEPA-vacuumed and wet cleaned for a third cleaning.
- (2) Upon the request of the Contractor, the Testing Laboratory for observing whether cleaned areas are free of dust, dirt, and debris will do final visual inspection for reoccupancy. Evidence of asbestos contamination identified during the inspection will necessitate further cleaning as heretofore specified.
- (3) When the Work Area passes the Testing Laboratory's visual reoccupancy inspection, air sampling shall not begin until at least one hour after the completion of the third cleanup. The testing laboratory shall perform air monitoring using aggressive testing techniques. The Testing Laboratory will approve Reoccupancy if the specified fiber count in the Work Area is achieved according to the testing laboratory.
- (4) When the Work Area passes the reoccupancy test, all controls and seals

established shall be removed.

- d. **Final Barrier Removal**
 - (1) Upon receipt of acceptable clearance testing results, polyethylene sheeting and Isolation Barriers shall be removed and disposed accordingly as asbestos-containing material.
 - (2) The area surrounding the abatement work place shall be cleaned of any visible debris utilizing HEPA vacuum and wet methods.
- e. The Testing Laboratory will conduct a final visual observation. Approval must be granted prior to break down of decontamination facility and contractor demobilization.

4.04 MAINTENANCE OF CONTAINED WORK AREA AND DECONTAMINATION ENCLOSURE SYSTEMS

- A. Ensure that barriers are installed in a manner to appropriate to the expected weather conditions expected during the project and for its duration. Repair damaged barriers and remedy defects immediately upon their discovery. Visually inspect barriers at the beginning and end of each work period.
- B. Visually inspect non-Work Areas and the decontamination enclosure system for water leakage. Check the floor below, ceiling and walls, and view beneath/or around the decontamination enclosure system, for signs of leakage. Perform the visual inspection a minimum of twice each 8-hour work shift.

PART 5 – ASBESTOS WASTE MANAGEMENT

5.01 ACM WASTE REQUIREMENTS

- A. The Contractor and all sub-Contractor are specifically alerted to the illegal practice of combining asbestos-containing waste (ACW) from one project with the ACW of other projects without using the services of a permitted waste transfer station as defined by 6 NYCRR Part 360 and 364. As part of the shop drawing submittals, the Contractor must submit for approval the proposed method of transportation and disposal that will be utilized to manage the ACW of this Contract. If a permitted transfer station is to be used, the cost shall be included in the Bid price. The Contractor must submit a waste manifest consistent with whatever approved method is utilized as part of the invoicing and payment procedures.
- B. The Contractor shall maintain compliance with the strictest set of regulations of Title 15, Chapter 1 of RCNY, NYC LL 70/85, NYS DOL ICR 56, USEPA, Asbestos Regulation 40CFR 61.152, 29 CFR 1926.1101, 29 CFR 1910.1200 (F) of OSHA's Hazard Communication Standards, and

other applicable standards.

NOTE: Any penalties incurred for failure to comply with any of the above regulations will be the sole responsibility for fines imposed due to negligence of the Contractor.

- C. When presenting ACW for storage at the generation site, the Contractor shall:
1. Wet down ACW in a manner sufficient to prevent all visible emissions of dust into the air.
 2. Seal material in a leak tight container while wet.
 3. Keep ACW separate from any other waste.
- D. When presenting ACW for storage away from the site of generation, the Contractor shall:
1. Ensure that ACW has been properly packaged as per requirements above.
 2. Examine the containers of ACW to ensure that there are no breaks in the containers and that no visible dust are being released into the air.
 3. If examination reveals damage to a container of ACW the Contractor or person accepting the waste shall immediately wet down the ACW and repackage it into a clean leak tight container. The subsequent repackaging shall be the financial responsibility of the Contractor and occur at no extra cost to the City.
 4. Keep ACW separate from any other waste.
- E. When storing ACW – The Contractor shall:
1. Ensure that the ACW has been sufficiently wetted down in tight container.
 2. Re-wet and repackage any damaged containers.
 3. Maintain at storage site an adequate supply of spare leak tight containers.
 4. Maintain at storage site an adequate supply of amended water.
 5. Keep ACW separate from any other waste.
 6. Keep ACW in a secured, enclosed, and locked container.
 7. If the Contractor has intention of sorting a quantity of ACW greater than or equal to 50 cubic yards, the Contractor shall:
 - a. Submit a written request and receive written approval from the City.

- F. When presenting for transport, the Contractor shall:
1. Ensure that ACW has been sufficiently wetted down.
 2. Examine the integrity of the container's airtight seal.
 3. Re-wet and repackage any damaged containers.
 4. Keep ACW separate from all other waste.
 5. Ensure that a person transporting asbestos waste holds a valid permit issued pursuant to law.
 6. Frequency of Waste Removal:
 - a. Properly packaged and labeled asbestos waste shall be removed from the site on a daily basis. Under no circumstance shall asbestos waste be stored on site without written approval from the Construction Manager and the City. The Waste Hauler and landfill shall be as indicated on the notifications to regulatory agencies.
- G. Waste Load-out Through Equipment Decontamination Enclosure (Full Decontamination Facility): Place asbestos waste in disposal bags. Large items not able to fit into disposal bags shall be wrapped in one layer of 6-mil thick polyethylene sheeting. Clean outer covering of asbestos waste package by wet cleaning and/or HEPA-vacuuming in a designated part of the Work Area. Move wrapped asbestos waste to the equipment washroom, wet clean each bag or object and place it inside a second disposal bag, or a second layer of 6-mil polyethylene sheeting, as the item's physical characteristics demand. Air volume shall be minimized, and the bags or sheeting shall be sealed airtight with tape.
1. The clean containerized items shall be moved to the equipment decontamination enclosure holding area pending load-out to storage or disposal facilities.
 2. Workers who have entered the equipment decontamination enclosure system from the uncontaminated non-Work Area shall perform load-out of containers from the decontamination enclosure holding area. Dress workers moving asbestos waste to storage or disposal facilities in clean overalls of a color different than from that of coveralls used in the Work Area. Ensure that workers do not enter from uncontaminated areas into the equipment washroom or the Work Area. Ensure that contaminated workers do not exit the Work Area through the equipment decontamination enclosure system.
 3. Thoroughly clean the equipment decontamination enclosure system immediately upon completion of the waste load-out activities, and at the completion of each work shift.
 4. Labeled ACM waste containers or bags shall not be used for non-ACM debris or trash. Any materials placed in labeled containers or bags, including those turned "inside-out", shall be handled and disposed of as ACM waste.

- H. All asbestos materials, wastes, shower water, polyethylene, disposable equipment and supplies shall be disposed of as contaminated waste, in accordance with the EPA regulation (40 CFR, Section 61.150) and those requirements of the New York Department of Environmental Conservation and New York City Department of Sanitation.
- I. All asbestos materials shall be prepared for transportation in accordance with this specification and all applicable Federal, State, County and City Regulations. Contractor shall submit the following documentation:
 - 1. Where applicable, an EPA Generator's identification numbers which has been obtained from the EPA for all asbestos waste generated from the project.
 - 2. Applicable State Waste Hauler license and registration numbers.
 - 3. Federal Hazardous Materials Waste Hauler number.
 - 4. Designated landfill EPA Permit numbers.
- J. Prior to loading asbestos waste the enclosed cargo areas (dumpster) shall be prepared as follows:
 - 1. Clean via HEPA-vacuum and wet wipe techniques the enclosed cargo areas of all visible debris prior to preparing with polyethylene.
 - 2. Line the cargo area with two layers of 6-mil polyethylene sheeting to prevent contamination from damaged or leaking containers. Floor sheeting shall be installed first and extend up the walls a minimum of 24-inches. Wall sheeting shall be overlapped and taped securely into place.
- K. Asbestos-containing waste shall be placed on level surfaces in the cargo area of the dumpster and shall be packed tightly to prevent any shifting or tipping of the waste during transportation.
- L. Asbestos-containing waste shall not be thrown into or dropped from the dumpster. All material shall be handled carefully to prevent rupture of the containers.
- M. All personnel engaged in handling and loading of contaminated waste outside of the Work Area shall wear protective clothing. The disposable clothing shall include head, body and foot protection and color of clothing shall be different from abatement personnel in the Work Area. Minimum respiratory protection shall be half. face, dual cartridge, air purifying respirators with HEPA-filters.
- N. Contractor shall immediately clean debris or residue observed on containers or surfaces outside of the Work Area. Cleaning shall be via HEPA equipped wet/dry vacuums only.
- O. All asbestos-containing waste shall be transported from the abatement site to the landfill by a registered Waste Hauler. When transporting ACW:
 - 1. Ensure that the ACW has been sufficiently wetted down in a leak tight container.

2. Re-wet and repackage any damaged containers.
 3. Maintain at storage site an adequate supply of spare leak tight containers.
 4. Maintain at storage site an adequate supply of amended water.
 5. Keep ACW separate from any other waste.
- P. Keep ACW in a secured, enclosed, and locked container.
- Q. Waste transport documents shall conform to the requirements of the U.S. Department of Transportation, Hazardous Materials Transportation Regulation, 49 CFR Part 173 and EPA 40 CFR 61.150 (d)(1)(2). Shipping documents shall be clearly marked with the required designation "RQ Asbestos". Contractor shall provide a copy of this document to the City.
- R. A uniform hazardous waste manifest shall be prepared by the Contractor and signed by the Contractor each time the Contractor ships a dumpster load of Asbestos-Containing Waste Material. The uniform hazardous waste manifest shall include the site of waste generation, the names and addresses of the Transporter, the Contractor, and the landfill operator with information on the type and number of asbestos-waste containers, time and date. Contractor shall provide the Construction Manager with signed copies of the waste manifest before each departure.
- S. Contractor or his registered hazardous Waste Hauler shall transport asbestos-containing waste material from the abatement site directly to the specified disposal site. Contractor or their Waste Hauler shall not accept material from any other site when transporting asbestos-containing waste material from the abatement site. The Construction Manager reserves the right to travel with Contractor's Waste Hauler to the waste disposal site. No intermediate storage of waste material (i.e. Contractor's warehouse) shall be permitted.
- T. Final or progress application for payments will not be processed unless all hazardous waste manifests generated to date have been received and reviewed by the Resident Engineer and Construction Manager.
- U. All asbestos materials, wastes, shower water, polyethylene disposable equipment and supplies shall be disposed of as contaminated waste, in accordance with the EPA regulation (40 CFR, Section 61.150) and those requirements of the New York State Department of Environmental Conservation and the New York Department of Sanitation.
- V. Contractor shall transport all sealed drums to a landfill disposal site approved by the Department of Environmental Conservation and the EPA. Transportation shall be performed by a New York State registered Waste Hauler, where required. When presenting the ACW for disposal the Contractor or sub Contractor shall:
1. Ensure that waste container is properly labeled according to the National Emission Standard for Hazardous Air Pollutants (NESHAP); Asbestos Revision, 40 CFR, Part 61,

- Subpart M. The labels shall include the name of the waste generator and the location where the waste was generated.
2. Comply with all applicable orders issued pursuant to asbestos disposal.
 3. Ensure that ACW has been sufficiently wetted down.
 4. Re-wet and repackage any damaged containers.
 5. Keep ACW separate from all other wastes.
- W. Contractor shall notify the waste disposal site, at least 24 hours prior to transportation of contaminated waste to be delivered. Contractor shall determine if a larger notification period is required.
- X. At the site Contractors or Waste Hauler trucks shall approach the dump location as close as possible for unloading asbestos waste. Containers shall be carefully placed in the ground. Do not throw containers from truck.
- Y. Contractor or Waste Hauler shall inspect containers as they are unloaded at the disposal site. Material in damaged containers shall be repacked in empty containers, as necessary.
- Z. Contractor or Waste Hauler shall not remove asbestos-containing waste Material from drums unless required to do so by the disposal site. Used drums shall be disposed of as asbestos-contaminated waste.
- AA. All personnel engaged in unloading of the containers at the waste site shall wear protective clothing. The disposable clothing shall include head, body and foot protection. Minimum respiratory protection shall be half. face, dual cartridge, air purifying respirators with HEPA-filters. Workers shall remove their protective clothing at the disposal site, place it in labeled disposal bags and leave them with the deposited waste shipment.
- BB. For the compaction operation, the Contractor shall ensure that disposal sites personnel have been provided with personal protective equipment by the disposal operator. If the disposal site has not provided this protective equipment, the Contractor shall supply protective clothing and respiratory protection for the duration of this operation (PAPR respirators are mandatory).
- CC. If containers are broken or damaged, the Contractor or Waste Hauler shall, using personnel who are properly trained and wearing proper protective equipment, shall repackage the waste in properly labeled containers. Contractor shall then clean the entire truck and its contents using HEPA-vacuums and wet cleaning techniques until no visible residue is observed.
- DD. Following the removal of all containerized waste, the Contractor shall decontaminate the truck cargo area using HEPA-vacuums and/or wet cleaning techniques until no residue is observed. All 6-mil polyethylene sheeting shall be removed and discarded as asbestos-containing waste material along with contaminated cleaning material and protective clothing, in containers at the disposal site.

- EE. The transporter(s) of all asbestos waste shall not back-haul any items on his return from landfill/disposal site.
- FF. All asbestos waste shall be disposed of in an approved Asbestos Landfill site only.
 - 1. NO PERSON UNDER ANY CIRCUMSTANCES SHALL ABANDON A.C.W. The same shall be disposed of only by certified persons in approved landfills.
 - 2. A manifest form will be signed by the Landfill City documenting receipt and acceptance of the asbestos-containing waste. This manifest will be furnished to the Construction Manager and the City of New York.
 - 3. It is the responsibility of the Asbestos Contractor to determine current waste handling, transportation and disposal regulations for the work site and for each waste disposal landfill. The Asbestos Contractor must comply fully with these regulations and all appropriate U.S. Department of Transportation, EPA and other Federal, State and Local entities' regulations and all other current legal requirements.
 - 4. The Asbestos Contractor shall obtain an agreement from the transporter (s) that the practice of "Back-Hauling" will not be engaged in, with respect to any and all waste loads taken from this site during the work.
 - 5. The Asbestos Contractor will document actual disposal of the waste at the designated landfill by having completed a Disposal Certificate and will provide a copy of the same to the Construction Manager and the Department of Design and Construction.

5.02 ACCEPTANCE

- A. Upon satisfactory completion of all decontamination procedures, a certificate will be issued by the Resident Engineer and Construction Manager with copies to all parties.
- B. A letter of Compliance stating that all the work on the project was performed in accordance with the Specifications and all applicable Federal, State and Local regulations.
- C. All warranties as stated in the Specifications.

END OF SECTION 02081

ELECTRICAL DESIGN ISSUES

Drawing E0.01

1. No comments.

Drawing E2.01

1. Control switch for kitchen exhaust fan KX-1 is not shown by the kitchen area.
2. Most of the circuiting and demolition work are covered by notes only rather than showing actual circuit numbers on the floor plan.

Drawing E2.02

1. Exhaust fans EF-1 and EF-2 located outdoors on the roof above the Electrical Service Room are shown to have non-weatherproof local thermal overload disconnect switch.
2. Most of the circuiting and demolition work are covered by notes only rather than showing actual circuit numbers on the floor plan.
3. Duplex outlet located on the roof above Mall area is not shown to be weatherproof type.
4. Exhaust fan located in the Chemical Lab Classroom no. 226 is not provided with local thermal overload switch to shut the power off during electrical maintenance period.

Drawing E2.03

1. Motor starter for GX-2 fan is two-speed type but the feeder shown is 3#10 in lieu of 6#10. Instead, the feeder for kitchen exhaust KX-1 is shown as 6#10 for single-speed starter. Feeder indications for GX-2 and KX-1 shall be swapped.
2. Wire size of 3#8 for exhaust fan GX-1 is not adequate and it will have a voltage drop of more than 5% due to its distance from Panel LP-UV3 via starter location.

Drawing E2.04

1. Electrical Service Room has two doors but the lighting control switch is not three-way type.
2. Note Nos. 5, 6, 7 and 8 call for #12 gauge wire run for Gymnasium lighting fixture. Due to high ceiling and long cable run, #12 gauge wire may provide very high voltage drop. Additionally, electrical circuiting of these fixtures is not shown on Contract Drawings and it is left up to the Contractor to decide how many fixtures to connect on one circuit.
3. Note No. 13 calls for all existing fire alarm speakers to be removed and re-installed but the Drawing does not show quantity of the speakers and their locations.

MECHANICAL DESIGN ISSUES

Drawing M2.01

1. Gas pipe should have been specified as galvanized for external use.

Drawing M2.02

1. CFM for low speed exhaust fan setting is not consistent as a percentage of high speed.
2. Room unit ventilators modulate the OA damper based on economizer mode. GX-1 and GX-2 go into high speed when one unit ventilators goes into economizer mode. This maintains classrooms under negative pressure. The engineer should have used gravity roof ventilators. A grv would maintain the classroom under positive pressure, when the pressure became excessive the grv would open relieving the pressure. This setup would be more energy efficient and would prevent drawing cold air through "cracks" in the building in the winter.
3. Indoor portion of kitchen exhaust should have been provided with new calcium silicate as per New York City code.

Drawing M2.03

1. Room unit ventilators modulate the OA damper based on economizer mode. GX-1 and GX-2 go into high speed when one unit ventilators goes into economizer mode. This maintains classrooms under negative pressure. The engineer should have used gravity roof ventilators. A grv would maintain the classroom under positive pressure, when the pressure became excessive the grv would open relieving the pressure. This setup would be more energy efficient and would prevent drawing cold air through "cracks" in the building in the winter.
2. LE-1 penetration through floor should be provide with FSD not FD.

Drawing M2.04

1. Exhaust shown with too short of straight run before fan inlet.

Specification

1. Missing louver section.

Monsignor McClancy Memorial High School Mechanical and Electrical Investigation Report

November 2008

Project No. 4651

LIZARDOS ENGINEERING ASSOCIATES, P.C.

Discipline: Electrical Sheet: 1 of 2Prepared by: ZAR Date: 11/6/2008**Electrical Construction Cost Estimate**Checked by: JM Date: 11/6/2008Project Title: Monsignor McClancy Memorial High School

Item #	Description	Quantity	Unit Price \$	Total \$	Assumption / Basis
1	Replace all EMT feeders and sub-feeders with rigid galvanized steel (RGS) conduits.	Lump Sum	\$120,000	\$120,000	
2	Provide cables in RGS conduits.	Lump Sum	\$70,000	\$70,000	
3	Provide PVC coated RGS conduits for incoming service feeders.	Lump Sum	\$125,000	\$125,000	
4	Provide incoming service conductors.	Lump Sum	\$80,000	\$80,000	
5	Provide additional support for EMT conduits and pull boxes to the building structure.	Lump Sum	\$20,000	\$20,000	
6	Separate DP-AC load side feeders from MDP trough.	Lump Sum	\$40,000	\$40,000	
7	Replace all branch circuit Greenfields with EMT conduits.	Lump Sum	\$80,000	\$80,000	
8	Furnish and install all branch circuit wiring in EMT conduits.	Lump Sum	\$35,000	\$35,000	
9	Replace Greenfield conduits for motor connection with Sealite	Lump Sum	\$5,000	\$5,000	
10	Provide rigid galvanized steel conduits for fire alarm system along with new fire alarm cables.	Lump Sum	\$125,000	\$125,000	
11	Provide missing fire alarm duct detectors and fire smoke dampers.	Lump Sum	\$15,000	\$15,000	
12	Remove, refurbish all fixtures Type 'FA' at the factory and re-install.	Lump Sum	\$25,000	\$25,000	
13	Provide patching and firestopping at all wall and ceiling penetration.	Lump Sum	\$15,000	\$15,000	
14	Replace dual disconnect switches on the roof with 6-pole switches.	Lump Sum	\$5,000	\$5,000	
15	Provide phenolic labels on all equipment panelboards and switches.	Lump Sum	\$3,000	\$3,000	
16	Replace panelboard LP-UV2. Replace 1 pole circuit breakers with 3 pole breakers to feed 3 phase loads.	Lump Sum	\$10,000	\$10,000	
17	Separate branch circuits and provide additional EMT conduits with new cables so that no more than three (3) circuits are run in any one conduit homerun from Panel LP-UV1, LP-UV2 and LP-UV3.	Lump Sum	\$60,000	\$60,000	
18	Replace exposed Greenfield conduits in Boiler Room with rigid metal conduits and provide new wiring.	Lump Sum	\$20,000	\$20,000	
19	Provide wiring and conduit for Chemistry Lab exhaust fan.	Lump Sum	\$10,000	\$10,000	
20	Increase the wiring and conduit size for GX-1 exhaust fan on the roof due to voltage drop.	Lump Sum	\$15,000	\$15,000

ELECTRICAL DESIGN ISSUES

Drawing E0.01

1. No comments.

Drawing E2.01

1. Control switch for kitchen exhaust fan KX-1 is not shown by the kitchen area.
2. Most of the circuiting and demolition work are covered by notes only rather than showing actual circuit numbers on the floor plan.

Drawing E2.02

1. Exhaust fans EF-1 and EF-2 located outdoors on the roof above the Electrical Service Room are shown to have non-weatherproof local thermal overload disconnect switch.
2. Most of the circuiting and demolition work are covered by notes only rather than showing actual circuit numbers on the floor plan.
3. Duplex outlet located on the roof above Mall area is not shown to be weatherproof type.
4. Exhaust fan located in the Chemical Lab Classroom no. 226 is not provided with local thermal overload switch to shut the power off during electrical maintenance period.

Drawing E2.03

1. Motor starter for GX-2 fan is two-speed type but the feeder shown is 3#10 in lieu of 6#10. Instead, the feeder for kitchen exhaust KX-1 is shown as 6#10 for single-speed starter. Feeder indications for GX-2 and KX-1 shall be swapped.
2. Wire size of 3#8 for exhaust fan GX-1 is not adequate and it will have a voltage drop of more than 5% due to its distance from Panel LP-UV3 via starter location.

Drawing E2.04

1. Electrical Service Room has two doors but the lighting control switch is not three-way type.
2. Note Nos. 5, 6, 7 and 8 call for #12 gauge wire run for Gymnasium lighting fixture. Due to high ceiling and long cable run, #12 gauge wire may provide very high voltage drop. Additionally, electrical circuiting of these fixtures is not shown on Contract Drawings and it is left up to the Contractor to decide how many fixtures to connect on one circuit.
3. Note No. 13 calls for all existing fire alarm speakers to be removed and re-installed but the Drawing does not show quantity of the speakers and their locations.

4. All Classroom lighting fixtures are shown as existing to remain. However, there are many 4'-0" fixtures where second pendant rod is missing and the fixture is hung on one pendant rod only.
5. There are emergency battery packs existing in the mall area but they are not adequate to provide code mandated footcandles in the area.
6. Existing battery packs in the Cafeteria area are not adequate to provide code mandated footcandles.

Drawing E6.01

1. Grounding of fire alarm control panel or fuse cut-out is not shown on the Drawing.

Drawing E6.02

1. Wiring for fire alarm system is not shown on the Drawings.

MECHANICAL DESIGN ISSUES

Drawing M2.01

1. Gas pipe should have been specified as galvanized for external use.

Drawing M2.02

1. CFM for low speed exhaust fan setting is not consistent as a percentage of high speed.
2. Room unit ventilators modulate the OA damper based on economizer mode. GX-1 and GX-2 go into high speed when one unit ventilators goes into economizer mode. This maintains classrooms under negative pressure. The engineer should have used gravity roof ventilators. A grv would maintain the classroom under positive pressure, when the pressure became excessive the grv would open relieving the pressure. This setup would be more energy efficient and would prevent drawing cold air through "cracks" in the building in the winter.
3. Indoor portion of kitchen exhaust should have been provided with new calcium silicate as per New York City code.

Drawing M2.03

1. Room unit ventilators modulate the OA damper based on economizer mode. GX-1 and GX-2 go into high speed when one unit ventilators goes into economizer mode. This maintains classrooms under negative pressure. The engineer should have used gravity roof ventilators. A grv would maintain the classroom under positive pressure, when the pressure became excessive the grv would open relieving the pressure. This setup would be more energy efficient and would prevent drawing cold air through "cracks" in the building in the winter.
2. LE-1 penetration through floor should be provide with FSD not FD.

Drawing M2.04

1. Exhaust shown with too short of straight run before fan inlet.

EXECUTIVE SUMMARY

Purpose

To find construction deficiencies in the recently constructed mechanical and electrical systems installed by the Contractors for the project "Soundproofing of Monsignor McClancy Memorial High School" located at 71-06 31st Avenue, East Elmhurst, NY 11370.

Summary

Lizardos Engineering Associates, P.C. (Lizardos) was engaged by the Monsignor McClancy Memorial High School to perform a field survey and document the deficiencies of construction work performed by the Contractors.

A walk-through was conducted prior to the beginning of the survey and Lizardos was briefed on the existing conditions in the building.

Lizardos was able to examine electrical equipment by opening the covers for electrical panelboards, pullboxes, junction boxes, and disconnect switches, in the newly constructed electrical service room and the adjacent mechanical spaces. System pumps (associated valves, strainers, thermometers, pressure gauges, and flexible connections), piping, insulation, hydronic accessories, unit heater, air separators, glycol fill units, expansion tanks, and controls were examined in the newly constructed mechanical room and existing boiler room. Unit ventilator (UV) installation and miscellaneous outlets relocated, to accommodate UV installation, were inspected in classrooms and offices on the first through the third floor. All units were inspected externally and internally by removing the covers. Exhaust fans and HVAC units on the roof were also surveyed. All systems and equipment were studied for compliance with contract drawings, contract specifications, contract documents, local codes, as well as universally accepted design standards.

Following is a list of contract documents which Lizardos has used in preparing this report.

1. Drawings
 - a. Mechanical Drawings M0.01, M1.00, M1.01 thru M1.03, M2.00 and M2.01 thru M2.15 dated January 10, 2005.
 - b. Electrical Drawings E0.01, E2.01 thru E2.04, E6.01, E6.02 and E6.03 dated January 10, 2005.
 - c. Plumbing Drawings P0.01, P2.01, P2.02 and P2.03 dated January 10, 2005.
2. Mechanical and Electrical Specifications dated October 31, 2003.
3. Mechanical and Electrical Shop Drawings.

Lizardos has provided this report by documenting our visual findings and prepared a list of recommendations as outlined in the Recommendation section of this report.

Electrical and Mechanical Code references have been attached in the Code Reference Section of this report.

EXISTING MECHANICAL ISSUES

GROUND FLOOR

A. NEW MECHANICAL ROOM

1. Glycol chilled water piping

The following is a list of deficiencies in the installation of the glycol chilled water piping:

(a) Piping is not per specification section 15820-2.01 and 15820-2.02.

- Piping installed is gruvlok which is a mechanical grooved connection.
- Specification section 15820-2.01 calls for flanged or welded piping.

2. Glycol heating hot water piping

The following is a list of deficiencies in the installation of the glycol heating hot water piping:

(a) Piping is not per specification section 15820-2.01 and 15820-2.02.

- Piping installed is gruvlok which is a mechanical grooved connection.
- Specification section 15820-2.01 calls for flanged or welded piping.

3. Glycol chilled water pumps

The following is a list of deficiencies in the installation of the glycol chilled water pumps:

(a) Pump casings are not insulated as per specification section 15850-2.08-E. Refer to Figure M1.

Figure M1

- (b) Flex hose is not insulated as per specification section 15850-2.01-E. Refer to Figure M1.
- (c) Strainer/suction diffuser is not insulated as per specification section 15850-2.01-K. Refer to Figure M1.
- (d) Valves associated with chilled water pumps are not tagged per specification section 15000-1.25-A.
- (e) Pump not provided with nameplate as per specification section 15000-1.24-A.
- (f) Piping not provided with identification as per specification section 15000-1.26. Refer to Figure M2.

Figure M2

- (g) Butterfly isolation valves at pump (typical of 4) are not per specification section 15830-2.07. Refer to Figure M3 and Figure M2.
 - Specification section 15830-2.07-B calls for cast iron or malleable iron lug body, aluminum bronze disk, Teflon seats, and stainless steel stem.
 - Valves installed are "Globe Fire Sprinkler" grooved iron body with iron disk.
 - Valves submitted by contractor (submittal number 57 on 10-11-05, Revised 12-23-05). No butterfly valves were submitted in the valve submittal.
 - Valve manufacture has not been manufacturing valves for 10 years or more as required by specification section 15830-1.03-A.
 - Valves are equipped with motorized actuators. Actuator wires are cut to valve.

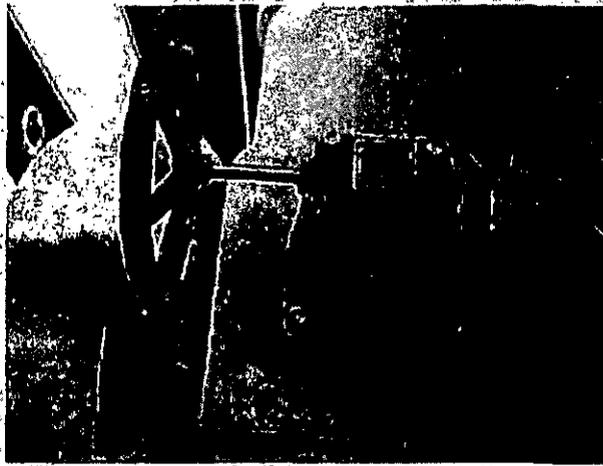

Figure M3

4. Glycol chilled water expansion tank

The following is a list of deficiencies in the installation of the Glycol chilled water expansion tank:

- (a) Expansion tank not provided with nameplate as per specification section 15000-1.24-A.
- (b) Valves associated with expansion tank are not tagged per specification section 15000-1.25-A.
- (c) Ball isolation valves associated with the expansion tank are not per specification section 15830-2.06-B.
 - Specification section 15830-2.06-B calls for bronze body, chrome plated bronze ball, Teflon seats, stainless steel stem, and seals threaded ends.
 - Valves installed are Everflow.
 - Submitted by contractor (submittal number 57 on 10-11-05, Revised 12-23-05) NIBCO S-580-70 solder end, bronze body, brass ball, bronze stem. Rejected by engineer stating, "BALL VALVES ARE TO BE BRONZE BALL WITH CHROME PLATING, STAINLESS STEEL STEM" "EXCEPT WHERE FLANGED VALVE ENDS ARE USED, USE THREADED END VALVES - SOLDER END VALVES ARE NOT ACCEPTABLE".
- (d) Air vent model and manufacturer not per specification section 15801-2.08.
 - Specification section 15801-2.08 calls for Armstrong No: 1 AV or Sarco 13W automatic air vents with test petcock.
 - Automatic air vent installed is Maid-o-Mist model 67.

- (e) Expansion tank is not insulated as per specification section 15850-2.08-A,B,C,F. No insulation is installed. Refer to Figure M4.

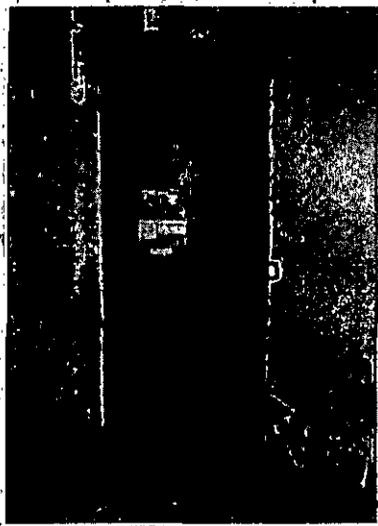

Figure M4.

5. Chilled water air separator

The following is a list of deficiencies in the installation of the chilled water air separator:

- (a) Air separator not provided with nameplate as per specification section 15000-1.24-A.
- (b) Valves associated with air separator are not tagged per specification section 15000-1.25-A.
- (c) Ball isolation valves associated with the air separator are not per specification section 15830-2.06-B.
 - Specification section 15830-2.06-B calls for bronze body, chrome plated bronze ball, Teflon seats, stainless steel stem, and seals threaded ends.
 - Valves installed are Milwaukee BA-485B (soldered end constructed with brass body, ball, and stem)
 - Submitted by contractor (submittal number 57 on 10-11-05, Revised 12-23-05) NIBCO S-580-70 solder end, bronze body, brass ball, bronze stem. Rejected by engineer stating "BALL VALVES ARE TO BE BRONZE BALL WITH CHROME PLATING, STAINLESS STEEL STEM" "EXCEPT WHERE FLANGED VALVE ENDS ARE USED, USE THREADED END VALVES - SOLDER END VALVES ARE NOT ACCEPTABLE".
- (d) Top of air separator is not insulated. See Figure M5.
- (e) Lack of dielectric fitting between has caused premature corrosion. Refer to Figure M5.

Figure M5

6. Glycol chilled water fill unit

The following is a list of deficiencies in the installation of the glycol chilled water fill unit:

- (a) Product data was not submitted to the architect/engineer for this product as required by spec section
- (b) Unit make and model not per engineering specifications section 15815-2.04. Specification calls for J.L. Wingert Co. Model GL50-D glycol feed package. Unit installed is Advantage Controls model AFG-2.
- (c) Unit not provided with nameplate as per specification section 15000-1.24: A.
- (d) The duplex positive displacement pumps are damaged due to dead heading the pumps. The pressure relief valves were observed to be left at the factory setting of 125 psi, well above the system fill pressure.
- (e) The pressure gauges for both pumps read 0 psig leading to believe that the fill line is not completely tapped into the glycol chilled water system. Refer to Figure M6.

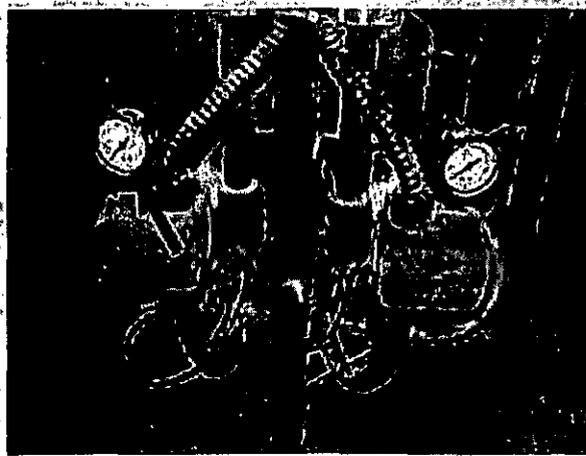

Figure M6

- (f) Label on control panel states "BEFORE INSTALLATION - Remove filler from behind panel". Refer to Figure M7 and Figure M8 showing this had not been completed.

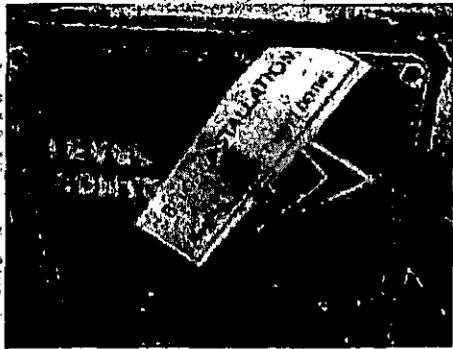

Figure M7

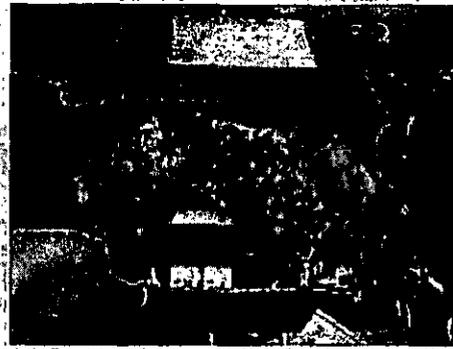

Figure M8

- (g) Pumptrol pressure switch (integral to unit) had not been calibrated to match system fill pressure.
- (h) Check valve is not installed in fill line as per contract drawing M2.07.
- (i) Ball isolation valves associated with the chilled water glycol fill unit are not per specification section 15830-2.06-B.
- Specification section 15830-2.06-B calls for bronze body, chrome plated bronze ball, Teflon seats, stainless steel stem, and seals threaded ends.
 - Valves installed are Milwaukee BA-485B (soldered end constructed with brass body, ball, and stem) or MATCO.
 - Submitted by contractor (submittal number 57 on 10-11-05, Revised 12-23-05) NIBCO S-580-70 solder end, bronze body, brass ball, bronze stem. Rejected by engineer stating, "BALL VALVES ARE TO BE BRONZE BALL WITH CHROME PLATING, STAINLESS STEEL STEM." "EXCEPT WHERE FLANGED VALVE ENDS ARE USED, USE THREADED END VALVES - SOLDER END VALVES ARE NOT ACCEPTABLE".
- (j) Valves associated with glycol fill unit are not tagged per specification section 15000-1.25-A.

7. Glycol chilled water venturi flow meter

The following is a list of deficiencies in the installation of the glycol chilled water venturi flow meter:

- (a) Product data was not submitted to the architect/engineer for this product. Specification section 15830-2.17-A calls for venturi flow measuring system as manufactured by Barco.
- (b) Valve installed is Tour & Anderson balancing valve not a venture flow measuring devise. Refer to Figure M9.

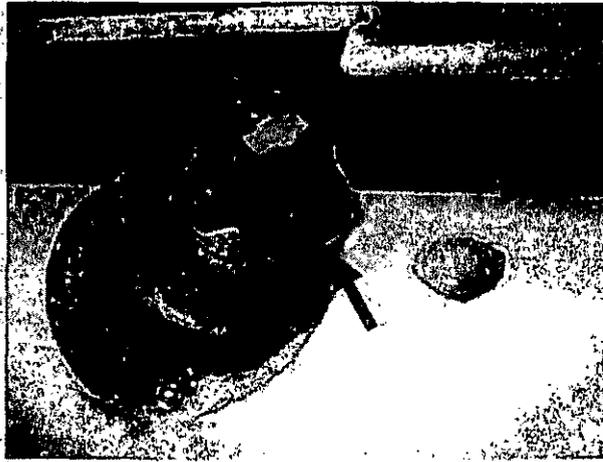

Figure M9

8. Glycol heating hot water pumps

The following is a list of deficiencies in the installation of the heating hot water pumps:

- (a) Pump casing is not insulated as per specification section 15850-2.08-E. Refer to photo M1-b-i-(1).
- (b) Butterfly isolation valves at pump (typical of 4) are not per specification section 15830-2.07. Refer to Figure M10.

Figure M10

- Specification section 15830-2.07-B calls for cast iron or malleable iron lug body, aluminum bronze disk, Teflon seats, and stainless steel stem.
- Valves installed are Gruvlok grooved iron body with iron disk.
- Valves submitted by contractor (submittal number 57 on 10-11-05, Revised 12-23-05). No butterfly valves were submitted in the valve submittal.

9. Glycol heating hot water venturi flow meter

The following is a list of deficiencies in the installation of the glycol heating hot water venturi flow meter:

- (a) Venturi flow meter is not installed. Installation location shown on mechanical drawing M2.07.

10. Glycol heating hot water air separator

The following is a list of deficiencies in the installation of the glycol heating hot water air separator.

- (a) Air separator not provided with nameplate as per specification section 15000-1.24-A.
- (b) Valves associated with air separator are not tagged per specification section 15000-1.25-A.
- (c) Ball isolation valves associated with the air separator are not per specification section 15830-2.06-B.
 - Specification section 15830-2.06-B calls for bronze body, chrome plated bronze ball, Teflon seats, stainless steel stem, and seals threaded ends.
 - Valves installed are Milwaukee BA-485B (soldered end constructed with brass body, ball, and stem). Refer to Figure M11.

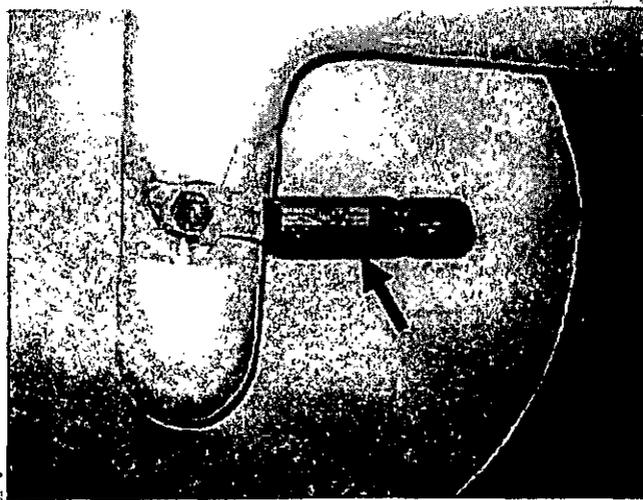

Figure M11

- Submitted by contractor (submittal number 57 on 10-11-05, Revised 12-23-05) NIBCO S-580-70 solder end, bronze body, brass ball, bronze stem. Rejected by engineer stating "BALL VALVES ARE TO BE BRONZE BALL WITH CHROME PLATING, STAINLESS STEEL STEM" "EXCEPT WHERE FLANGED VALVE ENDS ARE USED, USE THREADED END VALVES - SOLDER END VALVES ARE NOT ACCEPTABLE".

(d) Top of air separator is not insulated.

11. Glycol heating hot water fill unit

The following is a list of deficiencies in the installation of the glycol heating hot water fill unit:

- (a) Product data was not submitted to the architect/engineer for this product as required by spec section
- (b) Unit make and model not per engineering specifications section 15815-2.04. Specification calls for J.L. Wingert Co. Model GL50-D glycol feed package. Unit installed is Advantage Controls model AFG-2.

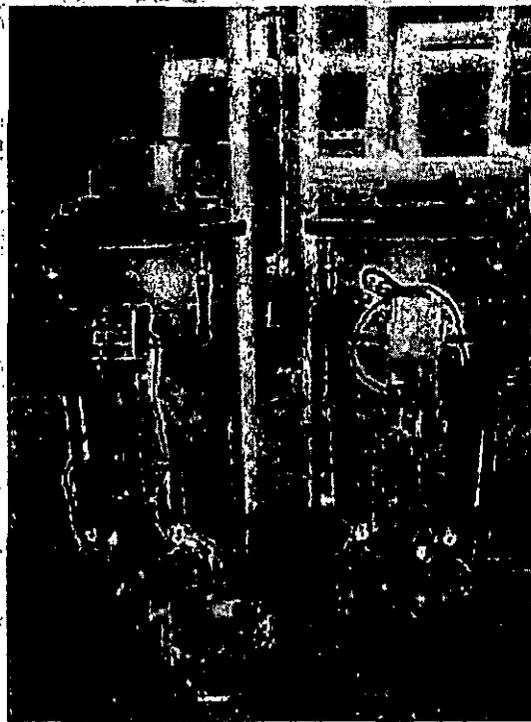

Figure M12

- (c) Unit not provided with nameplate as per specification section 15000-1.24-A.
- (d) Both pumps spray glycol mixture from pump discharge.
- (e) The pressure relief valves were observed to be left at the factory setting of 125 psi, well above the system fill pressure.
- (f) Label on control panel states "BEFORE INSTALLATION - Remove filler from behind panel".

- (g) Pumptrol pressure switch (integral to unit) had not been calibrated to match system fill pressure.
- (h) Check valve is not installed in fill line as per contract drawing M2.07.
- (i) Ball isolation valves associated with the chilled water glycol fill unit are not per specification section 15830-2.06-B.
 - Specification section 15830-2.06-B calls for bronze body, chrome plated bronze ball, Teflon seats, stainless steel stem, and seals threaded ends.
 - Valves installed are Milwaukee BA-485B (soldered end constructed with brass body, ball, and stem) or MATCO.
 - Submitted by contractor (submittal number 57 on 10-11-05, Revised 12-23-05) NIBCO S-580-70 solder end, bronze body, brass ball, bronze stem. Rejected by engineer stating "BALL VALVES ARE TO BE BRONZE BALL WITH CHROME PLATING, STAINLESS STEEL STEM" "EXCEPT WHERE FLANGED VALVE ENDS ARE USED, USE THREADED END VALVES - SOLDER END VALVES ARE NOT ACCEPTABLE".
- (j) Valves associated with glycol fill unit are not tagged per specification section 15000-1.25-A.

12. Unit Heater (UH-1)

The following is a list of deficiencies in the installation of the heating hot water unit heater:

- (a) Unit heater not provided with nameplate as per specification section 15000-1.24-A.
- (b) Unit heater piping not provided with identification as per specification section 15000-1.26.
- (c) Unit heater fan observed to be running in summer. This is due to the lack of a wall mounted thermostat as per "SCHEDULE OF UNIT HEATER" on contract drawing M2.10. The requirement of the wall mounted thermostat is also mentioned in specification sections 15770-2.01-F and 15950-3.12-A. Submittal number 19 from Trane shows a remote wall mounted thermostat
- (d) Unit is not provided with globe style hot water balancing valve as per "HOT WATER UNIT HEATER OR CABINET HEATER PIPING" on contract drawing M2.14.
- (e) Unit is not provided with unions as per "HOT WATER UNIT HEATER OR CABINET HEATER PIPING" on contract drawing M2.14.
- (f) Unit heater is not balanced. The water side is unable to be balanced due to the lack of balancing valve. The aquastat was observed to have the dial set at 80°F, according to specification section 15950-3.12-B the aquastat should be set at 100°F.
- (g) Air vent model and manufacturer not per specification section 15801-2.08.
 - Specification section 15801-2.08 calls for Armstrong No. 1 AV or Sarco 13W automatic air vents with test petcock.
 - Automatic air vent installed is Maid-o-Mist model 67 with no petcock.

13. Glycol heating hot water expansion tank

The following is a list of deficiencies in the installation of the Glycol heating hot water expansion tank:

- (a) Expansion tank not provided with nameplate as per specification section 15000-1.24-A.
- (b) Valves associated with expansion tank are not tagged per specification section 15000-1.25-A.
- (c) Ball isolation valves associated with the expansion tank are not per specification section 15830-2.06-B.
 - Specification section 15830-2.06-B calls for bronze body, chrome plated bronze ball, Teflon seats, stainless steel stem, and seals threaded ends.
 - Valves installed are Milwaukee BA-485B (soldered end constructed with brass body, ball, and stem).
 - Submitted by contractor (submittal number 57 on 10-11-05, Revised 12-23-05) NIBCO S-580-70 solder end, bronze body, brass ball, bronze stem. Rejected by engineer stating "BALL VALVES ARE TO BE BRONZE BALL WITH CHROME PLATING, STAINLESS STEEL STEM" "EXCEPT WHERE FLANGED VALVE ENDS ARE USED, USE THREADED END VALVES - SOLDER END VALVES ARE NOT ACCEPTABLE".
- (d) Air vent model and manufacturer not per specification section 15801-2.08.
 - Specification section 15801-2.08 calls for Armstrong No. 1 AV or Sarco 13W automatic air vents with test petcock.
 - Automatic air vent installed is Maid-o-Mist model 67.
- (e) Expansion tank is not insulated as per specification section 15850-2.08-A,B,C,F. No insulation is installed. Refer to Figure M13.

Figure M13

14. Glycol heating hot water to heating hot water heat exchanger

The following is a list of deficiencies in the installation of the glycol heating hot water to heating hot water heat exchanger:

- (a) Heat exchangers not insulated as per specification section 15850-2.08-A, B, C, D.
- Specification section 15850-2.08-A, B, C, D calls for 2" thick calcium silicate with aluminum jacking over insulation. (Refer to specification sections listed for greater detail).
 - Insulation installed is glass fiber. No aluminum jacketing installed. Refer to Figure M14.

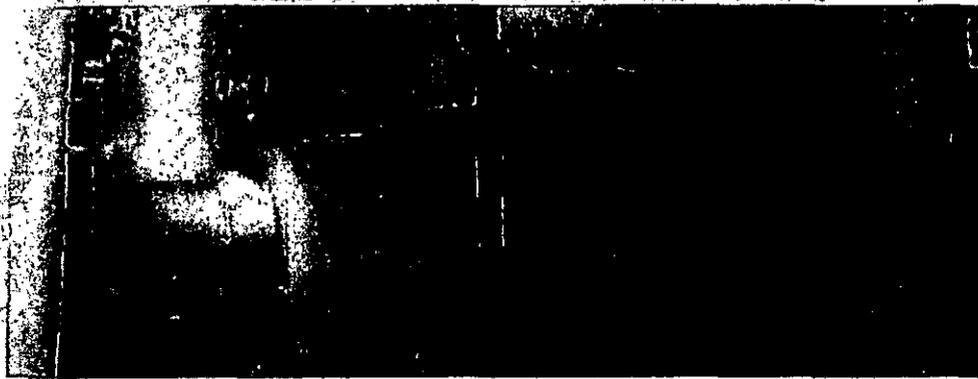

Figure M14

15. Area drain at west exit of new mechanical room.

The following is a list of deficiencies in the installation of the area drain:

- (a) Improper installation of area drain. Drain appears to be much older than the age of the installation. Refer to figure Figure M15.

Figure M15

16. Fresh air louver.

The following is a list of deficiencies in the installation of the louver:

- (a) Motorized damper not installed as per contract drawing M2.05. Refer to figure Figure M16.

Figure M16

17.EF-2.

The following is a list of deficiencies in the installation of the exhaust fan:

- (b) Motorized damper not installed as per contract drawing M2.13. Submittal from SRS includes motorized backdraft damper. Refer to figure Figure M17.

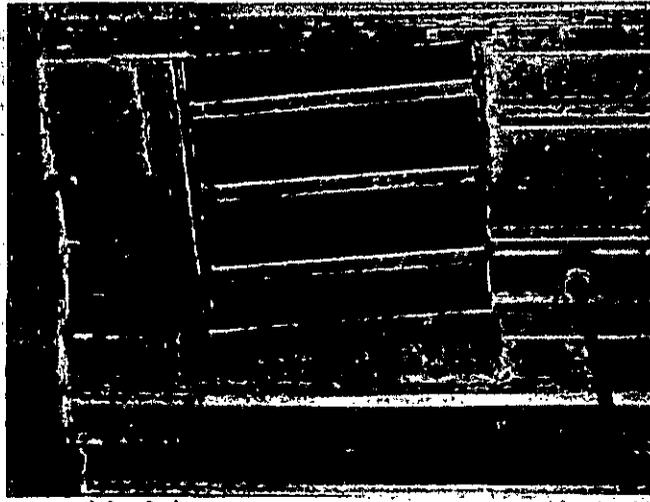

Figure M17

B. NEW ELECTRICAL ROOM

- 1. Fresh air louver.

The following is a list of deficiencies in the installation of the louver:

- (a) Motorized damper not installed as per contract drawing M2.05. Refer to figure Figure M18.

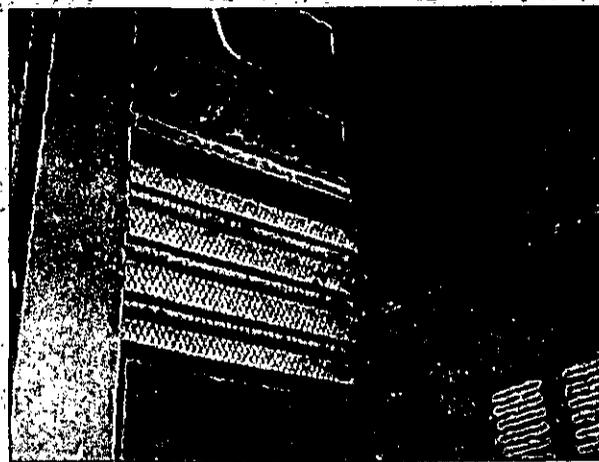

Figure M18

2. EF-2:

The following is a list of deficiencies in the installation of the exhaust fan:

- (b) Motorized damper not installed as per contract drawing M2.13. Submittal from SRS includes motorized backdraft damper. Refer to figure Figure M19.

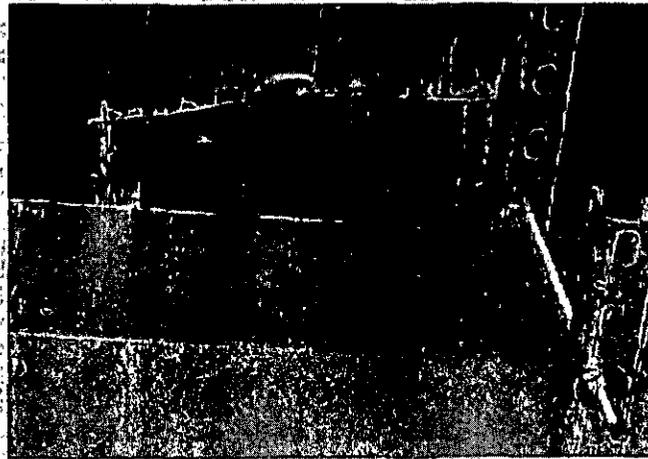

Figure M19

C. EXISTING MECHANICAL ROOM

1. Heating hot water-venturi flow meter

The following is a list of deficiencies in the installation of the heating hot water venturi flow meter:

- (a) Venturi flow meter is not installed. Installation location shown on mechanical drawing M2.07.

1. Piping Penetrations

The following is a list of deficiencies in the installation of the through wall piping penetrations:

- (a) Piping penetrations through rated wall are not per "DETAIL OF PIPING PIRING REQUIRED FIRE RATED PARTITIONS AND WALL" on contract drawing M2.13. Actual pipe penetrations lack one or more of the follow: pipe sleeve, escutcheon on both sides, and space between pipe and sleeve packed full depth with mineral wool or other UL approved equal. Refer to Figure M20 through Figure M23.

Figure M20

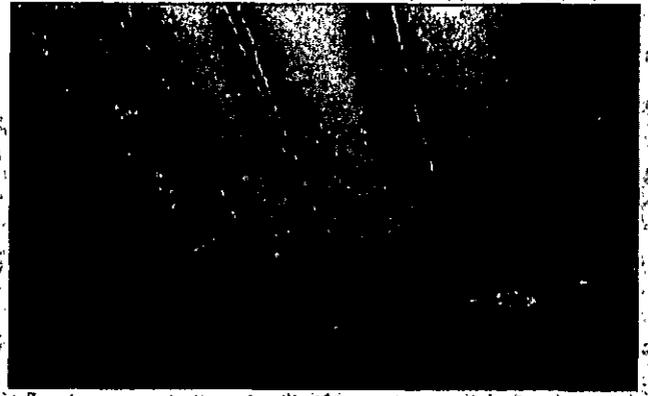

Figure M21

Figure M22

Figure M23

D. CLASSROOM 101 (ART CLASSROOM)

1. Unit Ventilator (UV-A)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A. Refer to Figure M24. This situation is typical for all unit ventilators.

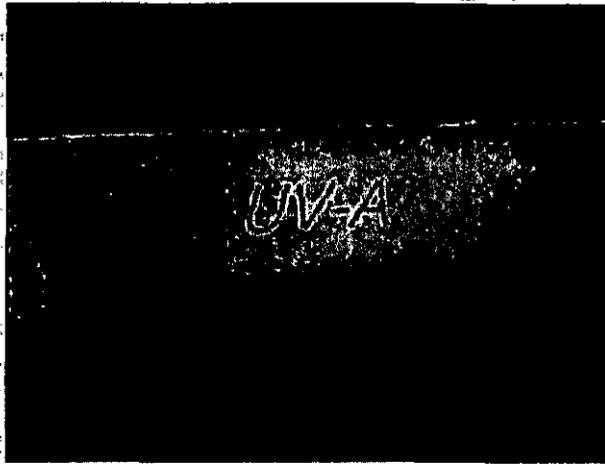

Figure M24

- (b) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Image Figure M25.

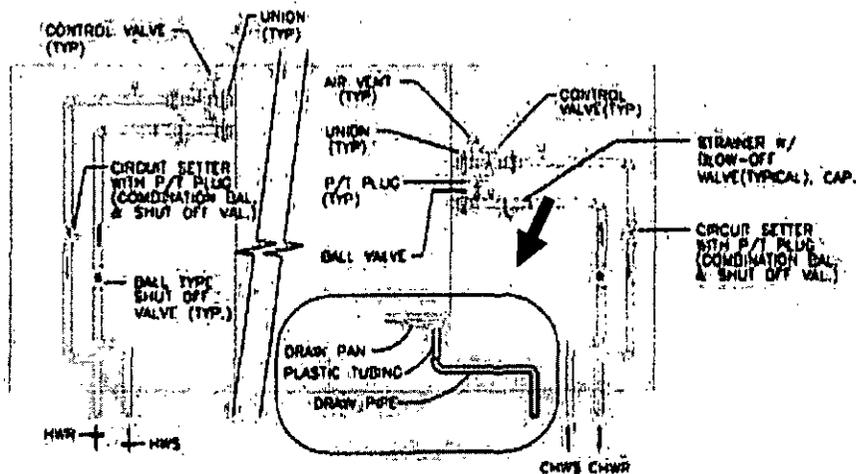

Figure M25

- (c) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M26. The fire stopping application shown does not meet UL standards.

Figure M26

- (d) Condensate drain hose is kinked preventing condensate flow. Refer to Figure M26. The drain line is not constructed per sketch issued to contractor. Refer to Figure M27 for sketch issued to contractor.

NOTES: 1. CHILLED WATER CONTROL VALVE SHALL BE NORMALLY CLOSED, TO COL. HOT WATER CONTROL VALVE SHALL BE NORMALLY OPEN.

FOUR PIPE UNIT VENTILATOR PIPING

NOT TO SCALE

Figure M27

- (e) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M26.
- (f) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M26.

- (g) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (h) Condensation from the chilled water lines formed pools of water below the piping. Refer to Figure M28.

Figure M28

- (i) Approximately 1" of standing water was observed in the condensate drain pan. Refer to Figure M29. This observation shows that a condensation test was not performed as per required in manufactures installation literature. The system should be checked by an environmental consultant for microbial growth.

Figure M29

- (j) The return air sampling chamber as shown in Image Figure M30 may provide an inaccurate space temperature when unit is not in operation.

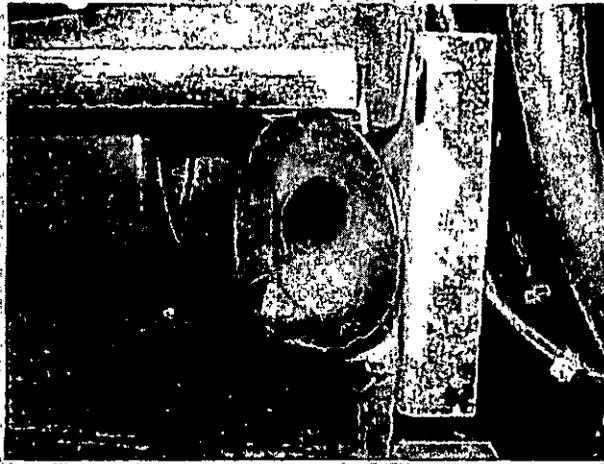

Figure M30

(k) Unit ventilator is not secured to wall as per Trane installation manual. Below are steps 4 and 5 of the unit ventilator mounting procedure.

- 4) Push the unit tightly against the wall to compress the seal on the back edge of the unit and intake opening. Anchor the unit by using the 1/2" mounting holes in both end pockets. Units containing a falseback; The falseback unit ventilator contains mounting holes located on the falseback metal. Use these holes rather than the holes located in the unit's end pockets. *Note: Ensure the unit is level. Coils and drain pans inside the unit are pitched properly for draining before shipment.*
- 5) Ensure the unit rests tightly against the wall. Check for proper seal and that air does not leak underneath the unit.

2. Unit ventilator (UV-A-1)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Unit ventilator not provided with nameplate as per specification, section 15000-1.24-A.
- (b) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB".
- (c) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". The fire stopping application shown does not meet UL standards.

Figure M31

- (d) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Image Figure M31.
- (e) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M31. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (f) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M31.
- (g) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (h) Approximately 1" of standing water was observed in the condensate drain pan. Refer to Figure M32. This observation shows that a condensation test was not performed as per required in manufactures installation literature. The system should be checked by an environmental consultant for microbial growth.

Figure M32

- (i) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (j) Unit ventilator is not secured to wall as per Trane installation manual.

E. CLASSROOM 102

1. Unit Ventilator (UV-B)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.
- (b) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB".
- (c) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M34. The fire stopping application shown does not meet UL standards.

Figure.M34

- (d) Condensate drain hose is kinked preventing condensate flow. The condensate hose broke off of the drain pan and a funnel was used to replace it. Refer to Figure M35. The drain line is not constructed per sketch issued to contractor. Refer to Figure M27 for sketch issued to contractor.

Figure M35

- (e) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Image Figure M35.
- (f) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01.
- (g) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (h) Approximately 1" of standing water was observed in the condensate drain pan. Refer to Figure M36. This observation shows that a condensation test was not performed as per required in manufactures installation literature. The system should be checked by an environmental consultant for microbial growth.

- (c) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M38.

Figure M38

- (d) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M39. The fire stopping application shown does not meet UL standards.

Figure M39

- (e) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M39.
- (f) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M39. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (g) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01.
- (h) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (i) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (j) Unit ventilator is not secured to wall as per Trane installation manual.

F. CLASSROOM 103

1. Unit Ventilator (UV-A)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.
- (b) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M40.

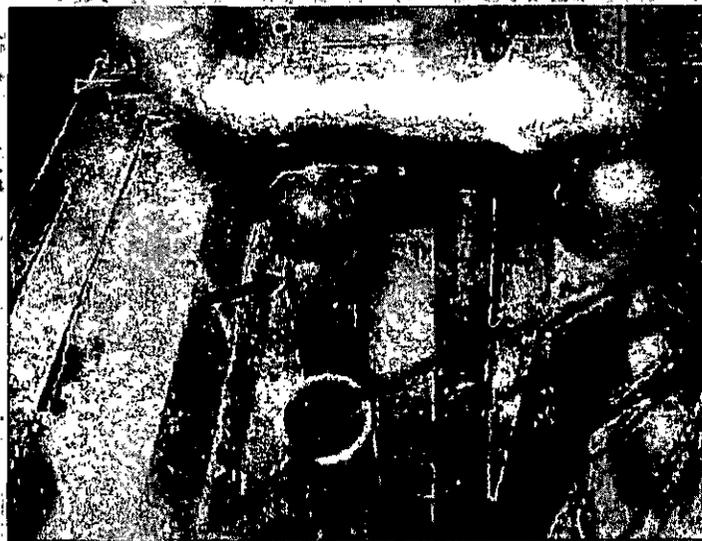

Figure M40

- (c) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M41.

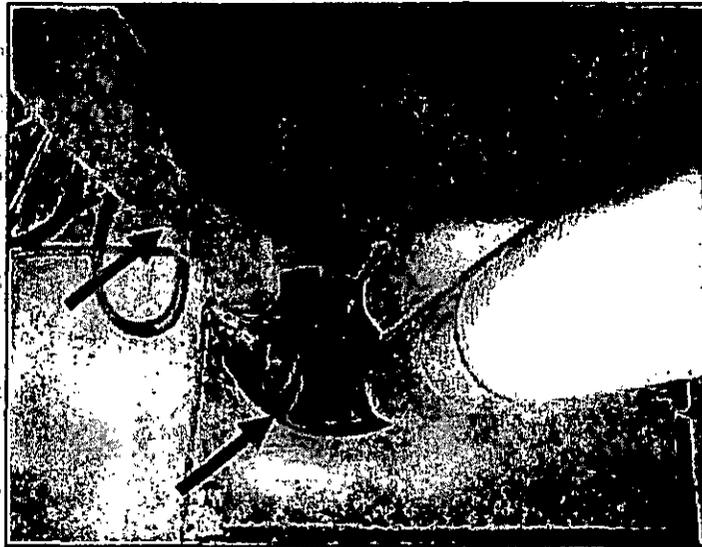

Figure M41

- (a) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M41.
- (b) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M41. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (c) Condensate drain piping not insulated below penetration. Specification section 15850-2.01 calls for all condensate piping to be insulated. Refer to Figure M42.

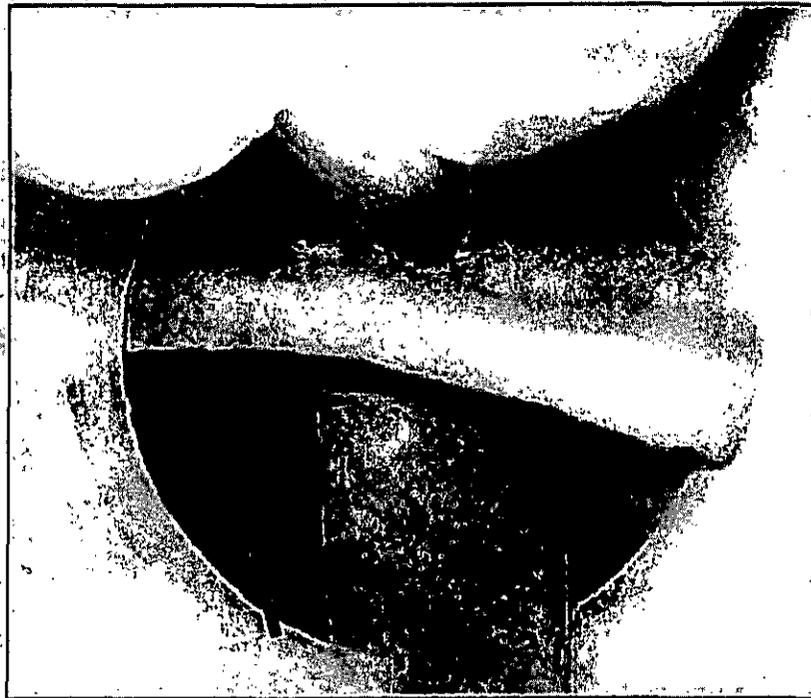

Figure M42

- (d) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M43.
- (e) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".

Figure M43

- (f) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (g) Unit ventilator is not secured to wall as per Trane installation manual.

2. Unit Ventilator (UV-A-1)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.
- (b) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M44.

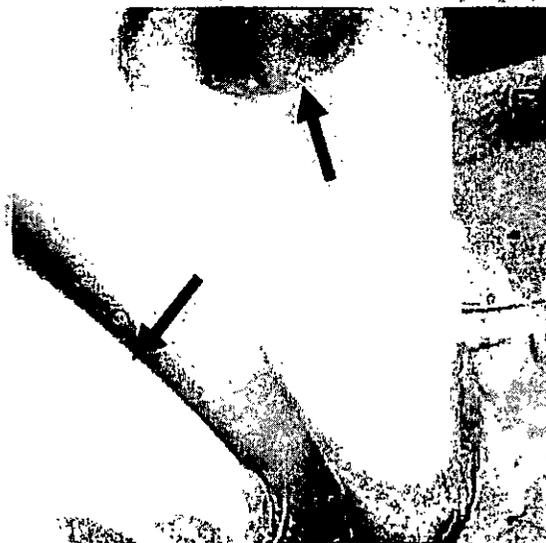

Figure M44

- (c) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M45. The fire stopping application shown does not meet UL standards.

Figure M45

- (d) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M45.

- (e) Condensate drain line has broken free from manufacturer connection to drain pan. Refer to Figure M45.
- (f) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M45. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (g) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01.
- (h) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer, "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (i) The return air sampling chamber as shown in Image, may provide an inaccurate space temperature when unit is not in operation.
- (j) Unit ventilator is not secured to wall as per Trane installation manual.

G. CLASSROOM 104

1. Unit Ventilator (UV-B)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.
- (b) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M46.

Figure M46

- (c) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M47. The fire stopping application shown does not meet UL standards.

Figure M47

- (d) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M47.
- (e) Condensate drain hose is kinked preventing condensate flow. Refer to Figure M47.
- (f) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M47. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (g) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M48.
- (h) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".

Figure M48

- (i) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (j) Unit ventilator is not secured to wall as per Trane installation manual.

2. Unit Ventilator (UV-B-1):

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.
- (b) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M49.

Figure M49

- (c) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M50. The fire stopping application shown does not meet UL standards.

Figure M50

- (d) Condensate drain line is not insulated as per specification section 15850-2.01.

- (e) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M50. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (f) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01.
- (g) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (h) The return air sampling chamber as shown in Image may provide an inaccurate space temperature when unit is not in operation.
- (i) Unit ventilator is not secured to wall as per Trane installation manual.

H. CLASSROOM 105

1. Unit Ventilator (UV-A)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.
- (b) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M51.

Figure M51

- (c) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M52. The fire stopping application shown does not meet UL standards.

Figure M52

- (d) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M52.
- (e) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M52. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (f) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M53.
- (g) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".

Figure M53

- (h) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (i) Unit ventilator is not secured to wall as per Trane installation manual.

2. Unit Ventilator (UV-A-1)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.
- (b) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M54.

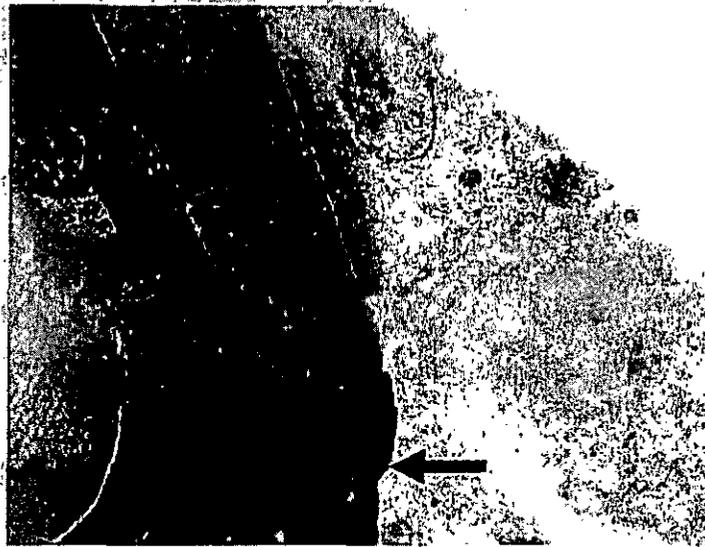

Figure M54

- (c) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M55. The fire stopping application shown does not meet UL standards.

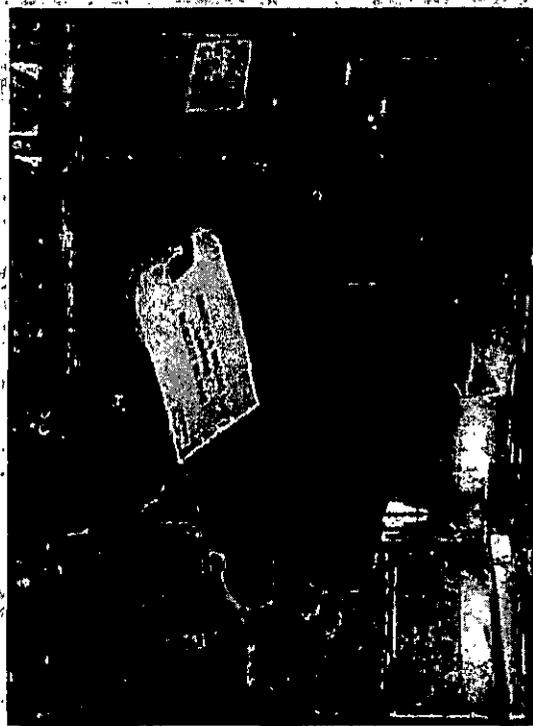

Figure M55

- (d) Condensate drain line is not insulated as per specification section 15850-2.01.
- (e) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M55. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (f) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01.
- (g) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (h) The return air sampling chamber as shown in image may provide an inaccurate space temperature when unit is not in operation.
- (i) Unit ventilator is not secured to wall as per Trane installation manual.

I. ATHLETIC DIRECTORS OFFICE #1

1. Fan Coil (FC-A)

The following is a list of deficiencies in the installation and manufacturing of the fan coil units:

- (a) Fan coil unit not provided with nameplate as per specification section 15000-1.24-A.
- (b) Fire stopping is not provided on the chilled water pipe, heating hot water piping, and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M56. The fire stopping application shown does not meet UL standards.

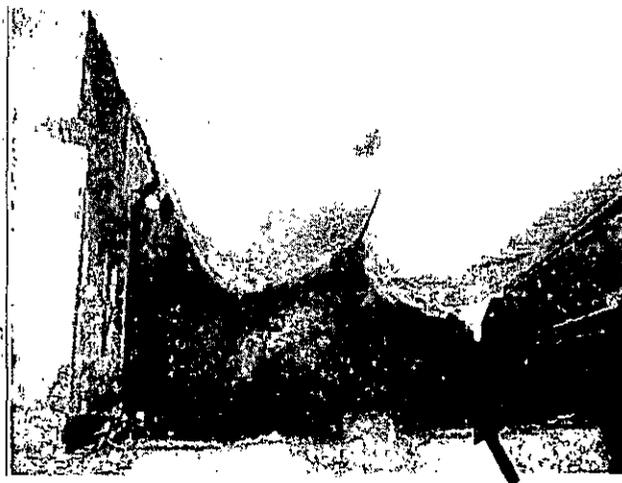

Figure M56

- (c) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M57.

Figure M57

- (d) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M57. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (e) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M57.
- (f) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (g) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (h) Fan coil unit is not secured to wall as per Trane installation manual. Refer to Figure M58 and Figure M59.

Figure M58

Figure M59

(i) The unions are leaking glycol-chilled water. Refer to Figure M60.

Figure M60

1. Fan Coil (FC-A)

The following is a list of deficiencies in the installation and manufacturing of the fan coil units:

- (a) Fan coil unit not provided with nameplate as per specification section 15000-1.24-A.
- (b) Fire stopping is not provided on the chilled water pipe, heating hot water piping, and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M61. The fire stopping application shown does not meet UL standards.

Figure M61

- (c) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M62.

Figure M62.

- (d) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M64. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (e) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M64.
- (f) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer: "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (g) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (h) Fan coil unit is not secured to wall as per Trane installation manual.

K. Corridor

1. Piping Penetrations

The following is a list of deficiencies in the installation of the through wall piping penetrations:

- (a) Piping penetrations through rated wall are not per "DETAIL PF PIPING PIRING REQUIRED FIRE RATED PARTITIONS AND WALL" on contract drawing M2.13. Actual pipe penetrations lack one or more of the follow pipe sleeve, escutcheon on both sides, and space between pipe and sleeve mineral wool or other UL approved equal. Refer to Figure M63.

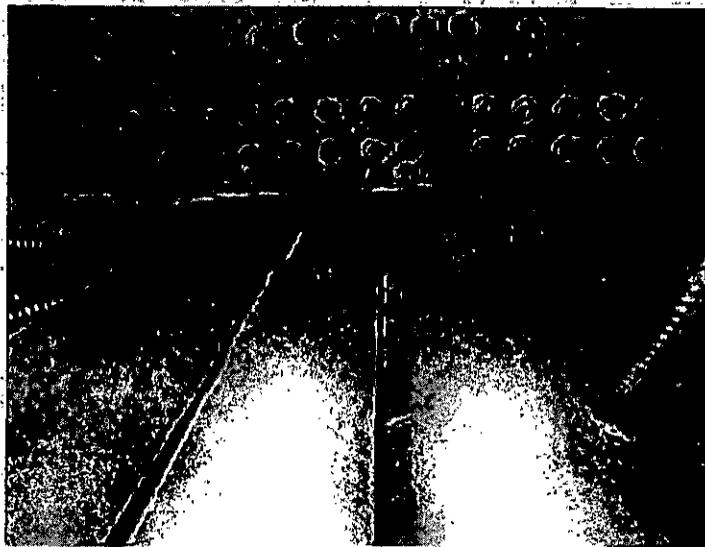

Figure M63

SECOND FLOOR

A. CLASSROOM 201

1. Unit Ventilator (UV-A)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.
- (b) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M64.

Figure M64

- (c) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M65. The fire stopping application shown does not meet UL standards.

Figure M65

- (d) Standing water was observed in the condensate drain pan. Refer to Figure M66. This observation shows that a condensation test was not performed as per required in manufacturer's installation literature. The system should be checked by an environmental consultant for microbial growth.

Figure M66

- (e) Condensate drain line is not insulated as per specification section 15850-2.01.
- (f) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (g) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M65.
- (h) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (i) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (j) Unit ventilator is not secured to wall as per Trane installation manual.

2. Unit Ventilator (UV-A-1)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.
- (b) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M67.

Figure M67

- (c) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M68. The fire stopping application shown does not meet UL standards.

Figure M68

- (d) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M69.

Figure M69

- (e) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M69. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (f) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M69.
- (g) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".

- (h) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (i) Unit ventilator is not secured to wall as per Trane installation manual.

B. CLASSROOM 202

1. Unit Ventilator (UV-A)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.
- (b) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M70. Paper towels were found packed into the annular space of the penetration. Refer to Figure M70 and Figure M71.

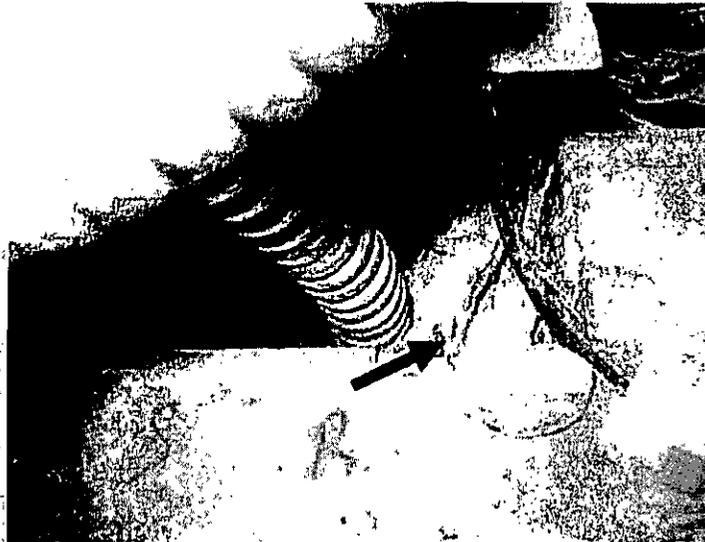

Figure M70

Figure M71

- (c) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M72. The fire stopping application shown does not meet UL standards.

Figure M72

- (d) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M52.
- (e) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M73. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (f) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M73.

Figure M73

- (g) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (h) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (i) Unit ventilator is not secured to wall as per Trane installation manual.

2. Unit Ventilator (UV-A-1)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.
- (b) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M74.

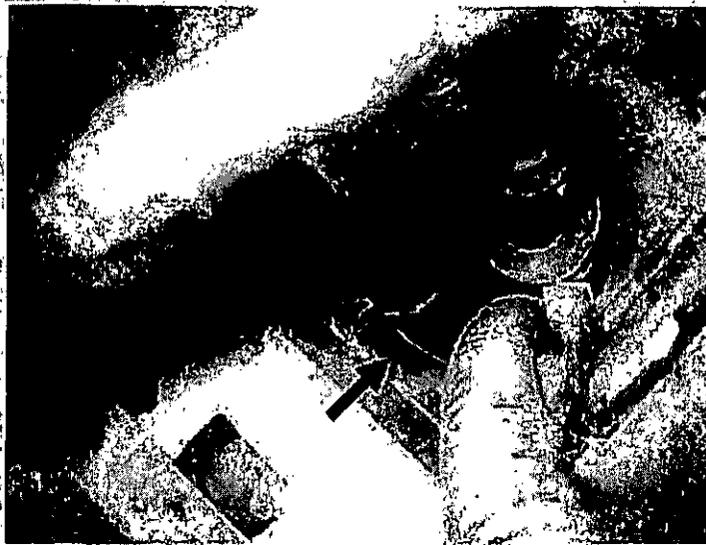

Figure M74

- (c) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M75. The fire stopping application shown does not meet UL standards.

Figure M75

- (d) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M75.

- (e) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M75. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (f) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M75.
- (g) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (h) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (i) Unit ventilator is not secured to wall as per Trane installation manual.

3. Fire Smoke Damper (FSD)

The following is a list of deficiencies in the installation of the fire smoke damper:

- (a) The fire smoke damper has exposed wires and electrical tape in air stream. Refer to Figure M76 and Figure M77.

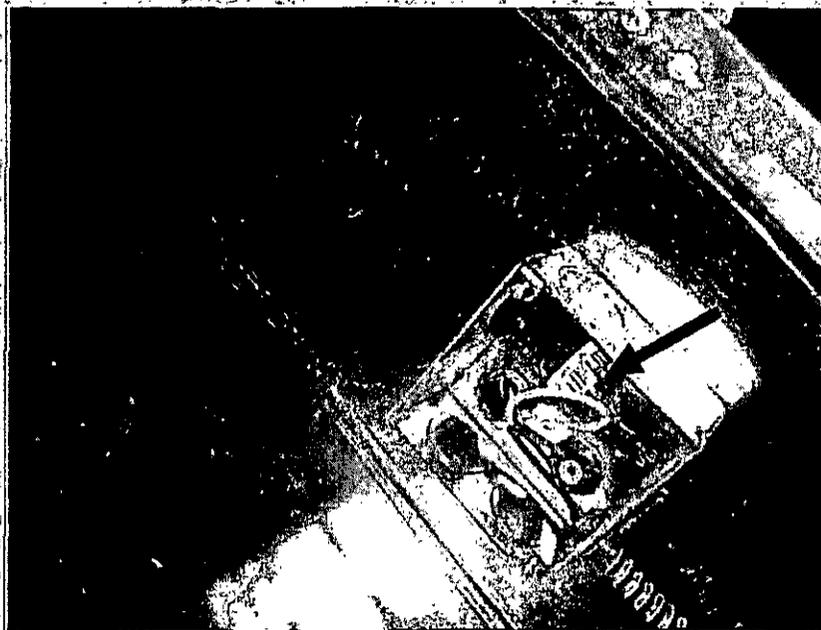

Figure M76

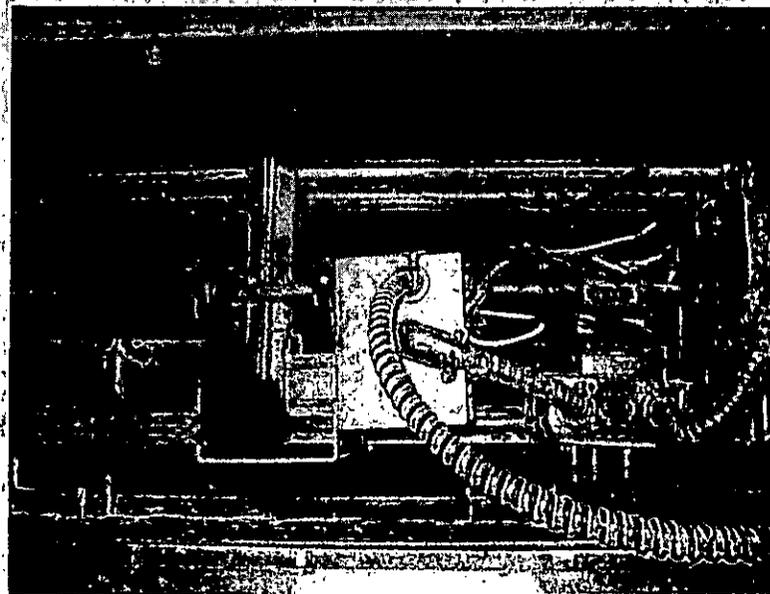

Figure M77

- (b) The fire smoke damper has exposed wire is exposed through duct penetration. Refer to Figure M78.

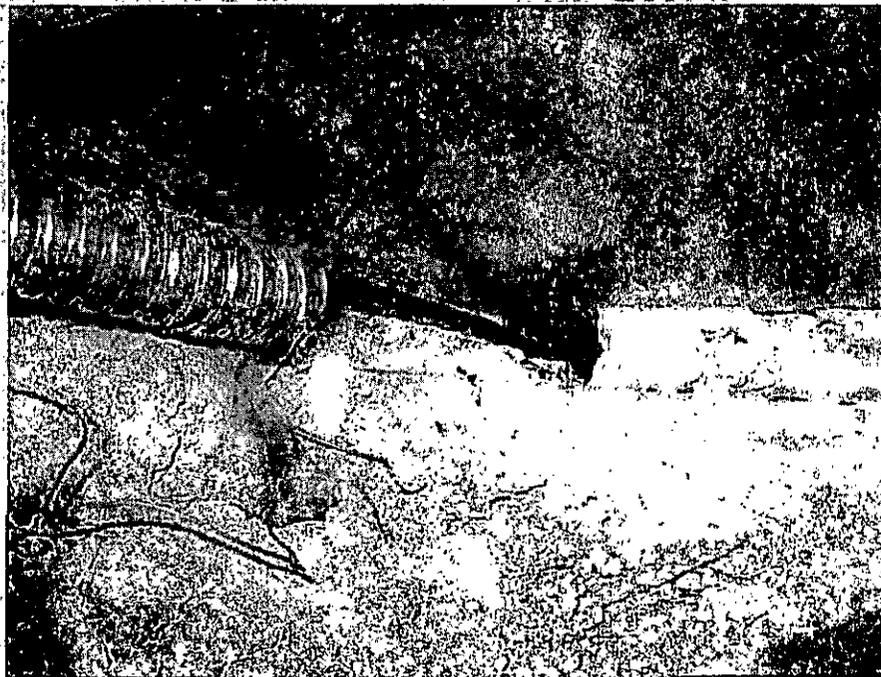

Figure M78:

- (c) Shaft contains large amounts of rubble. Refer to Figure M79.

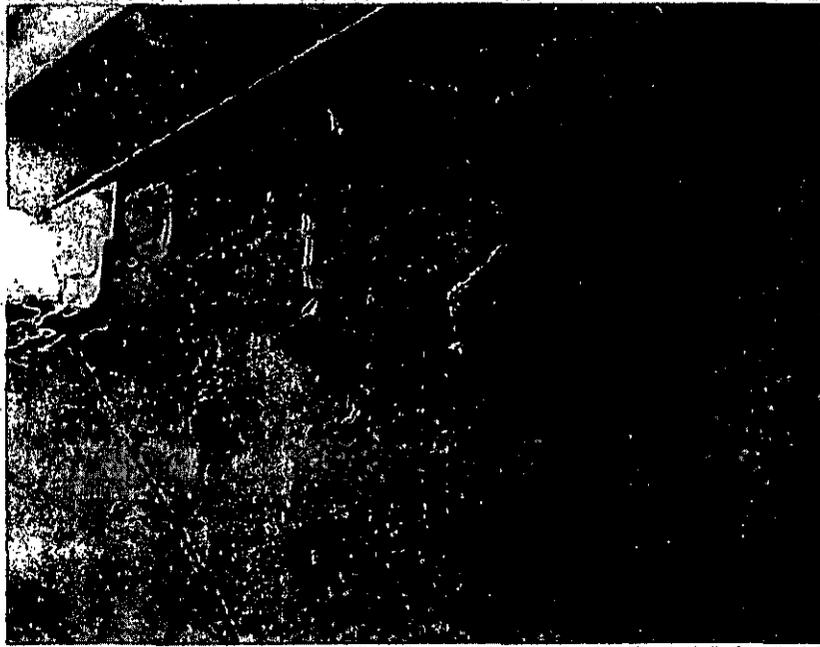

Figure M79

C. CLASSROOM 203

1. Unit Ventilator (UV-B)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Not applicable.
- (b) Not applicable.

- (c) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.
- (d) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M81.

Figure M81.

- (e) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M82. The fire stopping application shown does not meet UL standards.

Figure M82

- (f) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M82.
- (g) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M82. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (h) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M82.
- (i) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (j) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (k) Unit ventilator is not secured to wall as per Trane installation manual.
- (l) Core drill cut through steel channel. Structural analysis may need to be performed to insure structural integrity. Refer to Figure M83.

Figure M83

2. Unit Ventilator (UV-B-1)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

(a) Not applicable.

(b) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.

- (c) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M85.

Figure M85

- (d) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M86. The fire stopping application shown does not meet UL standards.

Figure M86

- (e) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M87.

Figure M87

- (f) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M87. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (a) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M87.
- (b) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING"
- (c) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (d) Unit ventilator is not secured to wall as per Trane installation manual.
- (e) Unit is not assembled properly. Refer to Figure M88 and Figure M89.

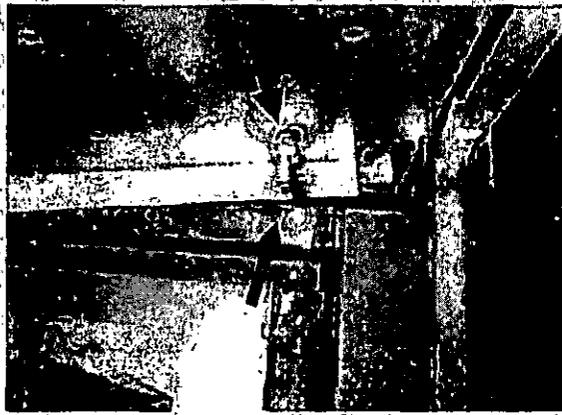

Figure M88

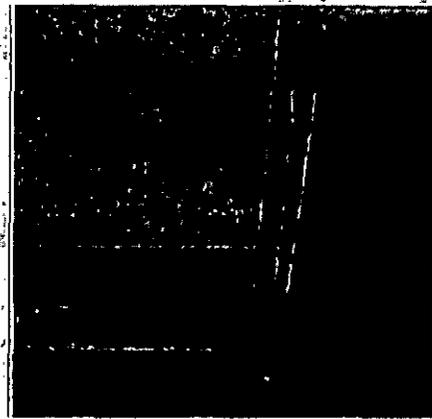

Figure M89

- (f) Leak in heating hot water piping has caused premature corrosion. Refer to Figure M90.

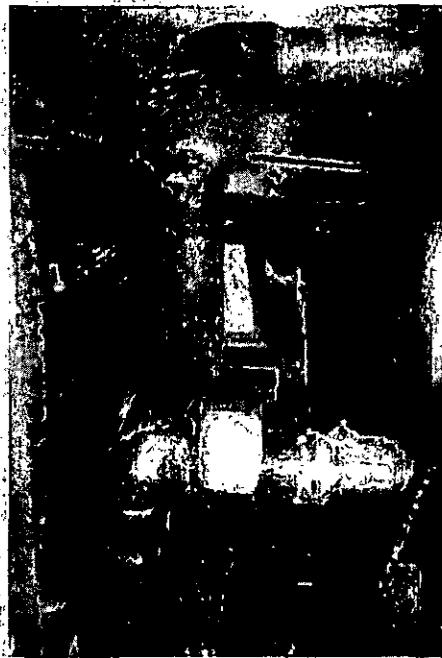

Figure M90

D. CLASSROOM 204

1. Unit Ventilator (UV-A)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.

- (b) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB".
- (c) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M91. The fire stopping application shown does not meet UL standards.

Figure M91

- (d) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M91.
- (e) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M91. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (f) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M91.
- (g) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (h) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (i) Unit ventilator is not secured to wall as per Trane installation manual.
- (j) Unit not installed over heating hot water core drilled hole. Pipes are bent under unit ventilator to penetration. Pipe is crimped at one point. Refer to Figure M92.

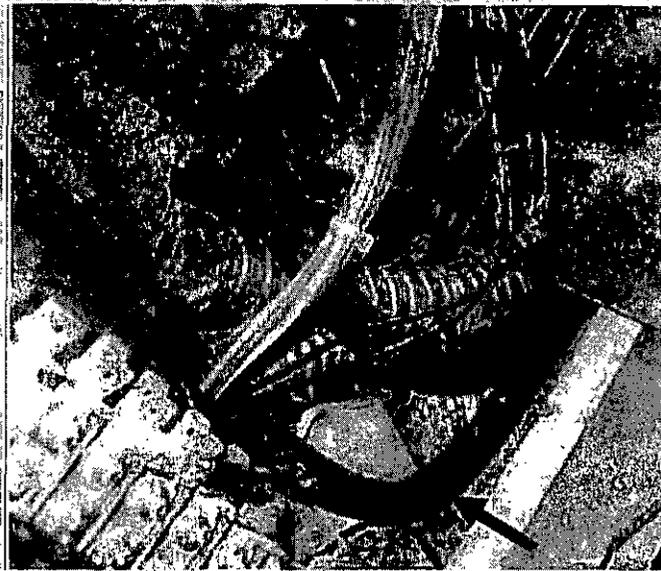

Figure M92

2. Unit Ventilator (UV-A-1)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.
- (b) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M93.

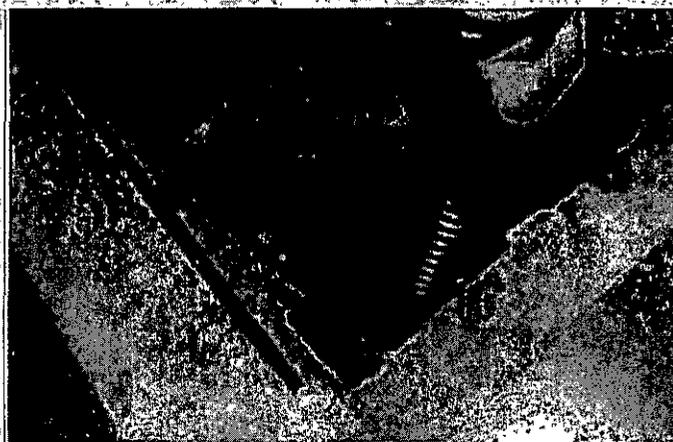

Figure M93

- (c) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M94. The fire stopping application shown does not meet UL standards.

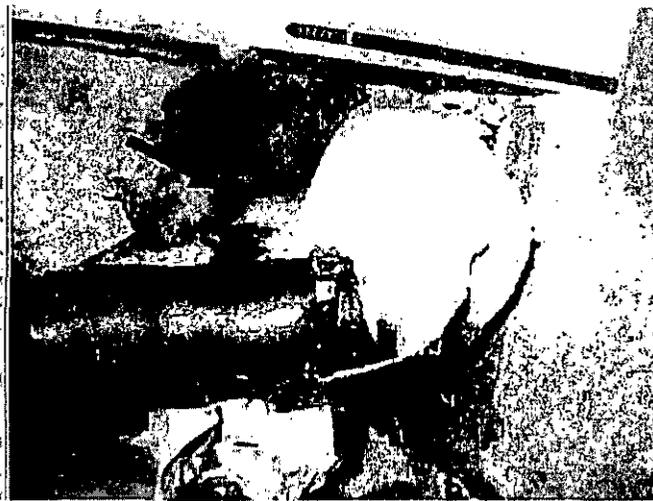

Figure M94

- (d) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M95.

Figure M95

- (e) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M95. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (f) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M95.

- (g) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer: "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (h) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (i) Unit ventilator is not secured to wall as per Trane installation manual. Refer to Figure M96.

Figure M96

- (j) Chilled water control valve does not have adequate clearance from manual vent for removal. Refer to Figure M97.

Figure M97

3. Fire Smoke Damper (FSD)

The following is a list of deficiencies in the installation of the fire smoke damper:

- (a) The fire smoke damper has exposed wires and electrical tape in air stream. Refer to Figure M98.

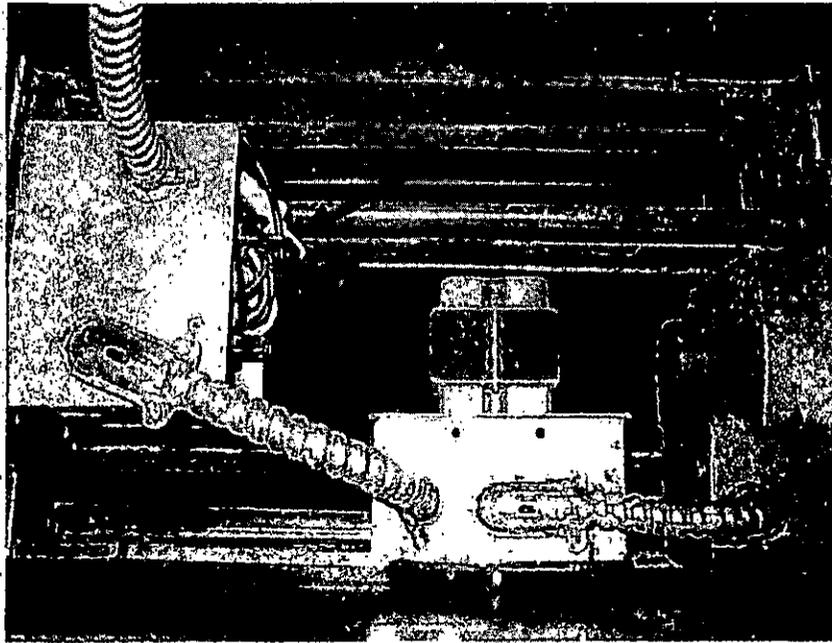

Figure M98

E. CLASSROOM 205

1. Unit Ventilator (UV-A)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.
- (b) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M99.

Figure M99

- (c) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M100. The fire stopping application shown does not meet UL standards.

Figure M100

- (d) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M101.

Figure M101

- (e) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M101. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (f) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M101.
- (g) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (h) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (i) Unit ventilator is not secured to wall as per Trane installation manual.

2. Unit Ventilator (UV-A-1)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.
- (b) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M102.

Figure M102

- (c) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M103. The fire stopping application shown does not meet UL standards.

Figure M103

- (d) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M104.

Figure M104

- (e) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M104. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (f) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M104.
- (g) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (h) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (i) Unit ventilator is not secured to wall as per Trane installation manual. Refer to Figure M105.

Figure M105

F. GUIDANCE OFFICE 213

1. Fan Coil (FC-A) EAST UNIT

The following is a list of deficiencies in the installation and manufacturing of the fan coil units:

- (a) Fan coil unit not provided with nameplate as per specification section 15000-1.24-A.
- (b) Fire stopping is not provided on the chilled water pipe, heating hot water piping, and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M106. The fire stopping application shown does not meet UL standards.

Figure M106

- (c) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M107.

Figure M107

- (d) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M107. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (e) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M107.
- (f) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (g) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (h) Fan coil unit is not secured to wall as per Trane installation manual.

2. Fan Coil (FC-A) WEST UNIT

The following is a list of deficiencies in the installation and manufacturing of the fan coil units:

- (a) Fan coil unit not provided with nameplate as per specification section 15000-1.24-A.
- (b) Fire stopping is not provided on the chilled water pipe, heating hot water piping, and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M108. The fire stopping application shown does not meet UL standards.

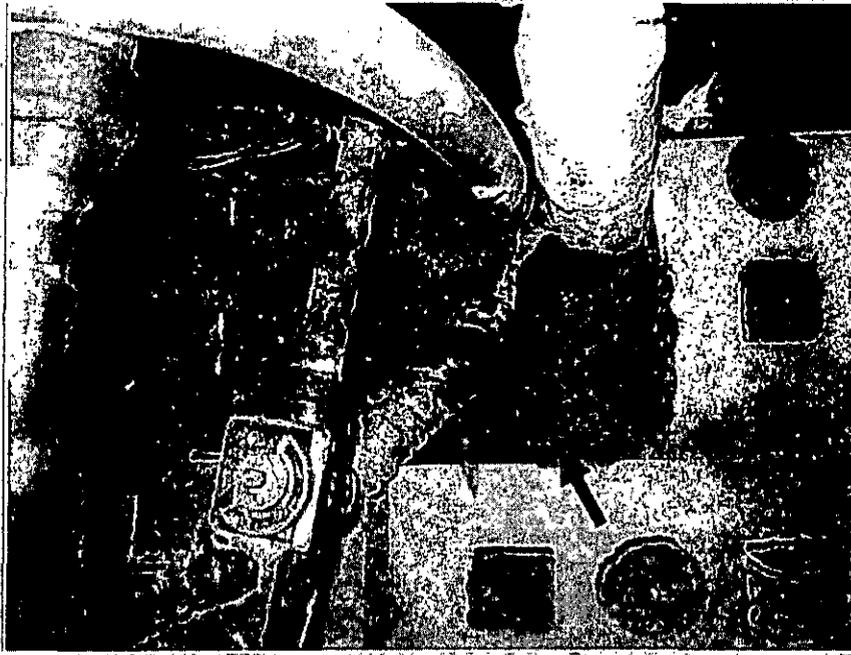

Figure M108

- (c) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M109.

Figure M109

- (d) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M109. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (e) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M109.
- (f) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (g) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (h) Fan coil unit is not secured to wall as per Trane installation manual. Refer to Figure M110.

Figure M110:

- (i) Leaking fittings have caused premature corrosion of the system. Refer to Figure M109.

Figure M111

3. Transfer duct

The following is a list of deficiencies in the installation of the transfer duct:

- (a) Transfer grilles not installed. Refer to Figure M112.

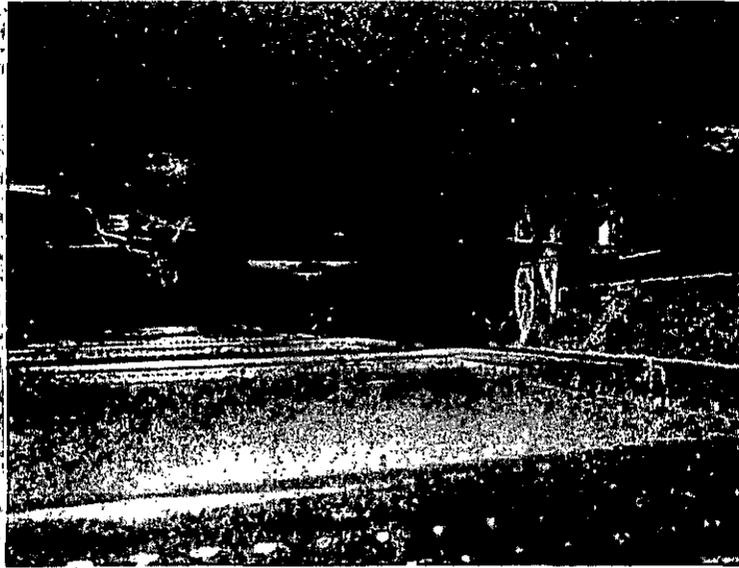

Figure M112

G. LIBRARY READING ROOM 214

1. Unit Ventilator (UV-A)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (b) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.
- (c) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M113.

Figure M113

- (d) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M114. The fire stopping application shown does not meet UL standards.

Figure M114

- (e) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M115.

Figure M115

- (f) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M115. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (g) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M115.
- (h) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (i) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (j) Unit ventilator is not secured to wall as per Trane installation manual.
- (k) Unit is not assembled properly or damaged. Refer to Figure M116.

Figure M116.

H.. MAIN OFFICE ROOM 217

1. Unit Ventilator (UV-C)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.

- (b) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M113.

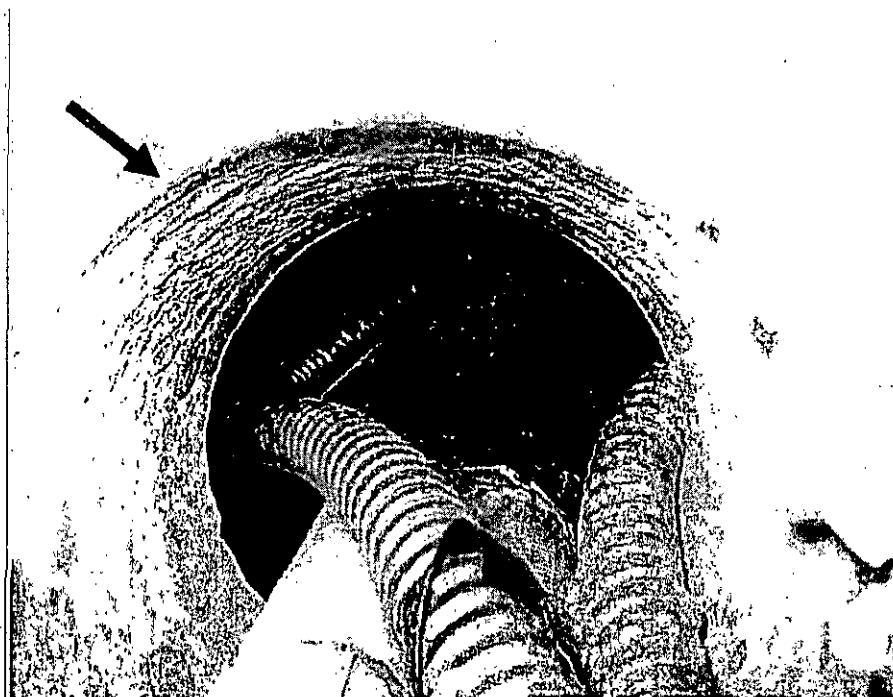

Figure M117

- (c) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M114. The fire stopping application shown does not meet UL standards.

Figure M118

- (d) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M115.

Figure M119

- (e) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M115. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (f) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M115.
- (g) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (h) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (i) Unit ventilator is not secured to wall as per Trane installation manual.

1. VICE PRINCIPAL'S OFFICE 217A

1. Fan Coil (FC-A) WEST UNIT

The following is a list of deficiencies in the installation and manufacturing of the fan coil units:

- (a) Fan-coil unit not provided with nameplate as per specification section 15000-1.24-A.
- (b) Fire stopping is not provided on the chilled water pipe, heating hot water piping, and condensate drain piping penetration as per contract drawing M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M120. The fire stopping application shown does not meet UL standards.

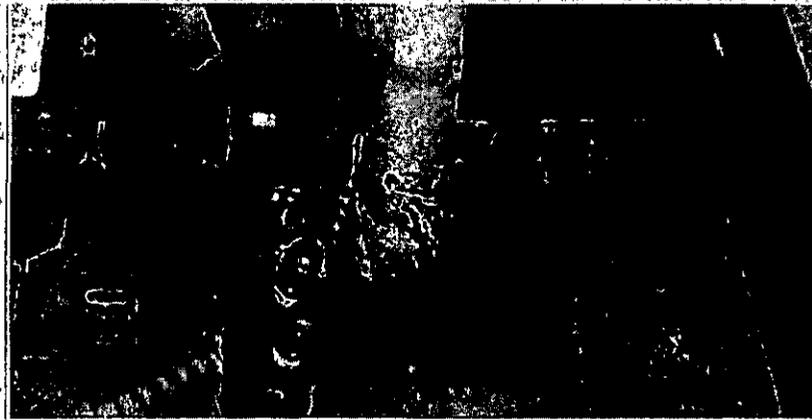

Figure M120.

- (c) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M121.

Figure M121

- (d) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M121. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (e) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M121.
- (f) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (g) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (h) Fan coil unit is not secured to wall as per Trane installation manual.

2. Fan Coil (FC-A) WEST UNIT

The following is a list of deficiencies in the installation and manufacturing of the fan coil units:

- (a) Fan coil unit not provided with nameplate as per specification section 15000-1.24-A.

- (b) Fire stopping is not provided on the chilled water pipe, heating hot water piping, and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M122. The fire stopping application shown does not meet UL standards.

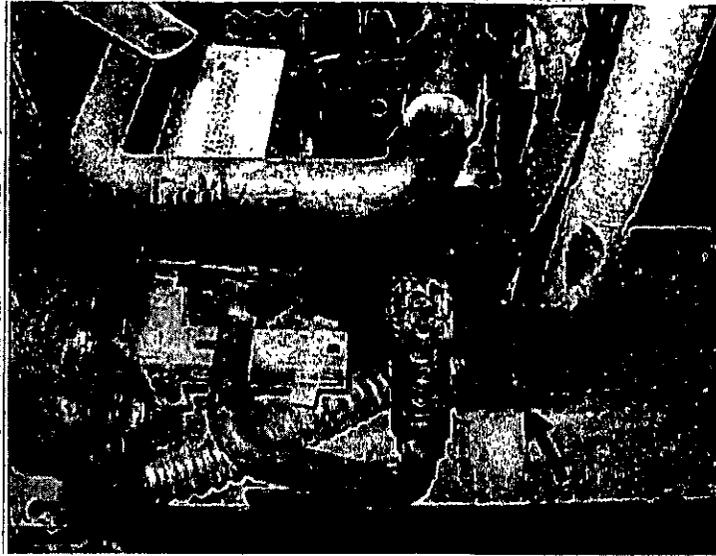

Figure M122

- (c) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M123.

Figure M123

- (d) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M123. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (e) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M123.
- (f) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer: "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (g) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (h) Fan coil unit is not secured to wall as per Trane installation manual.
- (i) Pipe sweating has caused premature corrosion of the system. Refer to Figure M124.

Figure M124

LIBRARY:218

1. UNIT VENTILATOR (UV-A) WEST UNIT

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.
- (b) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M125.

Figure M125

- (c) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". The fire stopping application shown does not meet UL standards. Refer to Figure M126.

Figure M126

Figure M127

- (d) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M127.
- (e) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M127. Refer to Figure M27 for sketch of condensate drain construction issued to contractor. Actual installation includes funnel at end of drain line.
- (f) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M127.
- (g) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (h) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (i) Unit ventilator is not secured to wall as per Trane installation manual. Refer to Figure M128.

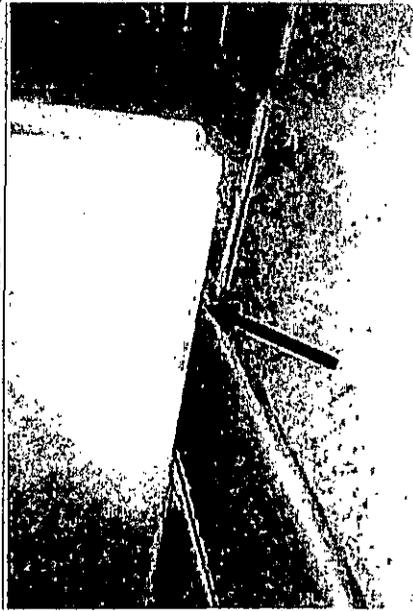

Figure M128

2. Unit Ventilator (UV-B) CENTER UNIT

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.
- (b) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M129.

Figure M129

- (c) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M130. The fire stopping application shown does not meet UL standards.

Figure M130.

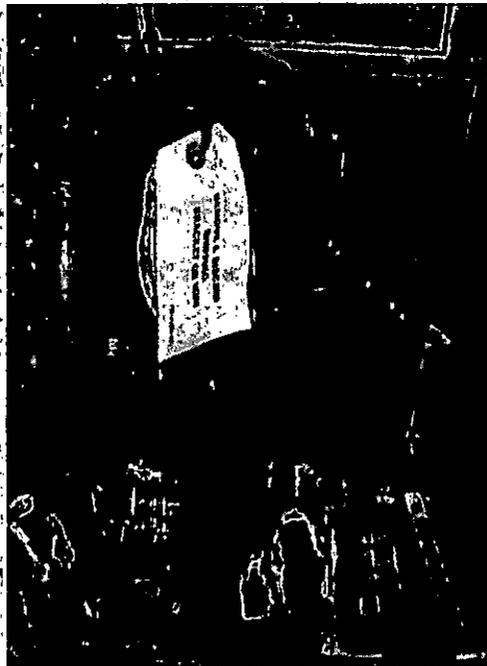

Figure M131

- (d) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M131.
- (e) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M131. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (f) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M131.
- (g) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer: "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (h) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (i) Unit ventilator is not secured to wall as per Trane installation manual. Refer to Figure M132.

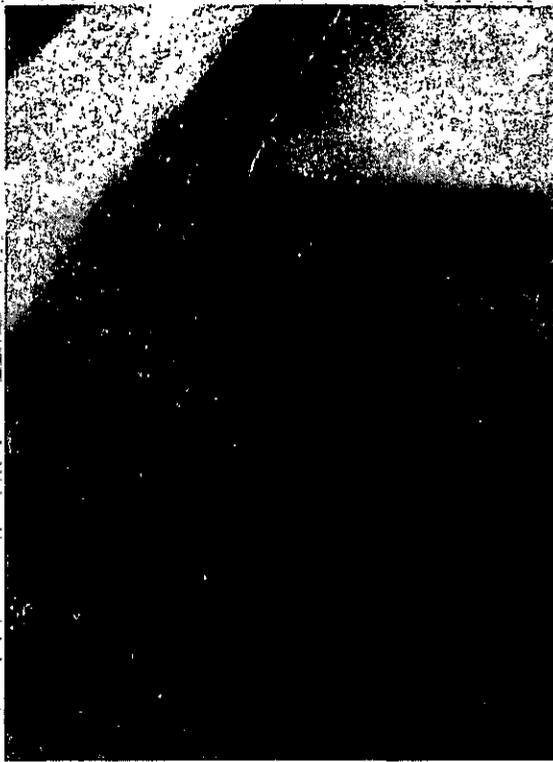

Figure M132

- (j) Unit is damaged. Refer to Figure M133.

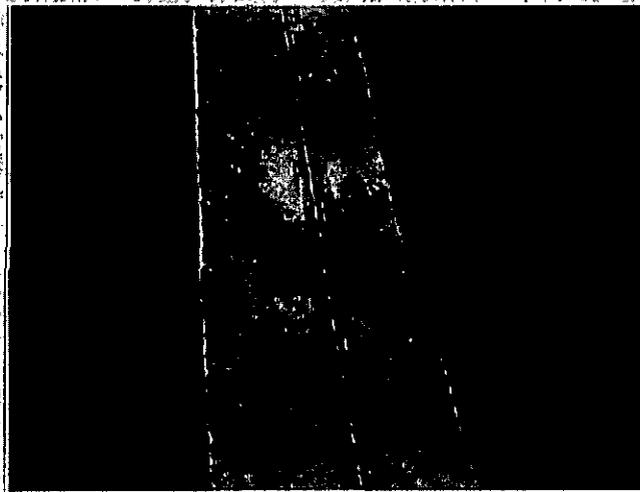

Figure M133

3. Unit Ventilator (UV-A) WEST UNIT

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.
- (b) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M134.

Figure M134

- (c) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M135. The fire stopping application shown does not meet UL standards.

Figure M135

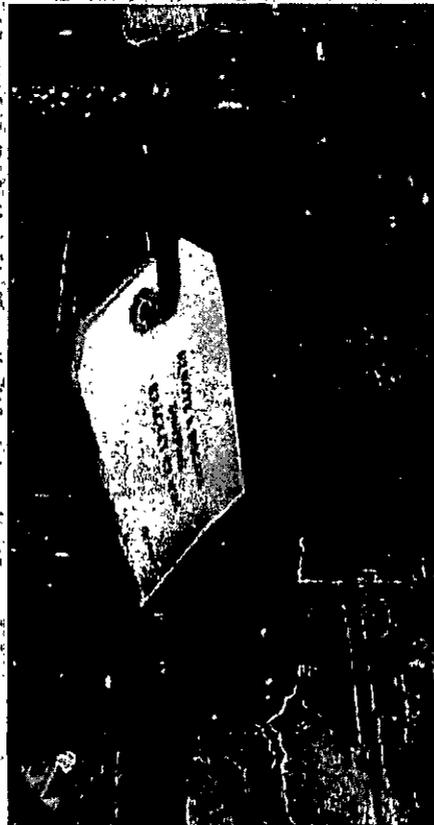

Figure M136

- (d) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M136. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (e) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M136.
- (f) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer: "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (g) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (h) Unit ventilator is not secured to wall as per Trane installation manual.

K. FACULTY ROOM 222

1. Unit Ventilator (UV-A)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.
- (b) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M137.

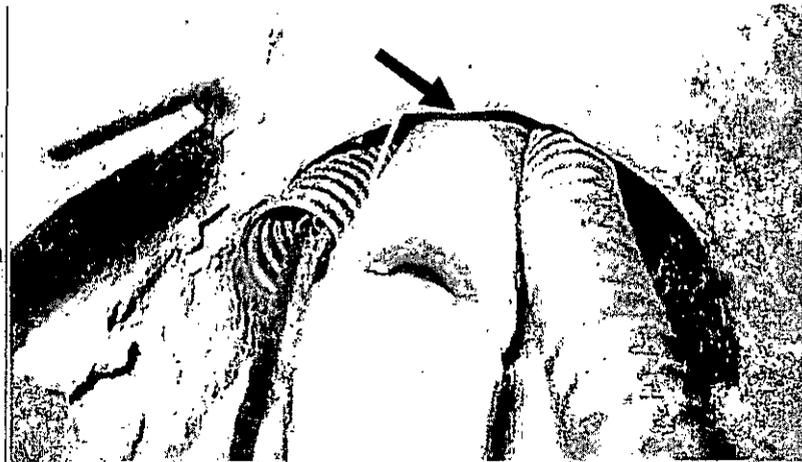

Figure M137

- (c) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M138. The fire stopping application shown does not meet UL standards.

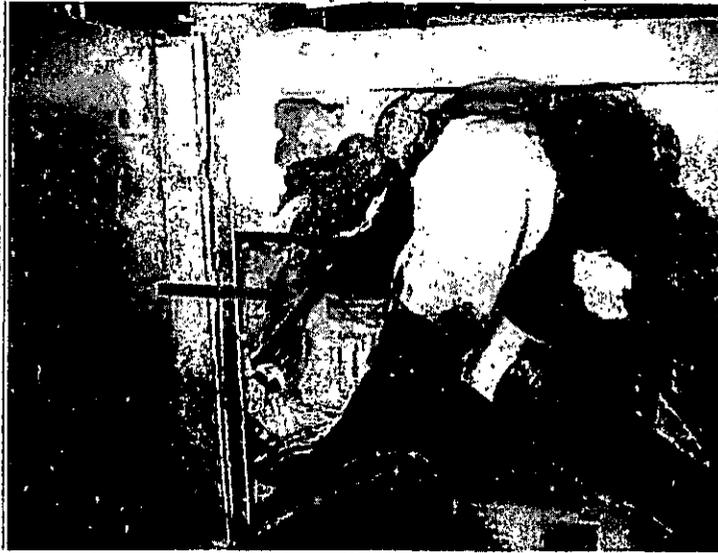

Figure M138

- (d) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M139.

Figure M139

- (e) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M139. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.

- (f) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M139.
- (g) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (h) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (i) Unit ventilator is not secured to wall as per Trane installation manual.
- (j) Unit is not assembled properly or damaged. Refer to Figure M140.

L. FINANCE 223

1. Fan Coil (FC-A) EAST UNIT

The following is a list of deficiencies in the installation and manufacturing of the fan coil units:

- (a) Fan coil unit not provided with nameplate as per specification section 15000-1.24-A.
- (b) Fire stopping is not provided on the chilled water pipe, heating hot water piping, and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M141.

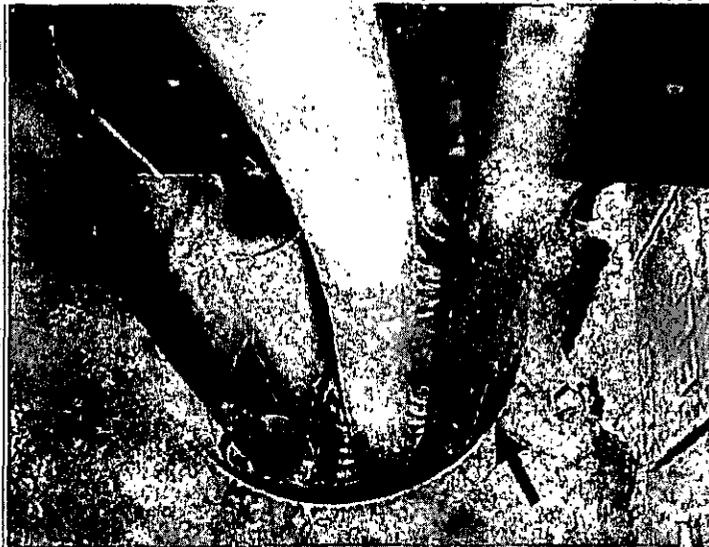

Figure M141

- (c) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M142.

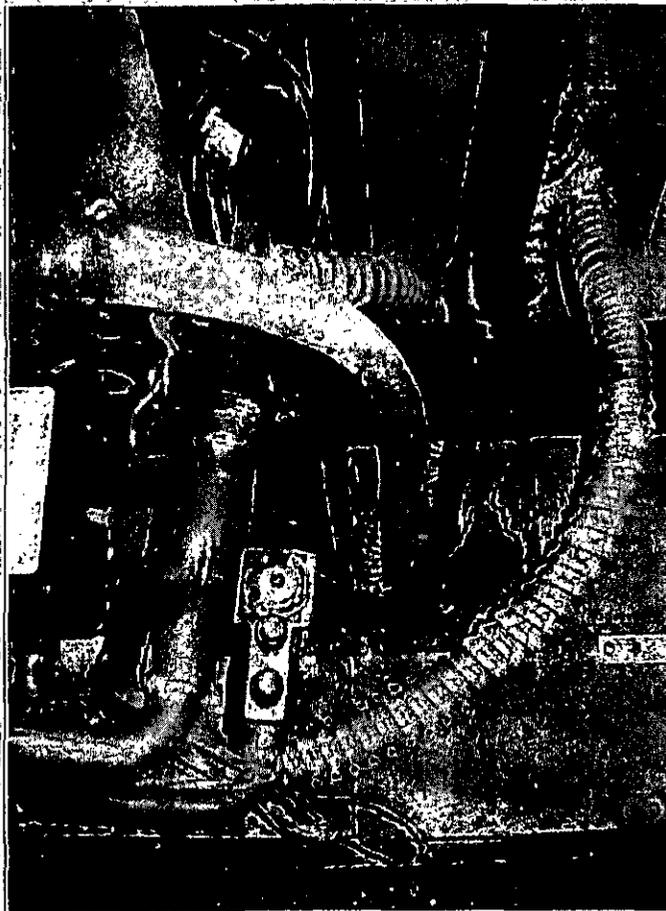

Figure M142

- (d) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M142. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (e) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M142.
- (f) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (g) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (h) Fan coil unit is not secured to wall as per Trane installation manual.

2. Fan Coil (FC-A) WEST UNIT

The following is a list of deficiencies in the installation and manufacturing of the fan coil units:

- (a) Fan coil unit not provided with nameplate as per specification section 15000-1.24-A.
- (b) Fire stopping is not provided on the chilled water pipe, heating hot water piping, and condensate drain piping penetration as per contract drawings, M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M143.

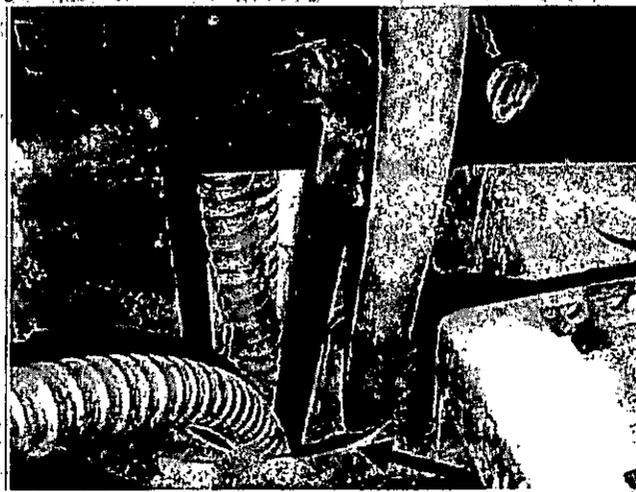

Figure M143

- (c) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M144.

Figure M144

- (d) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M144. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (e) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M144.
- (f) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer, "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (g) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (h) Fan coil unit is not secured to wall as per Trane installation manual.
- (i) Leaking fittings have caused premature corrosion of the system. Refer to Figure M145.

Figure M145

M: PRINCIPAL'S OFFICE 224

1. Unit Ventilator (UV-C)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.
- (b) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M146.

Figure M146

- (c) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M147. The fire stopping application shown does not meet UL standards.

Figure M147

- (d) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M148.

Figure M148

- (e) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M148. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (f) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M148.
- (g) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (h) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (i) Unit ventilator is not secured to wall as per Trane installation manual.
- (j) Existing wall damaged location of unit installation. Refer to Figure M149 and Figure M150.

Figure M149

Figure M150

2. Exhaust Top Register

The following is a list of deficiencies in the installation of the exhaust top register:

- (a) Existing wall damaged during installation of register. Refer to Figure M151.
- (b) Register missing at duct termination. Refer to Figure M151.

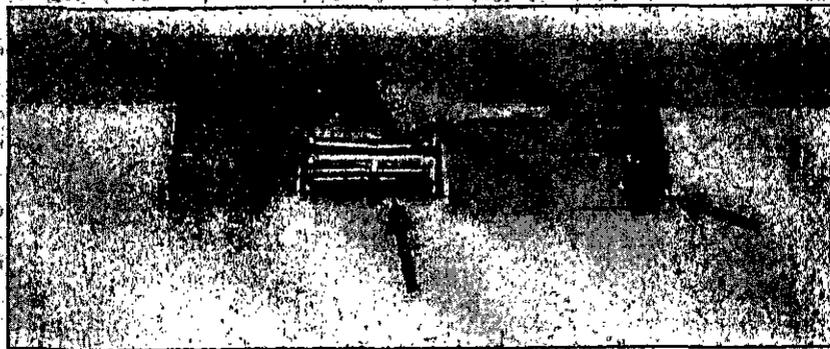

Figure M151

N. ASSISTANT PRINCIPAL'S OFFICE 225

1. Unit Ventilator (UV-C)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.
- (b) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M159.

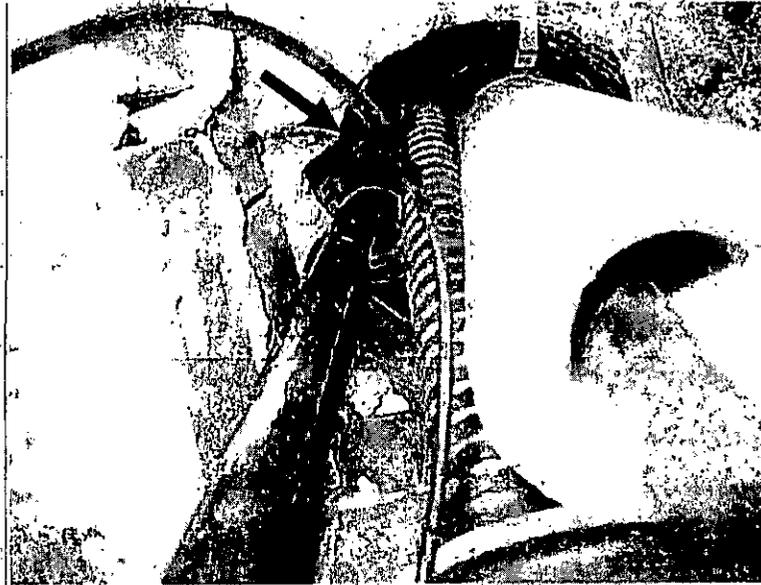

Figure M152

- (c) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M153. The fire stopping application shown does not meet UL standards.

Figure M153

- (d) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M154.

Figure M154

- (e) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M154. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (f) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M154.
- (g) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer: "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (h) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (i) Unit ventilator is not secured to wall as per Trane installation manual.
- (j) Existing wall damaged location of unit installation. Refer to Figure M155.

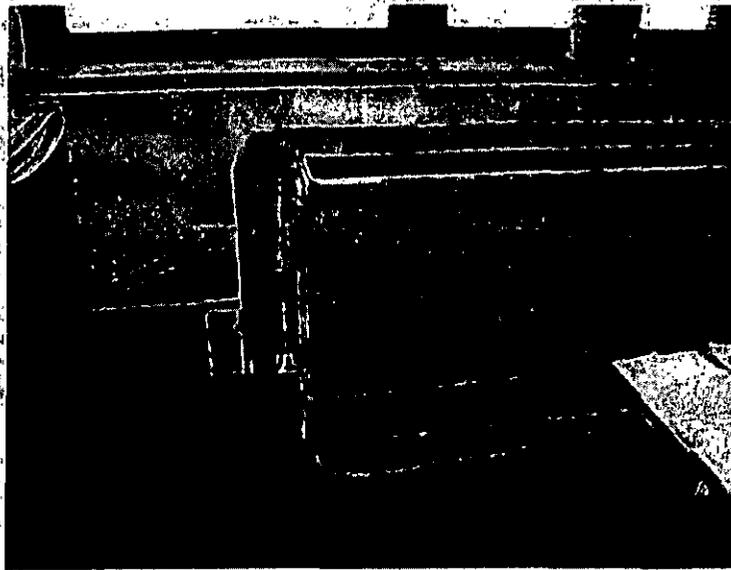

Figure M155

2. Exhaust Top Register

The following is a list of deficiencies in the installation of the exhaust top register:

- (a) Existing wall damaged during installation of register. Refer to Figure M156.
- (b) Register missing at duct termination. Refer to Figure M156.

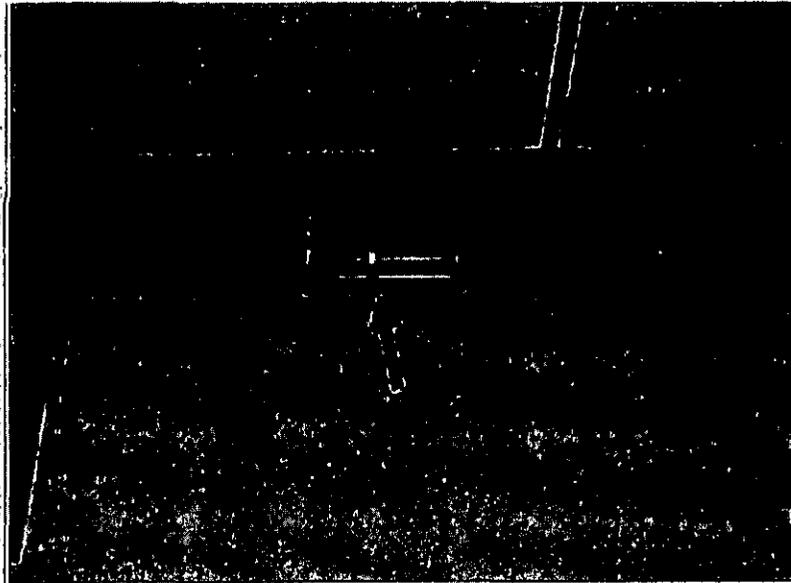

Figure M156

O. CLASSROOM 226 (BIOLOGY LABORATORY)

1. Unit Ventilator (UV-A-1)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

(a) Not applicable.

(b) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.

- (c) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M158.

Figure M158

- (d) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M159. The fire stopping application shown does not meet UL standards.

Figure M159

- (e) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M160.

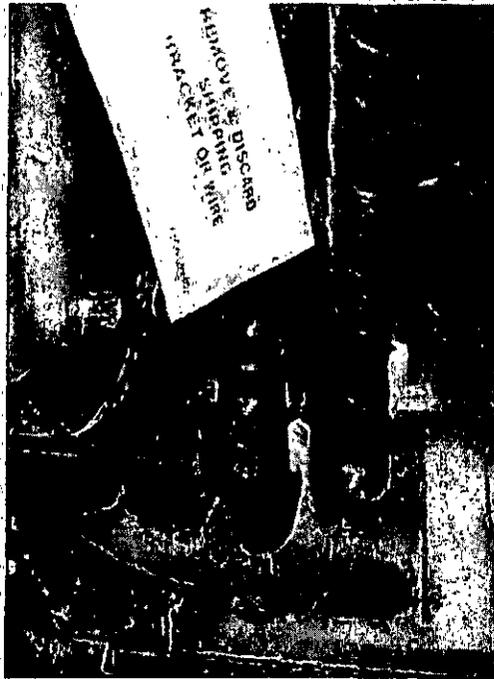

Figure M160

- (f) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M160. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (g) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M160.
- (h) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (i) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (j) Unit ventilator is not secured to wall as per Trane installation manual.
- (k) Unit is not assembled properly. Refer to Figure M161, Figure M162, and Figure M163.

Figure M161

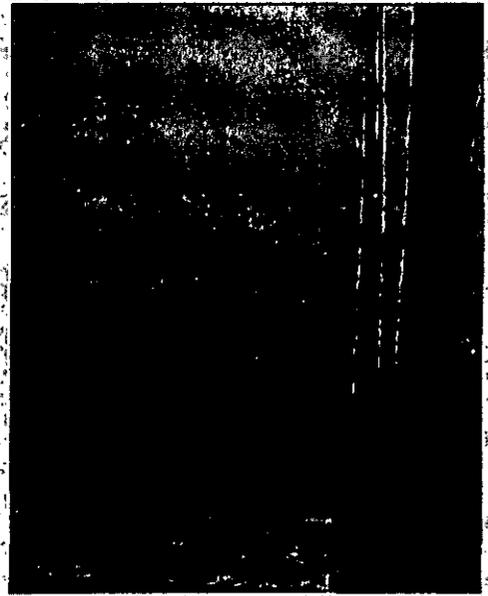

Figure M162

Figure M163.

2: Unit Ventilator (UV-B) West Unit

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.

(b) Not applicable.

(c) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M165.

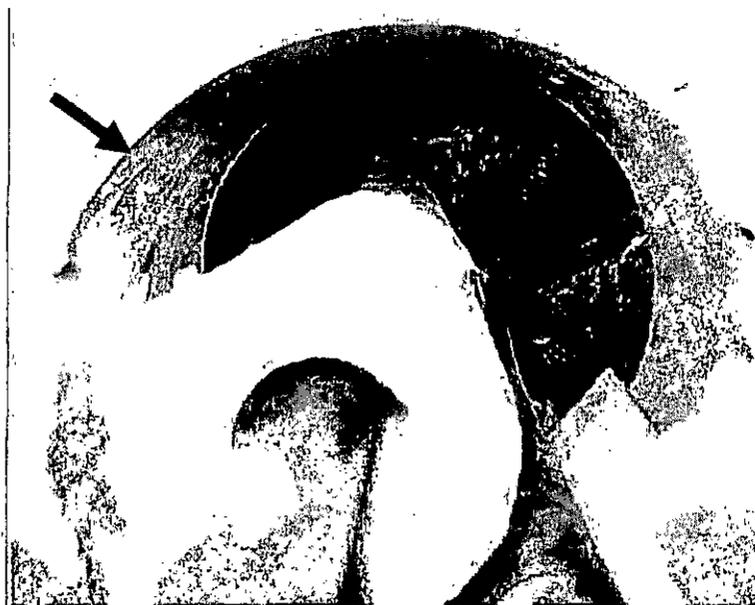

Figure M165

- (d) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M166. The fire stopping application shown does not meet UL standards.

Figure M166

- (e) Condensate drain line is not insulated as per specification section 15850-2:01. Refer to Figure M167.

Figure M167

- (f) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M167. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (g) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M167.
- (h) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer: "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (i) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (j) Unit ventilator is not secured to wall as per Trane installation manual. Refer to Figure M168.

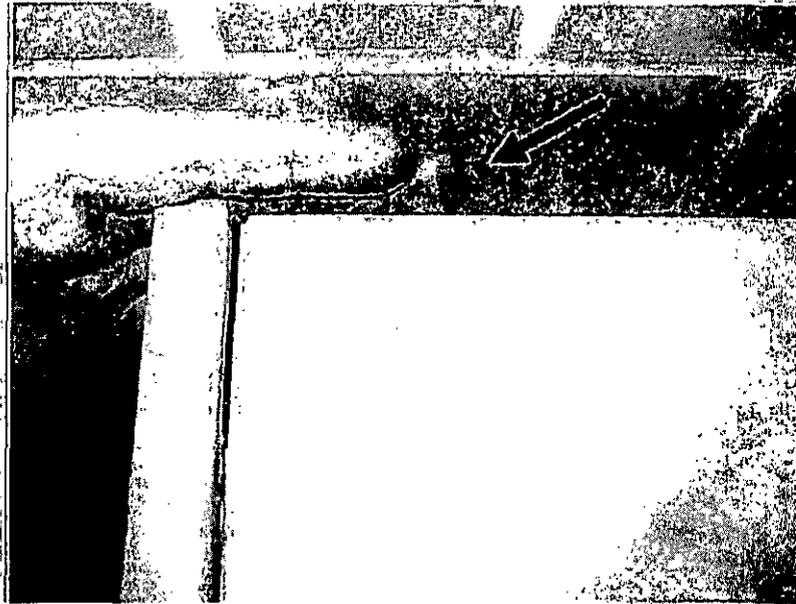

Figure M168

- (k) Unit ventilator does not have insulation removed for return air sampling chamber. Refer to Figure M170 and Figure M170.

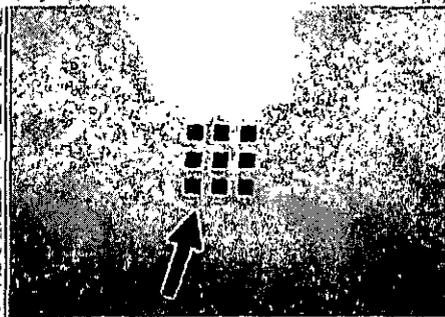

Figure M169

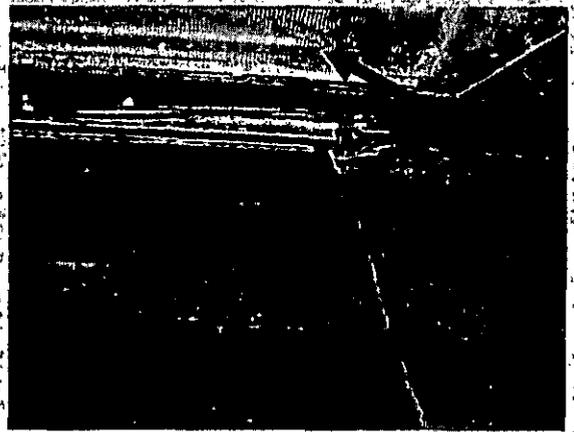

Figure M170

3. Unit Ventilator (UV-B) East Unit

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.

(b) Not applicable.

(c) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M172.

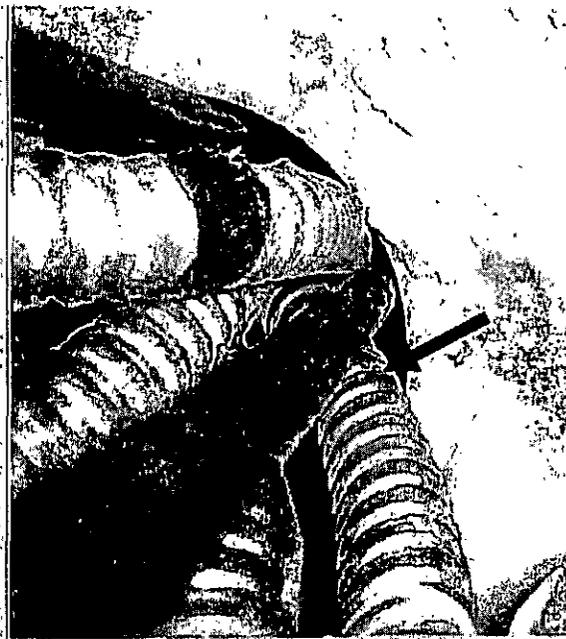

Figure M172

- (d) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M173. The fire stopping application shown does not meet UL standards.

Figure M173

- (e) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M174.

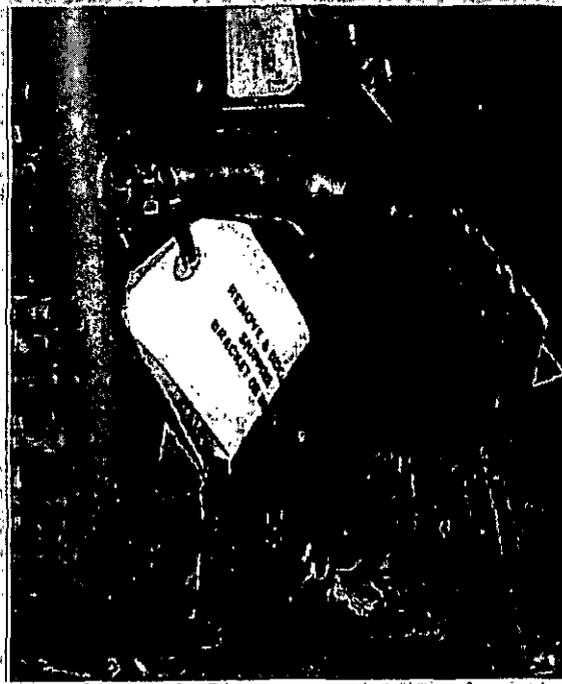

Figure M174

- (f) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M174. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (g) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M174.
- (h) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (i) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (j) Unit ventilator is not secured to wall as per Trane installation manual.

THIRD FLOOR

A. CLASSROOM 300

1. Unit Ventilator (UV-A)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.
- (b) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M175.

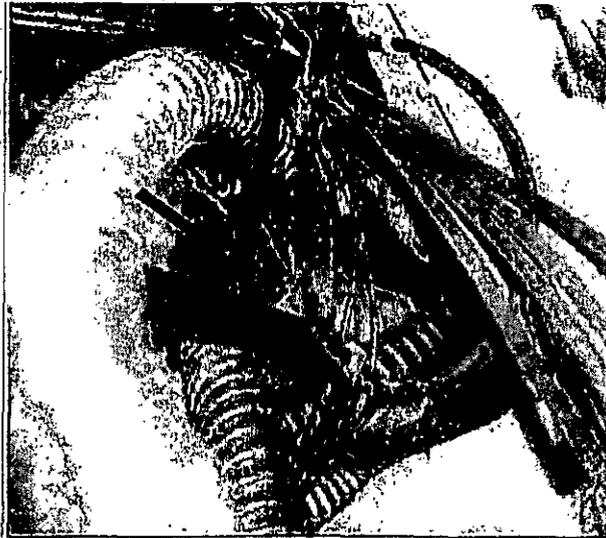

Figure M175

- (c) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M176. The fire stopping application shown does not meet UL standards.

Figure M176

- (d) Condensate drain line is not insulated as per specification section 15850-2:01. Refer to Figure M176.
- (e) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M176. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.

- (f) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M176.
- (g) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (h) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (i) Unit ventilator is not secured to wall as per Trane installation manual.

2. Unit Ventilator (UV-A-1)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.
- (b) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M177.

Figure M177

- (c) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M178. The fire stopping application shown does not meet UL standards.

Figure M178

- (d) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M178.
- (e) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M178. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (f) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M178.
- (g) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer: "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (h) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (i) Unit ventilator is not secured to wall as per Trane installation manual. Refer to Figure M179.

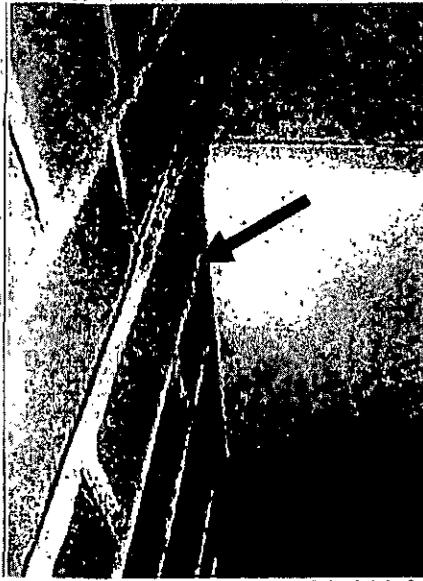

Figure M179

B. CLASSROOM 301

1. Unit Ventilator (UV-A)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.
- (b) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M180.

Figure M180

- (c) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M181. The fire stopping application shown does not meet UL standards.

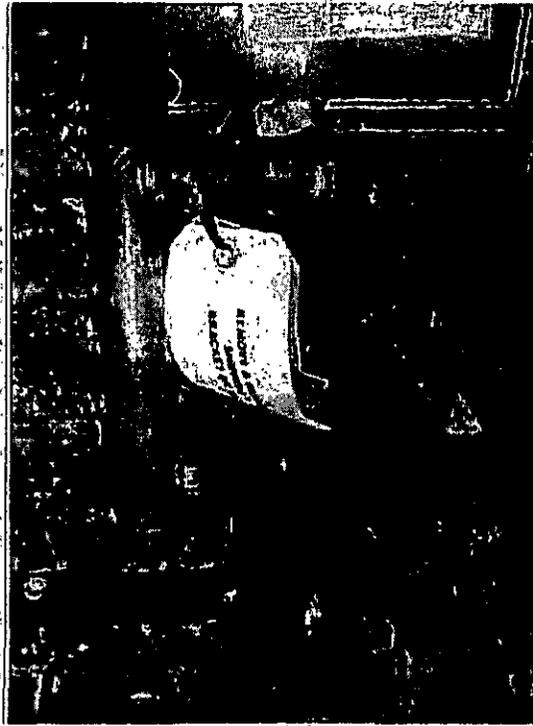

Figure M181

- (d) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M181.
- (e) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M181. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (f) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M181.
- (g) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (h) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (i) Unit ventilator is not secured to wall as per Trane installation manual.

2. Unit Ventilator (UV-A-1)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.

- (b) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M182.

Figure M182

- (c) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M183. The fire stopping application shown does not meet UL standards.

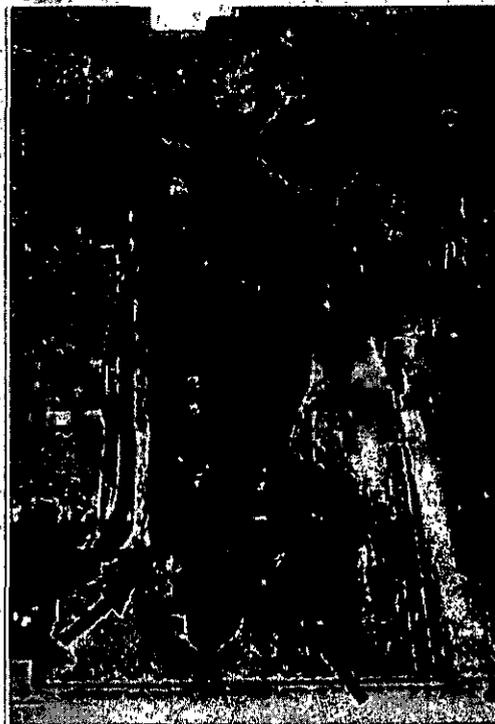

Figure M183

- (d) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M183.
- (e) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M183. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (f) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M183.
- (g) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (h) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (i) Unit ventilator is not secured to wall as per Trane installation manual.

C. CLASSROOM 302

1. Unit Ventilator (UV-A)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.
- (b) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M184.

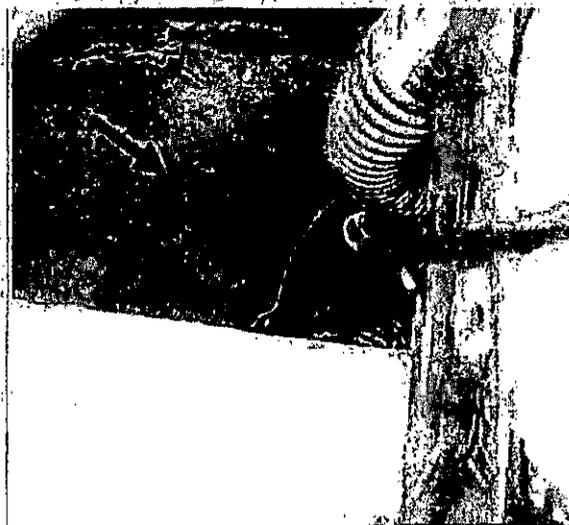

Figure M184

- (c) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M185. The fire stopping application shown does not meet UL standards.

Figure M185

- (d) Condensate drain line is not insulated as per specification section 15850-2.01.
- (e) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (f) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M185.
- (g) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer: "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (h) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (i) Unit ventilator is not secured to wall as per Trane installation manual.

2. Unit Ventilator (UV-A-1)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.
- (b) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail: "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M186.

- (c) Leak in heating hot water piping has caused premature corrosion. Refer to Figure M186.

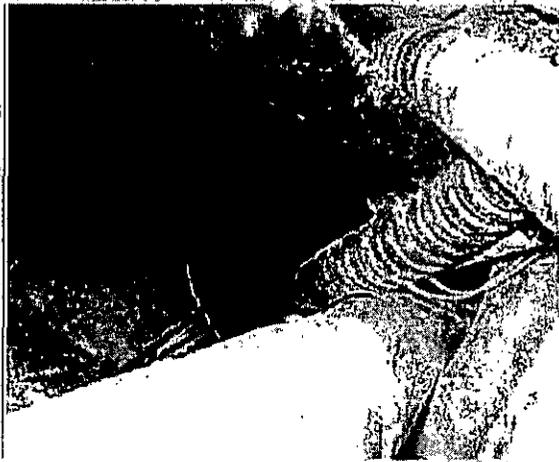

Figure M186.

- (d) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M187. The fire stopping application shown does not meet UL standards.

Figure M187

- (e) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M187.

- (f) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M187. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (g) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M187.
- (h) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (i) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (j) Unit ventilator is not secured to wall as per Trane installation manual.

D. CLASSROOM 303

1. Unit Ventilator (UV-B)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Not applicable.
- (b) Not applicable.
- (c) Not applicable.
- (d) Not applicable.
- (e) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.

- (f) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M188:

Figure M188

- (g) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M189. The fire stopping application shown does not meet UL standards.

Figure M189

Figure M190

- (h) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M190.
- (i) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M190. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (j) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M190.
- (k) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (l) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (m) Core drill cut through steel channel. Structural analysis may need to be performed to insure structural integrity. Refer to Figure M191.

Figure M191

2. Unit Ventilator (UV-A-1)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Not applicable.

- (b) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.
- (c) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M194.

Figure M194

- (d) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M195. The fire stopping application shown does not meet UL standards.

Figure M195

Figure M195

- (e) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M195.
- (f) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M195. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (g) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M195.
- (h) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (i) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (j) Unit ventilator is not secured to wall as per Trane installation manual.

E. CLASSROOM 304

1. Unit Ventilator (UV-B)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Not applicable.

- (b) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.
- (c) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M197.

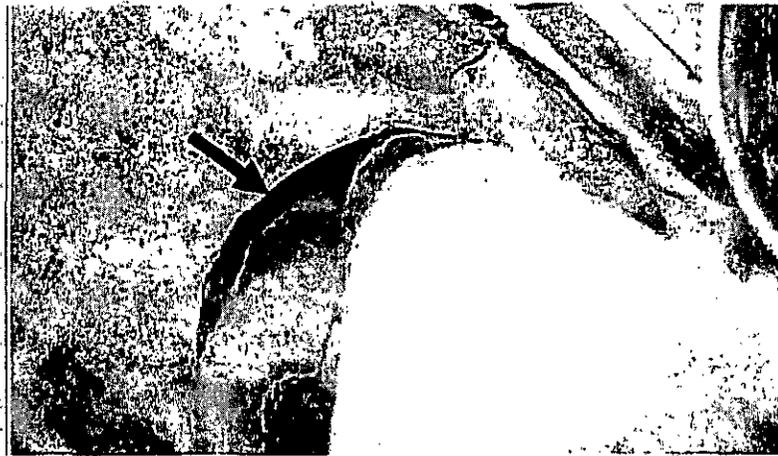

Figure M197

- (d) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M198. The fire stopping application shown does not meet UL standards.

Figure M199

Figure M200

- (e) Condensate drain line is not insulated as per specification section 15850-2:01. Refer to Figure M200.
- (f) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M200. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (g) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2:01. Refer to Figure M200.
- (h) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".

- (i) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (j) Unit ventilator is not secured to wall as per Trane installation manual.

2. Unit Ventilator (UV-A-1)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Not applicable.
- (b) Not applicable.
- (c) Not applicable.
- (d) Not applicable.
- (e) Not applicable.
- (f) Not applicable.
- (g) Not applicable.
- (h) Not applicable.
- (i) Not applicable.
- (j) Not applicable.
- (k) Not applicable

- (l) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.
- (m) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M201.

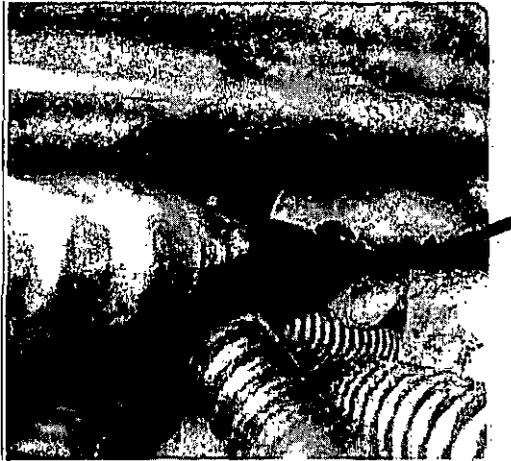

Figure M202

- (n) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13' detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M203. The fire stopping application shown does not meet UL standards.

Figure M203

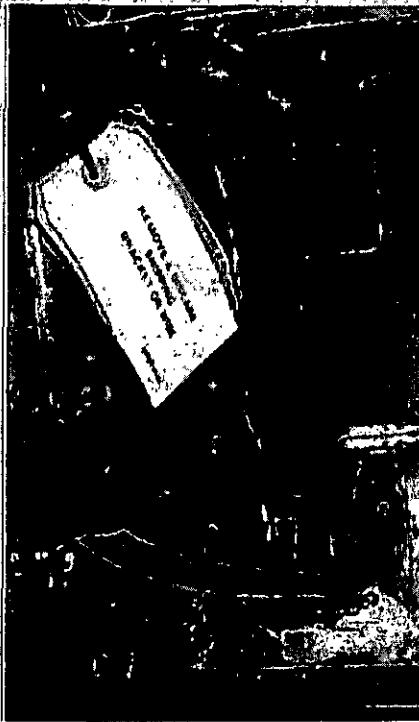

Figure M204

- (o) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M204.
- (p) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M204. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (q) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M204.
- (r) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (s) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (t) Unit ventilator is not secured to wall as per Trane installation manual.
- (u) Core drill cut through electrical conduit. Refer to Figure M205.

Figure M205

- (v) Chilled water manual air vent leaking glycol. Refer to Figure M206.

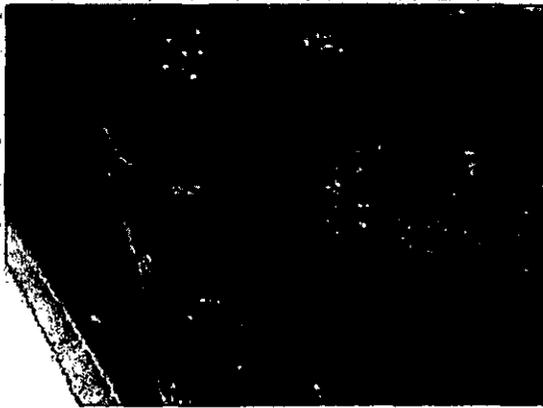

Figure M206

F: CLASSROOM 305

1. Unit Ventilator (UV-A)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.
- (b) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M207.

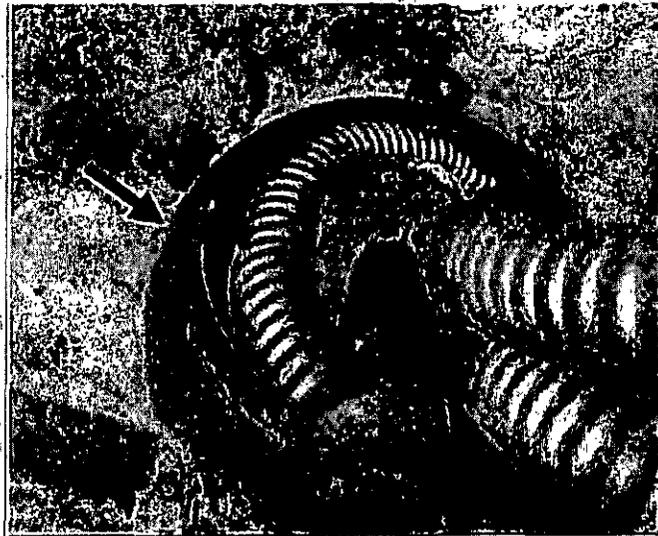

Figure M207

- (c) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M208. The fire stopping application shown does not meet UL standards.

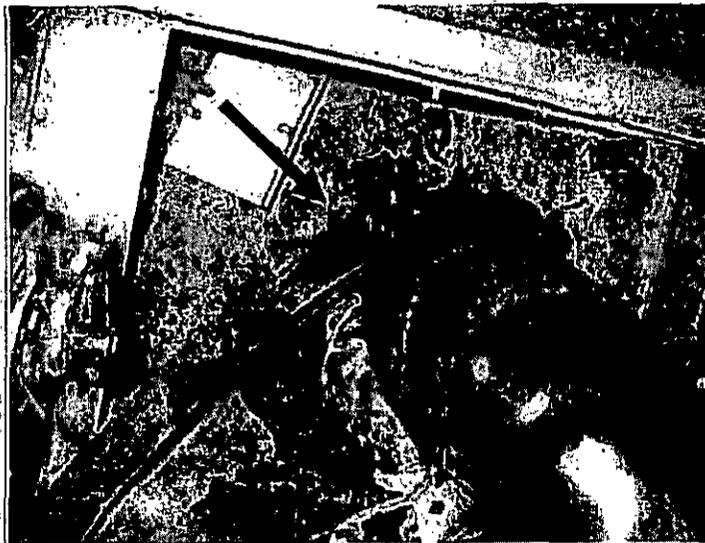

Figure M208

Figure M209

- (d) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M209.
- (e) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M209. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (f) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M209.
- (g) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (h) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (i) Core drill cut through steel channel. Structural analysis may need to be performed to insure structural integrity. Refer to Figure M210.

Figure M210

2. Unit Ventilator (UV-A-1)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.
- (b) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M211.

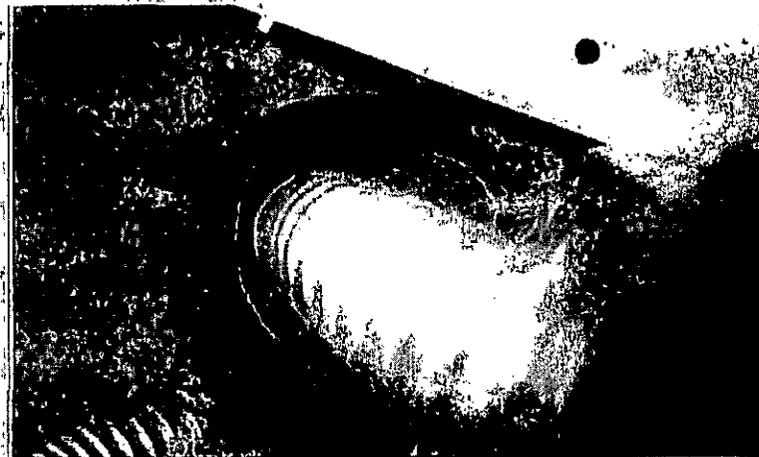

Figure M211

- (c) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M212. The fire stopping application shown does not meet UL standards.

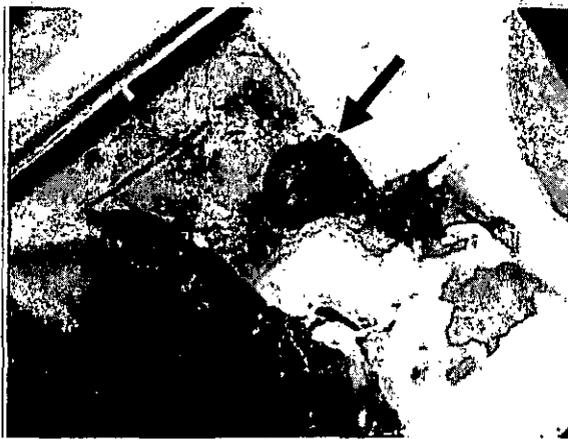

Figure M212

Figure M213

- (d) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M213.
- (e) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M213. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (f) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M213.
- (g) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (h) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (i) Unit ventilator is not secured to wall as per Trane installation manual.

G. CLASSROOM 306

1. Unit Ventilator (UV-B)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.
- (b) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M207.

Figure M214

- (c) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M215. The fire stopping application shown does not meet UL standards.

Figure M215

- (d) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M215.
- (e) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M215. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (f) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M215.
- (g) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (h) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (i) Unit ventilator is not secured to wall as per Trane installation manual.

2. Unit Ventilator (UV-B-1)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.
- (b) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M216.

Figure M216.

- (c) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure.M217. The fire stopping application shown does not meet UL standards.

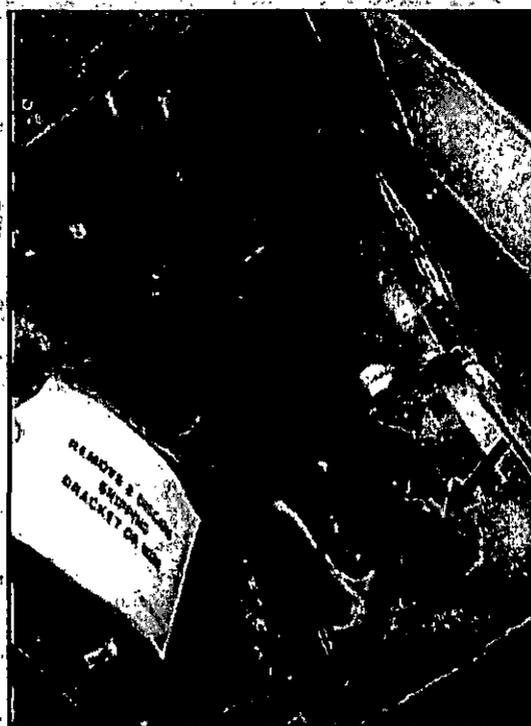

Figure M217.

- (d) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M217.
- (e) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M217. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (f) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M217.
- (g) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (h) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (i) Unit ventilator is not secured to wall as per Trane installation manual.

H. CLASSROOM 307

1. Unit Ventilator (UV-A)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.
- (b) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M218.

Figure M218

- (c) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M27. The fire stopping application shown does not meet UL standards.

Figure M219

- (d) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M219.
- (e) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M215. Refer to Figure M219 for sketch of condensate drain construction issued to contractor.
- (f) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M219.
- (g) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (h) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (i) Unit ventilator is not secured to wall as per Trane installation manual.

2. Unit Ventilator (UV-A-1)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.
- (b) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M220.

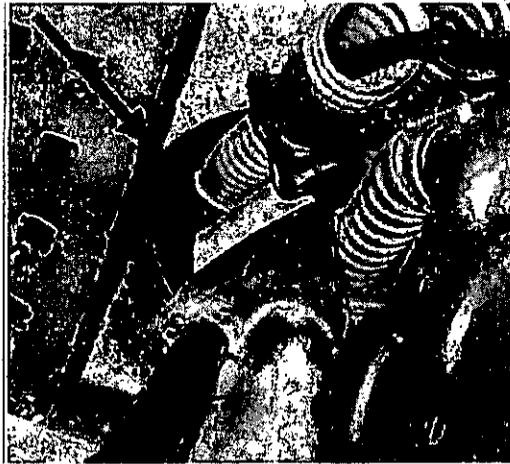

Figure M220

- (c) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M221. The fire stopping application shown does not meet UL standards.

Figure M221

- (d) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M221.
- (e) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M221. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (f) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M221.
- (g) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (h) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (i) Unit ventilator is not secured to wall as per Trane installation manual.

I. CLASSROOM 308

1. Unit Ventilator (UV-B)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.
- (b) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M265.

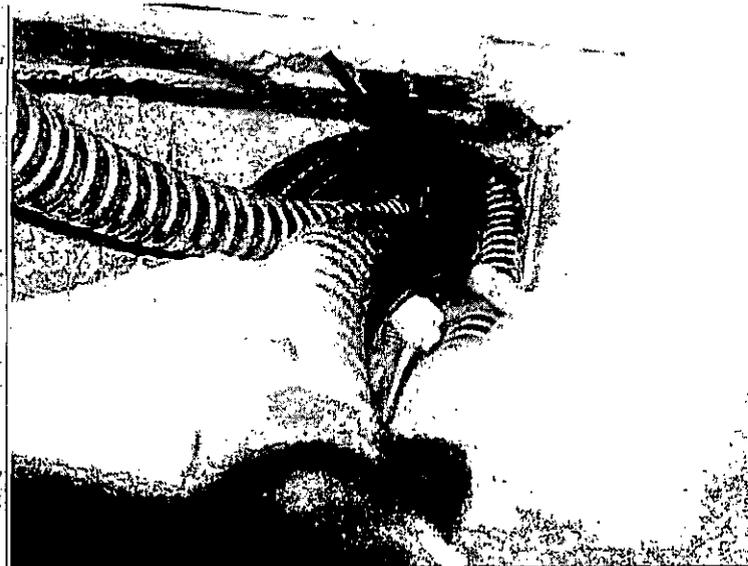

Figure M222

- (c) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE

SLEEVE THRU FLOOR SLAB". The fire stopping application shown does not meet UL standards.

Figure M223

- (d) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M266.
- (e) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M215. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (f) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M266.
- (g) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (h) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (i) Unit ventilator is not secured to wall as per Trane installation manual. Refer to Figure M224.

Figure M224

- (j) Core drill cut through steel channel. Structural analysis may need to be performed to insure structural integrity. Refer to Figure M225.

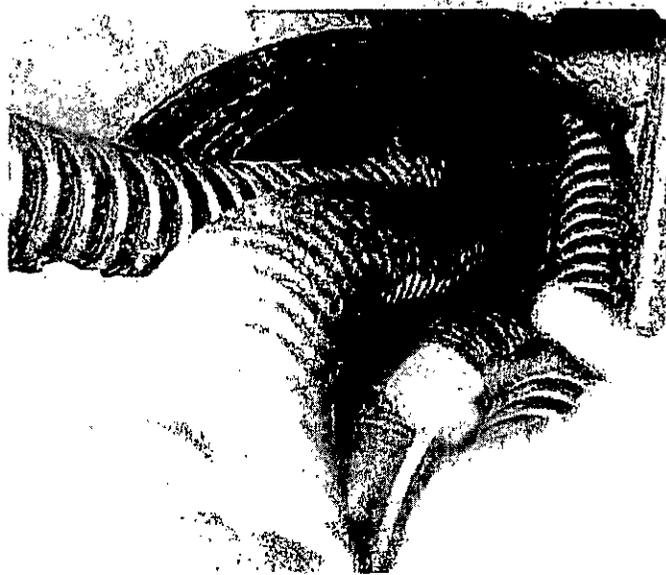

Figure M225

(k) Unit is not assembled properly or damaged. Refer to Figure M226.

Figure M226

2. Unit Ventilator (UV-B-1)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.
- (b) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M227.

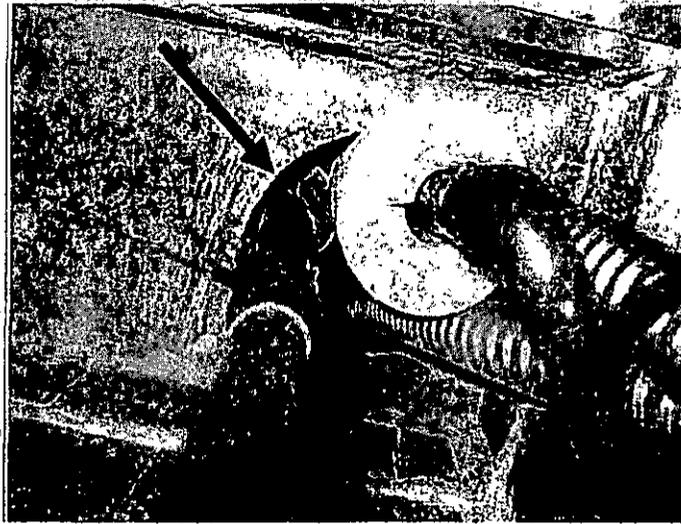

Figure M227

- (c) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M229. The fire stopping application shown does not meet UL standards.

Figure M228

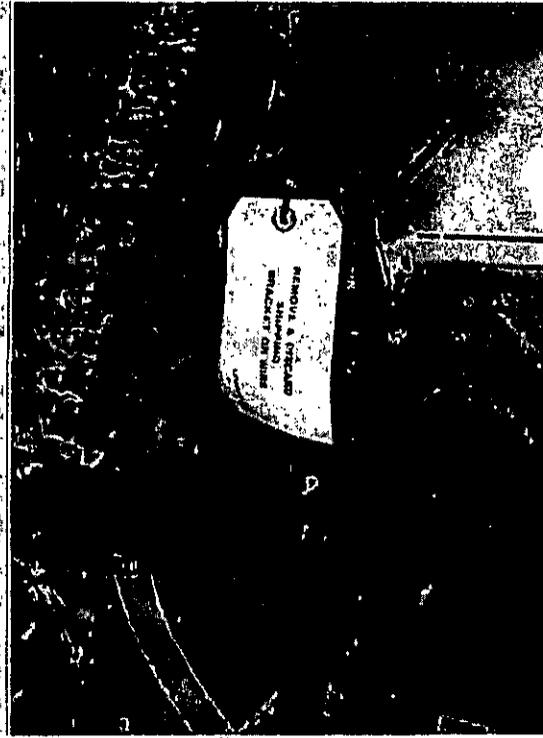

Figure M229

- (d) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M229.
- (e) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M229. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (f) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M229.
- (g) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer: "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (h) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (i) Unit ventilator is not secured to wall as per Trane installation manual.

J. CLASSROOM 311

1. Unit Ventilator (UV-C-1)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.

- (b) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M230.

Figure M230

- (c) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". The fire stopping application shown does not meet UL standards. Refer to Figure M231.

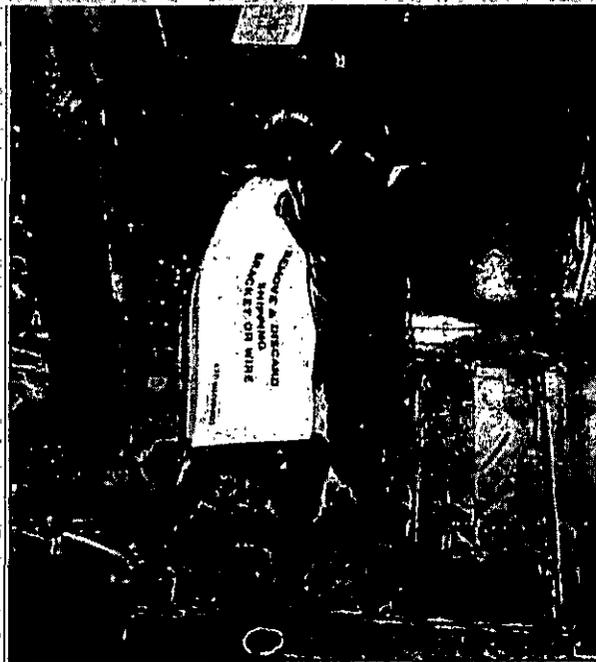

Figure M231

Figure M232

- (d) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M234.
- (e) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M234. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (f) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M235.
- (g) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer: "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (h) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (i) Unit ventilator is not secured to wall as per Trane installation manual.

K. ROOM 314 PUBLIC ROOM

1. Unit Ventilator (UV-C)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.
- (b) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M233.

Figure M233

- (c) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". The fire stopping application shown does not meet UL standards. Refer to Figure M234.

Figure M234

Figure M235

- (d) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M234.
- (e) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M234. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (f) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M235.
- (g) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (h) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (i) Unit ventilator is not secured to wall as per Trane installation manual.

L. CLASSROOM 310

1. Unit Ventilator (UV-A)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.
- (b) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB".
- (c) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". The fire stopping application shown does not meet UL standards. Refer to Figure M237 and Figure M238.

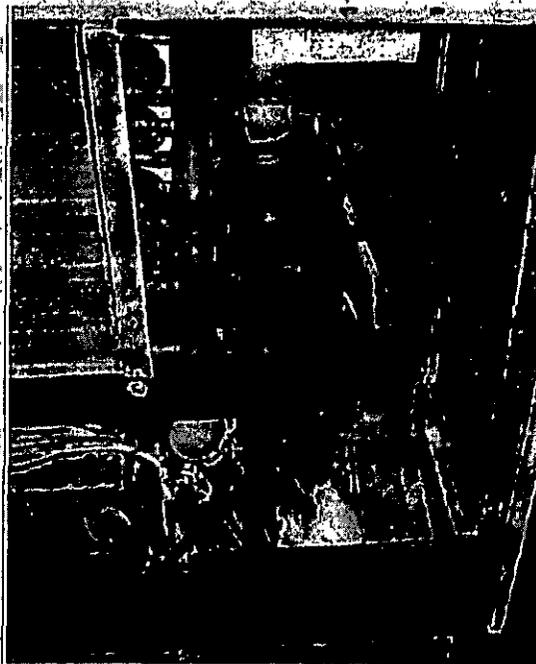

Figure M236

- (d) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M236.

Figure M237

Figure M238

- (e) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M237. Refer to Figure M27 for sketch of condensate drain construction issued to contractor. Actual installation includes funnel at end of drain line.
- (f) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M237.
- (g) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD. INSULATE PIPING".
- (h) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (i) Unit ventilator is not secured to wall as per Trane installation manual.

2. Unit Ventilator (UV-A-1)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.
- (b) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M239.

Figure M239

- (c) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M240. The fire stopping application shown does not meet UL standards.

Figure M240

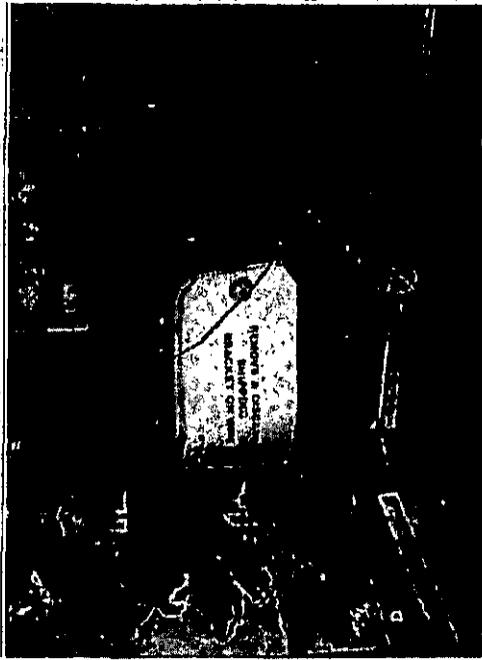

Figure M241

- (d) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M241.
- (e) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M241. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (f) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M241.
- (g) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (h) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (i) Unit ventilator is not secured to wall as per Trane installation manual. Refer to Figure M242.

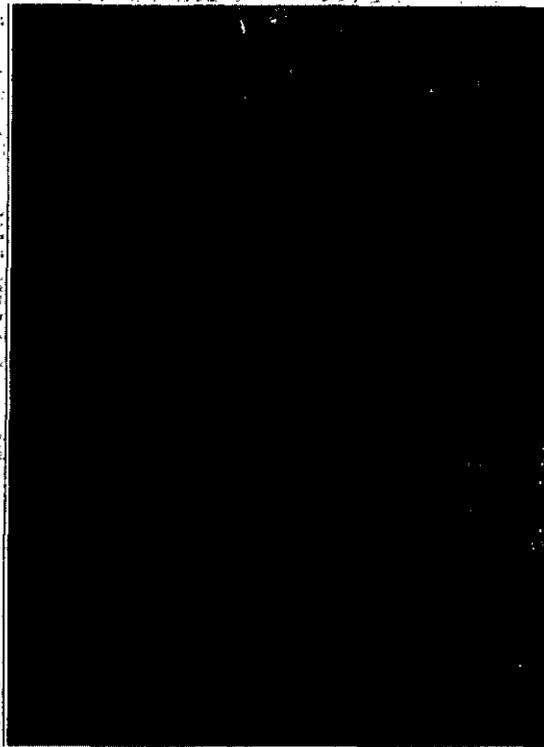

Figure M242

M. PHYSICS CLASSROOM 317

1. Unit Ventilator (UV-A)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.
- (b) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M243.

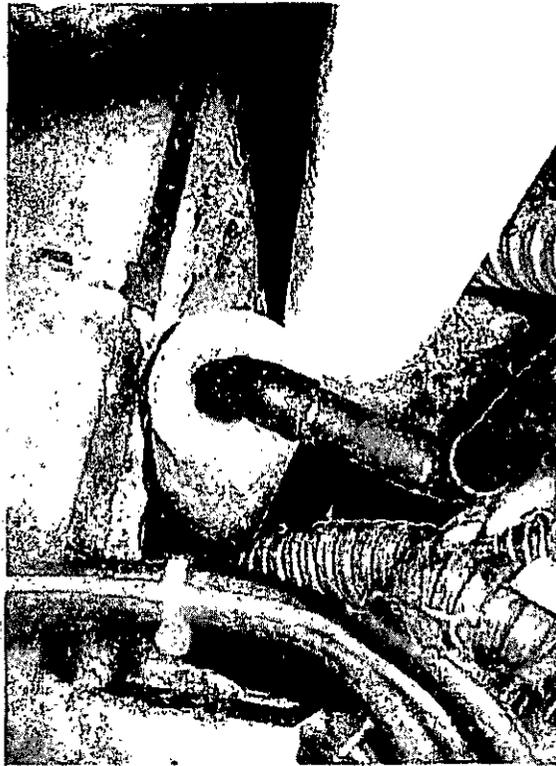

Figure M243

- (c) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail, "PIPE SLEEVE THRU FLOOR SLAB". The fire stopping application shown does not meet UL standards. Refer to Figure M245.

Figure M244

Figure M245

- (d) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M244.
- (e) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M244. Refer to Figure M27 for sketch of condensate drain construction issued to contractor. Actual installation includes funnel at end of drain line.
- (f) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M244.
- (g) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (h) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (i) Unit ventilator is not secured to wall as per Trane installation manual.

2. Unit Ventilator (UV-A-1)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.
- (b) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M246.

Figure M246

- (c) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M247. The fire stopping application shown does not meet UL standards.

Figure M247

- (d) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M247.

- (e) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M247. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (f) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M247.
- (g) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (h) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (i) Unit ventilator is not secured to wall as per Trane installation manual. Refer to Figure M247.

N. CHEMISTRY LABORATORY 319

1. Unit Ventilator (UV-A-1)

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.
- (b) Fire stopping is not provided on the heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M248.

Figure M248

- (c) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". The fire stopping application shown does not meet UL standards. Refer to Figure M250.

Figure M249

Figure M250

- (d) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M248.
- (e) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M248. Refer to Figure M27 for sketch of condensate drain construction issued to contractor. Actual installation includes funnel at end of drain line.
- (f) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M248.
- (g) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".
- (h) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (i) Unit ventilator is not secured to wall as per Trane installation manual.
- (j) Unit is not assembled properly or damaged. Refer to Figure M250.

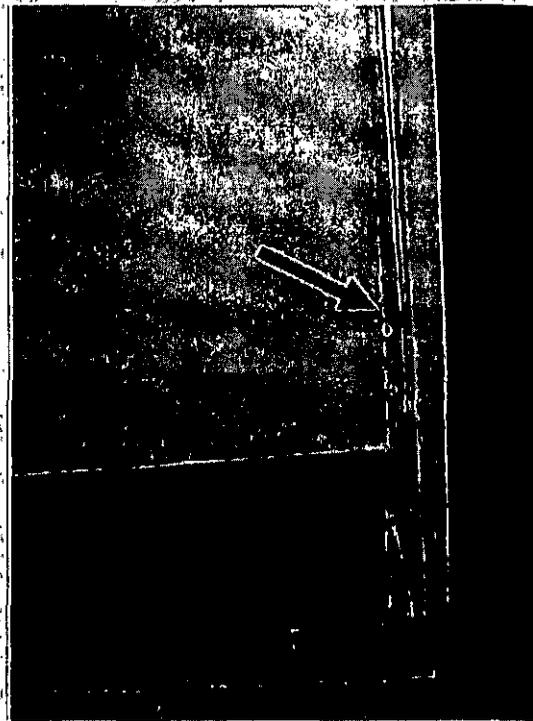

Figure M250

2. Unit Ventilator (UV-B) EAST UNIT

The following is a list of deficiencies in the installation and manufacturing of the classroom unit ventilators:

- (a) Not applicable.

- (b) Unit ventilator not provided with nameplate as per specification section 15000-1.24-A.
- (c) Fire stopping is not provided on the heating hot-water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M252.

Figure M252

- (d) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M254. The fire stopping application shown does not meet UL standards.

Figure M253

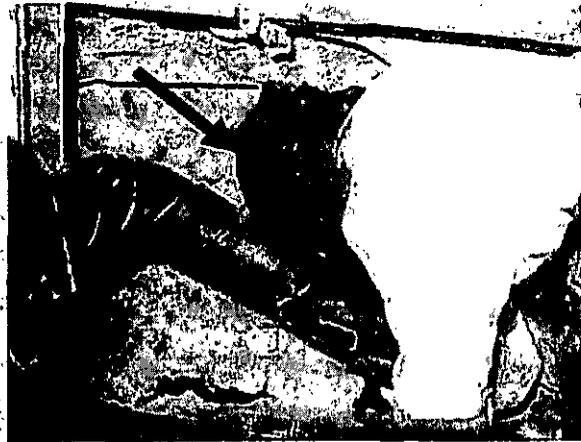

Figure M254

- (e) Condensate drain line is not insulated as per specification section 15850-2.01. Refer to Figure M253.
- (f) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M253. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (g) Chilled water supply and return lines are sweating profusely through insulation due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M253.
- (h) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD INSULATE PIPING".

Figure M257

- (d) Fire stopping is not provided on the chilled water pipe and condensate drain piping penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB". Refer to Figure M258. The fire stopping application shown does not meet UL standards.

Figure M258

Figure M259

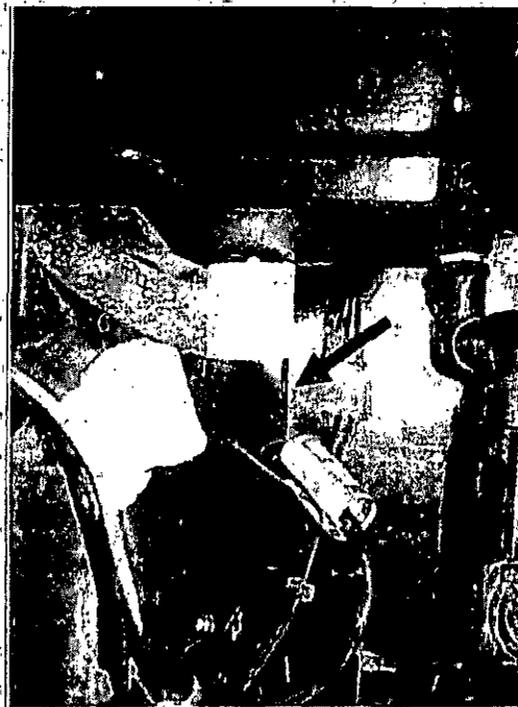

Figure M260

- (e) The condensate drain line is not constructed per sketch issued to contractor. Refer to Figure M260. Refer to Figure M27 for sketch of condensate drain construction issued to contractor.
- (f) Chilled water supply and return lines are sweating profusely through insulation, due to the lines not being insulated as per specification section 15850-2.01. Refer to Figure M259.
- (g) Submittal number 19 returned to contractor APPROVED AS NOTED contains the following notes from the engineer "9. CONTRACTOR TO FIELD: INSULATE PIPING".
- (h) The return air sampling chamber may provide an inaccurate space temperature when unit is not in operation.
- (i) Unit ventilator is not secured to wall as per Trane installation manual. Refer to Figure M261.

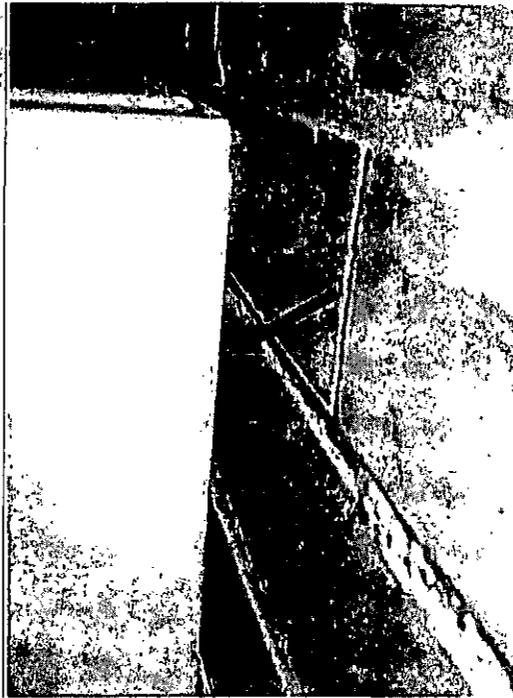

Figure M261

- (j) Unit ventilator piping and coil damaged. Refer to Figure M262, Figure M263, and Figure M264.

Figure M262

Figure M263

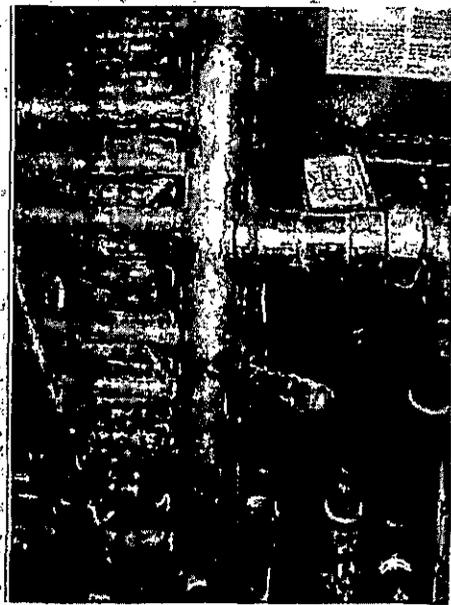

Figure M264

4. Laboratory exhaust hood

The following is a list of deficiencies in the installation of the laboratory exhaust hood installation:

- (a) Fume hood exhaust duct not constructed per specification section 15840-4. 304 stainless steel as.

GYM

A. AIR CONDITION SUPPLY AND RETURN DUCTWORK

1. Return Ductwork

The following is a list of deficiencies in the installation of the return ductwork:

- (a) Engineer states in the modified Sheetmetal Dwg # S.M.-1B (Submittal number 2, modified by engineer 8/24/2005 and returned to contractor 8/26/2005) that the return registers in the return ductwork for AC-2 shall have a "MIN 12" DUCT COLLAR HEIGHT FOR REGISTERS". Modified Sheetmetal Dwg # S.M.-1B (Revised by sheetmetal contractor 2/26/2006 and Stamped by engineer "EXCEPTIONS AS NOTED" on 5/2/2006) shows a collar on the return registers. Return registers installed in duct is mounted directly to the duct (no collar). Refer to Figure M265 and Figure M266.

Figure M265

Figure M266

- (b) Installed ductwork is not consistent with submitted Sheetmetal Dwg # S.M.-1A (Revised by sheetmetal contractor 2/26/2006 and Stamped by engineer "EXCEPTIONS AS NOTED" on 5/2/2006). Ductwork turn and transition are not consistent with SMACNA standards or ASHREA standards. Transition/turn combination increases losses as well as noises levels. Refer to Figure M267 and Figure M268.

Figure M267

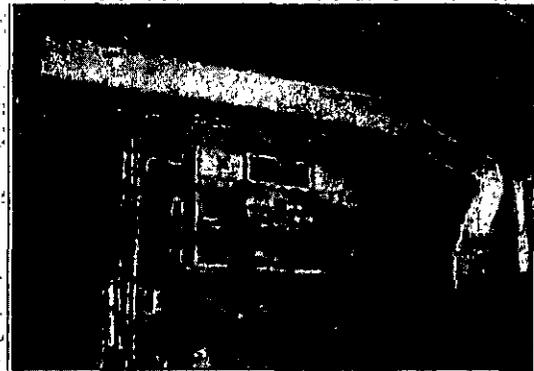

Figure M268

- (c) The return ductwork for AC-1 is missing the required volume damper. The damper is shown on contract drawing M2.03. The damper is also shown on the sheetmetal Dwg # S.M.-1A (Revised by sheetmetal contractor 2/26/2006 and Stamped by engineer "EXCEPTIONS AS NOTED" on 5/2/2006). The lack of a volume damper will cause more air to flow through this return register increasing the noise level considerably. Refer to Figure M269 and Figure M270.

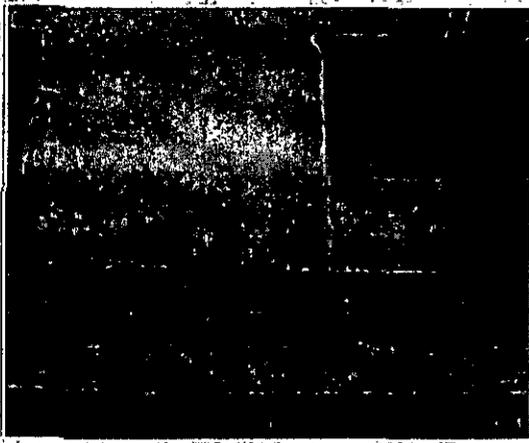

Figure M269

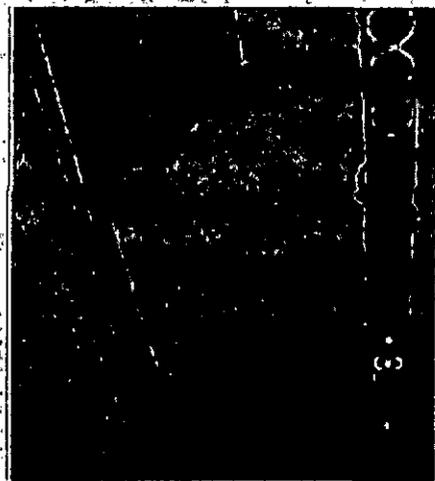

Figure M270

ROOF

B. THIRD FLOOR ROOF

2. General exhaust fan (GX-1)

The following is a list of deficiencies in the installation of the general exhaust fan (GX-1):

- (a) Exhaust fan is not provided with motorized damper as per specification section 15760-2.01-D. Submittal from SRS includes motorized discharge shutter. Gravity shutter installed.

Figure M271.

- (b) The fan inlet flexible duct connector is misaligned eliminating its ability to isolate vibration from the ductwork. Refer to Figure M272.

Figure M272

- (c) Roof duct penetration is not constructed in accordance with the "ROOF DUCT CURB DETAIL" on contract drawing M2.13. Refer to Figure M273 and Figure M274.

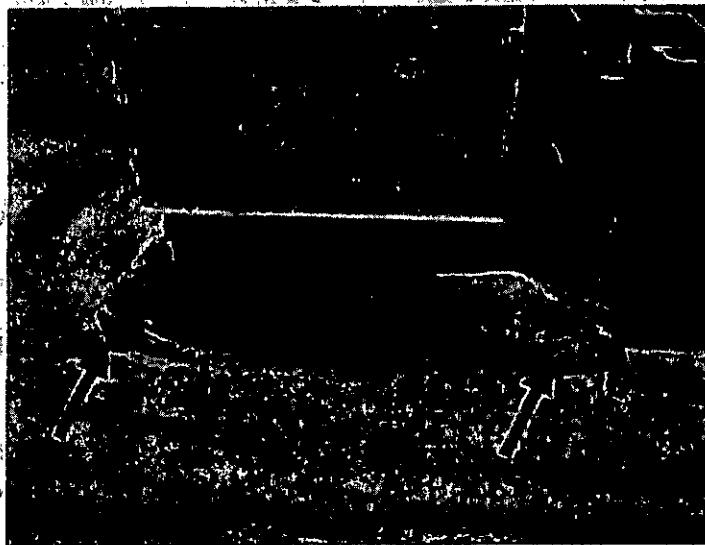

Figure M273

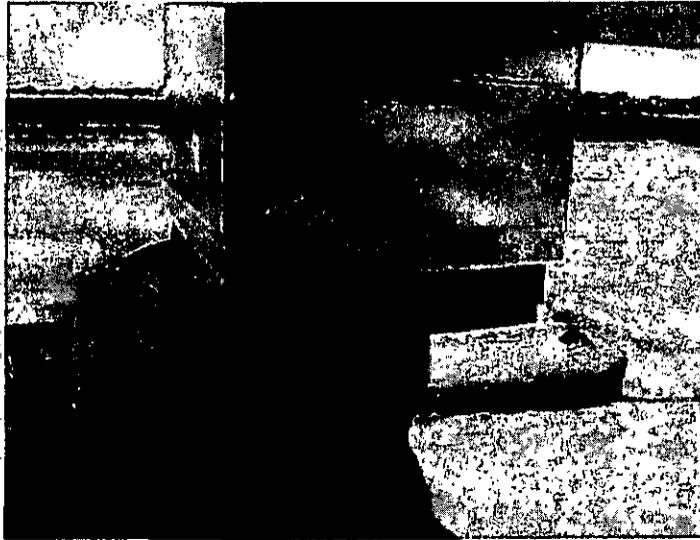

Figure M274

- (d) Ductwork not constructed per SMACNA (Sheet Metal and Air Conditioning Contractors' National Association) standards as required by specification section 15840-1.03-B. Ductwork not constructed per specification section 15840-2.01-G and section 15840-2.05-C which requires aluminum ductwork for air ducts exposed to weather and not insulated. Ductwork installed is galvanized. Refer to Figure M275, Figure M276, and Figure M277.

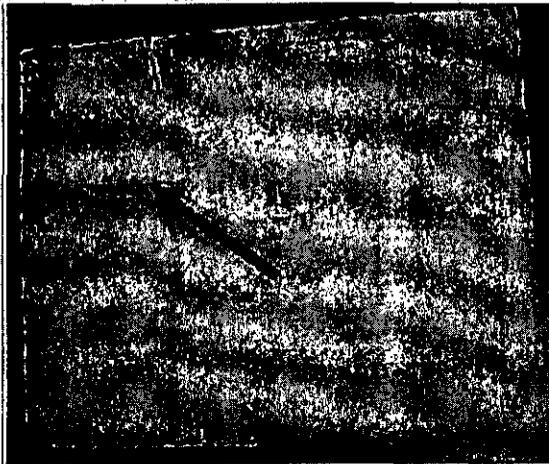

Figure M275

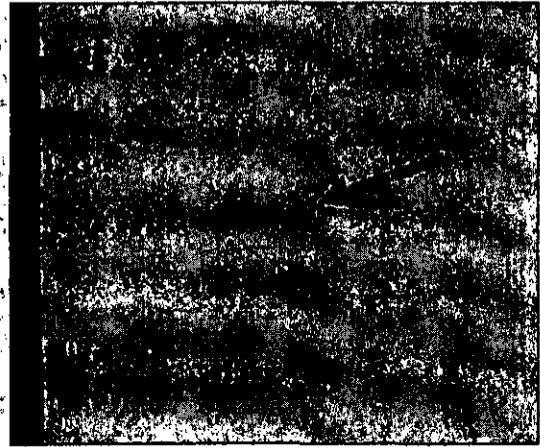

Figure M276

- (e) Specification section 15760-3.02-A states that equipment shall be installed in accordance with manufacturer's written instructions, and with recognized industry practices.
- Cook installation, operation, and maintenance manual states that "For ducted inlets, allow at least 3 fan wheel diameters between duct turns or elbows and the fan inlet."
 - Fan wheel diameter is 40". Three fan wheel diameters is 120".

- Installed length between elbow and the fan inlet is ~60" half the required 120". Refer to Figure M277.
- Ample roof space is available to have installed the fan 120" from the elbow.

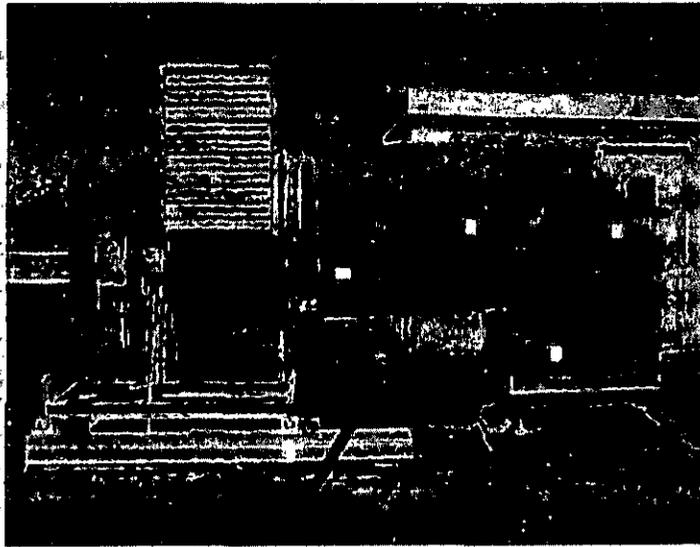

Figure M277

- (f) ASHRAE (American Society of Heating, Refrigerating and Air-Conditioning Engineers) standards state that the inlet connection on GX-1 is poor and causes a high entry loss. Refer to Figure M278 and Figure M279. This inlet condition is not consistent with the "ROOF UTILITY SET FAN DETAIL" on contract drawing M2.12.

Figure M278

Fan Inlet Connections

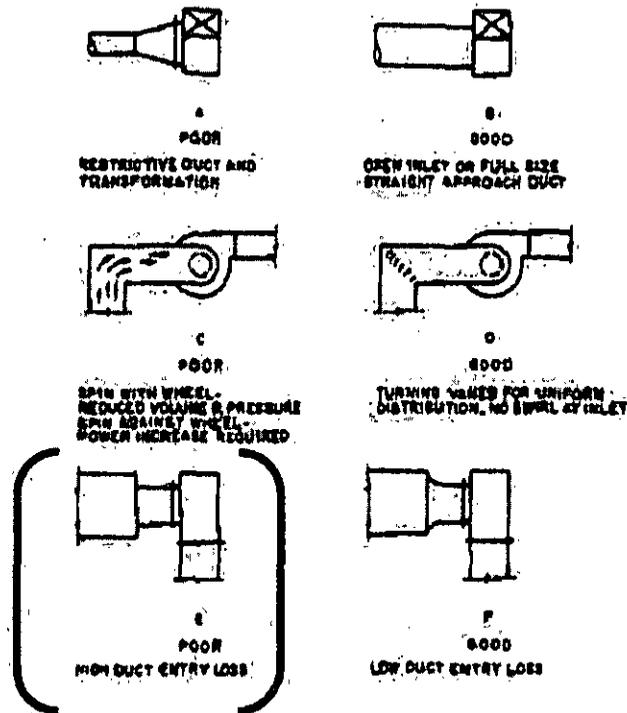

Figure M279

- (g) Housed spring isolators are fully compressed. Refer to Figure M280. Leveling nut must be turned counter clockwise to compress spring. This will lift the isolation base to provide clearance. The extra weigh caused by the unsupported cantilevering duct could be contributing to the spring isolators over compression. Refer to Figure M281.

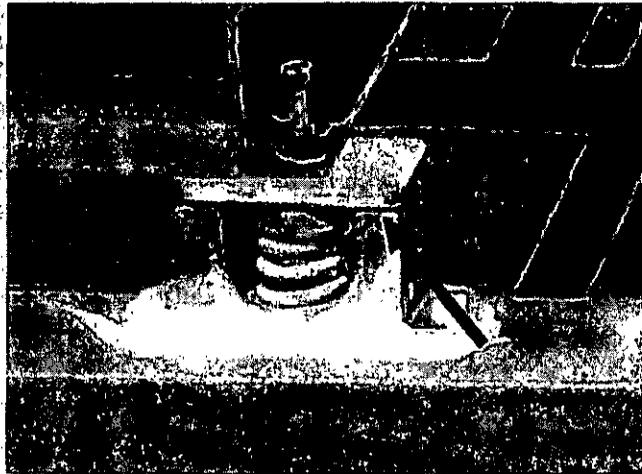

Figure M280

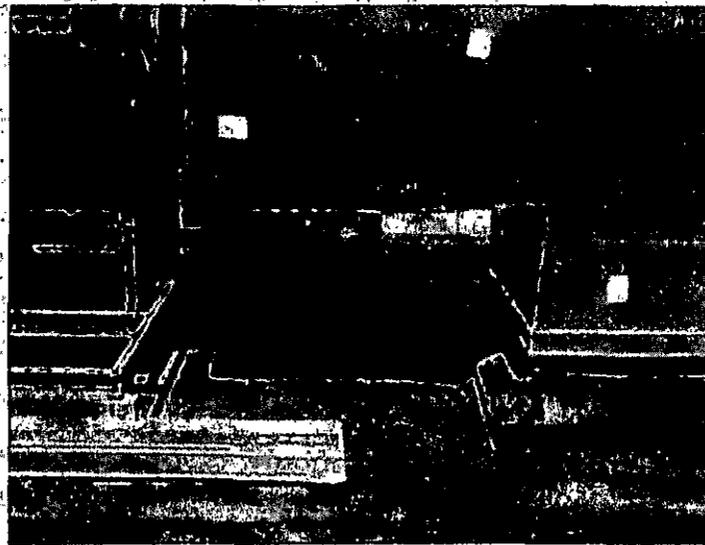

Figure M281

- (h) Sound attenuator is not installed in the ductwork located below the penetration through the roof as required per "SOUND TRAP SCHEDULE" located on contract drawing M2.11. The required sound trap is also shown "ROOF UTILITY SET FAN-DETAIL" located on contract drawing M2.12. Figure M282 shows the inside of the duct without sound trap.

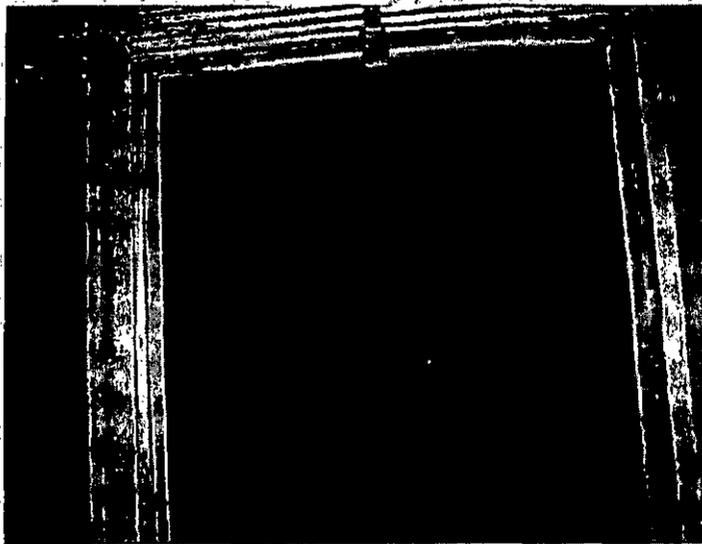

Figure M282

- (i) The access door located in the ductwork below the penetration through the roof does not comply with Reference Standard 13, Chapter 3, Section 3.4.2 of the New York City Building Code. "2-3.4.2 Service openings shall be identified with letters having a minimum height of one-half in. (12.7 mm) to indicate the location of the fire protection device(s) within." Refer to Figure M283.

Figure M283

3. General exhaust fan (GX-2)

The following is a list of deficiencies in the installation of the general exhaust fan (GX-2):

- (a) Exhaust fan is not provided with motorized damper as per specification section 15760-2.01-D. Submittal from SRS includes motorized discharge shutter. Gravity shutter installed.
- (b) The fan inlet flexible duct connector is misaligned eliminating its ability to isolate vibration from the ductwork. Refer to Figure M284.
- (c) ASHRAE (American Society of Heating, Refrigerating and Air-Conditioning Engineers) standards state that the inlet connection on GX-2 is poor and causes a high entry loss. Refer to Figure M284 and Figure M279. This inlet condition is not consistent with the "ROOF UTILITY SET FAN DETAIL" on contract drawing M2.12.

Figure M284

- (d) Roof duct penetration is not constructed in accordance with the "ROOF DUCT CURB DETAIL" on contract drawing M2.13. Refer to Figure M285.

Figure M285

- (e) Ductwork not constructed per SMACNA (Sheet Metal and Air Conditioning Contractors' National Association) standards as required by specification section 15840-1.03-B. Ductwork not constructed per specification section 15840-2.01-G and section 15840-2.05-C which requires aluminum ductwork for air ducts exposed to weather and not insulated. Ductwork installed is galvanized. Refer to Figure M286, Figure M287, and Figure M288.

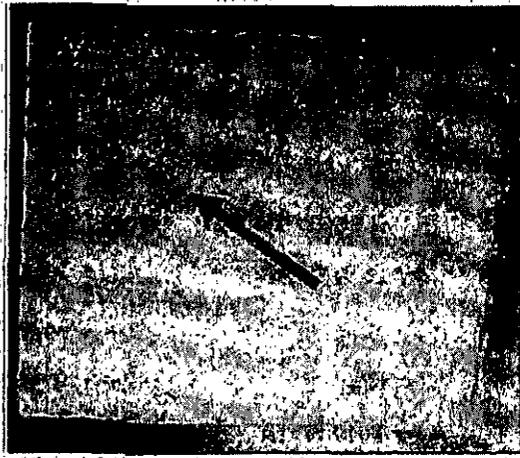

Figure M286

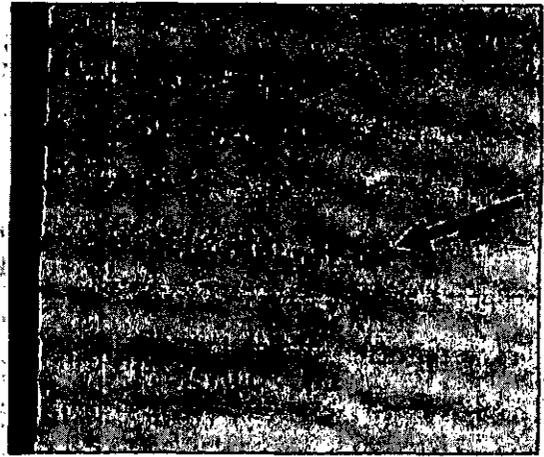

Figure M287

- (f) Specification section 15760-3.02-A states that equipment shall be installed in accordance with manufacturer's written instructions, and with recognized industry practices.
- Cook installation, operation, and maintenance manual states that "For ducted inlets, allow at least 3 fan wheel diameters between duct turns or elbows and the fan inlet."
 - Fan wheel diameter is 26". Three fan wheel diameters is 78"
 - Installed length between elbow and the fan inlet is ~32" less than half the required 78". Refer to Figure M288.
 - Ample space is available to have installed the fan 78" from the elbow.

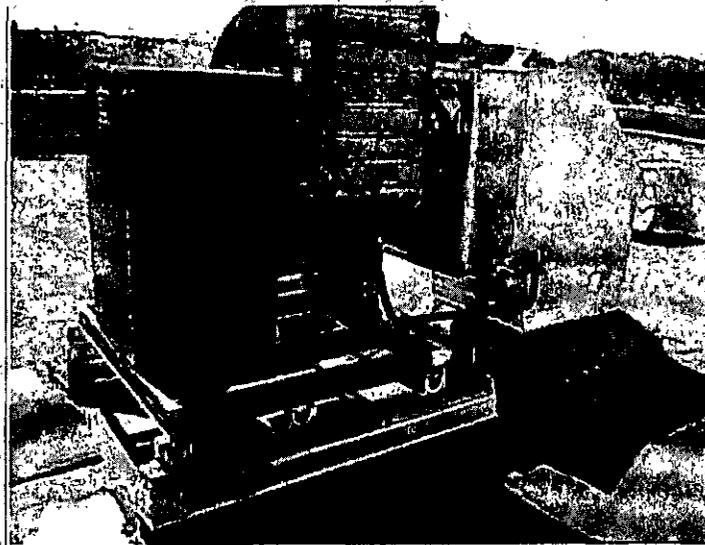

Figure M288

- (g) Duct support is not in accordance with "DUCT SUPPORT ON ROOF" detail on contract drawing M2.13. Refer to Figure M289.

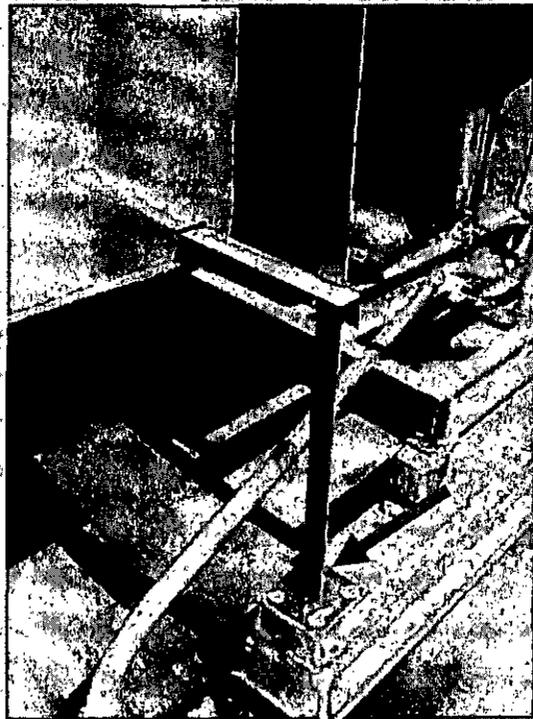

Figure M289

(h) The housing on GX-2 is damaged. Refer to Figure M290 and Figure M291.

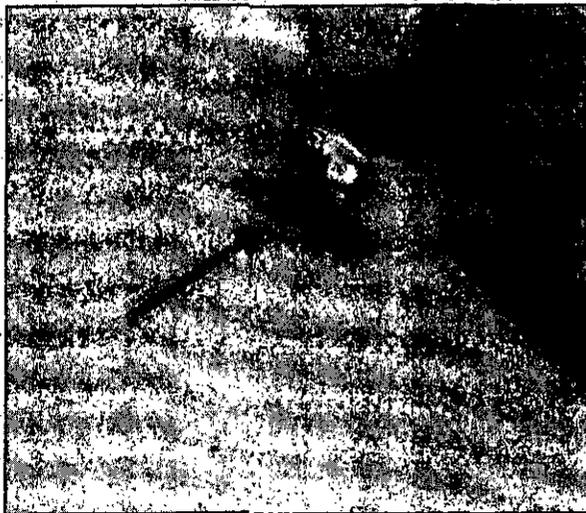

Figure M290

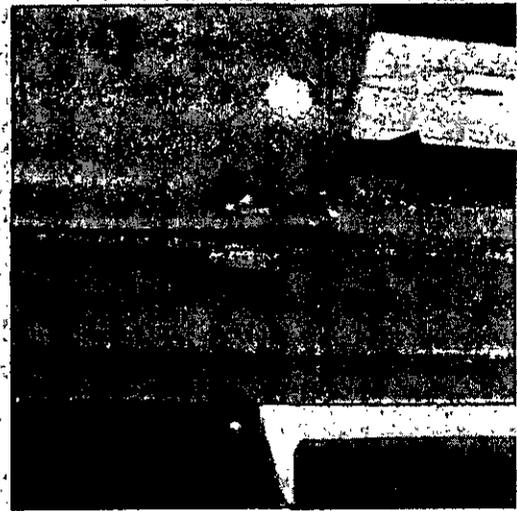

Figure M291

4. General exhaust fan (LE-1)

The following is a list of deficiencies in the installation of the general lab exhaust fan (LE-1):

- (a) ASHRAE (American Society of Heating, Refrigerating and Air-Conditioning Engineers) standards state that the inlet connection on LE-1 is poor and causes a high entry loss. Refer to Figure M292 and Figure M279. This inlet condition is not consistent with the "ROOF UTILITY SET FAN DETAIL" on contract drawing M2.12.

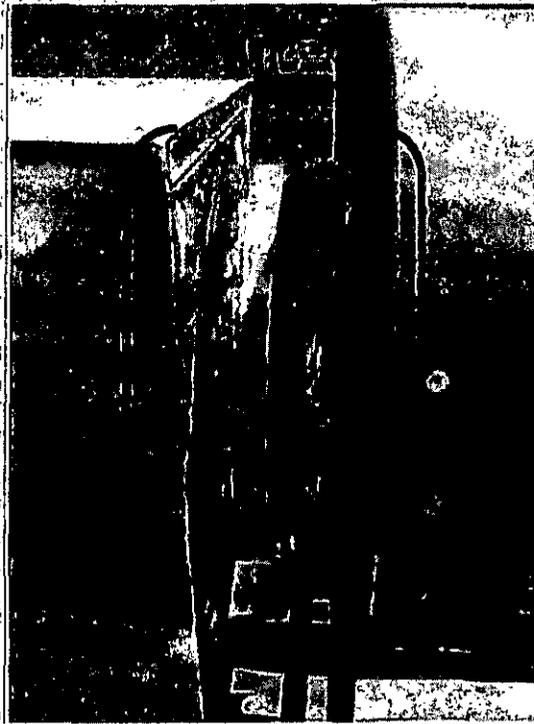

Figure M292

- (b) Roof duct penetration is not constructed in accordance with the "ROOF DUCT CURB DETAIL" on contract drawing M2.13. Refer to Figure M293.

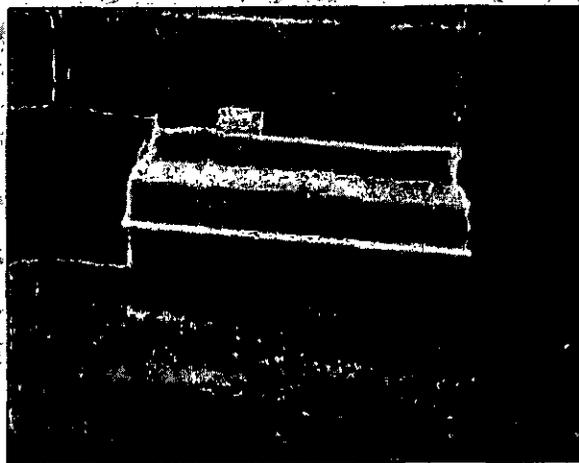

Figure M293

(c) Specification section 15760-3.02-A states that equipment shall be installed in accordance with manufacturer's written instructions, and with recognized industry practices.

- Cook installation, operation, and maintenance manual states that "For ducted inlets, allow at least 3 fan wheel diameters between duct turns or elbows and the fan inlet."
- Fan wheel diameter is 20". Three fan wheel diameters is 60"
- Installed length between elbow and the fan inlet is 48" less than the required 60". Refer to Figure M294.
- Ample space is available to have installed the fan 60" from the elbow.

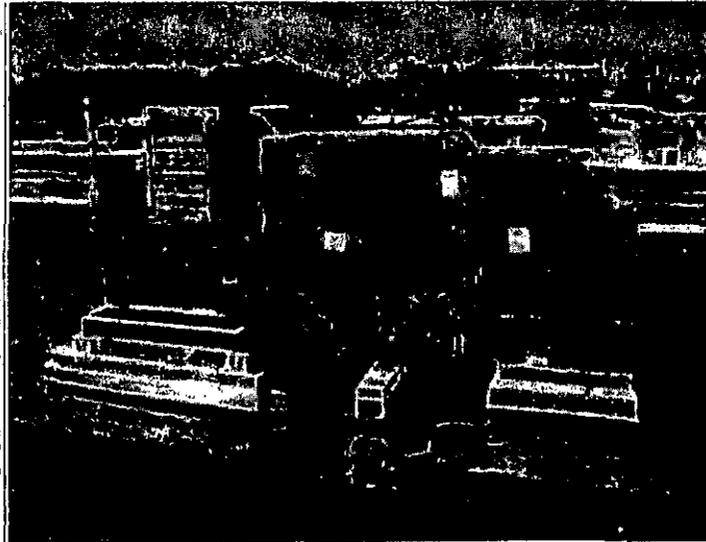

Figure M294.

- (d) Duct support is not in accordance with "DUCT SUPPORT ON ROOF" detail on contract drawing M2.13. Refer to Figure M295.
- (e) Dissimilar metals used on roof supports are causing premature corrosion and failure. Bare steel plate is sandwiched between galvanized steel support and aluminum curb. Refer to Figure M295.

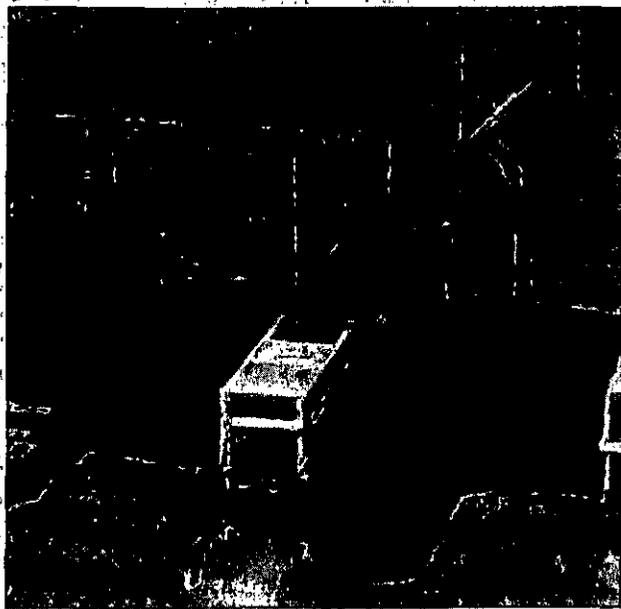

Figure M295

- (f) Missing and loose bolts on fan housing. Refer to Figure M296.

Figure M296

- (g) Ductwork not constructed per SMACNA (Sheet Metal and Air Conditioning Contractors' National Association) standards as required by specification section 15840-1.03-B. Ductwork not constructed per specification section 15840-2.01-G and section 15840-2.05-C which requires aluminum ductwork for air ducts exposed to weather and not insulated. Ductwork installed is galvanized. Refer to Figure M294, Figure M297, and Figure M298.

Figure M297

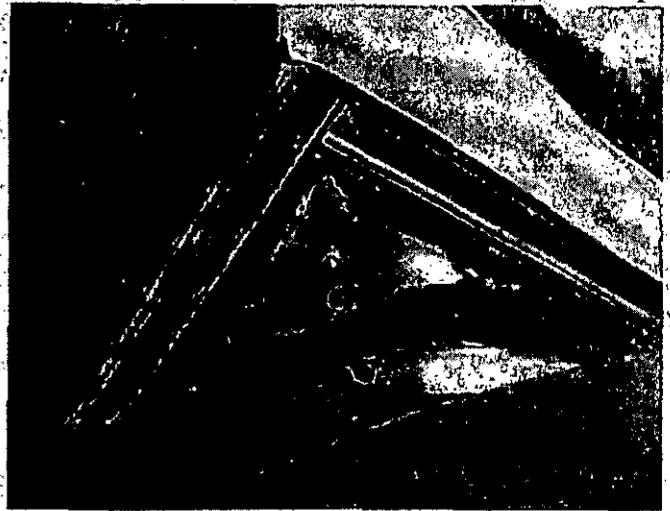

Figure M298

- (h) Careless use of sealant. Refer to Figure M297, and Figure M298.
- (i) Sound attenuator is not installed in the ductwork located below the penetration through the roof as required per "SOUND TRAP SCHEDULE" located on contract drawing M2.11. The required sound trap is also shown "ROOF UTILITY SET FAN DETAIL" located on contract drawing M2.12. Figure M303 shows the inside of the duct without sound trap.

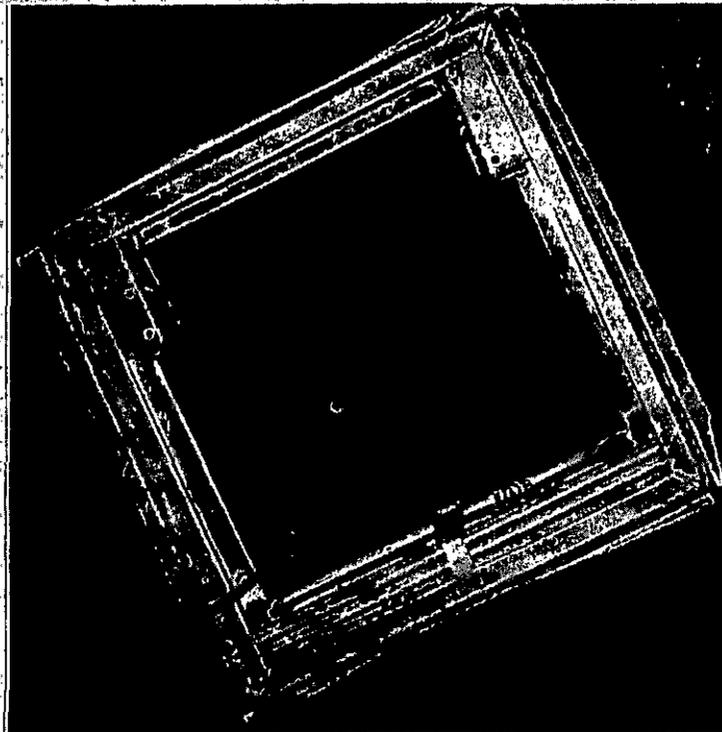

Figure M299

5. General exhaust fan (LE-2)

The following is a list of deficiencies in the installation of the general lab exhaust fan (LE-2):

- (a) The fan inlet flexible duct connector is misaligned eliminating its ability to isolate vibration from the ductwork. Refer to Figure M300.

Figure M300

- (b) ASHRAE (American Society of Heating, Refrigerating and Air-Conditioning Engineers) standards state that the inlet connection on LE-2 is poor and causes a high entry loss. Refer to Figure M301 and Figure M279. This inlet condition is not consistent with the "ROOF UTILITY SET FAN DETAIL" on contract drawing M2.12.

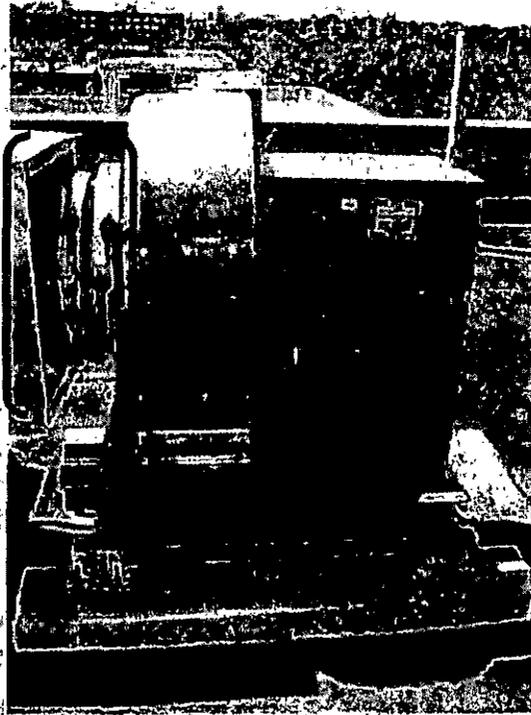

Figure M301

- (c) Roof duct penetration is not constructed in accordance with the "ROOF DUCT CURB DETAIL" on contract drawing M2.13. Refer to Figure M302.

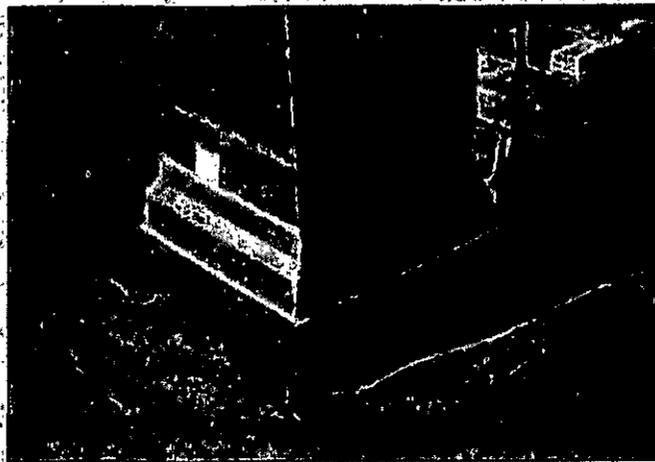

Figure M302

(d) Specification section 15760-3.02-A states that equipment shall be installed in accordance with manufacturer's written instructions, and with recognized industry practices.

- Cook installation, operation, and maintenance manual states that "For ducted inlets, allow at least 3 fan wheel diameters between duct turns or elbows and the fan inlet."
- Fan wheel diameter is 16". Three fan wheel diameters is 48"
- Installed length between elbow and the fan inlet is -36" less than the required 48". Refer to Figure M294.
- Ample space is available to have installed the fan 48" from the elbow.

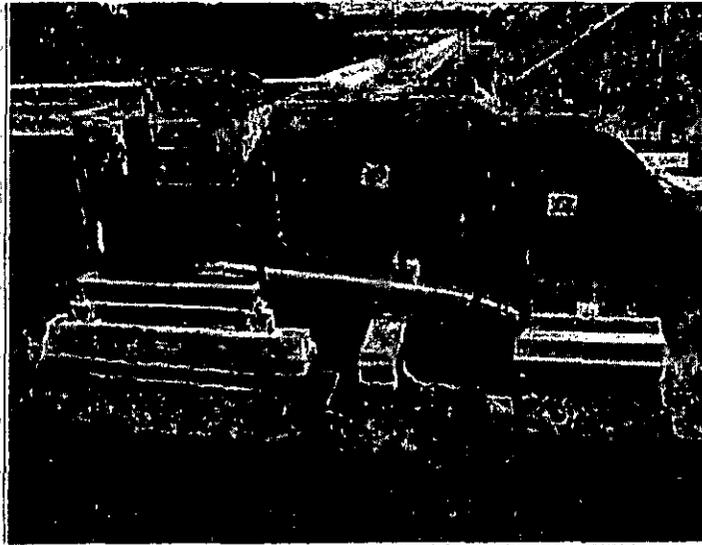

Figure M303

- (e) Duct support is not in accordance with "DUCT SUPPORT ON ROOF" detail on contract drawing M2.13. Refer to Figure M295.
- (f) Electrical conduit traveling inside duct interferes with fire damper operation.
- (g) Dissimilar metals used on roof supports are causing premature corrosion and failure. Bare steel plate is sandwiched between galvanized steel support and aluminum curb. Refer to Figure M295.

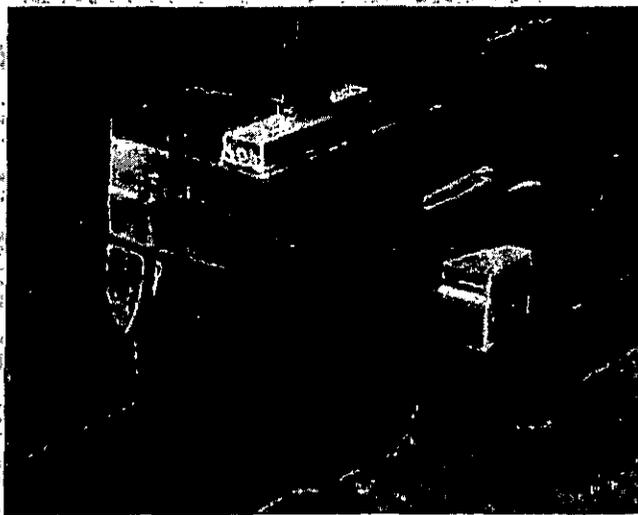

Figure M304

- (h) Missing and loose bolts on fan housing. Refer to Figure M305 and Figure M306.

Figure M305

Figure M306

- (i) Ductwork not constructed per SMACNA (Sheet Metal and Air Conditioning Contractors' National Association) standards as required by specification section 15840-1.03-B. Ductwork not constructed per specification section 15840-2.01-G and section 15840-2.05-C which requires aluminum ductwork for air ducts exposed to weather and not insulated. Ductwork installed is galvanized. Refer to Figure M303, and Figure M300.
- (j) Careless use of sealant. Refer to Figure M307.

Figure M307

- (k) Damaged fan housing. Refer to Figure M308.

Figure M308

- (l) Fire damper is not accessible because duct access door cannot be removed from drywall access door. Refer to Figure M309.

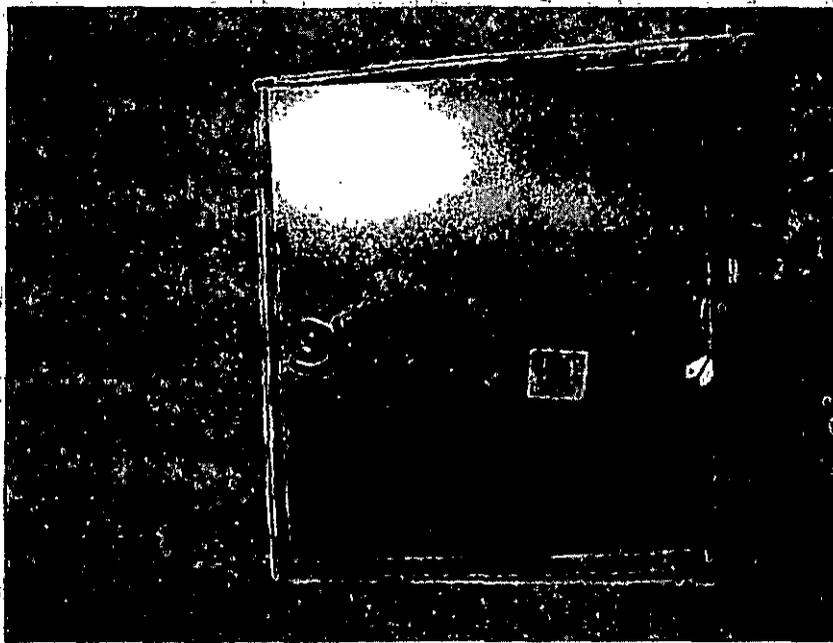

Figure M309

6. Kitchen exhaust fan (KX-1)

The following is a list of deficiencies in the installation of the general lab exhaust fan (KX-1):

- (a) ASHRAE (American Society of Heating, Refrigerating and Air-Conditioning Engineers) standards state that the inlet connection on KX-1 is poor and causes a high entry loss. Refer to Figure M310 and Figure M279. This inlet condition is not consistent with the "ROOF UTILITY SET FAN DETAIL" on contract drawing M2.12. This inlet condition on a kitchen exhaust fan will cause grease build-up and is not recommended.

Figure M310.

- (b) Duct support is not installed in accordance with "DUCT SUPPORT ON ROOF" detail on contract drawing M2.13. Refer to Figure M311 through Figure M314.
- (c) Dissimilar metals used on roof supports are causing premature corrosion and failure. Bare steel plate is sandwiched between galvanized steel support and aluminum curb. Refer to Figure M314.

Figure M311

Figure M312

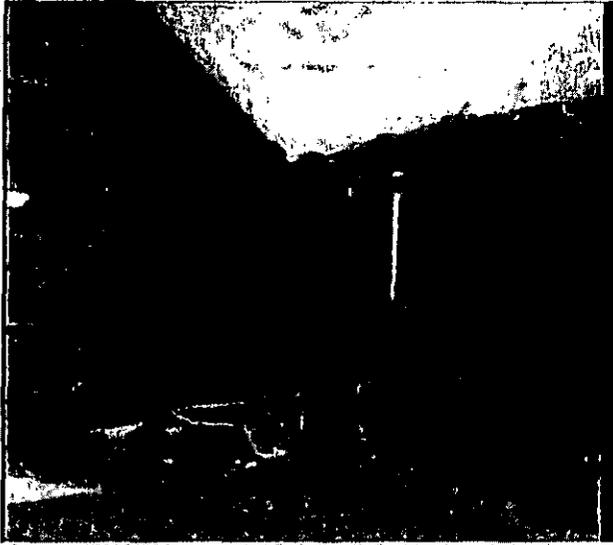

Figure M313

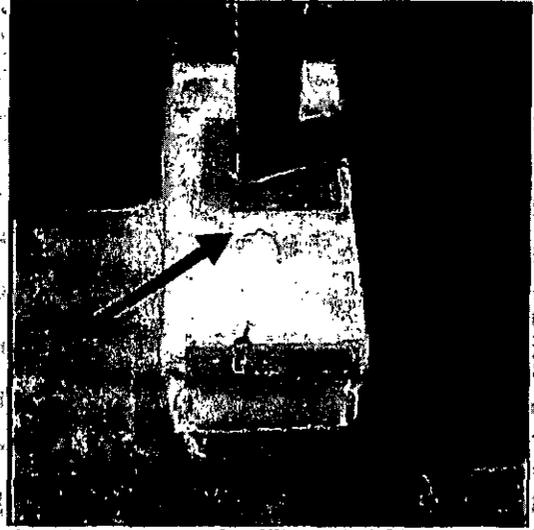

Figure M314

- (a) Kitchen exhaust ductwork is not constructed per specification section 15840-4 which requires 10 gauge black iron with continuously welded seams and continuously welded joint connections in accordance with NFPA 96. NFPA 96 allows for 4 types of kitchen exhaust duct connections; Telescoping joint, Bell-type joint, Flange with edge weld, and Flange with filled weld (all of these connection types provide minimal extrusion into the duct). The installed ductwork is not joined with any of these methods. The installed ductwork is butt-welded with an internally welded flange. Refer to Figure M315 and Figure M316. Butt welded connections are not permitted according to NFPA 96. NFPA 96 is a reference standard of the New York City Building Code.
- (b) The inside of the kitchen exhaust duct exhibits significant amount of rust for a two year old installation. Refer to Figure M315 and Figure M316. This rust is due to not protecting the steel during construction. Photos supplied by the architect that were taken during construction show standing rain water in ductwork segments. The iron kitchen exhaust ductwork incased in water saturated insulation is in danger of debilitating corrosion.

Figure M315

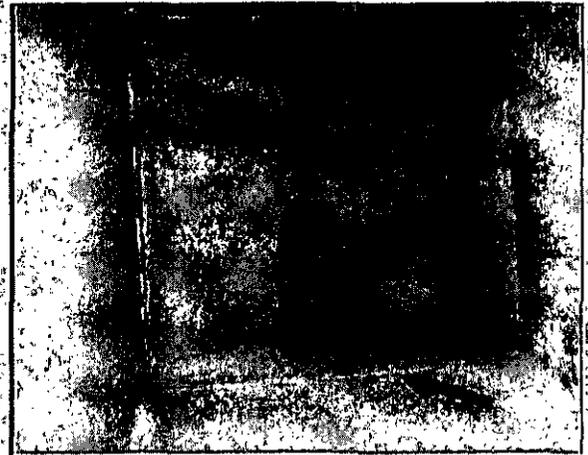

Figure M316

- (c) Ductwork is not supported in accordance with "DUCT SUPPORT ON ROOF" detail on contract drawing M2.13. The "DUCT SUPPORT ON ROOF" detail states maximum support spacing 4 feet on center. Installed supports are roughly 8 feet on center. Refer to Figure M317.

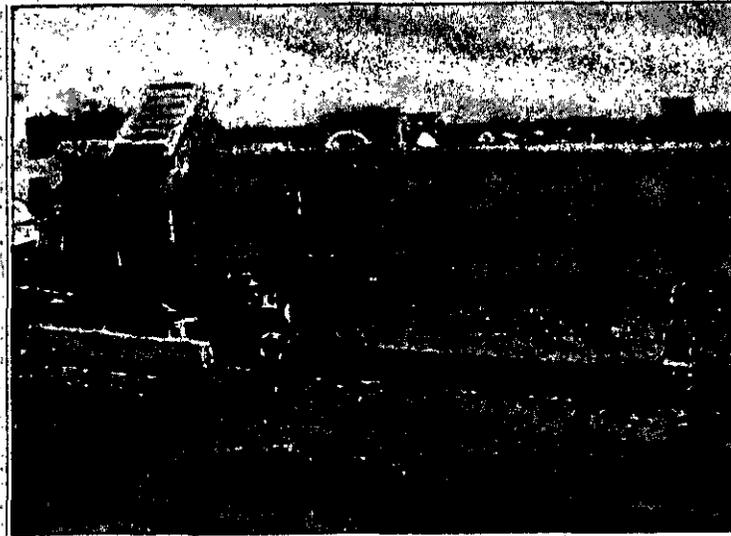

Figure M317

- (d) Kitchen exhaust ductwork access door is not constructed per specification section 15840-2.04-A which requires double wall access doors located every 15' and at each change in direction. Access doors installed are single wall and in some places up to 24' in separation. Refer to Figure M318.

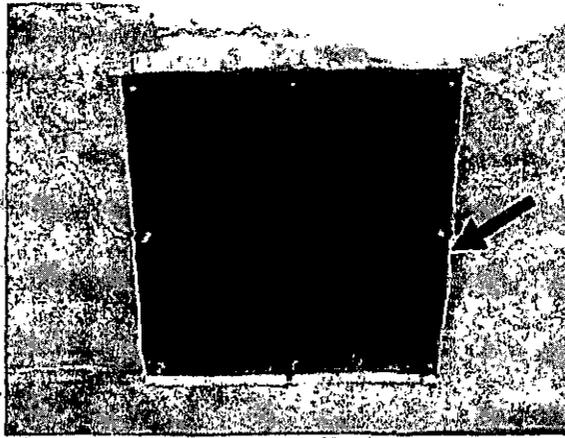

Figure M318

- (e) Kitchen exhaust ductwork access door is not constructed per specification section 15840-2.11-C which states that in no case shall access doors require the removal of nuts, bolts, screws, wing nuts, wedges, or any other screws or loose device. Access doors require the removal of (8) nuts on bolts that the heads are not accessible unless the insulation is removed. Refer to Figure M319.

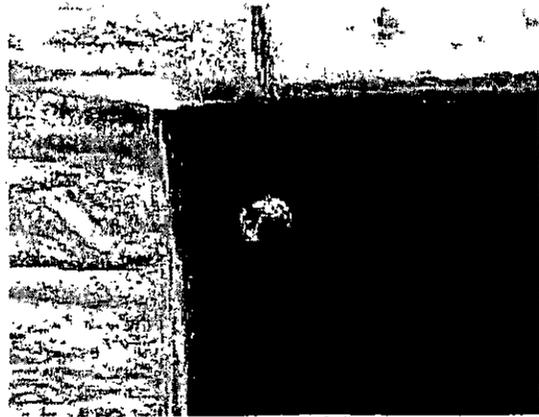

Figure M319

- (f) The submitted and approved FlexClad-400 outdoor duct insulation cover is not installed per manufactures instructions. The insulation is soaked throughout the length of the duct. Refer to Figure M320, through Figure M324. Figure M322 depicts factory recommended installation.
- (g) Insulation is not per specification section 15850-2.08-H. Specification calls for 2" calcium silicate insulation on all kitchen hood exhaust ductwork. 2" FSK rigid board insulation installed.

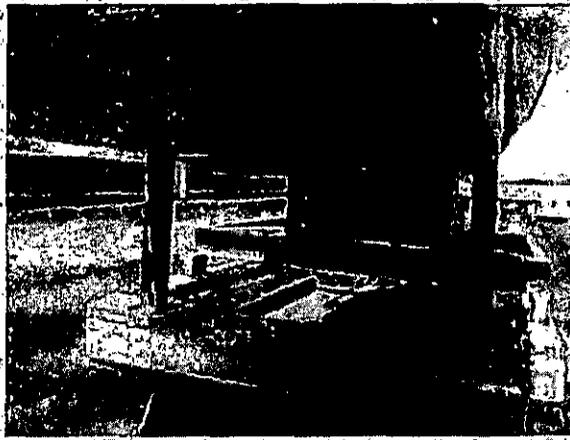

Figure M320

Figure M321

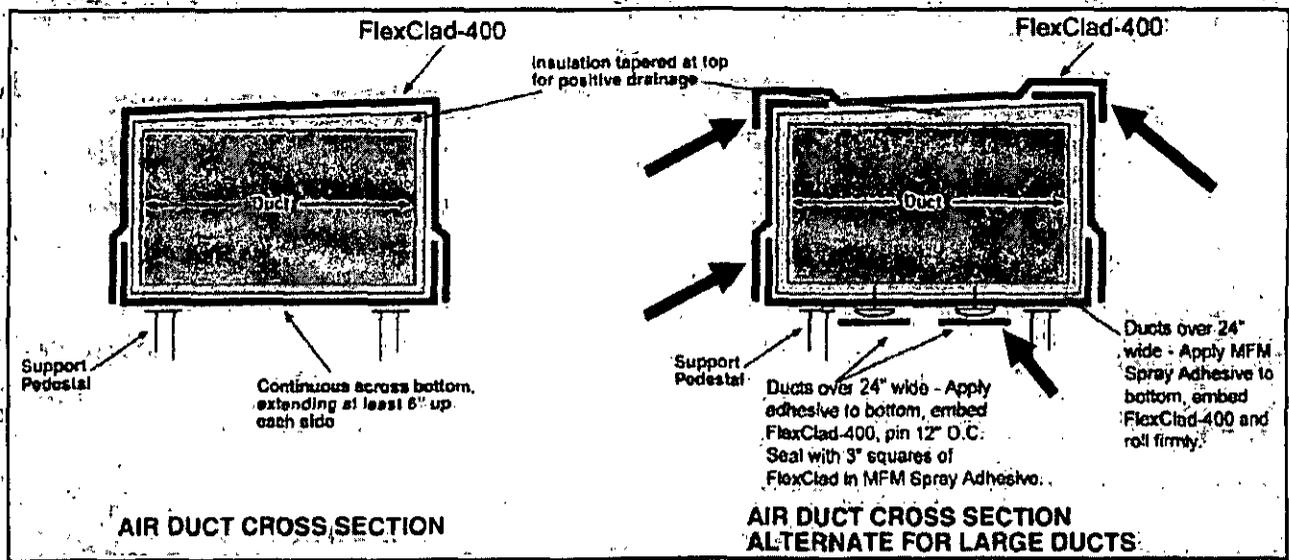

Figure M322

Figure M323

Figure M324

- (h) The iron kitchen exhaust ductwork incased in water saturated insulation is in danger of debilitating corrosion.
- (i) Kitchen exhaust ductwork should slope toward exhaust hood as per specification section 15840-2.04-A. Ductwork installed slopes toward exhaust fan. Refer to Figure M325.

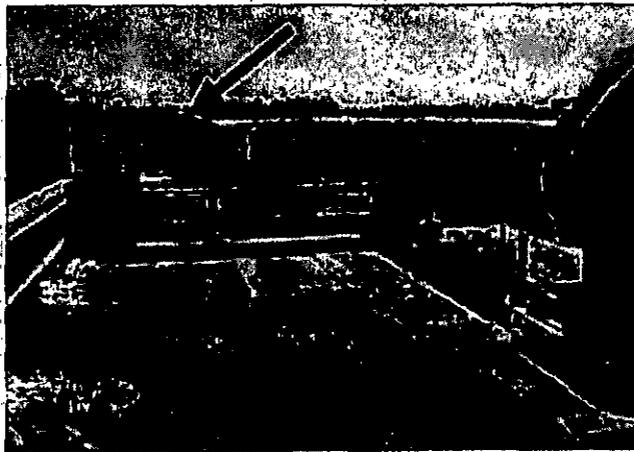

Figure M325

- (j) Fan motor cover not properly installed. Refer to Figure M326.

Figure M326

- (k) Vertical duct supports are not constructed as per detail "SUPPORTS FROM WALL" on contract drawing M2.14.
- (l) Kitchen exhaust switch shown on contract drawing M2.02 is not installed. Custodian must manually turn fan on in the morning and off at night via disconnect on the third floor.

C. MALL ROOF

1. Gym roof top ac unit (AC-2)

The following is a list of deficiencies in the installation of the gym roof top ac unit (AC-2).

- (a) Outdoor ductwork associated with AC-2 is not consistent with Sheetmetal Dwg # S.M.-1A (Revised by sheetmetal contractor 2/26/2006 and Stamped by engineer "EXCEPTIONS AS NOTED" on 5/2/2006) The dimensions do not match the shop drawing. Refer to Figure M327 through Figure M330.

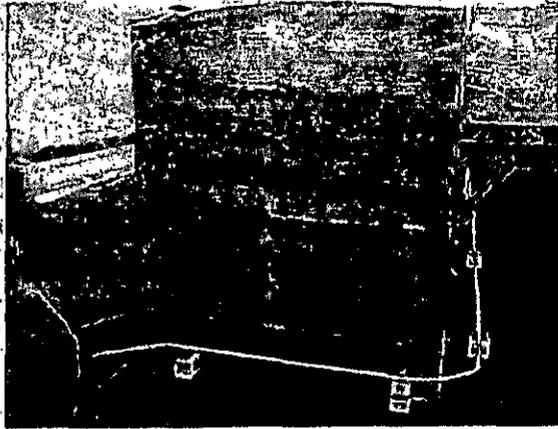

Figure M327

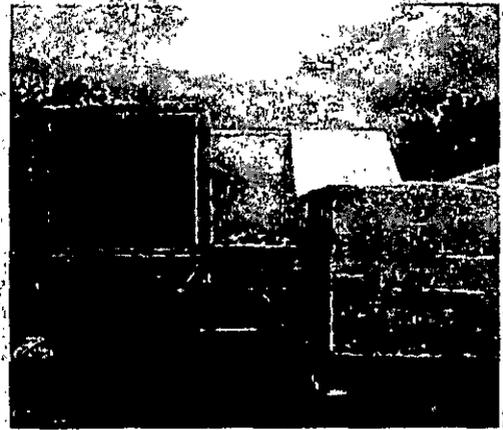

Figure M328

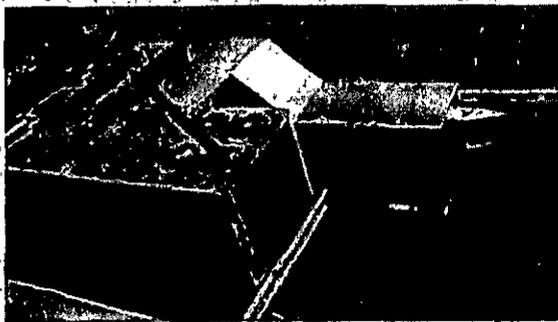

Figure M329

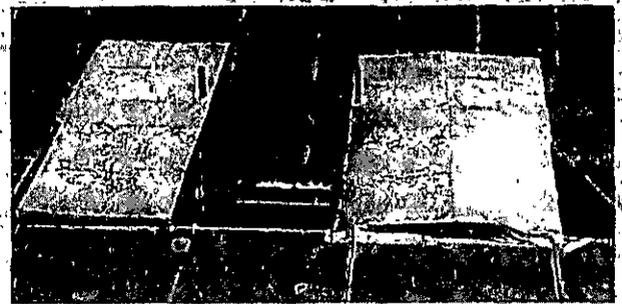

Figure M330

- (b) Service platform for unit is not complete. Refer to Figure M331.

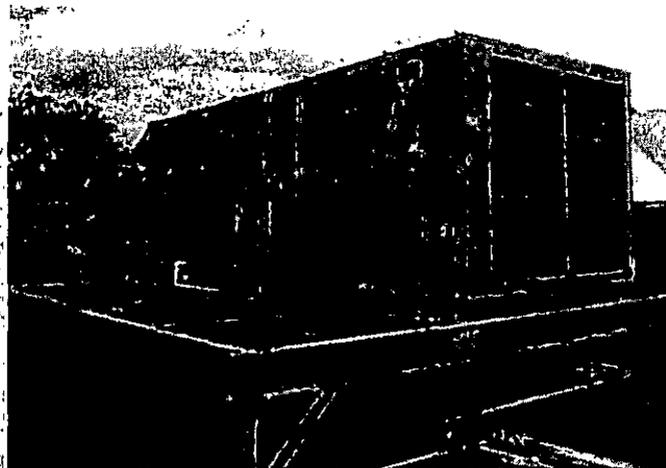

Figure M331

- (c) Ductwork connection to unit is without flexible connection as required by contract drawing M2.03. Refer to Figure M332.

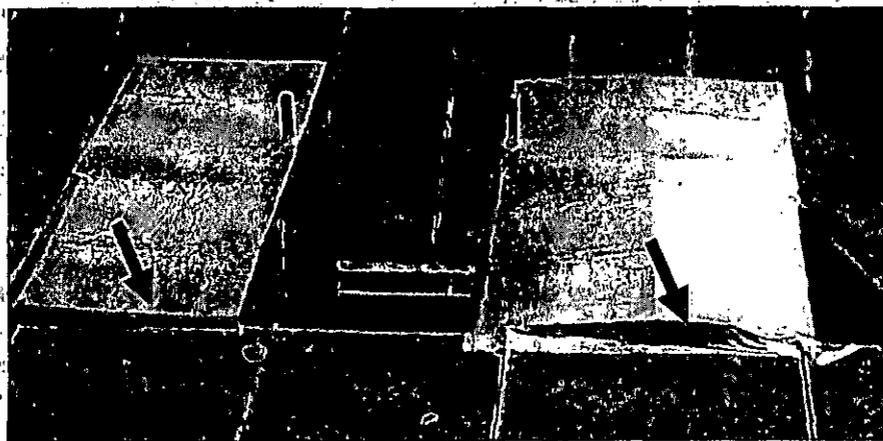

Figure M332

- (d) The submitted and approved FlexClad-400 outdoor duct insulation cover is not installed per manufactures instructions. The insulation is soaked throughout the length of the duct. Refer to Figure M333 through Figure M337. Figure M337 depicts factory recommended installation.

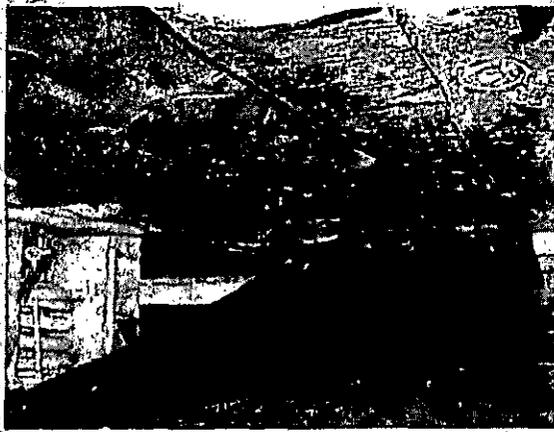

Figure M333

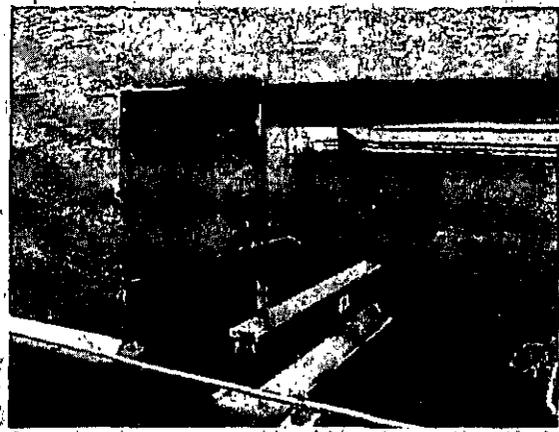

Figure M334

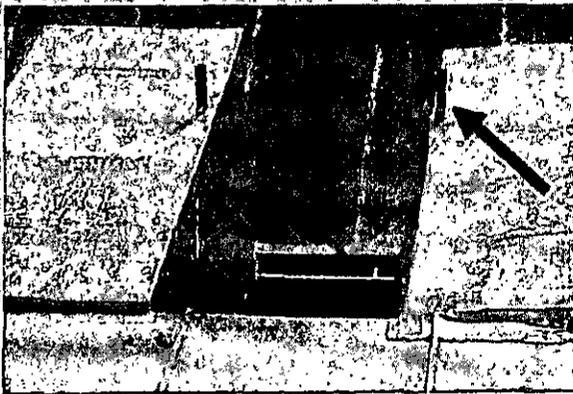

Figure M335

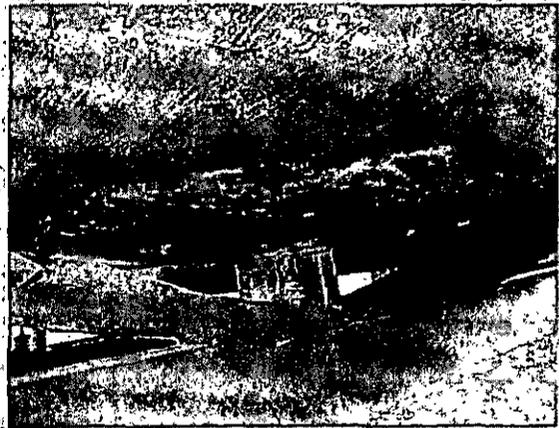

Figure M336

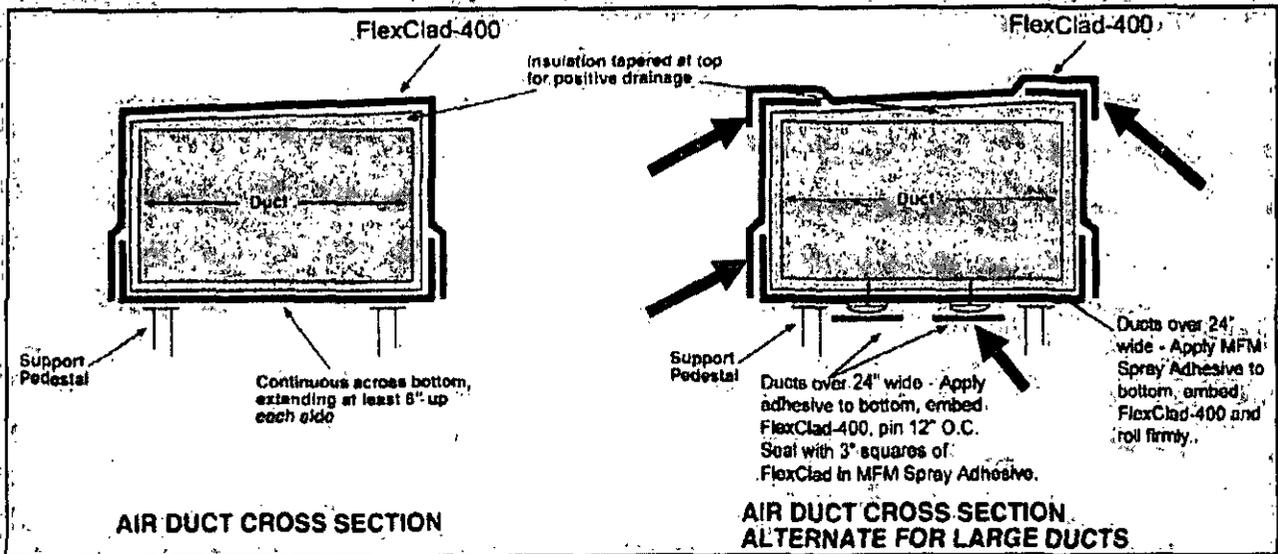

Figure M337

- (e) The natural gas line exposed on the roof should have been installed under the roof according to P2.02. Refer to Figure M338 and Figure M339.

Figure M338

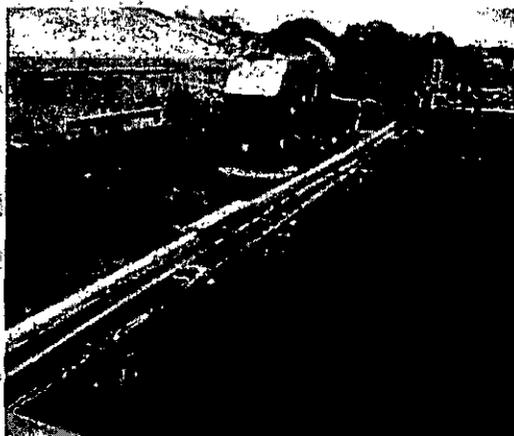

Figure M339

- (f) The gas line installed transitions from a 3" line to a 2" line approximately 25' from AC-2. According to the contract drawing P2.02 the transition to unit connection size should occur at the unit. Refer to Figure M340.
- (g) Gas line is heavily corroded. Refer to Figure M340.

Figure M340

- (h) Unit spring vibration isolators are not secured properly.

2. Exhaust fan (EF-5)

The following is a list of deficiencies in the installation of the exhaust fan (EF-5):

- (a) Exhaust fan is not provided with motorized damper as per specification section 15760-2.01-D. Submittal from SRS includes motorized discharge shutter. Gravity shutter installed.
- (b) The fan inlet flexible duct connector is misaligned eliminating its ability to isolate vibration from the ductwork. Refer to Figure M341.

Figure M341

- (c) Roof duct penetration is not constructed in accordance with the "ROOF DUCT CURB DETAIL" on contract drawing M2.13. Refer to Figure M342.

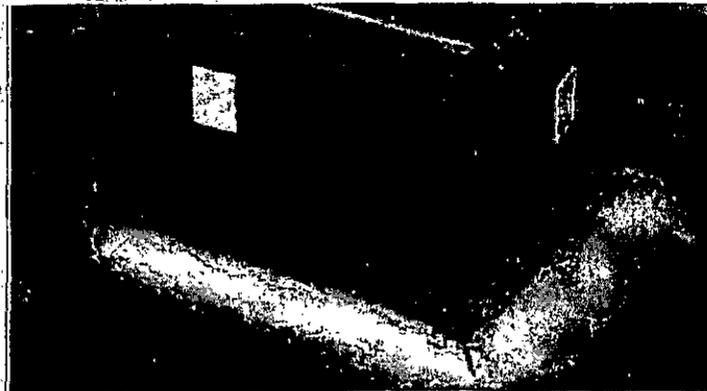

Figure M342

- (d) Ductwork not constructed per SMACNA (Sheet Metal and Air Conditioning Contractors' National Association) standards as required by specification section 15840-1.03-B. Ductwork not constructed per specification section 15840-2.01-G and section 15840-2.05-C which requires aluminum ductwork for air ducts exposed to weather and not insulated. Ductwork installed is galvanized.
- (e) Specification section 15760-3.02-A states that equipment shall be installed in accordance with manufacturer's written instructions, and with recognized industry practices.

- Cook installation, operation, and maintenance manual states that "For ducted inlets, allow at least 3 fan wheel diameters between duct turns or elbows and the fan inlet."
- Fan wheel diameter is 27". Three fan wheel diameters is 81"
- Installed length between elbow and the fan inlet is 42" which is less than the required 81". Refer to Figure M343.
- Ample roof space is available to have installed the fan 81" from the elbow.

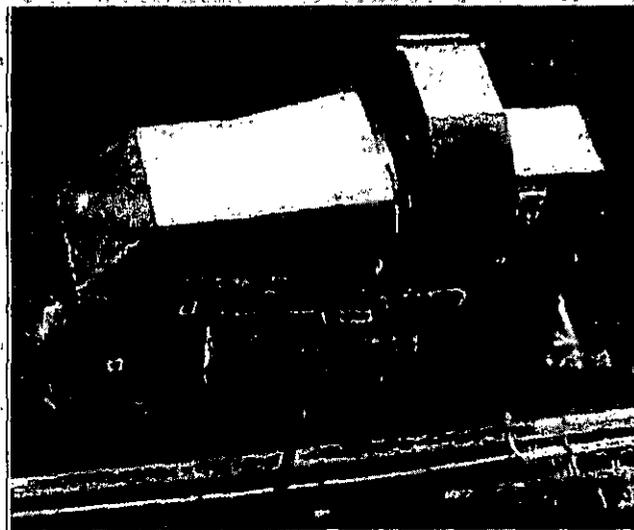

Figure M343

- (f) ASHRAE (American Society of Heating, Refrigerating and Air-Conditioning Engineers) standards state that the inlet connection on EF-5 is poor and causes a high entry loss. Refer to Figure M344 and Figure M279. This inlet condition is not consistent with the "ROOF UTILITY SET FAN DETAIL" on contract drawing M2.12.

Figure M344

- (g) Ductwork associated with EF-5 is not supported. Cantilevering ductwork causes tension on the fan inlet flexible duct connector. Refer to Figure M345.

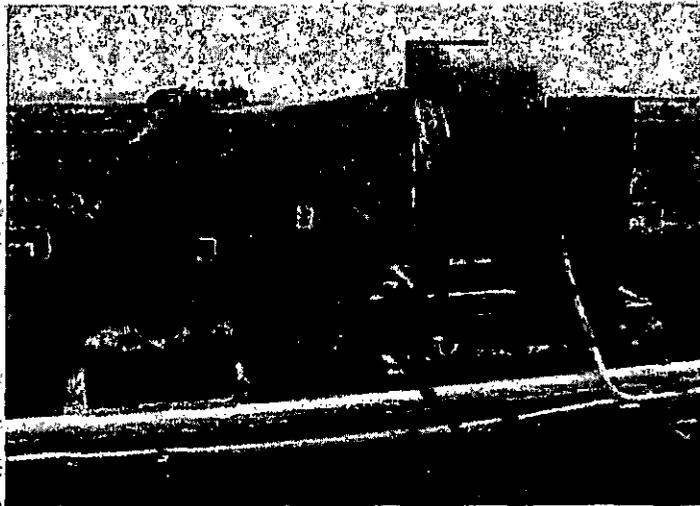

Figure M345

D. STAGE ROOF

1. Exhaust fan (EF-3)

The following is a list of deficiencies in the installation of the exhaust fan (EF-3):

- (a) Exhaust fan is not provided with motorized damper as per specification section 15760-2.01-D. Submittal from SRS includes motorized discharge shutter. Gravity shutter installed.

- (b) Roof duct penetration is not constructed in accordance with the "ROOF DUCT CURB DETAIL" on contract drawing M2.13. Refer to Figure M346.

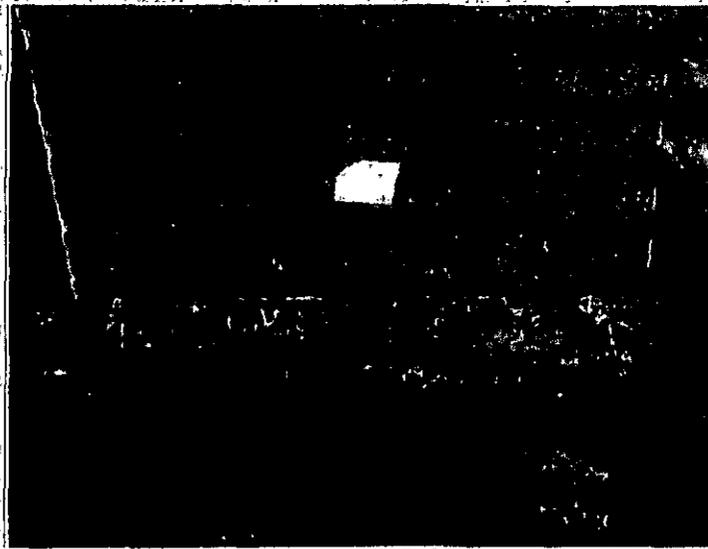

Figure M346.

- (c) Ductwork not constructed per SMACNA (Sheet Metal and Air Conditioning Contractors' National Association) standards as required by specification section 15840-1.03-B. Ductwork not constructed per specification section 15840-2.01-G and section 15840-2.05-C which requires aluminum ductwork for air ducts exposed to weather and not insulated. Ductwork installed is galvanized.
- (d) Specification section 15760-3.02-A states that equipment shall be installed in accordance with manufacturer's written instructions, and with recognized industry practices.
- Cook installation, operation, and maintenance manual states that "For ducted inlets, allow at least 3 fan wheel diameters between duct turns or elbows and the fan inlet."
 - Fan wheel diameter is 30". Three fan wheel diameters is 90"
 - Installed length between elbow and the fan inlet is ~27" which is less than 1/3 the required 90". Refer to Figure M347.
 - Ample roof space is available to have installed the fan 81" from the elbow.

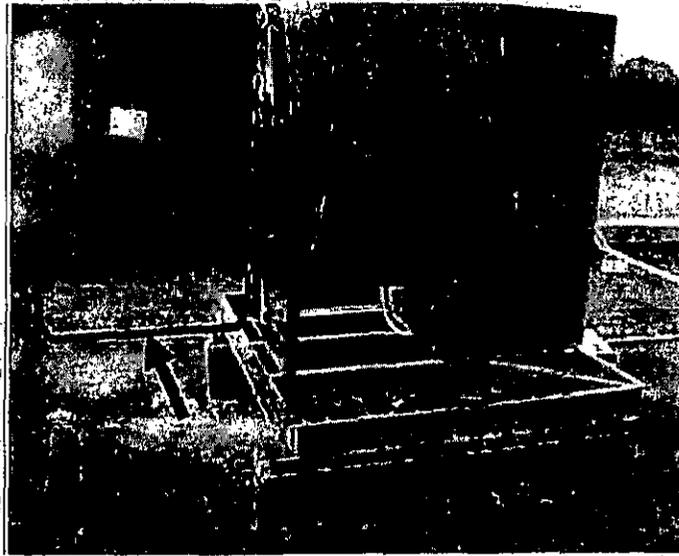

Figure M347

- (e) ASHRAE (American Society of Heating, Refrigerating and Air-Conditioning Engineers) standards state that the inlet connection on EF-3 is poor and causes a high entry loss. Refer to Figure M348 and Figure M279. This inlet condition is not consistent with the "ROOF UTILITY SET FAN DETAIL" on contract drawing M2.12.

Figure M348

- (f) Ductwork associated with EF-3 is not supported. Cantilevering ductwork causes tension on the fan inlet flexible duct connector. Refer to Figure M349.

Figure M349

2. Exhaust fan (EF-4)

The following is a list of deficiencies in the installation of the exhaust fan (EF-4):

- (a) Exhaust fan is not provided with motorized damper as per specification section 15760-2.01-D. Submittal from SRS includes motorized discharge shutter. Gravity shutter installed.
- (b) Roof duct penetration is not constructed in accordance with the "ROOF DUCT CURB DETAIL" on contract drawing M2.13. Refer to Figure M346.

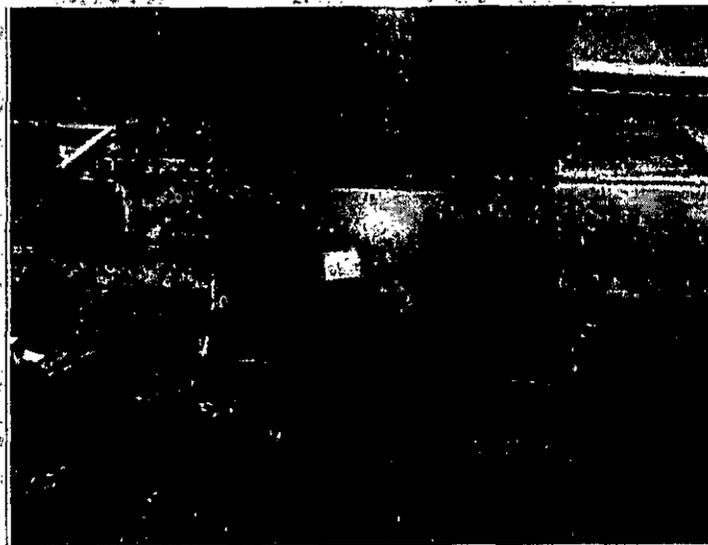

Figure M350

- (c) Ductwork not constructed per SMACNA (Sheet Metal and Air Conditioning Contractors' National Association) standards as required by specification section 15840-1.03-B. Ductwork not constructed per specification section 15840-2.01-G and section 15840-2.05-C which requires aluminum ductwork for air ducts exposed to weather and not insulated. Ductwork installed is galvanized.
- (d) Specification section 15760-3.02-A states that equipment shall be installed in accordance with manufacturer's written instructions, and with recognized industry practices:
- Cook installation, operation, and maintenance manual states that "For ducted inlets, allow at least 3 fan wheel diameters between duct turns or elbows and the fan inlet."
 - Fan wheel diameter is 30". Three fan wheel diameters is 90"
 - Installed length between elbow and the fan inlet is ~27" which is less than 1/3 the required 90". Refer to Figure M347.
 - Ample roof space is available to have installed the fan 81" from the elbow.

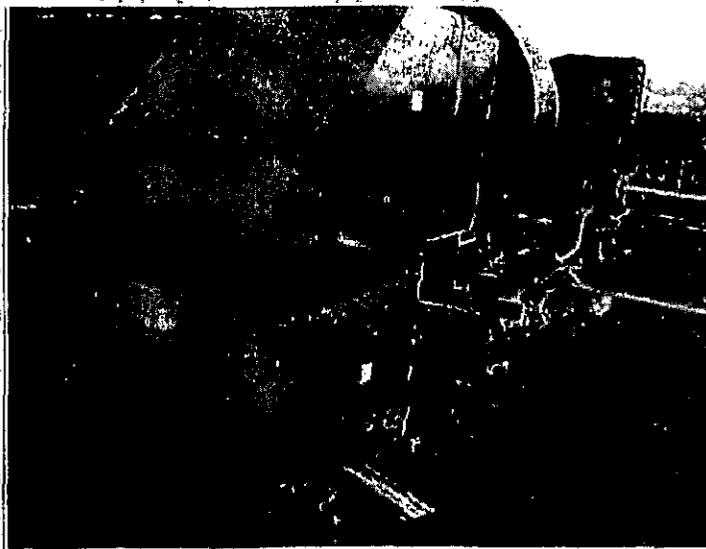

Figure M351

- (e) ASHRAE (American Society of Heating, Refrigerating and Air-Conditioning Engineers) standards state that the inlet connection on EF-3 is poor and causes a high entry loss. Refer to Figure M348 and Figure M279. This inlet condition is not consistent with the "ROOF UTILITY SET FAN DETAIL" on contract drawing M2.12.

Figure M352

- (f) Ductwork associated with EF-3 is not supported. Cantilevering ductwork causes tension on the fan inlet flexible duct connector. Refer to Figure M349.

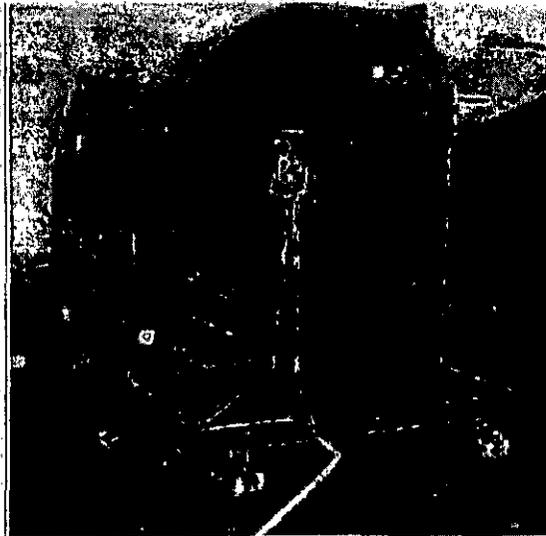

Figure M353

E. LOCKER ROOF

1. Gym roof top ac unit (AC-1)

The following is a list of deficiencies in the installation of the gym roof top ac unit (AC-1).

- (a) Service platform for unit is not complete.
- (b) Ductwork connection to unit is without flexible connection as required by contract drawing M2.03. Refer to Figure M354 and Figure M355.

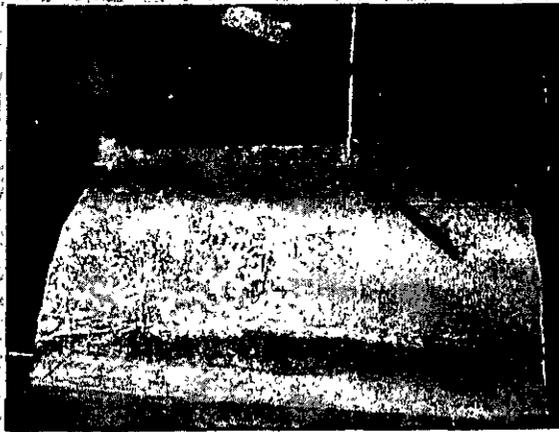

Figure M354

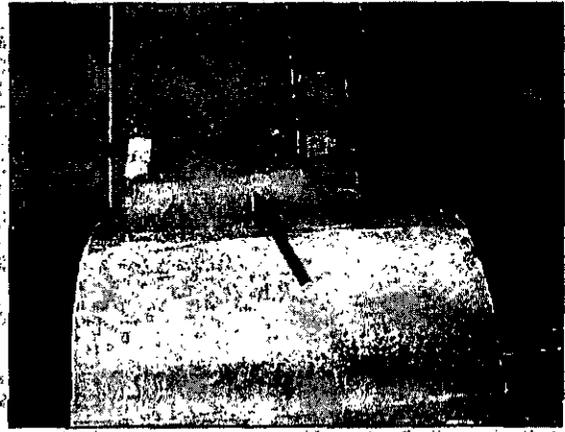

Figure M355

- (c) The submitted and approved FlexClad-400 outdoor duct insulation cover is not installed per manufactures instructions. Refer to Figure M356 through Figure M358. Figure M358 depicts factory recommended installation:

Figure M356

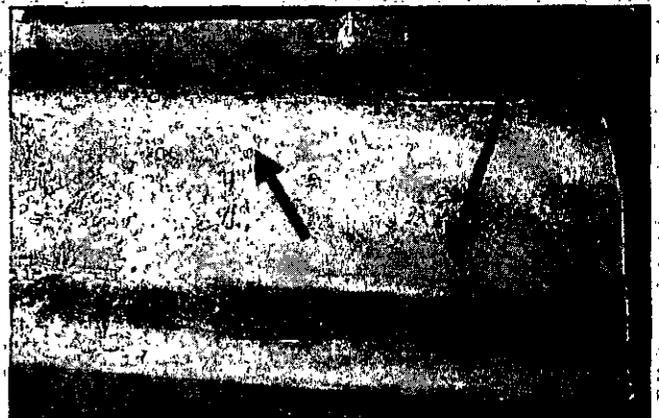

Figure M357

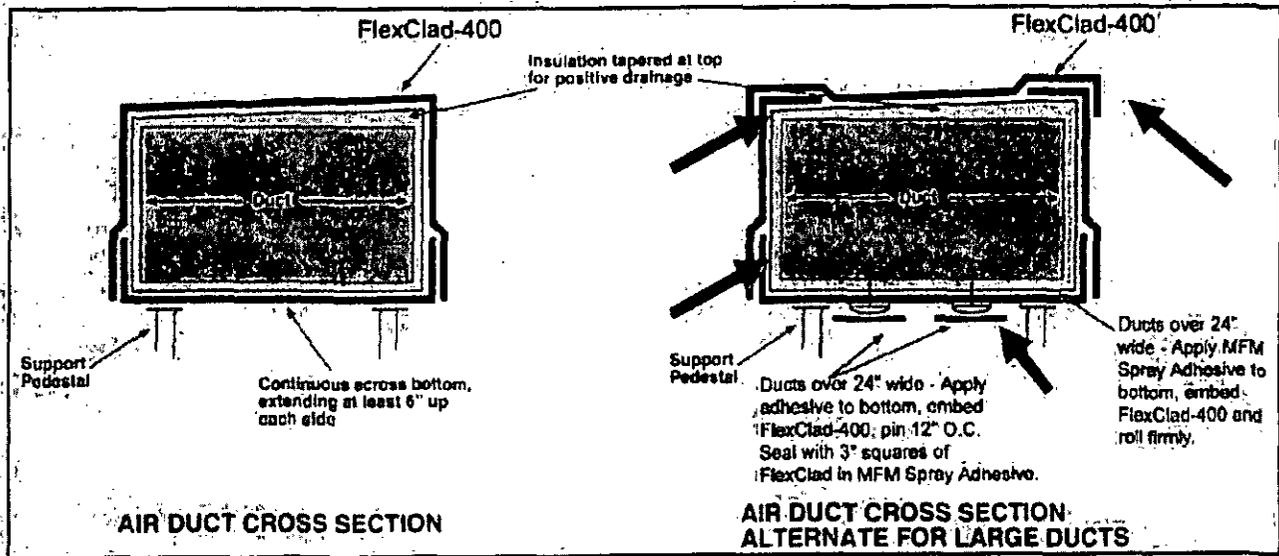

Figure M358

- (d) Metal strip missing off unit door. Refer to Figure M359. Refer to Figure M360 for example of missing strip.

Figure M359

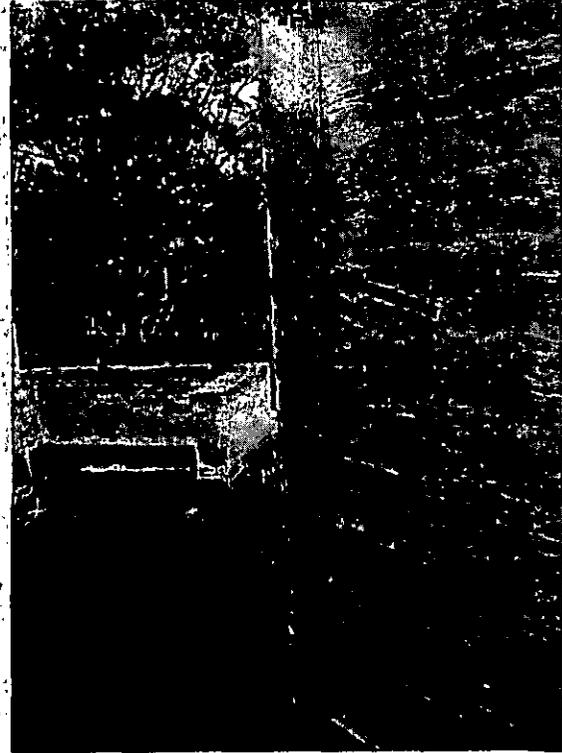

Figure M360

- (e) Unit spring vibration isolators are not secured properly.

BASEMENT CRAWL SPACE

A. Piping and Equipment

1. Condensate pump (CP-1 and 2)

The following is a list of deficiencies in the installation of the Condensate pump (CP-1 and 2).

- (a) Condensate pumps are not installed condensate drains are pipes directly into sanitary sewer. Condensate pumps are not installed in location shown on contract drawing M2.00. Refer to Figure M361.

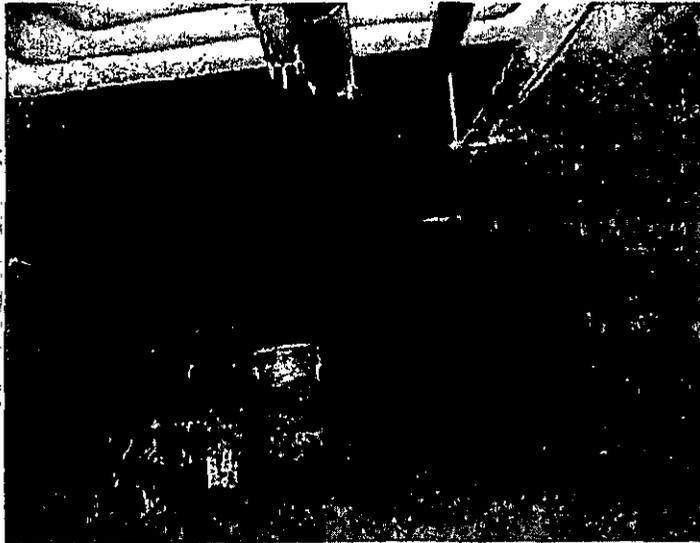

Figure M361

- (b) Unit ventilator coil condensate pipes in crawl space are not insulated as per specification section 15850-A. Refer to Figure M362.

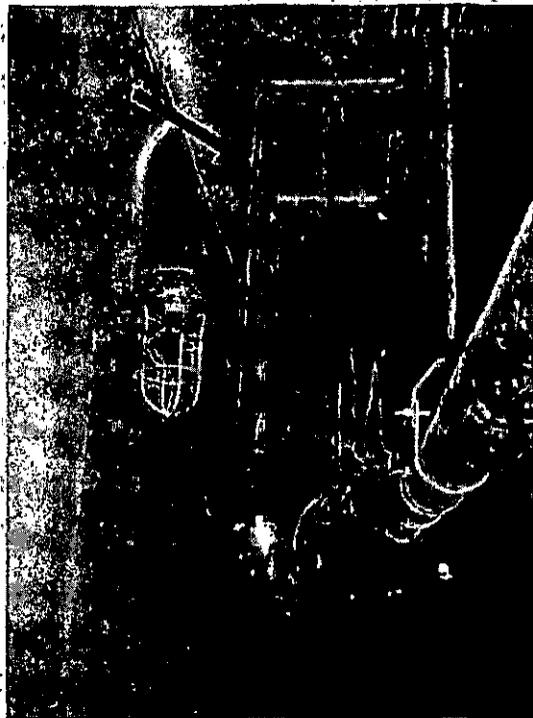

Figure M362

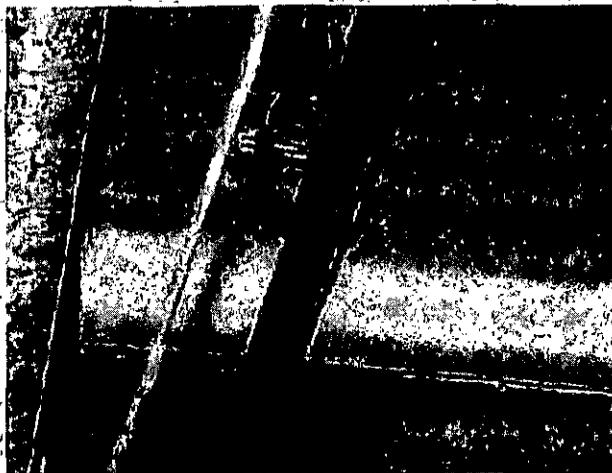

Figure M363

OUTDOOR AIR COOLED CHILLER

A. Air cooled chiller

1. Chiller piping

The following is a list of deficiencies in the installation of the Chiller piping.

- (a) Ball isolation valves associated with the chilled water glycol fill unit are not per specification section 15830-2:06-B. Refer to Figure M364.

- Specification section 15830-2.06-B calls for bronze body, chrome plated bronze ball, Teflon seats, stainless steel stem, and seals threaded ends.
- Valves installed are ProMax.
- Submitted by contractor (submittal number 57 on 10-11-05, Revised 12-23-05) NIBCO S-580-70 solder end, bronze body, brass ball, bronze stem. Rejected by engineer stating "BALL VALVES ARE TO BE BRONZE BALL WITH CHROME PLATING, STAINLESS STEEL STEM" "EXCEPT WHERE FLANGED VALVE ENDS ARE USED; USE THREADED END VALVES - SOLDER END VALVES ARE NOT ACCEPTABLE".

- (b) Lack of dielectric fitting between brass valve and steel pipe has caused premature corrosion. Refer to Figure M364.

Figure M364

- (c) Pressure gauge is not per specification section 15801-2.02-A, C, G, and J. Refer to Figure M365.
- (d) Lack of dielectric fitting between brass valve and steel pipe has caused premature corrosion. Refer to Figure M365.

Figure M365

- (e) Lack of dielectric fitting between brass valve and steel pipe has caused premature corrosion. Refer to Figure M366.
- (f) Ball isolation valves associated with the chilled water glycol fill unit are not per specification section 15830-2.06-B. Refer to Figure M366.
- Specification section 15830-2.06-B calls for bronze body, chrome plated bronze ball, Teflon seats, stainless steel stem, and seals threaded ends.
 - Valves installed are Milwaukee.
 - Submitted by contractor (submittal number 57 on 10-11-05, Revised 12-23-05) NIBCO S-580-70 solder end, bronze body, brass ball, bronze stem. Rejected by engineer stating: "BALL VALVES ARE TO BE BRONZE BALL WITH CHROME PLATING, STAINLESS STEEL STEM." "EXCEPT WHERE FLANGED VALVE ENDS ARE USED, USE THREADED END VALVES - SOLDER END VALVES ARE NOT ACCEPTABLE".

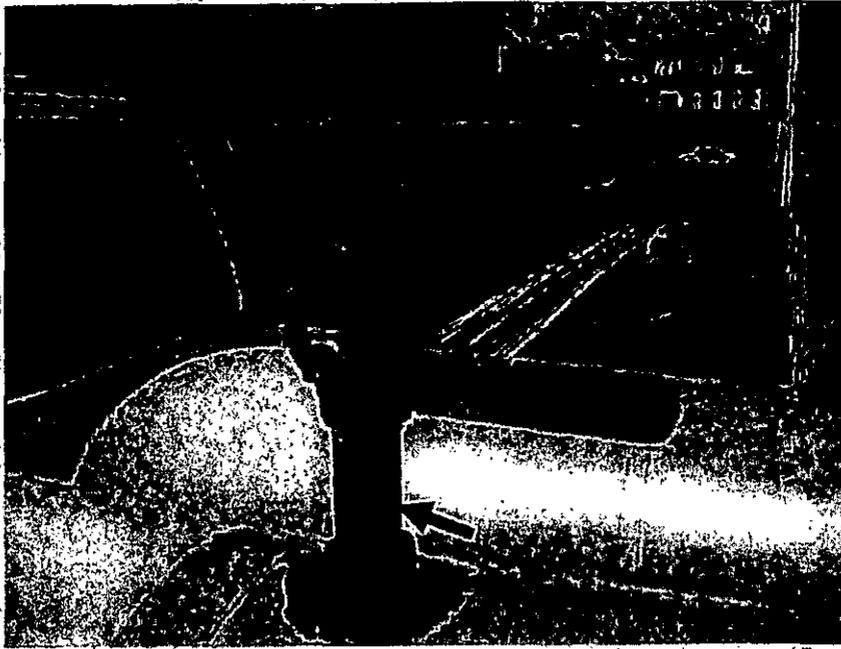

Figure M366

- (g) Chiller is not bolted to steel channels. Refer to Figure M366.
- (h) Specification section 15681-2.03-A requires vibration isolation on chiller.

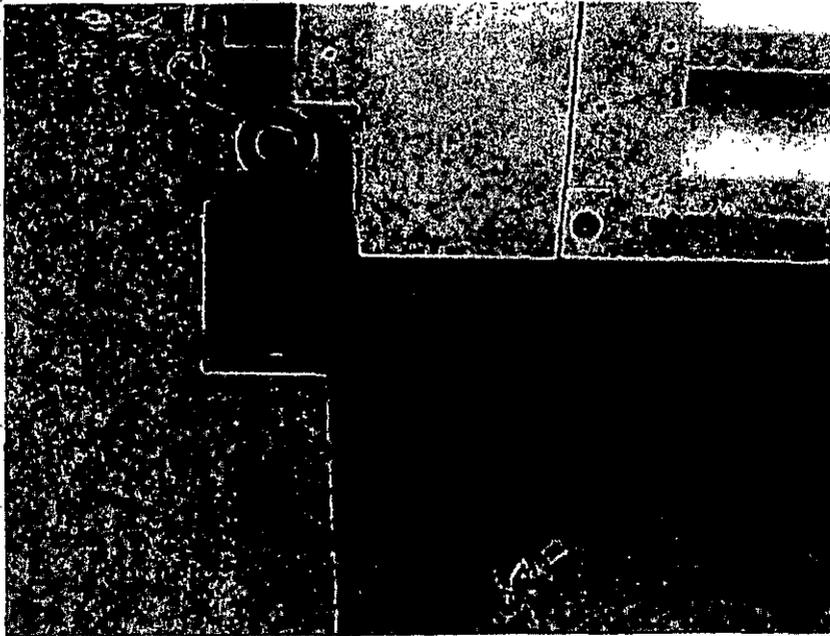

Figure M367

FACADE

A. Exterior louver

1. UV and FCU intake louvers

The following is a list of deficiencies in the installation of the UV and FCU intake louvers.

- (a) Louver (Aiolite T608) submitted by contractor in submittal number 108 is not what is installed (Aiolite T6482). Refer to Figure M368. This submittal was rejected by the architect.

Figure M368

- The Aiolite T608 louver (submitted louver) is rated at 28% free area at 78" w x 10" h. UV-A has an upper limit outdoor air flow rate of 870 cubic feet per minute. At this flow rate the face velocity of the louver is 572 feet per minute. Based on tests performed by the manufacturer utilizing AMCA water penetration test standards the beginning point of water penetration with respect to velocity is at 774 feet per minute. The submitted louver is 202 feet per minute below the point of water penetration.

- The Airolite T6482 louver (installed louver) is rated at 32% free area at 78" w x 10" h. UV-A has an upper limit outdoor air flow rate of 870 cubic feet per minute. At this flow rate the face velocity of the louver is 503 feet per minute. Based on tests performed by the manufacturer utilizing AMCA water penetration test standards the beginning point of water penetration with respect to velocity is at 668 feet per minute. The installed louver is 165 feet per minute below the point of water penetration.
- The flow rate used to calculate the velocity can increase under certain conditions. The improper balancing of the exhaust system (proper system balancing has not been performed on this project) will cause certain rooms to become too negative increasing the flow rate and subsequently the velocity through the louver. Prevailing winds during severe weather conditions can also increase the velocity through the louver.

(b) Louver not provided with weep holes as per sketch 20. Refer to Figure M369.

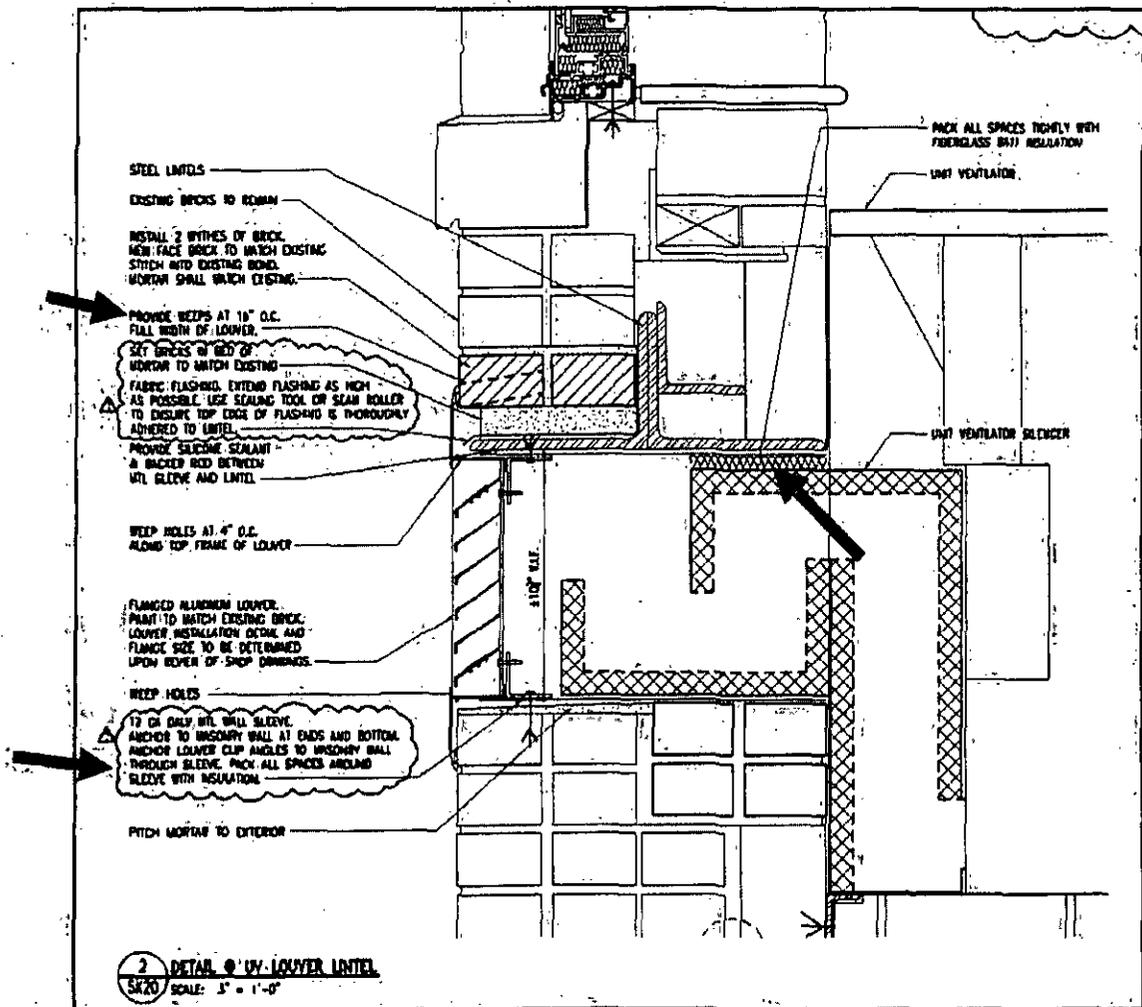

Figure M369

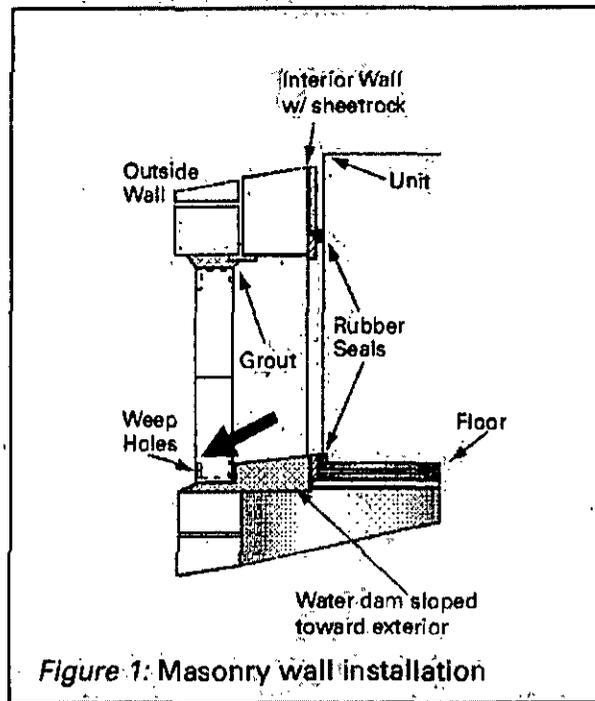

Figure-M370

2. Connection between UV or FCU and intake louvers

The following is a list of deficiencies in the installation of the connection between the UV and FCU intake louvers:

- (a) Louvers are not connected to unit ventilators and fan coil units as per sketch 20. Unit ventilators in the field are installed in an inconsistent manner. Figure M371 is of UV-B in classroom 203 with expansion foam between the sound attenuator metal sleeve. Expansion foam prevents the removal of the unit ventilator for service. Figure M372 is of UV-A in classroom 105 with mineral wool covered with aluminum tape.

Figure M371

Figure M372

- (b) Units throughout the building are not secured to the wall properly causing the seals to not function properly by stopping infiltration. Refer to Figure M373.

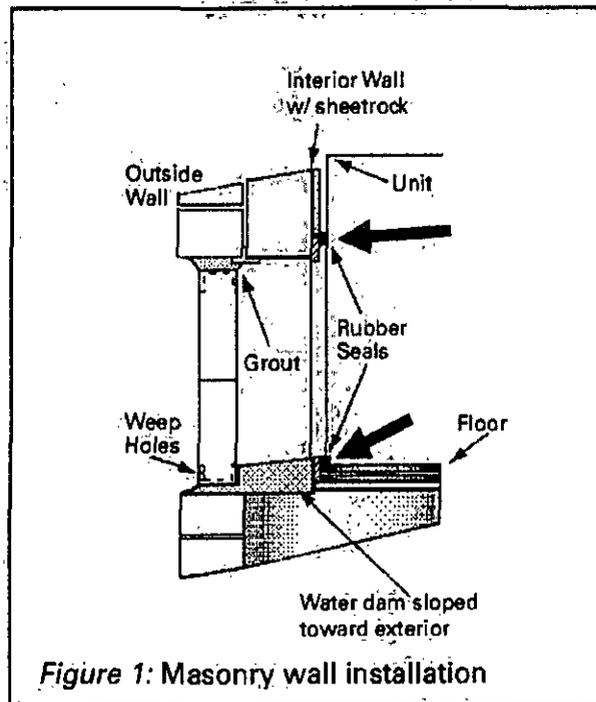

Figure M373

TESTING AND BALANCING

A. Hydronic test and balance

1. Glycol Chilled water test and balance.

The following is a list of deficiencies in the testing and balancing of the chilled water systems.

- (a) Balancing valves on the chilled water piping are set at 100% open. Units have not been balanced as per specification section 15900-3.07. Improper insulation has caused premature corrosion on the balancing valve. Refer to Figure M374.

Figure M374

- (b) Strainers on the chilled water have not been cleaned as per specification section 15900-3.05-D. Figure M375 shows a typical strainer completely filled with gravel like substance. Figure M376 shows the strainer after being cleaned with the removed debris pile adjacent to the strainer.

Figure M375

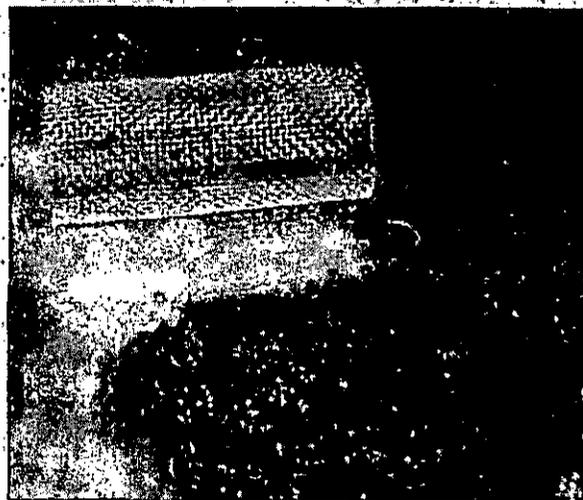

Figure M376

2. Glycol heating hot water test and balance.

The following is a list of deficiencies in the testing and balancing of the chilled water systems.

- (a) Balancing valves on the heating hot water piping are set at 100% open. Units have not been balanced as per specification section 15900-1.02. Typical for all units except two. Refer to Figure M377.

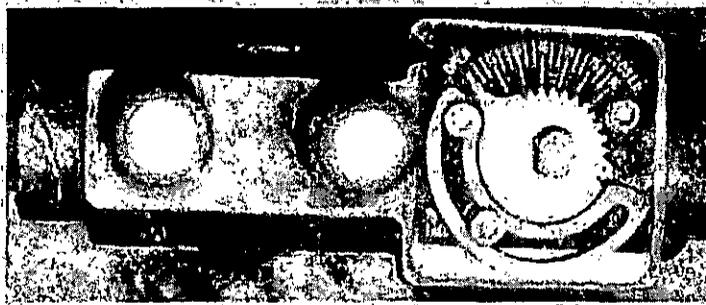

Figure M377

- (c) Strainers on the heating hot water have not been cleaned as per specification section 15900-3.05-D. Figure M378 and Figure M379 shows a typical strainer completely filled with gravel like substance:

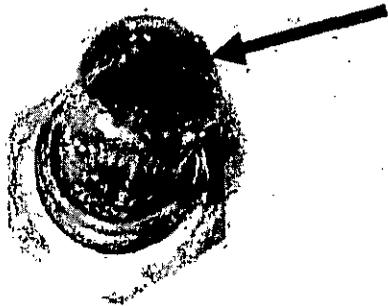

Figure M378

Figure M379

B. Air test and balance

1. Air system test and balance.

The following is a list of deficiencies in the testing and balancing of the buildings air side test and balancing.

- (a) The school notified members of the design team that the test and balance crew were not noticed at the school. The dates and times of testing and balancing were during times that classes were in session. For the test and balance crew to perform the tasks required under contract and not be noticed is improbable.

- (b) The test and balance report states that northern most 18x6 exhaust register in classroom 201 (which is required to exhaust 410 cubic feet per minute (CFM) of air flow when GX-1 is in high speed and 250 CFM when GX-1 is in low speed) was balanced to 420 CFM in high speed and 255 CFM in low speed. This is improbable because the ductwork is not attached to the register. The branch duct is missing the volume damper (device required for balancing) as required by contract drawing M2.03 and specification section 15840-2.08. Refer to Figure M380.

Figure M380

MISCELLANEOUS (Throughout the building)

A. Piping

1. Pipe Fitting Insulation

The following is a list of deficiencies in the installation of the pipe fitting insulation.

- (a) Pipe fitting insulation is not per specification section 15850-2.03 requiring: factory precut Hi-Lo Temp insulation insert covered with PVC fitting cover. Fittings in the field wrapped with mineral wool and covered with aluminum foil tape. Refer to Figure M381 through Figure M386. Figures shown are a small sampling, the deficiency occurs throughout school.
- (b) Submittal number 22 "JM/FPVC Jackets" returned by engineer "EXCEPTIONS AS NOTED" on 10/21/05. "(1) PROVIDE JACKETING ALL AROUND INSULATION FOR ALL FITTINGS IN ALL FITTINGS IN ALL HOT/COLD PIPING INCLUDING CHILLED WATER, HOT WATER, COLD WATER, DRAIN. (2) SECURE JACKETING. (3) PROVIDE ADHESIVE, VAPOR BARRIER AT ALL JOINT OF PVC JACKETING"

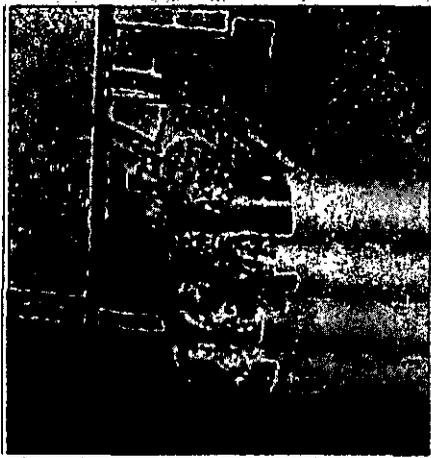

Figure M381

Figure M382

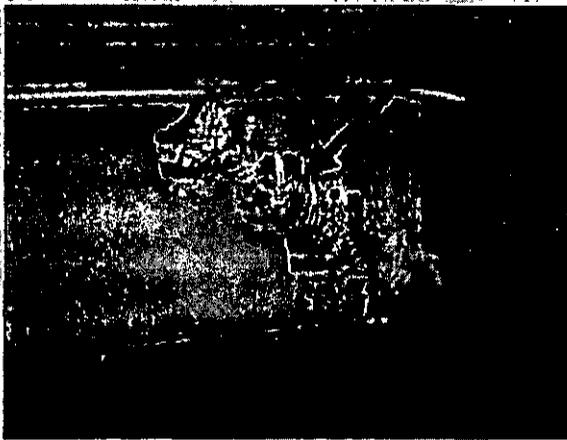

Figure M383

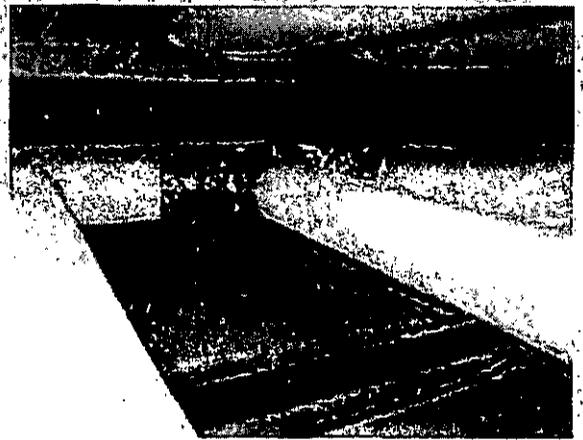

Figure M384

Figure M385

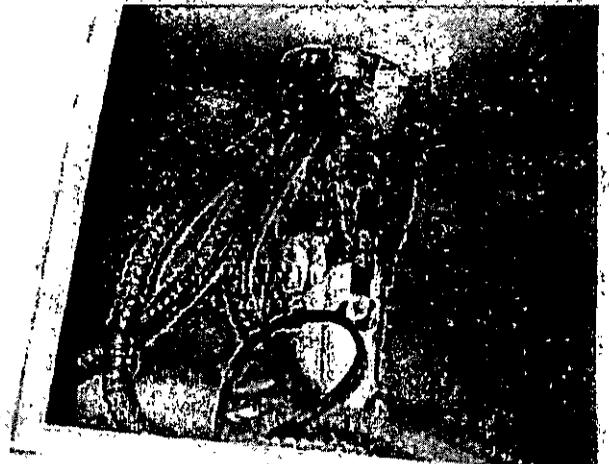

Figure M386

2. Pipe Hangers

The following is a list of deficiencies in the installation of the pipe hangers.

- (a) Pipe trapeze hanger is not installed per "TRAPEZE HANGER DETAIL" detail on contract drawing M2.14 which requires load bearing calcium silicate insulation at hanger and semi-cylindrical galvanized iron shield for hot pipes 2-1/2" & over. Refer to Figure M387 and Figure M388. Figures shown are a small sampling, the deficiency occurs throughout school.

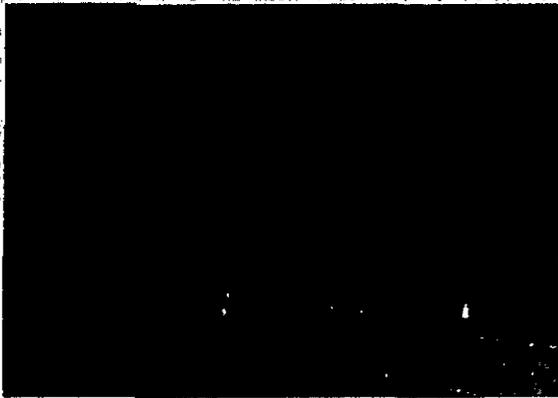

Figure M387

Figure M388

- (b) Pipe clevis hanger is not installed per "CLEVIS HANGER" detail on contract drawing M2.14 which requires load bearing calcium silicate insulation at hanger and semi-cylindrical galvanized iron shield for hot pipes 2-1/2" & over. Refer to Figure M389 and Figure M390. For pipe 4" and over, use clevis roller hanger. Refer to Figure M391 and Figure M392. Figures shown are a small sampling, the deficiency occurs throughout school.

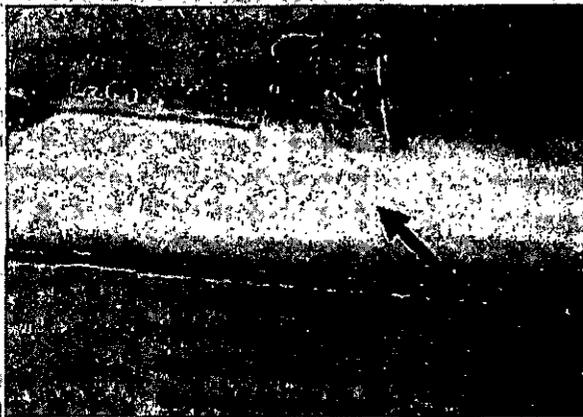

Figure M389

Figure M390

Figure M391

Figure M392

3. Construction Clean-up

The following is a list of deficiencies in the cleaning up after construction.

- (a) Brick rubble was observed throughout all hung ceilings. Construction debris was also observed on the roof. Refer to Figure M393 through Figure M396.

Figure M393

Figure M394

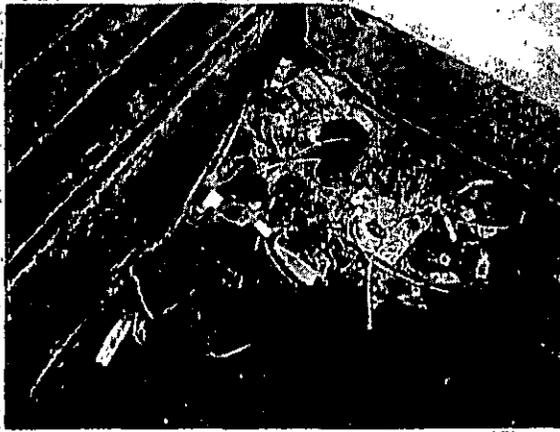

Figure M393

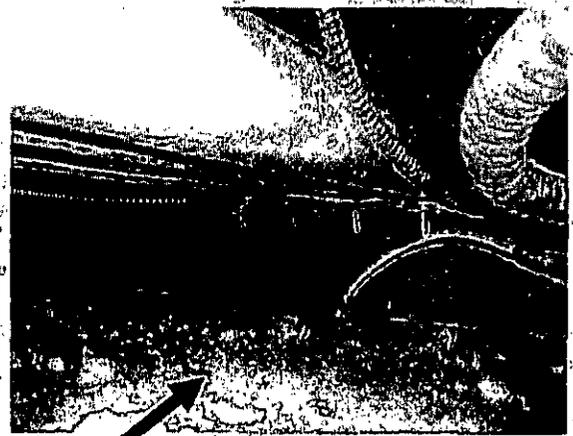

Figure M394

4. Building management system (BMS)

The following is a list of deficiencies in the building management system.

- (a) Multiple space temperature readings are much higher than possible or lower than possible.
- (b) Outside air damper position is believed to be inaccurate.
- (c) All sequence of operations should be checked and commissioned.

B. UV dampers

1. Dampers

The following is a list of deficiencies in the UV dampers

- (a) Multiple unit ventilator dampers are bent preventing them from operating properly.

ELECTRICAL

I. Ground Floor

Ground Floor consists of New Electrical Service Room, new Mechanical Room, existing Boiler Room, Mall Classroom, Multi-purpose Room, Cafeteria, Offices and various Classrooms.

The new electrical service is 4000A, 120/208V, 3Ph, 4W, underground requiring Advisory Board approval prior to installation.

We have not received any official correspondence indicating that the electrical service installation has been approved by NYC Advisory Board. However, a list indicating Advisory Board Calendar numbers was forwarded to us and a copy of that is attached to this report.

During our field survey of the electrical system, the following electrical deficiencies were observed:

A. New Electrical Service Room

1. EMT conduits with set screw connectors and couplings have been used in lieu of rigid galvanized steel conduits exposed at Electrical Room ceiling.

Electrical Specification Section 16111.3.02.A.20a and b states that rigid galvanized steel conduit shall be used in mechanical equipment spaces and EMT shall be used for branch circuit wiring installed in dry locations only (hung ceiling, hollow block wall and furred spaces).

Figure E1

1

ADVISORY BOARD CALENDAR

February 15, 2006

Calendar #	Submission #	Applicant Name and Address	Type of Request	Installation Location	Status	Fee
46968	06A0095	Robert B. Samuels Inc. 48 West 25th Street New York NY 10010	Requested approval for the electric service equipment proposed to be installed	Paramount Group 745 5th Avenue, Main Floor New York NY	Ok, but	\$650.00
Are the ATS's in the generator room.						
46969	06A0088	Elmac Electric, Inc. .61-20 Cooper Avenue Glendale NY 11385	Requested approval for the electric service equipment proposed to be installed	Monsignor McClancy H.S. 71-06 31st Avenue East Elmhurst NY	Approved	\$650.00
46970	06A0096	The Electric Connection Inc. 410 West 127th Street New York NY 10027	Requested approval for the electric service equipment proposed to be installed	New Yorker Hotel New York NY	Hold	\$650.00
1) Submission not in proper Advisory Board format. 2) Bus sizes not provided.						
46971	06A0097	BRG Electric, Inc. 88-26 Winchester Blvd. Queens Village NY 11427	Requested approval for the electric service equipment proposed to be installed	114-02 15th Avenue College Point NY	Approved	\$650.00
46972	406A0100	Olympic Electrical Wiring Corp. 133 50th Street Brooklyn NY 11232	Requested approval for the electric service equipment proposed to be installed	103-105 Norfolk Street New York NY	Approved	\$650.00

2. Incoming underground electrical service conduits are not PVC coated rigid steel conduits as mentioned in Specification Section 2.01.A.3.
3. A row of 4" EMT conduits have not been strapped to the Kindorf supports at multiple locations making this electrical installation unsafe.

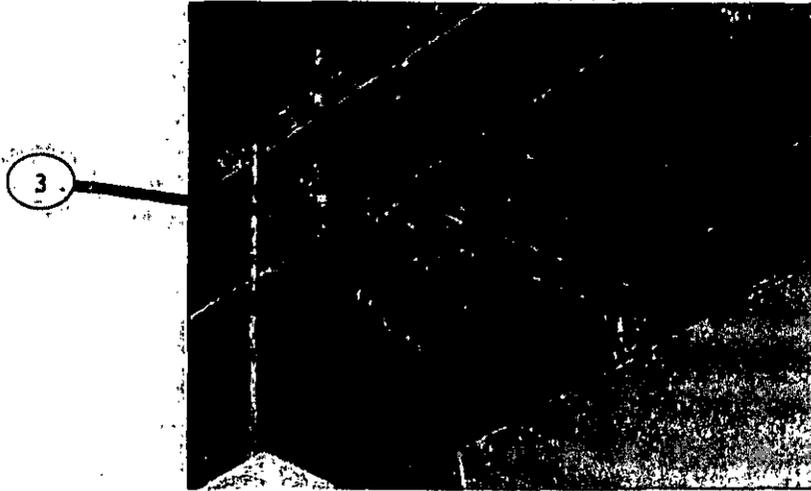

Figure E2

National Electrical Code (NEC) Section 358.30.A&B calls for all conduits to be securely fastened so that they will not move due to the weight of the cable.

4. Kindorf supporting the conduits is not leveled at multiple locations.
5. Kindorf supporting the 8" x 8" wiring trough is not leveled, creating no contact at some places and extra heavy weight at other places.

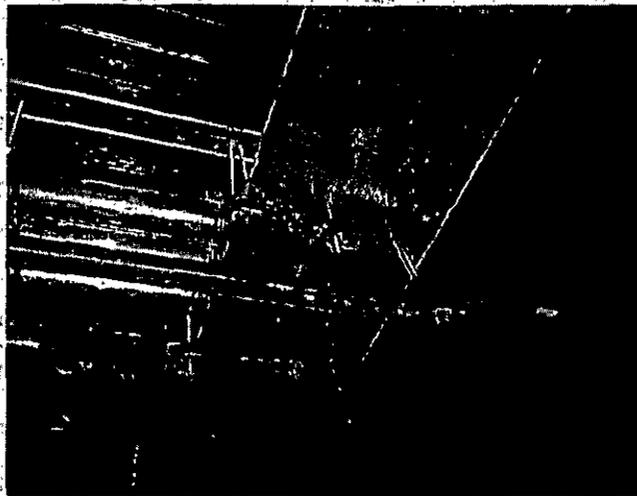

Figure E3

6. 2" empty conduit stub up at southeast corner of the room has been left abandoned 12" above the floor without any cap or cover.

Figure E4

7. Two (2) 3/4" conduit penetration to north wall has not been patched and firestopped. This may result in having fire spread from one room to another and cause severe damage to the building infrastructure.

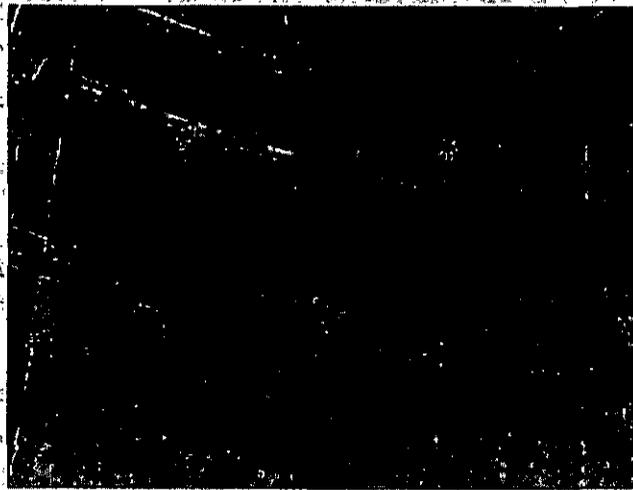

Figure E5

Electrical Specification Section 16111-3.02.20.c.1 states that "Where wiring, conduits, cable trays, wireways, and other electrical raceways pass through fire partitions, fire walls, or floors, install an approved firestop that provides an effective barrier against the spread of fire, smoke and gasses. Firestop material (heat activated putty and a high temperature fiber material) shall be packed tight and shall completely fill clearances between raceways and openings. It shall be applied concurrently with the installation of the wiring. The firestop fittings shall have a U.L. classified hourly rating equal to the fire rating of the floor or wall."

8. 3/4" LB conduit with its cover at southwest corner is buried partially inside sheetrock soffit, thus making it inaccessible for any maintenance work.

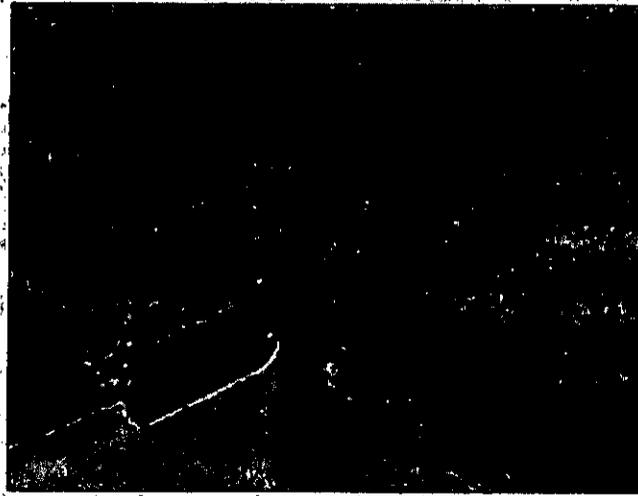

Figure E6

9. Junction box for fire alarm conduit is not painted red.

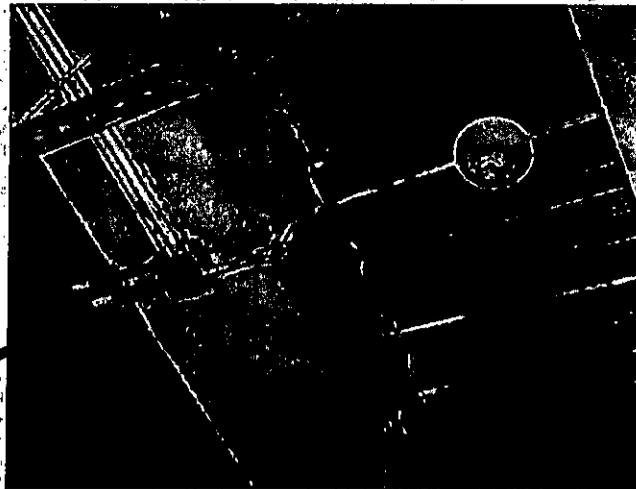

Figure E7

10. Service entrance conductors have been spray painted in lieu of using color tape for feeder phase identification. We do not know the chemical composition of the paint, but we feel that the chemicals present in the paint may deteriorate the wire insulation in the long run and may cause cable failure.

10

Figure E8

10

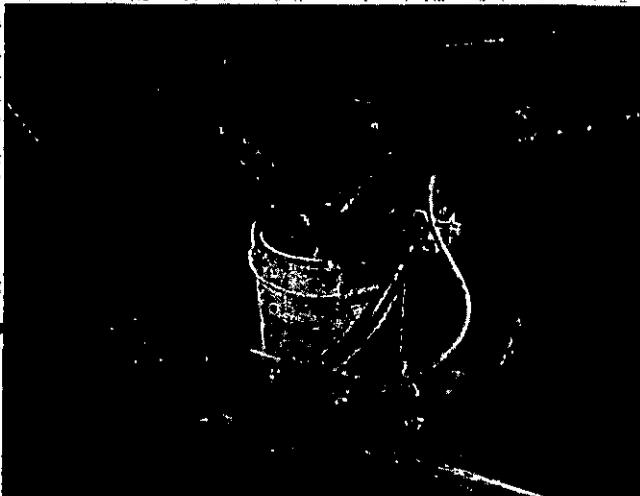

Figure E9

10

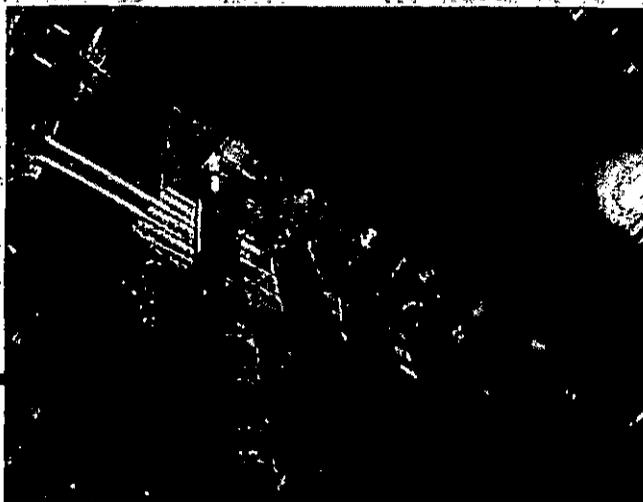

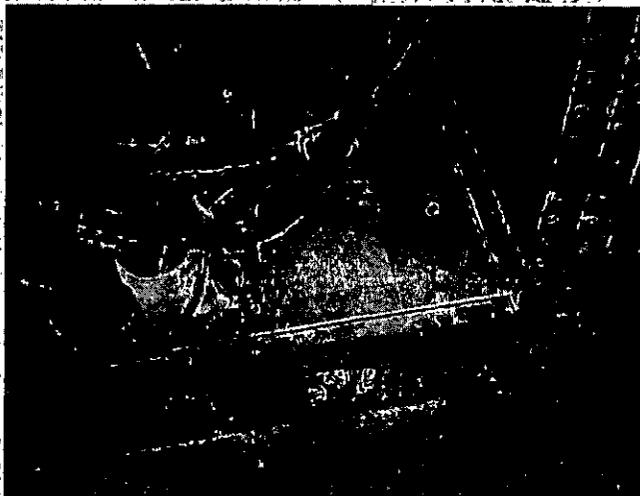

Figure E10

10

Figure E11

10

Figure E12

11. Fuse cut-out installed to feed power to existing fire alarm control panel has the following deficiencies:
- Solid neutral bar is missing and the neutral wires are connected through neutral bus.
 - Stranded wires have been used in lieu of solid wires.
 - Ground wire size is #12 stranded in lieu of #10 solid.
 - A third phase wire is hanging loose inside the FCO enclosure. This wire may be live and could cause a ground fault condition which may shut down power to the entire facility.

Figure E13

12. Two (2) load side feeders from distribution panel DP-AC are passing through the load side trough of distribution panel MDP, thus mixing the load feeders from two different panelboards in the common raceway.

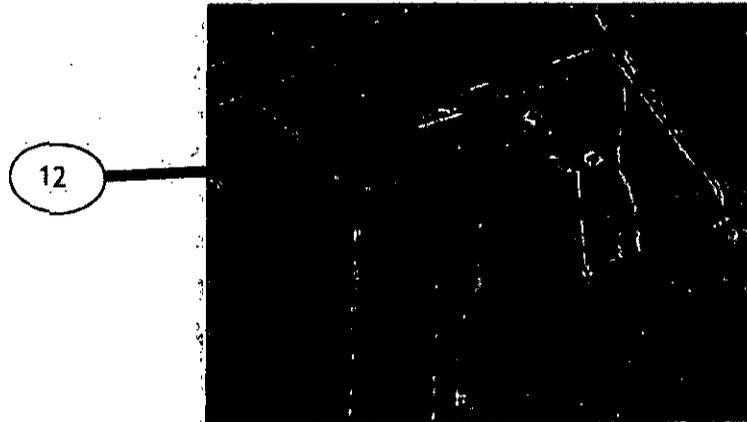

Figure E14

Figure E15

13. Contract Documents call for PVC coated rigid galvanized steel conduits to be used for eleven (11) sets of underground service feeders. However, the conduits stubbing up inside the service switchboard are not PVC coated and there is no shop drawing submission for PVC coated rigid galvanized steel conduits.

13.

Figure E16

13.

Figure E17

14. 24 wide insulation mat in front of switchboard equipment is not provided per Specification 16426 Section 3.02.E.

B. Mechanical Room

1. EMT conduits with set screw connectors and couplings have been used in lieu of rigid galvanized steel conduit.

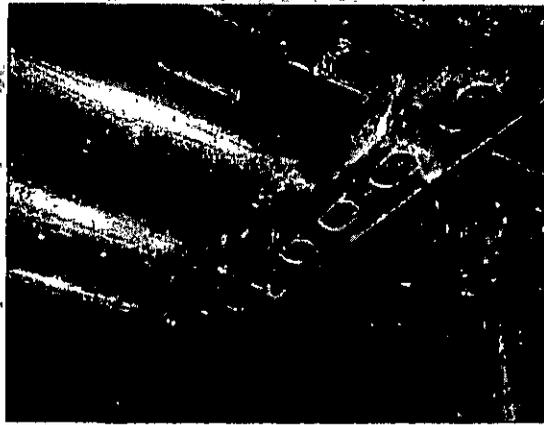

Figure E18

Electrical Specification Section 16111.3.02.A.20a and b states that "rigid galvanized steel conduit shall be used in mechanical equipment spaces and EMT shall be used for branch circuit wiring installed in dry locations (hung ceiling, hollow block wall and furred spaces)."

2. Greenfield has been used for final connection to pumps CHWP-1, CHWP-2, HWP-1 and HWP-2 in lieu of sealtite flexible conduit.

Figure E19

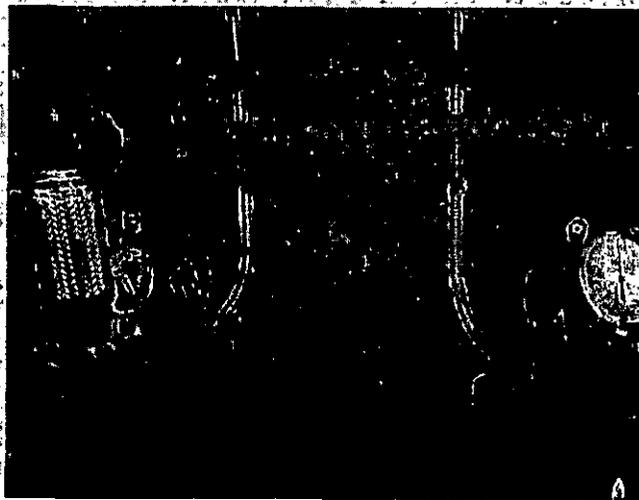

Figure E20

2

Electrical Specification Section 16111.3.02.A.20.c.1 and 2 states that "for final connections to motor terminal boxes, transformers and other vibrating equipments the flexible steel conduit shall have polyvinyl sheathing "sealtite" and a ground conductor."

3. 3/4" EMT conduit penetration on east wall for fire alarm smoke detector has not been patched and fire stopped.

Electrical Specification Section 16111-3.02.20.c.1 states that "where wiring, conduits, cable trays, wireways, and other electrical raceways pass through fire partitions, fire walls, or floors, install an approved firestop that provides an effective barrier against the spread of fire, smoke and gasses. Firestop material (heat activated putty and a high temperature fiber material) shall be packed tight and shall completely fill clearances between raceways and openings. It shall be applied concurrently with the installation of the wiring. The firestop fittings shall have a U.L. classified hourly rating equal to the fire rating of the floor or wall."

4. Fire alarm conduit on the east wall has not been patched and firestopped.

4

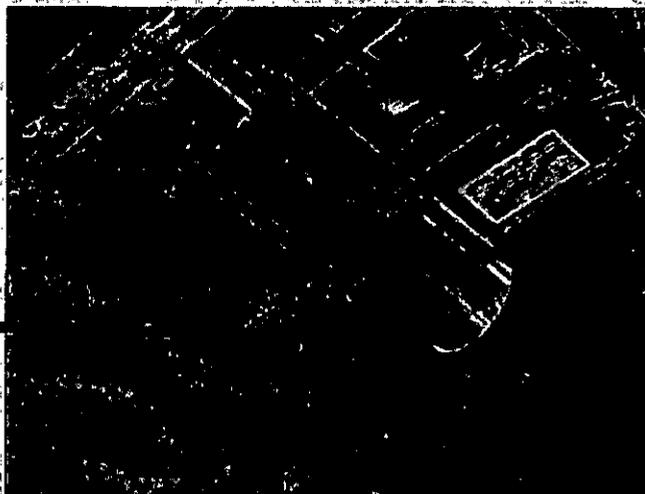

Figure E21

5. Pull box for pumps HWP-1 and 2 has KO seal missing.

5

Figure E22

6. Exit light, regular ambient light unit heater and sump pump circuits are all run through one common raceway homerun. Emergency light and exit sign circuit shall be run in separate conduit.

Figure E23

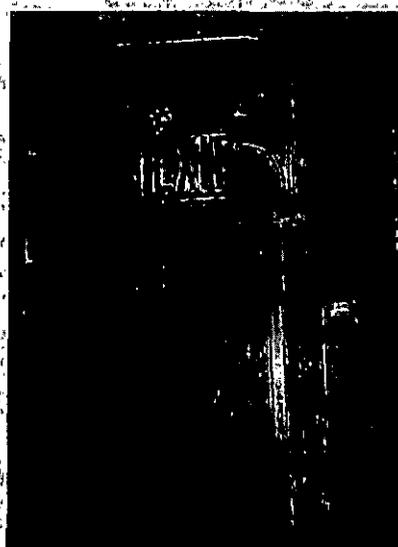

Figure E24

7. Motor controllers for CHWP-1, CHWP-2, HWP-1 and HWP-2 have not been labeled.

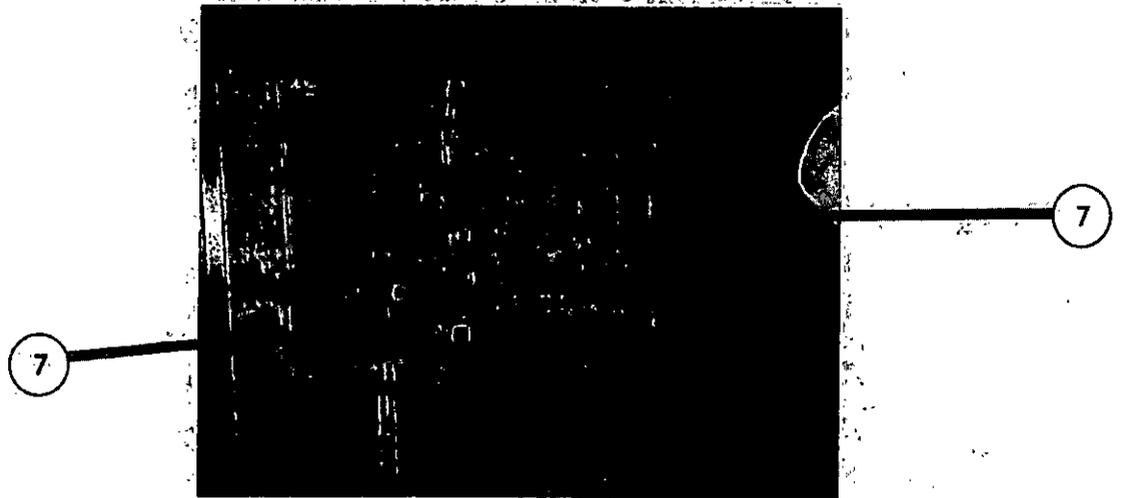

Figure E25

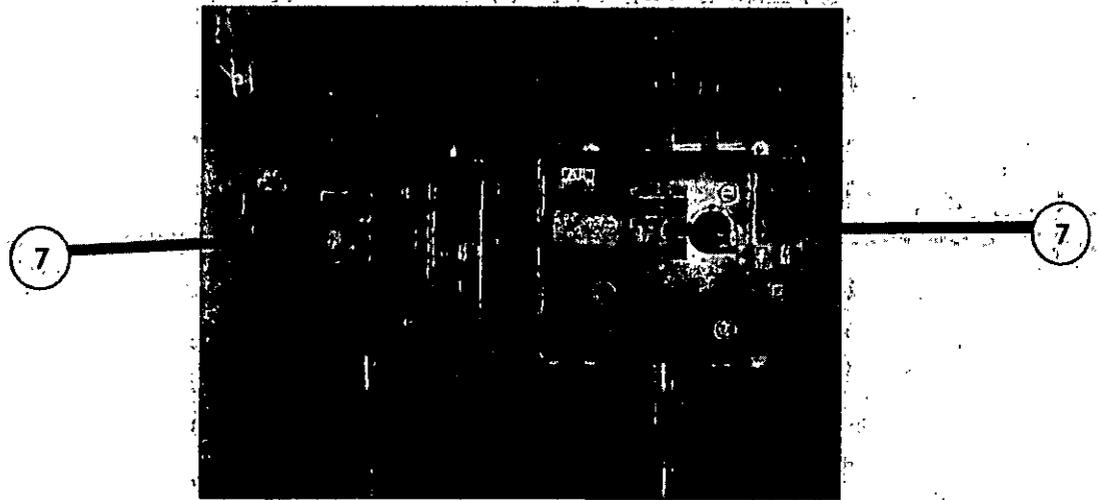

Figure E26

8. 3/4" conduit connector to pendant light fixture is loose exposing power wiring to outside for possible physical damage.

Due to loose conduit connection, the following problems may arise:

- a. Moisture or dampness may penetrate inside the fixture and cause damage to the interior parts.
- b. The wire insulation may deteriorate causing a short circuit condition at the fixture.

8

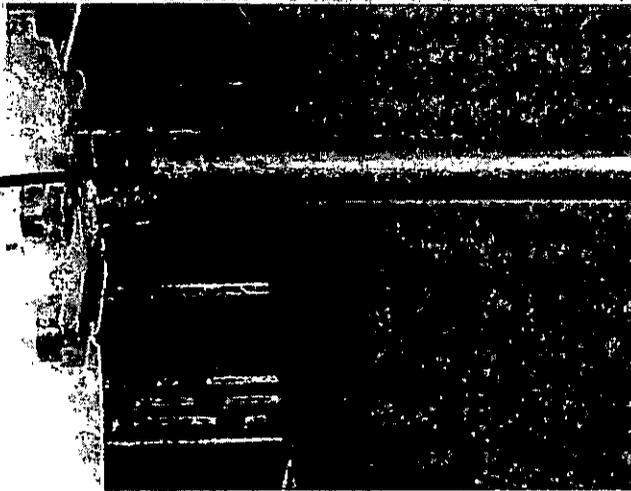

Figure E27

9. 1/4" C installed in the Mechanical Room Vestibule has cover missing for conduit.

9

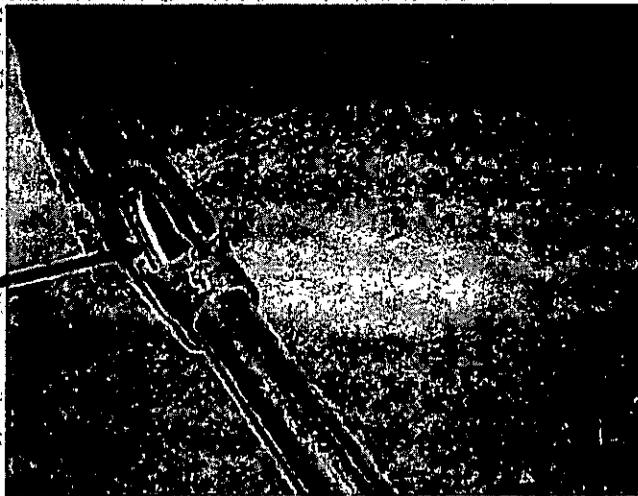

Figure E28

10. Fire alarm junction box installed in the Mechanical Room Vestibule has knock-out seal missing.

Figure E29

11. a. $\frac{3}{4}$ " EMT conduit feeding power to exhaust fan on the roof, above the Mechanical Room is not supported for a length of approximately 20'.

Figure E30

- b. $\frac{3}{4}$ " EMT conduit opening has not been patched and firestopped.

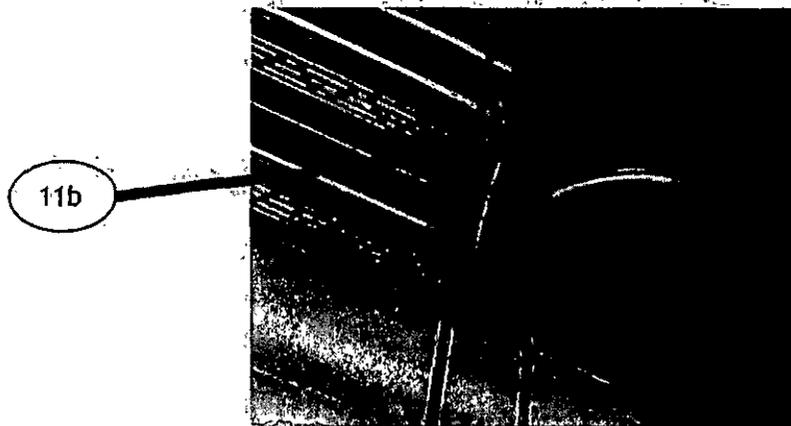

Figure E31

12. Fire alarm conduit connecting to smoke detector has not been supported for approximately 10' of the conduit run with multiple bends.

Figure E32

13. Feeders for pumps HWP-1.2 and CHWP-1.2 are run in one common raceway without any increased wire size for derating factor.

Figure E33

Figure E34

14. Emergency power shutdown breakglass switch for outdoor chiller unit is not installed.

C. Boiler Room

1. EMT conduits with set screw connectors and couplings have been used in lieu of rigid galvanized steel conduit.

Figure E35

2. 3/4" and 1" EMT conduits have not been strapped to the Kindorf channel at multiple locations.
3. 18"L x 3"W x 3"D pullbox has not been independently supported to building structure as stated in Specification Section 16111, 3.02.20.E.1.

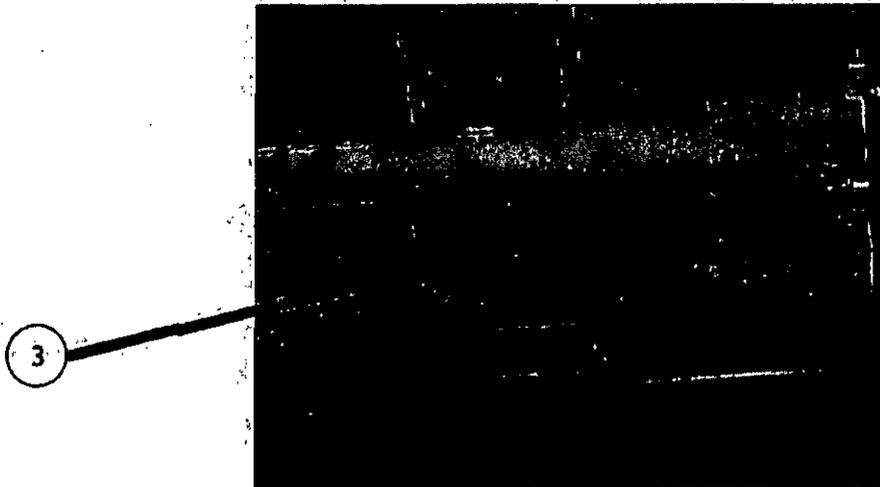

Figure E36

4. Greenfield has been used for final connection to pumps HWP-3 and 4 in lieu of sealtite flexible conduit.

Electrical Specification Section 16111.3.02.A.20.c 1 and 2 states that "for final connections to motor terminal boxes, transformers and other vibrating equipments the flexible steel conduit shall have polyvinyl sheathing "sealtite" and a ground conductor."

Figure E37

5. a. EMT and Greenfield conduits have been used in lieu of rigid galvanized steel conduit thru riser chase for second and third floor Panelboards LP-UV2 and LP-UV3 feeders.

Specification Section 16111, 3.02.A.20.a.1 states that "Rigid galvanized steel (RGS) conduit shall be used for risers and branch feeders as well as feeders in mechanical equipment spaces".

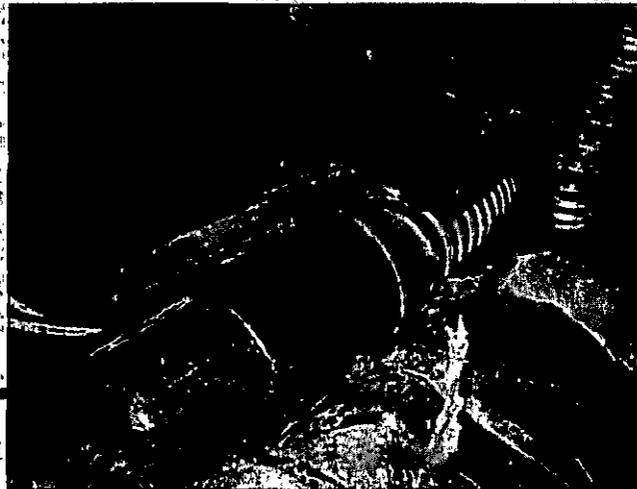

Figure E38

- b. Branch circuit wiring is run in Greenfield conduits:

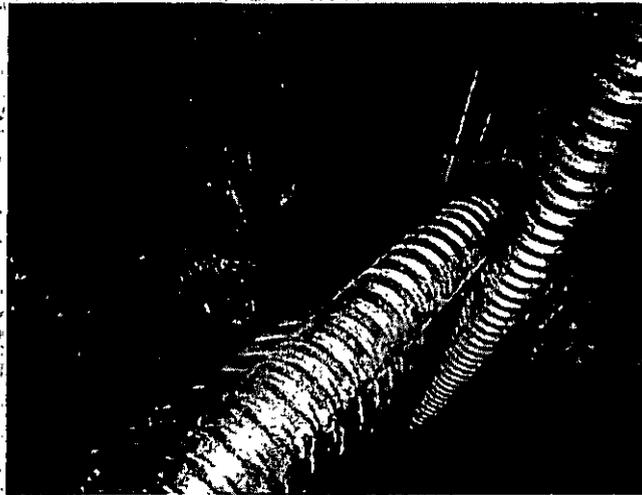

Figure E39

5b

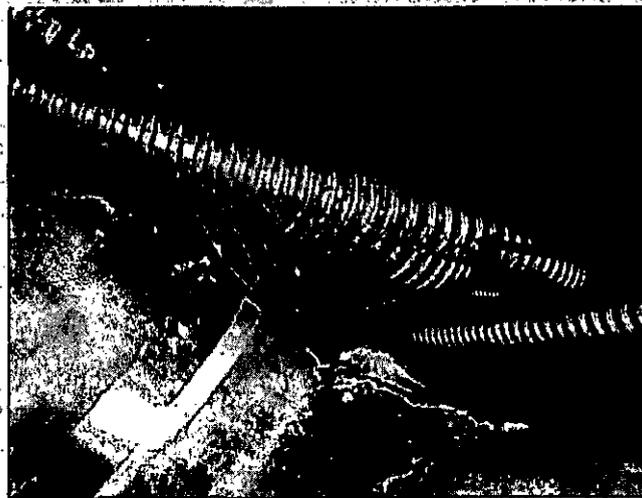

Figure E40

5b

6. a. Panelboard LP-UVI has been bought with one (1) 3 pole circuit breaker only, rather than five (5) 3 pole circuit breakers required for the field installation. For the four (4) missing 3 pole circuit breakers, 1 pole circuit breakers have been converted to 3 pole by inserting a piece of bare wire and nail. This will not only violate the UL rating of the equipment but also create a potential fire hazard situation where only one (1) of the three (3) circuit breakers may trip causing voltage unbalance known as single phasing where one phase will carry two times the current of the other two phases and eventually the motor will burn out.

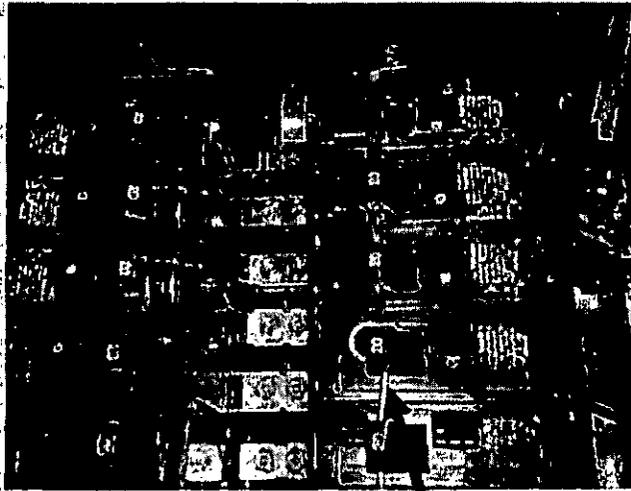

Figure E41

6a

- b. One of the circuit breaker tabs is broken due to excessive force used to drive the nail down the tab hole. This makes accidental tripping of one circuit breaker even more possible thus causing connected motor burnout.

Figure E42

- c. More than three (3) circuits are run in one (1) common raceway from Panelboard LP UV1 without proper derating factor.

6c

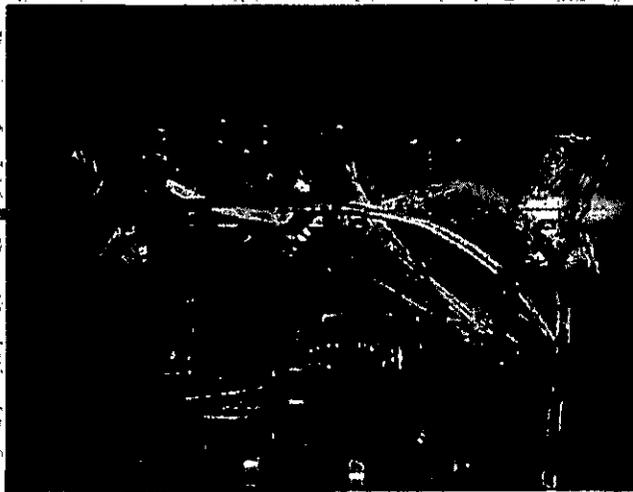

Figure E43

Electrical Specification Section 16123.3.01.B.7 and General Note No. 10 on Drawing E0.01, state that "not more than 3 lighting or convenience receptacle circuits shall be installed in one (1) conduit unless otherwise indicated on drawings."

- 7. a. Existing service CT cabinet and 1200 Amp attached service switch have not been removed.

7a

Figure 44

7a.

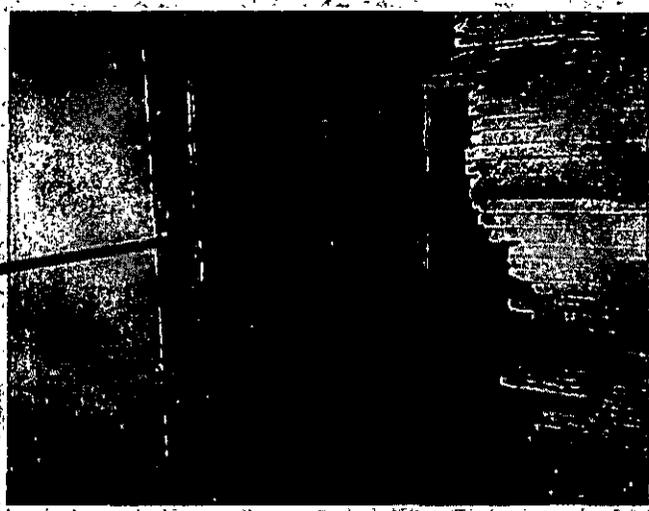

Figure E45

Figure E46

Drawings E2.01 and E6.01 single line riser diagram indicate that the CT cabinet and its service disconnect switch 1200A shall be disconnected and removed entirely with wires pulled back to the property line box located at 31st Avenue.

- b. Wiring nuts are used to splice #8 size cables or larger in the existing MDP panel slice box instead of using color-keyed compression connectors as mentioned in the Specification 16123, Section 3.01.C.2.

7b

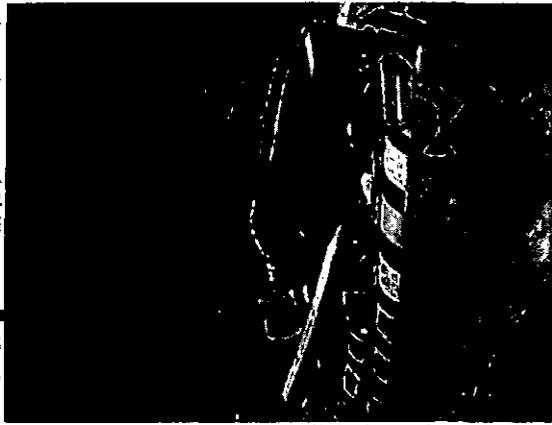

Figure E47

7b

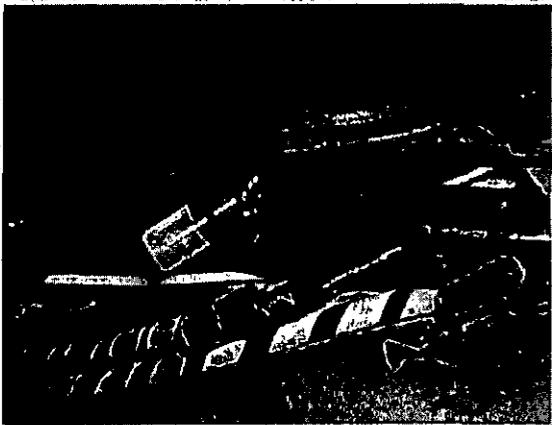

Figure E48

c. Some of the existing feeder wires are not removed from old MDP splice box.

7c

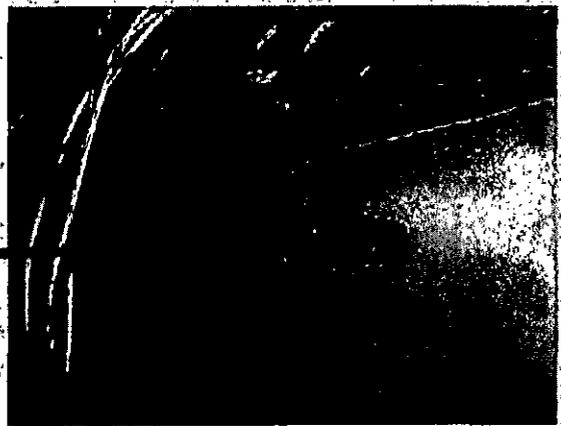

Figure E49

d. There are three (3) open knockouts in existing MDP panel presently used as splice box

7d

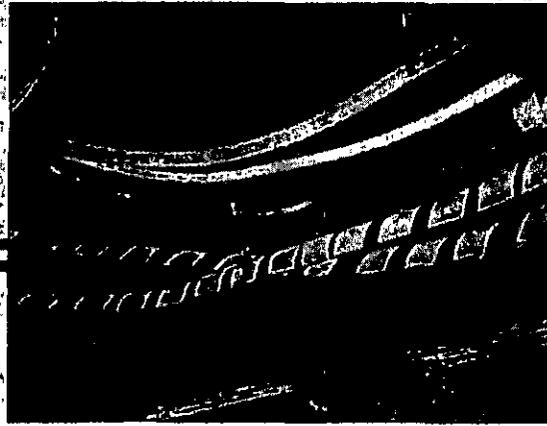

Figure E50

8. Greenfield has been used in lieu of rigid metallic conduit (through slab opening for unit ventilator power). This conduit is very close to steam pipes which may result in conduit damage. The opening is not patched and firestopped.

General Note No. 8 on Drawing E0.01 states that "no electrical conduit shall be installed within 3" space of steam or hot water pipes".

8

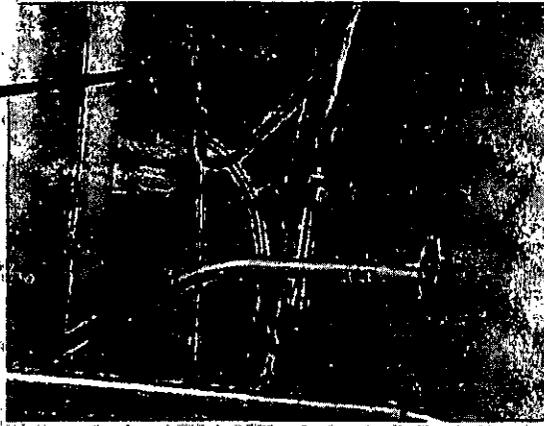

Figure E51

9. Greenfield conduits are run exposed along the side of steam pipes for power wiring.

9

Figure E52

10. Conduits passing from new building to old building shall use conduit expansion fittings at the building joints. However, expansion fittings have not been installed for all conduit crossing.

D. First Floor Corridor

1. Lighting fixtures Type 'FA' in the corridor do not match with the shop drawings submitted.
- a. Shop drawings indicate white acrylic overlay on the back of louvers to control the lamp glare. Contractor has used a plastic overlay material which is banned in New York City for the last many years. This plastic material also obstructs the light and has started burning at many places.

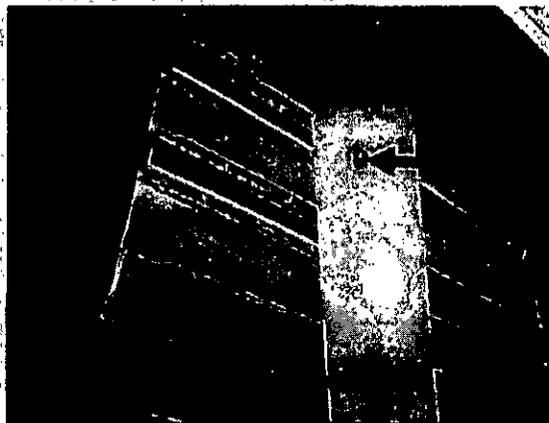

Figure E53

- b. Additionally, when the fixture cover is closed, the cover hits the T5 lamp on one side causing one of the three lamps to break. We were advised that the Contractor shall cut the part of the metal cover in the field to ensure that the cover will close properly. However, in our opinion, this will violate the UL Listing of the fixtures and we recommend that this should be done by the fixture manufacturers at the factory rather than the Contractor doing it in the field.

Figure E54

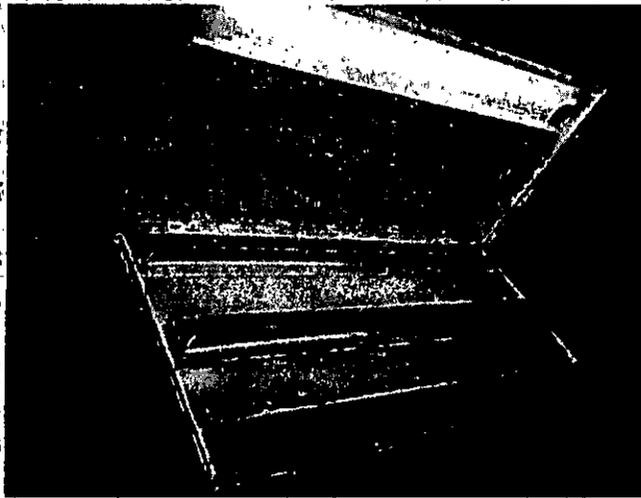

Figure E55

2. a. Greenfields have been used to carry branch circuits from a common pullbox in the hung ceiling to various loads.
- b. Pullbox located above the hung ceiling of the corridor outside the Custodian's Office has its cover missing, exposing live wires for possible damage.

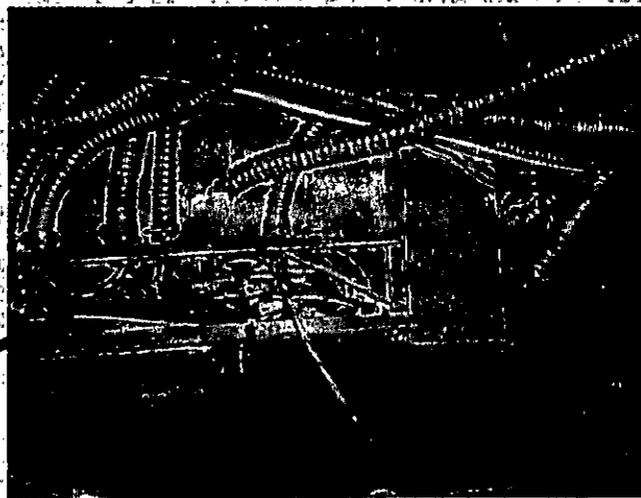

Figure E56

Specification Section 16111, 3.02:A.20.b.1 states that "EMT shall be used for branch circuit wiring installed in dry locations (hung ceilings, hollow block wall and furred spaces).

3. Fire alarm cables in the hung ceiling are run exposed without any conduit protection.

3

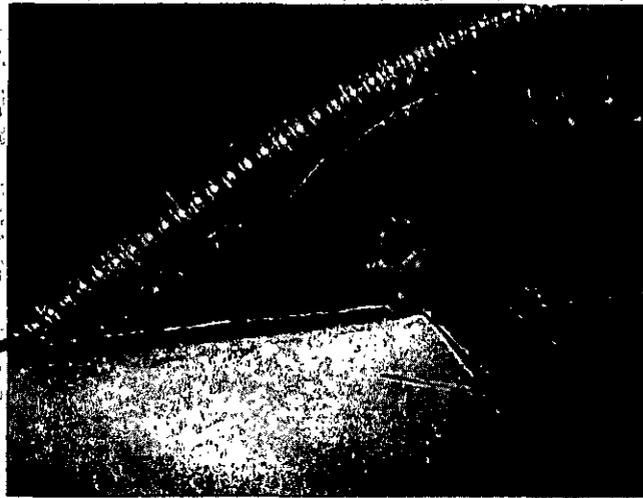

Figure E57

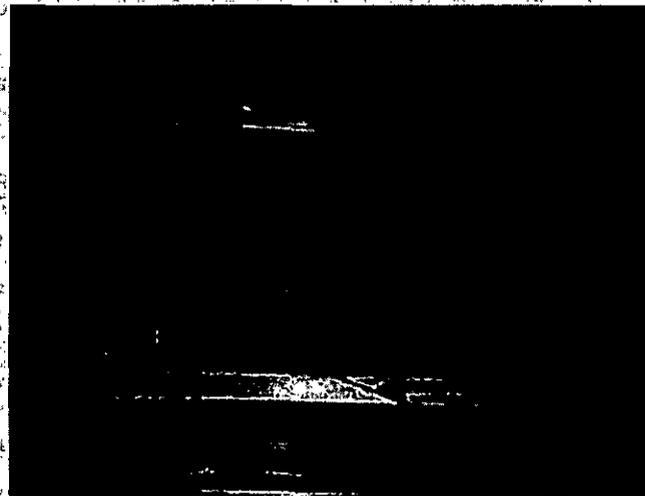

Figure E58

3

Specification Section 16111, 3.02.A.20.b.2 states that "EMT shall be used for low voltage system wiring including fire alarm wiring in dry locations (hung ceiling, hollow block walls, riser shafts and furred spaces).

4. Greenfield is run exposed in the ceiling of Custodian's Office.

Figure E59

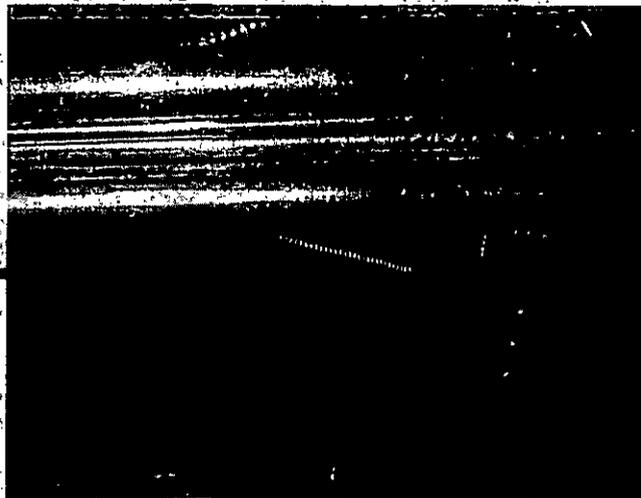

Figure E60

Specification Section 16111, 3.02.A.20.c.1 states that "Greenfield flexible conduit shall be used for short connection to light fixtures and vibrating equipment in dry locations" only.

E. Kitchen/Cafeteria

1. a. Power feed to two (2) Second Floor unit ventilators in the Classrooms are run in exposed Greenfield conduit rather than rigid conduit at Kitchen ceiling. Exposed Greenfield conduit wrapped around steam pipes and passing through same ceiling opening may damage conduit in the long run.

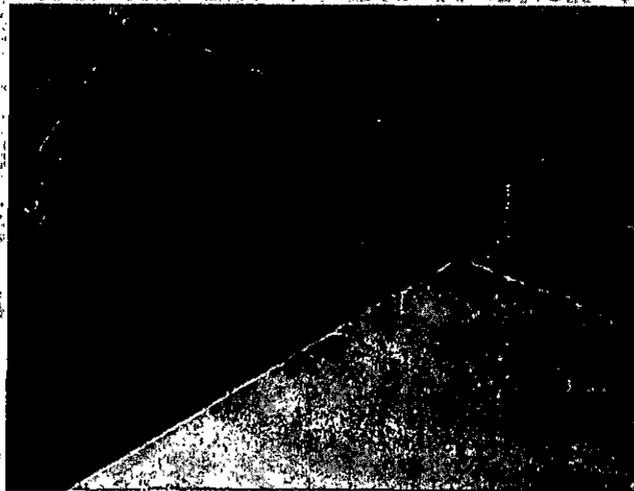

Figure E61

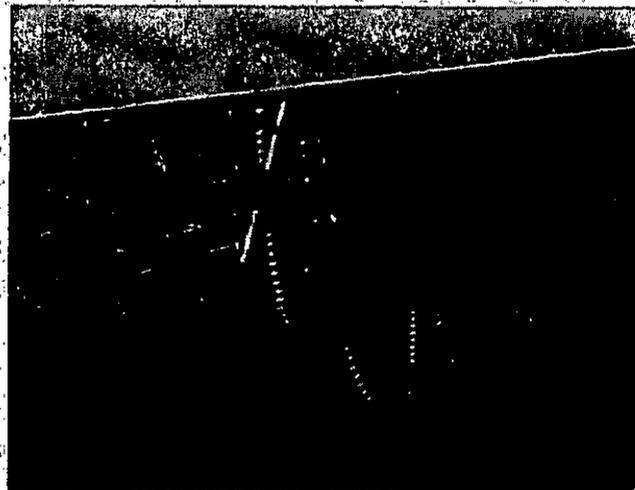

Figure E62

- b. Conduit and steam pipes opening at Kitchen ceiling to Second Floor unit ventilators in the Classroom is not patched and firestopped at two locations.
2. Receptacle at Cafeteria exit door has not been replaced with new and the broken receptacle has exposed live part which is potentially dangerous to the students.

2

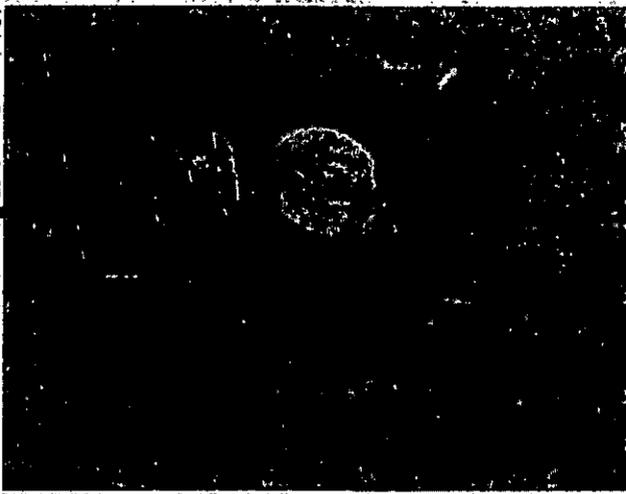

Figure E63

3.
 - a. Switch control for kitchen exhaust fan KX-1 on the roof is not functioning and it appears that the switch is not connected to the fan.
 - b. The switch provided is a weatherproof switch usually used for outdoor environment.
 - c. Raceway used for wiring method is Greenfield and Sealtite conduit in lieu of rigid metallic conduit.

3c

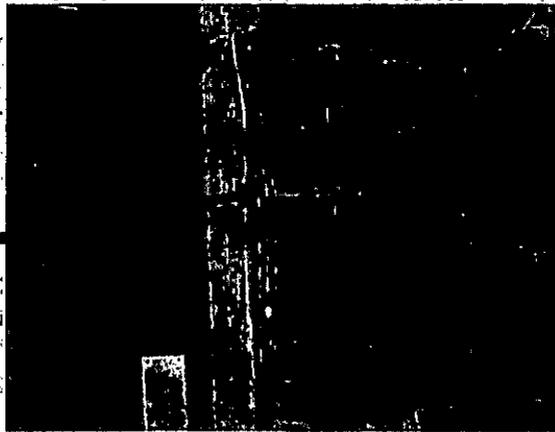

Figure E64

3a, b

Figure E65

4. Ten (10) unit ventilators in the Cafeteria are not installed.

F: Unit Ventilators in Classrooms and Offices

1. All power wiring for unit ventilators are run in flexible metal conduits (Greenfields) in lieu of electric metallic tubing (EMT) as per Specification Section 16111.3:02.A.20.b.
2. Conduit penetration through floor slab does not go through conduit sleeve.
3. Power conduits have not been terminated on the motor termination box leaving a length of power wiring exposed.

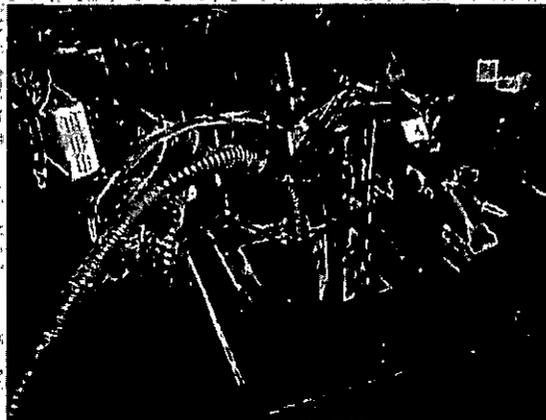

Figure E66

G. Multi-purpose Gymnasium Room

1. Old fire alarm pull station and its wiring are not removed after installation of new pull station.

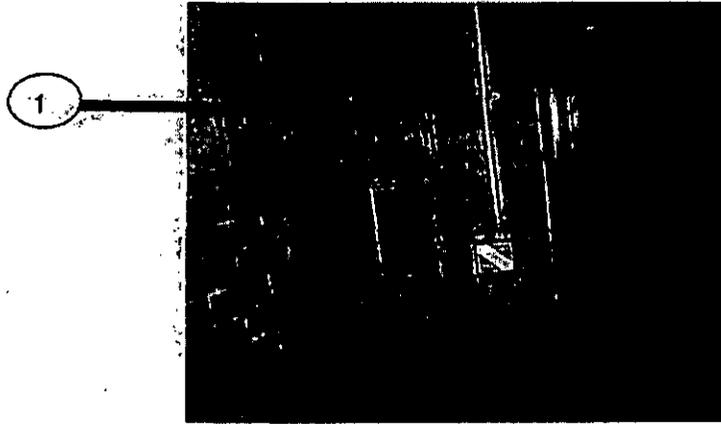

Figure E67

2. Fire alarm duct smoke detector wiring is run in exposed Greenfield conduit in lieu of rigid galvanized steel conduit.

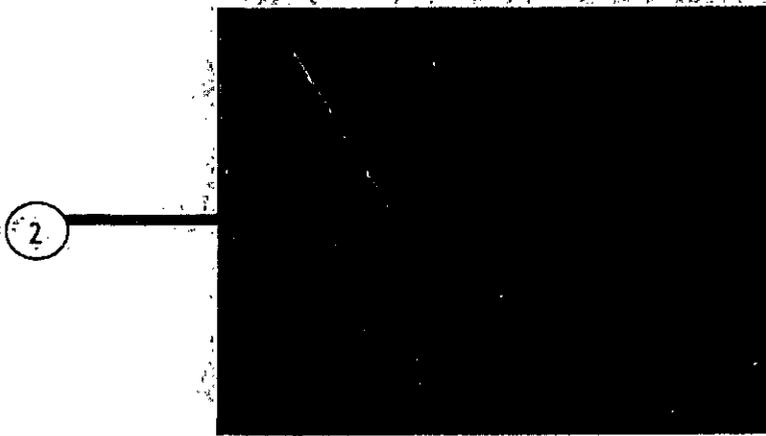

Figure E68

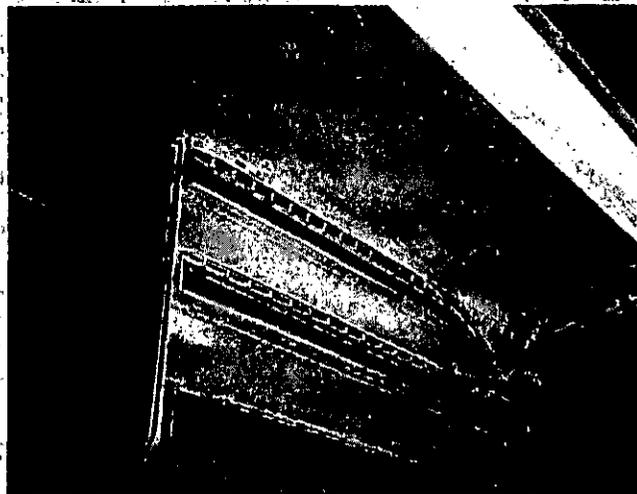

ii: Second Floor

Second Floor consists of Classrooms and Offices. The Scope of Work was to provide power to unit ventilators, receptacles, lighting fixtures in corridor and provide fire alarm devices.

During our field survey of the electrical system, the following electrical deficiencies were observed:

A. Corridor

1. Lighting fixtures type 'FA' in the corridor do not match with the shop drawings submittal.
 - a. Shop drawings indicate white acrylic overlay on the back of louvers to control the lamp glare. Contractor has used a plastic overlay material which is banned in New York City for the last many years. This plastic material also obstructs the light and has started burning at many places.
 - b. Additionally, when the fixture cover is closed, the cover hits the T5 lamp on one side, causing one of the three lamps to break. We were advised that the Contractor shall cut the part of the metal cover in the field to ensure that the cover will close properly. However, in our opinion, this will violate the UL Listing of the fixtures and we recommend that this should be done by the fixture manufacturers at the factory rather than the Contractor doing it in the field.

2a, b

Figure E69

2. Greenfields have been used to run branch circuit wiring from panelboards to various electrical loads.

Figure E70

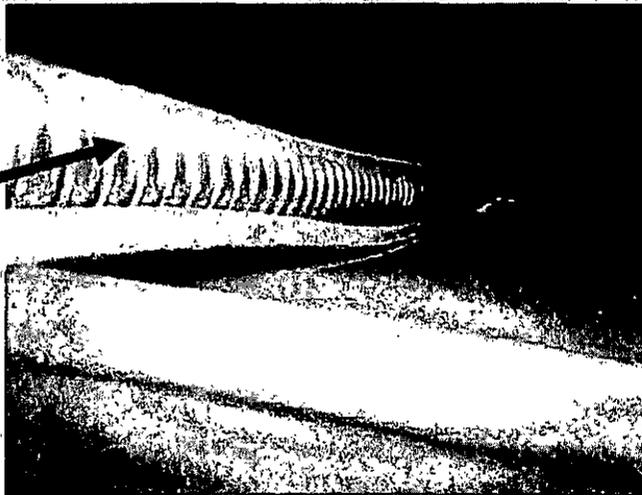

Figure E71

3. Fire alarm cables in the hung ceiling are run exposed without any conduit protection.

Note No. 6 on Drawing E6.02 states that "all fire alarm cables shall be run in rigid galvanized steel conduit".

4. Panel LP-UV2 directory is not up-to-date and does not agree with the loads connected to it.

5. Busbar for Panel LP-UV2 are rated for 100 Amp only. The overcurrent protection at distribution board DB-AC feeding LP-UV2 is 200 Amp. There is a 100 Amp main circuit breaker at Panel LP-UV2 but the feeder

to this panel is terminated at the main lugs rather than being terminated at the main breaker, thus making 100 Amp bus panel protected by a 200 Amp overcurrent protection from the Electrical Service Room panel. This clearly violates the electrical codes and makes this installation dangerous for a fire hazard.

5

Figure E72

5

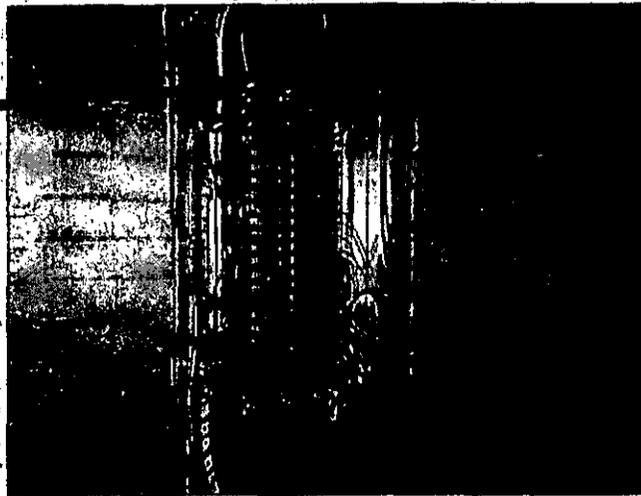

Figure E73

5

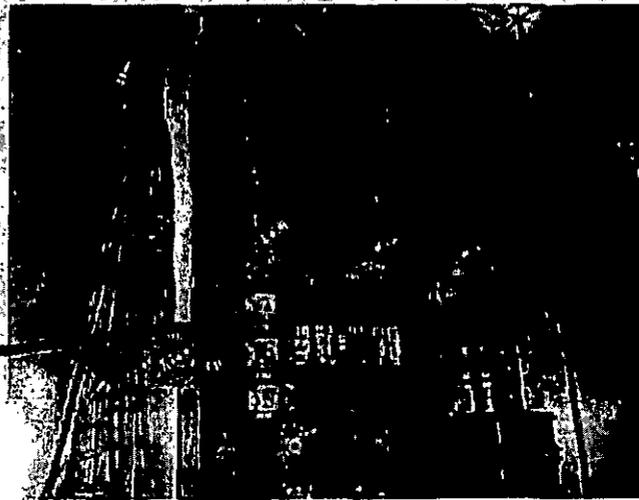

Figure E74

6. Multiple branch circuit conductors are run in one conduit without application of proper derating factor. This could cause overheating of the conductors inside the conduit and eventually damage the wire insulation.

6

Figure E75

Electrical Specification Section 16123.3.01.B.7 and General Note No. 10 on Drawing E0.01 state that "not more than 3 lighting or convenience receptacle circuits shall be installed in one (1) conduit unless otherwise indicated on drawings."

B. Classroom No. 202

1. Wiremold box leading to roof receptacle is open exposing wires and drag line for possible damage.

Figure E76

2. Wiremold connector cover is missing, exposing wires for possible damage.

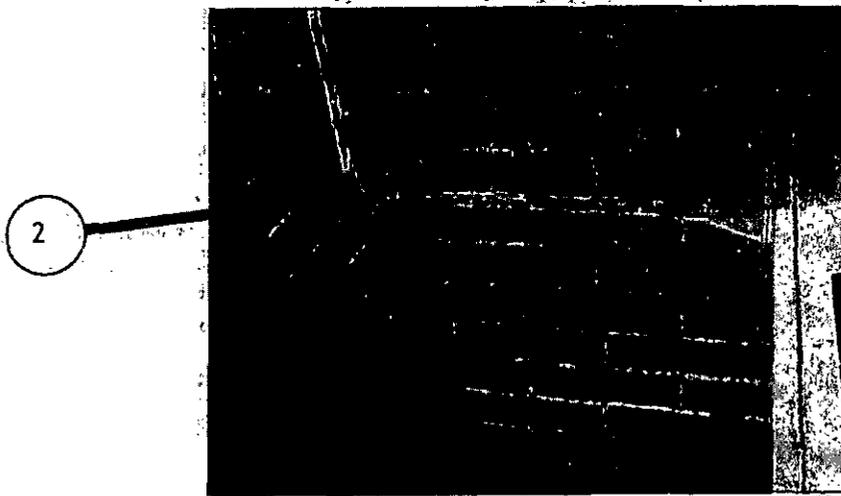

Figure E77

3. Roof receptacle circuit pass through unit ventilator raceway and roof receptacle may not be on a separate circuit.

Figure E78

C. Classroom No. 204

1. Duct smoke detector and fire smoke damper are not installed.
2. Power wiring inside the shaft junction box is exposed without box cover.

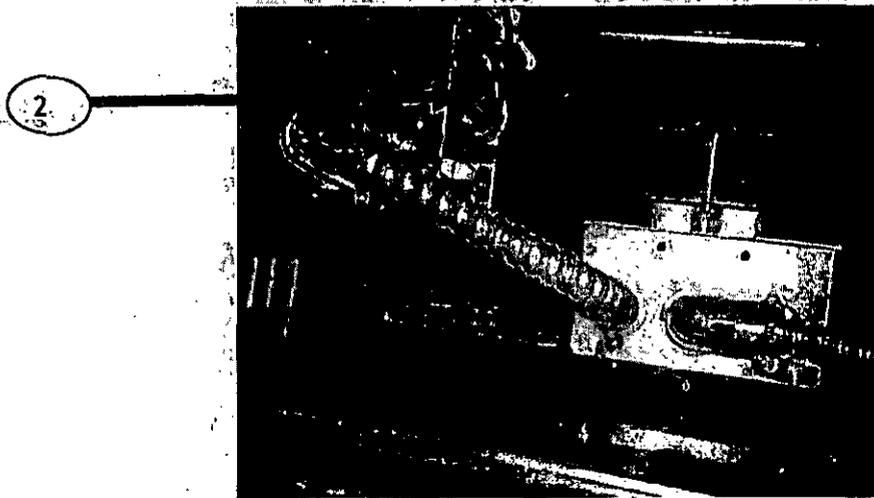

Figure E79

Figure E80

Figure E81

3. Wall opening for fire smoke damper and duct detector access is not covered with access door.

4. 'BX' wiring is run inside the duct shaft.

D. Classroom No. 205

1. Wiremold L fitting has its cover missing, exposing live wires for possible physical damage.

E. Library Room No. 218

1. After unit ventilation's installation, the existing wire mold has not been repaired properly exposing power wires to outside at multiple locations.

Notes Nos. 13 and 14 on Electrical Drawing E2.02 state that new flat type cover mold shall be installed to reroute the new wiring. This work has not been completed yet and there is exposed wiring at multiple locations:

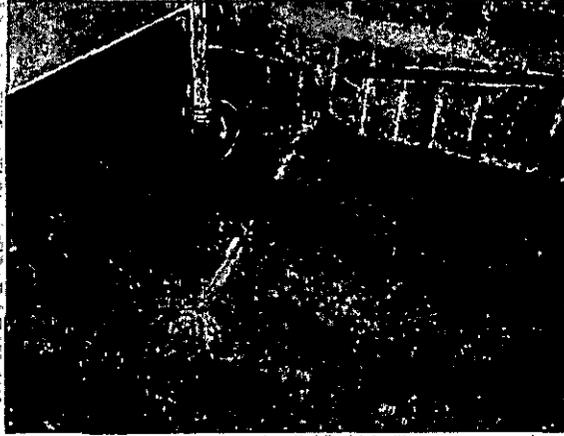

Figure E82

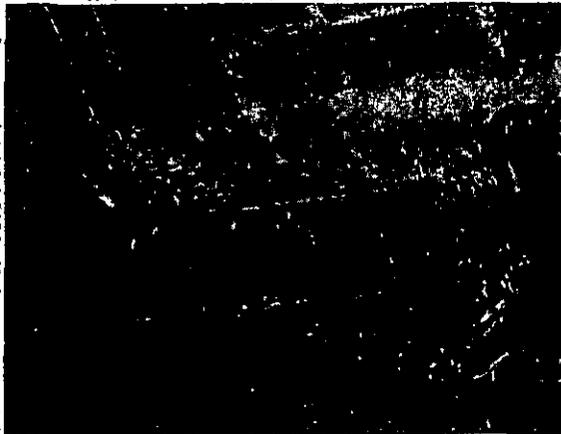

Figure E83

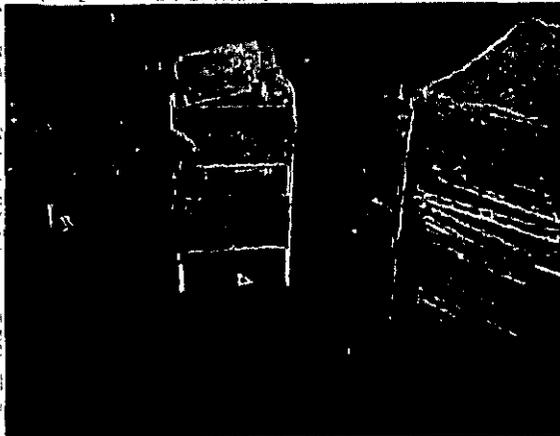

Figure E84

1

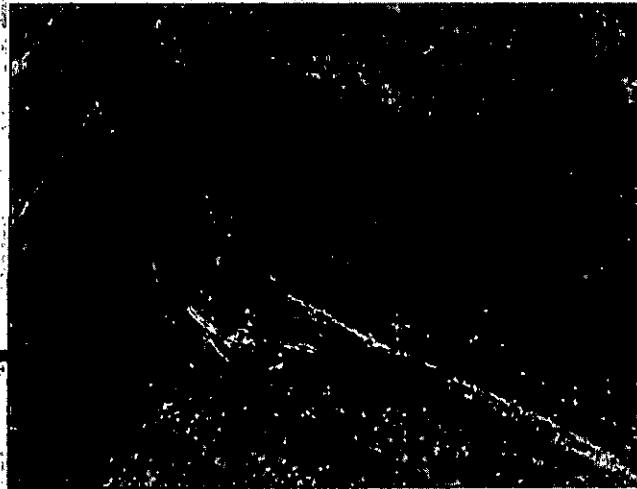

Figure E85

2. 220V outlet junction box near cast unit ventilator is not independently supported to the wall. Thus, the box and the outlet can rotate 360°, which can cause the wiring contacts to be loose and create a condition for ground fault.

2

Figure E86

3. Two (2) feet of power wiring running to a junction box is exposed without any wire mold or raceway protection.

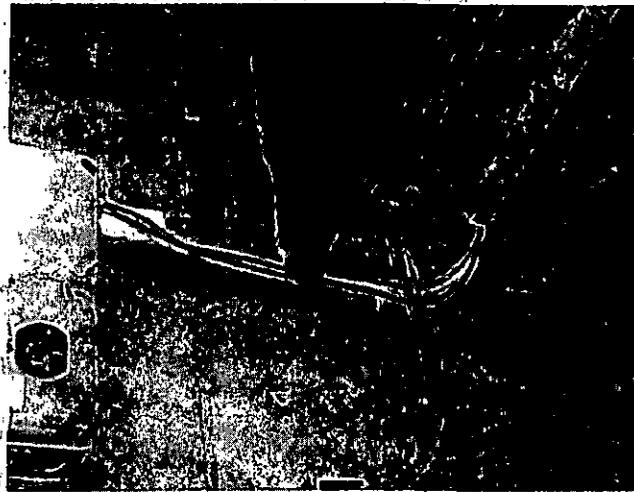

Figure E87

4. Wiremold connector is missing exposing live power wires for possible damage.

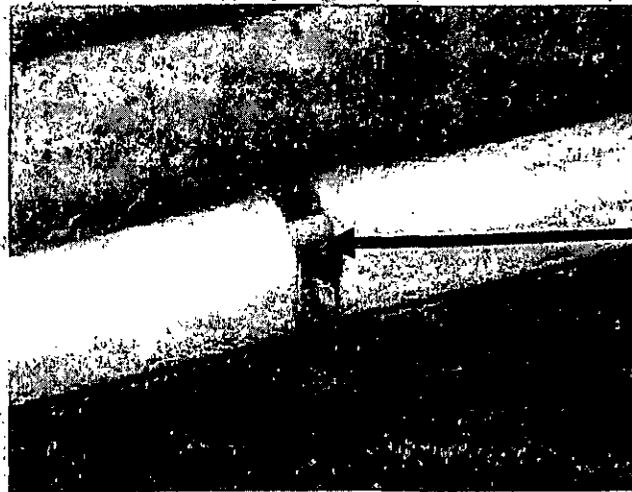

Figure E88

F. Finance Room No. 223

1. Two (2) new duplex outlets are not installed after unit ventilator completion.

Note No. 4 on Drawing E2.02 states that new outlets shall be installed with wiring and raceway extended over to the new location.

2. TEL/LAN wiring extension to new location is not provided.

G. Principal's Office Room No. 225

1. Unit ventilator's power wiring is run in Greenfield conduit and it is not connected to the motor terminal box. Thus, power wiring is exposed and wire nut splice is made outside the junction box.

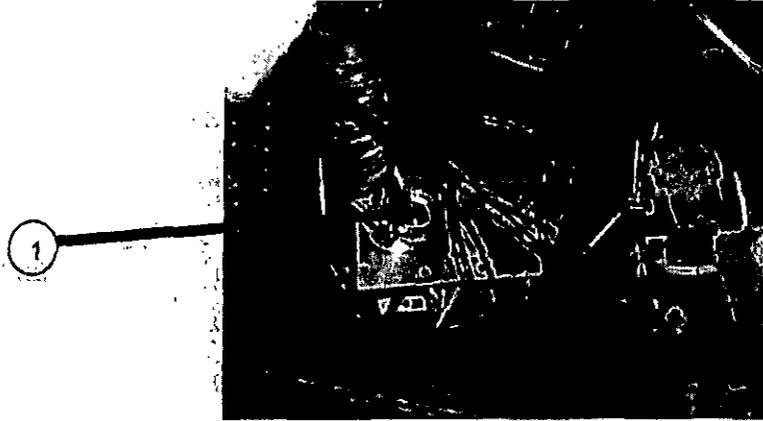

Figure E89

2. Gypsum board wall and ceiling are not repaired near duct opening and armored cable 'BX' is run exposed at the ceiling.

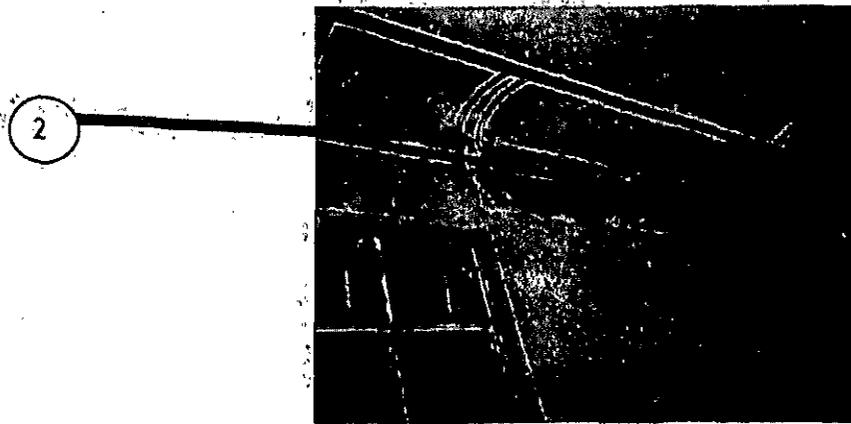

Figure E90

H. Unit Ventilators in All Classrooms and Office

1. All power wiring for unit ventilators are run in flexible metal conduits (Greenfields) in lieu of electric metallic tubing (EMT) as per Specification Section 16111.3.02.A.20.b.
2. Conduit penetration through floor slab does not go through conduit sleeve.

3. Power conduits have not been terminated on the motor termination box leaving a length of power wiring exposed.

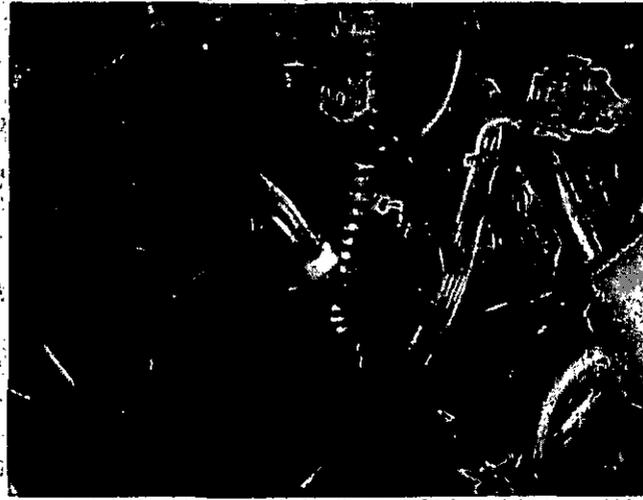

Figure E91

III. Third Floor

Third Floor Scope of Work was to furnish and install power to unit ventilators, receptacles, lighting fixtures in corridor, fire alarm duct smoke detectors and fire smoke dampers. Starters for roof exhaust fans are also located on the third floor.

In our field observation, the following deficiencies were noted:

A. Corridor

1. Lighting fixtures Type 'FA' in the corridor do not match with the shop drawings submitted.
 - a. Shop drawings indicate white acrylic overlay on the back of louvers to control the lamp glare. Contractor has used a plastic overlay material which is banned in New York City for the last many years. This plastic material also obstructs the light and has started burning at many places.
 - b. Additionally, when the fixture cover is closed, the cover hits the T5 lamp on one side, causing one of the three lamps to break. We were advised that the Contractor shall cut the part of the metal cover in the field to ensure that the cover will close properly. However, in our opinion, this will violate the UL Listing of the fixtures and we recommend that this should be done by the fixture manufacturers at the factory rather than the Contractor doing it in the field.

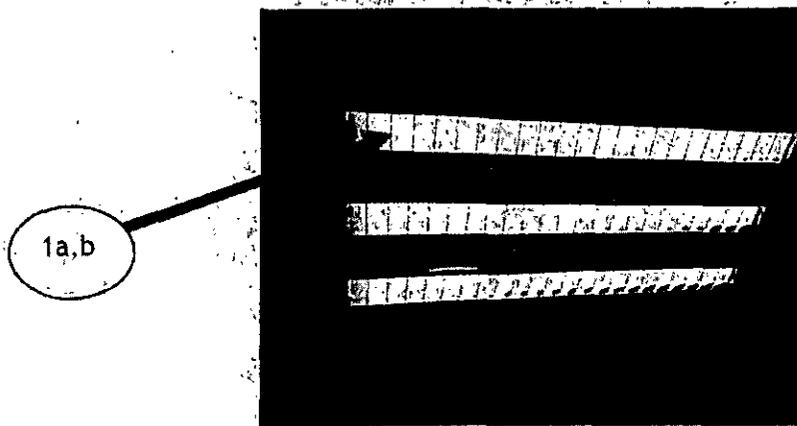

Figure E92

2. a. Greenfields have been used to run branch circuit wiring from panelboards to various electrical loads.

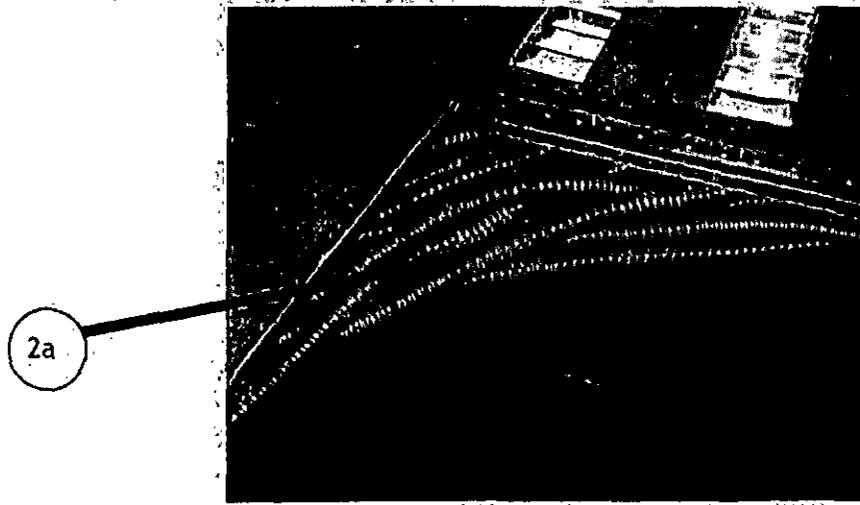

Figure E93

- b. Junction box is not independently supported to the building structure and does not have open knock-out sealed.

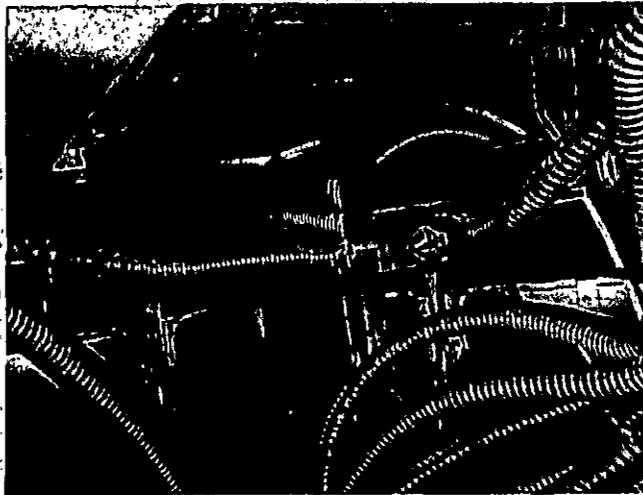

Figure E94

3. Fire alarm cables in the hung ceiling are run exposed without any conduit protection.

Note No. 6 on Drawing E6.02 states that "all fire alarm cables shall be run in rigid galvanized steel conduit".

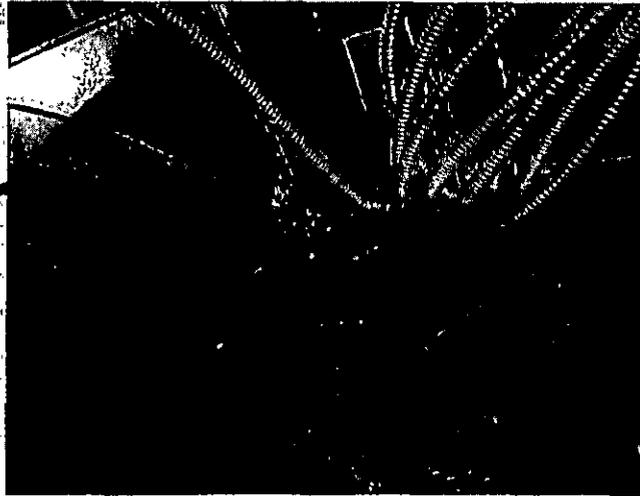

Figure E95

4.
 - a. Exposed power wires are run concealed in the hung ceiling outside Classroom No. 301.
 - b. For the sake of re-using existing junction box and wiring, the Contractor has made wiring splice outside the box in the open air.
 - c. The grounding cable is stretched to the extent that it may break anytime due to excessive stretching and become loose, making this an ungrounded system.

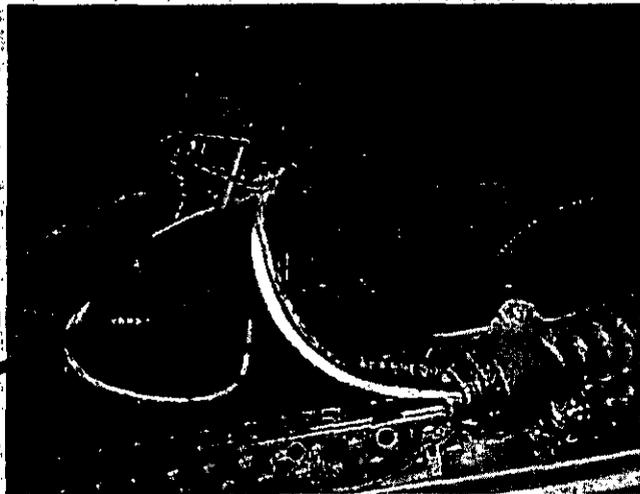

Figure E96

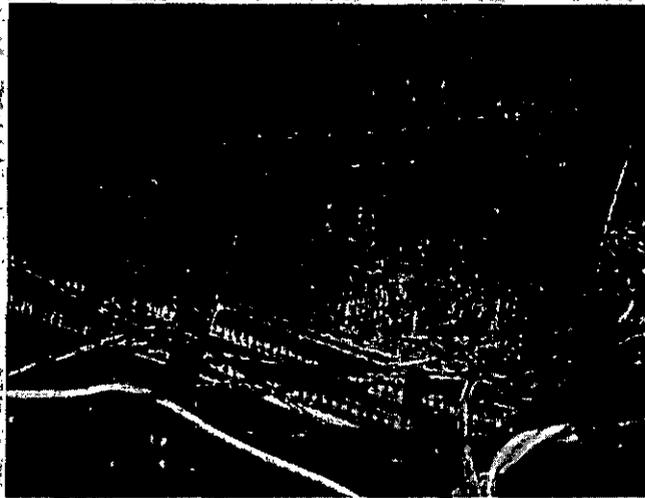

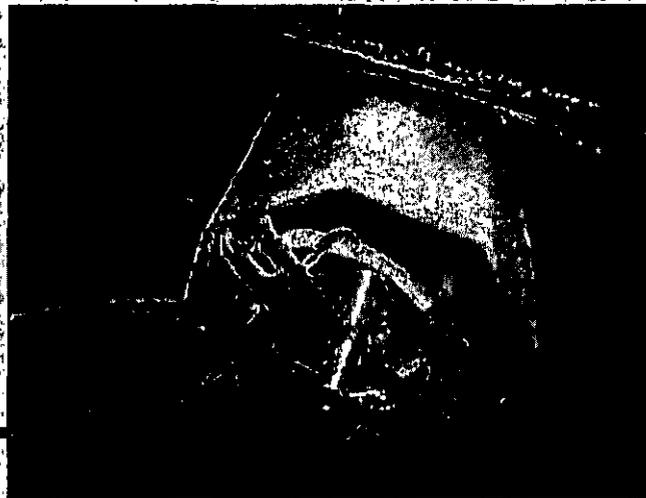

Figure E97

4a, b

4c

Figure E98

This is clearly a violation of Electrical Code and must be corrected immediately to avoid any personnel electrocution due to ungrounded system.

5. Power conduit openings to GX-1 unit on the roof are not patched and firestopped. Conduits are run without using any conduit sleeves.

5

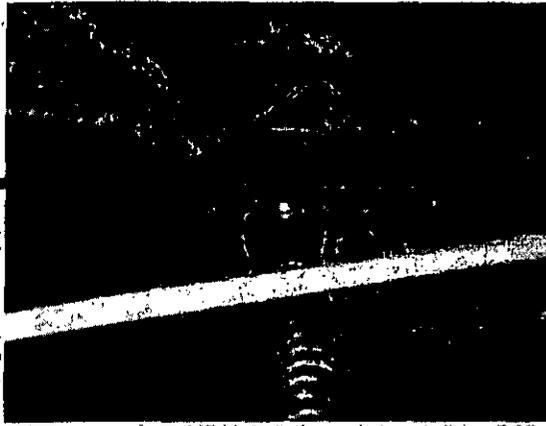

Figure E99

5

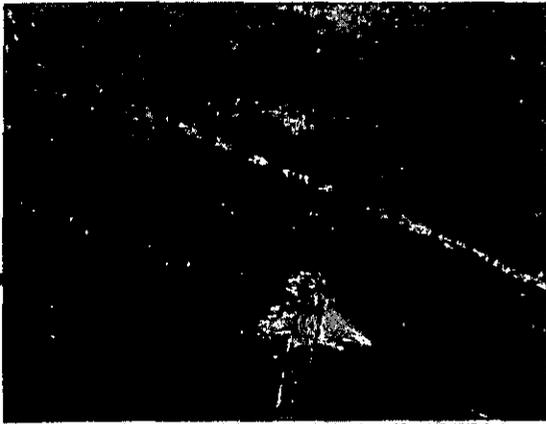

Figure E100

B. Room 302

1. Fire smoke damper and duct detector are not installed. Only fire alarm cable is pulled through junction box with missing cover.

1

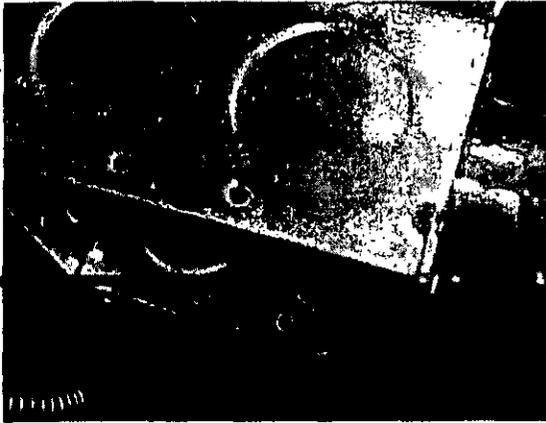

Figure E101

2. Opening in the wall and duct access have not been covered.

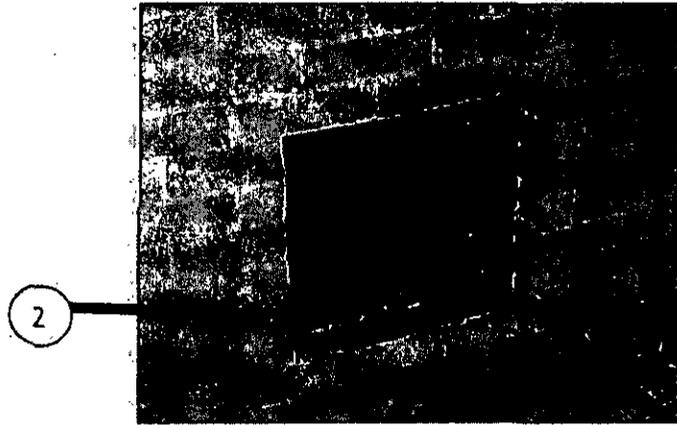

Figure E102

3. Gypsum board ceiling near duct riser shaft has not been repaired.

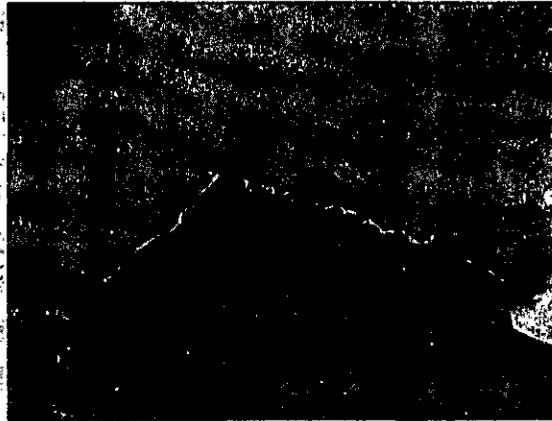

Figure E103

C. Computer Class Room No. 311

1. Two (2) of the four (4) receptacles are not installed.
2. Two (2) receptacles installed had cover missing.

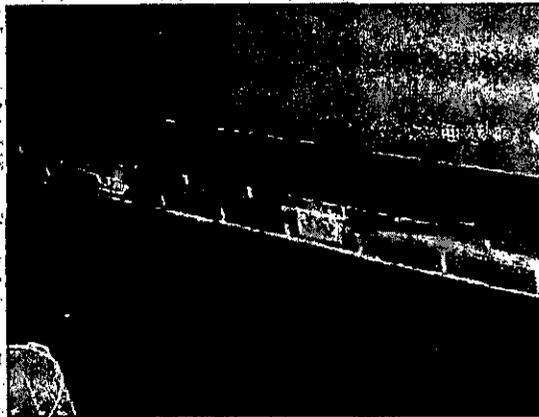

Figure E104

D. Physical Lab Room No. 317

1. Fire alarm cables are run exposed in the riser shaft.
2. Pull box carrying fire alarm cable is not covered.

1

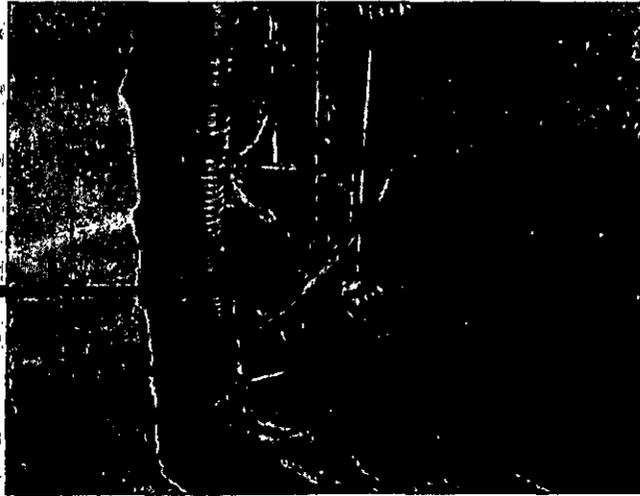

Figure E105

2

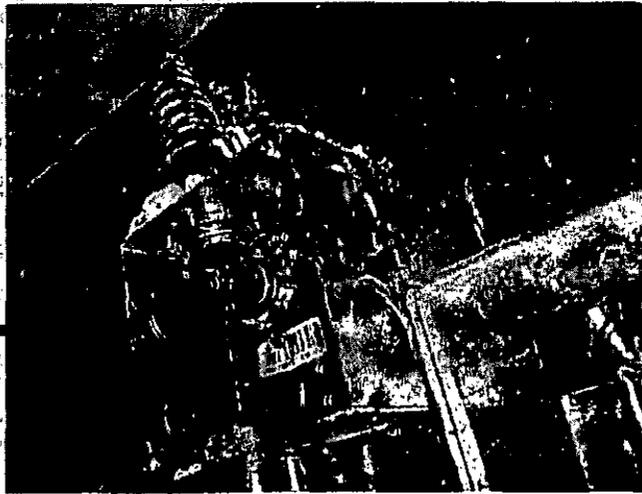

Figure E106

3. Fire smoke damper and duct detector are not installed. Only fire alarm cable is pulled through junction box with missing cover.
4. Opening in the wall and duct access have not been covered.

E. Storage Room No. 318

1. This chemical storage closet space has been used to house motor controllers for various exhaust fans.

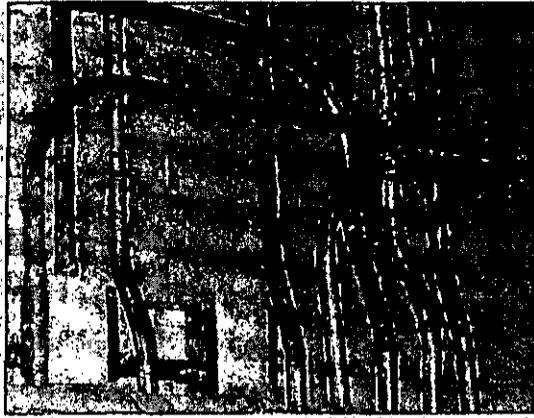

Figure E107

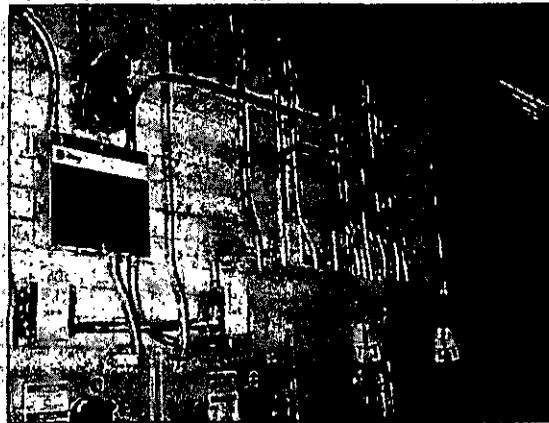

Figure E108

2. Conduit penetration through wall is not patched and firestopped.

Figure E109

2

3. Conduit openings at ceiling and wall are not patched and firestopped.

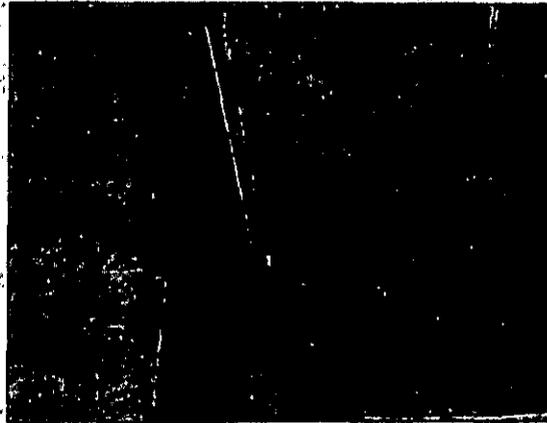

Figure E110

Figure E111

4. Branch circuit wires to starters for five (5) exhaust fans are run through one (1) common raceway without proper derating factor application and the wire size has not been upsized to offset the heating effect.

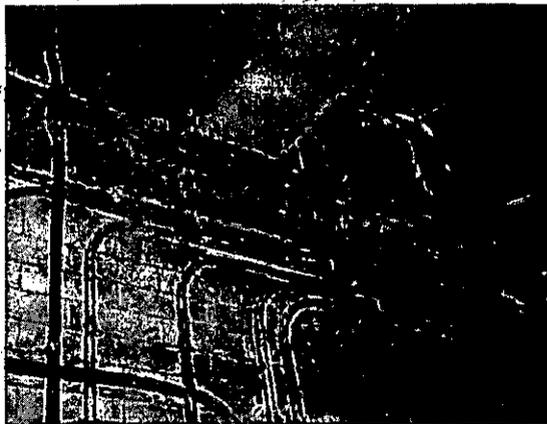

Figure E112

F. Chemistry Laboratory Room No. 319

1. Receptacle on west wall is not installed.
2. a. Exhaust fan located on the west wall of the Lab is not running, and it appears that the fan motor is burnt out. Extension cord is used to provide power to exhaust fan and armored cable 'BX' is exposed at the back of the fan enclosure.

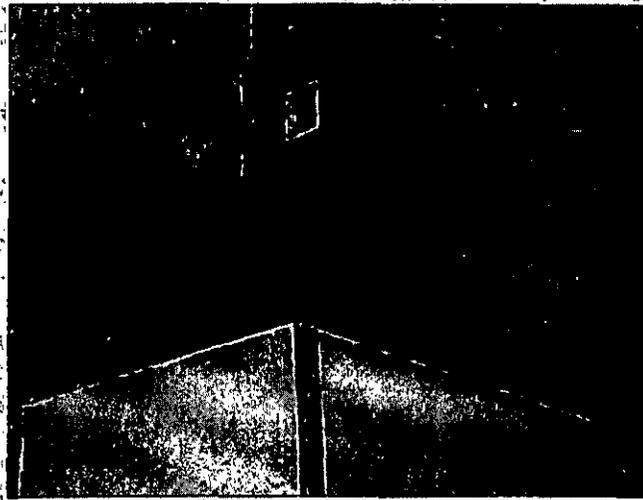

Figure E113

- b. Junction box connecting BX to exposed extension cord is not supported to any structure. This is causing strain on the extension cord and its connection to the fan motor.

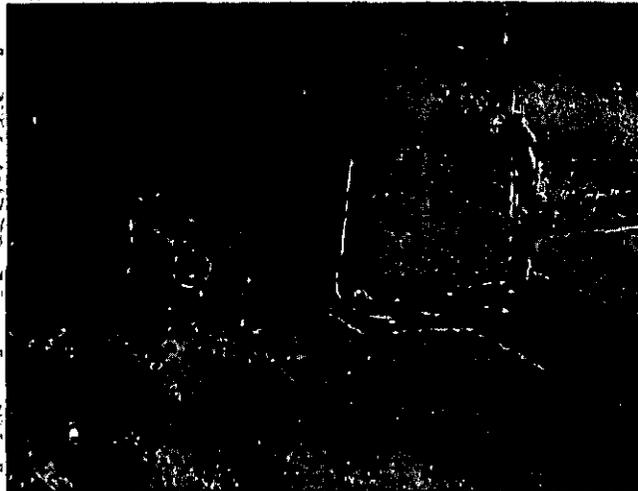

Figure E114

Figure E115

- c. Local thermal disconnect switch for exhaust fan motor has not been provided at the fan motor.
- 3. a. Power feeder inside the unit ventilation is run in Greenfield conduit in lieu of sealtite flexible conduit and presence of moisture inside the unit may cause the conduit to deteriorate.
- b. Greenfield does not have any connector at the end for termination on the junction box. Since the wires are partially exposed, against the rough edges of the conduit, the insulation could get damaged and cause a short circuit condition.

Figure E116

4. Conduit opening to the roof for exhaust fan LE-1 is not patched and firestopped.

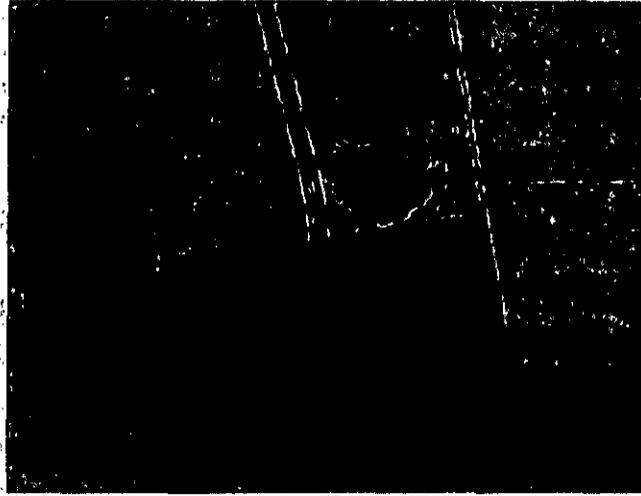

Figure E117

5. Receptacle on the west wall is not installed as called for in Note No. 4 of Drawing E2.02.

G. Unit Ventilators in Classrooms and Offices

1. All power wiring for unit ventilators are run in flexible metal conduits (Greenfields) in lieu of electric metallic tubing (EMT), as per Specification Section 16111.3.02.A.20.b.
2. Conduit penetration through floor slab does not go through conduit sleeve.
3. Power conduits have not been terminated on the motor termination box leaving a length of power wiring exposed.

Figure E118

IV. Roof Above Third Floor

A. Exhaust Fan GX-1

1. Feeder length for exhaust fan GX-1 is approximately 375' from Panel LP-UV3, via GX-1 starter located on third floor to GX-1 unit located on the roof. This would cause a voltage drop of 5.6% for a 208 volt branch circuit run, which is not acceptable by Code.
2. Two (2) disconnect switches have been used to shut down one motor in lieu of using one (1) 6 pole switch for six (6) phase legs from Star-Delta starter. This violates the Electrical Code.
3. Local disconnect switch at the unit is not labeled.

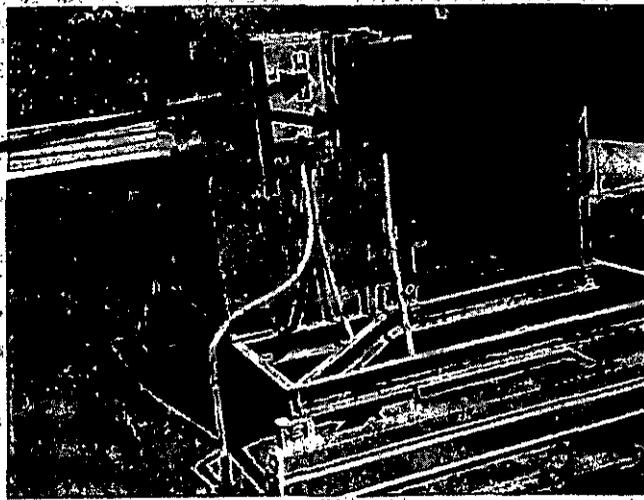

Figure E119

B. Fan GX-2

1. 3/4" RGS conduit run to the equipment has been secured using black electrical plastic tape and loose wires. This causes the rigid conduit to vibrate along with the flexible sealite conduits.

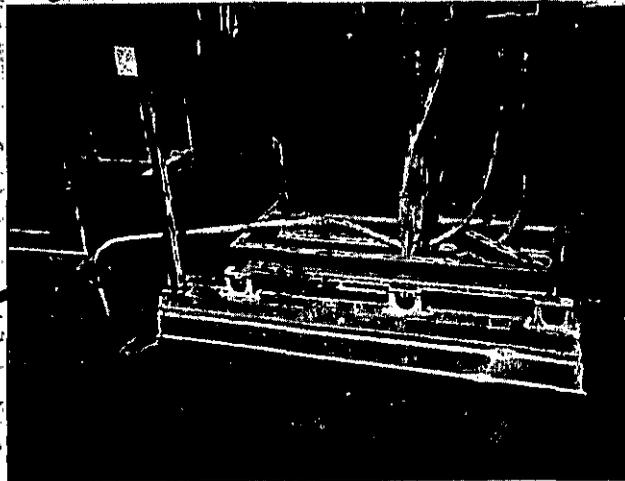

Figure E120

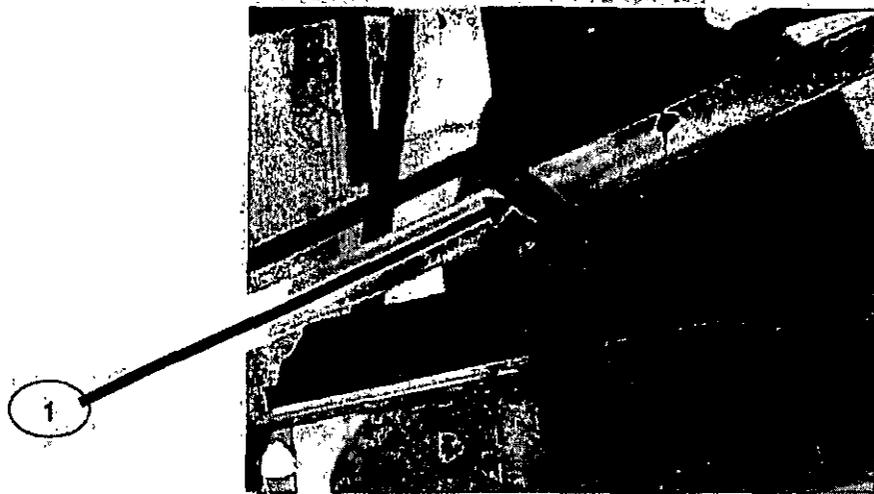

Figure E121

2. Two (2) disconnect switches have been used to shut down one motor in lieu of using one (1) 6 pole switch for six (6) phase legs from Star-Delta starter. This violates the Electrical Code.

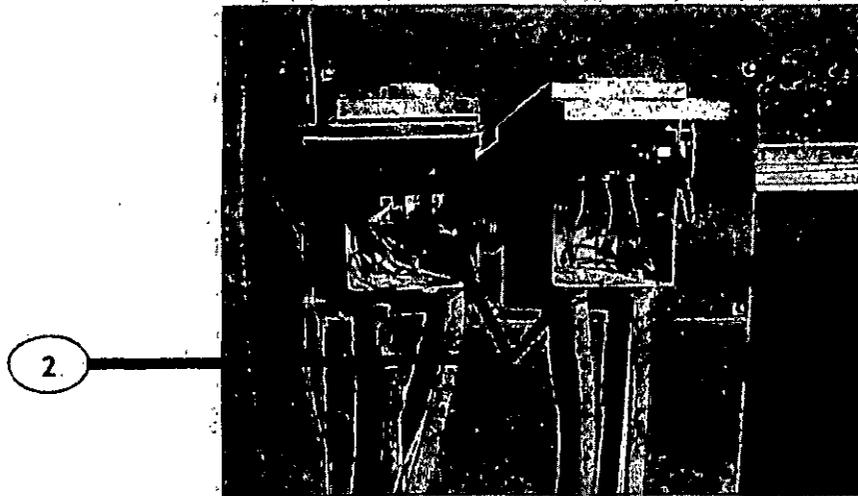

Figure E122

3. Local disconnect switch at the unit is not labeled.

Electrical Specification Section 16440-3.02:E states "Provide nameplate on switch indicating equipment served."

3

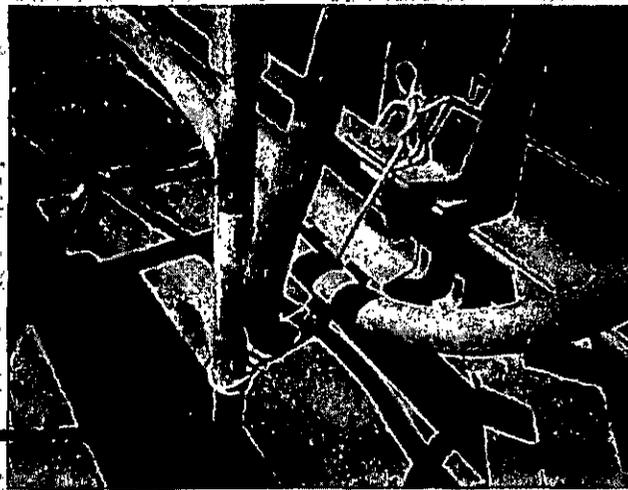

Figure E123

- 4. Ground wire is not bonded to the disconnect switch enclosure.

Figure E124

- 5. Conduit bushing inside the disconnect switch enclosure is not installed, making the wires more prone to insulation damage.

National Electric Code (NEC) Section 430.13 states that "where wires pass through an opening in an enclosure, conduit box, or barrier, a bushing shall be used to protect the conductors from the edges of openings having sharp edges".

- 6. Two (2) sets of 3 phase wires from starter to two-speed motor are not the same size. One set is 3#8 and the other is 3#10, which would cause different voltage drops at different speeds.

7. Stranded cables have been used in lieu of solid cables for #10 size and smaller as mentioned in the Specification 16123 Section 2.01.A.2.

C. KX-1

1. $\frac{3}{4}$ " rigid conduit run on the roof is not secured at all to the structure, causing it to vibrate free in the air.

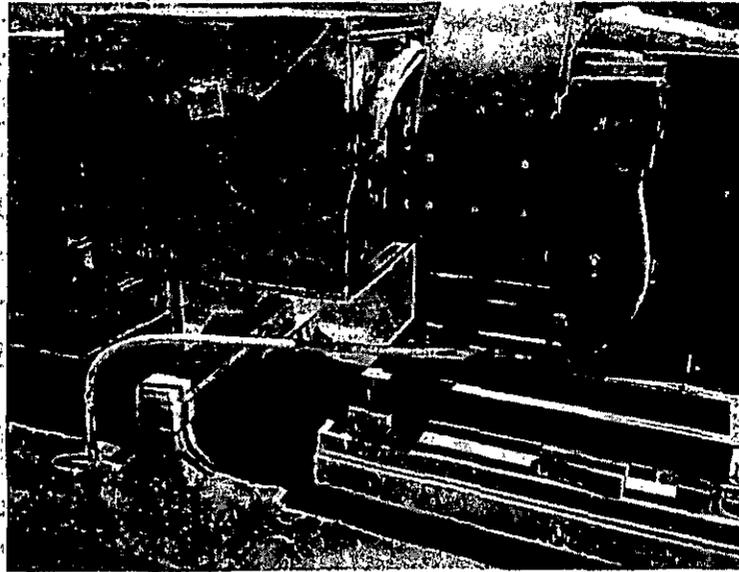

Figure E125

2. 30A, 3P local disconnect switch is not labeled.

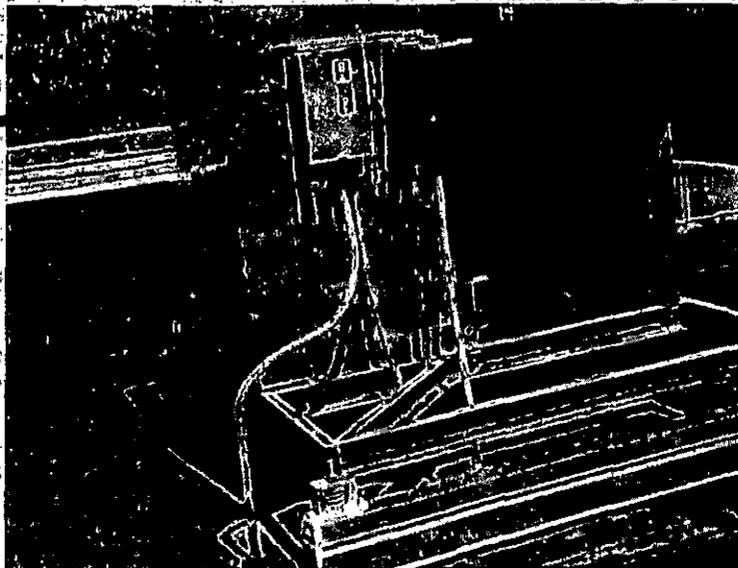

Figure E126

Electrical Specification Section 16440-3.02.E states "Provide nameplate on switch indicating equipment served." There are two local disconnect switches and neither one is labeled.

3. Stranded cables have been used in lieu of solid cables for #10 size and smaller as mentioned in the Specification 16123 Section 2.01.A.2.

D. LE-2

1. $\frac{3}{4}$ " rigid conduit run on the roof has been secured using loose piece of wire causing it to vibrate free in the air.

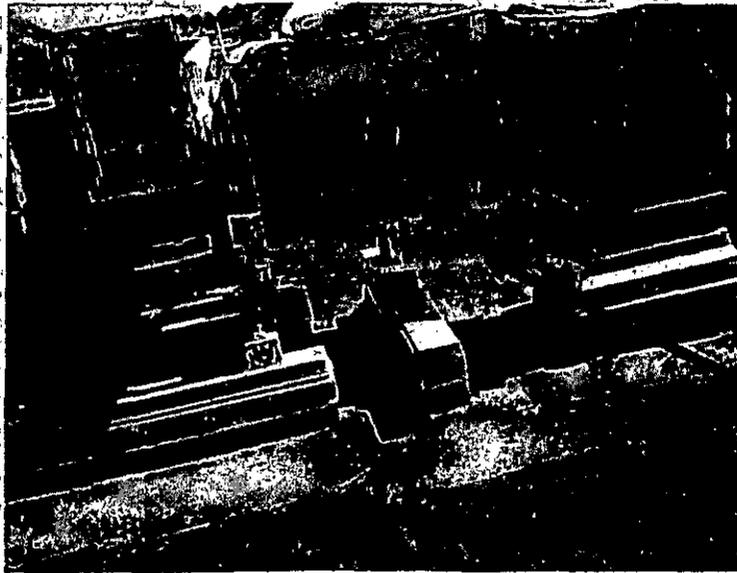

Figure E127

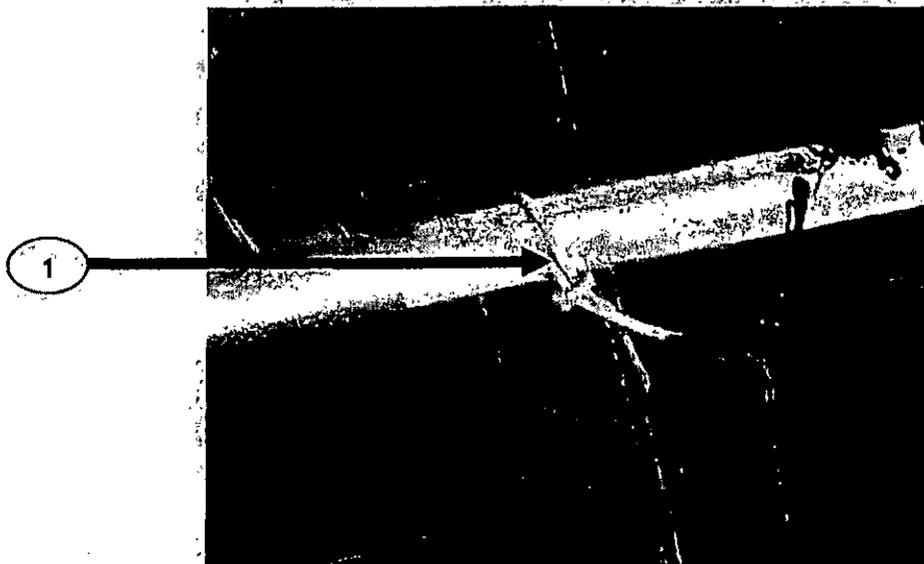

Figure E128

2. 30A, 3P local disconnect switch is not labeled.

Electrical Specification Section 16440-3.02.E states "Provide nameplate on switch indicating equipment served."

3. Ground wire is not bonded to the disconnect switch enclosure.

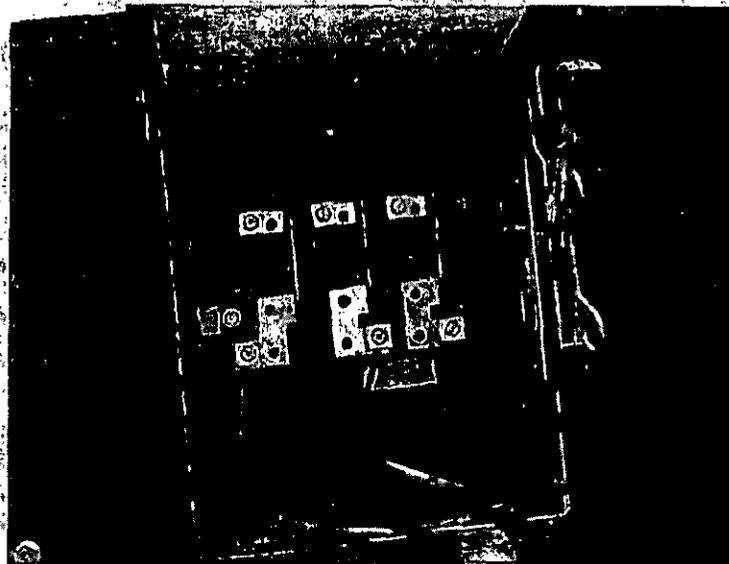

Figure E129

4. 3/4" feeder conduit up to the roof is running thru duct opening and the fire smoke damper. This conduit will obstruct the closing of fire smoke damper in case of a fire emergency and will allow the smoke to travel across the barrier, causing a hazardous situation.

Figure E130

5. Conduit bushing inside the disconnect switch enclosure is not installed, making the wires more prone to insulation damage.

National Electric Code (NEC) Section 430.13 states that "where wires pass through an opening in an enclosure, conduit box or barrier, a bushing shall be used to protect the conductors from the edges of openings having sharp edges."

6. Conduit passing through the sheet metal duct has damaged the duct and has created an opening which cannot be repaired.
7. Stranded cables have been used in lieu of solid cables for #10 size and smaller as mentioned in the Specification 16123 Section 2.01.A.2.

E. LE-1

1. 3/4" conduit on the roof is not secured at all to any structure, causing it to vibrate along with motor vibration.

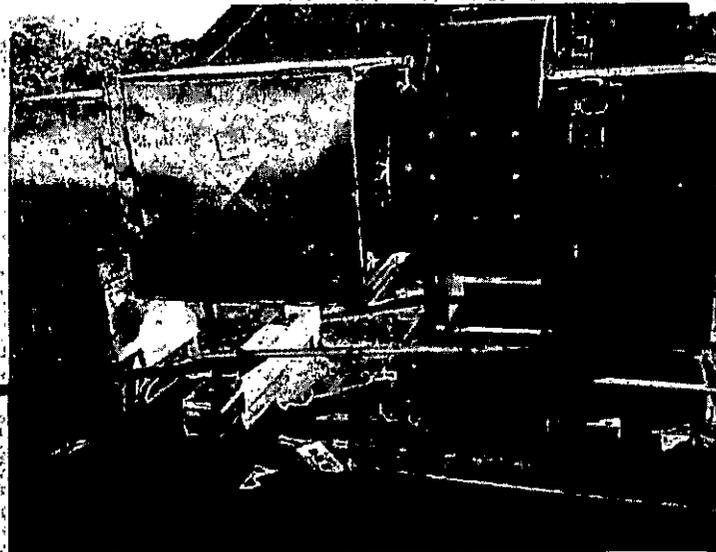

Figure E131.

2. 30A, 3 phase local disconnect switch is not labeled.

Figure E132

3. Conduit bushing at termination inside switch enclosure is not installed.
4. Conduit sleeve has not been used to install conduit through the roof.
5. Stranded cables have been used in lieu of solid cables for #10 size and smaller as mentioned in the Specification 16123 Section 2.01.A.2.

V. **Roof Above Mall and Multi-purpose Room (Gymnasium)**

This roof consists of three (3) different levels where mechanical equipment is installed.

1. Lowest roof is the roof above the Gym Locker Room. Equipment on this roof is AC-1 unit which is served by 400 Amp feeder.
 2. Slightly higher than this is the roof above the Mall Classrooms. There are three (3) HVAC equipments installed on this roof. AC-2 and AH-1 are new units. The third equipment is an existing unit which was not part of the Contractor's scope.
 3. The next higher roof is above the Gymnasium stage area where two (2) exhaust fans are located.
- A. Air Handling Unit Above Mall Classroom

1. Local disconnect switch is not labeled.

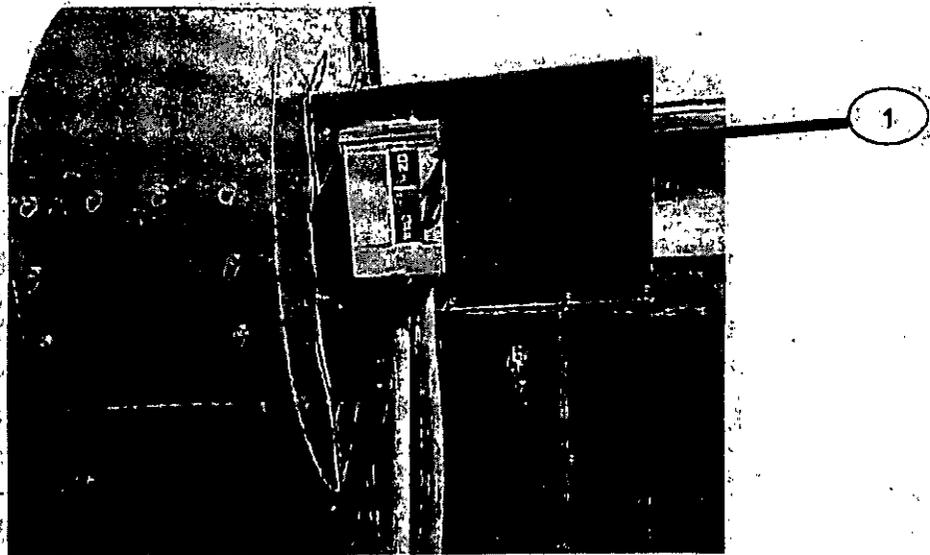

Figure E133

2. Ground wire is not bonded to the switch.

3. Bushing is not installed for wire protection.

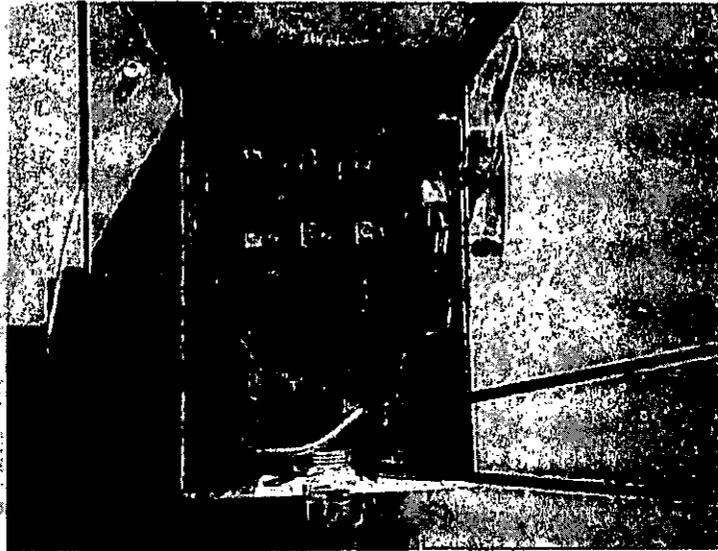

Figure E134

4. Part of the conduit run is old and existing with conduit corroding at multiple locations. Couplings and connectors are corroding at multiple locations.
5. Kindorf supporting conduit is missing at multiple locations leaving approximately 30' of conduit sagging down due to weight.

Figure E135

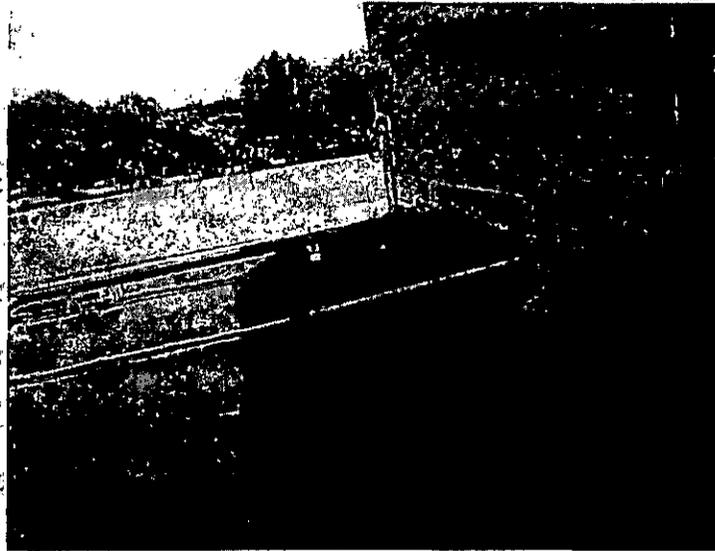

Figure E136

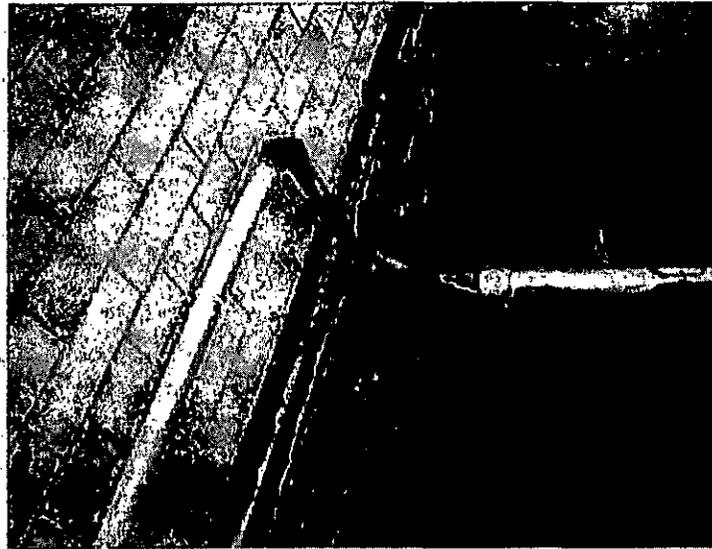

Figure E137

B. AC-2 Unit

1. 4" and 3/4" conduits are sagging down due to missing Kindorf support for almost 16' of conduit run.

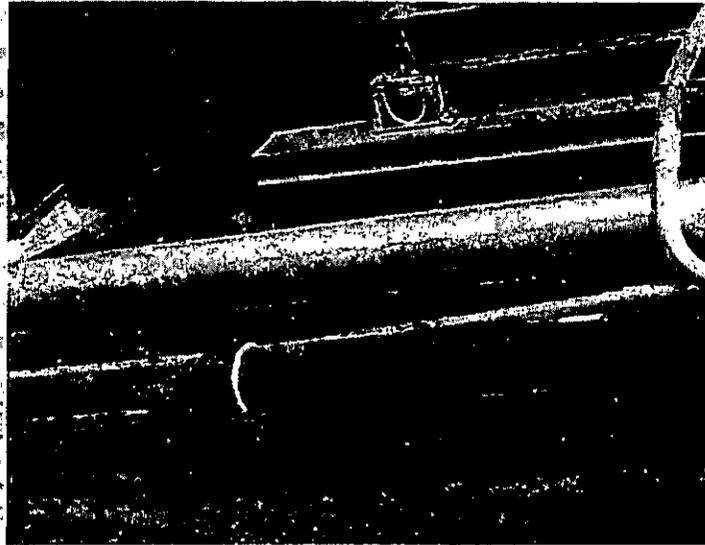

Figure E138

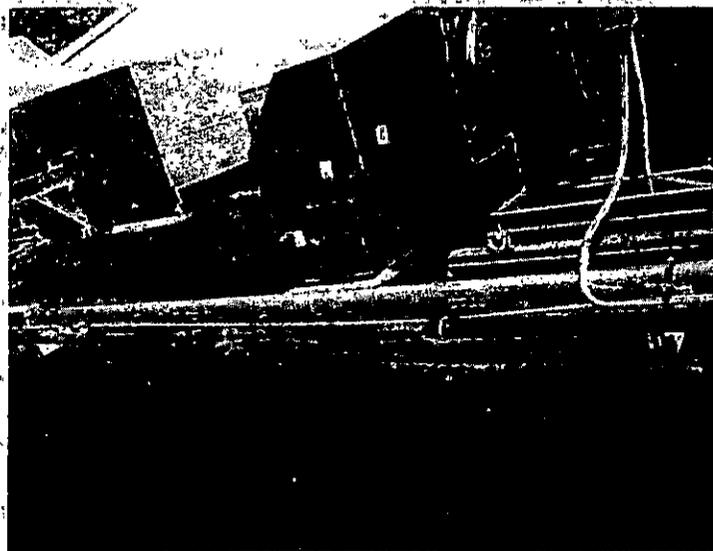

Figure E139

2. Pullbox for 400 Amp feeder run is loose and can rotate 90° on either side because the pullbox has not been fastened to any structure.

Specification Section 16111, 3:02.20.E.1 states that "Pullboxes shall be supported from the Building structure independent of the conduits".

2

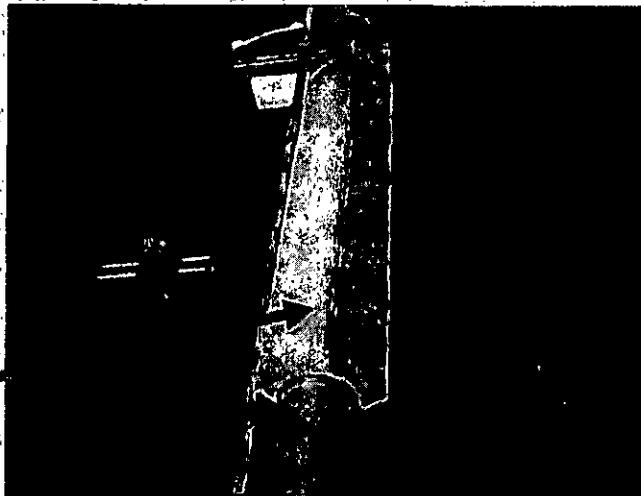

Figure E140

2

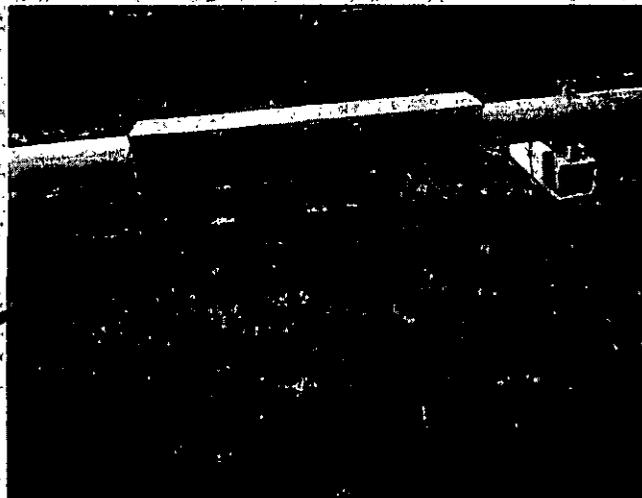

Figure E141

3. Conduits feeding power to air conditioning unit have been strapped to the Kindorf supporting HVAC pipe.

3

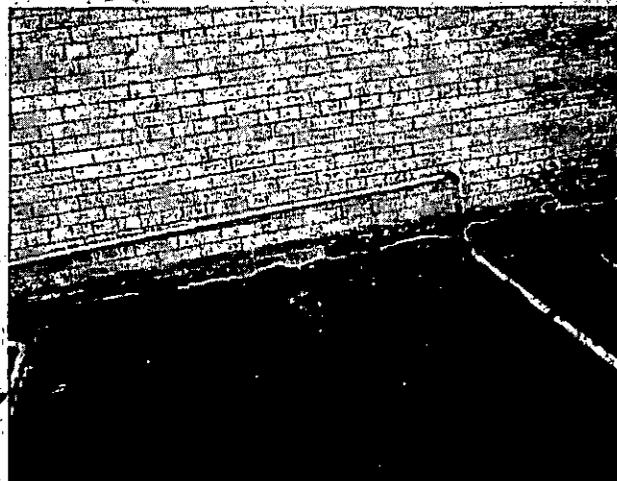

Figure E142

VI. BASEMENT CRAWL SPACE

1. Greenfield has been used in lieu of rigid metal conduit through slab opening for unit ventilator power wiring.
2. Power wiring has been run very close to steam pipes.

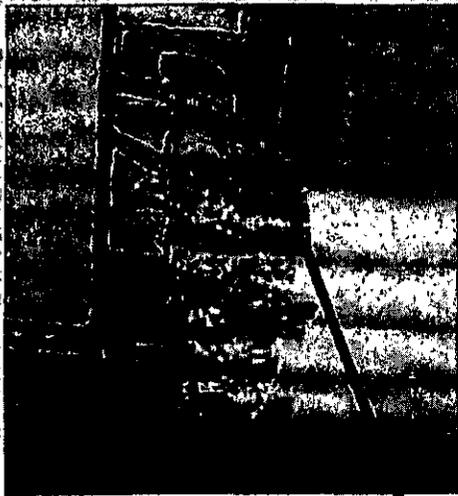

Figure E143

1

Figure E144

2

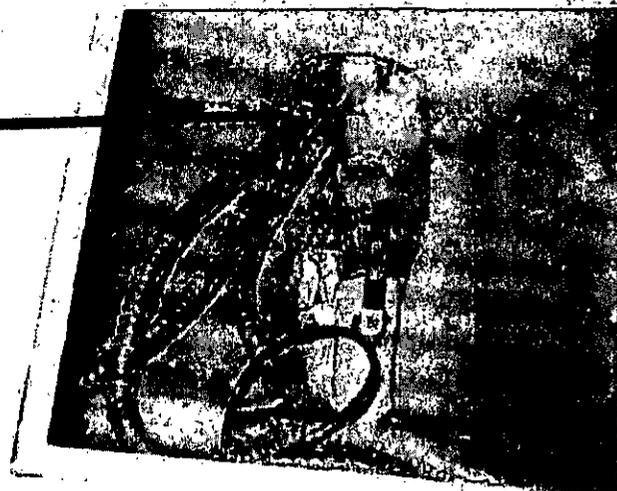

Figure E145

2

3. a. 400A feeder in 4" C for AC-1 unit on the roof is passing through the crawl space in the Locker Room. The pull box used for this feeder in the Locker Room has exposed feeder due to missing cover.
- b. Feeders exposed in the pull box are not color tapped.

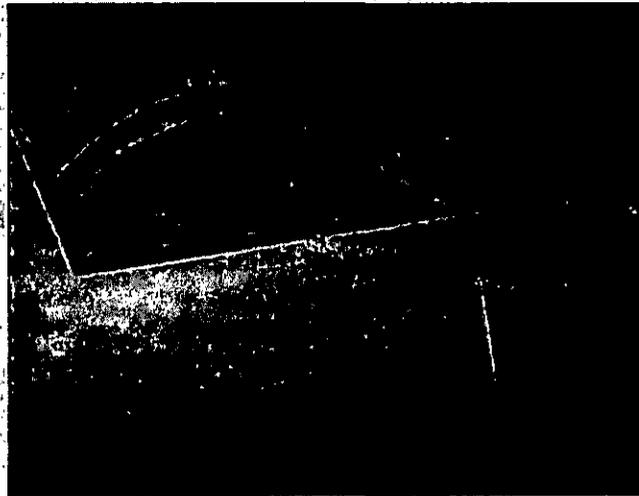

Figure E146

**MECHANICAL
RECOMMENDATIONS:**

1. Piping

- a. Replace all gruvlok piping with flanged or welded piping as per specification section 15820-2.01.
- b. Piping not provided with identification as per specification section 15000-1.26.
- c. Provide piping penetrations through rated walls as per "DETAIL OF PIPING PIRCING REQUIRED FIRE RATED PARTITIONS AND WALL" on contract drawing M2.13.
- d. Provide dielectric fittings between any dissimilar metal pipes as per contract drawing M-001. Replace any damaged pipe or equipment.
- e. Replace all damaged piping.

2. Pipe Insulation

- a. Pipe fitting insulation is not per specification section 15850-2.03 requiring factory precut Hi-Lo Temp insulation insert covered with PVC fitting cover. Fittings in the field wrapped with mineral wool and covered with aluminum foil tape. Figures shown are a small sampling, the deficiency occurs throughout school.
- b. Inspect all piping within concealed soffits, chases, and crawl space. Insulate all piping to meet specification section 15850.

3. Pipe Hangers

- a. Install pipe trapeze hangers per "TRAPEZE HANGER DETAIL" detail on contract drawing M2.14 which requires load bearing calcium silicate insulation at hanger and semi-cylindrical galvanized iron shield for hot pipes 2-1/2" & over.
- b. Install pipe clevis hangers per "CLEVIS HANGER" detail on contract drawing M2.14 which requires load bearing calcium silicate insulation at hanger and semi-cylindrical galvanized iron shield for hot pipes 2-1/2" & over. For pipe 4" and over, use clevis roller hanger.

4. Ductwork

- a. Replace ducts exposed to weather with aluminum ductwork per specification section 15840-2.01-G and section 15840-2.05-C.
- b. Replace fume hood exhaust with stainless steel as per specification section 15840-4.
- c. Provide piping penetrations through rated walls as per "DETAIL OF PIPING PIRCING REQUIRED FIRE RATED PARTITIONS AND WALL" on contract drawing M2.13.
- d. Provide dielectric fittings between any dissimilar metal pipes as per contract drawing M-001. Replace any damaged pipe or equipment.
- e. Replace any damaged piping.

- f. Replace kitchen exhaust ductwork as per specification section 15840-4 which requires 10 gauge black iron with continuously welded seams and continuously welded joint connections in accordance with NFPA 96. NFPA 96 allows for 4 types of kitchen exhaust duct connections; Telescoping joint, Bell-type joint, Flange with edge weld, and Flange with filled weld (all of these connection types provide minimal extrusion into the duct).
 - g. The inside of the kitchen exhaust duct exhibits significant amount of rust for a two year old installation. Replace ductwork.
5. Roof duct supports EF's and AC's
- a. Install duct supports in accordance with "DUCT SUPPORT ON ROOF" detail on contract drawing M2.13.
 - b. Avoid the use of dissimilar metals used on roof supports.
 - c. Vertical kitchen exhaust ducts shall be supported as per detail "SUPPORTS FROM WALL" on contract drawing M2.14.
6. Pumps
- a. Insulated pump casings as per specification section 15850-2.08-E.
 - b. insulated flex hose as per specification section 15850-2.01-E.
 - c. Insulate Strainer/suction diffuser as per specification section 15850-2.01-K.
 - d. Pump not provided with nameplate as per specification section 15000-1.24-A.
7. Valves
- a. Replace all valves to meet specification section 15830-2.07.
 - b. Tag all valves per specification section 15000-1.25-A.
 - c. Provide automatic air vents per specification section 15801-2.08
 - d. Provide pressure gauges per specification section 15801-2.02
8. Equipment
- a. Provide equipment with identification as per specification section 15000-1.26.
 - b. Repair/replace any damaged equipment.
9. Equipment insulation
- a. Insulate all required equipment as per specification section 15850-2.08.
10. Unit ventilator / Fan coil unit
- a. Remove unit with OA louvers and reinstall as per sketch 20.
 - b. Wrong model units should be replaced with the appropriate model.
 - c. Secure unit to wall as per Trane installation manual.
 - d. Insulate condensate drain line as per specification section 15850-2.01.
 - e. Provide condensate drain piping as per "FOUR PIPE UNIT VENTILATOR PIPING" detail.

- f. Provide fire stopping is not provided on the chilled water and heating hot water pipe penetration as per contract drawings M2.13 detail "PIPE SLEEVE THRU FLOOR SLAB".
 - g. Insulate chilled water supply and return lines as per specification section 15850-2.01.
 - h. Replace any damaged components on unit.
- 11. Glycol fill unit
 - a. Replace fill units per engineering specifications section 15815-2.04.
- 12. Venturi flow meter
 - a. Install venturi flow meters per specification section 15830-2.17-A.
- 13. Unit Heater
 - a. Install thermostat for unit heater
- 14. Area drain at west exit of new mechanical room.
 - a. Install new drain.
- 15. Fresh air louver in mech and elec room.
 - a. Install motorized dampers as per contract drawing M2.05.
- 16. EF-1 and EF-2.
 - a. Install motorized damper as per contract drawing M2.13.
- 17. FSD's
 - a. Repair/replace FSD's throughout the building.
- 18. Grilles, registers, and diffusers
 - a. Provide any missing grilles, registers, and diffusers throughout the building.
- 19. Gym supply and return ductwork
 - a. Provide volume dampers as per sheetmetal Dwg # S.M. -1A.
 - b. Provide duct collars as per sheetmetal Dwg # S.M. -1B.
- 20. Cleaning, Testing, and Balancing
 - a. All hydronic systems should be drained, flushed, cleaned and have corrosion inhibitor added as per specification section 15900. Prior to this all strainers should be cleaned.

- b. All water and air systems should be tested and balanced according to the mechanical specification section 15900.

21. General exhaust fans (utility sets)

- a. provide motorized damper as per specification section 15760-2.01-D.
- b. Provide roof duct penetration constructed in accordance with the "ROOF DUCT CURB DETAIL" on contract drawing M2.13.
- c. Relocate fan to adequate distance from elbow as per specification section 15760-3.02-A which states that equipment shall be installed in accordance with manufacturer's written instructions, and with recognized industry practices. ASHRAE dictates the required distance.
- d. Provide inlet condition consistent with the "ROOF UTILITY SET FAN DETAIL" on contract drawing M2.12.
- e. Housed spring isolators are shall be leveled by the following method. Leveling nut must be turned counter clockwise to compress spring. This will lift the isolation base to provide clearance.
- f. Install sound attenuators in the ductwork located below the penetration through the roof as required per "SOUND TRAP SCHEDULE" located on contract drawing M2.11. The required sound trap is also shown "ROOF UTILITY SET FAN DETAIL" located on contract drawing M2.12.
- g. Modify the access doors located in the ductwork to comply with Reference Standard 13, Chapter 3, Section 3.4.2 of the New York City Building Code. "2-3.4.2 Service openings shall be identified with letters having a minimum height of one-half in. (12.7 mm) to indicate the location of the fire protection device(s) within.

22. Kitchen exhaust fan (KX-1)

- a. Replace kitchen exhaust ductwork access doors constructed per specification section 15840-2.04-A which requires double wall access doors located every 15' and at each change in direction.
- b. Construct kitchen exhaust ductwork access door per specification section 15840-2.11-C which states that in no case shall access doors require the removal of nuts, bolts, screws, wing nuts, wedges, or any other screws or loose device.
- c. Install FlexClad-400 outdoor duct insulation per manufactures instructions.
- d. Insulate kitchen exhaust duct per specification section 15850-2.08-H. Specification calls for 2" calcium silicate insulation on all kitchen hood exhaust ductwork.
- e. Slope kitchen exhaust ductwork toward exhaust hood as per specification section 15840-2.04-A.
- f. Properly installed fan motor cover.
- g. Install kitchen exhaust switch shown on contract drawing M2.02. To control kitchen exhaust fan.
- h. Construct new roof duct penetration in accordance with the "ROOF DUCT CURB DETAIL" on contract drawing M2.13.

23. Gym roof top ac unit

- a. Reconstruct outdoor ductwork associated with AC-2 per Sheetmetal Dwg # S.M.-1A (Revised by sheetmetal contractor 2/26/2006 and Stamped by engineer "EXCEPTIONS AS NOTED" on 5/2/2006).
- b. Finish installation of service platform for units.
- c. Provide flexible duct connection to unit as required by contract drawing M2.03.
- d. Install FlexClad-400 outdoor duct insulation per manufactures instructions. Will require the replacement of the FSK rigid insulation.
- e. Install metal strip missing off unit door to prevent insulation from coming off door. Replace damaged insulation.
- f. Provide all missing bolts on AC unit vibration isolators. Follow manufacturer's instructions.

24. Natural gas piping

- a. Install AC-2 natural gas line under the roof according to P2.02 and specification.

25. Condensate pump (CP-1 and 2)

- a. Install condensate pumps in location shown on contract drawing M2.00.

26. Air cooled chiller

- a. Secure chiller to steel channels.

27. Exterior louver

- a. Louver not provided with weep holes as per sketch SK20. Modify or replace installation to conform to sketch SK20.

28. Construction Clean-up

- a. Remove all suspended ceiling tiles post construction and remove rubble. Construction debris should be removed from entire site.

29. General construction repair

- a. Repair damage caused to existing conditions.
- b. Complete all general construction items associated with work such as completing soffits or inclosing chases. *Note: All soffits will have to be demolished to properly insulate HHWS&R piping, CHWS&R piping, and condensate piping.*

30. Building management system (BMS)

- a. Controls shall be fixed and work per specification. Controls operation should be verified by third party commissioning agent.

31. Building commissioning

- a. After all work has been complete a third party agent should be obtained to verify all work has been completed to the contract drawings and specification.

32. Structural investigation

- a. The services of a structural engineer should be obtained to analyze the structural integrity of the perimeter beams. The beams are compromised due to core drilling through them.

33. Environmental investigation

- a. Due to the presence of standing water, improper louver installation, and profusely sweating chilled water lines. An environmental investigation should be performed to determine mold is present in and around the unit ventilator/fan coil units and soffits below units (but not limited to these areas).

**ELECTRICAL
RECOMMENDATIONS:**

1. All EMT conduits used for feeders and sub-feeders shall be replaced by rigid galvanized steel conduits as mentioned in the Contract Specification Documents.
2. All conduits shall be secured to the Kindorf channel at code required distance to avoid any excessive weight on Kindorf.
3. All pull and splice boxes not supported to the building structure shall be supported independently.
4. All conduit penetrations through fire-rated walls and ceilings shall be patched and fire-stopped with approved fire-stopping materials.
5. All indoor pumps and motors are connected with Greenfield flexible conduits. These Greenfield conduits shall be replaced with flexible sealtite conduits of the same size.
6. Local disconnect switches for motors and pumps are not provided with screw-type phenolic label. Contractor shall furnish and install these labels at all disconnect switches and panel boards.
7. Riser feeders to Second and Third Floors are run in flexible Greenfield conduit. Contractor shall replace these risers with rigid galvanized steel conduits as mentioned in the Specifications.
8. One pole circuit breakers, field converted to three pole by using a piece of metal or nail shall be replaced with factory manufactured three-pole circuit breakers.
9. Multiple branch circuits run in one common raceway from Panels LP-UV1, LP-UV2 and LP-UV3 shall be segregated into multiple conduits carrying not more than three phase legs.
10. Existing CT cabinet, 1200A, 3P service switch, service end box and conduits including wires shall be removed. Conduits shall be cut flush with the slab, patched and abandoned in place.
11. Conduit feeding light fixture in the Mechanical Room shall be re-terminated at the light fixture connector.
12. All corridor fixtures type 'FA' for the First, Second and Third Floors shall be removed, refurbished at the factory, and re-installed at the job site so that there is no need for field modification. Refurbishing shall include changing plastic overlay cover and cutting part of the fixture metal cover so that the cover can be closed without damaging the lamp.
13. All flexible metal conduits (Greenfields) feeding branch circuit loads from Panel LP-UV1, LP-UV2 and LP-UV3 on the First, Second and Third Floors, respectively, shall be replaced with EMT conduits as specified in the Electrical Specification.

14. All fire alarm cables installed exposed in the hung ceiling shall be rerun through rigid galvanized steel conduit as mentioned on fire alarm drawings.
15. All fire alarm cables installed in EMT conduits in the Boiler Room and Mechanical areas shall be re-installed through rigid galvanized steel conduit as mentioned on Fire Alarm Drawings.
16. Panel board LP-UV2 located in the Second Floor Corridor is unprotected since the 250 Amp feeder does not pass through 100 Amp main circuit breaker. Existing 250 Amp riser feeder shall be replaced with new so that a tap from the riser feeder can feed 100A, main circuit breaker of Panel LP-UV2 before extending over to feed Panel LP-UV3 on the Third Floor.
17. All duct smoke detectors and fire smoke dampers shall be installed and connected to the fire alarm system as shown in Fire Alarm Drawings.
18. Wire-mold installed in Classrooms, Offices and finished areas have covers and fittings missing at multiple locations. Contractor shall re-install wire-mold with fittings so that there is no wiring exposed anywhere in the system.
19. All branch circuit wiring feeding loads other than unit ventilator and passing through unit ventilation enclosures, especially in Room Nos. 202 and 319 shall be rerouted to avoid running through unit ventilator enclosure.
20. All unit ventilators branch circuit wiring uses Greenfield to pass through concrete floor slab. These flexible metal conduit (Greenfield) shall be replaced with rigid galvanized steel conduit and sleeves while passing through floor slab. The Contractor shall maintain a safe distance of 3" between the electrical conduits and steam or hot water pipes. All openings created to run these conduits shall be patched and fire-stopped.
21. On the Third Floor Corridor ceiling outside Classroom No. 301, power wiring is run and spliced exposed without any conduit or junction box protection. New rigid conduits and junction box must be installed to enclose these wirings in a code approved manner.
22. In Computer Classroom No. 311, two (2) missing receptacles shall be installed per Contract Drawings and two (2) receptacles installed on wire-mold shall be covered with cover plates.
23. Chemistry Lab Room No. 319 exhaust fan shall be repaired or replaced with new. Furnish and install a new local disconnect switch at the fan motor and redo the wiring so that flexible metal conduit is concealed and all exposed wiring is in rigid metal conduit and junction box used for splicing is secured on a structure.
24. Replace dual local disconnect switches with one (1) 6 pole switch for exhaust fans GX-1 and GX-2.
25. Provide label, bushing and bonding jumper to each of the local disconnect switches.

26. All conduits run exposed on the roof shall be secured to a structure and sleeves shall be used to run the conduits through any floor opening.
27. Branch circuit wiring for exhaust fan GX-1 is more than 300 LF and provides a voltage drop which exceeds the code permitted limit. This wiring shall be upsized to compensate for any voltage loss.
28. Branch circuit wiring for exhaust fan LE-2 shall be relocated away from duct and fire smoke damper penetration. New conduit through sleeve shall be used to run branch circuit wiring.
29. On the roof above Mall area, existing conduits used to run new wiring shall be replaced with new for new wiring installation. New conduit installation shall be supported as required by code.
30. On the roof above the Mall area, 4" and ¾" conduits used to provide power and controls for AC-2 unit shall be provided with additional supports so that the distance between each support does not exceed code required interval.
31. Pull box used for AC-2 unit feeder shall be secured independently so that it does not rotate freely.
32. Conduit supported on the Kindorf used for mechanical piping shall be re-supported independently of any mechanical supports.
33. Provide megger test report for all cables as mentioned in the Specification 16123 Section 3.02.B.1.
34. Furnish and install emergency shut-off breakglass station for outdoor chiller unit.
35. Provide documentation to show that the electrical service layout is approved by New York City Advisory Board. Otherwise, obtain approval and provide a copy to the Owner.
36. Segregate load side feeders of distribution panel DP-AC from panel MDP and reroute these feeders in separate conduits to the load.
37. Install rubber mat in front of all electrical equipments in the electrical service room.
38. Remove all unused electrical equipments including wiring and conduits.

ELECTRICAL CODE REFERENCES

Electrical installation shall comply with the following Electrical Codes and Standards.

- A. National Fire Protection Association (NFPA 70), National Electrical Code (NEC) latest edition at the time of filing the project with New York City Bureau of Electrical Control.
- B. New York City Amendment to National Electric Code.
- C. Underwriters Laboratories Inc. (UL) comply with applicable requirements of UL Standards pertaining to electrical systems.
- D. American National Standards Institute (ANSI).
- E. National Electrical Manufacturers Association (NEMA).
- F. American Society for Testing Materials (ASTM).
- G. Institute of Electrical and Electronics Engineers inc.(IEEE).

MECHANICAL CODE REFERENCES

Mechanical installation shall comply with the following Mechanical Codes and Standards.

- A. National Fire Protection Association latest edition at the time of filing.
- B. Underwriters Laboratories Inc. (UL) comply with applicable requirements of UL Standards pertaining to mechanical and electrical systems.
- C. American Society of Mechanical Engineers (ASME).
- D. American National Standards Institute (ANSI).
- E. American Society for Testing Materials (ASTM).
- F. American Society of Heating, Refrigerating and Air-Conditioning Engineers (ASHRAE)
- G. Sheet Metal And Air Conditioning Contractors' National Association (SMACNA)
- H. New York City Building Code

RE: Solicitation No. SCA07-06636D-1
Gompers Vocation HS (Bronx)
Aircraft Noise Abatement Program/Window Replacement/AC/Roofs/Parapets

ADDENDUM NO. 1:

Attention to Bidders:

This constitutes Addendum No. 1 to the referenced Solicitation Documents. This Addendum consists of this cover page and two (2) additional pages of answers to questions raised by prospective bidders.

Bidders are to acknowledge receipt of this Addendum in their bid.

The bid opening date and time of August 10, 2006 at 11:00AM remains unchanged.

All questions/comments should be directed in writing to Mr. R. Forde, SCA Contract Administration at E-mail address: rforde@nycsca.org, Fax Number (718) 472-0477, Phone Number (718)752-5288.

Sincerely,

Janet C. Cowhey
Director, Contract Administration

JCC/rdf

Questions and Answers

Question # 1: Floor Plans A-102A thru A-105B indicate 2HR rated Shaft Wall Partition per Details on Drawing # A-411 WHILE RCP Drawings A-802A thru A-805B point to the same locations and call it 6" CMU Shaft Enclosure per Detail A/A-411. Please advise

Answer #1: *Shaft wall partition will be as noted on Drawings A-102A thru A-105B, per details on Drawing A-411.*

Question #2: Acoustic window details show blinds but no Specification Section exists. Please advise.

Answer #2: *Blinds shall be as follows:*

1. *Blinds: Commercial quality 1".*
2. *Color: As selected by Architect from manufacturer's standard colors.*
3. *Tilt Mechanism: Radio Knob or other similar means without having to remove the guardian sash. Tilting mechanism driven by a cable attachment with a universal clutch to minimize cable or blind damage.*
4. *Factory install blinds enclosed between the exterior and the interior sash of the window unit.*

Question # 3: Work shown against symbol as ineligible but is in Base Bid on Drawing # A-201 thru A-208. Please advise.

Answer #3: *The term "ineligible" relates to funding. These windows, except for the window shades, are in base bid*

Question #4: "Acoustical treatment" is shown on Drawing # A-102A thru A-106B. Please clarify.

Answer #4: *There is no separate "acoustical treatment" other than the work shown on the contract documents.*

Question #5: Is the Project Labor Agreement (PLA) in effect for this project? Please advise.

Answer #5: *No*

Question# 6: Is pipe scaffolding required for the entire building for full duration? Please advise.

Answer #6: *Yes, scaffolding is required until all work is signed off by all parties.*

Question #7: Detail 1 on Drawing A-410 states that the soffit height is to be 10'-0" A.F.F. plus or minus. Detail 1 on Drawing H-102A indicates that the soffit height is to be 9'-0" A.F.F. plus or minus. Which is correct?

Answer #7: *Soffit height will be per 'H' Drawings (9'-0" A.F.F.).*

Question #8: Exhibit 1 and Appendix A: Exhibit 1, FAA requirements states that the over all DBE participation is 13.7%. Appendix A, Information to Bidders states that the utilization goal is 20% for M/WBE and 10% for LBE participation. Please clarify which of these requirements we are to apply to the above project.

Answer #8: *This school is funded primarily by the FAA to handle noise reduction construction at SCA schools. Therefore, we must abide by the FAA regulations regarding DBE participation. The SCA has a goal of 20% M/WBE and 10% LBE participation. On these particular projects, the DBE goals of 13.8% participation must be met. This does not totally exempt the firm from the SCA's M/W/LBE goals.*

You must work closely with the Contract Compliance officer that is assigned to the borough of Queens, Mr. Steve Gonzalez, (718) 752-5046 who is aware of the situation and requirements and can be helpful to you in assuring that you meet all goals. Some of the SCA's M/W/LBE firms are qualified as DBE's with the Port Authority, while some of the contractors that you are proposing may also qualify as DBE's with the Port Authority if they submit an application to them. We may be able to help you with this certification process. This way you can satisfy the Port Authority's goals and the SCA's requirements by utilizing firms that have overlapping certifications.

End of Questions and Answers
